NOTES OF THE WEEK.

From the letter that reaches us this week from Bucharest it will be noticed that the net result of the recent elections has been the eclipse of the National Liberal party and the establishment in its place of the Transylvanians. The latter, however, are not strong enough of themselves to dominate Roumanian politics, and the first concern of the new Prime Minister is to form a Parliamentary "bloc," which will enable him to carry on the administration of the country with some degree of stability. It is hardly to be expected that the country will find itself at once on a smooth, uneventful path. General Averescu accepted the portfolio of the Interior only to relinquish it immediately, and it will be noticed that the new Chamber does not include M. Také Jonescu or his followers. In these circumstances fresh elections would seem to be indicated before long.

In the belated way to which the war has accustomed us, news has just been given to the world of trouble which broke out in the Sudan at the end of October, and has since led to one of those unfortunate, but practically unavoidable, reverses which are only too familiar in our Empire story. On October 30, we are told, a Dinka tribe attacked an outlying police post, and though the attack was repulsed, the station was evacuated, after its defenders had suffered some loss. A reconnaissance undertaken by Sudanese troops showed that the region was in a state of unrest and the tribes disturbed, and a larger force, which subsequently made a more extended reconnaissance, had some stiff fighting with, and inflicted severe losses on, the enemy. This was on November 15, and full details of later events are not yet complete, owing to telegraphic interruptions. It is, unfortunately, certain, however, that further hard fighting took place, the advance guard of our now slightly strengthened force being attacked by some thousand tribesmen, and driven back on to the main body. Though the enemy had all the advantage given by surprise—his attack was delivered in thick jungle—he was driven off, but not before our column had suffered grievous loss, Major White, commanding the Equatorial Battalion, and Major Stigand, Governor of Mongalla, being killed, with one native officer, twenty-two other ranks, and three carriers.

According to the Cairo correspondent of *The Times*, who sent the first and fullest report of the occurrence, the enemy hung round the retreating column for four days, and seems to have ventured on one more attack, by night; but, in spite of the strain, which must have been very great, the hard-pressed force managed to withdraw the wounded and baggage, and finally reached Tombe. It goes without saying that punitive measures will be undertaken as soon as possible, but it is understood that no effective steps can be taken before the end of next month, owing to the denseness of the jungle and the high water in the wadis at present. The affair is deplorable by reason of the loss of a valuable "Political" and of gallant officers and men, and it is always vexatious to find a tribe, or tribes, infected by that spirit of "unrest" which used to be better known in the East than in the West, but is now so widespread as to be almost universal, though it manifests itself in very various ways. But it would be quite a mistake to connect this trouble with the events and agitation which have been, and are, making Egypt so unsettled. It is safe to say that it has no more connection with them than with the latest Phœnix Park outrages.

The situation in Egypt is improving. It is true that a few days before Christmas an attempt was made to wreck trains a little way south of Cairo, and that two days later the Chief Engineer of the State Railways was fired at. But, happily, these cowardly attempts failed; and though the attitude of the El Azhar authorities is disappointing, in other directions the outlook is markedly more hopeful. Lord Allenby has told an interviewer that "conditions are improving generally now," and has expressed himself optimistically regarding the Milner Mission. Moreover, it is becoming evident that the Mission's unostentatious work in collecting information and studying native opinion unofficially has already achieved results; while a statement issued by Lord Milner, setting out the aims of the Mission and inviting co-operation and a candid expression of opinion, no matter of what complexion, has been received not unfavourably. Add to these facts that Egypt begins the New Year with a balance of £E4,761,289, and it will be seen that the position is much better than it was a fortnight ago.

As was practically bound to be the case, in view of the exacerbation caused in Syria by the arrival of more French troops, a Franco-Arab "incident" has occurred. On December 15 a French *liaison* officer was made the object of a hostile demonstration at Baalbek, and, as a sequel, on December 18, there was fighting between

Digitized by Google

Arab volunteers and French troops. Both sides put the blame on the other: the French asserting that in the first place their *liaison* officer's orderly was mishandled, and that subsequently their troops were ambushed, while the Arabs declare that the French ignored an agreement made between the Emir Faisal and M. Clemenceau to leave the Baalbek region unoccupied. On whichever side right may lie, it was evident that an explosion was bound to come. A letter received in this country a few days ago mentions that early in December the French and Arabs were "sitting either side" of a particular valley of the anti-Lebanon "with all they can muster"; and the spirit thus shown could only lead to one thing. It will be wise not to attempt to form any final judgment on the case until clearer evidence is forthcoming, but in the meantime we should remember that the Arabs are our friends and fought side by side with us in the war just as the French did—a point which seems in some danger of being overlooked.

An official report comes from Busreh that the chiefs of the Milli Kurds have expressed their disapproval of the action of Ramadhan es-Shallash in raiding Deir ez-Zor. It would be more satisfactory if we could be told either that Ibrahim Pasha Milli had not, after all, associated himself with the very minor adventurer, or that he had now severed the connection. The report alluded to is dumb on this subject, though it declares that Ramadhan's following "is confined to a few mischief-makers among the tribes," and that "all is reported to be quiet at Abu Kemal and Mayadin," two towns on the Euphrates below Deir. It is unfortunate that the mischief-makers, despite their fewness, should have scored such a success as the capture of Deir undeniably was; but their effort appears now to have spent itself. According to the latest official report, Ramadhan's followers are falling away, and the British who were captured at Deir have been released and have joined our force at Abu Kemal.

Adequate justice cannot be done in a single paragraph to Sir John Hewett's able report on Mesopotamia. He was sent out to inquire into the administration and finance of the irrigation schemes, to determine whether expenditure charged against Imperial Army funds had been duly confined to such services as were necessary for the prosecution of the war, and to decide upon the extent to which civil funds can immediately or eventually bear the cost of various schemes developed in Mesopotamia by the Army. The report gives no encouragement to the detractors of our Mesopotamian enterprise or to those whose Imperial horizon does not extend beyond Central Europe. The Army's agricultural efforts are held to have been amply justified, and it is stated that there is no ground whatever for the suggestion that Army funds have been expended with the desire to provide for post-war developments. As was known to be the case, money was expended out of all proportion to the present capacity of the country to foot the bill. Sir John Hewett would charge a sum of £2,070,358 to the Civil Administration, and suggests that repayment should ultimately be spread over a number of years.

The fact that Mesopotamia to-day may be capable of producing a revenue of only one or two hundred thousand pounds is no reason for a pessimistic attitude towards the future of the country. It will be a sad day for the British Empire when Britons are deterred by the prospect of trouble or a few adverse balances from taking up obligations imposed upon them alike by their duty to civilisation and their own interests. No other country is in a position to guide Mesopotamia into an era of domestic peace and material progress. The longer that this stage is postponed the greater the burden imposed upon the British Empire, and it will be more economical in the long run to take up at once our share in the settlement of Mesopotamia. We must abandon grandiose ideas of converting the country suddenly into an El Dorado; but with cereals, cotton and oil its future, under wise and stable government, is abundantly assured.

It is one of the happiest features of our public life that the utterances of Royalty call for record but not for criticism, and the King's Proclamation to the princes and peoples of India does not fall short of the high standard set by the Royal House of Windsor. The Proclamation is in essence a clear call for harmony, and for that goodwill for which we pleaded as soon as the passing of the Government of India Bill was assured; the old India looked for such a lead, and we have every confidence that the new India will make a suitable response. Entire unanimity is not, indeed, to be expected, for there are sinister elements in the population, to whose aspirations the new constitution is definitely unfavourable, but the great majority of the political classes will be quick to recognise that their chance has come; the future is now largely in their hands, and almost everything depends upon the qualities which they bring to the task.

When we suggested recently that the Prince of Wales would probably visit India to open the new Legislature we scarcely anticipated that the formal announcement would be made so soon, but there can be no doubt that in this case prompt action was wise. An immense mass of detailed work has to be got through before the new constitution can actually take effect, and the Indian habit of striving for absolute perfection in every detail is rather apt to result in what unkindly critics call procrastination. The knowledge that the Prince is to come will serve as an effective time-limit, ruling out every suggestion for postponement, and hard-worked officials will settle down to a little more overtime than usual, while for many of them the hope of a rest will be once more deferred. Everything will doubtless be "all right on the night," and the next few months will be devoted to making the piece "go," after which we may hope that the pressure will relax, and India settle down to reflect.

That the authorities are alive to the necessity for speedy action is indicated by the fact that the Committee on Financial Relations is already being set up. This is perhaps the most difficult of the questions now outstanding: India is at last beginning to learn something of what the Permanent Settlement means, and other provinces are becoming more and more unwilling to bear a disproportionate share of the cost of the central government in order that the landholders of Bengal may continue to enjoy the bulk of the unearned increment resulting from the establishment of British rule. Pledges, however, must be kept, and when we take existing pledges into account, the task of distributing the burden equitably over the provinces looks very nearly an impossibility. Lord Meston is certainly in the right place as a member of the Committee, but he is associated so closely with the existing financial system that we are inclined to question the wisdom of his selection for the post of chairman; we should have preferred a financier of European experience, who would bring an entirely fresh mind to the problem, but perhaps men of that type are needed at home just now.

We are wholly in accord with the policy of clemency to political offenders laid down in the King's Proclamation, but in the interests of historical accuracy we must protest against the view put forward by some enthusiasts that it is in accordance with Oriental practice. It is true that our predecessors in India had occasional fits of clemency, but very few "political" offenders could hope to benefit by them; when you have been kneaded into pulp by an elephant expert in the art, or crushed to a jelly by the steady shrinking of your leathern garb, an amnesty loses all its personal interest, and even the release of a blinded imbecile is at most a doubtful kindness. The political offender of the present day is sufficiently well cared for in prison to enjoy liberty when it comes, and we hope that the men who are now to be released will not merely enjoy their liberty but will use it for the good of India.

THE WEEK AT HOME.

1920.

The New Year opens hopefully. Even the pessimists have admitted during Christmas that peace has not brought more disasters than war, that Britain is recovering more quickly than most other countries from the great struggle, and that trade has boomed beyond all expectation. We have learnt something from a year of peace as well as from four years of war.

The prospects for the New Year can be stated very simply. Prices are bound to go up again, particularly in clothing. Rates are certain to be increased. Rents must remain the same, at least until March, 1921, but more people will be forced to buy their houses, which comes to the same thing as paying a higher rent. Taxes will probably go up, but the feeling is growing that the Treasury may elect to treat the next Budget as another interim one between peace and war, and work on a conservative basis, leaving the real problem of finance to the year 1921.

The position of the Government is distinctly strong, less perhaps through their own virtues than through the weakness and contradictions of their opponents. A shrewd sporting politician hazarded the opinion the other day that it would be fair to bet five to two on their surviving the year, election or no election, but that only a gambler would bet as to the probability of an election taking place.

The political programme for 1920 is settled in advance. Controversy is bound to centre round the question of nationalisation, Labour being *pro*, the Government *con*, and the Independent Liberals inclined to trim on this as on other matters. Labour threatens a great campaign in January which is to convert the country to the principle of nationalisation, and the Government will no doubt respond in the opposite sense.

If it is permissible to indulge in prophecy in these columns, the prediction may be hazarded that the nationalisation campaign will fail. The Labour Party have not thought out their attitude thoroughly; they profess themselves opposed to bureaucracy, but they cannot get out of the tangle that nationalisation means either Government control or Syndicalism—their moderates want the former, their extremists the latter. The country wants neither. The average Englishman still believes that private enterprise is better than state control, and he has no particular affection for either Socialism or Syndicalism, under whatever brand they are offered him.

The Government seem to have manœuvred the Labour Party rather cleverly into a slippery position, and the strongest card of the latter appears to be their denunciation of trusts and profiteers and rising prices. That is always certain of a cheer, but the cool voter soon recollects that the demand for increased wages has as much to do with rising prices as the profiteer, and the Labour orator's trick is, therefore, easily over-trumped.

Ireland.

The situation in Ireland has taken another turn for the worse during the past week, and the outrages and disorders have not ceased with the attempted assassination of the Viceroy. It is rather curious that the Irish should believe in the efficacy of terror, after so signal a lesson as the failure of German frightfulness to impress the phlegmatic British mind; the effect, indeed, seems rather the reverse of that desired. Many Englishmen who sympathised with Ireland a year or two ago are now insistent that law and order must be restored before reform can have a chance, and the ordinary man is becoming increasingly impatient of the old Radical argument, still heard in some quarters, that the Government is "morally responsible" for the outrages, which spring from the blunders of officials. This sort of theory might have been justified in the eighties, when Ireland had real grievances, and was on the verge of famine, but it will not do now that Ireland is extremely prosperous, and has been asked *ad nauseam* to formulate her own Home Rule proposals if she does not like ours.

The Government will probably persist in the launching of their Home Rule scheme when Parliament meets again in February, despite the evidence of lawlessness across the Channel. On the whole, the proposals have been extremely well received in England, by Conservatives as well as Liberals, but Irish opinion, as usual, has rent them in pieces, and refused to consider them.

St. Albans.

The result of the St. Albans by-election caused some shaking of heads in political circles. The Coalition candidate won by a fair majority, but the runner-up was Labour, and the Independent Liberal was nowhere. In fact, the latter gentleman is subjected to the ignominious penalty prescribed by the Reform Act to "freak" candidates—surely a serious portent for Liberals, who are now awaiting the result of the Spen Valley contest in trepidation. If even Sir John Simon cannot win a seat for them, they profess to think their days are numbered.

The St. Albans figures will necessarily deepen the Liberal split between Coalition and Independent, and possibly make it irrevocable. Some of the doubters will take it as a sign that the hope of independence is vain, and join the left wing of the Coalition; the forwards and irreconcilables will also be tempted to leave a party which shows itself unable to attract support, and desert to Labour. From both sides they will receive a welcome. Coalition Liberals will ask no questions of their errant brothers; and Labour will admit privately that it needs some stiffening, and will be pleased to find itself the residuary legatee of the old Radical party.

The one hope of saving Independent Liberalism as a fighting force now appears to be the Manchester school, which has a programme containing something more than the pre-war aspirations which still seem sufficient to Mr. Asquith. Unfortunately for their prospect of success, Manchester has a programme but no personalities, and all the big Liberal personalities of the prehistoric age when Mr. Asquith was in power shirk the need for fresh thinking as completely as Mr. Asquith himself.

It seems true to say that the business men of the country have never forgiven Independent Liberalism for wobbling over the capital levy: even devotion to Free Trade has not cancelled the greater sin. Moreover, the business men, who hate the idea of nationalisation, are not quite sure if the Independent Liberals can be trusted even on that issue, and since they know the Coalition is fairly sound, or is at least open to argument on it, the great commercial vote is not likely to return to the old Liberal party. The collapse is a lesson in the retribution caused by lack of discipline and united policy.

The Pantomimes.

The Christmas theatres appear to have been crowded as usual, and the spectacle of middle-aged babes of the wood in perambulators, dainty girls as principal boys, and music hall heroes as Widow Twankeys, has

again delighted the juvenile population and left the intelligent foreigner speechless at the conventions of British drama.

The theatrical critics, running over the history of the past year, agree that only one play has been produced that deserves to be remembered—"Abraham Lincoln." There seems a general consensus of opinion that revue has held its own fairly well, and that this form of banality is likely to continue for some time; the farce with the "bedroom scene," however, which was imported from America, is now apparently a little the worse for wear, and the theatrical managers are prepared to see the school of "underclothing acting" die a natural death. If the stage does decide to turn from the bedroom to the drawing-room, it is not only the puritans who will be pleased; the modern girl who remarked that she had to be very careful what plays she took her father to see will perhaps have less need for anxiety in future.

One of the plays promised for the New Year is a dramatised version of "The Napoleon of Notting Hill." It is always a debatable question whether popular books go well on the stage. Mr. Arnold Bennett has caught the trick of the footlights, and professes to think the thing is easy enough; Sir J. M. Barrie is, of course, even more successful. But "Kipps" was a failure some years ago, and although we should like to see "Tono-Bungay" on the boards, Mr. Wells seems too busy with his new history and still newer theology to burn his fingers again. Apart from Barrie, Mr. H. A. Vachell is the most generally successful author-playwright, but even he has not been able to repeat "Quinney's." Perhaps Mr. G. K. Chesterton will do better than many others, but one is a little doubtful whether his wit will carry so well when spoken as when written.

Women Lawyers.

The bann on women practising as lawyers having now been removed, two women have just been admitted to the Bar. One lady was entered at Lincoln's Inn the day after the Sex Disqualification (Removal) Bill received the Royal Assent last week; the other was received by the Middle Temple on the same day. A third is to be articled to a firm of solicitors.

It would be untrue to suggest that either the Courts or the Bar really welcome the admission of women to their precincts. The Law is a conservative institution, and barristers have no belief in the existence of potential Portias, although it has been suggested that if women prove successful as advocates it will be necessary to have women on a jury, on the principle that only a woman is capable of seeing through the artifices of her sex.

But, on the whole, it is doubtful whether many women will take kindly to the law. They are usually impatient of precedent, and nobody has ever suggested that the feminine intellect is of the judicial cast. It will be interesting to see whether solicitors employ female barristers to plead the case of their clients. Male barristers emphatically hope they will not, for the Bar is in a most depressed state just now—in marked contrast to the solicitors, who are doing very well, particularly those with a conveyancing connection.

Taxing a Cathedral.

The tax-collector is everywhere in these days, but it does give me rather a shock to discover that even the Church is not recognised as a sanctuary against his intrusion. An oratorio was performed a few days ago in York Minster, and owing to the expenses and the by no means excessive endowment of the cathedral, a charge was made for the seats. But an official from the Inland Revenue was present —it is to be hoped he enjoyed the performance—and a day or two afterwards he notified the cathedral authorities that they were liable to pay the entertainment tax! After this, even the alms-dish hardly seems safe.

The Bookshelf.

The literary world has naturally been quiet over Christmas, but two books deserve notice. One is a magnificent volume of Sir William Richmond's sketches, sumptuously issued; it belongs to the realm of art rather than literature. Another, for very serious readers indeed, is by Mr. J. T. Merz, whose "Fragment of the Human Mind," discusses the relative values of Hume and Hegel's philosophy.

The issue of this work once again draws attention to the apparent change of taste in England since the war: we are all more serious nowadays, religion, science, and philosophy are discussed on every hand, and the publisher's catalogues bear witness to the alteration. Before the war the novelist had things all his own way, and publishers groaned in secret over every non-fictional manuscript submitted to them, apart from biography and reminiscences—which ought really to rank as super-fiction; but in these days there is a better chance for serious work than for any fiction except the best.

That does not, of course, mean that fiction is not written. A publisher recently told me that of the average of forty manuscripts submitted to him every week, about thirty were fiction, one was devotional or religious, two would be philosophical, two or three would be essays, and the remainder either poetry or ambitious suggestions for the complete reformation of civilisation. Of the fiction, more than half was written by women.

A Tax on Profits.

It is understood that the Treasury are trying to find a means of replacing the excess profits tax, which is both a penalisation of enterprise and a potent means of increasing prices, by substituting a scientific tax on earned profits. The trouble is not so much to define a profit as to discover a profit which can be taxed without at the same time taxing commercial efficiency. Squaring the circle is a mild amusement compared with this problem, and there are no great hopes of success. But with the dropping of the proposed luxury tax, the hatred of the excess profits tax, and the increasing demand of the married income-tax payer for abatements for those very expensive luxuries, a wife and children, some new fiscal engine will have to be discovered before next April. Nobody need envy Mr. Austen Chamberlain his post at the present moment.

London Traffic.

The new system of regulating London traffic, by permitting omnibuses to stop only at certain specified places instead of at any point demanded by the passenger, seems to be working fairly well, although old ladies' from the country often indignantly threaten to report the conductor when they pull the bell in vain five seconds after the omnibus has started. But in other respects London traffic is worse than ever, largely because the shorter hours of labour have concentrated it in a few rush hours in early morning and late afternoon. The tubes are gradually improving, except between five and seven in the evening, when one takes one's life in one's hands, and the railways with one exception are getting back to the normal.

The exception is the South-Western line, where the slackness and incivility of the company's servants and the inadequacy and unpunctuality of the service have recently become a public scandal. Many protests have been sent to the newspapers, but without effect, for the conditions on a line that used to be one of the best-managed in the kingdom are going from bad to worse. On the other hand, the South-Eastern Railway, which used to be a byword, is now rapid, punctual, and comfortable, and its non-stop expresses to Margate, Folkestone, and Hastings make passengers on the sleepy neighbouring Brighton line desperately envious. The South-Eastern learnt from the war that time is money; before the war it comforted itself with the idea that its time was somebody's else money. The "change of heart" is welcomed by the residents in Kent, who can at last hope to keep some of their business appointments.

OCELLUS.

Unprecedentedly stormy weather is reported from the Delta, Alexandria, and the Western Desert of Egypt. Much damage has been done to property.

THE NEAR AND MIDDLE EAST.

(From Our Own Correspondents.)

EGYPT.

CAIRO, December 15.

The Milner Mission.

Quietly and without any fuss the Milner Mission arrived in this country last Sunday. It came up to Cairo by special train, and was met unofficially at the station, whence it was conveyed by car to the Semiramis Hotel. Soon after his arrival Lord Milner paid a visit to Lord Allenby at the Residency. The next day he was introduced to the Sultan by his Excellency, the other members being subsequently received by his Highness, who kept them for a long time in conversation. On Thursday, Lady Allenby gave an "At Home" to permit of the Mission meeting the Ministers and the Advisers.

The Mission has excellent quarters at the Semiramis, which it shares with the Ministry of Communications; but by many it is very much regretted that it should have been deemed necessary to place sentries with fixed bayonets round the hotel. No doubt it is advisable in the present state of things to take every precaution to ensure that the members are not molested, but it would surely have been just as easy to protect them by placing troops in the vicinity and at strategic points where all roads leading to the hotel could have been watched. As it is, the impression given is a very unfortunate one, and one scarcely in keeping with British prestige. At the same time, the presence of armed sentries at every few steps round the building is not likely to encourage Egyptians to visit the place in their present very timid frame of mind.

The presence of the Mission came as a surprise to the Egyptians, who knew from the fact that a special train had been sent for it to Port Said that it was expected at any moment, but had remained in ignorance of the exact date of its arrival. As soon as the news was known, the students of the Higher Schools stopped work and started to make demonstrations, which the authorities immediately dispersed. Throughout the past week attempts have been made to demonstrate, but generally without success. On Wednesday the "Sittats" progressed through the city, but merely aroused the amusement of the passers-by. An attempt on the part of another crowd to reach the Semiramis Hotel being foiled, the demonstrators conceived the brilliant idea of hiring "felluccas" and serenading the Mission from the river, and the soldiers on guard were provided with the amusing spectacle of boatloads of excited "effendis" suddenly appearing and standing off opposite the hotel the while they shouted their usual catchwords until they were hoarse. Some of the demonstrations have attracted the rough element, with the result that a certain amount of *sabotage* of the trams has taken place; but in every instance the authorities have been able to deal with the trouble.

Reception of the Mission.

The arrival of the Mission has been the signal for the appearance of hostile articles in the vernacular press, and for the despatch of innumerable telegrams of protest. A large number of the latter have been addressed direct to the Mission, regardless of the fact that the senders have in most cases declared that they decline under any circumstances to recognise it; while it is instructive to learn that among the messages received have been quite a number appealing to the Mission to redress certain private wrongs suffered by the senders at the hands of the local authorities or of their own relatives!

So far the Mission has not decided upon any official procedure, or upon holding meetings for the taking of evidence. In the circumstances created by the opposition of certain elements and the attempt on the part of the Zaghlul Delegation to bring about a boycott, it has been deemed expedient for the members first to endeavour to establish personal contact with the Egyptians, and they are at present occupied in meeting the more important Egyptians of every shade of opinion. As far as can be ascertained there is little objection on the part of the latter to expose and discuss their views with them; while the procedure adopted would seem to appeal to the Moderates who, in present circumstances, where they are daily subjected to the heckling of the Extremist element, are still too timid to come out into the open. It is proposed later on that the members shall visit the more important provincial centres, where they will be able to see at first hand the practical side of the administration and get into touch with the fellah masses, which are certainly not represented by the town *Intelligenzia*, whatever the latter may say to the contrary.

By adopting this procedure the Mission will, it is hoped, get behind the boycott with which it has been threatened, and which is in reality due to the intimidation exercised by a small section over the rest, and not to any real desire on the part of the majority of the enlightened classes to hold aloof from the Mission. By these means it should, before long, be in close touch with Egyptian opinion, Extremist as well as Moderate, and should be in a position to gauge the extent to which the popular grievances are justified or not, and the reforms necessary to remedy them. It will, indeed, have gained this insight into the situation just as speedily as if it had held regular sittings for taking evidence, and without unduly committing those who may in this manner enter into relations with it. How soon it may be possible to start its official sittings will, of course, depend on the manner in which the situation develops; but the personal relations which will be established with the more prominent Egyptians of all parties should tend to break down the opposition that may exist, and to induce even the more uncompromising to see that contact with the Mission will serve their cause far better than the policy of holding aloof.

active part are the students, who have abandoned their studies altogether and spend their time organising demonstrations and intimidating all their fellow-countrymen, including men years older than they. They have persuaded the Native Bar to strike for a week, and are making strenuous efforts to get the Government officials to come out; but the latter cannot make up their minds to do so. In some Ministries the staff has categorically refused to move, whilst in others the younger employees have decided not to sign the general protest unless their seniors do so first. The latter, having more to lose, do not seem anxious to sacrifice their comfortable positions in the cause of their country, which they profess to have so much at heart.

Zaghlul and his associates may, and undoubtedly do, still enjoy the confidence of their fellow-countrymen, but it does not say much for their influence or for the real interest taken by the mass of the people in the present agitation that they should have to rely solely upon students, rabble, and cabdrivers for active support; and it serves further to show that an "Independent Egypt," apart from other unsatisfactory features, would most certainly before very long be ruled by mob and schoolboy law. As a matter of fact, people are getting thoroughly tired of the continued agitation and the interference with their affairs which it is causing without any tangible result, and the more enlightened and far-seeing are fast realising that they have been spoiling whatever good case they had by the tactics they have hitherto adopted.

ROUMANIA.

BUCHAREST, December 20.

The Political Situation.

Although Roumania has signed the Treaty of St. Germain, including the universally execrated Minorities clause, the Cabinet that assumed responsibility for the action has already disintegrated, and the past few weeks have seen a succession of political crises involving constant reconstruction of the Government.

When the results of the recent general election—the first held under universal suffrage—showed the National Liberal Party, under the leadership of M. I. Bratiano, reduced to 101 seats out of the 252 constituencies in the old kingdom of Roumania, it was evident that the long reign of the Liberal party had come to an end; but it was by no means equally obvious who their successors were to be. There was little time to consolidate the various scattered groups in the Chamber, so when M. Vaida-Voevod finally consented to endeavour to form a Government he had first to insure a majority in the Chamber, where his own party, the Transylvanian Nationalists, only held 207 seats out of the total of 568. The distribution of the various parties in the new Parliament is as follows:—

ROUMANIA.—National Liberals, 101, Independent Liberals 6, Peasants 60, National Democrats 28, Independents 24, Progressive Conservatives 13, League of the People 7, Socialists 7, and Citizen's Party 3.

TRANSYLVANIA.—National Party 207 and Independents 6.

BUKOVINA.—Independents 6 and Democratic Unionists 20.

BESSARABIA.—Peasants 75 and Independents 5.—Total 568.

CROWE & STEVENS,

Steamship Agents and . . .
Commercial Representatives,

PATRAS, PIRÆUS, ATHENS,
SALONICA.

President of the Chamber.

The Parliamentary *bloc* by which M. Vaida-Voevod hoped to maintain his Government consisted of the National Party of Transylvania, the Peasant's Party of Old Roumania and Bessarabia, the Democratic Unionists of the Bukovina, and the National Democrats of the Old Kingdom, twenty-eight of whom were elected under the leadership of Dr. Nicolas Iorga, the Roumanian historian. This *bloc* disposes of 390 seats out of the 568, leaving 178 in opposition. But the first meeting of the Chamber saw the defeat of the Government candidate for the Presidency of the Chamber and the election of Dr. Iorga to that office.

General Averescu, although he had ordered his party (League of the People) to abstain from putting up candidates at the recent elections, patriotically yielded to M. Vaida-Voevod's request to lend his authority to the Government faced with the duty of signing the Treaty of Peace with Austria. The defeat of the Government on the question of the Presidency convinced the General, however, that M. Vaida-Voevod's Cabinet did not possess the confidence of the legislative body, and in view of the serious questions facing any Government in this country just now, he did not feel justified in remaining Home Secretary. He, therefore, resigned, and his example was followed by Dr. Goga, the Ardeal poet and writer, who had accepted the position of Minister of Education.

Peasant Ministers.

Little surprise has been expressed at the inclusion of two peasant deputies in the Cabinet. M. Mihalache has been appointed Minister for Domains and Agriculture and M. Borcea Minister of Education. There was a large and fashionable audience filling all visitors' seats in the Chamber on Thursday, when the two peasant Ministers, picturesquely attired in the national costume, took their seats on the Ministerial Benches. The speech of M. Mihalache to the assembled officials of the new Ministry was marked by modesty and a refreshing sincerity. The simple dignity characteristic of the Roumanian peasant commands respect, and it may well be that the Ministry for Domains and Agriculture, which is carrying out the Expropriations, will find M. Mihalache an acquisition.

The Ministry's Programme.

The present Ministry is composed as follows:—

Premier and Minister for Foreign Affairs.—Dr. Alexandru Vaida-Voevod.

Minister of the Interior (temporary).—Dr. Aurel Vlad.

Minister of War.—General I. Rascano.

Minister of Finance.—Dr. Aurel Vlad.

Minister of Agriculture.—I. Mihalache.

Minister of Education.—I. Borcea.

Minister of Commerce and Industry.—Dr. Victor Bontesco.

Minister of Public Works.—Dr. Mihail Popovici.

Minister of Justice.—Ion Pelivan.

Ministers of State without portfolio.—Ion Inculet, Pantelemon Halippa, I. Nistor, Dr. Stefan C. Pop, Prof. Dr. Ion Cantacuzino.

On Tuesday M. Vaida-Voevod explained the Government programme, which includes a revision of the Constitution in order to bring it into accord with present-day needs; reform of the civil administration of Roumania based on a priniciple of decentralisation; economic reforms and reorganisation of the railroads; fiscal reforms, and the presentation of a Budget balancing revenues and expenditures.

The problem of balancing the Budget is to be solved by the introduction of many new taxes, including a progressive income-tax and a tax on war profits.

With growing industries, Roumania is finding the necessity of providing for the adequate protection of the workers, and the promised labour legislation includes an eight-hour day Bill and a Minimum Wage Act.

Tramway Strike.

The world-wide epidemic of strikes has spread to this country, and on Monday last the Bucharest public found no trams running and all negotiations have so far proved

Digitized by Google

fruitless. On Wednesday the cab-drivers presented an ultimatum to the Mayor, demanding permission to increase fares to nearly double the present tariff, and on the refusal of the City Government to consent to this heavy increase, the cabmen also ordered a strike. Up to the present the principal result has been that the non-union cab-drivers—who, incidentally seem to own better-looking turn-outs than the union men—have been working hard unofficially to initiate the public into the higher system of charges.

ASIA MINOR.

SMYRNA (undated).

While the Greek troops have been successful in driving the Turks away from the Hermus Valley, especially in the Magnesia district, they have not been able to keep in check the Turks attacking the British Railway in the Meander Valley. Yesterday the 12.30 p.m. train from Sokia to Smyrna failed to reach the junction at Balajik, and as the telegraph was destroyed by the Turks, no news could be obtained regarding the missing train. Its disappearance is all the more astonishing because Italian troops are still in the Sokia district. Between Balajik and Ephesus the Turks were firing at the Greek troops guarding the British railway, as passengers to Ephesus could distinctly hear the cannons. This gave rise to the report in Smyrna that there was fighting in the Caister Valley, between Scala Nuova, on the coast, and Ephesus.

Whenever the Greeks attack in force the Turks retreat, destroying whatever they cannot carry away with them, and then counter-attack the Greeks in another quarter, where they least expect it. This guerilla warfare is, of course, rapidly widening "no man's land" between the two forces; and unless it is soon checked, the greater part of Western Anatolia will be completely devastated.

MALTA.

VALLETTA, December 12.

The Coming Self-Government.

The inhabitants of the island appear to be both satisfied and hopeful over the above matter. The local Press reproduces various articles dealing with the subject, which have appeared in British journals. Whether self-government in local matters is going to prove the cure for all political and financial ills still remains to be seen; at all events, the new Governor, Lord Plumer, is receiving encomiums all round for the good he has done in hastening on matters. Many points for political discussion are already appearing concerning the proposed Constitution, but at the root of all lies the desire widely expressed for financial help from Imperial funds. The amount of financial assistance to be given has not been fixed yet, but islanders refer to the many public buildings which are being used by the Navy and Military authorities, the many excellent roads which have been constructed solely in the interests of the Imperial Government, and the annual payment of £5,000 per annum to the Imperial Government as being grounds for a substantial grant.

Malta Itself Again.

Gradually Malta is assuming her pre-war gay winter appearance, and despite the difficulties of obtaining boat accommodation there are many arrivals, with the result that the hotels are doing good business, but, as in other places, houses are difficult to obtain for those military and naval families who have come out for a protracted stay in the island. Grand Opera at the Theatre Royal is in full swing. The Malta Amateur Dramatic Society are producing "Raffles" from the 15th to the 19th, and the Christmas Race Meeting on the Marsa promises to be an exceptionally good one.

December 19.

A Civil Governor.

It is supposed to be the wish of the general public that the representative of the King and the principal trustee of the constitution should be a civilian. This desire is hard to explain, and *prima facie* seems unreasonable, as the granting of the constitution is only on condition that Malta as an imperial fortress and Naval station remains vested in the Governor.

General Sir C. C. Monro, Commander-in-Chief in India, has appointed a Selection Board of high military officers to deal with the question of staff, regimental, and other commands, and also that of promotion above the rank of lieutenant-colonel. The Commander-in-Chief himself will preside at the meetings of the Board.

THE CARAVANSERAI.

Think, in this batter'd Caravanserai
Whose Doorways are alternate Night and Day,
How Sultán after Sultán with his Pomp
Abode his Hour or two, and went his way.

A correspondent writes:—"We have often heard of the 'hair of the dog that bit you' as a cure for that next morningish feeling after the night before, but one has hitherto looked upon it as merely a euphemism to salve the conscience, if any, of a man who wants another drink, much as a Continental talks of his morning *aperitif*, which is not usually castor oil. Apparently, however, this hair of the dog is still a recognised remedy in the Egyptian Pharmacopœia. Recently a dog bit a native boy. The owner then captured the dog, and the boy's relatives cut off some of the hair and mixed it with oil, and applied the resulting ointment to the wound. As might be expected, the dog's hair not having been sterilised, the wound began to fester. The boy then went to a mission school dispensary, the lady in charge of which had great difficulty in removing the ointment; but the wound is now rapidly healing under the non-Egyptian method of treatment."

***

The repetition of jokes at the expense of the red-tape of the British Army becomes rather a tiresome thing; but one example that has recently come to my notice is so amusing that I must record it. An officer in the Devons was on service in Mesopotamia, whether as Lieut.-Quartermaster I do not know; but, at any rate, he was in charge of the messing arrangements for his men. Now he applied (presumably to Brigade) for a pair of butcher's knives, but was told that those things were not an issue for infantry. Being quite unable to live properly without these articles, he got his C.O. to countersign his indent, and the application this time got as far as Corps. Back came the answer: not an issue for the infantry. In despair the applicant persuaded the G.O.C. Base to sign his indent, and having done so breathed mighty hopes of getting his trifling request granted. The matter was shelved (the sad fate of many things that have to reach H.Q.), and the knives appeared to have been forgotten. One sunny day, however, there rolled up to the Devons' camp two sparkling bright new Field Kitchens. "What," said the officer, staggered by the wealth of the unexpected gift, "what is all this? I didn't ask for field kitchens. All I want is two plain butcher's knives." "Sorry, sir," said the N.C.O. i/c Field Kitchens, "but butcher's knives ain't an issue to the infantry. But 'ere's two field kitchens, sir, which includes two butcher's knives!" So what might have been done with a penny was done with many pounds.

***

Now there are lots and lots of people who want to say that this sort of thing was typical: they are just the people who think there is more truth than falsehood in *Mr. Punch's* remark that we lost everything except the war. I do not mind saying straight out that talk of this nature, when meant seriously, is bosh. Of course, everyone who has been in the Army has at some time or other groused at official methods, especially at the methods of the Q.M.G. Most soldiers have felt the joy of receiving pull-throughs when boots have been indented for, or woollies when trenching-tool handles were wanted. But there is a great deal of exaggeration in these things. If you take everything into consideration (and I know you wouldn't dream of doing half this job), you find that the British Army was a very efficient institution, and that the Q.M.G.'s department in particular did its work extremely well. When folk point in scorn to the inelasticity of our Army system and joke about the hide-bound natures of our officials, it is very well to tell them of their nonsense. The people who could have carried on the war much better than it was carried on are legion; but wasn't Legion a silly devil who had to be cast out?

***

A correspondent in Serbia sends me a story which might surely come from the Emerald Isle! It strengthens the claim of the Serbians to be called "the Irish of the Balkans," or so it seems to me. But judge for yourselves. Here is what my correspondent writes:—"A Yugoslav officer had recently been celebrating his *slava*, or his birthday, or some other festive occasion not wisely but too well. Mounting his charger, he performed dashing feats of horsemanship through the streets and on the pavements, scattering the frightened folk in his wild career till he came to the inevitable grief. When he was convalescent he was called upon for an explanation by his commanding officer. His report began as follows:—'The statement that I was intoxicated is not accurate, but my horse was terribly drunk, hence my accident. . . .'"

CORRESPONDENCE.

ALBANIA.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—The great Conference will soon decide the question of the Adriatic, and with it that of Albania. Albania asks for the re-confirmation of the independence guaranteed her by the Conference of London in 1913 and for reparation of the wrongs done her at that time.

The peace of the Balkans largely depends upon how the Great Conference solves the Albanian question, for a mutilated Albania with a million and a-half Albanians groaning under the yoke of the Slavs and Greeks will not cease to be a cause of grave unrest. And to mutilate Albania once more by giving Valona to Italy, and recognising that Power as having the right to mix in Albanian affairs would be a political crime without even the historic excuse of the division of Poland.

The Albanians will doubtless not have the power to resist the decisions of the Great Conference, but it is certain that they will not accept them cheerfully. The loss of Valona to Italy and of a province to Greece or Serbia will entail heavy consequences.

The inhabitants of the South are already much agitated, and those of Valona have once more sent vehement protests (November 16, 1919) to Paris against any Italian domination, *even in a disguised form*, protests which support those already made in September last.

We are waiting, and we do not yet despair. But the statesmen who decide the fate of small nationalities must not forget the responsibility which they assume if they solve the Albanian question in an unjust and iniquitous manner.—I am, etc.,

LUMO SKENDO,
Representative of the Pan-Albanian Society "Vatra" in the United States.

Paris, December 27, 1919.

THE "AZERBAIJAN REPUBLIC."

TO THE EDITOR OF "THE NEAR EAST."

Sir,—In your issue of the 19th instant you have referred to a common error in confusing the Persian Province of Azerbaijan with the new Republic that has arisen out of the ruins of the Tsarist Empire of Russia, and which now aspires to the name of Azerbaijan. Your editorial remarks in disapproving of such an aspiration encourage me, as one well acquainted with the history of those regions, to write a few lines for publication in your hospitable columns.

The assumption of the name of Azerbaijan by the Province of Baku, which is ethnographically part of the Persian plateau, and was actually within the Governorship of Azerbaijan from the dawn of history up to ninety years ago, is a manœuvre of the Young Turks, with the design to mix them together and to swallow both. Azerbaijan is the Arabic synonym for Azeralbadkan, meaning a place that flourished by fire (it is the classical Atropatant), so called because of the great fire temple erected 600 B.C. by Zoroaster, the great Iranian prophet and a native of Azerbaijan.

Baku, a Russian corruption of Badkuba, literally meaning "wind-swept," still contains several ruins of fire temples left from the time of Zoroaster. It is populated mostly by Aryans of the Moslem Shiah creed; but by a historical accident they, like their brethren in the north-west part of present Persia, speak the Turkish language, a fact which has given rise not only to a common error that the people of Azerbaijan are of Turkish or Mongolian origin, but has created for the intriguing Young Turks a fertile soil to sow their mischievous seeds of propaganda.

This unfortunate barbaric mark on the purely Aryan race is the result of the invasion of Ghengiz Khan about the beginning of the thirteenth century and the reign of the Mongolian dynasty in Persia which lasted to the middle of the fifteenth century. These Mongolians, who chose north-west Persia as the seat of their government, displayed great zeal in Turco-fying the Persians in that region, and used to punish those who dared to speak a non-Turkish language. Thus the Turkish language became a common language, notwithstanding Ghengiz Khan and all his heathen Mongolian troops being converted to Islam, thus losing all their barbarous customs, their language remained as a lasting taint on Persians of the north-west.

With all these historical and ethnographical rights Persians neither try to force their claim to the territory of the Caucasian Republic, nor desire to interfere with the aspiration and aims of the new Republic; at the same time they are not prepared to submit to the mischievous propaganda carried on under the direction of the Young Turks, which involves danger both to the Caucasian Republic and to Persia. I am well aware that Persians and the Persian Government have been well disposed towards the Republic, and I have authentic information that the Persian Foreign Minister, who left London a few days ago, maintained in all official negotiations a most sympathetic attitude towards the young Republic and its aspirations; but the inclination of the Caucasian Republic to lend itself to the intrigues of the Young Turks and German adventurers, to make itself the tool in their hands, and to allow the Turkish officers to direct its destiny, is a state of things that cannot be tolerated either by Persians or Britons, because it involves great danger both to Persian and British interests and possessions in the Middle East. The fact of being surrounded on west and north by Turks and their tools, without any naturally strong frontiers, not only subjects Persia to perpetual danger, but constitutes a great menace to the British Empire in the East as a whole. Now that the representatives of the Caucasian Republic have come to London with a view to securing British support and sympathy for their aspirations, they must realise that they cannot achieve these ends while they are creating in their country a source of perpetual danger to Persia and the British Empire in the East. If they desire to establish a close relation with a Mohammedan Power in the East, with a view to strengthening their position, why not establish it with the Persians, who are of the same race and religion as themselves and have friendly relations and common interests with Great Britain?

If the present state of affairs in the Caucasus is not nipped in the bud and not remedied in time, it may lead to complications and consequences that all well-wishers of the British Empire would deplore.—I am, etc.,

R. MAREAU.

21, Mincing Lane, December 30, 1919.

MUSICAL NOTES.

The present popularity of chamber music among people who are not themselves musicians is, I suppose, a sign of the times. Many men tire quickly both of the flare and blare of the full orchestra and of the monotony of the individual performer, and they find a *via media* in chamber music. Quartets, therefore, are now nearly everywhere extremely popular.

Now the London String Quartet, which has recently returned from very successful tours on the Continent, gave its 107th "Pop" (popular concert) at Æolian Hall on December 27 (it gives another one at the same place tomorrow afternoon), and it again proved itself to be, what everyone knew it to be, one of the best quartets in existence. (This being so, why, I may incidentally ask, does it adhere to the vile name of "Pops"? Granted very freely that it does not possess those signs—so beloved of the "Proms."—of bondage to commercial interests—I mean, of course, the popular ballads—but is such a title really essential to financial prosperity?) Its programme consisted of three items—Mozart's Quartet in D minor, Vaughan-Williams's Song Cycle, "On Wenlock Edge," and Schonberg's Sextet in D minor.

The position of Mozart is at the present time an uncertain one. Our impetuous youth of to-day, ever eager to undermine authority, is inclined to deny him standing, and quite cheerfully describes his works as fluent superfluities. And on the other and more numerous side is, of course, the classicist who worships at the master's shrine. For neither of these two sides is it so much a matter of the presentation of Mozart as of his intrinsic value or lack of value—either he is very great or he is very small. Now it seems to me that a central position is much the safer one to hold, by which I do not mean a moderate or middle position, which is merely a watering down of two extremes, but this: that to say that Mozart is great and always great, and to dismiss him as a copious writer of inanities are equally fond. Mozart certainly is great at times, but it is more often as a perfect artist than a great one that he appears to me. And this seemed to be the conviction which the London String Quartet held. They played Mozart wonderfully, beautifully, perfectly; their own art was as finished as Mozart's—in short, they enchanted us. But they could rarely thrill, and never overcome; and this I think was because the music itself is not great. This quartet in D minor is in some respects similar to a play by Congreve; we miss, if we look for it, the depth of Beethoven in the one, as we miss the depth of Shakespeare in the other—but then, we are fools if we look for it. The present generation may deny Mozart the quality of greatness; but to all those wise men who do not believe in progress his perfection is obvious.

Vaughan-Williams's "On Wenlock Edge" is very widely known, as it deserves to be. A. E. Housman's "Shropshire Lad" has been set to music by many composers, but Vaughan-Williams's is one of the most successful settings. It is a work quite representative of modern British art, full of the national idiom, and one that will surely survive. It was sung very competently by Mr. Gervase Elwes, whose tone blended well with the quartet and the pianoforte.

Why the Quartet should (with Mr. James Lockyer as 2nd viola and Mr. Cedric Sharpe as 2nd 'cello), have expended time on the Schönberg sextet, is rather a mystery. Terrific discussions are waged over this German composer, but his adherents are an extraordinary set of people. I cannot believe that by far the larger part of those who applauded so heartily this sextet did so for any other reason than to praise the performers. It was played excellently (though this can be said of anything the Quartet chooses to play), but what stuff it is! It starts normally enough, but proceeds to wander into modern labyrinths from which it extricates itself by clutching at those treacly melodies (thirds and sixths and all the rest of it) so dear to the German mind. These serious efforts of German radicals are far more tedious than the clever bluff of the French and Russian moderns; and one heard the end of the sextet in wearied and quite bewildered wonderment. It does not seem on first hearing to be bad enough to be dismissed as impossible, but I should think it could be put into the basket of dispensable things.

PRESS ON THE NEAR EAST.

Britain and Mohammedanism.

A writer in the *Liverpool Daily Courier* of December 18 makes a suggestion that we should conduct a counter-propaganda to the German-Bolshevist use of the pan-Islam movement. He says:—

In the meantime it were well if the British authorities throughout the Moslem parts of our Empire would undertake an energetic counter-propaganda against the German-Bolshevik attempt to work the pan-Islamic movement for all it is worth against ourselves on the spurious plea that we are out to destroy not the Turk but Mohammedism itself. The non-Moslem origin and character of this anti-British propaganda is well evidenced by the fact that its promoters are Germans, Russian Bolsheviks, and agnostic Young Turks. These are the people who are seeking to fan the flames of religious fanaticism in the breasts of others. Our propaganda should not only take note of the consideration that large blocks of Moslems, such as our Persian and Arab friends, decline to recognise the Constantinople Caliph, regarding him as a usurper and even schismatic (not to say heretic), but to such of our Indian and Egyptian Moslems, for instance, as spiritually speaking belong to the same Moslem community as the Turk, the same propaganda should emphasise the point that to associate their religion with the crimes of a political Power like Turkey is to do grave damage and injustice to that religion. The Moslem who approves of Turkey's crimes and wishes them to go unpunished is no good Moslem. This argument, if cogently presented, would, I believe, make a strong appeal to the virtues which adorn the really devout Moslem.

The Middle East.

In a rather gloomy survey of the state of the world, the *Outlook* of December 27 says of the problem of the Middle East:—

Peace with Turkey would undoubtedly be an important step forward. But, in the absence of American co-operation, any Turkish settlement in other respects satisfactory means a very large addition to the responsibilities of the Allies, and of this country in particular. It is to be noted that sea power will help us little in any obligations in the Middle East; the strategic position of the areas for which we are likely to assume at least temporary responsibility implies the necessity of defence by land armaments. If the problems attending the break-up of the Russian and Austrian Empires seem at the moment almost desperate in their difficulty, there is at least one hopeful circumstance. Many of the peoples cast adrift from their ancient moorings are of a fairly high standard of civilisation and gifted with some habit of self-help. It is not impossible to conceive of them fashioning some tolerable kind of polity for themselves when they have settled down. There is no such hope in the case of populations whose initiative has been sapped by ages of Turkish misrule. It is not sufficient to emancipate them; they must be ruled.

England and the East.

The *Nation* of December 27, in an article called "The New Meeting of East and West," points out the unsettled condition of the East. It says:—

If the Arabs have seen white men victorious, they have also seen white men in defeat. There is nothing in these conditions to support the idea that they will take any rule that is imposed on them, thanking Allah for the fall of a terrorism by men of their own religion, and not looking too closely at the institutions which take its place. Nor is the war the only earthquake in their minds. The Bolshevik propaganda makes a great appeal to the Mussulman world. It points to a common oppressor of the European proletariat and the Mohammedan peoples. It preaches a simple universal philosophy not alien or antagonistic to the ideas of the East. It denounces all those systems under which one Mahommedan State after another has lost its independence to a European Government. Some of the supporters of the Government defend their Russian policy on the ground that the Bolsheviks are poisoning the mind of India and Egypt, believing in their simple folly that this kind of influence can be arrested by war, and that the best way to check these ideas is to spread confusion and misery over the world.

This is not then an easy moment for assuming the government of Eastern populations or for assuming any position that carries with it the responsibility for keeping order. Remembering the kind of influence that will be at work, the kind of fear that will be in the minds of the rulers, let us look at the position of the men on the spot. They will not hold Mesopotamia by a large army for the simple reason that Great Britain cannot find one. Their ascendancy will be what we call a moral ascendancy. They may try to introduce reforms beneficient in themselves but distasteful to the inhabitants or to some sections of them. They may make mistakes of judgment or temper; they may act in a tactless or unsympathetic manner. Their authority and position will inevitably be challenged, and even when it is not challenged in fact their imagination will detect a challenge beneath the surface.

It concludes by suggesting that what is wanted is a new conception of the relations of Oriental peoples to the West, and fears that the new system of governments in the East is being built up on what it calls the "fatal fallacy" of a European life being "a great deal more valuable than the life of a native."

Egypt.

The Times of December 19 refers to the articles on Egypt which it is publishing from the pen of Sir Valentine Chirol, and to the modification which they have effected in British opinion. It says:—

It is clear, from his repeated statements, that our administration has seriously deteriorated, and has been developed on wrong lines. It is further clear that, in spite of the regrettable excesses of some of the Egyptian leaders, their grievances have in certain respects a real foundation. We have made many mistakes in Egypt since Lord Cromer left Cairo; and perhaps our worst mistake has been that it was never fully realized, either by the men on the spot or by the Foreign Office, that his departure marked the end of an era highly beneficial to Egypt, but requiring modifications in view of changing times. Lord Kitchener, who understood Egypt's needs, did something for the cultivators, and was liberal in his tendencies; but after he left, there were alternately apathy and blundering. The suspension of the Assembly on the outbreak of war was a grievous error, and so was our refusal to employ the Egyptian Army. While we were pressing the late Tsar to convoke the Duma, we were committing in Egypt the very fault for which we condemned him. . .

But it closes on a brighter note, recounting some of the benefits Great Britain has brought to Egypt:—

We have brought Egypt a material prosperity hitherto undreamed of. By our irrigation achievements we have, in the last twenty years, raised the rental value of occupied land from £E17,000,000 to £E80,000,000. The cultivators live under conditions of financial ease which would have been thought inconceivable in the oppressive days of Ismail. They forget the woes of their fathers, and the memories of the time of the *corvée* and the *courbash* are now dim, but present grievances bulk large in their eyes. In their clamour for self-government they ignore the possibility that they may not fare so well under their own leaders, who have notoriously taken very little interest in the welfare of the peasantry. The task of the Milner Commission, however, is to meet the unquestionable aspirations of the Egyptian nation, even if the results may not be wholly good.

NEAR EAST BOOKSHELF.

IN THE HANDS OF THE TURKS.*

To few people does the story of a prisoner of war make its appeal in vain. But it is one thing for a book to rely upon sentimental considerations for its passport to public favour; it is altogether a different matter to present an existence of three years in captivity as an arresting narrative which commends itself to the reader as an artistic whole. This is certainly what Captain Yeats-Brown has succeeded in doing. He was taken prisoner in November, 1915, in an attempt, as observer in an aeroplane, to cut the telegraph lines behind the Turkish position below Baghdad; and he finally gained his liberty in Constantinople not long before the Armistice. It requires judgment and the pen of the ready writer to tell the story of three years in such a way as will hold the reader's attention on every page, while admitting him into "the psychology of prison," and taking him through "the long descent of wasted days," when the chief break in the dismal procession of moons was the discussion of plans for escape, followed almost inevitably by their abandonment. Ultimately transfer to Haidar Pasha Hospital favoured our author's scheme. From this point incident presses upon incident. It was no mean achievement for two prisoners to effect their first escape as they did; it was a greater feat for one to live in Constantinople for some weeks as a German governess, and for the other, "so tall and so Saxon," to make a further dash for liberty as an Arab ragamuffin, hugging a poor little bowl of curds and half a cucumber. Both their efforts were frustrated, and for both the horrors of a Turkish gaol were in store. The Armistice and the collapse of the Committee régime followed hard upon the heels of the second and successful escape, and Captain Yeats-Brown was still in disguise in Constantinople when the new order was ushered in.

Few will lay aside this fascinating book without hoping that the author will be persuaded to tell the tale of the crowded weeks that marked the passing of Talaat and Enver and the installation of Allied troops as the temporary guardians of law and order in the Ottoman capital.

THE TRIALS OF MONTENEGRO.†

The Montenegrins have had no stouter champion outside their own country than Mr. Alex. Devine, who, with a tenacity that must have been the despair of those who desired to have a veil drawn over the fate of Montenegro, has pleaded the cause of fair play for the smallest of the Allied Powers. This pamphlet sets out to bring the story of Montenegro down to the events of the last few weeks. It is couched in vigorous terms, for Mr. Devine believes that the situation is too acute to call for velvet gloves. No attempt has been made to meet the objections of those who have urged that Montenegro ought to be left free to decide her own destiny. The spectacle of the Entente countenancing an utterly indefensible policy in regard to that helpless country is one of the most unedifying features connected with the Paris Conference. It has been crowned by the action of the British Government in sending a special mission to investigate conditions in Montenegro, and then refusing to publish the mission's report or to take action on its findings. The orgy of millennial altruism introduced by President Wilson, and shared by the British and French Governments, has been followed by the most cynical exhibition of cowardly selfishness known in British history. For the issue in regard to Montenegro is as clear as day; the Montenegrins accuse the Serbians of an organised campaign of massacre amounting almost to extermination; the Serbians deny the charge and denounce King Nicholas as a traitor to his country and to the Allies. The Entente Powers turn a deaf ear to both charges, allowing the Serbians to carry out whatever may be their policy in Montenegro, and continuing to treat King Nicholas as a loyal and respected ally. Any British statesman careful of the country's reputation with posterity would insist upon this *impasse* being straightened out, and it is a matter for surprise that the Yugoslav Government does not press for an inquiry to clear itself of the charges brought against it.

THE MODERN WAY.‡

These tales profess to be of Macedonia, but they are not about that undesirable country. In all there are twenty-two tales, and in not one of them can it really be said that the Balkan spirit predominates. The types described exist in a good many other countries. It is true that there is a certain amount of local suggestion—the names of Salonika, Athens, Doiran, and so on occur frequently—but the setting of the story is with Mr. Cumberland a secondary affair: it is more with his creatures than with their *cadres* that he is interested.

The tales themselves are most of them bad. Their subjects are what more than less accurately is called unpleasant: demireps, drink, jealousy, selfishness, and many more vices have the main place in these pages. They are drawn with flashy skill—we had a right to anticipate this from the author of "Set Down in Malice"—but generally speaking they are merely clever. Now, from cleverness to dullness is but a short step, and unfortunately it is one which Mr. Cumberland often takes. Sometimes, indeed, his clever superiority becomes oppressive. Look, for instance, at the irritating preciosity of sentences like these:—"Full-bosomed ladies, absurdly conscious of the number and whiteness of their teeth, have always seemed to me much too grotesque to love." And "So Cassels played some of the humane, if rather turgid, music of Schumann, in which one may always find balm for the poisoned mind." However, Mr. Cumberland is so wholehearted a modern and so successful in the provocation which he is resolved to incite, that one cannot find it in one's heart, however stern, wholly to condemn him. In three tales he is really good—"The Dreamer," "The Moonman," and "Trench Madness"; and in "The Victim" he has made a quite readable imitation of E. A. Poe.

But it is impossible not to end with a nearly full-throated refusal to accept these stories. If the author's ideas are loose, his writing is looser still. His apparent variety of styles is due really to the fact that he does not possess one. He can write, but more often he does not care to do so. Finally, these tales would look much better, or not so bad, in French: then we should read them and interestedly forgive them. But in English the description of vice after vice ceases after a little time to have any colour: it is not, as the musicians say, in the national idiom. And, after all, if we really thirst for these dreadfully clever stories of the ugly side of life, we can import them in quenchful quantities from abroad. There they will always do these things far better than we.

THE BLOOD-STAINED PURSUIT.*

Mr. Sax Rohmer has here published a modern "shocker," with all its glaring vices and none of its breathless virtues. He has, as it were, packed a portmaneau, filling it with such things as crocodiles, dwarfs, stupid constables, a girl "with violet eyes," *hashish*, severed wrists, and, in fine, with all the stock in and out of trade of the prosperous scribe. He has labelled the box "Hassan of Aleppo," and sent it off in the rather optimistic hope of getting us to unpack it. Really the story is wildly incredible, and it is so ill-written that one's imagination, before it can get to work to help along the tale, is smothered by a very reasonable indignation.

PERSONAL AND GENERAL.

CALENDAR OF THE WEEK

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian (New Style).	Julian (Old Style).	—	Moslem.	Jewish.
1920. January	1919. December.		1338. Rabia II.	5680. Tebet.
2	20	Friday	11	11
3	21	Saturday.....	12	12
4	22	Sunday	13	13
5	23	Monday	14	14
6	24	Tuesday	15	15
7	25	Wednesday	16	16
8	26	Thursday	17	17

Lord Inchcape left London on December 23 for Scotland.

Prince Alexander, Regent of Serbia, left Cannes on December 29 for Paris.

General Lord and Lady Byng of Vimy spent Christmas with the Duke of Portland at Welbeck.

General Franchet d'Esperey, before leaving Athens, presented the Croix de Guerre to King Alexander.

Dr. Michel Gavrilovitch, the newly appointed Serbian Minister, has arrived in London from Belgrade.

M. Yovan M. Yovanovitch, formerly Serbian Minister to the Court of St. James, has returned to London from Paris.

Lord Methuen opened on December 30 the new headquarters at George Street, Bath, of the Comrades of the Great War.

M. Boeresco, the Roumanian Chargé d'Affaires, has left London for the country. He will, it is expected, leave for the Continent soon.

"Serbia and Yugoslavia Before the War and After" was the subject of a lecture given on December 29 at the Æolian Hall by Mrs. Dickinson Berry, and we hope to give a report of it in an early issue.

Yussuf Wahba Pasha, President of the Egyptian Council of Ministers, is gazetted as an honorary Knight Grand Cross of the Order of St. Michael and St. George.

M. Misu is leaving Belgrade shortly for London. He will have an audience with the King at Buckingham Palace for the purpose of presenting his letter of recall.

Commander Talbot, who has been specially attached to M. Venizelos, the Greek Premier, by the British Government, arrived in London on December 30 from Paris.

The marriage arranged between Major W. H. Brooke, M.C., and the Hon. Marjorie Plumer will take place at St. Paul's Cathedral Church, Malta, on January 27, 1920.

The Bishops in India are making a special appeal to Church people at home to assist the Indian Church Aid Association to minister to the wants of the Anglo-Indians, formerly known as Eurasians.

Bishop Bury, who has approached the S.P.G. for help for the Europe Committee in maintaining chaplains on the Continent, points out that in Belgrade, among other places, opportunities are afforded for great development.

The Bishop of London preached at the Sung Eucharist at St. Etheldreda's, Fulham, on December 28. An eloquent appeal on behalf of the starving millions of children in Central Europe, Serbia, and Armenia drew a liberal response for the "Save the Children Fund" from the large congregation.

Sir John Sandys, Litt.D., the Public Orator of the University of Cambridge, has resigned office. For many years he served as the University representative on the Committee of the British School at Athens.

According to the *Œuvre*, the engagement is reported in well-informed circles of Prince George, the eldest son of ex-King Constantine of Greece, and Princess Elizabeth, the eldest daughter of the King and Queen of Roumania.

Lieutenant-Colonel Jacob, Assistant Resident at Aden, who was sent on a mission to the Imam of the Yemen at Sana, and captured, together with his companions, by hostile Arabs in September last, arrived at Cairo on Boxing Day, having been released some time previously. After submitting a report to Lord Allenby, Colonel Jacob will come to London on leave and to consult the Foreign Office.

It is officially announced that an agreement has been come to between the British and the Greek Governments under which a number of Greek Naval officers are to complete their training in this country. Under these arrangements ten officers of the Greek Royal Navy are to visit England. Four have already arrived, and the remainder are expected at the end of this month. They will go for instruction to Portsmouth and the Isle of Wight.

The Shah of Persia has presented to his Majesty's ship Ceres a cup, as a souvenir of his voyage in that ship from Batum to Taranto. In forwarding the cup to the First Lord of the Admiralty, the Persian Minister for Foreign Affairs writes:—"It is with much pleasure that his Imperial Majesty takes this opportunity of renewing his thanks for the admirable facilities placed at his disposal by his Britannic Majesty's Navy, and of expressing his appreciation of the courtesy and consideration shown by Captain Reinold and his officers."

Our Malta Correspondent writes:

His Grace, the Archbishop-Bishop, Dom. Maurus Carnona, O.S.B., has returned by the Italian steamer and has resumed direction of his diocese.

The public are responding in a marked liberal spirit to the fund just established for the purpose of presenting a gift to the Honorable Marjorie Plumer on the occasion of her forthcoming marriage.

The Senate of Malta University has conferred the degree of LL.D. (Honoris Causa) on Field-Marshal Lord Plumer, and also on the Noble Filippo Sceberras.

Major A. Dingli, O.B.E., Royal Marines, has arrived by the ss. Menfi.

His Majesty the King of the Hellenes has conferred the Medal for Military Merit on Captain Arthur Bernard Butterworth, O.B.E., of the Royal Army Service Corps.

APPOINTMENTS, ETC.

M. Misu, the Roumanian Minister in London, has been appointed Administrator of the Domains of the Roumanian Crown.

Prince Demeter Ghyka has been appointed Roumanian Minister to Paris, and also chief delegate to the Peace Conference.

M. Frederick Nano has been appointed Secretary to the Roumanian Legation in London. He was formerly Secretary to the Legation at Berne.

M. V. M. Popovitch, Secretary of the Legation for the Kingdom of Serbs, Croats, and Slovenes, has been appointed Chief Secretary in the Foreign Office at Belgrade.

Sir William Duke, G.C.I.E., K.C.S.I., assumed office yesterday as Permanent Under-Secretary of State for India, in succession to Sir Thomas Holderness, G.C.B., K.C.S.I.

The Rt. Hon. E. S. Montagu, M.P., Secretary of State for India, has appointed Mr. S. K. Brown to be his principal private secretary vice Mr. C. H. Kisch, C.B., promoted.

The Secretary of State for India proposes to appoint Sir Chettur Sankaran Nair, C.I.E., to be a Member of the Council of India, under the provisions of the new Act in succession to Sir Prabashankar Pattani, K.C.I.E., who has undertaken the duties of Senior Administrator of the Bhavnagar State.

The following are among the promotions recently made by the King for meritorious service in connection with the war:—K.C.S.I.: R. Nathan, C.S.I., C.I.E., late Indian Civil Service; and K.C.I.E.: Brig.-General W. E. Baron Montagu of Beaulieu, C.S.I., V.D.

G.B.E. (Military Division): Hon. Lt.-Colonel his Highness Maharaja Shri Sir Ranjitsinhji Vibhuji, K.C.S.I., Maharaja of Navanagar, Bombay Presidency.

K.B.E. (Civil Division): F. D. Couchman, C.I.E., Member Railway Board; G. S. Hart, C.I.E., Imperial Forest Service, Inspector-General of Forests; and Sir Alexander McRobert, Kt., Managing Director, Woollen Mills, Cawnpore, United Provinces.

Digitized by Google

The King has been pleased to approve the appointment of Hon. Lieutenant-General (in the British Army) H.E. Maharaja Sir Chandra Shamsher Jang Bahadur, Rana, Prime Minister, Marshal of Nepal, as an Honorary General in the British Army in recognition of services rendered during the Afghan War.

A committee has been appointed to advise the Government of India on the adjustment of the financial relations between the Central and Provincial Governments, with special regard to the new financial systems contemplated under the Government of India Act, 1919. The committee consists of Lord Neston, K.C.S.I., Lieutenant-Commander E. Hilton Young, M.P., and Mr. Charles Roberts. The committee will conduct its inquiries in India during the present cold weather.

The following names which appeared in the New Year's Honours Lists will be of particular interest to our readers:—

G.C.B.—Right Hon. Sir James Rennell Rodd, G.C.M.G., G.C.V.O., C.B.

C.B.—Charles Hubert Montgomery, C.V.O.

Baronet.—Sir Thomas William Holderness, G.C.B., K.C.S.I.

Knight.—Ernest A. Wallis Budge, M.A., Litt.D., D.Litt., F.S.A.

K.C.M.G.—Edgar Bonham-Carter, C.M.G., C.I.E., and Major-General Sir Percy Zachariah Cox, G.C.I.E., K.C.S.I.

C.M.G.—Malcolm Stevenson.

Hon. K.B.E. (Civil Division).—His Excellency Zulfikar Pasha.

OBITUARY.

The death occurred on December 21 of the Rev. E. Albany Clarke, late of Dikoya, Ceylon, aged 66.

Colonel Herbert Rowley Cook, late Manchester Regiment, died at Barnet on Christmas Day, at the age of sixty-eight. He joined the Army in 1870, and had seen service in the Afghan War, 1879-80, taking part in the march to Kandahar, and in the Egyptian Expedition of 1882. He received the decorations for both campaigns.

The death is announced at Dover of Colonel Frederick Coulthurst Elton, late Royal Artillery, at the age of eighty-two. He saw service in the Crimean campaign, being present at the siege and fall of Sevastopol, for which he was mentioned in despatches and received the medal with clasp, the Legion of Honour, and the Turkish medal. He took part in the Egyptian Expedition in 1882, and was present at the battle of Tel-el-Kebir, being mentioned in despatches and receiving the medal with clasp, the bronze star, the 3rd Class Mejidie, and the C.B.

The death has occurred at Edinburgh, in his eighty-seventh year, of Dr. George Smith, C.I.E., LL.D., the eminent Anglo-Indian publicist and biographer. In 1853 he landed at Calcutta to take up a professorship at Doveton College, which exists for the education of the domiciled Anglo-Indian community. He did much journalistic work there, and throughout his stay in India he was the chief correspondent in India of *The Times*. He returned from India in 1874. Dr. Smith married in December, 1855, Janet Adam, of Edinburgh, who died in 1888, after bearing him five sons and five daughters. The eldest son is now Sir George Adam Smith, Principal of Aberdeen University; and the second is Sir James Dunlop Smith, Political A.D.C. to the Secretary of State for India. Dr. Smith married a second time, in 1890, Mary Agnes, daughter of William Mackintosh, of Inshes House, Inverness-shire, by whom he is survived.

NEWS IN BRIEF.

The Cairo correspondent of the *Morning Post* reports that from the social point of view Cairo spent a gay Christmas.

Yugoslavia is stated to have started the expulsion of a great number of Jews, and a protest has been sent to the Yugoslavia Delegation in Paris.

The first issue of the *Jerusalem News*, an American daily newspaper, has appeared in Jerusalem in the English language. Lord Allenby contributes a letter wishing success to the enterprise.

Relief works in the Thaton district of Burma have been practically stopped, and famine operations in the Hutta Birioi and Palur estates of the Ganjam district in the Madras Presidency have been closed.

A squadron of aeroplanes has been despatched from Cairo to join the punitive expedition against the Dinka tribe which attacked a British column near Tombe in the Mongala Province in the Upper Nile region in the early part of December.

From Persia comes a curious series of provisional postage stamps alleged to have been issued under the temporary administration of Satar Khan. The design common to all values is that of the Persian national flag with alternate horizontal bands of green, white, and red. The denominations are expressed in "dinars," 10,000 of which go to the Persian "toman," and the stamps are lithographed on white wove paper and perforated.

The British High Commissioner at Constantinople has called the attention of the Ottoman Minister of War to the fact that damage has been done recently to certain British cemeteries in Gallipoli, and has caused disciplinary action to be taken in cases in which Turkish soldiers were the offenders. To prevent further acts of desecration, and to facilitate the work of the Graves Registration Units, the G.O.C.-in-C., Army of the Black Sea, is sending Serbian Guards into the area.

During January, 1918, appeared the first definitive stamp issue of Yugoslavia, with its caryatide of Victory and Croat sailor proclaiming freedom from the masthead; while from Fiume came on January 28 autonomous postage stamps of pictorial design by the artist Giovanni Rubinovitch, issued by the National Council, and eloquent of the Italian sympathies of its populace. In Turkey the abortive pictorial stamps prepared in anticipation of Essad Pasha's ill-fated invasion of Egypt were finally placed in circulation towards the end of January, with the addition of a three-line overprint signifying "Souvenir of the Armistice—30 Dulkaada 1334" (October 30, 1918). The Transcaucasian Republic of Georgia was added to the roll of stamp-issuing countries on May 26, when a set of four stamps made its debut with a hieroglyphic reproduction of the national arms depicting St. George crossing the Black Mountains. Some curious stamps adorned with a vignette of a large tree were issued about the same period by the Provisional Government of the Black Sea port of Batum, under British military control. Three separate series of provisional postage stamps issued at Aivaly, Smyrna, and Rodosto resulted from the Greek occupation of Asia Minor by the mandate of the Paris Conference.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO,
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

THE ONLY ENGLISH HOTELS IN ALEXANDRIA.
Proprietor: AUGUSTUS VAN MILLINGEN.

WINDSOR HOTEL
(Facing the Sea, opposite Y.M.C.A.), ALEXANDRIA.
American Bar and Restaurant,
Billiards, and Lift.

SUMMER PALACE HOTEL,
GLYMENOPOULO, RAMLEH.
This Hotel is situated near the Beach. Open all the Year.
Every Modern Comfort. American Bar, Restaurant,
Bathing Cabins on the Beach. Billiards.
Daily Concerts on the Verandah.

FRIDAY, JANUARY 2, 1920.

BRITISH INTERESTS IN THE NEAR EAST.

Next week will see an effort on the part of a resuscitated Paris Conference to draw up a final peace settlement for Turkey. No agreement that has been reached during the last twelve months in regard to the Near Eastern question justifies the least optimism over the weighty decisions that remain to be taken, and we must confess to no little anxiety at the prospect of fresh concessions and compromises that lead the Allied Powers farther away from the goal of peace and prejudice the real interests of all the countries concerned. If there was one Power that could claim to have knowledge of the East, it was Great Britain; for that reason, the whole of the settlement of the Near and Middle East ought to have borne the unmistakable imprint of British honour and fairplay, and whatever compromises had to be effected elsewhere, the British Government should have been adamant in insisting that there must be no departure from the canons of strict justice in the East. Up to the present it would be difficult to discover in any measure adopted in regard to the Near East the characteristics which have been the sheet anchor for Eastern and other peoples in their dealings with Great Britain. An impossible situation had been created during the war by a number of conflicting agreements which could not be carried out in their entirety. Instead of facing this problem honestly and fearlessly, Great Britain's representatives have tried to throw upon others the onus of extricating the Allies from a blunder of their own creation. The inevitable result has been to postpone a settlement, and the delay has only served to aggravate the position. It has been an axiom among those who have had any knowledge of the East that no solution of its difficulties could be found, unless it were imposed, so to speak, from above. But the Paris Conference, with the apparent acquiescence of the British Government, has ostentatiously washed its hands of the Near Eastern settlement and has left the rival elements to fight out their own differences. Italians have been pitted against Yugoslavs, Serbians against Roumanians; even the courage to prevent fighting between Montenegrins and Serbians was wanting, while the acme of callousness was attained in the dispatch of Greek troops to occupy Turkish territory during the period of the armistice, without attempting to secure for either side immunity from the hostility of the other.

The answer of the British representatives to this indictment of their handling of the Near Eastern question would probably be that they had to concern themselves with other, and weightier, matters, and they would hold that in their work in Paris they had done well to concentrate on the important things, while compromising on minor points. Unfortunately, the problem presented by the Near East cannot be regarded as of relative unimportance in its bearing on the peace of Europe, for any inadequate or unjust settlement of a single point threatens to provide sooner or later a storm-centre for the whole Continent. Indifference to the significance of the Near East in the scheme of world affairs has been carried so far that it is not appreciated that almost irreparable harm is being done to British interests. The higher the prestige of Great Britain as a moral factor in the world before or during the war, the greater her fall from grace in the eyes of the people of the Near and Middle East when she is seen to associate herself with the most flagrant breaches of honour and of justice. But the failing that will be the last to be forgotten is the lack of courage that has apparently prevented Great Britain from taking an independent line in any single question, with a view to compelling her Allies to abandon a policy of self-interest or vindictiveness in favour of one of elementary justice and common sense. Syria provides an excellent object-lesson. All the facts of the situation were perfectly well known to the British Government; the Arabs refused to accept the French as a mandatory Power; they are allies and not enemies of the Entente, and they have every right to invoke the principle of self-determination; they warned the two Governments that there would be trouble if the French assumed control. France could not have run counter to any firm stand taken by the British Government; but the latter, we are led to assume, was incapable of taking one. No one can quarrel with Mr. Lloyd George's statement to M. Clemenceau that "Our two countries must keep closer together than ever"; but everyone outside the Government, and, possibly, some in it, will challenge the corollary seemingly accepted by the British Prime Minister that Great Britain must efface herself the world over in order to maintain that closeness with France. There would be less cause for quarrel with the doctrine if it could be shown to be in the interest of the world's peace. As a matter of fact, it has entirely the contrary effect. A bolder stand in regard to Syria would have benefited France, the Arabs, and Great Britain. The seeds of unrest have been sown in the Middle East, and it is likely to be a long time before the last harvest has been garnered. The British Government's action may not cost it any votes at the next election, but there can be little doubt that posterity will denounce the whole handling of the Near and Middle Eastern problem after the Great War as a grave blot on British statesmanship.

The unpardonable delay in the Turkish settlement has brought about a condition of things such that any decision is now open to serious objections. Nine months ago, or at any time during the war, the issue was comparatively simple. The Allies stood for justice, the principle of nationality, and a better world, and in this programme there was no room for Turkish jurisdiction in Europe. To-day the Paris Conference has itself deliberately ignored the dictates of justice as well as the principle of nationality, and it would be hypocritical to pretend that it has moved a finger towards creating a better world in the Near East. In these circumstances it would seem to be folly or worse to revive abstract ideas of justice or the requirements of humanity for application in a single isolated instance, when such action must necessarily give rise to further unrest and bring a considerable portion of the world about Great Britain's ears. Virtue coupled with inconsistency may become little better than a vice. A Government that shrinks from the publication of Count de Salis's report on conditions in Montenegro cannot afford to be eloquent over an incorrigible Turkey; and the nations who had decided that the world would be better if the Turks were ejected from Europe, may do well to reflect on their own shortcomings or on those of their Governments, and agree to postpone the millennium on earth. Certain it is that the Turkish settlement stands to affect no one apart from the Turk as closely as it does Great Britain; and for Great Britain it is a matter of the gravest moment. It is to be hoped, therefore, that the British representatives at the Paris Conference next week will be better primed than they have hitherto been in regard to the bearing that their decisions on Near Eastern questions will have on the future of the British Empire, and that they will not sacrifice British interests for the *beaux yeux* of any Ally.

HASHISH.

(From a Correspondent.)

Those who have lived in Egypt for any length of time, and mixed with the people, have no doubt come across the "hashásh"—*i.e.*, the man who eats, drinks, chews, or smokes hashish, the intoxicating product of the forbidden hemp. The habit still prevails largely, many suffer in health from it, and it is responsible for a good deal of the insanity which is treated in asylums. The term "hashásh" is one of opprobrium. Most of us know that the word assassin is derived from "hashashin" (Latiné, assassin) the plural of hashash. Hashish (Lat., assis), as a generic term, signifies grass or herbage, fresh or dry: specifically it is applied to preparations of hemp (*Cannabis Indica* or *Sativa*), alias benj, beng, bhang, or bhung, the intoxicating or exciting properties of which have long been known in the East. Sometimes the leaves are chewed. For smoking, the young leaves are used, either alone or mixed with tobacco. The result, Lane tells us in his "Modern Egyptians," is to produce boisterous mirth; but it has various other effects, according to the individual and the form in which it is taken. In India it is sometimes taken in a liquid state by both Moslems and Hindus. The hemp leaves, *e.g.*, are pounded either with or without opium and spices (cloves, nutmegs, mace, black pepper, etc.) and drunk with water, milk, the juice of water-melon, or other fruit. Another method is to boil the leaves in butter or fat for some hours, then press out the juice and mix with honey or other sweet substances. This preparation is called *bast* (cheerfulness). In Arabia the vendor of cheerfulness, and sometimes the eater, is called *basti*. Another kind is called *shíreh*.

Hashish is taken largely as an electuary, or conserve. In the streets of Cairo there are little shops called *masháshch*, in which rows of porcelain, or glazed earthenware, jars—generally coloured blue and white—are ranged on shelves. The principal group of these shops is near the mosque of Sultan Kalaûn, in the north of Cairo. They are not like those in the drug and scent bazaars, but a class apart. The jars contain various preparations of hashish, combined with other ingredients, including henbane, opium, hellebore, and datura. The seed capsules of hemp are pounded and mixed with aromatic and sweet substances. The art of preparation is handed down from father to son, and the trade secrets are jealously preserved. The conserve is called *ma'gún* (*maajoun*), and the man who eats or sells it *magúngi* (*maajounji*). The varieties are very numerous. The most common is called *barsh* (*bers*). "One kind," says Lane, "makes the person who takes it manifest his pleasure by singing; another will make him chatter; a third excites to dance; a fourth particularly affects the vision; a fifth is of a sedative nature." As there is such a variety in the quality and strength of the hashish, and the preparation of the ma'gun, and as constitutions differ greatly, it follows that the effects of absorption into the system differ very considerably.

Opium, the less popular rival of hashish, is in Arabic *afiún*, and the person addicted to it an *afiúni*. The epithet is less opprobrious than that of hashásh. The effect of this "elixir of pleasure," which, De Quincey tells us, "has the keys of Paradise," are well known, and perhaps this drug is the base of the ma'gun more often than the hashásh imagines. Hashish is used for stupefying the senses. Thus in the "Thousand and One Nights" we find the companions of Sinbad made drowsy by it; and in another story the faithless wife gives it to her husband in his food, and then goes forth to meet her lover. Some preparations are believed to strengthen the constitution and renovate impaired vigour. Prospero Alpino, who spent some years in Cairo in the reign of our Queen Elizabeth, tells us that a certain quantity was taken daily by the dissolute Ottoman Sultan Murad III., "although he was subject to epilepsy." He discourses at length on various ma'guns, under the titles of Philonium, Bernavi, Theriaca magna, Mithridatium, etc.

Theophile Gautier has given an amusing account of the fortnightly meetings of the "Club des Haschashin" in Paris. But perhaps the best description of the bizarre influences of hashish has been given by M. Charles Richet.* The chief effects are a great exaggeration of all the feelings, including that of *amour propre*. All the senses are strangely affected. The notion of time is completely upset. Seconds appear like years, and minutes like ages, owing to the immense number and variety of ideas flashed through the brain. Visions of space are equally delusive. Objects assume fantastic shapes and sizes, in an atmosphere of dazzling brilliance; they are magnified and multiplied. Thus a single soldier may appear like a host, and a low staircase like Jacob's ladder ascending to the heavens. Rough daubs or paintings transport you to enchanting scenes and landscapes. A slight noise affects the ear like a crash of thunder or the booming of artillery, and dropping water falls like a resounding cataract. Rude music is converted into celestial strains. A word of reproach is felt as an intolerable insult. And all the time there is an entire absence of will and of self-control; you know that your senses are fooling you, but you have no power to resist the spell of the subtle influence. Memory, too, is unimpaired, unless the dose has been too strong; you recollect perfectly what you have said or done. There is often much resemblance to the states of hysteria. M. Richet considers that intoxication by hashish is practically identical with a state of dream or temporary madness. With some persons sleep brings pleasant and fantastic dreams. They are lulled into ecstatic trances or reveries of indescribable beatitude, apparently like those of the dupes of Hassan, the "old man of the mountains."

The sufferings of those who are deprived of the powers to gratify the cravings which habit creates, as in the case of the opium-eater, have been sometimes described. Prospero relates two instances. In one a sailor threw himself into the Nile from a vessel and fled like a maniac to the desert, to the great consternation of his fellow-travellers, who feared they would be held responsible. In the other, a leading camel rider of a caravan on a journey to Jerusalem completely lost the use of his hands and feet, and had to be bound by his companions upon his camel until relief was found.

A resident in the East can indeed both read and hear many an amusing anecdote regarding the eccentricities of those who indulge in this weird and bewitching drug.

NEAR EAST IN PARLIAMENT.

Topics in Parliament.

The subjoined headings are those given in the official report:—Yugoslavia (British Consular Representatives). Roumania (British Trade). Assyria (Christian Population). Demobilisation: Troops in Mesopotamia and Persia. British Army: Gallipoli. India: Miners' Wages.—British Troops (Charge on Indian Revenue).—Indian Army, Mesopotamia (British Officers).—Burma (Moung Tun Shein).—Rice Crop, Burma.—Miners' Hours and Wages, Bengal.—Famine and Epidemic Diseases (Mortality).—Shene Dagon Pagoda, Burma.—Press, Burma. (December 22.) British Army: Troops in Mesopotamia (Leave). Black Sea Army (Malaria). India: Hunter Commission.—Strikes.—Amritsar Disturbances.—Cost of Living and Wages.—Cable Rates.—Germans (Repatriation). (December 23.)

UR JUNCTION.

According to the latest information that has reached us from Lower Mesopotamia, the Busreh-Baghdad Railway was to be opened on January 1, or, at the very latest, January 15. A branch line to Nasiriyeh (at the lower end of the Shatt-el-Hai) leaves the main line, seven miles distant, at Ur (Mugheir), the reputed birthplace of Abraham. These famous ruins, which lie some little distance to the west of the Euphrates, thus seem likely to become known as Ur Junction, reminding one of Mark Twain's lines:

"Ease her; stop her;
Any more for Joppa"

Incidentally, it may be observed, the opening of this railway is likely to lead to a certain tourist traffic, in view of the strong archæological interest of the region traversed by the line.

The tone of the Yemen tribes who lately held up Colonel Jacob's Mission to the Imam of Yemen is, Reuter's Agency is informed, more friendly, and the Imam denies all responsibility for the detention of the party. As already reported, the Mission arrived safely at Hodeida on December 13, and left the same day for Aden.

SCHOOL OF ORIENTAL STUDIES.
London Institution, Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.

For particulars, apply to Sir E. DENISON ROSS, Director.

THE SEASON IN EGYPT.

(From Our Special Correspondent.)

Cairo, December 13.

Demand for Accommodation.

Since my last notes all the steamers arriving at Port Said and Alexandria have landed large numbers of residents and wives of officers of the Army of Occupation, with the result that the demand for accommodation has become even more accentuated than before. The extent of the influx is particularly noticeable at the dances and other social gatherings, and the "crush" is now every bit as bad as at the height of pre-war seasons.

We have quite a collection of literary celebrities here at present. In the first place there is Sir Valentine Chirol, who is soon going up to Luxor for a short stay; then there is Mrs. Alec. Tweedie, who is on her way to India; and Mr. Percy White, the novelist, who has returned to resume his winter activities as lecturer on English literature at the Egyptian University; and now we have Mr. J. A. Spender, who is one of the members of the Milner Mission.

The "Continental."

Great changes are being made at the Continental Hotel, where the grill-room is about to re-open and the reading and music rooms on the right of the hall are being converted into a ball-room with a special parquet floor. This will be a great improvement, for hitherto the weekly dances have been given in one of the side rooms, which has been quite inadequate for the purpose.

The Continental has been the scene of many dinner parties during the past week. Amongst those seen dining there have been Lady Palmer, Sir Edgar and Lady Bernard, who are shortly going on to Khartoum, Lady Fane, Mrs. Alec. Tweedie, Marquis et Marquise di Nobile, and Mr. and Mrs. Pembroke, who are on their way to Upper Egypt; Mrs. and Miss Bird, and Mr. Percy White.

In Upper Egypt.

Mention of Upper Egypt reminds me that many residents are arranging to spend Christmas at Luxor, where the Winter Palace, which during the War made an admirable hospital, has now been re-opened, and where in pre-war days Yuletide witnessed many a merry gathering of Caireines. In this connection it is curious how people out here love change at that festive season. For years Upper Egypt has been the attraction for Cairo residents, whilst Helwan has filled the same place in the hearts of Alexandrines; and this year, notwithstanding that so many have but recently returned from a holiday in Europe, bids fair to prove no exception to the old rule.

The Sultania Opera House opens its doors to-night for the season, and we are all agog with excitement at the prospect of the musical feast which is in store for us until next March. Meanwhile, those who have not been able to reserve seats or to possess their souls in patience have been patronising the Kursaal, where another Italian Opera Company has been giving some excellent performances. I hear, however, that there has been some hitch in the arrangements, and that this company may not remain after Christmas—which is a great pity, for we could well do with the double turn, since the Sultania Opera House is so small. I am not surprised, however, at any good singers objecting to singing in a house where smoking is allowed, as is the case at the Kursaal.

"Shepheard's."

At Shepheard's the weekly dances are still as popular as ever, and the scene in the grill-room and restaurant on Saturday evening is exceedingly gay and brilliant. It is quite like olden times to sit on the historic balcony at tea-time watching the kaleidoscopic scene, which all habitués of Egypt know so well, whilst in the evenings there is always a great rush for the Egyptian hall, where one can rest so cosily after dinner on the cold nights that will soon be with us. An excellent orchestra adds to the enjoyment, and, as often as not, after it has departed for the night some music-loving subaltern sits himself down at the piano and delights his soul—and his audience—with well-known classical pieces and songs. Amongst those staying at this hotel are the Comtesse della Salla, Sir Arthur Du Cros, Brigadier-General Deedes, Sir Valentine Chirol, the Hon. Mrs. Annesley, and Brigadier-General and Mrs. Morris.

In my notes a week or so ago I gave details of the Armistice ball held at Shepheard's Hotel, under the patronage of Lord and Lady Allenby and the Hon. Hampson Gary. The financial results appear to be most gratifying, for it is announced that a cheque for £E367 has been handed over to the Anglo-American Hospital. This handsome cheque will be most welcome to those responsible for the administration of this deserving institution, though, like Oliver Twist, they, with reason, cry out for more.

An Enjoyable Dance.

Private parties and dances are becoming more and more the fashion, and a most enjoyable dance was given the other evening by the Countess of Stradbroke at her villa at Ghezireh. The dance, which was given for her two daughters, took place on Lady Stradbroke's birthday, and amongst those present were Lady Fane, Sir Gilbert and Lady Clayton, the Countess d'Ardent, Count and Countess Serionne, Colonel and Mrs. Castle-Smith.

Racing still continues as actively as ever. During the past week we had two Derby meetings, one at Ghezireh and the other to-day at Heliopolis. The former meeting was attended by Lord and Lady Allenby, and both attracted a very large crowd. In fact, all Cairo was there, with quite a number of Alexandria folk thrown in.

Open-air Delights.

This is the time of year when gardens in Egypt are approaching their best, and those who take the trouble to visit the Zoo or go down to the Barrage are well repaid, for both places are in a delightful condition. The Zoo is always one of the great attractions. It contains a most excellent collection of the animal inhabitants of the Dark Continent, all of which seem to flourish under the able care of Captain Flower, whose wife takes an active interest in his work. The Zoo used to be one of the favourite haunts of the late Lord Cromer, and those who visit it can well understand his affection for the spot. As for the Barrage, the gardens, with Mougel Bey's masterpiece, constitute a most picturesque place in which to while away an afternoon. But the most ideal way of visiting it is to go by train after lunch, have one's tea in the excellent tea-garden, and return by water; and if one chooses a full-moon, one is able to conclude an enjoyable day with a most attractive evening view of the Nile.

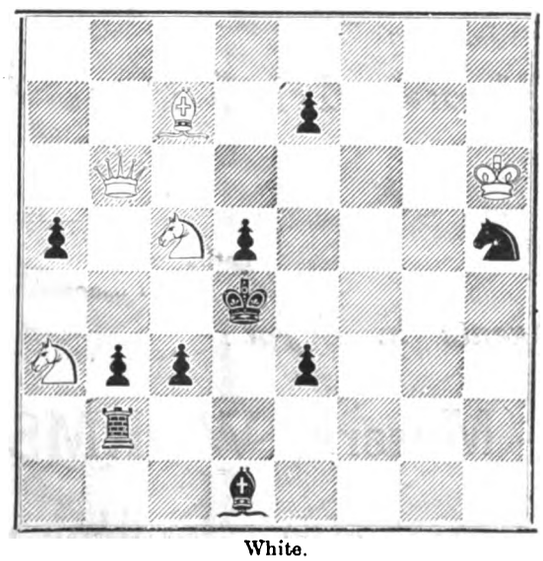
The Milner Mission.

The Milner Mission is installed at the Semiramis. Those who knew this palatial hotel in pre-war days will be surprised to find how it has been altered within. The reception rooms on the ground floor have been converted into offices for the Mission. A large partition runs down the centre of the magnificent entrance hall, to separate the Ministerial quarters from those of the Mission, and another partition has been run across the ball-room, to divide it into a lounge and dining-room, with an emergency staircase, giving access to the living rooms above, the main staircase being in the portion reserved to the Government. Notwithstanding these ugly arrangements, the Mission have very comfortable quarters, and their rooms on the first floor have a magnificent view of the Nile. There is only one lady in the party, Mrs. Spender, the wife of Mr. J. A. Spender, but it is understood that Lady Rodd will join her husband after Christmas.

CHESS.

PROBLEM No. 8.

Black.



White.

White to mate in three.

The above problem by Dr. E. Palkoska, Bohemia, was placed first (*ex æquo*) at the Barcelona Congress of 1914.

Solution to Problem No. 7.—1. B—Kt5 if B—Kt 2, Kt—K8; if any other B x P mate.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

The first step in the complete rehabilitation of Roumania has been taken with the conclusion of the recent election covering the whole of Greater Roumania. As a result, the National Liberals, under M. Bratiano, go out of office, and the Transylvanians succeed to power. It cannot be too strongly emphasised that, given wise government, the prospects of the country are most favourable. There will be no stint of production—cereals, oil, and a gradually increasing industrial output. But the first desideratum is a complete overhauling of the finances of the country. M. Vaida-Vaevod, the new Prime Minister, will, it is to be hoped, seek expert advice on this point outside Roumania, with a view to allowing the country to benefit from the maximum of foreign support. A complication is introduced by the second currency of Transylvania, and it is most important that no steps should be taken in regard to it without adequate consideration of the effect upon Roumania's position in world finance.

***

The figures for Greek revenue and expenditure in 1918-19, which were given by M. Negropontis in his Budget speech, illustrate the nature of the problem with which the Greek Government has been faced in regard to the reorganisation of the State's finances. The revenue for that period amounted to 450,269,284 drachmae, while the expenditure was 1,241,714,338 drachmae. To the revenue has to be added, however, the proceeds of loans amounting to 798,421,989 drachmae, giving a credit balance of 6,976,935 drachmae. In recent months a very striking improvement has been noticeable in the Greek revenue returns, and for the current year M. Negropontis estimates the revenue at 1,147,669,394 drachmae, which would be almost sufficient if the expenditure remained stationary, but the estimate on the other side is also higher, though not to anything like the same extent, at 1,541,330,749 drachmae. As the Minister pointed out, however, the revenue is continually increasing, and that despite the fact that "the Government, in spite of all sacrifices made, has not been able yet to organise the newly-acquired provinces," and so it is extremely probable when the accounts come to be made up that the deficit, if there is one, will be very small.

***

Seldom has a new company been launched on its way under more influential auspices than the Anglo-French Middle East Corporation. Among the directors are the Earl of Drogheda, a director of the Dunlop Rubber Company; Lord Inchcape, chairman of the P. and O., and a director of the Anglo-Persian Oil Company, and many other important enterprises; Sir T. Royden, Bart., deputy-chairman of the Cunard, and a director of the British Union Oil Company and the Pacific Oilfields. The objects of the company are to acquire and work oil and other minerals in the Middle East. Assured of the strongest support on both sides of the Channel, it may be assumed that the corporation will play an important part in the development of a region in which the interests of the two countries are to no inconsiderable extent identical.

***

An interesting reference is made in the December issue of the *Journal* of the British Chamber of Commerce of Egypt to the recent placing in America of an order for locomotives for the Egyptian State Railways. Our contemporary had previously put forward considerations in favour of the acceptance of British offers which "should more than counterbalance any ordinary difference in price." "From the figures which have since been put before the Chamber in correspondence with the Railways Administration," says the *Journal*, "it appears that the difference is more than ordinary, so far as price goes, and the time factor is heavily in favour of the U.S.A. In the circumstances one cannot hold the E.S.R. to blame, as they are in pressing need of locomotives to replace those worn out during the War. The trouble lies with the U.K., where things are not as they should be."

***

Our contemporary goes on to complain of the lack of interest sometimes shown by British manufacturers in the export trade. "It is admitted," says the *Journal*, "that the demands of labour at home, in conjunction with underproduction, do not make matters too simple for the firms concerned, but even while giving this its due weight it cannot be denied that while sufficient work is in hand the heads of the firms concerned do not worry about foreign business." I am afraid there is only too much truth in this criticism. The fact is that at the present time the home market can absorb almost unlimited supplies, and some firms are only too willing to content themselves with the easy trade which is at their door, so to speak, leaving markets elsewhere alone until necessity forces them to exercise enterprise and to look further afield.

***

Needless to say, this policy, if it were carried out on any wide scale, would be fraught with tremendous dangers for the future. The right course to adopt at the present time is the very opposite of this. Even if it means neglecting the home market to a very considerable extent and allowing rivals to obtain a substantial footing here, it is the duty of manufacturers to spare no efforts to meet at any rate some part of the requirements in outside markets, particularly in those of the Near East, where an opportunity such as is now presented is never likely to recur. In almost every one of the markets of that region there is a shortage of goods which the United Kingdom can supply, and especially in the Balkans the countries are looking to us to supply their needs. They will not look in vain long, for other countries will simply step in and seize the openings which we have neglected. Once more I urge British manufacturers to be up and doing and to make 1920 a worthy starting point of a new era in British commercial history.

***

Commerce and industry are well represented in the New Year's Honours List. An award of special interest is the baronetcy conferred on Mr. J. T. Cargill, chairman of the Burmah Oil Company, while interesting appointments in the India Office list are the knighthoods conferred on Mr. M. N. Hogg, partner in Forbes, Forbes, Campbell and Company, Bombay; Mr. Robert Stanes, the well-known Madras merchant; Mr. P. W. Newson, senior partner in the firm of Jardine, Skinner and Co., of Calcutta; and Mr. Robert Taylor, senior partner in the firm of John Taylor and Sons, Limited, and a director of the Mysore Gold Mining Company.

***

Particulars are now available of the proposals for the amalgamation of the Indian Presidency Banks. The scheme is that the capital of the new bank, which will be called the Imperial Bank of India, shall be Rs.11,25,00,000, divided into shares of Rs.500 each, while the paid-up capital will be Rs.5,62,50,000. This is considerably more than the paid-up capital of the three Presidency banks, and it is proposed that the balance shall be provided by the issue of 150,000 shares of Rs.500 each, on which Rs.125 will be payable; 80,000 of these shares will be allotted at par to the shareholders of the Bank of Bengal, 40,000 at par to those of the Bank of Bombay, and the balance of 30,000 at the price of Rs.225 per share to those of the Bank of Madras. Unlike the Presidency banks, there will be a branch of the Imperial Bank of India in London, and the bank will open 100 new branches in the next five years.

THE INDIAN MARKET.

II.—Effect of Industrial Development.

It needs no emphasis that the growing industrial development of India is bound to have a marked effect on the import trade. Mr. Ainscough, the Senior British Trade Commissioner for India and Ceylon, points out in his report that a new era is dawning for India—the era of industrial expansion—during which the great Dependency will gradually take her place as an important manufacturing country, and a valuable industrial asset to the Empire. Naturally this process will involve far-reaching changes in the character of the Indian market. Mr. Ainscough mentions three ways in which the development of Indian industries will affect the United Kingdom maker and exporter.

The first, which in his view is probably the least important, is that the imports of many articles which can be manufactured locally, but which were formerly imported from the United Kingdom, will be greatly reduced. To what extent this factor will operate will depend, of course, on the prevision shown by British traders. It is difficult to see how in any case much dislocation of trade can be avoided for the time being, and it is not improbable that some firms will sustain serious losses. But this should be merely a temporary phase, and in the vastly greater market that India will present in due course as the result of the increased purchasing power of the individual Indian it is confidently to be anticipated that British traders will find far more than compensation. Mr. Ainscough looks forward to a great expansion of British trade with India in the near future, and believes that India will not only remain the principal outlet in the world for our manufactures, but that she will increase her lead over other consuming markets.

It is further pointed out that the development of many industries, and particularly the iron and steel, engineering, chemical, electro-chemical and electro-metallurgical industries, will provide great scope for British capitalists and industrialists to erect works in India, and so take the fullest advantage of India's natural resources for the good of the Empire. While the country possesses raw materials and unskilled labour in large quantities, it needs capital, directing force and ability, experience of modern and scientific conditions of industry, and expert foremen and artisans to train the available labour. Obviously these must mainly, if not entirely, be provided from overseas, and Mr. Ainscough points out that unless United Kingdom capitalists and manufacturers are prepared to seize the opportunities offered, there is a risk of American and Japanese interests becoming established in the country. Several United Kingdom makers, it is remarked, have already made arrangements for the erection of works in India, and many more are conducting negotiations to that end, and others would be well-advised to investigate the prospects.

Mr. Ainscough recommends home industrialists who may be examining the possibilities of India as a field for their manufacturing activities carefully to consider whether it would not be to their advantage to ally themselves with one or other of the prominent British firms of managing agents in India in order to secure the benefit of their experience of local conditions, management of Indian labour, and knowledge of the market, both as regards the purchase of raw materials and also the disposal of the finished products, and so avoid the many pitfalls attending inexperienced enterprise in a country such as India, with its peculiar conditions of climate and people.

The third way is through the desire to render India as far as possible self-supporting This spirit is being manifested in many ways, Mr. Ainscough points out, perhaps the most obvious one being the gradual weakening of the London buying connections. As regards the proposed development which will leave to the Stores Department of the India Office only indents for goods which it has been found cannot be obtained in London, Mr. Ainscough says that considerable injustice will be done to Home makers unless the Indian Controller-General of Stores is authorised also to purchase direct from the local branches of home firms and so insure that these organisations have a fair chance of tendering for contracts which may be placed locally. In any event, adds Mr. Ainscough, certain British manufacturing engineers will no longer be able to rely upon receiving all their orders for Government account in London as they have done in the past, and they should, without delay, open their own offices in India, staff them with experienced salesmen and engineers, and, in the case of heavy plant, with a competent erecting staff.

The Tunisian date crop is estimated at 77,161,000 lb.

Messrs. Charles Barker and Sons, Limited, have transferred their offices from White Lion Court, Cornhill, E.C.3, to 31, Budge Row, Cannon Street, E.C.4.

The traffic receipts of the Egyptian Delta Light Railways, Limited, for the ten days ended November 30 amounted to £E17,003, making the total for the year £E228,608. The corresponding figures for 1918 were £E13,312 and £E232,421.

TRADE AT BATOUM.

Competition Reviving.

H.M. Consul at Batoum, in a recent report, says :—The number of steamers that have visited Batoum this year is comparatively small. Outside British transports and Government ships, the number since the resumption of trade has been 95 steamers. Of these 29 were under the British flag and 6 under the American flag. Small craft, including steamers plying between here and Constantinople, are numerous. They trade principally under the British, Greek, and Indian colours. Only about ten tank steamers have loaded oil here. They were :—One British steamer, about 3,000 tons, for Great Britain, two British steamers, about 6,000, for Turkey, one Belgian steamer, about 3,000 tons, for Antwerp, two Belgian steamers, about 3,500 tons, for Odessa, three Russian steamers, about 7,000 tons, for Odessa, one Russian steamer, about 1,750 tons, for Marseilles. The oil exports have quite recently taken a spurt, and healthy development before long is foreshadowed in this branch of trade. The approximate quantity of manganese ore shipped at Batoum and Poti since the Black Sea was reopened to trade has been, as near as possible, 25,000 tons. Of this quantity about two-thirds have gone to the United Kingdom, and one-third to American ports. About 2,000 tons of tobacco have been loaded, principally at Batoum and Soukoum, for the United Kingdom.

The principal importers of manufactured goods (such as textiles, boots, shoes, stationery, perfumery, soap, screws, nails, enamelled iron ware utensils, leather and sulphate of copper) and colonial produce (as for instance, Indian tea, coffee, cocoa, sugar, etc.) are British firms. The Italians come next in rotation with a similar class of goods (except colonial goods), but cheap and much inferior in quality to the British-made article. They, nevertheless, find a ready sale at profitable prices for their merchandise. The French follow with more or less similar goods. The volume of their imports has hitherto not been great. A certain proportion—about 30 per cent. of the import trade—is carried on by small merchants of a variety of nationalities who travel backward and forward between Batoum and Constantinople. They buy goods of every conceivable description at the latter place, and bring them to Batoum, where they are sold to small dealers and merchants who come here from the inland districts to purchase their requirements.

Members of the American Relief Committees are also busily engaged in opening up trade with America. Hitherto, little else but flour and clothing, for distribution to Armenian refugees and persons of other nationalities in distress, have reached this country from the United States, but the attention which is being paid to the Trans-Caucasus by American interests points to an appreciable increase in American trade in the near future. The Italians are no less active. Their Mission at Tiflis is striving, by all means possible, to acquire an ascending position in the industries and trade of Transcaucasia. A striking example of their activity is the recent establishment by the Lloyd Triestino of a fortnightly service of passenger and cargo steamers, via Northern Black Sea and Caucasian coast ports, from Trieste to Batoum and back, calling at Poti. It is just possible that the new line may divert some of the trade, which is now coming to Batoum, through Poti to Georgia.

MALTA TRADE NOTES.

(From Our Own Correspondent.)

Malta, December 14.

A Government Order has been issued prohibiting the manufacture from flour of any article of food other than bread, paste, cheese-cakes, and local biscuits.

The Control Board announces that arrangements have been made with the Egyptian Government to allow the exportation of cotton seed oil and cotton seed cake from that country. Permission has also been obtained to export eighty head of cattle from Tunis.

LANCASHIRE COTTON.

(From Our Own Correspondent.)

Manchester, Wednesday.

The market is distinctly dearer than a week ago. Raw cotton prices have advanced to a considerable extent, and spinners and manufacturers have not been slow to put up their quotations for yarn and cloth. The tone in all quarters has been very strong, bullish sentiment being pronounced. Considering the time of the year, trade has been active. A substantial rise has occurred in Egyptian cotton values. There have been rumours of smaller estimates of the yield, and, according to some advices, the growth will not be more than 5,500,000 kantars. There has been a revival of buying from the trade. Egyptian yarns have been distinctly dearer, and some producers have withdrawn quotations for the time being. Supplies seem to be scarcer than ever, and it has been quite impossible to place orders without paying full rates. In piece goods for Near Eastern outlets there has been a persistent demand with a considerable turnover in a variety of cloths. Shippers to Egypt and the Levant have bought freely. An enormous inquiry has been met with for India, and although many offers have been too low, Manchester merchants have bought speculatively on an extensive scale. After being rather quieter, there has been more activity for China. Steady support has been given by shippers to South America. An important advance has taken place in American cotton prices. Yarns have been put up very firmly with an encouraging offtake in home counts. A healthy business continues to be done in shipping yarns, especially for India.

December 22.

The conditions prevailing in the market show very little change. Spinners and manufacturers remain in a very strong position. For anything wanted full rates have to be paid. Some falling off in trade must now be expected until after the turn of the year. Prices in Egyptian cotton remain very stiff. No news of any importance has come through relating to the crop. The disturbances abroad cause some anxiety. A strong feeling has again been reported in yarns made from Egyptian cotton. There is an encouraging demand for the supplies available, which, of course, are very limited. In cloth for Egypt steady buying has taken place, and the confidence of certain shippers in purchasing for delivery towards the end of next year has caused some comment. Active dealings have also transpired for the outlets of the Levant. Home trade fabrics have been in healthy request. American yarns have been very firm in quotation, and a moderate business has been done. Export yarns continue to attract considerable attention, especially for India, China, and Holland. Producers of extra hards suitable for the Levant are deeply sold.

PARIS-CONSTANTINOPLE TRAINS.

The following memorandum on the train service between Paris and Constantinople has been forwarded by the British High Commissioner at the latter city :—

A train leaves Paris (Gare de Lyons) and Constantinople (Birkedji) daily. It contains six wagon-lits and one restaurant car, each wagon-lit being numbered. The restaurant car runs to Bucharest via Brodi, but there is no restaurant car service between Belgrade and Brodi. There is no direct wagon-lit service between Constantinople and Belgrade, but there is a wagon-lit service from Constantinople as far as Sofia only, three days a week, and the usual daily train leaving 14-15 hours on Sundays, Wednesdays, and Fridays; and from Sofia to Constantinople on Mondays, Wednesdays, and Saturdays. The first-class fare between Constantinople and Belgrade is approximately £10 sterling, including wagon-lit accommodation as far as Sofia. Between Belgrade and Paris the first-class fare is 600 francs, wagon-lit charge 207 francs extra.

Civilians travelling through Serbia must have their passports viséd before leaving the frontier towns of Belgrade or Tsaribrod. These must be viséd by : (1) Serbian Prefecture; (2) Serbian G.H.Q. Civilians travelling Belgrade to Paris must have their passports viséd by (1) Serbs; (2) Italians; (3) Swiss. The same applies for journey between Paris and Belgrade. The journey takes two days between Paris and Belgrade, and three days between Paris and Bucharest. The journey takes four days between Constantinople and Belgrade, and between Constantinople and Bucharest. Owing to lack of rolling stock and bad conditions of track, there is an improvised service between Tsaribrod and Pirot, consisting usually of one ordinary box truck and the engine. Passengers are thus obliged to transfer their baggage, etc., into the improvised train for the short journey before joining the connecting mail train at Pirot. This journey takes half-an-hour only.

INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following weekly cabled news received from the Director-General of Commercial Intelligence, dated December 17 :—

Rain general in Burma and North-West Frontier Province. Local in the Punjab, United Provinces of Agra and Oudh and Southern India.

During the week ending December 6 sowing spring crops and harvesting autumn crops continued North-Eastern and Southern India. Sowings continued Madras. Plucking tea continued Assam. Wheat sowing progressed Punjab. Cotton plucking continued everywhere. Almost completed Burma. General crop conditions good, but rain much needed to the north-west.

Bombay cotton market dull. Fully good broach, April-May, Rs. 536. Piece-goods market firm, with steady demand. Calcutta jute market tending upwards owing to increase of inquiries.

No change in bank rate.

Guzerat light feeder railways reconnaissance survey by state railways engineer sanctioned.

December 23.

Light rain in North-West Frontier Province, Lower Burma and Southern India. Dry elsewhere.

During the week ending December 13 sowing spring crops continued in North-Western and Western India. Neared completion North-Eastern and Central India. Harvesting autumn crops progressed Bombay, Central India and to the North-West. Harvesting paddy continued North-Eastern and Southern India. Sowing progressed Madras. Cotton plucking completed Burma, continued elsewhere. Plucking tea continued Assam. General crop conditions good. Useful rain has fallen in Punjab, but more badly wanted there.

Bombay cotton market steady. Fully good broach April-May Rs.552. Piece goods market firm, with demand slightly reduced. Calcutta gunny market heavy goods improved demand with steady prices. Hessians quiet.

Nanjangud Palakodu Dalavayhalli Railway reconnaissance survey fifty miles metre gauge railway by South Indian Railway sanctioned.

No change in Bank rate.

RELIEF WORK IN INDIA.

The India Office has issued the following telegram received from the Viceroy, Revenue and Agriculture Department, dated December 19 :—Our telegram dated December 12. Relief works in Thaton district of Burma have been practically stopped, and famine operations in Hutta Birioi and Palur estates of Ganjam district in Madras Presidency have been closed. Numbers relieved :—Burma : Works, 2,700; gratuitous, 100. Feudatory States of Orissa : Works, 1,216; gratuitous, not reported. Hyderabad : Works, 8,000; gratuitous, 3,000. Madras : Works, 297; gratuitous, 2,212.

The traffic receipts of the Smyrna-Aidin Railway for the week ended December 6 amounted to £9,119.

It is reported that the practice is increasing in Germany of issuing preference shares having several times the voting power of ordinary shares, so as to prevent foreigners from obtaining a majority control of the companies concerned.

SWEDISH ORIENT LINE.

Direct regular steamship service with about weekly sailings outwards and homewards between

GOTHENBURG and ALGIERS, PIRÆUS, SMYRNA and SALONICA.

Motor Show Reflections.

VII.

(From Our Own Correspondent.)

Of all the exhibits at the Motor Show none attracted more attention than did that of Sir William Angus, Sanderson and Co., Ltd., of Birtley, Durham. It will be remembered that some little time ago this firm announced their intention of going in for mass production on the largest possible scale, and they outlined a scheme of action which instantly commended itself to the public. It was for the production of a car of high quality which could be offered at a price which would bring it within the reach of practically every buyer, and it was made clear that this laudable scheme could only be realised by an immense output in order that all overhead and similar charges per car could be cut down to an absolute minimum.

Briefly, the method on which this firm are working is the purchase of all specialised parts from specialist makers, instead of attempting to make every part themselves. In this way, too, the specialist makers will be assured of such large orders as will reduce their production costs below their present figure, and thus will certainly lead to a higher quality of production at a lower price. As each of these sub-manufacturers will represent the highest quality of the respective products, it follows that the finished car, which will be assembled by the firm at the Birtley works, should be quite the best of its class. The firm, it may be recalled, have a reputation second to none as body builders, and it may be taken that in this respect also the finished car will hold its own against all comers.

The open touring car shown rivalled the coupe in appearance, and for those who wish for a car with somewhat greater utility, a model with a wide dickey seat is promised. The chassis is the same for all models, and, briefly, has a 14-h.p. engine, and is constructed of components made by leading specialists, and is practically the first of its kind to be produced in this country on a scale approximation to that on which the largest quantity-production firms in the world turn out their products.

The three models shown were fitted with the exceptionally powerful and highly efficient 4-cylinder Tyler engine, developing just over 14-h.p. on the brake. I have personally tested this engine, and can speak as to its general high quality, soundness of design, and robustness of construction. The cylinders are of 76 by 127 millimetres bore and stroke, and cooling is by the well-known and well-tested thermo-syphon system. Every moving part is effectively lubricated by forced oil feed, and the design is such that whilst every part of the engine and every bearing is amply lubricated, it is impossible to over-oil any part of the mechanism.

The ignition is by a high-grade British-made magneto of the high-tension type, and a very wide range of spark is obtainable. The Zenith carburetter, also British made, is a highly efficient device, giving an even and adequate supply of gas to meet every requirement, from slow running in traffic to quick acceleration on bad surfaces or heavy gradients. The gear box provides three forward speeds and a reverse, and is fitted with a central ball change, thus making for exceptionally easy manipulation. The transmission is by cone clutch and final bevel drive, and both rear wheels are fitted with powerful brakes of the internal expanding type.

The car is fitted with disc wheels, carrying 815 by 105 millimetre tyres. The wheel base is 10 ft., with a 4 ft. 4 in. wheel track, and a large amount of clearance is provided, making the car specially suitable for use in countries where the roads are bad and of uneven surface. An electric dynamo for lighting and an electric self-starting set is provided, the whole of the electrical equipment being by Messrs. Joseph Lucas, of Birmingham. Transmission is by Messrs. E. G. Wrigley and Co., Ltd., and the frames, wheels, springs, and other component parts are by equally well-known makers of high-class parts.

Another excellent model shown was the 15.9-h.p. Humber car made by the well-known pioneers of road-using vehicles, Messrs. Humber, Ltd., of Coventry. The firm also showed a 10-h.p. model, which is certainly one of the finest things of its class I have yet had the pleasure of seeing and testing. This model has a wheel base of 8 ft. 9½ ins., a wheel track of 4 ft. 7 ins., and over-all length of 12 ft. 10 ins., and an over-all width of 5 ft. 6 ins.

It is fitted with a 4-cylinder engine of 65 by 120 mm. bore and stroke, has four forward speeds and a reverse, and the design of the gear box is such that all gears can be readily removed for inspection if required. The ignition and throttle levers are placed on the top of the steering wheel in an accessible position, and there is a foot accelerator operating the throttle independently of the hand lever.

MISCELLANEOUS TOPICS.

Greek Railway Extension.

It is reported from Paris that a party of fifty French railway experts have left Paris for Athens to supervise the reorganisation of the Greek railways, which, it is stated, are to be materially extended after the coming into force of the Treaty of Versailles. The most important extension is the new line between Gida, on the Salonika-Monastir line, and Pappapouli, on the Thessalian frontier. The distance is about fifty-six miles, and the line runs along the Vistritza valley and the sea coast to Katerina and Pappapouli, where it joins the line to Larissa, of the Piraeus-Athens-Larissa Railway. The chief importance of this new line running along the coast lies in the fact that it links up the European, or Continental, railways with those of Greece. Thus passengers from Paris or any other Continental capital will be able to go by train to Athens in sixty to seventy hours, and thence to Alexandria by boat in forty-four hours. The construction of this new line was comparatively rapidly completed. Twenty new locomotive engines and the rest of the rolling stock were ordered in America, and are now ready for service. Owing to the war, several iron bridges which had been ordered in France could not be ready and wooden bridges had to be constructed. Some of them, undoubtedly, have already been replaced by iron bridges.

Salonika-Dedeagach Line.

Another important railway line is the Salonika-Dedeagach line. Its length is 510 kilometres (316 miles). This line leaving Salonika passes Kilindir, Demirhissar, Serres, and Drama, thence through the narrow passes of Drama to Xanthi, the famous tobacco place; from Xanthi it proceeds to Gioumulzina and Dedeagach. From Drama to Xanthi the railway passes through thirty tunnels, which, with the great Demirhissar iron bridge, constitute the most noteworthy technical works in this line. When the train comes out of the last tunnel the passengers have a most beautiful view before them—the great plain of Xanthi covered with tobacco plantations and picturesque Oriental farms. To the south of Xanthi is Yenitje, of tobacco fame, and Porto Lagos, the seaport of Xanthi. Like the whole net of the Oriental Railway, this Salonika-Dedeagach line is single and of narrow gauge. 1.45 metre (4 ft. 8 in.), and it was constructed in 1892 by a French company which had the concession from Turkey for ninety-nine years, with a guarantee that if the receipts per kilometre were less than 15,500 frs the Turkish Government should pay to the company the difference to make up that amount. But up to 1909 the receipts of this line never were more than 6,500 frs. per kilometre and in that year the Turkish Government had to pay the company 4,758,852 frs. This obligation of Turkey, according to treaties, has been taken up by Greece. But it is expected that with the recent political changes in that region and the railway policy of M. Venizelos, who proposes to unite all the Greek railways under one control, by which he believes a colossal economy of capital will be effected, this line, as well as all the Greek railways, will work at a good profit. It is very probable that the French railway experts who have left for Greece are to assist in a reorganisation of the Greek railways according to M. Venizelos' programme.

Wealth in Lignite.

We have had occasion in previous engineering notes to point out the abundance of lignite supplies that can be obtained in almost all the regions adjoining the Eastern Mediterranean coast, and have emphasised the fact that where lignite is readily procurable there the means of producing power cheaply exists. It is very satisfactory to hear that great interest is now being shown in neglected or inadequately worked mines in those regions; thus prospectors are seen about in search of outcrops of the erstwhile neglected mineral. We may point out that lignite is an excellent medium for use in the same way as ordinary coal for raising steam, etc. For carbonised lignite is now prepared for use in suction power-gas producers, and for this use it is unexcelled by any other form of fuel. In chemical composition it resembles anthracite. By carbonising the lignite the objectionable tar found in coals containing a substantial quantity of volatile matter is removed, and the gas goes to the cylinder of the gas-engine free of tar and clean. For the production of power in this way carbonised lignite is fully equal to anthracite, charcoal, or bituminous coke, the standard forms of fuel for that purpose.

Sulphate of Ammonia from Lignite.

Recent discoveries proved that there is still more, hitherto unknown, wealth in the lignite. Raw lignite, just as it is mined, when used in by-product gas-producers, makes sulphate of ammonia, producer-gas, and some tars of undetermined value; there is no solid residue except ash. Lignite carries on the average about 1.40 per cent. of nitrogen. If this nitrogen were wholly recovered as sulphate of ammonia the yield would be about 147 lb. per ton of lignite. This theoretical yield could not, of course, be obtained in commercial practice; the actual yield of sulphate of ammonia per ton of lignite gasified would be from 70 to 80 lb. The ammonia is contained in the gas and gas-water. It may be recovered as ammonium sulphate, a valuable fertiliser, as anhydrous ammonia for refrigeration and other commercial purposes, or it may be treated as the source of other nitrogen products, some of which are of vital importance in the manufacture of explosives. The fact that lignite does not coke in the sense that bituminous coal does, but rather crumbles on being carbonised, makes possible a continuous and comparatively inexpensive distilling process. It also parts with its volatile contents more readily than does bituminous coal. The whole process is mechanical.

NEAR EAST MARKETS.

London Produce Report.

Currants and Sultanas.—Supplies of currants are reported to be adequate for present requirements. There is, however, a marked scarcity of sultanas. The difficulties of distribution are still serious.

Coffee.—The market has had the usual dull holiday tendency, and there have been few changes in prices. The futures market has been steady. Quotations are March, 120s.; May, 116s.; July, 113s. 6d.; September, 112s.

Sugar.—With the commencement of the present week Government control came into operation. There has been a good demand for home refined at the official rates.

Oilseeds.—There has been little doing. Linseed was steady for spot, but rather weaker for distant positions. Rapeseed has been firm with Toria to Hull, January to March, at 46s. Cottonseed has been very steady. Egyptian has been done at 24s. spot.

Oilcakes, etc.—Once again there is little to report as regards oilcakes. Linseed cake has been in fair demand at 500s., and cottonseed cake, coconut cake, and ground nut cake have also been in request. Oils have been firm with linseed at 107s. 3d., January to April.

BEYROUT NOTES.

(From a Beyrout Correspondent.)

Trade is not what it used to be. Merchants are rather waiting to see what effect Haifa will have on their trade, and fear it will take much of the Mesopotamian trade from them. Their ambition now is to develop trade with Mesopotamia and to induce their *emigrés* to go there instead of to America and other places. At present it looks as if the Mesopotamian trade routes would pass them by on the north viâ Aleppo to Constantinople or on the south to Haifa. Before the war a company was formed to run carriages from Aleppo to Baghdad to open up trade. The journey was to take ten days After five months the company had to go into liquidation because the Turkish Government refused to help them with a grant of £100 a month, although it was pointed out that the trips already made had increased the trade of both cities enormously. The Syrian is fully alive to the fact that Mesopotamia could be as rich as Egypt, but he knows well that it must first have labour, good communications, and a stable Government. Given the last two, it is thought that Syria could produce much of the labour, and would hope for trade in return. It is unlikely that the French will be able to put much trade through these ports since the Arabs command the railways, and will refuse to handle French goods except at exorbitant rates.

OPIUM REPORT.

Messrs. Barker Bros., Smyrna, report as follows for the week ended December 6:—We have to report a very active market, the sales amounting to 111 cases, principally for the Far Eastern markets, at prices ranging from 14s. to 20s. as to quality. The exchange for cheque on London stands now at Ps. 360 per £1 sterling, and dollar cheque at 1.12 dollars per one Turkish paper pound of Ps. 100.

For the week ended December 13 Messrs. Barker Bros. report:—Our market has been again very active this week, with sales amounting to 68 cases of manufacturing descriptions at 15s. 6d. to 20s., and soft shipping at 21s. The exchange has advanced to Ps. 370 for sterling cheque per pound, and dollars 1.05 per Turkish paper pound. Our opium market closed very firm, however, with plenty of buyers, who wish to profit now with the more favourable exchange, so we expect higher prices will be paid next week for opium. The arrivals are 1,210 cases, against 80 at same date last year.

SHIPPING INTELLIGENCE.

Forthcoming Sailings.

The Papayanni Line s.s. Austrian, for Malta and Alexandria, leaves Liverpool on January 3. The same company's s.s. Serbino, for Smyrna and Constantinople, will leave Liverpool on January 10.

The Bibby Line s.s. Derbyshire leaves Liverpool for Rangoon on January 7.

The Johnston Line s.s. Wingate, for Piræus, Volo, Salonika, Bourgas, Varna, and Constantza, closes for cargo at Liverpool on January 10.

The Moss Line s.s. Siptah, for Gibraltar, Malta, Syra, Smyrna, and Constantinople, will leave Liverpool on January 6.

The Anchor Line s.s. Castalia, for Bombay, will leave Glasgow on January 12 and Liverpool on January 17.

Shipping Notes.

The first sailing from Philippeville and Bône, for Ajaccio, of the s.s. Titania, which is to effect a regular service between Algeria and Corsica, took place on December 21.

The trial trip took place, on December 23, of the steel screw steamer Gondia, built by Messrs. Wm. Gray and Co. (1918), Ltd., West Hartlepool, for the British India Steam Navigation Company, Ltd. This vessel, which is 413 ft. in length, has a deadweight carrying capacity of 8,000 tons, possessing a full equipment of winches and cargo gear, electric lighting, etc. Her engines—triple expansion—have been supplied by the Central Marine Engine Works. The trial was entirely satisfactory in every respect.

The steel screw steamer Mandasor, built by Messrs. William Hamilton and Co., Ltd., Port Glasgow, to the order of the Anchor-Brocklebank Line for their Eastern trade, was recently successfully launched. Her length is 413 ft., and she has a d.w. carrying capacity of 8,200 tons, including oil fuel in double bottom. Electric light is installed throughout the vessel, and she is also fitted with wireless telegraphy. Accommodation is provided for the captain, officers, and engineers on the bridge deck, while provision is made for a large native crew, with special galley arrangements in the poop. The latest cargo appliances will be fitted for the rapid handling of cargo, including eleven large steam winches.

Shipping at Malta.

(From Our Own Correspondent.)

Malta, December 14.

The transport Orotava has put to sea to-day for Mudros and Constantinople. The departures of naval ships included the Tilbury for Gibraltar, the Ark Royal for Alexandria, the Cleanthus for Venice, and the Flying Mist for Algiers, Gibraltar, and the United Kingdom. The transport Huntsgreen has just arrived from Constantinople, and the Czaritza has arrived from the United Kingdom. The Silverfield has just left for Smyrna and the Overton for Constantinople.

December 19.

The Cairo has just arrived flying the flag of a rear admiral. The following have left:—The trawler James Fennell for Gibraltar and the United Kingdom, the transport Pacuare for Liverpool, the Walter Burke for Tunis, and the tug St. Issey for Taranto. The Torch has left for Piræus, Mudros, and Constantinople.

The transports Trent from Mudros and the Teutonic from the United Kingdom have just arrived. The United States battleship North Dakota, which has had a few days in port, has left for Constantinople.

SUPPLIES AND PRICES IN TURKEY.

The following extracts are taken from recent reports received by the Imperial Ottoman Bank :—

SIVAS, November 15.

Exports.

During October and until now raw wool has been the sole article of export. The quantity exported is estimated at 50,000 okes, all of which is for Constantinople via Samsoun. The existing stock of wool amounts to about 150,000 to 200,000 okes, or nearly 250,000 kilos.

The present price of wool is 60 piastres (silver) the *batman* of 6 okes—that is, 235 francs the kilo. The quality of this wool is very good and white.

Transport from Sivas to Samsoun is carried on by means of oxen carts or trucks. It is still impossible to calculate exactly the cost; that is why the price of the merchandise can be established only approximately. On the average, the present cost of transport is about 1 franc the kilo.

JAFFA, December 9.

The principal articles exported in our region are agricultural products such as corn, barley, sesame, oranges, olive oil, almonds, and honey.

Corn.—As the corn crop in the current year was insufficient for local consumption, the Military Administration of Palestine, with the intention of preventing speculation in the article, and in anticipation of the height of the price to which it would certainly rise, has completely prohibited the export of it.

The stock of corn is about 1,700 tons, at P.E. 400 for 100 kilos. As this quantity does not suffice for local consumption, one necessarily has recourse to foreign flour to make good the deficit, and recently we have had Australian flour upon the market.

Barley.—Existing stocks are estimated at about 500 tons, at the rate of P.E. 233 the 100 kilos.

Sesame.—Stocks about 200 tons, at P.E. 700 the 100 kilos. The quantity will scarcely suffice until the new crop for local consumption.

Oranges.—The crop for the current year is estimated at five or six thousand cases. Here the price is 11s. the case of 144 oranges. Export of this fruit commences in November and finishes towards the end of April.

Oil.—As the crop of olives this year was bad, the production of olive oil has been almost negligible.

Almonds.—The total production of almonds, which amounts to about 200,000 kilos., is destined for export at a rate of P.E. 1,000 the 100 kilos.

Wines.—The total production of wines in Jaffa and the surrounding districts is estimated at 150,000 hectolitres, of which the greater part is to be exported.

Honey.—The annual produce amounts to about 10,000 kilos., and the existing stock is 7,000 kilos. Prices on the market are from P.E. 14 to P.E. 15 the kilo.

The prices of the cereals which we have just quoted are subject to frequent fluctuation. Thus an increase of 30 to 40 per cent. on the prices ruling in October has already taken place. It is said that the tendency for prices to rise will be maintained until June, 1920, the date of the beginning of the new crop.

COMPANY MEETING.

CYPRUS OIL TRUST.

The Leases Recently Acquired in Roumania.

The annual ordinary general meeting of Cyprus Oil Trust, Ltd., was held on December 31 at the registered office of the company, 52, New Broad Street, E.C., Mr. Thomas Bremner presiding.

The notice convening the meeting having been read,

The Chairman said: Gentlemen,—As explained in the notice sent out convening this meeting, we have called you together to comply with the regulations of the Companies Act, and the meeting being merely held pro forma, I shall propose adjourning it for the purpose of convening you at a later date, when we trust to have the complete and audited accounts submitted to you. I think, however, it may be necessary, and certainly of interest to the shareholders, that I should say a few words with regard to the present position of the company, particularly as to the oil leases we have recently acquired in Roumania. Full details of these properties were given by me at the general meeting held on July 11 last, when the capital of the company was increased with a view to the acquisition and development of the properties I have mentioned.

Our oil-bearing lands comprise a total area of 2,500 acres, situated in one of the best districts in Roumania, with all reasonable facilities near us, and were taken up by the vendor on the recommendation of Mr. Louis Hamilton, the well-known oil expert, and the Board are now formulating the policy for the active development of the leases. With regard to these properties, I am happy to be able to state that a deed of cession has been executed by the vendor, and steps are being taken to send a translation thereof, which has been duly legalised at the Roumanian Legation here, to Roumania, in order that the oil rights may be transferred into our own name as speedily as possible. We have had every assistance from Mr. Maw, the vendor, in regard to local conditions in Roumania, where he had resided for many years. On Mr. Maw's recommendation we have appointed Mr. E. G. Boxshall, a well-known British subject resident in Bucharest, as our general agent and power of attorney. This gentleman, from his wide experiences and intimate knowledge of business matters in Bucharest, will be of the greatest possible service to the company.

Oil Interests in Roumania.

There is no doubt that Roumania is a country rich in oil. The records of the past give every hope that the developments of the future will show an increase in the oil production of this country. All the big oil groups throughout the world have acquired, or are now acquiring, oil interests in Roumania. I need only mention the well-known companies, Steaua Romana, Romana Americana, Astra Romana, Concordia, International, and others, for you to appreciate the regard in which this country is held in this respect. I believe the companies I have mentioned, even in these times when conditions are entirely against them in Roumania, are producing about 300,000 barrels of oil a month, and this, I understand, is about half of the oil now being brought to the surface in the Roumanian oilfields.

The Standard Oil Company of New Jersey, besides controlling the Romana Americana, according to a statement that appeared in the public Press the other day, has agreed to purchase half a million barrels of refined and crude oil from Roumanian companies, delivery to be made about the end of February next. The Roumanian oilfields, as I have mentioned, are working under adverse conditions, and the output is not nearly normal, production being about 8,000,000 barrels a year, against something like 13,000,000 barrels a year before the outbreak of the European war. I stated in my speech in July last that our three properties are the Toplitza, Coacaza, and Chilii, situated in the Tazla Valley district of Bacau. Adjoining these three blocks are oil lands belonging to the well-known oil producing company, Societate Romana, and immediately to the south are situated about 29 producing wells of the Steaua Romana. The Steaua Romana is, I believe, almost the largest producer in the Roumanian oilfields, so we are in good company, as well as being in a good locality.

Financial Position.

With regard to the financial position, I may state that, mainly as a result of the last issue of shares at 4s. each, the company has a substantial cash balance in hand, sufficient for all its purposes in thoroughly testing the properties. We have been approached during the last two or three weeks by a responsible group who are desirous of taking over one of our Roumanian oil leases. They propose to spend a considerable sum in drilling, and, if results are satisfactory, to form a separate company, giving us a very large share interest in it free of cost. Full details of this arrangement have not yet been settled, but I have every hope that everything will be carried through in the immediate future. We have a very large area of oil country to prove, and an arrangement such as has been suggested to us should be of great help and profit to the company. I now move that this meeting be adjourned to a date not later than March 31, at which I hope our accounts duly audited will be submitted for your approval.

Mr. G. D. Spiro, in seconding the motion, stated that the last issue of 100,000 shares of 2s. each at 4s. per share was fully subscribed. Only the actual necessary outgoings had been paid out of this amount, and they had the balance in hand, which placed the company in a very strong financial position and enabled it to carry through any engagement into which it might enter.

The motion for the adjournment of the meeting was agreed to, and a vote of thanks to the chairman concluded the proceedings.

ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Street, Wednesday.

Business has been interfered with this week by the Christmas holidays; but during the few days upon which the Stock Exchange has been open there has been great activity, and, in a general way, a further substantial rise in prices, thanks to the receipt of large buying orders from Egypt.

In Government securities Egyptian Unifieds, after changing hands up to 75, close ½ better at 74, but the 3½ per cent. prefs. have exceptionally reacted ½ to 61¼.

In Bank shares there has been a very sharp rise in National Bank of Egypts to 21¼, an advance of ⅞, and Agriculturals have improved 1-16th to 5 11-16, after being done up to 5 13-16; while the 4 per cent. cumulative preferences have advanced ⅛ to 6⅞. Anglo-Egyptian Banks, after being down to 16, finish ⅜ higher at 16½, and Land Banks are fractionally firmer at 6⅛.

The market in Land shares has been very excited, and at times wild; business has been on a very large scale. Aboukirs finish 2s. higher at 34, while Béhéras have had quite a sensational movement, and, after rising to 18¾, finish 2⅞ up at 18⅛. Delta Lands have jumped 2s. 4½d. to 16s. 4½d. Egyptian Agricultural debentures are one point higher at 72½. Gharbieh Lands have had a sensational rise to-night to 3¼, an advance of 1 since last week. In New Egyptians the turnover has been on a very large scale, and the shares finally finish 3s. 6d. up to 31s. 6d. Sidi Salems have also been in great demand, improving at one time to 3⅜ and finishing 9-16ths higher at 3⅛. Sudan Plantations, after dropping to 7¼, finish unchanged at 7½. In Union Foncières a persistent demand carried the price at one time to 5½, and they close ½ up at 5¼. Egyptian and Foreign Trusts are fractionally firmer at 14s., and Mortgage Company of Egypt prefs. are ¼ easier at 6¾.

Among the Miscellaneous descriptions Abyssinia Corporations are fractionally easier again at 6s. 3d. A very fair business has been put through in Alexandria Waters round the current level of 10 11-16, while Associated Cotton Ginners are 1s. 3d. lower at 17s 9d. Egyptian Hotels have jumped ¼ to 2¼, and Salts and Sodas are closing ⅛ down at 2⅜.

In the Oil group Anglo-Egyptian "B" have recovered 5-32nds to 4 29-32.

In Greek securities the harder appearance noted in our last has again been in evidence, and we have to record higher prices practically all along the line. The 1881, 1884 and 1890 loans are all closing 1½ up at 51½. Monopolies are a point better at 50, Fundings have risen 3 to 50, and Rentes are also 3 points up at 42. Bank of Athens shares are ⅛ up at 3⅜.

There is reason to believe, it is stated, that the Bolsheviks are circulating forged £1 English notes in Persia and Caucasia.

A Bill has been laid before the Bulgarian Chamber to authorise the amalgamation of the three State banks—the National Bank, the Banque Syndicale and the Agricultural Bank.

A message from Baghdad to the *Pioneer* says that Messrs. Crapper and Hodgkinn, representatives of the British Empire Cotton Growing Association, have completed a tour of Mesopotamia, and are confident that Mesopotamia has a great future as a cotton-growing country.

BRITISH TRADE CORPORATION.

(Incorporated by Royal Charter),

13, AUSTIN FRIARS, LONDON, E.C.2.

Telegrams: "Trabanque, London."

CAPITAL: Authorised - £10,000,000 Subscribed and Paid Up - £2,000,000

Governor - THE LORD FARINGDON.

Manager, A. G. M. DICKSON. London Manager, P. C. WEST. Secretary, G. De B. BROUNLIE.

The Corporation has been established with the object of developing the Trade of the British Empire in every part of the world, and brings to the notice of all interested that it is prepared to grant financial facilities to British Manufacturers and Merchants for the increase of their Import and Export Trade.

It will be prepared to assist in opening up new channels for enterprise, and will afford financial facilities for the enlargement of works and the extension of plant.

The Corporation is appointing representatives in the chief cities of the world, and will open credits at home and abroad. It invites inquiries, and will endeavour where necessary to put export advice at the disposal of correspondents regarding the financing of their foreign and overseas business. Moneys received on fixed deposit. Terms on application.

INDIA'S MICA INDUSTRY.

The Chief Inspector of Mines in India in his report for 1918 states with regard to the mica industry :—

There was a large increase in the output, which was 51,572 cwt. as compared with 35,896 cwt. in 1917, being an increase of 43.67 per cent. This increase was almost entirely confined to the Bihar and Orissa field, although the Madras field showed a slight increase as compared with the large decrease given in the last report. Owing to the demand for war purposes lessees in Bihar and Orissa were urged to increase their output to the highest possible figure. Tonnage was very scarce and insurance rates were heavy. The industry, however, undoubtedly flourished throughout the year. There was considerable improvement in the industry in Madras also, and, in addition to mining, prospecting was carried out over large areas.

The Royal Exchange Assurance announces the following further resignations and appointments, all of which took effect on January 1 :—Mr. W. W. White retires from the position of sub-manager of the fire department at the head office, after twenty-nine years' service. Mr. J. F. B. Cockell is appointed home fire superintendent, and Mr. H. C. Sim foreign fire superintendent. Mr. R. D. Harvey retires from the management of the corporation's business in the U.S.A. and Mr. Everard Stokes is transferred from the management of the Egyptian branch to succeed Mr. Harvey at New York, Mr. Murray G. Harris being appointed to succeed Mr. Stokes as general manager for Egypt and the Levant.

NOTES OF THE WEEK.

Strong disappointment and indignation were caused in Yugoslavia at the close of the old year by the report that its share of the ex-Austrian fleet was to consist of only twelve disarmed torpedo boats; in some quarters there was a tendency to regret that the Yugoslavs had not sunk the fleet when it was at their mercy rather than hand it over to the Allies; and once more feeling against Italy ran high. Happily, with the New Year came an improvement in relations between the two countries. Signor Nitti and M. Davidovitch exchanged cordial New Year greetings, and Italy has released the Yugoslav prisoners from Dalmatia whom it had previously insisted upon treating as enemies. Signor Nitti's reference to M. Davidovitch as "Prime Minister of the Kingdom of Serbs, Croats, and Slovenes" has afforded peculiar satisfaction in Yugoslavia; and the *Politika* declares that if Italian statesmen had worked on the lines now followed by Signor Nitti the frontier question between the two countries would have found a satisfactory solution long ago.

The vexed problem of Fiume and the Adriatic is again exercising public opinion, in view of the fact that it is understood to bulk large in the discussions now being carried on between Signor Nitti, Mr. Lloyd George, and M. Clemenceau. Both in Paris and in London, Signor Nitti expressed himself as very hopeful of reaching a satisfactory solution of the problem. He declares that the difficulty is "of a sentimental order," and to the representative of a Paris journal he even went so far as to say that Italy and Yugoslavia were "not going to fall out on a question which, practically speaking, is only of secondary importance." Should a settlement be reached, the thanks of Europe will be due to Signor Nitti and his Ministry; but credit will also be due to the Yugoslavs, who, often in circumstances of a particularly provoking kind, have preserved a correct attitude, and avoided taking matters into their own hands. Much of the satisfaction felt, however, would be wasted if the rumour that the agreement is to be reached at the expense of Montenegro should be confirmed.

It is possible that Signor Nitti makes light of the Adriatic Question because his present conversations are more concerned with those "compensations" in Africa for Italy, regarding which negotiations are understood to be now in progress. These compensations are to be granted, under the terms of the Treaty of London of April, 1915, in view of the German colonies in Africa being taken over by France and Great Britain. According to a *Times* correspondent, Italy asks for very extensive areas beyond the borders of Libya; for an extension of Eritrea to include Kassala, with a portion of Sudan territory; for the whole of French and British Somaliland; and for the Jubaland province of British East Africa. She also wishes for the Farsan Islands, and for a "sphere of influence" in the Yemen. If this be an accurate statement of what she demands, it would not be easy to maintain that Italy was inclined to under-estimate the value of her services to the Allies. The latter, apparently, have their own views on the subject, and until they are officially made public it would be unprofitable to discuss the question in detail. It is permissible to observe, however, that the claims regarding the Farsan Islands and the Yemen would appear to be particularly difficult to uphold; and in view of her past experiences with Abyssinia it is, indeed, surprising that Italy should wish to acquire so much fresh territory adjoining that country—territory which would make her enclose Abyssinia on three sides

A dispatch from the Colonial Governor, received in Malta, and read at an extraordinary sitting of the Council of Government, outlines the new form of Government for the island. Matters connected with Imperial defence will be dealt with by the Governor, assisted by an Executive Council, while purely local concerns will be handled by a body of representatives elected by the people. The Constitution will follow as closely as possible on the lines of the draft submitted to the National Assembly. The dispatch emphasised the part played by Lord Plumer in securing these concessions for the island, and indicated that whole-hearted co-operation of the Maltese with the Imperial Government is required and expected. As our Malta correspondent's recent letters have indicated, Lord Plumer is just now extraordinarily popular with the Maltese, who fully realise what he has done in the matter. Whether they grasp the necessity of accepting the gift in the right spirit is not quite so certain. There appears to be some risk of a difference of opinion over the question of a Civil or Military Head of the Island; and that does not augur well for the future.

Reports alleged to emanate from Bulgaria have to be accepted with reserve these days, as repeated attempts have been made for some time past, without the least shadow of foundation, to represent conditions in that country as unsatisfactory. Thus, it was announced and repeated in the British daily Press that arrangements had been made for an outbreak all along the Ser-

Digitized by Google

bian frontier on the day of the signature of the Bulgarian Treaty. Nothing happened; it would have been a grave reflection on the Allied missions in Sofia if it had. Now comes the statement that the Bulgarian Prime Minister has been "attacked by a Bolshevist band on his return from Belgrade, where his mission completely failed." M. Stambuliski's Government, it is added, has resigned, and the Socialists are trying to form a Cabinet with Dr. Daneff.

The message requires to be confirmed before credence is placed upon it. The reference to Bolshevism points to its having been concocted outside Bulgaria, for the simple reason that, whatever unrest there may be in the country, nobody acquainted with the people and their institutions would apply the term Bolshevist to it. The great bulk of the Bulgarian nation consists of peasant proprietors, and of this material Bolshevism is not made. On the other hand, political antagonism may be carried to extremes, and no one need feel surprised if Bulgaria finds the road to internal peace and contentment a difficult one at first. The recent wholesale arrests by the new Government of all and sundry thought or alleged to have made too wholeheartedly common cause with the country's official Allies during the war were deprecated in these columns, and it is satisfactory to learn that large numbers of those arrested have already been set at liberty. Sympathy would be felt with M. Stambuliski's desire to clear his country's reputation; but in the face of a national disaster the first desideratum would seem to be national unity in order that effective co-operation of all parties and classes may be secured for the rehabilitation of Bulgaria.

The outlook in Egypt grows brighter. When replying to the Sultan's telegram of good wishes at the New Year, the King expressed the hope that 1920 will bring greater happiness and prosperity to his Highness and his people; and the situation has so much improved already that it looks as if the hope will be soon fulfilled. With the exception of the most violent of the Extremists, the Egyptians are beginning to grasp the fact that to pursue the sterile policy of boycotting the Milner Commission would be unmitigated folly; and though the Cairo Committee of the Egyptian Delegation continues to talk big about "complete independence," it is obviously rather alarmed by the headway which the Commission has already made. Against this general tendency it has to be noted that Prince Kamel ed-Din, Prince Omar Toussun and some other Princes of the Sultania family have issued a manifesto supporting the "complete independence" demand, and have addressed a letter on similar lines to Lord Milner, who has formally acknowledged its receipt.

The princely manifesto is somewhat belated. While the official Cairo Committee is apparently bent upon endeavouring to make it impossible for Zaghlul Pasha to enter into relations with the Commission, it seems to be the case that steps to bring about an understanding have actually been taken by other, wiser, Egyptians. It must be admitted that of late Zaghlul Pasha's attitude has not been such as to encourage hope that he will abandon his present policy and endeavour to work with, instead of against, Great Britain. It is interesting to note that a rumour was current a few days ago in native circles that he was to be a member of a new Cabinet, which was to include also Rushdi and Mazloum Pashas. The report is, of course, incredible, but in view of the way in which a grain of fact very often underlies a mountain of fiction in such Oriental rumours, it is not entirely to be ignored. In any case, if Zaghlul Pasha showed himself ready to co-operate with us, he would in all probability find the way made easy for him to do so even at this late hour. On the other hand, if he should postpone such action much longer, he may very well find himself several days behind the fair.

It is officially announced that the Deir ez-Zor incident "may be regarded as closed for the present so far as Mesopotamia is concerned." The wording is ambiguous, but the ambiguity may be not altogether unintentional. A few particulars regarding the last stages of the trouble are added in the *communiqué* just quoted; and both for the sake of record, and because they throw a little light on the Arab way of looking at things, they must be briefly referred to. It seems that the representatives of the Arab Government, and those of Ramadhan es Shallash, the rebel leader, both requested that British troops should return to Deir to restore order, which, they realised, was unlikely to be ensured by any other method. This request, though flattering, was refused by the British Commander-in-Chief, who politely reminded the Arabs that British forces had originally been sent to Deir only to secure order, and pointed out that as Ramadhan had brought about a state of anarchy, it was clearly the duty of the Arab Government to undo the mischief. A further request made by Ramadhan, to be furnished with funds "to replace those looted by his friends, and to enable him to establish law and order in Deir ez-Zor," also met with a refusal—couched, it is to be hoped, in suitable terms. Deir, which has been looted by desert Arabs, as well as by its own lower classes, is likely to feel the effects of the escapade for a long time to come.

The unrest that has been caused in the Moslem world by the war, and more especially, perhaps, by the fear that the Turks are about to be expelled from Constantinople, appears to have disposed many quite good Moslems to wonder whether they might not gain by an alliance with the Bolshevists. Others who are Moslems only in name—such as the leaders of the Young Turks—have passed this stage, and are ready to ally themselves with Bolshevism, or with any other force that may enable them to realise their own aims and ambitions: and, having exploited Islam in the past, they are hopeful now of carrying many of its true followers with them. As a fact, Islam is the religion of Resignation, of rigid obedience to the law of Right, of strict fulfilment of Duty: and if he rightly understood its character, no true Moslem would possibly have anything to do with the anarchical evil that is to-day labelled Bolshevism. But Bolshevist propagandists have been active and cunning in certain Moslem fields, and professing Moslems, who, in fact, make their religion a mere cloak for their political aims, have lent themselves to the work of misleading the unwary. The result is as stated above, and there is some danger of the Bolshevists making, in one way or another, catspaws of people who deserve a better fate.

The danger referred to should surely disappear at once if every doubtful Moslem could be informed how his co-religionists have been treated by their Bolshevist would-be allies. It is officially reported that at Aramvir, in the Kuban Cossack territory, the Persian Consul was, on July, 1918, shot by Bolshevist troops, that his body was torn to pieces, and that 270 Moslems who had taken refuge in the Consulate courtyard were killed by machine-gun fire. (Of the other Persian subjects, Christians, who met a similar fate, we say nothing.) In the Crimea over 200 Moslems were massacred in one month (April), two *Mullahs* were killed in Goursouf and Nikita; and numerous other outrages were perpetrated, including the burning alive of some people, and the mutilation of the dead in other cases. No follower of Mohammed, no believer in Allah the Merciful, the Compassionate, could ally himself with those responsible for these deeds.

The fragmentary and belated messages which are reaching this country necessitate an unusual amount of caution in forming an estimate of the present state of Indian opinion. There is, however, no doubt that the new constitution came at an unfortunate moment, when sentiment was deeply stirred by such extraneous causes

Digitized by Google

as the Punjab inquiry and anxiety regarding the fate of Constantinople: and since the defects of the cable-service have presumably been felt in India as much as here, we may question whether the features of the constitution were adequately explained. Into this atmosphere of suspicion, anxiety, and unrest fell the King's Proclamation, the sole form of communication which appeals to the heart of India, and we may safely accept the statement that it has produced a powerful impression in every portion of the country. We can, therefore, conclude that the position is better than it was, but we have as yet no data by which to measure the magnitude of the change. Judging, however, by past experience, we should anticipate that it will last and that the heavy work of translating the new constitution into practice will be carried out in tolerably favourable conditions.

Heavy as it is, this task is not the only exceptional burden on the Indian administration, and it is well to remember that while the Reforms are being elaborated by a special Department under Sir William Marris, another special Department, under Sir Thomas Holland, is attacking the no less difficult problems of industrial development. There is, in fact, a close resemblance between the position of these two organisations; each has a well-considered scheme to work on, but in each case the scheme is an outline, and its realisation depends very largely on the skill with which the details are now filled in, while in our opinion the success of both departments will be measured by their handling of the questions affecting particularly the masses of the people; in the one case the details of the electoral system, in the other the position of the labourers in the mines and factories. A progressive increase in the efficiency of labour is absolutely essential to industrial advance, and no achievements on the technical side can compensate for failure to start the operatives on the upward path, by which their brothers in Europe have already travelled so far.

Among the measures to be taken with this object, we trust that the organisation of factory-labour will not be overlooked. Opinion on this matter has developed rapidly in India, and we believe that the great majority of enlightened employers would welcome a change which would enable them to ascertain the considered opinion of their workmen as a body, and at the same time diminish the threat of sudden manifestations provoked by obscure and irresponsible interference. But even if employers were hostile, the question would still have to be faced; for the proceedings at the recent International Conference at Washington indicate clearly that India will be placed in an almost impossible position if the workers cannot speak with a decided voice; in some matters their interests undoubtedly clash with those of other countries, and without organisation their interests are bound to suffer. We do not say that India needs trades-unions on the English or any other specified model, but we are convinced that the workers must be organised, and we urge that the proper lines of organisation should from the very outset receive the best attention of Sir Thomas Holland and his colleagues.

The announcement of increased salaries and of various improvements in the terms of employment came as a welcome New Year's gift to the Indian Civil Service and to the officers of the Police and Educational departments, though we do not anticipate that they will put an immediate end to the dissatisfaction which has been steadily growing in volume for several years. Disregarding the confirmed grumblers, we should have liked to express a definite opinion as to the adequacy of the new schedules, but we must confess that we are baffled. On the one hand, the market for talent and character is in such an unsettled condition that no one can say whether the price now offered will continue to bring out the requisite supply: on the other hand, the value of the rupee, in which salaries are stated, is as uncertain now as at any period in the chequered history of the coin; and the most that can be said is that, while the various services appear to be reasonably attractive at the moment, the authorities will have to watch the market more closely than was necessary in the past.

THE WEEK AT HOME.

Spen Valley.

The political world is greatly excited at the result of the Spen Valley election, in which a Labour candidate defeated Sir John Simon and a Coalition candidate. The paroxysms of joy and despair in which either side has indulged need not be emphasised here; the leading facts are simple. The new Labour member was well known locally, and Yorkshiremen are clannish folk. Sir John Simon is not a Yorkshireman, but he had a certain amount of prestige, as a successful lawyer, and the only Liberal ex-Cabinet Minister with the pluck to fight again; and he probably gained some votes from the argument of his supporters that he would some day be Prime Minister—a prospect which looks less rosy to-day than a year ago. The Coalition candidate was a distinguished soldier, bearing the historic Yorkshire name of Fairfax, but the mere fact that he confessed himself no politician in his election address, and most assuredly proved the assertion in his speeches, lost him support he would otherwise have had, and possibly decided the election.

Labour is in high feather just now, and is quite entitled to preen its wings over the polling at St. Albans, Bromley, and Spen Valley. But it is evidently attracting votes, not so much at the expense of the Coalition, as of the old Liberal Party, which is in the depths of despair; a wag has suggested that the whole of the Reform Club would commit suicide at the prospect were it not for the admirable cuisine of that institution. The upshot therefore seems to be that Labour will obtain the old Radical vote, in addition to its own, and that the Whig element of Liberalism will seek refuge in the Coalition.

That matters are shaping this way is clear from the fact that Mr. Churchill, in a speech, last week, on behalf of the Coalition in Durham, attacked the Labour Party, but did not think it worth while to attack the Independent Liberals. He attacked Labour, by the way, for its incompetence and inexperience in administration, which is rather unfair, seeing that, never having been called upon to form a Government, they have never had the same chance of demonstrating their incompetence as the older parties. But Mr. Churchill's future—so far as the future of a political comet can be predicted—is definitely fixed with the new Centre Party which is to be born in 1920 from Liberal father and Unionist mother as the result of the Coalition.

The Railway Settlement.

Details of the railway settlement have been published. They follow in the main the terms recorded in this column a few weeks ago, but the main point about them now seems to be that they are not, in fact, a final settlement, since Mr. Thomas, in his speech discussing them with the railwaymen, proclaimed that they are only an instalment. Even with that proviso, which will not altogether please the patient public, a section of the railwaymen appears to think the terms too moderate, and to be ready to repudiate them and their leader. But the threat of another strike, uttered *sotto voce* in alarmist circles, is not generally credited. The majority, both of the public and the railwaymen, are agreed that the last shall be the last for some time to come, and the star of the moderates is for the time being in the ascendant in Labour circles.

The other railway sensation of the week has been the announcement that Mr. Joel has bought Sir Edgar Speyer's interests in the London Underground combine. The Joel family, who were supposed to be interested only in South African mines, British racehorses, and the Middlesex Hospital—to which their benefactions have been extremely generous—are now taking a great part in big finance. It is not long since that they entered the catering trade with the purchase of the Aerated Bread Company, which is now doing better business, and the Underground purchase gives them another great interest in London.

Incidentally, fares are again to be raised on the Underground, but this is not due to the Joels, but to the steadily increasing cost of operating. There will be some grumbling, of course, but as a matter of fact the

Digitized by Google

fares are not extortionate—or would not be if one could get a seat. The story is told of a daily passenger on the Underground, who vowed a year ago to put a penny in a hospital collecting-box exhibited at a tube station every time he got a seat. He kept a record of this novel form of "excess fare"—it cost him one shilling and ten pence in twelve months!

Rising Rates.

A table has been issued giving the rates in various English boroughs. The highest figures are in East and West Ham, in the East End of London, where they run out at over fifteen shillings in the pound. In several London suburbs they have doubled since the war, and most municipal authorities fear they will go higher still.

The Shortage of Offices.

There seems to be a good deal of grumbling among City men at the moment over the shortage of office accommodation. It is practically impossible to find offices in the "one square mile," and new businesses are hard put to it to get even a single room. Rents, of course, have been raised to new tenants, and things do not seem to be much better in the West End. As for shops, it is almost out of the question to find suitable new premises in any of the main thoroughfares, and in Oxford Street, where all the drapers have made fortunes, they are contemplating building higher, as in Regent Street, "to steal from heaven what earth cannot give." The skyscraper has not yet reached London, but it is threatened at the Aldwych site.

Clerical Poverty.

With the opening of the New Year and its concomitant Bills the question of clerical poverty again becomes urgent. Canon Masterman has just completed an inquiry into the subject of the incomes of the clergy, and the conclusions are lamentable and distressing. The large incomes of Bishops used to be the gibe of street-corner orators, but several Bishops have proved that with taxation, upkeep of the episcopal palaces, and travelling through their diocese—the latter a heavy and essential part of a bishop's duty—they are actually out of pocket at the end of the year. The clergy as a whole are in dire distress, and it is peculiarly difficult for a delicately-minded man to appeal to his flock to increase his stipend; nor is the experience of the Nonconformists any better.

The Outfitting Trade.

The winter sales are upon us—an event that was an obscure mystery to the ignorant male until the drapers began to advertise pictures of their most intimate wares in the daily papers; but it seems to be not only the ladies who purchase finery in these days. A paragraph from a trade paper dealing with male outfitting is going the rounds saying that the trade in silk underclothing for men passed all records in 1919, and in the last six months has exceeded prophecy and belief. This appears to be true, but while the quantities sold can be explained by the restocking of wardrobes after the war, the elaborate quality of the goods cannot be so easily dismissed.

The writer, for instance, was recently purchasing some shirts and socks in a West End shop. The young lady who served suggested that pyjamas would also be useful, and after a hasty mental survey of one's bank account, a nod of assent brought forth amazing creations—flimsy things in pink silk with an embroidered butterfly over the jacket pocket. With a modest blush the writer suggested that the lady had mistaken the sex of the potential wearer. She laughed and said, "Oh, no, these are the new patterns for gentlemen; of course, if you prefer something less *chic* and more old-fashioned, we have it—but we shall have to get it out of the basement for you." After a frank admission of mid-Victorian tastes, in this matter at least, the butterfly-less basement variety were produced and paid for. It was only an hour later that the knowledge dawned upon the owner that the price of the plain and old-fashioned apparel was no less than that of the gaudy and up-to-date goods.

The Week's Books.

The habit of publishing histories of publishing firms is growing since John Murray started the fashion, and the latest recruit is Rivingtons. This house nowadays deals largely in those educational works which instruct or torture youth, but in past years they issued Newman's Sermons, many of the "Tracts for the Times," and their ancestry goes right back to the great days of Jacob Tonson and the publication of the works of Dryden, Pope, and Dr. Johnson—the last of whom, at least, never joined in the outcry against publishers which Byron made popular with his "Now Barabbas was a Publisher."

The most interesting biography of the week is, curiously enough, "The Letters of St. Augustine," edited by Mr. Sparrow-Simpson. Everybody knows the "Confessions"; few perhaps have read the letters of the Bishop of Hippo. They might have been written yesterday, they are so modern in thought and method; this sixth century correspondence, in fact, leaves one with an extraordinary sense of the changelessness of the civilised world. Probably it is only in such familiar letters that one fully realises the fact. But was not Cicero interested in getting six per cent. for his money out of Roman rents?

Those who are interested in one of the most curious problems of archæology will read with interest Mrs. Routledge's "The Mystery of Easter Island," which discusses the origin of the celebrated sculptures in the Pacific; another work, akin in subject, is Dr. Churchward's forthcoming "Origin and Evolution of the Human Race," which is said by the author to deal with Easter Island and many other problems after a fashion that will evoke some controversy. A somewhat different class of statuary is dealt with in the "History of Madame Tussaud's," which has just appeared. A preliminary glance through its pages shows that it abounds in amusing anecdotes.

One of the most irritating things in the latter part of the war was the difficulty of buying standard books in cheap reprints, which had run out of stock and could not be replaced. I well remember my fury, after ordering a set of Dickens and Balzac for a Christmas present, on discovering that "David Copperfield," "Nicholas Nickleby," "Le Père Goriot," and "The Quest of the Absolute" could not be supplied; but from the fact that the faithful bookseller has now delivered these volumes to me—two years after they were ordered—I concluded that the reprints have at last been reprinted. Inquiry at the shop elicited the fact that it is so.

Two of the cheap reprints that ran out and were for long unprocurable were, of all things in the world, Gibbon's "Roman Empire" and Grote's "History of Greece"—the latter in ten volumes. One can understand the former, as an introduction to Turkish history possessing a special war interest, but the latter! Is there a single man alive to-day who can honestly say he has read Grote from preface to index? Yet the fact remains that it sold right out during the war. Perhaps the Salonica force all bought copies.

INDIAN CHURCH AID ASSOCIATION.

The Official Organ of the Indian Episcopate.

IN the present critical condition of India and under the shadow of changes which will materially lessen the proportion of Englishmen in the Indian Services, it is imperatively necessary to strengthen the loyal Anglo-Indian elements, upon whom will now devolve the task of maintaining the White Man's reputation for integrity. Ladies and gentlemen, therefore, who have served or resided in India in any capacity are invited to join this Association, the primary object of which is to help the India Bishops to carry on religious and educational work among these classes, upon whom so much depends.

THE NEAR AND MIDDLE EAST.

(From Our Own Correspondents.)

EGYPT.

CAIRO, December 23.

Attempt on the Prime Minister's Life.

This has been an eventful week with a vengeance. Scarcely was my last letter posted than we were electrified with the news that an attempt had been made on the Prime Minister's life. It took place while he was on his way to his office. Just as his car passed the Savoy Hotel and was crossing the square which leads down the Suliman Pasha Street towards the Kasr el Nil bridge a man stepped out from a café and threw two bombs. Fortunately, the chauffeur spotted the man and, as he took aim, pulled up dead, with such force that the car turned right about and escaped the two bombs, the first of them falling in front and the second going right over the top and falling on the opposite side, in each case the explosion doing no injury to anyone. The police officer who always drives with the Prime Minister immediately jumped out, and rushing at the man, together with one of the two escorting motor cyclists, caught hold of him just as he was in the act of drawing a revolver.

The man was at once taken off to the Ministry of the Interior, whither Wahba Pasha had proceeded in the meanwhile, and where he was confronted with his intended victim. He was then removed to the Governorate, where the inquiry was at once opened. He is a young student of the School of Medicine and a Copt, and when searched was found to have on him another revolver, like the first, fully loaded, and twenty-four spare cartridges. Asked why he had committed the act and who were his accomplices, he replied that he had done it all on his own initiative, that he had considered the Prime Minister as a traitor, and so thought the country should be rid of him, and that he had waited several days to carry out the deed, which he had decided on when he read the speeches made with reference to Egypt in the English Parliament. He added that he was glad that after all he had not killed Wahba Pasha, and that he hoped that his act would serve as a warning.

That sooner or later attempts would be made on the lives of the members of the Cabinet, especially on that of the Prime Minister, was a foregone conclusion; nor is it surprising that a Copt should make the first attempt, seeing that when the present Ministry was formed the students declared that the Premier must be removed, and that at a meeting held in one of the Coptic churches, which was attended by a large number of Moslems, it was openly declared that a Coptic Wardani would be found to carry out the wishes of the country.

The inquiry has not yet produced any evidence to show that there were any accomplices, or what connection the Extremists had with the attempt. Whether they can be implicated and whether there is anything like a plot behind this attempt it is, of course, quite impossible to say at present. Very likely, as in previous cases, the truth will never be arrived at. One thing, however, is certain. If direct responsibility cannot be assigned, nevertheless those who have carried on the political campaign and the editors of the Extremist vernacular Press, who have filled their columns with inflammatory matter, cannot escape responsibility; for by their utterances they have combined to excite the baser instincts of the people, and have thus undoubtedly led to the lives of two Prime Ministers being attempted in the short space of four months.

Widespread sympathy is felt for Wahba Pasha, whose courage in taking office at the present juncture has already been referred to, and who has throughout conducted himself with sang-froid and dignity. In more instructed Egyptian circles the act is condemned in no mild terms, for it is recognised that a policy of violence, such as these attempts and the intimidation now being actually carried on represent, is the last thing to commend the Egyptian cause to Europe, and so can but end in alienating whatever sympathy it may so far have aroused among the nations of the world.

It is understood that the assailant will be brought before a military court, but it is to be hoped that no lengthy formalities will be allowed to delay the trial. We have already had sad experience of the long time it takes in such cases to bring men to trial, for the two men accused of complicity in the bomb thrown at the Sultan Hussein were kept in prison a whole year before they were brought into court, whilst the man who threw the bomb at Mohammed Said Pasha, although caught in the act, is still untried. Such delays are not calculated to deter candidates for national martyrdom. The sooner such men can be tried and sentence inflicted the greater will be the deterrent effect. In fact, in the East the only method of dealing with such cases is to make punishment follow swiftly on the commission of crime; and if in an instance like the present the man could have been executed at once the more salutary would have been the effect. After all, there could be no doubt as to his guilt, and the chances of discovering any plot or accomplices by holding a lengthy inquiry are so slender that they count as nothing against the deterrent effect of immediate punishment for a crime of this nature in circumstances like the present.

El Azhar Enters the Arena.

The next day El Azhar for its part threw a bombshell into our midst by the delivery of two documents addressed to the Sultan, the High Commissioner, and the Prime Minister. The first was a protest against an alleged violation of the Mosque, which British soldiers were said to have committed on the 11th. The entry was actually made by the troops and is not denied; but it was effected under very peculiar circumstances and was of the very shortest duration, and the acts laid to the charge of the soldiers could not possibly have been committed in the time. The reply of the High Commissioner, which I append, gives what are the true facts, and at the same time very rightly points out to the Rector the great responsibility which he

bears in allowing his students to participate, and his premises to be used as a sanctuary for those who participate, in unlawful acts outside. His Excellency wrote as follows:—

I have received a letter addressed to me by your Reverence, the Ulemas of the Azhar, and the members of the High Council, and have caused inquiry to be made into the incident of December 11.

It appears that certain ill-intentioned persons broke into shops, and when pursued by British troops, exasperated them, and finally took refuge in the Azhar, from which they continued to throw stones. Some of the troops were naturally irritated and excited, and pursued the culprits into the precincts of the Azhar. You will, of course, realise that this was done in the heat of the moment, and you may rest assured that no insult to the sanctity of the Azhar or your Reverence or colleagues or peaceful students was intended.

I wish to express to you my regret at the occurrence. At the same time, I would point out that it is the duty of the authorities of the Azhar to prevent the precincts of the University from being used for unlawful acts of aggression.

The other document was a declaration on the present political situation, and runs:—

The Ulema of the mosque of El Azhar and the members of the High Council of its University, in view of the present conditions and of the troubles which these have brought upon the country—troubles which have attained such a degree of gravity that they can no longer be passed by in silence—deem that it is their sacred duty, imposed by God, not to neglect their mission, that mission being to give such good advice as may secure peace on earth and re-establish a good understanding between all peoples on the solid basis of concord and justice, in conformity with the prescriptions of all divine laws, and notably that of the holy faith of Islam.

The Egyptian people has expressed in unanimous fashion its determination to insist upon its legitimate rights to complete independence. It has persisted in this claim, using all the justifiable means at its disposal, without, however, seeing any sign of recognition of this right on the part of the English Government. This state of things has provoked in the public mind a current of suspicion, distrust, and uneasiness, which has led to a continuation of trouble, and to interference with public and private affairs.

Consequently, the signatories are of opinion that the unique method of establishing peace in the country and of reconciling the two parties, while safeguarding the interests of each, is:—

That Great Britain should honour her promises and recognise the complete independence of this country, which is distinguished by its glorious heritage, by its unique position, and, finally, by its dominant position among all the nations of the Orient.

