The full details of the financial and economic terms which the Allies have imposed on Turkey are not yet available, but the official summary which has been issued sufficiently indicates their general trend. Politically the Ottoman Empire is drastically reduced; financially it loses its independence. All the resources of Turkey, except revenue ceded or hypothecated to the services of the Ottoman Public Debt, are to be employed to pay the expenses of the Allied forces of occupation, and indemnities on claims preferred by the Allies as reparation for damage suffered by their nationals; and in order to restore Turkish finances a Financial Commission is to be appointed. This Commission will examine Turkish Budgets, and its decisions as to their contents are to have absolute authority; it is to supervise the execution of the Budgets, and the Turkish Government is forbidden to establish any new form of taxation, or to modify its Customs systems, or to contract any loan, internal or external, without the express consent of the Commission. Further, no new concessions may be granted by the Turkish Government in Turkey without the prior authorisation of the Commission. It is clear, therefore, that this body will have, in effect, sovereign powers over what remains of the Turkish Empire, and its personnel is consequently a vital indication of the attitude of the Allies. It is to be composed of "a representative of each of the interested Allied Powers"—France, Great Britain, and Italy. It will be noted that Greece is not represented—an omission which may lead to some jealousy in Athens and some jubilation in Rome—and that the United States are not officially "interested" in Turkish finance—a decision which probably reflects the attitude of the general public of the United States, who would not endorse President Wilson's desire to protect Armenia, but which may nevertheless be regretted by the very considerable American commercial and philanthropic interests in the Ottoman Empire. To this triumvirate of France, Britain, and Italy is added a Turkish representative, but he will only be called upon to act in a consultative capacity.

The real power over the remnants of the Turkish Empire, therefore, passes from Turkey to France, Britain, and Italy; these financial clauses strip Turkey of even the shadow of authority with which the political clauses, which we discussed last week, still seemed to bedeck her shrunken and attenuated skeleton. The economic clauses of the Treaty only emphasise the completeness of the revolution. All the Turkish concessions, and arrangements, and loans from Germany, Austria, and Bulgaria, are cancelled; the fruit of the twenty years' laborious policy of Berlin and Vienna, which seemed at one time likely to turn the whole Near East into a profitable Germanic estate, is scattered to the winds. There is no definite discrimination against Germany or German enterprise in the future, and there could be none against Austria, for Austria has ceased to exist; the Allies seem to profess themselves generally in favour of equality of treatment for all foreign enterprise in Turkey. Nothing could have indicated more completely the magnitude of the disaster which has overtaken Germany and her plans of penetration and control. They have passed away so utterly from the earth that it is no longer necessary even to devise safeguards in advance against their revival. The whole plan of financial control from Berlin in return for commercial concessions from Constantinople is dead; the Baghdad Railway, which was to be the instrument of German policy that was to outwit by rail-power the British sea-power, has passed from German hands into those of the Allies without compensation. Never, perhaps, were the rewards of victory and the losses of defeat more clearly visible than they are in the financial and economic clauses of this Treaty.

The stipulations are stern, but few will contend that they are unjust. They follow with almost automatic precision on the lines of the political treaty; and in one sense, and that a very real sense, they may give a better hope for the future. The weak point of the Turkish Empire has always been its administration and finance. The former was hopelessly inadequate, the latter was steadily becoming impossible. The gradual emancipation of the Turkish provinces in the nineteenth century indeed reduced the task of administration, but it also aggravated the financial difficulty, and the practical bankruptcy of the Porte, however disguised, has been one of the main causes of political instability in the Near East for over half a century. Turkish participation in the war made it evident that rectification of that position could no longer be delayed. The burden of war added to the practical bankruptcy of her finances before the war rendered it certain that after the war the victor would be compelled, in his own interest if not in that of Turkey, to reform her whole financial administration. There is good reason to believe that the preliminary steps to that end had already been taken in Berlin in 1917 and 1918, in the certainty of ultimate victory; hints to that effect were given by the German banks, and, indeed, their general policy in the Near East was conclusive evidence in that direction. The task has now fallen on the Allies, and it is well for Turkey that it has. It is no more possible for the Allies than it would have been for Germany to leave Turkey her independence; the actual political and financial situation forbids it, even if the Allies desired to do so. But whereas Germany would undoubtedly have ruled Turkey from the point of view of German interests, we may express the certainty, rather than the hope, that the Allies will maintain the higher ethical standpoint of administering Turkey from the point of view of Turkish interests. The colonial record of France and Britain has shown them capable of the nobler conception of authority in Africa, and we have no doubt that they will rise to the extent of their responsibilities and opportunities in Asia Minor. The task will be a long and a difficult one, and it will call for courage and patience as well as knowledge; but if it is properly carried out with a singleness of aim, it will in the end resuscitate some of the fairest districts of the earth, and restore them to a prosperity they have not known for centuries.

A PICTURESQUE ALLY.

THE ASSYRIAN CONTINGENT, MESOPOTAMIA.

By the Rev. W. A. Wigram.

Many a strange force of Asiatics or of Africans has done good service under British officers since the days of the first Sepoys who served "John Company," and a power of handling the strangest material has been developed accordingly, till old soldiers say that if you give a young man of the right type a company of chimpanzees to train, in six weeks he will be declaring that there never was such fine military stuff as the chimpanzee.

Seldom, however, has material more picturesque come under the hands of British subaltern and N.C.O. than the contingent of "Assyrians" who have been raised from the crowd of tatterdemalions who flung themselves on our protection in the camp of Bakubah. Incidentally, we may say that it is a thing as gratifying as it is rare to find a set of "native Christians" from the Ottoman Empire who really can fight, and who are at least as good, man for man, as any stock among their Turkish rulers. The words are written with full knowledge of the fighting virtues of the "Arnaut."

Certainly, the modern Assyrian—or, at any rate, those mountain clansmen who furnish the better part of the force in question—comes of a fighting stock; he claims to be of the blood of the fierce warriors who first taught military discipline to the world, and who followed Tiglath Pileser to the Mediterranean, and Sargon and Sennacherib to Samaria and Jerusalem. If facial and linguistic evidence goes for anything, the claims would seem to be well founded, for many a highlander from Tiari or Tkhoma looks as if he had stepped from the carved slabs in the British Museum, and most of the commonest words in his vernacular Syriac* are genuine Assyrian. Even the magical spells that he uses and most devoutly believes in—though he does not talk about "kharashutha" to the ordinary Frank—are most of them identical with the ancient "magic of the Chaldees," and have probably a continuous history of some six thousand years behind them.

A plainsman in the days when Nineveh was his capital, he has only been a mountaineer for a few centuries, a mere trifle in that land. It was, according to his tradition, no less a person than Timur the Tartar (approximately the contemporary of our Edward I.) who drove him up into the hills. There he has lived since, in a wild semi-independence, without any law to trouble him, and has been well accustomed to fighting with his Kurdish neighbours at long odds, in country which good judges describe as a worse land to campaign in than anything on the north-west frontier of India.

When he was driven—after a fight that did him no discredit—from this stronghold in the Great War, the Assyrian migrated to Bakubah and Baghdad; thus it was that, by way of earning his keep in the long interval that was to elapse before the lot of Mesopotamia could be settled, he found himself, to his own great content, in British service, and fighting under British officers against his own ancient enemy, the Kurd.

Discipline was a new thing for Assyrians to learn, and the soldiers enlisted had to acquire the rudiments of drill from N.C.O.'s who knew no word of the language of their charges. However, "Sergeant What's-his-name" has overcome greater difficulties in his time than a mere trifle like the curse of Babel, and the "contingent of scally-wags" soon began to present a creditable appearance. At first they were handicapped by being equipped with nothing better than the old uniforms of Ottoman zaptiehs (which is rather like expecting a British battalion to respect itself when it is clad in the cast-off garments of a regiment of Huns). but when the Kurdish trouble of 1919 developed, they were allowed to go to battle in a uniform modelled on their own picturesque and convenient mountain dress. So, for the first time, they found themselves engaged in a regular campaign with artillery actually on their side, instead of, as had always been the case hitherto, in the hands of their enemies.

In all the work of a campaign, they won high praise from good judges. As fighters they were admittedly first-class; on the march they were a little slow (the mountaineer lifts his foot high and takes a short step, from the fact that he is accustomed to very rough and stony ground), but they could keep their pace all day, and never a man fell out. They had provided themselves with their regular mountain sandals ("rushikki") with a soft felt sole sewn together with string, and with this they were thoroughly at home on their own mountains.

The fact that these raw irregulars were brigaded with Gurkhas was in itself as high a compliment as could well be paid them, and the Gurkha verdict on their comrades was "If only the general had given us those mountain sandals instead of boots, we should have done as well as the Assyrians." It may be owned that when Gurkhas apologize for not having done as well as irregulars, there is not much the matter with the fighting qualities of the latter!

It is true that these warriors were (to quote the verdict of a Political Officer of some reputation in Mosul) "just a trifle indiscriminate; they killed Kurds in the only village of Kurdistan where I ever felt safe. Now *I* don't mind their wiping out old scores, but I had to go and apologise for the matter." It was felt, however, that the mountaineers had a good deal to wipe out, and that there was excuse for them. Naturally, it was desirable that they should be kept under discipline when in British service, and they had a good and chivalrous tradition of their own, from which they dared not depart. It was the custom in Kurdistan in old pre-war days, that any gentleman might go on the raid against a neighbour and take what he liked or what he could. Still, all that he did not take, he must leave uninjured, and in no case must he injure or insult the women. So thoroughly was this rule understood, that in pre-war days both sides, Christian and Moslem alike, would often leave the women unguarded, for it was well known that no gentleman would touch them. In days of *Jehad*, however, this excellent and salutary rule went by the board, with much else that was decent. When you go to war for the sake of religion, you may commit any atrocity that you fancy. So, as the recent war was notoriously a *Jehad*, it is not surprising that it left some grim memories behind, in a way that no inter-tribal feud would ever have done.

Hence it was that when the Assyrian contingent was ordered to destroy the fortress of a certain obnoxious and dangerous Kurd in the Berwar district, with whom there were many unsettled scores, they went about the business *con amore*, taking it as a special compliment and concession to themselves, and reported to their

*Syriac as a language seems to have begun as the patois or Lingua franca of the Mesopotamian lands, the speech of diplomatic intercourse. "Speak Syriac," said Hezekiah's servants to the Assyrian ambassador Rabshakeh, "not the Hebrew which the soldiers will understand." "Wouldn't you like it?" said the Assyrian, "I want them to understand me." (II. Kings, xviii. 26.) In later days Syriac became the ordinary vernacular of "Syria" and Palestine in the first Christian centuries, and so continued till it was displaced by Arabic. Then it became—what it is still—a literary and liturgical tongue. It is only a vernacular now in parts of Kurdistan. Hence, Assyrians claim that they are the only Christians "who speak the language of Christ."

friends: "Reshid's castle is down at last, and praise be to Heaven; now you would not say that there ever had been a house there."

One quaint and illuminating episode occurred in the course of the destruction. A joyous party of mountaineers came to their C.O. to report that they had discovered some really valuable loot! It was brought, and proved to be two enormous manuscript tomes, books of the appallingly lengthy services characteristic of this ancient Church. They had formed part of the plunder of some forgotten raid, and now had been won back. A special request was made to the effect that they might have one of the baggage mules to carry the sacred trophy; this was granted, and the fact that these two books, when slung one on each side of the animal, formed a fair load for him, may give some idea of the size of the volumes. For the rest of the little campaign this palladium accompanied the contingent, and every night a volunteer guard of honour took charge of it. Ultimately, the trophy was brought back to headquarters, and solemnly handed over to the Patriarch, for future use in their churches.

If slow on the march, the Assyrians proved quick in action, which they regarded as a most superior kind of sport. It is true that on one occasion as they advanced up a hill they opened fire somewhat prematurely, but eagerly, causing the General to observe: "My word, those Assyrians have got into it quick." "No, sir," said an A.D.C. who had some experience of the animal, "I'll bet it's only pig they have routed out." He did them an injustice, but not a very serious one. It was a bear that they had started, and when they had settled him, they went on to account for the Kurds!

The ordered movements of a campaign, however, were inexplicably and boringly slow to their thinking, and a party of about eight deserted in consequence. After about ten days' absence, however, they sent in a letter of excuse, surely the most original that ever C.O. had, in defence for so great a crime as desertion in the presence of the enemy.

"To the beloved and reverend Major Knight, our commander, peace and love be multiplied," was the preamble. "Know, O our father, that we did not run away because we did not want to kill Kurds, but because we wished to do so; and by the blessing of God, we have been doing that thing for eight days." Then, with a drop into language learnt in the orderly room, "We regret to report the following casualty: Soldier. Private. One. John, son of Jacob of Gundikta, killed. But be it known to you that we have killed many more Kurds. And now, O our dear father, if *you* will promise to punish us, we will come in, but we do greatly fear going to the prison in Mosul." As they were dealing with a C.O. who understood the handling of rough material, the promise was given, and the rascals duly came in, submitted to discipline—and became their Commanding Officer's orderlies as soon as the punishment was over!

It may be mentioned in passing that the fear of "the prison in Mosul" is rather a new growth among them. The writer was advised in pre-war days—when he was obliged to take steps to get a Kurd imprisoned, on account of a slight indiscretion in the matter of highway robbery—"get the man imprisoned up in Amadia, Rabbi. It is no punishment to be put in prison in Mosul; they serve you out bread there nearly every day!" In smaller centres of government it was indeed lawful to supply food to any friend that was in durance, but if that was not done, the captive did not eat at all. If the prison in Mosul seems so formidable under a régime which keeps it aggressively clean, and serves out food regularly, it would seem that British government has already instilled a little wholesome fear into the minds of malefactors! Possibly it is the moral effect of the "nice neat little gallows" which was proudly pointed out to the writer by the N.C.O. who was acting as gaoler in 1919.

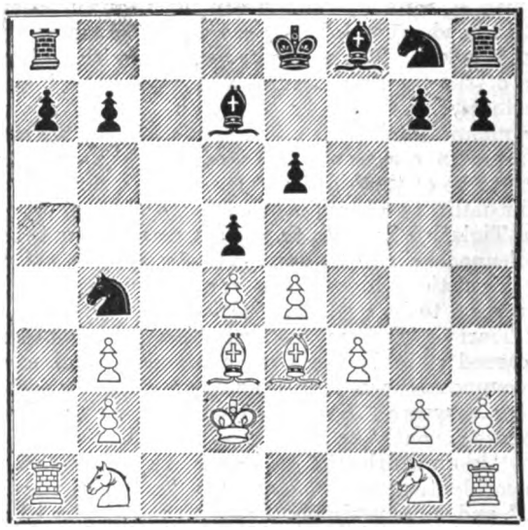
So the campaign ended, and the contingent, like the rest of the nation to which they belong, is now wondering what will be the fate of that part of Kurdistan to which they belong. There would seem to be some probability that if this Christian people goes back to lands outside British control, there may be some necessity for an expedition to protect the Kurds from them! Possibly, too, there is another matter that is worth the consideration of those in authority. Seeing that the British Government has undertaken considerable responsibilities in Mesopotamia, and is notoriously in doubt whether it can command bayonets enough to control what it has taken, does not this nation provide a military asset valuable enough to make us hesitate before discarding it?

CHESS.

The Hastings and St. Leonards Chess Club began their Whitsuntide tour on May 24, when they met Hampstead. The following day they played at Leicester, and yesterday at Sheffield. To-morrow they are due to meet Birmingham, and on Saturday Oxford City will be encountered.

It is understood that the eight-year-old Polish chess prodigy is to visit London shortly to give some simultaneous exhibitions. A friend who has seen him play tells me that his play is all it has been described to be. I must confess that I should rather like to see him perform, though I am not in favour of encouraging youthful prodigies at this or any other game.

Position after White's 10th move, P—B3.



The following game was played in Section C of the Murton Cup handicap, White receiving the odds of pawn and move:—

FRENCH DEFENCE.

(Remove Black's KBP.)

1	P—K4	P—K3	21	B—Kt5	KR—KB
2	P—Q4	P—Q4	22	K—Q3	Kt—R4
3	B—Q3	P—B4	23	R—B2	R x R (ch)
4	P—B3	P x P (1)	24	R x R	R—KB (8)
5	BP x P	Kt—QB3	25	K—K4	P—R3
6	B—K3 (2)	Q—Kt3 (3)	26	B—Q2	Kt—B3 (ch)
7	Q—Kt3	Q x Q	27	K—K3	P—R3
8	P x Q	Kt—Kt5	28	K—K2	B—K2
9	K—Q2 (4)	B—Q2 (5)	29	B—K	R—B
10	P—B3	Kt x B	30	K—Q	R—B3
11	K x Kt	B—Kt4 (ch)	31	Kt—Q2	Kt—Q4
12	K—Q2	B—B8!	32	R—Q3	B—B3
13	P—R4	P x P	33	R—B3	Kt—K2
14	P x P	B x P	34	Kt—B3	R—Q3
15	R—R2	B x P	35	B—B2	B x P
16	Kt—QB3 (6)	B—B3	36	K—B2	Kt—B4
17	R—K2	K—Q2	37	B—Kt3	R—B3
18	R—KB	Kt—B3	38	R—Q3	K—K2
19	Kt—B3	B x Kt (7)	39	B—K (9)	
20	R x B	B—Kt5			

(1) Playing this move before Kt—QB3 effectually prevents White from playing P—K5 at once.

(2) A wasted move. The QB should never be moved except with some definite objective in view.

(3) This places White in a difficult position, the option being doubled pawns or the loss of a pawn.

(4) The only move. If B—B5 (ch), B—Q2; 10 B x B, K x B; 11 K—Q2, P x P. If anything else is played White loses more than a pawn.

(5) Preparing a little trap into which White falls unhesitatingly.

(6) The issue now depends on whether White can obtain any decisive advantage from his development before Black is ready to begin an attack.

(7) The Kt at K5 threatened unpleasant complications.

(8) Black has now entirely overcome the disadvantage of a somewhat backward development.

(9) At this point White lost on the time limit. The result, however, was not in doubt, and would probably not have been long delayed.

CARO-KANN.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

The difficult position that has arisen with regard to the Syrian market is occasioning grave anxiety to British traders. Syria was before the war a very important outlet for British goods, and since the Armistice very considerable consignments of goods have been despatched there. Now, owing to a combination of local circumstances, trade is stated to have practically come to a standstill, and large quantities of Lancashire and Yorkshire goods have been thrown back on the hands of the Manchester shippers by Syrian importers. The principal causes of this state of affairs are the imposition of a tariff duty of an extra 12 per cent., by the Arabs, and the introduction of new French (Syrian) notes. The French currency circulates within a very limited area—the Arabs will not accept it—and the result has been that business between different areas in Syria has become almost impossible. Obviously it is in the interests of both the French and the Arabs to encourage and not to prevent the free development of trade, and it is to be hoped that they will realise the necessity of arranging some *modus vivendi* which will enable commerce to pursue its even tenor.

***

The Syrian *impasse* is one of a number of factors which have made the outlook for the Lancashire industry extremely uncertain. The fall in silver has, of course, affected the tael, which means a decreased purchasing power on the part of China, who is now anxious to reduce commitments in the way of contracts. Indian importers are also of the same way of mind, the root reason in both cases being the belief that lower prices are inevitable. Then we have the difficulties in respect of the Constantinople and Syrian markets, and altogether it cannot be said that the position is such as to inspire confidence. It is unlikely in the extreme that adequate outlets can be found elsewhere until the time when these markets develop their normal demand. Elsewhere, too, buyers are waiting for lower prices, for which, in view of the present cotton outlook in conjunction with the enormous increase of wages, there seems at the moment little justification. In the end prices must come down in the face of competition; and it does not need to be a prophet to foresee trouble unless the workers realise that there is a hard and fast limit to the amount that can be drawn from industry.

***

Roads and motor transport in India was the subject of a very interesting lecture by Lord Montagu of Beaulieu last week before the Royal Society of Arts, a report of which will be found on page 765. Lord Montagu urged the need for a road policy for India, and made out a strong case in support of his plea, showing how, with the advent of the railway era in 1853, roads had been neglected, with serious consequences. Until the possibilities of motor transport were realised, railways were naturally regarded as the only method of creating communications in vast expanses of territory. The case is entirely different to-day, and it is evident that there should be a great rôle in India for motor transport. No one would deny that India's railways are at present inadequate, and it is not less obvious that on the ground of expense alone it would be impossible to carry out extensions to serve every district of the country. But there is nothing to prevent the development of efficient motor services given the roads and the supply of motors capable of withstanding the climatic conditions.

***

Yugoslavia's most urgent requirements for reconstruction include railway material and rolling stock, especially locomotives, and I understand that negotiations by British manufacturers for their supply would be welcomed, and also for the construction of several bridges. It may be mentioned that there are also schemes for new railway lines, but these, it is understood, will not be entered upon until the existing lines are in good running order.

It would be foolish to attribute too much importance to the Bolshevist raids on the Persian coast, and to imagine that the capture of two small towns on the Caspian foreshadows a serious policy of aggression against Persia, with the consequent menace to British oil interests in the neighbourhood of the Gulf. On the face of it, this move of the Bolshevists would appear to be due to the desire to capture the remainder of General Denikin's fleet, and the insignificant forces engaged certainly do not give colour to any other view. But assuming for the sake of argument that there are ulterior motives in the background, it may be pointed out that the nature of the terrain in Persia constitutes the best possible guarantee against a successful invasion in force. And looking at it from another point of view, there are many hundreds of miles between the oilfields and the Caspian, land which everywhere offers admirable scope for defence by small numbers.

***

I learn that the grain harvest in the western part of Tripolitania has been excellent. The chief crop is barley, which is the principal food of the Arabs. In April 90 tons of barley was exported to Malta and 300 tons to Egypt, these amounts representing imports from Tunis last year, no longer needed in view of this year's excellent crop. Exception has, however, been taken to these exports, it appears, on the ground that all grain should be left in the country and the result has been a proclamation to the effect that the export of local produce will for the future not be permitted. What will happen when there is a considerable surplus remains to be seen. Possibly the awkward problem that would then arise will be avoided by the limitation of crops.

***

The Greek Budget provides for a revenue of 1,033,579,740 drachmæ, as against an expenditure of 1,298,759,754 drachmæ, the estimated deficit being, therefore, 265,180,014 drachmæ, as against a deficit for the past year of 172,701,176 drachmæ. An unsatisfactory feature from a financial standpoint is the large allocation for military requirements of 532,000,000 drachmæ, or, roughly, twice the estimated deficit. It is in this direction that economy will have to be made if Greece is to build up a strong financial position.

***

The Roumanian Budget outlook was dealt with at Craiova recently by the Minister of Finance, who stated that Roumania's war debt amounted to 30 milliards, of which ten milliards were actual war expenses, and the balance was spent on restoration, railways, roads, rolling stock, debts inherited from Austria-Hungary and Russia, and Budget deficits. He forecasted the introduction of two budgets, a war budget, to cover not only the actual expenses of the war but also the cost of reconstruction, which budget, he explained, would be covered by long-term loans; the second budget would merely deal with current expenditure, and would comprise an expenditure of from six to six and a-half milliards, and a revenue of 5 1-5 milliards.

Commerce and Industry.

(REPORTS FROM OUR OWN CORRESPONDENTS.)

EGYPT.

CAIRO, May 10.

The Question of Sugar.

As a result of the imports of wheat and flour made by the Government, the price of these two articles has appreciably diminished, but the desired effect has not manifested itself in regard to other cereals. On the other hand, it has now been found necessary to increase the price of sugar, which has been raised by about 30 per cent. In an explanatory note the Department of Supplies, which controls sugar prices, points out that when the excise was abolished the Sugar Company was allowed to maintain the tariff at the existing figures, which included the excise, because in order to meet local consumption about 9,500 tons of foreign sugar would have to be imported during the year at prices very much above the local price. Since then the sugar cane crop has been damaged by frost, and the production will be appreciably lower than was anticipated. Moreover, local consumption has increased very considerably, and it has been found necessary to import a further 11,500 tons to meet the deficit in the quantity available for local requirements. Naturally, the Sugar Company cannot be expected to sell this quantity at a dead loss, and so the prices have been increased all round so as to allow for the extra cost of these additional imports.

It is no doubt unfortunate that when an effort is being made to reduce the cost of living the price of one of the important necessaries of life should have to be increased. It is, however, a step that could not be avoided, and if, while local production, which had hitherto been sufficient, remains stationary and even falls off owing to climatic influences, the general public persists in increasing its consumption, as it has done since the second year of the war started the present wave of prosperity, it must expect to have to pay the higher prices which the supplementation of the local stocks by imports from outside renders necessary. As it is, local prices for sugar are still 50 per cent. lower than those on outside markets, and the local consumer, who has in this respect during the past five years enjoyed very preferential treatment, has after all not much to complain of.

YUGOSLAVIA.

BELGRADE, May 8.

Promising Crop Outlook.

The glorious spell of hot summer weather that had lasted for several weeks came to an end on Thursday, when there was steady rain all day. The peasants are delighted, although it spoilt many a rustic wedding-party; for it was St. George's Day, and the country folk believe that if rains fall on "Georgev Dan" there will be a bumper harvest. Everything points to a good year. The hot spring had hastened the growth of the crops, and just when the soil was getting too dry a good, steady, warm rain came as a blessing, and now the sun is shining again. The peasants certainly both need and deserve a good year, and all are full of hope and confidence.

The vine harvest is promising. Last year was a bad one, owing to the constant rains and absence of sunshine; the wine was thin and sour, and the scarcity of copper vitriol prevented the general spraying which is so necessary; there was also a great scarcity of the copper sprays. Now there seems to be plenty of "blue stone," as the vitriol is called, in the country, and the Union of Agricultural Associations has imported a large quantity of Vermorelle sprays from France.