This action would put an end to the rigorous repressive measures of which the deplorable effects have made themselves felt for so long a time, and in such regrettable manner. The entire population would then resume its normal calm and tranquility without harbouring the slightest feeling of hate or resentment against the English Government, and would watch over the interests of the Government, which would be safeguarded in the same manner as that of other foreign Powers.

Such is the sacred trust that God has confided to us, and we fulfil it that we may carry out the duty incumbent upon us as His ministers.

We take God as our witness; it is He who is the best of all witnesses.

The importance of these two documents lies in the fact that they are signed by the Chancellor and the ex-Chancellor of El Azhar, the Grand Mufti, the heads of all the "Tarikas," and the members of the Ulema Council—*i.e.*, all the leading religious dignatories in the country. El Azhar has long been known to be the centre of inspiration of the campaign of incitement and intimidation which, starting last March, has continued until to-day; but that the heads of that institution should in this official manner throw in their lot with the Extremists and endorse their claim for complete independence has come as a great surprise, and is considered to be due solely to intimidation of the signatories by the students, religious as well as lay. What effect these documents will have on the population as a whole it is difficult to foresee at present, but so far there are no signs of its having created much excitement, and it is just possible that it may pass unnoticed by the mass of people. In which case it may be asked whether, seeing that these documents, although apparently framed in a conciliatory tone, are really militant and calculated to appeal to the fanatical instincts of the masses, this incident will not go a long way towards exploding the idea of the influence which El Azhar is supposed to exert on the Moslem community in general?

ROUMANIA.

BUCHAREST, December 29.

Debates in the Chamber.

The meetings of the Chamber this week have been devoted to debates on the foreign policy of Roumania during the war under the successive Governments of M. J. Bratianu, M. Marghiloman, and Dr. Vaida-Voevod. The discussions have been extremely animated, numerous personal questions being mooted which only served to confuse the issue and to raise passions to such a pitch that Parliamentary procedure went by the board. On several occasions the President of the Chamber was obliged to close the sitting for a short interval with a view to restoring order. The attitude of M. Bratianu at the Peace Conference has been severely criticised by all parties, who, however much they may disagree amongst themselves as to what Roumania's line of conduct should have been, are unanimous in condemning the policy of the Liberal ex-Prime Minister. Dr. Vaida-Voevod insists that M. Bratianu cannot consistently maintain that Roumania abrogated any further rights by signing the Treaty of St. Germain. The Treaty of Versailles had already been signed by M. Bratianu, and that treaty included the League of Nations Covenant. Dr. Vaida-Voevod took the opportunity to complain of the activities of the Liberal party, which, he states, is doing everything in its power to render the position of the present Government untenable.

A Socialist Minister of the Interior.

The "*Bloc*" Government was completed on Friday when Dr. N. Lupu, Independent Socialist deputy for Bucharest, accepted the portfolio of the Interior. Dr. Lupu, who speaks English with fluency and ease, is known in London as one of the Commission sent by Roumania in 1916 to purchase supplies. He has undertaken a heavy burden, but his reputation as a man of pronounced democratic views is serving him in good stead with the workers. Yesterday he succeeded in settling the tramway strike, which had been in operation for three weeks.

The Tram Strike.

On Wednesday last an attempt made to run the trams in defiance of the strikers ended in a struggle between a group of strikers and a detachment of soldiers detailed to guard the tramway company's depôt. In the resulting confusion an officer ran off a belt of machine-gun ammunition, firing into the air, and a ricochet bullet wounded one of the strikers in the leg.

The workers maintain that they were returning to work when they met trams coming out in charge of strike-breakers, and they endeavoured to persuade the drivers to turn the trams over to the regular staff. The Government have ordered an investigation of the incident, and have promised the workers representation on the Committee of Investigation.

On Thursday the unions of Bucharest declared a "general strike" in order to celebrate the anniversary of last year's labour disturbances, when several workmen were killed. A large procession was formed and marched through the streets of the town to the cemetery, where wreaths were placed upon the graves. All passed off in quiet, and the unions duly decided that

CROWE & STEVENS,

Steamship Agents and . . .
Commercial Representatives,

PATRAS, PIRÆUS, ATHENS,
SALONICA.

Digitized by Google

the electricians should return to work in the afternoon, so that the city should not be deprived of light. There was a slight delay in getting the electric current restarted, and the Chamber of Deputies opened their session by candle-light.

The Banat.

The question of the Banat seems likely to become something on the lines of that of Alsace-Lorraine to the French and Italia Irredenta to the Italians. Every speaker on this subject during the session of Parliament has declared the right of Roumania to the whole of the Banat. All such assertions have been greeted with thunderous applause, and it seems probable that one of the major forces that will guide Roumanian foreign policy during the next generation will be the acquisition of the remaining part of the Banat, granted by the Peace Conference to Yugoslavia. The speech of M. Imbroano, a native of the Banat himself (and a priest who volunteered to fight during the war and served as an officer in the Roumanian Army), was particularly successful in rousing the enthusiasm of the Chamber, and its tone of sincerity struck deep into the sentiments of the deputies present.

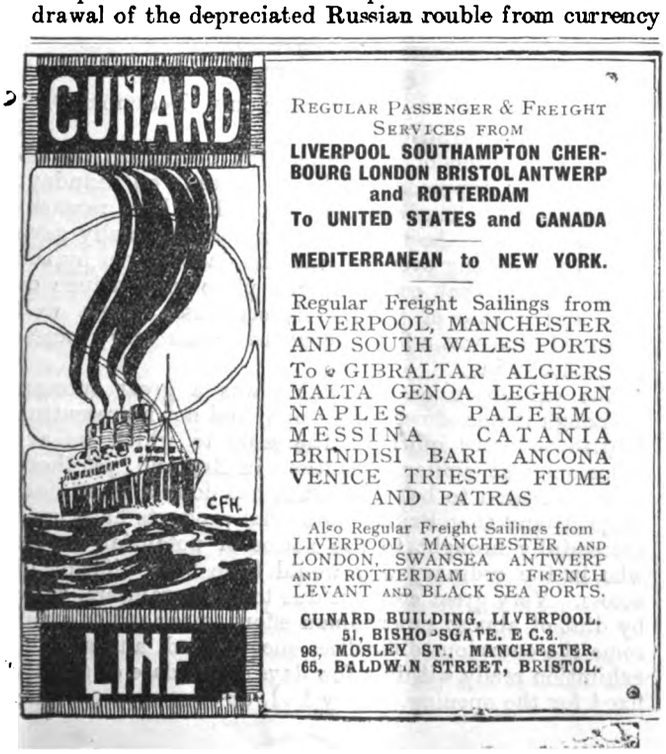
Transylvania.

The Opposition papers are making copy out of reports appearing recently in the British Press of disorders in Transylvania and the abuse by Roumania of her new powers in the annexed territory, in the persecution of Roman Catholics, Unitarians, and Lutherans. In view of the existing administrative disorganisation resulting from the war, and of the magnitude of the task which lies before Roumania since the victory won has extended her boundaries so as to treble the area of the kingdom, surely it is too soon to attack her with this sort of criticism. The alleged abuses are stated to have taken place in the war zone area, where civil administration has not yet taken root, and the reputation of Roumania as a country where religious tolerance was firmly established before the war warrants the assumption that any isolated instances of the arbitrary exercise of power which may have occurred will be severely dealt with. If further assurance on this point were needed, it might be found in the recent speech of the Prime Minister, who, in describing the policy of his Government, said: " . . . . Greater Roumania must be loved and respected by all her subjects, irrespective of race or religion. Liberty of conscience is one of the fundamental principles of every modern State, and a broad religious tolerance must be firmly established in Roumania."

Bessarabia.

In response to an urgent appeal from a peasant deputy from Bessarabia, the Minister of the Interior has promised to do all in his power to hasten the withdrawal of the depreciated Russian rouble from currency in that province, and the substitution of the Roumanian lei. Great distress prevails owing to the low purchasing power of the rouble, which the Government has been unable to replace so far, owing to lack of paper money. A supply is expected, however, in the course of the next few weeks from the United States. This money will be issued by the Government, as the question of the extension to the new provinces of the issuing powers of the National Bank has not yet been settled.

The policy of extension has been very strongly attacked, and it seems probable that a way out will be found in the inauguration of regional banks for Transylvania, the Bukovina, and Bessarabia respectively. These new regional banks would stand in the same position to the Government as the existing National Bank.



YUGOSLAVIA.

BELGRADE, December 29.

Political Parties.

Little is heard of politics nowadays. During the calm that has followed the "crisis," the old Liberal Party has dwindled to almost nothing; out of the half-a-dozen members who survived, most have now joined the Democrats; and Ribarats now remains practically alone, a veteran without a party. Dr. Koroshets, whose attitude was so enigmatical at the time of the outbreak of the crisis, now appears as vigorously anti-Democratic as he was anti-Radical at the time of his private crisis with M. Stoyan Protich. He is now a declared Clerical-Nationalist, calling for a *Kultur Kampf* against the Democrats, who, he says, are all anti-Catholic; and all good Roman Catholics should exert themselves against them. As his party is too small to be independent with any degree of efficacy, it will be interesting to see his attitude when the Constituent Assembly meets. He has a strong following in Slovenia, but chiefly in the country districts and among the peasants. Meanwhile, another phenomenon is the attitude of the Jews in Osijek, who have formed themselves into a party and nominated Dr. Marko Leitner their candidate. With the various nationalities, and religions, the new Constituent Assembly, when it does meet, should be a somewhat variegated gathering.

Montenegro and Italy.

It is definitely reported that the Italians are reinforcing their troops round Bar (Antivari) in Montenegro. It is stated that they are holding the coast near Bar, and also the railway, the narrow, curly, precipitous line that is the only one in the country, which leads from Bar over the Sutorman pass to Vir Pazar on the Lake of Skadar, where they also have a garrison. An entire battalion of the 96th Regiment has recently been sent up to Vir Pazar, with a machine-gun section. The military authorities are spreading over the country specially printed versions of the *Glas Tsrnagoska*, the old Montenegrin official gazette.

The Fiume Trouble.

As to Fiume, public opinion is easier, as Italy's barometer is falling; the inglorious end of d'Annunzio's fantasy, by which his "Fiume or Death" ended in a quiet departure when the voting went against him, the more sympathetic attitude of England and France, the domestic difficulties of Italy, and her lack of control over her own officers, all this has encouraged the Slavs. They have confidence in the justice of the Allies, and it was in that confidence that they maintained so correct an attitude through these past trying months. Their troops were ready, straining at the leash, waiting that d'Annunzio should cross over the demarcation line, but he knew too much, for he would certainly never have gone back again. The Slavs were anxious to settle the matter themselves, and had they had the mandate from Paris, they would have cleared Gabrielle out of Fiume in a day.

The Bocche di Cattaro and Dalmatia.

The Bocche di Cattaro is a portion of Dalmatia, but has well-marked local characteristics of its own. A deputation of Bokeli, headed by M. Liuba Jovanovitch, Minister of the Interior in the late Radical Govern-

Digitized by Google

ment, recently waited upon the present Minister of the Interior with the petition that the Bocche should be formed into an administrative province, directly administered from Belgrade, with the usual degree of autonomy—in fact, that it should be independent of the Dalmatian Provincial Government at Splijet. M. Pribitchehvitch received the deputation very sympathetically, but pointed out that it was a matter for the Constituent Assembly. At the same time, a deputation of students from the Bocche attended with a counter-petition, that the question should be dealt with only when the administration of the entire kingdom comes up for discussion.

England-Australia via Novi Sad.

Captain Matthews, the English aviator, who is flying to Australia, landed the other day at Novi Sad, to find the country covered with snow; he had some difficulty in getting away, but at last succeeded, accompanied a short distance by some of his Yugoslav colleagues, delighted at the opportunity of meeting the intrepid British flyer under such interesting conditions.

Relations with Austria.

Times have indeed changed when we read of a *rapprochement* between Vienna and Belgrade. The Austrians are in such distress that they are in urgent need of help from the outside, and they look to the rich districts of Northern Yugoslavia for material assistance. Besides, the Republican Party are afraid that the Monarchist group will gain strength from the popular discontent; and the Serbs consider that it is to their interest to help the Republicans, as they not unnaturally dread the possibility of a restoration of the Hapsburgs. A prominent Austrian official, Dr. Eisler, has recently been making a vigorous statement that every attack upon the S.H.S. is a stroke in favour of a restoration of the Empire, or at least of the monarchial system, and has given a sound drubbing to some papers that have shown anti-Serbian, or, perhaps rather, anti-Croat tendencies. The Serbian papers contain articles full of sympathy towards the Austrian Republicans. There is a good *quid pro quo*, for the Yugoslavs will give food and receive locomotives, so that everybody will be pleased.

The de Salis Report.

The *Politika* prints a communication from its Paris correspondent, who usually seems well informed, on the de Salis Report upon the state of affairs in Montenegro. He states that it is generally credited that the report paints the situation in Montenegro in very sombre colours, but categorically denies the truth of the version published by the *Chicago Tribune*. The correspondent of the *Politika* states quite definitely that the American account is not a true one, and that he has been able personally to verify this, and its Italian inspiration. He continues to state that Count de Salis himself reports that ex-King Nicholas has but a small following in the country, not sufficient to justify his return in the hopes of provoking a rising. In confirmation of this he calls attention to the supervision under which the ex-King lives at present at Cap Martin, his failure to greet his colony of adherents at Marseilles on his way through from Paris, and the stoppage of financial supplies to his followers in Paris. Whatever is the true state of affairs in Montenegro to-day, one thing is certain, and that is that Italian interference and intrigue make it far worse; if the reactionaries are really in a minority, it gives them false hopes and encouragement; if they are in a majority, due publicity should be given, and the people allowed to decide for themselves. It should be remembered that in past years, Montenegro and Serbia considered themselves as sister-States, and Montenegro supported Serbia in her wars, often without any alliance, just as in 1913 she gave her armed assistance ungrudgingly against the treacherous Bulgar attack. Only it suited Austria to keep them apart, and Austria invented the frontiers of the Sanjak of Novibazar for this purpose in 1878, and always fomented rivalries between the two Royal families. The marriage of King Nicholas's daughter to King Peter was a snub to Vienna, which always stirred up jealousy between the two dynasties, seeing that both States were candidates for the rôle of Piedmont in the union of the Serbian people.

Greece and Serbia.

Profound satisfaction is felt in Serbia at the recent speech of M. Venizelos in the Greek Chamber when a member, who hailed from Strumitsa, asked the Hellenic Statesman whether Greece had applied to the Supreme Council in Paris for the "return" of Strumitsa to Greece, and on what grounds, either ethnographical or historical, the district had been given to Serbia. Without troubling about the ancient history of the district, which, like almost every part of the Balkans, has belonged to Serbia at some time or other, M. Venizelos replied that according to the Serbo-Greek Treaty of 1913, Strumitsa fell under the Serbian sphere of influence, and what Greece did not claim then she could hardly claim now. He added that in September, 1915, when Bulgaria mobilised, he asked M. Pashitch whether Serbia, taking into consideration the bright prospects of realising her dream of national unity, would consent to a modification of the Treaty with Greece, so that the districts of Ghevgeli and Doiran should fall to Greece, and that Serbia should abandon any claim to Strumitsa. The then Serbian Premier replied that such a proposition could be considered, and Serbia might be able to consent to such a sacrifice, so highly did she estimate the friendship and alliance of her southern neighbour, but with the reservation that Greece should fulfil her duty as an ally in the event of a Bulgar attack. But, continues M. Venizelos, unfortunately Greece then failed in her duty, and so forfeited any such claim that she might have had. He further stated that he was touched by the anxiety of the Greek portion of the population of Strumitsa to join Hellas, but he never dreamt of asking Serbia for the cession of Doiran and Strumitsa, knowing well what Serbia's answer would be. M. Venizelos continued in the tone of a true statesman, that, as the honourable representative of a honourable nation, he considered that, in consenting to that sacrifice and regularising the Allied relations between his country and Serbia, he was doing so once and for all, and that Greece would never in future have any desire for the territory which, without any pressure, she had consented to see become an integral part of the Serbian Kingdom. So Greece henceforward has no claims whatever either upon Strumitsa, Doiran, Ghevgeli or Bitolj (Monastir). Finally, he said, those Greeks who remained outside the fold should remember that they belonged to a Christian State and friendly Allied Power, living under a constitutional régime, so that they could express their wishes through their deputies in Parliament. He also stated that at Paris, both the Bulgarian and Serbian delegates had pressed their claims for Strumitsa, but that he was sure that, since Strumitsa could not belong to Greece, no Greek would envy its possession by Serbia. The questioner replied that under those circumstances it were a thousand times better that it belong to Serbia.

GREECE.

ATHENS, December 8.

The F.B.I. Exhibition.

The Exhibition of the Federation of British Industries at the Zappeion, Athens, closed on Sunday, November 23. The weather, which had kept remarkably fine during the run of the exhibition, finally gave out on the closing evening, and the dance given by the exhibitors on that occasion took place in a deluge of rain and a gale of wind. Nevertheless, it was well attended, and was a fitting conclusion to a very successful undertaking.

The exhibition on the whole was a great success. Although it was of necessity small, and not representing British industry quite on the scale to which we are accustomed at similar exhibitions in England, yet there is every reason to believe that it has done a great deal of good, and that British industrial products have been successfully brought to the notice of potential buyers who in the ordinary way would have been difficult of access. Very great credit is due to the organisers, who, by dint of almost superhuman effort, managed to overcome the enormous difficulties encountered, and got the exhibition ready within a few days of the date originally fixed for the opening. They had, of course, to contend

Digitized by Google

with shipping difficulties and railway strikes at home, and with the hopeless congestion of the Port of Piræus here; and consequently the arrival of some of the exhibits was rather belated.

The exhibition was well attended, and attracted merchants from all over Greece. Owing to difficulties of transport, however, and to certain passport restrictions still in force, it is doubtful whether the number of visitors from Levant centres outside Greece was what was anticipated; but the Greek commercial man certainly responded very well to the invitation of the British manufacturers.

King Alexander's Interest.

King Alexander of Greece was a frequent visitor at the Zappeion, and showed marked interest in the automobile and aircraft sections. A Handley Page machine, which made several "joy" flights daily over Athens, piloted by Captain W. Shakespeare, R.A.F., had the honour of carrying his Majesty on two or three occasions. This machine, together with several others at the Tatoi and Eleusis aerodromes, was unfortunately destroyed by the gale which raged on the closing night.

A good deal of business was done, and many orders were placed at the exhibition, but, undoubtedly, considerably more could have been done had the conditions been otherwise. The representatives of many of the firms were obliged to reply to inquirers that they were booked up with orders for home delivery for some considerable time ahead; others were as yet without agents in Greece, and could not give information as to when stocks would be ready for delivery; while yet others had not foreseen the possibility of their being asked to quote prices for delivery c.i.f. Piræus. These, of course, are contingencies, which, owing to the exhibition being held so soon after the close of hostilities and the unsettled state of the markets of supply at home and the freight market, it is very difficult to contend with at the present moment.

The object of the Exhibition, which was that of giving the Greek factory owner and consumer an opportunity of seeing what British industry is capable of producing, was more than achieved. Very great interest was displayed in the machinery and textile sections, and some important orders were placed. It was an everyday sight to see a batch of 50 to 100 students of the Athens polytechnics and schools, accompanied by their professors, receiving practical instruction in the working of various machines and the use of the technical and scientific instruments exhibited, so that it is to be hoped that some useful propaganda work was also done.

A series of receptions and dinners were given in honour of the exhibitors, at which all the Greek Ministers and municipal authorities were present. The first of these was given by Lord and Lady Granville at the British Legation, and the Athens and Piræus Chambers of Commerce and Municipalities also entertained the exhibitors. The Federation reciprocated on various occasions, and some very complimentary things were said in the course of speeches by the Greek officials. The King was present at most of these receptions.

Return of M. Venizelos.

The event of the week has naturally been the return of the Greek Premier, M. Venizelos, to Greece, on the termination of his business at the Peace Conference. M. Venizelos arrived in Phalerum Bay in the Greek light cruiser Hellé, having hurried back from Paris after the signing of the peace treaty with Bulgaria after an absence of practically a year. Athens, on this occasion, was *en fête*, and a public holiday was observed. Dense crowds thronged the approaches to the Constitution Square, where his Excellency attempted to make a speech from the balcony of the Hôtel d'Angleterre. The crowd was, however, so effusive in its welcome that M. Venizelos could only bow and smile his gratification at the welcome given him, and had to hand his speech to the newspapers for publication the next day.

Considerable consternation was felt in Athens on the publication of the news a few days ago of the discovery of a projected *coup d'état* to overthrow the present Liberal Government. According to the Athens newspapers a number of reactionaries, officers and ex-officers and civilians, had prepared a most elaborate and drastic plot to exterminate M. Venizelos, together with most of his Ministers. It is asserted that emissaries had been sent to Italy with the object of intercepting and assassinating the Premier, and that, at the same time, plans had been made by the reactionaries to seize the batteries of Lycabettus, commanding Athens, and to terrorise the capital by dynamiting the public buildings. It is stated that the ringleaders have all been arrested, and the number of persons arrested and given passports is variously reported at 130 to 150. The Press, however, became very reticent after the communications of the first day or two. The plot is stated to have been inspired from Switzerland by the entourage of the late King.

M. Venizelos and the Labour Party.

M. Venizelos a few days ago went down to the Piræus to inspect the lately built extensions to the Customs House and stores erected during his absence, and necessitated by the congestion in the Port of Piræus. In a speech which he afterwards made in the Committee Room of the Customs House, he expressed his satisfaction with the efforts made in his absence to cope with the congestion of the port, caused principally through the increased utilisation of Piræus as a transit port. He afterwards took the opportunity of saying a few timely words to the leaders of the Labour party present. He signified his approval of their right to form an independent Labour party, and his intention of helping them in securing adequate representation, but he was very emphatic in his remarks that the Labour party must not lose sight of the fact that they represented a vast minority of the population of Greece, and that, if they intended to jeopardise the well-being and progress of the community by strikes, exorbitant demands, and "Bolshevist" tactics, they would find that he has no sympathy with them, but that, on the contrary, he would ruthlessly oppose any such tendencies on the part of the Labour-Socialists. This declaration of his intention has generally been applauded, but the Labour unions appear to be rather disconcerted.

CYPRUS.

CYPRUS, December 13.

The Cession of Cyprus.

The reply of Mr. Lloyd George to the London Deputation has been the subject of much comment. It differs but little from replies to the many memorials and deputations which have been sent to London. It is recognised that the last word will not be spoken for some time; meanwhile the town politicians derive much hope and consolation from some expressions which the letter contains. The Greek "Unionist" still regards the "Cyprus question" from a very insular and detached point of view, and ignores the fact that the fate of the island has always been, and must always be, as far as Britain is concerned, regarded as part of a much larger problem.

The return of the deputation is now awaited. Many partisans think that the members should have remained in London until the question is definitely settled. Subscriptions have recently been made in Egypt, amongst the "Cypriot fraternity" and others, in aid of the cause.

Aliens' Bill.

The Legislative Council met again on December 12, when a Bill dealing with the deportation of former enemy aliens was discussed and passed. The High Commissioner is thereby empowered to order an alien to quit the island, and to prescribe the time within which he shall leave. The penalty for disobedience is imprisonment not exceeding three years, or a fine not exceeding £200, or both. During the debate Irfan Bey submitted that power should be given to order the departure not only of former enemy aliens, but also that of any persons whose presence in the island may be a cause of trouble. Among the former, he argued, may be persons of the most exemplary character; whereas among the latter may be found undesirable mischief-makers, whose action is much more likely to be objectionable and a source of disorder. The King's Advocate, however, pointed out that the High Commissioner has already such power by virtue of a law passed since the British occupation—viz., "The Peace and Good Order Law, 1879." Under this law the High Commissioner may with the advice of the Legislative Council, under his sign and seal, declare that any person who may, in the opinion of the Council, be dangerous to the peace and good order of the island, shall be prohibited from residing, or being,

Digitized by Google

therein; disobedience being punishable with twelve months' imprisonment. Such person may be arrested and detained in prison pending trial.

Miscellaneous.

Telegrams have been sent from some towns congratulating M. Venizelos on his escape from the recent plot.

The papers mention from time to time the return of Cypriots who have served during the war in the British Army. One such has just returned after eighteen months' service from Constantinople, Mr. N. Economides, of Morphou.

MALTA.

VALETTA, Dec. 22.

The Governor.

Lord Plumer, the Governor, is receiving great encomiums from the general public for all he has done for the island in obtaining self-government for the people, and a promise of financial aid from the Imperial Exchequer. He seems to have gauged the peculiarities of the Maltese character very well, and he has also recognised that the great failures in the past have been due largely to a lack of leaders. This point he strongly emphasised in an address he gave to the University students at the ceremonial when he received his degree (honoris causa) of LL.D. Many have been the schemes proposed to relieve the burden of taxation, and the latest is to establish a *Lotto Nazionale*. Public lotteries are not recognised by the Government of the island, but despite this a vast sum of money leaves the island weekly to swell the funds of the Italian Government. The subject is a thorny one; but something ought to be done either to prohibit lotteries entirely or to establish one on equitable lines, which at all events, would benefit the island as a whole.

The Lieutenant-Governor has returned from London where he has spent a long time at Downing Street discussing the financial and constitutional affairs of the island. His mission appears to have been a great success.

Emigration is perhaps the only thing that can save the economic situation, and it is a fact very much to be regretted that the illiteracy of the would-be emigrants and a lack of a knowledge of the English language greatly impedes their settling in new countries. The Government have just published a communication from the Governor-General of Canada, relative to this matter. The letter points out the qualifications necessary for emigrants to Canada, and it is suggested that steamship agents should be prevented from encouraging that type of emigrant likely to be refused from leaving for Canada.

The University.

Dec. 28.

The general opinion prevails in the island that a radical reform in the curriculum and general organisation of the University is needed, and the conferring of the degree of Doctor on the Governor (Lord Plumer) is looked upon as being a matter which will "speed up" things educationally. There is much that is wanting here, from the lowest grade of school to the *alma mater* itself.

Scarcity of Bread.

The situation raised by the possible scarcity of bread is easier. As regards the stoppage of the mills, it has been wisely suggested that the millowners should provide themselves with adequate "spares," and that a Government inspector be appointed to report and advise periodically on the exact condition of the machinery.

"Olla Podrida."

The island, like other Near East places, is suffering from lack of prompt cable news, owing to cable collapses. The Eastern Telegraph Company are doing the best they can in the circumstances.

It comes as good news that the *Daily Malta Chronicle*, which ceased as a result of the riots last June, is shortly to start again.

Lewis F. Mizzi, Esq., LL.D., has made a present to the island of his unique and complete set of mineralogical, crystallographical and geological specimens, for which act he has been publicly thanked by the Council of Government. Dr. Mizzi is well-known in the Near East, as for thirty years he was president of the Consular Bar at Constantinople, and edited the famous *Levant Herald*, a paper hated intensely by the Young Turk section.

A Constantinople telegram earnestly requesting the continuance of Y.M.C.A. work for the comfort of the troops of the Army of the Black Sea during the winter has just been received at the Y.M.C.A. headquarters. In Constantinople and in the camps on the shore of the Sea of Marmora and the Dardanelles, as well as in the Caucasus and in South Russia, the Y.M.C.A. has been serving the troops since the armistice. A request has also been received from General Congreve in Palestine asking that new Y.M.C.A. centres may be opened for his troops when they take up their new positions.

ROUMANIAN GOVERNMENT'S POLICY.

Statement by Prime Minister.

We are indebted to the Roumanian Legation for the following report:—

In the Roumanian Parliament, on December 20, M. Vaida-Voevod, the Prime Minister, made an important declaration regarding the Government's policy. After giving particulars of the Roumanian nation's fight for independence and union, he pointed out that the Government was the first formed by the majority *bloc* in Great Roumania's first Parliament, and declared that it was conscious of the obligations thus imposed upon it. As the principal points of the Government's home policy, he mentioned the revision of the Constitution. As regards foreign policy, he said: "We will retain the wish to be as near as possible to the Allied and Associated Powers." Among schemes which are in progress, he referred to: (1) Electoral reform, on the basis of the universal, secret and compulsory vote; (2) agrarian reform for dividing the land between the peasants who really cultivated it before; (3) the reform of administration on the basis of the largest decentralisation, and the paying to the staff a living salary; (4) economic reconstruction, including the reorganisation of the railways, which is one of the principal cares of the Government; (5) the reconstruction of finance, introducing progressive taxes, taxation on fortunes made during the war, the confiscation of fortunes made dishonestly, and the participation of the State in export profits; (6) the regulation of work by means of establishing minimum salaries, and the protection of children and women working in factories; (7) the reconstruction of villages, building of comfortable and healthy homes for the poor population in towns, the establishing of public baths, and general measures for assuring the public health; (8) the protection and care of the invalids of war, as well as the orphans and widows of those fallen in the field. The nationalisation of secondary instruction, having in view the rights of minorities, the development of primary schools, and the organisation of the autonomy of the Roumanian Church as that of the University; (9) newly-established ministries will be entrusted with the protection of the race so as to assure the best possible conditions of life.

The provisioning of the country, said M. Vaida-Voevod, will be one of our first interests. Partial demobilisation has started.

The establishment of unity of thought and feeling between all Roumanians must be created. Great Roumania must be loved and loving, with no exceptions of nationality or religion. Reciprocity in religious tolerance must be established in Roumania.

The Jewish question was solved by Decree Law of July, 1919. The relation between us and the Jews was not satisfactory, not because of political reasons, but because of the economic situation. We will have full confidence in them, and hope that they will respond with the same confidence.

We had to settle foreign questions first so as to be able to start on home reorganisation. We continue to be in alliance with the Entente Powers. We have close community of interest with Poland. With Czecho-Slovakia we are on the best of terms, as well as with Yugoslavia, with whom we have so many interests in common. We hope that Greece will justify her classic past concerning the Roumanians of Macedonia. The blood spilt in common with our Allies is a bigger guarantee than any treaty written on paper. The many lies spread by our enemies in foreign countries will be falsified, for we shall maintain with loyalty our relations with foreign countries.

The Peace Conference has not given full satisfaction to our claims, but it has not acted with bad intention. Compromises were made so that one should not be favoured while another was being oppressed, the wound produced by the cutting off of one part of the Banat in which will not unsettle us. In the circumstances we found ourselves at the time we closed peace with Austria we had not the liberty to choose, so that we were bound to give in to a much greater power than our own.

The compromises we will have to make in the future will not be in any case as painful as those of the past. The policy of resistance could have been maintained if it would have had the agreement of the whole nation and if it would have offered grants of a better result. I take the responsibility of signing the Peace knowing that I may be sacrificed; when it is a question of the country's interests party interests must disappear. We will all work together for the sake of our country, putting aside the consideration of different parties.

MALTA'S NEW GOVERNMENT.

Reuter's Malta correspondent reports that at an extraordinary sitting of the Council of Government on January 5 the Governor read a despatch from the Colonial Secretary outlining the new form of government. It requires two distinct Administrations, one to deal with the interests of Imperial defence and matters relating thereto, and one to deal with purely local interests. In the former the Governor will be assisted by an Executive Council composed of representatives of interested bodies, and in the latter by the people's own representatives. The Constitution will follow as much as possible the lines of the draft Constitution submitted to the National Assembly. Emphasis is laid on the fact that this concession is granted at the express recommendation of Field-Marshal Lord Plumer, and that it will require the harmonious and effective co-operation of the Maltese people with the Imperial Government.

PRESS ON THE NEAR EAST.

Armenia and Turkey.

The *Manchester Guardian* of January 5 discusses in a leading article the Turkish Treaty generally. It says:—

There can scarcely have been anything on which opinion, in this country at least, was more agreed than that the successful ending of the war would mean the disappearance of the Turk, complete and absolute, from the regions in which he misgoverned a variety of subject races, and, above all, from Armenia, the stage upon which he had finally demonstrated, on a vast scale, the atrocities of which he is capable. To most people it would come with a shock of surprise and disgust to think that, under any circumstances or with any ostensible safeguards, the Turks could again be tolerated in Armenia, yet for some time it has been reported that certain Continental politicians, anxious for the purposes of their own diplomacy to keep the Turks alive, were disposed to recommend that Turkish authority should be maintained in Armenia. We should like to think that no British Government would even consider so infamous a proposal, and that if it did it would soon end its own life as a Government.

It then refers to the desirability of the United States' acceptance of the responsibility for Armenia, and continues:—

But if, as is all too likely, the United States will not take up this honourable burden, there are other adequate ways of providing for the future of Armenia without leaving a vestige of authority to the Turks. The work which the League of Nations can carry out through a mandatory it can also carry out directly through a commission of its own, and although commissions of mixed nationalities have their defects, such an arrangement might conceivably be much better for Armenia than that it should be handed over as a trust to any one of the Powers who in the Near East have so many private interests of the sort which have produced incessant friction during the recent months.

Constantinople.

In the *Graphic* of January 3, Mr. Demetrius C. Boulger writes on the future of Constantinople. His firm conviction is that the Turks must be left in possession. He says:—

The first point of capital importance for the British people and Empire is to remember that the fate of Constantinople is of the very foremost importance for vast Asiatic African communities, and that they will hold us alone to account for any affront to their dignity, and any assault on what they deem their interests. We may have partners and associates in whatever steps may be taken, but in their eyes we alone will be held responsible, and left to suffer as the mark of their indignation. Does the country fully realise what this may mean? Our present difficulties are many and greatly complicated by side issues. Are we going to add to their number by a piece of wanton provocation which will add fuel to the smouldering flame from the Nile to the Ganges? Have we taken into account our diminished resources, our depleted reserves of all kinds, the lassitude of our citizens, the gravity of our home affairs, that we wish to rush blindly into fresh wars that will disturb the Asiatic world to its depths, and perhaps rouse the torpid giant from his age-long sleep? . . .

Look at the matter from what angle you like, of British interest or international peace and concord, there is no safe alternative to leaving the Turk in possession. Conditions can be made of a suitable nature for the security of free and open navigation through the Straits, and for improved administration; but the *status quo ante* remains the only course open to us by the light of our own responsibilities and perils.

The Arabs.

A writer in the *Glasgow Herald* of December 31 reports a conversation he had had with a field officer who served on Lord Allenby's Staff in Palestine. Having discussed the character of the Turk, he says:—

My deponent was equally frank about our present troubles and those of the French with certain Arab sections. This question, he assured me, was wholly misunderstood here. For instance, there was a tendency to associate the revolt of the Syrian Arabs against the Sykes-Picot Convention and their demand for a united and independent State, with a move in favour of Hedjaz sovereignty. "In truth," said my friend, "this is not so at all. These Syrian Arabs are clamouring for a republic of their own and not for reunion with the Hedjaz. The authority of the Emir Feisul, who is a genuine friend of ours, is far from unchallenged in Syria. So that, in order to placate their violent Chauvinism, he feels constrained to support their claim to some extent, lest he should lose all influence over them. I always held that we made a very serious mistake when, on approaching Damascus, which the Turco-Germans had evacuated owing to the defeat inflicted upon them by British Imperial and Indian troops, we stopped the latter in order to enable the Arabs to enter Damascus first. They were hailed there and believed themselves to be the real conquerors, and have suffered from swelled head ever since!"

The above view is interesting in the light of a letter on this subject printed in the last issue of the NEAR EAST.

The Dardanelles.

In the *Contemporary Review* of January, Mr. H. Charles Woods deals with the report of the Dardanelles Commission. He first discusses the objects of the attack upon the Straits. He says:—

If we take it, as Lord Grey took it, that it would have had a bad effect if that assistance had been refused, then there were at least two alternatives open to the responsible authorities. First, it would have been possible to have informed the Russian Government that the suggested demonstration would be made as soon as the troops required were available, thus postponing an attack upon the Dardanelles until it could be carried out as a combined naval and military operation. And secondly, if it were necessary to act without committing ourselves to so much as an attempt to force the Straits, a less hazardous and difficult undertaking would have been a landing in the Gulf of Alexandretta, where an advance of only about twelve miles would have placed us astride of the Baghdad Railway, thereby practically severing the Ottoman communication with, and putting an end to, Turkish resistance in Mesopotamia and on the Egyptian frontier. We do not know whether the adoption of this course was considered at that moment, but the Commissioners tell us that, in November, after Lord Kitchener had advocated a landing in the neighbourhood of Alexandretta, a decision against this proposal was arrived at as a result of a Conference with the French Government. It therefore seems reasonable to suppose that, as reported at the time, France was, or would have been, opposed to an undertaking in an area which she regards as her special preserve, but in which she was impotent to give any effective military or naval assistance.

He makes an interesting point in speaking of the political results of the campaign.

Politically speaking, on the other hand, whilst the campaign may have heartened the Russians and maintained their resistance, I cannot agree with those who suggest that the Dardanelles campaign prolonged the neutrality of Bulgaria, for I consider that it was largely the developments of the first stages of the Suvla Bay operations which finally decided King Ferdinand and his clique to throw in their lot with the Central Powers, and that our subsequent total failure strengthened the hands of King Constantine of Greece, thereby definitely postponing the entry of that country into the war on the Allied side.

He closes on the brighter aspects of the campaign.

The two bright spots in the whole campaign are the decision taken to evacuate, and the magnificent conduct of the personnel of the Army and Navy throughout the operations. Indeed, as one reads page after page containing contradictory opinions or evidence, one seems for the first time to meet a ray of hope, of light and of determination, when one comes to the rôle of Sir Charles Monro. Only four days after his arrival at Mudros, that officer, whose efficiency throughout the war has been proverbial, decided that the Peninsula must be evacuated. In spite of the expression of more than one contrary opinion, and especially of a desire in certain quarters that the Army should not be withdrawn from Helles, the present Commander-in-Chief in India never for one moment wavered in his opinion—an opinion which we all now recognise as justified. What is more, Sir Charles Monro, who originally agreed that a loss of 30 to 40 per cent. in personnel and material might be incurred during the evacuation, actually effected that operation with casualties amounting to only 345 killed and 1,178 wounded. He thus proved himself the one and only commander who rightly over-estimated, instead of under-estimating, the dangers and difficulties of the operations at the Dardanelles.

Armenia.

In the *New Europe* of January 1 M. P. Tonapetean sets out some of Armenia's claims, and favours the idea of a British Protectorate. His article concludes:—

Armenia's future depends, not upon the extent of her territory, but upon the presence and effectiveness of a Mandatory Power. Those who advocate complete Armenian independence are either unpractical dreamers, or have been infected with the Social Democratic ideas on which Russian schoolboys have been fed for forty years past, and which are now bearing fruit in Russia. They may be good patriots and sincere idealists, but these qualities are not in themselves enough to administer a country whose peoples are mostly illiterate, and whose advanced classes are mostly devoid of discipline and full of presumption. A healthy Armenia can only materialise if for the next fifty years she is guided by the authority of a strong civilised Power such as Great Britain. In an atmosphere of justice and of perfect security of life and property the Armenian race would, in the period of fifty years, be enabled to grow numerically strong enough to form the nucleus of the new Armenian State. Meanwhile, being modelled upon the good example and under the guiding influence of British civilisation and government, it would be able to train itself in the duties and practice of self-government, and would thus be ready to stand alone when the time came.

CORRESPONDENCE.

EGYPTIAN UNREST.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—It is an error to think that the East can possibly develop except on its own lines, through Eastern master-minds. Let us find these for Egypt, and let it be their concern to do what is necessary, as our concern is to guard the Suez Canal and European investments in the country.

The present unrest has its roots outside, and must be dealt with accordingly. No amount of concessions will cure it; it is the work of enemies of the present régime, whom nothing will satisfy short of its destruction. The misfortune of Egypt was to have had a supercilious Khedive like Abbas Hilmi, who made it necessary for the British to take authority out of his hand instead of supporting *his* authority by their power. He was kept far too long on his Turkish throne, and it was his own faults which perverted the minds of certain Egyptians and the good intentions of Egypt's friends.—I am, etc.,

December 22, 1919. A. SEFI.

LORD RONALDSHAY AND THE INDIAN RENAISSANCE.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—On December 4 H.E. the Governor of Bengal received the Society of Indian Art at Government House, Calcutta, and addressed its members in language which has seldom been heard in that magnificent throne-room. He pointed out that the first impact of Western civilisation came at an epoch when India's national vitality was at its lowest ebb. So every form of indigenous art suffered a long eclipse, and when Schools of Art came into being, their teaching followed purely European lines. A renaissance came when the Tagores broke away from Western tradition and started a movement which in time gave birth to the modern school of Indian painting. Hence the unrest of which we hear so much extends to the realm of art. It has arisen from a clash of ideals, and is, in fact, a protest of India's soul against the invasion of foreign influence. H.E. expressed profound sympathy with the Indian point of view. As a result of the struggle for existence of her ideals, he said:—

"I look forward to seeing the peculiar genius of the Indian people finding expression in an artistic language of their own. It will not be easily understood by the stranger, but will be a language coming to India herself naturally and with no need of interpretation, in the message which the Indian artist has to give. If this new movement reflects the soul of India—and I am sure that it will do so—we shall see it chary of adopting the realism which is so marked a feature in European art, and clinging to the ideals which colour so deeply the whole artistic life of the Indian people."

Lord Ronaldshay's words indicate a new orientation of governmental policy. It has hitherto been dominated by the utilitarian canons which unfortunately are still current at home; it reeks of the counting-house whence our Empire sprang; and regards the arts as lying outside its province. But criticism must be tempered by an appreciation of the enormous difficulties which confront the Anglo-Indian administration. During a tour in Central Asia I asked poor General Kurapatkin, who then governed Transcaspia, why the glorious relics of Timur's reign at Samarkand had been suffered to lapse into utter ruin. "We Russians," he replied, "want all our money to buy powder and shot!"

It is noteworthy that William Pitt gave the self-same excuse for his refusal to purchase the art-treasures of Florence for a mere song in 1793. In both cases stern necessity conspired with utilitarian theory to limit the functions of government. H.E.'s sympathy with the legitimate aspirations of India has endeared him to her people; and his heart-whole support of indigenous ideals cannot but exercise a powerful influence for good.—I am, etc.,

January 5. F. H. S.

SERBIA AND YUGOSLAVIA.

On January 9, at the Æolian Hall, a Christmas lecture to young people was delivered on behalf of the Royal Geographical Society by Mrs. Dickinson Berry, M.D., its subject being "Serbia and Yugoslavia Before and After the War." Sir Francis Younghusband presided and introduced the lecturer as a lady who had had many adventures during the war, and had done splendid work for the Serbs.

The lecture was illustrated with lantern slides showing maps of the country, its scenery, its architecture, the picturesque costumes of its people, the blind minstrels and ballad-singers with their one-stringed instruments and so forth. Speaking of the condition of the Serbs while under Turkish rule, the lecturer said it was not worth while for them to cultivate their lands well because of the exactions of the tax-gatherer. If a Christian on horseback met a Turk he had to dismount; one boy from every Christian family was taken and brought up as a Mohammedan, in ignorance of his parents, as one of the corps of Janissaries. From this state of things the people had been delivered at the beginning of the nineteenth century by a successful revolt under Kara George (ancestor of the present king). Serbia was the only Balkan State which had succeeded in freeing itself from Turkey by its own efforts. It was an exceedingly democratic country; the old Serbian aristocracy had disappeared during the centuries of Turkish rule; and when it came out from this it was a community where nobody was very rich and nobody very poor. The Serbs to-day were an exceedingly intelligent race, and very keen politicians. They were very polite. One day, some time before the war, a party of English people, of whom the lecturer was one, met an old man on horseback. He was coming from a church festival, where probably a good deal of native spirit had been consumed, and it might be that his seat was not so firm in the saddle as it should have been. The English party were on bicycles. The horse shied at the sight of these, and the old man fell off. The road at the point where this took place was high above a river, and the old man went down the steep bank, bouncing from stone to stone like an indiarubber ball. Some of the English people went down to his assistance, thinking he was very likely killed, but he got up and was helped on to the road again. Seeing that it was the sight of the bicycles which had caused his horse to shy it would not have been unnatural if the old Serbian had been abusive; but instead of that being the case he thanked the English people for coming to his assistance, and expressed a hope that they would live for ever.

Another story of a different kind was the legend that on the night before Kossovo, Lazar, the last of the Serbian Tsars, had a vision in which an angel offered him the alternatives of victory and an empire rule or the Kingdom of Heaven. He chose the latter. Such was the spirit of the Serbian people that, in spite of the long centuries of oppression that followed they never blamed him for his choice.

The lecturer described more briefly the other countries now included in the Yugoslav kingdom. Of Fiume she said that although in the city itself there was a preponderance of Italians, if the suburb of Sushak was included the Slavonic element of the population was in the majority. It had never been an Italian city except for one year, in 1508, when the Venetians seized it by a successful raid. Except for that it had practically always been Croatian until Hungary got possession of it by means of a trick.

BIBBY LINE

OF FAST TWIN SCREW STEAMERS SAILING FORTNIGHTLY FROM

LIVERPOOL

TO

CEYLON, BURMA, and SOUTHERN INDIA.

Special Dining and Sleeping Carriages are run by the South Indian Railway Co. in connection with the Bibby Line Service outwards and homewards.

Moderate Fares, Cheap Return Tickets, electric fans free in all staterooms. Special attention given to the carriage of motor cars.

The best of cuisine and accommodation, every stateroom having a port with free access to the open air.

Apply to BIBBY BROS. AND CO., 10 and 11, Mincing Lane, London, E.C., 22, Chapel Street, Liverpool (Dept. U.S.G.); BULLOCH BROS. AND CO., LTD., and STEEL BROS. MOSLEM TALES FROM JERUSALEM.*

II.—THE STORY OF THE SULTAN HAROUN AL-RASHID AND THE POOR WOMAN.

One day the Sultan Haroun al-Rashid and his Vizier were walking together in disguise, as was the Sultan's custom. As they passed by a miserable hut standing alone in a field they heard some children crying and wailing within. "Give us food!" cried the piteous little voices. "It is now past noon, and we have not eaten since before the sun set yesterday."

"Let us go nearer and find out the truth of this," said the good Sultan. "How horrible is such a cry in the ears of Allah the All-Merciful!"

They approached the hut quietly. Just outside the door they saw a woman cooking something in a small pot over a wretched fire made of a few small sticks, which appeared to have little flame but much smoke, while three thin and ragged little boys clung around her, weeping and clamouring for food. To the surprise of the watchers, the woman thrust the children from her with angry words, and at length drove them into the hut, shutting the door upon them. She then returned to her cooking, while the children beat upon the door from within and wailed aloud.

The Sultan went nearer to her, and his anger showed itself in his benign countenance as he spoke to her, asking her why she had driven the children from her, hungry and sad. Could it be that she wanted all the food for herself? "Woman," said the Sultan, whose heart was ever open to all men's need, "it is not good at any time to turn away the hungry, and how great a sin is it when they are your own little ones!"

For answer, the woman lifted the lid from the pot and bade him look inside. The Sultan did so, and found to his amazement that it was full of water and large stones, and of nothing else.

"Can I feed them with stones?" she said, bitterly. "Do they not cry to me day and night for the food I cannot give them? They will sleep now, because they think I am cooking something for them; but when they wake, Allah alone knows what I shall do!"

The Sultan made no answer, but he signed to the Vizier, and they went quickly away together. And the woman was sad, for she had hoped that the stranger whose face was so kindly would have given her a little money.

"All men are alike," she said to herself, and her heart within her became hard and heavy like one of the stones in the pot. "They do not care for the trouble of another."

That is not true, however. If the first man's heart is stone, the second and the third will have hearts of silver and gold.

It was more than an hour later when the woman, who had sunk upon the ground in her misery and despair, suddenly looked up, and saw these two strangers coming towards her again. He who walked in front, he who had spoken to her, carried now a large sack upon his shoulders, and his companion was also heavily laden.

"Here is food for your children," said the Sultan. "I have brought you rice and meat and flour. Make ready a meal for them, for they will wake hungry."

Then the woman was filled with a joy beside which her hunger seemed as nothing, and she hastened to prepare a meal. The strangers waited until it was ready, and the children had been waked from their dreary sleep to share in the first good meal they had ever had in all their little lives, and when they had eaten the foremost of her two unknown friends called the woman aside. Slipping a heavy purse of gold into her hands, he said, "Tell your children that they have always a friend in the Sultan Haroun al-Rashid."

With these words he walked quickly away, followed by the Vizier, while the woman, raising hands and eyes to heaven called down upon her benefactor the blessings of Allah.

It may here be recorded what the great Sultan said of the English language.

One day his warriors were discussing amongst themselves which was the greatest language in the world. First, of course, they set Arabic, for it was their own, and it is also the language of Paradise; but which came next they could not agree, and it seemed as though some were ready to support their opinion with the sword.

Then said the Sultan: "O my children, you do not well to disagree. *I* will tell you which is the best. French is like the feeble speech of a weak and foolish woman. German is hard like the neighing of a horse; it is fit only for beasts. But English is as the roaring of a lion for majesty and strength; it is a tongue that men may use with honour to themselves."

ESTELLE BLYTH.

* These tales were told to the writer by a Moslem servant in Jerusalem.

THE CARAVANSERAI.

Think, in this batter'd Caravanserai
Whose Doorways are alternate Night and Day,
How Sultán after Sultán with his Pomp
Abode his Hour or two, and went his way.

In the extremely interesting series of letters exchanged between the Kaiser of Germany and the Tsar of Russia (now being published by the *Morning Post*), there are some instructive and amusing passages relating to the Near East. I do not know enough about the Kaiser to be able to deny the loud report that he is mad, but it seems to me that he indulged in at least a moment of sanity when he visited Palestine. Look at his description of Jerusalem, for example; it strikes me as being quite acute. He refers to the wrangling and jangling of the Christian sects there, and says:—"I am afraid that Jerusalem is often used by the Clergies as a cover for political devices and designs, and that is very wrong, and does Christianity a very great harm, as the Moslems have long ago perceived this and treat us accordingly." I must say that this comment tallies with my own recollections of the place. Later in this letter, which was written at Damascus in November, 1898, he discovers the following:—"Turkey is very much alive and not a dying man. Beware of the Mussulmen if you touch their national honour or their Khalif." Is not this exactly what some people, not our enemies, are saying to-day? I wonder if they are right?

***

William II. appears to have had a genuine affection for the Sultan. It is easy, of course, to say that it was all part of a deep game, but it really seems that the late Kaiser preferred simplicity to complicity. In the Cretan affair of 1898 he was, according to these letters and apart from any natural pique at the success of rival powers, quite sorry for the Sultan. Perhaps all autocrats feel thus bound one to another. But I suppose it is impossible for us ever to find out the real character of men like William II. and Abdul Hamid, for the ordinary virtues and vices of man do not belong to them.

***

It was on New Year's Eve that we were discussing the outlook for 1920, when one of us expressed curiosity regarding the fate in store for Egypt—another of the party having just "wondered what was going to be done about Ireland." Then said one, who, I knew, had formerly loved Egypt and the Egyptians only second, if second, to his own country: "I should like to give the Egyptians a few score, or hundreds, of Turkish Pashas, Beys and Effendis to govern them for a few years. They would very soon sing out for British rule once more." "But," urged another, "that is not what they ask for. They want—or say they do—complete independence." "I know," growled the first man, "but I don't believe 'em. My own idea is, in spite of the Coptic alliance, that at the back of the agitation is the one feeling that runs all through the Moslem world to-day. The 'Gippy wants to be ruled by Moslems; and, by Jove, I'd let him be! As to 'independence,' how long would Egypt keep that if it were given to her to-morrow? If we cleared out, either the Sudanese would sweep in and boss the show, or someone else—a couple of Maltese in a row-boat, perhaps!—would land, and take the country on!"

***

Now, these were my friends' opinions, be it noted, and I decline to endorse them. Personally, I do not believe that two Maltese, even if aided by the proverbial bull-pup, could reduce Egypt; though I have my own opinion about the chances of invasion from the South. But I must admit that the idea of sending out a few shiploads of Turkish notables and officials to "administer" Egypt tickled my sense of humour. If rumour is to be trusted, the "possibilities" of an official position are not yet entirely forgotten on the Nile, where, during the recruiting for the Labour Corps, some very interesting incidents seem to have taken place. But I imagine that the most accomplished native recipient of *baksheesh* would be able to learn a good deal from the Constantinopolitan type.

***

And what an enlightenment it would be for the average Fellah of to-day, who has had no experience of the "blessings" of Turkish rule, to be introduced to, say, Ahmed Pasha, or Selim Bey from Stamboul! How the glib-tongued Cairene Effendi would gasp when he found his eloquence of no avail against the rough and ready measures employed by the courtly old Turks, for whom he professes so much admiration, and—still more so, though with more skill—by the Young Turks. Yes, it would be an interesting experiment. Would the Egyptians welcome it, I wonder, if a vote could be taken on the subject.

NEAR EAST BOOKSHELF.

MESOPOTAMIA, 19.4.1915.*

Captain Birch-Reynardson tells the story of the Mesopotamia campaign from December, 1914, to December, 1915, with a brief account of the events of the month before the arrival of his regiment. Thus the book forms a self-contained narrative of a definite period of the campaign, during which we had firmly established ourselves at Busreh and its hinterland, had conceived the fatal plan of advancing with totally inadequate forces on Baghdad, and had suffered the horrors of the retreat following on the Pyrrhic victory of Ctesiphon. The story is told strictly from the point of view of the regimental officer. We seldom hear of the Staff and never of higher powers. This concentration on one point of view gives the book a very special value, which is still further enhanced by the entire exclusion of any personal matter concerning the writer from beginning to end. Indeed, Sherlock Holmes himself could hardly guess from the book that the author had been very badly wounded at Ctesiphon, had endured all the agonies of lying on that field and the subsequent ghastly transport to the sea, or that he had prepared this book during a gradual and painful convalescence. Seldom has it been our good fortune to read a war book so thoroughly selfless and so thoroughly imbued with the fine spirit which was the proud tradition of our Army before the war, and which we all hope to see continued in its successor.

It would not be fair to say that the book could not have been a better one. The arrangement is at times somewhat confusing—due, no doubt, to want of practice with the pen. The sketch maps are not so helpful as they should be, mainly because of the minute and indistinct lettering of place names. But, having said this much by way of criticism, we have nothing but praise for the book. Not only does it give a most vivid impression of the surroundings and appalling conditions in which our troops managed to live, and even to get some enjoyment; but it brings the actual fighting clearly before us. The mud, "the rich, adhesive article that must be slept in to be really appreciated," the "trench-warfare among marshes in a temperature of 120 degrees—the trenches crowded and full of dysentery cases," the hopelessly inadequate transport, and generally the innumerable miseries endured by the force without any of the mitigations, which were then so strangely neglected but were not denied to their more fortunate successors, are all presented with startling vividness and a good deal of grim humour. But the author never dwells morbidly on the painful side, preferring to give some of his space to the valiant efforts at sport, and to telling us of the marvellously beautiful effects of light on the dreary landscape of the Garden of Eden in the short intervals between day and night.

He brings out well the real meaning of the decision to advance on Baghdad; a decision which involved the abandonment of a policy of defence for one of offence; and one wishes that those who took this step so lightly and with such terrible consequences had had some of the clarity of thought displayed by this plain regimental officer.

His account of the battle of Ctesiphon, and of the sufferings of the wounded after it, is written with studious avoidance of sensationalism or personal feeling. But his plain, straightforward account produces a sense of tragedy and anger that more skilful and detailed narratives have not surpassed.

We shall leave this fascinating book with one quotation:—"After the war we must look forward to a British Mesopotamia—must, because for three years we have shown the people what it is to live under honest administration, and taught them to rely on justice, and have begun to make the desert blossom as the rose: and to surrender the people and the country again into the hands from which we rescued them would be an act of national cowardice, a deliberate and cynical refusal to fulfil our obligations."

C. S.-W.

MESOPOTAMIA.†

Apart from fame achieved in other works, Capt. Fairfax's lines on Lieut.-General Sir F. S. Maude—*Ave atque Vale*—have created a reputation for him in circles outside the Mesopotamian Expeditionary Force. This poem, printed and circulated by the Government Printing Press, Baghdad, is typical of Capt. Fairfax's verse, and it is well, therefore, to consider it. We may grant at once that it is dignified, scholarly, and essentially literary; but other qualities, vital in poetry, are lacking. Look at its closing lines:—

> Hail and Farewell! The laurels with the dust
> Are levelled, but thou hast thy surer crown,
> Peace and immortal Calm, the victory won.
> Somewhere serene thy watchful power inspires;
> Thou art a living purpose, being dead,
> Fruitful of nobleness in lesser lives,
> A guardian and a guide. Hail and Farewell!

They are fastidiously correct, finely chiselled, but do they ring? Might they not have been written of any great man in the war? Should there not have been a little more Catullus, a little less Virgil? It is this absence of real sentiment, of real passion, that mars what otherwise would be fine work. In every case Capt. Fairfax's inspiration appears to be literary, with the result that his verse sounds dim, like echoes. His personality is never obtruded upon us; his attitude is wholly objective. And though this way of writing is fit for narrative, in lyrics it is impossible.

It is a sad thing to say that these lyrics and sonnets always remain verse, that they never become poetry. For Capt. Fairfax is a nearly perfect artist. His verse, all of which is in classical form, reveals him as a complete master of the technique he wishes to exploit, and shows him to be possessed of a copious supply of poetic diction. It is all carefully measured, correctly accented, and finally rounded. His ear for rhyme, however, is not impeccable; he puts together two lines like these, for instance:—

> Scarred ruins and disastrous dreams,
> These were once Arras, Ypres, and Rheims.

We know that Capt. Fairfax could defend this rhyme—he would have so distinguished a poetess as Muriel Foster as co-defendant—but in our opinion it is not pardonable Again, he cannot be proud of this:—

> Once to re-echo the clear voices known
> And loved in the winged ecstasy of youth,
> When gazing up he glimpsed Eternal Truth
> Set in the shining air on Beauty's throne—
> Once to recapture and make this our own,
> In the dark hour given over to wrath and ruth
> Were the clear symbol of a power in sooth
> Staunch to endure and strong to bide alone.

We have purposely given examples of Capt. Fairfax's worst, merely to remark that it is very rarely that he falls into the commonplace. It is on common ground, however, that he chooses most often to tread. He cherishes the loneliness of youth in the correct Lionel Johnson (and, we suppose, Oxford) manner; he defies fate as mightily as Henley did: and in the wisdom of disillusion he is content. We have said that he is a perfect artist: that is true, but we do not think he will ever be a great one.

PHILOSOPHY AND SPORT.‡

The pursuit of big game implies many wearisome blank days, relieved by a few hours of intense excitement; and its inevitable monotony is reflected by nearly every book which attempts to describe its vicissitudes. Mr. Otto Rothfeld, I.C.S., has a philosophical turn of mind; his record of sport in eastern Kashmir is enlivened by thoughts which place it on a higher level than the lucubrations of Gordon Cumming, Selous, and their countless imitators. None but the elect can understand the fascination of big-game shooting; but our author offers a convincing explanation:—

> It is, perhaps, a matter, in the main, of human vanity and self-complacency. . . . . And at the end what is there except to lie in one's armchair in the hall before the fire, and look up at the head upon the wall—to remember the very place and moment of its shooting, and recall with a smile how very few men have been able to secure a like trophy of their sport. This is, this must be at bottom, the final attraction of big game shooting.

But Mr. Rothfeld gives the palm to humbler forms of sport, which are not a monopoly of the sterner sex:—

> Man is a social animal, and can find no full enjoyment where there are no women. . . Even in the grossness of the Middle Ages, with all their dirt and superstition, the coarse, unwashed boors who were given knightly rank fought their tournaments under the eyes of fair if grubby ladies. For civilised man there can be no human and urbane enjoyment that is divorced from the company of gentle women. . . It is not necessary that ladies should share the pleasure wholly, that they should shoot, for instance, with the men, but they should be at hand to dispel the heavy and fatal ponderousness of a one-sex pursuit, to inspire grace and wit in moments of leisure, and put men lightly on their easiest and best behaviour.

Still more interesting is our author's judgment of the Kashmiris, who, despite their ignorance, dirt, and superstitions, he claims as Nature's gentlemen:—

> They are now, I fancy, much as were the Scottish Highlanders before the 'forty-five: perfectly frank, manly and independent, yet invariably courteous, with a sort of innate tact and good-breeding. It seems clear that this fine nobility of manners is incompatible with certain qualities and pursuits, with everything, for instance, that Aristotle stigmatised as "Mean Trades." In modern Europe the lower middle classes and artisans are found at every turn "standing up for their rights," and there is not a moment when they are not busy suspecting someone or other of interfering with those precious

rights of theirs. And it is precisely those classes who have sunk to the lowest depths in all that concerns the social amenities and behaviour.

Again:—

Their lively curiosity is certainly one of the most hopeful qualities of the Kashmiri people. That their minds are as a rule quick and active there can be no doubt; and when at last education, or at any rate literacy, is forced on every man, and the existing shackles of superstition are thereby shattered, I cannot but believe that the vivid intelligence of this people will play a leading part in the development of Indian and Central Asian thought.

Like the rural population of every land, the Kashmiris age with terrible rapidity, passing almost at a bound from adolescence to decrepitude. Mr. Rothfeld's explanation of this fact has the merit of novelty:—

The unchanging fixity of face in an uneducated person who thinks little and feels very few emotions, undoubtedly creates those early and deep wrinkles which are so often the mark and feature of the common man. The face of the educated man, on the other hand, is always mobile. Its lines alter from moment to moment with the quick-changing thoughts and rapid motions which pursue each other across his words; and this constant play of facial muscle tends to lighten the lines which would otherwise be graven on his skin by advancing years.

It is an accepted canon of sociology that a nation's progress in civilisation is in proportion to the length of the interval separating the average individual's full growth from the period of his decline. Mr. Rothfeld was beset everywhere by Kashmiris who clamoured for doses from his medicine chest, but scorned the suggestion that scientific treatment was available at the local dispensary. He thought at first that their reluctance to consult the governmental doctor was connected with his demand for fees:—

One knows, of course, and regrets it, that even high medical authorities at home and in British India advocate, by some perverse and misguided individualism, the grabbing of fees by physicians and the sale of medical advice in a competititve market, like a tradesman's goods, though the system is ruining the honour and status of their fellowship; but the sole cause of reluctance, it came out, was a deep-rooted fear and belief that the doctor would intentionally murder his patients!

Although Mr. Rothfeld is not precisely a de Vauvenargues, his book will appeal to many readers who do not share the Englishman's passion for slaughtering his humble fellow-creatures.

F. H. S.

UN AMIGO DISTINGUIDO.*

It is an opinion to be clenched, neither semi-instructed nor undocumented, that Greco-Latin perspicuity foresaw and forestalled the gross design of the Hohenzollern-Hapsburg maniacs. To the representative statesmen of France, Italy, Greece, and Roumania, civilisation remains a debtor. I have four men particularly in mind, and, here, an opportunity of ranking them according to my fancy: Tittoni, the Italian; Clemenceau, the Frenchman; Venizelos, the Cretan; Take Jonescu, the Roumanian, and subject of this notice. And these four distinguished friends of England will no doubt admit to-day that one of the greatest worries of their political careers has been to lay the bogey to their own countrymen enshrined in the French phrase, "La perfide Albion." But they laid it: with what immense courage in the face of their dubious nationals! With what apostrophes to Downing Street! With what prescient faith in the honour of England! Had Italy, for instance, not abstained from abetting Germany and Austria, France would have been crushed in 1914. Had Roumania not abstained, Russia would have been paralysed in 1915. It is obvious that these four men had not only faith, but knowledge; they visualised the drama about to be played, and knew that Anglo-Saxondom was half-way house and buttress between the Greco-Latin and the Teuton. Sentimentalists and spiritualists to a degree, notwithstanding the day-to-day cynical realities of their political careers, they all stepped forward unhesitatingly to pick up the glove of the Prusso-Austrian challenger. England had not come forward. They simply knew she must come forward. There were men, considering themselves statesmen, in England who, in late July and early August, could not see. The agony of suspense suffered in that dire week by England's Greco-Latin friends must endear them to us; while what we did and have since done shall undoubtedly endear us to them.

Is it likely, therefore, that an Englishman can pick up a post-war sketch book from the pen of Take Jonescu without a feeling of curiosity, or surprising that he lays it down with a sense of appreciation and admiration? Small as Roumania was in the great scheme of things in 1914, here was one man who saw that a Greater Roumania was about to have its being. He may assuredly shake hands with himself on the score of patriotism and pre-vision, and no one may begrudge him the irrepressible note of triumph and disdain running through this volume—disdain and hatred of the Austrian and Magyar. Nevertheless this series of slight portraits and sketchy anecdotes of European luminaries is rather the effort of an international journalist than of a statesman. The statesman promises us more hereafter, but even so he dares to lift a portion of the Roumanian veil. He still has to hold his own end up in the politics of his own country; but we are of the opinion, evidently shared by Viscount Bryce, who supplies a preface, that "Some Personal Impressions" does service not only to the reputation of the author but to that of Greater Roumania. Westerners cannot read the book without gaining the impression that they have a real friend in the most eastern of the offshoots of Ancient Rome.

A. G. B.

* "Some Personal Impressions." By Take Jonescu; with an Introduction by Viscount Bryce, O.M. (London: Nisbet and Co. 9s. net.

A PILGRIM IN PALESTINE.*

It is difficult to know how to describe this book. As letters in MS. written by an impressionable visitor to the Holy Land, very conscious of the religious romance of the land, any of us would find them good reading; even the "poetry" would be not out of place. In cold print one has been accustomed to expect something more critical and finished. But the war has inspired many to write who would not have done so before. We may venture to say this book could only have been written by an American, but hasten to add that we can only hope that other readers will find as much unconscious humour in its pages as we have done.

The author by choice tramped within twenty-four hours from Jaffa to Jericho—no mean feat—and afterwards traversed on foot all the way from Beersheba to Dan. One only regrets how little he tells us of the aftermath of war. He had unique opportunities, but seems to have been deliberately dreaming of the far past rather than gathering impressions of what was around him. To General Allenby himself he pays a glowing tribute. We wonder, however, what the General thinks of the song, "Allenby, O Allenby!" Of the twenty-four illustrations, the most striking is the camel train.

THE INDIAN ELECTORATE.†

The anonymous writer of this pamphlet claims to present the problem of the electorates as it appears to a student of current happenings. Apparently he wrote before the issue of the Southborough Report and the connected papers, and consequently some of his observations suggest the past rather than the present, but he offers some acute criticisms of the Joint Report from the point of view of Bengal, and the pamphlet is still worth reading.

15	2	Thursday	24	24

The Raja of Pudukota has left London for Monte Carlo.

Lady Barrymore has left London for the Continent.

Prince Alexander, Regent of Serbia, visited Strasburg on January 6.

M. Venizelos has left Athens for Paris in connection with the Turkish question.

Mr. B. N. Basu has left for India, and has arranged to return to the India Office in April.

Lady Dorothy Mills left 91a, Ebury Street on January 6 for Algiers. She will remain away about eight weeks.

Lord Furness, who has been staying in the North of Ireland, returned on January 6 to Tunstall Court, West Hartlepool.

Field-Marshal Lord Allenby left Cairo for the Sudan on January 5 via the Red Sea. Lord Allenby was to meet King Hussein of the Hejaz at Jeddah.

The Shah of Persia will visit Brussels from January 14 to 16. He will be received at the Hôtel de Ville and given a gala performance at the Monnaie.

Sir Hamar Greenwood (Department of Overseas Trade) and Lady Greenwood left London on January 3 for a few weeks' holiday in the South of France.

Captain Matila Costiesco-Ghyka, Assistant Military Attaché to the Roumanian Legation, and Madame Costiesco-Ghyka left London on January 4 for Bucharest.

Reuter's Athens correspondent writes (January 1): The King sustained a fall to-day and broke an ankle. His Majesty will not be able to move his foot for a month.

Mr. and Mrs. Rudyard Kipling are staying at the Grand Pump Room Hotel, Bath. Mrs. Kipling has in past seasons derived benefit from the Bath waters, and is again taking the cure.

Colonel Rosetti, the Roumanian Military Attaché, Major-General R. de Candalle, Major the Hon. R. Thynne, and Mr. Sambourne Sheldrake were the guests of Colonel B. Granville Baker, D.S.O., at dinner on Tuesday night.

Under the patronage of Prince Nicholas and Princess Marie of Roumania a children's matinée will take place at the Court Theatre this afternoon at three o'clock for the benefit of the distressed Roumanian children.

The engagement is announced of Clermont Percival Skrine, Under Secretary, Foreign Office, India, only son of Francis H. Skrine, I.C.S. (retired), and grandson of the late Colonel John Stewart of Ardvoirlich, R.A., C.I.E., and Doris Forbes Whitelaw, younger daughter of James B. Whitelaw, King's Knoll, North Berwick.

Reuter's Calcutta correspondent, in a delayed message dispatched on December 22 says: Lady Chelmsford, the wife of the Viceroy, has been compelled to cancel all her engagements for the present, it having been necessary for her to undergo a small operation. This was successfully performed yesterday, and the patient is making favourable progress. There is no cause for anxiety.

Bishop Nicholai Velimirovitch, of Zica, in Serbia, will lecture under the chairmanship of the Vice-Chancellor of London University on "The Spiritual Re-birth of Europe," at King's College, Strand, this afternoon at 5.30.

Mir Jagoub Mehtieff, Mayor of Baku, and representative of the Caucasian Republic of Azerbaijan, has arrived in London on a mission connected with the military and political situation in South Russia.

The programme has been outlined of the proceedings to take place during the great missionary week from June 7 to 11, which is being organised by the Central Board of Missions. The subjects discussed will cover India and the Near East.

Several officers of the Greek Royal Navy arrived in London on January 6 from Athens to complete their training in this country according to an agreement which has been come to between the British and the Greek Governments. Among the officers is the son of Admiral Condouriotis. They will go for instruction to Portsmouth and the Isle of Wight.

Our Malta Correspondent writes (December 21):—

Judge Micallef has resumed his duties as Judge of his Majesty's Civil Court, First Hall.

Sir Gerald Strickland (formerly Governor of New South Wales) has arrived in Malta from England for the winter months.

The Croix de Guerre has been conferred on Lieut.-Colonel H. W. M. Bamford, O.B.E., M.C., by the President of the French Republic. Colonel Bamford is Commissioner of Police for Malta.

Rear-Admiral M. Culme-Seymour, C.B., gave a highly interesting lecture on December 30 in the Council Chamber of the Palace, on "Naval Work in the Ægean, Caspian, and Black Seas, from September, 1918, to November, 1919."

APPOINTMENTS, ETC.

It is notified in the *Gazette of India* that Lieut.-General Sir W. R. Marshall, who was lately in command of the Mesopotamian Expeditionary Force, becomes an Army Commander.

Messrs. R. C. Colvin and Cliff have reported their arrival in Khartoum, and have taken up their appointments as Inspectors in the Agriculture Department of the Sudan Government.

Earl Curzon, Secretary of State for Foreign Affairs, has appointed Mr. Stephen Gaselee, Fellow and Librarian of Magdalene College, Cambridge, to be Librarian and Keeper of the Papers at the Foreign Office.

The Governors of La Martinière College, Calcutta, have appointed as Principal Mr. W. R. C. Adcock, M.A., LL.B., barrister-at-law. He was formerly Scholar of Peterhouse, and Squire Scholar in Law in the University of Cambridge, and until recently Inspector of Schools under the Government of Nigeria.

Our Cyprus Correspondent writes:—Major Bayly is appointed to be provisionally a member of the Legislative Assembly, in place of Mr. C. S. Cade, late Commissioner of Nicosia.

Major Northcote, local Commandant of Police, is appointed to be Visitor of the Central Prison, Nicosia.

The King has approved the following appointment in His Majesty's Diplomatic Service: Mr. Thomas Beaumont Hohler, C.B., C.M.G., to be British High Commissioner at Budapest, pending the resumption of diplomatic relations with Hungary. Mr. Hohler was Envoy Extraordinary and Minister Plenipotentiary with Admiral Calthrop's Mission to Turkey last year.

Mr. A. L. F. Smith, Fellow and Tutor in Modern History, Magdalene College, Oxford, and son of the Master of Balliol, has accepted an appointment as Deputy Director of Education in Mesopotamia. Mr. Smith served in India and Mesopotamia until last summer, and was Political Officer with the Mesopotamia Forces. He left Oxford on January 5, and will take up his duties immediately.

OBITUARY.

The Rev. John Samuel Dawes has died at Surbiton, in his ninety-fourth year, after a short illness. His appointments included the chaplaincy to the British Legation at Athens and the chaplaincy of Corfu.

The death has occurred at Balliliesk, Dollar, N.B., of Mr. Alexander Izat, C.I.E., M.I.C.E. Mr. Izat entered the Indian Public Works Department in 1863, and first served in Hyderabad as an assistant engineer. After that date he had great influence on the development of the Indian railway system.

The death has occurred of Sir Thomas Fraser, Emeritus Professor of Materia Medica in Edinburgh University and Honorary Physician in Ordinary to the King in Scotland. Sir Thomas Fraser, who was born in Calcutta in 1841, was the son of Mr. John R. Fraser, formerly of Crailing Hall, Roxburghshire, and Calcutta.

Colonel Francis Sawbridge Cherry, late of the 4th Madras Cavalry, died at Vevey, Switzerland, on December 28, at the age of seventy-nine. He served in the Indian Mutiny Campaign and took part in several actions, while in the Afghan War of 1878-9 he was Assistant Superintendent of Transport with the Peshawar Valley Field Force.

Mr. James Robert Clark, C.B., R.N., who died at 1, Chesham Terrace, Brighton, on December 30, aged 75, was for many years attached as Chief Naval Instructor to the Royal Naval College, Greenwich. Early in his career Mr. Clark was serving on board H.M.S. Inconstant during the Egyptian War of 1882, and was awarded the Egyptian Medal and Khedive's Star.

Lieutenant-Colonel George A. Oliphant, late of the Army Veterinary Department, died in London on January 5, in his eightieth year. Colonel Oliphant, who had his first commission in 1860 and retired in 1896, was principal veterinary surgeon with the Kuram Field Force in the Afghan War of 1879-80, and had the medal for that campaign.

The death has taken place in Jersey of Mr. Thomas Hart-Davies, who sat in the House of Commons as Liberal member for North Hackney in 1906-10. He was appointed to the Indian Civil Service in 1867. During his thirty years' service in India he was successively assistant collector and magistrate in Bombay, inspector of education and manager of encumbered estates in Sind, judge and sessions judge, and in May, 1895, he acted as judicial commissioner in Sind. Mr. Hart-Davies was a Fellow of the Royal Geographical Society.

The death occurred on January 2 of the Right Hon. Sir Frank Lascelles, G.C.B., at the age of seventy-eight. He had a long and distinguished diplomatic career. In 1878 he was despatched to Athens, and from the Greek capital temporarily transferred to Cairo to fill the place of the British Diplomatic Agent, who had been summoned to London. He performed this duty during three periods in 1878-79, and achieved a notable success in coping with the difficult situation produced by the abnormalities of that extravagant potentate, the Khedive Ismail. Transferred to Sofia, he remained there till 1887, and before leaving the Near East for Persia put in four years as Minister at Bucharest. In the meantime he had been made a K.C.M.G. He was removed to Teheran in the summer of 1891 to fill a particularly difficult position. He spent three years in the Persian capital, during which his services were recognised by his being raised to the rank of G.C.M.G. He married, in 1867, Mary Emma, daughter of Sir Joseph F. Olliffe, physician to the British Embassy in Paris. Lady Lascelles died in 1897. Of the three children of the marriage, Major W. F. Lascelles, who married Lady Sybil Beauclerk, daughter of the tenth Duke of St. Albans, died in 1913. Mr. Gerald Claud Lascelles has been British Vice-Consul at Tangier, and Miss Florence Lascelles married the late Sir Cecil Spring Rice, recently our Ambassador at Washington.

NEWS IN BRIEF.

Yugoslavia produced about 15,000 tons of tobacco in 1919.

Telegraphic communication between Roumania and foreign countries has been reopened.

Armenians in Rio de Janeiro have telegraphed to Mr. Lloyd George begging him to support the liberation of Armenia.

Strasburg has received the Star of the Order of Karageorge with crossed blades, the highest national distinction of Serbia.

The Emir Faisal, a Busreh message states, has intimated that those responsible for the recent outrages at Deir-ez-Zor will be punished as rebels.

Swiss technicians are being enlisted by the Persian Government for employment in Government railways, telephones, and telegraphs.

Both battalions of the Malta Regiment of Militia, which were called up at the outbreak of war, have now been completely demobilised.

Mr. James Rothschild has given £500 for the purpose of instituting the Deborah Prize for Hebrew poetry at the Hebrew University in Jerusalem.

About 7,000 Indian troops are still left in France; they will leave Marseilles, where they are now assembled, in three batches in January, February, and March.

Two moving picture expeditions to penetrate "behind the walls" of Algeria, Turkey, and India have been dispatched from New York by the Inter-Church World Movement.

According to a Moscow wireless message, risings have taken place in the Tiflis and Kutais Governments, where, it is asserted, authority has passed into the hands of the Bolshevists.

Mr. Herbert Samuel, states the *Jewish World*, contemplates proceeding to Palestine, upon the invitation of Lord Allenby, for the purpose of assisting in the Jewish settlement in that land.

On the occasion of the evacuation of Dedeagatch, the Bulgarian authorities thanked the Allied representatives for the orderly manner in which the Greek refugees are being repatriated in Thrace.

A Malta telegram states that most of the Turkish political prisoners who had been conveyed there have now been released. The persons still interned in the island include some Egyptian political prisoners.

Captain Mathews (one of the competitors in the Australian flight), on a Sopwith machine, arrived at Constantinople on December 23 from Belgrade. He intends to proceed to Baghdad as soon as weather permits.

After spending three months in Russia, where it concluded an agreement to facilitate the development of trade relations between Poland and South Russia and the Caucasus, the Polish Trade Industrial Mission has returned to Warsaw.

A resolution has been passed unanimously by a representative meeting of the Armenian Colony in Egypt protesting against any attempt to sever Cicilia from Armenia, and urging that Armenia has the right to be consulted on its future status and the choice of the mandatory Power.

In connection with the information we published last week regarding the Busreh-Baghdad Railway, Reuter states that the latest news is that it is proposed that at first there shall be a daily passenger service between Busreh and Baghdad, doing the journey in twenty-eight hours, while the goods service will take forty-eight hours. Later, with necessary improvements, it is hoped to reduce the passenger service to twelve hours.

FRIDAY, JANUARY 9, 1920.

TURKEY AND THE ENTENTE.

The attempt that is to be made once more in Paris to come to grips with the Turkish settlement is being preceded by an earnest canvassing of various proposed solutions. Negotiations have been in progress for some time past between the British and French Governments, but it does not appear that agreement has been reached regarding much more than the fact that the matter is now primarily the concern of these two Governments alone. This is indeed a step in the right direction, and will, no doubt, facilitate a common understanding on the remaining points. For the moment, however, the two countries, it is reported in some quarters, represent two conflicting schools of thought, Great Britain standing for the expulsion of the Turks from Europe, France urging their retention in Constantinople. The statement is of no practical value, as the British Government has blown hot and cold alternately in regard to Turkey, and national opinion is divided on the subject. Britain will be held responsible for the final decision that she takes in the matter, not for the vacillating views hazarded by those in authority in the attempt to discover the trend of public opinion. There can be little doubt that both the British and French peoples, as well as their Governments, are resolved upon the complete liberation from Turkish control of the waterway connecting the Black Sea and the Mediterranean. This problem, which may be termed, for want of a better term, the Dardanelles question, is quite distinct from the rest of the Turkish settlement, and it is simplified by the fact that the objections which hold good in regard to international jurisdiction on land do not apply to joint control of a waterway. A Commission similar to that which will be responsible for the navigation of the Danube can equally effectively be charged with the regulation of traffic through the Dardanelles and Bosphorus. The object to be achieved is to secure for all time the complete freedom of this important channel, and the major preoccupation of any Commission will necessarily have been lightened by drastic provisions, incorporated in the international agreement; to prevent the fortification of either coast of the channel.

A further point of agreement, as far as the Allies are concerned, affects those territories of the Ottoman Empire lying south of a line drawn from the Cilician Gates to the Persian frontier on the meridian of Lake Van. These have all declared their own secession from Turkey, and they will naturally be excluded from Ottoman jurisdiction when the final terms of peace are arranged. The crux of the problem lies in the future of Constantinople. At the beginning of the war the ultimate surrender of European Turkey to Russia appeared such a natural solution that the Entente had no difficulty in yielding to Russian claims. The complete failure of the Young Turk Government to justify the hopes entertained of it proclaimed the moral bankruptcy of the country, and the consensus of opinion among the Allied peoples was in favour of ridding Europe finally of this danger spot. As soon as Russia renounced her claim to Constantinople the whole matter assumed a different aspect. There was no longer an obvious alternative to Turkish jurisdiction. Every other solution was found to be accompanied by serious drawbacks, and the question resolved itself virtually into a choice of evils. Even so, if the Allies had adhered in their world settlement to the high moral standard set by the war aims that they had enunciated during the four years' struggle, all other considerations could have been overruled. It could have been shown, and the dictum would have been generally accepted, that in the new world there was no room for Turkish jurisdiction in Europe, and that consequently any alternative would be better than the retention of the Turks in Constantinople. But an appeal to lofty principles at this stage would argue a degree of inconsistency from which even the Paris Conference seems to shrink, and for this reason it has again embarked upon the stormy sea of compromises and the adjustment of conflicting interests in the hope of finding some port of refuge. There can be no doubt as to the roughness of the voyage. The Allied statesmen have repeatedly declared that the Turks must be ejected; a determined attempt will be made in many quarters to hold them to this decision. On the other hand, the Mohammedan world, both in India and elsewhere, is up in arms against the suggestion, and the British Government is threatened with all manner of trouble if it consents to the expulsion of the Sultan-Khalif from Constantinople. An ugly situation is being created in Central Asia, where Bolshevism is striving to effect an aggressive alliance with the Pan-Islam movement; and it is almost certain that any decision taken in Paris which a large section of Moslems might resolve to regard as a slight upon their religion would materially strengthen the hands of the Soviet agents now bent upon spreading their doctrines in India.

So grave a problem will only yield to a courageous solution. One suggestion ought to be ruled out of court at once; it is that there should be anything in the nature of marking time in regard to a settlement until Russia is able to make her voice heard. Russia may not be rehabilitated in the eyes of the world for fifty years, but whether she be ready to take her place again in the Council of Europe earlier or later, there is no reason why she should not accept the ruling of other Powers rather than dictate one to them. It should also be recognised in Paris that the future of Constantinople is a question that cannot be localised. The repercussion of any decision may extend from Atlas Mountain to the Alashan, and the Allies must be prepared for all emergencies. Serious trouble can safely be predicted, if the Paris Conference delivers its verdict and then folds its hands with a view to observing the effect. The Turks could safely be left in Constantinople if a just and equitable settlement for the Balkans were to be enforced, which would remove the causes of past unrest and leave the different States conscious that there was an authority in Europe which would not allow the revival of internecine feuds or the perpetration of injustice. With equal safety Turkish rule might be eliminated from Europe if steps were simultaneously taken to prevent Constantinople from becoming a hotbed of fresh intrigues, and to discourage effectively all political agitation in the Moslem world due to the mistaken belief that any slight had been inflicted upon Islam, or that considerations of religion had entered into the decision. In either case the future good government of Turkey would also have to be the immediate concern of the Allies, in order that the transition from the existing uncertainty and chaos to a period of material prosperity might be as brief as possible. With the adoption of the safeguards indicated the problem is shorn of much of its gravity. It has acquired its present serious aspect owing to the delay in propounding a solution, and to the nerveless manner in which the whole question of the settlement of the Near and Middle East has been approached. If the Paris Conference had been able to envisage these regions as a whole, if it had held fast to the principles for which the war was fought, and if it had had the courage of its convictions, the position in the East to-day would have given less cause for anxiety.

AN "EASTERN SOCIETY": A WANT.

By Lieut.-Colonel A. C. Yate, F.R.G.S.

It would doubtless be impossible to draw a well-defined chronological line between Britain as a commercial, and Britain as a political, power in the East. Having thought this subject over not a few times, I fixed upon the Treaty of Tilsit (1807) as a convenient line of demarcation. Two years ago the Royal Historical Society was pleased to allow me to handle this topic at one of its meetings, and I then satisfied myself that it was in consequence of the Eastern policy professed, however insincerely, by Napoleon and Alexander at Tilsit, that the Governor-General of India, acting in concert, no doubt, with His Majesty's Government in London, opened up diplomatic relations with Persia, Sindh, Lahore (then Rangit Singh's capital), Kelat, and Kabul. This was a new departure at the time. We can now, in 1920, look back upon 113 years of its history, and, if I mistake not, we may reckon this same year as the starting-point of a new and very momentous period in the annals of the Eastern question.

It is perfectly evident that, as the issue of this stupendous five years' war, a new spirit has come over mankind, and that the mankind not of the West only, but also of the East, Russia, Turkey, Persia, and China have, during the last decade, all been in search of a reformed government, while Japan took that thorny task in hand just fifty years ago, and seems to have brought it to completion. India, Egypt, and Afghanistan have all now set off boldly on the track of independence, and the Arab, having for centuries held himself aloof in the security of his pathless deserts, is now preparing to take his place in the comity of nations. And well he may! If his deserts are pathless, the air above them is free to all mankind; and to-day that means volumes. Egypt, geographically, belongs to Africa, but politically it is so dovetailed into Asia that it cannot be dissociated from it.

More than a year has gone by since the Armistice was concluded; and we look upon this seething expanse of races and nationalities, and see that peace and settled conditions have no more asserted themselves in Asia than in Europe. In one country only, we believe, is stability of social, industrial and political conditions to be found, and that is Japan, the Farmost East; and even for Japan neither China nor Siberia nor Korea is a harbinger of peace. Able students of the great Eastern problem which is presented as the sequence of the Great War are of opinion that His Majesty's Government should found a new Department for dealing with British interests and responsibilities in the East. We are, most of us, heartily sick of new Government departments and the attendant millions which, in the form of taxation, they extract from our pockets. If we ransack the history of the past in such matters, we find that private enterprise has been as often as not the forerunner, and in almost all cases the most efficient coadjutor, in bringing to a successful issue policies, projects, and plans upon which His Majesty's Government finds it convenient to smile. Private enterprise, moreover, effects with thousands what Government achieves with millions, and provides a useful medium between the official and the public.

The days of Merchant Adventurers are surely past, though it may be rash to venture on any such assertion. The New Levant Company, it is understood, has no Government backing, though it doubtless commands Government sympathy. But did not the Chartered Companies of Elizabeth and James also command the Royal sympathy, and that, we believe, after a very practical fashion? However, the twentieth century is not reactionary. It is content to pursue the methods of its own age, an age of union and co-operation. Unions, associations, and societies are the *media* through which in our time great ends are achieved, and "Asia" is a field in which several societies may find abundant food for study, research, and action. There are three already at work in this field, viz., the Royal Asiatic, the Central Asian, and the Persia societies. I might very well also add the Royal Geographical Society, which deals with Asia as with other continents; but as that society eschews politics, as does also the Royal Asiatic, we may, I think, say no more about them here. Their spheres of action are ample, irrespective of the politics of Asia. The Persia Society has the sphere which its name indicates, and the recent visit of the Shah and his Foreign Minister, Firooz Mirza, to this country should have shown that society that its work is cut out, and well cut out for it. If it has hitherto cultivated a scholarly, literary, and artistic tone, Firooz Mirza, at the Savoy Hotel on December 2, inserted the thin end of the political wedge when he said: "I know very well that the Persia Society has excluded politics from its special field of activity, but it would really be too much to exact of a Persian Minister, although a member of this society, that he should be prevented from profiting by such an occasion to say a few words on the foreign policy of Persia, the more so as this policy is still all aflame with reality, and that it interests your country in the first degree."* The Persia Society has at its command a magnificent, an unrivalled field of action, around which Pan-Islamic, Pan-Turanian, and Bolshevist ambitions cluster. It is Britain's rôle to guide Persia through the delusive web woven by this trio, and Britain, as I understand, looks to the Persia Society to educate alike Briton and Persian in the rôle which they have to play.

The society that remains, the Central Asian, is the one that, by its constitution, its methods, and its programme, which have had a test now of nineteen years' duration, contains the germ of "The Eastern Society" of the British Empire. Its curriculum covers politics, sociology, industry, commerce, art and archæology, literature and religion; indeed, all is grist that comes to its mill. It numbers in its ranks all or most of those who are known as travellers and explorers in Asia or students of Asian affairs; its proceedings have been guided and conducted by the *élite* of that distinguished band, and its honorary president to-day is H.M. Secretary of State for Foreign Affairs—a noted traveller alike in Central Asia, Persia, and the Far East, with a brain built for assimilating and co-ordinating knowledge, an ex-President and Gold Medallist of the Royal Geographical Society. The origin of the Society† is indicated by its name, and the home of its origin is the very country which at this moment threatens to develop into the centre of the Bolshevist movement, a movement against which the organised governments of the civilised world must set their faces not only sternly and resolutely, but mercilessly. An enemy that menaces Azerbaijan, the Caucasus, the Caspian, the Trans-Caspian Railway, Herat and Kabul, menaces also Persia. Throughout the war it is Britain that, amid a thousand other claims, has met that of safeguarding Persia; and not only that, but there is no portion of the territory which extends from the Ægean and the Levant to the Bay of Bengal, and from Constantinople and Kazan to "Where Three Empires Meet," which is not indebted to Britain for help freely given. Near the legendary first home of the human race, and the land which is so intimately associated with the birth of the Christian and Mohammedan faiths, the sea, land, and air services of three, or

even four, continents are destined to meet. Napoleon and Alexander I. of Russia alike, early in the nineteenth century, regarded Constantinople as the site of the world's metropolis. Science has now moved that point further east, and if we search for the spot upon which "the Empire on which the sun never sets," converges by sea, air, and land, surely that spot is the Suez Canal and its entourage. As a maritime centre it has just celebrated its jubilee. General Salmond, Captain Ross Smith, and others have taken it in their course for India and Australia, and there is little doubt that the aeroplane will sail from Cairo to the Cape before the long-talked-of Cape-to-Cairo Railway and Lake steamship route is completed.† Time will see Asia and Africa networks of railways, as Europe is to-day, and the junction of the three Continental systems must be near that ancient and mediæval centre of caravan routes and emporium of trade, Aleppo. Unless the work of the Peace Conference ends—which God forbid!—in some unforeseen fiasco, Egypt, Palestine, Arabia, Mesopotamia, and Persia must acknowledge, for a period of years, at least, the controlling hand of Great Britain; and if Afghanistan thinks to dally indefinitely with Bolshevism, there is a blockade which will bring the Ameer and his subjects to his senses, as it promises to bring Germany. Wherever we turn our eyes in the Middle and Near East we see races and peoples and nations looking to Great Britain for a helping hand, Greek, Georgian, Armenian, Arab, Jew, Nestorian, Kurd, and Cossack. It is a great work—a work in which a powerful "Eastern Society" could render most effective help to the Government, just as the Royal Geographical Society does, whenever emergency calls for special effort.

Pan-Islamic and Pan-Turanian schemes have been for years maturing in a multitude of minds—minds at once thoughtful, capable, bold and unscrupulous. Again we see at work the intellects of earnest and right-thinking men, seeking to reconcile their duty, as they understand it, to their Prophet and to their King-Emperor. What startles the student of the Eastern or Asiatic policy of the British Empire is the discernment of symptoms of correlation between the aims of the Bolshevo-Islamic fanatic and those of the loyal Moslem who fondly trusts that he is guiding the footsteps of British policy into a safe channel.

When the Elizabethan Merchant-Adventurer set forth to contest the supremacy of the seas with Holland and Portugal, Spain and Venice, he can have little foreseen the vastness of the power and responsibility to which his initial venture would, within three and a-half centuries, lead. Of that power and responsibility recent events in almost every land of the Middle East have most gravely reminded us. Of the wealth of knowledge acquired by thousands of capable men and some women during this war not a tithe finds its way into the *penetralia* of our bureaucracies or into the columns of our newspapers. Movements in our universities, recently, have indicated a desire for nearer acquaintance with the East, a desire which in one case has crystallised into the shape of a debating society on Eastern affairs and literature. Ignorance of our Oriental possessions and responsibilities is an everyday reproach levelled alike at Parliament and people. Then they must be educated, and that work of education is the rightful task of a society composed of members recruited from those who have administered the British East for the past quarter of a century and more, and from those who have fought Britain's foes in the East during the past lustrum. The nucleus of such a society exists, I say, already in the Central Asian Society, and it merely rests with those whose knowledge enables them to grasp the gravity of the present situation, to develop therefrom an Eastern society which in due course will merit that honourable Eastern title, "Pillar of the Empire." The membership of such a society should be open not only to Britons and to his Majesty's Asiatic subjects, but also to the *literati* of all cultured races of Asia, affiliation with which may rivet firmer the bond of union between Asia and Europe. For "the twain *will* meet," I am convinced.

† Vide *Times* of December 27, 1919 (p. 11), reproducing an official report of work carried out since the Armistice under the orders of the Air Ministry.

GORDON COLLEGE, KHARTOUM.

Like its predecessors, the seventeenth annual report (for the year 1918) of the Gordon Memorial College, Khartoum, is a record of good work done, and provides satisfactory reading. Indeed, as Sir Reginald Wingate observes in his covering letter accompanying the report, it is "of special interest, as giving a brief retrospect of progress made during the progress of the war"; and it fully justifies Sir Lee Stack's remark that "the period of the war has been by no means unfruitful, and in certain respects the general education of the country shows a marked advance." An indication of the wise spirit that inspires the authorities and staff of the College is to be found in the following passage from the Principal's report:—". . . . The number of elementary vernacular schools is being very largely extended, but in the spheres of both industrial and primary education the conditions are quite different; the numbers admitted to schools of these grades have to be regulated, in the interests equally of the country and the boys themselves, with an eye to the demand for the special, and more or less exotic, types of educated natives produced in them." In certain less favoured lands the regulation of "numbers admitted to schools" and the display of foresight in regard to supply and demand are painfully conspicuous by their absence.

We agree with Sir Lee Stack that the elementary vernacular schools are of extreme importance, "as they are in closer contact with the mass of the people than the more advanced schools, and on them depends to a great extent the improvement of the general intellectual level of the country." Mr. Crowfoot's observations on the subject are, therefore, of much interest. He writes:—

"In 1914 elementary vernacular education, as has been already said, was the one branch of education not conducted within our walls: at that time the elementary schools which were scattered over the northern half of the Sudan were chiefly staffed by teachers trained in an elementary training college attached to the Primary School in Omdurman. As this training college grew, and the students in it were recruited from further afield, it became evident that they required more supervision than it was possible to provide in Omdurman, and it was decided in 1916 to transfer this section to Khartoum, to arrange for the instruction of the students in the Gordon College, and for their residence in a boarding-house conveniently close. The results of this transfer have been most satisfactory; each year we are attracting a better type of student, and are better pleased with the progress made. The elementary vernacular schools under the department have risen from forty-nine in 1914 to seventy-three in 1918, and the number of pupils in attendance from 3,633 to 6,087, and as they are the only schools with which the bulk of the population are brought into direct contact, the importance of any measures for the improvement of the staff is obvious, and what concerns the Gordon College immediately, such measures react sooner or later upon all grades of education. In the elementary schools boys are taught, besides drill, reading and writing, the four rules of arithmetic, and the elements of religion, and when they have completed this course most of them naturally stay on in their own villages, where they often become Sheiks and Omdas at a surprisingly early age, thanks to this elementary education. A few of them only continue their education either in a technical school or in one of the primary schools, where they begin to learn English and to fit themselves either for still further studies or for employment in Government offices or commercial houses."

It is not entirely surprising, though it must be disappointing, to learn that two small technical schools, at Kassala and Dueim respectively, have had to be closed. The explanation given is that pupils found difficulty in securing employment after completing their courses, the existing demand for artisans trained on European lines being very small in the Sudan, where "the conditions of life are very simple."

Another successful innovation is described in the section of the report dealing with the Arifs' section:—"In connection with the work of this section, a summer extension meeting was held last August for former members of the Elementary Training College who are now serving as teachers in different parts of the country. These men only had an elementary training in the first place, and since then have been serving, often for years, in remote districts, where they have every inducement to forget most of what they have learnt. Some twenty-five such teachers were brought to the Gordon College for a month and given special courses in the practice and theory of teaching, and in elementary hygiene and first aid, three visits a week being paid to the Civil Hospital; in addition to this, some popular lectures, cinematograph entertainments, and visits to the Natural History and Antiquities Museums were arranged. The meeting was a success in every way, and it is intended to hold a similar meeting for another batch during the coming summer."

It is gratifying to learn that the games and recreations "have flourished exceedingly," and that the health of the College "has been very good on the whole, except for an epidemic of Spanish influenza in November."

The research work has inevitably suffered somewhat as a result of changes of the staff due to the war, while lack of funds has hampered the publication of reports, for which ample material has been collected. Similarly, it looks as if some of the museum collections stand rather badly in need of suitable housing. The scientists have, however, "carried on" gallantly, and have achieved results quite remarkable in the circumstances. It is much to be hoped that the production of the "full report" to which Dr. Chalmers, director of the Wellcome Laboratories, refers, will soon be possible.

MUSICAL NOTES.

When the London String Quartet are at their best they attain perfection. Such praise as this is not commonly given to native musicians, but the necessary hesitation in granting it merely makes the pleasure of giving greater. It would be a mistake to say that in every detail they surpass any other quartet, but the soundness of their interpretation and workmanship generally and the exquisite finish of their playing place them in the front rank of the quartets of the world.

On January 3, at the Æolian Hall, they began their programme with Elgar's Quartet, which they played for the first time in England. This is a work of classical beauty by one of the greatest composers living. Now there are those who deny Elgar's authority, pointing in derision to the composer of the truly vulgar "Land of Hope and Glory," and his position is not yet secure. But musical critics are coming more and more to realise that, compared with Elgar, our own young composers and the foreign moderns are very small fry. Elgar is in the direct road of musical tradition: and he writes with sure, not daring, originality. Although it is possible to say that had Beethoven never lived Elgar's Quartet could not have been written, yet it is obvious that Elgar has looked to the Beethoven models only for guidance, not for inspiration.

Mlle. Lilia Kanevskaya, who I believe was a pupil of M. Moiseiwitch, appeared in the London String Quartet's programme. She played as solos Brahms' Capriccio in B minor and his Rhapsodie in E flat. In the first she characteristically succeeded, and in the second she naturally failed. The Capriccio is a light, whimsical thing—you do not have to go very deep either intellectually or emotionally to explore it fully—and Mlle. Kanevskaya played it very well indeed. The Rhapsodie was evidence that her ambition exceeds her abilities: it is too big a piece for her, and it might almost be said that its great chords were not made for female hands. But her ambition carried her through, and she seemed to be content if only she could get some of the notes right. (As a matter of fact, within her limitations, Mlle. Kanevskaya is an excellent player, and well above the majority of popular pianists.)

The Schumann Quartet for Pianoforte and Strings in E flat (Pianoforte, Mlle. Lilia Kanevskaya; Violin, Mr. James Levey; Viola, Mr. H. Waldo Warner; and 'cello, Mr. C. Warwick-Evans) was a qualified success. It is a beautiful work, with a wealth of melodic detail which seems to an ear accustomed to modern music almost too rich. It gives great scope for all the instruments in turn—an individual scope which was fully exploited. But the absence of sufficient rehearsal was apparent, and the performance was rather spoiled by the lack of synchronisation. This displeasing feature was naturally more manifest in the pianoforte than in any other instrument.

Seemingly as a yielding to popular clamour, the Schönberg Sextet, which had been played a week before, was again included in the programme. This performance of it seemed to me neither better nor worse than the first one; and I remain unconverted. I must confess that the first quarter of it made me think of recantation—it is finely constructed, and its originality arrests without shocking; but thence until a few bars from the end, I was staunchly *anti*. About the middle the Sextet is pure commonplace, and its main climax is reached in the manner of a second-rate Italian opera. The end comes with soft and flowing beauty, and one is simply amazed how even Schönberg can have attempted to cement a few good bricks with such slushy mortar.

ANDANTE.

By Appointment *to H.M. the KING.*

Intending Visitors, and Gentlemen taking up permanent appointments in India, Egypt, or the Eastern Mediterranean should write to:—

THRESHER & GLENNY

for List "H" giving details of necessary clothing and kit.

Military Officers, Civil Servants and other Government Officials proceeding to England can have their kit overhauled and replenished at short notice.

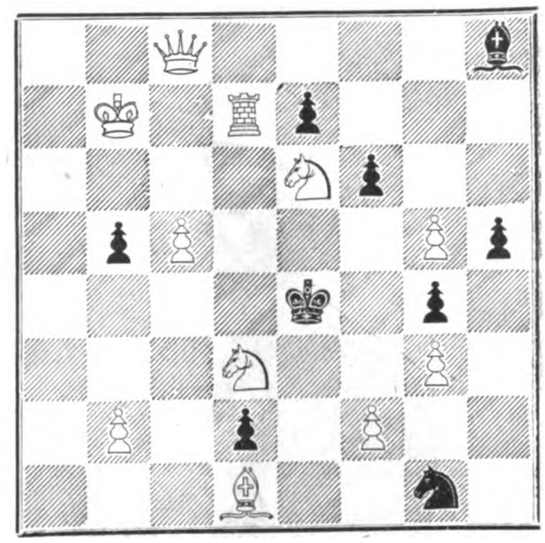
CHESS.

PROBLEM No. 9.

Black.



White.

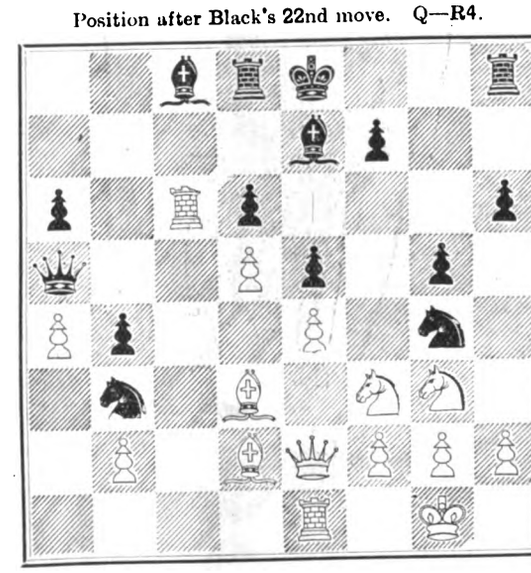
White to mate in three.

The above problem by A. Miskolczy and J. C. Dunka was placed equal first at the Barcelona Congress of 1914.

Senor Capablanca will be leaving this country for Cuba in the course of a week or so. There seems to be a possibility that a match will be arranged between him and Dr. Lasker in the present year for the world championship.

The following game was played between Senor Capablanca and Mr. F. D. Yates in the Victory Tournament at Hastings. Opening Ruy Lopez. White, Senor Capablanca; Black, Mr. Yates. 1. P—K4, P—K4; 2. Kt—KB3, Kt—QB3; 3. B—Kt5, P—QR3; 4. B—R4, Kt—B3; 5. Castles, B—K2; 6. R—K, P—Q Kt4; 7. B—Kt3, P—Q3; 8. P—QB3, Kt—QR4; 9. B—B2, P—B4; 10. P—Q4, Q—B2; 11. Q Kt—Q2, B—Kt5; 12. P—Q5(1), P—Kt4;(2) 13. Kt—B, P—R3; 14. Kt—Kt3, R—Q; 15. P—QR4, P—Kt5; 16. P x P, P x P; 17. B—Q3, B—QB; 18. B—K3, Kt—Kt5; 19. QR—B, Q—Kt; 20. B—Q2, Q—Kt3; 21. Q—K2, Kt—Kt6; 22. R—B6, Q—R4;

Position after Black's 22nd move. Q—R4.



23. B x RP, B—Q2; 24. B—Kt5, B x R; 25. B x Bch, K—B...; 26. Q—B4, Kt x B; 27. Kt x Kt, Q—R2; 28. Q—K2, P—R4; 29. Kt—B5, B—B3; 30. Kt—B4, Q—B4; 31. P—QKt3; Kt—R3; 32. Kt x Kt, R x Kt; 33. Q—K3, R—B; 34. R—QB, B—Q; 35. Q x Q, P x Q; 36. Kt x P, K—K2; 37. R x P, P—B4; 38. R—B4, B—R4; 39. B—Kt5, R x R; 40. Kt x R, B—B2; 41. P—K5, B—Kt; 42. Kt—K3, R—R2; 43. Kt x Pch, K—B2; 44. P—K6ch, K—B3; 45. P—K7, R x P; 46. Kt x R, K x Kt; 47. P—Kt3, B—B2; 48. K—Kt2, K—Q3; 49. B—K8, P—R5; 50. B—B7, K—K4; 51. K—R3, B—Q; 52. K—Kt4, P x P; 53. BP x P, K—B3; 54. B—K6, K—Kt3; 55. P—Q6, K—B3; 56. B—B5, B—Kt3; 57. P—Q7, B—Q; 58. P—R4, P x P; 59. P x P, B—B2; 60. P—KR5, K—Kt2; 61. B—K4, Resigns.(3)

(1) At this juncture this move seems decidedly useful.

(2) Initiating a King's side attack. The result is to leave a hole at KB4, of which Capablanca takes advantage in due course.

(3) The last twenty moves or so are particularly interesting. Capablanca handles the position with consummate skill.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

The serious set-back experienced by General Denikin, who is reported to be retreating on Odessa, brings into being the possibility that for a time the important South Russian market may be all but closed to British trade. It is not long since British traders were being urged to make a special effort to develop commercial relations with that region, and the frequent references in the trade reports which are given every week in these columns to goods passing Constantinople for Russia have borne tribute to their excellent response. If the Bolshevist successes should develop and bring about a suspension of these activities, one result would be that there would be a vast accumulation of goods at Constantinople. I learn from a friend who has just returned from that city that there is no lack of goods there, and that the shops hold everything that one is likely to ask for, so that if the goods destined for South Russia have to stay there they would be unwanted, and that, I think it will be admitted, would be a remarkable position to occur anywhere in present circumstances.

***

The position with regard to Italian compensation in Africa has been the subject of a most informative article by a correspondent of *The Times* this week, in which attention is drawn to the remarkable nature of the programme which finds favour with the Italian Colonial Party. By the Treaty of London of April 26, 1915, Great Britain and France entered into engagements to give "some equitable compensation" to Italy in Africa should the German colonies in that continent fall to them, and both countries are only too ready to deal with the situation in a most generous spirit. But the ambitions of the extremists in question go far beyond anything that could justifiably be termed "equitable" compensation. Thus the claims put forward would, *inter alia*, give Italy a position of unique importance in relation to Abyssinia, for it is proposed that she should receive Kassala and adjacent districts of the Sudan, French and British Somaliland, and the Jubaland province of British East Africa. A glance at the map will show the effect of these additions to her present possessions of Eritrea and Italian Somaliland, and will also suggest excellent reasons why the desires of the Colonial party should not be gratified. Great Britain has very extensive interests in Abyssinia, and it is not to be imagined for a moment that she is going to mortgage them, so to speak, in such a manner.

***

Next month will see the opening of the British Industries Fair—or, rather, fairs, for it is no longer possible to show all the exhibits in one centre, and the fair is, therefore, being held simultaneously in London, Birmingham, and Glasgow. In an interview he gave to the Press recently on the subject of the fair, Sir Hamar Greenwood, Secretary of the Department of Overseas Trade, says that it is the aim of the Department so to develop these annual fairs as to convince foreign buyers that they are trade events which they cannot afford to miss, and thus to tempt them to come from all parts of the world in increasing numbers. I do not think that anyone who has visited the fairs that have so far been held could have any doubt as to their future utility as a means of trade development. Despite war-time conditions, the fairs were enormously successful, and I shall not be surprised if, on the coming occasion, the difficulty is to see the exhibits for the buyers. In short, I imagine that the foreign buyer will not need any great persuasion to make him attend. This year, by the way, 52,000 invitations have been sent to foreign buyers for the London fair alone, while altogether 200,000 British and foreign firms have been communicated with.

***

I note with considerable interest Sir Hamar Greenwood's statement that the Department of Overseas Trade is considering the possibility of starting a number of "movable shops" and touring exhibitions abroad, with a view to supplementing the work of the fair. The idea is excellent, and the only criticism I have to offer is that no provision seems to have been made for the great markets of the Near and Middle East. May I suggest that to the four exhibitions that are contemplated a fifth should be added for the regions in question. It is not necessary for me to say anything as to the prospect in those markets; they are beyond dispute, as all those who took part in the Athens Exhibition are only too ready to admit. But I may point out that if the outlook there is extremely promising, no trade field is more in need of efforts to stimulate trade such as these under contemplation. Nowhere, for instance, is there likely to be keener competition in the future; a fact which is of itself surely a tribute to the potentialities of the markets.

***

The high exchange has, of course, not been without its effect on the Abyssinian market, and it is reported that the only goods for which there is an opening in that country at the present time are limited in general to clothing and articles of dress. For such commodities the Abyssinians are willing to pay high prices, but it may be noted that they take the cheapest articles without consideration of quality. Openings in other directions will depend largely on the restoration of more or less normal conditions.

***

A very satisfactory report is forthcoming from the British Burmah Oil Company for the period ended July 31. The company's trading operations resulted in a profit of £534,603, the best yet recorded, and an increase on the previous year's figures of £162,658. There was further a profit on exchange of £19,634, while the company received its first return on its shares in the Rangoon Oil Company in the shape of a 5 per cent. dividend, amounting to £4,272. A further dividend, amounting to £11,720, has been received since the close of the financial year. After providing for various charges, debenture interest, and depreciation there is left a surplus of £408,086, which, with the balance brought forward of £25,635, gives a disposable profit available of £433,721. The sinking funds receive £33,444, as against £29,174, while £200,000 is placed to reserves, as against £110,000, the contingent reserve receiving £165,000, the exploration and development reserve £20,000, and the general reserve £15,000. The dividend is raised from 12½ per cent. to 17½ per cent., tax free, and the carry-forward is £32,721—an increase of over £5,000.

***

Like other oil concerns, the company has been handicapped by the difficulty of obtaining supplies of necessary materials, and it is interesting to note that since November large quantities of drive pipe and drilling equipment have been shipped to Burma. It is stated, however, that the labour unrest in America, where most of the equipment is manufactured, renders the prospect of prompt and continuous shipments still somewhat doubtful. In September the company obtained permission to issue the balance of its 525,772 shares of 8s. each at a premium of 12s. per share. The provision of this additional working capital will facilitate various developments, and it is anticipated that the ordinary expansion of the business will be further enhanced as a result of the various expenditure. A scheme for providing electrical power for the Yenangyaung field has now matured, and negotiations are proceeding satisfactorily with the Burmah Oil Company, who propose to instal the plant necessary for the generation of the power and to supply the British company's requirements. Considerable economies are anticipated from this scheme.

EGYPT'S COTTON CROP.

United Kingdom's Imports.

(From Our Cairo Correspondent.)

The question has so often been raised as to the manner in which the Egyptian cotton crop is absorbed by the various countries engaged in the textile industry, and the share falling to the United Kingdom, that the attached table, giving figures for the principal buying countries, may prove of interest.

As can be seen, the total export has diminished considerably as compared with pre-war figures. This is not due to local consumption, but partly to the decrease in the acreage in 1914-1915 and 1917-1918, which as a result of legislation was reduced from 1,755,000 feddans in 1913-1914 to 1,186,000 feddans, and 1,315,000 feddans respectively, partly to diminished yield, the average falling from 4.45 kantars per feddan in 1912-1913 to 3.66 kantars per feddan in 1917-1918, and partly to difficulty in obtaining shipping.

Great Britain's share has risen from 44 per cent. to 64 per cent.; that of the United States remains the same at 13 per cent.; France, after a considerable fall, has a small increase; whilst Italy and Japan have each absorbed a slightly larger proportion; Switzerland, after rising considerably during the early days of the war, when control over destinations was not as rigorous as it became later on, has dropped to a figure more in keeping with her local requirements; Russia has for obvious reasons ceased to be a buyer, and an interesting feature is the total disappearance from the table of enemy countries, which in 1912-1913 took 13 per cent., and in 1913-1914 15 per cent. of the total export, and the share of which has been absorbed by the United Kingdom.

INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following weekly cabled news received from the Director-General of Commercial Intelligence, Calcutta, dated December 30:—Rain nearly general North-Eastern India, local South-Eastern Madras, Deltic Bengal, and Upper Burma. During the week ending December 20 sowing spring crops continued North-Eastern and in Western India. Harvesting autumn crops continued Bombay, Central India, and North-West. Harvesting paddy progressed North-Eastern and South-Eastern; sowing progressed Madras. Cotton-picking continued, except in Burma. Plucking tea continued Assam. General crop conditions good. Useful rain has fallen in Punjab, but more still required there. All India final indigo forecast: 233,800 acres, 37,100 cwt. Bombay cotton market: no change. Fully good broach, April-May, Rs.556 8 annas. Piecegoods market steady, with demand slightly reduced. Calcutta jute gunny markets: no change. Jute mills have agreed to five days' working, January, February, March. No change in Bank rate.

OTTOMAN PUBLIC DEBT.

The Council of Foreign Bondholders communicate the following information with regard to the gross receipts of the Council of Administration of the Ottoman Public Debt on account of the Unified Debt and Lots Turcs:—Provisional receipts, seven months (March to September), 1919, £T3,743,822 (paper); Definitive receipts, seven months (March to September), 1918, £T2,866,894 (paper). For the same period in 1913 the definitive gross receipts were £T3,182,842 gold.

Colonel E. W. Stanyforth, D.L., J.P., deputy-chairman of the Lancashire and Yorkshire Railway, has joined the board of the Anglo-Baltic and Mediterranean Bank. Mr. A. C. Robertson, M.B.E., J.P., formerly of the Bank of Scotland, brother of the joint general manager of the London County Westminster and Parr's Bank, has been appointed sub-manager of the Anglo Baltic and Mediterranean Bank.

EGYPT'S COMMERCE.

Favourable Trade Balance.

(From Our Own Correspondent.)

Cairo, December 22.

The September Customs returns just published give us the figures for the third quarter of the current year, which make interesting reading. Imports total £E30,818,793 and exports £E41,072,606 as compared with £E39,769,379 and £E35,962,431 at the end of September, 1918; re-exports come to £E3,561,029 as against £E932,020, and transit traffic to £E5,665,764 as against £E10,366,394 on the same date. Apart from a very welcome swing over in the trade balance, which from an adverse one of £E3,000,000 has become a credit one of £E14,000,000, there is an important development in the re-export and transit trade done by this country, which is fast regaining and exceeding the position in this respect that it had attained prior to the war.

During the nine months the principal imports have been smoked and preserved meats, £E980,562; wheat flour, £E484,454; oranges, £E163,321; coconuts, £E151,006; coffee, £E511,455; wine in casks, £E160,962; coconut oil, £E151,763; kerosine, £E1,348,084; benzine, £E496,037; mineral oils and greases, £E239,310; wrapping paper, £E155,697; cigarette paper, £E194,222; sawn timber, £E157,331; coal, £E2,272,092; nitrate of soda, £E473,088; medicinal preparations, £E247,528; household soap, £E366,132; cotton yarn, £E515,662; sewing cotton, £E313,812; cotton piece goods, £E6,309,153; mixed textiles, £E261,474; woollen and worsted cloths, £E416,914; silk yarn and thread, £E181,429; silk cloths, £E511,209; jute sacks, £E433,086; hosiery, £E430,041; tinplate, £E249,697; and tobacco, £E2,376,220.

The chief items under exports were eggs, £E240,827; hides and skins, £E421,043; heavy leather, £E368,128; rice, £E481,793; cotton seed, £E1,501,953; cotton seed cake, £E244,309; onions, £E422,448; sugar, £E420,472; gum arabic, £E301,281; cotton, £E34,399,332; wool, £E137,630; and cigarettes, £E727,250. The more important re-exports were:—Agricultural products, £E84,622; sugar, £E51,433; vegetable oils, £E87,737; coal, £E47,683; cotton piece goods, £E1,698,628; other textiles, £E840,753; whilst transit traffic consisted mainly of coal, £E4,399,255; benzine, £E829,296, and oil fuel, £E398,963.

Of the imports the British Empire supplied 58 per cent. as against 70 per cent. during the first nine months of 1918, the main reductions being in coal, textiles, and sacks. Of the other countries, Greece and Italy showed small reductions, and Japanese products fell off by 50 per cent.; on the other hand, the United States increased its sales from £E252,437 to £E1,935,123 (mainly kerosine), and Palestinian products rose from £E48,583 to £E569,596 (soap, oranges, olive oil, etc.). Under exports the United Kingdom took 56 per cent. as against 70 per cent. last year; by contrast France almost trebled her share, Japan increased by 50 per cent., Switzerland by 130 per cent., and the United States by 60 per cent.—all due mainly to cotton.

Trade between Egypt and the Sudan has fallen off in the northerly but has increased somewhat in the opposite direction. Imports into Egypt from the Sudan totalled £E1,265,093, and exports to the latter country £E2,106,216 as against £E2,013,521 and £E1,881,014 respectively a year ago. The principal items of exports from the Sudan were:—Bullocks, £E215,637; sheep and lambs, £E216,168; sesame, £E182,274; gum £E127,525; ground nuts, £E85,036; whilst the main exports from Egypt were wheat, £E58,279; maize, £E68,585; wheat and maize flour, £E76,717; sugar, £E519,024; cotton textiles, £E664,801; and tobacco, £E155,596.

The receipts of the Egyptian Markets for the week ended December 25 were:—Cattle markets, £1,489; general markets, £673; total, £2,162; total for year £62,319. The receipts for the corresponding week in 1918 ended December 26 were:—Cattle markets, £990; general markets, £523; total for week, £1,513; total for year, £54,078.

The Bank of Athens announces that Coupon No. 16, due January 14, in respect of the Piræus-Athens-Peloponnesus Railway Four per Cent. Bonds will be paid on presentation at the offices of the bank, 22, Fenchurch Street, E.C.3, under deduction of Greek tax of 8 per cent.

ROUMANIAN NOTES.

Galatz Dock Congestion.

Messrs. Watson and Youell report as follows, under date January 5:—We have had no recent news from Roumania about the weather and crops, but it is reported that, owing to weather conditions (drought first, and heavy rains afterwards), only a small area was cultivated in Old Roumania last autumn. It is said that the peasants have been somewhat lax in their efforts, but whether this is due to want of farm implements and machinery, army service, war weariness, or other causes, it is to be hoped that shortcomings will be remedied in the spring, and that the full area available in the country will be put under cultivation. As already reported, the newly acquired territories are producers of spring wheat; the soil is very fertile, and they add some 15,000,000 hectares of cultivable land to the former area; whilst their inhabitants are further advanced in up-to-date methods of cultivation. Industries are also much more forward in these territories, and with raw materials and sources of power at hand, there is reason to conclude that considerable progress will be made.

Reliable correspondents at Bucharest write us under date December 20 that grain stocks in the country are more than sufficient for requirements, and that later on export permits will be granted for a certain quantity of maize, barley, etc. The weather during the first half of December was mild. On December 16 the thermometer registered 5° centigrade of frost at Sulina, but the water in the Danube was high and the current strong, so that there was no indication of an early closing of navigation.

The congestion at Galatz Dock became worse than ever during last month, owing chiefly to the continued suspension of the supply of railway trucks and the crippled state of the port caused by the war, also labour and appliances being much below par; but some relief was obtained by energetic action on the part of steamers' representatives and merchants, and a certain quantity of goods was dispatched to Moldavia, and a little was sent up river by lighter to Oltenitza, destined for Bucharest. So far we have no news of any trucks being supplied for the direct railway line between Galatz and Bucharest, which is by far the most important, and only a small quantity of goods can be distributed by motor-lorries. The state of the roads during the mild weather resembled the conditions experienced in France and Belgium during the war, and some of the bridges are not very safe. Lorries and motor-cars stuck in the mud up to the axle-trees, remained in this position for days, and had to be extricated and drawn for considerable distances by bullocks. It is not surprising that the transport by motor-lorry from Galatz to Bucharest cost from lei 2 to lei 3 per kilogram.

In normal times the last general cargo steamers arrive at destination in the Danube about December 5 to 10, and even then there are great difficulties and delays to contend with in the handling of the cargoes, owing to the weather, short days, and the authorities dismantling pontoons, staging, etc., for the winter, together with congestion of goods on the dock quays and sheds. This year the conditions have been unprecedented, and instead of two or three general cargo steamers arriving, no fewer than ten arrived almost simultaneously about above dates, and found quays and sheds chock full with the cargoes of ten previously arrived steamers. It was found possible to send two or three Galatz-bound steamers to Braila to discharge, but when things came to a deadlock some of the goods had to be transhipped into lighters.

The floating crane has been repaired, and was able to be used in the discharge of heavy lifts, but the labourers gave trouble in refusing to work on saints' days, and have added some additional such non-working days never heard of before to their calendar. There was also an insufficiency of labour and cargo checkers to contend with, and some Customs regulations were enforced at this most inconvenient of times, which further increased the difficulties and retarded the work.

Vessels bound to Roumanian ports can only be granted free *pratique* at Sulina provided that they pass the Dardanelles and Bosphorus in charge of guards, ensuring no communication with the land, and provided that they may not have touched at Smyrna or Beyrout, or at any Greek port. The masters of some vessels, not complying with this regulation, or being misinformed as to the procedure, lost several days at Sulina, and one or two preferred to proceed from Sulina to Constantza for fumigation rather than lose time petitioning the sanitary authorities at Bucharest. If vessels cannot conform to the above requirements they must call at Constantza for disinfection purposes on their voyage from Constantinople.

We have made arrangements for the discharge of general cargoes at Constantza during the winter months by engaging one of the best sheds in the harbour for our exclusive use, and this carries with it the discharging berth which it faces on the quay. We hope shortly to receive news from our Constantza manager, who has lately been to Cernavoda and Borcea to study the situation at the bridge with a view to seeing how the transport of goods from one side of the Danube to the other is likely to be conducted. It is reported in the Roumanian Press that an American Mission have undertaken to reconstruct the Cernavoda Bridge, but we have no confirmation of this news.

It is pointed out in the Roumanian Press that the Government should take immediate action in respect of placing the valuta on a satisfactory basis, and we understand that this and railway transport, etc., are receiving attention, so as to improve financial and commercial conditions. Roumania having signed the St. Germain and Bulgarian Peace Treaties, and having been included in the list of countries which benefit by the Board of Trade Credits Scheme, business transactions should become less difficult, and an improvement in the exchange is looked forward to, which will no doubt become more pronounced when the Roumanian Government remove the restrictions on exports of surplus produce. There is great delay at Bucharest in the censoring of correspondence, and representation is being made to the authorities on the matter.

YUGOSLAVIA.

The Currency Question.

(From Our Own Correspondent.)

Belgrade, December 29.

The stamping of kronen is now complete, and the Currency Reform Committee is getting busy. Various rumours are circulating as to its decisions, but the only point on which unanimity has been reached appears to be the decision that the new notes shall not be Government paper, but issued by a privileged bank. There is a prevailing impression that kronen will be recalled at the rate of four to one dinar, which is the present average rate of exchange; the other alternative seems to be par. Whatever rate is fixed is certain to cause great dissatisfaction in some quarter, for it is impossible to please everybody when interests are so conflicting. Some capitalists in kronen are prepared to face the reduction of their wealth in order to make the peasants work; they say that the men on the countryside north of the Save have their pockets full of kronen and would be too prosperous and too lazy to work, whereas if the krone is exchanged at four and their wealth cut down by a quarter, they will have some incentive to work. The war profiteers will probably be annoyed, unless they have taken the precaution to turn their crowns into stock, plant, or real property.

As the number of kronen in circulation in Yugoslavia is now finite, and the smuggling in of Austrian, Hungarian, and other valueless money is stopped, the Government is probably by now in possession of exact statistics as to the number of kronen to be redeemed. They have forbidden the exportation of marked kronen, the object being to prevent owners of kronen cropping up to claim new dinars in replacement at Yugoslav legations abroad.

The free circulation is allowed of Greek and Bulgar nickel currency for the equivalents of five, ten, and twenty centimes.

Serbo-Roumanian Relations.

Friends of Serbia and Roumania have viewed with regret the recent coolness, amounting to friction, that has been allowed to grow up between these two states on account of the dispute over their mutual claims in the Banat, a jealousy that has certainly been fostered by Italy. It is, therefore, gratifying to hear that on December 20 the Roumanian Minister, M. Langa-Raskano, called upon Dr. Davidovich, and informed him that his Government has given orders for the release of all the constructional material ordered by the Serbian Government at Reshitsa for the repair of the Save Bridge. It will be remembered that the restoration of this bridge was long delayed by the action of the Roumanian authorities in retaining the material in the great steel works at Reshitsa when they fell within the new Roumanian frontier. Only under pressure from the Allies was Roumania induced to allow the delivery of sufficient parts to make the bridge at least passable, though still it is of decidedly patchwork design. It is authoritatively stated that this material consists of four hundred truckloads of steel and other materials, as well as fifteen locomotives. This assistance to Serbian communications will be as welcome as the improvement in Serbo-Roumanian relations.

Branches of the Bank of British West Africa have been opened at Duala (Cameroons), Bekwai and Dunkwa (Gold Coast), and Rabat (Morocco).

GREEK EXCHANGE.

Trade Handicapped.

(From Our Own Correspondent.)

Athens, December 8.

The question of the restrictions in force regarding the control by the Ministry of Finance of transactions in foreign exchange is occupying a good deal of the attention of the commercial community. According to a Royal Decree recently published, all dealings in foreign exchange are subjected to the control of a committee sitting at the Ministry of Finance, from whom a permit has to be obtained in order to purchase bills or open credits. Merchants requiring to open credits are obliged to deposit a guarantee that goods equal in value to the amount of capital sent out of the country will be imported within six months. This guarantee is personal and is fixed at 40 per cent. of the value of the invoice or amount for which the credit is opened when the interested party is a member of the local Chambers of Commerce, and at 20 per cent. in cash for others. Before this guarantee is released a certificate has to be obtained from the Customs House proving the arrival of the goods. Should the goods not arrive within the stipulated time limit, the guarantee deposited becomes the property of the State. Owing to lack of personnel the procuring of this permit necessitates a long delay, and frequently the time limit has expired before the Customs certificate can be obtained, although the goods may have arrived, whereupon the consignee is called upon to surrender the personal or cash guarantee given. These difficulties are causing great annoyance and hindrance to Greek importers, besides considerably hindering the foreign trade of Greece. A committee composed of representatives of the Greek Chambers of Commerce, bank officials and other representative economic authorities, is now sitting and discussing the advisability of modifying this law, and will present a memorandum to the Government embodying their views on this very important matter.

TRADE AT THE PIRÆUS.

H.M. Commercial Secretary at Athens reports that the Piræus Customs House receipts during the first twenty days of October (old style)—October 14 to November 3—were:—1,642,624.80 drachmæ from imports; 139,405.50 drachmæ in fees (i.e., clearing papers, etc.). Compared with the corresponding period of last year, the following excess is shown for the present year, viz.:—847,011.00 drachmæ from imports; 115,466.50 drachmæ in fees.

According to statistics issued by the Customs authorities, the sum collected at the Piræus from January 1, 1919, to the end of October, 1919, amounted to drachmæ 43,376,609.25. This total—for ten months only—exceeds already the total for the whole twelve months of 1918 by eleven million drachmæ. It is estimated, therefore, that, as the months of November and December still remain to be added, the total amount collected for 1919 at the Piræus will exceed the total collected in 1918 by some sixteen or seventeen million drachmæ. In commenting upon this state of affairs, the local Press draws attention to the fact that these satisfactory results are due not only to the increasing post-war flow of commerce, but to the activity and skill of the Director of Customs acting under the instructions of the Ministry of Finance.

Looking at it from the traders' point of view, however, this means to say that the Greek authorities are taxing the importers on the highest basis possible, and there are numerous complaints daily in the commercial world of articles previously entering under a lower tariff classification being now charged arbitrarily at a higher rate. The Government is naturally anxious to increase its revenues by any means available, but doubts have been expressed as to whether such action will pay in the end, as if imports continue to be taxed in this way trade may be driven away, as the mass of consumers have to pay such high prices for every commodity of life that people may find it impossible shortly to purchase anything but the barest necessities. General import might, therefore, be restricted, and it would then be for the Government to calculate whether they would not have gained more by adhering to a lower tariff, and so obtaining a greater flow of imports than by forcing up the Customs tariffs. As it is, considerable dissatisfaction has been expressed at the heavy dues and unequal incidence of the existing scale of duties. A new tariff classification, now that Greece has annulled her commercial treaties, is at the present moment under consideration.

The Postmaster-General announces that the Indian Post Office proposes to maintain a weekly air mail service between Bombay and Karachi. The air mails for Karachi will be despatched from Bombay after the arrival of the English mail. Letters, postcards, and packets of printed papers and samples, but not parcels, are eligible for transmission by the air service. The special fee for transmission by air is 1s. for each ounce or fraction of an ounce, in addition to the ordinary postage, and British stamps in payment of the special fee must be affixed to the covers of the correspondence. The air service from Bombay to Karachi will afford acceleration not only to correspondence for Karachi, but also to correspondence for places served viâ Karachi, such as the province of Sindh (including Sukker and Haiderabad) and Baluchistan (including Quetta).

BRITISH RELATIONS WITH GREECE.

M. Oikonomides' Views.

One of the most notable speeches delivered during the British Exhibition at Athens was that of M. Leonidas Oikonomides, President of the Greek Chamber of Commerce, made on the occasion of the banquet given by the Federation of British Industries at the Zappeion. The speech was as follows:—

As President of the Association of Greek Manufacturers and as a member of last year's commercial mission to England, I regard it as my duty to express to the exhibitors of the Federation of British Industries our unbounded gratitude for the extreme courtesy and the cordial treatment which we received during our visit, when the opportunity was given us to admire the magnitude and the extent of British industry, and to express to them our great pleasure at the inception and realisation of the idea of the Exhibition, which will render more intimate the commercial as well as the moral relations between Greece and Great Britain. It is true that the fine but small Exhibition of the incomparable products of British industry can only give the visitor an obscure idea regarding the size, the extent, and the productive power of the factories which produced them. How is it possible for the visitor to the Exhibition to imagine how the 16-in. gun is manufactured when he has not seen the enormous installations, with the colossal scientific and material means which are utilised for its manufacture? Or when, instead of this fearsome arm, the same house displays as an exhibit a peaceful product—the harmless plough or the optical instrument? Or when one sees the small reel of cotton, how is it possible to present to the imagination the great factory producing these goods, whose daily production could many times entwine the whole earth? Or when one sees exhibited the fine soaps of the great English factories, how can one picture that the yearly production of one installation alone exceeds one million tons—that is to say, double of the quantity of wheat imported into Greece from abroad?

Gentlemen, we in Greece, as well as all the world, have always known about British products, that the quality is higher and that the description of the article as British characterised it as solid and durable; notwithstanding that, of late the importation into Greece of the commercial products of other countries has developed, but Great Britain has kept the first place, as she herself exports half or more of the total. Now, especially when other than commercial reasons aid in drawing together the bonds between the two countries, British manufacturers need have no doubt that the importation into Greece of the articles they produce will increase still more.

When I was asked, gentlemen, a year and a-half ago, by the then Commercial Attaché of the British Legation, what means I thought would contribute to the development of the commercial relations between the two countries, I replied that intellectual contact primarily contributes to the tightening of commercial relations. I said that British schools should be founded in Greece, that newspapers in English should be published, and that the Greek should become acquainted with British literature. Intellectual contact will promote commercial relations, and commercial intercourse will increase intellectual relations, and thus the door of British civilisation will be opened to us Greeks. Because, gentlemen—I address myself especially to my fellow-citizens—we know the Englishman principally from the brave and cheerful sailor whom we saw about the streets, but of late also from the British soldier who fought as an ally in Macedonia, and has left to us the ineffaceable impressions of the brave and, at the same time, most dignified gentleman. In order to obtain, however, the real idea of the British world one must cross the Channel, where one will actually find the real civilisation, especially the intellectual civilisation.

There one will find the greatest patriotism, unfeigned respect for the laws, unlimited hospitality, devotion to family and traditions, altruism, admiration and imitation of the ancient world, and the moral principles and the wise teachings of our ancestors, which inspire in this great and noble country love and sympathy for the newer Greece, in the creation and development of which Great Britain has always stood first.

I hope that the British manufacturers, many of whom, I do not doubt, will not have passed most of their hours in the Zappeion Exhibition, but outside, admiring, on the one hand, the Parthenon, and on the other the violet tints of Hymettus and the intervening vista looking towards the sea and the infinite, when they return to their beloved country will advocate greater spiritual intercourse between their country and Greece, which, as she appears to-day, constitutes a very interesting field for commercial and industrial action, with which you will permit me, gentlemen, to ask you to raise your glass, drinking to the health and progress of the British manufacturers and to British industry.

It is reported that the British schooner Falka has arrived at Patras with the crew of the sailing vessel Woodcock, lost at sea.

The Supplies Control Board in Egypt has fixed maximum prices for sugar. Lump sugar works out at about 6d. per lb. for a minimum retail quantity of 27 lb.

An ordinance has been issued by the Occupied Enemy Territories (South) Administration at Jerusalem providing for the registration of companies, and for their authorisation before commencing business. This ordinance provides that the persons desiring to form a company to carry on business in Occupied Enemy Territory (South) must submit two copies of the proposed articles of association to a special commission.

ENGINEERING.

Motor Show Reflections.

VIII.

(From Our Own Correspondent.)

I was particularly interested in the production of Sir William Armstrong, Whitworth and Co., Ltd., and the Siddeley Motor Co., Ltd., who have now amalgamated, so far as motor-car work is concerned, under the name of Messrs. Armstrong Siddeley Motors, Limited, the works being at Parkside, Coventry. Here again one of the main objects of the firm is to produce a car of exceptional quality and conforming to a high specification in tremendous quantities, at a price which will enable it to compete with the products of any other country. An output of at least 5,000 cars per annum has been provided for as a commencement; an exceptionally fine plant has been laid down for the manufacture of the various parts, and quite half-a-dozen test chassis have been out on the road for the past few months, driven through all weathers, on all surfaces, and up all the most severe gradients, with a view to ascertaining whether after all any part of the chassis were weaker than imagined, and also with a view to seeing which form was most suitable for withstanding rough work.

In the Armstrong-Siddeley the chassis frame has a deep girder section to which the metal running-boards are riveted. The engine, like so many others, has overhead valves, and a lavish use of aluminium has been made in its construction so as to ensure the utmost lightness compatible with the greatest strength.

The transmission was of particular interest, and at the forward end of the gear-box proper will be seen a ball joint which acts as a swivel for the motion of the back axle. The ball jointed gear lever rods are in line with the centre of the bearing, and are so arranged that no matter in what position the gear-box may be their length is always constant, a feature which ensures easy and speedy gear changing. The back axle is of the semi-floating type, and helical bevel gearing is used for the final drive. Well made and tapered joints are used for securing the live shafts to the wheel hubs and differential, and these are fastened together further by locking nut and split pin. The braking arrangement is quite a special feature of this particular chassis, and consists of internal expanding rings working on drums of 17½ ins. diameter on the rear wheels. Any necessary adjustments to the brakes or brake rods can be made without difficulty.

With regard to the 29.5 horse-power chassis, it may be briefly mentioned that this has a powerful engine, with forced lubrication throughout. The gate change allows of three forward speeds and a reverse. A high-tension, British-made magneto is used for ignition, and gas is supplied through a Claudel-Hobson carburettor. The clutch is of multiple-disc type, and there is a spiral bevel final drive.

The wheelbase of the chassis is 11 ft. 3 in., with a 4 ft. 8-in. wheel track, and disc wheels of a special type are fitted, taking 820 by 135 mm. tyres. Dunlop Rubber Company's covers, of the Magnum pattern, are fitted as standard. The chassis is provided with an electric lighting set and a self-starter, also of the electric type. The car is complete with five lamps, four tyres and tubes, chassis stepboards, wings and dashboard.

Darracq Motor Engineering Co., Ltd., who are as well known as any firm in the world as manufacturers of a high quality car, had a stand under their new name of Talbot Darracq, and showed a very fine eight-cylinder car which attracted great attention. The most generally useful model shown, however, was the 16-h.p. model, which should sell readily overseas in countries where the road conditions are not a great deal worse than would be encountered in this country. The car has a nice turn of speed, and possesses all the usual refinements.

An exhibit of exceptional interest was that of Messrs. Enfield Allday Motors, Ltd., as the new five-cylindered radial engine was shown for the first time in public. The engine is of aero-engine type and is air cooled. The cylinders are arranged round the crankshaft, and a peculiarly smooth action results. The lubrication is by pump, the magneto is of the high tension type, and the car has three forward speeds and a reverse. Ample clearance is provided, and the car is sold complete with five detachable wheels, tyres and electric lighting set. The body shown was of the open touring type, and the car is in every way suited for use in countries where roads are not of first-class order and stiff gradients have to be negotiated.

Another well-designed light car shown was the Little Midland, by the Little Midland Light Car Co., Ltd., of Blackburn. This is a remarkably cheap proposition, considering its power and finish, and at the show it was listed at £215. The engine is a twin cylinder J.A.P., of 85 by 85 mm. bore and stroke, and gives a Treasury rated output of 9 h.p. It is water cooled and has drip feed lubrication. High tension magneto and Claudel Hobson carburettor are fitted, and the car, which has three forward speeds and a reverse, is fitted with Michelin disc wheels. It has a 7 ft. 3 in. wheel base and 3 ft. 5½ in. wheel track, so it should be able to travel on even narrow roads and to negotiate quite abrupt bends.

The only other light car which need be mentioned specifically is the Cosmos Engineering Company's production made at the Bristol works of the company. Here again the engine, which is three cylindered, is of aero design, and the springing of the chassis is on an entirely new principle, and is such as will certainly commend itself to users. The cylinders have detachable heads, and an automatic carburettor, designed to give the correct mixture at all speeds, makes the car suitable for use by anyone who does not possess any expert engineering knowledge. From a test I am able to say that the C.A.R., as the model is called, has a high turn of speed, holds the road well, and can be steered round sharp turns at high speed without showing any tendency to roll.

The exigencies of space have, of course, prevented me from dealing fully with a number of other makes of cars, all of which possessed many features of interest, and I shall be only too pleased to give any reader of The Near East my opinion as to any car exhibited at this historic show.

MISCELLANEOUS TOPICS.

How to Use Lignite.

Since writing the notes on the value of lignite as fuel, etc., we noticed in an Eastern contemporary an interesting article in support of a systematic and more extensive use of lignite in order to overcome the serious difficulties which the scarcity and the consequent high price of coal present to industries in general throughout the East. The subject is ably dealt with, and much good advice is given; but with regard to a suggestion of using a grate with the fire-bars further apart than when used in burning ordinary coal, we are afraid that the method will be found very wasteful, and also inefficient. Lignites are capable of yielding good results under steam boilers if the furnaces and method of firing are adapted to the chemical and physical characteristics of the fuel. It is well known that the most extensive use of lignite for industrial purposes has occurred in Germany, where electro-chemical and other works have been erected close to the deposits in order to obtain the benefit of this very cheap

SWEDISH ORIENT LINE.

Direct regular steamship service with about weekly sailings outwards and homewards between

GOTHENBURG and ALGIERS, PIRÆUS, SMYRNA and SALONICA.

GENERAL BANK OF GREECE.

Paid-up Capital, Drs. 3,000,000.

Head Office - ATHENS.

BANKING OPERATIONS:
Every description of Banking business transacted.

FINANCIAL OPERATIONS:
Investigations in connection with, and the promotion, organisation and financing of, Limited Joint Stock Companies, with a view to exploiting agricultural, industrial and mineral resources, executing technical works, etc.

COMMERCIAL AND SHIPPING DEPARTMENT:
Purchase and sale of goods on account of clients. Warehousing, Advertising and placing foreign products on the market. Agents for foreign companies and large commercial and industrial firms abroad. General Shipping Agents.

POPULAR BANK OF GREECE.

Head Office, ATHENS. Branch, PIRÆUS.

Correspondents throughout Greece.

Established June, 1905, by the National Bank of Greece and a group of Capitalists.

CAPITAL - Drs. 1,500,000.
RESERVE FUND - Drs. 2,500,000.
Deposits and Credit Accounts, Drs. 100,000,000.

The Bank specialises in the collection of Bills payable in Greece; it accepts goods on consignment, and undertakes their sale, and transacts every kind of Banking business.

General Manager: D. LOVERDO.

TRADE WITH THE NEAR EAST.

The Bank of Athens extends special facilities for business with the Near **East** to manufacturers, exporters and importers.

The Bank has offices in all the principal towns in **Greece,** also in **Egypt,** Cairo and Alexandria, in **Cyprus,** Limassol, in **Constantinople,** in **Smyrna,** and in **France,** Marseilles.

Inquiries from interested parties are invited.

BANK OF ATHENS.

PAID-UP CAPITAL : £1,920,000. **HEAD OFFICE IN ATHENS.**

London Office: 22, Fenchurch Street, E.C. 3.

COMMERCIAL BANK OF GREECE, LIMITED.

CAPITAL PAID-UP - Drs. 15,000,000.
RESERVE FUNDS - Drs. 2,364,793.

Head Office: ATHENS.

Branches:—**Piræus, Salonika, Patras, Volo, Syra. Calamata, Corfu, Cephalonia, Candia, Chios, Argos, Pyrgos, Vostitza (Ægion), Nauplia.**

AGENTS IN ALL PARTS OF GREECE, THE LEVANT, AND ABROAD.

The Bank conducts every kind of Banking, Commercial and Stock Exchange business and extends special facilities to traders interested in business with Greece. It acts as Agent for many Foreign Banks. It is specially organised for Exchange, the execution of mail and cable transfers throughout Greece, and for the collection of clean and documentary Drafts.

MERCHANDISE DEPARTMENT:
The Bank undertakes the warehousing and sale of goods consigned.

GREECE.

Area 43,522 square miles. The cultivated area amounted to 5,745,300 acres, of which about 2,253,400 were under cereals, 518,900 under grapes and currants, 370,600 under oak trees, 296,500 under olives, and 2,223,900 were forests.

Population (1914), 5,000,000 approximately.

Chief Products (with average annual production):—Currants, 142,000 tons; wines, 3,000,000 casks; tobacco, 9,000,000 lb.; cereals, 8,000,000 bushels; olive oil, 200,000 casks.

The **MINERALS** of Greece include:—Iron, Marble, Magnesite, Emery, Lead, Lignite.

IMPORTS (1914), Old Greece only:—Total value £7,000,000, of which £2,000,000 from the United Kingdom; £1,800,000 from Germany and Austria Hungary; £1,000,000 from Russia.

EXPORTS (1914), Old Greece only:—Total value £4,000,000, of which £3,000,000 came to the United Kingdom.

COINAGE.—The unit is the Drachmæ, equivalent to a Franc (10d.). The current rate of exchange is about 25·30 Drachmæ to £1.

FREIGHT.—From England, 160/- + 10 % primage.

WEIGHTS AND MEASURES.—It was decided in 1898 to introduce the metric system. The change is to be gradual from the old system, which is:—Oke = 2·82 lb., stater = 123·20 lb., livre (Venetian) = 1·05 lb., baril (wine) = 16·33 imperial gallons, kilo = 0·114 imperial quarter, pike = ⅔ of a yard, stremma = ·242 of an acre.

BANK OF NATIONAL ECONOMY (of Greece)

Head Office: ATHENS.

Branches:

PIRÆUS, SYRA. PATRAS.

Capital Paid Up - Drs. 10,000,000

Fully represented in all parts of the world for all kinds of commercial, financial, and shipping business.

President. L. EMBIRICOS. *Manager.* D. MIAOULIS.

BANK OF PIRÆUS.

For COMMERCE, INDUSTRY and SHIPPING.

Capital Paid-up - Drs. 5,000,000. Reserve Fund - Drs. 3,095,000.

OFFICES at PIRÆUS and ATHENS.

Every kind of Banking business transacted.
The Bank's connections throughout Greece enable it to offer foreign clients special facilities for the collection of Bills, etc.
Correspondence invited.

BANK OF INDUSTRY OF GREECE.

Head Office: 14, Stadium Street, Athens.

Capital Fully Paid-up - Drs. 15,000,000

The Bank has been established for the encouragement and development of Industry and Commerce, and undertakes every description of banking business.

BANK OF ORIENT.

Capital Paid up - Drs. 25,000,000

Head Office: ATHENS.

Branches: SALONIKA, SMYRNA, ALEXANDRIA, CAIRO, MITYLENE, SERRES, ZAGAZIG, MAGNESIA, PERGAMA, SOMA.

Every kind of Banking Business transacted.

fuel for power purposes. But, like other German industrial methods, no detailed descriptions of the power plants have ever appeared in print. Recent trials, however, in this country and in America, proved that in order to obtain a high efficiency from lignite a high temperature is required in the furnace, and this can be obtained by a suitable grate. It is found that a flat sawdust grate, with half-inch round holes, gives the best results. Such grates contain only 15 per cent. air space, but by having small openings a higher pressure can be maintained in the ash-pit, and the air passes through the small holes and through the bed of fuel at a greater velocity. This produces high temperature in the furnace, and as the volume is small the heat is not rushed through the boiler, and up to the smoke-stack, but is absorbed by the water in the boiler and a low temperature in the smoke-stack is obtained. Under such conditions, with a good boiler and setting, a pound of lignite containing 35 per cent. moisture, 6 per cent. ash, and 7,000 B.Th.U., will evaporate nearly 5 pounds of water per pound of fuel. These results can be obtained when a boiler is not pushed above its rated capacity, say, 3 lbs. of water per square foot of heating surface, as a boiler cannot be forced much over its rated capacity with lignite. It is recommended that the lignite for such a furnace should be broken to a uniform egg-size and screened before use, for large and irregularly sized lumps give irregular combustion. Firing must be frequent, with only small additions at a time.

A Fruit Farm Plough.

The advisability of introducing small-size agricultural implements for fruit and vine-growers in the East has often been pointed out in these columns. Very large fruit farms and gardens and very extensive vineyards in the Near and Middle East are cultivated by hand with a spade of local construction. The special narrow ploughs and diggers which are used in France, and even in this country, for this purpose are unknown there, although the natives throughout the fruit-growing districts of that region would be ready buyers of such implements if they knew them. Why the makers of such implements ignore the very markets in which their products would meet with a great commercial success is inexplicable. Of this we thought again the other day at the recent Implement and Machinery Exhibition at the Agricultural Hall, Islington, when we watched two landowners or merchants from the Levant absorbed for a long time in examining a small fruit-farm plough which was exhibited, and, if we are not mistaken, was subsequently bought by them. The implement was really very interesting: a reversible plough with movable handles and head, either or both of which can be instantly set at any desired angle to allow cultivation to be carried close up to the stems of trees without damaging the branches. There are no projecting parts on the beam, which is specially low down, so that even the branches of bush fruit should be immune from damage when closely ploughed. Moreover, the coulter is attached to the beam in a novel manner, so that no projection appears above the beam. To enable the head to be kept well towards each tree, the draw-bar is taken from the rear of the plough, thus permitting the man and horse to walk in the centre of the alley. The makers may be sure that, if properly introduced, this plough will find a good sale almost throughout the Near East.

Shipping.

It was noticeable that when the armistice was signed a large number of buyers of ships, new or secondhand, hastened to come to London and other British ports from all quarters, and especially the Eastern Mediterranean, hoping, apparently, that there would be a "bargain sale" of ships. Everyone believed that the position would very speedily become easier; that with the armistice there would be an end of the need for vessels for carrying munitions; and that there would be a great diminution in the number of transports required, and, altogether, the improvement in shipping generally would be rapid and considerable, and consequently there would be numbers of ships offered by the British Government at bargain prices! But everyone was disappointed. The removal of the Government control on steamers has not been, and could not be, so rapid or so extensive as was hoped. British shipping losses during the war were very considerable, and naturally the restoration of British shipping is the first consideration. The ships which had been employed on military work had to be refitted before they could return to the service of peace. A transport or armed merchant cruiser cannot be taken and immediately set to ordinary mercantile work. Very extensive alterations must be carried out first, and everything depended on getting those alterations carried out quickly. There were also many ships which needed considerable repairs, and it was very unfortunate that at such a time the men in many of the most important repairing yards should have decided to go out on strike. All these great difficulties which British shipping had to overcome, however, could not be realised or understood in allied or neutral shipping quarters, and comments passed which were quite unjustified.

In spite of the improvement of shipbuilding facilities it is believed that there is no hope of a drop in the prices for new tonnage. Shipbuilding in 1920 is likely to be as active as at any time during the past five years. There are still great difficulties in obtaining sufficient raw material, and although the various shipbuilding establishments are working at the highest pressure there is an insufficiency of labour, and steamers are not being completed as rapidly as was anticipated.

The Registers of holders of the 3 per cent. new debenture stock, and the 3½ per cent. debenture stock of the East Indian Railway Company will be closed from January 14, 1920, to February 3, both days inclusive, for the purpose of preparing warrants for the payment of interest for the three months ending February 3, 1920.

THE CONGESTION AT THE PIRÆUS.

Increased Warehouse Facilities.

The Secretary-General of the Greek Ministry of Finance has recently written an article for an Athenian newspaper dealing with the improvements which have been made in the port of Piræus, says a British official report from Athens. Numerous complaints have been made by business men of the lack of space in the Customs, congestion, and the incapability of the local authorities to cope with the situation at the Piræus. Nevertheless, this article shows that the Government has done a good deal, and has made a serious attempt to relieve a situation which to-day probably causes the same difficulties in the ports of other countries.

The article begins by showing the congestion at the port of Piræus at the end of 1918; warehouses and sheds were old, narrow, badly built, and absolutely insufficient to cope with the vast mass of goods which were accumulating daily, whilst the harbour was crowded with lighters overloaded with goods which could not be discharged. The Minister of Finance therefore decided to take immediate action and introduced a Law, which was passed, for the reform of the Custom House and for the setting up of a committee to study the plans.

On the basis of the memorandum drawn up by the Director of the Custom House, work was begun by the construction of the large warehouses at Zea in January, 1919. First of all certain Government commissariat stores, which had been occupying space in some of the sheds, were removed and the place cleared for the merchandise continually arriving. Other buildings were then hired, and use was also made of certain storehouses belonging to the Parcel Post Department as well as of the luggage hall of the Custom House. The committee then started on various reforms both internal and external. With regard to the former, measures were taken that, whereas formerly there was great disorder, congestion and noise inside the Custom House, matters began to run more smoothly.

Two warehouses were built at the Zea Mole, and a third one of 1,092 square metres. This was still not sufficient, so four other warehouses of 3,417 square metres were erected. Later on two more warehouses of 1,966 square metres were put up. Thus the State was responsible for the building of nine large warehouses, which receive over 10,000 bales of merchandise daily. The committee was still not satisfied, and in order to provide temporary shelter for the masses of goods which kept arriving daily two more light sheds of 3,560 square metres were put up in Karaiskakis Square, and another two sheds of 2,580 square metres, which stretched all the way from a place called Trumba right down to the Custom House itself. The building of further sheds of 1,500 square metres has been decided on at Xaveri. Light railway lines (Decauville) have also been laid inside and outside the sheds leading from the jetty, while measures against an outbreak of fire have been taken by orders given for motor-pumps of high tension. Furthermore, the open spaces in front of the building at Zea are being covered with tar and so made into open and paved places; while orders have also been given for winches.

Since 1918 up to the present the various Custom House offices, goods control offices, etc., clearing and sorting sheds have increased from seventeen buildings to thirty-nine, the number of employees has increased from eighty-one to 183, while guards at the Customs have been augmented from ninety-seven to 200, and the number of labourers now working there is 300 instead of eighty. There are now forty-four weighing machines instead of seventeen, and thirty-two trucks instead of ten. The length of the Decauville line has increased from 200 metres to 1,500 metres.

The writer states that the rush of business in this harbour during the last two years took everyone unawares, and admits that the complaints which are heard daily, and especially from foreign business houses and steamship companies, are not unjustified. He says, nevertheless, that one must remember that whereas the State has managed to help trade to this extent, providing some 20,000 square metres of space, the banks, shipping companies, warehouse companies and the merchants have not even built one square metre. Furthermore, many merchants use the Government buildings as warehouses, and leave their goods there for an indefinite time for the purpose of speculation on the rise or fall in price of thousands of tons of merchandise, while they nevertheless exclaim against the insufficient warehouse space, which space should really be used for goods to be passed through and not where they should remain for two or three months. In fact, although some ten to fifteen thousand bales enter the warehouse daily only some four to six thousand are taken away. Another point to be noticed is that goods remain a very long time in the lighters, for although goods are loaded on board the cargo boats very easily, owing to the special appliances elsewhere, they are discharged here with the greatest difficulty owing to the lack of machinery for discharging, lack of manual labour, and lastly of space, in spite of the extraordinary increase of warehouse room as described above. Even if the present movement were to relax a little it will nevertheless be necessary to come to some immediate decision both as regards the reconstruction of the harbour, the building of the new Custom House, machinery for discharging purposes and such like.

The India Office has issued the following telegram received from the Viceroy, Revenue and Agricultural Department, dated January 2:—In Hyderabad, situation not yet satisfactory, though famine distress confined to a few Talukas only. Numbers relieved:—Burma: works, 2,700; gratuitous, not reported. Hyderabad: works, 7,000; gratuitous, 2,000. Madras: works, not reported; gratuitous, incomplete figures, 48.

NEAR EAST COAL RESOURCES.

By John Kirsopp, M.I.M.E., F.G.S.

IV.—THE WESTERN URALS.

The discovery of coal in this region was made quite accidentally, in exploring for iron ore, and in excavations connected with the building of the Kizelovski works about the end of the eighteenth century. The industry here developed very slowly, and until 1879, when the Ural railway was constructed, the output of coal only sufficed for local necessities. After the completion of the railway the output rapidly increased, reaching 150,000 tons per year in the 'nineties and prior to the war being from 600,000 to 800,000 tons per year.

The following mines were in operation before the war: Lunyevski (near Alexandrovski works), Kizelovski, Gubakhinski, Usvenski, and a mine near Baskaya station. Coal also occurs on the Archangel-Pachüski estate at Vashkurski, on the River Chusovaya, at Lomovski, on the Kinovski estate, and on the Ilimski and Ulkinski Crown estates, but is not of practical importance.

On the Alexandrovski estates the coal-bearing deposits occur in several north-south bands, running through the Vladimirski, Ivanovski, and Ursinski mountains, and are crossed by the North and East Lunva rivers. The series attain a thickness of 560 ft., consisting of clays, slate clays, quartzose and argillaceous sandstones, and seams of coal (fifteen in number). There are ten working shafts sunk on this estate, the first one being sunk in 1870, the coal lying in north-south synclinal folds, dipping at low angles on the west wing, and steepening on the east wing, where in places in the upper part the dip is overturned and the coal pinches out. The two upper seams of the middle seams are the most extensively worked, and owing to the uneven quality of the coal these seams go under different names in different mines, the upper one at the Gregory mine, the Sagan (7 ft. in thickness), known as the Nikitinski, Andreieffski, Grassgovski, and the Graf seam. The lower seam, 35 ft. below, has a total thickness of 3 ft. 6 ins., and is divided by an 8-inch sandstone parting. Near the south-east end of the synclinal fold, 665 yards north-west of the Gregory shaft, in the Elim shaft they are met with at 294 ft. and 329 ft. respectively. The Kizelovski estate, adjoining Alexandrovski, on the southward, has not been examined, but coal has been met with in an abandoned iron mine, 3½ miles north-east of the Kizelovski works, near the boundary of these two estates; but the seams mentioned probably do not extend much farther to the south.

The Lunva coal can be divided into two classes, *i.e.*, coal of the first class, strong enough to withstand transport, and that of the second class, too friable, and mostly used for coke making. The coal is high in ash (up to 20-40 per cent.) with 3 to 5 per cent. of sulphur. The coal of the second class contains pyrites and slate, in the form of lumps and bands which are easily separated from the coal, whilst in the coal of the first class the impurities are in the form of thin films, or are disseminated in the mass of the coal making it difficult to clean. These coals show a range of grade between a non-coking and a coking coal. In general the Lunva coal is inferior to that of Kizel, and on account of their great irregularity they are more difficult to mine than the more regular beds of Guvakha and Kizel. The output of the Lunva mines has risen from 85,000 tons in 1900 to 120,000 tons in 1910. The average thickness of the two seams worked in this field may be reckoned at 2 metres and 1 metre (6 ft. 7 ins. and 3 ft. 3 ins.) respectively, and the actual reserve may be estimated at seven million tons.

Kizel coalfields are situated on both banks of the Kizel river, near the Kizel works. The coal seams occur in a series of beds which form two north and south folds, crossed by the Kizel river. In the Knyajeska mine, which was opened in 1880, and which is situated on the west wing of the west anticlinal fold, on the right side of the Kizel, three workable seams occur: the Elizabeth seam, 2 metres (6 ft. 7 ins.) thick; the Helena, 8.5 metres (28 ft. 5 ins.), below 1 metre (3 ft. 3 ins.) thick; and the Nicolai, 6 metres (19 ft. 8 ins.) lower, and also 1 metre (3 ft. 3 ins.) thick.

Two mines, the Knyagininski, near the railway, and the Razsolinski, about a mile and a-third further south, situated on the left bank of the Kizel, opposite the Knyajeski, are working the same seams, with a total maximum thickness of 14 ft., the coal-bearing series extending to the south of the Kizel river for a distance of more than eleven miles to Kosva. There has been no prospecting between the Razsolinski and the Lubimovski mines, on the right side of the Kosva (a distance of more than nine miles), except at one point on the right side of the Kosaiya river, where two seams 8 ins. and 2 ft. 11 ins. thick and dipping west at an angle of 60 degs., were f[illegible]

SHIPPING INTELLIGENCE.

Forthcoming Sailings.

The Johnston Line steamer Norton, to Piræus, Volo, Salonika, Bourgas, Varna, and Constantza, will close for cargo at Liverpool on January 10.

The Prince Line s.s. Algerian Prince, to Tunis, Malta, and Alexandria direct, taking cargo for Cyprus and Syrian coast ports, with option of transhipment at Alexandria, will close for cargo at Liverpool on January 10.

The Papayanni Line s.s. Serbino, for Algiers, Smyrna, and Constantinople, will close for cargo at Liverpool on January 17.

The Anchor Line s.s. Castalia, for Bombay, will leave Glasgow on January 12 and Liverpool on January 17.

The Bibby Line s.s. Herefordshire, to Marseilles, Port Said, Colombo, and Rangoon, will close for cargo at Liverpool on January 20.

The Power Line s.s. Pangbourne, to Rabat, Larache, Tangier, Casablanca, Mazagan, Saffi and Mogodor, will leave London about January 25.

Notes.

The City Line s.s. City of Calcutta, about which much anxiety was displayed in Liverpool in consequence of her not being reported since passing Ushant on December 23, has, according to a Lloyd's telegram, arrived at Port Said.

According to a German contemporary, the Deutsche Levante Linie (German Levant Line) is being amalgamated with the Hamburg-American Line. The capital of the former concern in 9.000.000 marks. The Hamburg-American Line has no intention of making a fresh issue of capital, but will exchange its own shares for Levant Line shares in the proportion of three of the former for one of the latter, a "friendly group" placing its holding at the disposal of the H.-A. Line for the purpose of the deal. No particulars are given as to the actual position of the Levant Line, but previous to the outbreak of hostilities the fleet comprised sixty-one ships with a total gross tonnage of 170,000 tons.

A correspondent writes:—There is a good deal of movement in the Cyprus ports. Steamers of the Italian Company Trieste Lloyd now arrive in the roadsteads, as well as those of the Khedivial and Prince Lines.

The s.s. Antar, 3,580 gross tons, built in the Tyne (1906), has been sold by the Egypt and Levant Steamship Company, to buyers not stated, at a price of about £150,000.

The s.s. Tweeddale, 4,432 gross tons, built at Glasgow (1904), has been sold by the Albany Steam Navigation Company, Cardiff, to Mr. Elie Angelis, Greece, at a price of about £225,000.

The Joanna, a steel screw steamer 5,300 tons gross, 8,300 dw., on 25½ ft. draught, length 400 ft., built at Sunderland for the Shipping Controller, now owned by Mr. Elie Angelis, of Athens, Greece, was launched on December 23.

The Cunard Company announce that Mr. James Ambrose, manager of the third-class passenger department at the head office in Liverpool, has been appointed general passenger superintendent. Mr. G. W. A. Hutchison has been appointed manager of the saloon passenger department at the head office in succession to Mr. E. H. Hoblyn, who has just retired.

YUGOSLAV STATE BANK.

The Issue of Notes.

A Reuter message from Belgrade, dated December 23, states that at an extraordinary meeting of the shareholders of the Serbian National Issue Bank, which was held recently, it was decided to extend the scope of the bank under the title of the National Bank of the Kingdom of the Serbs, Croats, and Slovenes. A new board of directors was elected, and is composed as follows:—M. Voya Velkovitch, Minister of Finance; M. Dragotine Protitch, lawyer; Count Culmer, a Deputy of Agram; M. Montchilo Nitchitch, former Minister of Finance. The meeting authorised the directorate to apply the new Banking Bill, which is now before Parliament, as soon as the Bill is passed. The bank is to have a nominal capital of 50.000.000 dinars in gold, divided into five series of twenty thousand shares. The State is to hand the bank 30.000,000 dinars as metallic security for the issue of new bank notes. The bank accepted this commission from the State, but declined to accept any eventual risk involved by the fluctuation of the exchanges. The new notes will be considered as legal tender. The National Bank is to be allowed to issue bank notes to a sum equal to three times the amount of the metallic deposit it holds, and may exceed this limit for the issue of notes (at present from 250.000.000 to 400.000.000 dinars) in proportion to its capital. The exchange of dinars and kronen will be continued under the present conditions until the end of February.

H.M. Commercial Secretary at Constantinople cables that this season's millet crop in the Smyrna district is reported as very good. Exportation is allowed.

NEAR EAST MARKETS.

LONDON PRODUCE REPORT.

Currants.—There is little change in the position now that the Christmas trade is over. In view of the considerable supplies that have been distributed, it might have been thought that the demand would have eased off, but, as a matter of fact, it continues as strong as before. The fact is, of course, that apart from any question of shortage of stocks, the consumption of currants in the United Kingdom is and has been for a long time on the up grade, and Greek producers may confidently look to this country as a strong and growing market in the future.

Sultanas.—The position is far from satisfactory as regards stocks in hand, which are all but disposed of, and the demand for this commodity is such that future consignments are likely to be quickly absorbed. There is no recent news from centres of production.

Coffee.—1,853 packages were offered at the first auction of the year, and met with a strong demand at firm rates. Costa Rica new crop bold greenish was done at 159s. and medium at 152s., while good bold greenish of the old crop came to business at 150s. Transactions have been effected in East Indian at 155s., Jamaica at 160s., and Colombian at 125s. A firm tone has again characterised the futures market. Quotations are March 123s. 6d., May 121s. 6d., July 119s. 3d., September 117s. 3d., and December 116s. 3d.

Sugar.—Satisfaction is expressed with the new official maximum prices for free sugar for manufacturing purposes. Sugar is to be issued against jam manufacturers' vouchers at 66s., and against all other manufacturers' vouchers at 100s. The order, which holds good until January 24, also fixes the maximum price of table sugar at 115s. per cwt. duty paid. It has been found necessary, in view of the acute position in producing countries, to limit issues to manufacturers to 75 per cent. of the quantity originally intended for jam manufacture, and to 50 per cent. of the quantity issued in the past year for other purposes of manufacture. The view has been taken by some sections of the public that the manufacture of sweets and confectionery is to some extent responsible for the reduced ration. It is pointed out by the Royal Commission on the Sugar Supply that if the manufacture of these articles was prohibited it would be possible to increase the domestic ration by only 1¼ oz. per week. Advices regarding the Cuban crop continue to be most favourable.

Oilseeds.—Linseed has been a dull spot, La Plata, January-February Hull being done at 38s. 3d. per cwt. Rapeseed has been firm with Toria a shade over 46s. for Hull January-March. Bombay cottonseed has been a strong feature at 20s. spot, while Egyptian has been steady at 26s. Last year's American linseed crop averaged 275-276 lb. to the acre.

Oilcakes, etc.—There has been a moderate demand for oilcakes. Linseed cake is in good request at 500s. per ton, while cottonseed cake has come to business at from 380s. to 400s. Rapeseed cake has been done at 360s. There is little change to record in oils. Linseed closed a shade stronger than last week at 107s. 9d., while rape oil, cotton oil, and ground nut oil are unaltered. Turpentine closed at 168s. 6d. spot.

CYPRUS AGRICULTURAL PROSPECTS.

(From a Correspondent.)

December 13.