MALTA.

VALETTA, May 12.

Bread Subsidy.

The question of the bread subsidy came under discussion at Saturday's meeting of the Council, and it was decided that the Government should be authorised to incur an expenditure of £1,630 per week during May in order to keep the price of bread down to 6½d. per rotolo (28 oz.).

Emigration Difficulties.

Unsatisfactory reports are reaching the island with regard to the emigrants who have left for America. Those who have arrived have not found the El Dorado they expected, and many of those who set out have not been able to proceed far towards the United States, but have been held up at Naples, Marseilles, Havre, Cherbourg, and Southampton. The local emigration committee is doing everything that is possible, but their difficulties are not decreased by the fact that the stream of emigration goes on, despite the experiences of those who have gone before.

Sugar Shortage.

Last week the difficulty was to procure matches; this week it is the sugar shortage which is engaging attention. Stocks in the island at present are negligible, and a Government consignment of 550 tons from England has been delayed.

CYPRUS.

CYPRUS (undated).

Issue of Small Notes.

The Government has received and placed in circulation notes of one shilling to the value of £20,000, and will shortly receive two-shilling notes of the same amount.

Good Crop Forecast.

The outlook for all cereal crops is now regarded as very promising. Good rain has fallen in almost every part of the island; and prospects of summer crops are good. On April 28 torrential rain fell in Nicosia and the east of the island, flooding streets and invading some houses in the capital. Hailstorms in the Larnaca and Famagusta districts have damaged vegetation in some areas, and also flocks. Last winter there were serious losses in the west of the island in horses, cattle, and flocks, through severe cold aggravating a lack of forage. The carob crop is likely to be below the average. It is still too early to hazard any forecast regarding the vine lands.

LIONDA & COMPANY, Ltd. 3, Broad Street Buildings, Liverpool Street, LONDON, E.C.2.

Tel.: "EXPLIONDAC AVE, LONDON." Cables: "EXPLIONDAC, LONDON."

Export Department: Heavy and Light Chemicals, Colonial Spices, Metals, Dried and Salted Fish, Matches, etc. Paper of any description, and all kinds of British, Scandinavian, Dutch and American Produce.

Hellenic, Sudanese and Egyptian Produce: Are always Buyers of Currants, Figs, Olive Oil, Locust Beans, etc., Gum, Senna Leaves, Beeswax, Hides and Skins, Cotton Seed, Onions, etc., etc.

Chartering and Insurance Department: British and Neutral Steamers chartering effected on the Baltic. Insurance of any description effected through Lloyd's and Government.

Shipping Department: For the Sale and Purchase of Steamers.

Tobacco Department: Stocks of various grades held always in London and Liverpool.

Coal Exporters, &c.

SALONICA HOUSE: Postal Address: LIONDA & CO., LTD., SALONICA, GREECE.
Tel. Address: "LIONDA, SALONICA."

ATHENS HOUSE: Postal Address: LIONDA & CO., LTD., ATHENS, GREECE.

BULGARIA'S ECONOMIC NEEDS.

II.—COMMERCE AND SHIPPING.*

(From a Bulgarian Correspondent.)

The capital employed in the weaving and other industries is solely Bulgarian. Much greater progress could be looked for if business men had at their disposal larger capital. Apart from the weaving industry there are some factories for food products and beer, chemical products, skins, metals, etc. The motive power employed in most of these factories is water. Electricity is, however, coming more and more into use; water power is abundant, and can be utilised for industry and especially for the production of electricity for lighting the large towns. There is no doubt that if foreign capitalists would interest themselves in industrial developments they could count upon excellent results.

It is only comparatively recently that the mines of Bulgaria, which apparently played an important rôle in ancient times, have been exploited. The Government, apart from the coal mines which are worked by the State, has granted concessions for some dozens of coal and copper mines. Concessions have been granted also for manganese, iron, zinc, etc. Deposits of these minerals have been found to a considerable extent, but they remain unexploited for lack of capital and foreign engineers. The mines in use often cannot give the desired yield because they are in inexperienced hands. For greater development it would be absolutely necessary to have recourse to foreign capital, and to apply modern technical methods.

The forests cover 30 per cent. of the total area of the country. They belong either to the State, to communes, or to private proprietors. The forest industry has hitherto been of little importance. If capital and personnel having the requisite technical knowledge were available there would be a great future for the industry. At the present time the forests are only utilised to obtain supplies of timber for building purposes, a great part of which is exported, especially to Turkey, wood for fuel and for charcoal making.

Trade Before the War.

Before 1907, and especially during the period from 1900 to that year, exports exceeded imports. After 1907 up to the Balkan War the converse was the case. The figures for 1912, for instance, were: Imports, 213,000,000 levas; exports, 156,000,000 levas. From the facts already given it is easy to understand that since the Armistice imports have greatly exceeded exports.

In 1912 Austria occupied the first place among countries sending merchandise to Bulgaria with 24 per cent. of the above mentioned figures, followed by Germany with 20 per cent. Great Britain occupied the third place with 14 per cent., while France's share was only 6½ per cent., and America's 2 per cent. As regards exports, Belgium was first with 28 per cent, then came Germany with 17 per cent., Turkey and Great Britain with 11 per cent., each, and Austria-Hungary with 10 per cent. The remainder of the exports was divided among other countries. As will be seen, Great Britain was third in both cases.

Since the European war Bulgaria has imported articles of the first necessity, such as all kinds of cloth, linen, flannels, cotton and woollen thread, hats, food products of all kinds—chiefly oils, sugar, olives, sardines, etc., chemical products—caustic soda, sulphate of copper, etc.—ironmongery, tanned skins, and shoes. The countries from which these commodities have been obtained have been Italy, Great Britain, Greece, Turkey and Asia Minor, and America.

On the other hand, attar of roses, opium, tobacco, and timber have been exported to Italy, Greece, and America, and very little has gone to other countries. The export trade would have developed greatly after the war if it had not been handicapped by the question of exchange. With a view to improving the exchange, a new State institution, the "Centrale des Devises," was established soon after the Armistice. The long war having prevented exports, Bulgarian merchants, on endeavouring to resume business transactions abroad, lacked foreign exchange, and could only pay for goods in levas. Italian traders were the first to accept payment in levas and to send their goods on consignment. Little by little, with the sale of produce, merchants obtained foreign exchange, and, aided by the Centrale des Devises, were in a position to make purchases abroad.

Trade in cereals promises to recover. The crop of last year is not yet sold. If the amount required for local consumption is deducted, there remains a considerable quantity for export. There was established lately a new institution, called the Consortium, for the export of cereals and their products, which has charge of the sale of cereals abroad.

The cargoes of merchandise imported and exported are carried solely by the merchant services belonging to the different foreign shipping agencies. According to the statistics for 1912 the ports on the Black Sea were visited during that year by 2,223 steamers and 3,080 sailing vessels, which brought about 304,000 tons of merchandise and 52,000 passengers. The same vessels left with 432 tons of merchandise and 56,000 passengers. It will be seen that sailing vessels played an important part in the carrying trade. That is explained by the fact that they are found more convenient for small shipments in the Black Sea, the Sea of Marmora and the Aegean.

Navigation on the Danube has considerably increased. During 1912 the ports of that river in Bulgaria were visited by 8,900 steamers, 368 sailing vessels, and 3,700 barges, which brought 270,000 tons of merchandise and 230,000 passengers. The same vessels left with 342,000 tons and 211,000 passengers. The rivers in Bulgaria are not navigable. The Bulgarian merchant service is absolutely insignificant. Its total tonnage scarcely amounts to 15,000 tons. The shipping lines serving Bulgarian ports are:—The Johnston Line, the Westcott Line, the Deutsche Levant Line, the Holland-America Line, Fraissinet, the Messageries Maritimes, and the Lloyd-Triestino.

The Exchange Problem.

When the Armistice was signed Bulgaria found itself in a deplorable position. Its economic life had been completely paralysed during the last few years, and the export of its produce developed very slowly after the Armistice; while the import of essential commodities, of which there was a great need, increased day by day and has far surpassed exports. Hence the depreciation of the leva. The efforts of the Government to improve the exchange have met with every possible support on the part of the business community. Thus, in response to an appeal from the State, exporters of attar of roses, opium and other commodities, placed their entire production at the Government's disposal. Exporters of tobacco, skins, and other products have made sales in Italy, America, and of late in Holland.

The only means of improving the exchange is by increasing exports, and the country is fortunate in having at its disposal large stocks of tobacco, cereals, and attar of roses. It is believed and expected that very soon the exports of cereals will be commenced to Great Britain. The profit that Bulgarian commerce will derive from exports to England will contribute greatly to the improvement of the exchange. It may be anticipated that henceforward Bulgarian produce should have a larger market in England, and similarly that English merchandise will find an excellent opening in Bulgaria. From every point of view the development of close commercial relations between the two countries is earnestly to be desired. It has to be admitted that before the war other European powers, notably Germany and Austria-Hungary (faithful to their motto of "Drang Nach Osten"), employed every means to obtain the monopoly—so to speak—of certain imports into Bulgaria and of Bulgarian products for export. Thus they established in Bulgaria banks, companies, exhibitions of commerce and industry, schools, libraries, etc., and spared no effort to gain the market.

Is it not surprising that up to the present not a single English bank is to be found in Bulgaria, while the Central Powers have some dozens of financial institutions there? For the establishment of permanent relations between Bulgaria and Great Britain in the future it will be necessary for English bankers to interest themselves in the country, as the Italians and Americans have been doing in recent months, and to found, in association with Bulgarian capital, banks, houses for import and export, etc.—briefly, to make popular by these institutions the creation of closer relations between Bulgaria and Great Britain.

GENERAL BANK OF GREECE.

Paid-up Capital, Drs. 3,000,000.

Head Office - ATHENS.

BANKING OPERATIONS:
Every description of Banking business transacted.

FINANCIAL OPERATIONS:
Investigations in connection with, and the promotion, organisation and financing of, Limited Joint Stock Companies, with a view to exploiting agricultural, industrial and mineral resources, executing technical works, etc.

COMMERCIAL AND SHIPPING DEPARTMENT:
Purchase and sale of goods on account of clients. Warehousing, Advertising and placing foreign products on the market. Agents for foreign companies and large commercial and industrial firms abroad. General Shipping Agents.

POPULAR BANK OF GREECE.

Head Office, ATHENS. Branch, PIRÆUS.

Correspondents throughout Greece.

Established June, 1905, by the National Bank of Greece and a group of Capitalists.

CAPITAL - Drs. 1,500,000.
RESERVE FUND - Drs. 2,500,000.
Deposits and Credit Accounts, Drs. 100,000,000.

The Bank specialises in the collection of Bills payable in Greece; it accepts goods on consignment, and undertakes their sale, and transacts every kind of Banking business.

General Manager: D. LOVERDO.

TRADE WITH THE NEAR EAST.

The Bank of Athens extends special facilities for business with the Near **East** to manufacturers, exporters and importers.

The Bank has offices in all the principal towns in **Greece,** also in **Egypt,** Cairo and Alexandria, in **Cyprus,** Limassol and Nicosia, in **Constantinople,** and in **Smyrna.**

Inquiries from interested parties are invited.

BANK OF ATHENS.

PAID-UP CAPITAL : £1,920,000. **HEAD OFFICE IN ATHENS.**

London Office: 22, Fenchurch Street, E.C. 3.

COMMERCIAL BANK OF GREECE, LIMITED.

CAPITAL PAID-UP - Drs. 15,000,000.
RESERVE FUNDS Drs. 2,845,010.45.

Head Office: ATHENS.

Branches:—**Piræus, Salonika, Patras, Volo, Syra, Calamata, Corfu, Cephalonia, Candia, Chios, Argos, Pyrgos, Vostizza (Ægion), Nauplia. Larissa.**

AGENTS IN ALL PARTS OF GREECE, THE LEVANT, AND ABROAD.

The Bank conducts every kind of Banking, Commercial and Stock Exchange business and extends special facilities to traders interested in business with Greece. It acts as Agent for many Foreign Banks. It is specially organised for Exchange, the execution of mail and cable transfers throughout Greece, and for the collection of clean and documentary Drafts.

MERCHANDISE DEPARTMENT:
The Bank undertakes the warehousing and sale of goods consigned.

GREECE.

Area 43,522 square miles. The cultivated area amounted to 5,746,300 acres, of which about 2,253,400 were under cereals, 518,900 under grapes and currants, 370,600 under oak trees, 296,500 under olives, and 2,223,900 were forests.

Population (1914), 5,000,000 approximately.

Chief Products (with average annual production):—Currants, 142,000 tons; wines, 3,000,000 casks; tobacco, 9,000,000 lb.; cereals, 8,000,000 bushels; olive oil, 200,000 casks.