The weather has been variable. Heavy rains fell in some parts of the island, followed by dry, cold weather, which is again breaking. Agricultural prospects are, on the whole, good, but many villagers are still in much need of seed corn, and great numbers of petitions are being received by the authorities asking for loans from the Government tithe stores. From some districts come complaints of serious privations suffered in the villages from lack of flour and wheat, and the Government is urged to take immediate steps to import on its account supplies for sale to the people.

The aeroplane business of A. V. Roe and Co., Limited, at Newton Heath is being transferred to Southampton, and in future the firm's activities in Manchester are to be confined to the manufacture of motor-cars.

H.M. Commercial Secretary at Bucharest reports that the Roumanian Government have decided to admit books of all kinds, in all languages (whether bound or not), into Roumania free of Customs duty. Further, the recently imposed surtax of 2 per cent. *ad valorem* is not applicable to books.

OPIUM MARKET REPORT.

Messrs. Barker Brothers, Smyrna, report as follows for the week ending December 20:—The sales this week on our market have been very important, amounting in all to 143 cases of various qualities. Prices started at Ps.770 to Ps.780 per oke, and gradually advanced to Ps.860 to Ps.870 (or 20s. to 21s. per lb. c.i.f.). Taking the abnormal high exchange, which is now about Ps.370 per pound sterling for cheque and 1.02 dollars for one Turkish paper pound, the advance in opium is not justifiable. The competition on the part of buyers to secure enough stuff to cover their engagements, coupled to the high exchange, brought on this advance, and from what we see we are of opinion that still higher figures will be ruling before the new year. The arrivals to date are 1,250 cases, against 90 at same date last year.

SUDAN PRODUCE.

Gum.

The C.E.B. report for October states that the exports during the month were, viâ Port Sudan, 1,444,291 kilos. of hashab of the value of £E64,300, 25,483 kilos. of bleached of the value of £E1,359, and 159,596 kilos. of talh of the value of £E4,079; viâ Suakin, 60,295 kilos. of hashab of the value of £E2,680; and viâ Halfa, 33,116 kilos. of hashab of the value of £E1,359, and 40,603 kilos. of talh of the value of £E1,037.

Kordofan Province.—The amount of gum sold in El Obeid market during October was 5,782 kantars, as against 6,144 kantars during the same month last year, the average price being £E1,342 per kantar of 100 rotls (45 kilos.). Arrivals from Nahud were 4,867 kantars, as against 1,283 kantars last year. One kantar was sold at Um Ruaba at £E1, and none last year. There were no arrivals at Rahad during the month.

Sennar Province.—313 kantars of hashab and 198 kantars of talh gum were exported from Singa out of stored gum. 25 tons of hashab and 15 tons of talh gum were exported by rail.

Cotton.

Berber Province.—Cotton-picking has began at Gendetto, and is in full swing at Ketiab and Zeidab. The Gendetto crop is particularly promising. Zeidab is well up to the average. Ketiab has suffered somewhat from shortage of water. Temera cotton is late, but quite promising. Bouga cotton is promising, but Mikelab is poor. It would appear that, except on new land, as at Bouga, it is useless planting cotton later than early May. In Berber Merkaz there is a marked contrast with the cotton at Mikelab planted in late May and June, and that at the Berber Agricultural School planted in April, which has already given 3½ kantars a feddan.

Bahr el Ghazal Province.—September: Fellata cultivators at Raga are now picking their cotton crop, but have difficulty in finding a market for it.

The 1919 crop of locust beans in Cyprus, according to the estimates of the Commissioners of the different districts, amounts approximately to 148,000 aleppo cantars, or 33,435 tons.

GREEK DEBT SERVICE.

The Council of Foreign Bondholders issues the following information compiled from figures published by the International Financial Commission at Athens with regard to the revenues assigned under the Law of Control for the service of the Greek Debt from January 1st to October 31st, 1919 (New Style January 14th to November 13th, 1919).

	Monopolies, tobacco stamps stamped paper & Naxos Emery	Piræus Customs.
	Drachmae.	Drachmae.
Gross receipts, October, 1919	4,861,507	5,341,323
Do. do. 1918	3,557,633	2,552,000
Estimated receipts for 10 months (Law of Control)	24,083,333	8,916,666
Actual do. 1919	40,270,301	40,350,718
Do. do. 1918	31,679,475	26,573,000
Difference between estimated and actual receipts for 10 months 1919	+ 16,186,968	+ 31,434,051
Difference between estimated and actual receipts for 10 months 1918	+ 7,596,142	+ 17,656,333

Of the surplus over the estimated receipts from monopolies, tobacco, stamps, stamped paper and Naxos Emery, 49 1/5 per cent. is applied towards increasing the minimum rates of interest and sinking fund of the External Gold Loans of 1881 to 1893. The receipts in gold from both Naxos Emery and the Piræus Customs are converted into drachmae at par when the average rate of exchange for the month is par or below par, but when the average rate for the month is above par the conversion is made at that average rate.

COMPANY NOTES AND REPORTS.

British Burmah Petroleum.

The report of the British Burmah Petroleum Company for the year ended July 31 states that the trading operations show a profit on revenue account of £534,603, the highest yet achieved by the company, representing an increase of £162,658 over the results of the previous year. Adding agency fees £3,215, dividend on shares in Rangoon Oil Company £4,273, interest £6,249, transfer fees £1,702, and difference in exchange £19,634, there is a total credit of £569,677. Against this have been debited sundry charges in Burmah, Bombay, and London £58,215, debenture interest £35,797, and depreciation £67,578, leaving a surplus of £408,086, which with net balance brought in, £25,635, gives a disposable profit available of £433,721. Interim dividend of 4 4-5d. per share absorbed £39,484, sinking funds accounts £33,444, additonal 2½ per cent. interest on second mortgage debenture stock under terms of trust deed £1,391, contingent reserve account for excess profits duty and income-tax purposes £165,000, exploration and development reserve £20,000, general reserve £15,000, commission to selling agents £27,970, and the directors recommend a balance dividend for the year at the rate of 1s. per share, free of tax, on all shares issued prior to July 31 last, making 17½ per cent., free of tax, for the year (as against 12½ per cent. for 1918). For the first time since the incorporation of the company it has received a dividend on its shares in the Rangoon Oil Company, Limited, amounting to £4,272, being at the rate of 5 per cent. Under the provisions of the trust deed securing the first mortgage debenture stock this dividend has been handed to the trustees of that stock for sinking fund purposes. Subsequent to the close of the financial year a second dividend has been received from the Rangoon Company amounting to £11,720, which sum has been similarly dealt with.

Up to July 31 the trustees had purchased for redemption first mortgage stock of the nominal value of £163,517, and since that date their holding has been increased to £167,605. At the end of July the trustees of the second mortgage debenture stock had succeeded in purchasing only £14 stock out of the £4,174 allocated to them for sinking fund purposes from the company's profits to July 31, 1918. Consequently a drawing took place in October at £105 per £100 of stock, and £4,000 stock was duly drawn for payment off and cancellation. For the year under review the sums provided for the sinking funds of the first and second debenture stocks amount to £29,273 and £4,171 respectively, enabling further purchases or drawings to be made. The expenditure at the refinery charged to capital account on this occasion is £9,141, and at the field to £8,446. Of the £67,578 written off this year for depreciation £26,934 has been allocated to refinery accounts and £40,644 to field accounts, being at the rate of 15 per cent. on the summarised totals of those accounts respectively as per balance-sheet at the commencement of the financial year. A few additional well sites at Yenangyaung have been acquired during the year. The combined production of crude oil by this company and the Rangoon Oil Company was again in excess of that of the previous twelve months, but the continued shortage of drillers and of supplies of material resulted in a reduction of footage drilled that may to some extent have a prejudicial effect for a period upon future crude oil returns.

Since November last large quantities of drive pipe and drilling equipment have been shipped to Burmah, and additional drillers are also going forward, enabling a more vigorous drilling policy to be proceeded with than has of late been possible, although the labour unrest in America, where most of the equipment is manufactured, renders the prospect of prompt and continuous shipments still somewhat doubtful. The throughput of crude oil at the refinery was in excess of previous years, and the results in the form of light oils taken off showed the highest percentage yet reached by this company, while the output of wax has been substantially increased. The company in September last was granted the licence then required to raise new capital by the issue of the balance of its 525,772 shares of 8s. each at a premium of 12s. per share. The provision of this additional working capital will facilitate the adoption of various improvements and extensions which had for some time been in contemplation, and should assist in enlarging the scope of the company's operations. The directors anticipate that the ordinary expansion of the business may be further enhanced as a result of this various expenditure. A scheme for providing electrical power for the Yenangyaung field has now been matured, and negotiations are proceeding satisfactorily with the Burmah Oil Company, who propose to instal the plant necessary for the generation of the power and to supply this company's requirements. Considerable economies may be looked for from the introduction of this electrical energy. In November Mr. Edgar Taylor relinquished his seat on the board and Mr. Robert Taylor was elected a director in his stead. Meeting, Cannon Street Hotel, E.C., January 13, noon.

South Behar Railway.

The report of the South Behar Railway Company for 1919 states that, after paying the dividend at the rate of 5 per cent. per annum for the half-year ended December 31, 1918, a balance remained in hand of £8,032, which with the rental received from the Secretary of State for India for the half-year to June 30, 1919, and other receipts, less interest on debenture stock and sundry outgoings, left £17,668 to the credit of revenue account at that date. An interim dividend at the rate of 5 per cent. per annum has been paid, leaving £8,178. Adding to this £15,000, the half-yearly rental to December 31, 1919, and other receipts, less interest on debenture stock and sundry outgoings, there remains a balance of £17,821 to be dealt with. The directors recommend a dividend at the rate of 5 per cent. per annum for the half-year to holders registered on December 31, leaving £8,331 to be carried forward. Warrants will be posted on January 14. Meeting, 25, Buckingham Palace Road, S.W., January 13, 1 p.m.

Balaghat Gold.

The statutory report of the Balaghât Gold Mines states that, in accordance with the reconstruction agreement, the preference shares were issuable as fully paid and the ordinary shares as credited with the sum of 6s. per share as paid, being part consideration for the sale and transfer of the property from the Balaghât Gold Mining Company (in liquidation). Up to December 29, 1919, there had been allotted 95,400 fully paid preference shares and 198,367 ordinary shares; 1s. per share has been called up on 198,360 ordinary shares, amounting to £9,918, making them now 7s. per share paid, and of this £9,507 has been received, together with a further sum of £192 on account of future calls. The sum of 10s. per share has been received on seven subscribers' shares and £207 on shares applied for but not yet allotted. The issue of ordinary shares was largely over-subscribed, and the allotment of the balance of 14,233 shares will shortly be made. The news concerning the development of the mines continues of a satisfactory character. Meeting, 6, Queen Street Place, E.C., January 15, noon.

Banque Générale de Grèce.

The profit and loss account of the bank for the first half of 1919 shows that interests, commissions, and divers profits amounted to 407,382.56, from which had to be deducted general expenses 82,648.20 drachmæ, taxes 1,573.40 drachmæ, interest on current accounts 100,750.84 drachmæ, and amortisations 33,394 drachmæ, leaving a net profit of 189,016.12 drachmæ. Out of this amount the allocations were:—To statutory reserve 37,803.20 drachmæ, distribution to shareholders (less tax) 60,000 drachmæ, to Council of Administration 8,599.55 drachmæ, to directors 8,599.55 drachmæ, public taxes 5,217.40 drachmæ, and to carry forward 68,796.42 drachmæ.

Central Province Ceylon Tea.

The report of the Central Province Ceylon Tea Company for the year ended June 30 states that the net profit for the year, after transferring £850 from manuring suspense account to profit and loss account, and writing off from estates account £750 for depreciation of machinery and buildings and £2,500 for bungalow pulled down, and placing £1,450 to income-tax and excess profits duty reserve, is £9,670, which, with £1,859 brought forward, makes £11,529 available.

COMPANY RESULTS.

Ordinary stock transfer books of the Rohilkund and Kumaon Railway Company will be closed from January 16 to January 30 for the purpose of preparing the dividend warrants for the six months ended September 30, payable to shareholders registered at the time of closing the books.

The ordinary general meeting of the South Behar Railway Company, Limited, will be held on January 13.

The ordinary general meeting of the Crédit Foncier Egyptien will be held at Cairo on January 13.

The Egyptian and Foreign Trust offer £75,000 Six and a-Half per Cent. Debenture stock for subscription to the existing shareholders at par. Particulars can be obtained at the offices of the company, Dashwood House, New Broad Street, E.C., where the trust deed can be inspected. Application for the stock, accompanied by a cheque for 50 per cent. of the amount applied for, must be made at the company's office on or before January 21.

The directors of the Jhanzie Tea Association have declared an interim dividend of 4 per cent. or 4s. per share, less tax.

Burmah Electric Tramways and Lighting.—Dividend of 10 per cent. (10s. per share), less tax, on preference shares for the period ended July 31, 1911; £8,000 is placed to depreciation reserve, making it £35,894; £750 to depreciation of investments, and £492 is carried forward.

Egyptian Salt and Soda.—A dividend of 45 per cent. (less tax) will be paid to ordinary shareholders registered on January 2, and interest coupon No. 21 on bearer warrants for ordinary shares will be paid at the National Bank of Egypt, 6 and 7, King William Street, E.C., and the bank's branches in Cairo and Alexandria.

The directors of the Hope Tea Company announce an interim dividend of 10 per cent., less tax.

The directors of the Assam-Dooars Tea Company announce an interim dividend of 5 per cent., less tax.

The directors of the Meenglas Tea Company announce an interim dividend of 5 per cent., less tax.

MALTA WHEAT SHORTAGE.

(From Our Own Correspondent.)

Malta, December 19.

The Maltese may be said almost to live on bread alone, and any shortage of wheat causes considerable anxiety. The Acting Lieutenant-Governor explained the present situation fully to the Council of Government at its last meeting. In brief, the state of things is as follows:—There is at present in the island a supply which cannot last longer than the middle of January; the naval authorities hold 1,000 tons, which could be utilised in an emergency, and which would see the island up to the end of January. The quantity of flour on hand is much lower, and unless large supplies arrive Christmas Day will see the stocks exhausted. There are only four mills on the island, and stoppages from causes out of the control of anyone have been frequent of late, whilst quite recently only one mill out of the four was in working order. The Food Control Board are doing their best to cope with the situation, but, in the words of the Lieutenant-Governor, matters are very disquieting. Following the scarcity of wheat, the island is now faced with a scarcity of sugar, and each person is rationed to half a rotolo per head per week.

SUPPLIES AND PRICES IN TURKEY.

The following extracts are taken from recent reports received by the Imperial Ottoman Bank:—

CESAREA, November.

Despite the Armistice and the resumption of commercial relations with the Entente countries, trade here has not developed to any great extent. The causes of this position are to be found in the uncertain future of the country, and the insecurity and heedlessness which exist among the people of Anatolia. Meanwhile, our town being short of all imported articles (manufactures, cotton goods, etc.) there has been a certain movement between Mersina and Adana. Goods that have arrived here have been bought up by consumers, and stocks remain nil. The position from Cesarea on the route Sivas-Erzeroum is of great importance from the commercial point of view. Before the war merchants despatched their goods as far as Sivas, Harpout, Erzindjan, and other points from Anatolia. The undertaking of consignments to our locality offers good prospects. The imported goods most in demand here are cotton and woollen manufactures, coloured materials, hosiery, hardware, etc. Exports from our town are partly stopped because of the interruption in railway communications on the line from Konia for the capital.

ADRIANOPLE, November.

The winter sowings have been actively carried on during this month despite some rains which have stopped the progress of tillage. One can express a more than favourable view of the sowings, and the prospects of the approaching crop. It is much to be desired that a deep snow will cover the fields that have been sown to ward off the dangers of an excessive dry cold.

The open adjudications for the supply of paper for cigarettes, matches, and other articles of which the need is pressing will give an impetus to the trade of our town, especially as merchants here are taking a very active part in regard to these adjudications.

BRITISH TRADE IN SOUTH RUSSIA.

The Department of Overseas Trade wish to announce, states the *Board of Trade Journal*, that British firms established in the United Kingdom who are sending representatives to South Russia are advised for the future to furnish such representatives with letters or certificates to the effect that the firm is British and that the person is representing British commercial interests. These letters or certificates should be addressed by the firm direct to His Majesty's Consular Officer at the port or town visited by the traveller, and handed to the latter for presentation to such officer.

The directors of the Jokai (Assam) Tea Company have declared an interim dividend for season 1919 on the Ordinary shares of 5 per cent., less tax.

The death took place at his residence, Thistleton Lodge, Kirkham, Lancashire, on December 11, of Mr. Thomas Walmsley, partner in the firm of Messrs. Reynolds and Gibson, cotton brokers, Liverpool. Mr. Walmsley, who was in his eighty-first year, became a partner in the firm in 1865. He was a great authority on Egyptian cotton.

SMALL ADVERTISEMENTS.

NURSERY GOVERNESS desires Post abroad (India preferred). Usual English subjects; some French; good music; tennis; golf; excellent references. £60.—A. K., The Ladies' League, 118, New Bond Street, W.

LANCASHIRE COTTON

(From Our Own Correspondent.)

Manchester, Wednesday.

Prices throughout the market have continued to advance. There has been a good deal of talk as to the level of values now existing being dangerous, but two or three months ago, when rates were much lower, similar opinions were expressed. It is realised, however, that there must be a stop some time. Rather more fluctuations are now taking place in American cotton futures, and some profit-taking by speculators is going on. Higher figures have been quoted for Egyptian cotton, and it is said that prices will go still higher. Egyptian yarns are much dearer than a week ago. Business has been very difficult to arrange and supplies seem to be scarcer than ever. Anything offering is soon taken up. The rumour that the Government was about to reduce its estimate of the Egyptian crop has been contradicted, and there is still a possibility of a yield of over 6,000,000 cantars. Spinners in America continue to buy freely in Alexandria. The general demand in piece goods for the Near Eastern outlets continues encouraging. Buyers for Egypt and the Levant have been on the alert for sellers who are in a position to deliver fairly quickly. Clearances on the other side are said to be quite satisfactory. India has provided a large inquiry. Some substantial transactions have been arranged for Calcutta, Bombay, and Madras in grey staples and light bleaching fabrics. Printed and dyed goods have moved off freely for South America. The home trade remains busy. The advances required for American yarns have checked trade to some extent, but spinners have held very firmly to quotations. Actual business in export numbers has been rather smaller.

NEW COMPANIES.

M. Embiricos, Ltd.

M. Embiricos, Limited, was registered as a private company on December 30, with a capital of £150,000, in £1 shares. Objects: To carry on the business of shipbrokers, chartering agents, loading, insurance, passenger and general brokers, ship store dealers, dock owners, ship repairers, etc. The subscribers (each with one share) are:—M. Embiricos, Holland House, Bury Street, E.C.3, shipbroker; T. N. Papadatos, Holland House, Bury Street, E.C.3. M. Embiricos is permanent governing director. Registered office: Holland House, Bury Street, E.C.3.

Middle East Development.

The Anglo-French Middle East Development Corporation, Limited, was registered on December 23 with a capital of £42,000, in 400 "A" shares of £100 each and 200 "B" shares of £10 each. The objects are to acquire lands, rights or interests in Syria, Arabia, Palestine, and the contemplated Kingdom of Damascus, or elsewhere, for the purpose of boring and searching for, getting and making merchantable mineral and other oils and substances, etc. The subscribers (each with one share) are:—Rt. Hon. Lord Inchcape, 122, Leadenhall Street, E.C.; Rt. Hon. Earl Drogheda, 40, Wilton Street, S.W.; Sir Thomas Royden, 34, Dover Street, W.; W. de Falbe, Bylands House, Redbourne, Herts; Comte F. M. E. Pillet-Will, J. Exbrayant, M. Devies, F. D. Chavigne and G. Hersent, all of Paris. The directors are to number not less than four nor more than ten. The British holders are to appoint the British directors, and the French holders are to appoint the French directors. The respective numbers of British and French directors are to be as nearly as possible in proportion to the "A" shares held by the British and French holders. The first directors are:—Rt. Hon. Earl Drogheda, Rt. Hon. Lord Inchcape, and Sir Thomas Royden, Bart. (British directors), and the Comte F. M. E. Pillet-Will, J. Exbrayant and M. D. Devies (French directors). Solicitors, Parker, Garrett and Company, 14, Water Street, Liverpool.

Palaw (Burma) Rubber.

The Palaw (Burma) Rubber Co., Limited, was registered on December 19 with a capital of £75,000 in 2s. shares. Objects: To acquire and turn to account rubber estates in Burma or elsewhere, etc. The first directors are:—W. J. Cotterell, Old Mansion, Frognal, N.W.; G. N. Marks, 10, Regent Court, Regent's Park, N.W.; F. Fairbairn, 7, Chepstow Mansions, W.2. Registered office, 7-8, Great Winchester Street, E.C.

Commercial Bank of London.

The Commercial Bank of London, Limited, was registered on January 1, with a capital of £5,000,000, in £1 shares. The objects are to enter into an agreement with the Commercial Bank of London (incorporated in 1913) and A. H. King, and to carry on the business of banking in all its branches. The first directors are:—The Right Hon. Sir Charles E. Hobhouse, Bart., P.C., C. C. Hatry, P. Haig Thomas, the Earl of March, H. W. Pelham-Clinton, Sir Francis W. Towle, C.B.E. Solicitors: J. C. Langton and Passmore. Registered office: 6, Austin Friars, E.C.

Mediterranean Ports Coaling.

The Mediterranean Ports Coaling Company, Limited, was registered on January 2 with a capital of £110,000, in £1 shares. Objects: To carry on business as indicated by the title. The subscribers (each with one share) are:—E. G. O'Reilly, 52, Bishopsgate, E.C., solicitor's managing clerk; H. Scarfe, 52, Bishopsgate, E.C., accountant. Managers and sole agents: Moxey, Savon and Company, Limited. Solicitors: Maxwell and Company, 52, Bishopsgate, E.C.

ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Street, Wednesday.

This has again been another week of great activity, and, generally speaking, of rising prices. Buying orders have come to hand continuously from Egypt, and in many cases it has been quite impossible to satisfy the demand. Egyptian Government stocks alone have not participated in this further improvement, for although there has been a fairly active business in progress Unifieds are closing half a point down at 73½, and Egypt 3½ per Cent. Prefs. are ¾ lower at 60½. In City of Alexandria Bonds a small amount of stock was thrown upon the market, and in the absence of any support changed hands as low as 66½. As a result the wide price of 65-75 is being quoted for this stock to-night. There has been some local demand for Turkish 3½ per Cent. Egypt Tribute, which close 1 point up at 59.

In Bank shares Agriculturals have remained stationary, with a certain amount of business passing, while the Pref. shares are slightly lower at 6⅝ x.d. There has been a large and sustained demand for National Banks, which are closing 1¼ up at 22½. Anglo-Egyptian Banks have also jumped ⅜ to 17¼.

In Land shares the turnover has been very large. Aboukirs close 2s. 3d. up at 35s. 3d., while the debentures have advanced 8½ points to 117. Béhéras have again been a feature, and are closing 1⅝ higher at 19¾, while Building Lands are 3s. better at 28s. Egyptian Consolidated Lands at last show some signs of improvement, and are closing 2d. higher at 2s. 5d., but Delta Lands, after being up to 17s., close only fractionally firmer at 16s. 6d. Gharbiehs at one time jumped ½ to 3¾, then reacted to 3¼, and close ¼ up on the week at 3½. New Egyptians have been in great demand throughout the week; a large business has been put through, and they close 2s. 9d. up at 34s. 3d. Sidi Salems have further improved ¼ to 3⅜, and Union Foncières are 3-16 higher at 5 7-16. Sudan Plantations, after being neglected, have come in for renewed attention, and are closing ⅝ up at 8⅛.

Among the Miscellaneous descriptions Abyssinians are 3d. easier at 6s., Alexandria Waters are fractionally firmer at 10¾, and a fairly large business has been done in Salts and Sodas, which are finishing at 50s. 6d. x.d., an improvement of a few shillings on last week's cum. div. price.

In Oil shares Anglo-Egyptian B, after being up to 5⅛, finished 3-32 better at 5.

Greek Government stocks have again been on the up-grade. The 1881 Loan finishes 2½ points up at 53½xd., the 1884 Loan is 1½ points better at 52½xd., Monopolies are about unchanged at 49½xd., Rentes are 1½ points higher at 43½, the 1890 Loan is a point up at 52½, and Fundings are 2 points higher at 51xd. Greek Rails are 57½, and the 1910 Loan is exceptionally dull round 48; but there has been a rather sensational rise in the 5 per Cent. 1914 Loan, which closes 5 points up to-night at 67. Bank of Athens shares have been a better market, with business up to 70s., an advance of 2s. 6d. since last week.

The numbers are announced of twenty bonds of £100 each of the Calcutta Railway Company 6 per cent. first mortgage debentures for £120,000, which have been drawn for repayment at par on January 15, with accrued interest to January 14.

BRITISH TRADE CORPORATION.

(Incorporated by Royal Charter),

13, AUSTIN FRIARS, LONDON, E.C.2.

Telegrams: "Trabanque, London."

CAPITAL: Authorised - £10,000,000 Subscribed and Paid Up - £2,000,000

Governor - THE LORD FARINGDON.

Manager, A. G. M. DICKSON. London Manager, P. C. WEST. Secretary, G. De B. BROUNLIE.

The Corporation has been established with the object of developing the Trade of the British Empire in every part of the world, and brings to the notice of all interested that it is prepared to grant financial facilities to British Manufacturers and Merchants for the increase of their Import and Export Trade.

It will be prepared to assist in opening up new channels for enterprise, and will afford financial facilities for the enlargement of works and the extension of plant.

The Corporation is appointing representatives in the chief cities of the world, and will open credits at home and abroad. It invites inquiries, and will endeavour where necessary to put export advice at the disposal of correspondents regarding the financing of their foreign and overseas business. Moneys received on fixed deposit. Terms on application.

NOTES OF THE WEEK.

With the resumption of discussions in Paris, the future of Turkey and, more particularly, perhaps, the fate of Constantinople become burning questions. It is generally recognised that the Turk cannot possibly hope to retain his southern provinces—Syria, Palestine, and Mesopotamia; and though nobody seems to have any clear idea what is to become of Armenia, or where its boundaries will be drawn eventually, very few people would have the hardihood to suggest that the Armenians should be placed again under Turkish rule. But with regard to Asia Minor and the fragment of Turkey that is still left in Europe, there is considerable curiosity, and on the question of Constantinople feeling shows signs of running high ere long. It is unfortunate that since 1914 several more or less conflicting statements have been made by various Allied politicians in responsible positions, and some of these have been regarded, rightly or wrongly, as pledges. It might be no bad thing to regard these statements as "cancelling out" and to start with a clean slate. Possibly some of the nations' representatives at Paris are actually following this course. At any rate, as far as it is possible to judge, Mr. Lloyd George has lately been inclined to give more weight to the representations made to him by those who wish to see Constantinople left to the Turks; while France and, to some extent, Italy also, it is said, strongly favour that course.

This question of the future of Constantinople must be settled solely on its own merits, and it is to be hoped that the Paris Conference, though it may give a hearing to all sides and examine all views, will not allow itself to be overpersuaded by the fanatics of either party. Unfortunately, in connection with the Turkish defeats, there has been much injudicious talk about "the latest Crusade," "the modern Crusaders," and so forth. Such phrases are very attractive to a certain type of mind, but subjects of the British Empire, at any rate, would be well advised not to make use of them at all. Similarly, discussion about the future of St. Sophia is to be deprecated most urgently, for it not only wounds Moslem feeling, but also makes easier the task of the Pan-Islam and Pan-Turanian agitator, who requires no help of the kind these days. In a recently issued protest against the proposal to cut Constantinople off from Turkey, the League for the Defence of Ottoman Rights urges that "the victory of the Allies must not be allowed to assume the form of a victory of the Cross over the Crescent." Those who hold the opposite view appear to forget the very important part played by Moslem troops in bringing about the victory, to whom their gratitude is surely due. However the decision of Paris may go, it is bound to give rise to disappointment and heartburnings, and the raking up, now or later, of religious differences will not help matters in any way.

The terms of the treaty of peace to be imposed upon Hungary are a matter of the liveliest concern to its neighbours, and it is to be hoped that the Supreme Council will lend an attentive ear to their representations on the subject. In the past there has been too marked a tendency on the part of the Big Four to set various commissions to work studying different aspects of the Near Eastern question, and then, in arriving at the final decisions, to ignore their recommendations. If the forecast of the peace conditions published in the *Nieuwe Rotterdamsche Courant* has any foundation in fact, it is to be feared that Hungary has actually succeeded in throwing dust in the eyes of the Allied Governments. According to one clause, Hungary is guaranteed for the next ten years one-half the yield of the Petroseny and other mines that now pass under Roumanian jurisdiction. It may be necessary to provide against too violent a dislocation of the economic life of Hungary; but the Entente should not lose sight of the arbitrary methods by which the economic system was built up. As the Magyars could not prevent the discovery of raw materials in the territory of their subject peoples, they were at pains to hinder as much as possible the industrial development of those regions. By the manipulation of railway rates and by other means, Budapest was made artificially an industrial centre. As an illustration, it may be mentioned that it was possible to obtain timber on the Roumanian frontier more cheaply by sending the felled trees to Budapest to be sawn into planks—which were then returned to the locality of origin—than to carry out the process on the spot. This is a state of affairs that the Allies have no interest in prolonging unduly, and care should be taken that injustices of this nature are not perpetuated by treaty for the benefit of the Magyars and at the expense of the States now liberated from the Dual Monarchy.

We would direct attention to the pathetic appeal addressed by the Montenegrin Government to Great Britain and France, the substance of which is reproduced elsewhere in this issue. It is not a case of the rights or wrongs of the dispute between Serbia and

Digitized by Google

Montenegro. King Nicholas and his Government were received in France as guests of the Allies, and a subsidy was accorded to them. They remain to-day the recognised heads of an allied country, but for reasons that need not be entered into here they have not been allowed to return to Montenegro. In these circumstances they have no source of revenue to defray the costs of existence other than the monies advanced them as loans by Great Britain and France. Suddenly, however, without, it is understood, any previous warning, the payment of the subsidy by the British Government was interrupted, and France followed suit a few months later. By recourse to the pawnbroker or to an equivalent transaction, the Royal Family has managed to "carry on"; but, as the appeal sets forth, numbers of officials, students, and others accepted as refugees by France are in a state of dire want. Such a situation reflects the gravest discredit on the Allied Governments, and has, surely, only to be appreciated by the British public to evoke a storm of indignation, which, under the leadership of a Gladstone, would suffice to turn any Government out of office. The whole episode of Montenegro is no longer a question of policy, in regard to which a Government might well hesitate; it is simply a matter of ordinary decent behaviour, in regard to which the Government, we regret to say, has shown itself so amazingly indifferent that it has not taken the trouble to attempt any justification of action that runs entirely contrary to British instinct.

That Lord Allenby should visit the Sudan at this time is satisfactory for more reasons than one. In the first place, it indicates that in his opinion there is no great risk of any fresh outbreak of trouble in Egypt at present—and he should be in a position to form a sound opinion on that subject. Secondly, the visit will afford much satisfaction to the Sudan, which will welcome the gallant soldier for his own sake no less warmly than for the sake of his official position, and may not be sorry of an opportunity to make known to him its views on its future standing with regard to Egypt. In the third place, Lord Allenby has been able to meet, at Jeddah, King Hussein of the Hejaz, and to discuss with him and with the Emirs Ali and Abdullah, some of the problems in which both Great Britain and Arabia are interested. The visit is reported to have made a favourable impression in Hejaz circles. That was to be expected, for Lord Allenby enjoys an almost unrivalled prestige among the Arabs, who will, therefore, have appreciated very highly the compliment of the visit; while the more far-seeing among them will rejoice that their rulers have had such an opportunity to discuss certain difficult questions with one who has proved himself their good friend.

Zaghlul Pasha shows no inclination to moderate his attitude towards the Milner Mission and the question of "complete independence." On the contrary, he declares, in a telegram expressing his joy at the six Princes' address on the subject, that he "sees a future full of great promise for the realisation of the nation's efforts." Possibly if he were now in Cairo, the Pasha would feel less certain that the unwise view which he supports would prevail. The latest indications are that the more moderate party is growing daily in numbers and in moral strength. For instance, Adly Yeghen Pasha and Sarwat Pasha, interviewed on behalf of the *Wadi en Nil*, have expressed the opinion that, in view of Lord Milner's offer, it is possible to enter into preliminary negotiations with the Mission without abandoning Nationalist claims. That is a step in the right direction; and if leaders of moderate views will only take their courage in their hands and accept Lord Milner's invitation frankly, in the spirit in which it was given, a way out of the tangle will almost certainly be found, to the great benefit of Egypt and the Egyptians.

An unfortunate incident has taken place in Cairo, resulting in the death of an Italian, a musician. According to one report, while British troops were passing along the Mousky, an Egyptian youth insulted the Flag; the Italian interfered to protect him from the chastisement his conduct merited, was struck by a soldier, and died later. A second report has it that the Italian tried to break through a cordon as the troops were passing, and, being prevented from doing so, struck a soldier with a packaxe handle, whereupon another soldier struck him back, with fatal results. British Headquarters has expressed regrets for the man's death; and the Italian official attitude appears to have been strictly correct throughout the incident, the Consul-General having refused to encourage the Egyptians who wished to make the funeral an excuse for "demonstrating." The Italian colony, however, is said to have been incensed by the incident. It is to be hoped that no heed will be paid to this attitude, for it is obvious that the victim brought his fate upon himself; and it would seem possible that the British community had at least as good grounds for being indignant as the Italian. The Italians in Egypt, it must be remembered, have followed their own course—and it does not strike the observer as a very straight one—in regard to the Nationalist-cum-Zaghlul agitation; they ostentatiously held aloof from the Peace rejoicings; and it was Italian agitators who brought about the worst of the recent labour troubles. In any case, if individual Italians in Egypt choose to range themselves side by side with rioters and brawlers, they must be prepared to take the consequences.

Our Cairo Correspondent refers to the subject of a British school in Cairo, and it is pleasing to know that, thanks to the exertions of those who realized the importance of the subject, there is now at least a reasonable prospect of the newly established school becoming a permanent institution. That it was really needed can hardly be doubted, and that it will be useful in spreading British ideas and ideals among others than the young Britons for whom it is primarily intended is equally to be expected. We believe that the grant to be made will prove to be an excellent investment, and we hope that the Imperial Government may feel disposed shortly to make other grants in aid of similar institutions in other parts of the Near East. The English High School for Boys in Constantinople—and its sister institution for girls—for instance well merits support. As a matter of fact, however, so far from receiving support of late, it has actually been hampered by the British authorities in Constantinople. Acting with the very best intentions, a desire to spare the feelings of the Turks in every way, the British authorities requisitioned both these schools for military purposes, rather than take over Turkish buildings. The boys' school was, we understand, given back in August, 1919, and the residential building in December, 1919; but the girls' school is still occupied. This state of affairs, while sparing the Turk, is obviously not favourable to British interests, and the sooner it is changed the better.

The Emir Faisal left Paris on January 7 on his return home, but reports regarding the results of his negotiations with the French Government are contradictory. On the one hand, it is stated that nothing has yet been definitely settled; on the other, that complete harmony has been reached, the Emir having agreed to a French mandate for the whole of Syria, and France agreeing to the formation of an Arab state, to include Damascus, Homs, Hama and Aleppo, to be administered by the Emir with the aid of French advisers. The Emir is also reported "to have accepted financial and economic collaboration with France, to the exclusion of all other Powers." It is probable that if the latter report is not yet strictly correct, it will prove ere long to be a very intelligent anticipation of events.

Meanwhile the situation in Syria is not entirely satisfactory from the French point of view. Lebanese Catholics, Orthodox Druses, and Moslems appear to be uniting on the question of demanding freedom from foreign control; and, though reports are somewhat vague, it seems to be the fact that fighting has taken place at more than one point. On the Arab side such fighting has been carried on by irregulars—the "National Volunteers" and Bedouin—and the Arab

Digitized by Google

regular troops have taken no part in it. An incident, startling in itself, but fortunately not developing along such serious lines as it might have followed, was the kidnapping of General Gouraud's Chief-of-Staff. The train in which he was travelling from Beyrout to Damascus was stopped by National Volunteers, and he was made prisoner. It is announced in Paris, however, that the matter was speedily settled, and the officer set at liberty immediately. The only importance of such an incident as this lies in the indication it affords of the state of the country and the sentiments of the population.

A serious handicap continues to be laid on British relations with the Near East, and particularly on trade relations, by the absence of satisfactory arrangements for the transmission of letters and parcels. For communication with Greece it is still necessary to rely upon steamers, which are admittedly irregular, but boats leave Italy and France always once, sometimes twice or three times, a week, and it should be possible to arrange for the transport of letters from London to Athens within seven or eight days. For Belgrade and Bucharest daily trains leave Paris, and the journey takes from two to three days. But it is by no means exceptional for letters to be from ten to fifteen days *en route* from London to Greece, Serbia, and Roumania. The state of affairs in regard to Sofia and Constantinople is still worse. There is, however, regular connection between these two towns and Bucharest, and all that is needed is that arrangements should be made for British mail bags to take advantage of the facilities provided by the Bulgarian and Turkish railways.

The trouble is that the mail-carrying capacity of the daily trains is limited, and the weight allowed the British postal authorities—250 kilos—is only a small proportion of the average load that has to be despatched. As to the fate of the balance it will be well not inquire too closely, but a guess may be hazarded that it spends a longer time at sea than it does in a train. While this state of things continues in regard to the postal arrangements, it is almost useless for the Department of Overseas Trade and British industrial and other organisations to launch elaborate campaigns for the promotion of British trade interests in the Near East. It is evident that the British postal authorities are unable of themselves either to devise better methods for the transmission of postal matter to the Near East, or to persuade the different Governments who control the railway routes to accord more equitable treatment to Great Britain. Indeed, until the matter has been taken up by the Cabinet as a whole, there would seem to be little prospect of amelioration. The whole question, we believe, is under consideration in Paris; but unless the British Government bring home to the countries controlling the transport of mails that it cannot tolerate the existing allocation of postal weight, there is little hope of improvement. If congestion and the shortage of rolling stock are urged, then it is evident that other arrangements ought to be taken in hand without delay, such as the introduction of an aerial post.

Mr. Montagu is certainly unlucky in his attempts to secure an adequate representation of Indian opinion in the office over which he rules. On paper he has the reasonable number of three Indians on his Council, but two of them have found it necessary to visit their homes, and for the next few months he will be dependent solely on the latest recruit, Sir Sankaran Nair, whose knowledge is necessarily limited to a small section of the country. Worse than this, Lord Sinha, who has made his mark so quickly as Parliamentary Under-Secretary, is also an absentee, and rumour is already hinting that his term of office is likely to be brief. It is, of course, an advantage that the Secretary of State's counsellors should be in close touch with Indian opinion, but continuity, which counts for something even now, will count for much more when the reorganisation of the office is complete, and it would undoubtedly be more satisfactory if the eminent Indians appointed to Whitehall could manage to endure its rigours for a reasonable term of years.

THE WEEK AT HOME.

Cabinets and Cliques.

Mr. Lloyd George has gone to Paris, and several members of the Cabinet have followed him, happily combining public duties with private amusement. Officially, there will be no politics at home until Parliament meets next month, but unofficially the gladiators are exercising their muscles. Mr. Churchill having attacked Labour for inefficiency, Lord Birkenhead attacks the Coalition, of which one imagined he was "magna pars," as "invertebrate"; to which the answer is that its real trouble is that it has too many, rather than too few, joints in its backbone, and that, like those strange monsters of the entomologists, it has so many eyes that it does not always know which way to look, and often gets frightened at the sight of its own shadow.

Lord Birkenhead, who is still more familiar to the public as "F. E.," declares that the remedy is a National Party, which, after all, turns out to be very much the same thing as Mr. Churchill's Centre Party, or even Mr. Lloyd George's Coalition. But there is one difficulty in the way. Three years ago General Page Croft started a National Party. A good many people joined it, but at the election its candidates were unhorsed with amazing unanimity, and the party now consists of a leader, General Croft, and one follower, Sir Richard Cooper. But this brave pair, a sort of political Beatie and Babs, consider they have a copyright in their name, and no doubt the Law Courts would uphold their claim. So, if Lord Birkenhead insists on a National Party, he will have to fight under General Croft's banner, which is the very last thing the Lord Chancellor is likely to do.

Meanwhile, Lord Robert Cecil, who frequently acts the part of the candid friend, points out that it does not much matter what one calls oneself, so long as one has proper principles; and that a National Party whose only motive is to fight Labour will not be a National Party at all, but a class party. These home-truths are very inconvenient to statesmen in a hurry, but vastly amusing to the general public, which does not take the current controversies with the seriousness of Westminster.

Lord Haldane, who usually works underground, like the ghost in "Hamlet," has now come out with the public declaration that Labour ideals are up in the heights, while Liberal practice apparently is down in the plains. It is thought by the cynics, and not the cynics only, that this declaration is meant to express Lord Haldane's willingness to accept the Lord Chancellorship under a Labour Government when it comes. For some inscrutable reason, Labour is said to admire Lord Haldane—its best friends rather resent the libel—and to have picked him out for office on "the day." But there are others who say that this love for Haldane is because the

only other candidate for the Labour Lord Chancellorship is Lord Buckmaster, who is too acidulated and pessimistic altogether. The suggestion, however, that there are no other alternatives for legal offices under a Labour Cabinet is rather amusing to those who know the Bar and politics. Labour may not have many open followers or secret admirers at the Bar, but soldiers of fortune have been heard of before now, and they worship the rising sun at the Temple as much as at Westminster.

Strikes.

Labour difficulties have soon broken out again. A strike of insurance agents, a small (if a novel) thing in itself, is causing some interest because of its possible effect on the question of industrial assurance. Socialists appear to be watching it with an eye to nationalisation propaganda.

The ironmoulders' strike, which has dragged on many weeks, was settled last week after long negotiations between employers and the trade union, the Government intervening. But the men refused to accept the terms their own union had made, and officially, therefore, the strike drags on, to the great detriment of industry, this trade supplying many other trades with key materials. It is said, however, that in some places they have refused to stay out any longer, and that work is being resumed by slow degrees.

The discussion, rather than the actual threat, of another railway strike has been with us all the week, and the situation still remains obscure. The trouble briefly arises from the following facts: The Government, with Mr. Thomas, the railwaymen's leader, assenting, have tried to fix wages on a sliding scale in a ratio to prices, in order to break the vicious circle of alternate rises in prices and wages. It is the sound economic way, but economics have a distressing method of ignoring human prejudices, and one of our most inveterate prejudices is that wages are wages independent of any sliding scale, in other words, that "a quid is a quid," although it is demonstrably not even "half a quid" any longer. Mr. Thomas has recommended the railwaymen to accept the sliding scale agreement, but apparently a majority of the railwaymen refuse. Their attitude is that they want their wages secure, whatever happens: if prices go up they will ask for more, and get more; if prices go down they propose, like the rest of the world, to lie low and say nothing. But the prospect of prices falling, at least for the next five or ten years, seems so extremely remote that the whole discussion is somewhat academic.

Food Prices.

The official figures of the food prices current in 1919 have now been issued, and they furnish a study of some interest. In January last they were 130 per cent. higher than in July, 1914; by March decreases in the prices of meat, margarine, and eggs had brought the figure down to 120 per cent. In April reductions in tea and cheese led to a further fall, to 113; in May the usual summer reduction in milk prices brought the figure to 107, and in June it was a mere 104 per cent. of pre-war figures.

Perhaps that was too good to last. At any rate, the index finger rose again: in July to 109, in August to 117, in October to 122, November 131, and in December 134 per cent. above 1914. "The moving finger writes," but unluckily it goes on writing, and nearly always in the same direction. The experts warn us that the movement is likely to be continuously upward in 1920, and that any problematic reduction of prices, which is theoretically possible in 1921, will be more than swallowed up by increases of rent and rates. In that case, there would seem to be something to be said for taking refuge on a desert island.

But there are compensations in these topsy-turvy days. Three ladies who were left a small independence some years ago found that taxation at one end and high prices at the other rendered it impossible to live in decent comfort, and they were wise enough not to realise their capital at a heavy loss. Being clever with their needle, they began doing fancy work, and when they discovered that the drapers gave them a pound for an article priced (and sold for) five guineas in the shop-windows a day or two later, they decided to open their own shop. They began by themselves in 1916, by 1918 they employed two assistants, and they have just sold the business. They have doubled their original capital by doing so, and are now better off than in 1914.

Drapery Trusts.

The drapers, by the way, seem to be following the lead of the banks in amalgamating small into big, and big into colossal businesses. It is not long since Debenham's, already owners of Marshall and Snelgrove's, purchased Harvey Nichol's, and now Barker's, of Kensington, have bought Derry and Toms for something over half a million. Other purchases of a similar kind are rumoured to be pending, and at least two firms, Debenham's and Selfridge's, are understood to be contemplating enormous expansions. When big combines occur in other trades, the Labour Party and the Socialist usually suggest that the process makes the path of nationalisation easier, and there may be truth in that view, but the Fabian Society has not yet suggested nationalising the drapers. One pities the politician who tries to get the woman's vote with that plank in his platform.

Faith Healing and the Church.

The suggestion is being made that one of the subjects for discussion at the forthcoming Lambeth Conference of Anglican Bishops should be the reality of faith-healing. The suggestion, of course, comes from America, the home of Christian Science. It is, perhaps, not likely to be received with very much enthusiasm by the episcopal authorities on this side, who usually prefer "safe" subjects at these rather formal and stereotyped debates. But now that the Church Congress has discussed spiritualism, there is no particular reason why the Lambeth Conference should not pay some attention to another form of the influence of mind over matter.

Air Seasons.

The announcement is made that season tickets are now issued on the London-Paris air service. The price is £120, which franks the holder for twelve journeys to or fro. It is not only the announcement, but the manner of making it, that shows the advance of flight. It has been published as an item of general news in small type in the daily Press.

The Library World.

The high-priced illustrated book, so popular before the war, but practically suspended for the last five years, appears to be coming into its own again. Following Sir William Richmond's "Assisi," Mr. John Lane has published "The Last Crusade," Mr. Donald Maxwell's story of the Palestine campaign. It is illustrated by a hundred beautiful sketches in colour, monochrome, and line by the author, some of which, notably the frontispiece, "Jaffa," and "The Street Which is Called Straight," have rarely been surpassed as finished examples of delicate colour-printing. Another, the sketch of an aeroplane over Damascus, cannot but give rise to very curious reflections. It should be added that the letterpress which accompanies the drawings is of a higher standard than that of the usual picture-book—too often views "et praeterea nihil."

In very different vein is "The Skilled Labourer, 1760-1832," by J. L. and Barbara Hammond. The authors have already dealt with "The Town Labourer" and "The Village Labourer" in previous studies, and the present appears to complete their analysis of the foundation of the industrial age. These works represent a valuable and original contribution to industrial history, relying largely on hitherto unpublished evidence. The authors appear to be somewhat pessimistic in their picture, but it must be remembered that they deal with an England that has long since passed away. Our present industrial system is certainly full of flaws, but by comparison with a century ago it shows enormous progress.

Some of the innumerable devotees of music will enjoy Mr. H. J. Watts' "The Foundations of Music," now published by the Cambridge University Press. It is a sequel to his previous volume, "The Psychology of Sound," which was meant more especially for physiologists and psychologists, a work which has won general recognition as a contribution to a notoriously difficult and controversial subject.

THE NEAR AND MIDDLE EAST.

(From Our Own Correspondents.)

EGYPT.

CAIRO, December 28.

A Declaration by the Milner Mission.

For the past few days it has been definitely stated in the vernacular Press that the Milner Mission was on the point of issuing a declaration to the Egyptian nation; and, as might be expected, the most extravagant interpretations of its contents have been circulated, more especially in regard to its recognition of the political aspirations of the people. This declaration was published to-day, and it runs as follows:—

The British Mission has been struck by the existence of a widespread belief that the object of its coming is to deprive Egypt of rights which it has hitherto possessed. There is no foundation whatever for this belief. The Mission has been sent out by the British Government, with the approval of Parliament, to reconcile the aspirations of the Egyptian people with the special interests which Great Britain has in Egypt and with the maintenance of the legitimate rights of all foreign residents in the country.

We are convinced that with good will on both sides this object is attainable, and it is the sincere desire of the Mission to see the relations of Great Britain and Egypt established on a basis of friendly accord which will put an end to friction and will enable the Egyptian people to devote the whole of their energies to the development of their country under self-governing institutions.

In pursuance of this task the Mission desires to hear all views, whether of representative bodies or individuals who have the welfare of their country at heart. All opinions may be freely expressed. There is no wish on the part of the Mission to restrict the area of discussion, nor need any man fear to compromise his convictions by appearing before it. He will be no more compromised by expressing his opinions than the Mission will be compromised by hearing them. Without a perfectly frank discussion it is difficult to put an end to misunderstanding and arrive at agreement.

As can be seen, the versions current have proved to be unfounded, but, on the other hand, it must be conceded that the document goes a long way towards meeting the situation. It sweeps aside all assertions that the Mission has come to rob Egypt of any of her rights; it proclaims, what all of us, except, apparently, the Egyptians, realised, that its object is to reconcile the country's aspirations with the special interests of Great Britain and of the foreign colonies; it puts on record that it is imbued with the friendliest intentions towards the country, and that its sole desire is, on the basis of a friendly accord, to end the strained relations which have existed, and enable the Egyptian nation to devote its energies to the development of the country under self-governing institutions; and it concludes by an invitation to all and sundry to come and give it the benefit of their views, at the same time giving an undertaking that they will be free to discuss any question, and that their appearance before it will not compromise them in any way.

A more sincerely worded and conciliatory declaration could not be conceived. The Mission has been hard at work interviewing responsible Egyptians, some of whom have had the courage to visit it openly, while others have preferred to discuss matters unofficially and as discreetly as possible. Now, having ascertained the general views held by the people, it has considered that the time has come for an appeal to be made, not because without their collaboration it is unable to fulfil its task, but because it wishes, if possible, to have that collaboration, and desires to give the Egyptians a chance of knowing that this is its wish, and that they can record their views without fear of the consequences.

Its Reception by the Zaghlulites.

Immediately the notification was published, the Cairo Committee of the Zaghlul Delegation summoned a meeting and issued a statement to the effect that it would have liked Lord Milner's declaration to have been clear and more explicit, and to have contained a recognition of Egypt's complete independence, but unfortunately it has been confined to an extension of the area of discussion which had previously been restricted within the circle of the Protectorate, and while this shows that the English are convinced that the Egyptians reject the Protectorate completely, it does not do away with the apprehensions of the Egyptians in regard to the British political declarations made prior to the arrival of the Mission, and in no circumstances will it move the nation to change its attitude. At the same time, the old Nationalist party met and declared that it would accept nothing less than complete independence and the British evacuation of Egypt, whilst the Press, undoubtedly responding to a *mot d'ordre*, has begun publishing hostile articles.

The time has been too short to be able to ascertain the effect of the Mission's declaration or of the Delegation's decision. Nevertheless, I have been able to establish that the terms are by no means distasteful to the Egyptians, even to some of the Extremist element, many of whom realise that this is probably the last opportunity for them to express their views to the Mission, and that if the latter is "boycotted," this in itself will not bring about the removal of the British Protectorate and of the British troops. There is no doubt that, left alone, they would accept the invitation offered them, and it now remains to be seen whether the Zaghlul clique is still able to exercise its influence over the rank and file whom the declaration appears to have divided—at any rate, at the present moment.

The next week or so may prove very critical for the Egyptians, who are, so to speak, at the cross-roads. They are being afforded a last chance to collaborate in the task which the Mission has before it, and if they do not respond to the invitation they will never with justice be able to plead before the world that they were not consulted in the drafting of the terms of the new constitution which is to be given them, for the Milner Mission has certainly spared no efforts to obtain their collaboration therein.

The Question of an English School.

The High Commissioner on Friday last presided over a meeting called to consider the question of the education of the children of the British community, a question which has been referred to at length on several previous

occasions in this correspondence. In 1916, owing to the difficulties brought about by the war, it was decided to open a school at which children who were prevented from going to England as usual for their education could, at any rate, start their studies until the difficulties referred to had passed away. At the same time, it was hoped that this school would come to fill the glaring omission made by not having a national school in Egypt, where all other foreign communities have for many years had their own schools, at which not only their own children, but also children from the other communities—including the British—and in many cases from the Egyptian population, have been educated.

Unfortunately, finances did not prosper, and after about two years' existence the school had to be closed, with a loss of about £800. It was felt, however, that the time had come when the British Government should take an active and practical interest in the question, and should follow the example of foreign Governments, all of whom handsomely subsidise their national schools abroad. Steps were taken to approach the Treasury. The High Commissioner wrote an admirable despatch on the subject, and Mr. A. T. Loyd, formerly of the Ministry of Finance, and who was then working at the Foreign Office, undertook to plead the case with the Treasury. His efforts met with success, and at the meeting he was able to announce that the Treasury had agreed to grant the sum of £600 towards a fund for buildings and give an annual subsidy of £1,400 a year for the first two years. At the same time, it was pointed out that the only hope of getting this grant increased or made permanent is for the community to prove to the Treasury that the object is worthy of its interest, not only by putting the school on a sound foundation, but also by supporting it liberally out of its own pocket.

It is a great satisfaction that the British Government should have decided at last to follow the example of European countries—and the public-spirited gentlemen who undertook the task of persuading the Treasury are to be congratulated on their success. It is now up to the British community first to see that this encouragement is justified, by subscribing handsomely towards an object which one and all agree is a most necessary part of the organisation of the British community in Egypt, and, secondly, to ensure, by the election of a working committee, that the school is run on proper lines and becomes a credit to the community.

Government Appointments.

Various official appointments have been made during the past few days. Brigadier-General Sir Gilbert Clayton and Mr. Sheldon Amos have been confirmed in the posts of Adviser to the Interior and to the Ministry of Justice respectively, in which they have been acting, the former since September and the latter for the past three years. Mr. F. T. Dallin has been appointed Assistant Under-Secretary of State for Finance in succession to Mr. R. S. Patterson. The latter's appointment as Adviser to the Ministry of Education was gazetted about six weeks ago, and he has been succeeded as Director-General of the Department of Direct Taxes, by Mr. R. Vaughan Wild, of the Ministry of the Interior, who, it may be mentioned, did admirable work at Tantah during the troubles last March; while Judge Percival has been appointed Vice-President of the Native Court of Appeal. The post of Sudan Agent, left vacant by Sir Gilbert Clayton's appointment to the Ministry of the Interior, has been filled by the promotion of Mr. R. E. More from the Governorship of Khartoum. In the latter connection I feel it is only right to point out that although the Sudan Agency has, technically speaking, become vacant only since General Clayton's transfer to the Interior, the work during the past three and a-half years has, to a very large extent, fallen on his assistants, and mainly on the shoulders of Mr. A. P. Bolland. In the latter Mr. More should find an invaluable assistant in the work which, since the war, and owing to the closer connection between Egypt and the Sudan, has increased beyond all recognition, and has taxed the energies of the permanent staff to their utmost.

ROUMANIA.

BUCHAREST, January 5.

The Chamber Adjourned.

When the Chamber of Deputies adjourned on Thursday for a month a hope sprang up that we had seen the last of the series of political crises which have kept Roumania in a ferment for the past few months and prevented her settling down to a calm survey of her post-war situation. The Government had succeeded in passing a certain number of urgent measures, one of the last of which was a bill empowering the Minister of Finance to raise an internal and an external loan. No limit was set to the amount of these loans, nor were any details vouchsafed as to the price of issue, rate of interest or guarantees. The Minister of Finance demanded, and was given, an absolutely free hand in the matter, although he assured the Chamber that no foreign loan would be contracted upon terms which could be interpreted as in any way humiliating to the country. He also stated that no attempt would be made to arrange for a loan abroad until the Government had succeeded in drawing up a budget showing an excess of income over expenditure A hint was given that the new taxation necessary would be levied on the propertied classes in the form of a capital levy and of a graduated income-tax.

The mention of a foreign loan seems to have raised the hopes of all the political parties of the Old Kingdom, who are practically unrepresented in the new Cabinet, which consists almost entirely of Transylvanians, Bukovinians, and Bessarabians. It was immediately bruited about that the Government would be obliged to co-opt one or more of the leading statesmen from the original Kingdom of Roumania, so as to convince the lending Power of the stability of the Cabinet demanding the loan. Rumours flew about concerning a possible *rapprochement* between the old Liberal Party and General Averescu. M. Take Jonescu is emulating Brer Rabbit, but his followers point to him as the one Roumanian statesman on cordial terms with the Entente. This is an exaggeration, of course, but it is certain that M. Jonescu is known to many British and French statesmen, while the members of the present Cabinet are political newcomers.

The British Purchase of Wheat.

In the meantime one of the first steps towards the consolidation of Roumanian national finance was taken just before the adjournment, when a Bill was introduced authorising the Government to take over the assets and liabilities of the Bureau Britannique. This latter institution was created to handle the ten million pound wheat purchase which the British Government made here in 1916, during the period of Roumanian neutrality. Of the total amount contracted for a little over half had been delivered into the hands of British agents here by August, 1916, when Roumania entered the war. Of this, some eighteen thousand wagons were subsequently turned over to the Roumanian War Office, which agreed to replace the wheat within six months of the signing of peace. When the time came it was discovered that it would be impossible to export this large quantity of wheat without jeopardising the wheat supply of the country. By the present arrangement the Roumanian Government will take over liability for the total purchases of the British Bureau, less only that amount of

CROWE & STEVENS,

Steamship Agents and . . .
Commercial Representatives,

Digitized by Google

wheat destroyed by the agents of the Bureau, in order to prevent its falling into the hands of the Germans.

Payment will be in sterling bonds bearing interest at 5 per cent. and redeemable at par on April 1, 1922; the rate of exchange accepted by both Governments is 26.22 to the £, this being the rate at which the wheat was purchased. In case the exchange prevailing on the date of redemption should be over this amount, the Roumanian Government will reserve the privilege of extending the term.

The Royal Vacation.

The Royal Family have gone to Bistritza, in Transylvania, for the Christmas vacation.

The Princess Elizabeth has been no more fortunate than other travellers by the Simplon Express, for she lost all her baggage on her return from Paris last week.

The Y.W.C.A. in Roumania.

On January 2, at 11 a.m., under the combined auspices of the American and British Y.W.C.A., a *foyer* was opened for Roumanian girls at Strada Dr. Marcovici, 7. H.M. the Queen, accompanied by Princess Elizabeth, was present at the opening ceremony, as was also M. Iorga, President of the Chamber of Deputies, and the rooms were crowded with visitors. After the usual short service of benediction, Miss Hodgkin, the local secretary, gave a brief address, in which, after thanking the Queen very heartily for the warm interest she had shown and the kind support she had lent to the scheme in its initial stages, she explained that the purpose of the *foyer* was to afford a meeting place for free intercourse to girls of secondary education and of all Christian denominations. Classes at nominal fees will also be held, and a number of Roumanian ladies have already offered their services in various ways. It is hoped that branches will soon be opened in Transylvania and other parts.

YUGOSLAVIA.

BELGRADE, January 5.

Christmas Festivities.

The small British colony in Belgrade spent a pleasant Christmas in good seasonable weather, with the country covered with snow, though the hard frost had broken a day previously. There was a bright and well-attended dance at the Scottish Women's Hospital, and a few days later there was another very cheerful function at the Serbian Relief Fund, in the old shooting-box built by Milosh, first Prince of Serbia, where splendid work is being done teaching broken men trades, setting them up in life again, and, above all, giving them renewed self-confidence.

The Italians at Fiume.

The Italians are still abusing their power in the districts which they continue to occupy by force. A prominent Slav lawyer, Dr. Krvaritch, was recently under arrest at Fiume, on the grounds of "high treason" and spying. While he was exercising one morning recently one of d'Annunzio's precious *arditi* was playing with his revolver, when it went off, and the bullet passed through the brain of Krvaritch. No Slav will ever believe that this was an accident. A less tragic incident occurred at Primosten, near Shebenik, where the Italian military authorities attempted to carry out a requisition of oil. The infuriated population turned out with axes and clubs, and sent the *carabinieri* flying downhill into Shebenik.

On the Montenegrin side we are now hearing less of Italian activities, but on the Albanian frontier they have been trying the old game of stirring up the ever-restless frontier tribes to an invasion of Serbian territory; the Arnaouts were led by Italian officers and reinforced by Italian gendarmes. By a surprise attack in superior numbers, the Albanians succeeded in cutting off a detachment of about a score of Serbian frontier guards with an officer, and are reported to have taken them off to the Klementi country. The Serbs had three killed, and a few wounded. The enemy's casualties are unknown. Order has now been restored on the frontier, and the Serbian authorities have lodged an energetic protest with the Italian command at Skadar, calling for the immediate release of the captured men.

Honours for Serbians.

Intense gratification is felt that Bishop Nikola Velimirovitch should have recently had the honour of being received by King George, and at the unusual honour shown to this talented Serbian prelate, in being permitted to preach at St. Paul's at the Thanksgiving Service for the liberation of Serbia, recently held. This is the only occasion, we believe, on which a service has been held there on behalf of a foreign people and that a foreign divine has been allowed to preach. Serbs, if not a highly religious people, are extremely sensitive, and have very deep feelings, and well know how to appreciate this signal token of friendship on the part of their English Allies and friends. A long and detailed account of the service has appeared in the *Politika*, from the gifted pen of that fine old historian, M. Chedo Miyatovitch.

France, too, has been honouring Serbs. On December 30 the French Society of Commercial Geography in Paris granted a medal to Dr. Ivan Tsviyivh, the eminent ethnographer, Rector of the University of Belgrade, as representative of "the people that has from the earliest days arisen in defence of science and the rights of humanity." A medal was also granted to M. Grgur Yakshitch, Serbian Consul at the Piræus, at present chief of the Press Bureau of the Serbian Delegation at the Peace Conference.

Kara George's Bell.

A little more than a hundred years ago, when Kara George liberated the Shumadia and Northern Serbia from the Turks, that astonishing peasant-genius made a present of a bell to the town of Shabats, with an inscription on it recording the gift. It was fated that the liberation should be but a short one, and a few years later the Turks returned across the Drina, before the final emancipation, and took away the bell as a souvenir to Serajevo. The Serbs in Serajevo have recently found the old bell, lying put away and forgotten all these years, and have returned it to the citizens of Shabats. Unfortunately, the fine old church in Shabats, like most of that long-suffering town, has been battered to pieces during the three times that the enemy have invaded the devoted province; and the skeleton of a tower cannot carry the bell; so a temporary tower has been erected, and on January 7, which is the Orthodox Christmas, the old bell will ring out in joyful peals its symbolic message of the final liberation of the Serbian people from its two secular enemies, the Turks and the Hapsburgs.

Mir, a Sofia newspaper, says that the repeated demonstrations organised by the Socialists against the Bulgarian Government are aimed at bringing about a change in the present *régime*.

ASSYRIAN THANKS TO BRITISH

We publish below a document full of human interest, and one that shows in a charming manner a feeling of gratitude of a somewhat rare order. It is in effect a manifesto by the Nestorians, from the mountain region of Hakkiari, now in the refugee camp established by the British at Bakubah (or Baqubah). These Nestorians number, we believe, some 17,000, and there are about 17,000 more from Urumia. The total number of refugees in the camp, including Armenians, is 50,000. An article upon the Nestorians and of the part they have played in the war was contributed to THE NEAR EAST a few weeks ago by the Rev. W. A. Wigram.* Several schemes have been suggested for repatriating the refugees, but it has not yet been possible to carry them out, owing to the disturbed state of the mountain regions.

The English of the document is the Nestorians' own, and it could not be changed without injuring the touching simplicity of their thanks.

THANKSGIVING.

Our brother men, sisters, wives and the children of the nation.

It is just one year now that we have received the beneficiences and favours in Baqubah, through the kindness of the most excellent British Government. Therefore, since we cannot make repayment by money, let us raise our voice and proclaim our gratitude for this goodness as much as, letter by letter, we can possibly remember.

Firstly.—Do you remember the time of our arrival, sick and exhausted? We were accommodated in large white magnificent tents, arranged by generous officers, and how many were put into each tent. This is the wonder we saw. How these sections, in each from fifty to sixty tents, were arranged, the camp being fashioned like European towns, their suburbs the sections; and how long it took us to learn their names and situation.

Do you remember how we were instructed not to drink water from the canal, but only from that which was brought in pipes; how we were murmuring, saying "We cannot drink this, for it has the taste of medicine"; and how these pipes had been put under the earth of the desert, ready when we arrived. You saw how this work reached completion in every section. Again, when we arrived here the latrines were ready and the workers thereof received good payment, under the care of a kind British soldier, who was always burning the refuse, lest bad odours should affect us. How all men were ordered to go to one place only. You saw all this work done perfectly in every section. Bathing places were arranged by the canal, and all men once a week were ordered to take soap from the stores and go to wash themselves, while hot water was prepared, under the care of two British soldiers—all this in order to keep us clean.

You remember that others were put to sweep the section, to remove all rubbish, empty tins, and all poisonous and dirty matter, and to cast it into a pit dug in each section specially for this. This digging of pits was a continual work, and the constant cry was heard "Come on, Jaldi Chair" ("Come on quickly to the pit") to the workmen of the section. The headman of each tent was made responsible for the cleanliness of his tent, both inside and out, for which duty he received pay.

The officer in charge of a section nearly every day visited each tent in the section to see if it was clean and in order. Often he inspected the sanitary condition of the latrines, the trenches (drainage), the open spaces round the section, cook-houses, etc.

Every morning a soldier visited each tent asking, "Is there any sick?" and should anyone sick be found, he was sent to the hospital in a stretcher; after which a Red Cross motor-car visited each section to collect the sick.

Orders were issued that washing water, when finished with, should be poured in a special pit. Should any trace of disease ("contagious") be found in a section, the person was sent to a disinfecting bath, and if it occurred in a tent then all the occupants and their belongings were disinfected. If a man happened to die in a tent, the headman was imprisoned and the tent's rations were reduced for a long time.

The honourable majors in each area used to visit the section, inspecting the sanitary conditions. General Austin and Colonel Cunliffe-Owen often used to walk through our camp, seeing to the order and cleanliness.

The visit of the doctors to the sections was a continual one, in order to discover any germs of disease.

When the weather was wet great care was taken to open and close the tents. "Makhi li qunjeeta" (put it to the corner) was a common expression on every tongue at seven o'clock in the morning, and those whose tent sides were not rolled back to the corner their ration ticket was taken away. Always the officer knew from where the wind blew, and that side towards the wind was closed. The same was done in closing the tents.

Sweeping out the flies in the morning, when they were benumbed by the cold, was an order. The flies were gathered in a rug and thrown into the incinerator.

The first step before entering a section was that of "segregation," as you know.

In all these ways, and more, that the British did their object was to protect us from disease and by these means we were kept clean, and as a result we are living now.

Secondly.—Two large hospitals for curing our sick people were arranged—one for males, the other for females. In cleanliness and good order they were set up. Rail couches were provided for every sick man or woman, furnished with clean, white sheets and bedding. The clothes of the sick were always changed, those people of the same disease being located in the same line or lines of tents. Thus the patients were transferred from ward to ward, from place to place, until they were cured, when they returned to their section. Food also was provided to suit the kind of disease, and according to the strength or weakness of the person. Many times a day medicines of different tastes, sour or sweet were given to the patients. They were looked after under the gentle care of Mrs. George and the major of the General Hospital. We thank the Indian doctors and employees for their love and sympathy towards our patients. They have astonished the Assyrian mind. Besides these two general hospitals, they arranged tents for dispensaries —one for each two or three sections, to distribute medicines in the morning and afternoon for slight illnesses. Motor-cars in the morning and afternoon used to come and collect the sick, should there be any, and take them to the general hospitals. These dispensaries every day were visited by the chief doctor.

Instructions were issued that should a woman be in childbirth she should report at once to the dispensary, in order to be taken to the hospital, where the baby would be taken care of. On returning to the section she took a note to the effect that the baby should be provided with milk and a feeding bottle, etc.

Thirdly.—*Water.*—This was another great thing by which we remained healthy. Water was brought from the river, twenty minutes away, through large pipes, and to the sections through smaller ones. The water was cleansed by being disinfected with medicines at its source (the engine), where it was drawn from the Diyalah river. Two large tanks were placed in each section, and they were filled with water from the pipes which ran up to the top of the tanks. A brick house was built round them in order to keep the water cold during the hot weather of the desert of Baghdad. To each section chatties were also given to keep water clean and cold. Policemen were appointed to see that the supply of water should be in order. The more we drank of this water, so much more were we healthy.

Fourthly.—*Rations.*—While we were on our way we did not think it would be possible to supply us with sufficient bread; but when we arrived here they gave us in sufficient quantity flour, salt, rice, beans, peas, *ghee*, oil, tins of bully beef (often fresh meat) and vegetables. Almost all these were issued daily. A British soldier and a policeman took round to the tents milk for the babies, coffee and tea for the people.

Fifthly.—*Wood and Cookhouses.*—The wood which we burned in Baqubah came from India, and was issued to us daily. Cookhouses and ovens in sufficient quantity were built in each section.

Sixthly.—Soon after our arrival at Baqubah the British provided us with material for clothes for every person, together with cotton, needles and buttons. Everyone was given a blanket. At the end of May a shawl was given to us, which we called "mandeela," to wrap round our heads. Everybody received from four to eleven yards, and we were instructed to wear it on the head as a protection against the sun.

Seventhly.—Two cookhouses, long buildings running from east to west, were built in each section. Between the two a space was left in which was made a water soakage pit. There was enough open ground also for sufficient ovens to be built for the baking of bread for all the section.

Eighthly.—Cooking and frying pots were given to each section. They were called "kattelook."

Ninthly.—Trenches were dug before every line of tents (for drainage), and small canals flowing into a central one and again into a larger one at the end of the section.

Tenthly.—*Orphanage.*—This was a great act of charity. A section was arranged for the orphans of the nation, and all who were without protection, males and females, were gathered together and put in charge of a British superintendent and an Assyrian supervisor, with women as mothers over the children. Teachers were appointed for their education, and they were provided with clothes and rations, etc.

Eleventhly.—Schools were opened and almost all the children were accommodated. A part of these schools were paid for by the American Mission.

Twelfthly.—Recruiting and training of the two battalions of the Assyrians. This was the best and kindest act which the British did for us. They told us that this contingent would be trained and prepared for use, both at the present time and for the future of the nation, until the latter should be settled in its own places. The first battalion has now been sent on with the British Army to punish the treacherous Kurds, our old enemy. The second battalion is still remaining to guard us here.

When we turn our memory back we remember that from Hamadan to Baqubah stages were appointed for the daily parties or batches. We received rations for ourselves and for our animals too, and we were safeguarded under military escorts from Sain-Kala to here.

Partly from our own knowledge, and partly from the tales of our fathers, we all know that we lived in Kurdistan under the protection of the British Government since seventy-five years ago, on account of their influence in the Turkish Empire. It was they who caused Bedr Khan Beg and Nur Allah Beg to be punished by being exiled to Crete, because they destroyed a part of our Ashirate. Since that time to the beginning of the general war the instructions of the late Queen Victoria never ceased to be carried out.

The Government from which we have received so much good, and still are, how shall we repay it, O! Assyrian Nation? Reply: We have nothing to repay it with but thanksgiving and complete obedience.

Let us pray God to increase it, and make it more victorious. Amen.

QUASHA YOKHANNAN ESHU.
Secretary, National Assyrian Committee.

IN CONSTANTINOPLE TO-DAY.

An Englishman formerly resident in Constantinople, who has lately returned from a short visit to that city, sends us the following description of conditions reigning there to-day:—

The city is filthier than it was forty years ago; the roads are in a sad state and badly need repairs, not having been touched for more than five years. It is much over-populated. Besides the Allied troops, officers, etc., there are many Russians, Roumanians, Greeks, Armenians, and others, who have left the provinces and sought refuge in the capital; and many Europeans, and Jews from Salonika, Egypt, and Palestine are flocking to the Eldorado that is to be—after the signing of Peace and the definite settlement of the status of the city. Meanwhile chaos exists, there being no recognised authority or governing body; everybody does practically as he likes, and in cases of trouble or difficulty one does not know to whom to appeal. This is especially the case of anyone who is not a subject of one or other of the Allies; but even in the case of an Allied subject one is never sure of obtaining redress through one's own authorities. This is due to jealousy and the intrigue that is going on, particularly, I regret to say, on the part of some of our so-called friends against the British. At the same time it is a standing joke with some of our own people that "if you want to get anything done you must apply to your Patriarch"—implying, of course, that Greeks, Armenians, and Roman Catholics can obtain redress more easily than the average British subject, owing to the petitions presented on behalf of the "persecuted" Greeks, Armenians, and so on.

The cost of living is exorbitant, almost incredible. At the same time, while English people are rationed for sugar, coal, etc., in Constantinople there is no rationing whatever, and one can obtain anything—if only they pay the price. (I was told this was the case also during the war.) All shops are now well stocked; there are no end of pastry-cooks, confectioners, etc., where any amount of sweetstuffs can be procured. In pre-war days, when we wanted cream we had to order it forty-eight hours beforehand, whereas to-day cream can be had in quantities at 300 piastres the oke. Naturally, milk is scarce, and what can be had very expensive—1s. 6d. to 2s. the quart. Large quantities of condensed milk are being consumed.

There is a great deal of amusement and "jollification" going on, consequently plenty of "refreshments" of all kinds are being consumed, and as this goes on till the early hours of the morning, a great deal of electricity is wasted.

Shopkeepers are profiteering to their hearts' content. As a result, all labour has to be paid for at figures which one never dreamed of in the years gone by.

Traffic is very much congested. You see Turkish police, British Tommies (M.P.), French *poilus*, and Italian *carabinieri* regulating (or attempting to regulate) the traffic, notwithstanding which there are daily cases of people being run over by motor cars or lorries, all military, and among which the principal offenders, I am very sorry to say, are the French. A local newspaper commenting on one occasion said, "The Briton imagines he is in London, and by holding up his hand he can stop or regulate traffic as he likes; the Frenchman imagines he can do so by polite parlance and arguments; and the Italian thinks that he can do so '*par élégance*,'" referring to the dress of the Italian police, with his Napoleonic hat, white gloves, and cape.

With all this there is any amount of buying and selling, and everyone appears to be making money; all talk in thousands, no one in tens and hundreds. The morals, customs, and consciences of the people have very much altered, the only things which remain unchanged are the Bosphorus and the blue sky. There is, of course, a great shortage of houses and accommodation for all purposes, due to the devastating fires which occurred during the last four or five years—I understand the number of buildings destroyed exceeded 20,000. Besides this, there has been an enormous increase of the population.

SCHOOL OF ORIENTAL STUDIES.
London Institution, Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.

For particulars, apply to Sir E. DENISON ROSS, Director.

MONTENEGRO AND THE ENTENTE.

The following is the tenour of an appeal addressed in the first week of January by the Royal Montenegrin Government to the Governments of Great Britain and France:—

The loan which the Montenegrin Government has regularly received from Great Britain since her exile has been cut off since last July, and France stopped it in October of the same year. Having confidence in the solemn engagements of the Great Powers in view of Montenegro's rights, the Government of Montenegro, since then, has been compiled, having to keep up her State administration, students, and refugees, to make private loans; the total sum of these loans exceeds 600,000 francs. The Montenegrin Government, however, finds even this way impossible for carrying on with the State administration. Accordingly all the Government employees, from the Ministers downwards, students, and many refugees with their families, are absolutely left on the street. Many of them to-day have nothing to eat.

I had the honour, in my letter of November 14, 1919, of attracting the attention of the British Government, as well as the Governments of the other Great Powers, to the fact that the subvention given to the Montenegrin Government was their moral and just duty, until the question of Montenegro is decided, because the same Government had given Montenegrin territory to an occupant, and had impeded the return of his Majesty the King and the Government of Montenegro to their country, thus hindering the restoration of Montenegro, in spite of all their earlier and solemn engagements to the contrary.

Unfortunately, as on many other occasions, the Governments of the Great Powers have passed over these claims in silence. The awful situation of many of my countrymen and their families, who in the middle of winter are plunged into the greatest misery, compels the Government of Montenegro to ask, not for her rights, because she would ask in vain, but for charity from the Government of Great Britain and from the Governments of other Great Powers.

In the name of these humane reasons, I have the honour to beg his Majesty's Government, alone or in accordance with other Governments of the Great Powers, to grant to the Government of Montenegro the sum of 200,000 francs out of the same credit from which the former loans have come. This sum is necessary to relieve the employees and refugees until they are able to find work in factories and other places, and for the payment of loans, which the Government has made to some creditors who are French citizens.

I am sure that the British Government will agree with me in this, that the dignity of Great Britain and of her Great Allies will not allow the representatives and employees of Montenegro to die of hunger and cold on the streets of Paris, and that Great Britain will not forget that these representatives and employees were received in France in 1916 as guests of the Allies, and that Montenegro voluntarily threw in her fate with the Allies in 1914, as his Excellency the President of the French Republic recognised in his celebrated speech last year, and also that Montenegro thus voluntarily sacrificed almost a half of her army and a third of her population.

As the necessity is urgent, I am taking the liberty to beg the British Government in the name of the Montenegrin Government to condescend to give their answer as soon as possible, so that, in the case of a negative answer, I could make an appeal to some neutral and philanthropic institutions.

At the same time, I beg the British Government not to consider this event, however painful it may be, as the end of the Montenegrin Government and by that the settling of the Montenegrin question. The injustice from which the Montenegrins suffer are so great and her rights are so sacred and indisputable that the members of the Government as well as the other Montenegrins who continue to defend their rights are ready to die, if it is necessary, of hunger rather than capitulate and help in that way the apparent justification before humanity and history of one of the greatest international crimes that history has ever known, a crime which has been committed for over a year against their unfortunate but, in spite of all, glorious country so deserving at the hands of Christian moral and civilisation.

Y. S. PLAMENATZ.

THE RE-BIRTH OF EUROPE.

At King's College, Strand, on January 9, the Right Rev. Dr. Nicholai Velimirovitch, Bishop of Zica, delivered a very eloquent lecture upon "The Spiritual Re-birth of Europe." His main thesis was that religion alone could found and maintain a civilisation. In dealing with the religions other than Christianity he said that they all contained part of the Truth, but that only in Christianity were all the particles of Truth fused into a whole. Turning to spiritual life in Europe (from which he excluded Great Britain and Russia), he declared it to have suffered a great decline. This he attributed largely to the French thinkers of the eighteenth century, and to the worship of Politics, Science, and Economics. These were the latest gods of men; and Religion, which once was the centre of the European's life, had now retreated to a minor position on its circumference. Hence the outlook for Europe was very black indeed—not for Christianity, for that easily could go to Asia—but the menace to European civilisation was very great. It could, in fact, only be averted through constant prayer and Christian example. His lecture showed Bishop Nicholai to be an immense spiritual power and a thinker of the first rank. He spoke in English to an audience largely composed of Anglicans, and his notable words made a deep impression.

THE MOSLEMS OF YUGOSLAVIA

(From Our Own Correspondent.)

Belgrade, December 29.

The kingdom of the Serbs, Croats, and Slovenes is also a Mohammedan State of considerable importance. The land-owning class of Bosnia and Herzegovina are the Mohammedan *begs* who are true Serbs in blood, descendants of the old feudal aristocracy, who went over bodily to Islam at the time of the Turkish conquest in order to preserve their privileges. These are often patriotic Serbs, and they all speak good Serbian. During the war Austria handed over a large number of these to the Turks, and quite a number of them were taken prisoners of war by our army in Palestine; for their heart was not in the fighting. But in Macedonia and the district known as Stara Serbia—that is, Rashka, the district of Novibazar—the Mohammedans are mostly real Turks —that is, Turkish in blood, and not only in the usual sense that the name is used in the Balkans, where "Turk" is generally synonymous with "Mohammedan."

The Moslems of both districts saw the advisability of combining for political purposes, and set to work to organise themselves. It was at first suggested that they should all combine on purely religious grounds, and form a distinct and united Mohammedan party; but the more advanced among them pointed out that the day has gone by when a political party can be founded on religion. Zuhdi Bey said that between the Moslems of Macedonia and Stara Serbia on the one hand, and those of Bosnia and Herzegovina on the other, there was nothing in common but religion; and Hidayet Effendi caustically remarked that the *begs* of Bosnia were their brothers, it is true, but their purses were not sisters, and that the Bosniaks would simply make use of their Macedonian kinsmen to save their *chiftiks*. So the suggestion of a common party was rejected, and after a somewhat heated discussion at a meeting recently held at Skoplie ten points were adopted as the planks of their platform. These are as follows:—(1) Religious autonomy and the union of all the Khalifate. (2) *Sheriat* courts for marriages, family matters, and wills. (3) Preservation of the *vakufs* and *merifs*. (4) Free use and official use of the respective mother-tongue, where non-Serb, in the schools. (5) Abolition of the Christian form of prayer in schools which Mohammedan children attend. (6) Acceptance and confirmation of a definite number of Moslem representatives in the Constituent Assembly proportionate to the strength of the total Mohammedan population of the kingdom, and their recognition as an integral part of that body. (7) Exemption of the *vakufs* from allotment and division for compensation. (8) Exemption from agrarian reform of the *begliks*, "with special regard to the general solution of the agrarian problem." (9) Compensation to *begs* for revenues unpaid during recent disorganisation by the tenants. (10) The restoration of the land to the position in 1912; that is to say, non-recognition of tenants settled on the land since 1912, either by Serbian or enemy administration, without the consent of the original owner. Finally, it was resolved not to form a separate party, but to support whatever existing political party would promise to make these points part of its programme.

The Serbian Press regards these demands as decidedly bold, especially as prior to 1912 many of these Turks distinguished themselves by their violent opposition and hostility to everything Serb. It will be interesting to see the results. Doubt is expressed that any party will accept them on these terms, though it is said that the Radicals once made them even finer promises, which, however, Midhat Bey accepted with a grain of salt, and consequently set to work to organise his co-religionists.

HELP FOR THE MOSLEMS IN SMYRNA.

The British Red Crescent Society has received from an eye-witness an account of the distress and suffering among the Moslem inhabitants of the district of Smyrna (Aidin), in Asia Minor. Villages and farms have been wiped out, houses have been deliberately burnt down, and no fewer than 100,000 people are homeless. The Rev. Mr. Frew, who administered the British Red Crescent help in Thrace, Macedonia, and Constantinople in the Balkan War, has written offering to go to Aidin, and the society has sent him, through the Foreign Office, £800 for relief purposes. This will mitigate barely a fraction of the distress, and the society appeals for further help. Contributions may be sent direct to the society's bankers, Messrs. Coutts and Co., 440, Strand, W.C.2.

According to intelligence received from Montenegro, Commandant Lassovitch, commanding the Montenegrin troops, with a detachment composed of the battalions of Koutche-Zeta, has attacked the Serbian positions at Podgoritza-Pousi, forcing the main body of Serbian troops to retire into Albania. The surrender of a Serbian battalion is reported.

A BRIGAND OF TO-DAY.

(From Our Belgrade Correspondent.)

A real brigand—one of the old-fashioned, brutal sort—came by his death, not very long ago, in a very appropriate way. The Haiduk Velichko had been engaged upon this profession for some time before the war, had been captured by the police, but managed to escape. The Austro-Hungarian authorities did not worry their heads much about him; they caught him once, but he got away again. He was daring, resourceful, and relentless, and always worked alone. One day, during the enemy occupation, he called at the village of Yablanitsa, near Valjevo, and paid a visit to the wife of a prosperous merchant named Kosta Alexitch, who was in Switzerland, and extorted a considerable sum of money from her. The owner of the adjoining inn implored a couple of Hungarian gendarmes who were there to lend him a rifle so that he could go and shoot the villain, but they refused, and declined to go themselves, doubtless out of respect for the hand grenades which he carried on him. Some months later Kosta returned from exile, when Velichko paid another visit; he called Kosta out, and, as the latter had known him for many years, he quietly came out and fell into the trap; the brigand caught and bound him and his son, too, and held them as hostages by which to extort more money. He made the distracted wife go round on a house-to-house call to raise money to redeem her husband and boy, and even then, being dissatisfied with the result, he led off all three to the forest and told them he was going to kill them. In a weak moment he gave them a minute's respite to say good-bye to each other. Kosta embraced his boy and his wife, and with lightning-like suddenness sprang on the brigand, and the two were soon rolling on the ground fighting with bare hands for life and death. Kosta was the more powerful man, but the brigand was desperate and gradually getting the better of the struggle, especially as Kosta was not quite free from the ropes that bound him, till his wife found a pair of scissors in her pocket and cut the ropes. The two men rolled down a slope in a deadly embrace, each trying to throttle the other. Then the mother cut her son's bonds, and the boy came to his father's rescue. He was unarmed, but he caught sight of a dagger in the brigand's boot, whence he had not been able to disengage it. The lad drew the knife, slit Velichko's throat, saved his father, and the three returned in triumph to the village to announce the good news.

ANGLICANS AND EASTERN CHURCHES.

The Archbishop of Canterbury has recently appointed a Committee on the Relations of the Church of England with the Eastern Churches. The functions of this committee are to foster the growth of friendly intercourse between the Churches of the Orthodox East and the Anglican Communion; to act as the official advisory committee to whom official communications from the Churches of the East may be referred; and to advise as to the making of such official communications from the Church of England to the Churches of the East. The Archbishop has also requested the committee to take into its purview similar questions touching the relationship of the Church of England with the separated Churches of the East.

CORRESPONDENCE.

CONSTANTINOPLE AND THE KHALIFATE

TO THE EDITOR OF "THE NEAR EAST."

Sir,—The perennial Eastern Question has entered on an acute, and it is to be hoped a final, stage. In view of the vast importance of the issues involved, I would ask your permission to deal with them from a physical and a political standpoint. The Bosphorus, Dardanelles, and intervening waters are physically a continuation of the Danube—that main highway of commerce for Central Europe, Southern Russia, and the Balkanic States. By virtue of its position astride these narrows, Constantinople is destined by Nature to be the hub of empire. On its possession was built the far-flung dominion of Byzantium and Turkey. A Power in occupation of Constantinople controls the postern gate of Europe. The political side of the Eastern Question turns on the significance of the Khalifate. It is well known that the Prophet Mohammed found materials in older religions for the creed that bears his name. From St. Augustine he borrowed the conception of *Civitas Dei*—God's Kingdom on Earth—connoting a close union between religious and civil authority. In 612 A.D. he assumed the title *Rasúl Illáh*—"The Emissary of Allah"—and after his death, which occurred in 632, the Faithful elected his father-in-law as the first *Khalíf Rasúl Illáh*—"Successor of Allah's Emissary," and supreme ruler of Islam. Considerations of space forbid me to follow the Khalifate's vicissitudes. At one time it bade fair to overrun three continents; but it entered a long period of decadence, and the beginning of the sixteenth century found a titular Khalif established in Egypt. In 1516, however, that country was conquered by Selim I., who fourteen years later assumed the title of Khalíf, and transferred its seat to Constantinople. Until comparatively recent years his successors' claim to supremacy in Islam received scanty recognition from their subjects, and pious Moslems generally ignored them, inasmuch as the House of Othman has no connection whatever with the Koreish tribe, to members of which Mohammed expressly restricted the choice of Khalíf. It is worthy of special note that the Indian Mutiny—largely engineered by Mohammedans—broke out thirteen months after the triumphant conclusion of a war undertaken by Great Britain in order to keep the Sultan at Constantinople. The revival of obsolete pretensions arose from the growth of the Pan-Islamic movement, to which Abdul Hamid's astute propaganda gave birth, and his successor is daily prayed for as Khalíf in Indian mosques. It is well to remember that Great Britain and France are governing 120,000,000 Moslems, whose susceptibilities must be reckoned with. On the other hand, the divorce of temporal from spiritual authority violates a fundamental canon of Mohammedanism. What, then, becomes of the current proposal to give the Sultan a status similar to that of the Pope? It is obvious that, unless this thorny question be handled with tact and knowledge, we shall see the Khalífate made a rallying point in a concerted effort to rescue Islam from an alien yoke. The future of the Dardanelles and Bosphorus is of equal moment. It is, of course, impossible to leave them in Turkey's grip, and doubtful whether any single Power should be mistress of that wonderful *lusus Naturæ*. There is, however, a precedent for dealing with it in the International Navigation Commission, which was established in 1856 in order to regulate traffic at the mouths of the Danube. Although its powers lapsed *de jure* in 1914, its functions are still exercised by English officials. I venture to think that the Commission should be again internationalised, and that its powers should extend over the Bosphorus and Dardanelles, which are geographically lower reaches of the Danube.

I am, etc.,

January 14, 1920. F. H. S.

THE ENGLISH LANGUAGE IN BULGARIA.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—Late and current events have made it awkward for a Bulgarian to appear before a decent public. The neighbours of the Bulgarian, without exception, have overwhelmed him with the produce of their crafty energy to vilify a crushed, unlucky enemy, their ally and leader of yesterday.

A few good, honest, incorruptible men have courageously stood up for right and justice, but their efforts have been a drop in the ocean of calamities prescribed for Bulgaria—Bulgaria, a child of British liberalism! Yes, the lever which moved and acted for the liberation of the Bulgarian people from utter destruction by the Turks, such as is going on with the Armenians, was the soul of British liberalism, with "the Grand Old Man" at its head. The Russians merely executed a task agreeable to their interests. (This last remark, however, must not be accepted as in any way diminishing in the Bulgarian's mind the immense service Russia rendered the Bulgarian race in liberating it from the Turkish yoke. This service will ever remain as the greatest rendered to the Bulgarian, and for it he will always be grateful, notwithstanding appearances, notwithstanding what interested parties may say to the contrary).

But my object is not to discuss either a political question or the sad situation of Bulgaria. My object is to draw attention to a fact not met with, I believe, in any of our neighbour States, friends and allies of England, and enemies of Bulgaria, a fact which may not be unpleasant to the English mind, and with which not a few well-informed Englishmen are acquainted.

In a recent number of your paper I read of a course of instruction in the Serbian language started in King's College. Well, we Bulgarians, the outcasts, have done and are doing better in this respect than our neighbours. The Serbians are waiting for the English to learn Serbian for better and closer relations between them and the English. We Bulgarians, on the contrary, have been cultivating the English languages for generations past, and have not ceased to do so in our present abandoned position. The Bulgarian has been recognised by the students of nations as positive, with nothing ephemeral in him, sturdy, and hard-working, and naturally very reserved, certainly not vainglorious, or a squanderer of his substance. He is the same to-day, under calamity, as he was yesterday, with a brilliant future, full of promise, before him.

There is not a town in Bulgaria in which you may not meet with several ladies and gentlemen educated in English. In Sofia there are as many as 200 acquainted with the English language, and many are learning it. This education in English has been obtained in the American schools in Bulgaria, in Robert College and the Girls' College in Constantinople, both American institutions, in America and England. There has never been an English school in Bulgaria. German schools there have been, French there are several,.

While the Germans, of course, did a great deal to spread their language in Bulgaria, and the French have always done so, and are doing so now, the English have never thought it worth while to give their mind to it. The interests of the English language in Bulgaria were left in the hands of the Americans, and undoubtedly they have done their work well. But in this case it is the Bulgarians themselves who have taken up the task, on their own initiative, for their own benefit in the first place. There is no doubt, however, that behind this leaning towards the English idea, this initiative to spread the English language, there is a conviction, notwithstanding present conditions, that there is something in the English to be depended upon and trusted for the future final settlement of things, because England has been the hope of Bulgaria in the past.

In 1911 an English-speaking League was instituted. It necessarily had to suspend its work during the wars which soon followed. Early last spring it was started afresh, and is doing excellent work, bringing together socially all speaking English, and encouraging the culture of the English language. Art. II. of its constitution says:—

"The object of this League shall be: (1) To become familiar with the Anglo-Saxon language, literature and ideals and to encourage the same object in the country. (2) To promote mutual understanding, freer intercourse and more friendly relations between Bulgaria and Anglo-Saxon countries. (3) To encourage Bulgarian students residing in Anglo-Saxon countries in their efforts to obtain education; and also to create a sentiment which shall be advantageous to all honest Bulgarians temporarily residing in the same. (4) To welcome and befriend Anglo-Saxons of good repute who may be visiting or residing in Bulgaria."

The number of the members of the League is now over 150. The Board arranges for public lectures, in English, which are always well attended. The shelves of the League's library, however, require books, and its reading room daily papers and periodicals. For these the League will have to depend upon the interest Englishmen and Americans will take in its work.

In the rooms of the League, every other Thursday, social gatherings take place, at which tea is served by the younger lady members, while a programme of vocal and instrumental music is executed by select artists and amateurs. These social gatherings are frequently attended by members of the British and American Military Missions, but as diplomatic relations are not as yet renewed with Bulgaria, these gentlemen, very discreetly, decline the League's hospitality, and pay for whatever they may order—tea or cake. These social gatherings in the League's rooms are a great success and attraction.

But the League's real work is in the three-monthly courses in English which it has undertaken, and carries on. We are now nearing the end of the second three-monthly course. The first three-monthly course was started with sixty-one scholars, the second one with eighty-three. The classes are held three times a week, between 6 and 8 o'clock p.m. The scholars are young military officers, clerks, and young professional men and ladies. I think that such work as the League is doing should be commendable to all Englishmen who really believe in the educational spirit that the English language carries with it.

Of course, at first we had not the necessary books for the classes; these were finally obtained through the kindness of the gentlemen of the British Mission here. This assistance, however, is the only outside support the League has ever received. I dare not say more. We Bulgarians are still under a heavy cloud.

I am, etc.,

P. M. MATTHEEF.

Sofia, Dec. 15, 1919.

It is reported that the Serbian military authorities occupying Montenegro have proclaimed a General Election for the Parliament to be held at Belgrade. The Montenegrin Government in Paris have addressed a formal protest to the Great Powers against this further infringement of the national rights of Montenegro, carried out without reference to the Peace Conference.

PRESS ON THE NEAR EAST.

Bessarabia.

In a recent issue of *New Europe* the difficult problem of Bessarabia was summed up in an article by M. Ion. G. Pelivan as follows:—

It must be said that the work accomplished up to the present in Bessarabia on the part of the former Kingdom of Roumania is one of abnegation and sacrifice which is not sufficiently appreciated by the outside world. The kingdom has brought peace to Bessarabia. It is the Roumanian soldier who, under arms for five years and without respite and repeatedly decimated by the enemy and by the sufferings of war throughout his defence of the frontiers, secures for the Bessarabian peasant and *bourgeois* the possibility of peaceful and productive work, while his own land lies fallow. It is the kingdom which subsidizes the whole organism of organic life—administration, schools, justice, church—in Bessarabia, whose total revenue amounts only to 30 per cent. of the money spent. On the other hand, wherever there is a question of an appointment or the exercise of some right, the Kingdom tactfully effaces itself in favour of the citizens of Bessarabia. How could such an unselfish policy fail to rally all Bessarabia to the standard of Union? There are, of course critics and malcontents, as in every country, since the Government does not exist which can satisfy everybody. But at the same time these criticisms are not directed at Roumania, but at the rulers of Roumania. The critics are drawn from certain opposition groups which feel themselves as truly Roumanian as the party in power, but who think that they could do more for their country.

One thing, however, is still required, in order that every citizen, without exception, may be free to devote himself to the fruitful work of developing the production of the country. That is the final settlement of the equivocal position in which the Supreme Council still elects to keep not only Bessarabia, but all the countries emancipated from Russia. So long as it hesitates to give its sanction to facts, which at the same time it is powerless to change, so long there will always be reasons to fear for the maintenance of peace. There will always be the necessity of remaining on the alert, with nerves and arms braced to meet a possible danger. And in this way the development of productive forces will always be fatally hampered.

Morocco.

The Morocco correspondent of *The Times* describes, in the issue of January 9, the nature of France's record in Morocco. He explains the difficulties, and how they have been overcome:—

From time immemorial it has been the northern part of Morocco which has been the seat of anarchy. This country is much less rich and productive than the south, and the tribes are wilder and more warlike, partly, no doubt, because they have less to lose. In the districts surrounding Fez there are a diversity of races—the Jibala, the Rifis, and the Atlas Berbers. They meet on the common ground of warfare and loot, with the French nowadays, formerly with each other. Even to-day a number of their tribes have accepted the French domination and fight on their side. Courageous and fine fighters, there is much that is admirable in the characteristics of these tribesmen, and the French are the first to acknowledge it. Where they have submitted they have become useful and loyal subjects of the Sultan and the Protectorate. Many of them fought in France, and fought valiantly. In thought, in civilisation, and in initiative the Berber tribes are far nearer to the European than the Arab—and they are a white race in every sense of the word.

The country in these districts is wild and the mountain fastnesses are almost inaccessible. The policy of General Lyautey has been to blockade the tribesmen in their mountains and to cut them off from their supplies of grain and from their agricultural lands, which lie at a lower elevation. Once this has been accomplished, negotiations are opened, but not until the tribes realise the fact, and have experienced it, that force is on the French side and can be further applied if necessary. It is a policy that has been, and cannot fail to be, eminently successful. Once negotiations are begun, offers of employment are made, and generally very few days elapse before the tribesman has laid aside his rifle for the pick and, earning a wage previously undreamed of, is busy helping in the construction of the great arteries of roads which the French have built all over the Protectorate.

The writer's conclusion is:—

The history of the French Protectorate of Morocco during the war is one of which France may well be proud. In spite of every difficulty, progress was made in every direction. In spite of danger, of diminished forces, of inadequate artillery and material, the French and native troops, never failing in their spirit of sacrifice, saved the situation. The danger is past. There remain the finishing touches which are wanting to complete the pacification of the entire country.

The Future of Turkey.

The Times of January 7, in a leading article devoted to "The Future of the Turkish Empire," attempts to justify the expulsion of the Turks from Europe upon historical grounds. It says:—

Most moderate and reasonable Musulmans perceive that the Turkish administration has for ever ceased to exist in the wide areas south of the Anatolian and Kurdistan plateaux. What is not so generally realised, either in the world of Islam or in Western Europe, is that much of the so-called Turkish Empire was of comparatively modern growth, as history goes. The Ottoman Turks did not move westward across Asia Minor, as is too often supposed. They first came into prominence in Western Anatolia, and gradually extended eastward towards Armenia. They crossed into Europe and established themselves over the greater part of the Balkan Peninsula long before they overthrew the last of the Greek Emperors by storming Constantinople. British arms had been carried to victory in the Persian Gulf before the Turks conquered Southern Mesopotamia and took Basra. The attempt to establish Turkish dominion in the Yemen really began only in the seventies of last century, and was always incomplete. On the western shores of the Persian Gulf the appearance of the Turk was even more recent, and was confined to a few posts very lightly held. Much of the fabric of the Turkish Empire in Asia, as we have known it, was of no great antiquity, and was so weakly constructed that it swiftly fell to pieces under the impact of a great war.

It then states its main theme that Constantinople in the hands of the Turks must of necessity be a danger to the peace of Europe.

For three hundred years or more the presence of the Turks at Constantinople has been the real source of most European wars. If we look farther back, we still find the Turks at the bottom of European strife. They were one of the principal causes of the recent unprecedented war, for if Germany struck her greatest blows in the West she found her chief incentive in the wild conception of a German Confederation stretching through Constantinople to the shores of the Persian Gulf. Europe can never again know lasting peace until the Turks return to the uplands of Anatolia, from whence they came. Constantinople will always remain an apple of discord while it is under the Turkish flag. To the contention that banishment to Asia will drive the Turks into the arms of the Bolshevists we may reply that, so far as these

tendencies exist, they will remain unaltered whether the Sultan dwells in Constantinople or in Konia. On the other hand, it is certain that no decision to maintain Turkish rule on a single rood of European soil could be invested with the elements of permanence. Constantinople would continue to be a centre of intrigue and an object of ambitious aspiration and rivalry, as it has been for centuries. It would be a seed-bed of war and an incessant provocative of the dreams which lead to war. The only safe solution is the transfer of the Turkish Government to Asia Minor. The method by which they should be replaced is a question which the Allies in council must decide. Clearly, under present conditions, no single Power can be put in possession of this coveted spot where Europe and Asia meet. That the Dardanelles and the Bosphorus should be neutralised and thrown open to the ships of all nations is a matter of common consent.

The Middle East.

In *Everyman* of January 3, Mr. Arnold J. Toynbee writes an interesting article upon "Our Position in the Middle East." He comments upon the disturbing facts in the Middle East, rejects the German-Turkish-Bolshevist propaganda theory as the explanation of all ills, and proceeds to discuss the relationship between us and the inhabitants of our eastern dependencies. On this subject he says:—

Our relationship with our Oriental fellow-citizens was already causing us heart-searchings before the war, and the war has not altered the problem, though it has accelerated its natural development. Englishmen undoubtedly have a talent for putting undeveloped or derelict countries in order, and for giving a "wash and brush up" to backward races or to civilised peoples ruined by barbarian invasion and internal breakdown. But how far does our talent extend? No cure is complete till the patient has been rendered capable of looking after himself, and a remedy that keeps him permanently in the doctor's hands may be worse than the original disease. This is perhaps the point in which British rule in the East is most open to criticism. Our success, it is contended, in curing the most glaring evils we found has been bought by the sacrifice of potentialities for further progress. Finding the native governing class corrupt and oppressive, we simply replaced them by British administrators and turned them into irresponsible critics, when we might have made them our pupils and partners. We gave the peasantry justice and economic prosperity, but by neglecting their education we have left them as powerless as ever to defend their own interests if the protecting hand of the British administration were withdrawn. And as for the town-workers, a recent class in the Middle East, brought into existence by the industrialisation that has followed the political connection with Europe, we have given them little protection or none, but have allowed them to be exploited under conditions forbidden in our own factories by legislation a century ago. In other words, we have implanted political aspirations without providing the means for their satisfaction, and set economic processes in motion without bringing them under social control. This is the really serious complaint against our policy. It can neither be proved nor disproved till it has been put to the test by the great experiment which has been initiated in India, and by the parallel steps which we are bound in honour to take in Egypt and Mesopotamia. But there is no doubt that the indictment contains an element of truth, and the anxiousness of the present transitional period is increased by the baneful influence of the war on an already strained relationship.

Turkey.

In the *Outlook* of January 10 there is a fair-minded article upon "The Future of Turkey." The writer's final paragraph is:—

With the utmost wish to conciliate Moslem opinion, it remains, however, that if the Turk is to stay on the European side of the Bosphorus at all, he cannot stop on the old terms. He came as a conqueror, and now he is conquered and must settle an account with the Europe which for centuries he flouted and outraged. Constantinople can be, if we may say so, his spiritual home, and the Sultan can actually reside there with such court and dignity as he chooses to keep, not because his people deserves well of us, but because France and Britain have millions of subjects who owe him, as their religious ruler, a measure of allegiance. His position there will be in some ways analogous to that of the Pope at the Vatican. Over some parts of Turkey in Asia he will doubtless exercise real authority, or authority will be exercised for him by his Ministers, but as far as Constantinople is concerned his period of temporal power is at an end. After the experience of Gallipoli, not to mention the Goeben and Breslau, there can be no question of again allowing the Turk to dominate the Straits. On that point at least complete agreement may be expected. Restored Russia, if the idea of a restored Russia be not altogether too visionary, must have a way clear to open seas. Little as we can do for her, that passage can and must be kept open under the guardianship of civilised Europe until better days come.

Article to Note.

"In Constantinople During the War," in the *Moslem World* (January).

Archæological high schools are to be established by the Greek Government at Constantinople and Rome.

A Japanese Legation is to be created at Athens.

Mgr. Pisani, the new Apostolic Delegate to India, was received in audience by the Pope on January 12.

MUSICAL NOTES.

The new Modern Trio has found a short cut to popular favour. The programme which it gave at the Wigmore Hall on January 7 consisted of Dvorak's Trio in F minor, Frank Bridge's Fantasy in C minor, and Brahms' Op. 101 in C minor, and it greatly pleased the audience. The violinist was M. Melzak, the 'cellist M. Mannucci, and the pianist Mr. Krish. In the Dvorak they performed with enthusiastic imperfection; the violinist had too strong an attack, the 'cellist was not impetuous enough, and the pianist found it quite difficult to remember that he was not a soloist. Dvorak's Trio has many beauties, but it is not a beautiful work; its linked sweetness is far too long drawn out, and the repetitions, in however cleverly disguised a form, are much more ingenious than necessary. In the Fantasy in C minor (Bridge) the individualities of the players were successfully merged, and the piece was performed with excellent tone and finish. Bridge writes chamber music more satisfactorily than most moderns, and in the Trio's presentation of his work there was no fault at all. The Modern Trio have it in them to attain the front rank, for they are all extremely capable players. It is not that their skill varies, but that their respective powers of technique and interpretation seem to find a fusion of strength difficult, which makes me think their proper *metier* is the solo rather than the trio.

M. Mischa-Léon, who gave a song recital at the Æolian Hall on January 10, has already attained wide and quite deserved popularity. His programme was made up chiefly of modern French (Félix Fourdrain, Rhené-Baton, Albert Roussel), modern English (Elgar and Holbrooke), recent Scandinavian (Heise, Gunder Knudsen, Grieg), and recent German songs (Weingarter, Hans Hermann, Richard Strauss). The French and Scandinavian songs he sang in their own language, but the German, with insufficient reason, he sang in English. The reasons of his popularity are obvious: he can be dramatic, strong, sentimental, and tender with equal ease and charm, and his volume, though not excessive, is equal to all the demands a small hall can put to it. The songs which he sang best were "Le Bachelier de Salamanque," by Albert Roussel, possibly the most interesting composer of the young French school; "Speak, Music," by Elgar; "Skönne Fra Beatrig," by Heise; and "If slender Lilies wandered forth," by Weingarter. Five of his songs were encored, and though they were not the best, his performance of them fully merited repetition. A very interesting, but not very successful, feature of the recital was the fact that the songs of Elgar and Holbrooke were sung with a Double String Quartet. The accompaniment was too strong, and generally attached too much importance to itself. Mr. G. O'Connor Morris was at the piano for M. Mischa-Léon. He more than fulfilled his duties by the superfluous and irritating practice of playing as a prelude to the song a few empty and vulgar chords. Otherwise he was very helpful.

On a quite different plane from M. Mischa-Léon's was Miss Dora Gibson's recital at the Æolian Hall on January 13. She has neither elasticity nor versatility, but she is extremely good at one thing—namely, the old spacious arias of the eighteenth century. Her singing of Glück, Tenaglia, and Catalani was artistically of a high order; her middle notes, in particular, were very full and rich. Apart from the rather English accent of her French and Italian, these arias were a delight to hear. When, however, Miss Gibson came to some modern songs by Ireland, Angus Morrison, and J. A. Carpenter, her deficiencies became more apparent. Her control was not certain, and her high notes were hard. The Russian group of songs with which Miss Gibson concluded her recital was chosen ill and performed ill. The first, a Russian Folk Song, arranged by Kurt Schindler, was neither very Russian nor very like a folk-song; the second, a genuine folk-song, was sung too artfully; and of the last two, both of which were by Rachmaninoff, only the second, "Spring Waters," made any effort to interpret the words. Miss Gibson (to judge from her choice of songs and her singing of them) has many of the qualities that ensure popularity, but her actual and irreproachable merits are few. She was assisted by the Philharmonic String Quartet, who played the first movement and scherzo of a quartet by Debussy and two Idylls by Frank Bridge. In modern music like this the Quartet are excellent: they suggest almost as much as they say. Their finish is not incomparable, and certainly their souls do not form a collective one, but their enthusiasm and skill are on a very high level. They played Debussy with any amount of freshness, and easily created the atmosphere necessary to his work. The Bridge Idylls were hardly so satisfactory: they are rather disjointed, and it was difficult to appreciate this presentation of them as a whole.

HOW JERUSALEM WAS WON.

The romance and picturesqueness of the great campaign in Palestine, as well as its brilliance and far-reaching success, give the many books which are now appearing relating to it a wide circle of readers. Mr. Massey's book will, we think, stand pre-eminent as the work of one who had opportunities greater than any other writer of seeing every step of the war from first to last. His graphic contributions to the Press must have been read by millions who, through his pen alone, were able to follow week by week a campaign in which he was the only "official correspondent of the London Newspapers." In this book Mr. Massey has handled his materials afresh; it is no republication of hurriedly-written dispatches, but a complete and, within the limits of a compact volume of 300 pages, an exhaustive account of the progress of the Egyptian Expeditionary Force from the close of the "Desert Campaign" until the victorious conclusion of the first great advance.

The tragic episode of the two earlier battles of Gaza had left the British Army at a standstill outside that city "with moral sensibly diminished," "in a state of lassitude engendered by a belief that they were settling down to trench warfare for the period of the war." It fell to General Chetwode—to whom the author gives a just and well-deserved meed of praise—to reorganise and to reinspire the army. They became infused by his energy; they saw him in the front line almost every day, facing risks they ran themselves, and thoroughly investigating every detail of improvement. Preparations on a vast scale were already well in hand, and even the main outlines of the plan for the final break through, before General Allenby himself arrived to take over the Chief Command. Intensive training of the troops preceded by months the "zero day" when at one word the whole great machine was set in motion which in a few brief days crumpled up the whole Turkish resistance. The tale of Gaza and Beersheba has been told and retold. It was not lack of courage or even of guns which failed our enemies; they were thoroughly out-generalled. At least, three times General Kress Von Kressenstein seems to have been absolutely befogged as to our plans. The pursuit up the Maritime Plain; the extreme difficulties, especially those of the mounted men, on account of scarcity of water; the magnificent and spectacular charges of the Yeomanry at Huj, at Mughar, and at Abu Shusheh (Gezer) are all described in vivid detail. Of the London Territorial Division the author cannot say enough. "These cockneys are the best men in the world . . . . the cockney makes the perfect soldier." It is impossible to quote the warm words of praise equitably distributed to each unit in turn through this great fight. The advance upon Jerusalem is fully described, the account being greatly elucidated by the map. The Turks had all the advantage of position, and to win through at last was a military feat which must ever remain among our very greatest.

The chapter on "Making Jerusalem Secure" tells in greater detail than did the newspapers of the Turks' utter failure to recapture the city on December 27, and of the splendid counter-attacks which drove them headlong to beyond Bethel. Little has been written of the crossing of the Auja, north of Jaffa, a proceeding which is here fully described as "A Great Feat of the War."

How perfectly the operation was conducted—noiselessly, swiftly, absolutely according to time-table—may be gathered from the fact that two officers and sixteen Turks were awakened in their trench dug-outs at the ford by the river-mouth two hours after we had taken the trenches. Two miles behind the river the Lowlanders captured the whole garrison of a post near the sea, none of whom had the slightest idea that the river had been crossed. The whole of the Turkish system covering the river, trenches well concealed in the river banks and in patches of cultivated land, were rushed in silence and captured. Muamnis was taken at the point of the bayonet, the strong position at Hadrah was also carried in absolute silence, and at daybreak the whole line the Scots had set out to gain was won and the assailants were digging themselves in. . . . The forcing of the passage of the Auja was a magnificent achievement, planned with great ability by General Hill and carried out with that skill and energy which the brigadiers, staff, and all ranks of the division showed throughout the campaign.

Very different—though equally successful—was the advance to the banks of the Jordan. Here, instead of waterlogged ground and cultivated fields, our army had to thrust back the Turks from the waterless "Wilderness of Judæa." Down the centre of the line of advance lay the Jericho high road, strongly guarded by the powerful fortress at Talat ed Dumm, of which, it is said, "it is hard to imagine a better defensive position." Up frowning heights and down the roughest torrent beds the Londoners and the Anzacs carried all before them, and by February 21st Jericho, the N.W. shore of the Dead Sea and the western side of the Jordan up to the mouth of the eastern river Aujeh were ours. Subsequent events—equally stirring and dramatic—are reserved for a second volume.

A glowing tribute to our Airmen and an Appendix of Official Turkish and British military documents conclude the volume. The sketch plans are very helpful to the text, and the thirty-nine new and original illustrations are excellently chosen.

These vivid and clearly-written descriptions of these great events will charm the general reader, while no scientific student of the History of the War can afford to neglect these observations by one who had unique opportunities of seeing everything at first hand.

CAPTIVES OF THE DESERT.

This is the record, written by their captain, of the adventures of the crew of H.M.S. Tara, whose ship was torpedoed off the North African coast, in November, 1915. They were taken prisoner by the Turks, marched into the interior, and left in charge of the Senoussi, in a desolate spot in the Libyan desert, and were finally rescued by the Duke of Westminster with a fleet of armoured cars, in March, 1916.

There are three reasons why this book cannot fail to interest all its readers.

In the first place, it is an instance of the terrible hardships and suffering which were endured by small isolated bodies of men during the war in all parts of the world. Many of these experiences are only now becoming generally known, and the knowledge of so much suffering above that which became tragically familiar during those dark years will add yet greater strength to man's horror of war. The book is a record of six months' perpetual hunger—a longing and craving for food which the author seems actually to feel again in memory as he writes this book three years afterwards—and of illness, with nothing to help or relieve it except increasing kindness to the weakest on the part of comrades who could only, by such sad comparison, be called well. But most difficult to read because of the great suffering described therein are the accounts of the march from the coast to the prison "camp" at Bir Hakim, over the cruel stones of the desert, and of six dreadful nights which seventy-five men were forced to spend in a dry well, 18 ft. in diameter, 10 ft. high in the centre of the vault, and with no means of ventilation except one tiny hole. We never lose sight of the captives' magnificent courage and amazing faith that they would eventually be found and saved.

Secondly, the book is well worth reading as an enthralling tale of adventure. From the sailing of the captured crew into Port Bardia through an entrance in the cliff "like an Aladdin's cave," to the wonderful moment when the impossible at last happens and the weary, almost hopeless, prisoners see the long line of khaki-coloured cars arriving, there is no incident or touch of picturesque detail wanting to make a romance such as one might expect from the imagination of one of the great writers of stories of adventure. The third point of interest is one that should appeal especially to all who wish to study the Near East and its inhabitants. Captain Gwatkin-Williams gives a vivid and entertaining account of the life of the wandering tribes of North Africa. He attempted an escape, and with the two Turkish soldiers who re-captured him, spent several days in Bedouin encampments. He tells us: "With all their squalor and filthy ways, these Bedouins always gave me the idea of being aristocrats. . . These sons of Esau have most patrician features and an engaging, devil-may-care generosity of manner. . . I could enter into their feelings, understand and sympathise with their ways." In spite of a rather irritating profusion of exclamation marks, Captain Gwatkin-Williams writes in a way which carries us along very easily. He tells us nothing which is not of interest or of importance to the working out of his dramatic

Digitized by Google

story, and he also finds room for much that is most entertaining.

THE USE OF THE "CRAZIEST ROAD."

In these absurd days when Spiritualism appears to be coining money from deluded victims, it is refreshing to read a book which, by the preferring of actual incidents, is, not deliberately, but of itself, a very weighty argument against the claims of Spiritualists. Here is the story of two British officers, prisoners of war at Yozgad, in Anatolia, who, starting Spiritualism as a game to offset the dreadful monotony of life, eventually used it as a means of escape. In the words of the author: —

Spiritualism enabled us to kill much empty and weary time. It gave "True Believers" satisfactory messages, not only from the world beyond, but also from the various battle-fronts—which was much more interesting. It enabled us to obtain from the Turks comforts for ourselves and privileges for our brother officers. It extended our house room, secured a hunt club for our friends, and changed the mind of our commandant from silent and uncompromising hostility to a post-prandial friendliness ablaze with the eloquence of the spook. Our spook in Yozgad instituted a correspondence with the Turkish War Office in Constantinople. . . . . It even altered the moral outlook of the camp interpreter, a typical Ottoman Jew. . . . Finally, what concerned us more, it helped us to freedom.

To extract incidents from the book would be an inadequate method of dealing with it, for every page of it is eminently readable. There is plenty of humour, plenty of feeling, and plenty of vivid writing. Lt. Jones was excellently equipped for his task of bamboozling the Turks; he had been a resident judge in Burma for many years, and knew well the strange customs of the folk there, and he employed his knowledge of Welsh and held back his knowledge of French with amazingly happy results. Lt. Hill was a most worthy partner to him, being an expert conjurer, and a most skilful mechanician. But what, above all, saved these two men was their indomitable resolution to escape. It was not an easy thing to have to deceive their fellow prisoners of war (and the British at Yozgad were surely one of the very best sets in the war), but their untameable passion to escape overcame everything, and about a fortnight before the armistice with Turkey they achieved their purpose.

Readers of another excellent book—"450 Miles to Freedom"—will here meet many of the things mentioned in that book—the Commandant, Kiazim Bey, the hockey-ground, and the Hunt Club, for example. That book and the one under review are among the best published on the war; they are simple, fine, and British.

We can do no more than advise our own readers (and all others) to buy this book at once. If they are interested in Turkey, there is much here that is at once original and illuminating; if they are Spiritualists, they will receive a tremendous (but certainly deserved) shock, but they cannot neglect it; and if they are British, they will glow with pride at the reading of this tale. This book was written for entertainment; it ends in making one think.

BURMESE LIFE.

The plot of this book is relentlessly tragic. Its value is not increased by the fact that it is told in a style which might be just tolerable in a story with a very light plot. In that case, it could possibly be regarded simply as an excuse for the author to sketch in his mildly interesting pictures of Europeans living in Burma and of the country, which he apparently knows fairly well. The subject of "The Leopard's Leap" is thoroughly sordid, and the character drawing quite superficial. In addition to the unpleasant impression it leaves, is a sense of acute irritation at the incongruity of the manner in which it is related.

BOOK NOTES.

G. K. Chesterton, one of the most brilliant of English journalists, has gone on a visit to Palestine. He intends to publish, through Messrs. Hodder and Stoughton, a book of his impressions. In view of the scope which his subject will afford him, the book should be one of his best efforts.

Mr. B. H. Blackwell, the Oxford publisher, will publish shortly "Kossovo: Heroic Songs of the Serbs," a metrical translation of Serbian national poetry by Helen Rootham. Some of Miss Rootham's work was first published in the *New Age*, a journal which has done notable work in making public Slavonic literature. The poems are to have an introduction by Maurice Baring, whose name is well-known to readers of this column.

In an official *communiqué* it is stated that the Sultan of Turkey is ill.

Mrs. Eckstein and Miss Eckstein have left London for Algiers and Tunis.

M. Vaida-Voevod, the Roumanian Prime Minister, has left Bucharest for Paris.

M. Tilea, Secretary to the Roumanian Legation, left London on January 13 for Paris.

Admiral Sir Ernest Troubridge left England on January 12 for the Danube to resume his official duties.

General Sir Charles Townshend, the defender of Kut, tendered his resignation to the War Office on January 10.

Mr. Edward Hope-Vere, First Secretary to the Residency at Cairo, has arrived at 39, Gloucester Square from Egypt.

Sir John Stavridi, the Greek Consul-General, left for Paris on January 8, on a visit to M. Venizelos, the Greek Premier.

M. Vesnitch, Serbian Minister to France, left Cannes on January 10 on board the French destroyer Bambara for an Adriatic port.

Sir R. Ghose, member of the Viceregal Council, has given 11½ lakhs of rupees for the purposes of applied chemistry at the Science College, Calcutta.

Mr. E. Hilton Young, M.P., left London for India on January 10, to attend the sittings of the Financial Relations Committee. He expects to return in April.

King Ferdinand of Roumania, accompanied by the Prime Minister, will shortly visit Paris in connection with the signature of various documents concerning Hungary.

The Hon. Mrs. John Scott Napier left London on January 8 to join the steamship Mantua at Marseilles for Ceylon. Mrs. Napier will be absent for some months.

Sir Benjamin Robertson, as representative of the Indian Government, will lay before the South African Commission of Inquiry the Indian view on the question of the position of Indians in the Union.

Mr. Roland Michell (ex-Commissioner of Limasol) will give a lecture on "Cyprus" to the Central Asian Society on January 21, at 4.30 p.m. The lecture will be given at the Royal Society's Lecture Room, Burlington House.

Mr. Theodore E. Casdagh, Consul for Greece in Manchester, has been unanimously re-elected chairman for the Egyptian Section of the Manchester Chamber of Commerce for the year 1920.

At the University of London, Professor A. J. Toynbee will lecture on January 21, on "The Problem of Constantinople and the Black Sea Straits," and the Rev. H. A. Popley, on February 6, on "Indian Music."

M. Yovan M. Yovanovitch, lately Serbian Minister to the Court of St. James, with Madame Yovanovitch, President of the Serbian Red Cross, left Victoria on January 8 for Belgrade. At the station to bid them farewell were M. Gavrilovitch, the Minister representing the Kingdom of Serbs, Croats, and Slovenes; Colonel Georges Ostoitch, Military Attaché, the *personnel* of the Legation, and members of the Committee of the Serbian Red Cross Society.

Digitized by Google

Sir Henry Manning, Governor of Ceylon, and Sir W. Joynson-Hicks and family left Colombo for Madras on January 7, the former to confer with Lord Willingdon about forthcoming legislation in Ceylon in regard to labour.

Mr. Alec Theophilus Callinicos delivered a lecture on January 13 at St. James' Schools, Higher Broughton, Manchester, on "Constantinople." The chair was taken by the Rev. Parry, B.D., and the lecture was illustrated by lantern slides.

The Queen of Roumania has had sent to her a telegram by the Roumanian Chargé d'Affaires saying that the children's matinée at the Royal Court Theatre had secured for the benefit of the distressed children of our Roumanian Ally nearly £550.

Our Jaffa Correspondent writes (December 18): The engagement is announced of Mr. H. N. Fiani, ex-British Consular Officer, at present the Adviser to the Military Governorate, Jaffa, and Miss Emily Mantoura, the eldest daughter of Mr. A. Mantoura.

Mirza Abdul Ali Khan, Sadigh-es-Santaneh, Persian Minister at Washington, arrived in Paris a few days ago to have an audience with the Shah. Sadigh-es-Saltaneh is well known in London, where he was stationed for a number of years.

Mr. Herbert Samuel left Victoria on January 11 for Dover, *en route* to Palestine, to which he is going at the invitation of Field-Marshal Viscount Allenby, with a view to advising upon questions of administration and finance relative to the development of that country. He anticipates an absence of two or three months.

The following gentlemen are recommended by the Civil Service Commissioners to the Secretary of State for India for acceptance as selected candidates for the Indian Civil Service, subject to their being found eligible in point of health, and on the result of any other inquiries he may desire to make. The names are given in order of merit: Captain A. J. Hopkinson, Major W. McC. Sharpe, Captain M. N. Clarke, Captain R. E. Boucher, Captain G. Y. Loveband, Lieutenant J. B. Irwin, Lieutenant J. M. Sladen, Lieutenant W. W. M. Yeatts, Lieutenant P. J. Scotland, Captain W. Christie, Gunner A. McD. Clark, Lieutenant A. Gledhill.

The body of Prince Jaafar Mirza, the youngest son of H.H. Prince Firman Firma and brother of H.H. Nosrat-ed-Dowleh, the Persian Foreign Minister, was removed on January 12 from the Kensal Green Cemetery, to be conveyed to Glasgow and thence to Kazimain, for burial within the precinct of the Shrine of two Shiah Imams. Prince Jaafar died last year while he was studying in Harrow School. The Persian Chargé d'Affaires, together with the members of the Persian Legation and Sir Harry Foster (Persian Consul-General), and several distinguished members of the Persian colony, were present at the ceremony. Monazem-es-Saltaneh, Second Secretary of the Persian Legation, accompanied the body of the Prince to Glasgow.

APPOINTMENTS, ETC.

M. Gregoire Michaesco has been appointed Commercial Attaché to the Roumanian Legation.

Mr. Alan Lenox Conyngham Stuart (President of the District Court of Larnaca) has been appointed Puisne Judge of the Supreme Court of Cyprus.

Dr. Dusan Rextar has been appointed Secretary to the Legation of the Kingdom of Serbs, Croats, and Slovenes.

General Sir J. A. L. Haldane, K.C.B., D.S.O., will shortly take over the command of the troops now in Mesopotamia.

Mr. Leonard Christian Adami, Indian Civil Service, has been appointed a Judge of the High Court of Judicature at Patna, in succession to Mr. Francis Reginald Roe, Indian Civil Service, who has retired.

The Sultan of Egypt has conferred the Grand Cordon of the Nile on the Ministers of Agriculture, Education, and Wakfs (Pious Foundations), and has appointed Madame Mohammed Said Pasha as Lady-in-Waiting to the Sultana.

The King has been pleased to appoint Sir Harold Stuart, K.C.S.I., K.C.V.O., to the post of British High Commissioner on the Inter-Allied Rhineland High Commission. Mr. Malcolm Arnold Robertson, C.M.G., a Counsellor in his Majesty's Diplomatic Service, has been appointed Deputy British High Commissioner. Sir H. Stuart has had a distinguished career in the Indian Civil Service, which he entered in 1881. He was Home Secretary to the Government of India from 1908 to 1911, and member of the Executive Council, Madras, from 1912 to 1916. Mr. M. A. Robertson entered the Foreign Office in 1898. He has held a diplomatic appointment at Bucharest, among other places.

OBITUARY.

The death has occurred in London of Father John Strassmaier, S.J., a well-known student at the British Museum, and a noted Assyriologist.

Colonel Robert D. Murray, late of the Indian Medical Service, died on January 12, in London, in his sixty-ninth year. He took part in the Burmese Expedition in 1886.

Major-General Isaac Ketchen, late of the Royal Artillery, died on January 12 at Bournemouth, at the age of eighty. He joined the Army in 1857 and took part in the Jowaki Expedition in 1876.

Brigadier-General Charles Henry Spragge, C.B., died at Torquay on January 9, in his seventy-eighth year. General Spragge first saw service on the North-West Frontier of India in 1897-8, for which he had the medal with clasp, while in the Tirah campaign he was Brigadier-General commanding the Royal Artillery, and was present at the action of Chagru Kotal and at the capture of the Sampagha and Arhanga Passes.

Lieutenant-Colonel George Launcelot McLean Farmer died on January 7 at 4, Lowndes Street. He was gazetted in 1861 to the 60th Rifles, the 2nd Battalion of which he commanded in 1890-4. With that battalion he served in Afghanistan, and took part in the Mari Expedition in 1879, when he earned a mention in despatches and the medal. Prior to going on active service in Afghanistan he was from 1873 until 1876 A.D.C. to Lord Northbrook, then Viceroy of India.

The death is announced of Lieutenant-Colonel Henry Kellett Harley, D.S.O., 7th Hussars, in his 53rd year. Colonel Harley entered the Army in 1890 and served with distinction with the Chitral Expedition of 1895. In the defence of Chitral Fort he gained the D.S.O. He was with the Sudan Expedition of 1897 and 1898, and was severely wounded at the battle of Atbara. Colonel Harley, who was with the British Mission, G.H.Q., Italy, in 1918 and last year, was a descendant of Robert Harley, Earl of Oxford.

Colonel Charles Herbert Shepherd, C.B.E., D.S.O., Hon. A.D.C. to the Governor of Bengal, commanding 1st Garrison Battalion Lincolnshire Regiment, died at Calcutta on January 2, aged seventy-three. Colonel Shepherd served through the Burmese War of 1887-89 and the Chin-Lushai expedition of 1889-90, receiving the medal with two clasps and the D.S.O. He rejoined the Army in 1914, serving throughout the war in England and India, and completed fifty-four years' service in May, 1919. He was made a C.B.E. in 1918.

The death of Sir H. A. B. Rattigan, Chief Judge of the Chief Court of the Punjab, is announced in a Reuter message from Bombay. Sir Henry Adolphus Byden Rattigan was the son of the late Sir William Rattigan, K.C., M.P., and was born in 1864. In 1889 he went to India and became an Advocate of the Chief Court of the Punjab. He was appointed Legal Remembrancer and Secretary to the Legislative Council in the Punjab in 1900, and officiated several times as a Judge of the Chief Court until 1905, when he was appointed an additional Judge, becoming a Judge in 1909 and Chief Judge in 1917.

The death occurred on January 8 of Sir Henry Meredyth Plowden. Sir Henry, who was born in September, 1840, was called to the Bar at Lincoln's Inn in 1866, and he later went out to India and joined the Judicial Department of the Punjab. After serving for seven years from 1871 as Government advocate and officiating Judge of the chief Court, he was appointed a Judge of the chief Court, and was senior Judge from 1880 until his retirement in 1894. Sir Henry was a distinguished cricketer in his school days at Harrow, and afterwards at Cambridge, where he was in the 'Varsity Eleven from 1860 to 1863, and captained the side at Lord's in 1862 and 1863.

THE SEASON IN EGYPT.

(From Our Special Correspondent.)

Cairo, December 31.

Since last I sent you these notes we have had an exceedingly gay time in Cairo, culminating in a veritable orgy of jollification during Christmas week. The most prominent features amongst the social fixtures have been the entertainments at the Residency. Lord and Lady Allenby, who seem bent on giving as much pleasure as they can to the community, have indeed entertained on a large scale. Their Excellencies have given several dinner parties, among them being one to which Lord Milner and his colleagues and the British Advisers were invited, and another at which the Prime Minister and several of his colleagues were guests. On Christmas Day another large party was entertained, and an impromptu dance followed in the drawing-room.

The *pièce de résistance*, however, so far, has been the dance which was given on Monday evening, mainly for the benefit of the Army sisters and officers of the local garrison, but to which a few other guests were invited. For this occasion the ballroom, so full of memories of K. of K., who had it built towards the end of his tenure of office, was once more brought into use. The fact that the corridors on either side have been closed in to provide office room for the additional staff which the war and increased activities of the Residency have rendered necessary somewhat dwarfed the room, but nevertheless all those who were present thoroughly enjoyed the evening, and the grey dresses with their scarlet capes and snowy caps of the nurses gave a quaint and unwonted touch to the scene. Lord and Lady Allenby were indefatigable in moving amongst their guests throughout the evening, and the dancing—in which "The Chief," as he is affectionately dubbed by his juniors, repeatedly joined—continued to the gay and seductive music provided by the Hussars Band—and in the intervals by the ever-accommodating Major Murray—until a very late hour.

In addition to the Army sisters, headed by the Senior Matron, Miss Dodd, and the garrison officers, the guests included Sir R. Rodd, General Sir John Maxwell, Mr. and Mrs. Spender, Sir Gilbert and Lady Clayton, Lady Fane, Major-General and Lady Newlands, Brig.-General and Mrs. Wavell, Mr. and Mrs. Alcock, Mrs. Bird, Mr. Keown Boyd, Mr. and Mrs. de Cosson, Miss Devonshire, Col. and Mrs. Elgood, Mr. and Mrs. Geary, Air Commodore Groves, Dr. and Mrs. Madden, Mr. and Mrs. Sydney Merton, Mr. and Mrs. Peckitt, Miss Peebles, Dr. and Mrs. Philipps, Miralai Russell Bey and Mrs. Russell, Mr. and Mrs. Selby, Major and Miss Tweedy, Major Waley and his *fiancée*, Miss Ades.

The first dance of the season at the Continental proved very successful. The grill-room and dining hall were packed beforehand and the dancers were enthusiastic over the floor of the new ballroom, which was used for the first time. A most enjoyable series of quartet concerts have been arranged at this hotel, and the programme of those given so far has been most excellent with regard to both selection and execution. Among those entertaining at dinner on Christmas Eve were General Sir Vire and Lady Fane, whose guests included Lady Stradbroke and her daughters, Air Commodore Groves, Lady Palmer, Col. and Mrs. Hine Haycock, while visitors included Captain and Mrs. Armine Willis, General Sir Vire and Lady Fane, Mr. Gordon Vereker, Sir Arthur Webb, Baron Alfred de Menasce, and Lieut.-Col. Newcombe.

The season at the Sultania Opera House has started, and promises to be a great success. The operas so far given have been "Lorelei," "La Tosca," and "Andréa Chenier," and several novelties are promised in the near future. Considerable adverse comment has been aroused by the attitude of the impresario towards the Press, to whom he refused to issue passes. While from his point of view there is no need to advertise the opera (since practically all the seats are taken by subscription), this cavalier treatment of the Press cannot fail to react unfavourably on the members of the troupe, whose future career depends on the notices they obtain wherever they perform. Another complaint is that the same opera is given four nights running. Since the most usual form of subscription is for a bi-weekly performance, this is not at all to the liking of the subscribers. This neglect of the Press, and incidentally of the interests of the singers, and the lack of consideration for the subscribers are novelties to Cairo.

Christmas Eve is always a gay time at Shepheard's Hotel, and this year proved no exception to the rule. A gigantic Christmas-tree in the Egyptian Hall caused much joy to the host of little ones who played around it during the afternoon. The hotel was simply crowded out at tea-time, tables having to be laid in the corridors—in fact, wherever any space could be found. It was, withal, a most festive scene, and the general fun was much added to by a Tombola in which all tickets drew prizes! From what I saw, the lottery gave as much pleasure to the grown-ups as it did to the younger generation, and the gay afternoon was fittingly crowned by an impromptu dance, which did not end until Christmas morn had been ushered in. Great doings are promised for New Year's Eve, but the early departure of the mail prevents me from giving details this week. Among those stopping at this hotel are Lord Eustace Percy, Lewa Burges Pasha, Countess d'Hautpol, Sir Robert Williams, and Lord Dewar.

Mena House Hotel has reopened, and has already been the scene of many gay gatherings. The Grand Hotel at Helwan has also reopened its doors, and both are being well patronised. Many, including Sir Paul and Lady Harvey, Mr. and Mrs. Ward-Boys, Sir David and Lady Bruce, and Col. Arkwright, took the opportunity of spending the Christmas holidays there. As was predicted in my previous letter, there has also been an exodus to Upper Egypt, and during the next week or so many residents are proceeding southwards, including the High Commissioner and Lady Allenby, who propose to pay a short visit to the Sudan.

The racing at Ghezireh and Heliopolis continues to be excellent. The race for the Sultan's cup at Heliopolis drew very good interest, and resulted in a popular win for Ishak Pasha Hussein, who is one of the strongest Egyptian supporters of the Turf, and whose horses can usually be counted on to obtain a place. Christmas week is giving us three race meetings—one at Ghezireh and two at Heliopolis; while in addition we have had one or two excellent regimental meetings.

The Continental was recently the *venue* of a very successful bazaar in aid of the Y.W.C.A. Lady Allenby kindly opened it on the first day, and at the end of an explanatory speech by Sir Murdoch Macdonald, in a few well-chosen words, gracefully wished the venture good luck. There were stalls without number, all of them laden with large stocks of wares to tempt buyers, and by the end of the afternoon there was very little left unsold. Among those holding stalls were the Hon. Mrs. Home, Lady Oakes, Lady Fane, Mrs. Greg, Mrs. Quibell, Mrs. Peckitt, Mrs. Richards, Mrs. Percival, and Mrs. Madden, while one of the side rooms had been most artistically arranged as a children's fair by Mrs. Llewellyn Phillips, who is certainly to be congratulated on the manner in which her efforts attracted the older members of the community as well as the little ones.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.

Open all the year round.

SEMIRAMIS HOTEL.

Splendid position on the East Bank of the Nile.

THE ONLY ENGLISH HOTELS IN ALEXANDRIA.

Proprietor: AUGUSTUS VAN MILLINGEN.

WINDSOR HOTEL

(Facing the Sea, opposite Y.M.C.A.), ALEXANDRIA.

American Bar and Restaurant, Billiards, and Lift.

SUMMER PALACE HOTEL,

GLYMENOPOULO, RAMLEH.

This Hotel is situated near the Beach. Open all the Year.

FINANCE IN THE NEW INDIA.

Those of our readers who have followed the public discussions on the new Indian constitution must have been struck by the apparent neglect of all financial considerations. India is poor, and a poor man should cut his coat according to his cloth, but on this occasion the country has ordered not merely a coat, but a complete outfit, without pausing to consider how the bill is to be paid; and while we do not blame the authorities for subordinating financial questions during the debates of the past year, we are of opinion that these questions should now receive their due share of public attention, since there can be no doubt that the new constitution will involve a heavy increase in expenditure, or, in other words, a progressive enhancement of taxation, and taxation is a matter in which the public are necessarily concerned. The new constitution will cost money, and the question is where the money is to be found. In seeking for an answer, we have to remember that Indian revenues are notoriously wanting in elasticity; very nearly the whole of the ordinary receipts are pledged in advance; new taxes are hard to invent, and the increase of those which exist is practicable only within narrow limits. In this respect, however, the Central Government is more fortunate than the provinces, which are now to enjoy a large measure of autonomy; apart from the contributions to be levied on the provinces, it will receive the rapidly expanding net revenue derived from the railways, and can look for substantial aid from Customs and income-tax, while, relatively to its means, the burden of new expenditure will be comparatively small. In the provinces, on the other hand, the increased burdens will be heavy, and the prospects of a rapid growth of revenue are slight; provincial finance will, therefore, dominate the situation for some time to come, and it will be worth while to present the problem in its broadest aspects, eliminating those technical details by which the significance of the facts is so commonly obscured.

The ordinary Indian province already spends all the money it can get, and very nearly the whole of its expenditure is "necessary," so that the margin available for new enterprises is absurdly small. Now these "necessary" expenses are bound to grow: Legislatures, Ministers, and Councils will all cost money, while the long-deferred increase in scales of salaries is just beginning to take effect, and, without going into the figures in detail, it may be said that the provinces will start next year with no appreciable margin for development. But development is the essence of the whole matter. The new constitution is at once a symbol and a stimulant of the growth of national life, and if that metaphorical expression means anything, it means that each individual life should have a reasonable chance of realising its capacities. India is very far indeed from that ideal. Year by year many thousands of lives are wasted before their capacities are known, and still more are blighted merely for want of opportunity; the need for expenditure on sanitation and education is incalculable in the strictest sense, but in every province the amount required is out of all proportion to the sums now spent, and even the most courageous Indians shrink from the burden which they are called upon to undertake. At the same time, there is an equally urgent need for material development, for increased facilities of transport, for the improvement of agriculture, for help in establishing new industries, measures which will enrich the country in the long run, but the returns from which will take years to reach the Treasury. The cost of these developments will fall mainly upon the provincial budgets, the rate of expenditure on them will go far to determine the future progress of the country, and unless material needs are met, social and intellectual advance must be postponed for an indefinite period. Wherever the provincial administrator looks, he is faced by imperative demands, and the conclusion is inevitable that in the new conditions the whole scale of expenditure must eventually be raised far above what was deemed possible or desirable by the thrifty, and sometimes timid, authorities of the old regime.

Almost the first business, then, of the new dyarchic Government will be the attempt to devise large and productive schemes of provincial taxation, and it is apparent, from the somewhat superficial observations recorded on this topic by the Government of India, that they will be allowed a tolerably free hand in their unpopular task, so long, at least, as the central revenues are not threatened. The task will be difficult as well as unpopular. Suggestions for "fancy" taxes are, indeed, numerous, but no one who knows the country will look for a large immediate revenue from such sources as amusements or advertisements, while taxable luxuries are few, and we fear that Legislatures composed largely of practising lawyers will be slow to impose fresh burdens on the indulgence in litigation which in India may fairly be described as luxurious. The Excise revenue has been repeatedly enhanced of late years, and nothing short of a wave of popular intemperance would raise it sufficiently to meet the new needs; it is conceivable that a province experiencing the effects of a sudden industrial revolution might drink and drug itself into temporary financial equilibrium, but even schools and universities may be too dearly purchased, and all friends of India will join in the hope that no such calamity is in store. Abandoning the idea of any large and sudden increase in revenue from such sources as those to which we have referred, we see only two courses before the new administrations; they may proceed cautiously at first, taking a little here and saving a little there, devote their modest surplus mainly to material developments which will bring a quick return, and postpone for a time the larger programmes of education and sanitation; or they may fall back on the unearned increment of land in the country as well as in the towns, the one great source of income on which Indian despots and oligarchs have relied for so many centuries, and finance their ambitious schemes either by a direct enhancement of the land revenue, or, like innumerable predecessors, by the imposition of supplementary cesses, destined to be incorporated in the revenue in process of time. The constitution of the provincial Legislatures is as yet so uncertain that it would be folly to venture on a prediction regarding their choice between these alternatives, but it is by no means improbable that the initial grouping of parties will be determined by differences of opinion on this particular question, the more ardent reformers pressing for a bold financial policy, while men of moderate views may hesitate to risk the hostility of the powerful landed interests. The position will in any case provide a critical test of the statesmanship of the new authorities; we are content to see the decision in their hands, and we ask only that they should not be fettered at the outset by interference from above. The need for vigilance is shown by the fact that the Joint Committee of Parliament have recommended legislation which would in effect endow Indian landholders with a large proportion of the unearned increment now available for the needs of the country as a whole. Such legislation would, in our opinion, be utterly indefensible at the present juncture. We are calling on the provinces of India to manage their own affairs, and considerations of justice, as well as policy, require that we should refrain from curtailing their discretion in disposing of the only great source of revenue which they now command.

A DANUBIAN FEDERATION.

By "Wayfarer."

The tidings that the Supreme Council is meeting again in Paris are possibly expected to have the same soothing effect as had that blessed word "Mesopotamia" on an audience perhaps as strong in the faith and probably as limited in number. The mountain is in the throes again and hopes to produce, among other events, a solution of the Adriatic difficulty. Also the Hungarian delegates have arrived in Paris to sign a peace which should help to clear the situation in Near-Eastern Europe, if only it arrives at showing the Hungarians their proper place in the general scheme of things as results from the war they provoked. In the meantime other factors have been active in a direction which is likely to affect the whole course of Europe's political and economic development. It was from Vienna that the dogs of war were unleashed, and it is from Vienna that Dr. Renner, the Austrian Chancellor, has set out for Prague to plead with the Government of the Czecho-Slovak Republic for the re-establishment of economic relations which Vienna was wont to dictate to the subject Czechs. There are indications that this step may be followed by others; Poland is said to be willing to come to an economic understanding with Czecho-Slovakia, and it is by no means likely that Hungary will care to be left out. This move would react strongly on the other States of South-Eastern Europe, the Danubian States, and notably on Yugoslavia. Here, then, appears to be the beginning of a real "League of Nations," based on economic conditions by which political relations will be regulated. And this is happening without the guidance of the Olympians of the Supreme Council; let us hope they will have the sense not to interfere.

In this new movement, which may well extend to the Adriatic and the Black Sea, the lead is taken by the able men who guide the destinies of a new State, the Czecho-Slovak Republic. Though this country does not, strictly speaking, come within the range of THE NEAR EAST, it is well to take note of its position and of the lines along which it plainly intends to develop its outward economic relations. Bohemia, unlike Hungary, never centralised all industrial enterprise in the capital; so there are a number of important industrial cities, of which Bratislava is likely to become the most prominent. A singularly attractive little town is Bratislava (Pressburg, or Pozony, according to Czech, German or Magyar version), lying with its back protected from the northern blasts by the wooded spurs of the Carpathians, facing the broad Danube and the wide Hungarian plains. For many centuries a happy and prosperous community, it has its flourishing industries and its important Danube traffic growing yet more voluminous as Vienna decays. To this must be added the possibilities of the Morava, which flows into the Danube near Bratislava, and which will connect up the Central European waterway, the Danube, with the North Sea and Baltic by way of Elbe and Oder. So the Danube is about to resume its work of centuries in connecting up the peoples that live on its banks in friendly commerce, at the same time relieving the worn-out and rather arbitrarily planned railway system of the late Austro-Hungarian Empire.

The admission of Austria, or whatever remains of the Duchies of Upper and Lower Austria, within a Danubian Federation may cause misgivings in a certain group of European politicians. They argue that nothing should be done to revive Austria, possibly under the Hapsburger again, as a dominant factor in European politics. But Austria is "down and out," and is about the only enemy of the Entente that realises that it has been beaten, and that it is indeed undergoing a just punishment for its crime against humanity. Left to itself Austria will die, but, as a deceased political body with an unholy past, would be a distinct danger to the peace of Europe, whereas gathered into a federation of States considerably stronger, the little good left in Austria might be turned to some useful account. There was at one time a suggestion that Austria would seek refuge with the confederation of German States, or German Empire, as it persists in calling itself, and this met with serious objections in certain quarters of Entente diplomacy, as strengthening the German element in Central Europe. This objection is surely based on groundless fears. To a close observer of tendencies which became manifest at the very outbreak of the war, it is obvious that German Austria has always been a source of weakness to "Teutschtum," that it is obviously more so now, and that any federation of the Austrian Duchies with the German Empire will eventually lead to a sharper phase of the "Kultur Kampf" and an eventual segregation of German Protestants and German Catholics into hostile camps. There remains, then, this opportune movement, inaugurated by the Czecho-Slovak Republic, of combining those whose economic existence is influenced by, if not dependent on, the Danube, into some economic understanding. True, this combine may in rough outline recall the defunct Dual Monarchy, but its composition is very different. Taking its prospective members from North to South, we have first the Czecho-Slovaks, efficient and purposeful, and full of confidence in the future of their State.

Then Austria, starving and crippled, calling only for a pittance to keep body and soul together for yet another day, and, therefore, hardly likely to recall expensive Grand Dukes in order to revive the vanished Habsburg tradition. Hungary next, perhaps the most difficult problem because least understood in this country, where really next to nothing is known either of the Magyars or their history. There is a sort of tradition of friendship between Hungary and England which, after careful inspection, boils down to little more than is suggested by the old song of the "squire of low degree who loved the King's daughter of Hungary"; there have been sporting amenities between Englishmen and Magyar magnates; and early Victorian sentimentality welcomed Hungarian political refugees to this country. The casual visitor to Hungary was not allowed to see what was going on underneath the superficial *bonhommie* of those Hungarian sportsmen; how every effort of other races in the land, Croats, Roumanians, and Ruthenes, to fit themselves for service in the higher offices of the State without disowning their racial traditions was ruthlessly suppressed by the minority of Magyars and international Semitic financiers. The stupid cruelty of Austrians paled before the ferocity of the Magyars in invaded Serbia. Having been beaten in war, the Magyars must face the consequences and appreciate the fact that they are no longer a power, not even a little one; but are nothing but an incident in the resetting of racial questions on lines more equitable than the former rulers of Hungary (and its people) were capable of conceiving or willing to carry into execution. But the Hungarian, opportunist as he is, may remain a possible danger to the peace of Central Europe. This Michael Karolyi proved sufficiently when he handed his country over to Bolshevism in order to scare the Olympians. He succeeded, too; but as the Hungarians, thanks to the efforts of Roumania, who knows her Western neighbour very well, have found that Bolshevism does not pay, they are trying other methods. This time they are posing as the victims; Magyars and international finance—under the guise of Roman Catholics and Unitarians—are appealing piteously against alleged religious persecution at the hands of the Roumanians. The Roumanian is not a saint, and does not profess to be one; he is, at least in the Banat, in Ardeal and Bukovina, what his Hungarian oppressors have made him; and this latest Hungarian move is no doubt clever propaganda, as it appeals to the muddle-headed religiosity of the kind that sends flannel petticoats to the ladies of Central Africa, who would much rather go on wearing nothing. For all its cleverness, this propaganda may yet defeat its own ends, as it is near to overstepping the limits of poetic licence.

But it is Hungary as economic factor, not as a picturesque mediæval survival, which should concern us. In this respect is Hungary meeting with just retribution. In order to make the oppression of the subject races easier and of more effect, not only the political but the economic life was centralised in the capital: outside Budapest Hungary has no large manufacturing

centres, not even in the districts of Petrosany and Medias, rich in raw material. Towns like Arad, Kolosvar, Zagreb were really little more than enlarged markets for country produce. Now that the provinces inhabited by Croats, Slovaks, and Roumanians have been incorporated each in its respective motherland, Hungary's state is that of having a heart too large for its body. There remains to Hungary nothing but an overgrown capital amid a purely agricultural country, a capital with thousands of factory hands whose livelihood depends upon the disposition of their neighbours to part with raw material. The commercial importance of Budapest is therefore considerably impaired, and it no longer compels the affluence of raw material from subject provinces, but is rather dependent on the goodwill of the State into which those provinces have been merged. If Bratislava continues to grow in importance, Budapest will sink to a second-rate status as a Danube port. The Hungarians are probably fully alive to this fact, and will therefore not be found adverse to any suggested resumption of economic relations with their neighbours. We must except the Roumanians, for whom the Hungarians seem to cherish a deep hatred, and against whom their ingenious propaganda is chiefly directed. This should eventually bring them to consider closer relations with their southern neighbours, the Yugoslavs. The kingdom of the Serbs, Croats, and Slovenes ranks second only to Great Roumania as a Danubian country; for though it controls a lesser length of the river than does Bulgaria, the Yugoslav section of the river drains the rich agricultural lands of the Serbian Banat, of Syrmia, and Baranya, as also the valleys of the Save and Bosna with the increasingly important industrial centres Zagreb and Serajevo.

The possibilities of " S.H.S." are not yet sufficiently realised by the British public. This is due to various causes, chiefest among them an insidious anti-Yugoslav propaganda, and also that people's ineptitude as propagandists in their own interests. There yet obtains in many circles an idea that the Yugoslavs are not far removed from brigands, picturesque and illiterate. A visit to the town mentioned above would help to remove this impression, and throughout the country of S.H.S. there is a very marked movement towards more intimate relations with Western, and more especially English, thought and culture. The charge of illiteracy and want of culture which is often brought against the Yugoslavs, and originates in Italy, would be amusing were it not so unjust. Statistics on the subject of illiteracy would probably show that Italy has no reason to claim any superiority in that respect over her Adriatic neighbour.

The Yugoslavs are taking their economic development very seriously, and up till now their efforts have been hindered rather than helped by their friends and Allies. They now have foodstuffs to export, and this fact is about to lead to a resumption of economic relations with starving Austria, again a move in the direction of a Danubian Federation, as traffic would pass through Hungarian territory, and this would act as an inducement to the Hungarians to set their house in order and get to business, in fact, to seek inclusion in the inevitable economic scheme. So the very thing that Italy has been trying to prevent bids fair to become a reality, and in a measure it is Italy's doing. Italy's policy from the thrilling days of the Congress of Rome in April, 1918, up till quite recently, has tended to frustrate any co-operation of the Danubian States (which co-operation could only be regarded as a step towards a peaceable settlement) by separating those states into rival groups, by encouraging Hungary and Bulgaria. Of these two, the one tried to wring concessions from a sacred Supreme Council, by adopting Bolshevism, and the other showy symptoms of socialistic unrest, possibly due to disappointment. According to Signor Nitti, the policy of Italy, which up till his advent to power recalled Sismond's history of the City Republics, has undergone a change. The vexed question of Fiume is to be settled. Fiume has, says Signor Nitti, a sentimental value to Italy: so has Rjeka for the Yugoslavs, and so it always had before the Venetians held the city for a short period in the 16th century, before the Hungarians stole it, and throughout the weary times when Hungarians encouraged the Italian colonists against the original Slav owners, even allowing the former to translate its name into their own language.

Throughout all the gloom and anxiety caused by the Supreme Council's want of decision and direction in dealing with Adriatic difficulties, the conduct of the Yugoslavs is the one bright spot. It would not have required any great military effort to dislodge D'Annunzio and his brigands; perhaps even persuasion in pecuniary form might have availed; yet the Yugoslavs restrained themselves, in loyalty awaiting some decision from the Supreme Council. Their action has entailed one serious loss to themselves: Field-Marshal Mishitch, one of the greatest leaders this war has produced, felt it impossible to remain in command of the Yugoslav armed forces under the affront offered to his victorious army by his country's Allies. Their failure to act in face of D'Annunzio's outrage was more than any honest soldier could stand, so Voivoda Mishitch, kindest of men, most modest of heroes, has retired from his high position. The Yugoslavs, who are rapidly losing their illusions as to the friendly relations of at least some of their Allies, have their own ideas as to the Fiume question. They consider that Italy's claim on Fiume is based on the fear that it may adversely affect the commerce of Trieste, that Italy's intention is to kill Fiume as a port, and that this would certainly happen even were Fiume to become a free port under an Italian mandate. They may be mistaken, but it must be admitted that their conclusions are not altogether groundless. In the meantime, while the Fiume question remains undecided, they are turning elsewhere to "the evils that they know" possibly, but evils which they are now in much better case to cope with. There is a modern German saying " in Geldsachen hört die Gemüthlichkeit auf," which, being interpreted, meaneth that there is no occasion for " bonhommie " in business matters, so the Yugoslavs may well resume business relations with their former enemies, if their friends are disinclined to trade with them. This applies particularly to the British business man. He is not altogether to blame, for the uncertainty which has reigned in Central Europe since the Armistice has not encouraged a venturesome trade policy. Moreover, the British business man has not been adequately supported by his Government. There has been much talk of helping trade, but little has come of it. Yugoslavia is as yet without consuls, and no commercial councillor has been appointed to that country, and, even were these posts filled, it is doubtful whether the Government would have found the most suitable men. For instance, Fiume requires a strong man to represent British interests—the usually worthy type of consul is not a big enough man for so exacting a position. It is a Treasury question, and while the Treasury is harassed by finding large sums for extravagant projects at home, it can hardly be expected in these days of political advertisement to spend much on representation abroad. The incipient economic federation of Danubian States offers great possibilities to the British business man, among new States which are only too keen on his expert co-operation. It makes for peace and for considerable expansion from the North Sea to the Baltic, to the Adriatic and the Black Sea, and will surely influence the reconstruction of Germany. It rests with the British business man, then, to take his due place in a scheme which will do more than all the Supreme Councils or Leagues of Nations towards leading Europe into the "Way of Peace." Needless to say, his old trade rival, the German, is already taking a lively interest in this new development of Central European affairs.

A Reuter message states that on December 29, 1919, the Roumanian Parliament, consisting of deputies from all parts of Great Roumania, ratified solemnly the decrees for the union of Bessarabia, Bukovina, and Transylvania.

An official report on the lately disclosed plot against the present Greek *regime* states that the aim of the conspirators, all ex-members of the Greek Army, was to seize power after having previously assassinated M. Venizelos and the principal leaders of the Liberal Party.

THE CARAVANSERAI.

Think, in this batter'd Caravanserai
Whose Doorways are alternate Night and Day,
How Sultán after Sultán with his Pomp
Abode his Hour or two, and went his way.

Bessarabia is in for a bad time on February 8, according to a gentleman who is described, alliteratively, by a local paper as "the well-known weather prophet who lives in Wimbledon." This authority predicts that on the date mentioned Bessarabia will be visited by an earthquake; and as his predictions in this line are said to have an uncomfortable way of "coming off" I feel quite glad I am not in Bessarabia, nor likely to be on the fateful day. The prophet foretells other earthquakes, for South Africa (February 20) and Central Europe, "about 48 degrees No. Lat., about midnight on March 2." There is also to be a volcanic eruption in the East Indies on February 7; so that, on the whole, Mother Earth seems to have a busy time ahead. To my mind, the most uncomfortable touch in this long catalogue of evils to come is the statement that the earthquake of March 2 (prox.) is mentioned as "a repetition of that of September 2, 1884, in Austria." I never did have a good opinion of earthquakes, and if they are of such a vindictive, sulking nature as this, my opinion of them will sink still lower.

***

Modern journalism is very enterprising, as we are constantly being reminded by the modern journalists. We all know, for instance, how the "5 o'clock editions" of the evening papers make their appearance at some time well before 3 o'clock in the afternoon, with the other editions running them very close; and how both morning and evening papers give us "bright" and "snappy" reports of everything that happens just as soon as it happens, occasionally before it does happen, and sometimes even when it does not happen according to expectations. But perhaps the greatest differences between the modern journalism and the old lie in the way in which the former concerns itself with personalities, and the familiar note—not to say the note of familiarity—which runs through its jazz-like performance. Whether this helps us to form a truer judgment on men and things, I cannot pretend to say. I merely note it as a phenomenon.

***

What led me to this disquisition was a paragraph in the account sent from Paris, by the representative of one of the Sunday papers, of the final ceremony in the Peace negotiations. This picturesque writer (that is, I fancy, the correct expression!) informed his readers:—

"When the representative of Bolivia had signed, the 'Tiger's' shrill voice was heard ringing across the hall: 'Any more want to sign?'"

What I want to know is whether we are to accept this description as accurate, and to conclude that the Prime Minister of the French Republic has no sense of the fitness of things, or whether the "picturesque writer" allowed his imagination to run away with his judgment. In the latter case there is no more to be said; but If M. Clemenceau really did behave as he is represented to have done—what an admirable railway porter he would make!

***

That reminds me, by the way, of a little tale I heard about the Peace Conference. Just as the Bulgarian Delegates were about to enter the room to sign the Peace Terms, the head of one of the Great Powers turned to a secretary and said: "Let me see, are they a republic or a kingdom?" No: it was *not* Mr. Lloyd George. Teschen has taught him quite a lot. But—poor Bulgaria!

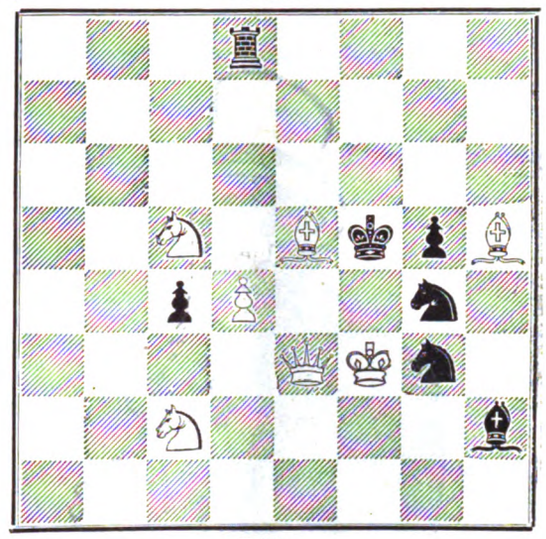
A MUSEUM FOR PALESTINE.

The Palestine Museum has been established in Jerusalem, and is to be open at present on Fridays, Saturdays, and Sundays (the Sabbaths of the three religions of Mohammedanism, Judaism, and Christianity). The museum has hitherto existed as part of the Bezalel School of Arts and Crafts founded by the Zionists, and although it was only established in 1906, it already contains over 3,000 exhibits, including, in addition to statuary and paintings, a valuable collection of ancient coins, many specimens of ancient pottery, glass, and brassware, Palestinian birds, animals, reptiles and insects, minerals, embroidery, jewellery, and articles used in Jewish ritual and ceremonial. Jewish artists in all countries have promised pictures, sculpture, etc., and a special section is to be established referring to the British conquest of Palestine.

CHESS.

PROBLEM No. 10.
Black.



White.

White to mate in two.

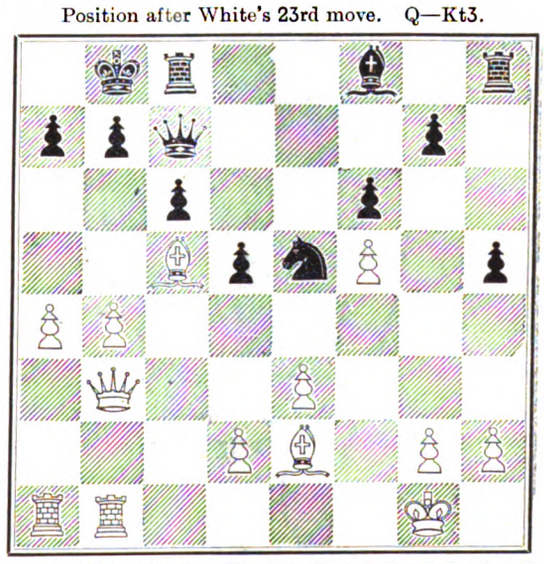
The above problem, by F. Vaux Wilson, jun., Philadelphia, won the first prize of the Good Companion Chess Problem Club for November, 1915.

Solution to Problem No. 9.—1. Kt—Q4, P x P; Q—KKt8; if 1 . . . . Kt any 2. Q—B6(ch); if . . . . P—K4, 2. Kt—Kt4.

Solution to Problem No. 8.—1. Q—K6, R—QB7; 2. Q—KKt6; if 1. . . . B—K7; 2. Q x KP.

The following game was played in Section C of the City of London Chess Club Companionship. Opening Irregular. 1. P—KB4, P—QB3; 2. P—QKt3, P—Q4; 3. B—Kt2, B—B4; 4. P—K3, Kt—Q2; 5. Kt—KB3, P—K3; 6. Kt—B3, KKt—B3; 7. B—K2, Kt—K5; 8. O—O, Kt(Q2)—B3; 9. Kt—Q4, P—KR4(1); 10. Kt x Kt, Kt x Kt; 11. P—B4, Kt—Q3; 12. P x P, KP x P; 13. Kt x B, Kt x Kt; 14. B—Q3, Q—Q2; 15. Q—B2, Kt—Q3; 16. P—B5, 0—0—0; 17. B—Q4, K—Kt; 18. P—QR4, P—B3; 19. P—QKt4, Kt—B2; 20. KR—Kt, R—B; 21. B—B5, Kt—K4; 22. B—K2, Q—B2; 23. Q—Kt3(2).

Position after White's 23rd move. Q—Kt3.



23. . . . Kt—Kt5; 24. B x Kt, P x B; 25. P—Kt3, B—Q3; 26. B x B, Q x B(3); 27. P—Kt5, P—B4; 28. P—Q4, P—B5; 29. Q—R3, Q—Q2; 30. P—Kt6, P—R3; 31. R—KB, R—R4; 32. QR—K, R—K; 33. R—B4, R x P; 34. R x P, R—B6; 35. R—R4, P—Kt4; 36. R—R6(4), K—R(5); 37. K—Kt2, P—Kt6; 38. R—R4, Q—K3; 39. P—R3, P—B4; 40. P x P, P x P; 41. Q—Kt2, Q—K5; 42. Q—Kt, R x KtP(ch) and wins (6).

(1) Black opened with several indifferent moves, of which this is a notable example; but though weak now it proved subsequently of very considerable value when Black, hard pressed, launched a counter-attack.

(2) At a *prima-facie* inspection it would appear at this point to be White's game. But by a simple manœuvre, for which the last few moves have been the preparation, Black is able to force exchanges, leaving himself with a won game.

(3) Now White's position has lost its strength.

(4) Putting the Rook out of play.

(5) Necessary because the threatened check was retaining the Queen for defence.

(6) There is now a mate in nine as follows:—43. K x R, Q—B6(ch); 44. K—R2, Q—B7(ch); 45. K—R, Q x R(ch); 46. K—Kt2, Q—R6(ch); 47. K—Kt, Q—Kt6(ch); 48. K—B, Q—B6(ch); 49. K—Kt, R—R, and mates in two moves.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

Complaints are still reaching me regarding the shortcomings of the postal and telegraphic services between the United Kingdom and the Near East. The latest is from a correspondent who has just returned home after several months spent in Constantinople. "The services," he writes, "are simply scandalous, and the result is that British trade is suffering, while the French, Italians, and others are reaping an advantage. The British Government ought to take steps to remedy matters without delay." As I have pointed out time and again, the question is one which emphatically calls for prompt action on the part of the authorities, who are in a position to know the reason for the unsatisfactory state of affairs, and should be able to devise a remedy without much difficulty. If it were a question of all countries being treated alike it would be a different matter, but that is not the case, for France and Italy appear to have no difficulties in regard to communications with the region in question.

***

My correspondent proceeds to comment on the trade position with regard to Constantinople. "Imports and exports," he points out, "are naturally restricted until the treaty has been signed and more shipping has been released. Trade, therefore, cannot develop, and, besides this, there is the everlasting question of exchange, which makes every good business man very careful and renders any extra big transaction very difficult." He further remarks on the great activity that has been shown by foreign countries. "The French, Italians, Spaniards, and Americans are all dumping goods into the city," he continues, "and I anticipate great competition in the future. Before the war one hardly ever saw any American mercantile tonnage in Constantinople, and not more than one Spanish steamer per annum would find its way to the Bosphorus, but since the armistice both these flags have been seen in those waters almost weekly without exception."

***

This simply bears out what I have said in these columns with regard to future competition for the Near East markets. But, granted that other countries have made the fullest use of their opportunities in 1919 in the Near East, and that it was only in the latter part of the year that British merchants were beginning to bestir themselves, there is little in the position now as I see it that need give rise to pessimism. In his brief reference to trade my correspondent does not give the whole picture. The past year was in every sense an abnormal period, and one which, from the commercial point of view, can scarcely be taken as a criterion for the future. Certainly no one would dream of attempting to obtain any useful conclusions by a comparison of the trade figures with those of the pre-war year or with those of the current year. Our competitors as a whole were first in the field mainly because they were better prepared for the renewal of the commercial conflict; some of them, be it noted, had been only indirectly affected by the war, and were thus in a most favourable position. But while they gained, to use a colloquialism, a "flying start," it yet remains to be seen how far their enterprise has been successful.