The **MINERALS** of Greece include:—Iron, Marble, Magnesite, Emery, Lead, Lignite.

IMPORTS (1914), Old Greece only:—Total value £7,000,000, of which £2,000,000 from the United Kingdom; £1,800,000 from Germany and Austria Hungary; £1,000,000 from Russia.

EXPORTS (1914), Old Greece only:—Total value £4,000,000, of which £3,000,000 came to the United Kingdom.

COINAGE.—The unit is the Drachmæ, equivalent to a Franc (10d.). The current rate of exchange is about 33·85 Drachmæ to £1.

FREIGHT.—From England, 160/- + 10 % primage.

WEIGHTS AND MEASURES.—It was decided in 1898 to introduce the metric system. The change is to be gradual from the old system, which is:—Oke = 2·82 lb., stater = 123·20 lb., livre (Venetian) = 1·05 lb., baril (wine) = 16·33 imperial gallons, kilo = 0·114 imperial quarter, pike = ⅔ of a yard, stremma = ·242 of an acre.

BANK OF NATIONAL ECONOMY (of Greece)

Head Office: ATHENS.

Branches:

PIRÆUS, SYRA. PATRAS.

Capital Paid Up - Drs. 10,000,000.

Fully represented in all parts of the world for all kinds of commercial, financial, and shipping business.

President. L. EMBIRICOS. *Manager.* D. MIAOULIS.

BANK OF PIRÆUS.

For COMMERCE, INDUSTRY and SHIPPING.

Capital Paid-up - Drs. 5,000,000. Reserve Fund - Drs. 3,095,000.

OFFICES at PIRÆUS and ATHENS.

Every kind of Banking business transacted.
The Bank's connections throughout Greece enable it to offer foreign clients special facilities for the collection of Bills, etc.
Correspondence invited.

BANK OF INDUSTRY OF GREECE.

Head Office: 14, Stadium Street, Athens.

Capital Fully Paid-up - Drs. 15,000,000

The Bank has been established for the encouragement and development of Industry and Commerce, and undertakes every description of banking business.

BANK OF ORIENT.

Capital Paid up - Drs. 25,000,000

Head Office: ATHENS.

Branches: SALONIKA, SMYRNA, ALEXANDRIA, CAIRO, MITYLENE, SERRES, ZAGAZIG, MAGNESIA, PERGAMA, SOMA.

Every kind of Banking Business transacted.

TRANSPORT IN INDIA.

COMPREHENSIVE ROAD POLICY NEEDED.

Brig.-Gen. Lord Montagu of Beaulieu, who was Adviser on Mechanical Transport Services in India from 1915 to 1919, read a paper on "Roads and Motor Transport in India" before the Indian section of the Royal Society of Arts on May 20.

In India, as in many other countries, he said, the chief roads were originally made for military operations. He could trace no records of any definite road system previous to the occupation of certain parts of India by the East India Company. The most ancient of all permanent roads in India were to be found on the northern frontiers, where, in more than one place, there were traces of Buddist roads. These mountain paths were not blasted out of the rock, as would have been the case to-day, but burnt out by a peculiar process. Such a road was clearly seen over the Malakand Pass, below the present military road on the western slope, and it was interesting to recall the methods which the Buddists adopted in order to make those roads. They lit wood fires upon the rock, mostly of a limestone character, and having made it very hot, suddenly poured water upon it, causing the stone to crack, and in this way laboriously achieved a more or less flat path on the mountain side. It was noticeable from an engineering point of view how well those old roads were made, showing that the constructors of those days had among them engineers of practical if not of theoretical experience. The first attempt at a national road system began with the construction of the Grand Trunk Road in 1839.

Madras, as was well known, was the oldest province in India, and it was interesting to note that to-day, as formerly, the road systems of Madras and Southern India were more highly developed, and there were more roads per square mile of country and per head of population than in any other part of India. What the road systems of India might have become had not the railway era in 1853-60 supervened it was not easy to say. Probably there would have been thousands of miles of first-class main roads all over India. To-day, however, compared with the area of the country, the number of its inhabitants, and the importance of its commerce, India had probably fewer miles of good road than almost any other civilised country in the world. A comprehensive road policy for India had become an urgent need, in regard not only to the present but the future development of India.

Present Road Difficulties.

Till lately the importance of roads had in many parts, he was afraid, been lost sight of by successive administrations in India. Besides abandoned roads and broken bridges to be seen all over India, on what were once much-used main roads, the spectacle had lately been seen of irrigation colonies growing heavy crops having been laid out in the most approved style, but with no allowance in the original plan for roads along which the produce could easily be transported to the local market, the railway, canal or pukka road. Very primitive and expensive methods of transportation, therefore, had been used, and disputes constantly arose as to pack animals treading down crops on lands of people other than their owners, and the canal banks, notwithstanding the efforts of the canal officers, were almost invariably used as highways instead of roads for a large portion of the traffic of the district. Wherever irrigation colonies or settlements were instituted in future it should be laid down by the Government of India that adequate roads must be made providing for proper communication between every part of the area irrigated or settled, as a *sine qua non* of the scheme. In some cases it might be well to combine the land reserved for roads with a provision for light railways as well. Over rivers and canals where there was no question of military importance, combined road and railway bridges should be adopted.

It was interesting in this connection to record that one of the greatest difficulties in India which were met with when country districts were affected by famine had hitherto been the lack of facilities for moving food even when the food was available near by. It was probably no exaggeration to say that millions of human beings had died in India during the last fifty years, not so much because there was a lack of food within reasonable distance, as because of the difficulties of transporting that food into the districts affected. With a better system of roads and transport this difficulty would be largely removed. With the present railway system aided by an extension of roads, the alleviation of famine conditions in future should be possible with much greater certainty, economy, and ease, especially as it was very rare that shortage of food existed all over India at the same time.

It might be asked what should be the policy of the Government of India with regard to the future administration of the roads. He would respectfully suggest that what was wanted in India first of all was a classification of existing roads in order of importance. They should be divided into first and second-class pukka roads, and third-class or kutcha roads. All roads of national and military importance should be placed in the first class, and should be maintained by the Government of India irrespective of provincial governments, but possibly with a contribution from them for the local use made of them. Such typical roads would be the main line of the Grand Trunk Road from Calcutta to Peshawar and from Bombay towards Delhi. Class 2 should be pukka roads of provincial but not necessarily of national or military importance. These should be under the control of and be repaired by the provincial Governments of Madras, Bombay, and Bengal. The third classification would consist of roads of comparatively little national or provincial importance, but necessary for local use. Some of these might be made pukka, but the majority would probably remain kutcha.

Since April, 1915, when the Government of India first decided to possess its own mechanical transport, the number of personnel and vehicles had increased with every year, till at the end of 1919 there was something like 5,000 personnel and about 4,000 mechanical transport vehicles under its administration, including the Ford vans and cars especially obtained for the Afghan war, and now in use on the frontier. The use of mechanical vehicles among the commercial community was also largely increasing, and in Bombay, Calcutta, and other commercial centres, a large amount of goods were being conveyed by mechanical transport, which till a few years ago were moved solely by animal power. There had also been a great increase in the number of motor-cars used by both the British and Indian community, and the demand seemed still unsatisfied. He might remark that purely European types, both of lorries and or ordinary motor-cars, were unsuitable for use in India during a considerable portion of the year owing to their having insufficiently large radiators. It was true that some European types continued to run, but they were operated at a disadvantage compared with those that had been specially designed to suit tropical conditions. It had to be remembered that when the water in the radiator was constantly boiling, not only was there a serious decrease in power produced by the engine, but mechanical troubles tended to develop as the direct result of overheating. In his opinion there was a great future before any firm who cared to specialise in a tropical model for the private owner's car. As regarded lorries, the Indian Standard 2½-ton vehicle specially designed for tropical use had already proved its worth, and was probably the best lorry for work in hot climates that had yet been designed.

Tarred Roads Needed.

There was one factor about the roads in India about which one could not help remarking: that was the absolute lack so far of any effort to make them—some of the most dusty roads in the world—dustless. This was the case even in the neighbourhood of cantonments. Not only was dust a nuisance, but it was distinctly prejudicial to health, and in the case of many cantonments there was much expense incurred annually for watering, which was in itself destructive of the surface of the road. There was, for instance, no reason why the main roads of Delhi, Lahore, Rawalpindi, Peshawar, and other military camps and important centres should not be made entirely dustless, and he was convinced that the extra expense in tar-spraying or the use of tarred stone would be amply repaid by the increase in the life of the road. Then there were also cases on the frontier where dust in the summer and mud in the winter were great drawbacks to military operations. Here, again, a dustless road with a bituminous surface would be of immense benefit to both troops and animals. In regard to the supply of tar, he had been unable to obtain any reliable statistics, but there should be enough tar made in various gas works all over India to provide a good many gallons for making roads dustless every year. If there were not existing plants for the distillation of tar from coal in the Bengal coalfields some could well be set up.

The latest returns in 1901-2, now nearly twenty years ago, showed that about 37,000 miles of metalled road, and 136,000 miles of unmetalled or kutcha roads, existed. The population of India was now about 320 millions, and the miles of road per head of population was therefore ridiculously few. From a military point of view the Government of India had lately begun to realise the growing importance of roads, the expenditure having been: 1917-18, Rs. 49.72,797; 1918-19, Rs. 77,21,588; and as estimated for 1919-20, Rs. 2,50,00,000.

The Imperial civil roads in 1917-18 cost Rs. 6,00,463, while the provincial civil roads cost Rs. 51,89,223, making a total of about 58 lakhs. This year more would doubtless be spent, but even if 100 lakhs were found for civil roads, the military expenditure would then still be two and a half times the civil expenditure, a difference neither easy to explain nor apparently justifiable, when one remembered the large excess of civil over military traffic on the Grand Trunk and other main roads in India. A large part of the military expenditure on roads benefited the civil population, and he ventured to suggest that the proportion of civil compared with military expenditure needed further consideration by the Government of India.

The Bulgarian Ministry of Agriculture has decided to found at Varna a Water Department for (1) altering the course of the Provadia River and reclaiming the marshy regions near the lakes Guebedge, Soultanlar and Karagatch; and (2) altering the course of the Kamtchia by the construction of a barrage-reservoir in the defile between Novo-Delo and Kailar, which will safeguard against floods fourteen villages situated between Novo-Selo and the Black Sea Coast.

TRADE ENQUIRIES.

"STANDARD" CIGARETTE MAKING MACHINE

Embodies all the refinements of years of operation and experimenting: fitted with every useful device for perfect production. It is the most efficient automatic mechanism yet evolved. Developed and produced in connection with active operating conditions in the World's Largest Tobacco Factories, it has attained an unrivalled degree of simplicity, strength and accessibility of all moving parts.

AMERICAN MACHINE & FOUNDRY CO., LTD.,

ENGINEERING.

Welding Structural Steel.

It has been the general custom hitherto when erecting steel buildings or steel frameworks for reinforced concrete structures to bolt or rivet the members together, and in comparatively few instances has any other method of jointing been tried. The new factory which is being erected for a large London engineering works is, therefore, of special interest to engineers generally, in that not a single rivet, bolt, or pin is being used in the construction of the steel roof.

The roof is of the multiple span, obtuse and acute-angle type, giving ample north light to the premises, and it is being built of steel trusses of an over-all span of 14 ft., these being supported on H-section stanchions and joists. In the construction of this roof every part requiring to be jointed is being electrically welded on the A.W.P. system, and it is said that perfect satisfaction is being given, both as regards quality and quickness of execution. Even the cap and base plates are being electrically welded to the stanchions, as well as the joists to the cap plates. The completed trusses are, of course, welded to the joists, whilst the cleats are also welded to the top sides of the trusses to carry the timber purlines for the attachment of the roofing and glazing.

It appears, from a description of the method of carrying out the work, that the procedure followed is to cut the stanchions to length and weld on the cap and base plates. The joists are hoisted upon the stanchion cap plates and welded whilst being held in place with suitable clamps. In this connection it is worthy of notice that in the first joists erected the method adopted was to hold the parts in place by means of a temporary bolt, but it was found very much quicker to make up jigs and special clamps to hold everything just as it was wanted than to go through the routine work of marking out and drilling for every joist.

The steel bars and angles composing the trusses are cut to the correct lengths on the site and dropped into a simple jig constructed of angle and light H-section steel in which the joints are welded up and the gussets welded in place. It is mentioned also that the cleats forming the junction between the truss and the joists are welded, one to the truss and the other to the joist, before erection, the final welding being done after the truss has been hoisted into position. It has been found, as a result of carefully kept records, that one welder and one labourer, having the material already cut to the requisite length, can assemble together and weld one truss in the average time of one and a-half hours, and on more than one occasion the work has been done in slightly under the hour.

As regards construction costs, it is interesting to note that, at the first-mentioned rate of working, the total labour outlay for one truss amounts to 9s. 4d., being 1½ hours for welder at 2s. 6d., 1½ hours for labourer at 1s. 8d., a total of 6s. 3d.; 2s. 10d. for 22 inches of electrode and 1½ unit of electrical energy at 2d. per unit. As each of the trusses weighs approximately 3 cwt., it will be seen that the total cost for assembling and welding one ton of parts is £3 2s. 3d., a figure which will be generally regarded as extremely moderate.

As far as the welding of the cap and base plates to the stanchions is concerned, it is found that a welder of ordinary skill, with a labourer, can complete each stanchion in about 30 minutes, at a total cost of 2s. 9d.; and as the total weight of a stanchion is 3 cwt., the cost works out at the very low figure of 18s. 4d. per ton. It must be mentioned, however, that the cost of cutting and delivering the material is not included in the above figures; but this, of course, would be the same were the ordinary methods of construction employed, and so need not be taken into account in this comparison. It is worthy of note, however, that the elimination of the costs of marking out and drilling by hand or by electrically operated drill reduces the comparative cost still further, and the simple jigs used are standard for all the jointing work that has to be carried out.

A New British Record.

It is interesting to note that another British record has just been put up by an aeroplane fitted with Napier engines made at the Acton works. This performance was put up by a Handley-Page machine of the commercial type, provided with two engines, and it attained a height of 13,999 ft., carrying a useful load of 3,690 lbs. Altogether the machine was in the air for one hour and twenty minutes, and the Royal Aero Club has given its certificate to the effect that this constitutes a British record for height, duration, and useful load carried. The machine, which was piloted by Capt. G. T. R. Hill, went up from the big aerodrome at Cricklewood. Following, as it does, the twenty-three other British records held by the Napier engine for speed, my friend Mr. H. T. Vane may well be proud of this latest performance, which emphasises the reliability and speed of these British-built engines. Whether in connection with car work or aeroplane engines, in all my fairly lengthy experience I have never heard of Napier's turning out an engine which did not give the utmost satisfaction.

B.M.T. Oils.

The introduction of B.M.T. motor oils is a further indication of the extent to which the British Motor Trading Corporation are catering for the needs of road users. The big output of cars assured by the Harper Bean organisation has rendered it necessary for a regular and uniform supply of motor lubricants to be obtainable, as the life of an engine depends to a large extent on the suitability of the oil used. Good oil means more than sweet running—it means an all-round reduction in running costs, increased power output, and a marked diminution in wear and tear. At the moment I am not in a position to say a great deal regarding the B.M.T. oil, but as I am just about to start a 400 odd miles run through Wales and the Midland counties, and shall be using exclusively B.M.T. oils, I hope to be able shortly to speak of them exactly as I have found them.

Coal Tar Products.

A new method of producing tartaric acid from coal tar has recently been patented, and it is said that the process is already being worked on a commercial scale; and in connection with it one of the most interesting points, from the view of the chemical engineer, is that a number of other and equally important substances can be obtained in a similar manner according to the inventors.

It appears that the basis of the process is a method of building up various substances from what is known as maleic acid secured from benzol. The benzol is agitated and allowed to mix with a required volume of oxygen and nitrogen, and the vapour is passed over a catalyser. When maleic acid is used as a base it is not only possible to obtain tartaric acid, but other products as well, and the success of the commercial manufacture of citric acid by this method and with these compounds seems assured. Experiments show that it is equally simple to obtain ample supplies of lactic acid, and although there is comparatively little demand for this, succinic acid can also be produced.

Digitized by Google

The question at once arises whether the inventors have stumbled on the gateway leading to a new development of synthetic organic chemistry. It would seem certain that in this way maleic acid synthesised from benzol could be employed as the basis of new dyes and pigments, fine and heavy and photographic chemicals and drugs, whilst it would seem that an unlimited field for the manufacture of synthetic flavourings is also about to be opened up. I am under the impression that the British Dyestuffs Corporation, at their Huddersfield works, have been carrying out some research work in connection with maleic acid and benzol, but I do not know what stage has been reached by them. Anyway, it would seem that American manufacturers are already alive to the possibility of manufacturing on a large scale from this new source of supply, and have welcomed the discovery, inasmuch as it will relieve them of the necessity for importing a good many of the materials they have hitherto been unable to produce.

Exports to Roumania.

There are two points to which the majority of the buyers in the East take exception when buying goods from European centres, and especially machinery from the United Kingdom—the charges for packing, which, they think, ought not to be made (although if they were included in the price of the goods, they would probably not be noticed), and the unsatisfactory way of packing goods. The latter point has been the subject of reference by the British Commercial Secretary at Bucharest, who says that British shippers of goods to Roumania should pay more attention to the question of packing. In several recent instances the baling or packing of goods has not been sufficiently strong to withstand the rough usage received, with the result that loss has been sustained through both damage and pilfering. Shippers are also urged to detail their invoices carefully in order to facilitate entries through the Customs, and invoices, it is remarked, should, if possible, relate only to the bales in each parcel shipped, and not to several parcels shipped on different steamers.

MISCELLANEOUS TOPICS.

The Vickers Internal Combustion Engine.

During recent years engineers, financiers and journalists have all been sounding the eulogies of heavy crude oil as the propulsive fuel for the ordinary marine engine of the future. As is always the case, however, in these matters of conjecture, nothing can be done in the way of advancement until the theories are put to the practical test. Sir James McKechnie, K.B.E., the managing director of the Vickers Naval Construction Works at Barrow-in-Furness, has always been an ardent exponent of the future of the internal combustion engine for marine propulsion, and the works at Barrow-in-Furness have produced some of the most reliable types of these engines which have ever been installed in any ship. Hitherto, the ships fitted with the Vickers internal combustion engines have been to the order of the British Admiralty, and the secrecy necessary in such contracts has prevented the general public from acquiring that wider knowledge of the Vickers' internal combustion engine which its achievements merited. Now that the war is over Vickers, Ltd., have been free to devote their energies to the development and construction of internal combustion engines for mercantile marine requirements. During the war, oil tankers built for the Navy (which have since been acquired by the larger oil-carrying companies) were fitted with the Vickers' internal combustion engine, and the special experience which was then gained, and the results achieved, completed the data required for the design and construction of their first mercantile ship to be fitted with this type of engine.

Shortly after the cessation of the war, the Vickers works contracted with the Anglo-American Oil Co., Ltd., to build an oil tanker for them, and to meet the stipulated requirements of the shipowners the following were the dimensions which the Vickers designers selected: length, B.P., 425 ft.; breadth mld., 56 ft. 8 ins.; total d.w. capacity, 10,050 tons; bunker capacity (oil), 733 tons. The vessel had to carry a cargo of 9,420 tons of oil in addition to 510 tons of fuel with allowance of stores, fresh water, etc., on a draft not exceeding 26 ft., and the propulsion was to be derived from Vickers' internal combustion engines of the heavy oil mercantile type. The ship was launched at Barrow on November 27, 1919, and on May 5 she left under her own power for docking and sea trials.

These trials have now been successfully carried out, and the Narragansett—as the ship was named—has fully justified all the hopes and confidence of the owners and of the designers and builders. From the special experience of these engines which the Vickers' firm have had little if any anxiety was felt by them as to the stringent contract requirements being met, but even the expectations of the Vickers Company's officials were surpassed in the results which the Narragansett gave on her official trials. These proved in every sense a success, and a speed was obtained of nearly one knot in excess of the contract requirements. Besides a sister ship for the oil company Vickers have under construction at present several large oil tank vessels to be propelled with internal combustion engines for Tankers, Ltd.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned:—

Greece: Ministry of Communications.—Supply of telegraphic materials. (Particulars may be seen at Department of Overseas Trade, 35, Old Queen Street, S.W.1.) June 20.

Roumania.—The Frontier Guards of Roumania desire offers, preferably in the French language, from British houses for the following medical supplies, instruments, etc.:—Boric acid, pure carbolic acid, antipirene, aspirin, quinine sulphate, dermatol, iodine, iodide of potash, permanganate of potash, protargol, sulphate of soda, bismuth salts, and vaseline; graduated syringes and needles, platinum needles, surgeons' knives with straight metal handles, probes, and general surgical instruments; cotton wool, gauze, rubber sheeting and bandages. As the amount of money at the disposal of the medical staff is limited, the quantities to be purchased are not mentioned, as these will depend upon the prices quoted. Offers should be addressed to: Monsieur le Commandant I Cerna, Corpul Greniceri, Boulevard Bratiann (Colt cu Batiste), Bucharest.

Greece.—The President of the Rice Cultivation Association of Messinia invites inclusive offers from British firms for the supply of rice-threshing, peeling, and polishing machinery, and motor-lorries for the conveyance of the rice. Tenders made out to the President of the Rice Cultivation Association of Messinia should be made on the basis of delivery c.i.f. Piraeus or Kalamata (Morea), and accompanied by designs, terms of payment, and any other relevant information, and addressed to The Commercial Secretary, H.B.M. Legation, Athens, Greece.

The traffic receipts of the Smyrna-Aidin Railway for the week ended May 8 amounted to £7,308.

Interest on the 6 per cent. debentures of the Aboukir Company, due June 1, will be paid on that date on presentation of Coupon No. 3 at 134, Palmerston House, E.C.

The receipts of the Egyptian Markets, Ltd., for the week ended May 12 were:—Cattle markets, £849; general markets, £609; total, £1,458; total for year, £36,922.

Official statistics which have been issued recently, give the quantity and value of Roumania's foreign trade in the first half of 1919 as follows:—Imports, 231,259 tons, value 1,114,549,722 lei; exports, 6,756 tons, value 5,983,371 lei.

Pending the opening of H.M. Trade Commissioner's office at Bombay, communications should be addressed to him at the office of H.M. Senior Trade Commissioner at Calcutta, P.O. Box 683, Allahabad Bank Buildings, 6, Royal Exchange Place, Calcutta.

The directors of the South Indian Railway have decided, in order to equalise the dividends of the two half-years, to pay on July 1 next an interim dividend from surplus profits of 2 per cent. (compared with 1½ per cent. July 1, 1919), making, with the guaranteed interest, 3½ per cent. for the half-year to June 30.

NEAR EAST MARKETS.

SPECIAL REPORTS.

The following information is compiled from the weekly bulletins received at the London offices of the Imperial Ottoman Bank from its correspondents in the Near East:—

STAMBOUL, April 24.

The commercial outlook has not improved during the week. The stagnation continues, communications with Anatolia are still interrupted, and financial difficulties continue.

Not only have arrivals notably decreased, but merchants are re-exporting considerable consignments to Manchester in order to realise at the best price. Prices here are a little firmer for certain commodities.

LONDON PRODUCE REPORT.

Dried Fruit.

The position is much the same as at the time of our last report. There is a brisk demand for all kinds of dried fruit, and there is no doubt that, given favourable conditions, it will increase.

Coffee.

Certain qualities have been in firm demand, notably Costa Rica and various Indian grades. Brazilian has come to business round about 116s., while the prices for Costa Rica have ranged from 145s. to 175s. Indian has been done at 145s. to 170s., and Columbian at from 125s. to 160s. The futures market has been inactive, but what movement has taken place has been in an upward direction.

Oilseeds.

The market has been quiet. Indian rapeseed has been done round about 40s., while linseed has come to business at from 38s. to 42s. Sesame is about 55s.

Oilcakes, etc.

Linseed cake at 400s. to 410s., and soya bean cake round about 430s., have been in fair demand. Other prices have included rapeseed cake at 245s. to 250s. and coconut cake at 230s.

EGYPTIAN CROPS.

The bulletin of the Egyptian Ministry of Agriculture gives the following particulars of crop conditions in April:—

Cotton.—The weather, though somewhat changeable, was on the whole favourable. General complaints of the scarcity of water, especially during the first half of April, have been reported from Lower and Middle Egypt. Districts lying at the tail ends of canals have suffered most. Generally speaking, the crop is backward and is not uniform. Preparations were made at the beginning of the season for early sowing, but bad weather interfered with this, and late sowing has in many cases been further delayed by scarcity of water, the sown seed having frequently had to wait many days before the water reached it. Until the end of April sowing after beans and barley was taking place, even in Upper Egypt. Slight attacks of aphis and sore-shin have been observed in most provinces. Where the germination of the plants has not been good, this has frequently been attributed by the farmers to the hot-air treatment of seed to destroy the pink boll worm, but this allegation has been proved to be untrue. Early sown fields suffered from rain and sore-shin in Lower Egypt.

Wheat.—The weather has been favourable. The crop continues to present excellent prospects. Rust, which attacked the Baladi variety late in the season, has done very little damage to the grain. The Hindi variety, which forms the bulk of the crop, has suffered very lightly from pest attacks. Harvesting commenced in the basins and perennial areas of Middle and Upper Egypt towards the middle of April, and the yield is expected to be very satisfactory—above the average for the past seven years and far above that of last year.

Barley.—Harvesting has started in Lower Egypt; in Middle and Upper Egypt it is practically over. The attack of rust and smut, which has been reported from several provinces, has not caused much damage. The yield is above the average.