***

On this question I have received an interesting communication from another correspondent. "As was only to be anticipated," he writes, "America of all the Allies stood in the best position to supply the immediate needs of Europe, and she was not slow in taking advantage of the opportunity that offered itself of capturing the Near East markets. Speculative shipping of all kinds of goods was carried on on a vast scale, reaching remarkable figures. This activity caused no little anxiety among British merchants who, hampered by Government control, labour troubles, lack of transport, and shortage of labour, felt that markets of the utmost importance to the United Kingdom as a mercantile nation were being wrested from us. A few months were sufficient, however, to prove the groundless nature of these fears, and to-day the British trader is rapidly forging ahead in a manner that excites the admiration and wonder of the world."

***

"After all," adds my correspondent, "it is really not to be wondered at that, despite the entrance into the field of new and redoubtable commercial rivals, the British trader, once he was able to resume unfettered competition, should be successful. Have not some of the Near Eastern markets been studied and catered for by the British merchant for hundreds of years? He does not gamble with merchandise. He knows what is wanted, and only sends what can be paid for. He has the confidence of Near Eastern merchants, and I am in a position to state that his goods are to-day in ever increasing demand. Any possibility of the Americans capturing the Near East markets is not now entertained for a moment. The huge shipments sent by America to the Near East are not likely to return the huge profits expected, and one need not be surprised should some heavy losses eventually result, due to want of knowledge of the market and ignorance of the class of merchandise required."

***

It now rests with the shareholders of the three Presidency Banks to pass their verdict on the scheme for the amalgamation of these institutions to form the Imperial Bank of India. It is open to question, as I think I pointed out recently, whether the end in view, the development of banking facilities in India, could not have been achieved by another method, the establishment of a new banking institution; but at the same time, if India is to have a national bank, there is undoubtedly much to be said in favour of the fusion of the three Presidency banks. Incidentally, there is one important factor which is not without bearing on the situation. It will be remembered that not many months ago there was a prospect that one of the great joint stock banks would acquire control of one of the Indian exchange banks. In a circular sent recently to the shareholders of the Bank of Bengal it was suggested that developments of this character were probable at an early date, and it was stated that to combat this and to retain their prominent position it becomes absolutely necessary that the three Presidency banks should consolidate by amalgamation.

***

On the following page will be found an important despatch from our Cairo Correspondent on Egypt's finances in 1918. The revenue amounted to £E27,661,289 and the expenditure to £E23,384,326, there being thus a balance of £E4,276,963. It is pointed out in an accompanying Note that the surplus cannot, however, be taken as a true index of the position. The revenue has in some respects been inflated by the abnormal conditions, while the difficulties of obtaining material have prevented Administrations from expending credits.

EGYPT'S FINANCES IN 1918-19.

Substantial Revenue Surplus.

(From Our Own Correspondent.)

Cairo, Deceniber 26.

The final accounts for the 1918-19 financial year have at last been published, and the figures show a remarkably prosperous result. Revenue came to £E27,661,289 and expenditure to £E23,384,326, thus leaving a surplus on the year's working of £E4,276,963. The revenue exceeded the estimates by £E4,761,289 and the expenditure the figure forecasted by £E134,326. From the surplus a sum of £E67,304 has been taken, as representing the seigniorage on coinage during the year, and has been added to the silver reserve fund, which now stands at £E1,452,561; whilst the balance of the surplus, viz., £E4,209,659, has been added to the general reserve fund, bringing the latter to £E10,979,838 on April 1, 1919.

The extraordinary manner in which the finances of the country have expanded during the past six years is well brought out in the following table:—

Year.	Revenue. £E.	Expenditure. £E.	Surplus. £E.
1913-1914	17,703,898	17,659,961	+ 43,937
1914-1915	15,389,124	16,857,783	—1,468,859
1915-1916	17,759,418	16,594,666	+1,164,752(1)
1916-1917	19,927,274	17,240,606	+2,686,668(3)
1917-1918	23,166,074	22,496,948(2)	+ 669,126(3)
1918-1919	27,661,289	23,384,326	+4,276,963(3)

(1) Apart from this surplus an amount of £E1,270,407 was written off for depreciation of reserve securities.

(2) Including a grant of £E2,967,956 to the British Government towards war expenditure.

(3) In 1916-1917 £E996,000, in 1917-18 £E389,257, and in 1918-1919 £E67,304 were transferred to Silver Reserve Fund to meet possible loss on recall of silver coinage issued during the war.

Revenue exceeded that realised during 1917-1918 by £E4,495,215, and expenditure that of the preceding year by £E887,378. The main increases in revenue were, customs £E1,029,660, tobacco dues £E345,804, excise £E218,723, railways £E1,987,443, telephones £E251,005, ghaffir cess £E148,259, interest on investments £E445,251, and extraordinary receipts £E200,820. The only item showing a decrease of any importance was miscellaneous receipts, which fell off by £E199,177. On the expenditure side, the chief increases were frontiers districts £E109,674, Education £E72,617, public health £E189,565, irrigation £E144,018, railways £E523,048, mechanical service £E136,393, ghaffirs £E188,445, War Office £E570,722, war gratuities £E924,782, whilst important decreases were recorded under telephones £E269,006 and war expenditure £E2,449,246. It is interesting to note that the railways telegraphs and post office paid their way, the deficit under telephones being due to the fact that the purchase price of £E750,000 is being paid out of revenue, and the past financial year bore the balance still due to the company. The attached table shows the extraordinary development which the revenues of the country have undergone since the first year of the war under each of the important headings.

	ACTUAL REVENUE				
	1918 £.E.	191 £.E.	1916 £.E.	1915 £.E.	1914 £.E.

Total.....	27,661,289	23,166,074	19,927,274	17,753,418	15,389,124

The inflation of the revenue is, of course, due to the special conditions created by the war, and in a note issued with the final account the Ministry of Finance points out that the surplus realised this year calls for material reservations. In the first place interest on investments (coming from the note issue) and extraordinary receipts, which are the items showing the greatest increase over estimates, rising from £E1,246,000 to £E2,350,000, are swollen by circumstances the continuance of which cannot be relied upon to give equally favourable results year by year. Secondly, the increase of £E1,350,000 over estimates recorded in Customs receipts is due to the abnormally high level of prices. On the other side of the account, it is pointed out that although supplementary credits amounting to no less than £E1,853,773 were granted during the year, the estimate was only exceeded by £E134,326, which shows that the administrations to which they were granted were unable to carry out the work projected, mainly due to difficulties in the way of procuring material and supplies and to lack of labour. The most notable instances appear to have been the public works and the state railways, where the expenditure was respectively £E444,000 and £E1,063,000 less than the estimate. These sums are postponed expenditure rather than true savings, and, considering that the arrears of maintenance to be made good in the course of the next five years in the case of the state railways alone are estimated at £E7,000,000, one must agree that the surplus of the past financial year, although very satisfactory, cannot be regarded as a true index of the country's budgetary position. The financial stability of the Egyptian Government is on the face of it excellent, since it has been possible to build up the reserve since 1913 to double its pre-war figure; but unless that total is very much to be depleted it will be necessary for the financial authorities to open up new sources of revenue to meet not only the heavy arrears of maintenance, new works, etc., which have had to be postponed during the past five years, but also the demand made for economic and social development, and the shrinkage which existing sources are sure to undergo in the near future.

AMERICAN ENTERPRISE IN ROUMANIA.

H.M. Commercial Secretary at Bucharest states that a steamer from the United States of America recently discharged at Galatz a quantity of merchandise, of which the following appeared to be the principal items:—Caustic soda, oxide of zinc, candles, shaving soap, ordinary soap, borax powder, stearine, nails, wire, tin, galvanised tin, screws, and ironware, together with 50,000 pairs of shoes and a quantity of coffee, paper, salt fish, saccharine, and a small quantity of window glass, toilet articles, typewriters, machine belting, asbestos, motor-cars, socks, cotton goods, cotton thread, and a few thousand pairs of stockings.

A number of American commercial travellers are strenuously endeavouring to sell their merchandise in this market. They appear to meet with a certain measure of success in selling what may be called distinctively American goods, such as thread and half-silk socks and stockings, American-shaped boots and shoes, typewriters, and some few other articles, such as special toilet articles, i.e., American shaving soaps, but in articles such as cotton sheeting and cotton piece-goods they do not seem to be able to withstand the competition of Manchester firms. The same conditions apply to a great extent in the iron and steel trades, although one or two quite large sales have been made, c.i.f. Galatz, upon a cheaper basis than could have been done from the United Kingdom.

Lord Allenby has issued a proclamation removing restrictions on the import into and the negotiation of securities in Egypt.

The death is announced of M. Victor Béret, secretary of the Suez Canal Company.

The receipts of the Egyptian Markets, Ltd., for the six days ended December 31 were:—Cattle markets, £1,407; general markets, £591; total, £1,998; total for year, £64,266. The figures for the corresponding period in 1918 ended December 31 were:—Cattle markets, £743; general markets, £378; total, £1,121; total for year, £55,199.

The Egyptian Cotton Crop.

By John A. Todd

1.—THE PRESENT POSITION.

The recent spectacular rise in the price of Egyptian cotton has naturally aroused a great deal of discussion as to its causes, and as to whether it has yet reached its limit. These causes go a long way back into the history of the crop. For many years before the war the crop had been on the whole steadily increasing, though the increase was not keeping pace with the expansion of acreage. The extension of the Egyptian crop is limited by the irrigation facilities available, and as these had been increasing ever since the British Occupation, it was natural that the acreage should show a steady upward tendency.

On the other hand, it had become apparent even before 1909 that the average yield per acre was steadily diminishing, and the disastrous crop failure of that year only brought matters to a head. From that time till the outbreak of war considerable progress had been made towards tackling the problem of water-logging. The scheme evolved would have had the double merit of restoring the Middle Zone to its former productivity, and at the same time adding to the available area about a million acres in the derelict Northern Zone, which would have meant a very desirable addition to the total crop. Unfortunately, it was found that the reclamation works which would have to follow the completion of the drainage scheme required even a larger water supply than was then available, and so the White Nile Dam scheme had to be taken up. Thus the process of remedying the harm done and adding permanently to the acreage under cotton in Egypt, was likely to occupy some years; but a certain amount of progress had been made before the war, and the prospects of the Egyptian crop in 1914 were brighter than they had been for a long time.

Reduction of Acreage.

The war unfortunately played havoc with all these schemes. The slump in prices in the autumn of 1914 destroyed for the time being all confidence in the demand for cotton; and in any case the war made it impossible to go on with huge engineering schemes. Thus, during the war, as will be seen from the following table, the acreage suffered serious diminution; but this was rapidly being recovered in 1917 when the exigencies of the war again compelled a serious reduction of the area to be put under cotton in 1918, in order that the supply of locally grown cereals might approach more nearly to the abnormal demands of the Army and civilian population, aggravated by the difficulty of bringing foreign supplies into the country owing to the submarine menace. Thus the crop was again thrown back, and the 1918 crop was smaller even than that of 1909. The recovery which might have been expected in 1919 was to some extent spoilt by the serious disturbances in the spring of the year, and the acreage is still far short of pre-war records, but the estimates of the crop have been round about 6¼ million kantars. We are thankful for small mercies in these days!

ACREAGE, YIELD AND PRICES OF THE EGYPTIAN CROP, 1913-20.

Season.	Acreage.	Per cent. on 1913.	Crop.	Yield per Acre.	Liverpool Prices (pence per lb.)		
					Lowest.	Highest	Av'rage
	Feddans.		Kantars.	lb.	F. G. F. Brown.		
1913-14	1,723,094	—	7,684,172	444	8·15	10·45	9·44
1914-15	1,755,270	102	6,490,221	369	6·30	8·30	7·34
1915-16	1,185,004	69	4,806,331	406	7·50	11·90	10·42
1916-17	1.655,512	96	5.111.080	310	11·60	31·50	21·56
1917-18	1.677.310	97	6.307 618	375	28·56*	35·50	30·97*
1918-19	1,361,000	79	4,820.6:0	355	26·59*	30·19*	27 85*
1919-20	1,573,662	91	*6,000 000*	*3 0*	—	—	—

The figures in italics are estimates. * Sakel.

Lower Average Yield.

There is, however, a further unsatisfactory feature in the statistical record of the crop during the war, namely, the marked accentuation in certain years of the reduction in the average yield per acre. An examination of the statistics on this point brings out two things. In the first place, there has been a very marked fluctuation in the average yields, and, second, even the best year since the war does not give an average yield equal to that of pre-war years. This suggests two causes. First, the old trouble of water-logging has not yet been cured (as, of course, we know it has not), because the years of lowest yield are the years of high flood, while the years of lowest flood gave the best yields. Second, the cause of the continued reduction in the average yields of the best years is the ravages of the pink boll worm. This also was due to the war, for the measures which were introduced by legislation just before the war could not be enforced owing to the impossibility of getting the necessary plant from Europe. It is to be hoped that this difficulty will now be got over, and that the damage done by pink boll worm will be steadily diminished in future years; but the position of the Egyptian crop will never be satisfactory until the much more deeply seated evil of water-logging is dealt with thoroughly and conclusively.

Government Control.

The last phase of the effect of the war upon the crop was the Government control of the 1918 crop, which came to an end on July 31, 1919. The sudden jump in price which immediately followed, very naturally gave rise to the impression that the control had been keeping prices down, but it is only fair to point out that this was by no means true of the control throughout its whole period. On the contrary, the control was responsible for maintaining the price throughout the season at a comparatively steady level, which was during a large part of the year much higher than would have been the case if prices had been left free to follow the general tendency of the market, as represented by the price of American cotton. The following table shows the relative prices of American and Egyptian cotton during the season, and it will be seen that, when American cotton slumped heavily during the season, the control held Egyptian prices up, but in the latter part of the season American recovered and Egyptian was kept steady. On balance Egyptian prices probably gained substantially by the control:—

AMERICAN AND EGYPTIAN PRICES, 1918-20.

Date.	American Good Middling Boweds.	Egyptian F. G. F. Sakel.	Premium Per Cent	Date.	American Fully Middling.	Egyptian F. G. F. Sakel.	Premium Per Cent.
1918.				1919.			
Aug. 1 ..	21·57	30·19	37	May 2 ..	17·89	26·59	50
Sept. 6 ..	24·58	30·19	22	June 5 ..	20·10	27·09	35
Oct. 4....	24·06	29·40	22	July 4....	20·04	27·09	35
Nov. 1 ..	21·89	29·40	34				
Dec. 6 ..	20·79	27·56	32	Aug. 8 ..	19·13	31·00	56
1919.				Sept. 5 ..	18·75	30·00	55
Jan. 6....	19·20	27·30	42	Oct. 3....	20·38	30·00	48
Feb. 7 ..	17·77	27·30	54	Nov. 7 ..	26·30	37·50	42
March 7..	15·96	27·09	70	Dec. 5....	26·37	49·00	86

				Jan. 2 ..	30·41	55·00	80
				„ 13 ..	29·93	64·00	114

The fact remains, however, that Egyptian prices jumped substantially on the removal of control, but, as will be seen from the continuation of the table into the current season, the rise was not maintained, because American fell again in August and September. The great rise which has taken place in both American and Egyptian since is due not only to causes affecting the American crop particularly, but also to the special conditions affecting the Egyptian crop. The former will be dealt with in a subsequent article. In the meantime it may be noted here that history has apparently been repeating itself with regard to the prospects of the Egyptian crop. The sudden rise in Egyptian in November has all the appearance of being due to the realisation by those on the spot that the crop was not going to be so large as the most optimistic estimates had forecasted. The market has been caught short again, as it has been several times in recent years, and the difficulty of finding cotton to fill contracts has sent prices soaring. At the same time it must be pointed out that the relative prices of American and Egyptian are not so alarming as they look. A premium of over 100 per cent. has been seen on at least two occasions since 1909.

AMERICA AND EGYPTIAN COTTON.

United States spinners continue to absorb a big proportion of Egyptian cotton. Messrs. Davies, Benachi and Co. announce that for the week ended January 3 shipments amounted to 8,750 bales, and last week to 4.250 bales, bringing the total since August 1 to 133.026 bales, compared with 11.792 bales in the corresponding period of 1918-19 season and 13.530 the previous year. Of the total shipments so far this season of 472.197 bales, Liverpool has received 175,672 bales and Manchester 96,188 bales.

ENGINEERING.

New Method of Testing Steel.

A new method of testing steel has been introduced recently, and it is claimed that it possesses advantages which render it interesting especially in industrial laboratory work. It is pointed out that in analysis most physical and chemical methods either necessitate the complete destruction of the sample of the metal dealt with, or else render it entirely unfit for any subsequent use.

The chief advantage claimed for the new method, in which use is made of the property of magnetism, is that it is non-destructive, and from this point alone it may be conceded that it has a certain commercial value. The new process, as was pointed out in a recent article, enables us to detect structural changes due to heating or cooling or as an indication of mechanical properties, this being so because the mechanical properties of steel are functions of its chemical composition, and also of its micro-structural and mechanical conditions. Further, the micro-structure and mechanical condition, such as internal strain, are determined by the thermal history, and the amount and kind of the mechanical work which has been done on the piece. As has been said, the magnetic properties of steel are likewise functions of the same variable conditions, and it follows that any change produced in one set of properties is certain to be accompanied by a corresponding, though not necessarily proportional change in the other.

It is possible to show graphically the relations between the properties, or, rather, the quantities measured in the course of a complete magnetic test, and recently an investigator showed by sets of curves the variation in permeability of annealed carbon steel with various carbon contents and the effect on the coercive force of drawing or re-heating a one per cent. carbon steel after quenching. The latter affords clear evidence of the cementile transformation in the case of water-cooled steel which took place between 200 and 300 deg. Cent. The transformation evidently took place during the quenching, when oil was used in place of water, due to the slower rate of cooling through the critical stage.

The method of magnetic analysis may be employed either during the test for the solution of theoretical problems involved in the hardening of steel or by the engineer carrying out the tests as a non-destructive method of test to supplement those already in use. The magnetic laboratory of the U.S. Bureau of Standards has developed a method for determining the degree of magnetic uniformity along the length of a specimen of substantially uniform cross-section, and this method is peculiarly suitable for studying conditions met with in steel rails, and experience has furnished sufficient evidence to show that magnetic testing may be used to advantage even in fundamental investigation.

Testing Tool Steel.

In a particularly interesting note in the *Journal* of the Birmingham Metallurgical Society a writer deals with the inaccuracy and ineffectiveness of the methods at present in vogue for testing the cutting qualities and durability of tool steel. He is particularly severe on the practice obtaining of running samples of tools to destruction at ruinously high speeds with a view to collecting the required data, and hazards the opinion that a less drastic test would suffice, provided the necessary data could be collected.

Something has been said previously as to this point, and an alternative method was suggested some little time ago by an authority. Speaking generally, it may be taken that the life and correct cutting speed of a tool depends principally, if not wholly, on its resistance to wear at low speeds. As a matter of fact, at an excessive speed the heating or softening of steel which takes place at a high speed conduces to excessive wear, and conditions are consequently introduced which the tool does not meet with in practice. From this it follows that a tool made of a certain quality of steel might have a comparatively long life in ordinary workshop practice, and yet might be quite unable to stand up to the high speed and deep cut at which it was operated in the test. The wear would then be caused mainly by abrasion. As the writer referred to says, this is unquestionably the more normal condition than when the life of the tool depends on its resistance to burning, owing to the heat generated when operated at an abnormal speed. He contends, and rightly, that tests which cause the tool to fail through softening in from one to three minutes cannot give any true indication or measure of its value for ordinary wear.

It is essential that the element of time should form part of all tests made upon tools and tool steels, and as a second authority once contended, no tests should be considered as giving any definite scientific data in which the running time is less than, say, twenty minutes. As a matter of fact, short time tests may even give entirely wrong data when steel is compared with stellite or other materials and alloys, as whilst the latter might offer greater resistance to damage by heat, the former might still have a greater power of resistance to ordinary abrasion, and thus might actually be of greater value for ordinary workshop and machine tool use.

APPOINTMENTS REQUIRED.

GOVERNESS desires post abroad. Higher Froebel cert Experienced with boys and girls. Nature study, drawing, all games. £80—£100.—M. T., The Ladies League, 118, New Bond Street, W.

THE Ladies League (under Royal Patronage) successfully recommends Lady Housekeepers, Companions, Governesses, Nursery Governesses, Lady Nurses, Secretaries, etc.

NURSERY governess desires post abroad. College trained. Take entire charge of children. 1st lessons. Excellent references. £60.—L. P., The Ladies League, 118, New Bond Street, W.

MISCELLANEOUS TOPICS.

A Box-Nailing Machine.

It is reported that there is an increasing demand throughout the Near East for all classes of wood-making machinery, especially to prepare native timber for making boxes, which are annually required in millions for the packing and exportation of currants, sultanas, figs, dates, oranges, lemons, onions, sponges, etc. The special features—solidity and high efficiency—of the modern British wood-working machines are well known in the East generally, but not so their manufacturers, who thus allowed their American, French, German, and other competitors to have in recent years almost the full run of those markets. Mention has often been made in these columns of new or improved types of British wood-working machinery which were considered as meeting the requirements of the trade in the East. A nailing machine which has recently been seen working at a show, would undoubtedly be of great interest to box-makers and fruit exporters in the Near and Middle East. The system of nailing by this machine is a new, simple, cheap, and secure method of nailing up many classes of materials for boxes and packing cases. A saving of timber, combined with increased strength and security, is thereby effected; fewer machines and less floor space are required, and a great reduction in labour is obtained. The nails are preferably driven angularly across the intersection of the boards, instead of through the outer face of the box side or end, and are then turned back into the timber in "hook" form, making it practically impossible to withdraw the nails without destroying the timber or box. This is effected by any standard type of nailing machine having as an adjunct the vice attachment of the machine referred to.

The Vice.

This vice automatically grips the under or vertical board while the nails are being driven, whilst its back jaw carries a series of nail-turning dies, so shaped as to turn the nails back into the timber in hook form. The advantage of this system may be summarised as follows: Two years' use in a large box factory in this country has proved the output of two of these machines in small boxes to be equal to that of four ordinary plain nailers, and as the vice prevents the nails running outside the timber the usual repairing tables are rendered unnecessary. These two features alone reduce the cost of labour for nailing to about half its present rate. Boards from 1/16 in. to 1 in. thick can be nailed up in the commonest classes of either soft or hard timbers; warped boards are automatically straightened out by the vice pressure before the nails are driven, and this ensures level, accurate, and flush work on every face. The risk of pilferage is obviated by the hooked nails. It is claimed, moreover, that 25 per cent. saving in timber is effected on most small boxes and 50 per cent. in wood on the ends of small boxes.

New Harbour Protection.

The Brasher air-screen, of which much has been said recently, was invented by an American Government engineer. It consists of a line of perforated pipes laid on the bed of the sea and connected with an air compressor. When a gale springs up, compressed air is driven into them and rises in the form of bubbles to the surface at all points where there are holes. The effect of the bubbles is to interfere with the wave action and to afford considerable protection to craft lying on the leeward side of the pipes. The device was first used for the protection of a pier 4,000 ft. long, built at El Segundo, in California. In the winter after the pier was built half of it was washed away, and its owners were considering the abandonment of the port when the air-screen was installed with satisfactory results. The simplicity of the apparatus and the ease

GENERAL BANK OF GREECE.

Paid-up Capital, Drs. 3,000,000.

Head Office - ATHENS.

BANKING OPERATIONS:
Every description of Banking business transacted.

FINANCIAL OPERATIONS:
Investigations in connection with, and the promotion, organisation and financing of, Limited Joint Stock Companies, with a view to exploiting agricultural, industrial and mineral resources, executing technical works, etc.

COMMERCIAL AND SHIPPING DEPARTMENT:
Purchase and sale of goods on account of clients. Warehousing, Advertising and placing foreign products on the market. Agents for foreign companies and large commercial and industrial firms abroad. General Shipping Agents.

POPULAR BANK OF GREECE.

Head Office, ATHENS. Branch, PIRÆUS.

Correspondents throughout Greece.

Established June, 1905, by the National Bank of Greece and a group of Capitalists.

CAPITAL - Drs. 1,500,000.
RESERVE FUND - Drs. 2,500,000.
Deposits and Credit Accounts, Drs. 100,000,000.

The Bank specialises in the collection of Bills payable in Greece; it accepts goods on consignment, and undertakes their sale, and transacts every kind of Banking business.

General Manager: D. LOVERDO.

TRADE WITH THE NEAR EAST.

The Bank of Athens extends special facilities for business with the Near **East** to manufacturers, exporters and importers.

The Bank has offices in all the principal towns in **Greece,** also in **Egypt,** Cairo and Alexandria, in **Cyprus,** Limassol, in **Constantinople,** in **Smyrna,** and in **France,** Marseilles.

Inquiries from interested parties are invited.

BANK OF ATHENS.

PAID-UP CAPITAL : £1,920,000. **HEAD OFFICE IN ATHENS.**

London Office: 22, Fenchurch Street, E.C. 3.

COMMERCIAL BANK OF GREECE, LIMITED.

CAPITAL PAID-UP - Drs. 15,000,000.
RESERVE FUNDS - Drs. 2,364,793.

Head Office: ATHENS.

Branches:—**Piræus, Salonika, Patras, Volo, Syra, Calamata, Corfu, Cephalonia, Candia, Chios, Argos, Pyrgos, Vostizza (Ægion), Nauplia.**

AGENTS IN ALL PARTS OF GREECE, THE LEVANT, AND ABROAD.

The Bank conducts every kind of Banking, Commercial and Stock Exchange business and extends special facilities to traders interested in business with Greece. It acts as Agent for many Foreign Banks. It is specially organised for Exchange, the execution of mail and cable transfers throughout Greece, and for the collection of clean and documentary Drafts.

MERCHANDISE DEPARTMENT:
The Bank undertakes the warehousing and sale of goods consigned.

GREECE.

Area 43,522 square miles. The cultivated area amounted to 5,745,300 acres, of which about 2,253,400 were under cereals, 518,900 under grapes and currants, 370,600 under oak trees, 295,500 under olives, and 2,223,900 were forests.

Population (1914), 5,000,000 approximately.

Chief Products (with average annual production):—Currants, 142,000 tons; wines, 3,000,000 casks; tobacco, 9,000,000 lb.; cereals, 8,000,000 bushels; olive oil, 200,000 casks.

The **MINERALS** of Greece include:—Iron, Marble, Magnesite, Emery, Lead, Lignite.

IMPORTS (1914), Old Greece only:—Total value £7,000,000, of which £2,000,000 from the United Kingdom; £1,800,000 from Germany and Austria Hungary; £1,000,000 from Russia.

EXPORTS (1914), Old Greece only:—Total value £4,000,000, of which £3,000,000 came to the United Kingdom.

COINAGE.—The unit is the Drachmæ, equivalent to a Franc (10d.). The current rate of exchange is about 25·30 Drachmæ to £1.

FREIGHT. — From England, 160/- + 10 % primage.

WEIGHTS AND MEASURES.—It was decided in 1898 to introduce the metric system. The change is to be gradual from the old system, which is:—Oke = 2·82 lb., stater = 123·20 lb., livre (Venetian) = 1·05 lb., baril (wine) = 16·33 imperial gallons, kilo = 0·114 imperial quarter, pike = ¾ of a yard, stremma = ·242 of an acre.

BANK OF NATIONAL ECONOMY (of Greece)

of its installation are strong points in its favour. It appears to have considerable possibilities in connection with protecting exposed jetties and vessels being salved.

Tar Oil as Fuel.

It will be very interesting to the large number of users of Diesel engines in the Near East to hear that the use of tar oils in these engines opens up new prospects for this type of internal combustion engine in the matter of fuel, the price of which is now, and likely to remain for some time, at a very high figure, owing to the cost of freightage, etc. The Germans had invented a pilot ignition apparatus, much on the lines of various vapourisers that are now being put on the market, to enable heavier oil than petrol to be used in the ordinary petrol engine. It is said that a means has been discovered of using tar oil without a pilot ignition apparatus, and is effecting a saving of 50 per cent. in fuel costs by the partial use of tar oil; whilst in another instance a new form of ignition apparatus has been evolved which effects a saving of 47 per cent., using a small proportion of crude oil for the ignition charges. So far as is known, the apparatus is not on the market commercially; but, according to authentic opinion, it will form a nucleus of a development which will have a two-fold effect—namely, reducing the running costs of Diesel engines and developing a home fuel industry through the medium of gasworks.

LANCASHIRE COTTON

(From Our Own Correspondent.)

Manchester, Wednesday.

Although the tone of the market continues quieter, there has been no loss of strength on the part of producers, and prices have again tended to harden. Undoubtedly increased difficulties are now being experienced in arranging fresh business. High prices and long delivery terms are checking negotiations between buyers and sellers, and a falling-off in the turnover has to be recorded. A feature of interest has been the further stiff advance in Egyptian cotton, the rise since a week ago being about 10d. a pound in Liverpool. It is reported that the Egyptian Government proposes to put a tax upon the export of cotton which will amount to about 1d. a pound. There has been active buying for Lancashire, the Continent, and the United States. Some people here believe that values in Alexandria will go up to 150 dollars. Business in yarns has been disorganised, and many producers have refused to quote. Users who have wanted small lots to meet urgent requirements have had to pay extraordinary figures for quick delivery. Although inquiry continues extensive, there has been rather less buying in piece goods for the Near Eastern outlets. Most cloths are distinctly dearer than at the end of last year. Favourable advices are being received as to clearances in Cairo. India has provided a very fair demand, but buying has been rather patchy. Steady buying has transpired for South America, chiefly in printing descriptions. The home trade has given rather less support. Manufacturers remain very independent. American yarns have moved off quietly at full prices. Certain numbers in twists are getting scarcer. Bundles have been in active request for India, but delivery has been very difficult to arrange.

CONDITIONS IN MALTA

(From Our Own Correspondent.)

Malta, December 21.

Recent imports have included a large consignment of eggs from Egypt. This has brought down the price from 2s. 9d. per dozen to 1s. 10d. Sugar is scarce, and the market price is from 1s. 5½d. to 1s. 9d. per rotolo—28 oz.

There is a great scarcity of hotel and house accommodation, and as a result attention is again being directed to the need for a new hotel. But so far there is no indication that local capitalists are taking any interest in the question.

The commercial railway tariff operating in the Trans-Caucasus, says H.M. Consul at Batoum in a recent report, is most complicated and very voluminous, as it covers several hundred pages of closely printed matter. Below, however, the rates charged for the transport of articles in which British readers are most likely to be interested, are given. The rate charged for carrying petroleum products from Baku to Batoum by tank car is Rs. 5.78 cs. per poud; for mineral oils, *i.e.*, kerosene by pipe-line, Rs. 5.53 per poud; solar oil and distilate, Rs. 5.56 per poud; steam and traction engines and machinery, to Tiflis, Rs. 3.40 per poud; to Baku, Rs. 5.24 per poud; textiles, haberdashery, boots shoes, other than rubber, articles of clothing, and wearing apparel—to Tiflis, Rs. 7.05 per poud; to Baku, Rs. 14.33 per poud; refined sugar—to Tiflis, Rs. 5.77 per poud; to Baku, Rs. 11.81 per poud; sand sugar—to Tiflis, Rs. 5.76 per poud; to Baku, Rs. 11.80 per poud; colonial produce—to Tiflis, Rs. 7.06 per poud; to Baku, Rs. 14.42 per poud; tea—to Tiflis, Rs. 7.06 per poud; to Baku, Rs. 14.42 per poud; fire bricks—to Tiflis, Rs. 3.98 per poud (on 1,000 pouds); to Baku, Rs. 5.22 per poud (on 1,000 pouds).

SHIPPING INTELLIGENCE.

Forthcoming Sailings.

The Cunard s.s. Sydney Reid, for Piræus, Constantinople, Varna, Constantza, and Novorossisk, will close for cargo at Swansea on January 22.

The Cunard s.s. Antigone, for Galatz only, will close for cargo in London on January 25.

The Papayanni Line (Ellerman Lines, Ltd.) s.s. Trentino, for Malta and Alexandria (taking cargo for Beyrout, Alexandretta, Mersyne, Cyprus, etc.) will close for cargo at Liverpool on January 24.

The Papayanni Line (Ellerman Lines, Ltd.) s.s. Serbino, for Algiers, Syra, Smyrna, and Constantinople, will close for cargo at Liverpool on January 17.

The Moss Line s.s. Amarna, for Gibraltar, Algiers, Malta, and Alexandria, will close for cargo at Liverpool on January 31.

The Anchor Line s.s. Scindia, for Bombay, will close for cargo at Glasgow on January 27 and at Liverpool on February 5.

The Bibby Line s.s. Herefordshire, for Marseilles, Port Said, Colombo, and Rangoon, will close for cargo at Birkenhead on January 26.

The Power Line s.s. Pangbourne, for Rabat, Larache, Tangier, Casablanca, Mazagan, Saffi, and Mogador, will leave London about January 25.

The Royal Mail Steam Packet Company's Almanzora, of 15,500 tons gross, the latest of the company's liners, sailed from Southampton on her first trip to Spain, Portugal, Brazil, and Argentina.

Shipping at Malta.

(From Our Own Correspondent.)

Malta, December 21.

There has been a number of movements. The Triad and Trent have arrived from Gibraltar to-day, and the Marlborough has left for Constantinople. The following have just left port:—The Seraph for Port Said and Alexandria, the Cardiff for Constantinople, and the St. Issey for Taranto, Corfu and Cattaro.

There has been a new development in shipping which has created great interest locally. P. Cutajar and Co. have made arrangements with the Steamship Corporation of New York for one steamer per month to call and collect local cargo for America. Probably the s.s. Jefferson County will inaugurate the service, sailing from Smyrna after loading coastwise from Piræus.

SUPPLIES AND PRICES IN TURKEY.

The following extracts are taken from a recent report received by the Imperial Ottoman Bank:—

Stamboul, December 20.

Manufactures.

The high prices continue at Manchester and other centres of production. Here one noted this week a marked alteration owing to the arrival of some merchants from Batoum, who made some purchases for the Caucasus. The news from the ports of South Russia (Odessa, Sebastopol, Rostoff) continues unfavourable. There is no improvement to report in the political situation; and there is talk even of requisitions of merchandise which will be carried out at Odessa and Rostoff. Stocks here continue to increase, and it can be foreseen that if local commerce is not relieved by the demand for Russia, merchants will find the necessity of having recourse to the banks for facilities.

Produce.

Sugar.—The market has been very brisk this week as a result of the news of the increase in Java and America, and prices have risen from £80 to £84 the ton. This increase would have been greater, but fifteen wagons of sugar from Trieste sold c.i.f. at 451 lire per 100 kilos has had the effect of stopping the movement.

Coffee.—The increase continues. Purchasers, foreseeing a still higher level of prices, are trying to obtain stocks.

Rice.—The market has been quiet, and transactions have been insignificant.

Oil.—The price of American remains between £T5 and £T5.15 the case. Oil from Batoum, awaited for some weeks, has made its appearance here.

Exports.

The demand for all the commodities for export, in general, is more and more active, and the prices reached a new high record for the week under review. Opium.—Sales of the week, 63 cases—53 cases Carahissar and Akchéhir, old, at Ps. 785-800 the oke against 760 the previous week, 6 cases Carahissar, new, at Ps. 755-765 against 735, 4 cases Carahissar II. at Ps. 725. Mohair.—An increase took place of Ps. 5 to 6 the oke. Arrivals, 700 bales. Sales, 830 bales at Ps. 98-102 extra, Ps. 90-95 I., Ps. 85-88 II., Ps. 75-80 Konia.

Wool.—Arrivals of the week, 185 bales. Sales nil. Nominal price from Ps. 48-53 the oke. Silk.—The level has risen this week to Ps. 1,850 the kilo. Sales have not been more than 5 or 6 bales, stock becoming more and more scarce.

Cereals.—Transport by rail has been temporarily interrupted owing to the collapse of a viaduct near Touzle. Cereals from the interior are unloaded at Dérindjé, and from there transported by sea road to Constantinople.

NEAR EAST MARKETS.

LONDON PRODUCE REPORT.

Currants.—There is little change to record. The demand continues strong for currants in sound condition, but the supply is inadequate.

Sultanas.—Inquiries have been very brisk, but stocks remain short.

Sugar.—There has been a strong demand for manufacturing purposes. There was a marked rise in consumption during 1919, this being 1,532,938 tons, while the imports amounted to 1,598,633 tons. Reports regarding this year's French beet sugar production are more favourable. It is estimated that the output will amount to 150,000 tons, as against 100,000 tons. A great increase in acreage is anticipated for the subsequent crop.

Oilseeds.—Linseed has been a firm market. La Plata January-February Hull has been done at 41s. per cwt., while transactions have been effected for February-March at 40s. Rapeseed has been steady, with Toria Hull January-March at 48s. Cottonseed has been in demand, and large supplies are in prospect, over 600,000 cwt. being in transit to this country.

Oilcakes, etc.—Linseed cake continues a strong spot at the maximum of 500s. Palm kernel cake has weakened to 280s. Other transactions have included coconut cake at 390s., arachis cake at 440s., and soya bean cake at 500s.

Linseed oil has been done at 107s. 3d. spot, 106s. 6d. for January-April, and 100s. for May-August. Cottonseed oil has been quiet; prices range between 92s. to 110s. Rape oil and ground nut oil are all firm, but quotations are unchanged. Turpentine is now 193s. spot and 194s. 6d. January-April.

Coffee.—At auction this week 4,271 packages were offered. The demand was fair and steady rates prevailed. Costa Rica bold greenish was done at 147s., and peaberry at 146s., while East Indian extra bold greenish came to business at 160s. There has been a firm tendency in futures. Quotations are: March 125s., May 123s. 6d., July 122s. 3d., September 121s., and December 119s. 6d. Imports during December amounted to almost 800,000 cwt., and this increase has had an effect on prices. As regards the output, it is probable that there will be a further upward movement in prices. Among the factors tending in that direction, prohibition in America is expected to have no small influence.

OPIUM MARKET REPORT.

Messrs. Barker Bros., Smyrna, report as follows for the week ended December 27:—

The sales this week on our market amount to 74 cases at 800 to 900 piastres per oke, which is equivalent to 15s. 6d. to 21s. 6d. per lb. c.i.f. The exchange dropped a bit—viz., Ps.370. per £ sterling for cheque and 1.05 dols. cheque for one Turkish paper £. The arrivals to date are 1,251 cases, against 95 at some date last year.

IMPORTANT B.S.A. DEVELOPMENT.

The Gun and Rifle Department of the Birmingham Small Arms Co., Ltd., has been formed into a subsidiary company, the proprietorship of which will remain with the parent company. This subsidiary company will be known as B.S.A. Guns, Ltd., as from January, 1920. In future, all communications regarding B.S.A. arms should be addressed to and all remittances made payable to B.S.A. Guns, Ltd., Small Heath, Birmingham.

SUDAN PRODUCE.

The following extracts are taken from the C. E. B. report for October:—

Dura and Dukhu.

Red Sea Province.—The merchants seem to experience little difficulty in procuring dura from the Blue Nile, and are selling it here at a price little higher than that of Government dura. The sale of the latter has been stopped.

Khartoum Province.—The dura situation has become easier, and a certain amount of stored grain appeared in the markets for sale in view of the new crop. The rain crop in this province is negligible. Furthermore, reports from Geili District are very bad, owing to a heavy visitation of "dud" to the dura shami and similar crops on Sagia land.

White Nile Province.—Practically no dura of the new crop came into the markets in October. Government dura has remained on sale throughout the month.

Berber Province.—The dura crops, both butuk and dameira, at Mikeilab and Beuga are excellent. The average market prices of dura per ardeb of 380 rottles (171 kilos) were:—White dura. £E3 900 m/ms.; Feterita, £E3 070 m/ms.

Maize.

Berber Province.—Average market price P.T. 360 per ardeb of 380 rottles (171 kilos). There has been local difficulty with the sakia crops near El Damer owing to the shortage of maize seed, the cultivators having sold too much at high prices, and now having difficulty in obtaining seed. This has been met by importing maize from Shendi, where the Gendette maize crop is now being harvested.

Sesame.

Mongalla Province.—September.—The sesame crops are looking well at Yei, but more rain is wanted.

Kordofan Province.—28 ardebs of 330 rottles (148 kilos) were sold in El Obeid market at an average price of £E3 740 m/ms. per ardeb.

Dongola Province.—The average market price was £E7 200 m/ms. per ardeb of 360 rottles (162 kilos).

Ground-Nuts.

Upper Nile Province.—The Renk groundnut crops are exceptionally good.

Sennar Province.—Two tons of groundnuts were exported by rail during the month.

Dates.

Halfa Province.—Merchants are buying at P.T. 170 and P.T. 180 per sack. In the Delgo District transport is difficult owing to the shortage of boats and falling Nile.

Dongola Province.—The average market price was £E2 160 per ardeb of 250 rottles (112 kilos).

Livestock, Hides, and Skins.

Red Sea Province.—26 cattle and 219 sheep have been exported viâ Sudan during the month.

Darfur Province.—September.—Trade in livestock has been flourishing at Fasher, and larger numbers of cattle and sheep have come to the market than in any previous month. The average price of bulls for the month was £E7 200 and of sheep 720 m/ms.

Berber Province.—370 cattle and 10,979 sheep and goats were sold in Damer market during the month. The building of a quarantine at Damer has been commenced.

Sennar Province.—245 cattle were imported from Abyssinia viâ Kurmuk, of which 232 left for Kosti, and the remainder were sold locally.

Upper Nile Province.—About 300 cattle were despatched north during the month from Tonga, Malakal, Kodok, and Melut.

The traffic returns of the Egyptian Delta Light Railways for the ten days ended December 10 amounted to £E19,545, making the total for the year £E248,153.

COMPANY MEETING.

ASSOCIATED COTTON GINNERS OF EGYPT.

The following is the report of the directors, with statement of accounts as at August 31, 1919, submitted to the shareholders at the fourteenth ordinary general meeting held at Alexandria on December 29:—

We have pleasure in placing before the shareholders, for their approval, our fourteenth annual report together with the audited accounts to August 31, 1919. The British Army employed during the year some of our factories, as they did in previous years. The quantity of cotton ginned in our factories during the year 1918-19 was cantars 700,821.47, against cantars 910,994.52 in 1917-18, and steam-pressed cantars 4,781.94, against 53,027.45 in 1917-18. The following are the results to August 31, 1919:—

	£E.	£E.
Factory profits		59.697.-
Less: Sundry repairs and renewals in the factories		2.268.-
		57.429.-
Less: Expenses and Management at head office, Alexandria	3.556.-	
Interest on debentures	£E.5.024.-	
Less: Interest earned	1.716.-	
	3.308.-	
Sundry expenses	1.237.-	
Insurance premiums	2.230.-	
Commissions	322.-	
		10.653.-
		46.776.-
Less: Depreciation on buildings and machinery	10.391.-	
Depreciation on stores and materials	6.986.-	
Debentures redeemed	3.900.-	
Depreciation on Mazout installation	1.976.-	
		23.253.-
		23.523.-
Less: Statutory reserve, 10 per cent.	2.352.-	
Dividend, as per statutes, of 6 per cent. to shareholders	21.060.-	
		23.412.-
Leaving a balance of		111.-
We have therefore to deal with the following amounts:—		
Statutory dividend of 6 per cent.	21.060.-	
Above-mentioned balance of	111.-	
Amount brought forward from last year	18.605.-	
		39.776.-
of which your board proposes to distribute as dividend to the shareholders 1s. 3d. per share, making		21.938.-
and to carry forward		17.838.-

Having found a favourable opportunity of disposing of the building materials of the ex-Choremi factory at Birket-el-Sab, these were sold. We regret to have to inform you of the death of Mr. Michel Sinadino, who has been a member of our board since the foundation of this company, and who has devoted his energy to the benefit of the company. You are now asked to approve and adopt the report, balance-sheet, and profit and loss account, as presented for the year ending August 31, 1919. You have also to appoint auditors for the ensuing year, and to fix their fees. Messrs. Russell, Harris and Co. are eligible for re-election.

It is stated that during 1919 Greek shipowners bought seventy-five foreign steamships registering from 100 tons to 9,400 tons.

The traffic receipts of the Ottoman Railway from Smyrna to Aidin for the week ended December 27 amounted to £6,116.

Mr. Oliver Vaughan Gurney Hoare has been elected chairman of the board of Cox and Co. (France) in the room of the Right Hon. Lord Claud Hamilton, who has resigned.

COMPANY NOTES AND REPORTS.

London County Westminster and Parr's Bank.

The accounts of the London County Westminster and Parr's Bank for the past year show that the net profits, after providing for bad and doubtful debts and all expenses, amount to £2,455,007. This sum, added to £377,560 brought forward, leaves available £2,832,567. The dividend of 10 per cent. paid in August last absorbs £494,969. A further dividend of 10 per cent. is now declared in respect of the £20 shares, and the maximum dividend at the rate of 12½ per cent. per annum on the new £1 shares will be paid. The sum of £1,000,000 has been set aside for investment depreciation, £100,000 transferred to the bank's war memorial fund, £100,000 to premises account and £165,721 to reserve, bringing the reserve up to £8,750,000, leaving a balance of £414,226 to be carried forward.

Cox and Company.

The balance-sheet of Cox and Company at September 30, 1919, shows:—Dr.—Capital, £650,000; reserve fund, £425,000; current, deposit and other accounts, £22,552,363; acceptances for customers, £543,800; total, £24,171,163. Cr.—Cash at bankers and on hand, £5,712,253; at call and at short notice, £3,350,000; bills of exchange, £3,752,378; Treasury bills (British and Indian), £301,000; British Government stocks (of which £8,421 War Loan is deposited with the British Government and £136,000 Exchequer Bonds with the Government of India), £3,321,300; India, Colonial (of which £50,000 Colonial stock is deposited with the British Government) and other securities, including 340,909 "A" shares of £1 each, 10s. paid, Cox and Co. (France), Limited, £832,150; advances to customers and other accounts, £5,895,459; liability of customers for acceptances (per contra), £543,800; bank premises, £318,133; balance of items in transit between head office and branches and exchange adjustments, £94,690; total, £24,171,163.

Jhanzie Tea.

The interim report of the Jhanzie Tea Association for 1919 states that telegraphic advices indicate that the total crop amounts to 2,824,560 lb., an increase of 279,150 lb. as compared with last year and 84,560 lb. over estimate. The directors have declared an interim dividend of 4 per cent., or 4s. per share, less tax.

NEW COMPANIES.

Slavo-British Trade Corporation.

The Slavo-British Trade Corporation, Ltd., was registered on January 6 with a capital of £350,000 in £1 shares. Objects: To promote trade between the British Empire and the Slavonic countries of Russia, Poland, Czecho-Slovakia and Yugoslavia, or other European and Asiatic countries, etc., and to enter into an agreement with the Anglo-Russian Institute, Ltd. The subscribers (each with one share) are:—C. Clemens, 2, Little Essex Street, W.C., accountant; N. K. Smitt, B.Sc., F.C.S., 254, Barcombe Avenue, S.W.2; E. Jarnatowsk, 19, Colville Terrace, W.11, Polish merchant; A. Raidl, 14, Church Street, Shaftesbury Avenue, W., Czecho-Slovak merchant; M. B. K. Smitt, 96, Queen Street, E.C., managing director Anglo-Russian Institute, Ltd.; B. G. Narischkmil, 65, St. Charles Square, W.10, C.E.; B. T. Timotheieff, 26, Torrington Square, W.C.1., Russian merchant. The first directors are to be appointed by the subscribers. Solicitors: Ashurst, Morris, Crisp and Company, 17, Throgmorton Avenue, E.C.

Dickwella Tea.

The Dickwella Tea Co., Ltd., was registered on January 1 with a capital of £80,000 in £1 shares. Objects: To carry on in British India or elsewhere the business of tea and general planters, etc. First directors: F. A. Roberts, 138, Leadenhall Street, E.C., managing director of Jorehaut Tea Co., Ltd. (chairman), Sir James F. Stuart-Menteth, Bt., Rownhams Mount, near Southampton; C. C. Forster, 11, Montagu Place, W.1, retired Ceylon tea planter; H. Miller, C.I.E., Holloway House, Heybridge.

Dr J. Collis Browne's Chlorodyne

Of all Chemists, 1/3 and 3/-.

Cuts short attacks of HYSTERIA, SPASMS, PALPITATION.
A true palliative in NEURALGIA, GOUT, TOOTHACHE, RHEUMATISM.
Checks and arrests FEVER, CROUP, AGUE.
The Best Remedy known for COUGHS, COLDS, ASTHMA, BRONCHITIS.

ELECTRIC POWER FOR PALESTINE.

By Victor L. Trumper, M.R.A.S.

The scheme which has been noted in several journals recently for the supply of electric power and light to Jerusalem and the rest of Palestine by means of water-power drawn from the Mediterranean through a tunnel to the Jordan valley is worthy of close consideration. Palestine must advance in commercial as well as political importance, and a cheap supply of power and light would be a big factor in the development of the country.

Jerusalem looms so large in the public eye that one is apt to forget how very small it really is, both as to area and population, and consequently the profit on any lighting scheme derived from Jerusalem itself would not be large enough to justify any great capital expenditure such as the 37-mile tunnel would entail. There remains to be considered the supply for the rest of the country. It is probable that this part of the business would be more profitable than the comparatively limited supply of Jerusalem.

To make a supply of power commercially economical the distance to be transmitted should be as short as possible; in other words, the supply should be in the centre of the consumers; and as the principal demand for power and light, other than that for the city of Jerusalem, will probably come from Samaria and the district northwards, it follows that a power station considerably farther north than Jericho would be more advantageous.

The plan outlined of a 37-mile tunnel, which is attributed to a Norwegian engineer, would need at least another fifteen miles of open canal to bring it from the coast to the foot of the hills where the tunnel would start; and the amount mentioned, £8,000,000, might be considerably exceeded before the Mediterranean was flowing into the Dead Sea.

Is it necessary to go to this prodigal expense to procure ample power to drive all the plant needed for even the largest installation? It is with great diffidence that I give my opinion, but I think I am within the mark in saying that an unlimited supply of water with a 100 ft. fall would supply all the power needed for any plant that might be erected. Such power is already in the Jordan valley, and does not need to be brought from the Mediterranean.

It is well known that the fall of the Jordan between its egress from the Lake of Galilee and the Dead Sea is over 600 ft. The fall of the river level after it leaves the lake is about 40 ft. to the mile, and this rate of fall gradually lessens till in the southern reaches it is only about 9 ft. per mile.

Supposing a power station was placed near the northern end, it is probable that an open channel of only five miles in length would give the necessary 100 ft. fall for the water; if the station was placed further south, where the fall of the river is only 10 ft. per mile, it is possible that an open channel of nearly 20 miles in length might be necessary. However, whether the channel was five or twenty miles long, its cost would only be a minute fraction of the eight-million-pound scheme.

Careful surveys would, of course, have to be made to tap the river at the best spot, so that its shifting bed would not leave the entrance to the canal dry, but the engineering difficulties with an open channel are very small compared with those that would be entailed by a rock-cut tunnel. The surplus water from the canal could no doubt be used to irrigate a large amount of the hill side terraces which abound on the edge of the Jordan valley.

BANK OF EGYPT LIQUIDATION.

Mr. H. Brougham, as Senior Official Receiver and Liquidator of this bank, which was ordered to be wound up in October, 1911, in giving notice of his intention to apply to the Board of Trade for his release, has issued a statement showing that the assets (including uncalled capital) have realised £2,777,885, which is the total amount of the receipts, £3,330,458, less the advances by bankers, and receipts for account of third parties—together £552,575. The total estimated value of the assets in the statement of affairs was £2,709,482.

The liabilities of the bank at the date of the winding-up order amounted to £1,958,186, made up as follows: Acceptance holders, £1,467,522; current deposit and other accounts in London and Egypt, £499,969; and preferential creditors, £895. An arrangement was made with the acceptance holders whereunder they agreed to take 50 per cent. of their acceptances in cash and the balance in loan certificates carrying interest. The above-mentioned advance of £550,000 from bankers, with the liquid assets of the bank, provided the funds to pay the acceptance holders their 50 per cent. in cash, and clear off the creditors in England and Egypt on deposit and current accounts. The bankers' advances and the loan certificates were discharged in full, with interest, by February, 1913. The whole of the unsecured creditors thus received 20s. in the £ on their claims, with interest, where payable, which absorbed a total payment of £2,013,635.

The total costs, fees, and expenses amounted to £166,715, of which £45,431 was incurred in London and £121,374 in Egypt. The latter were of necessity much larger than those in London, as the principal part of the assets were in that country, and had to be realised there.

A final, or ninth, return of 15s. 11½d. per share is now being made to the shareholders, making, with the previous returns, a total repayment of £12 5s. 11½d. per share, or only 4s. 0½d. less than the call of £12 10s. per share made upon them by the Liquidator. Having regard to the financial position in Egypt during a considerable period of the Liquidation, to the fact that the greater part of the assets were located in that country, and to the difficulties of realisation there, the result of the liquidation must be considered satisfactory.

The Senior Official Receiver and Sir William Plender (the Special Manager) feel that they are greatly indebted to the members of the Committee of Inspection for their assistance in dealing with the various and numerous questions relating to the realisation of the assets. Mr. Brougham also wishes to acknowledge and express his gratitude for the great assistance that has been rendered to the liquidation by Sir William Plender, the Special Manager. His considerable business experience, coupled with his close acquaintance with those who were officially connected with the bank's affairs, have been largely responsible for the success of the liquidation and the return of so large a sum to the shareholders.

COMPANY RESULTS.

The Bank of Madras has declared a dividend at the rate of 10 per cent. per annum for the past half-year, together with a bonus of 2 per cent. Rs. 2,00,000 have been transferred to investments, and Rs. 2,81,000 carried forward.

The transfer books in respect of the cumulative 6 per cent. (participating up to 8 per cent.) preference shares (issues 1909-1911 and 1918) of the Anglo-Persian Oil Company, Ltd., will be closed from January 17 to 30, inclusive, for purpose of preparing dividend warrants payable on January 31 for half-year ended September 30.

The directors of the Delhi Umballa Kaika Railway have declared a final dividend for the year ended September 30, 1919, of 5 per cent., together with a bonus of 3 per cent, on the ordinary stock, making 14 per cent. per annum. The dividend and bonus will be paid, less tax, at 4s. 9d. in the £, and will be payable about the end of February, 1920.

The London manager of the Tata Industrial Bank has received a cable from head office, Bombay, to the effect that profit earned for the half-year ended December 31, including Rs.1,54,836 brought forward, amounts to Rs.8,12,957.

Building lands are being put up for public auction at Salonika in accordance with a new scheme. The total value of the land represented in land bonds now reaches 97½ million drachmae.

INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following weekly cabled news received from the Director-General of Commercial Intelligence, Calcutta, dated January 7:—

Rain nearly general Southern India and local in Central and Western India. During the week ending December 27 sowing spring crops continued North-Western India, neared completion Central India. Harvesting autumn crops continued Bombay, Central India and to the North-West. Harvesting paddy progressed North-Eastern and Southern India. Sowing progressed Madras. Cotton picking continued except in Burma. General crop conditions good. Useful rain fell in the Punjab, but more required.

Second rice forecast: Acreage, 76,888,000; out-turn, excluding Madras and United Provinces of Agra and Oudh, 26,448,000 tons (last year's corresponding forecast, 74,363,000 acres, 19,005,000 tons). Third cotton forecast: Acreage, 22,186,000; yield, 5,668,000 bales (last year's corresponding forecast, 19,577,000 acres, 3,282,000 bales). First rape and mustard: 3,293,000 acres (last year's corresponding forecast, 2,950,000 acres). First linseed: 2,245,000 acres (last year's corresponding forecast, 2,002,000 acres).

Bombay Cotton Market weak. Fully good broach April-May Rs.535. Piece goods market quiet. Calcutta jute market quiet but steady. Heavy jute goods strong and rising. Hessians quiet but firm. No change in bank rates. Bombay mill hands' strike is now practically general; seventy-five out of the eighty-five mills are closed.

ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Street, Wednesday.

This again has been a week of great activity and rising prices in all Egyptian securities. A very large business has been done: the movement has, in fact, almost developed into a boom. In Government securities exceptionally there has not been much doing, but both Egyptian Unifieds and 3½ per cent. Prefs. close ½ higher at 74 and 61 respectively. City of Alexandrias have continued a dull spot and on some small sales have dropped 3 points to 67.

In Bank shares National Banks are 1¼ higher at 23¾. Agriculturals have remained firm, but the pref. shares are ⅛ down at 6½. Anglo-Egyptian Banks have moved up ¼ to 17½.

Delta Light Railway prefs. have come to business at 6½, a rise of ¼.

In Land shares the business has been on a large scale. Aboukirs close 5s. higher at 41s. 3d., but still higher prices have been paid, and the debentures have jumped up about twenty points to 137. In Béhéras a sensational movement has carried the shares up 8½ points to 28, and, as the rise has proceeded, shares have become more and more difficult to obtain. A renewal of interest has been taken in Egyptian Consolidated Lands, which have risen 7d. to 3s. Delta Lands, after being quiet for so long, have at last come into demand, and have had the big proportionate rise of 7s., closing at 23s. 6d. after being dealt in at even higher prices. Egyptian and Foreign Trusts have risen 1s. 6d. to 15s. 6d. Mortgage Company of Egypt prefs. are ¼ up at 6⅝, but the debentures are quoted rather nominally 7 points down at 75. In New Egyptians a very large business has been transacted, and the shares are closing 5s. up on the week at 39s. 3d. Sidi Salems have risen 3-16ths to 3 9-16, and Sudan Plantations, after being up to 9, close half a point up at 8⅝. Union Foncières have also been persistently inquired for, and are closing 7-16ths higher at 5⅞.

Among the Miscellaneous descriptions Abyssinian Corporations (now 15s. paid) are a steady market round ⅝. A fair amount of business has been done in Alexandria Waters round the current level. Egyptian Hotels are ¼ up at 2½. Markets have risen 1-16 to 23s. 9d., and Salts are 2s. higher at 52s. 6d. Khedivial Mail prefs. are a dull spot at 3⅝, a decline of ¼.

In Greek securities there has been some renewal here and there of Continental liquidation, with the result that Greek 81's close 1½ points lower at 52 and Greek 84's half a point lower at 52, the 5 per cent. 1890 Loan one point lower at 51½. On the other hand, Rentes have advanced 1½ points to 45 and Fundings and the 1902 Loans are both half a point higher at 51½ and 58 respectively. Bank of Athens shares are 1-16th higher at 71s. 3d.

In Oil shares Anglo-Egyptian B, after being down to 4 13-16, close a good market to-night and are ¼ higher at 5¼. Roumanians have risen 2s. to 24s. 6d.

BRITISH TRADE CORPORATION.

(Incorporated by Royal Charter),

13, AUSTIN FRIARS, LONDON, E.C.2.

Telegrams: "Trabanque, London."

CAPITAL: Authorised - £10,000,000 Subscribed and Paid Up - £2,000,000

Governor - THE LORD FARINGDON.

Manager, A. G. M. DICKSON. London Manager, P. C. WEST. Secretary, G. De B. BROUNLIE.

The Corporation has been established with the object of developing the Trade of the British Empire in every part of the world, and brings to the notice of all interested that it is prepared to grant financial facilities to British Manufacturers and Merchants for the increase of their Import and Export Trade.

It will be prepared to assist in opening up new channels for enterprise, and will afford financial facilities for the enlargement of works and the extension of plant.

The Corporation is appointing representatives in the chief cities of the world, and will open credits at home and abroad. It invites inquiries, and will endeavour where necessary to put expert advice at the disposal of correspondents regarding the financing of their foreign and overseas business. Moneys received on fixed deposit. Terms on application.

It is expected that the new railway to Badulla, the capital of Uva, in Ceylon, will be ready for traffic early in 1921.

The Governor of Ceylon is visiting Madras during the present month to discuss the question of labour supply from that presidency on behalf of the Ceylon planters.

The trade figures of the Sudan for the first ten months of last year were:—Imports, £E4,030,816, an increase of £E540,740 on the corresponding figures of the previous year; exports £E2,261,995, a decrease of £E1,161,312 on the previous figures.

NOTES OF THE WEEK.

A Roumanian newspaper is publishing certain documents relating to the Peace Conference. One of these is a dispatch from the Roumanian Delegation, addressed on May 22, 1919, to the Government at Bucharest, and is signed by M. Bratianu. "We have been obliged," says the Roumanian Prime Minister, "to give the Americans a declaration binding us not to negotiate with anybody else regarding the oilfields, and pledging ourselves to return to them the exchange bills which are at the Bank. The Americans were immovable and had already given orders to stop the revictualling [of Roumania]. We held that, whatever were the rights of the National Bank, it would have been a great mistake to give them a pretext for withholding supplies." As it is clear that the publication of these documents is intended to serve some political purpose in Roumania, it may not be wise to build too much upon their textual contents. The United States Government, however, will no doubt know how to reply to the incrimination contained in this passage, which implies that the Americans were using their relief measures in Europe as a lever for obtaining economic concessions from the people to whom they were dispensing charity.

In their attitude towards their late enemies the Allies can hardly fail to establish degrees of criminality, and according as an individual people stands high or low in such a list, so will any efforts on its part to rehabilitate itself be likely to be rebuffed or reciprocated. One determining factor, however, in this respect should be the extent to which the desire for the restoration of touch with the Allies, in particular with Great Britain, is accompanied by a genuine attempt to keep the peace all round. The Magyars, it is understood, are anxious to resume something like their old relationship with this country, but the compliment ought not to be returned so long as there is the least suspicion that the Hungarian Government favours any policy calculated to disturb the peace of the Near East or embitter its own relations with its neighbours.

According to a Roumanian report a Hungarian plot has been discovered in Transylvania in which the Budapest Government is believed to be an accomplice. The plan, it is alleged, was to exploit the discontent of the Magyar officials who are still in the employ of the Roumanian Government with a view to paralysing the whole administration of the country. A clear duty rests upon the Allies—either the Supreme Council or the League of Nations—to call for a complete elucidation of this matter. If there should have been, as stated, official Hungarian instigation, disciplinary measures ought to be enforced against Hungary for this violation of the comity of nations. If, on the other hand, there should be found to have been no foundation for connecting the Budapest Government with the action of certain Magyar officials in the employment of the Roumanian State Railways, the Bucharest Government would be the first to admit excess of zeal, and would accept a reprimand for seeking to embitter relations with a neighbour on insufficient evidence.

Now that her fate is seriously under discussion in Paris, Turkey shows signs of a very natural uneasiness. The Grand Vizier has handed to the Allied Representatives a scheme of reforms; and though few Deputies had arrived in the capital, Parliament was opened on January 12, doubtless to be ready for emergencies. The project put forward by the Vizier is concerned with judicial reform, and proposes the institution of a Committee of foreign jurists, which shall control all tribunals and have certain penal powers. Without being in possession of full details, it is, of course, impossible to criticise the scheme; but, according to the *Morning Post's* Constantinople correspondent, it is likely to miss success because it would leave the executive control in the hands of the Turks. It is to be supposed, however, that the Turks are open, especially at this time, to advice from the Allies. With good will, the project may, therefore, yet serve as a scaffolding for the erection of a respectable building.

The Sultan's Speech from the Throne—which was read by the Grand Vizier—disclaimed once again, on behalf of the Crown and the Nation, the responsibility for Turkey's joining in the war. Unfortunately for Turkey, while it is no doubt quite true that the nation was not consulted on the matter, and that if it had been consulted it would almost certainly have been against taking the fatal plunge, it cannot be denied that the nation did follow, and follow meekly, those who led it along the road to ruin. When the Sultan's Speech went on to refer to the occupation of Smyrna by the Greeks and of Adana by the French, it reached ground on which it is easier to feel sympathy with the Turkish point of view. The occupation by the Allies after the Armistice of territory that was in Turkish occupation at the signing of the Armistice was a mistake, if only because it permitted to one party to the bargain what was strictly forbidden to the other. Whether the occupying Power has done.

Digitized by Google

or does, well or ill with the charge practically handed over to it by the Allies has nothing to do with this point. No occupation of Turkish territory should have been allowed by the Allies as a whole until such territory should be definitely handed over by the Paris Conference with due regard to form and ceremony.

The latest available reports make the situation in Syria appear rather more serious than earlier messages. One correspondent announces that in the fighting at Mutallah (a Druse village in the Merj Ayun region) the French had over fifty casualties and were forced to retreat with the loss of several guns. In all probability these particulars lost nothing in importance on their way to Egypt, whence they were forwarded to London; but it is notorious that the Druses, who are famous fighters, have not taken kindly to the presence of the French in their country, so that if they took part in the fight it would be likely to be a stiff one. The latest version regarding the capture of General Gouraud's Chief of Staff is to the effect that he was waylaid by "a Syrian band" and held to ransom for the modest sum of £2,000: but that General Gouraud telegraphed to the Arabian Government "ordering" his release in 48 hours, and that he was actually released in 36 hours.

A special correspondent of the *Morning Post*—who, if he be the same that has written lately on Syrian affairs, is particularly well informed—states positively that the Emir Faisal has not reached any agreement with the French Government, and that it is to consult his people that the Prince has returned to Syria. The correspondent goes on to remark that "in view of the fighting which is taking place up and down the country," and of the initial successes obtained by the Syrians, the Emir will find it no easy task to restore peace between the French and the Arabs by means of any compromise. Reports from other sources fully bear out this writer's views, and it is to be feared that unless the unforeseen happens, the French will soon be forced to realise that Syria of 1920 does not think as did Syria of, say, 1861.

The Milner Mission has spent a week in Alexandria, where it has been in close contact with leading business men, and with other interests that must be considered in preparing any programme for Egypt's future. The visit is reported to have had very satisfactory results. The news from Cairo is, however, not so good. The Zaghlulist Committee has proclaimed that Lord Milner's Note does not afford a basis for discussion, and therefore does not change the situation. This attitude is attributed to the receipt of a telegram from Zaghlul Pasha himself, who still clings obstinately to the "complete independence" formula. At the same time, the announcement may be due to a desire to check those Egyptians who have already shown a disposition to take the opposite view and openly to avow it. That the moderate view must prevail in the long run is not to be doubted.

The young Copt who last month attempted to assassinate Wahba Pasha was put on his trial before a Military Court on January 16, and the following day was found guilty and sentenced to ten years' imprisonment. The authorities are to be congratulated upon not allowing the trial to be postponed, and upon the celerity with which it was conducted, affording another example of the advantage of entrusting such trials to the military courts.

The analogy between frontier troubles in India and industrial troubles at home is brought out very clearly in the messages published last week. When a strike occurs or is threatened, the authorities usually come to terms with the leaders, and then the leaders try to get their followers to abide by the settlement. Similarly, when the Indian Government makes peace with tribal leaders, it is only the first step in a somewhat lengthy process, for the leaders are not necessarily able to bind the tribesmen as a whole, and from this point of view we may say that the Mahsud affair is pursuing the normal course. In both cases, again, there is more "secret diplomacy" than the public like; the trade unions prefer to conduct their business behind closed doors, and the tribal leaders are almost equally inconsiderate, so we must be content to wait for the result, and we can only say that the latest indications are hopeful, though the risk of further fighting in the spring has not yet been eliminated.

It is a real pleasure to turn from such ill-organised communities and glance at the conditions prevailing in the orderly and progressive State of Mysore, the last Administration Report of which has just reached us. The State suffered with the rest of India from unhealthy and unproductive seasons, but emergencies are the test of administration, and they were met in Mysore by reasonable and tolerably effective measures, while the work of industrial development went steadily forward despite the difficulties of obtaining machinery, which have elsewhere been accepted as an excuse for marking time. In one way the Report is a little disappointing, for it is studiously impersonal, and we miss the clear, and sometimes caustic, comments by which some Indian Rulers enliven their official publications; we should like, for instance, to know exactly what the Maharaja thinks regarding the future of village life and of the co-operative movement among his people. But council-government has drawbacks as well as advantages, and the tenor of the Report is in strict accordance with the constitution and traditions of the State.

The problems of village life are, of course, not peculiar to Mysore. The vast majority of Indians live in the villages, and it is in the villages that the future of the country will be decided, so that we could wish to hear more about them, not merely from the present rulers, but from the politicians who aspire to be rulers by-and-by. Under the new constitution, the development of village life will be in charge of Ministers chosen from the provincial legislatures, and the fact that the first Ministers are almost certain to be townsmen gives occasion for a little anxiety, since townsmen are apt to be serenely confident that they know what is good for the villages, and serenely ignorant of what the villages really want. The villages must win in the long run, for they will have most of the votes, but they may suffer while they are learning how to use their powers.

A good instance of the mental attitude to which we refer is the remark attributed to Mr. Madhava Rao in a recent interview: that the deep cleavage between the Brahmins and other classes in Southern India is not a political matter. The townsman can define and distinguish, and when he has classed a particular phenomenon as social, he can proceed to the inference that it has nothing to do with politics. The uninstructed villager, on the other hand, looks at life as a whole; he is not interested in classification, but he knows when something hurts, and he will have no hesitation in importing social grievances, and also economic difficulties, into the political field. For good or for evil, provincial politics will be concerned for some time to come mainly with social and economic questions, and if town-bred politicians will not study these questions from the villagers' point of view, they may begin by making him rather more uncomfortable than he is now; then he will probably turn nasty, his grievance will be redressed, and the cogwheel of progress will register one more painful notch.

The selection of Sir Frank Sly to succeed Sir Benjamin Robertson as Chief Commissioner of the Central Provinces completes the list of the provincial rulers who have to do the spade work for the new constitutional edifice, and judging by his past record his share will be efficiently done; he knows the provinces almost as a Londoner knows his back-garden, while his friends credit him with an endowment of genial tact and sane optimism, qualities which will be particularly valuable at the present juncture. His evidence before the Joint Committee showed that his heart is in the work which lies before him, and he enters on his office with our cordial wishes for its successful accomplishment.

THE WEEK AT HOME.

Relations with the Bolshevists.

The Government change of attitude towards the Bolshevists is likely to receive a mixed reception, quite apart from larger questions of policy. The public is frankly tired of Russian adventures, Archangel expeditions, and the rest; the cold fit has succeeded the hot. But on the other hand it has no belief whatever in the alleged desire of the Bolshevists to reform and inaugurate a reign of perpetual peace and goodwill; and those who are loudest in pressing the Bolshevist virtues on our notice are precisely the same folk who were indefatigable a couple of years ago in depicting the moderation and gentleness of the Prussian.

Many people are frankly puzzled in these days when each Government department issues its own news and its own glosses, which frequently contradict another Department's news and glosses; it all adds to the fun of the fair, but, like the new siren on the District Railway, it is a little disconcerting to the unsophisticated. So far as one can judge from these literary efforts, Mr. Churchill is convinced of the need of fighting Bolshevism in Russia, in Asia, and, indeed, everywhere; Mr. Lloyd George apparently thinks that reasonable grounds of agreement can be discovered, that the blockade can be raised, and trade relations more or less restored. For the time being Mr. Lloyd George has won, but he had to go to Paris—in other words to put a couple of hundred miles between him and Mr. Churchill—to get his own way. Even then the fiery Secretary for War followed him across the Channel at the first opportunity; and as the whole British Government cannot permanently reside in Paris, the conflict will eventually have to be fought out in Downing Street.

Our Russian policy appears to be the sport of fate, changed more by circumstance than freewill, and altered once a month. The true fact is that nobody in politics really knows what solution to offer of this problem. Mr. Churchill's unique strength is, wonderful to relate, his consistent conservatism on this matter—whenever he sees a revolutionary head, he wants to hit it. Mr. Lloyd George, perhaps with some faint memory of his own wild days, appears to have a little sympathy with the revolutionaries. But Labour is equally divided. Theoretically, Labour approves of Soviets, elimination of the *bourgeoisie* and the extinction of capital; but in practice Labour is horribly embarrassed by Lenin's denunciation of British Labour leaders as smug traitors, who are worse than capitalists; and it does not want to commit itself too far. The upshot is general indecision and vacillation on all sides.

Paisley.

A pretty little comedy is playing itself out at Paisley. The seat is vacant, and it has always been held by a Radical; even at the last election the Coalition was not recognised in that stalwart stronghold. At the present time, therefore, the Coalition whips feel it is quite useless to run a candidate, and, since it is rather difficult for a Government to allow a seat to go by default, they breathed a sigh of relief when the rumour spread that Mr. Asquith would be asked to stand. The ex-Prime Minister is the one man of the late Liberal party whom they could afford not to oppose. But it appears that the Paisley folk are not so sure that they want Mr. Asquith; for he is only a Yorkshireman after all, and Paisley, being in Scotland, thinks a local Scot is better than any Yorkshireman, ex-Prime Minister or not. There was a delightful moment when it seemed that Mrs. Asquith might be asked to stand, but that was too good to be true. Now it is practically certain that a Paisley Radical may stand; in that case a Paisley Labour man would also run; and the Coalition would be compelled to find a candidate too.

Party Formations.

The political clubs and the country as a whole have been discussing the Lord Chancellor's proposed new National party, which, it is now generally recognised, is only another name for Mr. Churchill's Centre party. The quidnuncs have suggested that Mr. Churchill hopes to lead it, but that seems extremely unlikely to happen. Many people admire the abilities of the Secretary for War, but few have forgotten his lurid political past, and Antwerp and Gallipoli are not promising introductions to a future Prime Minister. Mr. Lloyd George, too, is not the man to be shunted easily. The strongest factor in favour of the new party, or permanent Coalition, is the increasing strength of Labour; but Labour has its own serious divisions, although, being in opposition, these are naturally less noticeable. Probably for the next two or three years, or perhaps longer, home politics will be unstable, and there will be a general manœuvring for position.

Strikes and Labour.

Fortunately the industrial position seems more hopeful. The railwaymen have suddenly, and by a narrow majority, decided to accept the Government's offer, so we are spared a repetition of the Labour strike. The ironmoulders, too, are admittedly anxious to get back to work; and the insurance agents' strike, which occupies a large space in the newspapers for various reasons, is not of much importance to the community.

For some reason which is not quite clear, the Labour campaign on behalf of nationalisation, which was to have electrified the country this month, seems to have been put off. There are whispers of dissensions among the Labour leaders themselves as to what constitutes nationalisation, and they may perhaps feel that the time is not yet ripe for this particular propaganda. When it does come, it promises to be as educative in the political sense as the old Free Trade-Tariff Reform controversy—and probably as inconclusive.

The House Famine.

The shortage of houses is steadily becoming more serious, and a great deal is likely to be heard about it when Parliament meets again. It is not indeed the fact that building is at a standstill, for in travelling about England nowadays one sees a good deal going on. But close inspection shows that it is new factories, or enlargements of old factories or business premises that are occupying the bricklayers; hardly ever does one see a new house under construction. The enlargement of business premises argues well, of course, for the prosperity of the country, but one hears strange stories of "daily-breaders" being driven to live fifty or sixty miles away from their offices because of the impossibility of finding nearer accommodation. Even the remote East Coast resorts, where in pre-war days a winter visitor was as rare as a whale, has developed a semi-suburban population this year, and the local house-agents, who used to sleep through the cold season like a snake gorged with its summer prey, have woken up sufficiently to ask preposterous rents. When frantic advertisements appear in the London papers, offering £50 to anybody who will inform the advertiser where he can get an eight-roomed house—there is one in Monday's *Times* of this kind, and one often sees similar despairing efforts—the rapacity of the agent is explained by the impotence of the prey.

Should a Doctor Tell?

Legal and medical circles are greatly exercised over the question, which has arisen this week in the Courts, whether a doctor should reveal the confidences of his patients. The judge, in a divorce case where the man was suffering from an infectious disease, ordered the doctor who had treated him to give evidence; the doctor objected, but in the end obeyed, and divulged the nature of the malady. The decision has naturally caused much discussion, for most people had imagined that the secrets of the consulting-room were as inviolate as those of the confessional.

Some medical men in speaking of the case have gone so far as to say they would have risked being committed for contempt of court rather than divulge knowledge acquired confidentially, and this probably represents the attitude of the faculty as a whole. The Bar appears to be divided in its opinion; but it is surely difficult to maintain that a solicitor has a right to refuse to divulge knowledge acquired from his clients in the exercise of his profession, and to refuse a similar right to the doctor.

More New Issues.

The flood of new capital issues from the City, which abated over Christmas, has again broken out, and the year promises to beat all records in this direction. One or two Colonial Governments have also come forward for money, but their demands are modest in comparison

Digitized by Google

with those of home industries. In most cases the issues are said to be over-subscribed.

One feature of the day appears to be the extraordinary multiplication of the small investor. It would be an exaggeration to say that the average working-man rings up his broker to inquire the current price of Oils or the chance of a deal in Chartereds during his dinner-hour, but things are beginning to move that way, and the man with only ten pounds to spare is just as keen to turn it into twenty as his wealthier brother is to make an extra thousand. I am afraid this keenness, combined with inexperience, will lead to the increase of bucket-shops; already one seems to notice an advance in the number of enticing financial circulars which invite one to double one's income by following the disinterested advice of So-and-so. These gentry, by the way, must have changed their methods. Before the war their prey were usually parsons and widows, but as neither class has any money nowadays, they must have discovered a fresh *clientèle*.

The Literary World.

The announcement of a novel by M. Clemenceau will not, perhaps, surprise the public very much, for the veteran statesman has done most things in his time, except preach a sermon. Anyway, the story, which is of the "triangle" plot vairety—two men and a woman—has been translated and published in England this week under the title of "The Strongest." Our British politicians are less versatile; they keep their fiction for their public speeches.

Two serious books worth notice are "The League of Nations," by Sir Frederick Pollock—the title and legal fame of the author sufficiently indicate its contents—and Lord Haldane's collected and, one hopes, final apologia, issued under the title "Before the War." Lord Haldane's literary style, like his oratory, is rather against him; we cannot see the wood for the trees, and he does not succeed in making clear the negotiations in which he was engaged with Germany. It is a disappointing book on the whole, but it can claim a place on the shelf of "memoires pour servir."

By far the most important of the documents published on the war, however, since the Armistice is the Kaiser correspondence which is appearing day by day in the *Morning Post*—it is to be hoped that the whole will be produced in book form, with the very able annotations which now elucidate the letters, in order to make them available to the general public.

The Kaiser appears in these letters as an astute intriguer, a man with little insight but considerable grasp of externals. He seems to have understood the material side of politics well; of the spiritual aspect he had no comprehension. But, then, very few had in Potsdam. Historians will probably differ considerably over their interpretations of these letters, in discussing Germany's policy towards Russia. It is a by no means easy problem to decide, and possibly the Kaiser himself varied in his attitude from time to time—whether it was better to retain a strong Russia as a buttress to the principle of autocracy, or to weaken Russia as a possible danger to Germany; the former seems the more probable from the letters, the latter from the facts.

But the popular fable that the Kaiser was mad may be dismissed after reading these letters. He was a restless, dogmatic, versatile, and uncomfortable person, but perfectly sane. Another fable, by the way, receives its death-warrant—the idea that he ever had any feeling of friendship for Britain. To this country, its policy, its people, and its press, he uniformly expresses his dislike. Probably he has not changed his opinion since his retirement.

Naturalists, and not naturalists only, will revel in Mr. Fitzsimon's "Natural History of South Africa," an important work in four volumes. It covers far too much ground for any adequate appreciation of its merits to be attempted here, but even the shortest reference must include an allusion to its numerous and attractive illustrations.

I cannot speak so highly of Mr. Harries' "Shakespeare and the Welsh," a large and learned tome published by Fisher Unwin. Since the remote days when Shakespeare was shown to be Bacon, the Germans have proved him to be a German, and Mr. Harries now demonstrates that he was Welsh. It was really inexcusable gaucherie of Shakespeare to have been born in the very middle of England, but that miserable blunder appears to make no difference to the critics with a hypothesis to prove.

Several other books deserve a word of notice. Flight-Lieutenant Edgar Middleton has published a history of "The Great War in the Air," in four volumes, through the Waverley Book Co. His account, which naturally deals mainly with the growth of the British air arm, is introduced by Lord Montagu of Beaulieu.

Some pleasant "Memories of George Meredith" have been issued by Lady Butcher, one of his many women friends. The cult of Meredith is perhaps a little dimmed these last few years, but there are probably a sufficient number of worshippers at the shrine of "The Egoist" to add this little book to their special Meredith shelf.

Mr. Hartley Coleridge has issued a two-volume biography of Coutts, the banker, through Lane. The work is admirably done, and although Coutts was a very dull person who made a fool of himself with an actress whom he married at the mature age of seventy-nine, his transactions with Fox and the Pitts and the politicians and gamblers of the late eighteenth century throw a good deal of light on the times.

A magnificent (and necessarily expensive) volume has been issued by Hutchinson's dealing with Westminster Cathedral. It is by Winifride de l'Hôpital, the daughter of the architect Bentley, and it is practically the story of his life. Bentley was brought up in the Gothic school, but he decided, and rightly, as the event proved, on the Byzantine style for the great Roman Cathedral. Byzantinism has not been very popular in England in comparison with Gothic, Renascence, or the sham Classical style which generally looks so absurd in the later Georgian churches in London; there are few examples of Byzantine outside Wilton and All Souls', Eastbourne. But Bentley and Westminster Cathedral have lived down their detractors. Some Philistines were rude enough to dub it a box of bricks when it was building; one now occasionally hears people go to the other extreme, and declare it a nobler pile than Westminster Abbey. However that may be, the story of its inception and completion under Bentley is extremely interesting. What would one give for a similar book on the great mediæval cathedrals, the very names of whose architects have been lost!

OCELLUS.

THE CHALDEANS.

An appeal, signed by Cardinal Bourne, Mr. J. W. Lowther (Speaker of the House of Commons), Mr. T. P. O'Connor, M.P., Mr. Ronald McNeill, M.P., Lady Sykes, Mrs. Halford Hewitt, and Mr. Herbert Ward, has been issued for subscriptions towards the fund raised by the Committee (whose address is 9, Buckingham Gate, S.W.1) in aid of the thousands of suffering Chaldeans who survive the atrocious treatment of the Turks during the war. It is pointed out that the Chaldeans were treated with quite as much brutality as the Armenians, and their sufferings have been intensified by a terrible famine experienced in the last two years. They suffered largely because of their entire sympathy during the war with Britain and her Allies, but, though equally deserving, they have not shared the generosity extended to their kinsmen from Kurdistan and elsewhere by the British Government.

THE NEAR AND MIDDLE EAST.

(From Our Own Correspondents.)

EGYPT.

CAIRO, January 5.

High Commissioner's Tour in the Sudan.

Lord and Lady Allenby left Cairo this morning by special train for Suez, where they embarked on a cruiser. The High Commissioner is proceeding on a trip to the Sudan, but on his way down the Red Sea will call at Jeddah, where he will spend three days, during which he will confer with the King of the Hejaz. Thence he will go to Port Sudan, and after spending a couple of days visiting Suakin, Tokar, Atbara, and Shendi, he will travel on to Khartoum, where he and Lady Allenby will be the guests of Sir Lee Stack, at the Palace. Their Excellencies propose to be away about six weeks, and during their stay in the Sudan will visit El Obeid, and will include a trip up the White Nile as far as Lake No.

It is stated that Lord Allenby's visit to the Sudan is in a measure connected with the proposed irrigation works, the sites for which he will inspect. I understand that another Commission is about to be appointed to study the projects from the point of view of the Sudan, and to report on the manner in which the water made available by them is to be allocated between Egypt and the Sudan. Definite information is, however, at present not available, but I hope to give more explicit details next week..

The Political Situation.

This week the political situation has undergone a further development owing to the intervention of the Princes of the Sultania family on the side of the Extremists. They announced their decision in the following letter addressed to Lord Milner:—

"We, Egyptian Princes, descendants of Mohammed Ali, present to you the following note:—

> "Inasmuch as the different sections of the Egyptian nation have expressed their patriotic feelings and their aspirations, by demanding the complete independence of Egypt; inasmuch as this is an ineffaceable and irrefutable proof of the sincerity of the Egyptian people, giving no opportunity to anyone to accuse it of acting under any coercion or any special influence, more especially as all the acts of the Egyptian nation, whole-heartedly united, show in a decisive manner that it acts spontaneously and that it is guided by the most noble sentiments of patriotism, we desire to inform your Lordship that not only do we associate ourselves with the demands of the Egyptian nation, but that we also join with it, so as to form one homogeneous body, to claim the rights of our fatherland, and to insist on the demand for the complete independence of Egypt."

While simultaneously publishing this letter in the vernacular Press—a lack of courtesy which Lord Milner astutely but without emphasis brings out in his acknowledgment—they at the same time issued a statement addressed to the Egyptian nation, announcing their sympathy with it in its demands and pledging themselves to support the claim for complete independence. Not unnaturally the Princes' action has been hailed with delight by the Extremist Press, which is publishing articles eulogising the signatories' patriotism and pointing out that this is the last conclusive indication of the unity of the nation at the present crisis.

There seems little doubt, however, that this is but another move on the part of the Extremists, who, having got El Azhar to declare for them, and having produced thereby no effect materially improving their position, have thought to obtain further support for their cause by roping in the Princes of the Sultania family. At the same time it would appear almost certain that the sudden intervention of the Princes at this juncture, after they had abstained from active and public participation in politics for so long, is due on the one hand to the intrigues, which, especially in this country, are part of the people's everyday life, and on the other hand to a desire for popularity and for closer association with, if not the assumption of, the leadership of the national movement.

It should be explained that for some time now negotiations have been going on between the Milner Mission and certain ex-Ministers with a view to finding a basis of agreement and to inducing Zaghlul to come back to Egypt and discuss matters directly with the Mission. These negotiations had reached a very advanced stage, but it is highly probable that the prominent part which these ex-Ministers were assuming in connection with the movement was not to the liking of other ex-Ministers who are in close touch with the Court, and who, by inducing the Princes to come forward and plump for complete independence at the present juncture, hoped to effect two purposes, one to check-mate their former colleagues in their move to the front and the other to take the national movement definitely out of purely Egyptian and place it in purely Turco-Egyptian hands, in the latter of which the reins of Government have reposed throughout the country's modern history until the present movement under the direction of Zaghlul Pasha, who is thoroughbred fellah.

Whichever way one looks at it, this new development appears to be but one of the many political manœuvres which are at present being made on all sides for an advantageous position in connection with the national movement, and it would therefore be unwise to attach too much importance to it, or to its effects on the situation.. At the same time there is just a possibility that it may in the long run prove to have been a move in the right direction, since it may lead to the formation of a group composed of elements which, albeit they stand for complete independence, would by their very nature be more inclined to discuss matters on reasonable lines.

YUGOSLAVIA.

BELGRADE, January 9.

Serbia and Albania.

Insolubly bound up with the Adriatic question is the problem of Albania, which touches Serbia very closely. Ever since the Slavs arrived in the Balkans, Serbs and Arnaouts have been neighbours, often friends, often enemies. In the days of the principality of the Zeta, relations were very intimate, and the fierce Ghegs of the Accursed Mountains and the Montenegrins often met in battle, sometimes as allies against the common foe, the Turk, sometimes as frontier and religious enemies. Skanderbeg himself was intimately connected with the Zetan Royal house; and there is no doubt that Albanian and Serb blood is largely intermingled to-day in Montenegro. Encouraged by the Turks, the Albanians have industriously progressed and settled in territories that were formerly purely Serbian. Names that are classical in Serbian history, such as Prizren, are to-day largely, if not dominantly, Albanian in character, and during the ghastly retreat through the snowy alps of Albania in 1915, while a few savages were picking off stragglers and old women, it was Essad Pasha's retainers who held the road for the broken Serbs through the passes of Central and Southern Albania. Besides, the Albanians are natural allies of the Serbs, though Turkish and Austrian intrigues have spared no effort in the past to stir up fanatical and racial hatred between the two nations. To-day, when many Albanians are looking for a recognition of their national status, the Serbs are turning with sympathy towards these interesting neighbours. The result of the break-up of Turkey-in-Europe was to create an "independent" Albania; but England consented to play catspaw to Austria, and virtually made it an Austrian protectorate, with a German dummy on the precarious throne. Albanians will not forget their amusement when Prince

Digitized by Google

William "Duratski," or "The Foolish," as the Russian called him in derision, with an untranslatable pun on Durazzo, bolted back to his palace in terror on hearing the shots of welcome fired in his honour by these martial tribesmen; but that farce may be forgotten with a smile, provided that the Albanians do not receive some uninvited "protector" against their will. In the Albanian question, Serbia's outlook is very simple. The Serbs ask that their neighbour shall be left to her own free will, provided only that she be granted a fair frontier against tribal raids and possible aggression.

Italians Evacuate Korchula.

It is announced from Splijet that the Italians have evacuated Korchula (Curzola) in Dalmatia, which is a step in the right direction; also that d'Annunzio's paymaster has absconded with a million lire—which is a step in the wrong direction, though hardly surprising.

The Save Railway Bridge.

The railway bridge over the Save has been condemned as unsafe. It will be remembered that this vital connection was patched up, owing to the delay in obtaining the material ordered from the Reshitsa steelworks. Consequently, travellers by the Orient express are once more condemned to the expensive and tedious process of landing at Zemun, and crossing to Belgrade by ferry. But with brighter news from Roumania, and the promise of the release of the impounded articles, it is to be hoped that this long-suffering bridge will soon be put properly upon its legs again.

Fishing Extraordinary.

There is a spot on the Danube, just below Belgrade, where the butchers' men go to empty away the lights and entrails of their slaughtered beeves. The other evening passers-by were surprised to see these men savagely and energetically probing the water with iron rods. It appears that a huge *som*, or Silurus, attracted by the tempting bait, had swum up from the depths, and was voraciously devouring the luxurious dinner thus offered to him. He was so big that many of the men were afraid, but one, a wounded soldier, succeeded in spearing him through the tail, and he was quickly captured. He proved to weigh 135 kilos, or about 297 lbs.; and his lucky captors sold him at ten dinars a kilo—truly, a windfall. He must have been a hideous monster, for the dark greenish back and broad, flat head, with gaping moustached mouth, make this fish very unattractive. His jaws are armed with a formidable set of small but sharp teeth, and big specimens have been known to attack bathers, especially children, in the Black and Caspian Seas. But he is very good eating, especially when not too big, and the Serbs make him into a delicious soup. Our troops used to catch him in some of the lakes in Macedonia, and found him a welcome change in their rations. They called him the catfish, and he certainly resembles the horrid-looking catfish of the Plate and other South American rivers.

Serbian Christmas.

Although the Government has officially adopted the Gregorian calendar for all official and civil purposes, the Church retains the old Julian style, like the other Orthodox countries. Consequently, residents in Belgrade have two Christmas holidays, at a fortnight's interval. On January 5 half the population of Belgrade was carrying a live sucking-pig about; the next day the other half were carrying a pigling on their shoulders. Nobody, however smartly dressed, was ashamed to be seen with a squealing porker in his arms, though many pinched their noses to keep them quiet, with the result that the town resounded to a chorus of piggies with colds in their heads. Roast sucking-pig is a *sine qua non* for the Serbian Christmas. It is very usual to prepare him a day, or even two days before the festival, to roast him, and eat him cold on the great day. The day before Boxing Day, or, rather, two days before their Christmas, is called *Tutsin Dan*, i.e., the slaughter-day: it was accounted a good sign that there was a mist twining round the forests of Topchider on *Tutsin Dan*, for that is a sign that the summer will be a fine one. The day before Christmas is *Badnyi Dan*, the day of the yule log, which picturesque custom survives with all its force in Serbia. A suitable tree is selected, and after due ceremony, felled and trimmed and cut into three, one length longer than the others, dragged home, and the fire lit in a formal way. Supper is served with many old customs, the origin of most of which is lost in antiquity, but one member of the family sits up all night to keep the fire in. The officers of the Belgrade garrison proceeded formally to collect their *Badniak* or yule log, which has brought into the town with a cavalry escort, paraded through the streets, and the good old customs maintained.

MALTA.

VALETTA, January 5.

War on Rats.

The Governor has been pleased to direct that, with a view to keeping bubonic plague at bay, a reward of one penny shall be paid for every dead rat handed in at the local police stations. This is a very necessary step, as of late the Grand Harbour has been crowded with ships which in most cases have touched doubtful ports at one time or another.

Enteric fever has manifested itself at Musta, Notabile, and Rabata, which places have been placed out of bounds to all troops.

A Maltese Tenor.

Great excitement in the musical world has been manifested during the last few days on the appearance at the Teatro Reale, for a few performances only, of a real Maltese tenor, Dr. Isilio Calleja. As a vocalist and actor he has attained great fame in Paris, New York and Milan.

Political Leaders.

Well in advance the various political organisations are looking around for a leader for their newly promised Constitution. The names of several leading men are mentioned in this capacity, amongst which those of Dr. Sciberras, Commendatore Lewis Mizzi, and Dr. Carnana Gatto are most to the fore. It is to be hoped that it will not be a case of too many political cooks spoiling the country's broth.

Personal.

An engagement is announced of Lieut. Arthur Polhill, R.N., second son of Cecil Polhill, Esq., of Howbury Hall, Bedford, to Elizabeth, elder daughter of Lieut.-Colonel and Mrs. Martindale, of Belgrave Square, London, and 127, Str., St. Torri Sliema, Malta.

The Archbishop, Bishop Dom Maurus Carnana, O.S.B., G.C.O.G., K.B.E., has been presented by the "Old Ignatians" with a full-length picture in oils. The work, which is highly praised by experts, is from the brush of Carnana Dingli, Esq., a well-known local artist.

Miscellaneous.

The Governor has communicated to the Council of Government a dispatch from the Secretary of State on the subject of the Constitution of Malta.

The much-discussed ordinance to make provision respecting duties on excess profits made during the war has been promulgated.

The time limit for the exportation of cattle from the French zone of Morocco has been extended to March 31 next.

Five hundred and sixty-four workmen who had signed the French Labour Contract have left by the French s.s. Belgrano. The emigrants are a fine type of man, and a large number comprised those recently discharged from H.M. Dockyard.

January 7.

The New Constitution.

Lord Plumer on the 5th read publicly the dispatch received from the Secretary of State relative to granting to the island a measure of self-government and a reform of the Constitution to the Council of Government. Great interest was manifested and every seat available for the public was filled. Naturally, the dispatch only gave broad outlines, but the general impression conveyed is that of complete satisfaction.

Sixty more emigrants have left for Marseilles on the terms of the French Labour Contract.

THROUGH PERSIA IN WAR TIME.—I.

By Ernest Betts.

By the middle of 1918 those of us who had survived the disasters of Kut and the dash to Baghdad began to consider that they had been sizzling in the Mesopotamian frying-pan long enough. We were getting inured to the overpowering atmosphere of the country, and we were wondering exactly what was going to happen next. As long as we were allowed to wonder in peace it was a pleasant enough pastime piling conjecture upon conjecture, until we had before us a solid wall of speculation. In the intervals we busied ourselves with other building operations. We began to erect complete hotels of mud to serve as officers' messes, and with this end in view we dug great cavities in the soft, terribly uninteresting Mesopotamian soil, and fetched great quantities of water from the Diyala River, and tamarisk and scrub from its banks. We sprinkled the Mesopotamian mud with the "bhooza," used as fodder for the transport animals, and patted it into bricks of a quite original shape. Further afield we constructed ammunition dumps, and asked ourselves whether they could possibly have any connection with an autumn offensive. We organised brigade cricket matches to relieve the monotony; we underwent concerts in the desert; we drank lime-juice by the bucket.

Then suddenly all this stopped. In the midst of fastening on the mud girders and the steel tamarisk branches for our Babylonian hotels, a rumour of unusual violence indicated that all our work was useless. We must stop working and prepare for activities of a less peaceful nature. Rumour turned to fact with certain words that fell from the lips of our Commanding Officer. In the course of one of his lectures to us he said that operations in Persia were imminent; that we were to be the operators; that marching in Persia was a stiff and stony exercise; that our Allies, the Russians, had had to fall back after they met us at Kizil Robat, and we must now undertake their task; that there would be another lecture the next day at 5 a.m., etc., etc.

Our wall of surmise became a mountain. We held discussions; we conferred; we made "weighty pronouncements." The question arose, was it better to scorch to death in a hot country or freeze to death in a cold? It was difficult to allocate ourselves an exact rôle in any Persian campaign. Policy in our part of the world, where policy there was, had been always an elusive thing. You had to run after it.

We thought that Persia was a neutral country, and that you must knock at the door of a neutral country before entering. For my own part, I was pleased enough. In Persia you can smoke a pipe in the comfort due to a reasonably cool climate: the furnace of Mesopotamia allows you no such consolation. Therefore it was an obvious advantage to leave Mesopotamia. I saw no object in regarding the future from any but an individual standpoint: I had given up imagining that from moment to moment I was saving the British Empire. So I bought my tobacco and awaited orders.

Orders came, and for the four hundred and forty-fourth time we prepared to move. I sat outside my tent watching the activities of the men as they rolled their blankets and scooped their jam-tins clean. It was evening, and a fine luminous dusk made everything glow with warmth. The fan-like heads of the date palms spread themselves out in an intense black silhouette against the crimson sunset, and a superb harmony of twilight colours was painting itself into the sky. This was the last time I should behold the lonely beauty of a desert evening, as it was perhaps the first I had ever realised what magic it contained.

Deserting rhetoric for plain disquisition, let me attempt to outline the system (such of it as there was) by which it was hoped to make our progress through Persia a success. To anyone the least familiar with the country it was clear that there were two problems to be dealt with by those organising the advance: the first, petrol, the second, supplies. It was found that Ford motor-vans taking petrol up to Hamadan for distribution purposes reached their destination with only sufficient spirit for the return journey. No reserve, therefore, could be accumulated; and as the supply of troops and material to our men up at the front was maintained entirely by motor transport convoys, a shortage of petrol would have been disastrous. The motor-lorries themselves could take with them only a negligible quantity, as they were packed far beyond their carrying capacity with troops, naval ammunition (why naval ammunition?), and guns. The curtain had nearly gone down on this drama of insufficiency before the problem was finally solved.

The second difficulty, that of supplies, was partly dependent, of course, on the solution of the first, but it gave rise to less anxiety than might have been expected. Local resources were heavily drawn upon, and convoys that had preceded us piled up ration dumps at various points on the road. Honey was a very frequent issue, but the commissariat on the whole was not on this lyrical scale.

But I must return for a moment to our starting-point. There was a narrow-gauge railway running (but generally walking) between our camp at Abu Saida—about sixty miles north of Baghdad—and the railhead at Ruz, which lies just south of the Jebel Hamrin Hills. We were to entrain at Abu Saida, and the toy engine and humorous open trucks were to convey us as far as Ruz—unless they all fell off the line before they got there. At Ruz we were to be unloaded and stacked in motor-lorries. These were to make their way up the Great Khorassan Road in five separate convoys. Four of them had already gone; ours was the fifth. It was not expected that we should travel in such perfect luxury for long, and the report ran that Hamadan was to be the final stopping-place for all the cars. Subsequently our destiny—but destinies have a habit of obscuring themselves.

Our train was to leave at midnight. By eight o'clock our arrangements for departure were complete, so that we had four hours in which to reflect on the world-shattering exploits we were on the eve of accomplishing. It was certainly time the men in the battalion were given something active to engage them. They were becoming comatose. It would do them good, I thought, to wake up and have it brought to their notice that the earth was still moving, and events with it. But considering the matter again, and observing the camp empty and silent of voice, my mind reverted to certain days of remarkable peacefulness and certain evenings of high jollity. Truth to tell, I had found comfort very comfortable, and so had everybody else.

Twelve o'clock came, and the train was not to be seen. One o'clock and still no train. Two o'clock—not a sign of it. As officers and gentlemen, unruffled by the jars of circumstance, we walked up and down the characterless desert and engaged in pleasant conversation. At ten minutes past two the train actually arrived, and with an ostentation that brought us all severely to our senses. Ten of us—five officers and five servants—crammed into one truck with all our kit and implements of war. We felt (and fought) like three babies in a perambulator. It was impossible to move without the risk of falling off the train.

We reached Table Mountain—a deceptive name, for it is only a great mound—at five the next morning, and at six identified each other from amongst the human wreckage. Table Mountain enjoys the reputation of having the stickiest climate and the worst rest camp, not in the world, but in the universe. But it was here we received the news. The *Baghdad Times* announced that the Staffords had occupied Baku. It was the Staffords who had formed the basis for a singular piece of humour on the part of the War Office. Orders were received for two hundred of them to be rushed across the Persian border in order to substantiate a statement by Mr. Bonar Law, or someone else, in the House of Commons, that British troops were already in Persia "to deal with the situation." Such was the tale we heard; and this hurried movement, which was badly supported, gave the Staffords little to laugh at afterwards, though possibly it quelled one or two prodding enquirers at home. The news about Baku was thoroughly exciting. But it was unintelligible. What earthly connection had we with Baku? Was Persia a mere road to the Caspian, or were there other things to be done in Persia? And where was Baku?

It would be untrue to say that the new aspect of affairs revealed by this development left us in a mood of indifference. Rather we had the idea that we were embarking on some large and rather dangerous project, the full details of which had been worked out by nobody. If anyone suffered, we would be the ones to suffer; and while none of us was averse to hardship or the perils of campaigning, we preferred not to be experimented upon in the early Mesopotamian manner.

THE CARAVANSERAI.

I see that the price of dates is to "go up" again—and 33 1-3 per cent., too. That is to say that the Persian dates, popularly known as the "sixpenny dates," are to be eightpence a pound as from January 21. "The Ministry of Food," we are told, "is having to pay more for its supplies," and so—33 1-3 per cent. is clapped on for the retail buyer. I should like to know *how much* more the Ministry of Food is paying, and I should like still more to know what the cost of carriage works out at. If we have the price of food controlled, why not the cost of carriage? At any rate, eightpence a pound for dates so long after the war is surely excessive. And, by the way, who buys these dates? Personally, I do not remember seeing any offered at 6d. a pound, though I bought some very good ones at 9d. a pound quite recently. But the "sixpennies" have been scarce—probably they have been kept back for a rise. Truly, we live in strange times!

***

I wonder how many people have read the remarks which Mr. J. Swinburne made on "Music and Women" a few days ago before the Musical Association? He had the courage to say (some will call it foolhardiness) that women were possessed of neither understanding nor creative ability. Of course, he was at once attacked (for anything you may say against any form of "progress" is bound to be attacked in these days), but was he really so very wrong? To call him a misogynist is beside the point: the question is not whether woman should be loved, but whether or not she is an inferior creature. Now, for myself, I am not at all sure that the Moslem way of dealing with women is not the most expedient: in that system you do at least know where they and you are. Someone, no doubt, will reply: "Ah, but the Moslem woman is now tired of her subjection; and she is already semi-emancipated." Quite so: and what is the result? When the Turk ceases to have a hold over his women he ceases to be a Turk: but, as a matter of belief, I don't think this passion for progress in the form of equality of sexes will ever conquer Turkey and Arabia. I hope not, anyhow. Emancipation is a very sterile freedom, and the Turkish peasant woman will not mind in the least being called an inferior being provided that she "gets the goods" from her husband. After all, the woman of Western Asia is a very practical person, not given to idealistic longings; and it's far more what she has than what she is that she worries about.

***

By the bye, it has long been my intention to compose a "Misogynist's Handbook," and although I have plenty of material from English, French, and Latin writers, I believe that in Turkish and Arabic I could get probably my richest haul. The more I think of the project the more I think (when sighing over the sad deceitfulness of these times) of it as a public duty. Even if I were to limit myself to Near Eastern authors I think I could get a representative selection of worldly wisdom. If any of my readers who have been disillusioned, or are about to be disillusioned, or cannot be disillusioned, wish to send along to me examples (not personal, please!) of female inferiority, their messages will meet with a courteous reception. Over them, however, will arise a tremendous wrangle in the Offices of THE NEAR EAST. For I must tell you (if I can get this to the printers without the Editor's blue pencil on it) that there are some on this journal who are the very reverse of misogynists.

***

When talking over these things the other day to one who knows the world and its ways better than I do, I was told that those words, if published, would raise a *furore* amongst certain readers. So that I can imagine these same readers chuckling with joy at the account of the latest discovery of Babylonian archæology. For those who have not noticed it I will give one or two details. Records have been found of a Babylonian colony, dated about 2400 B.C., at a place called Burus, which was three miles from the present Kaisariyeh in Eastern Asia Minor. This colony apparently had a well "advanced" form of civilisation, for "women's rights" were in full sway, and there was also a "woman's university" there. This university provided for its students the two faculties of "Literature" and "Arts," and in charge of each of these faculties was a "Principal." One would have thought that, having got so far, the women would run the whole show, but—this "Principal" was a male professor! It is interesting and comforting to know, therefore, that the folly of Burus did stop short somewhere. And it is explained that soon after these signs of progress showed their proud and independent heads, Burus was swallowed up by the wild tribes of the north. The internal decay which was attacking the Babylonian Government made it impossible to defend outlying colonies, and so this home of equal bliss disappeared. That, I say, is the official, natural, and therefore wrong explanation. Let me tell you (and I, as a Corsair, know well when States are strong and when they are weak!) that when a State takes as its ideals the two ineffable E's, Emancipation and Education, it is the beginning of the end. A State is strong as it attains freedom, but having attained it, it loses its virtue. If I may be serious for once, and apply to our own country the history of Burus, I must say it seems to me that the women of the country, upon whom the future largely depends, are striving, just as those of Burus strove, after the things that do not matter.

***

The account which THE NEAR EAST published last week of what the British did for the Nestorians during the war seemed to me very interesting, for two reasons. First, the frank and almost inexpressible gratitude of these people; and, secondly, the naive and almost inconceivable surprise which they appear to have felt at our methods of sanitation. Now, I do not know whether the Nestorians are to-day without skill in medicine generally; if so, they have lost an art which once they fully possessed. For when the Arabs, who had no physicians and knew nothing of sanitation, conquered the Greeks and Persians, they recognised the worth of philosophers and physicians, and took them over in batches from the conquered peoples. Many Nestorian Syrians were among these, and the physician of Mohammed himself, Hareth ibn Kalda, was a Nestorian. The Arabian civilisation was in many respects the result of a process of assimilation, and in this process the Syrians played a large part. These oppressed people, however low their condition is to-day, and however obscured their history, have a very real and living past. They are entitled, therefore, to the sympathy of more fortunately placed nations.

CORSAIR.

MR. H. SAMUEL AND PALESTINE.

Mr. Herbert Samuel gave some idea of the nature of his mission to Palestine, whither he has gone at the invitation of Lord Allenby to advise on matters of finance and administration, at a reception accorded to him in Paris by the Zionist members of the Committee of Jewish Delegations at the Peace Conference and by representative French Zionists. He declared that he would endeavour to keep the great Jewish schemes of colonisation before the attention of the British Government. He knew that the British Government was determined to introduce a modern system of agriculture into the country. They did not intend to build up a colonisation based on large-scale capitalism which would afford possibilities for the formation of large landed estates. They would consider primarily how to harmonise the interests of the small colonists and of the working masses with the interests of the whole country.

TRANSCAUCASIAN REPUBLICS.

The British Government have instructed Mr. J. O. Wardrop, C.M.G., High Commissioner at Tiflis, to inform the Georgian and Azerbaijan Governments that the Allied Powers represented on the Supreme Council in Paris have decided to grant *de facto* recognition to Georgia and Azerbaijan. This recognition does not in any way prejudge the question of the boundaries of the two Republics.

PRESS ON THE NEAR EAST.

Syria.

The *Morning Post* of January 17 published a short article on "British Policy in Syria," written by an obviously well-informed correspondent. He says:—

Despite the statements to the contrary, Faisal has made no sort of agreement with the French Government. There may have been proposals and counter-proposals, but these never reached the concrete stage. Indeed, it is to consult his people as to their wishes concerning their country's future that the Emir has now gone back to Syria.

He then refers to the difficulties of the Emir Faisal's position, and concludes with the necessity of retaining the friendship of the Arabs:—

It is very difficult to see now, in view of the fighting which is taking place up and down the country, how Faisal will be able to suggest any sort of compromise between Syrian aspirations and French claims. The greater initial successes the Syrians have obtained, the more impossible will be Faisal's task. But we should not put down the cause of the trouble in Syria and Mesopotamia to Bolshevist propaganda. This trouble was brewing long before the Bolshevist successes. That it was contemporaneous with them was merely a coincidence. The unrest throughout the Arabic-speaking world of the Middle East indubitably arises from disappointment with the peace settlement. The Arabs are "an old and haughty nation, proud in arms." They have helped to smash the Turks, whom they despise as barbarian and semi-infidel. They thought to realise their age-long dreams of a revival of the great days of their civilisation, with its twin capitals at Damascus and Baghdad—perhaps an idle sentiment, but yet one we did not disdain to play on during the war. So far matters have not become so bad as this, and there may still be time, if the French adopt another policy towards Syria and we take some steps to show the people of Baghdad and the Euphrates valley that they are not to be separated from their kinsmen in Damascus and Syria, to avoid a castrophe. If the Arabs are our friends the Bolshevist menace in the hither Middle East will not be serious; if the Arabs are not our friends that menace will very soon extend to Egypt.

The Future of Constantinople.

The *Birmingham Post* of January 15, in a leading article, finds a way out of the Turkish difficulty in a compromise. Its conclusion is:—

We should like to see Constantinople, and that part of Turkey in Europe which goes with it, administered by the Turk, under due control and supervision, as a mandatory of the League of Nations. Such a procedure . . . would get rid of the necessity of finding a Western Power willing and suitable to take the mandate. It would obviate all the danger of interference with the Caliphate. It would avoid giving offence to Moslem opinion. It would not be inconsistent with the principles of self-determination. But would it deprive the Turk—and that is the point on which any plan must stand or fall—of that power for evil to Europe which he has held and exercised for five hundred years? We believe it would. When all is said and done, the Turk's power for evil has rested on two things—on his control of the Straits and on his power over subject Christian races. Now, whatever the plan adopted does one thing is certain: The Turk will never again control the Straits. All the Allies are agreed on that. The Dardanelles, the Sea of Marmara, the Bosphorus—these must be absolutely free, for ever, to the ships of all nations. We cannot see that this will be harder to enforce because the Turk is a mandatory of the League and holds Constantinople for the League. It is a matter, surely, of naval and military precautions laid down in the Treaty and to be enforced by the League. Nor, again, does it seem impossible so to condition and control the mandate that Christian races under the Turk shall be safeguarded. Admittedly such a solution as this is imperfect. But we do not believe there is any perfect solution. To turn the Turk out completely, as we have endeavoured to show, is a policy attended with grave risks. It should be adopted only if all other policies have failed. And that brings us to another point. This Turkish mandate is an experiment—but it is not an experiment which rules out others. If it fails, as it may, the League of Nations will still be in a position to revoke its mandate, to adopt a more drastic course of action. It is easy to see difficulties and raise objections, easy to prophesy failure. But the fact remains that failure in this policy would result less disastrously than failure in any other policy advocated. To leave the Turk uncontrolled in Constantinople is unthinkable. To turn him out is to invite grave dangers all over the East. To give him a moderate and controlled sovereignty, carefully supervised, and subject to his attempting to meet the desires of the League of Nations—that seems to us a compromise reasonable in itself, and with possibilities of success held by no other proposals.

Armenia.

In that entertaining column of the *Morning Post* called "The Way of the World," there appeared on January 19 an interesting note on the Armenian Crown:—

Will the Allies' recognition *de facto* of the independence of Armenia bring forward any claimants to the kingship of that martyred country? The last Christian King of the ancient House of Lusignan was sent as a prisoner to Paris, where he died in 1393, but in quite recent times his descendants have asserted their rights to the Crown of both Armenia and Cyprus. The last well-authenticated claimant was Guy de Lusignan, who died in a Paris cellar in 1795, but a claim to direct descent was put forward in 1884 by Archbishop Khorian, who was chosen by the Armenians to represent them at the Congress of Berlin, and who won many supporters in this country to his claim that Cyprus should be made over to his family while awaiting the Crown of Armenia. One of the Archbishop's brothers married an English lady, while another wedded Mlle. de Nosrois, known in Parisian society as "Princess Marie de Lusignan of Cyprus, Jerusalem, and Armenia."

Articles to Note.

"The Calcutta University Commission," by Ernest Barker; and "Egypt and Palestine," by Major Lindsay Bashford, in the *Edinburgh Review* (January).

CORRESPONDENCE.

CONSTANTINOPLE AND THE KHALIFATE.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—Having lately returned from Constantinople, I should like to make clear to all your readers that almost without exception the inhabitants of that city—Turks, Greeks, Armenians, etc.—hope that the place will remain under British rule, whether mandatory or otherwise, and whether the Sultan be allowed to remain or not, rather than be handed over to an international body. The French are disliked to-day; the Italians are not popular; and the Turks consider the Americans are too sympathetic towards the Armenians.

All the nonsense which appears in the public Press in England with reference to offending the Moslems of Egypt, India, etc., if the Turks are sent out of Europe, should not be allowed to be published. It does more harm than good, as it is suggestive, and is at once taken up and made capital of by the few so-called Nationalists in those countries. There is not the slightest doubt that the majority of Great Britain's Moslem subjects, whether in Egypt, India, or elsewhere, admit that they were never so happy, free, or prosperous as they have been since they were under British rule, and they all sympathise with their co-religionists in Turkey, who have not been free or happy or prosperous under Turkish misrule, the despotic reign of Abdul Hamid, or the tyrannous misrule of the Young Turk party. The British Press ought therefore to advise all Moslems, whether under British, French, Dutch, or other European rule, to encourage the Moslems of the decaying Ottoman Empire to petition for a real Constitutional Government under British guidance, whether the Sultan remains in Constantinople or whether he goes to Broussa or to Konia. This is, in my humble opinion, the duty of the British Press. I think there would be no harm in allowing the Sultan to retain his palaces in Constantinople, where he might be allowed to reside during the summer months, and that the Straits of the Bosphorus and Dardanelles and Sea of Marmora, being free, would be a sufficient safeguard against further oppression on the part of the Turk in Europe. What I wish especially to lay stress on is that the Press, by its present style of suggestive publications, is doing more harm than good.

No matter what decision is taken by the Peace Conference with regard to Turkey, if the British, French, and Italian Governments show in a strong and determined manner that they mean to enforce the terms of the Treaty and have same respected in all countries, the inevitable will be accepted with a good grace all over the world, Moslems included. But we must have no weakness.—I am, etc.,

A. C. S.

THE TOMB OF ST. DEMETRIUS.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—Reading recently "A Woman in the Balkans," by Mrs. Will Gordon, F.R.G.S., I came across the following paragraph on p. 128:—

"Some of the public buildings in Bucharest are imposing, handsome edifices, and the churches are often very decorated, the cathedral especially, in which lies the body of St. Demetrius in a glass case enshrined in silver.

"In time of calamity or famine the sacred body is carried through the city, followed by a great procession, headed by the archimandrite, the priests, and the people."

This was a surprise, as during my peregrinations in Saloniki I have visited the Church of St. Demetrius several times, there seeing what I believed to be the actual tomb of St. Demetrius.

If, as stated by Mrs. Gordon, the body of St. Demetrius lies in the Cathedral of Bucharest, will some correspondent kindly put me right concerning that which I saw in Salonika?—I am, etc.,

A. R. G.

MUSICAL NOTES.

The remark was recently made at the Musical Association that singing has little connection with music. It is a comment which will inevitably shock many hopeful people—it has already shocked many hopeless people—but there is a great deal in it. For if you take English singing to-day, you find many artists and many singers, but you do not find many who are both. There are plenty of "big" performers who can sing, but their artistic purpose is always subservient to their commercial purpose, and no good will ever come from them. And there are tens of thousands of minor artists performing gallantly at the smaller halls who have a very keen desire to sing, but unfortunately know not how. The sensible critic's sympathy should go with these young artists, who at least have a soul. From the professional singer who has lost his or her soul will rarely come any music.

To this select band of artists belongs Mr. W. Johnstone-Douglas, who gave a song recital at the Wigmore Hall on January 14. It was at once a pleasure and a disappointment to listen to him. His programme was chosen carefully: it consisted of a cantata by Rameau for voice, violin, 'cello, and piano; six songs by Mr. John Ireland, and accompanied by him; and two songs by Mr. C. Armstrong Gibbs, with string accompaniment. These things were by no means equally good, but it obviously pleased Mr. Johnstone-Douglas to sing them, and one can but praise his selfish courage. He has a sense of interpretation which unfortunately is out of all proportion to his power to express it; hence what he actually sang was very different from what he meant to sing. The performance of Rameau was more interesting than pleasing, for the accompaniment was pleased to forget the deficiencies of Mr. Douglas' technique, and when its leader (Mr. Douglas) was (if I may say so) knocked out, it quite gaily took up the attack. Mr. Ireland excellently accompanied his own compositions, of which, however, only two—"The Heart's Desire" and "The Adoration"—can accurately be called songs. I am not sure that we ought not to feel alarm at this rather decadent tendency in Mr. Ireland: for at times it is only his sincerity that prevents him from falling into the lofty inanities of the Yellow-Book school. The most satisfactory item in Mr. Douglas' programme was his singing of Mr. Gibbs' song "Nod." The words are by our chiefest living lyricist, Mr. de la Mare, and the music to which they have been set is most fitting. The song has a soft, drowsy tune, with a broken rhythm in the accompaniment; and for a beautiful performance of it the composer, the English String Quartet, and the singer deserve the highest praise. The composer (Mr. Gibbs) is one whose future work everyone interested in music must watch: it may well be that he will attain as much distinction as the late George Butterworth, who before he was killed fashioned many lovely things out of the national idiom. The English String Quartet (Miss Marjorie Hayward, Messrs. Edwin Virgo, Frank Bridge, and Ivor James), who played Mr. Gibbs' compositions, are a set of players who both understand and feel what they play. They have not the finish and the unified effects of other quartets, but their balance is adequate, their tone is good, and their sense of music is very fine. The appeal they make does not come from any chilly polish or correctness, but it comes in a human and very certain way.

Miss Megan Foster, who, assisted by Mr. Ivor Foster, gave a song recital at the Æolian Hall on January 15, is a young Welsh singer who knows her art surely. She has a charming personality and an excellent voice, and she chose her programme in such a way as to make success absolutely certain. Her songs were mostly by modern English composers, written in the traditional and native idiom, and she sang them with perfect simplicity and artlessness. She failed in none of her efforts, which, however, were not wide enough. For, apart from a few French songs by Chausson, Debussy, and Ravel (all of which she sang most charmingly), all her songs were more or less in ballad form; and though these gave much scope for making differences in degree, it was something of a different kind that we wanted. Even the duets from Mozart's "Don Giovanni" and "Figaro," which she sang at the end with her father, were not sufficiently different from the rest of her songs to make a broad judgment possible. It is enough, and all that one can say, to remark that what Miss Foster sang was sung as well as such things can be. Further, it is certain that she has a big future, though whether it is to be on the conventionally successful lines is uncertain. If she can withstand the lures of popularity, she will rise very high. Mr. Ivor Foster, who assisted his daughter, is probably too well known to readers of this column to need much comment. He is a ballad singer, and always will be one. And though he has a fine voice, one fears that his songs are chosen for him. On this occasion he sang "Three Salt-Water Ballads," by Mr. Frederick Keel. Mr. Keel is a good composer, but in these songs his music has not reached the high level on which Mr. Masefield's ballads stand. "Trade Winds" is the best of the three, and it was the one which Mr. Foster sang best; the other two, which are written in nautical English, Mr. Foster spoiled by not singing the words as they are written. It should be noted that Mr. Foster sang for the inevitable encore Mr. Roger Quilter's "O Mistress Mine," a song that wears far better than was predicted.

The number of first-class British pianists is not large, and Mr. Maurice Reeve, whose recital I heard at the Æolian Hall on January 17, does not add to it. He chose to play familiar pieces by Bach, Beethoven, Chopin, Scriabin, Liadow, Balakirew, and Schumann, and he should not have done so, because in all these different faults were apparent. For instance, the Bach-Liszt Organ Fantasie and Fugue in G minor were quite spoiled by a very faulty use of the pedal; the Chopin was played with the hardness of a mechanical instrument; the Balakirew (Islamey) is a piece the difficulties of which all readers with a knowledge of Near Eastern music must know to be tremendous, and it was imperfectly, though bravely, given; and Beethoven I have never heard rendered more perfunctorily. Mr. Reeve's technique is a little in advance of his imagination, but not very far; and even to normal competency his is a long road to travel. At present his tone and touch are no better than that of the pianola, which has the additional merit of accuracy.

NEAR EAST BOOKSHELF.

I.—"THE TURKS IN EUROPE: A SKETCH STUDY." W. D. Allen. (London: John Murray. 10s. 6d. net.)
II.—"PIONEERS IN INDIA." By Sir Harry Johnston. (London: Blackie and Son, Ltd. 3s. 6d. net.)
III.—"NO MAN'S MONEY." By Henry Milner Rideout. (London: Jarrolds. 2s. net.)

I.—THE RISE AND FALL OF THE TURKISH EMPIRE.

Mr. W. E. D. Allen styles his sketch-study of the Turkish Empire a "chronicle of man's savageness and meanness." Regarded in due perspective, it marks a swing of the mighty pendulum which oscillates from east to west at intervals of five hundred years. In the 12th century of our era, the Osmanlis, a small clan of the Oghuz Tatars, were expelled from their pasture-grounds in Khorassan by Mongolian hordes. After many vicissitudes they settled down in Asia Minor under the protection of the Seljuk Sultan of Konieh, and developed a most efficient organisation for aggressive warfare. A hundred and fifty years later inveterate nomadism drove the Osmanlis westward; and they started on a career of conquest which brought them to the gates of Vienna.

In the fifteenth century Europe lay almost at their mercy. The Byzantine Empire, against which the tide of eastern invasion had hitherto beaten in vain, was in the last stage of decrepitude. The Feudal System which had enabled Christendom to defend its ideals by concerted action, had suffered disintegration from commercialism, religious hatred, and dynastic rivalry. So the Osmanlis, led by a succession of able and ruthless chiefs, were able to overrun the Near East. They found eager allies in the trading republics of Venice and Genoa; kinship in Tatar blood moved the Bulgarians to invoke their intervention. At the epoch-making Battle of Varna, fought in 1444, the flower of Europe's chivalry proved inferior to the Janissaries, a Prætorian guard established by Sultan Murad I. on the Roman model, which, centuries later, was copied by Prussia. A climax came in 1453, when Mohammed II., yclept The Conqueror, stormed Constantinople, which Napoleon has rightly styled "The Key of the World." Under Suleiman the Magnificent, a contemporary of our Henry VIII., the Turkish Empire reached its apogee, including as it did the whole of Western Asia, the Near East, and a large portion of Hungary. Suleiman was, in fact, the Arbiter of Europe. His encouragement of agriculture and commerce, his tolerance in matters of religion, his ability to select the best man for special functions, made him the superior of all European sovereigns of his day. But the empire, cemented together by statecraft and valour, carried in its bosom the seeds of decay. Suleiman was, perhaps, a solitary exception to the rule that Turks are lacking in administrative ability. The imperial dynasty was robbed of its brain-power by an atrocious custom which prescribed the slaughter of all males of the House of Ottoman at every demise of the Crown. Appointments to high office were determined by palace intrigues; and the harem's enervating influence rendered nearly every Sultan a *roi faineant*. The history of the Turkish Empire for three and a-half centuries has been a record of continuous decline. Its European provinces were lost in succession; and, but for the bitter rivalries which made Europe a house divided against itself, the Osmanlis would long since have been driven "bag and baggage" from Constantinople.

For patriotic Britons, Mr. Allen's sketch of modern developments is melancholy reading. He exposes the perpetual vacillations of our Foreign Office, the ignorant sentimentality of Parliament and the Press; the alternations of misguided strength and culpable weakness seen in our representatives at Constantinople. His peroration gives the key to a book worthy of close study by statesmen who are now endeavouring to solve the Eastern riddle:—

At the beginning of this book we asked: "How was it possible for an obscure tribe of nomad peasants from the depths of Central Asia to impose its dominion upon a dozen nations of Europe?" A study of the Balkans for the last five hundred years sufficiently answers this question. Intolerance, savagery, callousness, exploitation down through all centuries to the twentieth. How stupid is Man; not wicked, but always stupid!

Opportunist politicians are prone to handle contingencies as they arise, without giving a thought to the sequence of events which has led up to them. Yet the roots of the present are thrust deeply into the past, and the future looms before us as a resultant of forces which have been operating for centuries. Nor is the ruin of the Turkish Empire without salutary lessons for ourselves. Among its causes was an utter incapacity to sympathise with the aspirations of subject races, and a blind adherence to the Roman maxim *Divide et impera*. Only by incorporating such into a loyal and united community can Great Britain hope to weather the storms that threaten the fabric of civilisation.

F. H. S.

II.—ENGLAND, INDIA AND PEPPER.

This book, apparently one of a series, gives a popular and entertaining account of the early relations of India and Europe, based largely on the narratives of merchants, mendicant friars, and geographers. Trade is the key to these relations, for India was the treasure-house of precious merchandise to which Europeans were always seeking a way.

The author reflects somewhere on the changes brought about in history by one Indian spice—pepper. Here is a formula for the economic historian—the history of Indi-European relations told in terms of pepper. Nor is it quite fantastic. First, the Venetians tapping the overland trade from India along the caravan routes of the Near East and making Venice the distributing depot of Western Europe. Then an aggressive Islam gradually blocking those ancient routes, till pepper stood at 110 instead of 40 ducats a load on the Rialto. Of a sudden the discovery of a seaway via the Cape by the Portuguese, their brief commercial dominion in the Indian Ocean, the collapse of Venice, stricken by the competition of cheap freights. Next the frantic attempt of every maritime power to find a sea route to the Indies, Cathay, Zipangu, Taprobana, names which spell romance now, but then wealth beyond the dreams of avarice: the accidental, unfortunate discovery of America, whose existence never entered anyone's calculation (doesn't Lord Acton say that Columbus always tried to conceal the fact that he was the man who stumbled on that wretched obstacle?). Then the ephemeral prosperity of the United Provinces, due almost entirely to the riches of the Spice Islands; their neighbours' jealousy, which led them to entertain that epic resolve to quit Europe for the East Indies, where "they might rear, under the Southern Cross, amidst the sugar canes and nutmeg trees, the exchange of a wealthier Amsterdam." Lastly, the Englishman's fatal competition already roused by the Dutchman's attempted monopoly in pepper, its price jumping from 3s. 6d. to 6s. a pound: the incorporation of the East India Company and the final conquest of India by its "factors," Clive and Warren Hastings—what a romance!

But besides this, Sir Harry Johnston (and who is better equipped for the task?) gives a really informing account of Indian ethnology through the ages, and of that flora which made its wealth; and this is the chief excellence of an admirable book.

Elsewhere there are signs of haste in the preparation of the book. An index might have been added, and the maps are not quite good enough; one showing mediæval trade routes, or something after the fashion of those in Col. Yule's "Cathay and the Way Thither" (Hackluyt Society), would have been useful.

III.—NO MAN'S MONEY.

This is "a yarn," and nothing but a yarn, but it is a quite good yarn as far as it goes. The trouble is that it does not go far enough: that is to say, the author does not tie up his loose ends; and we get the impression that the book was intended to be two or three times as long as it is. It is to the author's credit that we should not resent its being twice or thrice as long; but as things are, we are inclined to be a little resentful at not being told what becomes of "Aunty Linah" or even of the silver rupees that give the story its title. The fact seems to be that Mr. Rideout is so keenly interested in his hero, Tin Cowrie Dass, and the British police officer, Weatherby Sahib, that he has not interest enough to spare to make the minor characters quite convincingly real. The scene is laid in India, but it is the India of melodrama rather than the matter-of-fact country that the Anglo-Indian sees and knows. It is, in fact, a kind of Oriental "Ruritania" or "Kravonia" that the book introduces us to; but Tin Cowrie Dass is a much less subtle bit of character-drawing than Anthony Hope would give us. He is, however, a likable fellow, and because we like him we can get quite interested in his adventures—which are certainly not lacking in excitement.

BOOKS RECEIVED.

"Causes of the War," by M. Bogitshevich, LL.D. (London: George Allen and Unwin, Ltd. 5s. net.)

"Great Ganga the Guru; or, How a Seeker Sought the Real," by Kavita Kaumudi. (London: Kegan Paul, Trench, Trubner and Co., Ltd. 6s. net.)

We regret that by a printer's error the name of the author of "How Jerusalem was Won," which was reviewed in last week's NEAR EAST, was wrongly given in the heading as W. T. May instead of W. T. Massey.

PERSONAL AND GENERAL.

CALENDAR OF THE WEEK,

showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian (New Style).	Julian (Old Style).	—	Moslem.	Jewish.
1920. January. 22	1920. January. 9	Thursday	1338. Rabia II. 1 Jomada I.	5680. Shebat. 2
23	10	Friday	2	3
24	11	Saturday.....	3	4
25	12	Sunday	4	5
26	13	Monday	5	6
27	14	Tuesday	6	7
28	15	Wednesday	7	8

The Prince Regent of Serbia has left Paris for Belgrade.

To Viscount Allenby's Memorial Fund the Zionist Organisation has contributed £100.

Colonel Sir Roper Parkington, Consul-General for Montenegro, and Lady Roper Parkington have left Claridge's Hotel for Brighton.

The Persian Minister, who is recuperating in Switzerland after his recent illness, has derived great benefit from his stay there.

Lord Barrymore passed a good night after his operation on January 14, and is stated to be going on as well as can be expected.

M. Venizelos, the Greek Premier, on the conclusion of the Peace Conference discussions in Paris, will, according to present arrangements, visit London.

The Shah of Persia has presented to the Queen of the Belgians the insignia of Grand Cordon of the Order of the Afstab, and the King of the Belgians has handed the Persian Minister in Brussels the Medal of King Albert.

The Spanish Ambassador will deliver a lecture before the Royal Geographical Society, at the Æolian Hall, 135, New Bond Street, W., at 8.30 p.m. on February 16, on "The Spanish Zones in Morocco."

A meeting will be held to-day, 3.15 p.m., at 95, Lancaster Gate, W.2, in support of the Indian Nurses' Hostel Fund. The chair will be taken by Lady Carmichael, and the speakers expected are Sir Sankaran Nair, Colonel O'Kinealy, I.M.S., and Dr. M. N. Mitter.

The marriage took place on January 15, at St. Martin's Parish Church, Scarborough, of Herbert H. Silley, M.R.C.S., L.R.C.P., second son of Alfred C. Silley, of Constantinople, to Katharine Mary, eldest daughter of the late Ernest W. Boswell, of Leeds.

The marriage arranged between William Wilson, of Baghdad, third son of the late Thomas Mills Wilson, Glasgow, and Margaret, second daughter of Mr. and Mrs. James Knox Hart, Hemel Hempstead, Herts, will take place on Tuesday, February 3, at St. Peter's, Piccadilly, at 2 p.m.

M. Constantinescu, Minister for Agriculture and Commerce in Roumania in the Government of M. Bratianu, leaves London this week for Paris, *en route* to Bucharest. M. Constantinescu, whose son is attached to the Roumanian Legation here, has been paying a short visit to London.

The engagement is announced, and the marriage will shortly take place, between Capt. Harry Chapman Sinderson, R.A.M.C. (Special Reserve), younger son of Mr. and Mrs. W. Sinderson, of Epworth House, Cleethorpes, Lincolnshire, and Maude Elsie, elder daughter of Mr. and Mrs. G. W. Mungavin, of Hampstead, N.W. Capt. Sinderson is now serving in Mesopotamia.

M. Michel Boerescu, Roumanian Chargé d'Affaires in London, has received his appointment to Ministerial rank. This promotion, it is to be feared, will lead sooner or later to M. Boerescu's transfer to another diplomatic post, and his departure from London will be regretted not only by his fellow-countrymen in England, but also by his very wide circle of British friends.

The third of a series of lectures arranged by the Egypt Exploration Society will be given by Professor T. Eric Peet on January 23, at 8.30 p.m., in the rooms of the Royal Society, Burlington House (by permission of the President and Council). The subject of the lecture will be "El Amarna, the City of Egypt's Heretic King." Tickets can be obtained free on application to the Secretary, Egypt Exploration Society, 13, Tavistock Square, W.C.1.

A public meeting, under the auspices of the British Armenia Committee, will be held in the Caxton Hall, Westminster, this evening, under the presidency of Mr. Aneurin Williams, M.P. The object of the meeting is "to urge upon the Peace Conference the fulfilment of the Allies' pledges for the liberation of the Armenians and other subject races from the Turks." The speakers will include the Rt. Rev. Bishop Gore, D.D., Lady Sykes, and Mr. Arnold Toynbee.

Under the auspices of the East India Association, Miss F. R. Scatcherd read a paper on January 19 at the Lincolnshire Room, 7a, Tothill Street, Westminster. Her lecture was entitled, "India and Her Friends: Wise and Otherwise," and was presided over by the Rt. Hon. Lord Lamington, G.C.M.G., G.C.I.E. Other lectures arranged by the East India Association include:—"Burma," by Sir Harvey Adamson, K.C.S.I., on February 9; "The Agricultural Development of India," by Mr. N. N. Sen Gupta, on March 15; and "India and the Covenant of the League of Nations," by Mr. K. Gauba.

The General Council of King George's Fund for Sailors has received a letter from Sir Henry Richards, K.C., K.B.E., enclosing a cheque for £5,000. Sir Henry Richards was chairman of the Executive Committee of the United Provinces Special War Fund, which he says amounted to over a quarter of a million sterling. During the Great War the fund was devoted mainly to the provision of motor ambulances at all fronts, including some to the Royal Navy. The gift now made to King George's Fund is part of an unexpended balance in England which the Executive Committee in India resolved should be distributed at the discretion of Sir Henry Richards on his return to England.

Mr. E. Rimbault Dibden, ex-curator of the Walker Art Gallery, Liverpool, whose services have been engaged by the Gaekwar of Baroda, is now on his way to India. Mr. Dibden is to superintend the collection at the new art gallery which his Highness has erected in that city. The Gaekwar's collection (says the *Liverpool Daily Post*) was formed in the years immediately preceding the war by Mr. Marion H. Spielman, F.S.A., but hostilities prevented its being established in its destined home. It comprises about 210 examples, and in forming it his Highness's intention has been to bring together examples representative of the development of the painter's art in Europe from early times until the present. It is expected that Mr. Dibden's mission will occupy some four months.

APPOINTMENTS, ETC.

M. Daeschner, French Minister at Lisbon, has been appointed Minister to Bucharest.

Fatollah Khan Noury Monazam-es-Saltaneh has been promoted Second Secretary of the Persian Legation in London.

Colonel Richard Fielding Edwards (Chief Engineer, Malta Command) has been appointed an Official Member of the Executive Council of the Island of Malta.

It is announced that the King has approved the appointment of Sir Herbert Guy Dering, K.C.M.G., K.C.I.E., M.V.O., to be British High Commissioner at Sofia, pending the resumption of diplomatic relations with Bulgaria.

The King has been pleased to approve the appointments of Mr. C. F. Napier and Diwan Bahadur Calamur Kumaraswami Sastri to be Puisne Judges of the Madras High Court, in two posts which have recently been added to the permanent strength of the Court.

It is announced that the King has been pleased to appoint Major A. S. Meek, Supernumerary List, Indian Army, to be an additional Member of the Third Class of Companions of the Order of St. Michael and St. George for services rendered in connection with military operations in the Aden Hinterland.

BY THE KING OF THE HEJAZ.

ORDER OF EL NAHDA.

2nd Class.—Maj. and Brev. Lt.-Col. C. H. F. Cox, R.F.A.; T./Lt.-Col. S. F. Newcombe, R.E.; A./Lt.-Col. C. E. Vickery, R.F.A.

3rd Class.—Maj. W. A. Davenport, West Yorks Regt.; T./Capt. H. Garland, Special List; T./Capt. H. St. Clair Garrod, Special List; T./Capt. (Hon. Lt. in Army) H. M. Goldie, Special List; T./Lt. G. A. B. Gottlieb, R.A.S.C.; A./Maj. W. E. Marshall, R.A.M.C.

BY THE KING OF MONTENEGRO.

ORDER OF DANILO.

Grand Officer.—T./Col. Sir C. Thomson (Special List).

OBITUARY.

Sir George Dalhousie Ramsay, C.B., died on January 16 from bronchitis. Sir George, who entered the Civil Service in 1846, was employed at the War Office for forty-seven years. During that period he was for some years Private Secretary to the Secretary of State for War, and he also served as Secretary to the President of the Board of Control for India.

Colonel Frederick Coulthurst Elton, C.B., R.A., whose death recently occurred at Dover, was born in July, 1836. In 1854, when he was only seventeen, he joined the Royal Artillery, and was sent immediately to the Crimea. There he was awarded the Legion of Honour by the French. He was present at the fall of the Redan, and took part in the siege of Sebastopol. For services in the Egyptian War of 1882 he was made a C.B.

The death occurred at Cambridge on January 11 of Mrs. Margaret Dunlop Gibson. Mrs. Gibson, who was a daughter of the late Mr. John Smith, a solicitor, of Irvine, Ayrshire, took a great interest in Asiatic lore, and with her sister made a number of journeys to Syria and Palestine. She visited Sinai six times, and in 1892 photographed the famous Syriac palimpsest of the Gospels, whilst four years later they brought to England the first leaf of the Hebrew Ecclesiasticus.

NEWS IN BRIEF.

The Vatican is about to conclude a *concordat* with Bulgaria, after which a Bulgarian Minister will be accredited to the Holy See and a Papal Nuncio to Sofia.

Lectures on questions affecting the Near East are to be given in the Vatican with the object of facilitating the reunion of the Eastern Churches with Rome.

Princess Natalia Constantinovitch, the former wife of Prince Mirko of Montenegro, whom she divorced in 1917, has been married at Eastbourne to Count Gastone di Dudzeele.

An English edition of the Hebrew daily newspaper, *Doar Hayom*, is now being published in Jerusalem, under the name of the *Palestine Weekly*.

Representatives of the Sultan of Morocco have officially taken possession of the German Consulate buildings at Casablanca and Tangier, acclaiming in speeches the victory of the Allies.

According to a telegram from Tetuan, the Spanish have resumed military operations in Morocco, several posts being occupied without resistance.

The Government of India have accepted an offer of the Jodhpur State to present to the British Government a sum of about £93,000 as a contribution towards the expenses of the war.

THURSDAY, JANUARY 22, 1920.

BOLSHEVISM AND THE MIDDLE EAST.

After sowing the wind of indifference towards Bolshevism, the Allies are reaping the whirlwind. Nearly two years have passed since the storm-signals were first hoisted in the Middle East. The war was still in progress; the Germans had seen Pan-Turanianism well launched in the regions bordering on the southern half of the Caspian Sea, and were engaged in welding Bolshevism into a weapon of aggression. With the menace in the Western theatre at its height, there was then some excuse for the Allies' reluctance to do more than set a guard on Russia. But with the collapse of Germany the Bolshevists were left as the declared enemy of the established order of things, and of a type as malignant as the Germans themselves, although less formidably equipped. In the face of such a foe, the Allied plea of exhaustion was no more valid than it would have been at any time during the four years' struggle against the Central Powers; but it served the purpose of the Governments that urged it and satisfied the sorely tried peoples because no one in authority had the vision to insist upon the potential danger lying behind the Bolshevist movement. Self-protection, no less than the interests of the Russian people, who already appreciated something of the inwardness of the despotism that masqueraded under the name of liberty, ought to have prompted vigorous action against the terrorism that had usurped power in Russia. Japan was one of the Allies and, far from being exhausted, had been adding to her strength throughout the war. That she would not intervene in Russia except on certain definite conditions was to be expected; but if the Western Allies had possessed the will and the knowledge, there can be do doubt that a working agreement with the Japanese could have been evolved. Governments, however, which were floundering in a muddle of helplessness and contradictory promises in the Near East were not likely to find inspiration when dealing with the Far East. The negotiations with Japan were left in suspense; Allied faith was pinned on a Russian General of mediocre talents and on an Admiral with political leanings turned commander of land forces. But even with these figureheads it would have been possible to make headway against Bolshevism in its early stages, all unprovided as it was with the sinews of war, if adequate and sustained support from the Allies had been forthcoming. Half-measures, however, alone were attempted, with the result that the anti-Bolshevists lost confidence in the Allies and in themselves, and their opponents were enabled to overrun practically the whole of Russia and Siberia.

To-day, when the whole world ought to be at peace, the Allies have had to summon hastily a Council of War in Paris. The full extent of the Bolshevist danger is at last appreciated by politicians who have hitherto approached the subject only in its possible relationship to Labour politics at home. In Russia the forces of General Denikin have fallen back on the Don, with little hope of staving off the Red advance on his right, which aims at reaching the Caspian. Behind him in the Caucasus the situation is becoming daily more precarious. Georgia and Azerbaijan, neither singly nor together, can hope to resist armed invasion, while Baku already has its Bolshevist element, which would need but little reinforcement from outside to enable it to assert itself. In Central Asia the menace is even more imminent. The whole of Trans-Caspia has passed under Bolshevist occupation, and troops are being despatched towards the Persian, Afghanistan, and Chinese frontiers. In Turkestan the Red Army can rely upon the support of prisoners of war to the number, it is said, of nearly forty thousand, mostly Hungarians, and its victories over the forces hitherto opposed to it appear to have provided it with up-to-date war equipment. The railway service is profiting by the capture of the oil wells at Kizil Arvat, and the food situation in these regions is said to be improving. The complacency with which Bolshevism was regarded a few months ago as a spent force has been rudely shaken. The policy of inaction or of half-hearted encouragement given to the Russians who remained loyal to the interests of their country is seen now to have been a mistake. But the danger has assumed such proportions that no simple expedient, which might have availed two years ago, has the least chance of success against it. The Allies are even less anxious than they were last year to embark on military expeditions on a large scale, and for this reason may be expected to fall back on more devious methods to attain their ends.

Although the danger from Bolshevism is real, and calls for resolute action to cope with it, the adoption of panic measures at this stage is to be strongly deprecated. The first step to be ruled out of court is any proceeding that may be interpreted as an intention to parley with the Bolshevists either while their hands are dripping with the blood of their victims, or when they have been unctuously dried on proclamations announcing the discontinuance of the system of terrorism as the first outcome of the defeat of the anti-Bolshevists. We find it hard to believe that Bolshevism is destined to become a permanent system of government in the world scheme. On the other hand, the Allies hitherto have done their best to establish it by refusing to take up arms against it, and now will certainly assure it a long lease of life, if they seek to come to terms with it. With the threat to Central Europe we are less concerned, as Bolshevism has only to become sufficiently formidable in this direction to rally the necessary forces to ensure its downfall. In the Middle East the position is different. Here the danger, to all intents and purposes, confronts Great Britain alone among the Allies. Persia stands to be an immediate victim, but the Bolshevists would use the hapless Persians only as a means to an end. Their goal is India and the British Empire as a whole, and it is this aspect of the danger that makes the remissness of the British Government in the past so culpable. Even now the Bolshevist strength consists not so much in their armies as in their propaganda, and our efforts must be directed towards counteracting the latter no less than towards rolling back and annihilating the former. Whatever success may attend Bolshevism in the Caucasus, it will not proselytise among the Arabs to the south of it. But the spirit of unrest among these, already stirred by French action, may well be used as a medium for the spread of Bolshevist doctrine to Egypt and to India. For the moment Afghanistan appears to offer a more fruitful soil; but while the Afghans will accept Bolshevist propaganda and Bolshevist money, they are not likely to open their country to Bolshevist armies, and a change as sudden as that which eliminated the last Ameer may alter the complexion of Afghan relations with India. Bolshevism will want time to consolidate its successes before passing to fresh conquests. It requires, therefore, to be dealt with circumspectly, drastically, and with full knowledge. If the present Government cannot rise superior to mere stage effects, the time has come for others to take in hand the safeguarding of the British Empire.

NOTICE.

As there is no prospect of any reversion to the former custom of dispatching the Eastern newspaper mail at the end of the week, the publishing day of THE NEAR EAST has been changed from Friday to Thursday.

THE TURKISH PROBLEM.

(From a Correspondent.)

Among the welter of unsettled problems before the world, that of Turkey is now to the fore, but for all the understanding of it that is visible some of its aspects might never have been placed before the general public. The question has been overlaid with a crust of inevitableness and diplomacy which is by no means natural. Missionaries and the novelists have led the ordinary man to picture a country of impenetrable Eastern despots sitting cross-legged in harems, while their savage soldiery crush an innocent Christian population under foot. This picture is ridiculously untrue.

The Turkish Empire from Busreh to Europe was centralised in the most exact and disciplinary manner, and the centre was Constantinople and the Ottoman Government. The revolution of 1908 deposed an autocrat and substituted in its place a scandalous oligarchy, but the ordinary man has no more say in it than a London cab-horse has in the election of an alderman. No action could be taken without orders from Constantinople, and Constantinople gave orders without considering the good of the people.

The Turkish Empire consisted, and at the time of writing still consists, of two parts: Constantinople and the rest. To know Turkey is to know the rest. To understand Turkey is to know Constantinople. The city is the capital of "Levantinia"—the home of the Levantine. The dictionary will not explain what he is, but three months of contact will enable you to recognise him anywhere. The city is a jumble of pieces of an ugly jig-saw puzzle which no one has yet made into a picture. Set in a girdle of wonderful seas, of wonderful hills, lit with gorgeous sunsets, it lies like a festering pool of iniquity, of all that is foul in human nature, of all the squalor of deformed city life. Ruling over it sits an effete Government, employing as its agents anyone of better brains or quicker intellect. The Government is as medley as the city; Turks, Greeks, Armenians, Jews, Albanians, Circassians, Kurds, figure in it, all equally bad, mean, dishonest, and treacherous. Outside it lies unofficial Constantinople, recruited equally from a variety of nations, striving in vain to make the city worthy of its unique position and potentialities.

The failure of Turkey is the failure of Rome. Rome fell because there remained no Romans, and Turkey will fall because in Constantinople there remain no Turks. They have become "Levantine-y." A Turk will trace in his family, perhaps, a Circassian mother, an Egyptian grandfather, here a rich Greek, always an Albanian or a Jew. He differs only in this respect that he forms the aristocracy of "Levantinia." Throughout the centuries many peoples have come to the city. The city of the Great Whore has sucked most of them in and spat them out Levantines—a people who are not a people, without patriotism, without honour, talking myriad tongues in jargon, the sole people in the world without one virtue. It is a city of intrigue, of backbiting and scandal, of cunning, treacherous men and dishonest women, living in squalid houses. Spread over all a fatalism which destroys effective action, and you have the citizen of Constantinople. It is a place of vast runnings about on petty affairs, vast intrigues on little things, no big ideas, no character, no drive, no continuous effort, no virtues. Round it, and in stronger contrast, lie the rolling downs of Mashlak, the deep shady valleys of Belgrade Forest, the Bosphorus with its green rushing current and its banks dotted with little lovable hamlets, the fathomless blue of the Marmora, and, beyond, the hills of Anatolia massing peak on peak away to the sunrise.

But it is from the city that this Turkish Government is drawn. The city forms the environment of the Government, and its spirit permeates the ideas of its rulers. It has not suffered even during the war; both the members of the Government and the citizen have profiteered and grown rich.

Beyond, away eastwards, lies Anatolia. We will leave the questions of Arabia, Syria, Palestine, Egypt, and Mesopotamia. Their future will not be Turkish. Anatolia: that is the problem. It is a country mainly of ragged mountains with rich cultivated valleys and picturesque villages clinging to the hillsides and stretching down the valleys. The climate is ideal, rarely too hot or too cold, with a fresh, clean feel in the air. To the south, below Konia, it becomes a little more tropical and unhealthy. It has produced untold wealth in past centuries, and it would do so again with a little effort. It is a land of unbounded possibilities. It is like a strong man's body lying under the spell of suspended animation. Beyond it lies Kurdistan, wilder and more savage.

Anatolia is peopled with Turks, Greeks, and Armenians, with a large majority of Turks. The people as a whole are peasants and small shopkeepers. Even the largest towns are merely magnified villages. The Greek and Armenian are far superior to their kindred of Constantinople, hardworking and thrifty. The Turk, on the other hand, is dirty, honest, ignorant, a truthful, religious peasant. An Englishman of the Middle Ages must in many ways have resembled him; he has certain elemental qualities which can be built on; he is brave and obedient to an absurdity. The difference between the Turkish and the Australian outlook on life was once aptly put as follows:—"If you went into a crowded railway station in Anatolia and said: 'Sit down,' the crowd would sit down. If you tried it in an Australian station, the crowd would knock you down."

It is practically impossible to hold a brief for the Turk in regard to his relations with the Greek and Armenian, but here, again, the popular representation has misled the world: the quarrel has been represented as one between Cross and Crescent. This is untrue, for the quarrel is as old as the ages. Left to himself the Turk would live happily with his Christian neighbours. The quarrel is based on the resentment of the dull, sturdy, and uneducated against those with sharper brains, better educated, and with the power to amass wealth. It corresponds to the resentment of the Russian against the Jew, but it will not come to a head unless whipped up by interested persons. It is the slow resentment of the gigantic primeval animal being crushed out of existence by puny opponents with better brains. The Government decided to massacre the Christians. The Turk was told that the Greek threatened to destroy him by means of a commercial stranglehold; that the Armenian was the enemy of his religion and a danger to his country. His resentment was fanned into flame, and then his obedience was called into play. He was ordered to kill. He killed; and he must pay the price.

Thousands of Europeans brought into contact with these peoples have found the same thing: the Greek and Armenian are thrifty, hardworking, crafty, ungrateful, and unattractive. The Turk has bravery, honesty, and a simple fatalistic philosophy of life. These are attributes which made him great in the sixteenth century. To-day they

are exploited. A good Government to-day must always be on the side of the worst element of the population. Extortion and cunning may be despised, but, being within the law, they must be protected. The gaols hold more fools than knaves. In qualities the Turk is supreme, in ability and brains the Greek and Armenian. Here is the old, old quarrel which Bolshevism and the British laws have both tried their hands at settling—the fight of those equipped for manual work against those fitted for brain work.

In cruelty neither side can throw stones. The standards of Europe will not hold in Anatolia. Whichever side is on top massacres with deliberate cruelty. In 1916 the Turk massacred the Armenians and Greeks; in 1919 the Greek in the Smyrna district massacred Turks with some accompaniment of rape and loot. The Armenians murdered thousands of harmless Moslems during the Russian advance on Van, and to-day regular troops of the Armenian Republic are murdering unarmed Moslems in the north-east of Anatolia and massacring women and children in the mosques. There is little to pick between them. The quarrel is another aspect of that between Labour and Capital, on more primitive lines than in Europe, and complicated and embittered by religion. It was exploited by the Constantinople Government for its own ends.

The facts to be grasped are these—at the head of Turkey to-day is Levantine Constantinople, ruling, whether under the autocracy of Abdul Hamid or the oligarchy of the Union and Progress Committee. On the other hand is the peasant population of Anatolia. The latter has suffered—the Greeks and Armenians by massacre and loot, the Turk by exploitation in ten years of war with famine rations, no pay, and appalling losses. There is but one hope for Turkey: the destruction of its present Government, root and branch; not the destruction of the Sultan, but of his Levantine surroundings and his Levantine Ministers. Until this be done Turkey will remain the ready prey of any unscrupulous adventurer or party. The guilty must suffer; but when justice has been done and the price has been paid, the Levantine Government should be destroyed and the people of Anatolia, Turk, Greek, and Armenian, be given a chance to make good. Turkey is represented in England as divided cleanly into the Turk and the Christian, eternally antagonistic. It is not. It is divided into Anatolian and Levantine, native inhabitant and bastard ruling race. Destroy the power of Constantinople and give all Anatolia a chance, Greek, Turk, Armenian alike in one mass. It will succeed.

Since his arrival in Khartoum (states the correspondent of *The Times*) Lord Allenby has been kept extremely busy. Among his engagements were a review of the British garrison, an inspection of the experimental farm at Shambat, an official dinner at the Palace, and a visit to the White Nile dam at Gebel Auli (some 30 miles from Khartoum), where Sir Murdoch Macdonald and Sir Arthur Webb met him and explained the project.

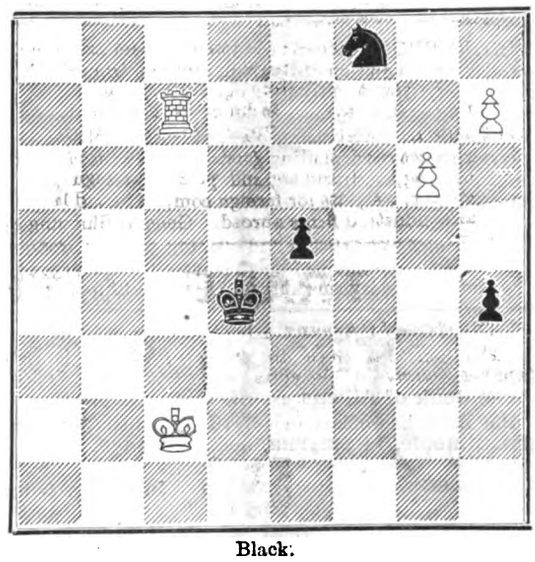
PROBLEM No. 11.

White.



Black.

White to play. What result?

The above position occurred in a recent game in the City Championship.

Solution to Problem No. 10:—1, K—Kt2; if Kt x Q (ch), 2, Kt x Kt (mate); if R x P, 2, Kt x R (mate).

Senor Capablanca gave his concluding simultaneous exhibition in England on January 18, when he met thirty members of the Maccabeans Club. He is now going to Holland, where he will meet Dr. Lasker, and it is at least possible that as a result of the meeting a match for the world's championship will be arranged.

THE SERBIAN RELIEF FUND.

The Prince Regent of Serbia has written a letter to the Committee of the Serbian Relief Fund, London, as follows:—

"Through the medium of the Serbian Relief Fund, I wish to thank the British public for their generosity and unfailing interest towards the Serbian nation. From the early days of the war, when the Serbian Relief Fund began its magnificent task of relieving our people, to the present day, when the country is once more free and independent, this splendid British organisation has never ceased its labours for a moment, and it is my earnest hope that we may count on its further co-operation in building up our sorely-tried land. There is hardly a nook in Serbia to-day where Serbian Relief Fund workers are not to be found, healing the sick, distributing food and clothing, or caring for a portion of our great number of war orphans. The committee of the Serbian Relief Fund has been to our people a glorious example of constancy and unselfishness in toiling for others, and I most particularly commend and appreciate the fact that its well-appointed staff in Serbia has been instructed to act in collaboration with Serbians, thus establishing British methods of work and thoroughness on a lasting basis.

"There is no doubt that the Serbian Relief Fund remains the excellent medium whereby the kind British public directly reach the suffering men, women and children of Serbia, and in the name of my people I again express my gratitude for all that they have done and are so generously continuing to do.

"(Signed) ALEXANDER."

A semi-official statement issued in Belgrade states that about 200,000 Serbs at present residing in Germany, and many Serbian families now living in Hungary and Roumania, desire to take up their domicile in Serbia.

GENERAL BANK OF GREECE.

Paid-up Capital, Drs. 3,000,000.

Head Office - ATHENS.

BANKING OPERATIONS:
Every description of Banking business transacted.

FINANCIAL OPERATIONS:
Investigations in connection with, and the promotion, organisation and financing of, Limited Joint Stock Companies, with a view to exploiting agricultural, industrial and mineral resources, executing technical works, etc.

COMMERCIAL AND SHIPPING DEPARTMENT:
Purchase and sale of goods on account of clients. Warehousing, Advertising and placing foreign products on the market. Agents for foreign companies and large commercial and industrial firms abroad. General Shipping Agents.

POPULAR BANK OF GREECE.

Head Office, ATHENS. Branch, PIRÆUS.

Correspondents throughout Greece.

Established June, 1905, by the National Bank of Greece and a group of Capitalists.

CAPITAL - Drs. 1,500,000.
RESERVE FUND - Drs. 2,500,000.
Deposits and Credit Accounts, Drs. 100,000,000.

The Bank specialises in the collection of Bills payable in Greece; it accepts goods on consignment, and undertakes their sale, and transacts every kind of Banking business.

General Manager: D. LOVERDO.

TRADE WITH THE NEAR EAST.

The Bank of Athens extends special facilities for business with the Near **East** to manufacturers, exporters and importers.

The Bank has offices in all the principal towns in **Greece,** also in **Egypt,** Cairo and Alexandria, in **Cyprus,** Limassol, in **Constantinople,** in **Smyrna,** and in **France,** Marseilles.

Inquiries from interested parties are invited.

BANK OF ATHENS.

PAID-UP CAPITAL : £1,920,000. **HEAD OFFICE IN ATHENS.**

London Office: 22, Fenchurch Street, E.C. 3.

COMMERCIAL BANK OF GREECE, LIMITED.

CAPITAL PAID-UP - Drs. 15,000,000.
RESERVE FUNDS - Drs. 2,364,793.

Head Office: ATHENS.

Branches:—**Piræus, Salonika, Patras, Volo, Syra, Calamata, Corfu, Cephalonia, Candia, Chios, Argos, Pyrgos, Vostizza (Ægion), Nauplia.**

AGENTS IN ALL PARTS OF GREECE, THE LEVANT, AND ABROAD.

The Bank conducts every kind of Banking, Commercial and Stock Exchange business and extends special facilities to traders interested in business with Greece. It acts as Agent for many Foreign Banks. It is specially organised for Exchange, the execution of mail and cable transfers throughout Greece, and for the collection of clean and documentary Drafts.

MERCHANDISE DEPARTMENT:
The Bank undertakes the warehousing and sale of goods consigned.

GREECE.

Area 43,522 square miles. The cultivated area amounted to 5,746,300 acres, of which about 2,253,400 were under cereals, 518,900 under grapes and currants, 370,600 under oak trees, 296,500 under olives, and 2,223,900 were forests.

Population (1914), 5,000,000 approximately.

Chief Products (with average annual production):—Currants, 142,000 tons; wines, 3,000,000 casks; tobacco, 9,000,000 lb.; cereals, 8,000,000 bushels; olive oil, 200,000 casks.

The **MINERALS** of Greece include:—Iron, Marble, Magnesite, Emery, Lead, Lignite.

IMPORTS (1914), Old Greece only:—Total value £7,000,000, of which £2,000,000 from the United Kingdom; £1,800,000 from Germany and Austria Hungary; £1,000,000 from Russia.

EXPORTS (1914), Old Greece only:—Total value £4,000,000, of which £3,000,000 came to the United Kingdom.

COINAGE.—The unit is the Drachmæ, equivalent to a Franc (10d.). The current rate of exchange is about 25·70 Drachmæ to £1.

FREIGHT.—From England, 160/- + 10 % primage.

WEIGHTS AND MEASURES.—It was decided in 1898 to introduce the metric system. The change is to be gradual from the old system, which is:—Oke = 2·82 lb., stater = 123·20 lb., livre (Venetian) = 1·05 lb., baril (wine) = 16·33 imperial gallons, kilo = 0·114 imperial quarter, pike = ⅔ of a yard, stremma = ·242 of an acre.

BANK OF NATIONAL ECONOMY (of Greece)

Head Office: ATHENS.

Branches:

PIRÆUS, SYRA. PATRAS.

Capital Paid Up - Drs. 10,000,000

Fully represented in all parts of the world for all kinds of commercial, financial, and shipping business.

President. L. EMBIRICOS. *Manager.* D. MIAOULIS.

BANK OF PIRÆUS.

For COMMERCE, INDUSTRY and SHIPPING.

Capital Paid-up - Drs. 5,000,000. Reserve Fund - Drs. 3,095,000.

OFFICES at PIRÆUS and ATHENS.

Every kind of Banking business transacted.
The Bank's connections throughout Greece enable it to offer foreign clients special facilities for the collection of Bills, etc.
Correspondence invited.

BANK OF INDUSTRY OF GREECE.

Head Office: 14, Stadium Street, Athens.

Capital Fully Paid-up - Drs. 15,000,000

The Bank has been established for the encouragement and development of Industry and Commerce, and undertakes every description of banking business.

BANK OF ORIENT.

Capital Paid up - Drs. 25,000,000

Head Office: ATHENS.

Branches: SALONIKA, SMYRNA, ALEXANDRIA, CAIRO, MITYLENE, SERRES, ZAGAZIG, MAGNESIA, PERGAMA, SOMA.

Every kind of Banking Business transacted.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

I notice that the forthcoming British Industries Fair is attracting considerable attention in the Near East, and I am not without hope that the various countries in that region, and in particular the Balkan countries, will be well represented at its opening. As constituted during the war, the Fair would possibly make only a limited appeal, but this year's event is in a different category altogether, and a visit to the three sections in London, Birmingham, and Glasgow will give the buyer from abroad an admirable birdseye view of the industrial potentialities of this country.

***

The latest news from South Russia is less unsatisfactory. General Denikin's position is stated to have become more stable—he is now holding the line of the Don—and the fact that this should be the case after so rapid and extensive a retirement gives cause for hope that in due course he may be able to do something more than meet the Bolshevists with merely defensive tactics. But there have been so many surprises in connection with Russia that it would be unwise to prophesy one way or the other. The one fact that stands out clearly from the present position is that Odessa and other ports of the Black Sea cannot be said to be in any immediate danger, and the presence of the Allied ships in that sea should have a most reassuring effect on the inhabitants.

***

Meanwhile it may be noted that the threat to South Russia is having the effect on trade which I indicated when touching on the subject two or three weeks ago. For some considerable period now the demand from the South Russian market has decreased, and the latest report from Constantinople describes the position at the end of December as one of stagnation. The consequence, as was to be foreseen, is that there is a great accumulation of goods at Constantinople, with a resultant fall of prices there in some directions, piecegoods being ten per cent. below the prices obtaining in Manchester. This congestion must be regarded as merely a passing phase, for, once the situation in South Russia is clearer, stocks in Constantinople will quickly disappear.

***

Mr. Frederick W. Tattersall's optimistic survey of the prospects for the cotton industry in his review of the cotton trade during the past year, a summary of which appears in another column, is merely in accordance with expectations. The result of the long drawn-out war was that many markets were denuded of supplies, and it follows that some time must elapse before supply can equal demand. So far there appears to be no sign of this happening. In Mr. Tattersall's view over-production is a long way off, and in this connection he mentions the fact that in many of the leading outlets the imports during the last few months have not been equal to the clearances.

***

That is one side of the cotton position as far as Lancashire is concerned. The other, the supply of the raw material, is the reverse of favourable. Lancashire is now, and must be for some years to come, mainly dependent upon the United States for cotton. But the United States cotton crop is decreasing, while internal consumption is going up rapidly, and, as was noted last week, American consumption of Egyptian cotton is also largely on the increase. In the circumstances it does not need a great effort of imagination to picture a time when, if adequate measures are not taken, Lancashire will actually be short of supplies. The danger is not a new one; it has been foreseen for years, but to-day the problem is a pressing one, and it is imperative that to meet it the promotion of cotton cultivation within the British Empire should be furthered in every possible way. Not the least difficulty is the fact that cotton is not always a remunerative crop. In America, for instance, one of the reasons for the decreasing yield of cotton is that farmers have found the cultivation of cereals and the raising of cattle more profitable undertakings. Illustrations can be given of the same thing within the Empire.

***

The position as regards the Egyptian cotton crop is now being dealt with in these columns by Professor Todd in a series of exceedingly important articles, the first of which appeared in THE NEAR EAST last week. He points out that, while for many years before the war the crop had on the whole been steadily increasing, the increase had not kept pace with the expansion of acreage, and the crop failure of 1909 "brought matters to a head." But the war came to cut short the progress made in dealing with the problem of water-logging and the schemes for extending the acreage under cotton. During the war he shows that there was a marked accentuation in certain years in the reduction of the average yield per acre. There has been a marked fluctuation in the average yields, and the average yield of the best year since the war has not been equal to that of pre-war years. Professor Todd states that this suggests two causes. Firstly, that the old trouble of water-logging has not been cured; and secondly, that the pink boll worm is the cause of the continued reduction in the average yields of the best years. "It is to be hoped," he adds, "that . . . the damage done by pink boll worms will be steadily diminished in future years; but the position of the Egyptian crop will never be satisfactory until the much more deeply seated evil of water-logging is dealt with thoroughly and conclusively."

***

As soon as the Treaty of Peace with Turkey is ratified it may be assumed that there will be important developments in connection with the oil resources of Mesopotamia. It needs no emphasis that the events of the last few years have been an ample demonstration of the necessity for the development of oilfields in territories that lie within the Empire, and in Mesopotamia, the responsibility for the government of which, it may be anticipated, will fall to this country, there are important oilfields. The question of concessions for their development is now engaging attention, and rumour has it that the intention is to grant a joint concession to the Anglo-Persian Oil Company, Ltd., and the Shell Combine.

***

The outstanding feature of the report of the Great Indian Peninsula Railway for the half-year ended September 30 is the marked increase in expenditure, which is largely due to higher wages, etc., and to the increased cost of renewals and maintenance. There was a marked rise in gross revenue receipts, the increase being Rs. 17.02,600, or 2.69 per cent., but on the expenditure side of the account the increase amounted to Rs. 80.51,500, or 23.08 per cent., with the result that the net earnings show a decrease of Rs. 63,48,900, or 22.31 per cent.