Beans.—Harvesting is over in Middle and Upper Egypt and approaching completion in Lower Egypt. In the latter part of the country the attacks of rust, broom-rape and blight reported last month have since considerably developed, and rust in particular has caused serious damage to the crop, especially in the provinces of Daqahliya, Sharqiya and Qalyûbiya. The reports on the yield are therefore less favourable than last month.

Bersim.—The weather has been, generally speaking, favourable, but the shortage of water has seriously affected the growth of the crop, dwarfing the stalks and shrivelling the seed. Harvesting of the seed crop is making good progress in Asyût and is over in Girga. On the whole the seed crop is expected to be relatively small this year, owing to the small area left for seed.

Sugar-cane.—Sowing of the new crop has been checked by the shortage of water, and the area put under this crop is reported to be smaller than usual. The second-year crop is being manured. The old crop is still being cut in Asyût and Girga.

LANCASHIRE COTTON.

Better Clearances in Egypt.

(FROM OUR OWN CORRESPONDENT.)

MANCHESTER, Thursday.

The tone of the market has continued very dull, and business to some extent has been disorganised by the Whitsuntide holidays. The outlook for spinners and manufacturers tends to get worse, and owing to the production of the machinery not being sold, producers in all sections have steadily lost ground. Reports relating to the Egyptian cotton crop remain more favourable, and there is every expectation of a very fair increase in the acreage. Owing to lack of demand and the probability of larger supplies, prices have given way. There has been very little buying of new crop months in futures. Yarns made from Egyptian cotton have also been very slow. Sentiment amongst users is distinctly bearish, and buyers are purchasing as little as possible. Trade in piece goods for the Near Eastern outlets has been of limited dimensions. Cases continue to be reported of shippers asking manufacturers to defer deliveries. It is stated, however, that the position in Constantinople is improving, and rather better clearances are taking place in Egypt. So far as fresh business is concerned, this is out of the question, as merchants distrust current rates. The turnover in cloth for India has been very disappointing. China continues to try to resell goods or cancel contracts. Some demand has been mentioned for Central and South America but comparatively little has been done. The American yarn market has been flat. Prices have favoured buyers. Export numbers have attracted very little attention.

TRADE OF VOLO IN 1918.

The great increase in the value of the exports for 1918 (£2,699,282) as compared with £214,636 in 1917, £468,699 in 1916, and £500,049 in 1914, is entirely due to the enormous quantity of tobacco now grown and exported from the district (says H.M. Consul at Volo in a recent report). The valuation of such tobacco is a somewhat uncertain matter but a fixed rate of ten shillings per oke has been assumed for that exported during 1918. Imports consist of manufactured goods and textiles of all descriptions. They still only indicate what has proved procurable, and do not by any means represent the real present needs of importers or consumers. The value of imports in 1918 was £306,602, as compared with £161,348 in 1917, £336,985 in 1916, and £553,031 in 1914. Merchandise to the value of £94,343 was received from the United Kingdom in 1918, imports from America being valued at £126,495, from Spain at £50,352, from France at £18,212, and from Italy at £17,200.

Openings for Trade.

Stocks in retail establishments are still very low, and a considerable unsatisfied demand continues to exist for manufactured articles. It is unfortunate that large textile buyers who have hitherto almost exclusively obtained their supplies from the United Kingdom now find this class of goods especially difficult to secure.

For many years past—indeed, ever since the Ottoman régime—British manufacturers in general have been highly esteemed, German or Austrian goods having a greatly inferior reputation. The main, if not the only, consideration which has influenced importers of German and Austrian production has been cheapness. It is true that in the past such goods have been ably pushed, and tempting inducements offered by competent commercial travellers, but the principal local importers are well acquainted with the various foreign markets and producers, and are not entirely influenced by mere "push" or convenient methods of doing business, as is sometimes assumed. Where foreign goods have supplanted British it has almost certainly been due to precisely the same causes which in the past led British buyers and consumers in the United Kingdom itself to prefer certain classes of imported goods to those of home manufacture.

SHIPPING INTELLIGENCE.

Forthcoming Sailings.

The Cunard Line s.s. Brescia, for Malta, Piræus, Smyrna, Constantinople, Bourgas, Varna, Constanza, Sulina, Galatz, and Braila, will close for cargo at Liverpool on June 5.

The Ellerman Lines s.s. City of Oxford, for Malta and Alexandria, will leave Liverpool on May 29.

The Ellerman Lines s.s. Douro, for Malta, Syra, Smyrna, and Constantinople, will close for cargo on June 10.

The Moss Line s.s. Karnak, for Gibraltar, Oran, Malta, Syra, Smyrna, Constantinople, and Beyrout, will leave Liverpool on May 29.

The Prince Line s.s. Italian Prince, for Tunis, Malta, Alexandria, Syrian Coast ports, and Cyprus, will close for cargo at Manchester on June 5.

Olivier's Levant Line s.s. City of Smyrna, for Tangier, Oran, Algiers, Tunis, Piræus, Salonika, Smyrna, Constantinople, Varna, Odessa, Sulina, Galatz, and Braila, will load at Middlesborough at the end of the current month or the beginning of June.

The Bibby Line s.s. Leicestershire, for Rangoon, will leave London on June 8.

The Anchor Line s.s. Scindia, for Bombay, will close for cargo at Liverpool on June 5.

The Harrison Line s.s. Explorer for Calcutta, will leave Liverpool on June 1.

The Johnston Line s.s. Fernandina, for the Mediterranean, Black Sea, and Danube, from Liverpool, Swansea, and Antwerp, to Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Tulcea, Galatz, and Braila, will close for cargo on June 1. The same line's s.s. Portinglis, for the same destination, will close for cargo on June 11. Cargo can be received by special arrangement only. All sailings are liable to cancellation with or without notice. All freight quotations and contracts are made upon terms of the Johnston Line bill of lading in use for the particular trade. For freight or other particulars apply Johnston Line, Ltd., 6, Billiter Street, London; 9, Mount Street, Manchester; J. and A. Roxburgh, Glasgow; M. Langlands and Sons, Dundee; Burgess and Co., Ltd., Swansea; Furness Shipping and Agency Co., Antwerp; and Furness, Withy and Co., Ltd., Royal Liver Buildings, Liverpool.

Notes.

There was launched at Jarrow recently the steamer Alipore, built by Palmers' Shipbuilding and Iron Company, Limited, for the Peninsular and Oriental Steam Navigation Company. The Alipore is 400 ft. long, 52 ft. broad, and 31 ft. deep, with a dead-weight carrying capacity of 8,200 tons. The vessel will be fitted with triple-expansion engines which will give her a speed of 11½ knots.

SHIPPING AT MALTA.

(From Our Own Correspondent.)

Malta, May 12,

The latest arrivals at this port have been H.M.S. Transport Frankfort, from Constantinople; H.M.S. Tobago, from the same port; H.M.S. Concord, from Gibraltar; H.M.S. Czantza, from Southampton; H.M.S. Teutonic, from Liverpool; H.M.S. Spear, from Gibraltar; ambulance transport Varela, from Newport; and H.M.S. Endeavour, from Port Said.

The following have recently left this port:—H.M.S. Tribune, for Syracuse; H.M.S. Tomahawk, for the Black Sea; and H.M.S. Hussar, for Constantinople.

INDIAN INTELLIGENCE.

Revised Wheat Estimate.

The Indian Trade Commissioner has issued the following cabled news received from the Director-General of Commercial Intelligence, Calcutta, dated May 12:—Nearly general rain has fallen in Kashmir, North-Eastern India and Burma. Local in Northern India, South-Eastern Madras and Malabar. All India wheat revised estimate April 30, 29,727,000 acres (as compared with 29,537,000 acres in the special wheat forecast intimated in the cable dated April 28). General crop conditions good. Construction Nanjangud-Hardanhalli metre gauge railway by Mysore Darbar, twenty-seven miles sanctioned. Bombay cotton market irregular. Fully good broach May Rs.484, July-August Rs.448 8 As. Piece-goods market no improvement. Calcutta jute market quiet with fair business passing. Hessians steady with tendency towards easier rates. Heavy goods steady with moderate demand.

No change in Bank Rates.

A later message dated May 19 states:—Nearly general rain has fallen in Kashmir, Bay Islands, Assam, Orissa, Chota Nagpur, North Madras Coast, and Central India West. Local in rest of North-Eastern India and Central India, Madras and Punjab. General crop conditions good, but rain required for sowing jute and paddy parts Bengal. Bombay Cotton Market steady. Fully good broach May Rs. 486, July-August Rs. 448-8 Annas. Piece-goods market no improvement. Poor demand. Calcutta jute market fairly steady, but no business. Hessians steadier with advancing prices. Heavy goods very quiet. Bank rate is—Bengal 7 per cent., Bombay 8 per cent., Madras 9 per cent.

NEWS FROM ALL SOURCES.

The Banque d'Escompte Slovène is raising its capital from 10 to 30 million kronen.

The Credit Foncier d'Algerie et de Tunisie has opened a new branch at Gibraltar.

The directors of the Bank of Athens announce a dividend of 7 drachmæ per share of the 1913 issue.

Chemins de fer de la Basse Egypte.—An extra-ordinary general meeting will be held at Cairo on May 31.

The report of the Banque d'Escompte Croate shows that the net profits for 1919 amounted to 5,335,832 kronen.

The Bulgarian Consortium has concluded a contract with the Government of Austria for the sale of more than 1,000 wagons of maize.

The directors of the Mayfield (Dimbula) Tea Company of Ceylon propose to subdivide the £10 preference and £10 ordinary shares into shares of £1 each.

It is understood that the Bucharest branch of the Agence Polonaise, a State institution, will establish an agency in Sofia for the purchase of cereals and other exports.

In an answer to a question as to the reasons for the continuance of restrictions upon the import of gold into India the Secretary of State for India points out that the removal of the present control is an objective of currency policy in India.

The accounts of the Gold Fields of Mysore and General Exploration, Ltd., for the year ended December 31 show that the revenue amounted to £1,875, against £2,031; expenditure was £2,191, to which is added £281, representing loss on shares, making £2,472, leaving £598 for the year.

The directors of the Bombay, Baroda, and Central India Railway propose the payment, in addition to the half-year's guaranteed interest of 1½ per cent., of a final dividend of 2 per cent., with a bonus of 1 per cent. from the company's share of surplus profits for the financial year to March 31 last, making a total payment in July next of 4½ per cent., less tax. The return on the capital stock for the whole year will therefore be 7 per cent., less tax, as compared with 6½ per cent. for the previous year.

POTTERY INDUSTRY OF FEZ AND MEKNEZ.

The principal articles of pottery manufacture in Fez are bowls, jars, tiles, glazed and coloured goods, such as plates, dishes, and small lamps. The usual fuel is "doum," or dwarf palm, but olive stones and skins and similar refuse from the oil presses in the town are also used. The colours employed to ornament the pottery are blue, green, yellow, and black, states H.M. Acting Consul at Fez. The blue dye is imported from the United Kingdom, and is known as "berrya." The green is obtained from an amalgam of copper and lead, the yellow from earth brought from Ghiatsa, near Fez, and known as "safar" (yellow), and the black from another kind of earth from the near neighbourhood of Fez. The secret of the light blue dye, which was formerly used, and which is seen on old tiles and pottery, has been lost.

The glaze used is made from lead, pewter, copper, and a white sand obtained from the neighbourhood of Meknez. The lead is obtained from the lead paper used for packing tea, being bought up all over the country. The pewter is obtained by melting down old pewter teapots, the usual teapot used in Morocco, and the copper by melting down old copper cooking utensils. Scraps and shavings of brass and copper are bought up from the coppersmiths and also utilised. The tiles have only one face dipped into the glaze and dye, but other articles, such as plates, are plunged completely into the glazing mixture. The designs, which are varied, but all conventional, are painted on by hand. In one part of the potteries there is a machine introduced by the French for making large tiles. The designs, which are not Moorish, are stencilled on, and four tiles make up the pattern.

The potteries at Meknez are not so extensive as those at Fez, but are of the same description. One section specialises in reproducing the old Moorish designs. The secret of many of the old colours has been lost, but experimental work for several months has resulted in the reproduction of some of them, while hopes are entertained that the others may also be recovered. Considerable quantities of square tiles for floors and walls, ornamented with designs copied from old Moorish tiles, are now being manufactured at Meknez and exported to France, while others, made in plain colours, are mostly sent to Rabat, Marrakesh, and other towns for local use. Large plates and dishes and jars of various shapes and sizes are also made in the Meknez potteries, and ornamented with designs in blue, green, yellow, and other colours. Some of these are exported to France as "objets d'art," but the greater part are at present sold locally. Curved green tiles, used for roofing, and a thin brick for building purposes are also made.

TRADE TENDENCIES IN CORFU AND EPIRUS.

Italy's Strong Position.