THE COTTON TRADE IN 1919.

Mr. Frederick W. Tattersall gives an interesting review of the past year in the cotton industry in the current issue of his *Cotton Trade Circular*. In 1919, it is pointed out, spinners and manufacturers undoubtedly had a record year. As regards spinners, the activity did not commence until after Easter, but subsequently the demand has gone on increasing at advancing prices. There has been a big turnover for Holland and other countries of Northern Europe, while there has been an excellent demand for Eastern markets. India has bought freely, and the business for China has been surprisingly large, while a feature of interest, it is stated, has been the trade done for Japan. It is satisfactory to note also that there has been a healthy demand for the Levant and other Near Eastern markets.

During the first quarter of the year business in piece goods was very restricted, and up to the end of March numerous manufacturers, it is pointed out, scarcely sold anything at all, while prices fell from week to week. In April, however, a demand developed for China, and in the next few weeks a substantial business was placed with manufacturers. It is remarked that "it must be placed on record that China merchants were the first to realise that the time was ripe for increased activity. For a long number of years they have had the reputation of being the best buyers of cotton goods in the world, and undoubtedly their action in the spring of the past year was another indication of their commercial sagacity." The effect of this demand was a hardening in quotations, and the changed position led to operations by buyers for other markets, and the trade has subsequently gone on developing at increasing prices. India, the leading outlet, has lagged behind, but in the closing weeks of the year a marked improvement set in. There has been a large offtake for Egypt and other outlets in the Near East, while a healthy business has been put through for Central and South America. It is further noted that there was also an improvement in the turnover for several European countries, especially in fancy materials.

As regards the future, it is stated that the general outlook for the cotton industry was never brighter, and that it is probable that in 1920 all previous figures will be beaten. "The margin of profit in yarn and cloth," it is added, "is exceedingly wide. Although a large business has been done during the past year, there are no indications of the requirements of our customers being satisfied. Demand still exceeds supply, and producers are quite unable to meet in an adequate manner the wants of buyers. Values at the moment are on a very high level, but there is every probability of still dearer rates during the next few months. No relief for buyers is expected before the end of March at least. In the spring a good deal will depend upon the acreage for raw cotton in the United States. Growers may be stimulated to plant a large area, and there is a possibility of a fall in prices. An easier movement in raw cotton rates, however, is not likely to have any immediate effect upon yarn and cloth quotations, as spinners and manufacturers are so deeply sold they can afford to be very independent. . . . With regard to consumption of cloth, it must be pointed out that, although a big trade has been done during the past nine months, our shipments are a long way behind pre-war days, and the output of Lancashire has been very seriously affected by the shorter working week in the factories. Over-production seems to be a long way off. It is reported that in many of our leading outlets abroad the imports during the last few months have not been equal to the clearances, so stocks, instead of increasing, are decreasing. Dealers in foreign parts have still to replenish their supplies, and in this connection India has not arranged exports which are likely to satisfy consumers. Buying during the coming year will probably be irregular, but a sound, healthy trade is assured. Spinners of yarn are expected to experience a very profitable twelve months. The cotton situation is very harassing for many firms, and big prices have to be paid for the superior qualities of the raw material, but, notwithstanding these extra charges, business will probably be very remunerative."

APPOINTMENTS REQUIRED.

LADY SECRETARY desires post abroad. Capable, experienced, work on own initiative, shorthand, typing, French, German. £4.—M.G., The Ladies' League, 118, New Bond Street, W.

GOVERNESS desires post abroad. Usual English subjects, fluent French, German; advanced music. £100.—K.L., The Ladies' League, 118, New Bond Street, W.

LANCASHIRE COTTON

(From Our Own Correspondent.)

Manchester, Monday.

The tone of the market has continued quieter, but prices have been very firmly held, and in some quarters there has been a tendency for quotations to harden. Many more difficulties are now being experienced in arranging fresh contracts, chiefly owing to producers being deeply sold and unable to deliver against orders for many months ahead. Some ups and downs have been met with in Egyptian cotton rates, but the basis of values continues very high. Demand remains healthy. In yarns made from Egyptian cotton a rather restricted business has been done. Many spinners have refused to quote. Now and again stock lots are sought after and special prices paid. All producers remain in a very strong position, and can afford to be exceedingly independent. The output of the mills is much below the requirements of users. Some advices relating to American cotton have not been quite so bullish as recently. There is talk of a record acreage in the United States for next season. In piece goods for Egypt there has been a steady flow of demand, and some fair lines have been booked. Sized goods continue to be sold, and moderate lots have changed hands in printed and dyed descriptions. Very favourable advices are coming to hand as to clearances in Cairo. The outlook for the markets of the Levant continues encouraging. A steady demand has been met with for India, but transactions of weight have not been so numerous as a little time ago. According to letters just to hand, goods are going into consumption on a promising scale. Rather less activity has shown itself for China. Some useful lines have been booked for South America. Printing cloths remain deeply sold and stiff in quotation. In American yarns home users have not been disposed to purchase freely, but prices are well maintained, especially in twists. Export bundles remain in request for India. Coarse counts have been wanted for the Levant, but there have been many difficulties relating to delivery.

YUGOSLAV CURRENCY REFORM.

Reuter's Belgrade correspondent reports, under date January 15, that the following semi-official statement has been issued:—"The present monetary situation in the Kingdom of the Serbs, Croats and Slovenes is very involved, firstly on account of the circulation of crown notes issued by the Bank of Austria-Hungary which are not covered by metallic reserves, and, secondly, by the dual monetary system—that is to say, the co-existence of dinar notes on the former National Bank of Serbia, together with crown notes of the Austro-Hungarian Bank. A reform in the monetary system is thus necessary. However, the Government are approaching the problem cautiously in order to avoid a disturbance in the economic system. The dinar notes and the crown notes will be replaced by a single note the value of which will be inscribed in crowns and in dinar, issued by the National Bank of the Kingdom of the Serbs, Croats, and Slovenes. The present relation of the dinar to the crown—namely, one to four—will be maintained in the case of the new notes. Present holders of dinar notes will then receive for a coin of little intrinsic value, and without a metallic guarantee, other coin guaranteed by all the resources of the National Bank of the Serbs, Croats and Slovenes, and by the entire credit of the kingdom. The decision of the Cabinet with regard to this reform is as follows: The Finance Minister will be able to proceed immediately with the stamping of the notes required by the bank with a view to the application of the monetary reform. Each note will bear, on both sides, an indication in crowns of the proportion of one dinar to four crowns. The Finance Minister is authorised to begin the recall of the crown and dinar notes at present in circulation, and to exchange them against the new crown and dinar notes as soon as a sufficient quantity are available. State banks will continue to make their discounts in two monetary units. As soon as the existing crown notes of the Bank of Austria-Hungary and the dinar notes of the National Bank of Serbia have been recalled, the new crown and dinar notes of the National Bank of the Kingdom of the Serbs, Croats and Slovenes will become the only means of legal tender. The value in gold of one and the other monetary units will be determined by special law."

TRADE ENQUIRIES.

Large Engineering Company, manufacturing all kinds of Excavating Machinery, such as Navvies Dredges, Dredges for Harbour Port Works, and all kinds of dredge work, mineral or otherwise, Cranes, and so forth for Railroad work, wishes to correspond with reliable Machinery House or Engineering Firms for the purpose of establishing Agency in—

ENGINEERING.

Concrete Sewers.

The use of concrete for sewers has never been popular in England, but in certain other countries, particularly the United States, a much greater use has been made of this material for that purpose. A number of engineers have been more or less prejudiced against its use by reason of some early failures, which could clearly be traced to the use of badly-made concrete. Others have feared lest percolation should take place through minute surface cracks into the concrete and through to the surrounding soil, but both fears and prejudice have probably been diminished by the reports recently received from a number of municipal engineers where sewers of this type have come under their immediate notice. The reports cover thirty-two towns in the United States, and the general conclusion arrived at is that concrete, if well mixed and made with a small aggregate, has proved satisfactory under all ordinary conditions. The records and reports cover a period of ten years, and it seems that in every case the cost of material and construction has been less than would have been the case had brick been used for the purpose. It must be borne in mind that bricks themselves are not proof against permeation, and still more so is this the case with the mortar generally used for the work. Concrete for sewer work should, of course, be reinforced by steel rods or webbing, and when supported in such manner the sewers are not likely to settle or crack through settlement of the surrounding soil.

Removing Rust.

As a result of a number of practical experiments carried out some little time ago, an effective method of removing rust from iron and steel plates by chemical means has been evolved, which is not without interest to engineers generally at the present time. A mixture of two parts of sodium bisulphate, crushed to as fine a state as possible, with one part of common salt, is applied to the surface of the plate or girder. The mixture, after preparation, is wetted just sufficiently to permit it to adhere to the surface, and if it is left for some two or three days before removing the plate will be found to be quite clean. A quicker method is to brush off the mixture with a wire brush every two or three hours and apply a fresh coating, removing this in due course. As soon as the plate is clean it is scrubbed with an alkaline solution and dried quickly by an air-blast, if possible, a coating of paraffin oil being afterwards applied. This method is said to be more effective than ordinary sand-blasting.

MOTOR ROADS IN THE RED SEA REGION.

The general use of motor vehicles in the Red Sea commercial district has been retarded by the lack of highway development, says the United States Consul at Aden, Mr. Addison E. Southard in a recent report. In the province of Hejaz there is only one highway suitable for the use of motor vehicles, and that is the 42-mile road from the port of Jeddah to Mecca. Only Mohammedans may go into the Hejaz, and consequently the European officials and business men residing in Jeddah, who might be expected to introduce the use of motor vehicles, have not had the opportunity to make use of the Jeddah-Mecca highway.

Yemen Province has no highways suitable for wheeled vehicles, but there are incentives which may result in some highway development as soon as the political future of that province is determined. Hodeidah is a Yemen port of some importance, and is the outlet for a considerable trade from the fertile Yemen highlands. The construction of a highway fit for motor vehicles across the desert hinterland from Hodeidah to the Yemen foothills, a distance of approximately fifty miles, would be a great help to trade. Produce from the Yemen Mountains could then come down to the edge of the desert coastal plain and be carried into Hodeidah in but a fraction of the time and at but a fraction of the cost involved in the present tedious and unsafe method of camel caravans. The transportation of imported goods from Hodeidah to the interior would profit likewise. A railway over this route has long been planned, and indications are that either the railway or a highway suitable for wheeled vehicles will be constructed within the near future. The narrow streets of Hodeidah do not offer any inducement to the use of motor vehicles.

On the opposite side of the Red Sea, in the Italian colony of Eritrea, there promises to be a market for motor vehicles. Highways are being built or planned which will offer a field for the sale and use of motor vehicles on the inland plateau between Asmara, Keren, Agordat, and other trade centres. There is at present a railway from the port of Massowah to Asmara. This railway is being built on to Keren, and will probably be extended to Agordat. If railway plans are carried out, it may mean some curtailment of highway construction, but it is apparent that the Italians are going ahead with the opening up of this colony in a way which will demand the construction of both highways and railways. There are as yet very few motor vehicles in use in Eritrea.

Somaliland and Abyssinia.

Jibouti, in French Somaliland, has broad streets and some roads extending a few miles outside the port, which afford facilities for the use of a few motor-cars. There are at present two cars in use there. It is not probable, however, that highways will be built from Jibouti to the interior. The hinterland is desert, and is already crossed by the Franco-Ethiopian Railway, which runs 500 miles inland to Adis Abeba. The railway affords all necessary facilities for interior trade and travel in the present undeveloped state of the country.

In British Somaliland are the ports of Zeyla, Bulhar, and Berbera. There is no immediate prospect of the building of highways into the interior from the two first-named ports, but a road suitable for wheeled traffic has been built from Berbera inland to the higher and cooler plateau back of the coastal desert plain; two or three small cars are in Government use over this road. The development of British Somaliland is, however, at present uncertain, and, unless there is some important attempt to open up the interior, it is not likely that highways will be built within the near future. This country at present offers no real possibilities for the sale or use of motor vehicles.

In Abyssinia there is at present no highway development. In and around the towns of Dire-Dawa and Adis Abeba, streets and roads could very easily be brought to a state fit for the use of a limited number of motor vehicles for local travel, and it is not improbable that this will happen. The materialisation of the present prospect of an active foreign interest in the development of Abyssinian trade will undoubtedly result in the building of highways suitable for the use of motor vehicles. Some definite developments in this situation should take place in the near future.

Motor Vehicles in Aden.

The commercial centre of the district is Aden, and here the greatest number of motor vehicles are in use at present. There are now in use in Aden 129 motor-cars, 33 motor-cycles, and 7 motor-lorries. On the small peninsula there are several miles of good roads or streets, but the longest straight run for a motor vehicle would be five miles, from one side of the peninsula to the other. One part of Aden is on the west side, and another on the east side of the peninsula. These two parts—five miles from each other—are connected by a frequent taxi service, maintained with automobiles. Just beyond the joining of the isthmus with the mainland is the Arab village of Sheikh Othman. From the two parts of the town and port of Aden, and over the isthmus, is a good motor road to this Arab village.

Beyond Sheikh Othman the desert continues to the Yemen foothills, which are an average distance of somewhat more than 75 miles inland. Road-building into the desert would not be too difficult, but there is as yet no real need for it.

SWEDISH ORIENT LINE.

Direct regular steamship service with about weekly sailings outwards and homewards between

GOTHENBURG and ALGIERS, PIRÆUS, SMYRNA and SALONICA.

GREEK EXCHANGE.

Regulations for Control.

A recent despatch from H.M. Minister at Athens gives details of the decree, dated November 4-17, dealing with the control of exchange operations in Greece. Among the provisions of the decree are the following:—

Art. 1.—The purchase and sale of bills of exchange on foreign countries, of whatever type, as well as the transfer in general of capital abroad, under whatsoever form and by whatsoever means, is placed under control.

Art. 2.—(1) An Exchange Control Service is established by the Ministry of Finance, placed under the immediate orders of the committee as per Art. 1 of the Legislative Decree of August 19, 1919, to which service is entrusted the control of purchases and sale of bills of exchange, and the transfer of capital abroad, as per the orders therein contained. (2) The personnel of the Exchange Control Service consists of officials appointed by decision of the same Ministry.

Art. 3.—(1) The banks, banking institutions, and banking offices, and each and every company wishing to carry on business in foreign bills of exchange, are obliged, before every transaction, to forward a declaration of same to the Exchange Control Committee. (2) In the case of firms maintaining sub-offices, the relative declaration can only be made by the head office, who should refer same to the sub-offices. (3) On the basis of these declarations, the committee will compile a list of persons entitled to do business in foreign bills of exchange, issuing permits when considered expedient. (4) Persons included in the list compiled, according to Art. 3 of the Royal Decree of November 27, 1919, are not obliged to make a new declaration, as decreed in the above paragraph.

Bills of Exchange.

Art. 4.—(1) The sale of bills of exchange on the part of persons entitled to carry on business in foreign exchange, and the transfer of capital abroad, as per the above Art. 3, is not permitted without a special permit of the Exchange Control Committee on each occasion. (2) This permit is granted on a duly drawn-up demand of the interested parties, explaining fully the reasons for the purchase of the bill of exchange, and the export of capital. (3) With regard to the opening of credits for the purchase of merchandise, the demand must set forth the description and quantity of the merchandise purchased, and copies of documents proving the contract and the conditions of same must be attached to the demand, furnishing at the same time guarantees that the goods for which the bill of exchange is purchased will be imported within six months. The guarantee is personal: (a) for persons entered on the registers of the Chamber of Commerce on the publication of the present law, as regards limited liability companies; (b) for traders established in Greece for one year before the submission of the petition to purchase bills of exchange, this being certified by the relative Chamber of Commerce, or where such does not exist, by the competent Financial Ephoros (Commissioner), on the basis of the taxation returns in his possession, or by the relative police authorities, granted by simple declaration in writing, and is fixed for the prejudicial consequences at 40 per cent. on the value of the bill of exchange purchased; for others not included in the above categories, it is monetary, and fixed at twenty per cent. on the value of the bills of exchange purchased, and it is to be deposited at the bank through which the credit is opened. (4) The guarantee expires, as determined by the President of the Exchange Control Committee, and upon the production by the interested party, within the stipulated time limit, by demand to the Exchange Control Committee, of a certificate from the competent Customs authorities, certifying that the importation of the merchandise, the description and the quantity thereof, and the place of origin, as well as the original invoice. The guarantee likewise expires, as per the stipulations in the above paragraph, on the cancellation of the credit, this being certified by the relative bank. (5) The stipulated limit having expired, the guarantee becomes the property of the State, and is confirmed as public revenue, in the charge of the President of the Exchange Control Committee. On a petition, however, of the interested party, and on the decision of the Exchange Control Committee, the above six months' limit may be extended for a maximum of three months. (6) With regard to the simple remittances abroad, these are allowed on the furnishing of a guarantee only, as above, the production of proofs not being demanded.

Art. 5.—The sale of bills of exchange is exceptionally allowed without special permit referred to above, in the following circumstances:—(1) For expenses of maintenance of persons living abroad, when the value in drachmae of the draft purchased does not exceed 1,000 drachmae per month for each recipient. (2) For the service of actual private needs, when the value in drachmae of the bill of exchange purchased does not exceed 500 drachmae monthly at each remittance, the remittance to be made to a recognised foreign commercial house. (3) For the payment of coupons of Greek securities. (4) With regard to the purchase of merchandise, the conditions contained in paragraphs 3—6 of the previous articles are applicable, in accordance with the decision of the Minister of Finance.

Art. 6.—Persons appearing in the list referred to in Art. 3 of the present Decree are allowed, on the decision of the Minister of Finance, freely to transact purchases and sales of bills of exchange, on condition that the highest limit of available exchange in accordance with Art. 4 of the Legislative Decree of November 20, 1917, is not violated by these transactions. Art. 7.—The sale of bills of exchange on the part of persons or establishments not referred to in the list as per Art. 3 is allowed to persons appearing in the list in question only. Art. 8.—Persons appearing in the list as per Art. 3 are obliged to keep complete records of movements of exchange, as per the conditions fixed by the above articles.

Duration of Credits.

Art. 11.—The duration of credits opened (*crédits confirmés*) shall not be above three months. The extension of the limit is allowed in the decision of the Exchange Control Committee, on the demand of the interested party, and after production of the necessary proofs from which it appears, in the opinion of the committee, that the non-execution of the credit within the original period is due to "force majeure." Under these conditions the substitution of the merchandise for which the credit was originally opened, or the substitution of the beneficiary in whose favour the credit was opened, or the utilisation of the balance of the credit not executed for the supply of goods of another description, is permitted.

Art. 13.—It is prohibited, without the permission of the Exchange Control Committee:—(1) To grant loans or advances against deposits with local or foreign banks, in foreign currency or securities, and foreign movable values of any description. (2) To export from the country by any means whatsoever foreign bank notes or paper money, Greek and foreign securities, and every description of movable values, with the exception of Turkish, Bulgarian, Austrian, and Russian, of which latter the free export is allowed. The above paper money and bank notes and the above values in general, being exported without permission, are liable to seizure on the drawing up of a report regarding this, and they shall be deposited with the Cashier of Deposits and Loans in the name of the titulary owner, to whom they shall be returned on his demand on the raising of the prohibition, or on his return to Greece. They are likewise returnable to his power of attorney in Greece.

Art. 14.—Since, according to the regulations laid down, the export of Greek paper money or bank notes is prohibited, such paper money or bank notes exported in contravention of this prohibition shall be seized, a report being drawn up regarding this and deposited in a bank in the name of the owner.

Art. 16.—The payment by the opening of a credit (*crédit confirmé*) of the value of merchandise or produce imported from abroad, and of which a permit for export is demanded, shall be assimilated to: (a) Payment by bill in sound exchange, converted into drachmae, when the cheque is issued on the place of destination of the merchandise exported, and to the order of the exporter, and when from the correspondence accompanying the draft it is clearly defined that this cheque has been issued exclusively for the payment of the value of the exported merchandise and produce. (b) The payment by order for payment, in sound exchange, converted into drachmae, when it is likewise proved that this order concerns the payment of the value of the exported merchandise and produce. In the above circumstances the merchandise can be exported on a decision of the Exchange Control Committee, issued on the demand of the interested party, attaching the necessary vouchers or proofs.

Art. 17.—The Exchange Control Committee also decides upon demands submitted for the export of merchandise and produce paid for abroad by the capital of the exporter abroad, in accordance with Art. 1, paragraph 5, sub-par. (b), of the Legislative Decree of September 17, 1919. (2) Under this heading, sub-paragraph (b), paragraph 5, Art. 1 of the Legislative Decree of September 17, 1919, fall also merchandise and produce sent into Greece by foreign firms abroad, for which Greek capital has not been employed; the furnishing of guarantees, however, not being necessary for the export thereof. In these circumstances, also, the Exchange Controller decides as to the export, on the demand of the interested party, he submitting the necessary proofs.

Art. 18—The export of domestic produce is permitted, on the decision of the Exchange Control Committee, without the deposit of a guarantee, or the export of merchandise and produce of foreign origin, without prepayment of their value, when merchandise of equal value to that exported has been imported by the same exporter, and for the payment of which the exporter has not exported the bill of exchange to which he was entitled.

NEAR EAST MARKETS.

LONDON PRODUCE REPORT.

Currants and Sultanas.—There is little fresh to report. If anything, the demand is increasing for both these commodities, but the position as regards supplies is uncertain.

Sugar.—A firm tendency prevails, the demand for manufacturing purposes remaining strong. There is no change as regards refined.

Coffee.—Available stocks are in demand at increasing rates. It is reported that much of the East Indian crop will be utilised locally, and as local and other markets are likely to attract Central Americans in default of higher prices here, it cannot be said that the outlook for supplies is any too favourable, especially taking into account other factors, such as the influence of prohibition on the consumption of coffee.

Oilseeds.—The firm tone in this market has continued, linseed being a particularly strong feature. La Plata is now 42s. 6d. for January-February Hull, 41s. 3d. for February-March, and 41s. for March-April. Rapeseed is unchanged, while cottonseed is a firm spot.

Oilcakes, etc.—This is nothing of interest to report as regards oilcakes. Oils are a shade harder for some descriptions. Linseed oil has firmed to 108s. 6d. spot, while it is 108s. February-April, and 105s. May-August. Cotton oil is firm. Turpentine is lower at 188s. 6d. spot, and 189s. 6d. January-April.

THE SMYRNA FIG TRADE.

Some thirty years back only about 10,000 acres of land in the Vilayet of Aidin were planted with fig trees, and an average crop of figs ran to about 9,000 tons; to-day the orchards cover some 25,000 acres, and 23,000 tons is the medium yield. Nevertheless, the continual advancing cost tends to show that, notwithstanding the increased output, the demand keeps steadily ahead of the supply. The fig-producing areas are, under normal conditions, exclusively tapped by the Ottoman (Aidin) Railway Company's system; the orchards, the majority of which are owned by Turkish peasants, being mostly to be found in the Meander Valley. The districts where the best figs are produced are Inovassi and Ortaxe.

As the purpose of this article is only to deal with the commercial aspect of the industry, its history, methods of cultivation, drying processes, etc., though exceedingly interesting, will not be touched upon; suffice it that the quality and virtue of the fruit grown in the Meander Valley is so far superior to that produced elsewhere that the Smyrna fig must necessarily always stand first on the markets of the world.

The peasant having dried his figs, they are transported to the nearest railway station and from thence conveyed, through the middleman, to the Smyrna market and there sold to the highest bidders. Taken in hand by the fig packer proper, they are worked to suit the requirements of the different foreign consuming markets. The methods of packing vary considerably, every market having its own particular preferences.

The fig output this year proved to be very disappointing. The yield—or, to be more correct, the quantity—of figs that actually reached the Smyrna market barely exceeded 10,000 tons. The reasons for this shortage may be given under the following four headings:—(1) Blight, the trees having suffered considerably from disease due to the excessive moisture consequent on the exceptionally heavy rainfall during the winter. (2) Neglected fertilisation; the processes necessary for the propagation of insect fertilisation having remained unexecuted owing to the exodus of the Turkish orchard proprietors from the districts occupied by the Greek troops. (3) Waste, being the result of the disturbed conditions brought about by the Greek military occupation. (4) Lack of communications; for although within the Greek sphere goods trains circulated more or less freely, railway communications throughout the districts controlled by the Turkish insurgents were completely suspended, with the result that the Smyrna market was for a time deprived of the finer quality of fig grown in the Meander Valley. Later on in the season, however, a fair proportion of this produce was surreptitiously transported on camel-back to the nearest railway stations on the Smyrne Cassaba and Prolongement line, and from thence to Smyrna.

The principal merchants who traded in figs this year rank, in the order of quantity, as follows (the figures given being the approximate number of tons):—The Smyrna Fig Packers, Ltd., 2,150; Hills Brothers (Aram Hamparzum), 1,850; C. J. Giraud and Co., 1,350; S. Malides, 1,000; D. Janik Elmassian, 1,000; F. A. Balladur, 400; Milton N. Catrevas, 300; Turk Anonyme Chirketi, 200; sundry minor merchants, 1,750; total, 10,000 tons.

The following are the countries to which this season's Smyrna figs were exported:—The United States of America, about 4,000 tons; the United Kingdom, about 5,500 tons; Continental countries (Entente), about 1,000 tons.

At the commencement of the season the maximum price-limit on figs entering the United Kingdom was fixed by the British Government Food Control at a figure below the prices paid by the U.S.A., with the result that practically all the arrivals on the Smyrna market were immediately bought up and packed for the benefit of American consumers. It was only when the Control raised its price-limits that a certain quality of fig could be profitably disposed of in the United Kingdom.

EGYPTIAN CROPS.

The *Bulletin* of the Egyptian Ministry of Agriculture gives the following particulars of crop conditions in December:—

Maize (Nili).—Harvest is practically complete. Unsheathing of cobs and storing of grain are in progress. The crop is an average one.

Sugar Cane.—The crop is in good condition, and the yield is estimated to be somewhat above the average. Cutting for the factories has begun in Asyût, and is about to begin elsewhere.

Wheat and Barley.—The weather was, on the whole, favourable, except in Beheira, and the water supply was ample until the closing of canals for clearance. Sowing is over; the plants have received their first watering, are in a good state of growth, and are hitherto free from pest attacks. The area under these crops appears to be smaller than usual owing to the large area being prepared for cotton.

Beans.—Weather was generally favourable except in Beheira and Daqahliya, and water supply sufficient. Sowing is practically over, and the early-sown crop is germinating well. The area under this crop is smaller than last year. The early-sown crop is flowering, while pods are developing in Upper Egypt.

Helba.—The plants are healthy, and the early-sown crop is flowering. Pods began to be formed in Upper Egypt. Cultivators cut the early-sown helba for local consumption.

Lentils.—The crop is in good condition, and flowers are seen in the early-sown fields.

Onions.—The crop is growing well, and transplanting is general.

Bersim.—Weather has, on the whole, been favourable, though somewhat too cold to stimulate the growth. Water supply ample, but shortness was felt in some provinces owing to the closure of canals. Cutting and grazing are in progress. Slight attacks of cut-worm and cotton-worm were reported from Beheira and Sharqiya at the beginning of December. While it has improved, the crop is still below the average.

DEVELOPMENT OF COCHIN HARBOUR.

It is considered that there will shortly be important harbour developments at Cochin, Madras, says the *Board of Trade Journal*. Specifications for a dredger have been called for by the Government from the India Office, and the services of an experienced engineer to carry out the harbour works have been called for from London. The Government of Madras are anxious to proceed with the Cochin Harbour development scheme at the earliest possible opportunity. As the dredger will have to be constructed, it would probably be a year or more before it would be ready, but in the meantime it is hoped that the new engineer will be obtaining all the necessary particulars, and that upon arrival of the dredger work will be commenced on the bar. In the opinion of the Port Officer, after some eight to ten months' dredging, ocean vessels should be able to enter the harbour. The question of providing wharves, dock accommodation, etc., will follow in due course.

Banque Franco-Serbe.

Capital Frs. 20,000,000.

Offices:

PARIS — MONASTIR (BITOLJ)
LONDON — USKUB (SKOPLYE)
BELGRADE — ZAGREB (AGRAM)

SUPPLIES AND PRICES IN TURKEY.

The following extracts are taken from recent reports received by the Imperial Ottoman Bank :—

STAMBOUL, December 27.

Imports.

The prices of manufactured goods continue to rise in the countries of production. Everywhere prices here are, on an average, about 10 per cent. lower than those ruling at present in Manchester, and that following the stagnation for Russia.

Two steamers loaded with manufactures (the "Victoria" and the "Grodno") have arrived here, and three others (the "Belgravian," the "Corby," and a third) are expected shortly.

Stocks here continually increase. The low rate of the rouble, which has fallen to 400 the Kerensky and 90 the Romanoff, has contributed towards paralysing all business with the Russian ports. A very little business is done at Batoum only. A certain demand for Anatolia may be noted, but the irregularity of means of transport is an obstacle to business transactions.

Produce.

Activity in this market, and particularly in sugar, continues. A new rise to £4 per ton, from £84 to £88, has been registered in this commodity, owing to the lively demands from Smyrna. In Customs the price has risen from £T41 to £T43 the 100 kilo. There have been no arrivals, and stocks here are diminishing. They may be valued at about 700 wagons, of which a good portion is damaged.

Rice.—Equally in demand, especially in inferior qualities.

Oil.—The arrival from Batoum, noted last week, instead of lowering prices, has had no influence on the rates, which remain firm at Ps. 550 per case.

Exports.—The demand for Anatolian products continues, and the prices this week mark a new rise.

Opium.—The sales this week for England and America amount to 170 cases. During the last weeks Smyrna has shipped 150 cases on the average, destined for America and England. Opium is in demand in these countries, and prices are maintained. It is quoted in dollars 4½ at New York per lb., and 19s. in London.

Mohair.—Market lively. Sales for the week 200 bales (arrivals 200) at Ps. 98/100 for first quality, and Ps. 105 for extra.

Wool.—In demand at Ps. 52/53 per oke, but stock lacking.

Silk.—Market weaker. The article is offered at £T18½ per kilo. No business. Stock insignificant.

SALONIKA, November 30.

Opium.—Market quiet; the prices remain unchanged within the limits mentioned in our previous report (60 to 65). The disposable quantities are equal to those of last month, that is, about 10 to 12 thousand okes.

Tobacco.—Prices slightly higher than in October (27 to 31 drachmae per oke) with a tendency everywhere to rise. Very little business. The stock existing in October—about 30,000 okes—remains about the same.

Hides.—The season is over, and all the stocks are exhausted at high prices.

Wool.—Scarcely any movement. Demands are very rare, possibly due to the prices which remain high (Drs. 3.30 to 3.50 per oke).

Cocoons.—More than 5 to 6 thousand okes have been exported at prices higher than drs. 30 per oke. The stock is now completely exhausted.

The winter sowings have continued under the best conditions. In the South of Greece vine and fig culture has also commenced. The olive crop, which has likewise begun, will be 30 per cent. inferior to that of last year. According to all indications the olive production from the islands will not reach that of the year 1918. Floods have caused a certain amount of havoc in the west of Macedonia, and more serious damage in eastern Macedonia. The sowings which have been interrupted for some time have everywhere been resumed.

COMPANY NOTES AND REPORTS.

Rohilkund and Kumaon Railway.

The report of the Rohilkund and Kumaon Railway Company for the year ended September 30 states that the net earnings of the whole system amount to Rs.23,44,352, against Rs.30,62,796 for the corresponding period of 1918. The company's share is Rs.10,11,284, against Rs.13, 74, 420. The actual rate of exchange during the period was, however, much higher than 1s. 4d., the book rate, and, adding the gain in remittance, the amount available for dividend is £84,965, against £99,815 in 1918. An ad interim dividend for the half-year ended March 31, 1919, of 3 per cent., plus a bonus of 1 per cent., has been paid on the ordinary stock. After bringing forward the balance from last year of £32,852, providing for interest on debenture and preference stocks, interim dividend and bonus, contribution to provident fund, and making other adjustments, including £3,987 on account of Secretary of State's share of surplus profits for the year, the amount to be dealt with is £57,713. The directors recommend a final dividend of £3 per cent., together with a bonus of 3 per cent. on the ordinary stock, subject to tax at 4s. 9d. in the £, and that the balance of £39,413 be carried forward. The dividend, with bonus recommended for the year, is at the rate of 10 per cent. per annum. The receipts were Rs. 1,23,497 less, and the working expenses Rs.5,94,946 more than those of the previous year, and the net earnings show, therefore, a decrease of Rs.7,18,443. Coaching receipts increased by Rs.1,34,692, but goods traffic decreased by Rs.93,784, and sundries by Rs.1,63,844. Meeting, Gresham House, E.C., January 27, noon.

East India Distilleries.

The report of the East India Distilleries and Sugar Factories for the year ended September 30 states that, after paying interest on and providing for the redemption of debenture stock and the other expenses, there is a profit of £22,167. The directors recommend a dividend of 10 per cent. on the ordinary shares, carrying forward £2,681, against £2,513 brought in.

Champion Reef Gold Mining of India.

The report for the year ended September 30 states that in the stamp and tube mills 140,553 tons of ore were dealt with and produced 69,688.34 oz. of fine gold, an average yield of 9 dwt. 22 gr. per ton. The current tailings from the mills, subjected to the cyanide process, produced 9,321.26 oz. of fine gold, an average yield of 1 dwt. 7.82 gr. per ton; 66,369 tons of old tailings, treated in the tube mills and cyanide works, produced 4,999.3 oz. of fine gold, an average yield of 1 dwt. 12.14 gr. per ton. Compared with the previous year, the value of the ore treated shows a decrease of 1 dwt. 10.4 gr. per ton. There was an improvement of 0.69 gr. per ton in the average extraction of gold. The total return of gold was 84,008.9 oz., a reduction on the preceding year's production of 10,230 oz. The proceeds of the sale of the gold amounted to £355,104. After deducting £18,322, the royalty payable to the Mysore Government, and adding £6,731 for interest, rents, etc., received, the total income is £344,513. Against this, expenditure amounting to £301,368 is charged, leaving £43,145 as profit on the year's working. To this is added £3,119 brought in, also £712 received from the Kolar Mines Power Station, Ltd., making a total credit to profit and loss of £46,976. The debits to profit and loss are: Income-tax, £28,746; depreciation of machinery and plant, £10,000; insurance and contingency fund, £1,000; Kolar goldfield prospecting department, £777; and donation to the British Red Cross Fund, £210—a total of £40,733. A balance is left at credit of profit and loss account of £6,243, and is carried forward. The outlay on capital account, consisting of £11,652 on buildings, machinery, and plant, and £1,111 on option property, amounted to £12,763, as compared with £28,078 for the previous year. During the period under review there was no amelioration of the adverse conditions caused by the war, and costs continued on a high scale. The increase of £15,918 in the total working expenses is chiefly due to the higher rates of exchange on remittances to India during the first eight months of the company's financial year. Negotiations were concluded in May, however, for the sale of one-half of the gold output of the Kolar mines for payment in India in rupees, and by this arrangement the heavy loss on remittances to meet the wages and other expenditure at the mines has since been avoided. The mining operations have continued without interruption, and development at the lowest levels has been vigorously carried on. Meeting, Cannon Street Hotel, January 29, at 12.30.

NEW COMPANIES.

Dickwella Tea.

The Dickwella Tea Company, Ltd., was registered on January 1, with a capital of £80,000 in £1 shares. Objects: To carry on in British India or elsewhere the business of tea and general planters, etc. First directors: F. A. Roberts, 138, Leadenhall Street, E.C., managing director of Jorehaut Tea Company (chairman); Sir James F. Stuart-Menteth, Bt., Rownhams Mount, near Southampton; C. C. Forster, 11, Montagu Place, W. 1, retired Ceylon tea planter; H. Miller, C.I.E., Holloway House, Heybridge. Minimum cash subscription, seven shares. Qualification, £250. Secretaries and offices, Begg Roberts and Co., 138, Leadenhall Street, E.C.

ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Street, Monday.

During the three days on which our Stock Exchange has been open since our last report the market for Egyptian stocks and shares has again been exceedingly active, with a further rise in prices in most instances. There was an enormous demand to-day for Egyptian Unifieds, which spurted at one time 7 points to 81, closing 6 points up at 80, and an advance of 5 points took place in the 3½ per cent. Prefs. at 66, round which price a fairly large business was transacted. City of Alexandria bonds are also 1 point higher at 68.

In Bank shares Nationals finish ¼ higher at 24, and Agriculturals ⅛ up at 5 13-16. Land Banks are 3-16 firmer at 6 5-16.

In Railways, Delta Lights continue to be quietly absorbed around 6½.

Amongst Land shares some big transactions have taken place. Aboukir have risen 1s. 6d. to 42s. 9d., but Béhéra are exceptionally closing 1½ points lower to-night at 26½. Consolidated Lands have been in demand, closing 3d. up at 3s. 3d. Delta Lands, after a large business and a further slight advance in prices, finish 6d. lower at 23s. Foreign Trusts have again been a feature of strength, and are closing 1s. 6d. up at 17s. In Gharbieh Lands a further large business has been doing, and the price has risen ½ to 4. New Egyptians have been heavily dealt in, and after being up to 40s. 6d., close 6d. higher at 39s. 9d. Sudan Plantations are 1-16 easier at 8 9-16. Union Foncières, on heavy buying, rose to 6½, but finish ⅜ up only at 6¼.

In Miscellaneous descriptions Abyssinian Corporations are 1-16 lower at 11s. 3d., but there has been a large demand for Associated Cotton Ginners, which have changed hands to-day at 22s. 6d., a rise of nearly 5s. since last week. Salts and Sodas close 1s. 3d. up at 53s. 9d.

In Oil shares Anglo-Egyptians "B" have fallen back ¼ to 5, and Roumanians are 6d. down at 24s.

In Greeks the only change to report is a fall of 1 in the Greek 1910 Loan to 47. The 1914 loan has changed hands to-day round 63½, and the London issue is 2 points down at 65. Bank of Athens are also nominally 1-16 down at 3½.

OTTOMAN PUBLIC DEBT.

The Council of Foreign Bondholders communicate the following information with regard to the gross receipts of the Council of Administration of the Ottoman Public Debt on account of the Unified Debt and Lots Turcs:—Provisional receipts, eight months (March to October), 1919, £T4,276,375 (paper); definitive receipts, eight months (March to October), 1918, £T3,261,007 (paper). For the same period in 1913 the definitive gross receipts were £T3,556,204 (gold).

ROUMANIAN PRE-WAR TARIFF IN FORCE.

The Board of Trade are in receipt of information, from H.M. Commercial Secretary at Bucharest, to the effect that the pre-war Customs tariff, both General and Conventional, is still in force in Roumania, and has not been subjected to any general modification, the only amendments being those regarding the importation of articles of luxury, and certain articles of prime necessity the importation of which is reserved to the State. The treaty with Germany is no longer in force, but the conventional tariff rates established by that treaty continue to be applied to merchandise the produce of countries which are entitled to "most-favoured-nation" treatment in Roumania.

BRITISH TRADE CORPORATION.

(Incorporated by Royal Charter),

13, AUSTIN FRIARS, LONDON, E.C.2.

Telegrams: "Trabanque, London."

CAPITAL: Authorised - £10,000,000 Subscribed and Paid Up - £2,000,000

Governor - THE LORD FARINGDON.

Manager, A. G. M. DICKSON. London Manager, P. C. WEST. Secretary, G. De B. BROUNLIE.

The Corporation has been established with the object of developing the Trade of the British Empire in every part of the world, and brings to the notice of all interested that it is prepared to grant financial facilities to British Manufacturers and Merchants for the increase of their Import and Export Trade.

It will be prepared to assist in opening up new channels for enterprise, and will afford financial facilities for the enlargement of works and the extension of plant.

The Corporation is appointing representatives in the chief cities of the world, and will open credits at home and abroad. It invites inquiries, and will endeavour where necessary to put expert advice at the disposal of correspondents regarding the financing of their foreign and overseas business. Moneys received on fixed deposit. Terms on application.

NOTES OF THE WEEK.

Yugoslav statesmanship is being subjected to a severe test by Allied diplomacy at this time, and it is to be hoped that both Government and people will continue to keep themselves well in hand. It would be fatal to their interests to resort to extreme measures; on the other hand, the greater their confidence in the justice of their own cause the easier to bow for the moment to any unwisdom to which the Paris Conference may be committed. As the situation now stands, the failure of the Yugoslav Government to accept the Allied offer in regard to Fiume and the Dalmatian coast has left the Allies committed to the 1915 Treaty of London. The manifest inequity of this document provides its own condemnation, and injustice is to be added to it by a fresh arrangement regarding Fiume, which the Treaty tacitly left to the Yugoslavs. Whatever political arrangements may be made, the economic facts of the case remain obdurate. With Trieste and Fiume in Italian hands, the Yugoslavs can in course of time divert practically the whole of the trade of the hinterland to another outlet, to the ultimate ruin of both Italian ports. Neither Italy, Yugoslavia, nor the rest of Europe can desire this eventuality, and no doubt discretion will sooner or later take the place of shortsightedness, at a smaller cost to the Yugoslavs than a campaign against Italy or the building of a new port.

Very little news reaches us from Bulgaria these days, but what does come to hand serves to emphasise the wisdom of accepting only with considerable reservations the stories of risings and rebellions in that country. We are, indeed, left to wonder what real interests can be served by spreading these malicious reports. There have evidently been some Socialist demonstrations in Sofia, and a strike has temporarily paralysed the Bulgarian railways. It would be strange if Bulgaria escaped from the prevailing epidemic of unrest. But as the last thing that the Balkan Peninsula wants is the perpetuation of anything approaching anarchy in its midst, it would be thought that the responsible people in the adjacent countries would studiously avoid any action calculated to render more difficult the present task of the Sofia Government.

Repeated reference has been made in these columns to the erratic character of the mail service between this country and the Near East. Letters arrive, or—more frequently—fail to arrive, in a way that the ordinary man cannot understand, and the only explanation possible is not creditable to those responsible for the present arrangements. An illustration of the unsatisfactory results of the existing system is afforded by the arrival together last week of what would in pre-war days have been four separate mails from Constantinople. By the same post we received from our Correspondent in the Turkish capital letters dated in the first half of December and others that were posted on January 10. Such a state of affairs is simply scandalous, and it is not surprising that British merchants and others who have important business interests in the Near East are saying many hard things about its being allowed to exist. It is high time that our own Government gave those concerned to understand that a change must be effected with the least possible delay. Courtesy to one's friends is admirable, and a desire to spare their feelings even more so; but these things must not be too one-sided, and, after all, Great Britain, as well as her Allies, has interests in Turkey and the Near East.

The Hungarian Peace Delegation is reported to have presented a request that a plebiscite should be taken in Transylvania "with a view to giving it autonomy without impairing its economic union with Hungary," and that the League of Nations should send a Commission to "deal with the internal regulation of the nationalities question in Transylvania." What these phrases are intended to convey is not quite clear, but as to the intention behind the proposal there cannot be any doubt: Hungary, failing utterly to realize her position, hopes still to snatch some advantage by playing the game of intrigue by which she has benefited so largely in the past. Even if such a plebiscite as that asked for were to be taken, it is practically certain that Transylvania would prefer to remain as it is rather than play the Hungarian game. It spoke with no uncertain voice when, on December 1, 1918, it proclaimed its union with Roumania, and the Saxons of the region subsequently (January 21, 1919) voluntarily adhered to Roumania. That Hungarian intrigue has been busy since that time is not to be doubted; and for one reason or another, it may have achieved some small success here and there. But that there would be any real chance of Transylvania voting for union, even economic union, with Hungary, if the vote were fairly taken, is almost inconceivable.

General Milne, Commanding the Allied Forces in Western Asia Minor, recently had occasion to call attention to repeated infringements of the Armistice terms by the Turks. The Allied Commissioners thereupon

Digitized by Google

addressed a Note to the Turkish Government, complaining of the attitude of the Turkish Minister for War and of his Chief of Staff. The former, it will be remembered, was very generally spoken of at the time of his appointment as a strong supporter of Mustafa Kemal and his "Nationalists," and his Chief of Staff apparently shared his views. Such being the case, it was evident that trouble was bound to arise sooner or later, and the only wonder is that the Allies tolerated such a state of affairs so long. They have acted at last, and with the inevitable result: Jemal Pasha and his Chief of Staff have both gone, and Mustafa Kemal's influence and prestige have suffered accordingly. As a matter of fact, the move may well prove a blessing in disguise to the Turkish Government, though the latter can hardly be expected to see through the disguise immediately. It is to be feared, however, that the present Cabinet is too "Nationalist" to work harmoniously with the Allied representatives. Yet, since all Turkey seems to be becoming more Nationalist every day, it can hardly be denied that the Government is tolerably representative of Turkish feeling.

The Egyptian Government has decided upon the appointment of a Commission to examine and report upon the projects for the further regulation of the Nile for the benefit of agriculture both in Egypt and in the Sudan. The schemes are so vast, involving such an outlay of capital and requiring such a long time for their execution, that nobody will question the wisdom of having the best advice before finally embarking on them: and certain criticisms to which they have been subjected make such a course still more advisable. Among other points on which the Committee will advise is the appointment of the cost of the works between Egypt and the Sudan.

The Cairo Correspondent of the *Times* understands that the Commission will be constituted as follows:—Mr. F. St. John Gebbie, Chief Engineer, Bombay, nominated by the Indian Government (Chairman); Dr. G. C. Simpson, meteorologist at Simla, nominated by the University of Cambridge; and Mr. H. T. Cory, nominated by the American Government. Mr. J. L. Capes, of the Egyptian Ministry of Education, will act as Secretary to the Commission; and it will be assisted by an English judge in cases where there is any conflict of evidence. It is understood that Sir Michael Nethersole was invited to preside over the Commission, but was unable to do so, probably because he found his health would not allow him to undertake fresh labours—unfortunately, his death, last week, is recorded elsewhere. His exceptional knowledge of engineering, and especially of canal works, would have made him the ideal chairman; but Mr. Gebbie will undoubtedly fill the post most satisfactorily, and his collaborators are both well chosen. The introduction of an American member is a happy thought.

Apparently incited thereto by a spirit of emulation aroused by the Milner Mission's visit to Alexandria and its announced intention of visiting certain provincial centres, leading Zaghlulites have been touring Egypt, speechifying and making collections on behalf of "the cause." This is strictly in accordance with the methods pursued by other agitators in other countries, and it has had the usual result of making trouble for the authorities. At Tantah, that Delta town which has achieved notoriety by its fanaticism and its apparent liking for riots and disorders, one of the leading Nationalists is reported to have made a super-inflammatory speech; and as a direct consequence the mob attacked an Indian patrol, and something like a pitched battle took place. According to a Reuter message one corporal was killed and two privates were wounded, while the mob suffered casualties to the same extent. Another report puts the total casualties at twenty dead and fifty wounded for two days' fighting. The agitator whose misplaced eloquence was responsible for this outbreak has been arrested.

A proposal is afoot to construct a new line of railway from Suakin to Tokar. Should it materialise, the project will result in the further opening up of an important cotton-growing area, to the obvious benefit of the Sudan. The Sudan as a whole is bound to see important developments in the near future, and it is to be hoped that Englishmen, or at any rate British subjects, will take a part not only in financing those developments, and in getting new enterprises into working order, but also in keeping them going when started. In other words, it is to be hoped that more Englishmen, of the right type, will go to the Sudan with a view to settling there. If it be urged that the climate and conditions are unsuitable, it may be pointed out that a considerable number of British officials contrive to survive these difficulties; and conditions in the Sudan to-day cannot be any worse than those which ruled in many parts of the East in, say, the days of Elizabeth and James I., when Britons established themselves in the Near and Middle East, and "made good" in face of extraordinary hardships and dangers.

On the afternoon of January 15 the first train to run through from Busreh to Baghdad reached the latter city, having left Busreh at midnight on January 13. The event is certainly an important one for Lower Mesopotamia, for though it is probable that for a long time to come most of the heavy "goods" traffic will still be carried by the river steamers, and even that many of the *Hajjis*, who set small value on time, will prefer the water to the land transport, yet the majority of travellers will doubtless soon come to regard the *vapoor* as the natural means of transit from place to place. It is interesting to note that in the course of a speech made at the inauguration of the new line General Sir G. F. Mac mun mentioned that there are now only 945 miles of railway in Mesopotamia, as compared with 1,113 miles during the war, the diminution being due to the pulling-up of unimportant lines.

Three weeks ago we commented on the wording of an official announcement that the Deir ez-Zor incident might "be regarded as closed for the present, so far as Mesopotamia is concerned." A semi-official statement issued on January 15 declared that: "The troubles in Mesopotamia appear to be by no means over," and added that Ramadhan es Shallash was still trying "to stir up the tribes in the area of the British occupation," and threatening to attack Abu Kemal. Another semi-official statement, issued in the latter part of last week, announced that the up-to-date adventurer was "calling in loans advanced by the Mesopotamian Administration to the people and sending his agents to stir up trouble far within the frontier." Moreover, Abu Kemal, it is announced, has actually been attacked (on January 11) by "a band of tribesmen about 300 to 500 strong." The attack was driven off with heavy losses, thanks largely to our aeroplanes, but a few houses are said to have been looted.

In spite of this annoying raid, Ramadhan's activities need not cause any serious alarm at present. Abu Kemal is a quite unimportant place, and even the least sophisticated of the tribes will hardly be eager to throw in its lot with a discredited leader who has bungled one raid rather badly. If only his efforts are met with suitable counter-propaganda, Ramadhan should find it extremely difficult to secure any considerable number of adherents. The attempt to connect this Euphrates disturbance with any Bolshevistic feeling on the part of the Arabs will be received with caution by those who know those Arabs. Ready to loot they always are, if they can see a reasonable chance of doing it successfully: and it is quite possible that they may have been stirred up, in this case, by agents of the Bolshevists. But any agent who sought to preach Bolshevist doctrines to them would very soon have cause to regret the attempt.

The chief interest of such news as comes through from India at present lies in the evidence it furnishes that political opinion, but lately so fluid, is rapidly crystallising into a small number of groups or parties, with "creeds" or "platforms" sufficiently distinctive to present clear-cut issues before the new electorate. The process is at once inevitable and essential. Reports of

Digitized by Google

the political meetings held at Christmas-time appear to justify the conclusion that the old theory of a country united against an alien government is now definitely exploded, and, in the clearer atmosphere resulting from the change, the distinctions between parties are coming to be recognised as important facts, and not trifles to be ignored, or adjusted in secret conclaves. This progress towards reality is a definite achievement, and in our judgment will materially facilitate the work which is now in hand; organisation of individuals is almost the first step in any political development, and the sorting-out process of the last few months has brought India very much nearer the point where the new legislatures can be expected to function for the advantage of the country as a whole.

These truths are being realised in England as well as in India, and the separate organisation of the Moderate party in this country is now an accomplished fact. The Committee which has been formed is reasonably strong and representative, and it starts with the blessing of Mr. Montagu, who, we are sorry to learn, has been compelled by indisposition to suspend his official labours for a time. In our opinion it is a pity that an organisation of the kind was not brought into existence when the Reforms Bill first came under discussion, and large parts of England were drenched with misleading statements and unjustified invective. The lies have been given a long start, and the new Committee's task is consequently more difficult than it need have been, but it can still render useful service if its members will only bear in mind that what England wants is the truth, and as much of it as possible. Speaking for ourselves, we are prepared to welcome representatives of every group or party from India, provided that their activities conform to this elementary principle.

We are indebted to one of these groups, the London branch of the Non-Brahmin Federation, for a lengthy message intimating the failure of the negotiations in which they are particularly interested. It will be remembered that the Non-Brahmins of Madras refused, unwisely, as we think, to put their case before the Franchise Committee, which found itself in consequence unable to make definite recommendations for assigning to them the representation justified by their numerical strength. The Joint Committee advised a settlement by negotiations between the parties, or, failing agreement, by an arbitrator to be appointed by the Government of India; from the message which has been sent us we gather that Brahmins and Non-Brahmins have failed to agree, and we conclude that an arbitrator will now be appointed. We do not envy him his task, for feeling on the question runs high, but that is a reason for settling the matter without further delay. There are happily some grounds for believing that the best of the Brahmins will welcome a statesmanlike adjustment, and there is at least a chance that a definite ruling from above may be received with practical acquiescence.

Perhaps it may be as well to explain that while we welcome the activities of these Committees and branches, as of all Indian organisations which endeavour to spread the truth, or portions of it, in this country, we do not regard them as destined to play a permanent part in English life. Hitherto Indian politics have been centred in this country, and it is not so many years since the Congress itself derived its main inspiration from "home"; but as political life becomes more and more of a reality, the centre of gravity is bound to shift, and we look forward to the time when branches and committees will find their occupation gone, because the various parties will be able to operate effectively in India without their aid. We trust that the new organisations realise that they are essentially temporary, and will be prepared to extinguish themselves gracefully when their purpose has been served, or perhaps transform themselves into social centres where Indians visiting this country may be assured of a welcome from men of politics like their own.

THE WEEK AT HOME.

Mr. Asquith at Paisley.

Politics were quiet during the week, but rumours were many. Most of them centred round the Paisley by-election, as to which excitable partisans are using the language of exaggeration which sounds so oddly since the war—"the most important by-election of the present century," and so on. They said just the same thing about Spen Valley and most other by-elections. The plain facts of the case are that Paisley has always returned a Liberal since 1832, that its Liberal Association only decided to ask Mr. Asquith instead of a local candidate to stand by a small majority, and that in a three-cornered contest with a strong Labour and a good Unionist candidate, anything may happen.

The contest will be chiefly important for its effect on Mr. Asquith's position, and he has himself referred to the coming fight as "a dark and difficult adventure," which is, to say the least, not the height of optimism. If Labour should win, it would be another nail in the coffin of Independent Liberalism; if the Unionist were to win—but the local pundits are clear that nobody need consider so improbable a contingency.

Meanwhile, Lord Birkenhead's proposed National Party makes no particular headway. He admits that the Coalition is here to stay; but he and Mr. Winston Churchill, an old associate of the Lord Chancellor's, are agreed that the future of the Coalition must be on an anti-Labour platform. A good many others are not so sure.

Local Currency.

A curious proposal which has some significance has been brought before the Wigan Town Council: it was suggested that local currency notes should be issued on the security of the local rates. The proposer had the idea that if his scheme were carried out it would enable local councils to escape the burden of paying interest. So far as his idea can be understood from the rather brief reports in the papers, his scheme would probably have the effect desired, at the price of still further depreciating the value of money, which, of course, is in effect much the same thing as paying interest in a roundabout and unscientific way. If the idea were generally followed up it would add an intolerable burden to life, for in addition to paper notes and silver and copper, every little urban district council would have its own local notes, which would be changeable at par in Puddleton but subject to a heavy discount in the rival and neighbouring district of Paddleville. Something of this kind used to happen in Italy and Spain in the old days; we may hope that the United Kingdom will succeed in avoiding it.

Wool Profits.

The papers are full at the moment of the extortionate profits which are said to have been made in the wool

and worsted trades of late. The evidence has not been published, and argument and demonstration are therefore very much in the air; but the average man, who looks at his tailor's bill and groans, is convinced on that evidence alone that somebody is making a fortune out of his necessities. Bradford, which is the headquarters of the trade, is issuing *démentis*, and accusing the Government in turn of profiteering; the Socialists are clamouring for nationalisation of the wool trade—nationalisation is a kind of *idée fixe* with these good people; and the folk who still believe in a capital tax—a rather discredited idea in these days—are trying to blow up the decaying embers of interest in that particular direction. It would all be very amusing to the onlooker—if the onlooker had not to pay fifteen guineas for a suit that in pre-war days cost six.

Dr. Warre.

Perhaps no man in the British Empire is so widely known as a Headmaster of Eton; he has castigated and instructed a whole generation of Viceroys, Governors-General, Field Marshals, and other personages at the impressionable period of their lives and bodies. Dr. Warre was a very old man, and most of those who passed through his hands are now nearing middle age; if he did not bulk so large in the outer world as Arnold or Temple, of Rugby, he left his mark on Eton, and he kept up the great traditions of the school.

The outcry against the public schools, by the way, seems to have died down for the time being. All the greater establishments, and most of the minor ones, have long waiting-lists from the preparatory schools; and when the average parent, in spite of heavy taxation and high prices, insists on sending his sons to the public school which has been denounced as "a place which gives the minimum of education at the maximum of cost" the task of the agitator seems hopeless.

Coast Erosion.

From time to time the scare that England is disappearing beneath the sea is revived. There have been one or two bad falls of cliff lately in the Thanet region, and an old East Anglian church, long threatened, has finally disappeared into the North Sea. Some figures that profess to be authoritative have now been published, and these indicate that the loss due to coastal erosion is very nearly compensated by the subsidence of the sea in other places. The East Coast and Cornwall are losing ground—Essex and Suffolk are suffering in particular—but Sussex is gaining soil. It is true that what is lost is usually fertile ground while what is gained is generally sandy, and useless for agriculture. But, on the whole, England appears to stand much where it did.

Appeals for Funds.

"Those who have money, prepare to spend it now" is the latest adaptation from Shakespeare. There is no lack of opportunity, for one institution after another is making its appeal. The Masons are asking for a round million for a new central home; the Salvation Army more modestly requests half a million; the missionary societies, hard hit by the exchanges, are anxious to maintain and increase their work; every diocesan organisation is in difficulties; and the hospitals, no longer adequate for the increased population, find that drugs, chemicals, and food cost more than ever. Some of the political propaganda societies are also hunting for funds. Most of the objects are deserving, but one does rather get the impression that there should be a central clearing house for charities and public institutions, which would point out the wisdom of not all advertising at once—and also not all advertising at the moment when the Income-Tax man is making his appeal.

The Ex-Kaiser.

The Dutch Government's refusal to give up the ex-Kaiser to the Allies was not unexpected. The refusal is very moderately worded, but it is difficult to see what further argument can be advanced to a sovereign State which stands on the right of sanctuary. The Dutch would probably be very glad if Wilhelm II. would give himself up, but that solution is scarcely likely to be popular at Amerongen.

A German Quarrel.

Most of the German politicians who have sprung up since the war are unknown quantities outside Berlin, but the violent personal quarrel between Erzberger and Helfferich has roused some interest. The former has been accused by the late German Finance Minister—he who wished the Allies "to drag through the centuries the burden of heavy indemnities"—of making a huge fortune out of the war. To this Herr Erzberger has replied that he married money, and was already rich before 1914. Whether the accusation is true or false nobody, of course, can say; but it is clear that Herr Erzberger, the "cunning fox" of the Centre Party, is still a power in Germany and still distrusted.

The German Fleet in War.

An authoritative naval diary which was kept by Admiral von Pohl has just been published in Berlin. These records indicate that, despite the remonstrances of von Tirpitz and the forward naval school, which wished to engage in action with the British Fleet, the Kaiser restrained the German Navy, and insisted on the policy of "watchful waiting" and inactivity. The battle of Heligoland, fought at the end of August, 1914, in which the Germans lost several ships and the British lost nothing, confirmed him in his view. It is to be hoped that this diary, which appears from its extracts to be both authoritative and trustworthy, and not written, like the memories of von Tirpitz, to justify a point of view, will be published in England. It indicates incidentally that Wilhelm II. objected to air-raids, but he was overruled. He wished to confine them to purely military objectives, and to have objected to the bombarding of women and children; this account of his attitude seems the more probable when one recalls that he objected to the sinking of the *Lusitania* on the ground that "no gentleman would drown so many women and children." But in the air-war, as in the submarine war, he seems to have allowed himself to be convinced against his better judgment.

The World of Books.

Mr. E. T. Raymond's "All and Sundry" is a continuation of the series of "Uncensored Celebrities," which earned him the title of "the malicious Debrett." In the present volume are discussed President Wilson, "the synthetic man," Mr. Harold Begbie, who can "sob on every occasion," Dean Inge, Lord Esher, Sir A. Conan Doyle, and many others. In a day when adulation is too often served up, in the Disraelian phrase, "on a trowel," Mr. E. T. Raymond's appearance as "advocatus diaboli," with the requisite amount of caustic, will be welcome to everybody but the victims.

Some interesting secrets are disclosed in Admiral Sir Douglas Brownrigg's "Indiscretions of the Naval Censor." Sir Douglas was head of that branch of the Censorship, and he must often have been amused as well as worried at the methods of the Admiralty. It was Lord Fisher, he states, who refused to publish the loss of the "Audacious," not Mr. Churchill, as has been generally assumed—perhaps because there is so much likeness between Mr. Churchill and audacity. On the other hand, Mr. Churchill wrote one or two communiqués, on the Coronel battle and other matters, which were suppressed because Lord Fisher threatened to resign if they were published. The names of those responsible for the first notorious announcement of the Jutland battle are given, and also the reason why the German papers came out with the news of the loss of the "Hampshire" before the British—a matter on which so large an amount of conjecture has been built. The author remarks at the close of his very informative book that he wishes he could have told the whole truth; but he has told enough to add a good deal to our knowledge of the inner activities.

Mr. E. V. Lucas has issued a new volume of essays in "The Phantom Journal," which will no doubt be popular with his many admirers. The work as a whole has been dull in a literary sense, but we cannot expect a new masterpiece every day.

OCELLUS.

THE NEAR AND MIDDLE EAST.

(From Our Own Correspondents.)

EGYPT.

CAIRO, January 12.

The Milner M ion.

Lord Milner and his colleagues left to-day for Alexandria, where they will spend some days, and will establish contact with the British and European communities. Meanwhile there is practically no change in the situation, and the Princes' declaration appears in general to have had little effect. It was followed two days later by an interview published in one of the vernacular organs, in which Sarwat Pasha (Minister of Justice in the Rushdi Cabinet), on behalf of himself, and Adly Pasha (Minister of Education in the same Cabinet) declared that Lord Milner's Note had created a new situation; that they, in concert with Rushdi Pasha and the members of the Zaghlul Delegation in Egypt and France, were examining the question of the attitude which the nation should take up towards the Mission; and that if it was decided to enter into discussion with the latter there was nothing to fear if this was done by a body representing the nation, which would know how to protect the interests of Egypt, and would only accept what it thought fit. The Cairo Committee of the Egyptian Delegation at once issued a manifesto contradicting the statement in the interview that negotiations were in progress with the Delegation, and stating that Lord Milner's Note could under no circumstances constitute the basis for negotiation, and could not move the nation from its attitude.

The statement of the Committee is little credited, except among the more rabid of the Extremists; but, on the other hand, this interview has served to confirm the impression that the more responsible Egyptians realise that the time has come for some action to be taken by them, and that it is not in the interest of the country for the attitude hitherto adopted towards the Mission to be persisted in. It is evident that there is a growing body of opinion in favour of entering upon official discussion with the Mission, and as a matter of fact one of the members of the Cairo Committee has left for France, bearing letters on the subject for Zaghlul Pasha, who, it is hoped, may be persuaded to return to Egypt for the purpose of discussing the question with the Mission. If he declines to depart from the attitude he has so far adopted the only course will be for the group which has been negotiating here to take matters into its own hands. In that case the important and interesting point will be whether they will in the circumstances command sufficient following to carry through whatever agreement they may come to with the Mission.

The present situation is an exceedingly complicated one, requiring delicate handling, and making it very difficult to say which way the cat will jump. There are so many cross-currents and so many personal interests involved that he would be very bold who would dare to predict how matters will turn in so far as the general attitude towards the Mission is concerned.

A New Irrigation Commission.

On Saturday last the Council of Ministers decided upon the appointment of a Commission to examine the irrigation projects which have been under discussion for some time for the regulation of the waters of the Upper Nile for the benefit of Egypt and the Sudan. These projects include not only the construction of irrigation works on the White and Blue Nile, but also regulation of the Lakes; and, taken in their entirety, they are intended to provide the water necessary to enable Egypt to develop to the utmost extent her own agricultural resources and to permit of the Sudan undergoing similar development.

The whole question of the regulation of the waters of the Nile, both in the Delta and nearer its sources, has, as is by now well known, given rise to some controversy. A Committee met in London last year to examine certain phases of this question, particularly charges brought against the Ministry of Public Works by Sir William Willcocks and Colonel Kennedy, which it declared to be unfounded; but the projects themselves were not referred to it. These are now to be examined in their entirety by the new Commission, the members of which, contrary to what the London Committee was able to do, will examine the data on the spot.

It should be pointed out that, although the charges above referred to have been continued, the new Commission will not deal with them except in so far as the examination of the details of the projects necessitates, but that the object of the Egyptian Government is to leave no stone unturned to assure itself of the complete soundness of the projects themselves. Its action in this respect, moreover, must not be interpreted as indicating any lack of confidence in its own technical experts; it merely follows on the lines laid down in connection with the undertaking of previous large public works, when the independent examination of outside experts was invariably obtained.

The new Commission will consist of three members—an irrigation engineer nominated by the Indian Government, a British physicist nominated by the University of Cambridge, and an irrigation engineer nominated by the American Government. It is the earnest desire of the Egyptian Government to avail itself of the best irrigation experience to be obtained, and so make the Commission as authoritative as possible, and this is the reason an American engineer is to be one of the members. For the purpose of sifting evidence on points of conflict the Commission will have the assistance of a British judge. Its terms of reference are: (1) to examine and report on the physical data on which these projects rest; (2) to report on the manner in which the waters made available as a result of these projects should be apportioned as between Egypt and the Sudan; and (3) to report on the proper apportionment of the cost of these works as between Egypt and the Sudan, and it will have power to take evidence on oath. It is believed that the new Commission will be definitely constituted very soon, and that it will shortly commence its work.

Incidentally, I understand that there is a proposal to create what might be called a Conservancy Board representing the Egyptian and the Sudanese Governments for the purpose of controlling the distribution of the waters available in the Nile between the two countries.

The Attempt on the Prime Minister.

The inquiry into the attempt on the life of the Prime Minister, Sir Youssef Wahba Pasha, has been concluded; and the assailant, Erian Effendi Youssef Saad, will come before a Military Court on the 15th instant, exactly a month after the date of the attempt. Seeing that the man accused of the attempt on the life of the late Prime Minister, Sir Mohammed Said Pasha, on September 2 has not yet been brought to trial, it must

be admitted that in this case the authorities have carried the inquiry through very speedily. Nevertheless, considering that the man was caught *flagrante delicto* and confessed his guilt, it is difficult to see why he should not have been summarily dealt with. Even a month is too long to allow to elapse between the commission of a crime and the trial, especially in the East and under present conditions.

YUGOSLAVIA.

BELGRADE, January 19.

Serbs and Albanians.

There is one phase of the Adriatic question which has not attracted very wide attention, being overshadowed by the more prominent and pressing problem of Fiume, and that is the question of Albania. It is understood that Italy claims a protectorate over the whole of Albania; though Albania was recognised as an independent State in 1913, and Italy made no such claims then. While her claim to Valona and the dependent territory is justified on strategic grounds, it is difficult to find any argument in favour of her desire to secure the whole of Albania. For years Albania has been the happy hunting-ground of Austrian and Italian political agents, each seeking to spread the power and influence of his employers, and only just after the Balkan wars did we hear much of Greek pretensions. Northern Albania was largely dominated by Austria, though the influence of Italian culture was felt, for Skadar had had commercial relations with Venice for centuries, and the Italian language was generally known in Skadar and the coast villages. But further inland, all foreign influence became very shadowy among the wild hill tribes.

It is reported that the Council in Paris has given a sympathetic hearing to a deputation of Albanian *emigrés*, who pressed for the recognition of their national status, with no unwanted protectors, and it is to be hoped that they will be granted at least some proportion of the much-talked-of but little adopted right of self-determination. The undoubted services of Essad Pasha to the Allied cause, too, should be borne in mind. It may be argued that he was handsomely subsidised; but the fact remains that his assistance was decidedly useful, and many thousands of Serbs of all ages and both sexes have good cause to bless the *Essadovtsi*, as they call his retainers who policed his sphere of influence during the terrible days of November and December, 1915.

This brings us to the question of Serbo-Albanian relations. Capital is often made of the secular hostility between Serbs and Albanians; but this is very largely exaggerated. There is undoubtedly a large element of Albanian blood in the Montenegrins, and the purely Albanian portion of the population of Montenegro has lived on good terms, generally speaking, with the Montenegrins themselves since they became subjects of King Nicholas on the cession of Albanian territory after 1878. There is a substantial contingent of Albanians who live on quite good terms with the Serbs in Macedonia, and during the early struggles with the Turks the Albanians and Serbs of the Zeta, as Montenegro was then called, were as often brothers-in-arms as they were enemies. If the Serbs have cause to complain to-day of the raids by marauding bands of hillsmen who come down upon the villages and loot the cattle, the cause is rather the mediæval condition of the country, and not necessarily innate racial hostility. The inter-tribal warfare of the Arnauts is just as fierce as, and probably more bitter than, their hostility to their Slavonic neighbours. There is no inherent reason why Albanians and Serbs should not dwell side by side on neighbourly terms, making due allowance for the unruly character of the mountaineers and mediæval condition of the country. The Serbs ask only to be left in peace, that enemy agents shall cease stirring up the Arnauts against them, and that they shall have a reasonably secure strategic frontier given them. They strongly sympathise in the Albanians' demand for independence. If this is granted, given time, the Albanians should develop into useful members of European comity, for they are industrious and often gifted: and many a good soldier and administrator have they given to Turkey during the past four hundred years. A people that has preserved its national characteristics in so marked a fashion from the dawn of history should be given a chance. Borrowing something from Italian, something from Greek, something from Slav, and again something from Turkish, culture, they will certainly imprint upon all the impress of their marked individuality, and it will be exceedingly interesting to watch their development.

The Constituent Assembly.

Preparations are proceeding for the Constituent Assembly. Negotiations are in progress between the Government and the parties for representation of all shades of thought in the committee which is being formed to carry it through. On this committee, the Democrats and supporters of the Government will have fourteen representatives, and the Opposition *bloc* thirteen. The Speaker, Dr. Pavlovitch, will be an ex-officio member, and Dr. Smodlaka as a non-party man; the Yugoslovenski Club will be represented by Dr. Gostinchar, and Messrs. Banitch and Shevegel; and the Narodny Club by Messrs. Markovitch and Drinkovitch. In addition to these, the following six professors will represent learning: Drs. B. Boshniak, L. Pitomeu (Liubliana), V. Politch, M. Konstantinovitch (Zagreb), Slobodan Jovanovitch, and K. Kumanudi, with M. Yasha Prodanovitch.

A "Learned Society."

The struggles and vicissitudes of internal and external politics have not stifled intellectual movement among the Yugoslavs, and there is being formed a kind of association under the name *Obnova* (Renewal) simultaneously in Belgrade and in Zagreb, to encourage and assist learning in all its forms, above party, free from politics, and devoted to the learning and tradition which are the common heritage of Serbs and Croats alike. The *Obnova* will not supersede the literary institutions like the Matitsa Srpske of Novi Sad, the Matitsa Hrvatska of Zagreb, the Matitsa of Dubrovnik, Prosvijeta i Cairet of Serajevo, the Drushtvo Sv. Mohora of Liubliana, but will help them morally and materially; it will work by means of lectures, meetings, publications and the regular machinery of learned and literary societies, and will carry on that tradition of literary effort which has had so profound an influence upon the history of the Yugoslav people since the birth of the national idea a century and a half ago.

Agrarian Reform.

Agrarian Reform is proceeding in spite of criticism and the absence of Parliament. In what was previously Austro-Hungarian territory, a hundred thousand hectares have been divided up among the peasants. The population is divided into five categories, that is, large landowners, proprietors who let their estates, those who work their own land, small holders, and those who have nothing. Agrarian Committees are being formed in each commune, on which there will be one member to represent twenty constituents of each of these five classes.

A Plethora of Parties.

Preparations are in full swing for a keen contest for the municipal elections in Croatia, especially in Zagreb and in Osijek, but the number of parties and cross-currents make them very difficult for the foreigner to follow. A new paper, the *Zagreb*, has appeared, devoted solely to local affairs, but the parties outnumber the paper. In Zagreb there are the following: Christian Socialists, Popular Socialists, Democratic Union, Croatia Union, the Communists, Social Patriots, Peasant Party, and Radicals. What makes it more complex is that the lines of cleavage on municipal matters do not always correspond with the division on political matters. It is said that feeling runs very high, and the contest will be a bitter one.

Serbia and Austria.

Although the Serbs very naturally resented the attempts, wisely abandoned, of the Supreme Council in Paris to link the question of revictualling Austria with the war indemnity; they are now, of their free will, arranging to supply Vienna with food, as I have previously reported. A complete agreement has now been reached. Serbian misgivings and fears of a Monarchist

Digitized by Google

movement in Austria are strengthened by the activities of Dr. Ivo Frank, whose name is insolubly associated with the anti-Serb party in Zagreb. As Dr. Frank was in favour with the Hapsburgs in the bad old days, but now appears in Graz as a Republican, while conducting a violent anti-union campaign, it is believed that his aim is the break-up of the Union and the establishment of a Republic as a stepping-stone towards a restoration of the Monarchy. It is stated that Italy, or at least some Italians, are supporting him, and that a meeting was recently held in Milan for this purpose.

ROUMANIA.

BUCHAREST, January 10.

Another Crisis?

While many deputies and senators took advantage of the special Parliamentary trains which the Government obtained from the hard-pressed Railway Directorate, and scattered to various parts of the country for the Christmas holidays (these are still celebrated according to the Orthodox Church calendar in Roumania, and, therefore, fall thirteen days later than our own), the political atmosphere can hardly be said to have cleared during their absence. Efforts are being made to form a new majority block in the Chamber amongst the different political parties of the Old Kingdom and certain elements of the new territories' representatives. The idea seems to be to furnish General Averescu with sufficient backing to form a new Government, in which the Liberal Party will also be represented. It is said that a difference of opinion has arisen between General Averescu and M. Také Jonescu regarding the advisability of continuing to press for a dissolution of the present Chamber on the grounds that it does not represent the country. In this connection it will be remembered that M. Také Jonescu's party, the Conservative Democrats, did not put up any candidates at the recent elections as it was felt that Opposition candidates would not have a fair opportunity in view of the strictly enforced censorship and diverse restrictions consequent upon the continuation of martial law. At the time General Averescu took the same stand, and the League of the People Party followed the advice of their leader. Now it appears that the Liberals have persuaded the General that by joining forces with them it may be possible to form an Averescu-Bratianu Cabinet. An alternative Government, also suggested, would include some of the Transylvanian leaders, General Averescu and M. Také Jonescu, and, presumably, the Bukovina and Bessarabia would be represented; but it does not seem probable that M. Také Jonescu would enter into any combination without a definite promise of new general elections.

Dr. Vaida-Voevod, the present Prime Minister, returned to Bucharest on Wednesday last from a brief visit to Transylvania, and a Cabinet meeting was held to consider problems arising out of the Bolshevist advances in South Russia. Permission to enter Bessarabia has been given to the numerous Greek refugees from Odessa.

Alleged Party Intrigues.

It has been freely stated in the Press that the Liberal Party are not confining their activities to the formation of a new Parliamentary *bloc*. The action of General Prezan, Chief of the General Staff, in mobilising the tram-drivers and guards, who had returned to work pending the outcome of the conferences between the men and their employers upon equitable scales of wages and conditions of work, is cited as an instance of the occult influence exercised through the General Staff by the Liberal Party. The three-weeks' long tram strike was telling on the nerves of the Bucharest population, and it hailed with joy the success of Dr. Lupu, the new Minister of the Interior, in persuading the men to go back to work and to leave the question of wages scales in the hands of a committee, on which workers and employers were to have equal representation, the Minister of Commerce acting as chairman and holding the deciding vote. The Bucharest tramway is generally regarded as a Liberal undertaking; their opponents are careful to point out that its stock fell from 6,000 to 3,000 lei after the defeat of the Liberal Party at the elections.

A more serious accusation was made in the *Chemerea*, which stated that an offer of peace terms made by the Bolshevists to the Roumanian Government by wireless was not delivered to the Government. As Roumania is still under martial law, the wireless station is under the control of the General Staff. The obvious solution of these difficulties would be the demobilisation of the General Staff, but this, it is stated, is not feasible until the demobilisation of the army is completed. Whether it will be found advisable to release any more classes is largely dependent on developments to the north, where the Bolshevists claim to be in possession of Odessa once more. News from Bulgaria is anything but reassuring, and Roumania will be forced to keep prepared for possible difficulties in this direction as well.

Bureau Britannique.

Criticism of the law passed during the last session of the Chamber authorising the Government to take over the assets and liabilities of the "Bureau Britannique" does not seem to take into account the fact that the British Government are foregoing their claim for the eighteen thousand waggons of grain lent by them to the Roumanian War Office, and which the Roumanian Government of that time agreed to replace in kind within six months of the signing of peace. Even if Roumania had sufficient wheat on hand to-day to permit of the exportation of this eighteen thousand waggons, the value of this quantity alone at current prices would vastly exceed the amount now being paid for the whole contract—less only those quantities destroyed by British agents or ceded by them to the Russians—whilst, if the British Government exacted payment at existing rates of exchange for their sterling expenditure of 1916, the Roumanian Government would be obliged to disburse five or six times what is now being paid at the conventional rate of 26.22 lei to the £ sterling. It is difficult to see upon what possible calculations the criticism of M. Vintilla Bratianu, that the British Government might have shown greater consideration for an ally, is based.

Peace Conference.

Dr. Ion Cantacuzino and Prince Dimitru Ghika, the new Roumanian delegates at the Peace Conference, have arrived in Paris, and great hopes are entertained that they will be able to arrange an acceptable interpretation of the Minorities clauses. The Prime Minister, Dr. Vaida-Voevod, will leave for Paris immediately after the holidays and will make a brief stay there. The Chamber meets again on January 26, and the Prime Minister is expected to return for this event.

Autumn Sowings.

The official statistics for the autumn sowings have just been issued, and are rather disappointing. Approximately a quarter of the area usually sown with winter wheat had been sown by the end of November. Sharp frosts put an end to the work soon after this, and it cannot be anticipated that the winter-wheat crop of next year will do more than supply seed corn for the following year. Any possible exports, therefore, depend upon spring cultivation. All grain stocks in the country

Digitized by Google

have been immobilised, and after deduction has been made for the food supply of the country until the next harvest, the balance will be distributed for the spring sowing.

Export Credit and the Cernavoda Bridge.

News has been received that Roumania has been added to the list of countries who are to benefit by the British Export Credit scheme, although no details are forthcoming as to the amount allotted to her. It might be suggested in this connection that a proportion of the money which Roumania is to receive should be earmarked for the "Borcea Bridge." The imperative necessity of reconstructing the bridge, which is the span of the great Cernavoda suspension bridge across the Danube destroyed by the Roumanian Army in their retreat from the Dobrouja in 1916, will be obvious to anyone glancing at a map of the country. At present the nearest port to the capital is practically isolated, as the flimsy pontoon bridge over this arm of the Danube must be crossed by daylight. The train service is thus restricted to one train a day each way, and these are crowded inside and out, passengers clinging to the carriage steps and sitting closely packed on the carriage roofs—as indeed are all Roumanian trains to-day. During the summer the trip was not so bad, although the pontoon bridge was not in working order, and the river was crossed by ferry. Bands of gipsies gathered about and sang songs to while the hours away, while their more enterprising companions carried passengers' luggage from train to ferry. No one familiar with the customs of these picturesque vagabonds will be surprised to hear that small pieces of hand luggage had a way of disappearing *en route*.

A much more serious feature, however, is the fact that the pipe line destined to carry petroleum products from the refineries to the port of Constantza crosses the Danube on this bridge, and the temporary link which was placed on the pontoon bridge has not been working satisfactorily. The storage tanks at the refineries throughout the country are full to overflowing, and at many wells it has been found necessary to retard production. Petroleum is Roumania's most valuable available export at the present moment, and no permanent appreciable amelioration in the exchange question can be expected until the transport difficulties which at present limit exports to an inconsiderable amount are overcome. The Railway directorate has made arrangements with the petroleum producers for a large number of damaged trucks to be handed over to individual oil companies, who will repair them at their own workshops, and in return will enjoy the exclusive use of the repaired trucks for a certain period of time. In view of the difficulty of finding locomotives to move trains about it is likely that the oil companies will be forced to use the repaired tank-trucks as storage space, and the export problem will not be any nearer a solution. There is at present a proposal on foot to replace the five-inch pipe across the pontoon bridge by a six-inch pipe run under the waters of the river (the pipe down to the river bank is a ten-inch one), but this work is not to be begun until the river freezes.

Roumanian Oil for Fiume Refinery.

The *Moniteur Officiel* of January 6 publishes a decision of the Council of Ministers authorising the sale of 3,500 tons of crude oil to the Italian Government for the petroleum refinery at Fiume. The arrangement was made through the Italian Military Attaché in Bucharest, General Ferigo.

BULGARIA.

Bulgaria's Position—Prime Minister's Survey.

SOFIA, December 31.

On December 26, in a Chamber that was rather excited owing to recent events, M. Stambouliski, the Prime Minister, made a statement regarding his mission to Paris. In spite of many interruptions by the Communists and the Moderate Socialists, he spoke for four hours, and was able to put his facts brilliantly.

He had gone to Paris, he declared, in the interests of the State, which were supreme over all others. The Peace, though bad, had to be signed; otherwise Bulgaria would still be regarded as in a state of war. His main pre-occupation had been to prepare the ground for a modification, in the near future, of the onerous peace terms; and, secondly, he had made an attempt to bring about a reconciliation with neighbouring States. Before long, he declared, perhaps in three years' time, the world would demand a revision of the Treaty. But Bulgaria must prove that she had broken for ever with the old policy; not plans for new wars, but peaceful work and intensive cultural development would raise her in the eyes of the Western nations, and build a bridge to an understanding and reconciliation with the neighbouring States.

In his interviews with Entente statesmen, M. Stambouliski had sought to make it clear that the Bulgarian nation was neither Chauvinistic nor militaristic in spirit, but by nature inclined to peace and work. Further, he had laid stress on the fact that Bulgaria was conquered, not so much by force of arms, as by President Wilson's principles. The enemy, by means of pamphlets dropped from flying machines, had conducted propaganda among the Bulgarian troops, who had been thus told that the world would be regenerated, not by force of arms, but by the power of those humane principles in the name of which the Entente was fighting; Bulgaria's legitimate demands would be respected, and that consequently the war became absurd. Thus, war-weariness was bred in the soul of the Bulgarian soldier, and the present misfortune of the country was brought about. In order to help Bulgaria to emerge from her sad position, and in accordance with the will of the nation, M. Stambouliski addressed letters to MM. Venizelos and Pashitch, and General Coanda, heads of the Greek, Serbian, and Roumanian Peace Delegations, asking for reconciliation and neighbourly understanding.

As to the future prospects of Bulgaria, the Prime Minister expressed optimistic views. The sovereignty of the Ægean was not awarded to Greece; henceforth the Conference would be concerned with its fate. The Bulgarians' first task was to disperse the suspicions of them with which their enemies had saturated the atmosphere of Paris. The world looked on them as barbarians, incorrigible rebels, and disturbers of the peace in the Balkans. M. Stambouliski had done his best to remove that impression, and to inspire confidence in Bulgaria's sincere intentions to work in future for peace. He had received particularly pleasant impressions from his visit to Italy, where he was received with considerate attention by Italian statesmen and by the Pope.

M. Stambouliski paid a tribute to the Army, which had always kept itself above party, had defended the authority of the State, and had done its duty to the Fatherland with dignity. Finally, he pleaded fer-

vently for the preservation of order at all cost, so that the ground should be prepared for a future revision of the Peace Treaty. Favourable conditions must be created for the development of the full strength of the Bulgarian nation; only a Bulgaria of work and peace would be of value to herself and to the world.

On the conclusion of his speech, M. Stambouliski was warmly applauded, not only by his own party—the Agrarians—but also by other parties in the Chamber.

Visit of General Franchet d'Esperey.

This morning, General Franchet d'Esperey arrived here, en route for Budapest. He broke his journey for a few hours in order to be presented to King Boris, and to return M. Stambouliski's visit. He was met at the station by the Prime Minister, by M. Madjaroff, M. Dimitroff, Minister of Railways, and by other Ministers and high officials; and at 11 o'clock he was received in audience by the King. At noon he had an important interview with the Prime Minister, who, I understand, was well satisfied with the result. At three o'clock King Boris returned his visit, at the hotel of the former Turkish Legation; and at five the General left by special train.

General Bridges, of the British Army, also arrived here from Constantinople, and left with General d'Esperey for Budapest.

Sofia's Cathedral.

In accordance with a decision of the Cabinet, M. Madjaroff, Minister for Foreign Affairs and Public Worship, has introduced in the Chamber a proposal to annul the action of the Radoslavoff Government in changing the name of the Cathedral from "St. Alexander Nevsky" to "Sts. Cyrille and Methode." The former name was chosen by the Bulgarian Holy Synod in commemoration of the Russo-Turkish Loan of 1877 for the liberation of Bulgaria. St. Cyrille and St. Methode were, of course, the Salonika brothers who converted the Bulgarians to Christianity, and gave them their alphabet.

TURKEY.

CONSTANTINOPLE, December 15.*

Sabah ed Din Bey.

The Cabinet has apparently survived the arrival of Sabah ed Din Bey, who seems to have succeeded in a remarkably short space of time in alienating the sympathies of all parties. His pronouncement concerning the Nationalists, which was reported in last week's letter,† deprived him of all hope of support from his quondam friends, without, however, satisfying his political opponents. It is nevertheless reported in the local press that the "Prince" (as the journalists persist in calling him) has consented to stand for Parliament, and that his nomination is practically certain. This is rather a drop from the position of Grand Vizier, which he was expected to fill, but half a loaf is better than no bread at all. It is somewhat difficult to understand the reason for the prestige which Sabah ed Din Bey has hitherto enjoyed. His father was not a favourite with Abdul Hamid, and left Turkey for France when Sabah ed Din was only a child. Only after the proclamation of the Constitution was Sabah ed Din able to return to his native country, and then it was but for a brief space. He became involved in reactionary intrigues and only escaped arrest through the influence of his mother, a princess of the Imperial family. Subsequently he was suspected of complicity in the assassination of Mahmud Shefket Pasha, and having fled from Turkey was unable to return until now. It is true that had it been applied his "decentralisation" programme might have saved Turkey from many misfortunes; but would Sabah ed Din Bey have been the man to try the experiment? On the whole, there is very little in his political career or in his personal accomplishments to justify his reputation.

Effect of Germany's Attitude.

In certain quarters there seems to have been a tendency to hope for a change in the situation on the strength of the attitude observed by Germany towards the Allies in regard to the signature of the protocol to the Peace Treaty. The Unionist paper, *Ifham*, suggested that the delay over the Peace Treaty with Turkey was, perhaps, after all, not a disadvantage, since "Time is a great master." On the whole, however, it is realised that all hopes of assistance from Germany are, at all events at present, vain.

Pan-Islamism.

Certain passages in the interview accorded recently by the Sultan to the correspondent of the Associated Press are worthy of note. In speaking of the interests of Europe in the maintenance of peace in the Orient, his Majesty said that this could only be guaranteed by leaving Turkey her independence, and added that *this was also the only means of pacifying the Islamic world.* With regard to America, the Sultan expressed his belief that that Power would not betray the hopes placed in her *by millions of Turks and Moslems.* In passing, American prohibitionists must have been pleased to hear that the Khalif expressed the great satisfaction of the Moslem world with regard to the application in America of the anti-alcoholic precepts practised by Moslems for centuries.

Somewhat more cryptic, but equally significant, are the utterances of certain Turkish newspapers. The following extract from the most extreme pan-Islamic organ, the *Turk Dunyassi* ("Turkish World"), is an example:—

"The strength of Islam resides not in its quantity, but in its quality. You will realise the truth of this assertion in studying the history of the two other religions which count the most followers: Christianity and Buddhism. Judaism being strictly a 'national religion' need not be mentioned. The Mohammedan religion is a power which assists the perfect development of Islam and the national ideal of every people. If the history of the first period of the Mohammedan religion is carefully studied, we think the truth of this statement will be acknowledged."

Mustafa Kemal's circular to the Powers of Europe referred, it will be remembered, to the danger of a conflagration involving "two continents" in the event of the peace terms being "unjust." Recent events would seem to show that such pronouncements are not quite all bluff.

The Nationalists.

The Cabinet seems to have ceased to struggle against the "government" of Sivas, and, according to official reports, the elections are proceeding with the completest calm imaginable, while such is the state of order and security that, one may deduce from official statements, Anatolia is like a church. Mustafa Kemal Pasha, Rauf and Rustem Beys were all elected to Parliament—without any pressure, of course; but to prove that there was no deception each has declined the honour. So the farce continues. If Mustafa Kemal had been in command in the later stages of the war in Palestine or Mesopotamia, instead of at Gallipoli and the Caucasus, he would perhaps realise more clearly how easily the farce may become a tragedy for his "National Forces."

Monsieur Picot.

The journey of M. Picot, late French High Commissioner in Syria, seems to have been singularly ill-timed, and it would be interesting to know who was really responsible for the idea. Happily, there is very little fear of any real harm being done, but it is a pity to give Mustafa Kemal and his followers the slightest encouragement in their hopes of a diversion caused by Anglo-French differences.

CONSTANTINOPLE, December 22.*

The Elections.

The Constantinople elections terminated with a complete triumph for the Unionists, the eleven successful candidates being all more or less sympathetic to the ideals of the Committee. Among them was a Socialist candidate, Naaman Effendi, a foreman at the Zeytin Burnu powder factory. "Comrade" Naaman is the first "Labour" member to be elected by the Ottoman Parliament, and he states that he will defend the interests of the "proletariat" (blessed word!) against the "capitalists." Incidentally, he also declares that he was elected by the "Socialist-Nationalists," whoever they may be. As a matter of fact, there is strong reason

* Delayed in transmission.

† Published in THE NEAR EAST December 26.

* Delayed in transmission.

Digitized by Google

to believe that the "Socialist" movement is only another move in the really clever game of the Unionists.

The almost universal success of the Unionists, however, seems to have created a certain amount of nervousness even in quarters that have been hitherto openly in sympathy with them. It is as if their complete triumph was altogether unexpected, and now that they have won in such a sweeping fashion it is realised that the effect upon the Peace Conference may be unfortunate. Even the *Vakit*, the editor of which was a close associate of Talaat, to-day deplores the complete triumph of the Committee.

Meanwhile there are persistent rumours to the effect that the Government contemplates preventing the Chamber from meeting. While the irregularities that have been committed in the elections and the widespread dissatisfaction would provide the Government with sound reasons for such a step, the official announcements to the effect that everything has proceeded in perfect order deprive the Government of the right to act upon those reasons, and it is said that the legal status of the Chamber will be called into question. The Constitutional law stipulates for a certain quorum in the Chamber, and this quorum cannot possibly be attained. Hence, from the legal point of view, the Parliament cannot meet.

It may be of interest to note that Sabah ed Din Bey only obtained 107 votes, while the "Labour" candidate, who was at the bottom of the list of the successful members, obtained 135. The present Minister of Foreign Affairs obtained only 98, and the Minister of the Interior only 41.

The Nationalists.

It was said at one time that as soon as the Chamber was convoked, the Nationalist Forces would have no further cause for existence, and would be disbanded. The Grand Vizier, through the medium of the Director of the Press, now declares that the National Forces will not do anything of the kind, but that they are resolved to defend the Eastern frontier as traced by the Sivas Congress. Mustafa Kemal himself in many a proclamation and telegram has never made any secret of the Nationalists' determination to resist what they would consider an unjust peace, but it has pleased the Government to maintain the fiction that the Nationalist Organisation had no other purpose than to restore Parliamentary Government.

How far the Nationalists will be able "to defend the Eastern frontier" remains to be seen. Presumably the phrase refers to the possibility of the Armenian Republic being awarded certain territories from the Eastern provinces. According to reports from sources that ought to be reliable, Mustafa Kemal's forces consist of only a few thousand men; poorly equipped and supplied. But it would be unwise to deduce from this that the Nationalists are only bluffing, for while the actual number of men under arms may not be very considerable, the fact that the National Forces can paralyse all communications in Anatolia at any moment proves that their organisation is sound, and that their adherents are very numerous.

A New Mahdi.

While the pan-Islamic campaign is in active progress both in Constantinople and in the provinces, a diversion has arisen at Baiburt, a small city half way between Trebizond and Erzerum. Here an individual, named Hassan Vasfi, has proclaimed himself Mahdi, and has secured a certain number of followers in the region. The Government has given orders for the Mahdi's arrest.

Anti-British Press Campaign.

It is strange that at the present moment when the British Army has been demobilised to such an extent that our miltary occupation of Turkey may almost be said to have become a matter of form, since our forces are far inferior to those which the Turks are permitted (*by the Armistice treaty*) to keep under arms—quite apart from the "National Forces"—we should be accused of selfish Imperialism and heaven knows what underhand intrigues in order to establish our dominion over Turkey. It is also strange—and highly regrettable—that such accusations should come, not from our late adversaries so much as from our own Allies, the French. August, 1914, has apparently been forgotten, at least by a section of French journalism. *L'Europe Nouvelle*, published in Paris, makes a speciality of attacking our Oriental policy, and every week its articles on the subject become more scurrilous and more libellous. In the number of December 6 *L'Europe Nouvelle* descended to personalities, and classed Dr. Frew, the well-known Constantinople pastor, as an "agent" of the British Government.

While this obscure publication is beneath contempt in many ways, it is unfortunately true that its capacity for harm is not altogether negligible, from the circumstance that it seems to be to the interest of certain people, who prefer to keep in the background, to see that the paper is circulated among Moslems in the Near East. Even the *Stamboul*, which is generally regarded as the "officieux" organ of the French Embassy in

Constantinople, in a recent article could not avoid references to "agents" and British Imperialism, which is stated to pursue in the Orient "the most irresponsible of policies." That such statements are wrapped up in phrases affirming the necessity for the Anglo-Franco-American Entente only aggravates the offence. What may be innocuous and legitimate criticism under other circumstances, when published at the present moment in the *Stamboul* is indiscreet, to put it mildly. And as the *Orient News*, the only British paper in the Near East, keeps strictly to news and quite impersonal leaders or literary articles, it is also taking an unfair advantage.

In the long run such statements cannot do us much harm, but they raise false hopes and create a false impression, with a final result that may possibly be just the reverse of what the authors of such statements intend.

CONSTANTINOPLE, December 29.*

What Do They Really Want?

Among the Turks of Constantinople it is a commonly expressed complaint that the European never moves away from the infected neighbourhood of Pera, and is therefore ignorant of Turkey and the Turks. Whether this be true or not, it would puzzle any but the Turkish mind to find an explanation for the strange vagaries of public opinion with regard to the elections. When Damad Ferid Pasha was Grand Vizier there was an outcry against his unconstitutional government without a Parliament, and the Press clamoured for an immediate general election, while Mustafa Kemal Pasha declared that the Nationalist forces simply existed to safeguard the Constitution and to see that the elections were properly carried out. The retirement of Damad Ferid Pasha and the convocation of Parliament would save the country, according to the Press. At last Damad Ferid Pasha had to yield to the popular clamour, and retired, and his successor immediately set to work upon the general election. In the course of these elections not only has the Government officially announced that everything has been carried out in perfect order and fairness, but any suggestion to the contrary was hotly contradicted by the Press, which could hardly find words to express its eulogies of Mustafa Kemal Pasha and his fellow-Nationalists. As for the Committee of Union and Progress, only the foolish and ignorant European could possibly believe that it had any connection with the Nationalists. All this seems to be forgotten to-day. First we have the *Vakit*, pro-Nationalist and Unionist, professing to deplore the Unionist victory in the elections, and now we have the *Tasfir-i-Efkiar* following suit. The latter paper sent a special correspondent to see Mustafa Kemal himself at a time when Anatolia was not very safe for travellers who were not *bien vu* by the Nationalists, and it was louder than any other paper in its praises of the patriotic work of Mustafa Kemal Pasha, as also in its denial of any possibility of the Unionists being associated with him. Yet to-day it writes.—"It is absolutely necessary to annul the elections. Only upon this condition can the future Chamber really represent the nation. If this liquidation is not achieved, our last hope of salvation will also have been sacrificed upon the remains of the Union and Progress, that sinister group which has been the cause of all our misfortunes."

The Committee—in Switzerland.

Meanwhile the *Alemdar*, edited by the son of Muhi-ed-Din Pasha, the Governor of Angora, who was arrested and ejected from his post by the Nationalists some months ago, has been making our flesh creep. The editor of this Turkish paper claims to possess documentary proof that the Unionist manœuvres that have had such a striking success in the elections were planned and directed by our old friends Talaat, Jemal, and Javid! With regard to the last, the *Alemdar* states that he escaped from Constantinople with the assistance of Izzet Melih Bey, of the Tobacco Régie, and proceeded viâ Rome to Switzerland, whence the Turkish Minister at Berne, Reshid Halis Bey, demanded his expulsion by the Federal Government, as well as that of Ismail Hakki Pasha, the War Office Supply millionaire. But just as the negotiations with the Swiss Government were coming to a favourable conclusion Ferid Pasha fell from power, and Reshid Halis Bey was dismissed from his post. Since then, says the *Alemdar*, the Unionists have had things all their own way in Switzerland, and a conference was held at Lausanne, attended by Nejmeddin Mollah, the Unionist ex-Minister of Justice, and Halajian Effendi, the Armenian Unionist ex-Minister of Posts and Telegraphs, among others, under the presidency of Javid Bey. Talaat and Jemal arrived in Switzerland in their turn, and the Committee, thus reconstituted, direct the Unionist campaign in Turkey. There is reason to believe that these statements are substantially perfectly true, but since the Allied Governments must be well aware of what is taking place there is no need to take the matter very seriously. What is more serious is the following statement of the *Alemdar*:—"The German Government is materially and morally assisting these sinister intriguers, and the Consulate of a neighbouring State of Turkey is acting as the medium of communication between the Unionists of the Empire and those who are now refugees in Switzerland and Germany."

In view of the striking proofs we have had of the duplicity of the German Government, there is every reason to believe the above statements; and unless we have forgotten the danger which Germany created in the East during the war we ought to watch the course of events with the greatest attention. For it is beyond doubt that Bolshevist Russia is only able to keep going with German assistance, and the way to Central Asia is now clear for German agents. In this respect, also, it is worth recalling that the German attitude towards the Allies recently had a certain reaction in Turkish political circles.

The Political Atmosphere

The news that the fate of Turkey is now seriously under discussion and that some progress has been made in the negotiations has generated a certain amount of electricity in the political atmosphere. For the last week further news has been eagerly sought, and it is not difficult to see that the Turks have a very lively fear of what is in store for them. For one thing, the close association of Great Britain and France in the matter has dissipated recent hopes of an Anglo-French misunderstanding, to achieve which a good deal of ink has been spilt and no inconsiderable amount of money has been spent. It is also realised, now that the fatal moment has arrived, that whatever may be the decisions of the Allies there will be no escape—National Forces or no National Forces.

There seem to be three principal currents of opinion among the Turks with regard to what they consider would be just peace terms: First, there are the Nationalists *à outrance*, who insist upon the complete territorial integrity of the whole of Asia Minor and the maintenance of Constantinople as the capital of the Empire; a smaller section would be willing to make certain territorial concessions to Armenia, but would "fight to the last drop of their blood" against the annexation by Greece of even a square centimetre of Anatolia; finally, there is a minute party which thinks the best plan is to confess frankly that the Turks are incapable of decent government, that they have been guilty of the most frightful crimes against humanity, and to implore the mercy and assistance of the Allies—to throw themselves upon the mercy of the court, as it were. But in all three cases there is a certain unanimity upon the matter of Turkish independence. The tiny minority alone would admit a mandate—for a limited period; the second party

would like to be "assisted" for a period of years by England or France; while the die-hards will hear of no control whatever—nothing short of the abolition of the Capitulations and the most unrestrained freedom and independence will be acceptable to them. All three really want the same thing—the abolition of the Capitulations—but the die-hards want it at once, while the others are more or less willing to wait for it or to agree to a gradual process of liberation in proportion to the country's progress in the art of humane and just government.

The Caucasus.

In the meanwhile it is good to hear that the Caucasian republics are beginning to pull together, probably under the benevolent inspiration of the British representative in Tiflis, Mr. Wardrop. The Georgian Government has recently assisted in the conclusion of an agreement between Armenia and Azerbaijan, and there is reason to hope that all outstanding questions will soon be amicably settled, thus putting an end to the bloodshed that has been occurring for the last twelve months or more. There is already an agreement between Georgia and Azerbaijan, and another between Georgia and Armenia. If the three republics could really form a solid *bloc* it would go a long way towards settling satisfactorily the Caucasian question in particular, and would have a healthy influence upon the Near Eastern situation in general. There is at present a conference at Tiflis of delegates from all three Caucasian States for the purpose of definitely settling all outstanding questions. The success of this conference will be a credit to its initiators, for until recently there seemed to be no more thorny question than that of bringing permanent peace to the Caucasus.

CYPRUS.

January 3.

Return of the Deputation.

The Archbishop and six of the members have returned to their homes; M. Theodotou and M. Nicolaïdes remain in London. All the returning members met with a very cordial welcome home, meetings being held and speeches delivered in their honour. Many Greeks are still of opinion that the delegates should return to London, and they are being assured in that case of full local support. The reply of the deputation to Mr. Lloyd George is published. It acknowledges the promise of full consideration, but expresses disappointment that the hopes of Greek Cypriots have not yet been realised.

Salaries of Officials.

Anxiety continues to be felt regarding the inadequacy of all salaries in the present state of affairs. Papers publish the reply of the Under-Secretary of State, given in the House of Commons, that the question is under consideration in respect of some Crown Colonies, and that the Home Government is giving careful attention to the matter as affecting other colonies, among which Cyprus is included. This, of course, also touches closely the matter of pensions. While insistence is urged here, as elsewhere, on the need of "a living wage" for those in harness, justice obviously demands that when old age is reached, after long service, the retiring allowance should *a fortiori* be sufficient to enable an official to live respectably, which is certainly not in many instances the case at present.

Bad Weather.

There have been heavy rains. In the north-west damage was done to the railway at some points, and traffic was interrupted for several days. The Kyrenia District, in the north, has borne the brunt of the storms. Torrential rains brought down volumes of water. Some 10 ins. fell in forty-eight hours, and 14 ins. in three weeks, which is phenomenal in Cyprus. Considerable damage has been done to properties. Some Government work at the Kyrenia Fort, one of the interesting relics of mediæval times, has been swept into the sea, causing serious loss.

MALTA.

Valetta, January 13.

Self-Government.

The idea of self-government keeps to the fore in Malta. The despatch from the Secretary of State concerning the matter has had time now to be understood, and is being widely discussed. Opinions as to the proposed change are conflicting. The most substantial point at issue is: Where do Imperial interests begin and end?, and this is a very important point indeed. In the past the drainage question, road construction, the police, capital punishment, etc., have been considered matters of Imperial concern, but there are quite a number of local legislators who would like an alteration in these matters. The Imperial authorities have vast interests to safeguard, but it is to be hoped that in the cavilling which there is bound to be over the matter, the advantages will not be overlooked. It appears to us that the Imperial authorities have made an honest effort to cope with the situation.

Scarcity of Food.

There is a great scarcity of bread and sugar in the island, and the poorer class are in a very bad way. The local government in the past have done much by subsidies, but the limit of the Exchequer has been reached. A still further effort, however is being put forth by adopting, where the family income is very limited and the families are large, a kind of sliding scale in prices. It should be mentioned that Malta is famed for its large families.

Echoes of the June Riots.

There are still echoes of the riots of June last, chiefly in connection with the wrecking of and looting from Farrugia's mill. The sentences meted out have been exemplary, and have ranged from two to nine years and six months, *Apropos* of the many sentenced for military and other offences, there appears to be a wish on the part of the public that free pardons should be granted, as has been done in Canada and India. Up to the present time there has been no official pronouncement on the matter. The hard times generally are causing a marked increase in thefts and crimes generally.

MONTENEGRO.

Report of British Mission.

The British Mission to Montenegro was organised last year, on the initiative of the citizens of the city of Glasgow, when a committee was formed under the chairmanship of the Lord Provost of Glasgow, Sir John Samuel consenting to act as hon. treasurer, and the fund being duly registered under the War Charities Act. In view of the conditions prevailing at the present time in Montenegro, it was considered of paramount importance, in order to ensure the purely benevolent and entirely non-political character of the Mission, that it should be placed under the charge of a British officer of repute and standing, and the committee were fortunate in enlisting the generous services of Lieut.-Colonel E. G. Cheke, R.F.A., who in September last left Paris *en route* to his headquarters established at Trieste.

The following are extracts from the latest report which has just arrived in London from the Mission in Montenegro itself :—

Antivari.

The population at Antivari is rather better off than most places in the country: the presence of French, Italian, and Serbian troops gives a certain amount of work to the male population, while the women work in the fields. Destitution is not very extreme, except amongst some of the very poor families in the district known as Turkish Town, most of whom are Moslems.

Virpazar.

The inhabitants of Virpazar are in a bad condition; food is very scarce. Work is very slack.

Riejka.

Most of the houses are commandeered by the Serbian authorities, and the best buildings have been turned into barracks. The population has been obliged to supply the Army of Occupation with mattresses and blankets, even having to go without any cover themselves.

Podgoritza.

At Podgoritza I found that the Americans were distributing a good deal of food, practically to the entire population; they have also distributed some clothing. There are three schools in Podgoritza, one a small Turkish school of no great account. The primary building is in a fairly good shape, although, as usual, too small for its 700 pupils. I have never seen boys so keen to learn as these young Montenegrins. They would take in more pupils if they could squeeze them in. The school has no supplies at all. The rooms are not heated, and the poor boys are all shivering with cold. The High School or Gymnasium, as they call it, is in a shocking condition. Austrian troops were quartered there and destroyed everything; rain comes in through the roof, the windows are without glass, nor have they proper seating accommodation or, indeed, enough room; no stove and no heating at all.

Kolashin.

This village in the heights of the Montenegrin Alps is at present completely isolated because of the destruction of two big bridges across deep chasms. Distress is very great. Food is very scarce.

To sum up briefly, the necessity for the relief of Montenegro, particularly of the women and children, is paramount. It is calculated that there are at least 80,000 children needing aid, in one form or another, those in the outlying districts up-country being in desperate need. It is calculated that a sum amounting to £25,000 will suffice to relieve the winter's distress. It is proposed to establish relief and feeding centres at Riejka, Cettigne, Kolashin, and Nitchitch, and we have made the port of Antivari the base for the reception of supplies.

CORRESPONDENCE.

AN "ASIAN" SOCIETY.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—I am not without hope that the "Eastern" or "Asian" Society, the formation of which you were good enough to allow me to advocate in THE NEAR EAST of January 9, will gradually materialise. It is quite clear that the thought has been running for some time past in the minds of those who are the best judges of its utility and practicability, and, what is more, even within the last few days signs have come from two of our great Universities that the thought is current there also. What we now want is the leadership of someone who stands high in the public estimation. The difficulty about such leadership is that the men who stand thus high are almost invariably absorbed in a multitude of other works. Day by day the political situation in Asia, Near, Mid, and Far, becomes more complicated and more indicative of peril for the British Empire; and to meet that peril unity of counsel and action is seriously needed.—I am, etc.,

A. C. YALE.

The Athenæum,
January 25, 1920.

THE TOMB OF ST. DEMETRIUS.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—Your correspondent, "A. R. G.," has *really* visited the tomb of St. Demetrius in Salonika. St. Demetrius, known in the hyperbolic phraseology of the Greek Church as "Thaumaturgus" and "Myrovlytes" (literally: he who discharges perfume), was born in Thessalonica in A.D. 260 and suffered martyrdom with his friend Nestor under Maximian in A.D. 290. Later on he shared the honour of patronship along with St. Gregory Palamas, Archbishop of Salonika, who became famous for his struggle against Barlaam, Gregoras, and Akindynus on Monastical Ecstasy and Thaborian Light (middle of the fourteenth century). Since then the Metropolitan of Thessalonica, alone among the other prelates of the Patriarchate of Constantinople, has the right to the title of "Panaghiotatos," *i.e.*, His Holiness.

Popular legend in Macedonia attributed many miracles to St. Demetrius, whose icon represents a young Roman soldier on horseback and slaying with his lance Lyæus, the boastful opponent of young Nestor, in the Stadium of Thessalonica. In fact, St. Demetrius is a miniature of St. George, and both saints are considered in Macedonia as national saints, along with St. Naum, another favourite saint of he good Macedonian folks. St. Demetrius's tomb was situated in the beautiful homonymous Byzantine church which was unfortunately destroyed in the great Salonika fire, an irreparable loss to mediæval art.

According to a popular legend, when the Bulgars were besieging Salonika soon after Constantinople fell to the Latins (1204) St. Demetrius slew with his lance Iohannes Assen, Tsar of Wallachia and Bulgaria (commonly called Iohannitza, Kaloyannes, and Kynoyannes, *i.e.*, Little John, Good John, or John the Dog). During the first Balkanic war when Greeks entered Salonika (November 7, 1912) the inhabitants regarded their entry as miraculous and a good omen, because it occurred on St. Demetrius Day.

As for St. Demetrius Cathedral in Bucharest, I know nothing about it, but I presume that the author of "A Woman in the Balkans" saw the relics of a Roumanian namesake saint. It might have been also the shrine of another saint if the cathedral of Bucharest is "Trisypostatos," that is, dedicated to three patron saints.—I am, etc., THEODORE D. MOSCONAS.

32, Oxford Street, Manchester, January 23, 1920.

PAN-SLAVISM.

(FROM OUR OWN CORRESPONDENT.)

CONSTANTINOPLE, December 22.

Lieutenant Marustchak, of the Italian Army, and President of the Carpathian Russians' Council in Italy, when passing through Constantinople recently on his way to join General Denikin's army, in the course of an interview made certain statements that "give one furiously to think." For one thing, Lieutenant Marustchak's remarks indicate that the Pan-Russian ideal is by no means dead. After recalling that the Council had presented to President Wilson and certain Italian statesmen a memorandum to the effect that the Carpathian Russians desired to be united to Russia, Lieutenant Marustchak stated that this people, numbering more than six millions, realised that Russia alone could deliver and protect them. "Consequently the Carpathian Russians are true Russian patriots," continued the Lieutenant, "hostile to every form of separatism, and especially to those Ukrainian ideas that were brought into being before the war by German and Austrian intrigues." It is also interesting to note that the General Benderoff who took part in the dethronement of Prince Alexander of Battenberg, Prince of Bulgaria, in 1886, and who afterwards fled to Russia, has been nominated General Denikin's Military Representative in Sofia, where he has already arrived.

An extension for six months of M. Abel's term of office as Governor-General of Algeria has been arranged.

A Rome message states that Signor Gerolumo Marizzi has been appointed Minister in Teheran.

THE ROMANCE OF THE EGYPTIAN MUMMIES.

Speaking on Egyptian mummies at a meeting of the Société Internationale de Philologie, held on January 19 at Taviton Street, N.W., the Rev. J. J. Pool said that it had been very much taken for granted that from time immemorial the Egyptians had preserved the bodies of their dead by mummification. But there was an earlier time when the dead bodies were disposed of by dismemberment and buried without ceremony. In the oldest graves skeletons were discovered mutilated in an extraordinary manner, as if to hide their identity. Reverence for the dead began when the Pharaohs, having conquered the prehistoric people of Egypt, ruled in the land, and the previous neglect was taken to indicate that the prehistoric people had no belief in the continued existence of the body in any form, and no faith in the resurrection. Mummification was the result of a revulsion of feeling, and a conviction that man would some day arise from the dead, even in his mortal body. It began about 4500 B.C., and continued for some centuries after the introduction of Christianity into the country, but gradually the new faith caused it to be abandoned. The Egyptians ceased to believe that the body must be mummified in order that the soul might return to it, when they held instead that at the resurrection man would receive back his body, even though it had been burned and scattered to the four winds of heaven. Thus by about 500 A.D. the practice was discontinued.

When mummification had been brought to perfection, said the lecturer, it was the work of a special guild, and the most expensive form cost about £250 of our money. By this method the brain was extracted through the nose, and all the viscera extracted through an incision in the side. The body was then filled with myrrh, cassia and other fragrant and astringent substances, laid in natron for seventy days, and finally wrapped up in strips of fine linen smeared with gum; there was a second less expensive method, and a third method, used only for the poor, which consisted in cleaning the body with some strong astringent and pickling or salting it for seventy days. The ancient Egyptians believed that to disturb the dead or destroy a mummy was the most impious of crimes. At first the mummy, after being placed in its case, was kept in the house; but accidents happened, and for greater security the priests ordered that all mummies should be removed to the tombs, where they would be under the protection of the gods. The ancients embalmed their loved ones, believing that they thereby secured them immortality.

ARMENIA AND THE ALLIES.

A public meeting convened by the British Armenian Committee was held on January 22 at Caxton Hall with the object of urging upon the Allies the fulfilment of their pledges for the liberation of the Armenians and other subject races from the Turks. Numerous letters from those unable to be present were received, among others one from Lord Bryce, saying that France as well as England and America had, through their leading statesmen, given definite pledges that the Turk should be finally expelled from Armenia, and we could not doubt they would stand by those promises.

Mr. Aneurin Williams, M.P., who presided, said the British Armenian Committee was not anti-Mohammedan nor even anti-Turk in the sense of being opposed to the Turkish people, for the wrongs of the Armenians were not so much due to the Turkish people as to the Turkish Government. Previous to the war the British Armenia Committee had sought to get for Armenia decent government within the Turkish Empire; its object now was to get the total cessation of Turkish government over the Armenian vilayets. Another thing it struggled for was the recognition of the Erivan republic. This little Armenian State had arisen in the extreme south of what had been the Russian Empire; it was struggling for recognition, and to have added to it the adjacent Armenian lands that were within the Turkish Empire.

Bishop Gore, Dr. Clifford, Lady Sykes, and Mr. Joseph Bliss were among the speakers. Mr. Ormsby-Gore, M.P., said that a reference had been made by Dr. Clifford to an allegation that bondholders were obstructing the way. A certain number of financiers had always found the corrupt Government of Turkey a happy hunting ground for somewhat speculative enterprises. Those same bondholders were now looking to Mesopotamia, where they would have trouble on their hands unless there was settled and civilised government over the border in Armenia.

A resolution was passed in accordance with the objects of the meeting, and another calling on the Allied Powers to advance money to the Armenian community, so as to meet the immediate needs of orphans and refugees, and assist in the work of repatriation and reconstruction. In this connection it was stated that there were between 200,000 and 300,000 Armenian orphans in Asia Minor.

TRAVELLERS TO ROUMANIA.

The Board of Trade has been informed that the Roumanian Government, in order to avoid being obliged to impose quarantine measures on travellers from countries in which plague or cholera has broken out, has requested the British and other Legations in Bucharest to take the necessary steps to compel their subjects to give their exact address to the sanitary authorities at the frontier, and to submit, in their own interest, to medical supervision at their residence.

THE CARAVANSERAI.

Think, in this batter'd Caravanserai
Whose Doorways are alternate Night and Day,
How Sultán after Sultán with his Pomp
Abode his Hour or two, and went his way.

A Serbian correspondent sends a tale which indicates that the Near East is likely to produce a successor to the great and only Rockefeller, when that multi-millionaire's mantle is ready to pass on. It is a youth from Zayechar, who has shown signs of financial genius. As a student in France he had the privilege of a specially low rate of exchange granted by the Ministry of Finance, to assist such students to buy francs. Accordingly he borrowed 600 dinars, for which, at the privileged rate, he received 500 francs in Paris. He lived very economically, and at the end of a month saved 250 of them, which he returned to a friend in Serbia, who promptly sold them on the market at the current rate of 240 to the 100. Taking 600 dinars of the result, the friend sent another 500 francs to Paris, where our hero repeated his tactics. So the young man from Zayechar was able to pay off the original loan of 600 dinars and to live on his ingenious system of financial perpetual motion.

***

Here is a true story told by a great lady about an experience that befell her a good many years ago. She was a young wife at the time, coming home from India, and her husband had placed her in the special charge of the captain. It was early in the season, and the Red Sea proved terribly hot, so that practically everybody on board slept on the deck; but the lady in question felt a shyness about it, and clung to her cabin. Then the captain spoke firmly to her. "You look downright washed out, Mrs. —," said he, "and you simply *must* sleep on deck. If you don't like the open deck, get the stewardess to have your bed placed just here," and he indicated a space at the head of the companionway, where there was air, with a certain amount of privacy.

***

The lady finally allowed herself to be persuaded, gave her promise, and accordingly asked the stewardess to have her bed made up on the spot indicated. The stewardess promised to do so; and that night, when she was ready for bed, the lady made her way to her new sleeping place. But to her surprise and horror she found it already occupied. An elderly gentleman, whom she knew slightly, was in possession, and when she ventured to suggest that he was making a mistake, he assured her positively that he was doing nothing of the kind—the bed was his, and he meant, in fact, to remain there. Perplexed and vexed, she spoke sharply. He retorted, also sharply. Sounds of mirth became audible from near by, and the distressed lady felt sure that Peeping Toms were about. "Really and truly, Sir Henry," she exclaimed, "the bed is mine, and I am going to have it." And thereupon she moved forward. The horrified old gentleman gave one growl, scrambled up, and fled incontinently, and the victorious fair occupied the evacuated position without a moment's delay. She was left in undisturbed possession—the defeated Sir Henry making himself more or less comfortable elsewhere, let us hope—and in the morning she awoke feeling fresher and more rested than for many nights. Down below she went to dress, and just outside her cabin met her stewardess. Wishing to thank the woman for making up the bed so comfortably, she began: "Oh, about my bed—," but the stewardess broke in: "Yes, ma'am, I am *so* sorry, but I clean forgot about it." It *was* the unfortunate Sir Henry's bed, after all.

CORSAIR.

Reuter's Busreh correspondent, in a delayed telegram dated January 17, writes:—The first through train from Busreh to Baghdad, containing British military and civil officers and Arab sheikhs, left Busreh at midnight on January 13 and arrived at Baghdad South Station on the afternoon of January 15, where Lady MacMunn, in the presence of a large gathering, fixed the last fishplate and declared the line open. The train then proceeded to Baghdad West Station. General Sir G. F. MacMunn, in the course of a speech, declared that there were now 945 miles of railway in Mesopotamia.

TO AMATEUR PHOTOGRAPHERS.

The Editor will be glad to consider photographs of Near Eastern scenery, types, places of interest, etc., etc., suitable for reproduction in THE NEAR EAST. *When desired, payment will be made for the right of producing such photographs. Readers should state, when forwarding pictures, whether payment is desired or not.*

Photographs should be sent either packed between stout cards or rolled in a cardboard tube, and should on no account be folded. Titles and notes should be attached to each photo, and should be very clearly written.

MUSICAL NOTES.

Of all forms of chamber music, probably the string quartet is the most popular, and the piano with the 'cello the least. In any case, there is no doubt that the piano and the 'cello have to be exceptionally well played to prevent their combination being dull. Much of the music, in fact, that has been written for these two instruments rightly belongs to what Mr. Ernest Newman has frankly called "lethal-chamber music." However, that these facts are considered by some to be merely opinions is proved by the almost daily recital of this kind of music. Among the better of these could be placed the sonata recital which Miss Ethel Hobday and Mr. Cedric Sharpe gave at the Wigmore Hall on January 21. Both these performers can play excellently, but they both had bad lapses at this concert. A phrase here and there was beautifully turned, a balance was sometimes struck, but before one's enthusiasm could be worked up something would go wrong. The sonatas played were Bach's in G minor, a new work (Op. 69) by Mr. J. D. Davis, and Rachmaninoff's in G minor, but not one of them was satisfactory. The *Adagio* of Bach was well enough, but why so unselfish an artist as Miss Hobday should have sustained so loud a tone in the *Vivace* one could not understand. The new work by Mr. Davis serves rather a utilitarian than an æsthetic purpose—'cello sonatas are not numerous—for it did not appear that he had very much to say. The first movement of the Rachmaninoff was the thing best played: it alone had been adequately rehearsed and it was extremely well delivered. Finally, it may be said that previous knowledge of the abilities of Miss Hobday and Mr. Sharpe makes a condemnation of this particular recital unnecessary: but it were well for them and for the public if they barred its repetition.

At Queen's Hall on January 22, Miss Jessie Snow (violinist), with the London Symphony Orchestra, conducted by Mr. W. H. Reed, gave an orchestral concert. Apart from Miss Snow's appearance, the chief interest lay in the performance of the new Rhapsody in E minor by Mr. Reed. Miss Snow is a fairly accomplished artist, though her technique lacks precision and finish, and she gave a plucky display. She is still some way from maturity, and her faults will probably disappear as her individuality develops. Her chief defect is a lack of breadth in interpretation—she observes the letter far too closely. In the Wienawski Concerto in D minor she did not convince—her technique was not adequate to its demands; but in Mr. Reed's Rhapsody she gave a very good performance. The Rhapsody is not a profound work, but it is quite pleasing, and will without difficulty find its way into the small group of pieces composed for violin and orchestra. Miss Snow also played with orchestral accompaniment Bach's Aria for G string and Novacek's "Perpetuum Mobile," the first without distinction and without accuracy, the second with an enthusiasm that only narrowly missed being brilliant. As a conductor, Mr. Reed is not yet individual enough; he keeps too close an eye upon the score. In the programme, however, there was nothing to try him severely, for the pieces were nearly all of a minor character. The London Symphony Orchestra is the best English orchestra, but, if allowed, can lose interest in what it plays. For instance, in Delibes' suite, "Le Roi S'amuse," it obviously enjoyed itself, and communicated its enjoyment; but in Elgar's "Two Dream Children" I found no charm, and this was through no fault of the music itself.

At the Æolian Hall on January 24, Miss Calista Rogers, whom I had not previously heard, gave a song recital. She commenced with three exceptionally beautiful old Italian airs, one "Cangia, cangia tue voglie," by Fasolo, being very charming indeed. These airs well suited Miss Rogers' light and thin voice, and their technical difficulties did not unduly tax her resources. Later, however, in songs by Mr Roger Quilter and Mr. Delius, the thinness of her voice was a serious deficiency. Her high notes were hard (without being shrill), and she displayed a monotonous inability to get a high note without climbing to it. She sang three songs from Sir Rabindranath Tagore's "Gitanjoli," set to music by Mr. J. A. Carpenter—nebulous things which appear to have attained an unwholesome popularity: these, again, were within her limits, and she made the most of their little worth. To conclude her programme she sang some very pleasing songs by Emmanuel Chabrier, Debussy, and Fourdrain. In these charming trifles she was at her best; they are excellent examples of the French genius for the artful assumption of childishness; and Miss Rogers, assisted by a very good accompanist (Mr. Anthony Bernard), caught their innocent rhythm and imparted their sense of joy. In minor matters Miss Rogers should do well enough.

ANDANTE.

The Allies, Reuter's Agency is informed, have decided to recognise *de facto* the independence of the Armenian Republic with its capital at Erivan. The question of boundaries has still to be settled, and the decision just arrived at will not prejudice any decisions to be reached later in regard to Turkish Armenia.

NEAR EAST BOOKSHELF.

I.—"OUT OF BONDAGE." By Schmarya Levin. London: Henderson's. 2s. 6d.

II.—"MORE LITERARY RECREATIONS." By Sir Edward Cook (London, Macmillan and Co. 7s. 6d. net.)

"ECHOES FROM THE GREEK ANTHOLOGY." By J. G. Legge (London: Constable and Co. 2s. 6d. net.)

I.— THE STATE OF THE JEWS.

It is quite possible that of all events in the European War, the declaration made by the British Government in favour of the emancipation of the Hebrew nation will be considered by future historians as the most important. Many men, indeed, hope that the eternal problem of the Jew has to a large extent been solved. The realisation of the Zionist ideal is certainly a momentous affair, the effects of which cannot yet be calculated. This small book is an attempt to explain that ideal, and as such should be useful to the "kindly-disposed stranger," the Englishman to whom it is addressed.

But it may be said at once that the twenty-three chapters of which the book consists are very unequal in importance. As an enthusiastic Zionist, the author finds it difficult to tolerate Jews who think differently from him, and this is unfortunate because, being impatient of opposition from his own race, he rather tends to minimise the importance of that opposition. As a matter of fact, we for the most part are in sympathy with Dr. Levin—his high idealism none but a materialist could resist—and to hear him railing, however eloquently, at his Jewish opponents is for us superfluous. Unfortunately, many pages are taken up in these domestic (so to speak) arguments.

The book begins with an eloquent chapter called "Light from the East," in which it is maintained that the western Jew's notion of freedom was wrong, for he thought only of *civil* emancipation, whereas what really mattered was *national* emancipation. The western Jews went off the right track: "the individual Jew was emancipated at the expense of the Jewish people. The loss of the people was the gain of the individual." This thesis is sustained throughout the book and some of the most convincing chapters are devoted to exposing the folly of the theory of "Assimilationism." The rejection of the assimilationist theory is valuable, and, although the author treats it here merely as a danger to the Jewish cause, he is on common ground with the "kindly-disposed stranger," who knows that the danger from the Jews comes from those who pretend not to be themselves. Of these people the author says:—

They fear that the revival of the Jewish people as an independent people, with cultural institutions of its own, would reflect upon their position as citizens in other countries. In truth, however, they are not so much afraid of the social or political consequences as of the moral consequences. They hate Semitism; they hate the East; they prefer to live in a borrowed West rather than in their own East. In the Jewish rebuilding of the Orient they see their own world in ruins, and they strain every nerve to shield their world, to save it from utter destruction.

Of this party Dr. Levin is without hope, as, indeed, every-one else is.

Among these pages are several interesting and disputable generalisations, which, of course, are inevitable in a book explaining an ideal. For instance, in one chapter, these two things occur:—"There can be no doubt that the worst freedom is better than the best submission," and "If we consider even the smaller national groups, the exotic nationalities, of whom the world has never taken any notice, such as the Albanians, we find that the attitude of progressive society towards their rehabilitation is very sympathetic. Nobody begrudges them an independent existence." Such sentences as these are wide but scarcely deep. Perhaps, however, it is not fair to pick holes in a book which deals only, as the introduction by Dr. Leon Simon tells us, "with the ideal and psychological forces that underlie the effort of the Jewish people to regain its birthright." But we should have liked to know how Dr. Levin proposes to conduct matters when his ideals clash with realities, as they certainly will do in Palestine. The "kindly-disposed stranger" belongs to a practical race, one really more interested in the questions of expediency than in those of abstract justice: and if the author of "Out of Bondage" should write a book on these matters half as eloquent as the one under review we should be delighted and certainly benefited.

II.—THE GREEK ANTHOLOGY.

The Greek Anthology is a thing which you must either wholly accept or wholly refuse; you must either love it, and love it more and more each day, or you must put it with the many things in literature that are accounted not to matter, and leave it there. In the two books under review are revealed two very enthusiastic lovers of the Anthology—the one, the late Sir Edward Cook, writing about it; the other, Mr. J. G. Legge, rewriting it, *i.e.*, translating it. Of the merits of the Anthology, both permanent and deep, neither author has any doubt. Sir Edward Cook says:—

The pieces in the Greek Anthology are, it is true, only minor poetry. The poets whose work is collected in it cover a period of more than a thousand years. . . . But the difference of time at which the several pieces were written is often not felt. The poets deal with the commonplaces of human life and with the elemental feelings of human nature, which are the same to-day as yesterday, and will be the same to-morrow. There is pathos in the Anthology, but Tragedy does not sweep by in sceptred pall. The cothurn is discarded, and we are placed on familiar terms with the everyday life of quiet folk. As in workmanship, so also in theme, the Anthology bears the same relation to the greater works of Greek literature that the engraved gems or Tanagra figurines bear to the marbles or bronzes of the great masters.

That is the whole secret of the charm of the Anthology. Its distinguished lack of greatness and the perfect form in which its matter is expressed at once make certain its appeal to the cultured, as opposed to the creative, mind. Its thoughts are close and human, and intellectually it is a constant delight. Mr. Legge loves it because it shows him "the courage, the dignity, the noble thought, the passion, the beauty, the gaiety, and gloom that marked the spirit of ancient Greece." And he loves it so much that his translations were most of them made "at the top of a municipal tram, or in railway carriages on tedious war-time journeys."

In Sir Edward Cook's volume of essays, of which that on the Greek Anthology is the only one which is strictly within the limits of The Near East's subject-matter, there is nothing original nor weighty said. It is, however, a delightful book to read. The little things of this world that do not matter are discussed in a charming way—the correct use of words, the use in daily life of classical quotations, and so on, are written of in a way that makes all scholars remember that they have forgotten some of their learning. The author brings to the surface from a mine gems which, though not found deep down, are very rich and sparkling: and the pleasure gained from reading his book is wide and recurrent.

Mr. Legge's translations are excellently done. His little work consists of fifty-seven pages, and of about as many authors. He has closely followed Mr. Mackail's standard arrangement (as which sensible translator has not?), but his versions are original, and in some cases as good as have been made. We give as an example Simonides' Epitaph on the Spartan Dead at Platæa: it has but one blemish, that of the use of the un-English word, "fadeless":—

To their dear land a fadeless wreath they gave,
These men now wrapped in death by cloudy night;
Who, being dead, yet live, since from the grave
Valour divine doth lead them to the light.

Mr. Legge's "Echoes" will certainly help to popularise the Anthology.

BOOKS RECEIVED

"Russia in Rule and Misrule." By Brig.-General C. R. Ballard, C.B., C.M.G. With a Foreword by General Sir William Robertson, Bt., G.C.B., K.C.V.O., D.S.O. (London: John Murray. 6s. net.)

"Morning Knowledge." By Alastair Shannon. (London: Longmans, Green and Co. 14s. net.)

"Some Sources of Human History." By W. M. Flinders Petrie. (Illustrated.) (London: S.P.C.K. 5s. net.)

"Kossovo: Heroic Songs of the Serbs." Translated by Helen Rootham. (Oxford: B. H. Blackwell, 4s. 6d. net.)

"The London Venture." By Michael Arlen. (London: Heinemann. 4s. net.)

"The Question of Thrace." By J. Saxon Mills and Matthew G. Chrussachi, B.A. (London: Edward Stanford, Ltd. 2s. 6d. net.)

"The Land of Goshen and the Exodus." By Sir Hanbury Brown, K.C.M.G. 3rd Edition. With 2 Maps. (London: Edward Stanford, Ltd. 7s. 6d. net.)

BOOK NOTE.

Mr. Charles M. Doughty, whose book on Arabia is probably the finest travel-book written by a living author, has published, through Messrs. Selwyn and Blount, a long poem called "Mansoul." Readers of his "Dawn in Britain" know how well he handles a large theme; in "Mansoul" they will find the same evidence of his grand conceptions.

4	22	Wednesday	14	15

Lord Allenby visited Omdurman on January 16.

The Hon. Mrs. Herbrand Alexander has left England for India.

Lord and Lady Sinha and Mr. Basu have arrived at Bombay.

Mr. Hilaire Belloc is expected to pay a visit to Egypt this winter.

Contrary to expectations, the Prince of Wales will not visit India this year.

Princess Roxane Mavrocordato left London on January 19 on her return to Bucharest.

Lord Barrymore continues to make satisfactory progress after his recent operation.

Madame Antonesco, the wife of the Roumanian Minister in Paris, has arrived in London.

Captain Raja Sir Hari Singh of Kashmir was received by his Majesty on January 22.

The Roumanian Prime Minister, who is at present in Paris, will visit London next week.

Princess Marie and Prince Nicholas of Roumania have arrived in London from the Continent.

M. George Cretziano, Roumanian Minister to Spain, left London on January 19 on his way to Madrid.

M. Popovitch, Secretary to the Legation of the Serbs, Croats, and Slovenes, left London on January 19 for Belgrade.

The King of the Hejaz has conferred the Order of El Nahda (Second Class) upon Cmdr. D. G. Hogarth, C.M.G., R.N.V.R.

Major-General Lord Edward Gleichen and Lady Edward Gleichen have left for Morocco. They will be away till the end of March.

General Sir Ian Standish Hamilton, who commanded the Mediterranean Expeditionary Force in the Dardanelles, has retired from the Army.

Messrs. J. E. Munro and E. Mackay have sailed for Constantinople to take up appointments on the staff of the Boys' High School there.

The *Sudan Times* states that Major-General G. F. Gorringe, C.B., C.M.G., D.S.O., contemplates visiting the Sudan at an early date.

Sir John Stavridi, the Greek Consul-General, returned to London on January 21 from Paris, where he had been on a visit to the Greek Premier.

M. Gregoire Michaesco, Secretary to the Roumanian Legation, returned to London on January 19 from Washington, where he has been on a special mission.

The Roumanian Chargé d'Affaires, M. Michel B. Boeresco, has been given the rank of Minister Plenipotentiary. He will continue to act as Chargé d'Affaires.

Lord Hardinge of Penshurst, Permanent Under Secretary for Foreign Affairs, on January 20 received M. Michel B. Boeresco, the Roumanian Chargé d'Affaires, with whom he had a long conference.

Under the auspices of the Royal Geographical Society, Professor J. L. Myres will lecture at the Æolian Hall on March 15. His subject will be "The Dodecanese."

A lecture was delivered on January 23 in the rooms of the Royal Society, Burlington House, by Professor T. E. Peet, of the Egypt Exploration Society, on the subject of "El Amarna, the City of Egypt's Heretic King."

The marriage of Mr. Eugen Millington-Drake with the Hon. Effie Mackay took place on January 20 at St. Paul's, Knightsbridge, the ceremony being conducted by the Bishop of Grantham, assisted by the Rev. H. Dransfield.

Prince Nicholas and Princess Marie of Roumania, with Colone Arion in attendance, arrived in London on January 22 from the Continent. The Roumanian Chargé d'Affaires, M. Boeresco, and the personnel of the Legation were at the station to meet them.

The Rev. Nikolai Velimirovitch, Bishop of Zica, has left London for Belgrade. Among those present at the station to see him off were the Rev. G. K. Bell, representing the Archbishop of Canterbury, and M. Miyatovitch, formerly Serbian Minister.

The marriage of Major E. G. S. Waley, O.B.E., second son of Mr. and Mrs. Alfred J. Waley, of Alderhurst, Englefield Green, and Miss Aida Ades, second daughter of Mr. and Mrs. Nessim Ades, of Kasr-el-Doubara, Cairo, took place in Cairo on January 25.

The Prince Regent of Serbia has conferred the Cross of Commander of the Order of Saint Sava on the members of the committee of the Society to Save Serbian Children. Among the recipients are the Duchess of Marlborough, Lady Grove, and Mrs. Asquith.

Colonel F. M. Bailey, of the Indian Political Service, says Reuter's Delhi correspondent, who was sent on a mission to Turkestan eighteen months ago and was detained by the Bolshevists last autumn, succeeded in reaching Meshhed safely on January 14.

Mr. N. M. Samarth, President of the Western and Eastern Lecture Society, and secretary of the Moderate Party of Politicians from India, will sail for India this week. Meetings of the Lecture Society are held at 2, Scarsdale Studios, Kensington, on Fridays, at 5 p.m.

The King of the Hellenes has conferred the Order of the Redeemer upon the following:—Grand Commander: Admiral Sir C. Dundas of Dundas, K.C.M.G. Officer: Capt. the Hon. W. S. Leveson-Gower, D.S.O., R.N.; and the Order of George I. (Officer) upon Lieut.-Cmdr. C. L. Kerr D.S.O., R.N.

A marriage has been arranged between Mr. E. W. E. Holderness, only son of Sir Thomas Holderness, Bart., G.C.B., K.C.S.I., and Lady Holderness, of Flagcourt, Tadworth, Surrey, and Bessie, second daughter of the late John Stephen Sampson, J.P., and Mrs. Sampson, of Tibshelf, Derbyshire.

For services rendered at Aden in connection with the war, Lieut.-Col. Thomas Howard Foulkes, Indian Medical Service, and Major Harold Berridge, 45th Aden Rifles, Indian Defence Force, attached Military Works Services, Aden, have been made additional Companions of the Order of the Indian Empire.

At a dinner in honour of Lord Sinha states Reuter's Bombay correspondent, Mr. S. R Bomanji proposed the erection of a statue to Mr. E. S. Montagu, Secretary for India, at the "Gateway to India," in commemoration of his services to India. A total of 50,000 rupees was subscribed at the gathering.

Mr. Montagu, the Secretary of State for India, has now entered on a short course of medical treatment, which he was advised to take in December but was obliged to postpone owing to his visit to Paris. Mr. Fisher, the President of the Board of Education, will undertake Ministerial supervision of the work of the India Office on Mr. Montagu's behalf.

An important lecture was given under the auspices of the Central Asian Society on January 21, when Mr. Roland Michell read a paper on "Cyprus." The Rt. Hon. Lord Carnock, P.C., G.C.B., was in the chair. We had hoped to give extracts from the paper in to-day's issue, but owing to the exceptional pressure on our space we are obliged to withhold these until a future date.

Our Malta Correspondent writes (January 13):—
The Order of the Membership of the Most Excellent Order of the British Empire has been conferred on Major W. Savona, LL.D., R.M.A., and on Capt. Raynaud, R.M.A.
Chevalier Off. Riccardo Monzani, the new Consul-General for Italy, arrived here to-day, and has assumed the management and control of the General Consulate.

Mr. Eric Rice gave a pianoforte recital on January 27, at the Æolian Hall, the entire profits from which were devoted to the scheme for building a children's hospital city in the country. Mr. Rice was assisted by Miss Janet Dunlop Smith, daughter of Sir James Dunlop Smith, Political A.D.C. to the Secretary for India, who sang, among others, two songs by Sir George Henschel, accompanied by the composer.

APPOINTMENTS, ETC.

M. Nostas Ilitch has been appointed First Secretary to the Legation of the Kingdom of Serbs, Croats, and Slovenes.

Captain Yovan Yovanovitch, Assistant Military Attaché to the Legation of the Kingdom of Serbs, Croats, and Slovenes, has returned to London from Paris.

The King has been pleased to appoint the Honourable William Augustus Forbes Erskine, M.V.O., H.M. Envoy Extraordinary and Minister Plenipotentiary to the Republic of Cuba, to be also H.M. Minister Plenipotentiary to the Republic of Hayti and the Dominican Republic. Among the diplomatic posts of the Hon. W. A. F. Erskine are included Teheran, Athens, and Rome.

The King has been graciously pleased to grant permission to Sir Davison Dalziel, Bart., M.P., to accept and wear the high distinction of the Cross of the Commander of the Order of the Crown of Italy, conferred on him by the King of Italy for services rendered during the war.

OBITUARY.

The death occurred of Lord Plunket on January 24. His diplomatic appointments included Rome and Constantinople. He was a Knight of Grace of the Order of St. John of Jerusalem.

Lieutenant-Colonel Algernon Hastings Campbell Neale, who died on January 7 at Relizane, Algiers, was the youngest son of the late W. B. B. Neale, his Britannic Majesty's Consul at Athens and for the continent of Greece.

The death took place on January 18, at Street Farm House, Bramley, Hants, of Vice-Admiral Noel S. F. Digby, who served in the Black Sea during the war with Russia in 1854-5, and was also a commander in the Ashantee War.

The death of Sir Michael Nethersole, formerly Inspector-General of Irrigation in India, is announced from Bombay. Sir Michael was born in 1859, and entered the Indian Civil Service in 1880. He was for thirteen years Irrigation Officer of the United Provinces, subsequently becoming Executive Engineer at Kashmir and Chief Engineer and Secretary to the Government of the United Provinces, while in 1912 he was appointed Inspector-General of Irrigation. He was made C.S.I. in 1914, and was knighted shortly after his retirement in 1917.

The death occurred on January 14, at the British General Hospital, Aden, of Captain George Parker Bevan, C.M.G., D.S.O., A.M., Royal Navy, Senior Naval Officer, Persian Gulf, H.M.S. Triad. Captain Bevan was a commander at the outbreak of war. In March, 1915, he was selected to command a flotilla of some fifty trawlers and drifters fitting out for the Dardanelles, and he remained in the Eastern Mediterranean until the evacuation of Gallipoli, when he was awarded the D.S.O., and promoted to captain in June, 1916.

Sir Robert Follett Synge, K.C.M.G., H.M. Deputy-Marshal of the Ceremonies, Foreign Office, died on January 22 at his residence, 7, Chester Square, S.W., following an accident. Sir Robert Synge acted as secretary to Lord Wolseley's Special Mission to the Courts at Vienna, Bucharest, Belgrade, Constantinople, and Athens, to announce the accession of King Edward, and was in attendance on the Special Ambassador from the Sultan of Morocco in 1901. He was secretary to Lord Roberts's Special Mission to the Courts of St. Petersburg, Bucharest, Belgrade, Berlin, and Dresden, to announce the accession of the King.

NEWS IN BRIEF.

The Cairo Intermediate School of Commerce has been closed owing to refractoriness of the students.

It is understood that a scheme is on foot for the complete reorganisation of the Malta Militia Regiment.

Turkish and Bulgarian invalid prisoners of war and seriously wounded men in France will be repatriated shortly.

In addition to her present Legations, Switzerland proposes to appoint Ministers to Prague, Belgrade, Athens, and Warsaw.

Owing to shortage of housing accommodation, the Bombay Government has provided temporary camping sites on Cumballa Hill.

Cardinal Dubois, Archbishop of Rouen, who is travelling on a special mission to South-Eastern Europe and the Levant, has been welcomed in Cairo.

A Women's Local Committee of the Egyptian Delegation has been formed to work for the independence of Egypt and the emancipation of Egyptian women.

There was an unprecedented incident at the Azhar Mosque, in Cairo, on January 19, when an American lady gave a two-hour political address to a great gathering.

Yugoslav police at Belgrade have discovered the organization of a secret Magyar "white guard" formed by Magyar notables of Petau, and have arrested a number of persons.

Censorship of the Press and martial law have been abolished for the old kingdom of Roumania, with the exception of the Dobruja, but will continue in force in the new territories.

A note signed by the heads of the Free Armenian Communities of Orthodox Catholics and Protestants has been presented to the Allied High Commissioners at Constantinople with a view to obtaining an advance of £2,000,000 on the sums the Turkish Government owes to Armenia.

In consequence of charges of religious persecution in Transylvania brought against the Roumanian Government, that Government is inviting representatives of British Churches to come to Transylvania to investigate the matter for themselves, when every facility will be afforded them.

At a meeting of the Manchester Council of Christian Congregations, the Bishop of Manchester presiding, a resolution was passed assuring the Government of its hearty support of the proposals to separate the temporal and spiritual powers of the Sultan and to complete the emancipation of the Christian races in the Turkish Empire.

THURSDAY, JANUARY 29, 1920.

ARMENIA AND THE TURKISH SETTLEMENT.

In the protracted negotiations over the settlement of the Near and Middle East the Allies, it is to be feared, are in danger of wandering a long way from the principles that they nailed to their mast in the struggle against Teuton materialism. If the world is to be exactly as it was before the war, and if it is to be to nobody's interest to have it better, then let the Paris Conference dismiss from its mind all considerations of justice or fair play, and merely parcel out the territory under dispute in whatever manner happens to be convenient. On the other hand, if there is a genuine desire to avoid as far as possible the recurrence of wars and to lay the foundations of a better world, every settlement must conform to recognised standards of right, with reasonable latitude allowed in exceptional cases for inevitable compromises. But it is a mere contradiction in terms to talk of a better world if the people in it are to show no improvement; consequently, the Allies, unless they are to be convicted of gross insincerity, must hold out the prospect of such improvement in connection with any attempt at a peace settlement. In other words, they cannot condemn any race or people as beyond salvation on its previous record, but must offer to all such practical means as the situation allows of making good. This policy is not likely to commend itself to the peoples who have hailed the Allied victory as their supreme opportunity for settling old scores with their traditional enemies. But clearly, if they are permitted to dictate the terms of peace, there can be little chance of the five-years' world-struggle and the settlement following it being more effective in ending war than any that have preceded it. The Great Powers in alliance should not require the mechanism of the League of Nations to enable them to impose a settlement which could at least be defended with conviction, and showed some confidence in the principles to which they had so emphatically subscribed. They required only to propound their solution of the different questions and to maintain their unanimity in order to disarm all criticism and secure acquiescence on the part of the nations concerned. Unfortunately, the failure of France and the United States to see eye to eye on a number of points started an almost interminable series of excessive demands, against which the Great Powers were unable to take a firm stand on moral grounds.

There may yet be time to get back to first principles, and the strongest incentive to this end is to be found in the hopelessness of the endeavour to solve the questions in dispute by any other means. The Turkish settlement, it is generally understood, is still in the melting-pot. The problem of the future of Constantinople is complicated by the opposition of Indian Moslems to interference with the temporal power of the Khalif. In Asia Minor the delimitation of the Armenian Republic finds Armenian and French aspirations wholly irreconcilable, while to the South practically a state of war exists between France and the Arabs. A similar indeterminate situation exists in regard to the Adriatic littoral, to Thrace, and to the Ægean coastline of Asia Minor. The Allies, having cut themselves adrift from sound and recognised principles, are floundering in a morass of shifting and shifty compromises. When they proclaimed their belief in the illumination of the dark spots of the political world it must have been their intention to assist in the process; in fact, themselves to let in the light which previously had been shut out. Nowhere is this light needed more than throughout the territories that formed the Ottoman Empire, and it would be mere affectation to pretend, where the whole falls so far short of the best European standard, that any one part more than another can afford to dispense with assistance in its endeavour to reach that standard. If, therefore, we start with the premise that Turks, Armenians, Arabs, and others will all have to be helped in their political development with the single-minded purpose of raising them to a satisfactory stage of self-government, the precise boundary lines of the new States become a less important consideration, and certainly do not justify any long delay in the general terms of settlement. The chief desideratum is that Allied influence should afford an adequate guarantee against any of the practices that have been the bane of these territories in the past. Where the ultimate destiny of any country is in dispute there could be no better method of settling the question than by preparing the ground for the exercise of self-determination after a period during which the national sense of the population has had time to develop under a regime of strict impartiality.

Given the degree of common honesty which the world is entitled to expect from the Allied Great Powers, it will be seen that the Turkish settlement can be robbed of much of its difficulty. If better things are hoped for in the future from the Armenians, they must be hoped for also from the Turks and from the Arabs. There is much to be said for the contention that the root of the antagonism between Turks and Armenians was not so much religion as difference in stages of development and incompatibility of temperament. To urge this is not to palliate the crimes of the Turks, in the perpetration of which religious fanaticism was invoked; but it may serve as a warning against transferring the opportunity that the Turk or Kurd had under the jurisdiction of Constantinople into the hands of the Armenians, justly incensed by the terrible ordeal to which they have so recently been subjected. That way the peace of Asia Minor does not lie. The Allies may have had no ground for withholding their recognition from the Armenian republic of Trans-Caucasia, but in the interest of the future development of Turkish Armenia they ought not to take any step that leaves the Kurds at the mercy of the Armenians while the passions of both are at fever heat. Cilicia will be less of a bone of contention if it is realised that its fate is in suspense until it is seen whether the Armenians develop the necessary capacity for administering it and the inclination to re-settle in it. If the nation has been wiped out to the extent that is claimed—as seems only too likely to be true—the Armenians will do well to limit their responsibilities rather than run the risk of incurring the charge of incompetence through taking over at the outset more than their numbers can absorb. The Turks, again, now that any solution of the Constantinople question is merely a choice of evils, can have their administrative capacity more accurately gauged under the eye of a Power interested in their political education than by the record of the regime of an Abdul Hamid or a German-bought Committee of Union and Progress. The only preliminary called for is that the Great Powers should be able to satisfy one another of the honesty of their intentions. If the United States persist in their refusal to take their part in the regeneration of the East, it is for Great Britain and France to take up the burden. A small Power might conceivably be given the Armenian mandate; but failing that, the best solution would be for Great Britain to assume the mandate for Turkey, and France the mandate for Armenia.

THROUGH PERSIA IN WAR TIME—II.

By Ernest Betts.

Our convoy left Ruz at 8.30 a.m., and although it was by then quite hot, a pleasant north-westerly breeze was blowing. We had made up our minds that it was no mere sight-seeing jaunt that was engaging us, but an entirely new expedition. Reports from the front gave us a clear idea of the increasingly calamitous drift of events up in the Baku area. The fighting had been severe, and our losses heavy, and the optimism which had begun the venture was being followed by anxiety and depression.

However, we had at least fourteen days' grace before we need actually look to our ammunition. In this period we calculated to cover the odd 570 miles to Enzeli, on the southern coast of the Caspian Sea. It seemed possible we might be made use of at Hamadan, the half-way house, or as a garrison to Resht—a point of tactical importance some 270 miles further north. It was now obvious that the mysterious naval ammunition we had seen in the lorries at Ruz was for use with our fleet on the Caspian, which was actively engaged in opposition to the Bolsheviks.

Always in Mesopotamia it had been the custom to issue a periodical intelligence summary, setting forth our own operations in brief outline, and giving any news brought in by spies or deserters as to Turkish plans. This was now impossible. We had to gather what we could from signal stations and persons coming down with dispatches or in ambulance convoys. And this was the tale they brought: Our occupation of Baku in August (1918) had at first been successful. It was being supported by the irregular Armenians trained in Dunster Force. These men had proved untrustworthy, and were causing trouble. Moreover, the enemy's numbers had been miscalculated. (If they had not been miscalculated only an act of madness could have despatched so small a force to attack them.) Our inconsiderable army of about 2,000 was opposed by some 14,000 Turkish regulars, and Turkish regulars, I have reason to know, are splendid fighters. In addition to this, the Turks were being assisted by the Germans, who were now at Tabriz, about 200 miles south-west of Baku, where they had a brigade of their own troops.

This was the happy little story we repeated to ourselves as we started off. For myself, I set down fifty per cent. as fact and fifty per cent. as fiction—and opened another tin of Garibaldi biscuits. I also did my utmost to get on good terms with the lorry driver, whose family history was very shortly an open book to me. It was through his agency that I obtained details of the road route, and as they are of some interest as foreshadowing the kind of country we were to pass through, I append a list of the main towns along the road, with the mileage they involved:—

Town.	Distance in Miles.	Town.	Distance in Miles.
Ruz	—	Mah-i-Dasht	12
Khanikin	16	Kermanshah	18
Kasr-i-Shirin	39	Kangavar	71
Ser-i-Pul	19	Hamadan	44
Pai Tak Pass	9	Kazvin	152
Taq-i-Girrah	3	Resht	120
Kerind	16	Enzeli	22
Chasma-Safed	6		
Harunabad	16	Total miles	579
Hasnabad	16		

Reference to the map shows what a severe test this route affords for the most powerful of cars. For a five-ton lorry it presented a stupendous task. The two stiffest ascents were up the Pai Tak Pass, on the approach to Kerind, and the far worse climb up the Asadabad Pass to the summit of the Alvand Mountains south of Hamadan.

The journey of fifty-five miles from Ruz to Kasr-i-Shirin was exceedingly interesting. The difference in topographical outline between Jezireh, or Northern Mesopotamia and the foothills of Persia, could scarcely have been more marked. The road passed first of all by tortuous windings through the Jebel Hamrin Hills, a series of long, razor-backed, slate-coloured ridges, running in a straight line to a point further north than Mosul. Gradually we became hemmed in by higher ranges, and the air perceptibly turned cooler. Presently we went over a fine steel-built bridge, spanning a deep ravine, and immediately after we got on to one of the most wonderful roads I have ever seen. It was perfectly straight and of immense length, stretching till the eye could not follow it. Only one side of this highway—the right—showed any signs of cultivation, and its extent was inconsiderable. I thought of the vastness and tragic barrenness of these plains, and in imagination I built a city there, and saw it flourishing. Unfortunately, had my town materialised, all the inhabitants would have died for want of water.

As we approached Kizil Robat the scenery grew richer, greener and more beautiful. You could see the cold, splendid peaks of the Zagros Range rising high and afar to the north-east; and closer to view—a long low cliff of dusky red, very beautiful when the evening sun threw out its colour—the second ridge of the Jebel Hamrin. After a time the dust became choking. Its effect was to dissipate the notion we had gained a day or so ago that motoring in Persia was an exhilarating pastime. It was by no means exhilarating, and it had a horrible resemblance to work; it was a dry, exhausting, unappetising business without any of the attractions usually associated with the open road. We were, therefore, much relieved at the spectacle of a Kurdish Labour Corps whom we espied laying the dust by means of ancient watering-cans (formerly kerosine tins) which they were filling from a neighbouring stream.

I must say something about the Kurds, though it is not strictly in my province to do so. But they are certainly the most picturesque figures between Burmah and the Black Sea—not even excepting the knightly Georgian, with his beautiful waist and the row of imitation cartridges across his chest. Perhaps, too, the Kurds are not entirely irrelevant to my subject, since it was from them, if from anybody, that we should have expected attack.

The predatory instinct in the Kurd is highly developed, and in Persia and his native Kurdistan, traditional. Always he is to be distinguished by the tall felt hat, shaped like an elongated horseshoe, which gives him the appearance of having emerged from some fairy tale. He wears a long coat of sheepskin or black cloth, reaching to his knees, and if of the latter material, cut away in a deep triangle at the neck. Beneath it he favours a white or coloured shirt, and narrow, absurd-looking trousers, generally of blue. But his crowning glory is his fine black hair, which peeps out in stiff curls from beneath his hat and adorns his ear in attractive clusters. In feature he is decidedly handsome. His face is stamped with the ruggedness and strength of the country, and is deeply tanned from exposure. His eyes in particular are strong and striking, the nose prominent, and the figure as a whole lank and nimble. These were the men we found so useful as road-menders.

So far we had seen nothing to suggest that war had ever affected the country's inhabitants. But the effect that it had had on an adjacent country—that of Armenia—was soon brought home to us. For down the stony, far-stretching road came a procession of outcast Armenian pilgrims, whom the Turks had flung from their native villages near Lake Urmia and Lower Kurdistan. They were making for Baghdad, at which place they had been told to expect food and a roof. The British had promised to bring down and feed some fifty thousand of these refugees, and many passed us by in Ford vans. Sooner than wait their turn in anxiety and insecurity, however, some thousands of men, women, and children had tramped down by themselves. They were a pitiful sight, and their fate a shocking one, unmitigated in its humiliation and dreadfulness. Most of them walked barefoot, but some of the children and the old men and women rode on the backs of donkeys or bullocks, jogging along hour upon hour, day after day, through a country that was foreign to them. The pedestrians limped along with infinite labour and difficulty, pots and pans in their hands, and ragged miscellaneous bundles on their backs. Family groups kept together, but their condition individually was too precarious and enfeebled for any one of them to render much assistance to the other.

At Khanikin little children, half starved, crawled about the wheels of the convoy picking up the filthy scraps of food that had fallen there. One of the drivers—evidently of the baser breed—noticing a little boy begging for food, told him, in his own words, to "'op it." The child disobeying, the driver flung a piece of watermelon at him, which struck him on the head. The boy said nothing, but he picked up the dust-covered piece of melon and ate it.

Many who were trying to make their way through Persia without assistance perished of illness or starvation on the way. I recall the sight of a dead man lying face downwards by the roadside as we passed the "great mountain of black rocks" east of Kermanshah. He had starved to death, and his body was frightfully emaciated. There was something in the dead figure of this man at the foot of the mountain that seemed to typify the attitude of wild nature to mankind. Said the Mountain to Man: "If you think I care a Bulgarian farthing for you, you're mistaken. I don't. A fall of one of my little boulders would

Digitized by Google

crush you to nothing. You perish with hourly frequency; I stand for ever. The most trivial accident destroys you; earthquakes cannot destroy me."

Farther on still, at Tak-i-Bustan, where those marvellous sculptures of Darius receiving the tributary kings still stand untarnished, a man sat in the middle of the road weeping bitterly. To one side of him lay his dead father, his hair and beard already grown to extraordinary length; to the other his dying wife, crumpled up and past healing from sickness. The man's anguish was unspeakable. Constantly he rocked backward and forward in loud outbursts of grief, neither seeing nor caring for aught else round him. You pictured this man burying his dead on the following day, and then in utter distraction dragging himself along the road till chance or starvation should end him.

How many of these refugees reached their destination I do not know, but from the Persians themselves they got little sympathy and no help. Where British assistance was not forthcoming many of them simply died uncared for on the road. If we achieved little else in Persia, the food and shelter we gave these Armenians must have saved the lives of thousands who would otherwise have perished.

Half a day's run from Khanikin brought us to the highlands of Persia. Khanikin, the last of the Mesopotamian towns as you travel north, lies on an effluent of the Diala, and with its fine stone bridge, prosperous bazaar, and cool views of tree and stream presented something entirely new to us in the general aspect of towns. Despite the ascent we had been making, it was still terribly hot, and we rejoiced at the prospect of climbing still higher.

Some fourteen miles farther on we passed the frontier Post, which marks the old Turco-Persian border—a square tower on a lonely height that would have made an admirable place of exile for the Kaiser.

I must pass over much of the coloured grandeur that we encountered on our way to Hamadan; though I do so with regret, for my memories of Iran are steeped in a positive sea of colour-effects such as I could scarcely have imagined possible but in the imagination of some fantastic artist. On our way we passed stupendous mountain ridges that fell sheer to earth in innumerable folds of dull gold and velvety brown, and in the evening the air seemed filled with a luminous mist of royal purple that was enchanting in its beauty.

At Chasma Safed, which we immediately re-christened Chase-me-Sophy, and which is reached by a descent 6,000 feet over the Pai Tak Pass, more news of an alarming nature came to us—this time by wireless. We eagerly discussed the new situation, for it was by now obvious that our destination could be no other than Baku. (So we prophesied, but as a matter of fact events postponed this visit to a more peaceful era.)

The wireless message announced that we had "withdrawn to our second line of defences," whatever that phrase might imply. It might mean a temporary reverse, or it might mean a disaster. Fifty per cent. of our men, it was added, had become casualties. Whereat we ceased to admire the scenery, and endeavoured to acquire the oriental stupour of fatalism. What was, was, said we, and what must be, must be! In any case it would be pleasant to die in a cool climate.

The Dismemberment of Turkey.

The *Nation* of January 17, in discussing "The Coming of Peace," takes up a rather pessimistic attitude. For the immediate present, it says, the situation is almost hopeless, but it looks to the future for better things.

The consequences of this Peace will work themselves out by the laws of moral causation; it is too late for protest and too early for revision. Meanwhile the Supreme Four are completing their work by the dismemberment of Turkey. It will be their masterpiece of Imperialism, and one hardly knows whether to pity more the populations who lose all hope of self-government, or the soldiers, mostly conscripts, who for decades to come will have to hold them down. Whatever the details may be, the effect on the Mohammedan world will be deep and lasting, and if we wished to prepare it for Bolshevik propaganda we could hardly have gone more skilfully to work. For our part we certainly should have wished to see far-reaching measures to end Turkish misrule. The imposition of a reform scheme under the control of the League of Nations should have been the first step. The natural line of reform for mixed Oriental communities is not, however, partition or even territorial Home Rule, but rather the extension and development of cultural autonomy for each racial and religious unit. Instead of this we are to have a purely Imperialist partition. Had Turkey survived without the loss of the immense territories which the Allies are dividing among themselves, we should have urged nothing against the expulsion of the Turkish Government from Europe. Constantinople, of all cities the most cosmopolitan, with its fabulously beautiful site, its Imperial tradition, and its strategical centrality, was destined by nature and history to be the capital of a world-federation. . . . The religious question is embarrassing. Though Constantinople is not a Moslem holy city, it did give prestige to the Ottoman Caliphate. That in any case is gone, since an "independent" Arab king holds the sacred cities of Arabia and guards the pilgrimage. Whatever happens, the shock to Moslem sentiment remains, for the last Islamic Empire is gone. A shadowy survival under Allied guardianship will not do much to placate Moslem feeling. Indeed, when the French argue that at Constantinople the Turks can be more easily controlled than at Broussa or Konia, we ask ourselves if their policy of retaining the Turks in Stamboul is really more merciful than the British policy of evicting them? The argument that a Turkish Army is needed to balance the ascendancy of the British Navy in the Straits is not calculated to reassure us. France, if the *Temps* voices her policy, seems indeed to aim at inheriting German influence in Turkey, and at adding one more satellite army to her European military system. Neither solution in these conditions promises a tranquil East. A jungle of wrongs and resentments stretches from Rhine to Ganges. The first step to clearing it will be to emerge from the politics of the Alliance into the politics of the League, and Labour alone is capable of leading the way.

The Ottoman Turk.

The *New Statesman* of January 17 publishes from a correspondent a statement concerning the character of the Turk. Its main thesis is that inability to maintain a decent attitude towards the Turk means the impossibility of preserving a judgment on him. It says:—

From the beginning of the last century a mass of incredibly ignorant and prejudiced literaure has been produced by Christian writers on the subject of the Ottoman. Political impulses led to a more impartial examination of the Turk during the first Victorian decades, but this fortuitous fairness gave way to the old view which, in its turn, dissolved in an element of indifference. From this indifference opinion has now leapt to a sudden and silly anger. The Press—inspired by that ancient father of lies, foreign policy—does what may be done to keep alive this anger; and so the taxpayer loses his money, the soldier his honour, and the nation its security. This is not an exaggeration, because so much more is concerned here than the Turk himself. I have no wish to make a suggestion in politics, but I do suggest a fairer view of the Turk, in the interests of common-sense and truth. Those of us who have lived in the Orient know well that the qualities of the Turk are characteristic rather of the Western races than of the Balkan, Levantine, or Armenoid breeds. He knows this himself, and in non-political social relations has lived on terms of friendship and understanding with the West European for the last century. In considering his dealings with the Balkan races, with the mixed peoples of the Anatolian littoral and the districts south of Caucasia, we must lay stress on the existence of a mutually intense hatred between himself and these peoples—all of whom equal or surpass him in an executive ferocity typical of the darkest ages or of the most savage tribes. In those wild areas, small, fierce races intermarry and slay, confuse themselves in a welter of stormy feuds, scatter, give battle, reunite. In Constantinople men jostle each other in the streets, in the tramcars and ferry-boats, with apparent impassivity; each knowing that the other would spend a delightful half-hour in torturing him to death or in forcing him to witness the violation of his wife. Religion has not pre-

Digitized by Google

served the racial integrity of the Turk. He has been brayed in the mortar with the rest, and though not mixing easily has become patched and dappled by contact with the infidel. One cannot draw a series of conclusive facts from the brawl and bloodshed of the Near East. The Turk is only one factor in this confusion of races and purposes, but politically he is the most important. The Ottoman, in the hour of his decline, has preserved the attributes of a proud and dominant people. This is remarkable, in view of what has happened since the Armistice. The tragedy of Smyrna is not known in England. Incidents of the occupation (or seizure) of Anatolia are not known in England. These matters may not be divulged at the present time, I suppose; but it is worth noting that deliberate humiliation and affront have never brought the Turk to the posture of a suppliant or caused him to act otherwise than with dignity. In common with dominant peoples (especially invaders) he is prepared to behave with severity towards those who were once his tributaries or subjects. His severity takes revolting forms; but remember that his Christian neighbours from the Adriatic to the Caspian behave in the same manner. The Armenian question is so oddly presented to English readers that I might wish to exhibit certain aspects of the case, were it not that such exhibition would be too digressive. Fairness compels the admission that the Turk does gain fortuitously in moral stature by comparison with his neighbours.

The correspondent concludes his letter thus:—

What is the weakness of the Turk and the cause of his failure? Has the common fate of invaders pursued him, or is there some deadly fault in his race? It is easy to say that the modern Turk has failed because Europe has wished him to be a failure; that is partly true, but not the whole truth. Turkey's main cause of failure is due to her religious isolation, and the fine refusal of compromise which is typical of Mohammedans. The causes of her immediate downfall are (1) the failure of the Young Turk Party to secure adequate help and sympathy from the Powers; (2) the exhaustion following a series of fateful wars and intrigues; and (3) an unfortunate military alliance. Delay in coming to terms with Turkey has led to vexation and bitterness, not only in the jarring Babel of the Middle East, but in vaster, more distant fields, and threatens to bring about between Christian and Mohammedan a state of enmity without parallel in history with regard to its scope and the enormous number of peoples involved.

The Preservation of Turkey.