As might be expected, for geographical reasons as well as for those connected with the rate of exchange, Italy appears to be rather the dominating factor in Corfu trade, says Mr. E. C. D. Rawlins, Commercial Secretary to H.M. Legation at Athens in a recent report. No British or French steamships make regular calls at Corfu, but the following Italian steamship lines call regularly:—The Lloyd Triestino Line, two boats weekly, each way. The Puglia Line, one boat weekly. There is much complaint that British goods take a very long time to reach Corfu, viâ Patras, and, even then, arrive much damaged and often unfit for sale. There appears to be no special competition from France or America. There is, however, a French store which sells all kinds of articles of a rather cheap variety. It was stated that a German firm in Saxony has been offering clinical thermometers c.i.f. Chiasso, Italy, for 24 lire the dozen.

Although the trade of Epirus was, before the war, mostly in the hands of Austria, it appears that the Italians now hold the monopoly in this district, and do some two-thirds of the whole total import. The reason for this is rather obvious, since Italian steamers call twice weekly at Santi Quaranta, and the Italians run lorries straight up to Janina by the Santi Quaranta road; but the local Greek companies may now use this road. The Greek lorry companies can only bring goods up to the Prevesa road, which is in a very bad state of repair. It is said that Italian goods can reach Janina two weeks after the order has been sent. British goods, however, would take months viâ Piræus or Patras and Prevesa.

It appears, therefore, that Italy is hoping that this district will increase in population and importance. American and French trade is said to be insignificant. As openings for trade might be mentioned:—(1) Small market for ready-made clothing. (2) Drugs (which formerly came from Germany now come from France and Italy). The inhabitants of Epirus seem well off for money. The only local industry is tobacco, and the chief exports are wool, cheese and butter. The whole country is awaiting developments, as there is a good deal of water power for electric power purposes, and much could also be done in the way of dairy produce. There is a branch of the Instituto Commerciale Italiano in Janina. A Bureau Commercial Français has also just been started under the auspices of the French Consular Agent, M. Lappas.

The American-Southern Slav Bank is reported to have been formed at Agram with the co-operation of the American Foreign Finance Corporation. The share capital of the new institution is 10,000,000 dollars.

It is reported that a Swiss syndicate, representing twenty electricity works, has been formed with the object of founding individual undertakings in Roumania.

H.M. Commercial Commissioner in Bulgaria has forwarded a list of articles to the Department of Overseas Trade for which catalogues, and in some cases samples, would be welcomed by him. These will be displayed by the British Chamber of Commerce, which was recently formed at Sofia. The lists may be consulted on application to the Department. He points out that to be most useful catalogues should be in French, German, or Russian, giving present prices, or, failing them, catalogues in English with present prices.

ON CHANGE.

Depression Continued.

(From Our Own Correspondent.)

Throgmorton Street, Friday.

There has been much less business doing this week, and prices, except as regards Egyptian Government stocks, are again lower. Egyptian Unifieds, for which there has been a continual demand, closed round about 68, and the 3½ per cent. pref. stock at 56.

In Bank shares Nationals of Egypt have dropped about half a point to 19⅛, and Agriculturals finished at 4¼ only, being ⅜ decline.

In Land shares Aboukirs were offered at one moment as low as 33s., but look a better market to-night at 34s. Gharbieh Lands are about 3, Sidi Salem 2, Union Foncières 5⅛, and New Egyptians 35s.

Amongst miscellaneous descriptions Salts and Sodas are again easier, having fallen 2s. 6d. to 50s.

In Oil shares Anglo-Egyptians B have declared a dividend to-day of 20 per cent. for the year, but are a further 6s. 3d. down on the week at 65s. Roumanians have picked up a little to 18s. 6d., whilst Traians are somewhat easier at 8s.

In Greek stocks the 1881 and 1884 loans are two points down at 52, and 1890's have dropped one to 54, but in the 1914 loan there are still unsatisfied buyers at 50. Bank of Athens shares are rather a nominal market to-night, closing at 60s. ex. div.

TRADE WITH SYRIA.

The following resolution was passed at a recent meeting of the Egypt and Levant Section of the Manchester Chamber of Commerce:—"This meeting of merchants interested in trade with Syria records its grave concern at the almost complete cessation of trade with that country, which in the opinion of those present is the direct result of various regrettable actions, amongst which are: the imposition of a tariff duty of an extra 12 per cent. by the Arabian sphere of influence, and the forcing of the French currency (so-called Syrian) upon certain areas, which currency is refused by the majority of the inhabitants. Free business intercourse between these areas is thus rendered impracticable. It is estimated that more than £3,000,000 worth of Lancashire and Yorkshire goods have now been thrown back on the hands of Manchester shippers by Syrian importers. The meeting urges H.M. Government to give the matter immediate attention with a view to the taking of such steps in the proper quarters as will effect a removal of the present difficulties and disturbances and a prompt reopening of trade operations."

OIL OUTPUTS.

Roumanian Consolidated.—Production for April, 3,010 tons.

Anglo-Egyptian—Hurgada.—Production for week ended May 16 6,206 tons (previous week, 2,105 tons).

The Nile Commission opened its public sittings in Cairo on May 25.

At the instance of the Chamber of Commerce of Sofia, a meeting of chambers of commerce and commercial bodies was held at Sofia on May 10 to discuss questions concerning imports and exports.

According to a Zagreb (Agram) newspaper, the surplus products of the province of Batchka amounted to 3,000 waggons of grain, 20,000 waggons of maize, 4,000 waggons of oats, about 600 waggons of wheat and a similar quantity of straw. The most urgent requirements of this area, it is stated, are agricultural machines, petrol, oil, paraffin and copper.

NOTES OF THE WEEK.

M. Vesnitch, the new Prime Minister of Yugoslavia, wisely lost no time in making known the Government's policy; and though there was nothing very remarkable about the declaration which he made on May 26, it was satisfactory inasmuch as it was what might have been hoped for from a Government determined to grapple immediately with the political ills from which the country has been suffering for some time past. The first aim of the Government, M. Vesnitch announced, would be to prepare the Constitution of the Kingdom of the Serbs, Croats, and Slovenes; the elections for the Constituent Assembly would be hastened forward, and a Bill in general terms would be immediately prepared for its approval. Bills for the ratification of the Treaties with Germany, Austria, and Bulgaria would also be introduced as early as possible; and for the rest, in its foreign policy, the Cabinet would follow the path heretofore trodden by Serbia.

Unfortunately, the Vesnitch Cabinet is likely to find the Adriatic Question no easier to solve than did its predecessors. The outlook has not improved during the past week, and an attack made by D'Annunzio's troops upon the Yugoslavs has given rise to a situation fraught with danger. Early last week it was announced in Rome that Signor Scialoja would shortly leave for Pallanza to resume the interrupted negotiations; but at the end of the week a semi-official announcement was forthcoming to the effect that the internal and international situation would not allow of the fixing of any definite date for the resumption of the direct conversations. This fresh delay may quite well be unavoidable, but it is extremely unfortunate, and the sudden recrudescence of activity on the part of D'Annunzio and his *arditi* makes it terribly dangerous. Signor Nitti is reported to have said, only a few days ago, that whenever negotiations for settling the Adriatic question were undertaken, alarming rumours were spread and agitation was intensified, in order to prevent a settlement. The statement would appear to be well founded as far as the arch-agitator at Fiume is concerned.

Reports regarding D'Annunzio's movements are conflicting, but it seems to be established that his followers have occupied territory from which Italian regular troops have lately been withdrawn, and that he has announced his intention to occupy Sushak, if he is not forcibly prevented from so doing. A Paris message says that his troops "have attacked the Serbs," but does not say where. In face of this provocation the Yugoslav Government maintains a strictly correct attitude. It has very naturally warned the Italian Government that such conduct as D'Annunzio's must compel it to take steps to defend Yugoslav interests, and that it declines responsibility for any consequences that may follow; it has given orders to the Army to be ready for all contingencies; and it has instructed its Peace Delegates to bring the matter before the Ambassadors' Council. But it has thus far refused to play D'Annunzio's game for him. Such restraint in circumstances so trying to a proud-spirited nation surely entitles Yugoslavia to favourable treatment by the Peace Conference; but the situation is too pressing to be treated with the deliberation which characterises most actions of that august body.

Turkey has asked for an extension of the time during which she may make observations on the terms of peace offered her, and it is practically certain that she will be given to July 11. That she will then suggest very extensive modifications is not to be doubted; for that is the Turkish way of playing the game, and moreover no Turkish Government would dare to accept such severe terms without first making a show of strong opposition. As a matter of fact, the spirit of opposition is hardening day by day, and criticism is reported to be spreading, so that it now extends not only to the clauses dealing with Smyrna and Thrace, but also to the extension of the Capitulations and to the provisions regarding the control of the Straits; and it has reached such a stage that the Grand Vizier is reported to have tendered his resignation to the Sultan on the grounds that his supporters are all falling away from him. In view of this feeling—which we must acknowledge is a quite natural one, though we may hold that its manifestation will avail the Turks nothing in the long run—it is not surprising that the Government's operations against Mustapha Kemal are languishing.

The Greek occupation of Western Thrace was completed on May 28. An official *communiqué* issued in Athens reports that at Gumuldjina the Greek troops "were enthusiastically received by the population and by the Presidents of all the national communities, including the Bulgarian"; that "the occupation was carried out without the slightest hitch"; and that "complete order reigns." Dedeagatch also has been occupied without opposition reported; but in the neighbourhood of Kirdjali the advancing Greek troops were attacked by Bulgarian *komitajis*. Cynics will be tempted to observe that it is easier to believe the latter report than the former; and that in view of the enthusiasm

Digitized by Google

which always manifests itself in any Balkan town or province on every occasion when it is occupied, it would seem superfluous to mention such commonplace events. The explanation, however, probably is that on such occasions many, if not most, of the inhabitants who would deeply resent the occupation betake themselves to more congenial surroundings before it becomes effective. According to Bulgarian reports that is what has been taking place in this case on a large scale in Thrace It is to be hoped that this latest migration will make for peace in the Balkans.

Last week it was announced that King Alexander of Greece was last November secretly married to Mlle. Manos, a member of one of the leading Greek families. It is now stated that as the ceremony was performed without obtaining the Metropolitan's licence and lacked the observance of certain formalities, the marriage was only a morganatic one, and not recognised by the Constitution. The Greeks are a warm-hearted people, who doubtless share the world's love of a lover, and Greece is a thoroughly democratic country; it is, therefore, not impossible, though perhaps rather improbable, that Mlle. Manos may yet be recognised as Queen of the Hellenes; and the fact that she is herself Greek will certainly be in her favour. The question is, of course, one that the young King, his Parliament, and his people must decide between them; but the decision will be awaited with lively interest in other countries as well as in Greece; and Democracy especially will inevitably express its opinions strongly in certain eventualities. Meanwhile much sympathy is expressed for King Alexander and Mlle. Manos, who had the misfortune last Friday, while motoring in the Forest of Fontainebleau, to be the cause of an accident to another car, the driver of which has since died of his injuries. The King is reported to have been free from blame for the accident, and his conduct immediately after it won the admiration of all who saw it.

In accordance with the decision taken, as briefly reported last week, the Egyptian Nationalist Delegation, in response to an invitation extended by Lord Milner, has sent three of its members to London to endeavour to find a basis of agreement between Nationalist aspirations and Great Britain's interests. These three representatives are: Mohammed Mahmoud Pasha, well-known in this country, and one of Zaghloul Pasha's most able lieutenants; Aziz Fahmi Bey, a prominent lawyer; and Ali Maher Bey, formerly a judge. According to a telegram sent by Zaghloul Pasha to Egypt, the immediate object of these delegates is "to ascertain the intentions of Great Britain in regard to Egyptian aspirations relative to complete independence." If that be so, we cannot pretend to feel very hopeful regarding the result, if we understand Zaghloul Pasha's "complete independence" aright. Nevertheless, there is some ground for hope, and it is almost certain that no harm can come of the visit. The fact that Adly Yeghen Pasha, who was Minister of Education under Hussein Rushdi Pasha, and who is a Moderate of the best type, is also in London now affords further reason for believing that the situation is actually more promising than it appears on the surface.

A Reuter's message from Washington announces that: "President Wilson's proposal that America should accept the mandate for Armenia has been disapproved by the Senate Foreign Relations Committee, the voting being 11 to 4." This is regarded in some quarters as a measure of retaliation for President Wilson's veto on the Republican peace resolution. Be that as it may, it means apparently that Armenia must abandon all hope of American help in the form in which it would have been most acceptable and most efficiently given; though there is still a prospect of generous financial assistance being rendered her by the States. The disappointment will be a very real one, and very acute, for Armenia's friends as well as for the Armenians themselves, but it must be recognised that President Wilson has tried hard to get his ideals converted into realities; and, on the other hand, that if his countrymen feel an insuperable aversion to commitments in Europe and Asia, the instinct may well be a sound one. While granting this, however, we must realise that in future discussions of European and Asiatic questions America's voice will inevitably carry less weight than it would have done had she seen her way to accept the mandate for Armenia. It was for her to decide whether the game was worth the candle. But we may be permitted to regret her decision.