The *New Europe* of January 22, in a forceful article entitled "The Kaleidoscope," reviews the attitude of the Paris Conference towards Russia and Turkey. It states that international finance is dictating our Russian policy, and it continues:—

The same sinister background of financial interest and intrigue underlies the conflict now being waged in Paris over the Turkish heritage. If Turkish rule is left in Europe this will be the work of the bondholder and the financial wire-puller. Turkish dominion was founded and maintained by the sword, and by the sword it has been overthrown. To-day it should be unthinkable that when it has reached its ignominious end an attempt should be made to bolster it up once more by artificial devices. It is only fair to say that even the advocates of the Turk no longer attempt to argue the case in his favour. His history has been a long chain of bloodshed, corruption, and misrule, and there are no extenuating circumstances. Hence the appeal is compounded of cupidity, sentiment, and fear. Cupidity, for there are many who look for higher profits and less effective control under the effete rule of the Sultan than in the brisker atmosphere of the international *régime*. Sentiment, for there are many who are overawed by the spiritual prerogatives of a dynasty before whose records the Borgias must be dismissed as mere dabblers in crime. Fear, for there are many who are not ashamed to urge that we should overlook the delinquencies of the Turks lest we should arouse trouble for ourselves among the eighty million Moslems of India.

Articles to Note.

"The Armenians: Their Past and Future," by W. E. D. Allen, in the *Quarterly Review* (January).

"My Two Years' Captivity Among the Turks," by Captain T. W. White, D.F.C., in the *Wide World Magazine* (January).

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

Elsewhere will be found a summary of the report made to the Board of Trade by the Empire Cotton Growing Committee. It is eminently satisfactory to note that the committee is confident that the British Empire can grow a large proportion of the cotton it requires, and that it is convinced that the crop will bring great prosperity to the places suited for it. But while the committee are optimistic on these points, stress is laid on the gravity of the present position. "There is evidence," it is stated, "of a world shortage of cotton goods, and there is no prospect whatever of there being a full supply of cotton for some years to come." The crux of the problem, as I pointed out last week, is the United States cotton crop, on which the Lancashire cotton industry is so largely dependent. For some years this crop has been a decreasing quantity, while the proportion of it taken by United States spinners has been continually on the increase. Obviously, in default of remedial measures, the time cannot be far distant when Lancashire may be actually short of cotton.

***

The committee, in their recommendations for the adequate development of the Empire's resources, lay stress on the need for research in regard to cotton cultivation, and the importance of the provision of an adequate supply of trained men. They point out that more professorships are needed at the universities, together with facilities for post-graduate work. The importance of the control by the Governments of all cotton-growing areas in the Empire of all essential matters connected with cotton growing is emphasised, and it is urged that special arrangements should be made in the interests of the grower to secure good marketing.

***

Finally, there is the question of the provision of the necessary funds to meet what, the committee point out, will involve a considerable outlay. In the first place, it is suggested that a grant should be made by the British Treasury to the British Empire Cotton Growing Committee for its establishment expenses and for any initiatory work in other directions. It is further suggested that the British Treasury should contribute to the carrying out of schemes approved by the committee, and should assist the Governments of Colonies and Protectorates in the construction of public works necessary for the development of their resources. Where developments of this character are calculated to affect favourably the general prosperity of the Colony or Protectorate, it is maintained that they should be financed locally, but where cotton growing is promoted in preference to other profitable crops for the benefit of the cotton industry the committee is of the opinion that the expenditure should be met by the industry. To meet this, the committee suggest the creation of a fund on the basis of a contribution or levy from the industry.

***

It is a long time since manufacturers' agents in general have displayed any overwhelming anxiety to obtain orders, for the simple reason that the great majority of firms have for some time been in the position of having orders in hand for a few months ahead. I notice with special interest, therefore, that manufacturers' agents representing Birmingham jewellery firms are now actively engaged in soliciting business. Of course, it was to be expected that what are known as the luxury trades would be the first to experience the old competition; but it is none the less a sign of the times, and I am certain that, despite the oft-repeated statements that manufacturers have all the business they can do with, it will not be long before trades which manufacture necessities will be in the same position. Many firms who at the moment are enjoying a transient prosperity are neglecting to cultivate markets which in pre-war days they were only too glad to have at their disposal. Needless to say, it is a short-sighted—I might with truth say a fatal—policy.

***

The activities of the manufacturers' agents for jewellery firms, to which I have referred, appear to have been mainly confined to London. May I suggest that they should turn their attention to the Near East, where they will find a remarkably extensive market for this class of goods. The Balkan countries and Egypt present specially promising fields, but farther off, in Persia and Mesopotamia, there is an almost unlimited trade to be obtained almost for the asking. Of course, the preliminary work required is not so easy as in the case of London, but I have sufficient confidence in the British trader to believe more than that consideration will be required to deprive him of his traditional enterprise.

***

In view of the short period of the British Trade Corporation's existence, the report now published can only be regarded as exceedingly satisfactory. During 1919 the corporation's activities were steadily extended, and branches were opened at Batoum, Belgrade, and Dantzig, while the National Bank of Turkey opened a branch at Smyrna. In addition, the corporation, with other banks, has formed the South Russia Banking Agency, Ltd., of the capital of which concern it holds £10,000. The profit is only slightly larger than the previous year at £88,340, as against £71,600, but the accounts for 1919 do not include any profits in respect of recently-opened branches, of the corporation's investments in subsidiary companies and in the National Bank of Turkey, which, when ascertained, will be included in the accounts of the current year. The dividend is 4, as against 2½ per cent., and the carry forward is £22,600, as against £14,300.

***

As in the case of the Great Indian Peninsula Railway, both the East Indian and the Rohilkund and Kumaon lines report a considerable increase in expenditure during the past half-year. As regards the East Indian Railway, there was a decrease in both gross and net earnings. The gross receipts declined from Rs.7,00,06,800 to Rs 6,75,86,700, owing to less traffic in certain staples, while the net earnings amounted to Rs.3,86,47,100, as against Rs.4,69,88,200, this considerable decrease being due to the larger working costs, the ratio of expenditure rising from 32.88 to 42.82 per cent. There was a further advance in coaching business, the receipts from which amounted to Rs.2,33,83,700, as against Rs.2,14,59,100. The company's share in the divisible surplus amounted to Rs.13,91,200, a decrease of Rs.5,68,600 on the figures for the corresponding period, but owing to the favourable rate of exchange this surplus at £155,800 showed an increase of £8,800, which, with the amount brought in, makes the available balance £29,200 higher at £209,000. It is proposed to raise the dividend on the deferred annuity capital from 1½ to 2½ per cent., making the rate 4½ per cent.

***

The report of the Rohilkund and Kumaon line also shows a decline in both gross and net earnings. The gross receipts amounted to Rs.55,02,900, as against Rs.56,71,900, the decline being due to poor crops and restricted exports; while, on the other hand, the operating expenses amounted to Rs.31,94,500, as against Rs.26,13,000, the ratio of expenditure increasing from 46.06 to 58.05 per cent., and the net revenue fell from Rs.30,58,900 to Rs.23,08,400. The company's share amounted to Rs.10,11,300, as against Rs.13,65,700, which, converted into sterling, amounts to £84,900, as against £99,800. The disposable surplus after providing for debenture and preference interest and making other adjustments, is £69,900, as against £64,200, and out of this it is proposed to maintain the ordinary dividend at 10 per cent., and to carry forward £39,400, as against £32,900.

EGYPT.

CAIRO, January 12.

A New Cotton Tax.

On Saturday last the Council of Ministers decided on the imposition of a tax on ginned cotton amounting to PT35 per kantar. This is in order to provide funds to enable the Government to deal satisfactorily with the foodstuff situation. As has been pointed out on more than one occasion in these letters, Egypt does not normally grow sufficient cereals for her own requirements, and in pre-war years she had to import from abroad approximately 200.000 tons per annum. Although to-day there is a wheat shortage in the world and shipping is difficult to obtain, the question of supplies could be fairly easily dealt with through the intervention of the Egyptian Government. Unfortunately, side by side with the question of supplies is the very important one of price. It is a fact that imported wheat or flour delivered in Egypt could only be sold by the importers at very high prices which would be beyond the means of the urban population, who constitute about 16 per cent. of the total population, and who have had little or no share in the phenomenal prosperity which has fallen to the rural element. It is, indeed, the affluent condition of the latter which has in great measure conduced to the forcing up of the cost of living against the urban community, and the Government has very wisely decided that whilst in the matter of foodstuffs the rural population is well able to protect itself, its duty is to take measures to assist the urban community, especially the poorer elements thereof. It therefore proposes to import flour and wheat, and to sell it to the urban consumers at prices below cost price, and therefore within their reach, and the loss in connection with which will be recouped out of the new tax.

A solution might possibly have been found in a limitation of the area to be devoted to cotton, as was done in the early days of the war, with the object of extending the area available for cereal cultivation and, by increasing local supplies, reduce the cost of cereals. But it has been decided that for many reasons it is inadvisable to resort to this at the present moment. Moreover, considering that the agricultural community, which under existing conditions enjoys to the full the benefit of the actual high cotton prices, is in a sufficiently prosperous condition to be made to contribute something towards assisting the poorer urban element, especially as the latter is directly suffering from the more prosperous condition of its rural fellows, the Government has hit on the device of imposing a tax on every kantar of ginned cotton, and. as this tax is to be levied at the ginneries, there is every prospect that the incidence will fall on the producer, as it is intended it should. At the rate of PT35 per kantar and taking a conservative estimate of the crop at 6.000.000 kantars, this tax will return approximately £E2.000,000 in the year. For obvious reasons it will not be applied to the crop now in course of ginning, and the collection will only start on December 1, when the 1920 crop which is about to be sown will begin to enter the ginneries.

In connection with the question of food supply it may be mentioned that the Government, through the Supplies Control Board, has for some time been exercising control over the distribution of wheat and maize, and has already imported large quantities of the former, which it has been selling to millers and bakers on condition that they retail flour and bread at certain fixed prices. Latterly, flour stores have been opened in the more important cities, and in Cairo alone there are at present seven of these stores in operation. This organisation has materially relieved the situation, and will prove of great value to the Government in the further measures it has in view, and will enable it to obtain complete control over the cereal distribution in the country.

TURKEY.

CONSTANTINOPLE, December 10.

Trade with South Russia.

On December 9 there was an important meeting of the British Chamber of Commerce in Constantinople, under the chairmanship of Mr. A. T. Waugh, in connection with the expected arrival of the new British High Commissioner to South Russia.

A most important statement was made by Mr. Hohler, the British Political Representative in Constantinople, who informed the meeting that the Government of General Denikin had decided to establish free trade and to permit the export of goods from South Russia for the purpose of creating sterling credits.

Mr. Bilinsky, of the National Bank of Turkey, stated that with regard to exports from South Russia if well-known banks could arrange to give credit against documents concerning such exports, it would greatly facilitate business. These banks would guarantee that such credits would only be utilised for the purpose of the exchange of goods with Russia, and a sterling fund could thus be created.

Members present were requested to communicate their suggestions, which would be embodied in a memorandum, to be presented to the High Commissioner to South Russia, explaining the directions in which they would like his assistance in removing the difficulties of commerce with South Russia. In this connection it is acknowledged that the greatest obstacle to business is the delay and difficulty in obtaining permits to export goods, for which one sometimes has to wait months. It was agreed that the High Commissioner's special attention should be drawn to this difficulty. A sub-committee was formed, consisting of Mr. Sellar, Mr. Edsberg, and Mr. Bilinsky, for the purpose of collecting further information for the above-mentioned memorandum.

All British merchants interested in trade with South Russia are strongly urged to report the difficulties they are experiencing, and at the same time to make suggestions for improving matters. Such information, the result of practical experience, would be of the greatest value to the High Commissioner, and, by giving him a clearer view of the situation, would assist him materially in removing difficulties. It is hoped that all who are interested in South Russian business will not fail to respond to this appeal, which really amounts to an exceptional opportunity to bring about an improvement in existing conditions.

All communications should be addressed to the Secretary of the South Russian Section of the British Chamber of Commerce, Mr. Harold Gibson, c/o Mr. Smith Lyte, British Consulate-General, Galata, Constantinople.

The Economic Crisis.

Reshad Bey, the Turkish Government Director of Commerce, has made a long statement concerning the conclusions of the Commission which has been inquiring into the causes of the extraordinary inflation of prices in Constantinople. According to this report, the prevailing dearness is not due to profiteering, but to the following causes:—(1) The depreciation of Turkish paper money as compared with the fiduciary issues of producing countries; (2) excessive marine insurance premiums; (3) the scarcity of tonnage from which the whole world is suffering, but more especially the Eastern Mediterranean; (4) the excessive delays in the Customs. Business men whose goods remain indefinitely in the cargo steamers or in the lighters employed for discharging goods, seek to compensate themselves under this head by increasing their selling prices.

Of all these various inconveniences, stated Reshad Bey, the only one that we ourselves are in a position to remedy is that which arises from the Customs delays, to which end the number of depots and the personnel of the Customs should be immediately increased. A further measure that would alleviate the difficulties in the Customs and the process of conveying goods from the steamers to the warehouses would be the fixing of a definite tariff, to put an end to the extortions of porters, carters, lightermen, etc.

With regard to the above statements, my attention was drawn the other day to a case of goods remaining in a

lighter for seventy-two days before they could be discharged. There is no doubt that the amount of quay space occupied by the Allied naval and military authorities aggravates the evil, and there are also complaints of a dog-in-the-manger spirit on their part with regard to allowing certain facilities upon exceptional occasions in regard to the space at their disposal.

The British Industries Fair.

It is to be hoped that the Near East will not be neglected with regard to inducements to patronise this exhibition. The Press information on the subject states that literature is being printed in various languages, but the only one that would be of any use here among those mentioned is French. Why not Greek and Turkish? It is absurd to take the view that because the Turks fought against us in the Great War, therefore all the Greeks, Armenians, and Jews in the Ottoman Empire must be excluded from our markets. It would be absurd in any case, but in view of the fact that the bulk of Turkish commerce is in the hands of Christians, and that the bulk of the Christians have never been other than the sincere friends and admirers of Great Britain, it would be all the more absurd.

If facilities were accorded to merchants to visit London the result would undoubtedly be of very great benefit to our trade in the Near East—unless we have so much business that we do not care if someone else gets the market. In that case we shall care later on—when Germany gets going.

CONSTANTINOPLE, December 29.

South Russia.

Bolshevik successes against the volunteer army have had an adverse influence upon business in Constantinople. Large quantities of goods have had to be warehoused, and the rouble has slumped heavily. Consequently, so far as manufactured goods are concerned, the Constantinople market is at present within sight of being overstocked.

Customs Congestion.

There is little, if any, improvement in the situation described in my letters of some months ago. It is well known that even before the war, when there was not nearly so much business as there is at present, owing to the fact that Constantinople has become the general clearing-house for South Russia, there was considerable congestion in the Customs. Now, with ten times the amount of pre-war business, there is only half the amount of quay and warehouse space. Is it surprising that people have to wait weeks and even months before they can get their goods? To add insult to injury, merchants are obliged to pay for the warehousing of their goods in the interval, and the authorities are actually contemplating increasing the warehousing charges tenfold! Meanwhile, valuable space is occupied by the British authorities for provision depots, and the French take up more valuable space with a large garage. At the moment of writing it is announced that the Galata Customs are to be released on January 1. This is an excellent start, at all events.

Lighterage and Porterage.

Not only are freights much higher than before the war and steamer services very irregular, but the charges for discharging goods and conveying them to the warehouse are simply outrageous, amounting in some cases to far more than the amount paid for bringing the goods all the way from Europe. A lighter costs £T10 a day, and sundry charges for surveillance £T5 a night. When goods have to remain for weeks in a lighter, it can be imagined that there is a heavy bill to pay. Furthermore, the porters are no longer satisfied with anything like reasonable rates of pay, and by the time the goods are warehoused, what with lighterage and porterage, the original invoiced cost has been considerably augmented.

Rents.

Even then the tale is not finished, for rents for warehouses and shops, to say nothing of private houses, are simply fantastic, amounting to anything from thirty to fifty times pre-war charges. Extortionate rental is one of the principal reasons for the dearness of living in this part of the world, and also accounts to a very great extent for the general demand for higher wages. All things being considered, other things are not abnormally dear in proportion to the rate of exchange and the prices prevailing in other countries, but rents are absurdly high.

The above are the principal items in the list of hindrances to our capturing the ground lost by the Germans, and unless something is speedily done to remedy these and other matters we shall not reap the full fruits of our victory.

Turkish War Companies.

Under the impulsion of the Unionist Government, which, as is well known, was largely under Jewish and German influence, a considerable number of Turkish companies were floated during the war. So long as they were in the enjoyment of exceptional advantages, owing to their being carefully nursed by the Government and the Committee of Union and Progress, most of these enterprises made enormous profits, although in many cases their paid-up capital was only a fraction of their authorised capital—usually about one-tenth. The majority of them were frankly profiteering societies established with the approbation of the Government, and often with the active assistance of one or more influential members of the Government, who would assist the company in question not only in such details as railway transit, but also to crush all competition, especially Christian competition, and thus obtain for the enterprise what amounted to an actual monopoly. After the Armistice, when these associations had to stand on their own feet, many of them were very soon in difficulties, and then the interesting fact transpired that the funds of the Evkaf, or Pious Foundations, had been largely invested in profiteering enterprises. There followed law suits, and the Ministry of Pious Foundations obtained the authorisation of the courts to take a hand in the administration of the companies concerned.

The Market.

Generally speaking, business continues to be rather quiet, partly owing to the fact that the South Russian situation has necessitated holding up and warehousing goods that have been ordered and have arrived from abroad for the South Russian market, and partly on account of the dislocation of transport in Anatolia, which has prevented the arrival in Constantinople of large quantities of cereals.

The month has been remarkable for the sudden and considerable rise in the price of gold, which jumped from 390 to 500, and even to 530, piastres for a short time. This was doubtless due to a certain extent to speculation, but although there has been a reaction the price is still well over 400 piastres. The pound sterling followed suit by rising from 360 to 384 piastres, and other foreign moneys also moved upward, while there is also a general tendency in the same direction with all sound securities on the market.

The main reason for this state of affairs is doubtless the piling up of credits abroad to pay for imports, and the high rates will probably be maintained until after the winter, when Anatolia should have a certain amount of material ready for export—always provided that Mustafa Kemal and Co. do not turn Anatolia into a bear garden. In spite of her heavy burdens, Turkey has plenty of potential wealth with which to pay her debts and provide for a prosperous future, but peace and order must first be established and just government guaranteed. The Allies have the chance now of opening up to world industry an almost virgin field of enterprise, and it is devoutly to be hoped that intrigues prompted by selfish individual interests will not stand in the way of ensuring for the unhappy population of the country, Christian and Moslem alike, the chance of "cultivating their gardens" in peace—a blessing they have never experienced in the whole history of this part of the world.

BULGARIA

SOFIA, December 31.

Import Duties.

The import duties, municipal and other taxes, which are collected at the Customs in gold, will from January 1 be paid at the exchange of 600 frs. instead of 500 for 100 frs. gold. With a view to greater stability in commerce, the Ministry of Finance announces that this represents the maximum rate of exchange which will be in force during the first half of 1920, and that it will probably be decreased when the Government Consortium commences the export of Bulgarian cereals.

CYPRUS.

January 3.

Bread Shortage.

The scarcity of wheat and flour is now keenly felt throughout the island, and reports of distress come from various quarters. The District Commissioners have received numerous appeals from villagers. The prices of other foods, such as rice, which are looked for as substitutes, are for many prohibitive. The Government is taking measures for relief where needed. At Nicosia, from January 1, the Government is distributing bread by means of ration cards, not only to the poor, but also to officials. Issues are made at the bakeries, which are allowed to draw wheat from the Government tithe grain stores. The allowance to the poor is one-third of an oke (a little under 1 lb.) to those over ten years, and half that quantity to those under that age. The well-to-do can obtain white bread, made mostly of Australian flour, with a proportion of barley or potato flour. This is now sold at 8 piastres the oke (rather less than 4d. the lb.), which is a very high rate for Cyprus. Similar relief is being given in other districts, by the issue of grain from Government stores.

Digitized by Google

The last few years have afforded very convincing proof, if such were needed, of the wisdom with which the Government acted in deciding some years ago to take tithe in kind instead of in money.

With regard to seed corn, there seems no doubt that loans are still needed in some districts. Two or three weeks only remain for sowing, and it would be a pity if any *bonâ-fide* needs were left unsatisfied, and a full harvest thereby endangered. The fear is that the corn will not be used for the purpose for which it was issued; but, on the other hand, some risk must be taken and the benefit of the doubt be given to the farmer. The local papers blame the Government both in the matter of seed corn and the bread famine.

MALTA.

MALTA, January 13.

Local anxiety in regard to the shortage of flour is relieved by the knowledge that 10,000 tons of wheat are expected shortly from the Argentine. The most notable of recent imports have been carobs and seeds.

THE SUPPLY OF COTTON.

Committee of Inquiry's Report.

The report to the Board of Trade of the Empire Cotton Growing Committee, of which Sir Henry Birchenough is chairman, was issued last week in the form of a White Paper. In the memorandum submitted to the Prime Minister in July, 1917, calling attention to the serious position as regards the supply of cotton, and to the necessity for the rapid development of cotton-growing in all suitable parts of the Empire, it was pointed out, *inter alia*, that the British industry drew four-fifths of its supplies of cotton from the United States, that it was dangerous to be so largely dependent on the climatic vagaries of one portion of the world, that the United States were year by year requiring for their own consumption an increasing proportion of their own crop, that experience showed that in many parts of the Empire the growing of cotton was or could be made exceedingly profitable to the country growing it, and that it was believed to be possible to grow within the Empire the quantities and qualities of cotton that it required.

The committee state that all the investigations made tend to confirm the statements made in the memorandum. As regards the shortage of cotton, it is pointed out that the position has become decidedly worse since July, 1917. Owing, in part, to the necessity for growing more foodstuffs to meet the needs of the war, the cotton crops in the United States, in Egypt, and in India have been curtailed. Moreover, the seasons have been unfavourable, and the present season is giving rise to fears that the crop both in the United States and in Egypt will again be deficient. There is evidence of a world shortage of cotton goods, and there is no prospect whatever of there being a full supply of cotton for some years to come. Prices of cotton are already at levels far in excess of anything recorded since the cotton famine in the 'sixties. The committee are confident that if proper measures are taken it should be possible to grow, within the Empire at any rate a very large proportion of the cotton it requires, and they are convinced that in many parts of the Empire cotton-growing will greatly increase the prosperity of the colonies which grow it.

The solution of the problem of the adequate development of the Empire's resources appears to depend, it is stated, on the proper handling of three main questions: (1) The acquisition of necessary knowledge, and the supply of men to apply that knowledge; (2) the establishment of efficient arrangements for (a) controlling the growing of cotton crops, and (b) marketing the crops, when grown, so as to secure to best possible results for the growers; and (3) the provision of the necessary funds.

It is considered advisable that a Central Research Institute should be established as early as possible, and the committee are of the general impression that Egypt would be the best place for it. Agricultural Departments, it is emphasised, need strengthening. With regard to the provision of scientific men professorships should be provided by British universities in plant physiology, plant genetics, mycology, and entomology. Provision should be made for a number of post-graduate studentships attached to these chairs. A Central Bureau of Information is considered advisable to collect and disseminate the knowledge of all matters of interest to cotton growers.

The distribution of seed for sowing should be under strict Government control. There must also be compulsory measures against cotton pests. Good marketing is a necessary condition of successful cotton growing, and it is a matter of great importance where cotton growing is in an undeveloped state that there should be disinterested help in marketing.

The promotion of cotton growing will involve a large capital expenditure. The committee is of the opinion that expenditure on general development of this character should be primarily the business of the local government with or without the assistance of the Imperial Government, but they feel also that there will be no difficulty in presenting a strong case for Treasury support.

The committee explain that it is their present object to distinguish between the responsibilities for expenditure on the part of the cotton-growing colonies and the cotton-using industries, and to establish the principle that while expenditure which directly benefits the general interests of a colony should be borne by the colony itself the cost of promoting the cultivation of cotton in preference to other crops should be recognised as a charge on the cotton industry. The hope is expressed that this broad principle may find general acceptance in Lancashire and other cotton-growing districts.

As regards the raising of funds from the industry the committee are of the opinion that it is impossible to raise it by appealing for gifts and voluntary subscriptions, and that it is also equally impossible to raise money for the purpose named with the promise or expectation of ultimate profits. Profits will accrue to the cotton-growing and cotton-producing communities and not to individuals. The committee suggest the creation of a fund to be raised upon the basis of some kind of levy from the cotton industry. The levy of so small a sum as 6d. per bale of 500 lb. upon raw cotton imported into the United Kingdom would raise annually £100,000. The committee, without at this stage recommending this particular method, point out that it presents certain advantages, such as simplicity, ease of collection and difficulty of evasion, and is not in practice likely to be noticed as a burden upon the industry.

General Recommendations.

The committee's general recommendations are as follow:—

(1) That the Empire Cotton-Growing Committee be authorised to continue its work on the general lines of the present report, and that a grant be made to it by the Treasury of not less than £10,000 per annum for five years to pay for its secretarial and other current expenses and for any outlay that proves to be necessary for initiatory work in directions connected with the objects of the committee.

(2) That the immediate importance of greatly enlarging and strengthening the agricultural departments of British Colonies and Protectorates be recognised as a preliminary step essential to any rapid progress, and that the Colonial Office be respectfully recommended to appoint a committee on the scale of numbers, salaries and general expenditure which should be aimed at for adoption as and where circumstances permit.

(3) That in order to supplement the present knowledge of scientific principles underlying cotton growing, a central research institute be established for their investigation.

(4) That in order to increase the supply and improve the training of scientific men financial provision be made for at least four readerships at British universities in plant physiology, plant genetics, mycology and entomology; that funds be provided for research studentships to be held for one or two years by graduates selected for training in methods of research in these and other sciences concerned with the study of the living plant, the number to be five to begin with, but to be considerably increased before long.

(5) That we should establish a bureau for the interchange of knowledge of cotton growing, and should arrange for the publication of a quarterly review devoted to this subject.

(6) That the Governments of all cotton-growing areas in the Empire be advised to take full powers for exercising strict control over all essential matters connected with cotton growing.

(7) That where it is possible and seems desirable such Governments be recommended to establish local associations of cotton-growers to advise their Government upon matters of general interest to the industry.

(8) That an agreement be negotiated with the British Cotton-Growing Association, in accordance with which that body will act as agent for the Empire Cotton-Growing Committee for marketing crops, where this is desired by the local government, a condition being that the Cotton-Growing Association shall forego any profits in the business carried on under the agreement, but shall be guaranteed against permanent loss arising therefrom.

(9) That funds for the promotion of cotton-growing in the Empire should be provided from the following sources: (a) The British Treasury; (b) the local revenues of cotton-growing areas; and (c) the cotton industry.

As regards (a) it is suggested that the British Treasury may be fairly looked to (1) to provide for the secretarial and establishment charges of the Empire Cotton-Growing Committee and for outlay for initiatory work; (2) to contribute—in some proportion to be agreed—towards expenditure approved by the committee; and (3) to assist the Governments of Colonies and Protectorates either by grants or more probably by guarantees to provide funds for public works, such as railways, waterways, irrigation and harbour works, necessary for the development of their resources.

With regard to (b) it is suggested that where developments are calculated to extend the general prosperity of a colony or protectorate they should, as a rule, be financed by the Colonial or Protectorate Government, and with regard to (c) that where the growing of cotton is promoted in preference to other profitable crops, and where pioneer work is undertaken in order to ascertain whether cotton can be grown profitably, the consequential expenditure should be at the charge of the cotton industry.

(10) That the committee be authorised to ascertain the opinion of the cotton trade of this country in regard to these recommendations, and in particular upon what lines effective co-operation in raising the necessary money may be expected from the organisations in which the trade is grouped.

Privileged Company to Protect Production and Trade in Currants 5 per Cent. Sterling Loan.—Coupon No. 20, representing the half-year's interest due February 1 on the above loan and the bonds drawn for redemption, will be paid on February 2, 1920, or any succeeding day (Saturdays excepted) between the hours of 11 and 2 o'clock, at the offices of Messrs. Erlangers, 8, Crosby Square, E.C.3. Coupons and drawn bonds must be left three clear days for examination.

The Egyptian Cotton Crop.

By John A. Todd.

II.—THE IMMEDIATE PROSPECT.

Since the first of these articles was written the position has become even more acute as regards the price of Egyptian cotton. After a slight relapse, F.G.F. Sakel has risen again to 68d. per lb., while fully middling American, after being up to 31.23d., also relapsed, and is now only 28.91d. That makes the Egyptian premium 135 per cent., which is a new record, the highest previously known to the writer being 110 per cent. in April, 1917.

The question of the permanence of such a premium depends, as always, on the prospects of supply and demand. Of the first it is particularly difficult to judge this year, owing to the disturbed state of the country. In normal years it would be fairly safe by this time to estimate the probable amount of the crop by a comparison of the arrivals at Alexandria to date with those of previous years. If that standard were applied just now on a basis sufficiently long to carry back into pre-war years, it would make a very poor showing for the present crop. The following table gives the figures back to 1912-13, from the Bulletins of the Alexandria General Produce Association :—

Season.	Arrivals to December 26.	% of Total.	Total Arrivals.	Adjusted Total Crop.
		In thousands of Kantars		
1912-13	5,673	76	7,482	7,533
1913-14	5,497	72	7,612	7,684
1914-15	2,795	44	6,373	6,490
1915-16	3,179	68	4,640	4,806
1916-17	3,759	74	5,063	5,111
1917-18	3,583	53	6,157	6,308
1918-19	2,992	62	4,825	4,821
1919-20	3,810	64†	*5,950**	*6,000**

† 7 years average. * Estimates.

It is obvious, however, from these figures that the conditions during the war have been abnormal, and the difficulty is to decide how to compare the present year with its predecessors. Is it fair, for example, to compare the arrivals this season with those of normal pre-war years, when there was no such disturbance in political affairs, and especially when transport facilities had not been impaired as they probably still are to-day, owing to the damage done to the railways last spring. On the other hand, it must be remembered that up till 1918 the transport facilities available for cotton were seriously reduced owing to the demands of military transport. Again, it is well known that the movement of the crop is always influenced very largely by the prices during the early months of the winter. In 1914, 1917, and 1918 prices were falling. To-day they are higher than they have ever been.

Putting all these pros and cons together, it is very difficult to draw any conclusion from the statistics, but it is safe to say that they do not justify any very optimistic views as to the out-turn of the present crop. The Alexandria General Produce Association's estimate of 6,000,000 kantars is likely to be very near the mark. Such a figure cannot be regarded as satisfactory from any point of view. It is 20 per cent. less than the pre-war figures, and even then the world was crying out for more Egyptian cotton. It is true that the present consuming capacity of the mills is greatly limited—e.g., by the restriction of the hours of labour, and by the damage done to the cotton mills in the devastated regions of Northern France. It is very probable that the great majority of the Lancashire mills which use Egyptian are now well stocked or covered by purchases ahead for a large part of this season's consumption, so that there may be no immediate danger of shortage of actual cotton. But it is not satisfactory to know that the year's crop is hardly more than sufficient to meet the present restricted consumption, and that even a return to pre-war rates of consumption would find us seriously short of the raw material. For the fact is that we are already faced with a very serious addition to the pre-war needs, in the form of a substantial demand for a purpose which before the war did not take up a material proportion of the crop—namely, motor-car tyres. It is now well known that this is the main cause of the great increase in the American demand for Egyptian cotton, and that this new demand is not only likely to run the present supplies very close indeed, but is likely to increase at least as fast as the possible increase of the crop in the immediate future.

The position may be summarised as follows. The American tyre industry is increasing just as fast as it is possible to turn out the cars and the tyres. The output of tyres is at present limited by the amount of tyre fabric available, and that, again, is probably limited by the capacity of the mills to produce the yarns required, which are of very low count but very high quality. There is a good deal of evidence to the effect that the tyre makers are placing their demands for quality in the raw material rather higher than is strictly necessary. They began by using Sea Island cotton, then Egyptian, and now they are using staple American cottons, and any other variety, such as Peruvian, which has any pretence to staple. Incidentally, one reason of the present rush on Egyptian is the fact that in 1918 the premium obtainable for staple cotton in America was so low that most of the growers dropped it in 1919, and the crop was very short. That should be remedied in the coming season.

But to the tyre maker the price of his cotton does not matter much, especially as the very low price of rubber is compensating the rise of cotton. What he wants is mileage, and he is convinced that that depends on long staple, and as long as he can get long staple he does not care much what he pays for it. There is, of course, a limit to the price, but it is very difficult to say whether that limit has been reached yet. Only one thing is certain: that the price he will be willing to pay will be a great deal higher than Lancashire has been in the habit of paying for similar cotton for quite other uses.

It is very probable, therefore, that the special market for Egyptian cotton which placed the Egyptian producer in so favourable a position is likely to be accentuated in the immediate future. We are in for probably a long period of very high premiums for Egyptian cotton. The next point for consideration is the prospect of the general cotton supply, upon which the basis price of cotton depends, and that will carry us in the next article into a consideration of the present position and prospects of the American crop.

ENGINEERING.

Cold and Concrete.

Now that such extensive use is likely to be made of reinforced concrete in construction work it is essential that not only should every aspect of the subject be closely studied, but that all engaged in concrete construction, whether practical, experimental, or in the nature of research, should make known to others the difficulties they encounter and the best ways of surmounting them that have come to their notice.

A very great deal of work has been done by the Concrete Institute, but much more remains to be determined, and amongst other questions worthy of special consideration is that of the effect of cold ranging from just above a freezing temperature to well below zero on concrete construction. Just now, delay in construction, once commenced, cannot be tolerated, and yet it appears that such delays will have to be encountered in steel and concrete construction work should operations be commenced during the early part of the winter months. So far it is the general impression that concrete will not harden properly at a temperature near to the freezing point.

It would seem, however, that provided proper precautions are taken, concrete construction work can be continued even under severe climatic conditions. Tarpaulins can be used to ward off cold, freezing winds, and coke or other heating fires can be placed in such positions as to mitigate largely the effect of severe frost, provided care is taken to place them to windward of the work. By means of a few old gas and steam pipes screwed together, with sufficient double bends or elbows, a coil can be constructed which can be buried in the piles of sand, gravel, or broken stone, and through which steam can be passed at about atmospheric pressure from a small boiler. The sacks of cement can be kept warmed to proper temperature in the same way, and the mixture can be worked with warm water instead of cold. Where fear is expressed lest the steel reinforcing shall have too severe a coiling effect on the wet concrete, the steelwork can be heated by means of a steam jet, after the type of those used in steam brush work. Where materials are stored in bins, these can be heated by steam piping, or if there is installed in the vicinity a plant with ample supplies of warmed condensing water, this can be fed by piping through the material stores. The forms, as the wooden moulds into which the concrete is poured are called, can be kept heated by coke fires or steam until the concrete has set; and many other expedients will suggest themselves to every engineer. It may be pointed out that with this kind of work a better class of labour than ordinarily employed is required, otherwise carelessness may cause a good deal of damage.

MISCELLANEOUS TOPICS.

"Defective" Concrete.

The use of concrete for building purposes, apart from its very extensive use in public works, has recently been increasing throughout the Near East, the few earthquakes last year having probably given a new impetus to concrete building. There is, however, also a certain amount of hesitation owing to defects which are often noticeable in such constructions, and which are attributed to reasons more or less baseless. The most probable reason, however, in such cases is the bad handling of the concrete through inadequate supervision over inefficient men who are entrusted with the mixing. It is admitted that the mixing of concrete is one of those things which can be done very easily indeed, but requires a very great deal of care if it is to be done really well. Men who handle concrete habitually are aware of the importance of grading aggregate, sand and cement in such proportions as to give as solid a concrete as possible; and of mixing the components together thoroughly. Professor Abrams, of the Lewis Institute, drew attention to a point which perhaps has not received due consideration, and that is the importance of using the minimum amount of water sufficient to produce a plastic or workable concrete. In fact, he considers that the water proportion has more effect on the nature of the resulting concrete than the proportioning of the other ingredients. His conclusions are based upon some 50,000 tests, and therefore deserve the most serious consideration. Two of them are that the use of a pint more water than is necessary in a one-bag batch reduces the strength as much as would the omission of 2 lb. to 3 lb. of cement; and that the mere use of richer mixtures, while encouraging a feeling of greater security, in many cases causes nothing more than waste of cement because the water is in excess.

Electricity in Farming.

The use of electricity for assisting and improving the growth of plants has passed the experimental stage, and in many large farms, and even in small holdings, it is now employed with complete success. It has been proved that the action of an electric current passing through the soil is very stimulating. The method usually adopted is a network of galvanised iron wires stretched over the field to be treated, and suspended 15 to 18 ft. from the ground from insulators attached to wooden posts placed about sixty yards apart. These posts are in parallel rows, about 100 yards apart. The electrification of the network is accomplished by the use of a very little current at an extremely high voltage. The network is charged positively. The power which is required per acre is quite small. It is calculated that for an expenditure of twenty units per annum per acre the electrical discharge may take place for eight or ten hours a day; and if the cost per unit is no more than 3d. the price per acre amounts to about 5s. per annum. By this electrical treatment the yield per acre is increased 30 per cent., and even more under certain conditions. The beneficial effect of electricity on plants is not a new discovery, for it was noticed some years ago that the growth of plants was assisted by the electrification of the atmosphere. In the South of Italy the above described method, with slight modifications, has recently been adopted to assist the growth of Macedonian (Yenitze) tobacco.

CHROME ORE DEPOSITS IN ASIA MINOR.

It has been said that Asia Minor is very rich in poor mines, says the American Consul-General at Constantinople, Mr. G. Bie Ravndal, in a recent report. The country is indeed rich in the number of its mineral deposits; but it must be remembered that the field has never been thoroughly and scientifically surveyed so as to justify a verdict in regard to whether these deposits are rich or poor. Chrome ore deposits are to be found in Asia Minor among the eruptive rocks of serpentine formation. The four most important districts where chrome mining has been more or less developed are the provinces of Smyrna, Brussa, Adana, and Konia. Among the forty chrome mines for which firmans (concessions) have been granted only eighteen have been worked. Twenty other research permits have been issued. Most of these mines are worked in a primitive way, and, modern methods not having been introduced, it would be difficult to ascertain the real chrome resources of the country. Specimens of chrome ore taken from deposits in the different districts of Asia Minor proved to be rich in chromic oxide (Cr_2O_3), the percentage varying between 40 and 55. The maximum annual production of chrome mines in Turkey amounted to 30,000 tons before the war.

Besides the lack of modern mining processes, the very inferior state of roads and communications has been another drawback to the progress of these enterprises. There are a great many mines which have not been worked on account of their being distant from a seaport or a railway line, and about which we consequently do not possess any information. According to an Italian mining engineer of thirty years' experience in Turkey, the geological structure of the Erzerum and Erzindjan regions being partly of serpentine formation, chrome mines might well be discovered in these provinces; investigations have not been made so far because of the comparative inaccessibility of these regions from seaports or railroad lines. The insecurity of the interior and the reluctance of mine owners to invest money have constituted additional impediments to the progress of mining enterprises. Moreover, the laws of the country concerning mines do not promise proper advantages nor security to holders of concessions. Consequently, foreign capital has not been forthcoming.

Chrome-Producing Districts.

The chrome-producing districts of Turkish Asia Minor may be classed in four zones, according to location, as follows:—

Brussa Zone.—Chrome ore is found in this zone in the Sanjak of Kutakia, near Tavshanli, mining district of "Dagh-Arde"; in the Sanjak of Brussa, near Harmandjik, at 31 miles from Adranos, and also at 15.5 miles from Adranos; and in the Angora Province, near Mihalidj, 3 miles from the Eski-Chehir-Angora railroad.

Smyrna Zone.—There are chrome ore deposits in the Sanjak of Menteche, at a distance of 6.25 miles from Makri; also in localities situated 23 miles south-east of Moughla, and 16 miles from the Aidini-Dinar railroad, near Denizli, respectively.

Adana Zone.—Ore is found in the Sanjak of Adana at a distance of 23 miles from the town of Adana; in the Sanjak of Mersina, near Elvanli; and in the Sanjak of Djebel-Bereket, Kaza of Yarpouz, at a distance of 16 miles north-east and 9 miles south-east of Yarpouz, near the Baghdad Railway.

Konia Zone.—There are two mines in the Sanjak of Teke, Adalia, one at a distance of 6 miles and another at a distance of 25 miles from the sea. The Sanjak of Konia has one mine;

BUSINESS MAN desires appointment in the Levant, Constantinople, or Asia Minor preferred. Considerable experience in general trading at home and abroad. Any suitable post considered. Address in first place, Box 148, "THE NEAR EAST," 1, Devonshire Square, London, E.C.2.

TRADE ENQUIRIES.

Large Engineering Company, manufacturing all kinds of Excavating Machinery, such as Navvies' Dredges, Dredges for Harbour Port Works, and all kinds of dredge work, mineral or otherwise, Cranes, and so forth, for Railroad work, wishes to correspond with reliable Machinery House or Engineering Firms for the purpose of establishing Agency in—

GREECE, YUGOSLAVIA, ROUMANIA, BULGARIA, TURKEY, EGYPT, SYRIA, MESOPOTAMIA.

Replies to BOX 147, THE NEAR EAST, 1, Devonshire Square, London, E.C.2.

GENERAL BANK OF GREECE.

Paid-up Capital, Drs. 3,000,000.

Head Office - ATHENS.

BANKING OPERATIONS:
Every description of Banking business transacted.

FINANCIAL OPERATIONS:
Investigations in connection with, and the promotion, organisation and financing of, Limited Joint Stock Companies, with a view to exploiting agricultural, industrial and mineral resources, executing technical works, etc.

COMMERCIAL AND SHIPPING DEPARTMENT:
Purchase and sale of goods on account of clients. Warehousing, Advertising and placing foreign products on the market. Agents for foreign companies and large commercial and industrial firms abroad. General Shipping Agents.

POPULAR BANK OF GREECE.

Head Office, ATHENS. Branch, PIRÆUS.

Correspondents throughout Greece.

Established June, 1905, by the National Bank of Greece and a group of Capitalists.

CAPITAL - Drs. 1,500,000.
RESERVE FUND - Drs. 2,500,000.
Deposits and Credit Accounts, Drs. 100,000,000.

The Bank specialises in the collection of Bills payable in Greece; it accepts goods on consignment, and undertakes their sale, and transacts every kind of Banking business.

General Manager: D. LOVERDO.

TRADE WITH THE NEAR EAST.

The Bank of Athens extends special facilities for business with the Near **East** to manufacturers, exporters and importers.

The Bank has offices in all the principal towns in **Greece,** also in **Egypt,** Cairo and Alexandria, in **Cyprus,** Limassol, in **Constantinople,** in **Smyrna,** and in **France,** Marseilles.

Inquiries from interested parties are invited.

BANK OF ATHENS.

PAID-UP CAPITAL : £1,920,000. **HEAD OFFICE IN ATHENS.**

London Office: 22, Fenchurch Street, E.C. 3.

COMMERCIAL BANK OF GREECE, LIMITED.

CAPITAL PAID-UP - Drs. 15,000,000.
RESERVE FUNDS - Drs. 2,364,793.

Head Office: ATHENS.

Branches:—**Piræus, Salonika, Patras, Volo, Syra, Calamata, Corfu, Cephalonia, Candia, Chios, Argos, Pyrgos, Vostizza (Ægion), Nauplia.**

AGENTS IN ALL PARTS OF GREECE, THE LEVANT, AND ABROAD.

The Bank conducts every kind of Banking, Commercial and Stock Exchange business and extends special facilities to traders interested in business with Greece. It acts as Agent for many Foreign Banks. It is specially organised for Exchange, the execution of mail and cable transfers throughout Greece, and for the collection of clean and documentary Drafts.

MERCHANDISE DEPARTMENT:
The Bank undertakes the warehousing and sale of goods consigned.

GREECE.

Area 43,522 square miles. The cultivated area amounted to 5,745,300 acres, of which about 2,253,400 were under cereals, 518,900 under grapes and currants, 370,600 under oak trees, 295,500 under olives, and 2,223,900 were forests.

Population (1914), 5,000,000 approximately.

Chief Products (with average annual production):—Currants, 142,000 tons; wines, 3,000,000 casks; tobacco, 9,000,000 lb.; cereals, 8,000,000 bushels; olive oil, 200,000 casks.

The **MINERALS** of Greece include:—Iron, Marble, Magnesite, Emery, Lead, Lignite.

IMPORTS (1914), Old Greece only:—Total value £7,000,000, of which £2,000,000 from the United Kingdom; £1,800,000 from Germany and Austria Hungary; £1,000,000 from Russia.

EXPORTS (1914), Old Greece only:—Total value £4,000,000, of which £3,000,000 came to the United Kingdom.

COINAGE.—The unit is the Drachmæ, equivalent to a Franc (10d.). The current rate of exchange is about 26·50 Drachmæ to £1.

FREIGHT. — From England, 160/- + 10 % primage.

WEIGHTS AND MEASURES.—It was decided in 1898 to introduce the metric system. The change is to be gradual from the old system, which is:—Oke = 2·82 lb., stater = 123·20 lb., livre (Venetian) = 1·05 lb., baril (wine) = 16·33 imperial gallons, kilo = 0·114 imperial quarter, pike = ¾ of a yard, stremma = ·242 of an acre.

BANK OF NATIONAL ECONOMY (of Greece)

Head Office: ATHENS.

Branches:

PIRÆUS, SYRA. PATRAS.

Capital Paid Up - Drs. 10,000,000

Fully represented in all parts of the world for all kinds of commercial, financial, and shipping business.

President. L. EMBIRICOS. *Manager.* D. MIAOULIS.

BANK OF PIRÆUS.

For COMMERCE, INDUSTRY and SHIPPING.

Capital Paid-up - Drs. 5,000,000. Reserve Fund - Drs. 3,095,000.

OFFICES at PIRÆUS and ATHENS.

Every kind of Banking business transacted.
The Bank's connections throughout Greece enable it to offer foreign clients special facilities for the collection of Bills, etc.
Correspondence invited.

BANK OF INDUSTRY OF GREECE.

Head Office: 14, Stadium Street, Athens.

Capital Fully Paid-up - Drs. 15,000,000

The Bank has been established for the encouragement and development of Industry and Commerce, and undertakes every description of banking business.

BANK OF ORIENT.

Capital Paid up - Drs. 25,000,000

Head Office: ATHENS.

Branches: SALONIKA, SMYRNA, ALEXANDRIA, CAIRO, MITYLENE, SERRES, ZAGAZIG, MAGNESIA, PERGAMA, SOMA.

Every kind of Banking Business transacted.

and ore is found also in the Sanjak of Hamidabad, at a distance of 16 miles north of Sparta, and on a highway leading to Dinar, which is a terminal station of the Aidini-Dinar Railroad.

The physical character of Brussa Province, its climate, the structure of the rock, its water supplies and forests, are favourable for mining operations, or, at least, present no special difficulties. The annual output of the mines varies from 10,000 to 15,000 tons, and the ore is of a high grade. Research work in this province has shown that there are more than 200,000 tons of ore available.

Mine of Dagh-Ardi.—This mine is situated in the district of Simay, near the village of Dagh-Ardi, at a distance of 37 miles from the Kutahia railroad station, and 56 miles from Guemleik (near Ismid Harbour). It consists of two chrome ore deposits parallel to each other and inclined to the horizontal at an angle of 20 deg. They are of mass formation, of a thickness of 33 to 50 feet, and of a grade varying between 44 and 52 per cent. After the process of reducing the serpentine to the maximum allowable percentage of 3 per cent. the grade of the ore could reach 55 per cent.; a mechanical treatment of the ore would raise its grade to 58 per cent. The extraction of chrome ore from the mine is attended with some difficulties; deep inclined and vertical shafts must be used in order to attack the mass of rock at low strata. Besides the two deposits mentioned, there is a third one called Kervan. The grade of this ore is 33 per cent. It can be used after a thorough and proportional mixing with high-grade ores and a mechanical treatment in the washing plant.

Mine of Dombay Olduyi-Deressi.—This mine is at a distance of 2½ miles from the Dagh-Ardi mine. It is of mass formation, its grade being from 45 to 48 per cent. Transport of the ore is facilitated by the aerial railway which crosses this mine. These deposits have not been yet worked, only research work having been carried out.

Terzi-Pounar Mine.—Situated at a distance of 6 miles from the Dagh-Ardi, and located on a wagon road. Its grade is from 50 to 52 per cent. Prospecting has been undertaken, but no real work has been inaugurated.

Assarlik Mine.—Situated at a distance of 4 miles from the Dagh-Ardi, and quite near the wagon road. Its grade is 48 per cent. Only prospecting has been done so far.

Karadja-Keuy Mine.—Situated near Karadja-keuy, at a distance of 22 miles from Kutahia; it is of vein formation and perpendicular bearing. The grade of the ore is 48 to 50 per cent. The mine has not been seriously worked. It belongs to Turks. The ore is transported to Kutahia.

Karli-Yer Mine.—This mine is situated at a distance of 59 miles from the Kutahia station. The chaussée road extends from this station to Tavshanli, which is 19 miles distant from the mine. The grade of the output has always been on an average of 55 per cent. The total production for approximately thirty years has been 130,000 tons. The output has been shipped to Glasgow and sometimes to Baltimore and Philadelphia. This mine can produce 4,000 to 5,000 tons of 55 per cent. graded chrome annually. Its approximate future production is estimated at 100,000 tons. There are forests and water supplies in the neighbourhood of this mine, and the climate is healthful. The mine belongs now to Krupp; 6,000 tons of chrome have been exported to Germany and Austria.

THE CONSTANTZA PIPE LINE.

According to the *Moniteur du Petrole Roumania* the pipe line to Constantza, which has been repaired over the Danube by a 5 in. pipe fixed on a floating bridge, has occasioned some difficulty in working, as, up to that point the pipe is 10 in. The management have now commenced to change this arrangement by placing a 6 in. pipe under the surface of the Danube, and it is expected that this change will greatly facilitate the pumping of petroleum towards Constantza. The 5 in. pipe running through Cernavode to Constantza will be replaced by a 10 in. pipe for a distance of 13 km., and the present 5 in. line for this part of the distance will be used exclusively for the transfer of the production of the Colombia refinery.

NEAR EAST MARKETS.

LONDON PRODUCE REPORT.

Currants and Sultanas.—There is little to add to the remarks made last week. Good quality currants are unquestionably in ever-increasing demand. Sultanas are also in steady request.

Coffee.—A quiet and steady tendency has been in evidence in this market. Among the latest transactions Costa Rica, various qualities, has been done at prices ranging 158s. to 168s., while Indian has come to business between 140s. and 158s.

Sugar.—The demand for the raw commodity shows some sign of decreasing. On the other hand, the refined is in strong request at the controlled rates. The latest reports with regard to cane crops are satisfactory. During 1919 4,068,000 tons of sugar were consumed in the United States as against 3,496,000 tons during the previous twelve months.

Oil Seeds.—The market is very steady. Linseed is a specially firm spot. La Plata, January-February, has been done at 42s. 5d., February-March at 41s., and March-April at 40s. 6d. Cotton seed is steady. Rape seed has been firm, Toria being 49s.

Oil Cakes, etc.—There is little to report in regard to oil cakes. Where there are alterations it is in the direction of a lower tendency. Soya bean cake is 24s. 9d. Coconut cake is quoted at 20s. Rapeseed cake is fairly firm at 18s.

Oils in general are firm. Linseed is a strong spot at 108s., and the same February-April. Rape oil is steady, deodorised being 130s., and crude 15s. cheaper. Cotton oil remains about the same, deodorised being 135s. and crude 118s. Turpentine is 185s. spot, and also February-April.

SHIPPING INTELLIGENCE.

Forthcoming Sailings.

The Cunard s.s. Sydney Reid, for Piræus, Constantinople, Galatz, and Batoum will close for cargo at Swansea on January 31.

The Johnston Line s.s. Alpine Grange, for Piræus, Volo, Salonica, Bourgas, Varna, and Constantza, will close for cargo at Liverpool on February 3 (unless previously full).

The Papayanni Line s.s. Worsley Hall for Malta and Alexandria, will close for cargo at Liverpool on February 14.

The Moss Line s.s. Karnak, for Syra, Smyrna, Constantinople, and Beyrout direct, will leave Liverpool on February 15.

The Anchor Line s.s. Scindia, for Bombay, will close for cargo at Liverpool on February 5.

The R.M.S.P. Co.'s s.s. Sunland, for Gibraltar and Morocco, will leave London on February 5.

Shipping at Malta.

(From Our Own Correspondent.)

Malta, January 5.

The latest arrivals include the s.s. Bavarian from Liverpool, s.s. Thurso from Newcastle and London, s.s. Hunnie from Alexandria, and H.M.S. Hibiscus and Iron Duke from Constantinople.

The s.s. Euphrates has left for Marseilles, the Falernian for Constantinople, and the Flaxton for Port Said.

Malta, January 13.

There has been a lull during the last few days. Amongst the arrivals the most important have been the British s.s. Will Hemsoth from Constantinople, the Danish s.s. Rota from Helsingfors and Gibraltar, and the Italian s.s. Tebe from Sengasi. The Centurion from Gibraltar and Devonport, and the Sirdar from Palma, Algiers, Gibraltar, and the United Kingdom have just entered port. The drifter Young Sid has left for home.

SWEDISH ORIENT LINE.

Direct regular steamship service with about weekly sailings outwards and homewards between

GOTHENBURG and ALGIERS, PIRÆUS, SMYRNA and SALONICA.
„ „ ALEXANDRIA, JAFFA and BEYROUTH.
„ „ CONSTANTINOPLE, ODESSA and other Black Sea Ports.

COMPANY MEETING.

G.I.P. Railway.

The one hundred and fortieth half-yearly general meeting of the Great Indian Peninsula Railway was held on January 23 at the company's offices, 48, Copthall Avenue, Mr. J. E. Dallas, managing director, presiding.

The secretary, Mr. R. H. Walpole, read the notice convening the meeting.

Mr. Dallas, who stated that in the absence of Sir Charles Armstrong who had gone to India on a tour of inspection it devolved on him to take the chair on this occasion, said that it would be seen from the report that the gross receipts amounted to 6½ crores of rupees; this constituted a further record, the increase over the former half-year amounting to 17 lakhs of rupees. Unfortunately expenditure increased by 80½ lakhs of rupees, resulting in net revenue being decreased by 63½ lakhs of rupees. Excluding State lines, and deducting interest charges, the net revenue showed a decrease of 62½ lakhs of rupees. They would notice that the traffic of the line continued to increase in a satisfactory manner. They budgeted for 12.80 crores for the present financial year 1919-1920, but that estimate had already had to be revised, and they now expected to overtop 13 crores; in the next report they might possibly talk about still larger figures. They had to bear in mind, however, that there was leeway to be made up in the maintenance of the line, due to the necessity of curtailing expenditure during the war.

If they examined the details of the receipts they found that they carried 3,288,000 more ordinary passengers than in the corresponding half-year of 1918-1919 and earned Rs. 33 lakhs more on this service. There was a slight decrease in the earnings of troop traffic, but this was still an important feature in their coaching receipts, as they carried 629,000 troops and received Rs. 40 lakhs on this account. The total increase in coaching receipts was Rs. 36½ lakhs, equivalent to an increase of 16.23 per cent. The chief feature in goods traffic was the falling off of Rs. 28½ lakhs in general merchandise and military stores.

In the unsettled state of trade it was permissible to regard as satisfactory the above-mentioned increase in earnings. It was, however, disappointing to find that it was accompanied by an increase in working expenses of 23 per cent. on the corresponding period of last year, of which 20.39 per cent. would be unaccounted for by greater traffic handled. One of the first comments he had to make on this high figure was that in the corresponding period of 1918-1919 the ratio of working expenditure to gross earnings, viz., 55.08 per cent., was, owing to the difficulty in carrying out all the maintenance works that were required, more favourable than would have been the case if each half-year had borne its fair share of expenditure. On the other hand, the corresponding ratio in the half-year under review, viz., 66.01, was higher than their pre-war average of 58. The increase in salaries of staff and wages of workmen has necessarily followed the rise in the cost of living. He should not omit to mention an accidental cause of high expenditure which prejudiced the accounts of the period under review. In August the East Indian Railway was breached in several places between Allahabad and Katni, and for a period of three weeks traffic which would have traversed their Bombay-Jubbulpur main line had to be diverted to the north and sent via Cawnpore, and was thereby considerably restricted in volume. The issues of fuel and stores which had been made to meet the heavier traffic would therefore bear more heavily on the traffic which was actually carried.

In connection with schemes which required the expenditure of capital money, he might inform them that the investigations which this company had made on the question of electrifying certain portions of the line had now been completed. Messrs. Merz and McLellan, of Victoria Street, who carried out the necessary surveys, had been appointed consulting engineers to the G.I.P. Railway Company for electric traction. The reports and estimates covered the suburban sections from Bombay to Kalyan, and the main line to Bhusaval on the north-east and Poona on the south-east. A proposal to electrify, as a first instalment, the section from Bombay to Kurla, including the Harbour Branch, was now being made to the Government of India, and as it was understood that Government was anxious to encourage the electrification scheme, at any rate so far as the suburban sections were concerned, it was possible that this scheme might be inaugurated as soon as funds could be made available.

As regards the future, the prospects were in many respects favourable. There had been an excellent monsoon, and the rain had been well distributed, resulting in good kharif crops, and there was every prospect of good rabi crops, which would shortly be reaped. The cotton crop was reported to be well up to the average of the best years. The traffic reports for the current half-year showed satisfactory increases.

He then moved the adoption of the report and statement of accounts, which was seconded by Mr. J. F. Finlay, C.S.I., and carried unanimously.

The Chairman then moved a vote of thanks to Sir Lawless Hepper, the Agent in India, the heads of the departments, and the staff in India and at home, which was unanimously agreed to, and a vote of thanks to the chairman and the directors terminated the proceedings.

The traffic receipts of the Smyrna-Aidin Railway for the week ended January 3 amounted to £20,551.

The *Frankfurter Zeitung* states that under the direction of the Roumanian National Bank all the large banks in Roumania have formed a trust with a view to joint action in all goods exchange negotiations between Roumania and the Central European States, especially Austria, Yugoslavia, Poland, Czecho-Slovakia, and Germany.

LANCASHIRE COTTON.

(From Our Own Correspondent.)

Manchester, Monday.

The conditions prevailing in the market have not shown any distinct change during the week. During the last day or two, however, there have been indications of rather more demand in some sections. The slacker state of affairs which has been experienced since the beginning of the year has had practically no effect upon prices, and buyers who have held aloof in the hope of getting in at lower figures are disappointed. Spinners and manufacturers have plenty of work to go on with, and there is of course no running after fresh orders. A further advance has occurred in Egyptian cotton prices. Substantial buying has taken place for tyre cloth manufacturing concerns. Yarns made from Egyptian cotton have been put up in quotation, but users seem to be afraid of purchasing freely at the abnormal prices which now rule. Engagements of spinners seem to be getting rather more irregular. Fluctuations have occurred in American cotton, but bullish sentiment is not so pronounced as a week ago. In cloth for Egypt, the general inquiry keeps up well. Some fair lines have been put through in sized materials, and steady buying has taken place in finishing goods. Some advices from the Levant have not been altogether encouraging. Fancies have been in healthy demand for several European countries. India has not been generally active, but some useful lines have been secured in bleaching and printing descriptions for Bombay and Madras. A feature of interest has been the revival of demand for China, and more sales have been arranged than since the beginning of the year. Manufacturers remain very difficult to deal with, and order lists are of such a character that sellers can afford to be independent. American yarns for home consumption have not moved off freely, but late rates are well held. A persistent demand has been met with in bundle yarns for India. Delivery difficulties have checked operations for the Near East.

NEW COMPANIES.

Scottish Mesopotamia Corporation.

The Scottish Mesopotamia Corporation, Ltd., was registered in Edinburgh as a private company on January 13 with a capital of £100,000 in £1 shares. Objects: To carry on commercial, industrial and financial relations between Mesopotamia, Persia, Asia Minor, Armenia, Palestine, Syria, Arabia, India, Ceylon, Russia and any other country or countries on the one hand and Great Britain, the British Dominions, Colonies, and Dependencies, the United States of America and any other countries on the other.

The subscribers (each with one share) are:—J. A. Hunter, Inchmartine, Inchture, N.B., retired planter; T. W. Tod, Clerwood, Corstorphine, Midlothian, merchant; W. Greenhill, 31, George Street, Edinburgh, chartered accountant.

The first directors are:—J. A. Hunter, T. W. Tod, Sir James W. Thomson, 28, Bernard Street, Leith; F. F. Mackay, 4, Randolph Place, Edinburgh; and G. H. Davey, 5, Fenchurch Street, E.C. Qualification: £500. Registered office: 4, Randolph Place, Edinburgh.

Borhat Tea.

The Borhat Tea Company, Ltd., was registered on January 10 with a capital of £180,000 in £1 shares. Objects: To take over certain estates in the district of Sibsagar, Assam, and any other lands or tea estates in British India or elsewhere, and to enter into an agreement with a company of a similar title, incorporated in 1903, and the liquidator. Subscribers (one share each): H. S. Cholmeley, Rodwell, Calne, Wilts, farmer; A. G. Adams, "Sunnymead," Aldeburgh, Suffolk, retired tea planter; A. Bryans, 45, Leadenhall Street, E.C., East India merchant; W. F. C. Nelson, 45, Leadenhall Street, E.C., clerk; G. P. Vasey, 45, Leadenhall Street, E.C., clerk; C. G. Ballingall, 45, Leadenhall Street, E.C., East India merchant; Capt. R. Shields, R.E. (T), "The Cottage," Epping. Registered office: 45, Leadenhall Street, E.C.

ROUMANIAN COMPANY FOR FINANCING TRADE.

H.M. Commercial Secretary at Bucharest reports that an important financial organisation has been formed at Bucharest to finance imports and exports. It is understood that a considerable part of the new company's activities will be the forming of agencies for British and French firms. Each branch of the import business will be managed by a technical expert. At the present moment the organisation of the company is not complete, but it is expected to be ready for operations in a short time. Among the first board of directors are M. Stefanescu, a director of the Banca Romaneasa; M. Osiceanu, director of the Petroleum Company (Steaua); General Iliescu, at one time chief of the Roumanian Army; and other prominent men. The registered capital is 60,000,000 lei, divided into 120,000 shares of 500 lei each. Operations will commence on a subscribed capital of 20,000,000 lei.

The Banca Commerciale Italiana e Bulgara was opened recently in Sofia as a limited liability company with a capital of 12,000,000 liras.

SPONGE GATHERING IN TUNISIAN WATERS.

Although the Greek divers have abandoned the sponge fisheries of the Tunisian coast for those of Tripolitan waters, unexploited since the Turco-Italian war, where, it is reported, unexcelled sponges have recently been taken, the sponge beds along the Regency's coast are bringing no small profit to the Sicilian dragnets and harpoonists now plying in the Gulf of Gabes and around the Kerkenna Islands, says a recent American Consular report. Sfax, the chief port of Southern Tunisia, is naturally the trade centre of the industry, the sponge market of Tunisia, whence domestic and export prices are regulated. It is interesting to note that for the fine sponges which the Kerkenna fishers obtain the Sfax prices are from 32 francs per kilo (2.2 lb.); sponges form the Gulf of Gabes, of ordinary quality, bring 27 francs a kilo (formerly from 12 to 14 francs). The harpoonists are bringing in good sponges, poorly dried and cleaned, which are sold at 32 francs a kilo in Sfax. There the extremely fine Kerkenna sponges are expected within a fortnight, for sale, it is already announced, at about 50 francs a kilo; these are sold without any preparation whatever to buyers, who themselves clean the delicate tissues.

CONVENTION BETWEEN ARMENIA AND GEORGIA.

The Chief British Commissioner in Transcaucasia, reports that the Convention, signed at Tiflis on November 3, between Armenia and Georgia, freeing transit trade from all Customs duties, has now been ratified. The Board of Trade have received from the Foreign Office the following translation of the Convention:—1. For goods proceeding by the Armenian railways from beyond the bounds of Armenia into Georgia, or from Georgia beyond the bounds of Armenia, and also for goods proceeding by the Georgian railways from beyond the bounds of Georgia into Armenia, or from Armenia beyond the bounds of Georgia, there is established free transit, i.e., transit without payment of Customs duties. 2. This Convention is established for the period of three years, but on the expiry of one year from the date of the ratification there is granted to each of the contracting parties the right to declare for a revision of the Convention, and in that case the Convention remains in force during six months from the date of the Declaration. If during that period the parties do not arrive at an agreement concerning the revision, then the Convention terminates.

BAGHDAD RAILWAY OPENED.

Reuter's Busreh correspondent, in a message dated January 17, states:—The first through train from Busreh to Baghdad, containing British military and civil officers and Arab sheikhs, left Busreh at midnight on January 13 and arrived at Baghdad South Station on the afternoon of January 15, where Lady Macmunn, in the presence of a large gathering, fixed the last fishbolt and declared the line open. The train then proceeded to Baghdad West Station. General Sir G. F. Macmunn made a speech, in which he said that there were now 945 miles of railway in Mesopotamia, as compared with 1,113 miles during the war. This fact, he said, was due to the pulling up of unimportant lines.

The Cairo correspondent of *The Times* states that it is proposed to extend the railway from Suakin to Tokai, thus tapping an important cotton-growing district.

COMPANY NOTES AND REPORTS.

East Indian Railway.

The report of the East Indian Railway Company for the half-year ended September 30 states that the capital expenditure was Rs.17,73,099. The gross receipts of the entire system were Rs.6,75,86,660, working expenses Rs.2,89,39,555, and net earnings Rs.3,86,47,105. The gross receipts were Rs.24,20,110 less than those of corresponding period of 1918. The working expenses were, however, Rs.59,21,016 more, the result being a decrease in net earnings of Rs.83,41,126. The net earnings, including the South Behar Railway, together with the sum received for working the Delhi-Umballa-Kalka Railway, amount to Rs.3,72,42,555. From this has to be deducted Rs.1,95,15,079 in respect of various charges, leaving a divisible surplus of Rs.1,77,27,476, the company's share of which, after deducting Indian income-tax, is Rs.13,91,208. This amount has produced £155,786, which, added to balance on surplus profits account, after payment of the dividend in July last and all excess profits tax to September 30, 1918, and after providing for such duty as may be payable in respect of the two half-years to September 30, enables the board to recommend a dividend, subject to English income-tax at 4s. 9d. in the £, of £2 10s. per cent. on the Deferred Annuity capital and the Deferred Annuity capital Class "D." in addition to the guaranteed interest of £2 per cent. for the half-year. The arrangements for the management and working of the undertaking by the agency of the company after December 31 having been accepted by the Deferred Annuitants, the contract for giving effect thereto between the Secretary of State for India in Council and the company has been concluded. It now remains for the directors to take the necessary proceedings for establishing the rights of the Deferred Annuitants to the same abatement of income-tax during the currency of the contract as is received by the Ordinary Annuitants. The computations of the accountants, regarding the assessment of the company's share of the surplus profits of the railway for the further period to March 31 to excess profits duty, have recently been agreed to by the surveyor of taxes, and £29,589 has been paid in respect thereof. Meeting, Cannon Street Hotel, E.C., January 28, 12.30 p.m.

British Trade Corporation.

The report of the British Trade Corporation for the year ended December 31 states that during the past year the export trade of the country has revived, and the corporation has rendered substantial assistance in the finance thereof. Branches have been opened at Batoum, Belgrade and Danzig, and the National Bank of Turkey has opened a branch at Smyrna. During the war the corporation, in conjunction with other banks, has formed the South Russia Banking Agency, Ltd., and has acquired £10,000 of the capital thereof. With the view of closing the accounts at or about the usual date only ledger balances of branches (which have only been recently opened) are incorporated in the accounts now submitted, and no profits in respect of such branches and of the corporation's considerable investments in subsidiary companies and in the National Bank of Turkey are included therein. These, when ascertained, will appear in the accounts for 1920. The net profit for the year, after payment of all expenses and making provision for depreciation of investments and contingencies, amounts to £88,340, which, with £14,252 brought forward from December 31, 1918, makes a total of £102,592. The directors recommend a dividend of 8s. per share (subject to income tax), leaving £22,592 to be carried forward. The board has appointed Sir Henry Babington Smith, K.C.B., C.S.I., as an additional director and deputy-governor of the corporation as from January 1, 1920. Meeting, Institute of Chartered Accountants, Moorgate Place, E.C., February 11, 3 p.m.

Deltota (Ceylon).

The report of the Deltota (Ceylon) Tea and Rubber Plantations for the year ended June 30 shows a loss of £499, which, added to £1,145 brought forward, makes a total debit balance of £1,644 to be carried forward. Since the date of closing the accounts £25,000 eight per cent. convertible debenture stock has been created and issued, and the outstanding mortgages and loans redeemed. The quantity of tea made from estate and bought leaf during the year totalled 375,840 lb., against estimate of 386,000 lb., the average net price realised being 9.24d. per lb. The estimates for the current year are: Estate leaf 276,000 lb.; bought leaf, 120,000 lb.; total, 396,000 lb.

ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Street, Monday.

During the past week our market for Egyptian securities has remained active, and there has been a fairly large business doing. In Government stocks City of Alexandria Bonds have risen a point to 69, Egyptian Unifieds are three points higher at 83, and the 3½ per cent. Pref. have advanced 1½ points to 67½. Turkish 1891 have improved 2½ to 69, and the 3½ per cent. 1894 are 1½ points up at 60½.

In Bank shares Nationals after temporarily easing close a firm spot and unchanged, while Agriculturals have risen ⅛ to 5 15-16, and the Pref. shares have improved to 6 11-16.

In Railways Delta Lights are ⅛ up at 6⅝.

Amongst Land shares, where a very large business has been transacted, Aboukirs have been in persistent demand, and, after at one time receding to 40s. sellers, finish 3s. 9d. higher at 46s. 6d.; whilst the debentures have advanced three points to 140. Béhéras after dropping to 25 finish unchanged at 26½. Building Lands have jumped 4s. to 32s. Delta Lands at one time fell to 20s. sellers and close 1s. 3d. lower at 21s. 9d. Egyptian and Foreign Trusts have risen a further 1s. to 18s. Gharbieh Lands have been in strong demand and close ⅛ up at 4⅛, but business has been restricted owing to scarcity of sellers. New Egyptians, after dropping to 37s., finish unchanged at 39s. 9d. Sidi Salems have been exceptionally dull, closing 3-16 lower at 3⅜; Sudan Plantations have put on a like fraction at 8¾. Union Foncières dipped at one time to 5¾, and finish ¼ down at 6.

Amongst Miscellaneous descriptions Salts and Sodas are closing 1s. 3d. higher at 55, and Morum's have advanced 3s. to 18s.

In Oil shares Anglo-Egyptian B have been a dull feature, and close 5-16 down at 4 11-16; Roumanians have dropped 6d. to 23s. 6d.

In Greek securities the 1881, 1884, 1890, Fundings and 1902 Loans have remained firm. Monopolies are one point lower at 48½, and Rentes have also dropped one point to 44. The 1910 Loan has again been weak on Continental attempts to sell, and finishes one point down at 46.

INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following weekly cabled news received from the Director-General of Commercial Intelligence, Calcutta, dated January 7:—Nearly general rain in central and extreme south of India and local in the north-west. Recent unusual rains in Madras, generally beneficial, though damage caused in places to ripe crops. During the week ending January 3 sowing spring crops continued in north-western India. Harvesting autumn crops continued Bombay and north-western India, neared completion central India. Harvesting paddy progressed north-eastern and southern India, neared completion Bengal. Sowing progressed Madras. Cotton picking continued, except in Burma. General crop conditions good, but rain required Punjab. Alipur Duars Kumargram railway survey, 26 miles by Eastern Bengal State Railway sanctioned in lieu of Goalkunge Kumargram Alipur Duars Railway reconnaissance survey previously sanctioned. Construction Larkhana Dodapur section of Larkhana Jacobabad project fifty-four miles, and Kasta Coalfields Railway seventeen miles, by East Indian Railway sanctioned. Bombay cotton market steady despite mill strikes. Fully good Broach Rs. 558 8 annas. Piece-goods market firm. Calcutta jute market quiet but firm. Heavy goods quite firm with fair general demand. Hessians very firm. Mill strikes affecting both near and forward positions. No change in bank rate.

RAILWAY CONSTRUCTION IN MOROCCO.

Authority to draw on the reserve funds of the Protectorate has, it is stated, been granted by the French Government for the amount necessary for the preliminary work of laying out, levelling, and preparing the line of the Petit-Jean-Kenistra broad-gauge railway for ballasting. The French attribute great importance to this line, as it will connect Casablanca with the Tangier-Fez line, and thus enable that port to compete successfully with Tangier for the Fez trade when the Tangier-Fez line is completed.

BRITISH TRADE CORPORATION.

(Incorporated by Royal Charter),

13, AUSTIN FRIARS, LONDON, E.C.2.

Telegrams: "Trabanque, London."

CAPITAL: Authorised - £10,000,000 Subscribed and Paid Up - £2,000,000

Governor - THE LORD FARINGDON.

Manager, A. G. M. DICKSON. London Manager, P. C. WEST. Secretary, G. De B. BROUNLIE.

The Corporation has been established with the object of developing the Trade of the British Empire in every part of the world, and brings to the notice of all interested that it is prepared to grant financial facilities to British Manufacturers and Merchants for the increase of their Import and Export Trade.

It will be prepared to assist in opening up new channels for enterprise, and will afford financial facilities for the enlargement of works and the extension of plant.

The Corporation is appointing representatives in the chief cities of the world, and will open credits at home and abroad. It invites inquiries, and will endeavour where necessary to put expert advice at the disposal of correspondents regarding the financing of their foreign and overseas business. Moneys received on fixed deposit. Terms on application.

It has been decided to found a British Chamber of Commerce in Bucharest which will have as its immediate objects to obtain an improvement in transport and shipping facilities, and to build port extensions.

For BUILDING UP your HEALTH take

WILKINSON'S (Estd. since 1829)

ESSENCE OR FLUID EXTRACT OF RED JAMAICA

"We cannot speak too highly of it."—LANCET. SARSAPARILLA

(The best "Pick-Me-Up")

Pronounced by the HIGHEST MEDICAL AUTHORITIES the Safest and Most Reliable Remedy for

Torpid Liver, Debility, Eruptions, and the most WONDERFUL PURIFIER of the HUMAN BLOOD.

IMPORTANT EVIDENCE.—"We recommend your Jamaica Sarsaparilla."—MEDICAL REVIEW.

"The only preparation for removing what may be called the sequelæ of a mercurial course."—SIR R. MARTIN.

The late LORD CLYDE said:—"I am never without it, for when feeling depressed or out of sorts from anxiety or fatigue, a dose or two animates me."

"It cured me of Torpid Liver after all other remedies failed."—EARL OF ALDBOROUGH.

N.B.—Indispensable to all who value Health.

A World-wide Reputation for over Three-Quarters of a Century.

Robt. O. WIENER & Co.

Old Trinity House, 5, Water Lane,
LONDON, E.C.3.

Telegraphic Address: "Roadmaker, London."

Also first-hand for all Oils, Fats, Tallows, and kindred articles, including Edible Oils.

SCHOOL OF ORIENTAL STUDIES.
London Institution, Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.

For particulars, apply to Sir E. DENISON ROSS, Director.

All genuine, in pots like this.

YAGHOURT.

THIS HEALTH-GIVING FOOD SHOULD BE TAKEN BY ALL.

Recommended by the leading medical faculty of to-day.

Suitable alike for the invalid and the healthy.

Obtainable at HARROD'S, SELFRIDGE'S, and all the leading Stores.

BUSINESS DIRECTORY.

ANIMAL INTESTINES
Cleaned and Packed in Salt or Dried.

NOTES OF THE WEEK.

The announcement from Simla that "the Viceroy has issued a public and emphatic denial of the rumours to the effect that His Majesty's Government is pressing at Paris for the expulsion of the Turks from Europe" testifies to the embarrassment that has been caused to the Government of India by the long delay in settling the Peace Terms for Turkey. It was inevitable that various rumours should gain currency, and political agitators in India would see to it that the worst complexion should be put upon the uncertainty that has seized the Allies regarding the future of Constantinople. The suggestion that the Turks should be expelled, bag and baggage, from Europe belongs to the picturesque language of the platform, and is out of date even as that. On the other hand it has been proposed that Turkish jurisdiction over Constantinople should be terminated, and that the Ottoman seat of Government should be transferred to Asia Minor If the end of the war had found the Allied ranks intact it is probable that the Sultan and his advisers would already have taken this step of their own volition, and Russia would have occupied Constantinople without comment from India or elsewhere. But Russia's defection left the Allies without a definite policy of their own regarding any Near Eastern question, and the differences of opinion that were allowed to protract unchecked the deliberations of the Paris Conference effectually side-tracked the Turkish settlement for a year.

The immediate result of this delay was that the Turkish Government recovered its self-assurance, Mustapha Kemal strengthened its hands by independent action in Anatolia, and an outcry was raised in India against interference—which had never been contemplated—with the Khalifate. It has become necessary, therefore, for the Allies to reconsider their intentions in regard to Constantinople. The factors in the situation are that, with Russia no longer *compos mentis*, there is no obvious or even satisfactory alternative to Turkish jurisdiction; and that there is the certainty to-day that the forcible transfer of the Porte to Asia Minor would be followed by some form of armed revolt among Moslems. To those who believe that trouble with the latter is in any case brewing, it has been a strong point that there should be a good rallying cry, and they profess to have found it in the removal of the Turks out of Constantinople. For this reason they would go through with the original policy and face the consequences. Their case would be stronger if they had any adequate substitute for Turkish jurisdiction. Strong as one's faith in the League of Nations may be, it is clearly not yet a "going concern," and, if it were, it would be subjecting it to the severest of all tests in its infancy to saddle it with the government of Constantinople. But the Turkish settlement now ought not to be delayed many days, at least not many weeks, and if the verdict were for the removal of the Porte the Allies must have a working organisation ready to take its place. The experience of Paris suggests that with an international régime in Constantinople the opportunities for intrigue would be just as favourable as under the Turks.

There remains the alternative of leaving the Turkish Government in Constantinople, and then by improving it and eliminating the temptation for intrigue—which, after all, originated with the Great Powers themselves—ensuring a decent administration for the city. If Great Britain, France, and the United States could come to an agreement on this one point, international difficulties in the Near East would begin to melt away. But so long as their mental horizon in regard to this problem is bounded by votes, francs, and dollars respectively, they may be certain that they will encounter the maximum of trouble, whatever solution they adopt. In other words, the three Powers themselves will have to go through exactly the same process of regeneration to make the international government of Constantinople a success as to achieve the requisite improvement of the Turkish administration. Failure on their part to get rid of the old Adam in themselves will lead to practically the same result as far as Constantinople is concerned, whether the Porte is removed or not; but if it should be removed, they will have in addition to face the certainty of serious unrest over a large part of Asia. Incidentally, it may prove easier to purge Turkey of its evil geniuses, if the Sultan remains in Europe, than if the whole Ottoman Administration were relegated to the less accessible Asia Minor.

Another attempt at the assassination of a Minister has to be added to the record which Egypt's "Nationalists" are apparently bent on piling up. As Sir Ismail Sirry Pasha was motoring in Cairo a few days ago—on January 28, to be exact—a youth threw a bomb at him. Fortunately the Minister was not hurt, though the car in which he was riding was damaged. But unfortunately the person who threw the bomb escaped, and though the Government at once offered a reward of £E500 for his arrest, or for information leading to his arrest, he still remains at large at the time of writing. What object the perpetrators of these outrages hope to achieve

Digitized by Google

by these bomb-throwing tactics it is not quite easy to see. Granting for one moment that they might produce a species of reign of terror which would make it difficult to form a Ministry, would they be any nearer getting power into their own hands? If they think so, they are indeed wildly mistaken. It is difficult to imagine that even folk so lacking in judgment as they have so far shown themselves to be could fall into such gross error, and it looks as if these cowardly attempts must be set down to the ebullition in spite pure and simple. In this case it is possible to regard them as hopeful symptoms.

The Milner Mission, meanwhile, continues to work, not unsuccessfully, along its own lines. Some of its members have been visiting centres in Upper Egypt, others in Lower Egypt; and though their visit to Luxor coincided with a demonstration which had been organised on the instigation of a Zaghlulist agent, the members of the Mission were not subjected to any inconvenience. As far as it goes, this is encouraging, but unfortunately the Mission is encountering a good deal of passive resistance. At Assiut, for example, as *The Times* correspondent reports, Mr. C. J. B. Hurst, the legal member of the Mission, wished to attend the sittings of the native Court. The local Bar, however, learning of his intention, requested the President of the Court to dissuade him from his purpose. The reason given for the objection was rather quaint: Mr. Hurst's presence, said the objectors, would excite the lawyers and prevent them doing their duty to their clients. In the circumstances, Mr. Hurst decided to spare the feelings of the shy legal lights. The outside world will form its own conclusions on the merits of the case, and will be unlikely to think highly of the mental balance of the objectors.

The agent sent to Zaghlul Pasha by his friends in Egypt delivered last week the letters of which he was the bearer, and, doubtless as a direct result, Zaghlul made a statement of some interest on the situation and on his own attitude. The Egyptian Delegation, he declared, was prepared to negotiate with the Milner Commission, if only the Commission "is able to declare that it has been authoritatively asked by the British Government to negotiate with the Egyptian Delegation as the representative body of the nation." The object of the negotiations, he added, would be to arrive at an agreement which would give Egypt "complete independence," while at the same time safeguarding British interests in that country. It almost looks as if the first step towards an understanding would be to get a clear definition of the "complete independence" that Zaghlul Pasha has in mind. It is with real pleasure that we note his declaration that the Egyptians, once granted their independence, would wish more than ever to remain faithful friends of Britain. Left to themselves, the bulk of the Egyptian people would almost certainly feel nothing but friendship towards Britain, to whom—as they recognise when they pause to think—they owe their real freedom and prosperity. The present irritation and restlessness are but a passing phase. Reconciliation, however, will not be helped on by Zaghlul's attitude to the ex-Minister's representations regarding the Milner Commission. In this reply he urges Egyptians to stand firm, as, in his opinion, it can only be a matter of time till a British Labour Ministry will grant all their demands.

The Turkish Cabinet is still in difficulties, but—at the time of writing—it is still in being; and possibly the latter fact is more remarkable than the former. In view of its unenviable position between the Allied High Commissioners on the one hand and Mustapha Kemal and his troops upon the other, the Cabinet is surely entitled to congratulate itself upon its powers as an equilibrist, which seem to be second only to those of the late Abdul Hamid. Its latest trouble has been due to a dispute with the Nationalist leaders over a scheme of financial reform prepared for submission to the representatives of the Entente. The Mustapha Kemalites insisted that this scheme ought to be submitted to them before it is placed before the High Commissioners, while the Cabinet took up the attitude that, the Chamber of Deputies having been convoked, it was no longer bound by the bargain which it entered into with the Nationalists last autumn. The split appears to be a serious one, and as one result a new group of Deputies has been formed, styling itself the *Ahd* (Covenant), and bent upon bringing about the downfall of the Cabinet. It is possible that the Cabinet itself would regret that event as little as any body in Turkey.

According to a Dutch newspaper, the mandate for Armenia will be offered to Holland, if the United States refuse to accept it. What Holland would have to say on the point remains, of course, to be seen; but it is clear that whatever country accepts the responsibility is likely to find its hands full. Quite apart from the Bolshevist menace, which in the case of Armenia is not by any means a negligible one, there is every prospect that the Turkish "Nationalist Army" will make trouble as soon as the decisions of the Peace Conference regarding Armenia are made known. As the war showed, the Armenians are brave fighters; and they have provided several military leaders of distinction. But to put them in a position to defend themselves effectively, they will require instructors and munitions of war from the West; and in other directions they will need advisers. It is to be noted that a telegram from a British source at Baku reports that on January 24 a force of Armenians, with artillery, crossed the frontier of the Azerbaijan Republic, destroyed twenty-four villages, and killed many of the inhabitants. The British representative, the message added, was doing his best to bring about peace. Raids of this kind will not make any Power anxious to accept responsibility for Armenia.

It is announced that the evacuation of Beyrout by British troops was complete on January 19 at noon, and that the whole of the area of French occupation is now clear of our troops. Other news from that region is, it is to be supposed, less satisfactory for the French. All available troops from the Lebanon and Beyrout have been dispatched against what are described as the revolutionaries in the Merj Ayun district, and it looks as if further reinforcements will be required ere long. Moreover, it is reported that differences have arisen between the French and the Lebanon authorities, who resent what they regard as excessive interference in matters of local government. It is significant that the clergy are reported to have ranged themselves against the French in this matter. If this be the attitude of the inhabitants of the one part of Syria which was formerly strongly Francophil, the outlook, for the French mandate—or occupation, as it is now called—cannot be regarded as very hopeful.

One of the disadvantages of the present news service from India is that the cables, when taken alone, tend to give an altogether distorted view of the progress of affairs in what was formerly termed the Dependency, but is now aspiring to the more honourable title of Dominion. Looking back over the past few months, one finds that the information supplied to the public in this country has related almost entirely to frontier troubles, political manœuvres, strikes, and financial "booms," but the real India pays little attention to such matters; the frontier is a long way off, industrial and financial affairs concern directly only a few cities, and while interest in politics is spreading rapidly, the subject is not yet a staple of conversation in the villages. At the moment politicians appear to be busy in organising, rather than demonstrating, and the occasion afforded by the lull may be employed in glancing at a few topics of real importance to India itself, and consequently to all parts of the world with which India maintains relations.

Stern necessity compels India to think of the weather before anything else, and all the available information on this point is satisfactory, indicating that the year ending in June will be marked by large and profitable agricultural production. The mines are busy, and also the looms, except where the hands have struck, and it may fairly be claimed that India at least is play-

Digitized by Google

ing her part in helping to feed and clothe a hungry and a naked world. The loss to production resulting from the recent strikes is in itself deplorable, but we fear that it was inevitable in the circumstances, and the events of the past month go far to confirm the view previously urged in these columns, that the organisation of Indian factory labour must be taken in hand without delay. The world has not learned how to do without strikes, and India must expect to have her share; but it will be a definite forward step when the workers are able to put forward intelligible demands, and when the public can form a definite opinion on the questions at issue between men and masters.

The importance of this matter is bound to increase with the progress of industrial development, which is now practically assured. So much has been said of late regarding the evils of the "boom" in company promotion that it is well to insist upon the other side; if some recent flotations have been sheer gambles, the last few months have seen the inception of a substantial number of thoroughly sound concerns, and, what is even more significant, a definite broadening of the basis of industrial enterprise. The old gibe that while Bombay is a Parsee city, Calcutta is Scottish, will soon be obsolete; in both those cities, and in several others, the mercantile classes are beginning to interest themselves in making as well as selling, and their numbers and collective resources are so great that when once they get fairly started, the results will quickly put existing achievements in the shade. Unfortunately, these classes have as yet but little knowledge of the way to manage workmen, and their appearance as employers makes it all the more necessary that the whole problem of labour should be tackled in earnest.

If we ask whether due preparations are being made to cope with the increased production which may now be confidently anticipated, we are met by the fact that owing to the war the railways have fallen below the standard required to handle even the existing traffic, so that the work of the moment is to complete the equipment of open lines, rather than devise extensions which would result only in an increase of congestion. The extensions will come in due time, but the authorities are undoubtedly right in concentrating their immediate resources on operations which make little show and arouse no enthusiasm among the general public. Of greater interest is the movement towards increasing the number of modern seaports, a matter in which India has undoubtedly fallen behind. We have the great peninsula flanked by Karachi and Chittagong, between which there are only three important harbours, or, say, one to about a thousand miles, and while everyone is proud of the harbours which exist, no one who has studied the question will deny that they require to be supplemented in the interests of the country as a whole. A few facts may be brought together to show that this question is at last receiving the attention which it claims.

On the East Coast we have the Bengal-Nagpur Railway pressing for two outlets between Calcutta and Madras, one at Vizagapatam to serve the eastern side of the Central Provinces, the other somewhere on the coast of Orissa. Further south, Tuticorin has aspirations as well as possibilities, while, on the West Coast, Cochin is preparing to go ahead, the Mysore State is apparently in earnest over the project for restoring the forgotten glories of Bhatkal, and Bhatkal's historic rival, Goa, is also said to be aroused from her long repose. Nobody expects that any of these places will rival Calcutta or Bombay, but all the same there is room for them, and perhaps for more; under the new conditions almost every part of India will have something to sell, and local patriotism is for once in accord with sound economic principle in insisting that produce shall find a direct route to the seaboard. Such are the tendencies at work beneath the froth resulting from the political ferment—increased production, a broadening of the basis of industry, and better facilities for transport, the things which India needs most if she is to prosper as a modern State.

THE WEEK AT HOME.

Royal Tours.

The Prince of Wales leaves for Australia and New Zealand in March, and his programme is already so full that it is anticipated he will not be back in England again until October. It is suggested in some quarters that he may visit India towards the end of next year, or early in 1922.

Princess Mary is also to make a trip abroad—in her case of a more restricted nature. She is to visit the Northern capitals of Europe—Christiania, Stockholm, and Copenhagen. In each case, she will find relatives to welcome her.

The Exchanges and Finance.

The collapse of the foreign exchanges has been the main topic of the City during an eventful week. Many have made money out of it, but this type of speculator is not very useful to the country. The problem is quite beyond the bankers or the ordinary operations of trade, which indeed it paralyses; and the Treasury have taken the right step in promising to look into the whole international position. The move, indeed, might profitably have been made before, but there may have been an impression in official, as there certainly was in unofficial, quarters that something would be done in America. It has now been made quite clear, however, that no action will be taken by the United States, where the trend of public opinion seems entirely averse from mixing in European affairs at all—an unfortunate reaction from the war.

At the bankers' meetings this week, different causes have been assigned for the present troubles, but all are agreed that the remedy is to work more and spend less. As a matter of fact, England is working well, as the steady monthly rise of exports proves; but we are certainly spending too much, the Government as well as the people. There is, of course, a great deal of excuse for both—the former having reduced war expenditure, are faced with housing and education and other problems which swell their peace expenditure; while the public, compelled to buy at high prices, is equally driven to make good the wear and tear of war.

The American suggestion for stabilising the New York exchange—that we should export gold, a course that was adopted in war-time—is not likely to be adopted; and since for a variety of reasons we cannot greatly increase our exports to the United States, there is an idea current that it would be good policy to restrict imports from America to absolute necessities—a course which would speedily improve, if not right the exchange. Recently, for example, we have imported a great deal of very bad American whisky as well as more wholesome food. The food we cannot well do without, but the whisky and a good many other things are no great gain to this country. It is, of course, clear that the more food we grow at home and the more goods we manufacture at home the stronger is our position both economically and politically.

At the moment America is trying to gain the financial leadership of the world, as a result of the enormous wealth gained by her long period of neutrality during the war, but it is not generally believed that she will be able to retain it. One condition, however, of the restoration to London of its financial supremacy is the stabilisation of the European exchanges, and here the problem is both difficult and complicated, but not beyond remedy.

For the time being, of course, Russia must be left out, as we do not know her attitude towards her debt. At the other end of Europe the Spanish exchange is against us, because they are selling sovereigns to make good losses on German marks; the Dutch exchange is slightly against us; the French and Italian exchanges so heavily in our favour that they handicap our trade by making it more profitable for both countries to trade with Germany. The central problem, therefore, is the restoration of the German exchange, which can only be done by providing Germany with raw material with which she can employ her population and export and buy manufactured goods. The idea of cutting Germany

Digitized by Google

off from the world's markets has, of course, gone by the board, but there will probably have to be some system of industrial control. It has been suggested that an English banker, manufacturer, and distributor should proceed to Germany to study the proper method on the spot.

The case of Austria is, of course, more serious but less important than that of Germany. Austria in these days means Vienna, and Vienna is starving. But in this instance charity is needed, more than any other form of assistance. At least Britain is doing what she can to feed her late enemy.

Swallowing a Camel.

The idea which seems current in America that England is bankrupt should receive a rude shock from Lord Leverhulme's meteoric purchases. Hardly a week elapses but what he buys some great enterprise, and adds it to the original Sunlight Soap Company; sometimes it is another soap, sometimes a chemical or margarine factory, or a household requisite like Sanitas. Recently it was the Hebrides, but the latest purchase has beaten everything—it is nothing less than the Royal Niger Company, a very considerable organisation indeed. The purchase is obviously designed to facilitate the obtaining of the tropical produce required by Lord Leverhulme's many factories; but if we had been told he had bought the London County Council one could hardly have been more surprised. The Leverhulme interests are now unquestionably the largest of their kind under a single head in the world.

Politics and Paisley.

Party politics have been not so much dull as dead this week, except at Paisley, which is, after all, a good way away from London. There Mr. Asquith is said to be making headway, but the Independent Liberals confess themselves a little nervous whether the Labour man may not after all have the best of it. The other two by-elections that are proceeding at the moment are hardly given half a dozen lines in the newspapers—a sufficient index of their importance in the eyes of the public. Next week, when Parliament meets again, interest will revive, but it will take some time for things to get into their stride. The rumours of an early general election and a speedy collapse of the Coalition have died of inanition. The Government feel fairly secure, Labour is not ready for power even if the country is ready for Labour, and the Independent Liberals faint at the very mention of the word election.

Mr. Barnes Resigns.

The resignation of Mr. Barnes is a distinct loss to the Government. He seldom spoke, and nobody could call him eloquent, but he carried weight, and his serious manner always added to the impression created by the matter of his speech. He reminded one, physically as well as mentally, of the ideal full back at football—he seldom had an opportunity for display, and never sought it, but those who came up against him were usually conscious of a few sore places afterwards.

Labour is gradually withdrawing from the Government—only Mr. Roberts and Mr. Parker are now left—and this may be taken as a sign of preparing for office, whenever it comes. Mr. Barnes is certain of a high place in a Labour Cabinet, and he would probably do well as a Home Secretary—a post in which it is necessary to have a man who cannot be stampeded by some sudden agitation or caprice of public opinion. One might as well try to remove a block of granite by sneezing at it as stampede the solid Mr. Barnes—and he will be a sore trial to the Extremists in his own party on that account, for he is essentially a Moderate.

The Referendum?

Some interest has been excited by the rumour that the Government are considering the taking of a referendum on the subject of nationalisation. The referendum is an innovation in this country, but Mr. Lloyd George is not the man to boggle over precedent unduly, and it would at least clear the ground for the discussion upon which Labour insists. That there would be a majority against nationalisation is practically certain, and for that reason Labour may object in advance. But it is always a confession of weakness to object to a referendum—it is sure to be branded by the other side as undemocratic, the one mortal sin in politics.

The Wave of Crime.

There has been a great deal of discussion recently as to the cause of a sudden outbreak of crime and outrage all over the country. Many banks and post offices have been robbed, several gruesome murders have been perpetrated, and shooting affrays and forcible seductions seem to fill a large space in the newspapers. Leading articles and special articles have attributed this wave of crime to the aftermath of war, the decay of Churchgoing, the existence of unemployment and Labour unrest, or whatever particular bee the writer happened to have in his bonnet at the moment. Unfortunately for these theories Scotland Yard, which knows almost as much about crime as journalists do, has issued an assurance that there is rather less crime in the country than after the Napoleonic wars, and that the actual amount is much the same as immediately before the present war. It only happens to be more spectacular.

A Message from Mars.

No week is complete nowadays without its Press stunt, usually in the evening or Sunday papers. This week we have had two. A clergyman has produced his revelation of the next world—by means of automatic writing—for the curiosity and, let us hope, the edification of Sunday readers; from a hasty glance over the first instalment it does not seem to differ appreciably from the average spiritualist document.

More excitement was caused by the rumour that a real message from Mars had at last been received by wireless. It is true that Signor Marconi derided the idea, and the learned laughed, while the vulgar gaped; but the day was dull, news was slack, the papers had plenty of room to spare, and the great advantage of multiplying Universities is that there are always plenty of professors willing to talk pseudo-science to the reporters. By the side of this, the threatened influenza epidemic fell flat, but after twenty-four hours the thing collapsed. The Martians, like the sea-serpent, always time their visits for the Parliamentary recess.

The Week's Books.

The most interesting book of the week has been "Science and Life," by Mr. Frederick Soddy, who is Professor of Inorganic and Physical Chemistry at Oxford. Mr. Soddy sees in the discovery of radio-activity the hope of the world, and the bulk of his work deals with its effect on the future of our civilisation. He also discusses some questions of theology and metaphysics with a more open mind than one generally finds in those who have served a long apprenticeship to the exact sciences.

Those with a taste for historical biography will enjoy the "Life of Henry Fox," first Lord Holland, in two volumes, by Lord Ilchester. There is a thumb-nail sketch of this first Fox—who was not a very reputable person, even for an eighteenth century politician—by Macaulay, but a full-length account of the founder of a remarkable family will find many readers. This book, like that of Mr. Soddy, is published by John Murray.

Those who are tickled by outspoken diatribes against prominent men of the day will thoroughly enjoy the latest volume of Mr. Wilfred Scawen Blunt's "Diaries." Mr. Wilfrid is a Sussex squire, and, as everyone knows, his political creed is a simple one—that every Egyptian nationalist and Indian agitator is a heaven-sent patriot, and every English administrator and statesman a diabolical tyrant or fool. The more prominent the Englishman, the worse his character. In the present book Lord Kitchener is described as a "lap-dog"—surely the last epithet one would have expected. Roosevelt appears *tout court* as "that swine," but these are the milder words in Mr. Blunt's vocabulary. The real villains of the piece are Lords Cromer, Grey of Falloden, and Morley. But Mr. Blunt's comments on these gentlemen are too disgraceful to be given wider currency. There should be limits even to the bad temper of a disappointed man.

OCELLUS.

THE NEAR AND MIDDLE EAST.

(From Our Own Correspondents.)

EGYPT.

CAIRO, January 20.

The Milner Mission.

The Milner Mission returned from Alexandria on Friday last after having spent five days in that city. During the whole of the time they were in close contact with the European communities. This was indeed the main object of their visit. Part of the Mission were the guests of Mr. Harry Barker, the Chairman of the British Chamber of Commerce, and the remainder were accommodated by Mr. Abdy. During their stay in Alexandria Lord Milner and his colleagues received deputations from the British, French, Greek, and Italian communities. A free exchange of views took place in each case, and the present situation was fully discussed. The Mission gave two banquets at the Savoy Palace Hotel, to which the leading members of the foreign communities were invited; while Mr. C. J. B. Hurst, the legal member of the Mission, paid a long visit to the Mixed Courts and met the judges of the Mixed Court of Appeal and the members of the Mixed Bar, with whom he fully discussed the question of judicial organisation. (It is noteworthy that while none of the Egyptian members of the Mixed Bar attended, practically all the Egyptian judges were present.) In addition, Lord Milner and his colleagues found time to visit the Municipal Museum and to take tea with the Municipal Councillors, and Lord Milner also drove out to Victoria College and distributed certificates and prizes to the boys, to whom he delivered an admirable address on citizenship.

These five days proved a very strenuous time, but by all accounts the Mission did very good work, and completely reassured the European communities, and especially the legal element, who one and all—and perhaps not unnaturally so—have been somewhat anxious as to the manner in which the contemplated constitutional and other reforms might affect their interests. I gather that the irritation and soreness, which as a result of the events of the past two years had been created amongst these elements of the local population, which are so intimately concerned with any change, administrative or otherwise, that may be made, have been to a very great extent allayed, and that a spirit of goodwill and a desire to co-operate with those who are endeavouring to bring about a satisfactory settlement of the present complicated state of affairs have been brought into being as a result of the Mission's visit.

Some of the members are visiting the provinces in order to obtain an insight into the working of the administration in the districts, and in the hope of getting more closely into touch with the *fellah* masses. A determined effort is being made by the Extremists to prevent any contact with the provincial officials and population, just as they have done in Cairo and during the visit of the Mission to Alexandria. But notwithstanding the activities of the students, who, as usual, are acting as willing agents, and are using methods of intimidation for all they are worth, the Mission is getting all the information it requires. Meanwhile, except for the continuation of political discussions in the local press, there is a lull in the political situation, and every one is awaiting news from France, where Aly Bey Maher, the member of the Cairo Committee who bears letters to Zaghlul from the latter, and from the ex-Ministers who have been discussing informally with the Mission, is just about due to arrive.

The Attempt on the Prime Minister.

The trial of Erian Youssef, the Copt who tried to assassinate the Prime Minister, his Excellency Sir Youssef Wahba Pasha, by throwing a bomb at his car, took place on Friday, the 16th—it was postponed from the previous day—before a Military Court sitting at the Ministry of Justice. Mr. Maxwell prosecuted, and the counsel for the defence were Mr. Reginald Silley and Maïtres Wahib Doss and Halim Effendi. Judge Thorp acted as Judge-Advocate General. There were very few Europeans present, but, as might be expected, the well of the court was filled with Egyptians, many of them of the student class. The accused, who was certainly less jaunty than at the time of his arrest, appeared very self-composed, and repeatedly saluted and smiled at friends whom he recognised amongst the audience. Counsel for the defence raised an objection to the jurisdiction of the Court on the plea that this was a criminal act committed by one Egyptian subject on another; that although the latter held an official position, the attempt on his life could not be considered as prejudicial to military interests; and that as the Prime Minister last summer had issued a notice to the effect that the Military Courts then existing had been done away with, the accused in this case should be tried by an Egyptian Criminal Court, just as is being done in the case of the man who attempted the life of the late Prime Minister, Sir Mohammed Said Pasha. The Court considered the objection, but over-ruled it, and the trial proceeded. Numerous witnesses were called for the prosecution and the defence, amongst them Wahba Pasha himself, but the proceedings did not last longer than a day, and the Court, after calling for evidence as to the character of the accused, announced that its verdict would be made public after it had been approved by the Commander-in-Chief.

The Cotton-Tax.

The imposition of the cotton tax has given rise to a certain amount of adverse comment, mostly, and perhaps not unnaturally, from the Egyptian side. The urban population has not bothered much about it, nor have the agricultural elements; and the main comments have come from the Extremist Press, who are trying to make political capital out of it. One of their main objections is that the commercial community, which has accumulated such vast profits during the war, has been left untouched, and that as the agricultural classes contribute to the administration of the country in the form of land-tax, the opportunity should have been taken to bring the commercial community into line, and, by imposing a traders' or income-tax, make them bear their share of the burden which is now imposed on the agricultural community. That is very well, and no one more than the financial authorities would welcome the chance, not only of exacting some contribution from the prosperous commercial element, but also of more evenly distributing the burden of taxation. Indeed, in the more recent reports of the Financial Adviser, the desirability of such a course has been frequently animadverted upon. What the critics of the new impost overlook, however, is the fact that the Egyptian Government cannot impose taxes on the foreign communities without the consent of the fifteen Powers enjoying treaty rights with Egypt, and that, if a traders' or income-tax were imposed at the present

moment, it would only be recoverable from Egyptians and local subjects, who by no means constitute the whole of the commercial community—unless it were imposed under martial law, a procedure which would surely not be to the taste of the Extremists, since the abolition of the military regime is pressed for by them. So long as the Capitulations exist, so long will foreigners escape local taxation in Egypt, and, if the Extremists wish to bring the foreigners into line with the Egyptian community, they have it in their own hands to do so, for the sooner they adopt an attitude which will conduce to a removal of the present impasse, the sooner will a settlement of the political affairs of Egypt be arrived at and consequently will it be possible to remove the Capitulations.

ROUMANIA.

BUCHAREST, January 16.

Exit Dora.

At a Cabinet meeting, held just before the departure of the Prime Minister for Paris, a decree-law was drawn up suspending martial law and the "preventive" censorship in the area comprised within the former frontiers of the kingdom with the exception of the Dobruja. On Tuesday the King appended his signature to the document dispensing with the services of the Roumanian "Dora," who yielded nothing in unpopularity to her English sister. It was generally understood that Dr. Lupu, before he accepted the office of Minister of the Interior, insisted upon a definite promise that civil authority should again be given control of the administration of the country. The reasons for continuing military control in the Dobruja are probably connected with fears of Bulgarian intrigues and the decision to confine refugees from Southern Russia to the district of Tulcea, although no restrictions will be placed upon any refugees who may wish to leave Roumania for a foreign destination. Alarming reports reach us daily of the ravages made in the Ukraine by the pneumonic plague, and the sanitary authorities here have insisted upon a strict quarantine of all travellers from South Russia, who are only allowed to enter the country at certain points.

BUCHAREST, January 22.

Bye-Elections.

Candidates are coming forward for the Senatorial bye-elections, and in spite of rumours to the contrary, M. Take Jonescu is still firmly advising his party to await the next general election before entering the arena. On the other hand, the Liga Poporului are preparing to fight these bye-elections, and General Averescu has announced his intention of standing for the district of Rimnic-Sarat. The elections will be watched carefully, as they will afford a more severe test of the strength of the Peasants' Party than the November elections did; although the limited franchise under which senators are elected does not give the peasant equal opportunities to register his opinion, the political manœuvering demands a better organisation, and there is less chance for a dark horse to win. At the last general election the Peasants' Party candidates used the same colours as the Liga Poporului (Averescu's Party), and it has since been claimed that many peasants voted for the candidates of the former party, not realising that the Averescans had refused to stand. The General is a most popular figure among the peasants.

The Peasants' Party of the Ardeal recently held a meeting at Sibiu, which was attended by over three hundred delegates, and arrangements were made to oppose the Nationalists at the next elections. In the Old Kingdom many of the Peasant Party deputies have been working hard during the holidays, holding meetings in their constituencies to explain the policy of the Government and to point how the peasant can co-operate, and, indeed, must do so, if the new measures are to be successful.

Russia.

With thousands of refugees from Southern Russia clamouring for admission into Roumania, it is natural that the new attitude of the Allies towards Russia should cause surprise and a certain confusion. Unanimity of opinion prevails as to the British origin of the policy, and it is generally conceded that the step from commercial to diplomatic relations will inevitably be taken before long. Too much of the Russian Revolution took place on Roumanian soil for any illusions to remain here as to the nature of the Soviet Government, but there is no secret as to the present whereabouts of the Roumanian gold reserve. So if the first shipment from Moscow includes 493 million lei in gold for the Banca Nationala, not to mention the stocks, bonds, pearl-necklaces, and other valuables confided by their owners to the official safety deposit vaults in Bucharest, and subsequently sent to Moscow for safe keeping at the time of the German invasion, Mr. O'Grady may anticipate a warm welcome should he ever pass this way.

One of the causes of the tremendous rise in value of certain securities last summer is stated to have been the scarcity of stock on the market. There is some delay in obtaining duplicate certificates for those sent into Russia, and Stock Exchange speculators were able to manipulate the market by dealing in really insignificant blocks.

Rural Police.

New laws altering the character and status of the Gendarmerie Rurale are being prepared by the Ministry of the Interior. It is announced that the numbers of these police will be decreased, and that the body is to be put under the control of the civil authorities. The Gendarmerie Rurale is at present a semi-military organisation, whose abuses of power and petty tyrannies the peasant has resented for many years, without possessing a convenient means of redress. The policy of decentralisation which is now being pursued in planning reforms of the civil administration of the country naturally involves a change in the status of the gendarmerie, if anomalies are to be avoided.

Borcea Bridge.

Erroneous reports have apparently been circulated recently to the effect that the bridge of boats at Borcea, which carries the railway line from Bucharest to Constantza across an arm of the Danube, has been removed and the line interrupted. This is not the case, and trains are running daily. There is no question of removing the bridge unless the Danube freezes. There is no prospect of the river freezing for some weeks, as the weather has been mild and spring-like up to the present. To-day, however, there is a heavy fall of snow, although the temperature is still mild and there is no severe frost.

The Cluj University.

Great celebrations are being organised to solemnise the inauguration of the University and National Theatre of Cluj (Kolosvar), in Transylvania, which will take place on January 31 and February 1 respectively. The King and Queen and Royal Family will take part in the ceremonies, and the Parliament will have a holiday for two days to enable the deputies and senators also to be present. There will be a gala performance at the National Theatre, at which the King and Queen will be present, on the evening of

January 31. On the following day, at 11 a.m., the inauguration of the University will take place, and the professors will be sworn in. At one o'clock the University will give a banquet in the salons of the Prefecture, and at five in the afternoon there will be a reception at the National Theatre. For the evening the students are arranging a fête in honour of the Royal Family. All Cluj is busy with preparations, which will be on a large scale. The new University is a great source of pride to the Roumanians, who intend to make it an important scholastic centre.

Celebration of the Union of the Principalities.

This celebration will be extended this year so as to commemorate the union of all the provinces constituting Greater Roumania. The League for the Union of all Roumania is making special preparations for fêtes in all the villages, and at Bucharest there will be a huge popular manifestation.

Women's Vote.

A Commission appointed to inquire into electoral and administrative reforms has almost finished its report. The Commission has pronounced itself in favour of giving women the right to vote in the municipal elections. It is thought that the majority would also be in favour of women voting at the legislative elections for the Chamber of Deputies and the Senate.

Epiphany Ceremony.

The annual ceremony of the Blessing of the Waters took place last Monday (January 6, O.S.). The King, attended by a large suite, was present, and after the immersion of the Cross, he held a military review. Several of the Foreign Military Attachés were also present at the ceremony. The weather was extremely fine, and the great crowds assembled on the quays gave the King and the troops an enthusiastic welcome.

TURKEY.

CONSTANTINOPLE, January 5.
(Delayed.)

Christmas and the New Year.

Christmas and the New Year have been celebrated very quietly, and the exceptionally mild weather made it hard for many to realise that the "festive season" had arrived. The non-Turkish Press, as may be expected, came out with articles hailing the New Year as one of final deliverance, and it is significant that most of them expressed the liveliest satisfaction at recent proofs of the solidity of the Anglo-French Entente which, they realise, is the only guarantee to-day of peace and liberty in Europe.

Apropos of the New Year, one of the Turkish journals made an unfortunate *gaffe*, which was amusing, in a way, but which was also a painful reminder that the Young Turk mentality of to-day is very different from that of the Young Turk exiles in Paris some twenty years ago. Commenting upon the law promulgated by the Unionist Government during the war, the *Tasfiri Efkiar*, a Unionist organ, which finds it advisable at present to adopt an anti-Unionist tone, remarked: "This date which has for the Christians a religious significance (!) for us is of neither religious nor historical significance. . . . Let us hope that as soon as peace is established . . . we shall put an end to this anomaly, and adopt as the commencement of the year a date in conformity with our religion and our history."

Had some wretched little provincial paper published the above, it would have been merely a joke, but when the *Tasfiri Efkiar*, one of the oldest Turkish journals, and one which has a really brilliant record, adopts such a tone, one realises into what unworthy hands has fallen the heritage of Shinassi, Ebbuzzia Tewfik, Zia Pasha, and others, who were the real pioneers of that awakening of the Turkish intellect which has so grievously failed to fulfil its early promise.

The Chamber.

Last week, in reply to a delegation of newly-elected deputies, the Grand Vizier stated that the convocation of the Chamber would have to be temporarily adjourned in order to permit the elaboration of certain laws which were being considered. In any case, it is difficult to see what possible difference the convocation of Parliament can make; for even Turkish opinion, to a very great extent, realises that the elections have been farcical where they have not been accompanied by tragedies and that the new Parliament will be unworthy of either respect or confidence. There is ample evidence that in Anatolia bayonets and corruption were the principal items in the election campaign.

The Peace Terms.

A sensation has been caused by the publication of the statements to the effect that while Constantinople will remain the religious capital of Islam, the seat of Turkish Government will be removed to Anatolia, and that the Straits will be internationalised, with Anglo-French control preponderating. It is generally felt here that the question of Constantinople is really bound up with the question of establishing an effective control over the Turkish Government, and for that reason it would be better that Constantinople should remain the seat of Turkish Government. Provided there is to be a really strong control, neither Americans nor Greeks would mind if the Turks were allowed to keep their capital. The real questions which are of vital interest to everyone are the Allied decisions concerning Smyrna and Armenia. It is taken for granted that in one way or another Turkey will be made safe for Christian life and property, and the main interest in the settlement concerns the extent to which national aspirations will be satisfied—or dissatisfied.

Futility.

Ahmed Riza Bey, in Paris, and Ghalib Kemali Bey, in Rome, have been making all sorts of attempts to create a current more favourable to Turkey. There are only faint indications of the line adopted by Ahmed Riza Bey, but the *Giornale d'Italia* has lately published some interesting declarations of Ghalib Kemali Bey, who expresses the deepest sympathy of the Turkish nation for the unfortunate Armenians, who, he says, were the victims of Russian machinations. The former member of the Armistice Commission then mentions Sultan Abdul Hamid's "liberality" towards the Armenians, and describes the massacres as a "just but bloody repression" of a revolt instigated by Russia, while he considered the slaughter of Armenians during the war was counterbalanced by the massacre of 135,000 (sic) Moslems by Armenians, and 300,000 (sic) by the Russians.

The Nationalists.

The gradual advance of the French in Anatolia seems to have upset the Nationalist Committee, and its headquarters have been removed to Eski Shehir. There is reason to believe that a considerable section of the Nationalists would rather see the Parliament held in that city than in the capital.

Sheikh Ibrahim, who revolted against the Nationalists in the Sivas province, has just published an interesting document upon the Nationist movement. After stating that the population was induced to adhere to the movement by false information to the effect that the Armenians intended to occupy the country, the Sheikh continues: "There is no connection between the National Organisation and the people; for the masses, impoverished and dispirited, take no interest in such questions; the middle and intellectual classes can understand nothing, for the Central Committee keeps all its decisions strictly secret. . . . The partisans of the Congress (Nationalist) are all former leaders and satellites of the Union and Progress."

While it is the "middle and intellectual classes" who are really responsible for the Nationalist Movement, it is none the less true that the masses are heartily sick of everything, and want nothing but peace. Now that the moment has come for the peace terms to be made known, it will be interesting to see how far Mustafa Kemal Pasha will be able to put his schemes

Digitized by Google

into practice. He may be able to raise 50,000 men, and a considerable section of the regular Army is almost sure to join him, making, say, another 40,000 or so. But how are they going to be maintained?

Efforts are also being made to arouse the religious sentiments of the Anatolian Moslems, and to obtain the active support of Islam in general. Under the auspices of the Sheikh-ul-Islam, the Islamic Development Association, or *Téali Islam Jemieti*, has been formed, and although very little reference is made to it in the Stamboul Press, provincial journals are far more communicative. It appears that there are branches of the association throughout the provinces, where the matter has been taken up, if the provincial Press is to be believed, with the greatest enthusiasm. How far the Islamic world will lend its active support to the Turks remains to be seen; but the dismemberment of the Turkish Empire may easily provide an excuse in certain quarters for making trouble.

It must be admitted that there are some disquieting signs. It is not difficult to see that the Nationalists are relying to a very great extent upon being able to profit from disturbances in the Islamic world. The Anatolian papers, which are all under the control of the Nationalists, give exaggerated reports of every occurrence that may be contrued as a sign of support from the rest of Islam. For instance, a paper published at Balikeser in the Smyrna province, entitled "To Smyrna," declared that an Afghan Army had taken Krasnovodsk, that there had been a great pan-Islamic congress at Tashkend, and that Egypt had risen against the British. In reading these provincial papers, one might easily imagine that the war was still continuing. There are official *communiqués* from the "fronts," and announcements of police regulations concerning the registration of travellers, together with regular reports of the general situation.

Such is the general tension that it is to be hoped that the Allies, now that they have decided to manage without America, will get the job over quickly.

BULGARIA.

SOFIA, January 9.

Ratification of the Peace Treaty.

On the 5th inst. the debate upon the ratification of the Peace Treaty began in the Chamber. The document had been duly translated into the Bulgarian language, and a printed copy was handed to each Deputy. The debate was opened by M. Sobiroff, Moderate Socialist, who declared that the group to which he belongs would not vote for the ratification of the Treaty. M. Dimitroff, Communist, stated that, in spite of their direct participation in the peace negotiations his group had decided to abstain from voting for the ratification. M. Vasilieff, a lawyer, representing the Democratic group, said it was a duty to express the sincere thanks of Bulgaria to those few who in Paris had the courage to denounce the Peace as a monstrous one. This was greeted by prolonged cheers from all the Chamber. The speaker then read a resolution of protest from the national deputies from parts of the country taken away from Bulgaria. M. Alexander Radoloff, Agrarian, begged the Chamber to vote the Treaty, and proposed the Order of the Day on the question of ratification; which was adopted. M. Theodor Theodoroff, leader of the National Party, then delivered a very eloquent speech. "The Treaty," he said, "hems us in and suffocates us. I consider this is not the time to ask who brought the country to such a pass, who is responsible for the nation's degradation and disappointment. Why does Paris give us this monstrous peace? Because we were there regarded and treated as monsters; for our opponents had already succeeded in depicting us as a robber and disturbing element in the Balkans. The accusations made against us were, indeed, frightful. But I do not wish to dwell upon the moral standing of our accusers, who so flagrantly violated the noble engagements into which they had solemnly entered for the good of mankind. They will have to answer for their conduct in History! . . . I protest, as you do, but I wish at the same time to remind you of my optimism. I beg you to keep your belief in the lucky star of our race. We can, and we must, prove to those who have forced on us this fearful Peace that we deserve a better fate. But we must exercise tact, tranquillity, self-control. I hope that in a short time we shall attain success through this course. Let us by our prudent internal policy make our judges feel that they have punished us with extreme severity. Let us appeal to their conscience, and make them feel sorry for the unjust treatment of our nation and revise their sentence on us."

M. Theodoroff went on to say: "I can tell you that the signs of the Bulgarian sky clearing are already visible. Regarding our outlet to the Ægean Sea, two great Powers are already engaged to secure it for us. They, however, wish us to give them proof that we are an element of order, culture, and civilization. In this lies our bond for the future. If we continue to follow a policy of reconciliation, of good neighbourly relations, and of loyalty, Bulgaria will soon, without recourse to arms, attain the rectification of her frontiers. We have before us the League of Nations, which will be the saviour of the conquered and the unjustly treated. Let us have confidence in it. Annihilated, crushed, and plunged in deep sorrow by this peace, as I feel, yet let me conclude by saying that, following along the path of order, calm cultural and economic activity, bloodstained and maimed Bulgaria will patiently bear her misfortunes in order that she may witness a return to happier days."

After this the ratification of the Peace Treaty was voted by all the groups with the exception of the two Socialist parties; so that the ratification was carried by a strong majority. The Chamber then adjourned for the Christmas vacation till the 28th inst.

Resumption of Relations with Great Britain.

Last Wednesday the new British High Commissioner, Sir Herbert Dering, arrived here by special train from Rustchuk. He will, after the completion of the peace formalities, be accredited as Minister Plenipotentiary to the Bulgarian Court. He has already had several interviews with the Prime Minister, M. Stamboulisky, and also with the Minister for Foreign Affairs, M. Madjaroff.

Last Thursday evening Brigadier General A. W. F. Baird, C.M.G., D.S.O., who has been British military representative in Bulgaria, was received by King Boris in farewell audience, and, together with the officers of the British Military Mission, had the honour of dining with his Majesty. Yesterday the General left by special train by way of Belgrade for England. At the railway station he was seen off by Colonel Kourtouklieff, representing King Boris, the Chief of the General Staff, General Nerezoff, the diplomatic and military representatives of the Powers, and numerous friends. By his tact, his straightforward and fair attitude, the General during his stay here had won the regard of Bulgarians and the gratitude of the Government.

ASIA MINOR.

SMYRNA, January 13.

Motors and Accidents.

The arrival of large quantities of motor cars in Smyrna is emphasising the utter absence of good roads in and around the city. Moreover, street accidents are daily increasing in number, especially those caused by the large motor lorries that dash recklessly to and fro on the Quay—the chief promenade in Smyrna. A young lady, a member of the Whittall family, has just been killed outright by a motor-car, in which she was riding from Magnesia to Bournabat, having been overturned through the carelessness of the chauffeur. The accident was rendered more painful by the fact that the chauffeur promptly disappeared and apparently made no attempt to withdraw the girl from underneath the car. The other occupant of the car, another young lady, after recovering consciousness, had to run several miles to Bournabat to get assistance, which arrived too late.

MOROCCO.

TANGIER, January 12.

Raisuli Rumours.

As compared with a few months ago the absence of Raisuli as a subject of conversation and of speculation is striking. I heard a statement made that Raisuli had been not beaten, but bribed to efface himself! This is certainly not the general opinion here, and can only be held, if it is really held, by very few. The Spanish zone is very quiet at present, work on the roads is being pushed actively forward, and it is hoped that 1920 will see some substantial progress.

The British Colony.

The first post-war summer has seen considerable movement among members of the British colony in Morocco, especially in Tangiers; very many of them having taken the first opportunity of going home that they had had for several years. It was exceedingly difficult to find room by steamer. Some people waited their chance at Gibraltar, which often meant a considerable stay there, or, in several cases, eventually travelling by cargo boat, or, if one became very impatient, facing the inconvenience and expense of going overland and the trouble and discomfort of the Channel crossing. Several Tangiers residents joined a homeward-bound steamer which was first going to Casablanca and other ports, and had to spend nearly three weeks on board her before the direct voyage to England commenced.

To secure berths to return was still more difficult, and, at times, seemed almost hopeless. But at last all our residents are home, and the stories of their difficulties in finding holiday accommodation and their despair of ever getting away from England before winter—of which we are all shy—are by now ancient history.

Traffic Regulations.

Some time ago I reported the application in Tangiers of the regulations for street traffic, which had taken the Diplomatic Corps nearly two years to draw up. The only practical result appears to be the payment by motor cars, and, after some time, by cabs, of high fees for licences. Parts of the proceeds were supposed to help to provide salaries for inspectors, who, however, were practically invisible. There was some improvement at first in the traffic in the main street, which is exceedingly narrow, with about two feet of side walk, as one of the regulations prohibited vehicles travelling both ways. One or two people high in authority ignored the regulation from the first, and now the street is worse than ever; cabs and cars have greatly increased in numbers and travel both ways, blocking the street and endangering foot passengers, who are very much more numerous than twelve months ago.

What can be thought of public officials appointed or approved by some ten highly paid diplomatic representatives of the most important nations in the world when a young donkey can be left dying in one of the principal and busiest thoroughfares, and taking two days to do it in, poor thing? Yet this happened, or is happening, for when I passed there to-day it was, for the third day, still there.

In his speech after his return from France General Lyautey, Resident General, made some interesting remarks to his colonists in reference to their engaging in political agitations in Morocco. He reminded them that neither the Protectorate Government nor France had an entirely free hand in this country. Behind France there are treaties in which other countries are interested, and he advised his hearers to occupy themselves with their work and push on the development of the country—wise words which should be well laid to heart.

CYPRUS.

January 17.

Greek Press on the Past Year.

The work of the Deputation in London occupies a foremost place. The island administration has been to a great extend paralysed owing to insufficient staffs of officials in various departments, and of judges in the Law Courts. Vacancies in the ranks of higher officials have not been filled, and work has consequently suffered. The Government is blamed for failure to cope effectively with a serious outbreak of small-pox, and for want of proper foresight in providing against a formidable bread and corn famine. Business has suffered from the delay in settling Eastern questions; and protracted restrictions have harassed certain industries.

The "Cyprus Question."

The "Cyprus question" continues to occupy considerable space in the Greek papers. A letter from M. Theodótou (the member of the deputation who remains in London), addressed to the people of Cyprus, urges that the delegates should return. Meanwhile, he keeps a watchful eye on the course of events in England. Supporters in Cyprus must persevere, and be prepared for any sacrifices. He seems, however, to think it quite possible that the question of "union with Greece" will be subordinated to wider Greek interests. In the island various meetings have been held which show that opinions are much divided in respect of the deputation. One party, strong at the capital, Nicosia, consider that several at least of the members should return to London as soon as possible. It is better, they say, that representatives should be in Paris, or London, in case their presence might be of advantage, rather than there be any risk of something occurring to call for their presence, and find none of them there. "We," says a leading organ of opinion, "through our representatives, must be ready, with our lamps trimmed and our vessels full of oil, and not emulate the foolish virgins." The opposing party consider that there is no such need, but that it is better to follow the counsel of the Greek Premier, who advised that no good purpose could any longer be served by a deputation, since the matter would be the subject of negotiations between the British and Greek Governments. Moreover, a conviction no doubt prevails with many, though it may not be proclaimed from the housetops, that quite enough money (some say £9,000) has already been spent on the mission. That body exhausted every possible argument. Any further representations can be quite as effectively conveyed through the usual channel as by other means. A meeting is to be held in the Archbishop's palace on January 24, with a view to a final decision on the question.

The Bread Famine.

The Government is taking wise measures for the relief of those in need. In some districts the Commissioners have directed Mukhtars to submit lists of distressed families and individuals, to whom barley flour is being issued at 5 piastres (about 6½d.), and Australian wheaten flour at 12 piastres (1s. 4d.) the oke. The Archbishop, in an encyclical letter, prays that collections should be made by Greeks in all churches, at New Year services, towards the fund for the relief of the food famine which threatens so many of their compatriots in Asia Minor and other scattered settlements. Cyprus, he urges, should not fall behind in this work of charity.

The Archbishop.

The present Archbishop, Kyrillos, is a man of learning and of deep piety, and an eloquent preacher. He is devoted to the work of the Church and ecclesiastical progress in the island, and is not, like his namesake and predecessor, a fighting politician. The late Archbishop distinguished himself more in the political arena than in any other direction, and was an ardent champion of "union." The present Archbishop is very anxious to raise the standard of the rural clergy, a very illiterate class, and is endeavouring to enlist recruits from the more educated class who qualify as school teachers. The task, however, is a difficult one, as youths

Digitized by Google

who obtain a good education seek more lucrative employment than can be found at present in the ranks of the clergy.

A Suggestion.

The *Voice of Cyprus* quotes from an English review an opinion of Sir Aston Webb that the seat of the League of Nations should be a place which possesses a fine climate and surroundings, and a suitable geographical position, and that such a spot could be found at Malta, Crete, or Cyprus.

MALTA.

VALETTA, January 19.

Suggested Schemes.

Little countries, like little dogs, are most addicted to snarls, and Malta is no exception to this rule. The least trivialities are discussed with the gravest of concern, and mere suggestions assume the nature of wild-cat schemes. With the coffers of the local exchequer empty, all kinds of schemes are being evolved, the solution of all only being possible by further expense. The latest is the suggestion of the passing of an electoral law with another election. One reason for this suggestion, according to a leading article in the local Press, is to make the general public familiar with the electoral machinery which is to come in the future; it is like the story of the man who pawned his watch and spent the money in order to see what it felt like to pawn. The more intelligent part of the public advise ... *lente* policy, particularly as up to the present time the details of the promised form of self-government are embryonic only.

A Labour Party.

The Labour Party—quite new for the island—are clamouring for a leader, and desire an ecclesiastical pronouncement on the matter. As far as can be gauged, the qualifications demanded are "a Catholic, not only in principle but practice, a Catholic who is a scholar and a gentleman proud of belonging to the British Commonwealth, etc." Competitors are not yet forthcoming.

Food Control Board.

It is becoming the general rule of things in the island for the Food Control Board to answer criticisms levelled against them by letters signed by a *nom de plume* through the Press. This is considered by the majority to be an undignified method of procedure. Legitimate complainers have a more open and honest way of remedying grievances by direct dealings with the Control Board, so why do their work under the cloak of semi-anonymity?

Prices and Profits.

Lord Plumer gave an explicit statement at the last sitting of the Government as to the causes of the increase in the price of bread, and he described the situation as being very serious.

The price of gas is still high, but the local government have instructed their auditor to examine the books of the company at an early date to see whether the high rate charged is justified.

The Act dealing with excess profits is creating much wordy warfare, and though too late in the day, there is much being said about the annoyance and expense the Bill will bring in its train. But the traders of the island show little unity, and the piper will have to be paid. There are bound to be some instances of humorous friction and evasion in the near future.

Personal.

Social events are very conspicuous just now, and private and public dances are carried on until the small hours of the morning; but there is a general complaint as to the lack of sufficient and suitable hotel accommodation.

Canon Camilleri has resigned his office at the Collegiate and Parochial Church of St. Paul's on account of advanced age.

The many friends of Chev J. Depeilon have been gratified to learn that he has been appointed Consul-General to France in Rome.

Father A. Leaza, S.J., Father Rector of the College of St. Louis, has arrived from Italy.

A marriage has been arranged between the Most Noble Mallia Tabone and Miss Inez, daughter of Dr. Luigi Camilleri, one of his Majesty's Judges to the Island of Malta.

The news of the death of Mr. L. V. Paris, of Port Said, has been received with great regret by his many Maltese friends.

A marriage has taken place between V. R. Carnara, Esq., and Miss Mary Nuereb, sister of L. M .Nuereb, Esq., managing director of Samuel Greet and Co.

An expression of thanks from H.R.H. Princess Patricia of Connaught for the wedding present she received from the ladies of Malta has just been made public

CORRESPONDENCE.

EPIRUS.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—We read a letter in your issue of January 2 from an Albanian gentleman in the United States. We cannot help feeling sympathetic to the legitimate aspirations of Albanian patriots for a free and independent Albania. But that measure with which they ask the world to gauge their rights they deny to us, the Northern Epirotes. It is not true that "Greece lays claim to an Albanian province." It is no secret that the Peace Conference offered the mandatory over Albania to Greece, but M. Venizelos declined the offer. It is not Greece that claims Northern Epirus. It is the large majority of us Epirotes of the North who refuse to enter the family of Albania. People may call us Albanians; our language may be Albanian, and so on. But we love Greece, and prefer to live under Greek rule, in the same way that the French Swiss prefer to live under Swiss rule rather than under French, or the German Swiss under Swiss rather than under German rule.

We do not begrudge our Albanophile compatriots of Northern Epirus the longing for Albania. We insist, however, that they respect the wish of the majority which wants union with Greece.—I am, etc.,

GREGORY PETROU,
President, Epirotic Society, Boston, Mass.

January 19, 1920.

MUSTAPHA KEMAL.

TO THE EDITOR OF "THE NEAR EAST."

SIR,—In your last issue your Constantinople correspondent suggests that Mustapha Kemal Pasha served during the war only at Gallipoli and in the Caucasus, and so did not realise the severity of the Turkish defeats in Palestine and Mesopotamia.

In this your correspondent is in error, as from March, 1918, to the Armistice, Mustapha Kemal was in Palestine in command of the Seventh Turkish Army, and latterly, during Lord Allenby's great advance, he commanded the Turkish rearguards.—I am, etc.,

Y. M. R. STUDHOLME.

101, Cowley Road, Oxford, January 30, 1920.

EDUCATION IN MESOPOTAMIA.

Major H. E. Bowman, C.B.E., has recently left England to resume his duties as Director of Education in Mesopotamia. Major Bowman, who was sent to England in the autumn of 1919 by the Civil Commissioner in order to accompany the Arab Missions from Nejd and Koweit, has been engaged for over two months in recruiting British personnel for the Judicial and Educational Staffs in Mesopotamia, and in ordering books and school material for use in that country. A bookshop under Government auspices is being opened in Baghdad in connection with the Education Department, and a large consignment of books in English, French and Arabic, mainly of general interest, but including some more especially connected with the history and archæology of the Near East, has been despatched. In the entire absence in Mesopotamia of bookshops worthy of the name, we regard this venture as one deserving of all support, and we hope that it will fill a longfelt want not only among the members of the British forces, but also among the educated classes of the native population.

VISIT OF THE ROUMANIAN PRIME MINISTER.

Dr. Alexander Vaida-Voevod, Prime Minister of Roumania, accompanied by M. Brediceano, Under-Secretary for Foreign Affairs, arrived in London on January 28, and stayed at the Carlton Hotel as the guest of the British Government. During his visit of less than a week he can have had few leisure moments, for his programme seemed to account for every hour of a long working day. But Dr. Vaida-Voevod is typical of the driving force that has been so long lost to Roumania in her unredeemed provinces, and it is significant that she should have availed herself so early in the history of Greater Roumania of the services of this new blood for the highest political post in the kingdom.

On the morning after his arrival Dr. Vaida-Voevod called upon Mr. Lloyd George at Downing Street, and had a short conference with him. At a luncheon given the same day in his honour by Commander William Cozens-Hardy, M.P., Mr. Lloyd George, Mr. Walter Long, and other members of the Government were present. In proposing the health of the Roumanian Prime Minister Mr. Lloyd George said:—"I am glad to salute, in the name of the British Government and in my own, the first Premier of reconstituted Roumania. Roumania has been a friend to us in the past, and should in future also be an effective help. I am glad, therefore, to be able to welcome in Dr. Vaida-Voevod the representative of the men who stood by us. I know that he was one of the Transylvanian chiefs. I know that he carried through the Hungarian Parliament a splendid fight for his own people. I know that he managed to maintain their spirit, their striving for liberation, in Transylvania itself. I am glad to have the advantage of knowing him personally, which is a very different thing from meeting him in the course of negotiation at the Peace Conference. I have always been anxious to establish close relations between us and Roumania, and I hope we can count upon Roumania in future also for aid in the tasks that lie before us. Dr. Vaida-Voevod can help us greatly, and I am sure he will help us in connection with the questions of Hungary and of Russia."

In reply, Dr. Vaida-Voevod said that he was deeply grateful for the splendid reception of the British Government and people. He knew that the honour was not offered to him personally, but to the Roumanian people, who had always been with the Allies. The part that Roumania could play in the future could be very important for the civilisation of the world. Roumania could play that part all the more easily if she would have in the future the friendship and the help of the Allies, and especially of Great Britain. He asked the British people to support the Roumanian nation also in the future, and he could assure them that the Roumanians would be worthy of that help.

On the morning of January 30 Dr. Vaida-Voevod made a tour of the City, visiting the Baltic Exchange, the Royal Exchange, and the Stock Exchange. He lunched with the Lord Mayor at the Mansion House. Among the guests on this occasion were Lord Haig, Lord Denbigh, Lord Burnham, Lord Methuen, Lord Faringdon, Lord Rawlinson, M. Boerescu (Roumanian Chargé d'Affaires), Lord Cheylesmore, M. Brediceano (Roumanian Foreign Office), Admiral Sir Cecil Burney, Admiral Sir Doveton Sturdee, Sir Charles Wakefield, Sir Arthur Lawley, Sir Herbert Creedy Colonel Boraston, M.P., Sir Vincent Caillard, Sir Hugh Trenchard, Sir Henry Mackinnon, Admiral Sir Edward Inglefield, and the Sheriffs.

In the afternoon a further conference took place with Mr. Lloyd George, to be interrupted for little more than an hour while Dr. Vaida-Voevod went to the Roumanian Legation to meet representatives of the Press who had accepted the invitation to tea of M. Boerescu, Roumanian Chargé d'Affaires. The conference with the British Prime Minister was renewed at six o'clock, and subsequently a dinner was again given in Dr. Vaida-Voevod's honour at the Carlton Hotel.

In the evening Dr. Vaida-Voevod was the guest of the British Government at a dinner given at the Carlton Hotel. Lord Hardinge of Penshurst, Permanent Under-Secretary of the Foreign Office, presided, and among those present were M. Boerescu (Roumanian Chargé d'Affaires), Admiral Sir Edmond Slade, Major-General Sir F. H. Sykes, Sir A. K. Rollit, Consul-General of Roumania, General R. de Candolle, Commander the Hon. W. Cozens-Hardy, M.P., Prince Antoine Bibesco, Monsieur Trifu, Lieut.-Colonel N. Arion (Equerry to Prince Nicholas of Bavaria), Mr. N. Gologan (Roumanian Vice-Consul), Mr. H. Wickham Steed, Mr. M. Beya, Mr. A. Bowring, Mr. H. T. Montague Bell, and Mr. Conway Davies.

In proposing the health of Dr. Vaida-Voevod, Lord Hardinge referred to the striking circumstance that the first Prime Minister of Greater Roumania should have belonged not to the old Kingdom, but to one of the new territories now incorporated in it.

Replying to the toast, Dr. Vaida-Voevod thanked the company for the honour that they had done him, and more particularly for the sympathy which Great Britain had shown to the Roumanian people. "For a young nation like ours," he continued, "every mark of sympathy on the part of the Great Powers who direct the destinies of the world is the best encouragement to work, the best incentive to progress. Divided until now into five sections, the Roumanians, united at last for ever, recognise that their sacrifices and their tenacity in the struggle would have been in vain without the powerful support—material as well as moral—of their great Allies. Public opinion in the three great nations of the Entente and America has rallied unanimously to the call of their statesmen in the defence of small oppressed nations. These statesmen by their eloquent words, by their energetic action, symbolised in the eyes of the Roumanians, striving towards their national unity, the spirit of liberty and the generosity of their great countries.

"The names of your British statesmen had for us the virtue of justifying in our hearts the hope and the conviction that, in spite of the immense sufferings which it had caused, the war could only end in victory. From the moment when Great Britain had decided to enter into the struggle we had the certainty that there would triumph at one and the same time the military genius and the generous ideas for which so many young men have fallen on the field of battle, for which the happiness of so many families has been shattered and so much ruin has been accumulated.

"To-day peace has been concluded. Our national unity has been realised. Full of confidence, we turn towards our great Allies with the certainty that they will aid us in the work of spiritual *rapprochement*. When two men do not speak the same language, it is difficult to create between them the sympathy which springs from confidence in the exchange of sentiments and ideas. If it is difficult to establish lasting relations by the agency of an interpreter between two individuals, it is still more difficult to do this between two peoples. It is the word alone that puts minds and hearts in communication. We are firmly resolved to send to the countries of the West a large number of young men in order that our future generations of politicians, savants, merchants, manufacturers, and workmen may bring back to Roumania a part of the manners, the culture and the mentality of these great nations. Great Britain, the classic home of political and religious liberty, we have the firm hope, will aid us by her benevolent counsels and by her complete understanding of the end that we have in view—to allow the young Roumanians to profit by the happy results of a superior education on this soil of English democratic traditions, exempt from all narrow prejudice. After the military help and the material assistance that you have given us, I ask you, gentlemen, in the name of Roumania, to give our nation the help, the sympathy, and the moral assistance of the English people. In the full expansion of its youth, this people, eager to progress, intends to consolidate its national liberty by assuring most complete liberty to all national and religious minorities. Modern Roumania is resolved to lay the foundations of its future conditions of democratic liberty on the basis of steady economic progress and financial consolidation. Like you, we are fully aware that outside these principles there can be nothing lasting. Your history gives us magnificent examples in this path of progress and fruitful work on economic ground. It is for that reason that I ask for your moral co-operation in order that we may realise our ideal of progress. It is for that reason that I ask for your collaboration and the help of your experience for our economic reconstruction.

"Our dear Queen is a child of Great Britain. Her Anglo-Saxon virtue of heroic tenacity, indefatigable devotion, and of steadfast faith in the most difficult circumstances, have formed a harmonious complement to the wisdom and self-denial of his Majesty the King of Roumania and our valiant army's spirit of sacrifice for the sacred cause of liberty. A part of the veneration and affection which every Roumanian feels towards her Majesty the Queen is reflected upon the English people, upon the splendid dynasty which presides over the destinies of Great Britain, and upon the illustrious person of your noble King."

Dr. Vaida-Voevod was to leave London for the Continent on February 3.

PRESS ON THE NEAR EAST.

New India and New Turkey.

In the *New Witness* of January 22 Mr. P. L. Weston Edwards writes on "New India, New Turkey, and the New World." His opinions are very definite, and he commences thus:—

New India—the India assured of partial self-government brought into existence by the Reform Act—is making a bad start. It is disappointing when you have taken pains to place a community on the path that leads to nationhood, to find even a section of it obstinately facing the wrong way, and whatever may be said for the Turcophilism of Indian Moslems it unquestionably leads right away from that sense of the unity of India which reform was to stimulate, and which was to carry on reform.

He then illustrates the case for Indian self-government:—

An old Indian story attributes to a ruling chief the statement that if the British were to withdraw from the country and leave Indians to their own devices, when they had got as far as Aden they would there find a cable imploring them to return. According to another, probably of later date, an Indian extremist once sought the support of an influential fellow-countryman for an anti-British scheme which he described in great detail. The intended convert listened patiently without interrupting, but at the point where the last Briton had been driven into the sea he put the question "—and then?" The scheme had not been worked out beyond that point, and the convert was not made. Moreover, the question remains unanswered. The idea of Indian self-government as a British aim does not, as many persons seem to imagine, date from August 20, 1917. The accepted phrase, a generation ago, was "We are in India to teach Indians to govern themselves." If progress has been so slow as to lead our critics to regard this aim as purely theoretical—as a thing conceived only to be deferred—it is largely through the lack of any answer to that "—and then?"

He then endeavours to show the unreasonableness of the Indian Moslems' opposition to the proposed dismemberment of the Turkish Empire. He says:—

The Allies, however, are not merely seeking to exact the price of defeat. We have accepted the principle that the new political boundaries must be so drawn that the world shall be free from the more obvious seeds of future wars. This involves making them accord with racial distribution, and that task in itself is sufficiently difficult. It is complicated by regard for national tradition, since the ancient boundaries of, for instance, Poland and Serbia, do not coincide with those that might be drawn to-day on ethnographic lines. Exactly what principle of religious unity should be introduced as a further complication the Turcophils do not make clear. Some of them are content to warn us to avoid risk of trouble without laying down any rule at all. Others seem to hold that, because there are so many million Moslems in the British Empire, it is our duty to guard the political boundaries of a Moslem State. Since Great Britain is herself a Christian State, she should, by parity of reasoning, have preserved the boundaries of Austria. More narrowly, since we have in Great Britain and the Dominions a percentage of Catholics—equal, perhaps, to the percentage of Moslems in India—many of whom fought bravely against Austria, they might have claimed that that Catholic State should be treated at the Peace Conference as a body of their co-religionists which could not be touched without offence to their susceptibilities. Our Catholics, however, are more modern than our Mahommedans in their view of national as against religious unity, and fighting against Austria involved no greater strain on their loyalty than opposing Protestant Germany. They put in no plea for the Empire that claimed to exercise a veto upon the choice of a Pope, and the Peace Conference did not concern itself with that veto any more than it is likely to do with the purely Moslem question of the Khalifate. Austria's political boundaries were fixed according to her political record. There was no difficulty in reconciling that method with the ethnographical one, because, as a ruler of alien races, the Austrian had been no more successful than the Ottoman. The advocate of different treatment for Turkey must have difficulty in avoiding the charge of claiming a preference for the Moslem over the Christian. This article is not written in a spirit of hostility towards any Turkish claim whatever, but merely in protest against the basing of claims on grounds that would carry us back to the atmosphere of Crusades and *jehads* at the very moment we are supposed to be bringing India forward to the substitution of fatherland for faith as a ground of unity. If there is any spot in Europe—a part of Thrace or Constantinople itself—whose justly-established inhabitants desire to be subjects of the Sultan, a claim based on that fact will need no support from appeals to fears of Moslem unrest. Such support can be needed only by a claim that the governance of people in one continent shall be placed in certain hands to please residents in another continent. If Moslems can claim from the Peace Conference treatment so different from that accorded to Christians, what might they not claim, as against Hindus, from a native government of India?

The Guilt of Turkey.

The *Spectator* of January 17, in an article upon "The Future of Constantinople," believes strongly in the need of applying principle to the Turkish problem. Fears about unrest in the Moslem world must be faced, it says, but it has its own ideas about the strength of those fears.

Our own opinion of the right manner in which to treat the Ottoman Turks may be expressed in a sentence. We believe that we ought to do exactly what we think is right on the merits of the case, without being deflected one inch by timid fears as to what might be the results of an uprising of Moslem sentiment. This policy has always been ours in the past, and it has always served us well and safely. The result of it has been that, though the Turk has intrigued incessantly against us, and has struggled violently in the grasp of his fate, saying reproachful and bitter things, he has always in his moments of greatest need turned to Great Britain as the Power on whose justice and impartiality he could rely. If we had allowed ourselves to be intimidated by prophecies of the break-up of the British Empire through Mohammedan disaffection, we should have done nothing to free the many small races which groaned under Turkish rule. We would ask our readers when they are being besieged by arguments in favour of the Turk to remember a few simple but important facts. There was no need for Turkey to join Germany in the Great War. She did it coolly and deliberately. There was no question of a Holy War. She did not fight for religious reasons. Turkey joined herself with Lutheran Germany, with Roman Catholic Austria, and with Orthodox Bulgaria, in order to attack Great Britain, Russia, and France. We cannot forget the terrible cruelties which the Turks have practised against all subject to them. They have massacred Armenians, Greeks, and Syrians. British soldiers, and also our own Indian soldiers, who are now supposed to be seething with discontent at the idea that Turkey should be deprived of Constantinople, had more than a taste of Turkish cruelty when they were taken prisoners by the Turks after the surrender of Kut. Why should it be assumed that Islam throughout the British Empire will turn against us when the perfectly natural and foreseen results of our winning the Great War are visited upon the Turks? The fact that Mohammedans all over the British Empire gladly fought on our side in the Great War would seem to indicate the exact contrary. Moreover, the Mohammedan troops of Great Britain and the Arabs of the Hedjaz were not alone in fighting against the Sultan. Mohammedan soldiers of France and Russia did the same thing. If the argument that we must now hold our hand for fear of what may happen if we deal justly with the Turk were sound, we ought not to have ventured to fire a single bullet or a single shell at the holy persons of the Sultan's troops.

The Balkans.

Mr. J. D. Bourchier, in an article in the *Contemporary Review* (January), called "Væ Victis," maintains as his thesis that "the Balkan settlement is based on the principle *væ victis*." Among his remarks occurs the following passage:—

On the European mainland we have seen the revival of oppressed nationalities, and the bestowal, in many instances, of the right of self-determination. In the Balkans we have witnessed the development of a very different programme. An entirely new rearrangement of boundaries has been sanctioned, but in no instance has the right of self-determination been accorded to the populations affected. How have the three smaller nations of the Balkans been treated? Bulgaria has been crushed and mutilated, and her patrimony in Macedonia and elsewhere has been divided among her enemies; the fate of Albania has not yet been pronounced, but there is only too much reason to believe that the signatories of the deplorable pact of London have not abandoned their designs on her independence and integrity; Montenegro, our ally, has been denied her unquestionable right to take part in the Conference, and the Western Powers have winked at the deposition of her ancient dynasty by a bogus Parliament and the forcible annexation of her territory. Everywhere in the Balkans we witness the triumph of the *jus fortioris*, of lawless rapacity and greed.

Yugoslavia and Italy.

The *Morning Post* of January 27 deals with the Fiume settlement. It recognises that the proposals are not ideal, but pleads very strongly for a compromise. It concludes:—

Further, we would add that British public opinion—and it may possibly carry some weight on both shores of the Adriatic—is becoming tired of the extreme attitude which now seems to find favour in Central Europe. . . . But Serbia is now the centre of a new State, and its bitterest enemy has been crushed and broken up. Roumania, too, has been exacting, but Roumania had once to bow before the Treaty of Bucharest. The Jugo Slavs may rage over "rocks in the Adriatic," they may pant over "stones and Slavs," but they have gained much, and by being moderate they may win even more—the goodwill and sympathy of the British people.

MUSICAL NOTES.

At least half-a-dozen string quartets have been heard in London recently, and the number of trios being formed is increasing. The popularity of chamber music is for a time fixed. Indeed, when we hear the better quartets—such as the London String Quartet or the Philharmonic String Quartet—we wonder how it is that chamber music has not always been popular. But it appears that in music, just as in other less important things, fashion is a hard and whimsical mistress. It is extremely doubtful whether the public, semi-cultured as it often is, really knows what it wants, and the market of musical works and their presentations is by no means a stable one. At the present moment, however, there is a tremendous and vital boom in chamber music. Probably the average concert-goer would now choose as the most pleasant evenings he had spent those in which he listened to a good string quartet. Such an evening he certainly had on January 26, when the Spencer Dyke String Quartet gave a performance at the Wigmore Hall. The beauty and efficiency of their playing were a surprise to me. The works they presented were all except one by English composers—Elgar, Eugène Goosens, E. Tomlinson, and Bridge. The exception was Haydn (who, I believe, is now being claimed as a Yugoslav. I will leave readers of this journal to find out the actual facts about his birth). The quartets in E minor (Op. 83) and in B flat (Op. 64) by Elgar and Haydn respectively are beautiful pieces of music—they are equally classics for all time—and they were given adequately, if not perfectly. No delicate effects were lacking, but the players did not realise and come upon the central ideas simultaneously. It seemed that the first violin (Mr. Spencer Dyke) and the viola (Mr. E. Tomlinson) had personalities that demanded methods which the quieter minds of the second violin and of the 'cello could not sustain. For instance, in the first movement of the Haydn (*Vivace Assai*), the spirit was everywhere present, but not equally at the same time. In the other works I could see no fault in the Quartet, and their playing was absolutely delightful. They achieved a rare and very fine success in the first piece of Goosens—"By the Tarn." It is a work which through its misty and coloured vapours says something very definite, and it was played with refined and most exquisite *chiaroscuro*. Goosens' second piece, "Jack o' Lantern," seemed to derive too obviously from Stravinsky to be of much importance, but it was made by broad mastery to appear a quite harmless, and even enjoyable, pleasantry. If this Quartet were to seize the achitectural ideas of the classical pieces they play (for in minor works they cannot be surpassed), they would fall little short of perfection. Whether they can do this, I think, is doubtful; but if they succeed, an unlimited future is before them. In any case they are already far too important to be overlooked.

The vogue which the music of Scriabin is now having is at once the delight and the perplexity of many people. For in him some see the direct descendant of Bach, Beethoven, Chopin, and Brahms; and to others his pieces are the abnormal ravings of a semi-demented Slav in whom barbaric anti-intellectualism has reached the fondest depths of insanity. As yet he is incompletely understood, though this fact does not deter many people from passing a final judgment on him. He may or may not be fortunate in achieving fame so soon after his death, and I cannot say how long his present popularity (an exaggerated word) will endure. Like nearly all great men, he was reviled when he was alive, and is admired now that he is dead. Myself, I think that when the complexities of his music are made simple to us, when the new musical sense which the demands of modern composers have created is grafted on to and made one with the old sense of "classical" music. Scriabin will be regarded as the greatest Russian composer, and will for piano and orchestral writing take his place with Beethoven. However, that is a mere opinion, and I am well aware of its possible unsoundness. One thing is certain anyway: that people are trying with pleasure and without affectation to understand him: his present followers are not like those, say, of Stravinsky or Malipiero, the worship of whom may be called, perhaps unprofitably, a cult.

Two recitals of Scriabin were given last week, the first by Miss Lilias Mackinnon at the Wigmore Hall on January 26, and the second by Mme. Eurydice Draconi at the same place on the following day. Both these performers showed themselves as very fine artists, and their technique was superb. Scriabin, probably more than any other composer, places on the pianist most severe demands—not merely in the use of the fingers, but especially in the use of the pedal has he enlarged upon the past. It is something merely to play Scriabin, but these two artists had in addition an exceptional faculty of interpretation. Miss Mackinnon plays with great authority, restrained confidence, and clarity; with masterly vigour, moreover, and masculine delicacy. Although she could not prove that Scriabin's earlier preludes might not have been written without much difficulty by Chopin, she certainly established that something tremendously vital was being said in, for instance, the Fantasie (Op. 28), the 9th Sonata (Op. 68), and in the Poem (Op. 69). Everyone who can (unless he be, like Scriabin, a Theosophist) will put a different interpretation upon the later works of Scriabin; but it is not easy to conceive of a clearer and more determined expression of their meaning than that which Miss Mackinnon gave. Although first in the Scriabin field, Miss Mackinnon will surely find plenty of competitors, but I do not think she will soon be beaten. You feel that her consummate artistry, which comes from the careful ordering of beautiful difficulties, is an indefinite and unsurpassable thing. In this generation, at any rate, Scriabin will hardly be played better than she plays him.

Mme. Eurydice Draconi, who was introduced as "the new Greek pianist," is a most accomplished musician. Her avenue of approach to Scriabin is peculiar to her—it is neither effeminate nor severely masculine, but consists of a mixture of extraordinary warmth and of almost unnecessary coldness. When Scriabin is like no one else (as in all his later works) she views him very closely; when he resembles someone (generally Chopin) she regards him distantly, and permits none of the ordinary emotions in her playing. In the Preludes she was extremely good; but for a lack of singing tone in the melodic outline, she brought out every beauty in them. But her playing of the fourth Sonata excelled even that of the Preludes. This sonata is commonly supposed to represent the striving of the soul to creative power and the languor consequent upon achievement. Whether this be so or not (and personally I do not think any of Scriabin, whose music seems to me to be absolute, helpfully bears any such explanation), the temperament of Mme. Draconi was in complete accord with the music. The fifth Sonata, which Mme. Draconi played next, is one of the greatest sonatas ever written; one which some day may rank with the "Appassionata." From the pianist it exacts every kind of test—technical, mental, intellectual, and emotional—but Mme. Draconi broke down under none of them. She also played the difficult "Vers la Flamme," and the striking "Poème Satanique," in the latter of which is a remarkable forecast of the future use of satire in music, a use in which on a minor scale (as it seems to me) such composers as Stravinsky and Lord Berners have already indulged. It goes without saying that Mme. Draconi has unusual qualities of memory and endurance, and it is certain that she is an uncommonly fine pianist, whose absorption in and expression of the modern idiom are full. She has a tendency—happily not yet become a characteristic—to allow warmth to degenerate into uncontrollable fervour; but even without the eradication of this tendency she will go very far indeed. She is a great credit to her country, and is an artist of whom any Near Eastern people would, if they could, be proud. Her career will be regarded with profound and richly deserved interest.

The Sonata Recital, which Mr. Albert Sammons (violin) and Mr. William Murdoch (piano) gave at the Wigmore Hall on January 31, was a thing not to be forgotten. It is rarely that two such supreme artists are in such perfect accord, but both intellectually and emotionally they were as one. It was not that they each sank his excellent individualism; rather they merged them so that the collective result was greater, not less, than the sum of the two individualities. The Sonata in E major, Op. 21, by Dohnanyí, with which they commenced, is in one movement, and it is a very sound piece of work. This Hungarian composer is not always inspired, but he is never dull; and in the *Allegro ma non tenerezza* he reached a lofty height. The two performers gave a very intelligible and intellectual reading of him. In things as far apart as Beethoven's Sonata in G major (The Great Sonata) and Debussy's Sonata in G major, they showed equal mastery and charm; the rendering of Debussy in particular was both great and perfect. They concluded with Mr. John Ireland's Sonata in A minor, which is now becoming as well known as it deserves to be. It is a very fine work indeed—probably the best thing this composer has done; and its ruggedness, its slow sonority, and its dancing rhythms were equally fully explored by Mr. Sammons and Mr. Murdoch. It was a magnificent performance, a fact for which the public (for whom, curiously enough, this sonata has an immediate appeal) gave due thanks to the composer and to the performers. Mr. Ireland in his saner moods is one of England's few hopes: and Mr. Sammons and Mr. Murdoch would take al eading place in any country.

II.—"THE LONDON VENTURE." By Michael Arlen. (London: Heinemann. 4s. net.)
III.—"FETTERS." By C. S. Goldingham (London: George Allen and Unwin, Ltd. 7s. net.)

I.—A VOICE FROM SYRIA.

The title of this small volume of verse and the fact that it pleads poetically for the sake of the native Syrian might make some at once dismiss it. But we have here an instance of the tremendous folly of judging by external appearance. For the prose introduction itself shows the author to be a man of distinction; and the slim body of the book shows him to be a real poet as well. It is our misfortune not to have read any other works of Mr. Thompson; it will, however, be a pleasant task to watch his certain progress to fame.

He writes of Syria and of Lebanon in a way that no one but Flecker has surpassed. His pictures are those of war or of war's effects, and they are at once more vivid and dignified than those of many of our younger poets—Siegfried Sassoon and Robert Graves, for example. He tells of death, of famine, of filth, of misery, and of the rest of the things of war; but his purpose is not so much to arouse disgust as to evoke sympathy and understanding. Especially he wants sympathy for the women and children, for he has seen them living like animals and dying in the streets of Syria. And at the men who caused this misery his indignation boils over. Listen to this of the children of Beyrout:—

> All this was in Beirut.
> God knows that in Beirut
> There are a score of men that we should shoot,
> Another score that should be hanged, were we
> As just as we would have it understood,
> And I could name you three
> For whom a death by fire would be too good.

At times Mr. Thompson's verse rings with saddened bitterness, for very little seems to have escaped his vision, and in what he saw the bad greatly outbalanced the good. We have no space to give his philosophy, or to describe his love of nature, of animals, and, above all, of humanity. For the same reason we cannot speak of his technical and artistic achievements. Suffice it to say that the book has an importance out of all proportion to its size, and reveals a poet who will go very far. Its subject-matter limits the author, and causes him to write lines that are nothing more than vigorous verse; but when he writes of general rather than particular matters, the result will certainly be high poetry.

II.—THE SPRINGTIME OF LIFE.

Here is a series of papers, more or less connected, which deal with impressions gained from the people, the thoughts, the actions, and in general the things of London; they are written by an Armenian, Dikran Kouyoumdjian. The author has adopted the name of Arlen because he wittily fears that in the difficulty of pronouncing his natal name may be found a possible reason for obscurity. However, after trying seven times, we have really pronounced it correctly; and we like it rather more than his assumed name, which might mean anything, and is in any case out of keeping with the light seriousness of the book.

Some of these papers we seem to have read before in the *New Age*; they are, therefore, troublesomely clever and inevitably readable. The author writes from youth, to youth, and for youth, and we do not imagine that anyone who has reached a safe age in life (unless it be the Mr. George Moores or those who still can read more than three pages of the Yellow Book at a time) will be intrigued by the author's writings. But there may be some to whom it is not forbidden to remember breakfasts on whisky and apples, lunches on liqueurs and grapes, and dinners with fickle females and tremendous thoughts; and to these we commend with wise confidence this book. It is an intellectual's book, written for intellectuals (whom incidentally and, of course, the author despises); it tells of a lonely Armenian's life in London, of a time when it seemed to Mr. Arlen "much better to be a murdered prince in Hayastan than a living vagabond in London," of the people whom he then meets and who thought that "Armenians were funny little old men with long hooked noses and greasy black hair, who hawked carpets about on their backs, and invariably cheated people, even Jews and Greeks . . . ," and of girls to whom you give at once your cigarettes and your bored attention.. In short, it is a rambling summary, in which the gaps are not too few, of the life of the modern young man and woman. It is, moreover, a proof of artists' thoughts being on the same plane; for is there not (or was there not) a popular song by a very perfect artist, called "I can't forget the days when I was young"? As we have said, this book, which has the rare merit of not being a page too long, is expectedly clever; and with a little more luck the sentences in which it abounds might have been epigrams. But we are afraid that most of them have been said at least as far back as Mr. G. K. Chesterton. For instance, "Ah, this wise old East of mine! so old and so wise, my dear, that it knows for certain that nothing is worth doing."

To us the author appears wholly to have absorbed the modern atmosphere, and but for feigned longings and helpful contrasts we see little trace of the East in his work. But this fact does not make the book any less enjoyable. There are, however, three things against which we would protest; the abundant use of Mr. H. G. Wells' dots, which we hoped the *New Age* had killed when some time ago it finally called them "unspeakable"; the really very wrong opinion which Mr. Arlen holds of the work of Mr. D. H. Lawrence; and the space which Shelmerdene (a girl) gets in the book, and the assumption that the readers are in the least interested in her fate. Otherwise, of all the books that do not matter, this is one of the most excellent.

III.—THE BONDS OF YOUTH.

We are introduced to Dick Chamier as an unwanted small boy being kept severely in order by an unsympathetic aunt—and we leave him having at last, after great tribulation, broken the fetters of over-sensitiveness and selfish pride which had bound themselves round him during his lonely, unloved childhood.

The author shows us Dick's development in quick flashes—impressionist sketches. We have glimpses of episodes here and there which form some crisis in his life or serve to show the bent of his mind. This method is successful up to a point—during Dick's unhappy schooldays, his reluctant abandonment of the idea of an artist's career, his first years in the army, his courtship of his godmother's daughter, Beatrice, and his marriage with her.

Mr. Goldingham has a gift for painting in the impression of a moment. He catches the almost indescribable wretchedness which youth can experience over little things when it feels itself conspicuous and laughed at—as when he describes the agonies suffered by Dick on his first visit to his godmother's country house, Saltram, as each evening he dons the suit of evening clothes which have been discarded by a friend of his aunt's, and so obviously altered to fit him, when all the other boys of the party wear dinner jackets. And he can also suggest fleeting moments of ecstasy—Dick starting out with his sketching paraphernalia on a "gloriously, magnificently hot" summer day—coming out of his first Sunday concert at the Queen's Hall: "The short winter afternoon had closed in by the time the concert was ended, and he went out into the cold freshness of the streets and the romance of the lamplight, past hurrying crowds who were no more to him—less, in fact—than the fanlight above an Adam doorway or the magic of chimney-pots against a primrose sky"—or buying for Beatrice, with reckless extravagance, the antique ivory statuette she had coveted in the little shop in Rome. But as the plot becomes more dramatic and we come to the climax, when Dick, after three years of hardship and torment as a prisoner in the desert, returns to Beatrice, who believed him to have been killed, the author does not seem so sure in his touch, and the interest rather flags. Possibly this is because Dick, in spite of the skill with which some aspects of his character are revealed, never quite becomes material, and his brother-in-law, who plays the villain and conceals the fact that Chamier may be alive in order that his own son may inherit the estate of Saltram, does not seem altogether real. Beatrice, great-hearted and generous minded, is much more convincing, and a very attractive figure. The chief charm of the book lies in its sympathetic representation of some of the feelings of youth, at once so poignant and so quickly gone.

BOOKS RECEIVED

"The Story of the Fifth Australian Division," by Captain A. D. Ellis, M.C. With a Foreword by Marshal Foch. (London: Hodder and Stoughton, Ltd. 15s. net.)

Sir George Clerk, British Minister to Czecho-Slovakia, has arrived in Prague.

M. Venizelos has left Paris for Athens, but will return to discuss the Turkish question.

General MacMunn left Busreh on January 24 for India to take up his new duties as Quartermaster-General.

Lieutenant-Colonel N. Arion, Equerry to Prince Nicolas of Roumania, has moved to 3a, Burlington Gardens.

DR. ALEXANDER VAIDA-VOEVOD.
Prime Minister of Roumania.

It is announced that M. Clemenceau left France on February 3 for Egypt. He will remain in Egypt probably for two months.

Lord and Lady Inchcape left by the P. and O. express on January 30 for Marseilles to join the mail steamer Khiva for Bombay.

Mgr. Severius Borsom, the Syrian Orthodox Archbishop of Syria, and the delegate of the Patriarch of Antioch, has arrived in London on a diplomatic mission.

Mrs. Carey Evans, the Prime Minister's daughter, who is going out to India to join her husband, will leave Liverpool on February 7 by the Ellerman liner Patrician.

Mr. Arthur Nias, who resigned his post of director-general of the Imperial Ottoman Bank, Constantinople, at the end of last year, has now returned to London.

The wedding of Prince Christopher of Greece, youngest brother of ex-King Constantine, with Mrs. William B. Leeds, widow of an American millionaire, took place on February 1 at the Russian Church at Vevey, Switzerland.

The engagement is announced between John Henry Lyall, Captain I.A.R.O. and Deputy Conservator of Forests, younger son of Sir Charles and Lady Lyall, of 82, Cornwall Gardens, S.W., and Eugènie Barbara Logan Kemp, elder daughter of Mr. and Mrs. Sidney Kemp, of 71a, Warwick Road, S.W.

M. Michailo Gavrilovitch, whom the Government of the Kingdom of Serbs, Croats, and Slovenes has appointed as its Envoy Extraordinary and Minister Plenipotentiary to the Court of St. James, has been elected President of the Serbian Red Cross Society in Great Britain in succession to M. Yovan Yovanovitch, who has returned to Serbia.

Christmas Day (N.S.) was celebrated at the Refugee Camp, Baquba (Mesopotamia) by the assembling together at dinner of the various Assyrian and Armenian notabilities in company with the British administrative staff. Among those invited by the Commandant, Lieutenant-Colonel F. Cunliffe-Owen, Mrs. Cunliffe Owen, and the officers at Headquarters, were Mar Yosep Khnanishu, Nestorian Metropolitan; Vahran Vartabed, Gregorian Archdeacon; Agha Zeita, brother of the Assyrian Patriarch; Malik Ismael, Assyrian Tribal Chieftain; and Baron Levon, a representative of the Armenian Committee.

APPOINTMENTS, ETC.

Sir Benjamin Robertson, K.C.S.I., K.C.M.G., is proceeding to South Africa to represent the Government of India on the Commission appointed to inquire into the Indian problem in the Union, and his successor in the Chief Commissionership of the Central Provinces, which he has held uninterruptedly since April, 1914, is Sir Frank Sly, K.C.S.I.

OBITUARY.

Mr. Hugh Fraser, late of the Indian Civil Service, has died at South Kensington. Joining the Indian Civil Service in 1874, he served in the North-West Provinces and Oudh, and retired in 1899.

A report received at Busreh by air from Aleppo states, says Reuter's Busreh correspondent, that Mr. Alexander Fleming, a civil engineer, was killed recently by Arabs near Deirez-Zor, while he was motoring from Aleppo to Baghdad.

Mr. James Monro, C.B., Bengal Civil Service (retired), died on January 21. In 1857 he entered the Bengal Civil Service. In Bengal he held the appointments of Magistrate, Director of Sessions Judge, Secretary to the Board of Revenue, Commissioner of the Presidency Division, and Inspector-General of Police. He retired from the Civil Service in 1884. He afterwards returned to Bengal and founded the Ranaghat Medical Mission.

We record with great regret the death of Mr. Joseph Offord, of 94, Gloucester Road, Kensington, after a long and painful illness. Of a most kindly disposition and with a deep interest in men and things which his scholarly attainments and extensive reading brought him, Mr. Offord enjoyed great popularity among a wide circle of friends, and he will be greatly missed. He had made archæology, and particularly Egyptian archæology, the study of his leisure moments for a long period, and his notes on this subject have been familiar to readers of THE NEAR EAST. Other publications to which he was also in the habit of contributing will be losers by his death.

Captain the Hon. Wilfred Gilbert Thesiger, third son of the late General Lord Chelmsford and the Dowager Lady Chelmsford, and brother of the Viceroy of India, died suddenly on January 31 at Brighton from heart failure. After leaving South Africa—in which he served with the Imperial Yeomanry—he was appointed Vice-Consul at Belgrade, and was given the local rank of Second Secretary in the Diplomatic Service while holding that appointment. During his stay in Belgrade he was for three years in charge of the Legation. Afterwards he was appointed to the position of Consul-General at Adis Ababa, Abyssinia, with the local rank of Envoy Extraordinary and Minister Plenipotentiary while so employed.

THE SEASON IN MOROCCO.

Our Tangier Correspondent writes (January 12) :—

We are having quite a pre-war number of British visitors. Sir John and Lady Lavery and Miss Lavery are here for the first time since the outbreak of war, also Dr. Verdon, who has been doing war work at Norwich, and Mrs. Verdon. The Misses Ritchie and Mrs. and Miss Taylor are back after a long absence; so are Major and Mrs. Hay Brook. Miss Hay Drummond Hay has returned after a visit of several months in Europe. Sir Basil and Lady Scott and family are at Miss Kirby-Green's. Miss H. Wilson is back, and has her sister, Mrs. Benthall, and Miss Sparkes staying with her.

Mr. and Mrs. Weir Brown have bought a house near the Marshan where they intend passing the winter. Mr. G. F. Moore, President of the British Chamber of Commerce for Morocco, returned with his family in October.

Among the visitors at the different hotels are the Earl and Countess of Pembroke, Sir Eric and Lady Swayne, Mr. and Mrs. Cumberland Weir, Dr. and Mrs. Jaques, etc. Dr. Jaques, who served with the forces in Mesopotamia, has commenced practising here.

Mr. Clark Kerr, the new first Secretary, took up his duties at the British Agency in November.

Finally, ex-Sultan Moulay Abdul-Aziz has returned, and is in his palace on the mountain.

The Rev. Waldo Burnett has undertaken for the third season the duties of chaplain.

Mr. and Mrs. Knott-Hill, having sold their house on the mountain, are not here this winter, and the colony has lost two well-known members since I last wrote you. Dr. Gabrielle Breeze, who was one of the first women to qualify, died on November 28. She was attached to the North African Mission, was a very capable surgeon, and was held in high repute. She had done a great deal of good work among the Moorish women.

One of the oldest members of the colony, Mr. Edward Taylor, who was for very many years a churchwarden, died in July. Mr. Taylor was one of the original members of the Commission d'Hygiene.

EGYPT EXPLORATION SOCIETY.

A lecture was delivered on behalf of the above Society by Professor T. E. Peet in the rooms of the Royal Society on January 23. The subject was "El Amarna, the City of Egypt's Heretic King." The lecturer said that in 1375 B.C., when King Amenophis III. died, his son and heir appears, from the evidence of the mummy generally supposed to be his, to have been little more than a boy. Despite this he seems not later than in his fourth year as king to have created a revolution in the State religion, and to have moved his capital from Thebes to El Amarna, a site 300 miles further down the Nile. There he founded a city called Akhetaton, where he settled down with his court to the enjoyment and practice of the new religion. This took the form of a pure monotheism, the old Egyptian pantheon being consigned to oblivion in favour of the new god, the Aton or Disk of the Sun. Some description was then given of the remains of the city of Akhetaton as excavated in recent years. The site had been marked out at the outset by fourteen immense boundary stones covered with inscriptions relating the circumstances of its foundation. The temple of the Aton had been discovered, and the king's palace, with its painted floor, and numbers of private houses had been excavated. The inevitable end of Akhetaton's complete neglect of home and foreign affairs was finally described. During his short reign of about seventeen years the great Egyptian Empire in Syria fell completely to pieces. He was succeeded by a son-in-law, Sakere, who, after a brief reign, gave place to a second son-in-law, Tutankhaton. Tutankhaton moved the capital back to Thebes and re-established the old religion. So perished the sole attempt ever made in Egypt to establish monotheism.

ROYAL SCHOOL
FOR
Daughters of Officers of the Army.

Patrons
Their MAJESTIES THE KING AND QUEEN
and HER MAJESTY QUEEN ALEXANDRA.
Chairman: LT.-COL. A. GRUBB. J.P.
Vice-Chairman—SURGEON-GEN. SIR WILLIAM TAYLOR, K.C.B.

Daughters of Officers of the Army are admitted to the above Schools according to the circumstances of their parents, at rates of £20, £45, £65, and £80 a year. Granddaughters of Officers are admitted at £45, £65, and £80 a year according to circumstances, and a limited number of daughters of civilians are admitted at £120 a year when there are vacancies. There are 15 Scholarships, open to competition, in the School, of amounts varying from £10 to £20 up to one of £50.

As half of the School consists of pupils on the £15 foundation, which includes both board and education, a deficiency of about £2,500 a year has to be met by contributions, which are earnestly solicited. Donations of £5 5s., giving one vote for life, or subscriptions of 10s 6d., giving one vote for the year, may be sent to

F. W. T. ATTREE, COLONEL (late R.E.), Secretary.
Office: Panton House, 25, Haymarket, S.W.1.

NEWS IN BRIEF.

Land taxes have been raised in various Egyptian mudirias from 2 to 10 per cent.

The last batch of British soldiers has left India for demobilisation, which has now practically been concluded.

The first Karachi-Bombay aerial mail started on January 24. The 600 miles were covered in 6½ hours flying time.

Many persons sentenced in connection with the disturbances at Gujerat are to be released, and some sentences reduced.

Switzerland proposes to quarantine all travellers from Turkey, Greece, and Russia except persons who are merely passing through Switzerland.

The Indian Government has issued a notification that former enemy aliens will be prevented from entering India until five years after the conclusion of peace.

It is reported at Athens that thousands of Russian refugees have asked the permission of the Greek Government to pass through Salonika on their way to Serbia.

A representative of the British Indians in the Transvaal is on his way to England for the purpose of submitting to Mr. Montagu a statement of the grievances of Indians in South Africa.

The Azerbaijan and Georgian Governments have addressed very cordial telegrams of thanks to the Supreme Council in return for their *de facto* recognition by the Entente Powers.

A message to the *Pioneer* from Baghdad reports, states Reuter's Bombay correspondent, that Captain Matthews, flying a Sopwith "Wallaby" machine, reached Baghdad on January 21.

A despatch from the French Moroccan headquarters reports that a squadron of aeroplanes bombed some encampments of the Tadla tribe, dispersing many insurgents, who left twenty dead.

A Bombay telegram says that during a triumphal procession held in honour of released political prisoners a Moslem youth was killed by a restive horse. The festivities were abandoned.

Lord Allenby has issued a proclamation ordering that nobody over sixteen years of age shall, after February 1, 1920, enter Egypt except with a passport complying with certain specified conditions.

Over £20,000 has been collected throughout Ontario for Armenian sufferers, and most of it has already been telegraphed to the Canadian missionaries in Constantinople as agents of the Near East Relief Association.

Lord Curzon has informed the Committee of the Church of England Peace League that the question of the early repatriation of prisoners in Siberia and Turkestan (many of whom have been there for years) and the immediate provision of the necessaries of life for them has been brought to the attention of the Supreme Council in Paris.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.

THURSDAY, FEBRUARY 5, 1920.

ROUMANIA AND GREAT BRITAIN

The brief visit to England of the Roumanian Prime Minister will be found ultimately, we believe, to signalise something more than the desire on the part of the Roumanian Government to plead its cause before the Entente Powers. A curious situation confronted Dr. Vaida-Voevod when he assumed office. Roumania was in the bad graces of the Paris Conference, but realised that she could count on a strong measure of sympathy from most of the Allied Powers individually. In these circumstances the Prime Minister rightly decided that a personal exchange of views with the Supreme Council or Ambassadors' Conference was more likely to bring about a satisfactory understanding than months of correspondence. Officially Roumania has fallen into line with the Allies' wishes; the Treaty with Hungary has been signed, and the distasteful Minorities clause has been accepted, but the Roumanians feel that their point of view is far from being properly appreciated among the Allies. On his political record, and as a Transylvanian, Dr. Vaida-Voevod would have a strong claim upon the sympathetic attention of those who have been inclined to accuse Roumania of intransigeance. But his personality, combined with the obvious sincerity and the moderation with which he has urged the Roumanian case, has clinched the success of his mission. The happy inspiration which brought him to London is symptomatic of the recognition by Roumanians of the fact that a variety of circumstances is making for closer relations between Great Britain and Roumania. A little less than a year ago Queen Marie of Roumania reminded the British public of the personal link which she herself had created between the two peoples, and undoubtedly her visit helped to no small extent to make this country somewhat sceptical of the justice of the Paris view of Roumania's attitude towards the Allies and her action in regard to Hungary. Dr. Vaida-Voevod is now concerned to show that in addition to sentimental considerations there are practical reasons why Roumania should be encouraged to keep in close touch with Great Britain, and at the same time he is anxious to throw light on the various matters in connection with which the Roumanians consider that they have been misrepresented. He could probably point to the printed word in confirmation of all that he has to say; but he is shrewd enough to know that there is a limit to the knowledge of foreign affairs that a Government anxious about its own position at home is able to absorb by reading, and he has wisely preferred to cover the ground in personal conversation.

While economic matters must of necessity be uppermost in the Roumanian mind at the present moment, there are several political questions to which Dr. Vaida-Voevod will have been anxious to refer during his conversations with the British Prime Minister. On the subject of the rights of minorities we are confident that the Roumanian statesman will have been able in comparatively few words to dispose of any misgivings that the British Government may have entertained as a result of *ex parte* statements. Roumania as a modern State has had only a brief existence of less than sixty years, and throughout that period the stern necessity of self-preservation has dictated much of her policy. The sudden influx of a needy and impoverished population escaping from Russian persecution confronted her with a Jewish problem entirely different from the experience of any other State. She dealt with it according to her lights at that period, and it was inevitable that foreign opinion on the subject should soon show itself in advance of the Roumanian attitude. The war has opened the eyes of Roumania as well as those of other countries; the Jews, whose disabilities were more grievous in principle than in their actual bearing on the individual, have received the full rights of citizenship, a policy of land expropriation under safeguards in the interests of the peasants and of production, that may well serve as a precedent for other countries, has been introduced. The mistake made by the Paris Conference was to regard the countries of South-Eastern Europe as on the same level of political development as the Entente Powers, and to ignore the extent to which intrigue, malice, and uncharitableness, within and without, hampered their growth. The Conference was prolific in counsels of perfection, but did not stop to think that these could not be attained, and still less did it lend a helping hand or point the way to their attainment. Dr. Vaida-Voevod, we are confident, will have proved, if he has been given the opportunity, an able exponent of Roumanian reasonableness in the light of her war experience. The Allies have evidently hesitated to commit themselves on the subject of Bessarabia. They will have accepted the preponderance of the Roumanian population, but have failed to understand the various movements that have tried to hinder the complete absorption of the province in Roumania. Only first hand knowledge of the position—the history of Bessarabia, the status of the Roumanian element, the sharp distinction in cultural development between the town-dwellers and the country-folk, the ramifications of German intrigue and Ukrainian aspirations—will enable the Allies to do the right thing and obviate future trouble by supporting Roumania's right to the province. On the other hand, the Roumanian Government, it is to be hoped, will realise that no good will come of any attempt to counter one injustice by another. It has been disappointed—bitterly disappointed—over the division of the Banat, and it is tempted to seek compensation by holding on to the "Quadrilateral," the strip of Dobrujan territory taken from Bulgaria by the Treaty of Bucharest (1913). As in all Balkan controversies a formidable array of argument can be marshalled on each side. The fact remains that the land in question was seized seven years ago as the price of victory in a war that did not arise from any quarrel between Roumania and Bulgaria, and it is significant that to-day, when martial law has been withdrawn from the whole of Roumania, it has been considered necessary to retain it in the Dobruja. The matter, we believe, is one that will be adjusted satisfactorily sooner or later, and the statesmanship shown by Dr. Vaida-Voevod justifies the hope that he will recognise the advantage of removing as far as possible, and as quickly as possible, everything that tends to perpetuate an "Alsace-Lorraine" or 'the spirit of "revanche" in the Balkan Peninsula.

The overwhelming necessity for coping with the economic situation ought to prove an effective stimulus for the settlement of all outstanding political questions. A serious handicap is imposed on Anglo-Roumanian trade relations by the depreciation of the *leu*, and economic conditions in a country as rich in natural resources as Roumania could hardly be worse. By common consent there is but one remedy—production, more production, and still more production. Every soldier who is kept under the colours is depriving the country of his services to this all-important end. If the retention of the "Quadrilateral" entails an additional number of troops mobilised for all time, the question should be faced whether Roumania has more to gain by holding this strip of territory at the sword's point, or by liberating for productive work the soldiers and officials that its occupation necessitates. By common consent the question is one for Roumania herself to settle; but if any advice on the subject has reached Dr. Vaida-Voevod in England, he will know how to take it in the spirit in which it has been offered. Neither the British Government nor the British people are concerned over the occupation by any particular race of this or that piece of land in the Balkans; but they are deeply interested in the lasting peace of the Near East, and they believe that it will prove to all the countries immediately concerned far more advantageous than the retention of any territory at the expense of a neighbour's hostility.

CAUCASIA.

I.

The problem of how to deal with Caucasia has been left amongst the last of those which the Peace Congress has attempted to settle. It is a difficult problem, requiring practical and far-seeing statesmanship, to overcome the political, geographical, economic and military difficulties with which it bristles.

Caucasia has an area of nearly 200,000 square miles, and a population of nearly ten millions. It is one of the main connecting links between Europe and Asia, and both its position between the Black Sea and the Caspian and the vast chain of mountains by which it is intersected for some 900 miles make this territory one of great strategic and political importance. Besides a soil in many places of great natural fertility, Caucasia contains some of the richest oilfields in the world, not to mention its other less developed resources in the way of manganese copper and other metals, and timber. Batum, Poti, and Novorossisk on the Black Sea, Baku and Petrovsk on the Caspian furnish Caucasia with tolerably good ports, and Caucasia may fairly be looked on as a natural highway from Western to Eastern Asia.

Amongst German statesmen there has been no lack of vision in regard to the supreme importance of this favoured land. As soon as the collapse of Russia's military and naval power set in, Germany sent out General von Kress to Tiflis to exercise political and military control. Turkish troops were sent across the Caucasus to raise in revolt the Mohammedans of Daghestan, and to seize the oilfields of Baku and the Apsheron Peninsula. Three States were created at once, Georgia, Azerbaijan, and an Armenian Republic. Further developments north of the Caucasus were to follow. The downfall of Roumania and the state of the Russian navy allowed Germany to treat the Black Sea almost as a German lake. Manganese was shipped to Germany from Batum and Poti. Oil from the Baku and other oilfields was also obtainable. Georgians were brought to Berlin, in order that arrangements might be considered without loss of time for the commercial and industrial development of Caucasia by Germany. The Germans, at any rate, showed no reluctance to undertake control and responsibility. Ostensibly, no doubt, the three new Republics which Germany had set up were to be masters of southern and eastern Caucasia. But Turkey was led to believe that the Republic of Azerbaijan, with a population largely consisting of Mohammedans, either Tartars or Iranians, would join in some future Pan-Islamic federated State, with Turkey at its head. Events proved that Turkey had become too exhausted to carry out even the first steps towards the realisation of these plans, and though some Turkish forces crossed the Caucasus, they could not hold Baku and the oilfields. With the defeat of Germany and her allies, the Germano-Turkish plans came to an end for the moment, leaving Caucasia north of the mountain range in the hands of General Denikin and his volunteer army in the plains, while the various hill tribes held the higher mountain districts and Daghestan; south of the Caucasus range the newly-created Georgian Republic with difficulty asserted some show of authority in the district round the City of Tiflis and towards the Black Sea—but found itself at once involved in a struggle with the Armenian Republic, and in difficulties with the Tartar populations living in Southern and Eastern Trans-Caucasia and in the new Republic of Azerbaijan. In almost all districts south of the Caucasus a food shortage of an acute kind had prevailed during the latter part of the war, while in the territories claimed by the Armenian Republic an appalling state of famine existed. Tartars, Georgians, Russians, and Armenians, who form the bulk of the population, were antagonistic, often openly hostile to each other. In these circumstances some steps were imperatively necessary to keep open the railways and communications as the best means of mitigating the famine, and in order that open war between the various races might be prevented, till some arrangements had been come to as to the future.

An American Commission was to report, and meanwhile some small British forces were drafted into the country to keep order and help fight the famine. Batum was occupied by the British from the Black Sea without opposition. Baku was seized by British troops coming from the direction of the Caspian, but had to be evacuated under pressure, largely because of the attitude taken up by the local Armenians, who form a considerable element of the Baku population. These Armenians not only failed to help adequately in the defence of the city, but actually intrigued with the besiegers to hand it over. Ultimately the city of Baku was re-occupied by the British troops, and the British Navy, with probably the most ramshackle fleet it has ever fought with, obtained complete mastery of the Caspian.

The above brief sketch will recall to the reader the events in Caucasia which led up to the situation with which the Allies had to deal from Versailles. The occupation of Batum and Baku, the two sea terminals of the Trans-Caucasia railway, and the presence of scattered bodies of troops, however small, in these parts of Georgia and Azerbaijan, together with the efforts of political officers and missions, sufficed for the moment to keep a comparative state of peace, and to prevent the total breakdown of communications south of the Caucasus, while General Denikin's army with difficulty maintained a hold on the northern side of that range, from his real base in the Kuban Cossack territories. These expedients sufficed for a time, but the rapid march of events made it imperative that a definite policy for the future should be decided on. The Georgians were chafing at the continued state of indecision, and at the continued absence of recognition by the Allies. This was a state of things which encouraged intrigue among all the nationalities and tribes. Still, the decision was not an easy matter.

The Allied Powers were in a position of some embarrassment in deciding upon a policy which affected integral portions of Russia, a state with which they were or had been in alliance. The Allies naturally, as long as there seemed a chance of that Russia which had been their ally again reconstituting itself, hesitated before they recognised as independent some of its richest territories. Poland and Finland had, it is true, already been recognised, but Poland had a well-known history as an independent State and Finland had also definite historical claims, at any rate, to autonomy. Northern and Southern Caucasia were comparatively unknown, and their claims to recognition seemed less strong. It would be difficult, with decency, for the Allies themselves to annex, or even permanently to occupy, these rich territories of their late ally.

The United States of America, as an associated Power, might indeed with propriety have accepted a mandate to administer at any rate those parts of Caucasia which are not inhabited mainly by Russians, but the United States has refused all mandates. Italy, too, might have been entrusted with a mandate—but Italian statesmen might well feel that if Italy were to accept the task she would be undertaking a task beyond her powers, for the foreign administrators of Caucasia run the risk of attack from Bolshevist Russia (which is strongly imperialistic in that it insists on the integrity of the old Russian boundaries before the war, besides desiring the economic advantages of the oilfields), as well as the risk, amounting almost to a cer-

tainty, that many of the mountaineers would resist a new foreign administration, just as the Circassians and the Lesghians of Daghestan had resisted that of Russia. Italy, as the heiress of the Republic of Genoa, might have wished to revive the glorious tradition of that republic and her trade with the Black Sea in general, and Georgia in particular. But Italy has not taken a mandate. France, too, has her hands fairly full in Syria with the Arab problem—and in her case, as in that of any Power which could only reach Caucasia by way of the Dardanelles, the difficulties in the event of hostilities would have been very serious. The British Empire is in a more advantageous position owing to the relations existing between it and Persia, for troops might well be sent to the Caucasus through that country in the event of the Dardanelles being closed to military forces. The British Empire, however, seems also to be unwilling to occupy or annex any part of Caucasia.

In these circumstances the obvious course seemed to be the recognition at least of the *de facto* Government of the three republics of Georgia, Azerbaijan, and Armenia, which the Germans and Turks had invented, and this recognition of the Governments, while carefully refusing to recognise any frontiers, was granted towards the end of January of this year. This recognition may strengthen these new States in their struggle for existence. It may make it easier for the Allies, or the League of Nations, to intervene if their existence is threatened by the Bolshevists; and if the Republics of Georgia and Azerbaijan can maintain themselves they will serve as buffer States, protecting Persia and Mesopotamia from invasion by land.

Neither the North Caucasian Republic nor any Government or tribe has so far been recognised by the Allies as independent. There are some difficulties about the recognition of Governments so amorphous and liquid as those in question; but a little kindly encouragement might well cause crystallisation to take place quickly. The need of some prompt action is imperative if the non-Russian inhabitants of the Northern Caucasus are to resist the Bolshevists on the one hand; or in the Mohammedan districts the work of pan-Islamic intrigues begun by the Germans and carried on by the Turks.

(To be continued.)

CYPRUS.

Below we give extracts from the lecture which Mr. Roland Michell gave before the Central Asian Society on January 21. He discussed the past, the present, and the future of Cyprus. After sketching the history of the island, he said:—

We may regard British rule from two points of view: (1) What has Britain done for Cyprus? and (2) What has it failed to do? As regards (1), those who desire to examine this record of progress will find volumes of information in Blue Books and the annual reports of forty years. No reform gave greater satisfaction in Cyprus than that of the Law Courts, carried out in 1883 under the late Sir Robert Biddulph, who so ably governed Cyprus for seven years from 1879. The highest praise is given by all classes to the judicial department with the Supreme Court at Nikosia, and a British Resident in six District Courts. Reforms were similarly carried out in all branches of the administration. The financial department was reorganised. That of the Public Works constructed roads, bridges, and public buildings. A light railway now connects Famagusta with Nikosia and the Central Plain. Education has made considerable advance. The medical department shows a good record as regards public health, sanitation, and hospitals. Lepers and lunatics are properly cared for. Forests are preserved and nursery gardens have been established. An experimental farm has done some good work. The breeds of horses, donkeys, and cattle are being improved. The campaign against locusts is maintained. The post and telegraph services are efficiently managed. A small harbour has been constructed at Famagusta. Municipalities have been given wider powers. The standard of comfort has been greatly raised in both towns and villages. Details would occupy far too much time. Only those who knew Cyprus as pioneers in the early years (or old residents) can appreciate the complete transformation that has been effected. In the second place, however, it must be candidly admitted that much has been left undone during our trusteeship.

The lecturer then dealt with the charge of British incapacity to govern Cyprus, which was to be a model to Asia Minor. He said: The truth is that it never had a chance of becoming so, mainly for the following reasons:—(1) The condemnation of the occupation by a powerful party in England; (2) it was condemned and written down as a pestilential and feverish spot, whereas by 1881 Sir Robert Biddulph was able to say that it was, for our troops, the healthiest place in the British Empire; (3) the burden of the "tribute"; (4) the occupation of Egypt in 1882, which caused further disregard; (5) the anomaly of our tenure, which prevented the investment of capital. Attempts to develop the island were stifled by the Home Treasury.

In a description of the people of Cyprus, he said: The people of Cyprus are keen-witted and in a high degree intelligent. The villagers are strong, hardy, and frugal, law-abiding, and remarkably courteous and hospitable. The population is now about 290,000, including 230,000 Greeks and 60,000 Turks. In speaking of Greeks, I should observe that they are not Hellenic subjects; up to 1914 they were Ottoman subjects (*rayahs*), when they became British subjects. It is very difficult for an Ottoman subject to become a Greek, because an Ottoman subject must not only invest himself with Greek nationality (which is easy), but he must also divest himself of Ottoman nationality by permission of his Sultan, which is far from easy.

Turning to the future of the island, he said: The situation, as far as it is known, is this. A definite promise has been given in Parliament that the question will not be decided before it has been referred to the House of Commons. The British Government is, of course, quite independent of the Paris Conference in this matter. The claim does not emanate from Greece, and was not included in "the full and complete statement of the Greek Case" (the Dodecanese area does not even include Rhodes, far less Cyprus). It is presented by a section of the Cypriot people. It is very doubtful whether it would be for the interests of Greece to take over this responsibility. It is reasonable to assume (as a late writer has done) that our Government does not desire to add to Greece's difficulties by giving her more territory than she can at present administer. This is not the moment to act on grounds of sentiment. Greece has enough to do at present to set her own house in order. She is acquiring sufficient new territory, and can afford to wait. The questions are, what is best for Cyprus, and what do British interests demand? Taking the first question—as regards the material interests of the island—it can hardly be to its advantage that is should pass from the hands of a powerful and wealthy Power to those of a nation still weak and poor. It stands to reason that its development (which, now that it is a British possession, should certainly proceed) will be better promoted by Britain than by Greece. But the dominating question is, what line does British policy dictate? I would say that not only the argument for detention holds the field, but that it is stronger than it ever was before.

Then followed a discussion by some eminent personalities. Sir William Haynes Smith said that countries now seething in discontent and war would never be settled unless Lord Beaconsfield's far-seeing views were carried out. A railway should connect Alexandretta and Trebizond, and tap the grain-producing regions of South Russia, as well as countries near the Caspian, without meddling with Turkey.

Gladstonian Governments were opposed to the scheme, and Lord Salisbury subsequently said that there we had backed the wrong horse. With all deference to that statesman, he held that we had backed the right horse, but put it under the wrong jockey. Turkey, under German influence, planned the Baghdad railway to counteract British naval power. The right policy was to view matters from the geographical standpoint. We should regard Cyprus as the key to the situation, and resist to the utmost the idea of ceding the island to Greece.

Sir Charles King-Harman said: Regarding the question from a material point of view, it was not to be expected that the island, if ceded to Greece, would prosper any more than the unfortunate Ionian Islands had done. If a free and genuine expression of opinion on the part of the people could be obtained he was perfectly convinced that such determination (to use the current phrase) would be overwhelmingly in favour of the island remaining a part of the British Empire.

Sir William Ramsay said it had been his life study to consider the relation between Europe and Asia. As a student of history he had come to the conclusion that the British Empire, in spite of many mistakes—indeed, crimes—and in spite of ignorance and narrow views on the part of Governments whose horizon was limited by considerations relating to general elections—in spite of all these defects, the British Empire had moved nearer to a line of progress than any other Power. If we retired from Cyprus we should be retiring from the line of progress, and turn our back on our own history. Such abandonment would imply a disbelief in the country's mission and our national character. This was the time of railway development in Asia Minor. He advocated the policy of letting the Germans make the Baghdad Railway, which, he predicted, would in fifty years be in British hands. Colonel C. E. Yate also spoke. Sir Thos. Holdich in the chair (in the unavoidable absence of Lord Carnock). There were present also: Sir Francis Younghusband, Sir Charles Tyser (late Chief Justice, Cyprus), Archdeacon and Mrs. Beresford Potter, Lieut.-Colonel Hope Biddulph, Colonel A. C. Yate, and many others interested in the East. It was clear that there was a strong feeling against the idea of our ceding Cyprus to Greece.

TO AMATEUR PHOTOGRAPHERS.

The Editor will be glad to consider photographs of Near Eastern scenery, types, places of interest, etc., etc., suitable for reproduction in THE NEAR EAST. *When desired, payment will be made for the right of producing such photographs. Readers should state, when forwarding pictures, whether payment is desired or not.*

Photographs should be sent either packed between stout cards or rolled in a cardboard tube, and should on no account be folded. Titles and notes should be attached to each photo, and should be very clearly written.

THE CARAVANSERAI.

Think, in this batter'd Caravanserai
Whose Doorways are alternate Night and Day,
How Sultán after Sultán with his Pomp
Abode his Hour or two, and went his way.

The story told recently by THE NEAR EAST's Belgrade Correspondent of the capture of the 297-lb. fish—a *som*, or Silurus, he called it—set me looking up data about the finny giants of the Euphrates and the Tigris. I think I wrote of them some time ago, but my memory is such a poor thing that I cannot be sure; and at the moment I cannot put my hand on my own notes. However, I see by an old number of the *Field* that in September, 1918, Lieut.-Colonel Ewart, fishing at Ramabi (Query: Ramadieh) landed a Euphrates salmon weighing 130 lb. Of course, that is a minnow by comparison with the Belgrade butcher's catch; but then they speared or clubbed the poor *som* to death, while Colonel Ewart landed his beauty with a split-cane rod and quite light tackle, after a twenty-three minutes' tussle. Personally, I would much rather have to my credit the 130-lb. "Euphrates salmon," which is a game and graceful fish, than the larger *som*, which appears to have been a finny Caliban—though not a very ferocious one, poor brute!

***

Colonel Ewart, by the way, is of opinion that the "Euphrates salmon," which is the Arab *bez*, belong to the family of carp or barbel, as they all have four barbules, or beards, and are bottom feeders. He mentions that a casualty clearing station held the record for the biggest *bez* taken out of the Euphrates. It weighed 244 lb., was 7 ft. long, and 49 ins. in girth. Another item of interest in the Colonel's notes was that these big fish—or some others—eat birds that fall into the river. An officer who was shooting sand-grouse lost four birds in this way in one day. No wonder that he announced his intention to use grouse or sparrows as bait when next he went fishing!

***

The Bermondsey Borough Council, having presumably done all that it possibly can do for the happy borough whose interests it watches over, lately ventured into the field of politics. Without waiting for the official reports, it passed a resolution recording its "deep sense of horror and humiliation at the news of the brutal massacre at Amritsar" and then, filled with a sense of its own virtue, no doubt, it proceeded to send copies of this Pecksniffian effort to other councils, with an invitation to them to back its opinions by doing likewise. Happily, other councils did not exactly tumble over one another in their haste to imitate Bermondsey in its example of bad taste and lack of fair-play. On the contrary, Westminster officially expressed its regret that such a resolution should have been passed at a time when the matter was still under investigation; and said a good many hard, but true, things about the Bolshevistic tendencies observable in some directions in this country. Anything more improper and more utterly un-British than Bermondsey's action I cannot imagine. It is not the sort of thing that one would expect even from that malodorous and unattractive neighbourhood.

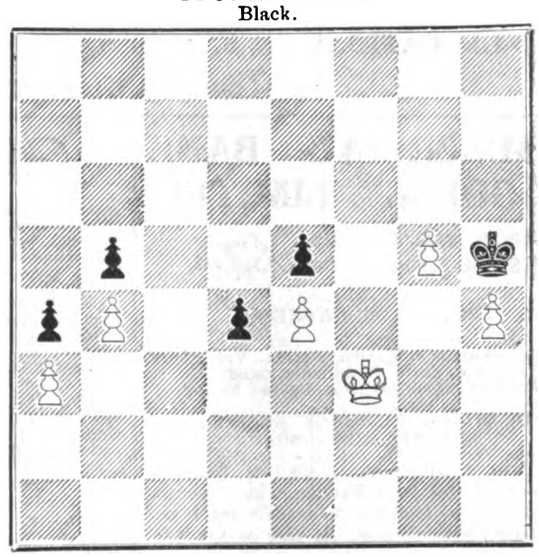
***

Sir Rider Haggard has been complaining about the difficulty—or, rather, the impossibility—of studying the Egyptian antiquities in the British Museum, owing to the galleries being still monopolised by some Government Department or other. I, for one, share his indignation. It is absolutely disgraceful that the B.M. should still be given over to Government flappers so long after the end of the war. Most of us are heartily sick of the said flappers, and anxious to see the last of them; and quite a lot of us want to visit our old friends the mummies again. But my chief interest in regard to Sir Rider's complaint is to know whether he is contemplating another "Cleopatra-y" book. I have always had a liking for "Cleopatra." In fact, I think it was that book which in my young and impressionable days turned my thoughts to Egypt and the East, and thus set me in the way to become a real lover of the Orient in time. I remember that I had a soft place in my heart for Charmion! So, if Sir Rider Haggard is going to give us another Harmactus, he may reckon on one interested reader already.

CORSAIR.

CHESS.

PROBLEM No. 12.
Black.



White.
White to play. What result?

It is reported that as the result of the meeting of Señor Capablanca and Dr. Lasker in Holland a match for the championship of the world has been agreed upon, to take place in Holland next year.

The London tournaments are now entering their most interesting stage. Sir G. A. Thomas looks like repeating his previous victories in the City Championship, while the leader in the Metropolitan Championship at present is Mr. E. E. Colman.

GENERAL BANK OF GREECE.

Paid-up Capital, Drs. 3,000,000.

Head Office - ATHENS.

BANKING OPERATIONS:
Every description of Banking business transacted.

FINANCIAL OPERATIONS:
Investigations in connection with, and the promotion, organisation and financing of, Limited Joint Stock Companies, with a view to exploiting agricultural, industrial and mineral resources, executing technical works, etc.

COMMERCIAL AND SHIPPING DEPARTMENT:
Purchase and sale of goods on account of clients. Warehousing, Advertising and placing foreign products on the market. Agents for foreign companies and large commercial and industrial firms abroad. General Shipping Agents.

POPULAR BANK OF GREECE.

Head Office, ATHENS. Branch, PIRÆUS.

Correspondents throughout Greece.

Established June, 1905, by the National Bank of Greece and a group of Capitalists.

CAPITAL - Drs. 1,500,000.
RESERVE FUND - Drs. 2,500,000.
Deposits and Credit Accounts, Drs. 100,000,000.

The Bank specialises in the collection of Bills payable in Greece; it accepts goods on consignment, and undertakes their sale, and transacts every kind of Banking business.

General Manager: D. LOVERDO.

TRADE WITH THE NEAR EAST.

The Bank of Athens extends special facilities for business with the Near **East** to manufacturers, exporters and importers.

The Bank has offices in all the principal towns in **Greece,** also in **Egypt,** Cairo and Alexandria, in **Cyprus,** Limassol, in **Constantinople,** in **Smyrna,** and in **France,** Marseilles.

Inquiries from interested parties are invited.

BANK OF ATHENS.

PAID-UP CAPITAL : £1,920,000. **HEAD OFFICE IN ATHENS.**

London Office: 22, Fenchurch Street, E.C. 3.

COMMERCIAL BANK OF GREECE, LIMITED.

CAPITAL PAID-UP - Drs. 15,000,000.
RESERVE FUNDS - Drs. 2,364,793.

Head Office: ATHENS.

Branches:—**Piræus, Salonika, Patras, Volo, Syra, Calamata, Corfu, Cephalonia, Candia, Chios, Argos, Pyrgos, Vostizza (Ægion), Nauplia.**

AGENTS IN ALL PARTS OF GREECE, THE LEVANT, AND ABROAD.

The Bank conducts every kind of Banking, Commercial and Stock Exchange business and extends special facilities to traders interested in business with Greece. It acts as Agent for many Foreign Banks. It is specially organised for Exchange, the execution of mail and cable transfers throughout Greece, and for the collection of clean and documentary Drafts.

MERCHANDISE DEPARTMENT:
The Bank undertakes the warehousing and sale of goods consigned.

GREECE.

Area 43,522 square miles. The cultivated area amounted to 5,743,300 acres, of which about 2,253,400 were under cereals, 518,900 under grapes and currants, 370,600 under oak trees, 296,500 under olives, and 2,223,900 were forests.

Population (1914), 5,000,000 approximately.

Chief Products (with average annual production):—Currants, 142,000 tons; wines, 3,000,000 casks; tobacco, 9,000,000 lb.; cereals, 8,000,000 bushels; olive oil, 200,000 casks.

The **MINERALS** of Greece include:—Iron, Marble, Magnesite, Emery, Lead, Lignite.

IMPORTS (1914), Old Greece only:—Total value £7,000,000, of which £2,000,000 from the United Kingdom; £1,800,000 from Germany and Austria Hungary; £1,000,000 from Russia.

EXPORTS (1914), Old Greece only:—Total value £4,000,000, of which £3,000,000 came to the United Kingdom.

COINAGE.—The unit is the Drachmæ, equivalent to a Franc (10d.). The current rate of exchange is about 26·89 Drachmæ to £1.

FREIGHT.—From England, 160/- + 10 % primage.

WEIGHTS AND MEASURES.—It was decided in 1898 to introduce the metric system. The change is to be gradual from the old system, which is:—Oke = 2·82 lb., stater = 123·20 lb., livre (Venetian) = 1·05 lb., baril (wine) = 16·33 imperial gallons, kilo = 0·114 imperial quarter, pike = ⅔ of a yard, stremma = ·242 of an acre.

BANK OF NATIONAL ECONOMY (of Greece)

Head Office: ATHENS.

Branches:

PIRÆUS, SYRA. PATRAS.

Capital Paid Up - Drs. 10,000,000

Fully represented in all parts of the world for all kinds of commercial, financial, and shipping business.

President. L. EMBIRICOS. *Manager.* D. MIAOULIS.

BANK OF PIRÆUS.

For COMMERCE, INDUSTRY and SHIPPING.

Capital Paid-up - Drs. 5,000,000. Reserve Fund - Drs. 3,095,000.

OFFICES at PIRÆUS and ATHENS.

Every kind of Banking business transacted.
The Bank's connections throughout Greece enable it to offer foreign clients special facilities for the collection of Bills, etc.
Correspondence invited.

BANK OF INDUSTRY OF GREECE.

Head Office: 14, Stadium Street, Athens.

Capital Fully Paid-up - Drs. 15,000,000

The Bank has been established for the encouragement and development of Industry and Commerce, and undertakes every description of banking business.

BANK OF ORIENT.

Capital Paid up - Drs. 25,000,000

Head Office: ATHENS.

Branches: SALONIKA, SMYRNA, ALEXANDRIA, CAIRO, MITYLENE, SERRES, ZAGAZIG, MAGNESIA, PERGAMA, SOMA.

Every kind of Banking Business transacted.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

The movements of the exchanges have almost monopolised the attention of the business community this week. It is now realised on all sides that every effort will have to be made by the countries concerned to remedy this aftermath of the war if trade is to resume its accustomed course. Each country has the solution in its own keeping in the rapid development of reconstruction and in the establishment of strict economy in expenditure. Before these notes appear a conference will have taken place between the Chancellor of the Exchequer and the bankers on the economic position of Europe, and it is assumed that the result of the meeting will be that an International Conference will be arranged at which the whole position will be discussed. Elsewhere in these columns will be found two articles on the exchanges—one on the outlook in Near Eastern countries, in which it is pointed out that the internal position of the countries in question is on the whole very sound, and that their resources are ample for the establishment of adequate foreign credits, provided hard work is the order of the day; the other on the Indian Currency report, which has just been issued, and has been followed by the placing of the rupee on a gold basis, the result of which has been that the exchange is now in the neighbourhood of 2s. 9d.

***

The announcement that a P. and O. Banking Corporation is being formed with strong banking support is bound to be of the greatest interest to the business community. The many recent acquisitions by the P. and O. have given it a unique position on the trade routes between the United Kingdom and the Far East, and as banking and shipping are in many ways so closely correlated, it follows that the new development is bound to be of the greatest importance in the furtherance of British commerce in the Near and Far East. Before the war there was only too much justification for the complaint that British traders met with far too little support from the banks, particularly in regard to trade with the Near East. The last few years have seen a marked improvement in this respect, and now we have the present formation, which, like some immediate predecessors, aims directly at the development of foreign trade. When the activities of both these great institutions are fully developed, I do not think the British trader will have much ground left for complaints regarding the lack of banking facilities.

***

The prospectus of the P. and O. Banking Corporation is to appear in April. It would have been out last week but for the request of the Chancellor of the Exchequer that new issues should be held over until the Government bonds are out of the way. The capital of the new corporation will be £5,000,000, of which £2,000,000 will be paid up. Lord Inchcape will be the chairman. Arrangements have been made for the participation by the P. and O. Company and by Lloyds, the London County, Westminster and Parrs and the National Provincial and Union Banks, the most enterprising of the great joint-stock institutions, and in the allotment of shares preference will be given as far as may be desirable to applications from the P. and O. stockholders. The bank will have its head office in London, and it is intended gradually to open business at the ports where the P. and O. Company and its allies operate, in the East, Australia, and elsewhere.

***

Lancashire has warmly welcomed the proposals of the Empire Cotton Growing Committee. The gravity of the position with regard to the supply of the raw material is now fully recognised in the cotton centre, and the desire is to do everything possible to further the growing of cotton within the Empire. At the meeting of the Manchester Chamber of Commerce last week a resolution was carried urging the Government to give effect without delay to the recommendations of the Empire Cotton Growing Committee, while another was passed requesting the President of the Chamber to call a meeting of delegates representative of the cotton trade with a view to the raising by levy of a fund for the development of cotton growing.

***

One of the chief handicaps to the extension of cotton growing is the fact that other crops are sometimes more profitable and, therefore, are preferred by the cultivators. It goes without saying that the development of Empire cotton growing must depend ultimately on the profitable character of the crop and its products, and special interest, therefore, attaches to the question of the utilisation of cotton seed, which is the subject of an illuminating article in *The Times Trade Supplement* this week by Mr. E. C. de Segundo, in the course of which he points out that the established facts indisputably show that the cultivation of cotton and the proper disposal of the cotton-seed should be treated as interdependent propositions, and that cotton-seed is potentially a very important factor in the economies of cotton cultivation. Professor Todd, speaking at the Royal Society of Arts a year ago, said that the utilisation of the short residual fibres "might just turn the scale in many cases in favour of cotton, and that the importance of these by-products could hardly be exaggerated."

***

Reports continue to come to hand of German activities in fields where the Teuton was specially prominent before the war. Evidently the war has in no way impaired their commercial aggressiveness, and there is every indication that at a time when, owing to the low exchange value of the mark, they stand to gain little immediate profit, they are sparing no effort to regain their foothold with a view to penetration "in the old way" as soon as the occasion is propitious. But, forewarned is forearmed, and as no one now has anything to learn about German methods it is not surprising that the pushful Teuton should suffer not a few rebuffs in his arduous task. Still, there is always the certainty of a new generation, and perhaps Germany is pinning its faith on that factor.

***

France has not been slow in realising the value of the aeroplane as a connecting link with her colonies, and for some time now there has been a fortnightly aerial service between France and Morocco. The service, which is between Toulouse and Rabat, with stopping places at Barcelona, Alicante and Malaga, has so far been carried on without an accident, a fact which emphasises very forcibly the progress that has been made in flight in the last few years.

***

Favourable news is forthcoming of the progress of Morums Oriental Stores. Despite the unsettled conditions in Egypt, it is announced that there has been a satisfactory increase in the company's business compared with the corresponding period of the previous year, and it has been decided to pay an interim dividend of 3½ per cent. on the preference shares.

(REPORTS FROM OUR OWN CORRESPONDENTS.)

ROUMANIA.

BUCHAREST, January 16.

British Chamber of Commerce.

H.M. Commercial Secretary in Bucharest has given another proof of his energy and practical helpfulness by taking the initiative in the foundation of a British Chamber of Commerce in Bucharest. A preliminary meeting was called on January 12, and there was a large attendance of representatives of British firms either established in Roumania or doing business here. Telegrams of regret at their inability to be present were received from half-a-dozen representatives of firms established in the provinces. Upon the proposal of Mr. Louis Johnston (public accountant), seconded by Mr. Humphries (of the Bank of Roumania), Mr. Adams was unanimously elected to the chair.

Mr. Adams addressed the meeting, giving a brief summary of the proposed activities of the Chamber. He stated that one of its tasks would be the elaboration of a scheme for the settlement of trade and commercial disputes between British and Roumanian houses. He hoped that before very long contracts for the sale of merchandise between the two countries would contain a clause by which disputes would be submitted to the arbitration of the British Chamber in Roumania. It was obvious that the arbitration awards of the Chamber would be of great value. He also thought that the Chamber should include in its scope a consideration of the difficult question of transport facilities in Roumania. He thought that the representations of a Chamber standing forth as the official organ of British-Roumanian trade (which reached many millions sterling per annum) would have great weight both with the Roumanian authorities and also with the British Government.

Mr. Adams also considered that the Chamber might well consider questions constantly arising out of the discharging of steamers in the various ports, together with the provision of proper machinery for unloading, etc., and the allied questions of port extensions and alterations. Another activity of the Chamber should include the provision of an information office for the purpose of giving not only commercial but also credit information. This office was not intended to supersede the banks or inquiry agents in the giving of credit information, but should prove a very valuable supplement to their work. A few of the minor activities could be the installation of an employment bureau for the placing of young Englishmen in offices and warehouses in Roumania, and for the provision of correspondents able to read and speak the English language. In addition, the Chamber could possibly take an interest in the extension of the English language in commercial schools in this country, and in any case should prove an important factor in spreading a wider knowledge of British business methods, British standards, and British culture in Roumania, as well as providing a firm pillar of support for that intangible thing—British prestige. He called upon the oldest British resident in Roumania, Mr. Monckton, to move the formal resolution.

Mr. Monckton (Monckton and Co.) then proposed that a British Chamber of Commerce in Roumania should be instituted. Mr. Nadejde (Associated British Manufacturers (Near East), Limited) seconded this proposal. It was put to the meeting and carried unanimously. The general sense of the meeting was in favour of the Chamber being formed on the same general lines as other British Chambers of Commerce abroad.

It was proposed by Capt. J. Pitts, and seconded by Capt. E. G. Boxshall, that a Drafting and Organising Committee of five (in addition to Mr. Adams) be elected for the purpose of drafting the memorandum and articles of association of the Chamber, and proceeding to incorporation of the Chamber in the usual manner. This was carried unanimously.

The following gentlemen were elected members of the Committee in addition to Mr. Adams:—Mr. Louis Johnston, public accountant; Mr. E. E. Humphries, Bank of Roumania; Mr. J. H. McGaffin, New Levant Co.; Mr. Aschkenasy, Fratii Aschkenasy; Capt. T. Masterson, D.S.O., Rownson, Drew, and Clydesdale. It was decided that the annual subscription to the Chamber should be £5, and the life subscription £50. Mr. Aschkenasy stated that he and his brother would both become life members, and annual subscriptions were collected at the meeting from five other members.

Redemption of Kronen and Roubles.

Among the financial problems demanding solution none is more urgent than the question of the redemption of the crowns and roubles current in Transylvania, the Bukovina and Bessarabia. A supply of notes was ordered some months ago in America, and it is expected that these will shortly arrive. Almost every day the authorities and frontier guards discover large sums of Austrian and Hungarian crowns and Kerensky roubles which unscrupulous individuals are trying to smuggle into Roumania, where, by imitating the Roumanian Government stamp, it is possible to put these well-nigh worthless notes into circulation. A few weeks ago the Customs officials at Galatz opened a parcel addressed to the Ministry of Foreign Affairs at Bucharest and discovered the contents to be a million Kerensky roubles, which they promptly confiscated pending an inquiry. The incident is by no means an isolated one, nor does the sum constitute a record.

A year ago it was estimated that 1,000 million lei would suffice to replace the crowns then in circulation; but to-day, we are warned, double that quantity will be required. Presumably the Commissions instituted by the Government kept records of the series and numbers of the notes stamped by them, or marked them with some secret sign, otherwise the Government will be faced with the expense of redeeming currency estimated at the present moment to be 7,000 millions of crowns for Transylvania and the Bukovina alone, and it is no secret that the total is increasing daily. An exchange basis of 1 leu to 2 crowns was fixed a year ago, and there will certainly be considerable irritation when the exchange takes place and the innocent holders of contraband notes, falsely stamped, are forced to suffer heavy losses. In addition to the crowns and roubles of the new territories, there are over 2,000 millions of Banca Generala notes issued by the Germans during the occupation; fortunately, this paper is of such poor quality that some of it has been worn out, but how much will not be known with any degree of accuracy until the exchange into Banca Nationala notes is completed.

BUCHAREST, January 22.

Compensation for War Damages.

Twenty million lei are to be allocated to the industrialists who suffered from the hands of the enemy. Until some settlement is arranged by the petroleum mission now working at the compilation of the necessary statistics, the oil companies will not be included in the distribution of compensation, and it is doubtful whether the Roumanian Government will make haste to recognise the oil companies' claims to compensation from the Government coffers.

Under the existing restrictions there is little incentive to produce oil, as the maximum prices fixed do not cover the cost of production. These restrictions will undoubtedly be altered before long, as it is only by the export of her petroleum products that the country can improve the value of the lei.

There should be a surplus of maize for export, but transport conditions preclude counting upon it.

Inter-Allied Railway Conference at Vienna.

The directors of the Roumanian State Railways have delegated MM. Ioanid and Neagou to represent them at the above conference, which will take place on January 31, for the settlement of the question of traffic circulation in Central Europe.

Timber Production.

According to statistics recently published, the new kingdom of Roumania possesses forests which cover an extent of 7 million hectares. The areas covered by forests in the annexed provinces respectively are as follows:—Transylvania and the Banat, 4,200,000 hectares; Bukovina, 470,000 hectares; Bessarabia, 200,000 hectares; and in the old kingdom, 2,100,000 hectares. It has been estimated that after satisfying all the wants of the country, Roumania could profitably export annually four million cubic metres of timber, which would represent a very considerable sum.

A new company has recently been formed called the Société Industrielle Forestière, with a capital of ten million lei, for the purpose of exploiting forests, and once the transport difficulty has been got over, the export of timber and petrol alone should go a long way towards re-establishing the financial position of the country.

TURKEY.

CONSTANTINOPLE, January 5.

Concessions.

In spite of the uncertainty of the future, the good old game of concession-hunting which has always been so

Digitized by Google

popular in Turkey, is being actively continued. The method of granting concessions has always been one of the greatest obstacles to the proper development of the natural wealth of the country. Concessions are granted to people who cannot command the capital to develop the mine, or even to carry out the elementary work necessary for its eventual development. Most of these people know very little about mines and mining, and look upon their concession as a source of immense wealth, with the result that their conditions are such that no capitalist can be found to take the matter up.

Difficulties of Exploitation.

There is no doubt whatever that Asia Minor is immensely rich in mineral wealth, but its development is attended with sometimes insuperable difficulties. Coal, chrome iron, emery, and boracite are already satisfactorily exploited, but there are also important deposits of copper, iron, lead, tin, etc.

One of the principal obstacles is encountered at the very outset, for Turkish laws are framed to prevent mining property from falling into the hands of foreigners. To overcome this difficulty, a dummy Turkish proprietor is often put forward, but such a proceeding entails considerable risk.

Apart from legal obstacles, however, there are three main hindrances to the successful exploitation of mining property in Turkey. First comes the want of good roads and railways. Throughout Anatolia the roads consist of mere tracks across open country, and are absolutely impassable in winter. The railways are altogether insufficient, and in certain provinces do not exist. The important town of Kaisarieh, for instance, is a hundred miles from the nearest railway station. Everything has to be transported by camels or bullock-carts, and the expense would prevent even a rich mine from being a practical proposition at present.

The next obstacle is the want of raw material, such as timber. At a no very distant period Anatolia was one of the richest countries in Asia so far as timber is concerned, but to-day that wealth is practically exhausted. Not only have vast forests been cut down for fuel, without the slightest attempt at reafforestation, but enormous damage has been done by fires, often wilfully started by vagabond charcoal burners. It is said that twenty years ago wood could be obtained within eight miles of the Arghana copper mine, near Diarbekir, but to-day there is none within a radius of over twenty miles.

Finally, there is the eternal labour question. Not only is the Ottoman workman slow and incapable of prolonged spells of work, but he compares unfavourably in intelligence with the European, and is practically devoid of both elementary and technical education. Furthermore, it is impossible to find workmen in sufficient numbers. Recently, indeed, a number of Chinese labourers have arrived here to work in the Zungulduk coal mines, upon which Constantinople now has to rely for coal. These mines are not only capable of providing the capital with all the coal needed, but could produce much more. Such is the shortage of labour, however, that there has not been enough produced for Constantinople alone.

Hence it is not surprising that those mines that are exploited, are worked, for the most part, in the most primitive manner. Only one or two employ steam or electricity or modern devices, and the rest are dug into anyhow by people who have neither capital, technical knowledge, technical skill, nor any considered plan whatever.

If ever there were a country that cried for capital and technical skill, and offered great prizes for exploitation, it is Asia Minor.

MOROCCO.

TANGIER, January 12.

The increased value of Hassani currency is still a very serious matter, though the agitation which took place in September and October, and was still active in the French zone in December, has apparently quietened down. One can quite understand the natives feeling bitter about the matter; after Hassani had been forcibly placed on a par with French money, to find that the latter (paper) had lost 30 to 50 per cent. of its value was enough to excite anyone. The peseta is still worth 50 per cent. more than the franc, and everything in still in an unsettled state—the Commission sent from Paris has apparently not finished its studies.

There had been ample evidence that Hassani money was becoming scarce—indeed, the Banque d'Etat drew the attention of the Protectorate to the very serious position that might and eventually did arise, but no action was taken to meet the difficulty, though several ill-advised attempts were made to minimise it once it arose. One of these was the extraordinary step of prohibiting the transfer of Hassani from the French to the other zones—that is to say that certain parts of Morocco were deprived of the native currency of the country; much as if people in England were not allowed to take or send gold, silver, or notes into Scotland, Wales, or Ireland. This action made things very much more difficult in Tangier than in the French zone. One of the reasons given was that silver coin was exported from the Spanish and international zones to Europe. This, of course, was stoutly denied, and there does not seem any probability that it was carried out to any large extent.

Green Teas.

The Food Department of the Intendance of the French Protectorate has announced that the French Government have 73,000 chests of green teas, of which the prices are given, for sale at Marseilles. There does not seem much doubt that these are the teas purchased by the French Government for the Moroccan market early this year, and about which, if I am not mistaken, questions were asked in the House of Commons. Anyhow, great indignation is felt that the French Government should have taken any action which is bound to interfere with the legitimate trade of the tea importers.

England has been for long by far the most important supplier of green teas to Morocco, and it is felt that the British Government can hardly look very favourably on a transaction which will dislocate such an important branch of British trade here for the whole of the season—73,000 cases representing 80 per cent. of the total annual imports to Morocco. I have not yet heard of any actual transactions on these teas; it may be that the qualities are not suitable for native consumption, but I believe Moroccan merchants went to Marseilles with a view of buying.

Importers' Difficulties.

I have previously mentioned the dissatisfaction with the want of system by the Customs authorities in estimating the value of imports for duty. According to the Act of Algeciras, *ad valorem* means the wholesale value of goods entered at the Custom House, plus cost of unloading. According to the Customs authorities, this means *local* wholesale value. This often changes, and is sometimes lower than at the place of origin. On the other hand, local wholesale prices may be higher than cost price, but whichever happens the Customs people demand duty on the higher value.

The state of the different exchanges is another weapon which the Customs people wield with dexterity, always

SWEDISH ORIENT LINE.

Direct regular steamship service with about weekly sailings outwards and homewards between

GOTHENBURG and ALGIERS, PIRÆUS, SMYRNA and SALONICA.

against the unfortunate importer. Duty is payable in Hassani currency, of which, since its increase in value the Banque d'Etat fixes a rate of exchange every day, and the rate is posted up at the Customs; but it has happened very many times that importers, on applying for Hassani money at the Banque d'Etat have been charged a higher rate than that announced. I believe there has been an improvement in this matter lately, but I mention it to show the unnecessary difficulties importers meet with.

It can be readily understood that there is great discontent with the authorities, and it is felt that the whole matter needs examining and a proper system instituted, or if no change can be made, that a definite ruling regarding the meaning of the Act of Algeciras should be agreed upon and systematically applied.

Shortage of Supplies.

From the way things have been going on lately one might almost think that there had been a general agreement to strengthen the hands of the opponents of a real international regime for Tangier. For some time there has been a great shortage of bread in Tangier, and eventually a very imposing native demonstration waited on the different diplomatic agents. At one or two of the agencies the demonstrators who were quite orderly were quietly received, but it would appear that one Agency had an acute attack of nerves, and there are very curious rumours of the reception of the demonstrators, who were throughout quite quiet and respectful.

Wheat and barley have been supplied from the French zone, but for some inexplicable reason the grain supplies had not equalled the requirements. Some try to attribute this to the fact that up to some time ago recognised grain merchants in Tangier received licences from the local Controller of produce imported from the French zone, and could buy, if not quite from whom they chose in that zone, at least from licensed exporters there who were fairly numerous, but a change was made, and the entire export of grain from the French zone was put into the hands of one firm, which sold it to the licensees here.

The delegation referred to obtained satisfaction, apparently chiefly through the good offices of the British Diplomatic Agent.

Cattle also have been short and meat at fearful prices. Cattle are imported from the French zone on licence, being bought in the open village cattle markets; but can only be sold here to one firm appointed by the French Controller, who fixes the prices, wholesale and retail. These, especially the former, have been so inadequate that several importers suspended operations, and the retailers practically broke away from the official tariff and charged what they liked, until at last the tariff excluded all good "cuts" from the list of prices and classified them as "hors taxe"—in fact, the taxed "cuts" might almost as well appear in the same class for all the notice many butchers take of the official prices. There have also been complaints of shortage of cattle in certain towns in the French zone.

Of course, various political reasons have been put forward officially and otherwise, to explain the short supplies abovementioned. It was stated that large quantities of bread were smuggled out of Tangier for Spanish troops over the frontier, but Spain sends in flour for these troops and also a certain quantity for the town supply, which is only fair, as there are so many Spaniards here.

An attempt to explain away the shortage of cattle was made by a statement that they were smuggled from the French zone into the Spanish to Alcazar, and by the fact that cattle were exported abroad—*i.e.*, Gibraltar. The former may have been done to some small extent, though the frontier is very well guarded, but if it were carried on to such an extent as to reduce seriously the quantities available in the French zone, it is curious that 20,000 head allotted for export last summer do not appear to have left the country, as the permission to export them has been renewed time after time, which evidently would not have been done if the authorities feared a shortage for home consumption.

The Resident-General of the Spanish zone has quite recently authorised the export from that zone into Tangier of 100 head of cattle, 300 rams, and 100 pigs per month. These are subject to no control.

Bourse de Commerce at Casablanca.

A notice has appeared in the *Bulletin Officiel* announcing the lines upon which these are to be instituted, and these should be most carefully examined by the British authorities, because if the proposals are carried out British subjects in Morocco may find it practically impossible to carry out some branches of business in which they specialise.

A group of traders at Casablanca, who are already exploiting two important flour mills at that place, have just decided, according to a French contemporary, on the establishment of a large modern mill, with a production of 1,000 quintals per day. This factory—by far the most important in Northern Africa—is expected to be in working before the end of this year.

"GERMANY AND THE UKRAINE."

We have received the following letter in regard to an article on "Germany and the Near East," which was published in the first issue of our Greek Subsidiary, "Βιομηχανία καὶ Εμπόριον" and previously appeared in THE NEAR EAST of July 4:—

Sir,—In the first issue of your esteemed journal for the month of October an article was published, entitled "Germany and the Ukraine," where it is a question of my country only, it is true, as an eventual market for the commercial products and machinery of the Germans. As the conclusions relating thereto are deduced from the political situation of my country, and as it seems to me that the political facts which are relative to it do not correspond precisely to reality, I feel that I ought to draw your attention to three factors of which mention is made.

(*a*) You ascribe to the indisputable success of Germany the rising of the Ukraine.

The limited and very precious space in your paper compels me to restrict my reply to this imputation, repeated many times unjustly and persistently by opponents of the existence of the Ukraine as a State. In this connection I should like to draw your attention to the following facts:—The Ukrainians who served in the Russian Army never made any sign of revolt during the whole Russian war, and that despite the 400.000 victims that the Ukraine offered on the altar of Mars during that war, which ought to bring it its independence. The Ukrainians were the only troops who continued to defend the front, despite the *débâcle* of the Russian Army. If it was the Germans who raised the Ukraine against Russia they would not have had need to place at the head of the Ukraine, free until then, the hetman General Skoropadsky, and to drive from the administration of the country all the Ukrainian elements, to install Russians, Poles, or Germans, supporters of the defunct Russian Empire. But did the German State exist when the Ukraine was constituted an independent State, and was it the independent German State (still non-existing) which urged the Ukrainians to formulate their demand to reconstitute itself as a State independent and separated from Russia as well as from Poland, after the subjugation of the Ukraine by these two countries?

(*b*) You describe the Ukrainians as the enemies of the Poles.

Really, I have no reasons for contradicting this. But the causes of this regrettable fact are wrongly described in the article referred to. It is not because the Ukrainian Army was defeated (that it has never been); it was only made to retire before the Polish forces which had been armed by certain Entente Powers for a very different purpose. The reason of it is that the Poles utilised their numerical superiority to snatch from the Ukraine, bleeding from the struggle against the Russian Bolshevists, Eastern Galicia, where there is only a small Polish minority, and where the Ukraine element is represented by 95—97 per cent. of the total population of that province.

(*c*) The Ukraine, it is stated in the article in question, is ready to enter into commercial relations with Germany. I ought to confess that I am astonished that you can divine the intentions of the Government of my country. I should like to emphasise the fact that the Ukraine, which gained its independence thanks to the unsurpassed heroism of its sons, has proclaimed the principle of free commerce with all countries, and, in consequence, is willing to enter into commercial relations with Great Britain, America, France, Germany—it does not matter what country—even with Poland, if only that last country, taking into account its real interests, will abandon its imperialistic tendencies, which have, unhappily, been in evidence up to the present time, and will enter upon a path of collaboration and good comradeship with its neighbours of the South-East in the common interest.—I am, etc.,

M. LEVITZKY,
Secretary to the Ukraine Diplomatic Mission in Greece.

December 16.

APPOINTMENTS REQUIRED.

GOVERNESS desires post abroad. Entire charge of children, good knowledge of health, teach usual English subjects; French, Music, Drawing, Ride, Drive; excellent refs. £80—£100.—M. U., The Ladies League, 118, New Bond Street, W.

THE LADIES' LEAGUE (under Royal Patronage), 118, New Bond Street, London, W., successfully recommends chaperones, lady housekeepers, companions, secretaries, governesses, nursery governesses, lady nurses, nurse-companions, etc.

GENTLEMAN with EXPERIENCE of Eastern Trade conditions wishes APPOINTMENT with firm trading there. Willing to prove his ability in London Office first if necessary.—Address Box 150, "THE NEAR EAST," 1, Devonshire Square, London, E.C.2.

The Egyptian Cotton Crop.

By John A. Todd.

III.—THE PROSPECTS IN AMERICA.

There is, of course, no question that, in spite of occasions such as the present, when Egyptian seems to go off entirely on a course of its own, the price of Egyptian cotton is, as a rule, governed largely by that of American. It is therefore impossible to discuss the probable future of Egyptian prices without considering the main factors likely to affect the price of the American staple, which still supplies nearly two-thirds of the world's total crops. The recent movement of American prices has itself been sufficiently dramatic to attract attention, if it had not been overshadowed by the still more exciting course of the Egyptian market. In February, 1919, September futures touched 11.55d., and we count that a low price in these days! In January, 1920, American spot prices touched 31.23d. per lb.

The causes of this extreme movement are nothing new. Even before the war we had learned to recognise that there was a method in the madness of the fluctuations in the price of American cotton. A fairly regular sequence of big and small crops, with low and high prices, was not entirely fortuitous, but had become something in the nature of an economic vicious circle. A large proportion of the growers were working too near the margin of profit, and when a big crop caused a fall in price, they went off cotton next year, with the result that a smaller acreage produced a smaller crop and a rise in prices, to be followed by the reversal of the swing in the following year. This tendency was intensified by war conditions. The slump of 1914 was reproduced in the autumn of 1918 after the armistice, with the result that the acreage was again substantially reduced, and as the crop once more had bad weather the result was most disappointing, and high prices followed as a matter of course.

If present prices are maintained for the next few months there is almost certain to be a considerably increased area under cotton this year, and with any ordinary luck in the weather we ought at last to get a good crop; but it must be remembered that that has been our hope every year since 1915, and it has always been disappointed. But the important question is not merely what is going to happen in the immediate future, but, rather, what are the general conditions affecting the future development of the world's principal supply. For many years before the war, practically ever since the American Civil War, the acreage in America had been increasing steadily, on the whole. Is that likely to become true again in the future?

It is becoming more and more clear that the answer to that question will be in the negative, or at least that the only condition which may secure the continuance of a satisfactory acreage in America is the maintenance of a level of prices which a few years ago would have been looked upon as fatal. We have long been hearing reports that the cost of production of cotton in America was rising; but these were to a large extent discredited in this country. The World's Cotton Conference at New Orleans in October last served at least one good purpose by giving an opportunity for the planters to state their case in the presence of the spinners, and for the spinners to see for themselves something at least, and to hear a great deal more, of the state of affairs in the South.

Those who saw most were probably the nearest to being convinced that the conditions in the Cotton Belt were not altogether satisfactory, and certainly far from being so rosy as most of us in this country had thought they must be, judging by the high level of prices in recent years. For this there seem to be two main reasons. The first is that while the better-class planters are quite able now to look after themselves, and have probably done very well indeed these last two years, there are still a great many small men in the industry who, partly through their own fault and partly for reasons beyond their control, do not always make a decent living out of cotton even now. The second is that, owing to defects in the marketing system, many of the growers do not receive the high price which the spinner is paying for the cotton. This leakage, again, is due to two causes. In the first place the price of cotton fluctuates so much that it is very difficult for the grower to make sure that he gets the best market. If he is dependent on some merchant or storekeeper for his season's supplies, he is very much in the hands of his creditor as to when he must sell, and, judging from what one hears, there are evidently still some people in the Belt who are not above taking advantage of his necessities in that direction.

The second cause of leakage is that the small planter is often ill-informed as to the real value of his cotton, partly because he is no judge of staple, and partly because he is not in touch with those special sections of the market which deal with anything above the ordinary run of cotton. The value of cotton depends on many things, particularly its condition and its staple. But the ordinary market quotation takes no account of staple, and throughout most of the Belt the local price is fixed by the buyers according to some unknown standard of what the cotton of that district as a whole is usually worth, modifications of this village standard price being only made according to the condition of the particular bale offered.

But the over-riding cause of the dissatisfaction among the planters is the fact, which is undeniable, though its degree is difficult to estimate, that the cost of production has risen alarmingly in recent years. This is due to many causes—the reduction of yield owing to boll weevil, the high labour cost of cultivation and picking, and the high prices of everything the planter has to buy, from seed and fertilisers to implements, stock and feed. The last-mentioned may be taken as typical. Before the war the farmer grew almost nothing but cotton, and bought all his supplies, including food for himself and his stock. But now everything is going up in price, from wheat, meat, and corn down to watermelons, and the result is that even with the high price of cotton he is not much better off than he used to be. The fact is that the standard of living in many parts of the South is too low, and the risks of the trade are too great for the small planter. In certain parts of the Belt the climate is so unreliable that the crop may be ruined year after year. In one part of Northern Texas, for example, this year, owing to the abnormal rainfall (which followed four years of extreme drought), the crop would not pay the cost of cultivation alone.

It is almost hopeless to try to place any figure upon the probable cost of production, so as to arrive at a price which would adequately remunerate the farmer. There are so many varying conditions in different parts of the Belt, so many disputed questions as to the basis of the calculation—*e.g.*, as to the yield per acre upon which the calculation should be framed, and so on. The only thing one can say with any approach to certainty is that the cost of production has nearly doubled during the war, and that now the lowest price that will produce a satisfactory acreage in those parts of the Belt where the cost is highest is somewhere about 25 or even 30 cents per lb. That is lower than the lowest figures that were submitted to the Conference by those who spoke for the planters, even in the most favoured districts, such as North Carolina, where labour is cheapest and there is no boll weevil yet.

This, of course, is a very serious business for the cotton-using areas of the world, but it can hardly fail to reassure any who may be afraid that the high prices of Egyptian are only a flash in the pan. It is as sure as anything can be that we are in for a considerable period of high prices for cotton of all kinds, subject, of course, to any great upheaval which would bring down the general level of prices as a whole. The world's supply of cotton, while probably adequate to the restricted consumption of to-day, leaves no margin for an early return to anything like pre-war conditions of consumption, let alone for any resumption of the pre-war rate of increase of consumption.

But while the Egyptian grower may rest assured that the price of his crop is not likely to be brought down by any superabundance of American cotton, there is one factor in the American situation which ought to make the Egyptian grower think seriously. This is the development in the Western States of new cotton-growing areas, under irrigation conditions very similar to those of Egypt, which are now producing cotton probably quite as good as anything that Egypt can grow, and in increasing quantities. A visit to the Salt River Valley in Arizona is a very healthy corrective to the idea which used to prevail in certain quarters that only Egypt could grow Egyptian cotton. There, under the direction of a small but highly organised community of very live Westerners, with unlimited capital behind them, and the scientific assistance of the Federal Department of Agriculture, a most promising industry has been built up, which is already going some way to meet the American demand for Egyptian cotton. The crop this year is estimated at figures varying from 45,000 to 60,000 bales, and it is certain that the coming season will see a largely increased acreage. It is very difficult to indicate the probable limits of expansion, though probably the wildest optimist would not look for a total anything like so large

Digitized by Google

as that of the Egyptian crop. Perhaps 250,000 bales would be the outside as far as can be seen at present. But even that is a considerable quantity, and it ought to be enough to warn the Egyptian growers that their monopoly of the fine cotton supply, reinforced now by the failure of the Sea Island crop in America, is too valuable to be left without at least serious attempts at competition. So far, Arizona has hardly been able to keep pace with the rapid diminution of the Florida and Georgia Sea Island crops; but the latter will probably reach its limit in a year or two, while the former will go on increasing for some time to come.

NEAR EASTERN EXCHANGES.

The Present Position.

The violent fluctuations of the foreign exchanges during the past week have brought to the fore a problem which, it is no exaggeration to say, is causing the gravest anxiety to the business community. During the war the exchanges were artificially supported, but since the Armistice the economic effects of the war have been seen in the constant decline in the exchanges of the Continental belligerent countries, while the pound sterling has steadily depreciated compared with the dollar. The result of the process has been to impose a serious barrier in the way of the resumption of the normal course of world commerce. Trade with a country where exchange has not only greatly depreciated but is also subject to rapid variations can only be carried on in circumstances of extreme difficulty, and yet it is a vital matter that commerce should be re-established at the earliest possible moment. Therein lies the crux of the problem, for only by that means can Europe regain settled conditions.

Outside Central Europe and Russia the difficulty of the foreign exchanges is most acute in regard to the Near Eastern countries with the exception of Greece, whose participation in the war left her almost unscathed, and whose sterling exchange remains, in consequence, in the neighbourhood of par; at one period, indeed, it was slightly above it. But, apart from Greece, a heavy depreciation in exchange handicaps British trade throughout the Near East and the Levant. The Yugoslav exchange is 90 dinars to the pound sterling, as against 25; the Bulgarian leva stands at 150; the Roumanian leu has reached 205; while the Turkish exchange has been as high as 400 piastres. Hitherto the position has been met by the establishment of credits at banks in the importing countries, and that would have proved a successful solution if, as was not unnaturally expected, an improvement had taken place in the exchanges. As we have only too good reason to know, the converse has been the case, and the currency of Roumania and Turkey has continued to depreciate.

The cause of this depreciation is to be found simply in the fact that the countries concerned are still far from the resumption of their pre-war activities. Credits abroad can only be created by exports, and during the past year for one reason or another only too little progress was made in this direction by some of the Near Eastern countries. The delay in regard to the various Peace treaties has been one of the most important factors. But there have been other causes besides, with which externals have nothing to do. In some Near Eastern countries there has been far too much of what may be called a *laissez faire* attitude on the part of the population, and the tendency has been to depend on help from the Powers, whereas economic salvation is only to be attained from within.

While the improvement in sterling can be effected only by increased exports of manufactured goods, coupled by the drastic curtailment of imports of luxuries, the solution as regards the Near East is to be found in the development of production. Without exception the countries are agricultural communities--using the term in a broad sense—deriving their wealth from the land in the form of crops or minerals, and in this they stand at a marked advantage over countries which are mainly industrial, for their production consists largely of necessities for which at all times it is the easiest possible thing to find a market, and which, now that demand has far outstripped supply, are in the greatest request. Once the internal reorganisation is completed and production is again normal the battle of the exchanges will have been won. But—and too great insistence cannot be placed upon this point—there is no other remedy but hard work.

Beyond emphasising the paramount need for rapid progress in reconstruction, the exchanges of Roumania, Yugoslavia, and Bulgaria have little real significance, for the basis of the position of these three countries is emphatically very sound. Roumania is particularly well situated. Except for the expenditure incurred during the war, Roumania has no national debt, as its pre-war debt was owed to Germany, and in its crops and its oil—especially the latter, of course—it has ample resources for the creation of foreign credits. All that is required is that the policy of the country should be framed on sound economic lines, and that this will be the case will be evident from the admirable programme of reform outlined by the Prime Minister, M. Vaida-Voevod. Given this, there is no reason why Roumania should not become one of the most prosperous of the minor Powers. Yugoslavia and Bulgaria lack the vast oil resources of Roumania, while Bulgaria's national debt is of no inconsiderable amount, but both countries have in normal times ample produce for export, particularly Bulgaria with her production of tobacco, hides and skins, and attar of roses. That the exchanges of these countries stand relatively better than Roumania's is due to the fact that in their cases circumstances have been more favourable. From the potential aspect the Roumanian exchange ought to be much nearer the normal than either.

INDIAN CURRENCY.

By "Gold Mohur."

The secrecy with which the report of the Currency Commission has been maintained was broken during the week-end by the publication of the report, along with certain decisions taken by the Secretary of State with regard to the measures recommended. Although numerous attempts have been made during the past month to extract information about the views advocated by the Committee, it is well known that the secret has been so carefully kept that the Press announcement which appeared on Monday morning took everybody by surprise. One banker's opinion was that it would make the twopenny rises look foolish, and this has been borne out. A nervous jutewallah evidently assumed that the two shilling rate was coming into force at once, and rushed to the City early on Monday with the object of trying to seize the 2s. 4d. exchange before the slump. He found his banker quite willing to oblige him, and no doubt had leisure to repent his hasty action later in the day when he learned that exchange was round about 2s. 8¼d. On Monday the Exchange Banks were bombarded by inquiries in person and by telephone, and we understand that business is practically at a standstill pending advices from India.

The chief features in the report are as follows:—Measures will be taken to stabilise the rupee at two shillings, and it is proposed to place it upon a gold basis, but the restrictions on the imports of gold into India are to remain in force for the present. Under Government control, the acquisition rate for gold will be 1 rupee for 11.30016 grains of fine gold and 10 rupees for a sovereign. The Committee advocates the removal as soon as convenient of the prohibition on imports of silver, and the repeal of the duty. It is evident that efforts will be made to maintain gold as the recognised legal tender in India.

The first effects of the report produced a temporary paralysis in the rupee market. Having elected to discard the former ratio of 15 rupees to the sovereign and link up the rupee with gold, it follows that the current price of gold is now the principal factor which determines the value of the rupee. As the price of the precious metal is influenced by the fluctuations in the New York Exchange, another disturbing element is introduced. Looking ahead to the time when the premium on gold may disappear and the two shilling rupee become effective, there can be no doubt that the advantages of a fixed exchange are indisputable. But the progress towards that desirable end must be surrounded with anxiety. India is absorbing an enormous amount of gold at present, and it is unlikely that her wants will be satisfied for a long time.

The parity at present gold prices is in the neighbourhood of 2s. 9¼d., and the question which will come uppermost in the minds of merchants is, why the Government should not have taken steps to prevent such a jump, which only dislocates the exchanges and benefits no one, except the Indian importer. The rupee has been so long controlled that it would have been advisable to peg it at 2s. 4d. for a time until the sales of gold had caused the premium to diminish. Exports from India will naturally be held up, and great dissatisfaction will be caused amongst those engaged in the exports of Indian produce. When the currency report was completed, the danger from an inflated gold premium was not so apparent; otherwise, it can hardly be imagined that the Committee would not have recommended measures to check such a sensational advance as has now taken place.

STABILISATION OF INDIAN EXCHANGE.

The publication of the Indian Currency Commission's Report on January 31 was followed by the issue of a memorandum by the India Office, which states:—

The Secretary of State in Council has considered, in consultation with the Government of India, the Majority and Minority Reports received from the Committee appointed by him, under the chairmanship of Sir Henry Babington Smith, to advise on the subject of Indian Exchange and Currency. The Majority Report, which is signed by the chairman and all the members of the Committee except Mr. D. M. Dalal, states as its objects the restoration of a stable and automatic system and the maintenance of the convertibility of the note issue. The fundamental recommendations of the report are as follows:—(*a*) That the present rupee unchanged in weight and fineness should remain unlimited legal tender; (*b*) that the rupee should have a fixed exchange value, and that this exchange value should be expressed in terms of gold at the rate of one rupee for 11.30016 grains of fine gold, that is, one-tenth of the gold content of the sovereign; (*c*) that the sovereign, which is now rated by law at Rs. 15, should be made a legal tender in India at the revised ratio of Rs.10 to one sovereign; (*d*) that the import and export of gold to and from India should be free from Government control, as soon as the change in the statutory ratio has been effected, and that the gold mint at Bombay should be open for the coinage into sovereigns of gold tendered by the public; (*e*) that the notification of the Government undertaking to give rupees for sovereigns should be withdrawn; (*f*) that the prohibition on the private import and export of silver should be removed in due course, and that the import duty on silver should be repealed unless the fiscal position demands its retention.

These recommendations develop, with the necessary modifications required by altered circumstances, the principles on which the Indian currency system was established before the war, and are accepted by the Secretary of State in Council as expressing the goal towards which Indian currency policy should now be directed. Under the conditions existing prior to the war sterling and gold were identical standards. The existing disparity has made a choice between these standards necessary, and the committee's recommendation is in favour of placing the rupee on a gold basis. In recommending a rate—namely, that above mentioned—for the exchange value of the rupee, the chairman and majority have taken account of the high range of silver prices, and of the importance of safeguarding the convertibility of the Indian note issue by providing so far as possible that the token character of the rupee shall be restored and maintained—*i.e.*, that the Indian Government may be in a position to buy silver for coinage into rupees without loss. They were also impressed by the serious economic and political risks attendant on a further expansion of Indian prices such as must be anticipated from the adoption of a low rate. The arguments advanced in favour of a gold basis and a high rate of exchange appear to the Secretary of State in Council to be conclusive, and he has decided to take the necessary steps to give immediate effect to the recommendations on these points. Accordingly the Government of India have to-day announced that the rate which they will pay for gold tendered to them under the Gold Import Act by private importers will henceforth be fixed at one rupee for 11.30016 grains of fine gold, that is, 10 rupees for the gold content of the sovereign. The consequential changes in the regulations relating to the sale of Council Drafts by the Secretary of State in Council and Reverse Councils by the Government of India will be notified separately.

The question of the internal ratio presents special difficulties. The committee recommend the maintenance of gold on a legal tender footing, especially in view of possible difficulties in obtaining adequate supplies of silver. A fixed ratio must therefore be established between the rupee and gold as used in the internal circulation, either one sovereign for Rs.15, as at present, or one sovereign for Rs.10, in correspondence with the new exchange ratio. The former alternative would give the sovereign the status of an overvalued token coin, necessitate permanent control over the import of sovereigns, and make an open gold mint impossible. The Secretary of State in Council agrees with the committee that such conditions ought not to be contemplated as a permanent arrangement. On the other hand, the lower ratio cannot be effectively introduced while a great disparity continues to exist between the commercial price of gold in India and the intended Indian Mint par of one sovereign for Rs.10. Present conditions are the product of the war, and in some sense artificial. They cannot be immediately remedied without the risk of shock to the economic and monetary system in India and of reactions elsewhere to which India cannot in her own interests be indifferent: a gradual process of rectification and adjustment to new conditions is required. For some time past action has been taken in India to reduce the premium on gold by regular Government sales of bullion to the public, and this measure will be further developed. It may be expected that in this way a natural adjustment may be effected and the path to legislation cleared. The Secretary of State has decided therefore: (1) That the import of gold shall continue, for the present, to be controlled by licence under the Gold Import Act with a fixed acquisition rate as mentioned above; (2) that meanwhile periodical sales of gold bullion to the public shall continue; and (3) that as a provisional measure during the transitional period the sovereign shall remain a legal tender at the present ratio of Rs.15.

In arriving at these decisions the Secretary of State in Council has not failed to give careful consideration to the Minority Report signed by Mr. D. M. Dalal. Mr. Dalal's main object is the effective restoration and maintenance of the ratio of Rs.15 to one sovereign as a measure both of the exchange and the circulating value of the rupee. In order to secure this he relies upon freedom for the melting and export of rupees and corresponding freedom for the import of gold. To meet the possible resulting shortage of silver coin he recommends that as long as the New York price of silver remains above 92 cents, Government should coin 2-rupee silver coins of reduced fineness, the coinage of rupees of present weight and fineness being meanwhile suspended and only resumed when the price of silver falls to the figure named. He also recommends that sterling drafts on the Secretary of State should be sold only at 1s. 3 29-32d. The Secretary of State in Council is satisfied that this programme could not be adopted without untoward consequences.

NEAR EAST MARKETS.

TURKISH FRUIT CROP.

Messrs. C. J. Giraud and Co., Smyrna, report as follows under date January 1:—Our previous report of November 1 last clearly exposed the statistical position of sultanas, figs, and red raisins and the export movement up to that date. The British Food Ministry ceased purchases of sultanas in the course of November, but placed some large orders for natural figs which absorbed all stocks available of such grade. A fair quantity of sultanas was shipped during November to Continental ports and more recently, both sultanas and figs have been exported to Constantinople, both for local consumption and for transhipment to Black Sea ports. Demand is now developing from the United States, Canada and the Continent.

Sultanas.

The following figures, which we have obtained from the tithe office, shipping agencies, and from reliable correspondents in the country, summarise the trade movement to the end of 1919: Total shipments from Smyrna and Vourla about 410,000 Turkish kintals, or 22,500 tons. Visible stocks Smyrna and Vourla, 35,000 Turkish kintals; interior, 50,000 Turkish kintals—85,000 Turkish kintals, or 4,500 tons; total crop estimate about 27,000 tons.

Of the shipments effected to date the distribution is approximately as follows: To the United Kingdom, 14,500 tons; to the Continent and elsewhere, 8,000 tons. Market is steady, and prices in local currency stand at practically the highest level recorded during the season, but this appreciation is offset to some extent by the more favourable rates of exchange prevailing.

Stocks remaining available for shipment are exceedingly small and entirely inadequate for even a moderate spring demand. Some orders have recently been received from New York, about 400 tons being in course of shipment for the United States and Canada. Very few supplies are reaching market from the country, and it will require very little buying to cause a further advance in values. Prospects generally for next summer, whether gauged atmospherically or politically, do not in any way inspire hopes of a marked increase in production.

Figs.

Total arrivals during the season have amounted to 50,000 loads, or 11,000 tons. This quantity has been distributed as follows—To the United States, Canada, etc., about 6,000 tons; to the United Kingdom, about 3,000 tons; to the Continent, etc., about 2,000 tons—11,000 tons. Shipments to the United States have been mainly in layer packing and fine grade naturals. The United Kingdom has limited its purchases to good average naturals, shipped in bags.

Qualities, on the whole, in the present season, have been very inferior, and in view of the abnormal conditions under which the fruit was collected this is little surprising. In our August report, in exposing the conditions prevailing in the Meander Valley, we expressed the fear that "the quality, condition, and grading will certainly not be up to the mark." It is all the more gratifying to us, in spite of the difficulties of the season, our shipments, especially of layers, have everywhere afforded the fullest satisfaction. Our New York agents recently report as follows: "Buyers now have examined all your layer shipments, and are well pleased with quality. But we hear everywhere that your quality is first-rate and giving general satisfaction." Although the largest exporters of figs this season, we have not received a single complaint about any of our shipments, and buyers, in many instances, have written to us direct to express their satisfaction with our deliveries.

The Outlook.

Stocks of sultana raisins are small, and figs are nearly exhausted. Of the latter fruit some few hundred tons, mainly fine grades, are stored in the districts beyond the Greek line of occupation, but unless railway communications are resumed there is not much chance of these figs reaching our market. So long as the British Food Ministry maintains its control over dried fruits no shipments are likely to be made to the United Kingdom except against fresh purchases for Government account. Meanwhile there is some demand, both from the States and Northern Europe, and stocks are likely to be further reduced during the next month or two. Under the circumstances, it can be safely reckoned that all stocks abroad of our fruits will run into consumption before next season.

The situation meanwhile on this side is very clear. Stocks of sultanas and figs are reduced to a very small compass, and with the increasing demand from free and uncontrolled markets very little fruit will be available before long. It may consequently be expected that prices will advance in proportion to the reduction of stocks. We also would call attention to the fact that stocks now remaining on the market and in the interior of the country consist for the most part of fruit of inferior quality. Choice descriptions have entirely run out. Medium grades, in good sound condition, are in limited supply and command a premium on the ordinary run of similar grades, which have commenced to show signs of deterioration. In our previous report we had estimated the yield of sultanas at about 28,000 tons. As a certain quantity of inferior and damaged fruit has been utilised for distillery purposes, without figuring in the daily market sales, allowance must be made for this source of consumption. The yield for this season may therefore be estimated at between 28/29,000 tons.

LANCASHIRE COTTON.

(From Our Own Correspondent.)

Manchester, Monday.

The amount of business passing in the market during the past week has shown some improvement, but the tone in some sections has been rather uncertain. Matters relating to currency and international exchange are causing a good deal of confusion, and merchants scarcely know how they stand from one day to another. Another upward bound has occurred in the price of Egyptian cotton, fresh high records being established. There is still an extraordinary demand for the article, especially from tyre cloth-producing firms. Speculation, however, is rampant, and many leading operators are beginning to fear disaster in the near future if the present gambling goes on. No news of any importance has come through relating to the crop. Trade in Egyptian yarns has been in a state of chaos. Spinners, unless they have cotton bought, are refusing to quote. Users are afraid of buying anything at all at the moment. This section of the market is thoroughly out of gear. In cloth for Egypt there has been a steady demand, and some fair weights have been sold in sized materials and miscellaneous fabrics. Useful support has also been given by the outlets of the Levant. Clearances in the Near East generally are said to be encouraging. An increased inquiry has been met with in piece goods for India. Without many big lines being negotiated the turnover has been rather larger, especially in bleaching and printing styles. Madras and Bombay have done better than Calcutta. More activity has been about for China in grey and white shirtings, sheetings, jeans and Mexicans. Printed and dyed goods have been in steady request for South America. American yarns for home use have not been active, and most of the buying has been in small lots to meet urgent wants. Export bundles remain in healthy request for India, and demand continues to be met with in coarse counts for the Levant.

REQUISITION OF GRAIN IN ROUMANIA

H.M. Commercial Secretary at Bucharest reports that a decision has been made by the Council of Ministers which prevents the free movement in this country of grain of all kinds, and it holds all stocks, wherever situated, at the disposal of the Ministries of Agriculture and Domains, and Commerce and Industry. An explanatory note states that the autumn sowings only amount to about 25 per cent. of the area sown in normal times. The Ministers therefore demand the requisition of all stocks in order to meet the needs of the country for food, and to ensure a supply of seed corn sufficient to sow, not only the normal spring wheat area, but also the areas left unsown this autumn. It will be noticed that this decision does not refer to maize. It is generally believed that the maize harvests have more than fulfilled expectations and that there should be a good surplus available for export at the present moment. The text of the decision is:—Art. 1.: Each and every quantity of wheat, rye, barley, oats, peas, and millet, together with all their derivatives, now warehoused in private warehouses, railway stations, ports, docks, or any other kind of warehouse, and belonging to grain merchants, duly registered or not, is declared to be requisitioned and held at the disposal of the Ministries of Agriculture and Domains and Industry and Commerce in order to be used only as seed corn and for food. Art. 2: MM. the Ministers, Secretaries of State for the Departments of Agriculture and Domains and Industry and Commerce are entrusted with the carrying out of this present decision, and are authorised to take all measures which they may consider necessary for its execution.

OPIUM MARKET.

Messrs. Barker Brothers, Smyrna, report for the week ended January 3:—Our market was quiet this week, with sales amounting to only four cases best quality Carahissar at 18s. per lb. c.i.f., and two rich soft of high render at 21s. The exchange for cheque on London advanced to 378 piastres per pound sterling, and 1.01 dols. for one Turkish paper pound. The arrivals are 1,300 cases, against 110 at same date last year.

ENGINEERING.

Low Grade Fuel.

Colliery refuse, shale, and other low-grade fuels are now being used at a number of industrial plants, and in Germany and on the Continent generally an increasing use is being made of peat either by itself or ground to dust and mixed with coal slack. These fuels are being dealt with in the same way as coal or ground to an almost impalpable dust and blown into the furnace by an air or steam blast. In a large number of plants these low-grade fuels are used in the form of briquettes, and at practically every German colliery the refuse from the coal-washing plants is being used for steam raising.

A method of dealing with this refuse was devised in this country some years ago, and it is this which is now being followed, with few or no improvements, by German firms. Instead of being fired into internal furnaces, this material is burned in large external furnaces similar in design and construction to refuse destructors. It is thus possible to provide for a Lancashire boiler 8 ft. in diameter, which would in the ordinary way have an internal grate of about 38 sq. ft. in area, an external grate with a surface of as much as 50 sq. ft., or more if considered necessary. Further, the fuel can be burned under very much better conditions, as the dust, slack, and crushed shale is thrown in small quantities at a time into a firebrick chamber, which is filled with incandescent gases, and the walls of which are at a white heat. This large area of firebrick, as compared with the cool surface of a Lancashire boiler, has a good deal of effect where low-grade fuels are being used. This, with the large grate area and the fact that cold air cannot possibly come into contact with the boiler, accounts for the high efficiency obtained and also for the facility with which such fuels as mentioned can be used.

Profit Sharing.

An important profit-sharing scheme has been introduced by a leading firm of machine tool builders, which represents several features of interest. The whole of the employees, to the number of 1,000, benefit by its terms, and are to all intents and purposes made co-partners in the enterprise. The scheme, after making provision out of the profits for a deduction of 7½ per cent. on the present-day valuation of the business, allocates the profits on the year between the shareholders and the workpeople, and it is anticipated that the scheme will actually increase the earnings of the latter by at least 50 per cent.

MISCELLANEOUS TOPICS.

Italy and the Near East.

Italian manufacturers evidently mean to secure business in the Near East. Their efforts disclose a very well-organised and efficient plan, which their competitors, unless they act promptly and adequately, will find only too successful, for, as was pointed out previously in these columns, Italy's geographical position, her language, which, whether in the Balkan Peninsula or in the Levant, is spoken by the peoples in those regions, either pure or mixed with their own, especially on matters concerning industry, commerce, and domestic life, and the great number of flourishing Italian business communities throughout the Near East, afford exceptional advantages to Italian manufacturers in those markets. Their latest financial arrangement is very significant. According to the *Agenzia Economicæ*, the companies "Bredæ," "Terni," "Officine Meccaniche Gia' Mianie Silvestri," "Meccanica Lombarda," and "Moto-Aratruce" have come to an agreement, under the auspices of the Credito Italiano, to form the "Societa Italo-Orientale," which has for its object the concentration into a single channel of the exporting activities of the above industries in the Balkans and the Near East. The new company is beginning with a capital of 2,500,000 francs, and has its head offices in Milan. In order to put into practice a plan for the co-operation of the countries with which the new company intends to trade, financial groups in these countries will be asked to contribute to the capital of the new company, places being reserved for their representatives on the board of directors.

American Trade Commissioner in India.

According to official statements, there are rumours of the probable early appointment of a permanent Trade Commissioner in India by the United States Government, although so far the American Consulate in Calcutta is without definite news on the subject. In this connection, however, it is of interest to observe that Mr. W. H. Rastall is now visiting India as a Special Trade Commissioner of the United States to investigate the prospects for the extension of the sale of American machinery. Mr. Rastall is a mechanical engineer who during the war was in charge, in Washington, of the aircraft productions of two of the American States, and he was despatched on this special mission to the East just before the Armistice was signed. He went to India viâ Java and the Straits Settlements, and proposes to stay there four months, then proceeding to the Far East. Up to the present, with the exception of the American Consular officers in Calcutta and Bombay, virtually no commercial work has been conducted on behalf of the United States Government in India, but this mission and the probability of the appointment of a permanent Trade Commissioner would seem to indicate a determination to foster trade officially, and to forecast still keener American competition in the Indian market; whilst the appointment of a mechanical engineer as Special Trade Commissioner indicates the most likely direction of the attack.

THE TIMBER INDUSTRY IN TRANSYLVANIA.

Reference to the forests in Greater Roumania is made by our Bucharest correspondent this week.

Reducing Coal Consumption.

The shortage and consequent high price of coal compelled some of the largest gasworks in the Continent to use water-gas as a means to reduce the consumption of coal. The fuel burned in the manufacture of water-gas is coke, the solid residue of lighting-gas manufacture; and it is found that 30 per cent. of water-gas mixed with the ordinary lighting-gas conduce to a considerable reduction in the consumption of coal. This mixture gives a lower quality of gas both for lighting and heating purposes, but it is stated that the difference in quality is hardly noticeable in lighting and heating effects in ordinary practice. Water-gas consists of hydrogen and oxide of carbon, with small quantities of dioxide of carbon and nitrogen. The process of manufacture is to pass steam through glowing coke.

Handy Cargo Winch.

In view of the scarcity of labour in most of the principal ports of Eastern Mediterranean in which the loading and unloading of a ship takes many days, if not weeks to be completed, an oil motor cargo-winch, which has recently been exhibited at a show, would be of much interest to barge and warehouse owners and stevedores in those ports. The engine is a single-cylinder

GROWERS AND PURVEYORS OF LEAF TOBACCOS OF ALL TYPES FOR CIGARETTES AND PIPE.

The above Corporation can supply large quantities of Virginian, Carolina, and Kentucky Tobaccos; and Oriental (Turkish) Leaf direct from its own buying organisations on the markets abroad. Considerable quantities are now available in U.K. and Continental Ports.

EXPORTERS AND IMPORTERS OF RAW AND SEMI-RAW PRODUCTS FROM AND TO THE NEAR EAST.

The above Corporation is prepared to consider and handle propositions for any products from the Near East, and represent firms.

BRANCHES:
America, Greece, Turkey, Bulgaria, South Russia, Japan, Korea.

Digitized by Google

balanced petroleum engine, completely enclosed and self-contained, with fuel tanks and cooling water pump upon the winch-bed It is controlled entirely by one lever, can be started in a few seconds, and lifts one ton at 60 ft., or 10 cwt. at 120 ft., per minute. By its use great economy in unloading ships, etc., can be effected, and for general haulage work it can be profitably employed. This machine will have a good reception in all ports in the Near East if it is brought to the notice of interested parties there.

Ferro-Molybdenum.

Molybdenum is supposed to exist in many parts of the Near East, especially in Asia Minor and some parts of the Ægean Islands. Outcrops of the metal have recently been found in the island of Thasos and the opposite Macedonian coast, but evidently little is known of the present value of the metal and the part it plays in modern engineering, since prospectors and others in those regions do not seem to pay much attention to it. Molybdenum for use in steel manufacture on a large scale may be said to be a product of war conditions. Its action is in the main similar to that of tungsten, which makes steel self-hardening. Its ores are widely distributed, but are not very plentiful. The scarcity of tungsten, particularly in Europe, and urgent war demands, have led to the manufacture of ferro-molybdenum on a relatively large scale. Its use is so recent that very little has been made known concerning it. It is said that the large German guns which bombarded Liège were lined with molybdenum-steel to increase their resistance of erosion. Parts of guns, gun-carriages, motors and automobiles are also being made of molybdenum-steel of excellent quality. Canada has been especially active in the manufacture of ferro-molybdenum-steel, most of which is exported to Europe. Germany drew considerable supplies of molybdenite from Norway to compensate the shortage of tungsten for high-speed tool steel. Many new companies have been founded to work any known molybdenum deposits, and prospectors in the Near East should not lose the opportunity.

COMPANY MEETING.

Land Bank of Egypt.

The report of the directors for the year ended September 30, read at the general meeting held in Alexandria on December 9, 1919, states:—

The year 1918-19, of which we have the honour to present to you the results, saw the termination of the greatest war of which humanity has had to bear the ravages in the complete and final triumph of the Allies in the defence of Right and Liberty. We are sure that we represent your wishes in recording our remembrance of, as well as our sentiments of profound gratitude to all those who have fallen gloriously, and to those who have returned to us crowned with victory. The belligerent countries have suffered from the great upheaval caused by the war, and the barbarous methods of fighting introduced by the enemy; they will still have to struggle before civilisation has recovered by continuous work, and has made good the losses sustained in human life and in goods during more than four years of destructive strife. The position of Egypt is, from that point of view, fortunate; an agricultural country above all, the consecutive industrial crises of world-wide effect have affected it less than others; the products of its soil have realised unexpected prices which will remain high without doubt for a very long period. A large part of personal debt has been repaid, and considerable disposable sums have been left in the hands of the cultivators, enabling them to make new purchases; the expenditure on the improvement of lands hitherto unproductive, through the programme of extensive works undertaken or projected by the Government, will further favour the development of the economic life of the country. The Land Bank of Egypt, to which its normal clientèle of small proprietors continue to remain faithful, has followed closely the general trend of affairs; the receipts have been high in number as in the previous year, and a real return of activity in regard to mortgages was shown during the closing months of the year. We have concluded 146 new loans for a sum of £E397,718.839; 61 sales for £E82,087.933, £E479,796.772, or 12,438,023.90 francs, as new transactions, which, added to old loans or sales, bring the total of our business guaranteed on mortgage or privilege of the vendor to £E3,521,368.368, as against £E3,455,675.353 last year. The total of annuities in arrears, markedly decreased, has fallen from £E261,184.958 to £E179,103.168, of which £E62,459.178 is placed against the previous year's accounts, and £E116,644.010 to various maturities of the year. The movement of the resale of our land has continued regularly; despite new acquisitions for £E34,166.878, our account has been reduced to £E127,868.950, against £E143,100.024 last year, after fourteen complete sales of land and twenty-four partial for a total of £E51,017. The proceeds of the year—interest on mortgage loans, advances on short term, various interests, compensation for repayments, etc.—rose to £E342,871.756, against £E326,997.576 in 1917-18. The expenses are, it is true, increased, especially owing to the fact that the board considered it its duty, in the difficult living conditions, to improve notably the position of its faithful and devoted staff, to which it addresses its thanks. The various reserves have been endowed, following the usual prudent methods, with a sum of £E22,656.835, to which there has to be added a special reserve, to which reference will be made later, and which is raised to £E19,500. These reserves are composed as follows: (1) Provision for amortisation of debentures, premiums and charges, £E14,048.971; (2) amortisation of real property, movables, and brokerage on mortgage loans, £E4.607.864; (3) provision for risks on loans and the sales of lands, £E4,000, or a total of £E22,656.835. The net profits, after the deduction of the various provisions and amortisations deemed necessary, among which is included a sum of £E4,870.317 for depreciation of the shares of the statutory reserve, valued on September 30, 1919, amount to £E140,174.081; they will be utilised for distribution increased by the carry-forward of the previous year. We propose to give 9s. per share and £3 8s. per founder's share. The temporary character of some of our profits, such as those resulting from exchange on the sales of lands, a possible slackening in the activity in mortgages, and increases in expenses has decided your board to strengthen the position in the future by the creation of a special reserve for the equalisation of dividends. That reserve, standing at £E19,500, in Government securities, would be, like the profits on revenues, definitely allocated to the shares or founders' shares in the proportions prescribed by the Articles of Association. That utilisation for distribution would take place in future years so as to maintain regularity in the dividends if circumstances demanded it. In assuring in the future, as far as possible, a stable remuneration on the capital of the company, after having constituted the destined provisions to guard against the various risks of our mortgage operations, we do not doubt that your board will obtain your complete approbation, knowing that it has done its best for the legitimate interests of the Land Bank of Egypt.

PROFIT AND LOSS ACCOUNT.

Expenses.

	£E.	£E.
General expenses	19,711.720	
Directors' fees	833.625	
Stamps on shares and debentures and sundry expenses	17,814.505

		344,265.445

Receipts.

	£E.
Interest on mortgages advanced at short terms, sundry interests, and repayments, etc.	308,778.364
Sundries	34,093.392
Balance from year 1917-18	1,393.689
	344,265.445

The general meeting (1) Approved the accounts and balance-sheet for the year ended September 30, 1918, and gave the directors their discharge for their administration. (2) Approved the division of profits proposed by the directors, and fixed the dividends as follows: 9s. on the ordinary shares, £3 8s. on founders' shares. An interim dividend of 3s. for the shares having been paid on June 16, 1919, it will remain to pay as a final settlement for the year 1918-19 6s. per share. (3) Decided to carry forward £E1,396.827 or 36,210.473 fr. for the shares, £E11.127 or 288.45 fr. founders' shares. (4) Re-elected MM. M. Salvago, R. J. Labruyère, A. Ismalun, the retiring directors. (5) Nominated as auditors, MM. Franz Sofio, H. Pougin, and A. Ferren at the same remuneration as last year. (6) Fixed the directors' fees at £5 per meeting.

The traffic receipts of the Smyrna-Aidin Railway for the week ended January 10 amounted to £7,469.

A Reuter message from Cairo, dated January 24, states:—Lord Allenby and his party, accompanied by the Governor-General of the Sudan, proceeded south from Khartoum on January 17 for the purpose of visiting the cotton farms, experimental stations, and irrigation works. A large gathering of Arabs of the Western Sudan tribes, mounted on camels and horses, enthusiastically welcomed Lord Allenby at El-Obeid, where he conversed with a number of the sheikhs. He left Korti on January 21 for a week's trip on the Nile as far as Lake No.

TRADE ENQUIRIES.

TRADE WITH THE NEAR EAST.—Ex-Captain, recently demobilised from the E.E.F., returning to Near East, desires to arrange with firms wishing to develop Near East trade. First-hand knowledge of Near Eastern markets. Connections amongst leading business men in Cairo, Jaffa, Jerusalem, Haifa, Beirut, etc. Over 20 years' business experience. First-class credentials.—Box 149, THE NEAR EAST, 1, Devonshire Square, E.C.2.

BUSINESS MAN desires appointment in the Levant, Constantinople, or Asia Minor preferred. Considerable experience in general trading at home and abroad. Any suitable post considered. Address in first place, Box. 148, "THE NEAR EAST," 1, Devonshire Square, London, E.C.2.

SUPPLIES AND PRICES IN TURKEY.

STAMBOUL, January 10.

The following extracts are taken from recent reports received by the Imperial Ottoman Bank:—

Manufactures.

The high level continues at Manchester as well for raw cotton as for textiles. Being given the deviations of price between our market and the countries of production, merchants find it convenient to realise here goods intended to be loaded for Constantinople, because they foresee from that end a certain weakness is to be looked for on important arrivals. On the one side, on account of the high level in Europe and the movement of the exchange, prices of manufactured goods here are firmer, despite the lack of demand which continues for Russia. It is for this that merchants do everything possible to keep their stocks and seek to obtain funds to meet regularly the documents appertaining to new arrivals of merchandise. On the other side, the Constantinople market is, in fact, dead as regards what interests buyers for Anatolia, and holders foresee a serious fall in the price of manufactured articles in the approaching spring.

Produce.

Sugar.—The persistent demand of Smyrna and Greece caused the price to rise to £102 per ton at the commencement of the week. But later offerings from America led to a setback of £3 to £4 the ton. Sugar in Customs sells here at £T48 100 kilos. The stock is decreasing despite arrivals. It is estimated at about 500 wagons.

Coffee.—The market is strong because of the firmness of the price abroad and the lack of arrivals.

Rice.—Market particularly quiet.

Oils.—Prices are firm; the case of two bidons sells at Ps.570-575.

The market in produce continues to be very active. For the most part merchants find themselves in possession of goods bought earlier at advantageous prices, and to-day are realising good profits.

Exports.

The demand remains always active in regard to all the produce of Anatolia. Prices increase markedly, the height of the exchanges contributing a good part of this addition.

Opium.—The sales of the week amount to 100 cases, of which 80 Druggist Karahissar at Ps.900-920 the oke, and 20 soft (fine quality) at Ps.1,000 to Ps.1,050 the oke. The market is firm, with a rising tendency.

Mohair.—Arrivals of the week, 500 bales. Sales, 800 at Ps. 105-110 Extra, Ps. 100-105 No. 1, and Ps.90-95 No. 2.

Wool.—Arrivals, 360 bales. Sales, 160 bales at Ps.52 the oke.

Silk.—The recovery of the market has continued up to £T 22 the kilo. There have been only two bales of Brussa sold at that price, the merchandise being rare. On the other hand, 15 bales Syrian (which hitherto were ignored) have been sold between £T14½ and £T15 the kilo.

Cereals.—Regular traffic having been re-established on the Anatolian railway, the arrivals of the week have been 150 wagons of wheat, 20 of barley, and 25 of flour. Despite the resumption of traffic on the line, prices remain high because of the shortage of wagons, the high cost of transport, and the reserve placed by holders in Anatolia, who hope to find later a better market.

ALEXANDRETTA, January 6.

Products exported in December.—Wool from Aleppo and pistachios from Aintab in small quantities.

Sowings have been carried out in favourable conditions.

SHIPPING INTELLIGENCE.

Forthcoming Sailings.

The Papayanni Line s.s. Worsley Hall, for Malta and Alexandria, will close for cargo at Liverpool on February 14.

The Moss Line s.s. Armana, for Gibraltar, Algiers, and Malta, will close for cargo at Liverpool on February 7.

The Ellerman Line s.s. Douro, for Patras, will close for cargo at Liverpool on February 20.

The Ellerman Line s.s. Bosnian, for Alexandria (taking cargo for Beyrout, Alexandretta, Mersina, and Cyprus), will close for cargo at Liverpool on February 7.

The Bibby Line s.s. Warwickshire, for Marseilles, Port Said, Colombo, and Rangoon, will close for cargo at Birkenhead on February 25.

The Johnston s.s. Rapidan, the first steamer of the season for the Danube, will close for cargo at Swansea on February 11 and Liverpool on February 14.

The Moss Line s.s. Karnak, for Syria, Smyrna, Constantinople, and Beyrout direct, will close for cargo at Liverpool on February 15.

COMPANY NOTES AND REPORTS.

Bengal and North-Western Railway.

The report of the Bengal and North-Western Railway Company for the year ended September 30, 1919, states that the net earnings of the joint undertaking amount to Rs.1,50,75,439, against Rs.1,40,94,089 for 1918. The company's share is Rs.88,77,350, against Rs.80,44,215. The actual rate of exchange during the period to which the accounts relate was, however, much higher than 1s. 4d., the book rate, and adding the actual gain in remittance the net earnings for the year are £708,729, against £585,235 in 1918. An ad interim dividend for the half-year ended March 31, 1919, of 3 per cent., plus a bonus of 1 per cent., has been paid on the ordinary stock. After bringing forward the balance from last year of £100,431, providing for interest on debenture and preference stocks, interim dividend and bonus, contribution to provident fund, £35,000 for the sinking fund for redemption of capital in 1982, transferring £80,000—part of the gain by exchange—to reserve, and making other adjustments, the amount to be dealt with is £251,879. The directors recommend a final dividend of £4 per cent., together with a bonus of 3 per cent., on the ordinary stock, subject to tax at 4s. 9d. in the £, and that the balance of £91,754 be carried forward. The figures given are net after deducting income-tax, and the dividend with bonus recommended for the year is at the rate of 11 per cent. per annum. Meeting, 237, Gresham House, E.C., February 10, noon.

London County Westminster and Parr's.

The report of the directors of the London County Westminster and Parr's Bank states that after paying interest to customers and all charges, making provision for bad debts and contingencies, allowing £300,347 for rebate on bills not due, the net profit amounts to £2,455,007, which, with £377,560 brought forward, leaves available £2,832,567 (against £2,390,800, including £184,599 brought forward, for the previous year). The directors report with regret the deaths of their esteemed and valued colleagues, Mr. W. G. Rathbone and Mr. A. Hill. Sir William Norton Hicking and Lord Faber have been appointed directors. The amalgamation of the business of the Nottingham and Nottinghamshire Bank with this bank has been successfully carried out. The bank has taken up 1,000 shares of £10 each, fully paid, of the South Russia Banking Agency, Ltd.

Eastern Telegraph.

The directors of the Eastern Telegraph Company have decided to pay in May next a final dividend for 1919 of 5½ per cent., making 10 per cent. for the year, free of tax, paying no bonus. They have also decided to issue £1,000,000 ordinary stock to meet expenditure which is being incurred to add to and improve the cable services. The stock will be offered at par to holders of the ordinary stock. After the necessary powers have been obtained from the stockholders to increase the capital the prospectus will be issued.

ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Street, Monday

There has been rather less doing this week, and on a cessation of Egyptian buying prices have weakened. At the close of the week, however, there has again been a hardening tendency. Egypt is again in the market as a buyer in certain directions, and there is a distinctly firm tone ruling to-night.

In Government stocks, Unifieds have dropped 4½ points to 78½, and the 3½ per Cent. Pref. have come down 2 points to 65½. On the other hand, City of Alexandria Bonds are a firm spot and half a point higher at 69½, and Turkish 3½ per Cent. Egyptian Tribute Bonds are also a similar fraction higher at 61. Turkish Unifieds have fallen back 1½ points to 37½.

In Bank shares, Nationals, after dropping to 23½, finish only ¼ down at 23¾. Agriculturals have lost 3-16ths at 5¾, and the Pref. shares are ⅛ down at 6 9-16. Anglo-Egyptian Banks have been exceptionally firm, and close ¼ up at 17¾, and Bank of Abyssinias have to-day jumped 3s. 9d. to 40s. Land Banks have shared in the general reaction, and close 3-16ths down at 6¼.

In Land shares, Aboukirs are 1s. lower at 45s. 6d., and Béhéras have dropped £1 to 25½. Building Lands, on the other hand, have advanced a further 3s. to 35s., and Egyptian and Foreign Trusts have remained a firm spot at 18s. Consolidated Lands, after being down to 2s. 10½d., finish only 1½d. lower at 3s. 1½d. Delta Lands, which at one time dropped to 20s., are closing a very firm spot to-night at 21s. 6d. on a renewal of demand for Egypt. Gharbiehs, after falling nominally to 3¾, finish only ⅛ lower at 4. New Egyptians went back at the worst to 38s. and close at 38s. 6d., a drop of 1s. 3d. Sidi Salems close ⅛ down at 3¼, but, on the other hand, Sudan Plantations have gained a like fraction at 8⅞. Union Foncières, after receding to 5⅝, finish only ⅛ down at 5⅞.

Among Miscellaneous descriptions, Alexandria Waters and Ginners have both been firm spots, and Salts and Sodas have been quite a feature, jumping up at one time on large orders to 71s. 3d., and finishing 10s. higher at 65s. For Khedivial Mails there has been a renewal of interest on this side, and a very fair number of transactions have taken place round 5½. Another interesting development has been a large demand for Morum's Oriental Stores 7 per Cent. Participating Pref., which, on the declaration of an interim dividend of 3½ per cent. and a good progress report, have jumped up 2s. 6d. to 20s. 3d.

In Oil shares, the feature has been the renewal of demand for Anglo-Egyptian B, which, on various unconfirmed favourable rumours regarding new concessions, have advanced 10s. to 5 3-16. Roumanian Oils are about 1s. down at 22s. 6d.

In Greek securities there has been a rather persistent demand for the 1881 and 1884 Loans, with the result that the price closes to-night about two points up at 54. Greek Monopolies, on the other hand, have been a dull spot, and are ½ down at 48. In Rentes, most of the floating supply has been absorbed, and the price closes about one point up at 45. Both the 1890 and 1893 Loans are in demand, but no stock is offering. The former loan is nominally two points up at 53½ and the latter half a point up at 52. The 1910 Loan has been dealt in as low as 44, and subsequently at 45, showing a drop of one point since last week, but sellers at the reduced level are scarce. "Currant" bonds have changed hands to some extent round 93, and are closing to-night about 91 xd. Bank of Athens shares were done round 65s., a drop of ½.

INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following weekly cabled news received from the Director-General of Commercial Intelligence, Calcutta, dated January 21:—Rain nearly general in Berar and in the north of Hyderabad. Local Bombay Deccan, dry elsewhere. General crop conditions good. All India final sesamum forecast: 4,212,000 acres, 409,000 tons (corresponding forecast last year, 3,251,000 acres, 188,000 tons). Malbari-Tangla railway reconnaissance survey by Eastern Bengal State Railway, 50 miles sanctioned. Bombay cotton market irregular. Fully good broach, April-May, Rs.567. Piecegoods market steady, with demand slackening. Calcutta jute market firm but quiet. Hessians quiet. Heavy goods steady but quiet. Bank rate is: Bengal and Madras, 6 per cent.; Bombay, 5 per cent. Bombay mill hands' strike continues.

BRITISH TRADE CORPORATION.

(Incorporated by Royal Charter),

13, AUSTIN FRIARS, LONDON, E.C.2.

Telegrams: "Trabanque, London."

CAPITAL: Authorised - £10,000,000 Subscribed and Paid Up - £2,000,000

Governor - THE LORD FARINGDON.

Manager, A. G. M. DICKSON. London Manager, P. C. WEST. Secretary, G. De B. BROUNLIE.

The Corporation has been established with the object of developing the Trade of the British Empire in every part of the world, and brings to the notice of all interested that it is prepared to grant financial facilities to British Manufacturers and Merchants for the increase of their Import and Export Trade.

It will be prepared to assist in opening up new channels for enterprise, and will afford financial facilities for the enlargement of works and the extension of plant.

The Corporation is appointing representatives in the chief cities of the world, and will open credits at home and abroad. It invites inquiries, and will endeavour where necessary to put expert advice at the disposal of correspondents regarding the financing of their foreign and overseas business. Moneys received on fixed deposit. Terms on application.

AYAHS' HOME,

26, King Edward Rd., South Hackney, London.

ESTABLISHED 1825.

IN CONNECTION WITH THE LONDON CITY MISSION.

Hindustani spoken. Ayahs boarded and lodged at 18s. per week each until their Return Passage is paid or s Situation secured for them to return. Ayahs met at any Dock or Railway Station in London. Experienced, well-recommended Ayahs taken entirely off Ladies' hands for a certain payment, which differs according to time of year. Ladies proceeding to India or China requiring an Ayah can generally obtain one by applying to MRS. FLETCHER, Matron.

For BUILDING UP your HEALTH take

WILKINSON'S (Estd. since 1829)

ESSENCE OR FLUID EXTRACT OF RED JAMAICA

"We cannot speak too highly of it."—LANCET. **SARSAPARILLA**

(The best "Pick-Me-Up")

Pronounced by the HIGHEST MEDICAL AUTHORITIES the Safest and Most Reliable Remedy for

Torpid Liver, Debility, Eruptions, and the most WONDERFUL PURIFIER of the HUMAN BLOOD.

IMPORTANT EVIDENCE.—"We recommend your Jamaica Sarsaparilla."—MEDICAL REVIEW.

"The only preparation for removing what may be called the sequelæ of a mercurial course."—SIR R. MARTIN.

The late LORD CLYDE said:—"I am never without it, for when feeling depressed or out of sorts from anxiety or fatigue, a dose or two animates me."

"It cured me of Torpid Liver after all other remedies failed."—EARL OF ALDBOROUGH.

N.B.—Indispensable to all who value Health.

A World-wide Reputation for over Three-Quarters of a Century.

NOTES OF THE WEEK.

The reply of the Yugoslav Government to the Allied demands upon it reached Paris on January 28. It was a discreet and, on the whole, carefully worded document, which neither flatly rejected nor accepted the proposals made, but in effect asked for more time to consider them and to propose modifications of them. It permitted itself to remark that the Powers' proposals were not entirely in agreement with the principles proclaimed by the Peace Conference, and also to express surprise that "a Treaty conducted between third persons, without its co-operation and the clauses of which have never been communicated to it, could be applied to it in default of the immediate acceptation of their proposals." The reference to the Treaty of London might have been made still more pointed, but the Yugoslav Government was wise to be moderate.

On February 7 the French and British Ministers at Belgrade informed M. Davidovitch that the Allies had decided to adhere to the January compromise; and that their Governments desired a definite reply from Yugoslavia, stating whether it accepted the Allies' proposal or whether the Treaty of London should be applied. The terms of that Treaty were at the same time officially communicated to M. Davidovitch, accompanied by a friendly intimation that Yugoslavia would be well advised, for its own sake, to choose the former alternative. One result of the crisis in external affairs has been another attempt to form a Coalition, or Concentration, Cabinet in Belgrade. The Prince Regent has made a fresh appeal for the union of all parties in the national interest, at a time when it is so essential for Yugoslavia to show a united front to the world, and, with the exception of the Serbian Radicals, all parties appear to be ready to respond to the appeal. Should the Radicals persist in their purely selfish policy, they may succeed in injuring their opponents, but they must also injure the country, and most seriously, and will earn for themselves the disapproval not only of the majority of their fellow-countrymen, but also of all foreigners who wish Yugoslavia well.

In connection with the Adriatic difficulties, Signor Nitti took up a firm attitude in the debate in the Italian Chamber, and his speech should certainly enhance his reputation for courage and true statesmanship. There were, he said in effect, three possible solutions: the legal solution, the satisfaction of Yugoslav ideals, and an equitable and just solution, harmonising Italian and Yugoslav interests and aspirations, and he declared frankly that he hoped to win the entire confidence of the Yugoslavs. His speech puts a more hopeful complexion on the case, and, approached in such a spirit, the problem ought not to prove insoluble. According to Reuter's report, Signor Nitti declared that in cases of dispute in Asia Minor and Turkey, as well as in the Adriatic, the principle of nationality should prevail. This upholding of an ideal which in certain quarters has appeared to be practically ignored in the case of Turkey and the Turks is commendable, and it is to be hoped that it will meet with the approval of all the Allies.

A little while ago we were told that the British military authorities in Constantinople, suspecting that leakages were taking place at an ammunition dump which was under Turkish guard, determined to shift the dump, and, desiring to show every courtesy to the Turk, notified him of their intention in advance. The result was what might have been expected: a grand explosion. Now comes news of a daring raid on the dumps of surrendered war material at Akbashi Liman, whence the raiders carried off 8,500 rifles, 33 machine guns, and 500,000 rounds of ammunition. The Nationalists are, not unnaturally, credited with this raid, although it does not appear that any of the raiders were captured. On the other hand, it is reported that the French soldiers who were guarding the dump were "overpowered and captured." Whether they were carried off has not been allowed to transpire, but it appears that the bulk of the loot, if not the whole of it, was simply transported to the Asiatic shore by the raiders. Probably in consequence of this surprising occurrence British troops have occupied Matchka Arsenal, Constantinople, and Panderma, on the Sea of Marmora.

The new Turkish Chamber has elected its President, in the person of Hikmet Bey, and its officers; and the unfolding of the Government programme is now expected. The new President has declared his confidence "that the Powers which at present control the destinies of Europe will keep their promises," and that the Peace will be "in accordance with the principles laid down by President Wilson." Unfortunately, these sentiments and this correctness of attitude are not shared, or copied, by all the residents of Constantinople. An orator at a mass meeting held there on January 30 indulged in some violently anti-British talk. According to the *Morning Post's* Constantinople correspondent, this orator is a subject of Azerbaijan.

Digitized by Google

the republic whose independence we have just recognised. It is to be hoped that he is not a fair sample of its citizens. Had his speech been addressed to a more intelligent audience it would have been a subject for amusement only; for he talked of Turkey having entered the war in order "to free millions of our Turkish and Moslem brethren under a foreign yoke," and declared that Azerbaijan's independence was "due to the blood shed by Turks in Palestine and the Caucasus." These daring perversions of fact apparently found favour with, and were accepted as truth by, the Constantinople mob, who indulged in hostile cries against this country. It almost seems a pity that the modern democratic (and demagogic) methods that have found their way to the shores of the Bosphorus cannot be blended with some of those older methods with which the name of that beautiful, but often ill-omened stretch of water used to be associated.

The opposition to the French occupation of Syria continues, among the latest manifestations reported being an attack by Bedouin upon the post at El Hammam, which necessitated the despatch of reinforcements and led to the death of an officer. A delayed telegram from Cairo states that at the beginning of the month the situation, while not alarming, was causing anxiety to the French by reason of attacks, such as this, on isolated posts; and according to other messages it would seem that the French had occupied towns and villages with small detachments, thus ignoring friendly hints that had been given them, and inviting attack by the natives. In view of the outspoken expression of opinion by the Arabs and others regarding their presence in Syria, this policy would appear strange, unless it was intended to lead up to a situation justifying the employment of further forces and an extension of the French influence.

It is not only with the Bedouin and the Syrians that the French have to reckon. In the Aintab and Marash district, in Cilicia, there has been fighting of some severity. Described in some messages as having "occurred between the inhabitants and brigands" and having necessitated the intervention of the (French) troops, this fighting is said in other reports to have taken place between Nationalist bands and their local sympathisers on the one hand and the French forces on the other. The latter reports have it that the Nationalist bands treacherously attacked and murdered several French officers and men, and compelled the French to evacuate Marash and Aintab. The French armed the Christian population and defended themselves in the hilly country around Aintab until they received reinforcements, when they took the offensive, shelled the Turks out of several fortified positions, and recaptured Aintab and Marash. As it is also reported that the Emir Faisal is co-operating with General Gouraud to calm the Arabs, the outlook for the French seems to be improving.

Changes in the status of the rupee affect so many classes other than those whose views are reflected in our commercial columns that it may be of interest to examine the measures taken last week from what may be called the social standpoint. People whose pockets are not immediately affected are disposed as a matter of sentiment to regret that the Indian coin should have to part company with the sterling pound, but at the same time it is generally recognised that the "Bradbury" is not at the moment a very reputable companion. There is no question of a permanent divorce, as some journals have hastily assumed, and when the "Bradbury" gets back to a gold basis, the relation to the rupee will be automatically stabilised, but in existing circumstances a temporary separation is probably, as the Misses Spenlow put it, "better for the happiness of all parties," and in the case of some important classes the adoption of this attitude of resignation is facilitated by the immediate prospect of some very substantial advantages.

The Englishman in India, for instance, finds the difference in his home charges, which have lately become an almost intolerable burden. To maintain his family in England he needs, roughly speaking, two pounds where six years ago he needed one; at the present rate of exchange he can buy two pounds for the number of rupees which went to buy one, and he is thus restored to something like the "pre-war" footing so far as expenditure in this country is concerned. The rupee-pensioner benefits in a similar way, and even the sterling-annuitants of the Civil Service reap a modest advantage in virtue of the almost-forgotten rule that their annuities are payable in India at a fixed rate of exchange. The authorities at Whitehall have now very properly taken this rule into account, and are paying these annuities on the recognised basis of 10⅔ rupees to the pound, so that while the pound remains cheap annuitants will have a few more pounds to spend. These classes at least can view the depreciation of English currency with something more than equanimity.

The Indian in England benefits in the same way, for at current rates his rupees will buy about as much as they bought before the war, and we may therefore expect a rapid expansion in the stream of visitors to this country for business, study and recreation. Probably both countries stand to gain by the tendency. It is true that young Indians may be marred, as well as made, by a period of study abroad, and their parents should discriminate much more carefully than they have been wont to do; but we should say that more of them are made than are marred; while at the present juncture it is undoubtedly advantageous that as many Indians as possible should obtain practical experience of the every-day working of representative institutions. It means disillusionment, of course, for few will assert that our current politics are inspiring, but Indians have been taught to expect so much from votes and legislatures that disillusionment must come. India has now to get down to the bedrock of hard facts, and the process will be accelerated most effectually by experience of countries where facts are taken fully into account.

Perhaps the question may be asked how the Indian peasant stands with regard to the measures which benefit these and other classes. On this question we have heard two theories advanced. One school maintains that the effect of "gilding the rupee" will be to deprive the peasant of his fair profits, if not actually of his market; the other regards him as almost the worst of all "profiteers," selling grain and oilseeds, or cotton and jute, at prices out of all relation to the cost of production, and battening on the necessities of an exhausted world. The Currency Committee seem to us to have come very near the truth, which lies between these theoretical extremes. The Indian peasant has done well in the war, and he is so poor that we need not grudge the fact, but at the same time we need not provide further immediate benefits for the peasants, or for the middlemen who intercept so large a share of their gains; the peasants' market is assured because the world needs his produce; if prices fall in India, he will benefit as a consumer of clothes, oil, salt, metals, and minor articles; and in any case it is practically certain that a portion of the recent rise in prices represents a permanent gain.

We anticipate, then, that when prices have settled down in accordance with the new value of the rupee, the peasants will be found, on balance, distinctly better off than in the year 1914, but we recognise that there is a possibility, though, in our opinion, only a faint possibility, that this anticipation may not be realised, and we should like to have a definite and formal recognition that the authorities are alive to this aspect of the situation. The matter concerns, primarily, the Revenue and Agricultural Department at Delhi, a Department which for some years past has not enjoyed the entire confidence of the public; a change in *personnel* is nearly due, and we trust that in the selection of the new Member of Council this particular question will be borne in mind, and that, whether the choice falls on an Englishman or an Indian, he will have the strength and the wisdom needed to watch the interests of the peasants, and to impose his judgment on his colleagues. The peasant will, later on, take charge of India, but until he finds his feet he will need a bold and vigilant watchdog at headquarters.

THE WEEK AT HOME.

The Doomed Country House.

Now that large estates are being broken up everywhere, the problem of the country house has become urgent. No country has so many of this type of mansions, great and small, as England—the mere fact that *Country Life* has been illustrating them one every week for years past is sufficient proof of their number. But the large country house loses its old *raison d'être* when the surrounding estates are sold; and although there are plenty of wealthy men who could afford the upkeep, it is not every new millionaire who wants to live on so vast a scale. The mere business of administration takes up too much time; to the old type of country gentleman it was a pleasant side-occupation; to the new retired business man, who still has interests in the City, it would be a nuisance. A country house is to him a place for rest and recreation, and not necessarily a home.

But it would be a pity to pull down some of the magnificent piles that have lately come into the market, simply because no individual wants them. Fortunately no such fate need be anticipated, as public institutions are buying them up for convalescent homes, old-age retreats, and so on. John Jones, ex-costermonger, and certified tuberculous, may sleep in a room once occupied by a Georgian beauty; and Bill Brown, basket-worker, certified mentally defective, occupy a bed in which a Prime Minister, racked with the storms of State, used to rest. *Sic transit gloria mundi* . . .

The Diminishing Squirearchy.

Perhaps the country gentleman is also doomed. The yeoman is going up in the world and farming his own farm; the squire is coming down, or selling out and emigrating to a ranch in East Africa. In many ways it is a pity; it was an old-fashioned, straight-spoken, and God-fearing type, and it did a good deal of work for the country without looking for reward.

It is the fashion among modern intellectuals to laugh at the squirearchy, and to suggest that it never had any brains. As a matter of fact it probably had pretty much the same mental endowment as the rest of us—Shelley was curiously enough a squire's son—but it had character, an asset of no small value, and its children did their full share in Empire-building.

Population and Housing.

Somebody who was bewailing the shortage of houses the other day remarked that he could not understand where all the people came from. The Registrar-General's return of births and deaths for the great towns supplies part of the answer. Last week there were over eleven thousand births and only four thousand deaths in the urban areas of Great Britain—and an increase of seven thousand a week means an increase of getting on for half a million a year. Every baby obviously requires a certain amount of house-room; if it were not for the children a number of people would probably share houses to reduce expenses. But it is far easier to love one's neighbour as oneself than to love one's neighbour's children as one's own.

These and other statistics incidentally knock on the head the theory that the country is committing racial suicide; but I have not observed that any of the current figures support the old supposition that more boys than girls are born after a war. More boys than girls are of course always born, but owing to the greater delicacy of the male sex fewer survive, and this higher mortality is kept up through life, as every insurance table shows. But the excess of boys over girls does not appear to be greater than usual; nature works slowly to correct the ravages of man.

This steady increase explains why more houses are needed—it does not explain why they are not built. But the growing congestion is sufficient reason for the fact that the price of houses has again gone up quite recently—even this year, only a month old, has already seen an appreciable rise, according to the house agents.

Tobacco Prices Increase.

The newspapers are reporting further increases of prices of other things besides houses. Coal is up again, owing to the railway rates this time, not the miners; the fact that butter has jumped from 2s. 8d. to 5s. 6d. a pound need not disturb one, seeing that it is almost as rare as gold; but the last straw has come with the advance in cigars and tobacco. This is due, not only to advances in cost of manufacture and distribution, but to the adverse American exchange.

There is hardly even a crumb of comfort in the news that the American pussyfoots are agitating for the abolition of the sale of tobacco in the United States, for if they won the day—which seems highly improbable—they would proceed to stop it being grown, and the last state of the world would be worse than the first.

The agitation, however, across the Atlantic may lead to more tobacco being grown within the British Empire. There used to be some excellent Nyasa pipe tobacco a few years ago, but it has not been seen on the market for some time; no doubt South Africa and Australia could grow a great deal more, but the real difficulty comes with the curing, which is a tedious technical process. Some English tobacco was grown in Hampshire just before the war, and a shop in Bournemouth used to sell it to the more courageous customers; it was not so very bad in the open air—nothing like so deadly as a Trinidad cheroot or an Irish cigar, the consumption of either of which should qualify for a military medal.

Currency Questions.

A secret Treasury Conference has been held during the week to discuss the international financial situation. No definite remedies appear to have been devised; nor can these things be improvised on the spur of the moment; but it is now generally agreed that an international conference should be held—Holland has announced her desire to participate—and that some form of artificial stabilisation of Continental exchanges will become necessary. It is increasingly doubtful whether the United States will take any practical part, and the appeals in the British Press that America should help, not England, which needs no help, but the Continental countries, appear to provoke resentment rather than sympathy across the Atlantic.

Two other points in the financial situation should be placed on record. At the annual bankers' meetings held during the past week, the experts have agreed that the increasing currency is a consequence, and not a cause, of high prices; and it is stated, apparently with some authority, that the Government are contemplating the introduction of nickel coinage, in view of the shortage and high price of silver. The convenience of nickel can hardly be denied, but any serious attempt to reform the coinage would at once bring up again the old question of a decimal currency and decimal weights and measures—an interminable controversy in which the specialists disagree, and the public remains consistently apathetic.

Parliament.

With the re-opening of Parliament, the political correspondents are again predicting "the most momentous session of modern times"—an annual prophecy which leaves the country entirely unmoved. Ireland,

Digitized by Google

Housing, Nationalisation, and the Budget are the foremost topics; but at the moment it is not principles so much as parties which count. If Mr. Asquith can win at Paisley—and local betting is now 2 to 1 on the ex-Premier—then Independent Liberalism will have rallied from its deathbed to the dose of oxygen, and some of the deserters to Labour may find it in their hearts to desert again, while many Coalition Liberals would probably return to the Asquithian fold. If Mr. Asquith loses, then Labour is the only alternative to the Coalition, and the Coalition will be correspondingly strengthened.

It is understood that Mr. Lloyd George will be present in Parliament more often than last year; and although he has felt the strain of fourteen years' continuous office, there is no reason to believe that he desires to relinquish power. Mr. Garvin, in the *Observer*, has made the fantastic suggestion that the Prime Minister is worked out, and should take a year's holiday and a trip round the world. Mr. Lloyd George might reply effectively with a *tu quoque*.

Mr. Roberts Goes.

The Labour members of the Government will soon be like the ten little nigger boys—"then there were none." The resignation of Mr. Barnes is followed by that of Mr. Roberts, Labour member for Norwich and Food Controller. A pleasant little man, his small size gives no indication of his pluck, as Socialist pacifists in his constituency discovered during the war to their sorrow, and he has done well in office. There are now only two Labour men in the Government—Messrs. Parker and Wardle, and they are by no means of the calibre of Messrs. Barnes and Roberts.

Brawn or Brains.

The Labour Party has got its own particular trouble as well as the Government. A great effort has been made to secure the vote and support of the brain-worker as well as the manual labourer, and a few intellectuals like Mr. G. H. D. Cole have joined the party, and more may follow. These naturally want to stand for Parliament, but it is said that while Labour is ready enough to take their help it does not particularly want them in the Commons, and it is inclined to fob them off on hopeless constituencies. The evil-minded suggest that the ordinary Labour member dislikes the idea that he may be outshone by a brilliant young recruit, who may aspire to the leadership over solid and even stolid trade union secretaries; and it is true that jealousy springs eternal in the human breast. But a party that keeps its best brains out of action is never likely to rule England.

Pianos and Prices.

The decision of the well-known piano manufacturers, Brinsmeads, to shut down their works, apparently permanently, has caused much discussion this last week, and will cause more. The firm state that the cost of production has increased too much, and in far larger ratio than the selling price; the employees have issued a reasoned answer. There the matter rests for the present. Seeing the prices which even old-fashioned second-hand pianos fetch in these days, the ordinary person would have thought the price of a new piano would be anything the manufacturer chose to charge, but apparently Brinsmeads think differently.

This particular dispute, however, combined with certain other indications during the past week or two, seems to show that the upward tendency of wages in non-essential trades is being checked. In the necessaries of life, it is true, the producer still has the consumer under the harrow, and both wages and prices increase; in non-essentials the consumer is apparently finding the appropriate remedy of refraining from consumption. The result may, of course, be a certain slackening of employment, but that is an inevitable part of the process.

In this connection two significant facts may be noted. There has been a great outcry on the part of the public and the trade unions generally against the forthcoming increase of fares on the London Underground Railway, but one trade union and one section of the public has announced its determination to support the increase on the ground that high wages cannot be paid without high prices being imposed. That trade union is the National Union of Railwaymen. They are fully aware that the public has got to travel by Underground Railway whether it wants to or not.

On the other hand, a well-known tobacconist gave it as his considered opinion that the increase of 20 per cent. in the price of cigars would "simply kill the Havana cigar trade in this country." After all, one need not smoke Havanas.

The struggle for power between producers of essentials and non-essentials could hardly be more strikingly illustrated.

Bradford and Vienna.

In view of the suffering and famine in Vienna, the Bradford Finance Committee are thinking of inviting a thousand necessitous Austrian children to be accommodated and cared for in the Yorkshire city. The commercial connection between Bradford and the Central Empires before the war was, of course, a very close one, and the fact may have had some weight in shaping this practical charitable proposal; and since Bradford has made enormous sums of money out of the war, and since the war, the rather large expenditure such a scheme would contemplate is by no means beyond the reach of her citizens. All the same, the proposal is a kindly one.

The German War Criminals.

The demand that Germany should give up her war criminals has stirred the late pacifist Press into passionate denunciations of "the policy of vengeance," and they are again at their old game of vilifying France under the cloak of fair words. Probably the list of war criminals is too long, and the delay in demanding them has certainly been unfortunate, but the demonstrations of the defeatists in favour of the men who sunk hospital ships and tortured our prisoners will provoke nothing but disgust. Nor will the attempt to drive a wedge between England and France in favour of Germany meet with much success.

The Dynasts.

The most interesting theatrical event of the week will be the production of "The Dynasts," Mr. Hardy's monumental play, by the Oxford University Dramatic Society—suspended during the war, but recently revived. This amazing blank-verse epic-drama has been staged before, it will be curious to see if one's original impression will remain, that it is far more suited to the study than the footlights.

Current Literature.

Many students of current French literature will be grateful to Madame Duclaux for her book, published by Collins, entitled "Twentieth Century French Writers." It is a very useful and discriminating guide to a fertile territory which is apt to confuse the stray traveller through its very variety.

Mr. G. A. B. Dewar, whom one still thinks of as quite a young man, makes public confession of advancing years by publishing his autobiography under the title of "A Younger Son." The author is frankly rather a puzzle. A naturalist at heart, he chose to live in Fleet Street, and although there are some very strange birds there, they are not easily got under the miscroscope. At another time he edited the *Saturday Review*; but his real metier in a rationally-constructed universe—if he could have tolerated such a world—would have been as a writer of short stories. Some day the collectors will hunt for those slim little volumes, "The Leaning Spire" and "Dreams," and wish there had been more of those delicate fantasies.

A new war book that may be briefly mentioned is "G.H.Q.," by G. S. O., which discusses with knowledge and apparently from inside information the detailed working of the British General Headquarters. It is issued by a new publishing house, Philip Allan and Co. The man who can start as a publisher in these days of costly paper and printing deserves commendation for his pluck; if addresses go for anything, the firm should issue only first-class work, for their domicile is Quality Court. Some firms that could be named would be more appropriately housed in Rotten Row.

OCELLUS.

THE NEAR AND MIDDLE EAST.

(From Our Own Correspondents.)

EGYPT.

CAIRO, January 26.

The Attempt on the Prime Minister.

The sentence passed on Erian Youssef, the Copt accused of trying to assassinate the Prime Minister, his Excellency Youssef Wahba Pasha, has now been promulgated by the Commander-in-Chief, and turns out to be one of ten years' penal servitude. This has given rise to considerable comment in Egyptian as well as European circles; for there is little doubt that considering all the circumstances the sentence is extremely light. In this connection it is amusing to note that one of the vernacular organs referred to the verdict as being in accordance with all the dictates of justice, and added that had he been brought before the native courts, the prisoner would have been sentenced to at least fifteen years' penal servitude!

The Milner Mission.

No further news has been received from Paris, where Aly Bey Maher has already arrived on his mission to Zaghlul Pasha, beyond a telegram communicated by an Italian telegraphic agency, stating that Zaghlul Pasha in an interview had declared himself ready to come to terms with the British Government on the basis of the independence of Egypt. Considerable anxiety is being experienced by both Extremists and Moderates as to the attitude which Zaghlul Pasha will adopt. Meanwhile the mission is quietly continuing its inquiries into the administration, and several of its members have just returned from visits to the provinces. These visits have not been to the liking of the Cairo Committee of the Zaghlul Delegation, who have sent delegates out into the provinces in order to address the people—and incidentally to collect more funds—and exhort them to have nothing to do with the mission. The unfortunate feature about these visits made by the Zaghlulite representatives is that in many cases demonstrations have taken place and, although, except at Luxor, the members of the mission have suffered but little inconvenience, these have tended to rekindle excitement in places in the provinces which for some time now have been relatively quiet.

The Situation in the Provinces.

During the last week trouble has again broken out in the provinces. This time the offending centre is Tantah, which has always been regarded as one of the most fanatical towns in the country. It appears that on the evening of the 20th a series of most inflammatory speeches were delivered by certain well-known agitators, amongst them a notorious Nationalist lawyer, in the Ahmady Mosque, at the conclusion of which the audience swarmed into the streets and began to demonstrate. On their way they met two members of the British military police, whom they mishandled. British troops had to be called in to restore order, and a few casualties ensued. The next evening, while a company of Indian soldiers was out on patrol it was attacked with bricks and revolver shots by a hostile crowd, which mortally wounded the corporal in charge.

This incident created great excitement in the town, and the British officers had much difficulty in restraining the Indians from avenging the death of their comrade. More troops were sent down, and martial law was at once rigorously enforced. The appearance of the troops seems to have calmed the town, which has been quiet ever since, and the man mainly responsible for the demonstration, the native lawyer—who last summer for similar activities was interned at Rafa, and was released only in the autumn—has now been arrested. It is to be hoped that on this occasion no leniency will be shown him, or any others who may emulate him; for the policy which has been followed during the past few months of arresting agitators or relegating them to their villages and then releasing them has not by any means conduced to improving the general situation.

Trouble of a different nature and having a different origin has arisen in Upper Egypt, where one of the express trains has been derailed and robbed by a band of armed brigands. The attempt was made late in the evening about a hundred kilometres from Cairo. About ten metres of the railway line had been removed, and by the merest good luck the engine driver was able to pull up in time to prevent the train from falling down the embankment. The brigands fired on the train, and wounded one of the officials in the postal wagon, from which they managed to take about £E3,500. It is understood that the train carried about £E20,000, but the brigands were prevented from getting hold of the whole amount by the postal officials, who with great sangfroid concealed it, and by some police who were escorting prisoners, and who fired on the brigands, thus forcing them to run away.

An inquiry has been opened and has progressed to the point where there is reason to believe that the gang will be discovered. This is the third attempt that has been made during the last two months on trains at this spot. The motive is purely one of robbery, and has nothing to do with the political situation, except in so far as these incidents are symptomatic of the state of public security resulting from that situation.

YUGOSLAVIA.

BELGRADE, January 31.

The Fiume Crisis.

Consternation was caused in Belgrade by the news of the presentation of the ultimatum that Yugoslavia must accept Signor Nitti's terms, or be prepared to see the Treaty of London enforced. Astonishment and resentment were mingled, not so much, perhaps, at the terms themselves as at the sheer injustice of the thing. In the first place, Signor Nitti is uttering fair words and smooth talk of friendly compromise, while Italians are stirring up trouble in different parts of Dalmatia and fishing in dirty waters in Montenegro and urging on the Albanians against the Serbs; then, suddenly, he presents an ultimatum embodying intolerable conditions. The alternative is to subject the young kingdom to the terms of a treaty to which they are not parties, made without their knowledge. They may well ask: Are we Allies or defeated enemies? It is notorious that the Italian advance across the Piave in November, 1918, came after, and not before, the mutiny of the Slavonic troops in the Austrian army, and the consequent break-up of that front, and immediate incorporation of the Austrian Slavs into the Kingdom of the Serbs, Croats, and Slovenes. The Slavs, too, are hurt that this ultimatum should come from their friends and recent comrades in arms, the English and the French. Opinion was very divided as to the best answer; but it was possible to observe that every hour the die-hards gained in strength, with the policy of rejecting the ultimatum, and leaving to the British, French, and Italian Governments the invidious task of enforcing the Treaty of

London; they argue that this would still leave the question open, and that under their protest they would have the right and power to reopen it at a more favourable opportunity.

The Cabinet were in prolonged session, and it appears that their reply was to the effect that the ultimatum was presented by three separate Powers, and not by the Peace Conference, and as it is a vital question for them, and they are members of the Conference, they ask that the question be settled by the Conference as a whole. Immediately after this came the news—with the newspaper headings "America to the Rescue"—that the Government of the United States has lodged a protest against the ultimatum and its form. Shrewd observers consider that in reality England, and perhaps France, too, have really been serving Serbia's interests and bringing about an intolerable situation, which they themselves knew could not be solved in the way they suggested. The Powers have muddled the Adriatic problem as badly as they have muddled the Russian one; it would have been better and simpler not to have meddled in it at all, but to have allowed the Serbs and Italians to settle it themselves; or at least, to have held Fiume and not allowed the claimants on one side to hold the town.

The weakness of the Serbs has been their slackness in propaganda and failure to educate the public in friendly and Allied countries. Nobody grudged Trieste to the Italians, although even there half the population is Slovene and the town an ancient Slavonic settlement. But the Italians realised that whereas Trieste would feed Vienna, now a second-rate provincial poverty-stricken town, Fiume would be a much more important place, being the inlet for Yugoslavia, Czecho-Slovakia, Hungary, and perhaps even Poland. Consequently, their much-prized Trieste was of far less value than they anticipated, and to save the situation for them they felt obliged to seize Fiume, where their claims are really of the shallowest. It is perhaps worth while repeating that there are two old Croatian settlements on the coast adjoining each other, separated only by a brook, Rijeka (or the River) and Sushak. Circumstances led Rijeka to become a port; so Hungary, by fraud, since exposed, stole it from Croatia, and in order to lessen Croat influence there, popularised the Italian form of the name, Fiume, and encouraged Italian settlers and colonists, and made a political alliance with them so that Magyars and Italians should run the town to the exclusion of the Croats. To-day the Italian population of Fiume admittedly slightly exceeds the Croat, but as Sushak is exclusively Slav, the two taken together—and they are really one town—have a largely preponderating Slavonic population. Apart from that, both geographically and morally, the town and port are unquestionably Slavonic. Italy has an immense coastline and numerous ports. Yugoslavia has none; the possession of Fiume is an absolutely vital question for Yugoslavia; her struggle towards the sea resembles the secular struggle of Russia for an ice-free port. Any compromise would be unfair. The proper solution of the Fiume problem is absolutely simple: give it unreservedly to the Yugoslavs, to whom it belongs by all rights except force. Probably not one Italian in ten thousand had ever heard of Fiume before the Italian Government made it a popular question for purposes of their own, and then could not tame the Frankenstein that they had called into existence. The very fact that they ask for a corridor along the coast for purposes of access is further evidence of the artificiality of their claims.

One thing is certain: one day, sooner or later, Fiume will again be Rijeka—the Serbs have been able to wait five centuries to free their land and people from the Turkish yoke; they have known how to wait to throw off the Hapsburgs; it will be easier for them to recover Rijeka. They are patient and determined, and the local population are inflexible. They have seen enough of Italian methods in Istria during the past unhappy year to refuse to submit one day more than necessary. The Belgrade Government has had great difficulty in restraining the infuriated people. Act on the side of justice or it will stultify itself; if it fails, then the outraged people will take the law into their own hands. The Southern Slavs have long memories and strong arms.

The Paris correspondent of the *Pravda* wires that the Government's reply has produced a very favourable impression; for while expressing most cordial sentiments towards the Powers, they remind the Council that they have no knowledge of the Treaty of London beyond what they have read in the Press. As Great Britain and France signed away Austrian territory to Italy in 1915, but afterwards recognised the Kingdom of the Serbs, Croats, and Slovenes, they are in an awkward dilemma; for if the Treaty of London is enforced, it will be the duty of Britain and France to enforce it against their friends and allies, who would undoubtedly resist. This consideration appears to have been overlooked at Paris, and this, with America's protest, will certainly lead to a revision; meanwhile, Italy will have again lost ground by Signor Nitti's attempt to represent his personal ultimatum as that of the Peace Conference. Once again have the Yugoslavs shown moderation and restraint in the face of great provocation, and this attitude will certainly win them much sympathy in Britain and France.

Serbs and Croats.

An incident is reported from Paris, which shows how insidious and far-reaching, and also how effective, Italian propaganda has been. It is stated that when Dr. Ante Trumbitch, Minister of Foreign Affairs for the Kingdom of the S.H.S., who is well known in London, had finished his *exposé* at a recent session, M. Clemenceau stated it seemed to him that there were two currents in Yugoslavia, one, the Serbs, who deserved all their consideration, and were very reasonable in their attitude towards the Fiume problem, and the other, the Croats, who were *intransigeant* and, moreover, during the war fought to the end against the Allies in the Austrian Army. M. Pashitch immediately protested against this inference, and then Dr. Trumbitch spoke at some length, thanking M. Clemenceau for what he had said about the Serbs, but taking up the cudgels on behalf of the Croats, indignantly repudiating the suggestion, circulated in Italy, based on exaggerated reports on Yugoslav politics by Italian agents, of want of harmony between the two branches of the Yugoslav people. At England's request he had proceeded to Rome and participated in the conference which led to the famous Pact of Rome in 1917, where he engaged the Croats to do all in their power to bring about the rupture of the Austro-Hungarian monarchy. He pointed out how Croats had deserted *en masse* on every front, how they had formed whole units thus in Russia which had fought on our side against their oppressors, and how the famous Yugoslav division had travelled half way round the world from Southern Russia, Archangel, and the Murman through Great Britain, and even through Siberia and distant Vladivostok, to Salonika, where they had performed prodigies of valour, and contributed a large share to the break through on the Macedonian front. And those that remained behind prepared the ground for the revolution, and, working in unison with their Slovene brothers, had induced the mutiny of the Slav troops, in sympathy with the Czecho-Slovaks, which resulted in the melting away of the Austro-Hungarian Army on the Piave, and consequent Italian successful advance.

There is no doubt that Italian agents have cleverly worked an anti-Yugoslav propaganda throughout England and France, artfully suggesting that the Serbs are our gallant Allies, but that the Croats are dangerous to European peace. This is seen in Montenegro and Dalmatia, and is constantly reflected in the British and French Press. It is, of course, very difficult for foreigners to judge the strength of political movements in another country; and to-day, when Democrats are abusing the Radicals for their "unholy pact" with the Croat Nationalists, and the Slovene Clericals are savagely attacking the Democrats, it is very easy to overrate these differences, and to forget the bitterness of party politics in these regions and to exaggerate the importance of alleged centrifugal movement. Both Croats and Slovenes know well enough that they are not strong enough to stand alone, and that mere self-preservation

Digitized by Google

makes it advisable for them to join with the Serbs, quite apart from all the other factors. Of course, among the Croats there is a substantial proportion that has been Hapsburgised, and accustomed to look to Vienna as the source of everything that is good, and these feel rather lost in the democratic world in which they find themselves, and are noisy. It will be time enough to believe in a movement towards separation when we see it, and to judge its force when we have seen its action. They may very likely fight like Kilkenny cats among themselves on questions of internal politics, but they will close up their ranks and show an uncommonly solid front to any foreign interference.

The Italians in Dalmatia.

News from Splijet (Spalato) reports that the Italians are continuing to behave in the occupied parts of Dalmatia as a conqueror rather than an ally. Over two hundred respected natives of Knin have been taken awav in fetters and manacles to Zadar (Zara) for the crime of singing patriotic songs and celebrating their Christmas with the usual firing. At Zlosela, because the Yugoslav colours were shown, two prominent citizens were taken off in chains to Shebenik (Sebenico) to be court-martialled. By such means the Italians seek to endear themselves to the population of the territory which they occupy by force in spite of the protests of the Slavonic population, which claims some right of self-determination.

TURKEY.

CONSTANTINOPLE, January 11.

The Question of Constantinople.

The announcement relative to the fate of Constantinople, upon which I commented in last week's letter, has been the main theme of the Press throughout the country; while the Athenian journals which have arrived also discuss the same question. After the first shock the Turkish Press derived some comfort from the comments of *The Times*, according to which the announcement was premature. The effect upon Turkish opinion may be judged from the following extracts from the leading articles upon the matter. The *Yeni Gun*, a strongly Nationalist organ, after having pointed out that the question of the Straits could be settled without changing the attribution of Constantinople, and that the power to close the Straits was left to Turkey by the express desire of the European Powers, especially Great Britain, continues:—

But the question does not concern the form which is given to these principles and which cannot be rejected provided they are interpreted in a logical and equitable spirit. The real question is to know whether the Turks and Islam, of which the Ottoman Empire constitutes the supreme refuge, are admitted to have a right to exist.

The *Peyam-Sabah*, edited by Ali Kemal Bey, a former Minister of the Interior, and one of the few just men in Turkey, writes in a very pessimistic spirit:—

It will be only after matters have run their course, and the Powers have rendered their first decisions, when we shall have dashed our head against the stones, that there will be a useful task for the Government and the nation to accomplish in the direction of repairing faults committed. In our opinion, all that can be done in the meanwhile is to leave the present Government and the National forces . . . to finish what they have begun. It is said that he who sows the wind reaps the whirlwind, and these men (the Nationalists) will reap what they have sown.

The utter collapse of the Volunteer Army has not improved the situation, and there is good reason to believe that there is some sort of an understanding, if not between the Nationalists and the Bolshevists, at least between Enver and Trotzky. What hope is there of the Volunteer Army being able to prevent the Reds from entering Turkey by way of the Caucasus? Further east, also, there is not a very reassuring situation. From Roumania and Bulgaria comes news of increased unrest; and the Allied armies in Constantinople have been so far reduced that it is doubtful whether they number 20,000 men, all told. The Turks are permitted to maintain an army of 50,000 men, and the Nationalists could raise as many more. The general trend of opinion is, even among those who have very little sympathy for the Turks, that under present circumstances it would be a mistake to make them suffer the extreme penalty.

Reforms.

Fourteen months after the Armistice, the Turkish Government announces a scheme of reforms. The scheme consists of the formation of a body of European inspectors for the various tribunals and judicial institutions throughout the Empire, together with a "judicial" police corps under European direction. It is difficult to see what object the Porte expected to attain by this scheme, which, in the nature of things, must remain a dead letter. Whatever may happen to Constantinople, it seems certain that the Allies themselves will determine what reforms are necessary; and the Turkish Press generally recognises that the reform scheme is labour wasted. The non-Moslem Press naturally takes the same view, and recalls the various edicts by which successive Turkish Governments have announced reforms that have never been put into operation.

Mustafa Reshid Pasha, in an interview accorded to a local journalist, stated that with the administrative, political, judicial, and financial reorganisation carried out with the assistance of the Powers, the Turkish Empire in its integrity could and must continue to exist. With regard to the question of Constantinople raised by the interviewer, the Foreign Minister replied: "Constantinople—the newspapers have said a good deal about it, but for us the question does not exist. For four centuries and more Constantinople has been the capital of the Ottoman Empire. Without Constantinople Turkey is a body without a head, without a soul, without life. There is no more to be said."

The Turko-German Secret Treaty.

For the last few days the revelations of Javid Bey published in *The Times* have provided the Press with an interesting theme. Mahmud Pasha, who was a member of Said Halim Pasha's Cabinet, and who retired after the outbreak of war, declares that the treaty was never discussed at any Cabinet meeting at which he was present, and he had no knowledge of it, but certain signs had led him to the conclusion that there was a "rapprochement" between Turkey and Germany.

Ibrahim Bey, who was Minister of Justice in the same Cabinet, had something more interesting to say, in that, according to his statement, Said Halim Pasha undertook the responsibility for the conclusion of the Alliance, which was negotiated without the knowledge of any of the other members of the Cabinet except

INDIAN CHURCH AID ASSOCIATION.

The Official Organ of the Indian Episcopate.

IN the present critical condition of India and under the shadow of changes which will materially lessen the proportion of Englishmen in the Indian Services, it is imperatively necessary to strengthen the loyal Anglo-Indian elements, upon whom will now devolve the task of maintaining the White Man's reputation for integrity. Ladies and gentlemen, therefore, who have served or resided in India in any capacity are invited to join this Association, the primary object of which is to help the India Bishops to carry on religious and educational work among these classes, upon whom so much depends.

For further particulars apply to

Enver and Talaat. The existence of this secret alliance was not officially acknowledged until the autumn of 1918; but it was commonly known in certain circles in Constantinople that some kind of a secret agreement had existed for years. In fact, according to the assurances of certain people who are generally well informed in these matters, it was Marschall von Bieberstein himself who commenced the negotiations. Curiously enough, to this day the actual text of the treaty is unknown, and there is only the vaguest information as to its general conditions.

The Parliament.

Although the Imperial Decree convoking the Parliament for Monday was announced yesterday, there seems to be some doubt about the matter. While the Ministry of the Interior has sent a circular to the provinces announcing the convocation of the Chamber for Monday, according to authoritative sources at the Sublime Porte, this will be impossible, and the cards of invitation have consequently not even been prepared.

In one of my former letters I stated that the Government was said to be contemplating plans to prevent the Chamber from meeting, and also that the victory of the Unionists in the elections might have been a "plant" on the part of the opposition in order that the party responsible for the war should be obliged to make the peace. There is now reason to believe that this was substantially correct; for while those who are in favour of the immediate convocation of Parliament are to a great extent inimical to the Nationalists and Unionists, it would appear to be the Government that is placing obstacles in the way of the Parliament, and the Government is simply the instrument of the Nationalists.

Meanwhile, a section of the Nationalists are in favour of removing the seat of the Legislature to the interior of Anatolia, but the news of the possible fate of the capital has brought about a considerable difference of opinion on the subject; for to remove now would be equivalent to committing suicide. On the other hand, the extremists, who are determined to fight to the bitter end, reply that sooner or later this step will have to be taken, and it would be better to have the Parliament near the Nationalist headquarters from the beginning. There are indications that there has been some sort of a compromise, and that it has been agreed that the Parliament shall make its debut in Constantinople, and that the Chamber itself will then decide whether to remove or not.

The Nationalists state that their field of action at the present moment is not in Constantinople, and that having sworn that Turkey shall belong to the Turks, they intend to hold to their oath.

The Trial of the Unionists.

At last the famous trial of the scoundrelly assassins who carried out the scheme of the Committee of Union and Progress to exterminate an entire nation has come to a conclusion. It will be remembered that Enver, Talaat, and Jemal were condemned by default to death, and that the Chief of Supply, Ismail Hakki Pasha, who made millions out of his office, was condemned to one year's imprisonment—also by default. Out of the rest, who did not make good their escape two have just been condemned to ten years' hard labour, and the others are to await their sentences for a while. The hundreds of thousands of women and children who were slaughtered with every accompaniment of ferocity and outrage can hardly be said to have been avenged by such paltry measures, and the Turks have committed yet another grave fault in this matter.

ROUMANIA.

BUCHAREST, February 1.

The Danube Commissions.

In several of the States through whose borders the Danube flows it has been possible to trace a certain uneasiness at the prolongation of the activities of the Upper Danube Commission, and the constant extension of control which this body has been exercising. The Roumanian Press is demanding to know how and why the military mission sent out under the command of Admiral Troubridge to regulate the transportation of supplies to the Allied armies in Hungary is continuing to regulate the traffic of the whole of the Upper Danube, and one of the Liberal papers recently stated that this Commission has even fixed a new scale of taxes to be levied on shipping at the Sulina mouth. This is pointed out as an infringement of the prerogatives of the International Commission of the Lower Danube, a body created by the Treaty of Paris in 1856. This Commission consisted of eight members representing respectively Great Britain, France, Germany, Austria, Italy, Russia, Turkey, and Roumania, and had its seat at Galatz. The regulation of the traffic of the Lower Danube, the maintenance of an adequate body of engineers to keep the Sulina mouth of the river dredged and the channel up to Braila navigable to the great grain-carrying cargo-boats which bore the rich Roumanian harvest to the ports of Belgium and Britain were among the duties of this Commission. The necessary funds were obtained by the taxes levied on shipping.

The Upper Danube Commission provided for in the Treaty of Versailles was to be of a purely temporary character, and was to consist of members from each of the States through which the Danube flows and representatives of the Great Powers. This Commission was to control the Upper Danube until definite mutual arrangements could be made and embodied into an international treaty for the purpose of regulating navigation on the Upper Danube. This Commission has just been called into existence at Budapest, and the Roumanian delegates are leaving shortly for the Hungarian capital. It is to be hoped that the urgency of the task before the new Commission will not be lost sight of. In the present disorganisation of the railroads of this part of the world the Danube is an all-important means of communication between western Europe and Serbia, Roumania, and Bulgaria.

More Labour Troubles.

The success obtained by the tram drivers in their recent strike evidently persuaded the rest of Bucharest's workers that the possibilities of the surprise strike were not yet exhausted, so on Thursday the Electric Light and Gas Company's workers ceased work, and the city was plunged into darkness.

Roumania is not a highly industrialised State, as we are frequently told, but, however opinions may vary as to the adequacy of this standard, such organised labour as exists here has nothing to learn from its Western brethren. For instance, the electric light and gas workers demanded a flat increase of 40 per cent. in wages all round, retrospective from November, 1916, when the capital was evacuated in order to save it the

Digitized by Google

horror of enemy bombardment. It would be interesting to know whether the strikers expect to collect the just proportion of their wages from Marshal von Mackensen direct? The 40 per cent. increase was granted in principle after two days' gloom, and the men went back to work, but the date has not yet been fixed when the higher wages are to be paid.

The Tobacco Monopoly has also been having difficulties at the local factory. In the autumn the employees asked for an advance of 1,000 lei in order to purchase wood for the winter, giving at the same time a pledge that this sum should be recovered by the monopoly in the form of weekly instalments to be deducted from the increased wages simultaneously demanded. Trouble arose when in due course an attempt was made to retain the instalments. The wood bought with the 1,000 lei had in all probability been burned by the time the monopoly had completed the book-keeping arrangements necessary, and the severe weather only just beginning. The workers then proposed a compromise:—"Give us another 1,000 lei and we shall pay it back if you give us higher wages." As soon as these concessions were made the strike at the cigarette factory ended, and the men at the railroad repair workshops came out.

So at present we are enjoying all the anomalies of highly industrialised States: our tram drivers get more wages than our judges receive emoluments, and the lot of the "white-collared slave" is no easier here than in England or America.

Roumanian Congratulations to M. Paul Deschanel

On the occasion of his election to the Presidency of the French Republic the Roumanian Government addressed to M. Deschanel a telegram couched in terms of the warmest friendship, and expressing the most sincere congratulations. M. Deschanel formerly visited Roumania on a political mission, and there is a note of personal friendship in the wording of the telegram, part of which reads as follows:—

The Roumanian people and Government can never forget the feelings of fraternal affection and cordial sympathy with your Excellency has always evinced and the strong support you have afforded to Roumania at every opportunity, and especially in her saddest and most trying moments.

The memorable words of encouragement which your Excellency was good enough to pronounce in our favour at the Sorbonne in July, 1917, made a deep impression upon the minds of the Roumanian people, to whom this manifestation of sympathy afforded the necessary power of resistance to continue their prolonged struggle in the name of civilisation against the common enemy.

I desire to assure your Excellency that besides preserving a sentiment of profound gratitude towards the French Republic for all she has done and is still willing to do for the national aspirations of Roumania and her establishment within her ethnical frontiers, the Roumanian Government will strive to preserve a sincere political friendship and close collaboration with her great Allies, and especially with France, being convinced that this policy is entirely in accord with the best interests of Roumania.

Parliament.

The Council of Ministers is meeting daily to discuss the Bills to be presented to Parliament when the session begins. (At the present moment, February 1, there is a semi-official vacation of three days, as many of the deputies and Ministers have gone to Cluj to the opening of the University.)

It has been decided that the question of the ratification of the decree-laws passed during the time when Parliament was not sitting shall be settled in each case separately. This means practically a debate upon the merits or demerits of each decree before its ratification by the Legislature, and as the political position of the Liberal Government is far from what it was at the time when the decrees were passed there is no doubt that a considerable body of decree-made laws will be rejected. There is talk of opposition being developed, especially to those decrees which sanctioned supplementary expenditure for payments made on account of war damages in certain parts of the country. The late Liberal Government are accused of having made many of these payments for political purposes.

The necessary measures have been taken for the repatriation of the Polish refugees from the Ukraine.

MOROCCO.

TANGIER, January 29.

An Official Ceremony.

Thursday, January 15, was the day selected for the solemn ceremony of taking official possession of the German Legation in Tangier. At an early hour crowds began to assemble, the route to the Legation being kept clear by companies of the Sultan's troops. In spite of a heavy *levante* blowing, the sun shone radiantly upon the gay scene. The arrival of Naib Tazi, the Sultan's representative, was announced by buglers, and his cortège was brilliant and picturesque, being composed of the Moroccan notabilities in gala dress and splendidly mounted. As the Sultan's representative arrived at the German Legation the keys were handed to him, the gates were opened, and the Moroccan flag was hoisted amid loud cheering from the crowds. Accompanied by the Allied Ministers and his suite, the Naib entered the gardens and proceeded to the ex-Residence, where, in the grand reception room, he read a document announcing his taking official possession on behalf of his Sherifian Majesty's Government. Naib Tazi then offered lunch to all his guests.

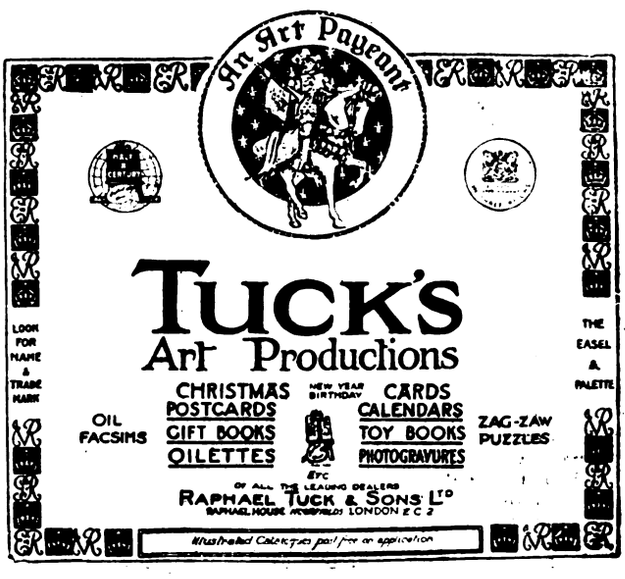
The gardens of the ex-Legation are very beautiful; they were thrown open to the public in the afternoon, and, judging from the numbers who took advantage of it, this privilege was fully appreciated.

It is not quite decided what use shall be made of the building and its gardens. Possibly it will be utilised for the offices of the Sultan's representative and of the local government.

I give below a translation of a leading article from the French local paper, treating of the ceremony just described. The views expressed are hardly consistent with the reference to the treaties in General Lyautey's speech mentioned in my last letter, and the article might almost be taken to imply a menace to the decision regarding the Government of Tangier upon which the Governments interested may eventually agree. The Sultan is, of course, the Sultan of Morocco, but he delegated his power in the Spanish Zone, and during the war it was excusable to think that he was not quite master in his own house.

The translation is from an article in *La Dêpeche Marocaine*:—

The position of Morocco with regard to Germany was clearly defined by the Maghzen's declaration of war on the Government of William the Second, and by the expulsion of Germans and the representatives of Germany in Tangier. By this measure of courage, justice, and security the Sultan signified his intention of being the indisputable master in this town, and that in future none other than him should have control there. Nevertheless, by reason of the war which nullified the treaties and reopened every problem to discussion, an impartial spectator or, if you prefer, a neutral spectator might have considered this ejection as provisional and as a measure which one day might turn on those who formulated it. It was, in fact, the prologue of a great drama which only the judgment of arms would unfold. After four years of frenzied warfare, during which Moroccan soldiers bore themselves as heroes, the god of wars places outside the game



Digitized by Google

the very Power which, in order to ingratiate itself, had proclaimed him their god alone. The Germany Army, vanquished and broken, only escapes from total annihilation by the signing of an armistice, in virtue of which it surrenders unconditionally. Peace and victory are being celebrated here and, even to far-off shores, public rejoicings testify to the triumph of civilisation, of justice, and of right.

Act the First.

In these rejoicings the Maghzen and the whole of Morocco are taking their just part, but except for "powder plays," no tangible fact bears witness to the definite eviction of Germany and the strengthening in Tangier of all Maghzenian power. The Allies, in their wisdom, nevertheless introduced into their Treaty a clause concerning the property of German subjects and of the German Government in Morocco. Private property to be sold by public auction, official property to return to the legitimate Sovereign of this country. The Treaty being definitely ratified on January 10, Sultan Mulay Youssef, in the person of Naib Tazi, his representative, therefore presented himself yesterday at the gate of the German Legation and publicly and officially, with the consent of the Allied countries, whose Ministers were present, he entered, so to speak, his own house. And, in truth, in future he will be in his own house.

Act the Second.

The show is not yet finished; it is not yet time to leave one's seat. Prevented from exercising his power to the full here by reason of the survival of the diplomatic agreements, which agreements victory had virtually annulled, the Sultan must one day manifest his sovereignty in Tangier by the proclamation of a definite policy. This policy must involve on the part of all the Powers the full recognition of his unquestionable rights. On that day the third and last act of the piece will be played, and there will be nothing further for us to do but to lower the curtain. But in the meantime we may rejoice at the solemn expropriation of our enemies. Their loss is our gain. The Maghzen's power is thereby reinforced, and just as our victory brought about yesterday's happy events, so also this event must bring with it the rupture of the last obstacles which retard the triumph of order here and the dawn of an age of prosperity.

SYRIA.

JERUSALEM, January 10.

Important Events.

The state of things in Damascus continues to be obscure. Nothing is settled, and the constant changes cause great anxiety to the people. The following are some of the most important items of news received here from those parts:—

1. All salaries and bonuses of the Government employees of the Arab Government have been decreased, and as a result great dissatisfaction reigns among all the officials. Many, including sixty policemen, have resigned in Damascus alone. 2. Emir Zaid, brother of Faisal, has at last approved of the Bill instituting compulsory service for all men between the ages of twenty and forty for the period of six months. This too, has caused dissatisfaction among all classes of the people. Some, however, argue that this step is essential to independence. 3. Great changes have been made among the administrative officers. All the old Executive have resigned or have been made to resign, and new men have been appointed in their places. Among the more important of the changes are: Nimet Pasha, in place of the Military Governor-General of Syria, Rikabi Pasha (resigned); and Haddad Pasha, who has been replaced. 4. The tone of the Arabic newspapers in Damascus has recently been harsh and very bitter against the Allies. They were warned a short time ago that unless they made a change they would be suppressed.

Disturbances.

Several incidents have occurred recently between the French Army of the Western section of Syria and the native Arabs. Three of these have been on a rather large scale, and much panic has been caused in the surrounding districts. The first occurred in the Hule region (S.E. of Damascus). Certain Arab tribes attacked and pillaged Christian villages of the plain. Many persons were killed and many more fled towards the coast, where they await the settlement of their fate. The largest of the villages attacked were Deir Mimas and Balat. The reason that led the wild Arabs to such an action derives mainly from their passion for independence—a passion inflamed by seeing the French hoist the French flag over the minaret of a mosque in that region. Seeing this, they thought that the French had commenced their Occupation, and thus their religious passions were aroused. General Gouraud, the French High Commissioner in Syria, has sent a force against them.

More important than this is what occurred at Baalbek. According to the recent agreement between the French and the Arab Governments, the Arabs were to stay in Baalbek while the French kept the line of the railway as far as Rayak and Zahleh in the Anti-Lebanons. On December 15 there arrived in Baalbek a French officer and three men. Their entrance into the city was prevented, and they were forced to go back. The inhabitants of the city were furious at the arrival of these Frenchmen, and treated them with scant courtesy. This action of the people enraged the French military authorities, and two days later they sent some artillery. A battle ensued between the people and the French, lasting several hours; it ended in the victory of the latter, who entered the city and still remain there. This incident has had a great effect on the people, and the Moslems of the region insist absolutely that the French should not be allowed to remain there. It is worthy of note that the Arab Moslems of that region (as well as those of the adjoining cities or Homs, Hama, or Aleppo), who are both rich and fanatical, have declared several times that they will stand against all French encroachments.

A still more noteworthy event is one that happened at Tel Kalakh (N.E. of Tripoli). For some time it was kept secret by the French, who allowed no word of it in the Press. Full light has now been thrown upon it in the Arab Press, and the gist of the affairs appears to be as follows: When the inhabitants of Tel Kalakh ascertained that the country had been definitely divided, and that their country had come under French protection, they sent to the French Military Governor, who had come among them, an ultimatum, and demanded: 1. The removal of the French flag. 2. The preservation of Syria, free, undivided, and independent. 3. The removal by the French Government of the French Army from the adjoining districts. These demands were naturally ignored by the Military Governor, whereupon the inhabitants prepared for fight. They surrounded the barracks and opened fire. The French Governor was killed, with two others. The French High Commissioner dispatched a force to the spot. Severe fighting took place, lasting for two days, but when their ammunition was exhausted the inhabitants surrendered. The leaders were sentenced to death, and several others to imprisonment. The tribe that caused this trouble is known by the name of the Dandash. It is very unfortunate that the French have met at the beginning with so much resistance and unpopularity. It is the division of the country into three parts, which has caused all this trouble.

THE ARMENIAN REFUGEES' (LORD MAYOR'S) FUND.

Our readers will be interested to learn that excellent work is being done by this fund, which exists for the relief of distress among the refugees in Asia Minor, the Caucasus, and Persia. Its head offices are at 96, Victoria Street. The relief work is being administered at Adana by Dr. and Mrs. Kennedy. Operations are shortly to be extended into Cilicia. At Bardezag, where the fund has an orphanage and does much relief work, Miss Newnham is in charge. At Erivan (Caucasus) Captain Gracie is doing splendid work, and within a few days a new assistant is being sent out to him. In Hamadan (Persia) the distress is very great, and a new worker is being sent out there. It may be stated that everywhere the relief is being administered by English people—the direct representatives of the fund.

"THE AUCTION OF SOULS."

The film which is now being shown at the Albert Hall under the title "The Auction of Souls" has aroused much discussion. We have seen the film and we have read the report and book upon which it is based. The pictures represent the massacres of the Armenians by the Turks from 1915 onwards, and, presumably (though this has without convincing been denied), are given to the public to show them the real character of the Turks (and, incidentally, the Kurds and Arabs), who committed the atrocities. The story of the film consists of the sufferings of a young Armenian girl who, driven from her home in Chemushgezek, undergoes, with other Armenians, most painful and harrowing experiences in places like Arabkir, Malatia, Severek, Diabekir, and so on. It is impossible, unless one be a pro-Turk, not to sympathise with the Armenian people; it is equally impossible not to be convinced that the Turk, as judged by these atrocities, is outside the pale of civilisation. The discussion that this film has provoked should therefore centre round two points: the truth of these pictures and the desirability of making them public. Their truth in the main we do not question, though this is by no means the same thing as saying that the fault is wholly and always on one side. The desirability of associating these atrocities with a kind of commercial propaganda is another matter. We confess that when we saw the film we kept persuading ourselves that it was taken in America, and remembered that the League of Nations Union, under whose auspices it is published, have, in employing commercial American enterprise, used a double-edged weapon. But the villains of this film, the Turks, are still technically our enemies, and propaganda against them may therefore be justifiable. We are glad to think that the film was not taken in England, but this is a matter of self-respect, and has nothing to do with the actual justice and expediency of the case.

King Alexander of Greece having congratulated M. Deschanel on his election as President of the French Republic, the latter has replied that he will always remain a faithful friend and admirer of Greece.

CORRESPONDENCE.

EGYPTIAN SIDE-LIGHTS.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—When ex-officials of such high standing as Sir Malcolm McIlwraith and Sir Walter Bond take opposite sides on the Egyptian question, and then write to *The Times* claiming the late Lord Cromer as supporting their respective views, the public may well be puzzled what to believe. I think that Sir Walter Bond would have been more correct had he stated that Lord Cromer acquiesced in rather than approved of the proposed evacuation in 1887. I happened to hear Lord Cromer say that he looked on the Egyptian question as part and parcel of the larger Eastern question, and on that account it could not be dealt with in the interests of the Egyptians alone. Lord Cromer was not singular.

I remember years later Lord St. Audries, who was at that time Chief Whip of the Conservative Party, telling me that if the Young Turks succeeded in putting their own house in order—at that time there seemed every probability of their doing so—he did not see how we could well refuse to evacuate Egypt, should the Turkish Government asks us to do so. Poor Turkey! in those days both parties deemed it of some importance to meet her wishes!

But this is all ancient history, and the Egyptian problem of to-day is by no means the problem which confronted Lord Cromer in 1887.

As regards Sir Malcolm McIlwraith's contention that the Egyptian Ministers of to-day are less dependent and have more power than the Ministers who held office in the eighties and nineties, this is hardly corroborated by Sir Valentine Chirol and other unbiassed correspondents writing from Egypt. It is quite true, however, that for a brief period during the Gorst *régime* the Egyptian Ministers were given a free hand. It is equally true that the late Lord Kitchener made less use of his advisers than either Lord Cromer or Sir Eldon Gorst, working as he did to a great extent direct with the Ministers. But it by no means follows that the Ministers had in consequence more power, for the simple reason that Lord Kitchener was his own adviser, and the Government became more personal than at any time during the occupation (Lord Cromer's Abbas II.). Zaghlul Pasha was, of course, a strong Minister, but I doubt his being appreciated on this account, either by Sir Malcolm McIlwraith or Mr. Dunlop, the two advisers with whom he worked. Zaghlul Pasha is really very like the late Riaz Pasha in character, and though very obstinate was open to reason—at least, I found him so when on one occasion he supported an action of mine which was questioned even by my own Minister of the Interior. It was on this account that I ventured to suggest, both in your columns and in *The Times*, that it would facilitate matters if Zaghlul Pasha and other prominent Egyptians were asked to become members of the Commission which would give them the right to assist in the final report, an altogether different matter to being asked to appear and give their views before the Commission. Is it too late even now for such a procedure to be followed? It would seem from the letter Zaghlul Pasha has written to *The Times* that he now recognises that he can only look to the British Government for what he considers justice—altogether there seems to be a more reasonable atmosphere all around notwithstanding the boycott.

I fear that I have already exceeded the space which you are likely to be able to spare me, but there is still another Egyptian question on which I would like to express my views. I refer to the educational policy described by Sir Valentine Chirol in *The Times* as our worst failure. Of the subjects dealt with by Sir Valentine Chirol in the series of articles which he has contributed to *The Times* it is the one, and the only one, in which the British official directly concerned has been, in my opinion, handled with uncalled-for severity. Mr. Dunlop, the late Adviser, is silent, probably considering that *qui s'excuse s'accuse*, but he appears to me to have such a very strong case that I cannot refrain from stating the facts as I read them. I am not an Educationist, so cannot say whether Sir Valentine Chirol is justified in condemning Mr. Dunlop's whole policy to the extent he has. Sir Valentine has taken as his text a report made by Mr. Boyd Carpenter, and we are told that for the first time the Egyptians learned the failure of our educational system, as Mr. Dunlop had "been keeping the machinery of education and its results to himself. . . . Since Lord Milner left Egypt there had been very few Englishmen in responsible positions who had paid more than lip service to the importance of education." Now this is a very sweeping condemnation, and if true (again I say I am not an Educationist) reflects not only on Mr. Dunlop, but also on Lord Cromer, Sir Eldon Gorst and Lord Kitchener, who adopted Mr. Dunlop's policy as their own. We have only to read the annual reports to see that this is so. In 1905, especially, Lord Cromer deals at length with education, he tells us what he found in 1882, what has been attempted to date, and his hopes for the future. Incidentally, Lord Cromer regrets that he is unable to give Mr. Dunlop all he asks, as even education "must yield to the paramount necessity of maintaining financial equilibrium." It is clear, therefore, that if less was expended on education than in some "backward Balkan States," the fault is not Mr. Dunlop's. It must be remembered, too, that we were all being cut down and were never granted anything like the credits we demanded. I have often pitied the financial advisers in their annual budget struggle with the spending departments! On Sir Eldon Gorst taking charge he devised a scheme whereby the expenditure on education was nearly doubled, and it has always appeared to me that Sir Eldon's Provincial Council reform never received the credit it deserved if only in this matter of education. In the last report (1913), submitted by Lord Kitchener, the results attained by the Provincial Councils in education are dealt with at length, and I may say enthusiasm, by his Lordship. It is hard to reconcile these reports with Mr. Boyd Carpenter's compilation of the examination results of 1919. Was it that many summers in Cairo without leave had got on Mr. Boyd Carpenter's nerves and made him unduly pessimistic, or was it merely a stunt on the part of the educational experts to capture the Financial Adviser at the next distribution of grants? Anyhow, it seems hardly fair to condemn a whole policy on account of one year's failure when all the students were certainly out of hand and many of the English teaching staff were absent at the war. Again, is it the personal element, then, more to blame rather than the policy? Mr. Dunlop was never popular, and undoubtedly failed to maintain discipline either amongst his own British subordinates or the students. But will Mr. Paterson be more successful? An educational team is always a difficult one to drive, and once having succeeded in unseating their coachman, the same manœuvre might again prove successful. Possibly "self-determination" may be granted to the students to elect their own Adviser.—I am, etc.,

COLES PASHA.

THE BAKU EPISODE.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—In your issue of 5th instant, in an article under the heading "Caucasia," appears the following:—"Baku was seized by British troops coming from the direction of the Caspian, but had to be evacuated under pressure, largely because of the attitude taken up by the local Armenians, who form a considerable element of the Baku population. These Armenians not only failed to help adequately in the defence of the city, but actually intrigued with the besiegers to hand it over."

An eastern proverb says, "A lunatic threw a stone into a well, forty sane men could not fetch it out." It is applied to a case in which someone, wanting in sufficient discrimination, publishes an evil report which the efforts of the more correctly informed meet with apparently little success in putting right. So it appears to be in this instance. As a result of the Baku episode in the late summer of 1918, someone erroneously or designedly (I do not know which, for it has never, to my knowledge, been clearly explained) at an ill-balanced moment sent out a message that the failure of the gallant but somewhat "romantic" (as the British Press styled it at the time) British Expedition to Baku was due to Armenian intrigue. The credulous amongst the general public immediately believed the report; it afforded them an explanation of the unpleasant position of affairs; it attached the blame to someone to the exoneration of another; that was sufficient for them, nothing else mattered! Then came explanations and disclaimers from better informed quarters, notwithstanding which the mischief caused by the first amazing report seems to echo and re-echo from time to time, as in the instance quoted above. Perhaps the following extract from the Parliamentary Debates of October 24, 1918, as officially reported, may, once for all, dispel from the minds of the public the wrong idea conveyed to them by the unjust accusation if you will be good enough to give publicity to it, in fairness to the Armenians of Baku:—

SURRENDER OF BAKU (ARMENIAN FORCE).

Major George Peel asked the Secretary of State for Foreign Affairs whether he is able to furnish any information as to the friendliness or otherwise of the action of the local Armenian force during the recent evacuation of Baku by the force of General Dunsterville?

Lord R. Cecil: It would appear that a certain amount of misapprehension exists in the public mind as to the action of the local Armenian force in entering into negotiations with the enemy relative to the surrender of Baku. His Majesty's Government have now been informed that these negotiations were undertaken by the Armenians on the advice of General Dunsterville when he saw that the fall of the town was imminent, and therefore no blame attaches to the action of the Armenians in this respect.

Mr. Aneurin Williams: How did the report which was sent out in this country come to be sent out on that occasion, blaming the Armenians in this matter?

Lord R. Cecil: I am afraid that I could not answer that without notice. I am very glad to have this opportunity of making the matter absolutely clear.

Mr. Bliss: Is it not a fact that the Armenians rendered gallant service in aid of the Allied cause during the Turkish campaign?

Lord R. Cecil: I should not care to say offhand, but I believe that to be true. Certainly the Allied cause owes a considerable debt to the action of the Armenians. I am, etc.,

February 7, 1920. S. M. GREGORY.

MUSICAL NOTES.

Mr. Mark Henry Raphael, whom I heard for the first time, gave a song recital at the Wigmore Hall on January 28. He commenced very well with some old Italian songs (Caldara and Bassani) and "Eri Tu," from Verdi's "Un Ballo in Maschera." In these he used a semi-operatic style, which suited, at any rate, his middle voice admirably. Then he sang some Schubert, and one simply longed for the German and a good accompanist! The English translations, inadequate on all (except war) occasions, were in this case especially unpleasing—you had on insignificant notes words like "shattering" and "thrilled"—and one feared that neither the singer nor his accompanist (Miss Nem Cooper) know the charm of *lieder* singing. In some modern French songs, however, both did much better; and Debussy's "Air d'Azaël" was, but for an occasional rasp on loud notes, sung with excellent feeling and taste. Duparc's "Elégie" was beautifully done. In this Mr. Raphael gained his highest success, and showed that, within limits which certainly are somewhat narrow, he has a very fine voice. Of his own compositions (words and music) with which he concluded I shall say nothing; it is better so.

On January 30 I went to a performance of the recently-formed Russian Musical Dramatic Art Society, "Lahda." Though the interest, which was intense, lay chiefly on the dramatic side, it may be well briefly to note the music. It was all by Moussorgsky, except for some incidental music to Evreinoff's "Merry Death" by M. Saminsky (some of whose compositions I remarked a few weeks ago), and a folk-picture, "Vanka-Tanka," by Dargomijsky. Moussorgsky has a perfect genius in the quaint simplicity of Russian folk-music, and he was well sung by Mlle. Nikitina, and excellently by M. Rosing. M. Saminsky's music seemed to be quite adequate without being very original; it consisted chiefly of dances, the merits of which depend partly upon one's conception of Evreinoff's piece. Dargomijsky's music to "Vanka-Tanka" made it a very pleasing thing, for he, who was the first Russian, I suppose, to think of introducing humour into music, knew completely the art of preserving simplicity without being obvious. There is no nation with more natural genius than the Russian: in it chaotic greatness and cultivated perfection flourish side by side. It is the artistic side, upon the existence of which no two opinions are possible, that this society "Lahda" is so satisfactorily displaying.

The main interest during the past week was in the concerts given by foreign musicians—I mean the Czecho-Slovak Folk Songs Trio and the Ukrainian National Choir. The Czecho-Slovak concert was at the Wigmore Hall on January 31. Remembering what this newly formed Republic gave us last year, I was in high hopes of hearing something similar this time. As a matter of fact, there was only one bright star in an evening of cimmerian darkness, and that was the very fine singing of M. Milo Luka, a baritone. He has a commanding voice, and on this occasion was so masterful that he compensated for all the deficiencies of the accompanist, It would be foolish ever to miss an opportunity of hearing him again. His wife, Mme. Milo Luka, who performed both alone and with her husband, I regret to say, does not sing. She has boundless enthusiasm, and seizes with gusto on the rhymths of her folk-songs, but why this should be so is not clear. Her voice is shrill and thin, and her joyful personality is sometimes a hindrance to her song. Of the accompanist not much should be said. He regarded himself as a soloist, whose aim was to play loudly and (generally) belatedly a lot of unnecessary notes. An accompanist should be just as much an artist as a singer, but even in Czecho-Slovakia they appear not to be aware of this fact. England is therefore not the only country which sins. The violin solos which Mlle. Zdena Kubesova contributed were some of the most painful things I have ever heard outside a practice-room. She had a dashing technique which simply carried all the notes off their feet; semi-quavers and quavers were as often as not upside down, and as for the poor crotchets and minims, they were half on one side, and sounded very drunk. The impression it made was as if you, having stayed some time at an inn, heard outside a fiddler playing who also had refreshed himself, and were told that it was Wieniawski's "Faust" Fantaisie. The only difference is, that in the one case you would probably say "Quite so," and at the Wigmore Hall I didn't say that.

But another disappointment was in store for me. The Ukrainian National Choir, which I heard at the Queen's Hall on February 6, has had a tremendous "boosting" in the Continental Press, and certain of our own journals have remarked on its marvellous splendour. Now, I admit that I suffered certain disadvantages: I know neither the Russian nor the Ukrainian language, and although Ukrainians have told me that their folk music is far superior to the Russians', my knowledge extended no farther than that. As a self-acknowledged ignoramus, then, I perforce judged the music *per se*. I did not discover this choir to have a "soul." What I found was a quite wonderful technique, and a very keen perception of effect. The *pianissimos*, the prolonged notes with closed mouth, the fiery yet always controlled violence, were nearly thrilling. The fine sonority of the bases I admired immensely: the basses of the Eastern peoples seem leagues ahead of other peoples. The altos were very good also; they did no less than was required of them. But the sopranos and tenors we should not have to search very far in this country to beat; and I wonder what sort of reception this choir would have, say, in Wales or the North of England. As I say, the conductor, M. Koshitz, obtained wonderful results from his machine, but when, as occasionally happened, a little grit got in it, he had an impossible job in trying to rid himself of it. The tone of this choir (always excepting the basses) is like its technique; it is precise but hard. The songs themselves were so modernized that the orchestration often became as important as the folk-song itself; and to attempt to get at the soul of the people through songs like these was stiff work. I confess that after about an hour I became very weary, yet began to suppose that independence was, in spite of certain and not distant things, probably a good thing after all.

The London Chamber Society commenced its spring season at the Wigmore Hall on February 3. The English String Quartet, with Mr. Murray Davey as vocalist, and with Mr. Haydn Draper (clarinet), Mr. A. E. Brain (horn), Mr. W. James (bassoon), and Mr. Claude Hobday (double bass), to help in Schubert's Octet, provided a most enjoyable evening. The Quartet, who have attained such efficiency that over nothing merely technical need you worry in the least, played Debussy's Quartet in G minor excellently. This musicianship (the word, unfortunately, but I suppose of necessity does exist) is very smooth and sound; and although they have not very fully the power of suggesting what is outside the music, they work a long way into the music. The second movement of the Debussy, for instance (*Assez vif et bien rythmé*), they played with unsurpassable charm, giving to its *pizzicato* at once the delicacy and strength that come from true grace. Schubert's Octet is not often played, and it was very good to hear it again. Except for a slight and, happily, not persistent, tendency of the horn to play flat, it was given a beautiful performance. Its flowing melodies are so plentiful that it is very easy, when playing it, to suffer from an *embarras de richesse*; but on this ocasion everything was brought out fully. The balance between the string and the wind instruments was everywhere superb. In the first, third, and sixth movements the music was played absolutely perfectly. Mr. Murray Davey sang three songs of his own composition with Quartet accompaniment. In a deep voice he has some notes of very fine quality, but his own songs did not give him much scope. He gave to the Quartet all the important things to say; and only in the last song—"Le Repas Prepare" (A. Samain)—did he show that his modesty was unnecessary. He sang this song very well, but the connection between the words and the music was very far from being clear. They both have movement, but there is little else in common.

NEAR EAST BOOKSHELF.

I.—"THE MODERN CRUSADERS." By Captain R. E. C. Adams, M.C. (London: George Routledge. 3s. 6d. net.)

II.—"RUSSIA IN RULE AND MISRULE." By Brigadier-General C. R. Ballard, C.B., C.M.G. (London: John Murray. 6s. net.)

I.—PALESTINE FROM BRIGADE H.Q.

Here is a record in diary form of the doings of the 231st Infantry Brigade (74th [Yeomanry] Division) from October, 1917 to May, 1918. It therefore incorporates some of the most important events in Palestine, and for the more or less inside account which it gives of those events it is interesting. The disjointed form of the book, however, makes it rather difficult to read; and in despite of the radiant good humour which informs the author's views on most things some of the descriptions are too trivial to warrant publication. Generally speaking, the book does fairly represent the average British officer's attitude towards the war in Egypt and Palestine; but it is doubtful whether that fact will be a sufficient inducement to those who did not take part in the campaign here written of to read it. The practice of publishing diaries has become widespread, and its desirability decreases in proportion to its universality. Yet there is, notwithstanding the misleading title of the book, a local and temporary value attaching to it; and one of its best things is the inclusion of some photographs, which are well-produced and informing, and upon which we congratulate the author and his publishers.

II.—RUSSIA: PAST AND PRESENT.

It would not be an unwise statement to make that almost every settlement now being made in the Near and Middle East will be revised when Russia attains stability. Many of the decisions that have been made and are to be made by the Paris Conference derive from the collapse of Russia, and probably their strength will endure no longer than the impotence of that once mighty Empire. Of necessity, then, every man who looks more than a few years ahead must study Russia, her achievements and her possibilities. It is with the object of providing a basis for such study that Brigadier-General Ballard, lately Military Attaché in Roumania, has written this small volume.

It has been said of France, and it might be said of Russia, that her history is the story of the development of two qualities—the religious and the military. On the religious side of Russia General Ballard does not touch, but as a soldier he lays much stress on the military history of Russia; and for the rest he is inclined to regard her history as the history of her governments. In about a hundred pages he deals with the events of a thousand years, and it is literally impossible for him to do more than prefer a few and some very bare facts. Whether this was worth doing is doubtful, but it has one merit: his sources of information are entirely Russian (chiefly Ivanoff). As he has no space, however, to give the Russian interpretation of facts, his naked recital is not so valuable as it otherwise would have been. In the first half of the book (why it should have been called "Russia in Rule" is not obvious; might such a title be given to every country that has suffered revolutions?) there is one thing lacking, the inclusion of which would have proved very useful; we mean the conquest, annexation, incorporation, or whatever one likes to call it, of the outlying provinces of Russia—Bessarabia, the Ukraine, the Caucasian provinces, and so on. The author knows as well as anyone that the futures of these places are by no means determined, and in his history of the growth of the Russian Empire we think he might have shown the artificial or natural character of their adoption by Russia.

The second and greater part of the book is devoted to "Russia in Misrule," or rather to the antecedents and causes of that misrule. Here, of course, the author is on very controversial ground, but, although his horizon is by no means unlimited, it must be said he deals with his subject very fairly. Indeed, except for mild sarcasm at the efforts of revolutionaries and a thorough dislike of Kerensky's idealistic *fainéance*, he seldom obtrudes his personal views into his recital of the facts. In his account of Russian affairs from the beginning of the war to the beginning of 1917 he has endeavoured to collate different points of view, and the result is instructive. The year of 1917 he divides into three periods: (1) March to June, the period in which all good Russians attempted to make the best of the revolution; (2) July to the end of October, the months which the author calls the Kerensky period; and (3) the period of the Bolshevists. With the establishment of the "Red Terror" he concludes his book. His final judgment on Lenin's régime is: "The Russian nation has no longer any delusions about its present Government; perhaps a small percentage of the people are still contented with the present rule." From this quotation it will appear that the author does permit himself to express views as well as to announce news.

As we have said, this book is merely an introduction to the subject, and its merits must be judged more by what it will lead to than by what it is. Whether it will serve its purpose is not certain; for the author, though convinced that we ought to study Russia, does not really show why we should do so. His book, therefore, is a disappointment; his aims are scarcely attained, and the possibilities (his access to Russian sources, and his at least partial knowledge of Russia) of his work are not fulfilled. It is naturally, but need not of necessity have been, a disjointed effort, and the knowledge that he was writing for English readers ignorant of the subject has caused the author to devote undue space to elementary facts, thus making his book rather like a lumpy pudding. For one thing, however, all must be grateful to him, *viz.*, his Appendix II., which is the translation of an allegory taken from a Russian magazine. It depicts the relations of the Russian working man with his revolution, and shows very cleverly (how truly even after reading this book we do not know) how his feelings turned successively from worship to knowledge, and from knowledge to disgust.

BOOK NOTES.

"A History of the Nationalist Movement in India," which Sir Verney Lovett has written, is being published by Mr. Murray.

Messrs. A. and C. Black will shortly publish "The Salonika Front." By Captain A. J. Mann, of the Salonika Balloon Company.

Our readers will be interested to learn that Mr. Francis H. Skrine, F.R.Hist.S., a name well known to them, has had reprinted the address which he delivered at the Millbank Boys' School, Westminster, on December 8, 1919. The title of the pamphlet is "Democratise Education."

General Townshend's book, "My Campaign in Mesopotamia," is being published this month by Messrs. Thornton Butterworth.

The Bodley Head announce for immediate publication: "With the Serbs in Macedonia," by Douglas Walshe.

BOOKS RECEIVED

"A Kut Prisoner." By H. C. W. Bishop. With illustrations. (London: John Lane, The Bodley Head. 6s. 6d. net.)

"Indian Nationality." By R. N. Gilchrist, M.A. With an Introduction by Ramsay Muir. (London: Longmans, Green and Co. 7s. 6d. net.)

THE SEASON IN EGYPT.

(From Our Social Correspondent.)

Cairo, January 26.

A Cold Snap.

Since my last notes we have had an exceedingly cold snap, such as had not been our experience for many years. To Anglo-Egyptian residents the change is welcome, as we require something of the sort to brace us up for the long period of hot weather through which we have to go in the years we do not take leave; but for the visitor element, who have come out from home to escape the hardships of a northern winter, it has come as an unpleasant surprise, though even a cold snap in Egypt is deprived of the terrors of slush and fog, which would have been their lot had they remained in the old country.

The change in temperature has not interfered with the season's gaieties, and has not prevented anyone from attending the races and other out-of-door fixtures. Thus, during the last week, in addition to the usual meetings at Ghezireh and Heliopolis, we have had the first of a series of trotting matches—quite a novelty in Egypt—and an interesting polo tournament at Ghezireh for the Sultan's Cup, which ended in a victory for the 11th Hussars' team. All these events attracted large crowds.

A Successful "Fancy."

The event of the week has been the fancy dress ball given at Shepheard's Hotel on the 20th instant, which was an unqualified success. This was undoubtedly due to the fact that not only was it given under the auspices of Lord and Lady Allenby in aid of a most worthy cause—that of the English School, towards which the British Government has recently given a substantial grant—but also that it was the first event of its kind since the outbreak of war. Year in, year out, Cairo has revelled in its masked and fancy dress balls—it has, indeed, been famous for them—and Tuesday eve's event did not in any shape or form fall short of its pre-war forerunners. From the point of view of attendance and of costumes it left nothing to be desired, and wherever one goes one hears the same remark: "A top-hole affair."

Before the dance, the dining and grill rooms were the scenes of many merry parties, and long before the hour fixed for the dance the ante-rooms and hall were filled with a large and hilarious throng of mummers, who appeared to have ransacked the bazaars in their efforts to disguise themselves, and had displayed considerable ingenuity and artistic sense in the choice and confection of their "glad garments."

There were pierrots and pierrettes, Arab sheikhs, Jerusalem Jews, Chinamen, pirates, the inevitable cook, courtiers, and their dames of every period as far back as the Elizabethan, Tweedledum and Tweedledee, wild animals from Central Africa, Johnny Walker still as young as ever—and most energetic in his efforts to direct a most amusing coster troupe, who between the dances gave a regular Hampstead Heath display—several *suffragis*, some of whom quite took in the guests, including a much respected General, whose name wild animals would not drag from me but whose munificent tip went to swell the school funds; and a host of other characters, who contributed greatly to the attraction of the kaleidoscopic scene which met one's eyes in the ballroom.

Prize Costumes.

Two prizes were offered by the committee for the best dressed ladies and the best dressed men, whilst Lieutenant-General Sir Walter Congreve, the Commander-in-Chief, and Lady Congreve generously offered two other prizes for the best male and female costumes, not costing more than P.T.100 (£1). There was great competition for all these prizes, and the committee, presided over by Lady Congreve, had indeed an exceedingly difficult task in making its collection from amongst so many qualified candidates. Eventually the Congreve prizes were awarded to a French lady, who came as "La vie Parisienne," and to Colonel Holmes, who looked every inch the ancient Briton that he claimed to represent. Of the other prizes, those to the ladies went to Mrs. Castle-Smith, who looked sweet in early Victorian costume, which admirably suited her, and Mrs. Alcock, who made a striking Carmen in every detail in the traditional costume and pose correct; whilst the men's prizes went to Captain Foulger, a handsome Mandarin, and Colonel Baggaley, a ferocious but excellently got-up pirate. At the end of the distribution the committee announced that they had decided to award an additional prize to Mr. Sydney Merton, whose costume as a "hot-water bottle" was considered to be deserving of recognition.

Dancing continued to the strains of the excellent Hussars' band until an early hour, when the merrymakers reluctantly took their departure, giving one another rendezvous at the Continental, where another fancy dress ball will be given on Shrove Tuesday. The committee are deserving of the warmest praise for the excellent manner in which everything was arranged, and they are to be congratulated on the success which crowned their efforts, which should give the English School a substantial leg-up.

The English School.

Mention of the English School reminds me that a delightful party was recently given there to a large number of children of the British community. They thoroughly enjoyed the side-shows which had been provided for them and the usual games which had been arranged, and their crowning delight was a superb Christmas tree. Rumour has it that the little ones of the community are to have a further treat in the near future in the shape of a children's party at the Residency.

Visitors to Upper Egypt.

The season seems to be going strong in Upper Egypt, whither many residents and visitors have wended their way since the turn of the year. Both the Cataract Hotel at Assuan and the Winter Palace Hotel at Luxor are doing good business, and amongst those staying at the last-named are Sir Valentine Chirol, Lady Rodd and her daughter, Mrs. Spender, and the Hon. John Collier and Mrs. Collier.

Amongst the latest arrivals in Cairo are Mr. and Mrs. G. K. Chesterton, who are making a short stay at the National Hotel. "G. K." has during the past week delivered lectures to the Garrison on "The Difference Between the Wandering Jew and Christian" and "Sight-seeing by the Blind," and he has now left for Palestine, where he will deliver a series of lectures to the troops in connection with the War Office educational scheme.

The Wedding of the Season.

A very pretty and fashionable wedding took place at the Ismailia Temple on Sunday afternoon, when Major Eric Waley, O.B.E., son of Mr. Alfred Waley, of the London Stock Exchange, was married to Miss Aida Ades, daughter of Monsieur Nessim Ades, the well-known Cairo banker. The interior of the synagogue had been most beautifully decorated with red and white flowers, the garlands having the initials of the happy couple artistically woven into them. Lieut.-Colonel W. F. Sterling was best man, and with him was Major Courtney; the bridesmaids were Miss Ades, sister of the bride, and Miss Balley, of Alexandria, whilst three little pages carried the bride's train. The ceremony was performed by the Rev. Levine, C.F., who delivered a simple but touching address to the happy couple. Under the canopy erected in front of the Ark, in addition to the best man and the bridesmaids, were Mr. Alfred Waley, who had come out from England expressly for the ceremony, and Monsieur and Madame Nessim Ades. The congregation included Mr. Herbert Samuel, Sir Gilbert and Lady Clayton, Brig.-General and Mrs. Gregory, Mme. Rolo, Major and Mrs. Wethered, M. and Mme. Delanker, Mme. Naus, Mr. and Mrs. Sydney Merton, Major Tweedie, Mr. Grafftey-Smith, Mr. Vereker, Mr. F. N. Walton, Mr. Devonshire, Maitre Merzbach, Mme. De Rizo, Mme. Spetsaropoulo, M. and Mme. Tueni, Mr. Nagib Sarrouf, Capt. Morris, Mons. Youssef Aslan Cattaoui Pasha, Mr. Adolph Cattaoui, Mr. Joseph Mosseri. The ceremony included some beautiful singing by singers of the Sultania Opera House, and during the signing of the register—Mr. Samuel and Sir Gilbert Clayton were among the witnesses—the orchestra played Mendelssohn's "Wedding March." M. and Mme. Ades subsequently held a reception at their residence at Kasr El Doubara, after which the happy couple left for Mena House, *en route* for Italy and France, where the honeymoon will be spent.

PERSONAL AND GENERAL.

CALENDAR OF THE WEEK,

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian (New Style).	Julian (Old Style).	—	Moslem.	Jewish.
1920. February.	1920. January.		1338. Jumada I.	5680. Shebat.
12	30	Thursday	22	23
13	31	Friday	23	24
14	1 February	Saturday.....	24	25
15	2	Sunday	25	26
16	3	Monday	26	27
17	4	Tuesday	27	28
18	5	Wednesday	28	29

General Sir William Birdwood has accepted an honorary generalship of the Australian Military Forces.

Lieutenant-General Sir Aylmer Haldane left London on February 9 for Cannes, *en route* for Mesopotamia.

Major-General Sir David and Lady Campbell are sailing for India this week. Their address will be Mhow, Central India.

Raja Sir Hari Singh, Commander-in-Chief of the Kashmir Army, left London on February 3, on a visit to the battle-fields of France.

A telegram from Jerusalem to the Zionist organisation, dated February 7, states that Mr. Herbert Samuel has arrived there.

Mr. Rudyard Kipling will preside at the festival dinner of the Royal Society of St. George on St. George's (England's) Day, April 23.

Sir Robert Williams, M.P., of Bridehead, Dorset, and his daughters, have returned from a three months' tour in Palestine, Egypt, and the Sudan.

As a result of the two concerts which Mr. Eric Rice, assisted by Miss Janet Dunlop Smith, gave at the Æolian Hall, and at 26, Seymour Street, the sum of £280 is being given to the Children's Hospital, City.

Colonel R. Rosetti, the Roumanian Military Attaché, who was prevented by illness from being present at any of the entertainments given in honour of the Roumanian Prime Minister, is now convalescent, but will not be able to resume his duties at the Mission for a fortnight.

In the list of those who were present at the banquet given by His Majesty's Government to Dr. Vaida-Voevod, the Roumanian Prime Minister, on January 29, the name of Sir Frederick Black, K.C.B., was inadvertently omitted.

His Excellency Monsieur Michailo Gavrilovitch was received in audience by the King on February 9 and presented his Letter of Credence as Envoy Extraordinary and Minister Plenipotentiary from the Kingdom of Serbs, Croats, and Slovenes.

Under the auspices of the Central Asian Society, at the Royal Astronomical Society's Lecture Room, Burlington House, Capt. Hon. W. Ormsby-Gore, F.R.G.S., M.P., will read a paper on "The Organization of British Responsibilities in the Middle East," on February 18, at 4.30 p.m. The Rt. Hon. Lord Carnock, P.C., G.C.B., will take the chair.

The Coronation of the King of Greater Roumania, says *Reuter*, will take place this spring at Alba Julia, in Transylvania, the historic centre of the old Roman colony and of what is now Greater Roumania, including Bessarabia and Bukovina. King Ferdinand's Coronation, which could not take place for a year after the death of King Carol, was postponed owing to the war.

The marriage was celebrated on January 27, at St. Paul's Cathedral Church, Valetta, Malta, by the Rev. Canon Fargus, assisted by the Rev. F. J. Walker, Senior Chaplain to the Forces, and the Rev. A. C. Moreton, Naval Chaplain, between Major William Hallaley Brooke, M.C., West Yorkshire Regiment, only son of William Brooke, Esq., of Leafield, Moor Allerton, Yorks, and Marjorie Constance, youngest daughter of Field-Marshal Lord Plumer, G.C.B., G.C.M.G., G.C.V.O., Governor of Malta, and of the Lady Plumer, O.B.E.

APPOINTMENTS, ETC.

Sir Charles Marling and Mr. Ernest Rennie, both of whom are known to our readers for their work in Persia, have been appointed as Presidents of the Administrative Commissions instituted under the Peace Treaty with Germany in Schleswig and East Prussia (Allenstein).

OBITUARY.

The death occurred on February 3, at Mysore, S. India, of Arnold, third son of the late Robert B. Baker, solicitor, London.

The Cairo correspondent of *The Times* states that Mr. J. P. Foster, a leading British barrister, died on January 31, at Luxor.

The death occurred on February 4 in London of Henry Neville Harris, late Deputy Inspector-General Police, Bengal, aged 73.

Colonel M. E. Sowerby, Under-Secretary of Communications in the Sudan, died on January 28. He served in Gallipoli and Salonika, and, as Deputy-Director of Railway Transport, he was to a great extent responsible for the administration of the Palestine Railway during the main advance.

The death occurred at Oxford on February 8 of Sir Thomas Raleigh, K.C.S.I., Fellow of All Souls and Deputy Steward of the University. In 1899 Lord Curzon sent him to India as Legal Member of the Viceregal Council. He was made Vice-Chancellor of the Calcutta University in 1900; and on the legislation and education of India he set an imperishable mark.

Kaid Sir Harry Maclean, late chief instructor to the Army of the Sultan of Morocco, died on February 4. Sir Harry Maclean was born in 1848. He entered the 69th (Warwickshire) Regiment, and while his regiment was stationed at Gibraltar he crossed the straits to Tangier and paid a visit to Moulai el Hassan, who was then Sultan of Morocco. His ability and personal qualities made so great an impression on the Sultan that he invited him to take up his permanent residence in Morocco, and to become Military Instructor to the Moroccan Army. The Sultan installed him in a magnificent palace in Fez, and gave him a salary of £7,000 a year. When Abdul-Aziz succeeded Moulai el Hasan as Sultan he treated Sir Harry Maclean as his sole adviser in all military affairs. The name of Sir Harry Maclean came prominently before the public in 1907, when he was treacherously kidnapped and detained for several months by the brigand Raisuli. He was buried at Tangier on February 6 with full military honours.

Our Cairo Correspondent writes (January 26): Anglo-Egypt has suffered a great loss through the death of Mr. E. A. Harrison, which took place recently in England. Mr. Harrison, as general manager of the firm of Thos. Cook and Son (Egypt), Limited, has been connected with this country since 1894, and he has throughout the past twenty-five years been a prominent figure in the British community. Mr. Harrison was well known by reason not only of his activities as head in Egypt of the great tourist firm, but also of the leading part he has played in all charitable enterprises and in the local Masonic world. He was a man of keen business instinct and sound judgment, and his advice was always eagerly sought and followed by the authorities. It will be difficult to fill his place in the British community, and at a time like the present we can ill afford to lose a man with his ripe experience and far-seeing qualities.

The death occurred on February 6 at Oxford of Mr. Vincent Arthur Smith, C.I.E., D.Litt., I.C.S. Vincent Arthur Smith was born in 1848. He was selected for the Indian Civil Service in 1869, and passed out first in 1871. He was appointed to the North-West Provinces and Oudh (now known as the United Provinces). He was appointed a District Judge in 1895, was Chief Secretary to the Government, and then Commissioner in 1898, and retired in 1900. As a Sanskrit scholar, he gave his attention early in his service to the antiquities which abound in those Provinces,

Digitized by Google

and thus wrote on the coinage of the early Gupta dynasty and the antiquities of Mathura. Historical studies specially interested him, and he described "Græco-Roman influence on the civilisation of ancient India," the history and conquests of Samudra Gupta, and the life and edicts of Asoka, the great Buddhist emperor. Mr. Smith wrote the "Oxford Student's History of India," a work in small compass which has gone through seven editions, a catalogue of the coins in the Indian Museum at Calcutta in 1906, and an "Oxford History of England for Indian Students" in 1912. He did for Indian art what he had done in the political sphere, by his "History of Fine Art in India and Ceylon," published in 1911.

NEWS IN BRIEF.

A message from Constantinople states that the Turkish Minister for the Interior and Minister of Justice have resigned.

Viscount Allenby has issued a proclamation removing the prohibition on the import of gold into Egypt.

It is reported that from April to December, 1919, 4,807 motor-cars were imported into India, of which 4,560 were American and 200 British.

The Serbian Red Cross Society has given 10,000 francs (in Swiss money) to the League of Red Cross Societies for relief in Eastern Europe.

It is announced in Rome that Father Basilius Lucasiu, the Transylvanian Minister in the Roumanian Cabinet, is negotiating a concordat with the Holy See.

Graves of Yugoslav and Allied soldiers buried in Serbian territory are to be under the care of a special department of the Yugoslav Ministry of Worship.

All persons travelling to Egypt from the United Kingdom must have their passports vised at the Passport Office, 1, Lake Buildings, St. James's Park, S.W.

Ramadhan Shalash is still attempting to create disturbances in the Deir-ez-Zor district of Mesopotamia. A patrol has been sent by the Emir Faisal to effect his surrender.

French native troops lost twenty-six killed and the Moorish tribesmen sixty killed, and many wounded, in a fight near Mekinez in which the tribesmen were routed.

In the Prize Court recently a sum of £31,000 was awarded to the officers and crew of Submarine E 14 for sinking the Turkish transport Gul Jemal in the Sea of Marmora in May, 1915.

The Indian Government notifies the creation of a Forest Engineering service, the scale of pay to be the same as that of the Imperial Forest service. Recruits for the new service are to be trained in Canada and America.

The evacuation of Beyrout by the British troops was complete at noon on January 19. The whole of the area of French occupation, i.e., that to the north of an east and west line half-way between Acre and Tyre, is now clear of British troops.

Turkish newspapers in Constantinople state that the Government appears to have decided upon steps to prevent those Deputies from taking their seats in the Chamber who are in any way responsible for massacres, deportations, and profiteering.

A telegram from Algiers to Paris states that the Algerian aerial squadron, which is carrying out a flight over the Sahara, left Algiers at 2.5 on February 3, and arrived at Biskra at 5.15. General Nivelle was a passenger on one of the machines.

A telegram received in Paris from Belgrade announces that the Ministers of France and Great Britain have presented to M. Davidovitch, the Premier, a copy of the Pact of London asked for by the Yugoslav Government in its reply to the last Note from the Allies.

Owing to cases of bubonic pest having occurred east of the town of Hotin, access to Bukovina and Bessarabia across the frontiers of these provinces has been completely stopped. The passage from Roumania to Poland is allowed, but travellers are not allowed to return.

Sir Roper Parkington, Consul-General for Montenegro, has received the following telegram from the President of the Council of the Montenegrin Government:—"During a recent encounter in the neighbourhood of Podgoritza between the Serbian troops and three companies of Montenegrin infantry, the former were completely annihilated, leaving one hundred and fifty dead and over three hundred prisoners, with three large guns and six machine guns, in the victors' hands. Following a further advance of the Montenegrins, Podgoritza was evacuated by the Serbians, and many leading Montenegrin citizens, imprisoned for more than fourteen months, were rescued. Serbian reinforcements have at present stayed further progress, and as a reprisal Serbian troops have burnt several villages, more than 1,500 women and children being compelled to seek refuge in Albania."

THE HEBREW UNIVERSITY AT JERUSALEM.

Based on a report by Dr. Weizmann on his return from Palestine, a programme has been drawn up by the Zionist Organisation for immediate work in connection with the Hebrew University, the foundation stone of which has been laid on Mount Scopus, Jerusalem. It is proposed to establish in the house of Lady (Gray) Hill on the site: A Physical Research Institute; a Chemical Research Institute; a Micro-Biological Research Institute, in a temporary building to be erected; two lecture rooms; a number of small rooms for lectures, administrations, etc.; and two reading and reference library rooms and a library. A start is to be made with a Hebrew Institute and a general course in arts. The plans for a noble range of buildings with a magnificent dome are now in London, and will shortly be made public.

WHERE TO STAY.

For the convenience of visitors from overseas "THE NEAR EAST" offers its services in booking rooms at hotels in the United Kingdom, on receipt of instructions preferably a week before the date of arrival. When instructions are telegraphed the message can be abbreviated as follows:—

"EASTAPROX, LONDON. TWENTIETH MATLOCK TWO

(The visitor's name and place of residence abroad to be added)."

which would indicate that two rooms were required at Matlock on the 20th of the month.

BRISTOL
GRAND SPA HOTEL.

EXETER
ROYAL CLARENCE HOTEL
(facing Cathedral).

THURSDAY, FEBRUARY 12, 1920.

EGYPT AND THE MILNER MISSION.

That Lord Milner's Mission should have progressed so far with its task that it is able to contemplate an early return to England indicates that the curtain is about to be rung down on the first act of a drama which will always remain an outstanding feature in the piquant history of Egypt. The announcement of the British Government's decision to send a Mission to Egypt to inquire into the causes of unrest in that country, and to report on the form of constitution best suited to it, was the signal for the outbreak of a series of riots and general disorder throughout the country. Unfortunately, owing to the season of the year, it was impossible for the Mission to start immediately after its composition had been fixed, and the delay seemed to lend colour to the belief that the Home Government hesitated to expose the members to the risk of personal danger. The mere suggestion served to encourage the opposition in Egypt; but the pace set by the extremists was too strong to last, even if the authorities had not felt compelled to adopt more drastic measures against the agitation. Order reigned when the Mission started, and no untoward incident marked its arrival in Egypt. No doubt strict precautions were taken for the safety of Lord Milner and his colleagues on their journey to Cairo; but the excesses of the earlier programme arranged by the extremists had been abandoned in favour of a boycott. No Nationalist, no patriotic Egyptian, was to have anything to do with the Mission; and to strengthen their resolve demonstrations against it became the order of the day. The Nationalists had overlooked only one thing in their elaborate organisations; it was the personality of the head of the Mission. They were prepared apparently for everything except the imperturbable calm and consummate tact with which Lord Milner met their noisy clamour. The Egyptian Nationalists were to prove the truth of the saying that you can fool some people all the time and all the people for some time; but you cannot fool all the people all the time. The student demonstrations continued, and prominent Egyptians publicly exhorted one another to have nothing to do with Lord Milner. Privately they arranged for early interviews with him, anxious lest their point of view should be overlooked or be prejudiced by the statements of others of their own people. Instead of formal meetings at which each speaker would be more concerned with the effect of his remarks on the other members of the deputation than with the presentation of facts to the Mission, individual Egyptians could unburden themselves of their real views to Lord Milner and his colleagues. It is not a matter for surprise, therefore, that the latter have been able within a comparatively short time to collect the evidence that they required and can prepare to return home in order to correlate their opinions and frame their report.

In the course that events have taken in Egypt Zaghlul Pasha, the head of the Nationalist movement, has remained practically outside the picture. A man, undoubtedly, of parts, he has missed his opportunity, either because he was not quite equal to the rôle that he had to play or because he has fallen a victim to the attractions of Paris. He failed to realise that his success was at its zenith when the announcement was made that a mission would be sent to Egypt. From that point he had the ball at his feet, if he had chosen to play the game. He showed, however, that there was nothing constructive in his agitation; he may have forgotten nothing, but he had certainly not learnt anything. His cry for "complete independence" had rallied the extremists to his standard, and appeals to mob passion could be counted upon to produce disorders. But a policy which had nothing else to fall back upon could never have taken Egypt far. He failed to realise in what a strong position he would have been if, instead of boycotting the Milner Mission, he had hurried back to Egypt and marshalled temperately and effectively the counts of his indictment, and supported his case with convincing evidence. He misread the purpose of the British Government, he misjudged the character of the Mission, and, worst lapse of all, he displayed his ignorance of his own countrymen. His henchmen in Egypt have done his bidding, they have received and circulated his fulminations against the British; but they had occasion, in spite of the boycott, to compare Egypt's best product in the person of Zaghlul Pasha with just one of the products that Britain could spare to examine the Egyptian question, and they were compelled to award the palm to Lord Milner. Zaghlul Pasha has ignored the recent history of South Africa, otherwise he could not deliberately have chosen the rôle of an Egyptian Hertzog, when he had open to him the career of a Botha or Smuts. Badly as he has played his cards, even now it may not be too late to retrieve his mistake. Certain it is that, if he does not make the attempt, Egypt will soon learn how well it can get on without him, and will institute a comparison between the achievements of the man for whom such large sums were contributed to enable him to carry on his propaganda, and the achievements of those who gave evidence before Lord Milner and laid the foundations for a constitution that will satisfy every legitimate aspiration of the Egyptian.

For, whatever may be the opinion of Zaghlul Pasha, there can be no doubt that the British Government is in earnest in its resolve to meet the wishes of the Egyptians as far as is compatible with the country's prosperity and with the interests and integrity of the British Empire. Our experience in Egypt has been a shock to the British conscience. Of the agitation and of the outrages, on which others might set store, we take no reckoning. The heartburning has been caused by the discovery how Britons have failed, under the stress of a most exacting war, in the qualities for which the nation's prestige has been gained. It is more disconcerting to hear that a subordinate official's wife has used her husband's position to secure provisions from natives at half their market value, and that bribery and corruption have flourished, than to learn of mistakes in high politics. Each offence has its roots in the same set of conditions, the temporary shortage of good material caused by the demands of the war. But the net result is there in the injury to British prestige, and the surest way to rehabilitate it is to leave as much of the future administration of the country in the hands of the Egyptians as is compatible with the safety and well-being of the British Empire as a whole. That the constitution that will be recommended by the Milner Mission will conform with this principle may be taken for granted. To make it a success Egypt will need to make use of all the best material that she has, and if Zaghlul Pasha claims to be in this category, he cannot do better than abandon his present attitude and endeavour to reinstate himself in the eyes of those of his countrymen who are becoming disillusioned in regard to him. Great Britain has no other object in view than to help Egypt make the best of her opportunities. She will bear no ill-will to Zaghlul, although his foolish policy hitherto must weaken for some time any confidence in his political capacity. It is probable that Lord Milner and his colleagues in the framing of their report in England will still need to consult representative Egyptian opinion. If Zaghlul Pasha hastens back to Egypt, he may yet be able to make a useful contribution to the common stock of knowledge by the ventilation of opinions which have been obscured or distorted by extremist excesses. An invitation to representative Egyptians to visit England for a final consultation with the Mission will enable the Government to make amends for an omission which, in the face of invitations issued broadcast during and since the war, has not unjustly been resented in Egypt.

CAUCASIA.

II.*

A strong claim may be made upon our sympathies by all the Caucasians, and especially by the Georgians and Lesghians, who have carried on a struggle for independence, with varying success, for nearly 2,000 years, and indeed we may well sympathise not only with them, but also with the Cossacks of the Kuban and Terek in their efforts to escape Bolshevist rule.

But in the case of the Caucasians proper many people do not realise or remember that they are in no sense Russian, either in race, language, or sympathies. Nevertheless, many people in England would object to a policy of support for these nationalities struggling for freedom, on the ground that we must not interfere with Russians in the settlement of their domestic affairs, which concern them alone. It is to be hoped that a knowledge of the real facts may spread, so that if intervention or support by this country becomes necessary there may be no such ill-grounded opposition.

A real problem is, to what extent the purely Caucasian races and the Turco-Tartars and Armenians are likely to prove capable of forming stable governments. The Georgians have maintained an independence or quasi-independence for nearly 2,000 years, in early days relying for support sometimes on the Byzantines, and sometimes on the Persians, in later days relying on the protection of Russia, their country being overrun at intervals by Arabs, Mongols, Turks, and Persians. Finally they voluntarily joined Russia for greater security in 1803. The kingdom of Georgia, whose boundaries varied constantly, had latterly become divided into principalities, Khacheti and Karthli, in the eastern part, constituting Georgia proper, and Imeretia, Mingrelia, and Guria westwards to the Black Sea coast, being separate states. The latter countries were not joined to Russia till some time after Georgia had consented to that union, which the Georgians have never ceased to regret, for the Russian view of the union was that it surrendered the Georgians' right to be considered as a separate people, whilst the Georgians had looked upon the union as merely an effective form of protectorate. The Georgians are an extremely clever and ambitious people. Placed at the doorway between East and West, they look towards the West, and consider themselves as essentially European and not as Asiatic. Except in Guria and some other western districts they are all Christians, belonging to the Orthodox Church. Many Georgians are well educated and cultured, and under the rule of the Emperors of Russia many entered the Government service, and especially in the army, where they often served with distinction as officers. Under the Russian Republic Georgians have also figured prominently—Tseretelli and Chkheidze, to mention two of them, are Georgians. The Georgians have shown themselves to possess some military capacity, but their political capacity remains an unknown quantity so far. Commercially they are inferior in competition with the Armenians, who form a large element of the population of Georgia. The most that can be said at present seems to be that there are great possibilities of the success of a republic of which the population largely consists of a people as attractive, versatile, and clever as the Georgians. Time alone can show whether the necessary political stability and power of national cohesion now exist.

The Georgians number probably about 1,400,000, though a larger number is sometimes claimed. In the South, towards Armenia, the Georgian and Armenian populations are much intermingled, while towards the East in the Steppes of the Kara, some Georgians are dispersed among the large Turco-Tartar element which predominates there. It seems probable that the Georgian Republic will extend mainly over the old Russian Governments of Tiflis and Kutaïs. The total population of Caucasia, south of the Caucasus ranges, including Georgians, Armenians, and Turco-Tartars (of whom there are over 1,750,000), is about five and a-half millions.

The Republic of Azerbaijan is essentially Turco-Tartar, though a considerable Armenian element is to be found, especially at Baku, the capital.

Azerbaijan, which is the name not only of the new Republic, but also of the adjoining province of Persia, is inhabited mainly—as already pointed out—by Turco-Tartars; but the population includes many Persians, and of the total Mohammedan population of Caucasia some 2,000,000 are of Sunni and nearly 900,000 of the Shia variety, and the latter are largely Persians. At present there does not appear to have been any effective movement among the Turco-Tartars of Persian Azerbaijan to join their brethren in the Azerbaijan Republic across the Russian border, but such a movement may wel. develop. Both districts were at one time under Persian rule. The boundaries claimed by the Republic of Azerbaijan are at present too vague, and too little known, to enable more to be said than that they probably include the late Russian Government of Baku, with Baku as its capital, and part of the late Russian Government of Elizavetpol, together with an uncertain stretch of Caspian coast northward of Baku. The importance of this new Republic lies first in the possibility that it may form a link in a Pan-Islamic chain uniting the Ottoman Turks with the Mohammedans of Central Asia, Afghanistan, and Persia; secondly, in the possibility that it may cause trouble in Persian Azerbaijan, by inducing the Tartars there to attempt to join it; and, finally, in the fact that it includes some of the finest oil wells in Europe. Very considerable progress in culture has taken place of late years among the Tartar population of Russia, including those in Azerbaijan. But, again, as in the case of Georgia, one can only conjecture whether the elements of a stable government are to be found.

There remain among the new States forming out of Southern Caucasia the Armenian Republic. This, however, will largely consist of territories which formed part of the Ottoman Empire, but many difficulties will be found in devising frontiers between it, Georgia and Azerbaijan.

On the northern side of the Caucasus matters are scarcely so advanced as on the southern. Daghestan and some of the adjoining districts to the west appear to have formed a North Caucasian Republic. The Lesghians, who inhabit Daghestan, are, like all the Caucasian tribes on the northern slope, magnificent fighters. They were not subdued by Russia till 1859. The more central part of the northern side of the range is inhabited by the Tchetchentzes and Khabardians, and both these gave excellent troops to Russia during the late war. Still further westward are to be found the Fugushes, who are a relatively small nation, but they have shown a strong desire to assert themselves recently. The western end of the Caucasus on the northern side was formerly the territory of the Circassian nation, but most of them have been exterminated by the Russians during the long wars of the nineteenth century in which Russia was engaged in subduing them. The remainder of the Circassian nation is to be found scattered over Turkey. The actual districts along the Black Sea at the western end of the Caucasus are thinly populated—the Circassians and Abkhassians, who formed the population, having perished in the fighting (which only ended about 1864) or emigrated—it has been found impossible to colonise the empty lands with Russian settlers. Numerous attempts were made, but the Russian peasants who came were found incapable of living in the feverish climate of that country.

There seems to be no reason why these mountain tribes on the northern side of the Caucasus, who are for the most part connected in race and language (though there are smaller nations such as the Ossetes and Khevzurs which are quite distinct from them) should not form a republic or federation. Some such group is essential if buffer States are to be formed which can effectively bar the aggression of the Russian Soviet Government. The obvious and rational solution of Caucasian problems would seem to be the formation of a Federal Republic on the lines of Switzerland—the component States of which might give all the various nations and tribes a full opportunity of local self-government, and of preserving their national and racial identity. Such a federation might well include the

*The first portion of this article appeared in THE NEAR EAST of February 5.

Digitized by Google

Kuban and Terek Cossacks. The States or cantons would be united for defence, and united in a Customs union, and would co-operate in maintaining and controlling the railways uniting the Caspian and the Black Sea north and south of the Caucasus, as well as the horses, wool and oil of such a federation would be very great. Even Armenia might with advantage be included. Unless some such solution is adopted, there seems little hope that the States forming themselves out of Russian Caucasia can long survive. The prospect, apart from federation, is one of continuous strife among the Caucasians themselves during such time as they may resist being once more subjected by the Russians. But there is not much chance that the various half-fledged States, composed of so many races, divided by religious differences, will succeed in federating themselves. If the Allied Powers will plan a definite policy and help, by promising protection, there seems some reason to think that success might be achieved.

INDIA'S GIFT TO NEPAL.

Reuter's Delhi correspondent, in a delayed message dated January 27, writes :—A letter is published to-day, dated December 27, from the Viceroy to the Prime Minister of Nepal, expressing the profound gratitude of the British Government and the Government of India for Nepal's assistance during the war. The letter remarks that Nepal contributed 58,000 recruits for the Gurkha battalions, besides war material, and states that the good relations between Nepal and India have been cemented and strengthened. The Government of India now makes an offer to Nepal of an annual present of 10 lakhs of rupees as a recognition of the sacrifices Nepal has made. The Prime Minister of Nepal, replying on January 12 in graceful terms, says that his Majesty and the Government of Nepal gratefully and thankfully accept the offer.

THE CAMPAIGN IN MESOPOTAMIA.

On February 4 Lieut.-Colonel G. P. A. Philips lectured at King's College, London, on "The Campaign in Mesopotamia." He said that it was no part of the German plan that the Turks should come into the war at the first. When they did the Indian Government was ready, and the first troops were landed in Mesopotamia almost on the same day as Turkey came into the war. Various actions were fought, and Kut was taken by the British as the result of a battle which was a masterpiece of tactics, and in which they beat a Turkish force greater in number than themselves and very strongly entrenched. If General Townshead had then advanced, his men were flushed with victory and would have followed him anywhere, while the enemy was beaten and demoralised; but he was kept waiting for six weeks, giving time for two whole Turkish army corps to come down the Tigris. Consequently, when he received the order to go on to Baghdad he met the Turks at Ctesiphon, and fought them under every disadvantage. For four days and nights his force beat off the attacks of the enemy, until it was decided that there was only one thing to do—to get back to Kut. Then came the retreat, and on one day the rearguard marched forty-three miles, only halting to fight, and then marching on again. When the British arrived again in Kut it was only to find that the Turks and Arabs had passed them on the road, and had got astride of the river lower down. There was no way out, the troops were utterly exhausted, and General Townshend decided to remain at this strategic point. The Turkish engineers built a wall practically round the garrison, and every day there were attacks, trying to wear them down. Sickness was rife, and the want of green vegetables and fresh meat was felt very severely. Eventually, in spite of a most gallant defence, the garrison of 9,000 men was compelled to surrender.

Arab Self-Determination.

In the *Manchester Guardian* of January 23 and 26 there appeared two important articles on the Arab countries. The writer refers to the causes of division among the Arabs, but states that there are elements among them that make for union. In politics this is especially so, he says:—

Particularism is strongest among the most backward of the Ottoman Arabs, the Bedawi, though there are no physical barriers between one group of tribes and another, and their institutions conform to a standard pattern. The movement towards national unity is making most progress in Syria, where the different districts are divided and subdivided by mountain ranges and creeds, but where there is more literacy, economic efficiency, and political experience than elsewhere. It looks as though this latter tendency were destined to prevail as civilisation spreads through the area, and we are encouraged in this belief by the wisdom and moderation which the Nationalist leaders have shown in their policy since the beginning of the war.

He comments at length upon the problems arising out of the Anglo-French agreement, and then describes the actual events of the war in Syria. He says in connection with the rout of the Turks: "Before French troops could arrive on the spot, Beirut had run up the Arab flag and set up a national Administration, while the Syrian army of liberation was entering Tripoli and Latakia." He continues:—

The French were disappointed, but the Arabs' turn for disappointment was soon to come. Both French and Arabs in Syria were under General Allenby's command, and (acting, of course, under instructions from home) he ordered the Arabs (that is, the Syrians) to hand over to the French the provisional administration in the greater part, though not quite the whole, of the coastal zone of Syria as defined in the negotiations discussed above. Thus we saved our own face and left both our Allies aggrieved; and our recent withdrawal from Syria, while it extricates us from an embarrassing position and vindicates our diplomatic good faith, is not so certainly to the interest of France, who pressed for it, and is quite certainly against the interest of Syria. The French and Syrian military administrations now stand face to face without the restraining influence of a superior authority; the French seem to be advancing into the districts of their "zone of direct administration" (in the terms of the agreement) which were not handed over to them by Allenby; there are reports of resistance by Syrian national volunteers, and it is to be feared that, even if Feisal has reached an agreement with the French, his Government may be swept away by a revolution, and Syria plunged into a desperate attempt to drive the French out by force.

He concludes with a presentation of the case from the Syrian and from the French point of view:—

What is the Syrians' case? First, they have a strong desire to govern themselves: the different sections of the population have proved it by taking part in the war against the Turks; they consider that the Allies are bound by their principles to respect this desire; and they point out that national self-government is being vouchsafed to peoples less fitted for it than themselves. The Turks, for instance (who, incidentally, were on the wrong side in the war), will certainly be allowed to have it, yet the Turks still massacre non-Turkish minorities. Nothing like the Turkish treatment of Greeks and Armenians can be brought up against Syria, and, in fact, there are no alien minorities there in the same sense as in the country beyond the Taurus, for everyone in Syria speaks Arabic, and the sense of nationality has been growing fast between sect and sect. The Syrians, then, deny the necessity of placing their country under a mandate, and in the second place they represent that France has special disqualifications for that commission. The two countries may have conflicting economic interests, for there used to be a large export of raw silk from Syria to the factories of Lyons, and the French could hardly look with favour on the Syrians' ambition to make use of the water power of the Orontes and work up their silk at home. But economic considerations are secondary. The besetting fear of the Syrians is that French policy would break up their new and cherished national movement, not, perhaps, deliberately in order to "divide and rule," but because French policy in Syria is sentimental and traditional. It dates back to the Crusades, when religion and not nationality divided and united people politically, and it rests upon a local championship of the Roman Church. In a French mandate the Syrians foresee a Catholic hegemony—not an ascendancy of foreign Catholics over all Syrians, which would not matter so much, but an incitement to the Syrian Catholics to leave the national camp and throw in their lot with France, which would mean the end of Syrian national unity. Recent reports indicate that the Syrian Catholics themselves are more and more taking the nationalist point of view on this question.

And what is the French case? First, a very human desire to bring home spoils as fine as ours. But the driving force behind the French claims is historical sentiment. "Remember," said M. Clemenceau last year to an advocate of the Arab cause, "that French interests in Syria go back to the Crusades." "And you, sir, must remember," said the other gentleman (who told the story to the writer of this article), "that the Syrians won the Crusades, and are proud of it." But those are terrible memories to call up. Moslems regard the Latin

Digitized by Google

invasion of the Levant as we regard the Turkish conquest of Constantinople, and it is a rather sinister coincidence that the line drawn in the Anglo-French Agreement between the French littoral and the international Palestine on the one hand and the "independent" interior of Syria on the other coincides almost exactly with the boundary between the Catholic and Moslem principalities during the Crusading period. Across this line Frenchmen and Syrians are facing each other again to-day with arms in their hands. *Absit omen.*

The Turkish Tangle.

In the *Fortnightly Review* of February Mr. H. Charles Woods deals with the problems arising out of the Turkish settlement. He divides his subject under three heads, Constantinople and the Dardanelles, Armenia, and Turkish Anatolia. Of these two latter he says:—

With respect to Armenia, which should either be entirely independent of Turkey or, at any rate, subject to only a nominal and theoretical suzerainty, there is but little divergence of opinion, for it seems practically an accepted fact that an Armenian State should now be brought into existence. Consequently, the primary problem here is one of frontiers—a problem which cannot be decided exclusively upon the ethnological distribution of the inhabitants, for to adopt this course would be to reward the Turks and other Moslems who have endeavoured to solve the Armenian question by means of the destruction of that race. Here, therefore, the only foundation upon which to work is to establish a State sufficiently large to secure its independent existence and to enable it to receive emigrants now domiciled beyond whatever may be its future frontiers. If this thesis be accepted, I think that the six so-called Armenian vilayets (with the exception of North-Western Sivas), together with the eastern part of Trebizond, should become part of Armenia, her southern frontier being made contiguous to whatever may be the northern boundary of Mesopotamia. The Armenian Republic of Ararat is reported to have elected to become part, and therefore should be included. For the rest, that is, the questions of Cilicia and of a port upon the Mediterranean, a solution must depend largely upon the arrangements arrived at for the distribution of Syria and upon the identity of the Mandatory or Protector of the new State.

When we come to the remainder of Anatolia there are two alternatives—disruption and the maintained integrity. The adoption of the first would probably mean the at least partial realisation of the Anglo-Franco-Russian agreement of 1916, of the Pact of London, and of Greek aspirations at Smyrna. Such an arrangement, carrying with it a series of different mandates, would almost certainly cut off Turkey from the Mediterranean, and in robbing that country of areas which are preponderatingly Turkish in race it would prove neither durable nor fair. Rejuvenated integrity, on the other hand, would maintain, as Turkish, territories the population of which is probably 75 per cent. Moslem, and it would avoid the establishment of two rivals—Italy and Greece—as neighbours in Asia. No doubt therefore remains in my mind that the easiest and least unsatisfactory course of adoption would be for the Allies to abrogate the above-mentioned agreements, rendered obsolete as they are by the exit of Russia from, and the entry of America into, the war, and to prolong a supervised and controlled Turkish administration, with its capital at Constantinople or elsewhere, in all the areas situated to the west of the Armenian frontier.

Kurdistan.

The Times of February 2 discusses in a leading article the consequences of Great Britain's assuming responsibility in Kurdistan. Its comments on the new proposals are as follow:—

Apparently the new proposal is to accept a mandate including the whole of the Mosul vilayet, which will carry us into the mountains of Central Kurdistan, where the recent fighting has occurred. Such a decision ought not to be reached without the most careful investigation, and the Minister who ought to say the last word is the Chancellor of the Exchequer, because he will have to find the money required. There is a pleasant but wholly delusive theory that the Kurds of Central and Southern Kurdistan can be formed into a "loyal" *gendarmerie*. Past experience of the Kurds does not support this assumption, and last year we saw the tribal militia on the Indian frontier crumble to pieces almost in a night. If we go into these wild and difficult ranges of mountains, we shall be undertaking responsibilities which may eventually prove immeasurable. The enthusiastic reports of local officers are in this case, as in most similar cases of the kind, extremely misleading. Before entering Kurdistan we should examine our enormous commitments elsewhere in the Middle East, the future of our Standing Army, and our financial position at home.

Tangier.

In the *Morning Post* recently there was, under the title, "Where East Meets West," a good description of Tangier. The writer says:—

On a moderately clear day Europe is clearly visible from Tangier, and the Straits barred in by the mountains of Spain and Morocco seem no more than a lake. Nowhere in the world do such a few miles of sea, so narrow a material gulf, mark such a vast cleavage between two worlds of thought and civilisation. For Spain is the West and Tangier the East, in derision of all geographical definition. For the visitor unaccustomed to the East, Tangier is a sudden plunge into the Arabian nights. On board the boat from Algeciras he may see a Moor or two, probably interpreters sent from the hotels at Tangier to assist the foreigner. The fez, the djellaba, or burnoose, that, not unlike a friar's habit, covers clothes of bright colour, the legs bare to the knee except for socks, which display with strange incongruity European suspenders, all uncovered, and the yellow slippers or babouches, announce a strange land and a new civilisation. But the great majority of the passengers are European.

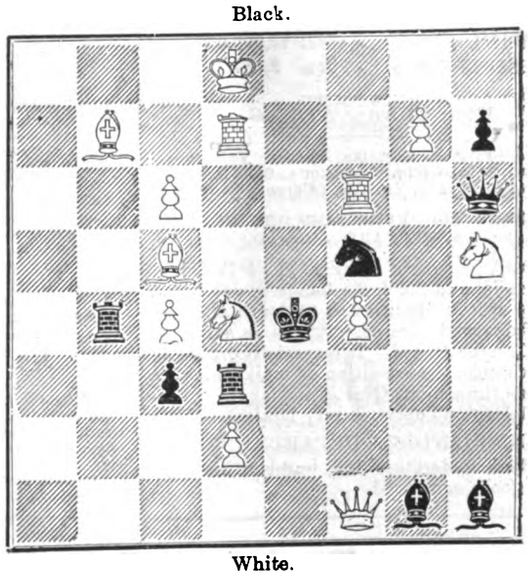
He then shows what Tangier itself is like, with its maze of streets.

The European would be far more at home falling down the White Rabbit's hole in Alice in Wonderland than he is at first in a maze of bewildering, tiny, zig-zag streets. Except for the cool shadow below, everything is dazzling white in the African sun. The streets, roughly cobbled, are all sharp turns and archways and unexpected ups and downs. The whiteness of it all recalls a war impression in the Italian Alps—the dazzling brightness of the snow tunnels which took the place of trenches in the high mountains. The impression deepens when, making one's way uphill towards the Kasbah, the ancient citadel, one passes between walls and houses washed with faint blue, a colour which in that luminous atmosphere suggests the transparent blue of the ice in tunnels which the Alpine soldier had driven deep in the glacier. In these tortuous streets it is rare to see a European. Dignified figures in turbans and burnooses of many colours, women closely muffled up in white robes, wearing the "haik" across the lower part of the face, or with a corner of their dress held in front of their faces for modesty's sake, fascinating children of every age, a water-carrier or two with their goatskins, and donkeys, heavily loaded, bumping their way down the steep streets, form a perpetual kaleidoscope. Grave Moors squatting on the floors of their little shops sell their wares without haste or acrimony, and Jews clothed in black walk hurriedly along with anxious, furtive step. A half-opened door shows a great, cool courtyard, ornamented with bright mosaic. Europe is in another world.

CHESS.

PROBLEM No. 13.

Black.



White.

White to mate in two.

This problem, by Frank Janet, New York, obtained the first prize for two-movers in the Victory Tourney of the British Chess Problem Society.

Solution to Problem No. 12:—(1) K—Kt3, K—Kt3; (2) K—Kt4 (Black's P of course still cannot advance), K—Kt2; (3) P—R4, K—B2; (4) P—Kt6 (ch.), K—B3; (5) K—B3, K—Kt2; (6) K—Kt3, K—B3; (7) K—Kt4, K—Kt2; (8) K—Kt5, P—Q6; (9) P—R6 (ch.), K—Kt; (10) K—B6, P—Q7; (11) P—R7 (ch.), K—R; (12) P—Kt7 (ch.), K × P; (13) K—B7 and wins, for if the BP Queens, white mates in two, and if K—R3, the mate is still threatened, and the pawn is lost. If (9) . . . K—B or K—R (10) K—B6, P—K7; (11) P—Kt7 (ch.), K—Kt; (12) P—R7 (ch.), etc. It will be noticed how after the sixth move White loses a move.

The annual University match is to be played in March at the City of London Chess Club. The fixture was revived last year, mistakenly, in my opinion, as Oxford was evidently far from ready for a contest. Reports from both Universities show that the game is far more popular now than in pre-war days, and I think it will be found that Oxford will put up a much better fight on this occasion, though I have little doubt that Cambridge will win the match, but of course there are such things as surprises even in chess matches. Cambridge has only had two victories over Oxford since 1904, the first occasion being in 1910 and the second last year.

Information is now forthcoming as to the terms of the proposed match between Lasker and Capablanca. Whatever the result, Lasker claims 60 per cent. of the stakes. The match is to go to the leader by eight games, but if thirty are played without that happening the title will go to the leader at that stage.

CARO-KANN.

GENERAL BANK OF GREECE.

Paid-up Capital, Drs. 3,000,000.

Head Office - ATHENS.

BANKING OPERATIONS:
Every description of Banking business transacted.

FINANCIAL OPERATIONS:
Investigations in connection with, and the promotion, organisation and financing of, Limited Joint Stock Companies, with a view to exploiting agricultural, industrial and mineral resources, executing technical works, etc.

COMMERCIAL AND SHIPPING DEPARTMENT:
Purchase and sale of goods on account of clients. Warehousing, Advertising and placing foreign products on the market. Agents for foreign companies and large commercial and industrial firms abroad. General Shipping Agents.

POPULAR BANK OF GREECE.

Head Office, ATHENS. Branch, PIRÆUS.

Correspondents throughout Greece.

Established June, 1905, by the National Bank of Greece and a group of Capitalists.

CAPITAL - Drs. 1,500,000.
RESERVE FUND - Drs. 2,500,000.
Deposits and Credit Accounts, Drs. 100,000,000.

The Bank specialises in the collection of Bills payable in Greece; it accepts goods on consignment, and undertakes their sale, and transacts every kind of Banking business.

General Manager: D. LOVERDO.

TRADE WITH THE NEAR EAST.

The Bank of Athens extends special facilities for business with the Near **East** to manufacturers, exporters and importers.

The Bank has offices in all the principal towns in **Greece,** also in **Egypt,** Cairo and Alexandria, in **Cyprus,** Limassol, in **Constantinople,** in **Smyrna,** and in **France,** Marseilles.

Inquiries from interested parties are invited.

BANK OF ATHENS.

PAID-UP CAPITAL : £1,920,000. **HEAD OFFICE IN ATHENS.**

London Office: 22, Fenchurch Street, E.C. 3.

COMMERCIAL BANK OF GREECE, LIMITED.

CAPITAL PAID-UP - Drs. 15,000,000.
RESERVE FUNDS - Drs. 2,364,793.

Head Office: ATHENS.

Branches:—**Piræus, Salonika, Patras, Volo, Syra, Calamata, Corfu, Cephalonia, Candia, Chios, Argos, Pyrgos, Vostizza (Ægion), Nauplia.**

AGENTS IN ALL PARTS OF GREECE, THE LEVANT, AND ABROAD.

The Bank conducts every kind of Banking, Commercial and Stock Exchange business and extends special facilities to traders interested in business with Greece. It acts as Agent for many Foreign Banks. It is specially organised for Exchange, the execution of mail and cable transfers throughout Greece, and for the collection of clean and documentary Drafts.

MERCHANDISE DEPARTMENT:
The Bank undertakes the warehousing and sale of goods consigned.

GREECE.

Area 43,522 square miles. The cultivated area amounted to 5,745,300 acres, of which about 2,253,400 were under cereals, 518,900 under grapes and currants, 370,600 under oak trees, 295,500 under olives, and 2,223,900 were forests.

Population (1914), 5,000,000 approximately.

Chief Products (with average annual production):—Currants, 142,000 tons; wines, 3,000,000 casks; tobacco, 9,000,00 lb.; cereals, 8,000,000 bushels; olive oil, 200,000 casks.

The **MINERALS** of Greece include:—Iron, Marble, Magnesite, Emery, Lead, Lignite.

IMPORTS (1914), Old Greece only:—Total value £7,000,000, of which £2,000,000 from the United Kingdom; £1,500,000 from Germany and Austria Hungary; £1,000,000 from Russia.

EXPORTS (1914), Old Greece only:—Total value £4,000,000, of which £3,000,000 came to the United Kingdom.

COINAGE.—The unit is the Drachmæ, equivalent to a Franc (10d.). The current rate of exchange is about 26·89 Drachmæ to £1.

FREIGHT.—From England, 160/- + 10 % primage.

WEIGHTS AND MEASURES.—It was decided in 1898 to introduce the metric system. The change is to be gradual from the old system, which is:—Oke = 2·82 lb., stater = 123·20 lb., livre (Venetian) = 1·05 lb., baril (wine) = 16·33 imperial gallons, kilo = 0·114 imperial quarter, pike = ⅔ of a yard, stremma = ·242 of an acre.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

The latest news from South Russia is uniformly unfavourable. The Bolshevists, it is reported, have succeeded in advancing along the sea coast in the Odessa region, and have occupied the town. Further east the menace of their advance has led to the evacuation of Grosny by British and American subjects, and it would appear that we must be prepared for news of the occupation of the oilfields in that region. Bolshevist successes are also reported on the opposite shore of the Caspian Sea, and in the direction of Khiva. The loss of the South Russian market is a comparatively minor matter set against the possible damage to British interests that might be expected to accrue from the capture of the oilfields. One can but hope for the best, but, assuredly, the lot of shareholders in Russian enterprises at the present time is very hard.

***

The effect on the Constantinople market of the Bolshevist advance has been very pronounced, a result which I indicated would be the case some weeks ago, when it became clear that South Russia was once again menaced. There have been very large consignments from Odessa and other ports, and the result of the curtailment of the South Russian market has naturally been that Constantinople is now overstocked with supplies. Of course, as soon as the position improves these surplus goods will simply vanish, but in the meantime it behoves exporters to exercise considerable discrimination in the nature of their consignments.

***

Apart from anything else, it follows that the delay in the peace settlement as regards Turkey is bound to have a most prejudicial effect on business at Constantinople. In this connection I am able to quote an interesting extract from a letter from Constantinople dated January 19:—"Everything is at a standstill," says the writer, "and there is a complete stagnation of business owing to the uncertainty of what is to be the fate of Constantinople. The public is very much unnerved, and no one thinks of business, consequently the foreign exchanges have risen considerably, and the Turkish pound has lost in value. The shilling may be reckoned at 21 piastres—420 piastres to the pound sterling. Under these conditions you can easily understand that there is no chance of booking orders."

***

Little improvement is so far apparent as regards the cable service. I understand that the delay in the case of telegrams to Egypt is 7½ days and to India 9 days. The position with regard to the Near East generally is most unsatisfactory, and I am constantly receiving complaints on the subject. In extenuation of the delays, it is urged by the authorities concerned that the number of telegrams despatched is now treble the number sent in 1918, and in addition that the arrears of construction entailed by the war have to be made good. But the Armistice is now receding into the distant past, and I am of the opinion that the time is arriving, if it has not already arrived, when we ought to hear no more of the war as an excuse for inadequate services.

***

First views from India on the reform of the rupee indicate a strong current of hostility on the part of the Indian mercantile community to the development. The fear is, it appears, that the measures taken will have a markedly adverse effect on India's export trade, and that falling exports and increased imports will put an end to India's favourable trade balance and bring about new difficulties in regard to the financing of imports. Of course, the higher rupee exchange by increasing the purchasing power of India should facilitate the stream of imports, but apart from any other consideration in view of the world-wide scarcity of commodities, it is, on the face of it, taking much too pessimistic a view to anticipate disastrous consequences as regards the export trade. Besides, whatever may be the case in the future, India's exports to-day consist almost wholly of articles of primary necessity, such as jute, hides, cotton, etc., and the fact that more has to be paid for these articles is not in the least likely to restrict the demand.

As regards companies in India and Ceylon, two effects of the higher rupee exchange are to be noted. The railway companies and business concerns which have simply to remit the profits home, of course, stand to benefit greatly, and in the case of the railways the increased profit on exchange will help to make good the increased expenditure which has to be undertaken as the result of the war. But the plantation companies which dispose of their produce here, and remit to India to meet the working costs, will, of course, be seriously affected.

***

Mr. Walter Leaf, in his speech at the general meeting of the London County Westminster and Parr's Bank last week, the report of which will be found elsewhere in these columns, touched on a number of the most important problems of the day. Referring to the serious increase in the price of cotton, which he pointed out was likely in the near future to hamper the growth of the country's greatest textile industry, he emphasised the fact that it is due to "an alarming shortage of the raw material." He drew attention to the competition of the United States with this country for the limited crop of Egyptian cotton, which had resulted in forcing up the price from about 29d at the beginning of October to 76d., and said that it was to be hoped that speedy effect would be given to the efforts now being made to extend the growth of cotton within the Empire.

***

Mr. Leaf strongly criticised the importation of luxuries at the present time. He quoted certain items from the Board of Trade Returns, and said that it was there they should look for an earnest effort of self-denial if they were honestly determined to hold up their heads before the world and to face their creditors with a clear conscience. He put the question whether the country had done its best to reduce the import of articles of mere luxury, and after giving a few illuminating examples declared that it would not be an over-estimate to say that of the gap of 150 millions or so which last year represented their addition to foreign indebtedness, at least one-third, perhaps a half, might have been saved.

***

Turning to the currency question Mr. Leaf expressed his unbelief in proposals for artificial restriction. The only remedy, he declared, was to stop the issue of claims to currency in the form of Government expenditure and Government credits. To fix an arbitrary limit, in his view, would simply be delusive. Happily, as Mr. Leaf pointed out, the temperature of the currency barometer has fallen a little during the past few weeks, though the normal is still a long way off, and will only be reached when the "Bradbury" exchanges freely for a sovereign and a sovereign for 4.866 dollars. That end, Mr. Leaf emphasised, can only be gained by steady and determined self-denial, and would be only definitely postponed and made harder of attainment by waste and luxury, private as well as public.

COMMENTATOR.

BANK OF ROUMANIA LIMITED

(FOUNDED 1866.)

Head Office: 27, THROGMORTON ST. LONDON, E.C. 2.

Commerce and Industry.

(REPORTS FROM OUR OWN CORRESPONDENTS.)

EGYPT.

CAIRO, January 18.

Improved Trade in October.

The statistics of the foreign trade of Egypt during October show an improvement over these for the corresponding month of 1918. Imports totalled £E4,885,741, and exports £E6,642,886, as against £E3,485,615 and £E2,980,875 respectively during the previous October. Re-exports showed a slight improvement, and transit trade was about the same.

The principal items of import during the month were wheat-flour £E209,173, coffee £E76,234, kerosene £E104,253, stationery £E118,369, timber £E83,215, coal £E413,761, nitrate of soda £E106,585, cotton yarn £E108,827, cotton-piece goods (grey) £E141,608, cotton-piece goods (bleached) £E242,556, cotton-piece goods (printed) £E247,229, cotton-piece goods (dyed in the piece) £E261,282, cotton-piece goods (dyed in the yarn) £E258,263, woollen and worsted cloths £E120,037, and tobacco £E213,586. The principal increases were in wheat-flour (Australia and New Zealand), kerosene (United States), coal (United Kingdom), nitrate of soda (Chili and United Kingdom), cotton-piece goods (United Kingdom, Japan and Italy). No preserved meat came in during the month, and there was a serious falling off in benzine.

Under exports the chief items were cotton-seed £E368,250, refined sugar £E83,268, raw cotton £E5,586,064, cigarettes £E97,238. The rise in the value of cotton-seed can be seen from the fact that whereas the quantity exported during the month was the same, the value was double that of the previous October. Cotton exports rose from 284,000 kantars to 610,000 kantars, whilst the value increased by over 140 per cent.

The United Kingdom doubled its share of the imports, and the only other noteworthy increases were Italy and the United States. Our share of the exports more than trebled, whilst France took a very much larger proportion, practically every other country showing a falling off.

CAIRO, January 26.

Effects of Spring Disturbances.

The State accounts for August, which have just been published, still further reveal the unfortunate financial effects of the spring disturbances. Revenue during the period amounted to £E10,043,899, against £E10,469,304 on August 31, 1918; whilst on the other hand expenditure rose from £E8,491,420 to £E9,371,726. In other words, revenue fell off by £E425,405, expenditure increased by £E880,306, and the excess in receipts for the five months fell from £E1,977,884 to £E672,173.

Under revenue the only items which show any improvement are, tobacco dues £E260,039, Ghaffir cess £E176,881, interest on funds £E97,638, and sale of land £E97,763. Very large decreases are recorded under Customs £E574,231, judicial fees £E138,326, and railways £E403,820. The increase in expenditure was fairly evenly distributed, but the largest share goes to railways £E540,979, war gratuities £E424,421, and Ghaffir cess £E105,527. There is, however, a decrease under War Office of £E195,164, and under extraordinary war expenditure £E178,505.

ROUMANIA.

BUCHAREST, January 16 (delayed).

The Depreciation of the Leu.

Another financial question engaging the attention of the Government is the depreciation of the leu. To-day it is practically impossible for the Roumanian to purchase abroad the manufactured goods indispensable to the rehabilitation of the country. The Commission de Valuta, the organ created about a year ago for the purpose of regulating all payments abroad and thus controlling the value of the leu, has ceased to function owing to its inability to purchase foreign exchange at the official rates and the impossibility of limiting transactions to the official channel. Severe penalties were provided for infringements of the law, but as the official rates fixed were far below the real market rates, the only result has been to take the exchange business out of the hands of the banks who were unable to purchase at the official rates and unwilling to engage in transactions at an exchange rate forbidden by the Commission, and to throw it in the way of the money-changers who have reaped fortunes. How profitable speculation in exchange has been may be judged from the fact that the market rate was about forty lei to the pound sterling when the Commission was instituted last February, while to-day it is 160.

It was simple to forbid travellers leaving the country to take more than 2,000 lei with them in any currency, and the confiscations at the frontier stations show that a certain control can be maintained, although how effective the control may be we have no means of knowing, as we hear nothing of the sums that are not found and confiscated. Until recently the export of jewellery was permitted, and many small merchants purchased diamonds and pearls locally and took them to Paris or London, where they sold them and used the proceeds to buy goods. The export of all jewellery and precious stones is now prohibited.

YUGOSLAVIA.

BELGRADE, January 31.

The End of the Krone.

The Ministry of Finance hopes to recall the old krone currency and issue the new dinar-cum-krone notes on February 1; one and a-half milliards of the new dinars have arrived from Paris, and it is hoped that these will be overprinted with the krone value on one side in time for issue at the date appointed; another 600 millions are on the way. This will be enough to replace the eight milliard krone in circulation. As a 1,000-krone note will be worth 250 dinars, it is obvious that to replace each 1,000-krone note there are required two 100 and five 10 dinar notes, for there are no 50-dinar notes. Thus will the Austro-Hungarian krone be buried. It is probable that the exchange has been fairly discounted, and that there will be little disturbance.

TURKEY.

CONSTANTINOPLE, January 11.

Lighterage.

The charge for unloading cargoes has been raised from £T30 to £T50 per ton, and there is a prospect of a still further increase. In a recent letter I dwelt upon the heart-breaking hindrances to business caused by the congestion in the port, and touched upon the outrageous demands of the porters and lighter owners which largely contribute to the throttling of commerce. Such is the power of the lightermen's monopoly that a marine agent who is responsible for the following information begged that his name might not be mentioned, as he might be *boycotted by the lightermen.*

While in most other ports of the world each steamship company has its own organisation for the discharge of cargo, or else there are a number of private companies that undertake the operation, here one is at the mercy of the bargees and lightermen. So powerful is their corporation that it is certain if a company were to commence the construction of lighters to be independent there would be all sorts of difficulties before the enterprise could commence operations.

To-day a lighter obtains £T15 a day, or about £4 sterling, and contains hardly 200 tons of merchandise. As goods remain for weeks at a time in the lighters, there is usually a heavy bill to pay. Imagine the case I cited of goods that remained in a lighter for 72 days. The lighter bill thus came to £T1,080, or about £280 sterling. As the lighters are insufficient in number there is never a day unoccupied, and the lighterman can therefore reckon upon an income of £T5,400, or over £1,300 per annum! And still they are not satisfied. Who is going to put a stop to what is nothing less than brigandage? What have the Allies fought for if their trade is going to be strangled by bargees?

Banque Franco-Serbe.

The Customs.

The Turkish Government has decided to re-establish the pre-war system of an 11 per cent. *ad valorem* duty, and has submitted the scheme to the inter-allied authorities, who have not yet come to any decision. The Government proposes to levy the duty upon the gold value of the goods before the war, in order that time should not be lost in obtained certified invoices and so forth, as the port is very crowded. Taking into consideration the depreciation of the paper money and the increase in the price of goods, the Government estimates the actual increase over pre-war prices at ten times more, but states that it will be satisfied with an estimate of eight times pre-war prices. It is proposed to draw up lists in which every article will be valued at eight times the pre-war standard, and duty will be levied on this basis. This is very generous of the Turkish Government, but it needs no expert to detect the fallacy of the scheme. Some articles are considerably more than eight times pre-war prices, while others are less. On the whole, it would be better to stick to the old method of levying duty according to a properly certified invoice. But as peace is to be signed shortly, in all probability the Allies will advise the Government to leave the matter alone for the time being.

High Prices.

There is a general and sharp rise in prices, but especially in foodstuffs. It was generally supposed that after the armistice there would be a fall in prices, but there is very little difference between the prices of to-day and when the Unionist profiteers were in the hey-day of their power. All the reasons that are invoked to account for the general dearness of things existed before the armistice, and in those days it is well-known that certain individuals made enormous profits out of monopolies and corners.

One of the principal reasons for the present rise in prices is undoubtedly the slump in Turkish paper money. This was brought about this time by the mild panic caused by the unfavourable political news and the fear that the Turkish lira would drop to the level of the mark or the krone. There was a rush to buy gold or foreign securities, and, of course, the rate of exchange went up rapidly. The pound sterling rose to 380 piastres, and the dollar was quoted at more than a Turkish pound.

In reality, there was no justification for the panic. There is very little likelihood of the Turkish lira dropping to anything like the value of either the mark or the krone. Turkish war paper hardly amounts to 150 millions, and the Peace Treaty with Germany in no way threatened its value. The gold which guaranteed part of the emission is now in French custody, so there is no reason at all for panics, beyond "bourse" manœuvres and public ignorance. It is an ill-wind that blows no one any good, however, and those who had the sense to exchange their sterling for Turkish money will make a very satisfactory profit shortly.

The Economic Effect of the Massacres.

The *Orient News*, in an interesting article, draws attention to the effect upon the financial stability of Turkey caused by the massacres and deportations that occurred during the war, and points out that the foreign bondholders are likely to suffer. For instance, the bondholders are interested in the Turkish tobacco crop, for 12½ per cent. of the tax upon land under tobacco cultivation goes to the Public Debt. Three such districts, which in 1910 produced over two and a-quarter million kilos of tobacco in 1917 produced only 922,379 kilos, because the Greeks had been deported from those districts. The loss to the bondholders under this head is estimated at £T1,200,000.

Again, the official reason for the 47 per cent. decrease in certain revenues in 1915 is stated to be the "emigration" of the population in certain important agricultural districts.

In letters written some months ago, I commented upon the ruin of the once-flourishing silk industry, and now according to all reports, Greek and Turk between them have finished off the best part of the Smyrna fruit-producing district.

It is difficult to find adequate expression for the abysmal folly of the Turks in coming into the war in the first place, and, secondly, in coming in on the side of the German.

MOROCCO.

TANGIER, January 29.

Importation of Sugar.

The President of the British Chamber of Commerce here in his last annual address remarked upon the curious action of the authorities of the Protectorate in discouraging the import of sugar except that authorised by them from France, notwithstanding the fact that any sugar imported from elsewhere released the same quantity for consumption in France, where it was so scarce. The situation in the Protectorate is now quite altered, and importation is encouraged no matter whence. In Tangier, however, this is not the case; sugar imported from one special refinery in France is controlled as regards price and distribution by an official sent here from the Protectorate to control all commodities imported into Tangier from France or from the protected zone. Some British merchants purchased a considerable quantity of sugar from a refinery in France, bought freely on the French market, and without any licence. When this arrived in Tangier the official mentioned above claimed the right to control the distribution of it, preventing its leaving the custom-house in the meantime. After considerable negotiations had taken place he found his position untenable, but the importers engaged themselves to give him the name of their buyers, though they were under no obligation to do so. The shopkeepers who had regularly obtained licences to deal in the French sugar which was authorised to come into the country were informed, however, by the official that if they dealt in any other sugar they would receive no more licences for the authorised sugar. An official request was made to the French Government to prevent the export to Morocco of any other sugar than that authorised from here. This included Java sugar transhipped at Marseilles under the French law that all goods transhipped at a French port become French on being landed.

MALTA.

MALTA, January 19.

Two hundred and twenty-five British steamers of a total tonnage of 503,205 called at Malta during the year 1918-19, and 132 foreign steamers of 184,407 tons. The increase of £169,713 in the exports of the island has been due to food, drink, and tobacco, raw materials and manufactured articles. The value of the imports was £271,654 below the average for the past three years. Cotton has been a notable import, no less than 51 packages arriving on one boat.

The Malta Government are in a position to secure the import from Algiers of 300 head of cattle. The export from the island of winter and irrigated potatoes has been forbidden.

The Italian local paper, *Malta*, has devoted some space to criticising the amount which has been set aside in the past in the annual estimates for depreciation on Government securities. Its criticisms have been proved to be very wide of the mark, as the fund set aside to cover depreciation was increased solely in the interests of the island, and was to meet any emergency in the event of a fall in stocks—Consols in particular. In the 1917-18 estimates no provision has been made for further depreciation.

SWEDISH ORIENT LINE.

Direct regular steamship service with about weekly sailings outwards and homewards between

GOTHENBURG and ALGIERS, PIRÆUS, SMYRNA and SALONICA.

The Egyptian Cotton Crop.

By John A. Todd.

IV.—THE FUTURE OF THE EGYPTIAN SUPPLY*.

It is almost impossible to keep pace with the movement of events in these days, changes are so rapid, and so extreme. F. G. F. Sakel is now (February 6, 1920) standing at 82.50d. per lb., against 28.65d. for fully middling American, representing a premium of 188 per cent. The difference between the prices in Alexandria and New Orleans is still greater. In Alexandria, on Tuesday, March futures opened at 143.50 dollars per kantar; while in New Orleans they closed that day at 36.80 cents per lb., making the premium 290 per cent. The difference between the premiums is, of course, accounted for by the fall in the American exchange, a factor which is at last beginning to make itself seriously felt in the cotton market. The exchanges are producing strange results in other ways. Thus, to-day, New England spinners can buy their Egyptian cotton in Boston about 30 per cent. cheaper than the Lancashire spinner in Liverpool, and they can buy imported Egyptian cotton cheaper than they can buy Egyptian cotton grown in America for the same reason—at least they could if there was much of it to buy. Unfortunately, the latest reports of the Arizona crop are unsatisfactory, and the higher estimates mentioned in the previous article (45,000 to 60,000 bales) are now not likely to be fulfilled. 37,500 is spoken of as the probable maximum.

The moral of all this is obvious. It is of the very first importance that the supply of Egyptian should be increased at the earliest possible moment. It, of course, goes without saying that the fellah will do his best to increase the acreage under cotton in Egypt this summer, and it should be safe to assume that the area this year will be at least up to pre-war records. There are, however, two questions behind that: (1) Is there any probability of pre-war records of acreage being exceeded; and (2) given pre-war acreage, is it reasonable to expect a pre-war crop?

Taking the latter question first, it is unfortunately beyond question that the average yield in Egypt during the war has suffered considerable diminution, and that the reduction is not likely to be remedied in one year, nor perhaps in several. The main reason for that is the fact that the water logging of the Delta is yet to be cured, and the remedy, which is primarily one of drainage and reclamation, cannot be fully applied until further irrigation supplies are available.

That brings us to the answer to the first question. There can be no substantial increase of the area under cotton in Egypt, nor in the Sudan, until the various irrigation schemes now under consideration or under way, in the Sudan, are completed, and that will inevitably take time as well as money. For the benefit of those of your readers who are not familiar with the details of these schemes, it may be recalled that they are two in number, and entirely distinct in character and purpose, as well as in regard to the financial responsibility for them. Yet they are essentially parts of one comprehensive scheme, for the question of water supply in Egypt and the Sudan must always be regarded as a whole.

In the first place then the scheme for the erection of a barrage or regulator on the Blue Nile is intended to facilitate the irrigation of an area, limited in the meantime to 300,000 acres, in the district known as the Gezira, lying between the Blue and White Niles. That is essentially a Sudan scheme, and the financial responsibility rests primarily on the Sudan Government, who propose to find the money out of the £6,000,000 loan authorised by the Bill introduced into Parliament last Session. But while this is primarily a matter for the Sudan Government, it must be considered in the light of Egyptian interests, in order to make sure that the water to be taken from the Blue Nile will not imperil the supply available in Egypt, for the principle has never been questioned that Egypt has first claim on the Nile supply.

The second scheme is for a great storage reservoir on the White Nile, which is to serve the double purpose of holding back the flood in the White Nile in the early stages of the rise of the river (when the Blue Nile alone is quite sufficient to fill the channel below Khartoum), thus reducing the risk of flooding in Egypt, and at the same time largely increasing the possible supply in Egypt at a later stage. This is essentially an Egyptian scheme, and the fact is recognised in the decision that the financial responsibility must rest on the Egyptian Government alone. Funds will therefore not be available for this work out of the £6,000,000 loan, and there is danger that in the present disturbed state of the country, which has involved considerable financial embarrassments, the finding of the funds for this great work may involve delay in its execution.

The first point therefore which must be kept constantly before the Egyptian authorities is that, great as is the cost of these schemes, the profit to be derived by Egypt from their *immediate* execution is certain to be out of all proportion to their cost. It is true that all the estimates of cost have had to be raised since they were first planned, but the rise in the cost is not to be considered as against the rise in the price of cotton, and the consequent increase of the returns to be expected from the schemes. Financial difficulties, therefore, no matter how great, must not be allowed to stand in the way of these works being pushed on at once.

Unfortunately however, there are other difficulties than financial. The political situation in Egypt at present is most unsatisfactory, and it is necessary to make the Egyptian people realise that while the world is admittedly in great need of increased supplies of Egyptian cotton, it is the Egyptian grower who will benefit first, and probably most, by the increase of the crop. Present prices ought to be sufficient to show that there is no question of exploiting Egypt for the benefit of Lancashire or America.

But even political difficulties are not the last fence. It is very much to be regretted that there is grave danger of the schemes being held up while certain unfortunate differences of opinion between experts as to the best methods to be applied are still further threshed out. It is, of course, inevitable that these differences must be left to experts to settle, but it is peculiarly desirable at the present juncture that the authorities should realise that every year's delay in completing these works involves a loss to Egypt of something not far short of *the total cost of their execution*. The drainage and reclamation of the Middle and Northern Zones of the Delta would probably add at least three million kantars to the crop, which at present prices are worth over £80,000,000. There is a very large margin available there to allow of a fall in the price of cotton, and yet to cover the cost of the schemes in a few years. The total cost of the drainage, reclamation and irrigation of these zones will probably be about £30,000,000. In this calculation, no account is taken of the yield of the Gezira scheme, which would be very substantially in excess of its cost.

Delay, therefore, means certain loss. The risk of adopting a scheme which might turn out in the long run to be not quite the best that could have been devised is, of course, a serious matter for a Government spending public money, but there are times when risks must be taken, and the responsibility is very heavy on the Egyptian Government to decide whether this may not be one of them.

It is at least very desirable that the public should have some definite assurance that those parts of the schemes which are not seriously affected by the points in dispute, such as the completion of the two sections of the drainage scheme which were already in hand before the outbreak of war, are being pushed on with the utmost rapidity. Even although, owing to the lack of sufficient irrigation, the work of reclamation of the Northern Zone cannot be overtaken in the meantime, the completion of the drainage of the Middle Zone would go far to restore its pre-war fertility, and to increase the average yield per acre. That alone might mean a considerable addition to the crop.

It cannot be too strongly insisted upon that we are faced with a serious shortage of fine cotton, and that there is no other source to which we may look for early relief, except Egypt. Mesopotamia may come on some day, but that will take time. Egypt is the only country in the world that could give us a substantial addition to the supply next year, or perhaps even this year. The failure of the Sea Island crop, through the long threatened arrival of the boll weevil, and the development of the American tyre demand, both of which have unquestionably come to stay, are Egypt's opportunity. If she does not rise to it, the loss will be hers as well as the world's.

NEAR EAST MARKETS.

LONDON PRODUCE REPORT.

Currants and Sultanas.—The demand for currants has slackened appreciably, buyers showing an evident intention to wait for a reduction of quotations before coming to business. Sultanas have been in good request.

Coffee.—The firm tendency of this market has been maintained, and what movement there is has been upwards. Futures have been steady. Messrs. Reynolds and Gibson point out that on its merits and the strength of the position, coffee should reach higher levels, but that this again is contingent upon the purchasing power of consumers, who now, in many cases, are prevented by the operation of exchange from exercising their buying desires.

Sugar.—Business has been less active as far as manufacturers are concerned. The market for refined has continued active at the controlled prices. There is nothing of interest to report from producing centres.

Oilseeds.—The market is strong, linseed being a particularly firm spot. La Plata January-February, Hull, has been done at 46s. 6d., while February-March has come to business at 45s. Rapseed is firm, with Toria at 55s., February-April, Hull. Cottonseed is a strong feature, with Egyptian nominal at 33s.

Oilcakes, etc.—English linseed cake has been done at 505s. and over. There is a good supply of cottonseed cake, and prices are somewhat lower in consequence. Oils are strong, with linseed at 108s. spot, and 109s. February-April. Crude cotton oil is rather weaker, but edible is unchanged.

OPIUM MARKET.

Messrs. Barker Brothers, Smyrna, report for the week ended January 17:—We have had again a very active week, with sales amounting to 60 cases of manufacturing qualities at piastres 835 to 970, which is equal to 17s. 6d. to 21s. per lb. c.i.f. The exchange advanced three days ago to piastres 435 per pound sterling for cheque and 0.86 dollars for one Turkish paper pound; to-day, however, we have a drop to piastres 410 and 9.92 respectively. The arrivals are 1,398 cases, against 195 at same date last year.

Messrs. Barker Brothers report for the week ended January 23:—We have had a quiet market this week, with sales amounting to only 6 cases of current qualities at piastres 920 per oke, equivalent to about 17s. per lb., c.i.f., and 2 cases extra selected Kara-Hissar at piastres 950—18s. 6d. per lb. The exchange for cheque on London is now about piastres 420 per pound sterling and 0.90 dollars per one Turkish paper pound. The market, although firmly maintained, we consider some needy sellers may make a slight concession should a serious buyer come forward to buy. The arrivals to date are 1,405 cases, against 165 at same date last year.

GREEK DEBT SERVICE.

The Council of Foreign Bondholders issues the following information compiled from figures published by the International Financial Commission at Athens with regard to the revenues assigned under the Law of Control for the service of the Greek Debt from January 1 to November 30, 1919 (New Style January 14 to December 13, 1919).

	Monopolies, tobacco stamps stamped paper & Naxos Emery	Piræus Customs.
	Drachmae.	Drachmae.
Gross receipts, November, 1919.....	5,185,363	5,058,591
Do. do. 1918.....	2,616,579	2,371,000
Estimated receipts for 11 months (Law of Control)	26,491,666	9,808,333
Actual do. 1919.....	45,455,664	45,409,309
Do. do. 1918.....	34,296,054	28,944,000
Difference between estimated and actual receipts for 11 months 1919	+ 18,963,998	+ 35,600,976
Difference between estimated and actual receipts for 11 months 1918	+ 7,804,388	+ 19,135,666

Of the surplus over the estimated receipts from monopolies, tobacco, stamps, stamped paper and Naxos Emery, 49 1/5 per cent. is applied towards increasing the minimum rates of interest and sinking fund of the External Gold Loans of 1881 to 1893. The receipts in gold from both Naxos Emery and the Piræus Customs are converted into drachmae at par when the average rate of exchange for the month is par or below par, but when the average rate for the month is above par the conversion is made at that average rate.

OIL NOTES AND NEWS.

Grosny Evacuated by British.

The North Caucasian Oil Fields, Limited, have received a telegram from their Grosny manager, dated Constantinople, January 30, stating that he and other British members of the administration, together with their families, have left Grosny en route for England. The company understand that this step has been taken on the advice of the British authorities, owing to the advance of the Bolshevist Army in the direction of Grosny.

The Spies Petroleum Co., Limited, state that a telegram has just been received from the manager of the company in Russia, dated Constantinople, January 30, to the effect that, acting upon the advice of the British authorities in the Caucasus, all British and American subjects have been evacuated from the Grosny Oil Fields, in view of the danger of the town of Grosny, where this company's properties are situated, being cut off by the advance of the Red Army. The telegram further states that the British members of the staff of this company and their families are proceeding to England, and that the properties of the company have been left in charge of two of the Russian employees of this company, and that the manager considers that the properties are safe should conditions improve.

Oil Situation at Baku and Ural District.

The following report on the oil industry at Baku and in the Ural district has been received from the British Military Mission, Economic Section:—Baku.—Production in 1914 was 425,000,000 poods, but fell to a minimum after the capture of Baku by the Turks. The half-yearly output since the British entered Baku has been:—1918 (first half-year), 117,352,484 poods; 1918 (second half-year), 53,149,805 poods; 1919 (first half-year), 104,674,528 poods. In 1918 the Bolshevists exported 70,000,000 poods to Astrachan, since when there has been no export in that direction. The Baku-Batoum pipe line started working in January, 1919, but owing to its bad state of repair only 17,000,000 poods have been pumped. No considerable quantity has been exported by tank car owing to the bad state of rolling stock. Total exports from Baku for the first seven months of 1919 in all directions amounted to 20,709,000 poods. Owing to the great falling off in export, stocks have increased so much that no further storage is available. Oil is at present being stored in open ambars. The total stocks at Baku on August 1, 1919, were 209,235,000 poods.

Ural District.—Owing to the firmness displayed by the Ural Cossacks there has been little actual Bolshevism in this district. Conditions of working have none the less been very bad. No drilling has been done during the last two years, and there has been no export since 1917, as the sole outlet, viz., the Volga, has been in Bolshevist hands. All available storage has been filled. Total stocks on July 1, 1919, were 15,153,000 poods.

STANDARD COMMERCIAL TRADING CORPORATION

(*Incorporated in the United States of America*),

4, London Wall Buildings,
LONDON, E.C.2.

GROWERS AND PURVEYORS OF LEAF TOBACCOS OF ALL TYPES FOR CIGARETTES AND PIPE.

The above Corporation can supply large quantities of Virginian, Carolina, and Kentucky Tobaccos; and Oriental (Turkish) Leaf direct from its own buying organisations on the markets abroad. Considerable quantities are now available in U.K. and Continental Ports.

EXPORTERS AND IMPORTERS OF RAW AND SEMI-RAW PRODUCTS FROM AND TO THE NEAR EAST.

The above Corporation is prepared to consider and handle propositions for any products from the Near East, and represent firms.

ENGINEERING.

MOTOR TRANSPORT IN THE SUDAN.

By Joseph Rhodes, A.M.I.Mech.E., A.M.I.Auto.E., S.G.S,

The need for reliable and inexpensive transport in a rapidly developing country like the Sudan is realised by everyone who is sufficiently interested to give the matter proper consideration. There is only one solution of the situation, and that is motor traction. Camels and other draught animals are already in heavy demand, and no great development can possibly take place in districts dependent upon such means of transport. At the present time animal transport is slow, unreliable, limits the weight of loads, and is by no means cheap.

After a recent journey of 400 miles in the Eastern Sudan by light motor lorry, the writer is convinced that mechanical transport of the correct type can be worked as a paying concern, between the outlying districts and the railways. The arguments put forward in support of motor-buses in England are applicable to the question of tractors in this case, and it is well known with what success the motor-buses competed with railways and trams. It is not intended to imply that tractors are better than a modern railway or light railway, though they have the advantage in many ways.

A few of the advantages of motor transport as compared with a railway are: (1) No expensive permanent way, station, or running sheds are required. (2) A service of tractors can follow the traffic demand in any direction. For instance, it may be that during certain months transport is required for a cotton crop in one district, and at another season a gum or grain crop in another. (3) Native labour can clear roads for tractors, but cannot lay a railway. (4) A much smaller European staff would be required for tractors. (5) Tractor service is justifiable in sparsely populated country where a railway would be a commercial failure. (6) The capital required for tractors is a very small percentage of the large capital expenditure of a railway. (7) In the desert districts of Kordofan and the Northern Sudan, there would be great difficulty and expense in providing an adequate water supply for a railway, whereas enough is obtainable now to supply cooling water for motor tractors.

The Correct Design.

Without the proper type of tractor and an experienced staff of capable motor-men, a mechanical transport service is doomed to failure. Motor tractors are, as a very little observation will show, widely different in design; indeed, no type of motor vehicle differs so radically in individual makes. There are more than thirty well-known models of chain track tractors, and great improvements have been made in their construction since the commencement of the war. One cannot lay too much emphasis on the necessity of designers paying great attention to reliability and interchangeability. At first sight the problem of designing a suitable tractor appears to be comparatively easy, until one considers the conditions under which the machine must work and the possible difficulties which may be met with. All that is required is ability to work at lowest cost, and elegance, neatness, and comfort do not enter into the subject. It is plain that many designers have had little knowledge of the varied requirements of traction work in countries like the Sudan. The two outstanding difficulties to be overcome are:—(1) Soft, sandy stretches of road, and soft mud in the rains. (2) Shortage of water in the dry season.

To overcome the former special attention must be given to the method of driving and the area of tractive grip. There are hundreds of miles of firm, cleared roads in many parts of the country where, provided the tractor has fairly wide driving wheels, there will be no difficulty in using any of the up-to-date types which are well geared down to give ample power at the draw bar. It is when such a vehicle is called upon to cross the broad bed of a sandy watercourse, or a deep sand drift, that it gets bogged. This is caused by the wheels having to sink in the soft ground until a point is reached when the surface of the wheel support in contact with the ground equals the surface area required to carry the load. The ground resistance is being increased as the surface of support is being increased, and when the balance is reached there is no further sinking in. The smaller the wheel used, the more it will have to sink in before sufficient of its periphery is in ground contact. It will further be seen that increasing the wheel width will increase the effective wheel surface, and with a given diameter the depression will be less in proportion to the increase in width. Where it is undesirable to increase the diameter of driving wheels, as in the case of motor-cars with interchangeable wheels, this principle has been applied, and it is customary to fit dual wheels on the driving axle, as in the colonial model F.I.A.T.

Crossing Soft Ground.

In crossing soft, loose sand with a light motor lorry having a total weight of five tons, two rolls of strong woven wire netting, ½-in. mesh, were laid on the ground in front of the driving wheels. This method was found to be successful, and the same principle could be used for heavy tractors, using sheets of expanded metal instead of wire netting. The mesh distributes the weight and prevents the wheels sinking in.

This sinking in is undesirable because, if the wheel sinks into the ground it rests on a hole, and has either to climb out or push the load of earth in front of it along, to make a track for itself, either of which calls for a considerable expenditure of power, and so much so that if the conditions are bad enough, the vehicle will be unable to extricate itself. To negotiate the sandy roads of the Northern and Western Sudan, tractors would have to be fitted with the chain track, e.g., "Caterpillar" drive, and carry their own tracks. The opinion has been expressed that a motor would extricate itself from a bad hole by means of a cable and anchor, in a similar manner in which a river steamer pulls itself of a sand bank, with its winch. The scheme does not appear workable.

The Water Problem.

The vehicle can be found which is capable of travelling over wet roads and sand; therefore, before discussing the subject further, attention may be given to the water problem. Steam tractors would be the most suitable in many ways. If designed for wood fuel, the fuel would be cheap, and easy to obtain. The mechanism of the steam engines is more easily understood by the native drivers, which is also an advantage. On most roads the lack of water prohibits the use of such vehicles, unless one could be designed to condense its exhaust steam and so economise feed water that it was capable of travelling, say, 100 miles between water supplies. Unless this can be done the only possible tractor is an oil one.

The "Ford" cars used for transport work by the Army on the Egyptian Western desert have condensers fitted to the radiators for the purpose of saving the precious cooling water, which otherwise boils away. In a hot country like the Sudan, the tractor radiator would need a similar condenser, together with a fan of ample size, easy of access and with simple driving gear. The cooling surface would

have to be extra large, and the water supply carried must be sufficient for 100 miles.

The very best solution of the problem would be the development of a suitable air-cooled engine. One of the well-known American Franklin cars with an air-cooled engine is at present being tested in Khartoum, and has now been running satisfactorily for some months. The engine is fitted with aluminium pistons, and works at high speed.

Bad Roads.

The conditions of the roads on the war front in France were worse than anything likely to be met with elsewhere. It can hardly be called ground over which the military tractors have to travel. It resembles more a morass. These conditions have stimulated invention, and it can be stated without hesitation that there are now machines which will haul loads safely over marshy ground in which a man would sink to his waist; in fact, it can safely be said that where a track can be found seven feet wide which does not present rocky obstacles over ten inches high, whether over sand, ash, clay, snow or marsh, on the level or on gradients up to one in three, the chain tractor has proved itself capable of travelling and performing useful work beyond the capacity of animal haulings.

The development of this type of vehicle is owing to the difficulty in working wheeled tractors over bad surfaces, and they are destined to occupy a position of increasing importance in the development of the Sudan, and in any new country where it is necessary to transport goods over roadless country.

(To be continued.)

MISCELLANEOUS TOPICS.

Molybdenum Steel.

A new method of determining the percentage of molybdenum in steel by chemical analysis is by dissolving the steel to be tested in dilute sulphuric acid. The ferrous sulphate is then oxidised by the addition of powdered permanganate of potash, care being taken to avoid adding an excessive amount, and the solution is then rendered alkaline by potassium hydroxide and boiled, after which it is passed through a filter. An aliquot portion of the filtrate is then diluted, faintly acidified by the addition of a few drops of hydrochloric acid and treated with an excess of standardised titanium trichloride solution. The excess is then titrated with ferric chloride solution, using potassium thiocyanate as an indicator. In solutions containing less than 0.05 gramme of molybdenum per litre and having an acidity corresponding with one cubic centimetre of free hydrochloric acid per 100 cubic centimetres, the reduction proceeds according to the equation $2MoO_3=Mo_2O_5+O$. Vanadium may be determined in a similar way, the reduction being according to the formula $V_2O_5=V_2O_4+O$. If molybdenum and vanadium are both present in a steel, they are determined together as described. The vanadium is then determined colorimetrically with hydrogen peroxide and the molybdenum is obtained by difference.

Fires Caused by Hertzian Waves.

The fact that the cause of many fires which have recently happened in towns in the Near East cannot be explained, reminds one of the assertion of a French scientist that the Hertzian waves of wireless telegraphy were the sole cause of several fires which were brought to his notice. Wishing to corroborate this view, this scientist proved by direct experiment that it was possible. He devised an apparatus called an "inflammatory resonator," and in which he could place the substances necessary for experimenting. He used for the experiments a Rohmkorff coil, which was made in his own workshop owing to the difficulties of war. The primary coil was suited for a maximum current of 20 amperes, and from the terminals of the secondary, sparks of 45 cm. to 50 cm. long could be obtained. He initiated the arrangements for wireless telegraphy by laboratory methods, and with such feeble currents as described succeeded in setting fire to guncotton, paper, cotton wadding, etc., from a distance of several feet. In cases, therefore, of spontaneous fires in warehouses with bales of cotton bound with hoop-iron, etc., he believes that these could be set on fire by the electric waves used in wireless telegraphy.

The Bank of Athens is opening a branch in Port Said.

Lieut.-Col. George Clifford Miller Hall, C.M.G., D.S.O., late R.E., and late Egyptian State Railways, has joined the board of the Anglo-Egyptian Bank.

SHIPPING INTELLIGENCE.

Forthcoming Sailings.

The Papayanni (Ellerman Lines) s.s. Worsley Hall, for Malta and Alexandria (taking cargo for Beyrout, Alexandretta, Mersina, Cyprus, etc.), will sail from Liverpool on February 14.

The Moss Line s.s. Karnak, for Syra, Smyrna, Constantinople, and Beyrout direct, will leave Liverpool on February 15.

The Ellerman Line s.s. City of Oxford, for Gibraltar, Malta, Syra, Smyrna, and Constantinople, will leave Liverpool on February 12.

The Ellerman s.s. Douro, for Patras, will close for cargo at Liverpool on February 20.

The Bibby Line s.s. Warwickshire, for Marseilles, Port Said, Colombo, and Rangoon, will close for cargo at Birkenhead on February 25.

The Prince Line s.s. Tudor Prince, for Tunis, Malta, and Alexandria, direct (taking cargo for Cyprus and Syrian coast ports, with option of transhipment at Alexandria), will close for cargo at Manchester on February 20.

The Johnston Line s.s. Rapidan, the first steamer of the season for the Danube, will close for cargo at Liverpool on February 14.

The Anchor Line s.s. Massilia, for Bombay, will close for cargo at Liverpool on February 18.

Notes.

The ex-German twin-screw 14,000 tons steamer Patricia, which has been handed over by the British Government to the Ellerman Lines, Limited, left Liverpool for India on February 7, with a large number of passengers. She is calling at Marseilles to embark about 2,000 Indian troops for conveyance back to their own country. With the object of giving the Board of Trade officials and members of the shipping community an opportunity to inspect the ship, Mr. Graham Smith, the Liverpool manager of the Ellerman Lines, Limited, entertained at luncheon, on February 5, in the spacious dining-room, a large gathering, when, in the course of a short speech, he said he wished to express, on behalf of the company, their thanks for the great courtesy and consideration that they had met with from all those who had anything to do with the vessel in preparing her for the new trade, the vessel having previously been employed in the Atlantic service of the Hamburg-Amerika Line. It was only by their united efforts that the company had been enabled to get the ship ready for her first voyage to India under their ownership. In conclusion, he wished to give them the toast of, "Success to the German ships under British management."

The s.s. Alexandra Woermann—a former German liner, allocated to the White Star Line by the British Government—left the Mersey, with a large complement of passengers, for Bombay, on February 9.

Shipping Movements at Malta.

(From Our Own Correspondent.)

Malta, January 19.

Considerable interest has been caused by the departure from the harbour of several naval craft, said to be bound for the Black Sea.

H.M.S. Tumult, Somme, Iron Duke, Steadfast, and Seraphis have all left for the East. The transport Assaye has arrived from Marseilles, and the transport Magdalene has left for England.

Lord Allenby has issued a proclamation removing the prohibition of the import of gold into Egypt.

According to statistics published by the Greek Ministry of Shipping, during 1919 new ships of an aggregate capacity of 265,460 tons were added to the Greek mercantile marine, which now totals 550,000 tons.

The receipts of the Egyptian Markets, Ltd., for the week ended January 14 were:—Cattle markets, £1,688; general markets, £759; total, £2,447; total for year, £5,489. The figures for the corresponding week last year, ended January 16, were:—Cattle Markets, £1,339; general markets, £635; total, £1,974; total for year, £4,470.

COMPANY MEETING.

LONDON COUNTY WESTMINSTER AND PARR'S BANK.

A Plea for Economy—Currency Problems—Mr. Walter Leaf's Statement.

The annual ordinary general meeting of the shareholders of the above bank was held at the head office, 41, Lothbury, E.C., on February 5. Mr. Walter Leaf (the chairman) presided.

The Chairman, at the outset, said there was hardly a point in the political situation which had not some bearing on the outlook of bankers, but he would be able to touch only on those which had a direct bearing on the shareholders' interests as proprietors of the bank. Proceeding, he analysed the leading figures of the balance-sheet. They were, he said, truly remarkable figures. Their deposits had grown during the year by no less than 42 millions, of which about six were due to the absorption of the Nottingham and Notts Bank. In so far as the figures were only a reflection of an inflated currency, these large figures were by no means a ground for satisfaction; and they would be entitled to congratulate themselves when a falling off in circulation began to reduce them to a more modest total. They had carried out the increase of capital proposed a year ago, and had raised the reserve to £8,750,000. To do this they had transferred from profits £165,720. The rest of the increase came from the premium on shares issued. There was a large increase under the head of advances to customers and acceptances. This was the measure of the assistance the bank was giving to the remarkable increase of British commerce and industry which was developing, as they had always hoped, with the long delayed coming of peace. The demands which they anticipated, and which were a strong motive for the strengthening of the large banks by amalgamation, were now coming upon the bank in full force, and at the present rate promised soon to tax all our resources to the full. He then made a running commentary on other leading items in the balance-sheet—their investments and the premises account. The Ulster Bank had continued to make satisfactory progress; he gave details of the bank war memorial scheme, and as to the staff, they had received during 1919 no less than £400,000 in excess of what the bank paid them in 1918, in addition to the bonus in shares given them in the course of the year. Further, they had just adopted a fresh scale of salaries, with a bonus for the current year designed to meet the needs of the staff on a liberal scale.

He could not refrain from alluding to the sudden and very serious increase in the cost of cotton, which was likely to hamper in the very near future the growth of our greatest textile industry. This increase was quite independent of any question of exchange; it was due to an alarming shortage of the raw material. The American crop had been materially curtailed by the ravages of an insect pest, which was, unfortunately, spreading till it threatened the complete destruction of the Sea Island cotton. At the same time the United States were competing with us for the limited crop of Egyptian cotton, which was of the utmost importance to Lancashire, with the result that the price had been forced up from about 29d. at the beginning of October to no less than over 76d. to-day. The prospect was undoubtedly serious, and it was to be hoped that speedy effect would be given to the efforts which were being made to extend the growth of cotton within the Empire. Their bank had, through its branch at Liverpool, so large and direct an interest in the cotton trade that he ventured to call special attention to this grave question. Referring to our imports and exports, he quoted certain items from the Board of Trade Returns—especially articles of luxury and foreign wines and spirits. Here it was that we should look for an earnest effort of self-denial if we were honestly determined to hold up our heads before the world and face our creditors with a clear conscience. Had we done our best to reduce our importations of articles of mere luxury? Referring to the heading of foreign wines and spirits, especially foreign brandy, rum, port, and champagne, he said it was, to his mind, a scandal that, when everyone should be earnestly doing his best to put the national balance-sheet straight, we should during 1919 have imported no less than £26,695,000 of foreign wines and spirits. Of this, importations from Portugal—that was, port wine—amounted to over eight and a half millions, and champagne alone to £3,861,000. It was an increase over 1918 of sixteen and a half millions—all a dead loss, a hindrance and a discouragement to those who were striving earnestly to set our national finances on a solvent basis. This was only a part of the whole system of wanton extravagance which was only too obvious. Remember that these things were not done in a corner. They were discussed in the United States, as he found on his recent visit to America. We are at present in the position of having to ask America, in one form or another, for extended credits due to our excess of imports. It would not be an overestimate to say that of the gap of 150 millions or so, which last year represented our addition to foreign indebtedness, at least one-third, perhaps a half, might have been saved if we had been content to live in comfort and eschew mere vulgar ostentation.

Great Britain and United States.

Proceeding, he said that he had had an opportunity of discussion with many of the leading men in political thought as well as in finance alike in New York, Washington, Boston, and Chicago. Everywhere he was impressed with the feeling of real friendliness towards this country, a feeling which attained a really astonishing climax in the reception of the Prince of Wales in New York. Wherever he (the chairman) went he was asked to say something about co-operation between the two countries. On the other hand, there was clearly a strong revulsion, after the enthusiasm of war, against European entanglements. Of the traditional boastfulness of our American cousins he saw nothing; the part that this country had played in winning the war was more than generously acknowledged, and he never heard a more eloquent eulogy of England than from the mouth of a Chicago banker who had held an important post with the rank of brigadier-general in the American army in France. When the talk turned on European mandates, he had rather to complain of American modesty—a reluctance to take any part in European administration on the ground that the United States had no trained Civil Service capable of the work. And it was clear that in this direction no help was to be looked for. When it came to a question of credits, the American attitude was distinctly critical and suspicious of our expenditure on luxury—all the more because they had imposed on themselves the severe restrictions of the prohibition law. This was continually brought up against him, and he found it difficult to reply. There was also an idea, which he disclaimed without hesitation, that the fall in the American exchange was favourably regarded here as an incentive to our export trade. But, generally speaking, the attitude taken was that which had been so forcibly summed up by Mr. Hoover, that the remedies for our own troubles were in our own hands, in our own resolution to work and save; and that it was neither prudent nor consistent with our dignity as a great nation that we should come to the United States with petitions for great loans to help us through. With that view he was entirely in agreement; and he could not help expressing his regret that well-meaning, but, he was afraid, mistaken appeals should have been recently made for amounts which could only defeat co-operation by their very magnitude. That was not the policy either of English financiers nor of the British Government. So long as we take the bold stand that we mean to pay our debts, and were well able to do so, and that we were anxious to co-operate with the United States in the great task of the restoration of Europe, he for one had no fear either of the loss of our commercial and financial place in the sun, nor of any serious discord between the two great Anglo-Saxon nations on whose friendship such vast issues depend.

The Currency Question.

He went on to say, the question of the depreciation of our currency, with its direct effect in the rise of prices, was a matter which came home to all of us every day, and was at the bottom of a great part of the universal sense of unrest. He was no believer in proposals for artificial restrictions of the currency. To say that the total issue of Treasury Notes should not exceed an arbitrary amount seemed to him useless; it came to the same thing, since the amount of gold in the country was a fixed sum at any time, to say that the currency could only be issued against a fixed percentage of gold. So long as the Government was freely issuing claims for currency, it must supply the currency to meet them; to fix an upper limit would in time merely bring us to a point when the banks would find themselves unable to meet their customers' demands for notes, and we should have to choose between bankruptcy or a removal of the restriction. It would be like trying to cure a fever by plugging your clinical thermometer at "normal," and the only result would be that you would burst your thermometer. The only remedy was to attack the fever, to stop the issue of claims to currency in the form of Government expenditure and Government credits. It seemed to him that the fixing of arbitrary limits, so far as it had any effect, was rather to delude us by the idea that the limit was the normal, and that so long as we were below it we were all right. The currency returns were an infallible clinical thermometer to measure the fever from which the body politic was suffering. Happily we saw our temperature had fallen just a little during the last five weeks; we might hope that we had reached the turning point. But we were yet a long way from the normal. Just where that would be we could only find out by experience; we do not yet know how many £1 notes would circulate when we had reached stability, but there would be no difficulty in saying when we had reached that point; we should have reached it when a "Bradbury" exchanged freely for a sovereign, and a sovereign for $4.866, so that London was once more a free market for gold. And that end could be gained only by steady and determined self-denial; it was definitely postponed and made harder of attainment by waste and luxury, private as well as public. That was the direction in which we could each best set ourselves to help our country now.

International Position.

Finally, he alluded to the International position, observing that it was necessary to take a wide and humane view, a generous outlook which took cognizance of more than the passions of the moment. We must learn to put aside all thoughts of mere destruction, and to recognise that the attempt to annihilate Germany by preposterous demands for reparation would hurt ourselves far more than it will hurt Germany, and would mean not only economic but social suicide for England. Nor must there be any boycott of German trade. The blackness of the cloud which hung over the Continent was alarming to us all, and was a gloomy background to all the hopes which we could base upon our own reviving trade. But the prospect must be boldly faced and fearlessly handled; and we might well hope that the coming year might see, abroad as well as at home, the turning point of our economic troubles with our own land in unquestioned place as the leader in the new civilisation. (Applause.)

The report was unanimously adopted and other formal business transacted. A hearty vote of thanks to the Chairman closed the proceedings.

COMPANY NOTES AND REPORTS.

Delhi-Umballa-Kalka Railway.

The report of the Delhi-Umballa-Kalka Railway Company for the year ended September 30 states that the company's share of the net earnings for the year is £157,679, against £151,479 for 1918. The actual rate of exchange was, however, much higher than 1s. 4d., the book rate, and adding the actual gain in remittance, the net earnings for the year are £174,567, against £164,634. After bringing forward the balance from last year of £27,011, providing for interest on debenture and preference stocks, interim dividend and bonus, interest on capital advances, and making other adjustments, the amount to be dealt with is £59,902. The directors recommend a final dividend of £5 per cent., together with a bonus of £3 per cent. on the ordinary stock, subject to tax at 4s. 9d. in the £, and that the balance of £11,102 be carried forward. The dividend with bonus recommended for the year is at the rate of 14 per cent. per annum. The total coaching receipts show an increase of Rs.2,41,793, due partly to the greater number of passengers carried, but to a greater extent owing to the rise of fares. The total number of passengers carried was 332,433 more. The total tonnage carried increased by 73,013, but receipts decreased by Rs.65,860. The coal traffic increased by 41,880 tons. General merchandise decreased by 3,612 tons. The capital expenditure during the year amounted to £2,203 on the open line and £3,619 on the Jhind-Paniput extension. Of the amount expended on the Jhind-Paniput extension, £1,297 was provided by the company and £2,322 by the State. Meeting, Gresham House, E.C., February 18, noon.

Shahdara (Delhi)-Saharanpur Railway.

The report of the Shahdara (Delhi)-Saharanpur Light Railway Co., Ltd., for the twenty-eighth half-year ending September 30 states that the length of the open line is 92.50 miles. The total expenditure on capital account up to September 30 was Rs. 44,00,756. The expenditure incurred during the half-year on capital account for additions to station buildings, etc., amounted to Rs. 7,157. The earnings for the half-year were :—Coaching, Rs. 2,39,819; goods, Rs. 1,01,196; sundries, Rs. 5,453; making a total of Rs. 3,46,468, as compared with coaching, Rs. 2,36,907; goods, Rs. 1,83,953; sundries, Rs. 1,076, a total of Rs. 4,21,936 in the corresponding period of 1918. The excess in coaching is due to raising of the third-class fare from 3 pies to 4 pies. The decrease in goods is due to restrictions by Government on the consignment of goods outside the province. The working expenses were Rs. 2,12,610, which include Rs. 50,000 transferred to credit of renewal fund, or 61.37 per cent. of the gross earnings. The net revenue for the half-year is Rs. 1,37,473, which includes Rs. 3,615 interest accrued on the surplus funds of the company, and the balance brought forward from the previous half-year was Rs. 1,96,918. The interest on debentures at the rate of 4½ per cent. per annum amounting to Rs. 54,084, and the London Agency charges Rs. 1,803, have been paid, and income-tax Rs. 4,000 also provided for. The directors recommend the payment of a dividend of Rs. 3½ per share, equal to 7 per cent. per annum, which will absorb Rs. 52,500, and that the balance of Rs. 2,28,806 be carried forward, out of which Government's moiety of profit is Rs. 23,736, and managing agents' commission amounts approximately to Rs. 9,000.

East Indian Coal.

The report of the East Indian Coal Company for the half-year ended October 31 states that, after making the usual allowance for the depreciation of buildings, plant, and machinery, writing £15,000 off development account, and adding £10,000 to general reserve, the half-year has resulted in a profit of £19,080, making, with £3,102 brought forward, a total of £22,182. An interim dividend of 15 per cent., less tax, was paid on January 2, and the balance to be carried forward is £4,182. The output was 427,374 tons during the half-year, against 313,359 tons. The loan from Messrs. Jardine Skinner and Co. has been substantially reduced during the past half-year, and a further reduction should be effected during the current half-year. Meeting, 14, Billiter Street, E.C., February 17, noon.

SALE OF STALYBRIDGE MILLS.

A circular has been issued by Messrs. Henry Bannerman and Sons, Ltd., of which Sir Charles Macara is chairman, announcing that a change has taken place in connection with the Bannerman Mills Co., Ltd., of which they are the proprietors. The merchant business of Henry Bannerman and Sons was established 115 years ago. Subsequently the mills known as the Bannerman Mills Co., Ltd., were carried on by the members of the firm of Henry Bannerman and Sons, but as separate concerns. These businesses, although converted into limited companies, remained the property of Henry Bannerman and Sons, Ltd. After the original purchase of mills at Manchester and Dukinfield, spinning mills at Stalybridge were acquired. The Stalybridge mills were mostly engaged in spinning yarn for sale and export. It has now been decided to dispose of these latter mills and to carry on and extend the original mills at Manchester and Dukinfield (at which both spinning and weaving cotton are carried on) under the sole proprietorship as heretofore of Henry Bannerman and Sons, Ltd. The purchaser of the Stalybridge Mills is Mr. Samuel Langshaw, of Lees, near Oldham, on behalf of a syndicate.

The traffic receipts of the Egyptian Delta Light Railways for the eleven days ended December 31 amounted to £E16,663, making the total for the year £E278.427. The figures for the corresponding period of 1918 were £E14,188 and £E272,209.

LANCASHIRE COTTON.

(From Our Own Correspondent.)

Manchester, Monday.

We continue to experience a very strong market. Price concessions are quite out of the question, and the tendency of values has been against buyers. The position of affairs with regard to Egyptian cotton becomes more extraordinary from week to week, and another substantial rise in quotations has to be recorded. The demand for the article is very extensive, both for Lancashire and the United States. The requirements of tyre cloth producing companies are increasing by leaps and bounds. Yarns made from Egyptian cotton have been put up in price very firmly. Small lots have been sold at tremendous figures. Producers experience no difficulty in clearing the output of the machinery, and many spinners are fully sold up to the end of this year. In piece goods for Egypt, sales have not been quite so numerous this week. The demand, however, is persistent, and the falling off in the turnover is only expected to be temporary. Some shippers to the Levant are now showing less enterprise, as there are reports of dealers on the other side being over-supplied. More business has come round in piece goods for India. Encouraging sales have occurred for China. The South American outlets have given useful support. Manufacturers as a body have met with plenty of demand, and much more cloth could be sold but for the fact that the output of the looms is not nearly sufficient to meet the requirements of customers. American yarns have been stiff in quotation, but trading has not been very important. Twists well maintain their strong position, but the lower numbers in wefts are getting a little more plentiful. Demand continues to be met with in coarse numbers for the Levant, and trade remains active for India.

SUPPLIES AND PRICES IN TURKEY.

The following extracts are taken from recent reports received by the Imperial Ottoman Bank:—

PANDERMA, January 15.

As was indicated in the previous report, the collection of the tithes from olives of the regions bordering our town which had been put up for auction towards the end of November has finally been adjudged for £T36,500. The production of the crop is estimated at more than 1,300,000 kilos, and the forecasts of the price of olives indicate a rise in this produce.

The rains that have fallen during the month have been so abundant that their continuance threatens, we understand, the winter sowings in the plains or in the flat country. On the other hand, the sowings on higher land or on the hills are greatly benefiting by this excess of rain.

Business has been very quiet during the month.

STAMBOUL, January 17.

The Constantinople market has suffered this week from the influence of a marked rise in the price of exchange and of gold, which has thrown business here into confusion. However, the prices of merchandise have increased in a proportionate measure to the more or less strong demand for them. But the high course of the exchange, which seems largely to have been reached as the result of speculation, could not long be maintained, and a sharp recoil followed, leaving the market, so to speak, disorganised.

Manufactures.

The high prices continue at Manchester. Raw cotton has reached 37¼d. per lb. (the highest price during the war was 26d.), and manufacturers refuse all delivery for 1920, the nearest date being from 16 to 18 months. It is estimated that both in England and America the prices of all kinds of manufactured goods have risen at least 50 per cent. since the Armistice. In these conditions merchants who take delivery of their orders in England find it easy to realise in the same place.

During the week three vessels arrived from England and one from America loaded in part with manufactured goods. But it is estimated that there will be a marked decrease in future arrivals. Thanks to purchases made by the large houses from weak holders, the crisis that was feared has been averted.

The Public Works Department in Tunis has just introduced a measure created by the decree of December 29, 1913. A committee has been appointed to examine all claims affecting mineral taxes. It is presided over by the Director-General of Public Works, and is composed of the Chief Inspector of Mines, a representative of the Financial Administration, and two mining prospectors.

The receipts of the Egyptian markets for the week ended January 28 were:—Cattle markets, £1,641; general markets, £682; total, £2,323; total for year, £10,062.

NEW COMPANIES.

Baltic and Black Sea Grain.

The Baltic and Black Sea Grain Co., Ltd., was registered on January 23 as a private company, with a capital of £15,000, in 1s. shares. Objects: To carry on the business of grain importers and exporters, shipowners, etc., in the United Kingdom, British Dominions, Russia, or elsewhere. The subscribers are to appoint the first directors. Solicitor: H. J. Fisher, 9, Great St. Helens, E.C. Registered office: 14, Copthall Avenue, E.C.

Seferiadis Tobacco.

The Seferiadis Tobacco Co., Ltd., was registered on January 28 as a private company, with a capital of £100,000, in £1 shares. Objects: To take over the business of a tobacco merchant and manufacturer carried on by B. Seferiadis as the Seferiadis Tobacco Co. The first directors are:—B. Seferiadis, 10, Berkeley Street, W., tobacco merchant; L. Jacoubovitch, 20, Jermyn Street, S.W., banker; S. de Castro, 20, Jermyn Street, S.W., merchant; M. Berline, 48, Onslow Square, S.W., gentleman. All the above are directors of De Sefi, Ltd., and all, except L. Jacoubovitch, are directors of the Russian Foreign Trade Co. Solicitor: T. Trimnell, 71, Lincoln's Inn Fields, W.C.

Oriental Mercantile Air Navigation.

The Oriental Mercantile Air Navigation, Ltd., was registered on January 15 with a capital of £225,000, in £1 shares. Objects: To carry on the business of manufacturers of and dealers in aircraft, etc., and to enter into an agreement with the I.A.C. Syndicate, Ltd. The first directors are:—A. M. Barnes, J. A. Gant, J. W. Jones, and W. J. V. Hoytema. Solicitors: Corbould-Ellis and Co., 1, Church Court, Clements Lane, E.C.

United Oil and Coal Corporation.

The United Oil and Coal Corporation, Ltd., was registered on February 4, with a capital of £100,000 in £1 shares. Objects: To carry on the business of manufacturers and sellers of a compound and combination of oil and pulverised coal, coke, lignite, or other material, vendors of oil for fuel, lubricating, lighting, or heating purposes, manufacturers of apparatus for the lubrication of machinery and engines, manufacturers of patent fuel, etc. The first directors are:—Sir Frederick W. Black, K.C.B., 22, Fenchurch Street, E.C.; Sir Byron Peters, K.B.E., M.I.M.E., 3a, Deans Yard, Westminster; T. Jowett, 51, Savoy Court, W.C., manufacturer; W. T. Watts, 22, Fenchurch Street, E.C. Registered office: 38, Victoria Street, Westminster.

Algiers Bunkering Association.

The Algiers Bunkering Association, Limited, was registered on January 31 as a private company with a capital of £25,000, in £1 shares. Objects: To carry on the business of steamship bunkerers and agents, coal, coke, oil and fuel merchants, contractors and agents, coal dischargers, stevedores, owners of coal depots at Algiers or elsewhere, etc., and to adopt an agreement with Frank C. Strick and Co., Limited. The first directors are: F. C. Strick, E. Brodrick, and A. L. Thomson. F. C. Strick may retain office, while F. C. Strick and Co., Limited, hold £2,000 shares, and E. Brodrick may retain office while Sir John R. Ellerman holds £2,000 shares. Managers, Frank C. Strick and Co., Limited. Solicitors, Bullen, Debenham and Co., 52-53, Cheapside, E.C. Registered office, Baltic House, 127, Leadenhall Street, E.C.

London, Paris and Marseilles Steamship.

The London Paris and Marseilles Steamship Co., Limited, was registered February 4 with a capital of £1,000,000 in £10 shares (50,000 preference). Objects: To carry on the business of shipowners, carriers by land and water, shipping managers, chartering agents, wharfingers, etc. The subscribers (one share each): H. C. Albino, The Manor House, Bourton-on-the-Water, Gloucester, shipowner; A. L. Thomson, 9, St. Albans Road, Kensington, W.8, shipowner; A. E. O'Neill, The Moorings, Bushey Hall Road, Bushey, shipowner; A. Walker, 206, Walm Lane, Cricklewood, N.W.2, marine engineer; R. W. Woods, 13, Upper Phillimore Gardens, W.8, solicitor; J. W. Holmes, The Shute, St. Laurence, I.W., merchant; H. M. A. Hennessy, Bourton, Station Road, Wokingham, secretary to steamship company. Minimum cash subscription, seven shares. First directors: Felix G. Chacon, F. C. Strick, F. G. Jonas, A. Walker, A. L. Thomson, H. C. Albino, J. W. Holmes, R. W. Woods, and A. E. O'Neill. Qualification, £500. Managers, Frank C. Strick and Co., Ltd.

"Bragosev," Ltd.

"Bragosev," Ltd., was registered as a private company on February 2 with a capital of £1,000,000 in £1 shares. The subscribers (one share each) are: F. Thwaite, 4, Langham Mansions, Earl's Court Square, S.W., solicitor; E. C. Mercer, 38, Morrison Street, S.W., solicitor's clerk. The subscribers are to appoint the first directors. Solicitor: W. E. Pickerd, 20, Gamage Buildings, 118-122, Holborn, E.C.

ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Street, Monday.

The firmer tone at the end of last week did not last long; a further depreciation in the European exchanges brought out a good bit of selling of Government stocks, and this, coupled with a bout of profit-taking in Egypt, caused a certain amount of depreciation here, so that most prices are lower this week. At the close, however, a better feeling seems to have come over the Egyptian market, and there is again some renewal of inquiry from that side at the lower prices now current, with every indication that, should the European exchanges stop depreciating, there will be a sharp rally in prices. Egyptian Unifieds are 3½ points down at 75, and the 3½ per cent. Prefs. have dropped two points to 63½. The Turkish 3½ per cent. Egyptian Tributes are half a point lower at 60½, and City of Alexandria Bonds, after dropping to 68, finish half a point down at 69. Turkish Unifieds have also dropped 1½ points to 36.

In Bank shares, Nationals, on some quite small sales, have tumbled rather heavily one point to 22¾, and Agriculturals are a quarter down at 5½. There has been a sensational movement upwards in Anglo-Egyptian Banks to 19¾, a rise of two points, on various unconfirmed rumours. Land Banks have also been a firm spot, advancing an eighth to 6¼.

In Railways, Delta Lights have put on one-eighth at 6¾.

In Land shares, Aboukirs and New Egyptians have been the firmest spots, and have been practically throughout the week in good demand for Egypt round the current levels. Some business took place in Allotments at 4. Béhéras close three-quarters down at 24¾. Consolidated Lands have been very active and strong all through the week, and close 3½d. up at 3s. 5d. Delta Lands, on the other hand, have come on offer, and are 1s. down at the close at 20s. 6d. Gharbiehs have changed hands to the extent of a few hundred shares round the current price. Sidi Salems have been done at 3 3-16, a decline of one-sixteenth. Sudan Plantations are three-eighths down at 8½. Union Foncières, on the other hand, are a very firm spot at 6, a rise of one-eighth.

In Miscellaneous descriptions, Alexandria Waters have risen ⅛ to 10⅞, Egyptian Markets have declined 9d. to 23s., and Salts and Sodas are 3-16ths lower at 3 1-16. Of Khedivial Mails there is some quiet buying at the present level, and the same remark applies to Morum's Oriental Stores.

In Greek securities, there has again been a hard tendency. The 1881, 1884, and Monopoly Loans are all half a point up at 54½ and 48½ respectively. Some small business has been done in Larissas round the current level. The 1902 Loan is quieter and a point down at 57, and the 1914 London issue is also a point lower at 64. The 1910 Loan has been in good demand, but the price closes half a point lower at 44½.

BANK OF BRITISH WEST AFRICA, LTD.

A branch of the Bank of British West Africa, Ltd., has been opened in temporary premises at 17, Ivegate, Bradford. The bank has branches at Manchester, Liverpool, New York, Canary Islands, Egypt, and throughout West Africa and Morocco, and agents and correspondents in all parts of the world.

The traffic returns of the Egyptian Delta Light Railways for the ten days ended January 10 amounted to £E16,188, making the total for the year £294,615. The corresponding figures for 1919 were £12,883 and £285,092.

Notice is given in the *Gazette* that the provision of the Treaty of Peace to the effect that the property of German nationals within the territory or under the control of an Allied or Associated State may be constituted a pledge for enemy liabilities is applied to Egypt.

BRITISH TRADE CORPORATION.

(Incorporated by Royal Charter),

13, AUSTIN FRIARS, LONDON, E.C.2.

Telegrams: "Trabanque, London."

CAPITAL: Authorised - £10,000,000 Subscribed and Paid Up - £2,000,000

Governor - THE LORD FARINGDON.

Manager, A. G. M. DICKSON. London Manager, P. C. WEST. Secretary, G. De B. BROUNLIE.

The Corporation has been established with the object of developing the Trade of the British Empire in every part of the world, and brings to the notice of all interested that it is prepared to grant financial facilities to British Manufacturers and Merchants for the increase of their Import and Export Trade.

It will be prepared to assist in opening up new channels for enterprise, and will afford financial facilities for the enlargement of works and the extension of plant.

The Corporation is appointing representatives in the chief cities of the world, and will open credits at home and abroad. It invites inquiries, and will endeavour where necessary to put expert advice at the disposal of correspondents regarding the financing of their foreign and overseas business. Moneys received on fixed deposit. Terms on application.

The President of the Manchester Chamber of Commerce, at the annual meeting on February 9, said the demand for cotton goods exceeded the supply, and there was no hope of an early increase of production. Prices were high, but it would be foolish to reduce them, as most of the goods went abroad and helped to swell our exports.

Prague will shortly have a population of over a million through the incorporation of the suburbs into the city.

For the relief of Eastern Europe, the Serbian Red Cross has given 10,000f. (Swiss) to the League of Red Cross Societies.

Reuter's Bombay correspondent, in a message dated February 4, states:—The mill strike has ended. All mills are again working normally.

For BUILDING UP your HEALTH take

WILKINSON'S (Estd. since 1829)

ESSENCE OR FLUID EXTRACT OF RED JAMAICA

"We cannot speak too highly of it."—LANCET. **SARSAPARILLA**

(The best "Pick-Me-Up")

Pronounced by the HIGHEST MEDICAL AUTHORITIES the Safest and Most Reliable Remedy for

Torpid Liver, Debility, Eruptions, and the most WONDERFUL PURIFIER of the HUMAN BLOOD.

IMPORTANT EVIDENCE.—"We recommend your Jamaica Sarsaparilla."—MEDICAL REVIEW.

"The only preparation for removing what may be called the sequelæ of a mercurial course."—SIR R. MARTIN.

The late LORD CLYDE said:—"I am never without it, for when feeling depressed or out of sorts from anxiety or fatigue, a dose or two animates me."

"It cured me of Torpid Liver after all other remedies failed."—EARL OF ALDBOROUGH.

N.B.—Indispensable to all who value Health.

A World-wide Reputation for over Three-Quarters of a Century.

NOTES OF THE WEEK.

The decision taken during the past week by the Supreme Council of the Allies sitting in London to allow the Sultan and the Turkish Administration to remain at Constantinople was not altogether unexpected. In these pages we have insisted for some months past that the logic of events was opposed to any other solution. If the Allies in peace time had been able to live up to the principles enunciated as their war aims, they could have made out a good case for an ideal administration in Constantinople. But ideals went by the board in Paris, and there was little in the history of the Conference to distinguish it from the "Pull devil, pull baker" record of any previous gathering of a similar kind. Not only was there no unchallengeable alternative to the maintenance of Ottoman jurisdiction in Constantinople, but any alternative proposed was seen to be open to objections as serious as those that could be brought against the Turkish *régime*. The present decision, therefore, is wise, although, in view of the repeated assertions that the opposite policy would be adopted, it must be recognised as heroic.

The most unfortunate feature in connection with the decision is that it should have been so long delayed. Time has been given for a variety of movements to make capital out of the retention of the Porte in Constantinople. A political agitation in India has been offered a weapon of which it is likely to make further use in the future; the Nationalist party in Turkey, which bears a strong family likeness to the organisation of the Committee of Union and Progress, will be quick to pose as the saviour of the country. It will be well, therefore, if the Allies publish a candid statement of the reasons which have led them to withdraw from their former position regarding the future of Constantinople. Certain it is that their decision has not been prompted by the revelation of an unsuspected capacity for administration on the part of the Turk. They can be under no illusions as to the necessity for making themselves strictly responsible for the good government of Constantinople and the rest of Turkey, and as a mandatory condominium is out of the question, there ought to be a definite understanding that the Turks are to be required to look to one Power, and to one Power alone, for practical and disinterested advice in the art of government. If the Allies in this matter will "play the game" themselves, they will have still better reason to be satisfied with their Turkish settlement. By strengthening the hands of the mandatory State they will be able to convince the Turks that they are indifferent to all considerations of party and are only concerned to see that Turkey is provided with an efficient and progressive Government.

It would be nothing short of a world tragedy if the decision to leave the Sultan and the Turkish Administration in Constantinople implied that the Allies proposed to wash their hands of the Turks after a drastic curtailment of Ottoman jurisdiction in Asia. The reluctance to insist upon differences in political development among the Allied States may have been natural and would reflect credit on the more advanced Powers; but to allow mutual jealousies to deprive the Turks of the period of political training which in their own interests they ought to undergo would merely lay up an additional heritage of trouble for Europe. Justice to the Turks as a race, to whose individual qualities testimony has often been borne, requires that, if in any part of the world a new era is being ushered in, they should be given every assistance in evolving a worthy administration. To this end it will be necessary to avoid taking sides in Turkish politics at an early stage, in the light, for instance, of events during the Armistice period. Lip-service to the Entente cause may not necessarily cover greater administrative capacity than rough-and-ready methods of defending what were regarded as Turkey's rights. The confidence of all Turks, as far as possible, should be won by a readiness on the part of the Allies to start with a clean slate. But such a policy presupposes the strength of mind to deal firmly with any attempt to take undue advantage of Allied altruism, and, above all, to perpetrate fresh massacres.

While the Supreme Council will receive considerable support—particularly in France—for their Turkish settlement, their self-complacency has been subjected to a severe shock by the receipt of a long memorandum from President Wilson directed against the latest move in the adjustment of the Adriatic question. Amid a variety of proposals that have been put forward in the last two years for the settlement of this controversy, the main point at issue is whether the frontier line between Italy and Yugo-Slavia shall be so drawn as to bring Italian territory up to the walls of Fiume or whether it shall run a little west of the middle of the Istrian peninsula. After having agreed to the latter proposal in concert with the United States Government, Great Britain and France appear to have been won over to the Italian demand and presented the Yugo-Slav Government with the choice, in the form of an ultimatum, between accepting this solution and the enforcement of the Treaty of London. There was no justification for this

Digitized by Google

action, and President Wilson has apparently reminded the British and French Governments of this fact. Clearly a delicate position has arisen in consequence of this step, and the two Governments are once more confronted with the alternative between insisting upon a wrong course and going back upon a deliberately chosen line of policy.

A telegram received in London a few days ago from the Chief Agent of the Lord Mayor's Fund for the relief of Armenian refugees reported the massacre of 1,500 Armenians near Marash, at the end of January. It added that two Americans were murdered near Aintab on February 1, and that both outrages were believed to be the work of Nationalist bands. Later reports, coming by way of Constantinople, put matters in an even worse light, the total number of victims being estimated at 7,000, and fears being expressed for the safety of 150,000, unless assistance is sent promptly. There can be no doubt that these events are directly connected with the Turkish Nationalists' recent attempt to drive the French garrisons out of the Aintab-Marash district. The French, it will be recalled, were reported to have armed the Christian population; and eventually they dislodged the Turkish bands from the positions they had captured. But they were not in sufficient force to do more than this; so the Turks have been able to wreak their vengeance on the ill-fated Armenians for fighting against them. If this reading of events be right, it affords some explanation of—but, of course, no excuse for—the outbreak at a time when even the Nationalists might have been expected to show some discretion; and especially to avoid irritating or embarrassing the French, who are apparently not so hostile towards them as some of the Allies. It will be interesting to see what French official reports have to say regarding these deplorable occurrences, if, and when, any are published.

In his outspoken championship of Montenegro, Mr. R. McNeill has not only deserved well of that country, but he has saved his own in some measure from the reproach of being wholly indifferent to a grave injustice which it seems powerless to prevent. Mr. McNeill's speech in Parliament on February 12 was a masterly indictment of British action or inaction in regard to Montenegro, and no impartial reader of the debate could pretend that Mr. Bonar Law attempted to meet, still less to counter, any of the charges. He did, however, carry the matter one point further than any Government apologist had done before, by definitely ranging the British Government against King Nicholas in the Montenegrin controversy. "Our information," he said, "is not to the effect that there is on the part of the majority, or any thing like a majority, of the Montenegrin people any desire to have the King restored as King of Montenegro." If the British Government believe that to be the case, there is still less justification for their failure to insist that the Montenegrin people should be left entirely free from all outside pressure in order to be able to record the national will by an uninfluenced plebiscite. The most elementary knowledge of Balkan psychology would have told them that they have adopted a course which must lead to constant intrigue and unrest, while a free vote would have settled the future of Montenegro in a way that would have prevented the perpetuation of dynastic feuds that have retarded the development of the Serbs for a hundred years.

The notorious Ramadhan es-Shallash has departed from Deir ez-Zor, but his departure has not been followed by that change for the better which might have been expected. Indeed, a semi-official statement issued last week declares that the new Governor, one Maulud Pasha, "continues his predecessor's policy of inciting the tribes throughout Mesopotamia to active revolt and rebellion": and it adds, significantly, that he appears to be well supplied with funds for this purpose. It would be interesting to know whence these funds come, and doubtless our Intelligence is making, or has already made, the necessary investigations. But what concerns us much more closely is the fact that he has had the effrontery to threaten the lives of our political officers, and has actually attempted—fortunately unsuccessfully—to waylay one of them. It would also seem probable that he is referred to in a Busreh telegram, which reports that "the representative of the Arab Government" has repudiated the temporary frontier between Syria and Mesopotamia fixed by the Peace Conference; has suggested that we should retire, in his favour, below Anah: and has forcibly occupied Miadin (or Mayyadin).

This is precisely the kind of policy that might have been pursued in the past by the Sheikh of one petty tribe in dealing with the Sheikh of another tribe, but it is, emphatically, not what would be expected from the official representatives of one Government in dealing with representatives of another. We are ready to recognize the difficulties under which the young Arab Government is labouring at present, owing partly to the peculiarities of the Arab temperament, partly to the conditions under which the Arab lands have lain for many years, and partly to unfortunate conditions for which they cannot be held even remotely responsible. Making every allowance for these things, however, it is obvious that such a situation as that which has arisen on the Euphrates is not to be tolerated indefinitely; and the Damascus Government would be well advised to give it immediate attention. Maulud Pasha is as clearly the wrong man in the wrong place as was his predecessor: he should be recalled, and every care should be exercised to see that no third firebrand is appointed to succeed him. We cannot cheerfully contemplate a succession of Ramadhans and Mauluds as governors of towns or districts in which they can work us harm.

Without advertising them extensively, Persia has been conducting operations against the Kurds in the Urumiah region, who have never been famous for their law-abiding character, and who lately, egged on and assisted by the Turks, have been making fresh trouble. The operations referred to are reported to be progressing favourably, certain strategic points having been occupied and a notorious chieftain, Simkho, having been surrounded in his stronghold near Salmas. The chief referred to is presumably the one who distinguished himself by his treachery towards the Assyrian refugees, and is usually supposed to have been responsible for the death of their much-loved Bishop, Mar Shimun. It is to be hoped that he will not succeed in slipping through the cordon and escaping the vengeance that he so justly merits. As British aeroplanes are taking part in the little campaign, his difficulties are likely to be much greater than they would otherwise have been.

The report that the Sheikh ul-Islam at Constantinople and the Grand Mufti at Cairo have both denounced Bolshevism as contrary to Islamic law causes the *Times* Delhi correspondent to ask what attitude the Ameer of Afghanistan will adopt towards the Bolshevist Mission at Kabul. As we have pointed out in these notes, it is absolutely impossible for any man to be at once a good Moslem and a good Bolshevist. He may be a bad Moslem and a good Bolshevist or a good Moslem and a very poor Bolshevist: but Bolshevism and Islam have nothing at all in common. It will, therefore, be of some interest to observe what line the Ameer will follow in view of the pronouncement on Bolshevism by the Moslem spiritual leaders. The "Mission" appears to be composed of very heterogeneous elements, and the Ameer is not likely to be blind to its character or, let us hope, its real purpose: but thus far he would seem to have tolerated, if not welcomed, its presence in his capital. If he continues to do so after its condemnation by the Sheikh ul-Islam and the Grand Mufti, he must certainly forfeit his claim to be a good Moslem.

Sir Ismail Sirry Pasha, the Egyptian Minister of Public Works, has resigned. He has allowed it to be understood that the resignation is connected with the appointment of the Nile Irrigation Projects Commission, and presumably it is intended to free that body from any possible embarrassment in regard to the projects, for

Digitized by Google

which he felt a large measure of responsibility. It is easy to understand also that after so many years spent in the service of his country he should feel the need of rest, especially when his countrymen show so little sense of his service as to indulge in an attempt on his life. It will be remembered that such an attempt was made on January 28, and an Egyptian student has lately been arrested on suspicion of being the person who threw the bomb. The Sultan of Egypt has marked his sympathy with his Minister by conferring on him the Grand Cordon of the Order of Mohammed Ali; and by all thinking Egyptians, as well as by the many Englishmen who are able to appreciate his services to Egypt, the honour will be recognised as thoroughly well merited, and his resignation will be sincerely regretted.

Englishmen in the Near East, like their countrymen in other parts of the world, will learn with pleasure of a step that has been taken by the Secretary of State for Foreign Affairs. This is the appointment of a committee to advise him in regard to the steps to be taken to promote solidarity among British communities, and to make British ideals known, in foreign countries. The Foreign Office has taken the matter up in consequence of representations received from various chambers of commerce, schools, and other institutions abroad, and among proposals already put forward are the encouragement of such schools and chambers of commerce, of British clubs and associations, and, where possible, of local British newspapers. The Committee will take all these suggestions into account, and will consider what means may be adopted to achieve the desired purpose. We welcome its appointment as a sign of a new spirit in a quarter where there was room for it, and we are confident that British communities throughout the Near East will share our pleasure, and will unite in working to make the scheme a success.

THE WEEK AT HOME.

The Government's Revival.

A week ago we were being entertained with lugubrious tales of the Government's staleness, the weariness and desire for rest of the Prime Minister and his colleagues, and the impending doom of the Coalition. It was like a boat, one understood, which was already sinking fast; only the precise moment of the last plunge remained in doubt.

After these predictions, it was distinctly unkind of the Government to meet the House of Commons with every appearance of health and vigour. Mr. Lloyd George has made three of the best speeches of his life. Mr. Balfour followed suit with one of those analytic orations which resemble thinking aloud rather than a speech; even Mr. Austen Chamberlain, who does not usually go in for cut-and-thrust work, showed some of his father's genius for attack in his defence of the Treasury against the critics. But the unkindest cut of all was Mr. Lloyd George's regret that the Opposition was so weak as to be ineffective.

The "Siamese twins," as Sir E. Carson called Sir D. Maclean and Mr. Adamson, the leaders of Liberal and Labour Opposition, have both been ineffective. The best Opposition speech was made by Mr. Brace, the coal miners' representative, who advocated nationalisation of the mines on the ground that it would increase output and result in industrial peace. It was studiously moderate and persuasive in tone, but its effect was ruined by another Labour member immediately afterwards threatening direct action if Parliament did not immediately obey the miners' demand. To this threat of sectional revolution the Prime Minister responded with a cogent statement of the determination of the State to fight to the death any such tyranny, from whatever quarter it came. The effect both in the House and the country was crushing; after the speech one of the Liberal Independents said gloomily to a Coalition member in the Lobby: "You are in for five years longer, and if Labour plays the fool like that any more, probably for twenty."

The Labour Difficulties.

The plain fact is that the Labour differences cannot be concealed any longer. The party is pledged to nationalisation of mines and other industries, but it is becoming increasingly clear that what they want is not nationalisation in the generally understood sense at all, but the control of their own industries by themselves—in a word, a variant of Guild Socialism, with or without an element of confiscation. The moderate Labour leaders, intent on the general vote, without which they can never obtain a majority in the United Kingdom, put the case persuasively, as good for the country and the industry; the extremists always contrive to threaten a revolution, force, and "frightfulness." It is an instructive contrast in mentality; and still more instructive is the fact that most of the moderates are in the House of Commons and most of the extremists outside.

Labour Aspirations.

Another and very different aspiration of Labour has been mentioned by Mr. Bevin, the Dockers' leader, at the enquiry now proceeding into the dockers' demand for a standard wage. He has bluntly declared that while higher wages are required to meet the increased cost of living, shorter hours are demanded because the workers are determined to secure leisure to educate themselves. The statement has been laughed at in certain quarters, but there is no reason to doubt its accuracy. There is a passion for information and education among large sections of the workers, which is a very hopeful sign for the future of the country; they are reading a great deal, attending lectures, and taking courses in general culture with all the passion of the young bluestocking. It is an entire change from the soullessness of twenty years ago.