There are no developments of importance to report regarding the situation at Enzeli. The Bolshevists appear to be still in occupation of the town, and the latest news of our own small force is that it is still at Resht, unmolested. Persian reports are optimistic regarding the departure of the Bolshevists, and as a matter of fact the Bolshevists seem to be too busily employed with Georgia and Armenia to trouble much about Persia—yet. Besides protesting to the Soviet Government, the Persian Government has appealed to the League of Nations, with whom its Foreign Minister has lodged a formal protest against the Bolshevist aggression. Prince Firouz has been in close touch with the Foreign Office since his arrival in London, and it is understood that he is highly satisfied with the result of his conference with Lord Curzon, whose wide knowledge of and personal interest in Persian problems are assets of incalculable value to both countries at the present time.

The long-expected report of Lord Hunter's Committee on the disorders in India was published last week, together with the views of the Indian Government and the final orders of the Cabinet. We deal with the subject elsewhere, and it must suffice to say here that our recent prognostications as to its reception appear to be justified by the latest messages from India. The report is clearly not accepted as an eirenicon, but is taken as an excuse for the repetition of preconceived views, and an idea of its treatment by the Extreme Left may be formed from the description of Lord Hunter's judicial summary as "special pleading," a description which is ludicrously inappropriate in the ears of anyone possessed of even a superficial knowledge of legal procedure. We hope, however, that the value of the investigation will become more manifest as time goes on; truth tells, though perhaps less quickly in India than in the West, and the large number of politicians who are also lawyers will realise, though they may not admit, the merits of this impartial examination of occurrences which have been misrepresented in every conceivable way.

That Indian public men are not impervious to such considerations may perhaps be inferred from the change which has come over the Khalifate agitation. A good many of the politicians have now recognised the danger, and are putting on the brake, so that, if the matter were purely political, we might almost be justified in concluding that the worst was over. Unfortunately the actual position is somewhat different. Judging from recent messages, the mischief has progressed to a point where the religious sentiments of the Moslem masses have been definitely stirred. These masses are apt to conduct their arguments with clubs and butchers' knives, and those of our readers who have witnessed the response of an Indian city to the cry of *Din! Din!* will watch the cables with anxiety for some time to come. We trust that efficient administration and wise leading may suffice to avert the danger, but if it should unfortunately materialise, no elaborate enquiries will be needed in order to fix the blame.

The industrial situation in India shows no improvement. Strike follows strike and since the strikers have no sense of discipline, each cessation of work is followed by a greater or less amount of disorder and wanton destruction. At this distance it is difficult to speak with certainty regarding the causes at work, but the tide of prices seems to have definitely turned; there has been time now for the remedy of all genuine economic grievances, and we rather suspect that the weather is partly to blame. In India tempers vary with the temperature, and both are just now about the maximum. The best news to be expected from that quarter of the world is the advent of an early and generous monsoon, which would soothe strained nerves, accelerate the fall of prices, and set the country free to concentrate on choosing legislative councils worthy of the great occasion.

THE WEEK AT HOME.

Parliament and Soviet Envoys.

Politics have been so utterly dead during Whitsun week that even the Independent and Coalition Liberals seem to have forgotten to quarrel; but that particular oversight will no doubt soon be rectified when Parliament meets again. There are, however, more immediate indications of a storm over the status and reception by the Government of the Soviet envoys. M. Krassin, delegate of the Bolshevist Government to discuss the resumption of trade between Russia and Britain, arrived in London last week, and so far he has been remarkably reticent. But the papers have not. The Socialist and Labour journals can hardly conceal their glee; the journals of another persuasion have been examining the past of M. Krassin, and the suggestion that the Bolshevist Government is willing to export gold to England has been received by these organs with shouts—or rather placards—of "Will you take stolen gold?" My general impression is that the public is rather confused by the whole business, and discounts the statements of both sides. The worst of political propaganda of this kind is that you have to raise your voice so loud to drown what the other man is saying that the noise becomes deafening, and people retaliate by turning from the political to the sporting page.

The most damaging statement made against the Bolshevists has been that of Mr. North, the British parson at Moscow, whose report carried weight because it was plainly stated and bore the impress of truth. Mr. Lansbury and the *Daily Herald*, who worship daily at the Soviet shrine, have been unable to refute the clergyman, although they have tried hard to do so.

London as Financial Centre.

Mr. Otto Kahn, the great American banker, is now in London, and has discussed the financial situation of Europe with a representative of *The Times*. His views cannot be called pessimistic, but the particular point of his remarks concerns the future of London as the financial centre of the world. During the war, and since, several people in the United States claimed that New York would displace London, largely owing to American profits from increased trade; but Mr. Kahn will not hear of it. His position makes his words sufficiently important to be quoted:—

"The world position of London," he says, "is the result of psychological, geographical, and economic factors. It springs from racial qualities and practices and the accumulated commercial wisdom and experience of generations. The British people during and since the war have demonstrated to the admiration of the world that they retain to the full the qualities which have rightly given them the prestige and position that have long been theirs. America henceforth will be a factor in international financial affairs more than heretofore. But she will be that, and ought to be that, not with the aim of supplanting England, but of supplementing England. The world is in need of all the efforts that both countries can put forth with their utmost energies."

Housing Loans.

The British public is a very practical person. The Government Treasury Bonds and Housing Loans are in open competition for the investor's favour, and the Housing Loans seem to be beating the Treasury Bonds. At any rate, it is announced that the Kent portion of the composite Housing Loan—a million and a-half sterling—has been oversubscribed, and the London County Council Loan of three and a-half millions was also oversubscribed in three days, and this particular scrip has gone to a premium. That looks as though we may be getting houses built in some numbers before the winter sets in.

As a matter of fact, I saw a house being built—a single house—in a London suburb the other day. It was such a novel sight that several people, not obviously feeble-minded, had stopped to look at it.

Guild Socialism in Practice.

Incidentally the house famine has led to an interesting experiment. Many people have heard of the Guild Socialists and their theories—Mr. G. H. D. Cole, a young Oxford man, and a leader of the Labour party, is their shining light—but it has always been objected to them by the ordinary practical man that they are all theory and no practice. Their theory, as I understand it, is roughly that work should be done for pleasure and pride in one's craft, and not for profit. It does not seem a very outrageous idea, or one that bears the essential stamp of Bolshevism or anarchy, but it seems to horrify many worthy people.

However that may, a Building Guild is being formed, or, rather, has been formed, to build houses on these lines. No doubt the bricklayer will sing at his work, the carpenter will meditate on the good of humanity, and the plumber construct a new political philosophy as he plumbs; but if the house is properly built and made ready for occupation at a reasonable rate, I do not see why anybody should object very much. The idea that they will convert the world into a non-profit-making paradise strikes one as a little ingenuous—almost as ingenuous as those who are frightened of the success of the experiment.

Cost of Living Rises.

As I foresaw, the cost of living has again risen, and those newspapers which make a great feature of a speedy fall, like the *Daily News*, now look rather foolish. These Fleet Street "stunts" raise expectations which are doomed to disappointment, but it is a great pity that, in the rush of producing a daily paper, the editor has not time to think. A moment's thought would have shown that there was no real possibility of prices falling this year in anything but local or seasonal things. One thing goes down a penny, but something else goes up twopence; the general tendency is for the cost of living to rise for at least the next year or two. Indeed, the *Outlook* assures us this week that there is no great probability of a fall for the next eight or ten years, owing to the increase of population and the general shortage of supplies. Meanwhile, the director of the London School of Economics has worked out a new variety of the sun-spot theory, which seems to show that things will be at their worse in 1925; but these prophecies leave us cold. The statisticians have generally forgotten some factor which turns a minus into a plus, or a famine into a surplus.

The London Hospital.

The plight of the London hospitals, and particularly of the London Hospital, is more desperate than ever. The latter is £85,000 overdrawn at its bankers, and has borrowed a further £15,000 from an insurance company. Lord Knutsford, the chairman, in a letter to the Press, states that, "unless largely helped, the Hospital cannot pay its bills or expenses after the end of this month." The situation is a deplorable one, and all the hospitals are in practically the same position, owing to high prices of food, drugs, and labour. The contributions have increased, but not so rapidly as the expenses, and every rise in prices hits the efficiency of the hospital, and consequently affects the public health.

Dean Inge on Progress.

The Dean of St. Paul's, who is popularly known as "the gloomy dean," because he seldom echoes the popular optimism of the day, delivered the Romanes Lecture at Oxford last week. By a curious coincidence, he chose for his subject the Idea of Progress, which formed the subject of Professor Bury's last book. Of course, the Dean will have none of it. Mentally, we are inferior to the Athenians, and physically we are inferior to prehistoric man; he refutes Spencer's doctrine of inevitable progress by a citation from Huxley—a telling shot, and he remarks, acidly, that "the superstition of progress" had a profound effect on the philosophy of Hegel and Comte. It is true that he still allows us hope, "the distinguishing characteristic of mankind." The lecture was a very brilliant discourse, full of gems of wit; and the only possible retort that one can make to it at the moment is that, since Dr. Inge is manifestly a greater man than Dr. Donne, who once occupied his position at St. Paul's, the progress which is denied to the universe as a whole is, by some inscrutable Providence, still permitted to "those difficult dignitaries, deans."

Cockneys have often disagreed with their Dean, but they have come to be proud of a man who thinks for himself, and does not toady for popularity, and, since he still permits hope to rank as a Christian virtue, I can only hope that he will escape one of the bishoprics which are now at the Prime Minister's disposal. The episcopal bench would effectually smother his epigrams, for while "deans delight to bark and bite, bishops only purr."

The Week's Books.

In a literary sense, the week has been dull in the extreme; the publishers, like the gods of Baal, have slept, and the booksellers, like their prophets, have called on them in vain.

Mention may, however, be made of "A Short History of Celtic Philosophy" (Foulis), by Mr. H. Moore Pim, which has just reached me. By including Bishop Berkeley, the author makes quite a respectable show of thinkers; but better than anything he cites from his savants I like the Celtic story he quotes of the origin of the world. It appears that "a marvellous cask was given to a woman by God. Being a woman, she could not permit it to remain unopened; and from this cask the world received its waters." It is a subtle tribute to the curiosity of woman.

"The Taint in Politics," which is published anonymously from the house of Grant Richards, deals with bribery, corruption, party funds, the sale of titles, and other things which, according to the best authorities,, never happen. Unfortunately, there is a certain amount of evidence, which is diligently collected here, that these things do happen; but the writer admits that things are much worse in America. He suggests no remedy, and until one can devise a patent for overcoming the apathy of the public, which is the direct cause of a great deal of the trouble, I do not see that anything can be done. The idea of shorter parliaments, tentatively put forward here, would probably only lead to a smaller percentage of the electorate voting.

The matter of a sharper tone in criticism, which I noticed last week, has been taken up by a contemporary. It appears that Mr. J. C. Squire, who used to edit the *New Statesman*, has recently published a book of literary essays and criticism. It has been condemned as superficial and meritricious and precious, and one of the critics has invoked the name and principles of Sainte-Beuve. The spectacle of a live critic using a dead critic as a battering ram for another living critic has its amusing side; but one cannot but agree that Mr. J. C. Squire should be allowed to stand on his merits—or demerits—quite apart from anything Sainte-Beuve said or did. There is certainly too much pedantry in criticism, and the dead hand of the past is as heavy on the reviewers as their hand is on the authors. For all that, I never heard of a book being killed by criticism, and broadly speaking it is still true, as Dr. Johnson said, that a man was never written down except by himself.

THE NEAR AND MIDDLE EAST.

(From Our Own Correspondents.)

EGYPT.

CAIRO, May 17.

Lord and Lady Allenby are at present in Palestine, whither they have gone for another short trip. The situation in Jerusalem seems to be improving, according to recently-arrived travellers, but that on the northern frontier and in French territory, especially the latter, is far from satisfactory, and the Palestinian Administration has been called upon to cope with a steady flow of refugees across the border.

The Cabinet.

There have during the past few days been persistent rumours of a Ministerial crisis. The Prime Minister, Sir Yussuf Wahba Pasha, who has been indisposed on and off for some time, is now laid up with fever; and despite the many efforts made no one suitable has been found to take the vacant portfolio of Agriculture, which is still held temporarily by the Minister of Public Works, H.E. Mohammed Shafik Pasha.

The Attempt on Darwish Pasha.

Meanwhile it has for all practical purposes been established that the student who died as the result of wounds received on the occasion of the attempt on the life of Hussein Darwish Pasha, the Minister of Wakfs, was actually the man who threw the bomb. The nature of the wounds sustained by him, the suspicious manner in which he slunk home after the attempt, and, in spite of his agony, changed his clothes and had them concealed, the correspondence, etc., found in his rooms, and the discovery of bottles containing acids similar to those used in these bombs all point to the conclusion that the dead man died by his own hand.

It is certainly a satisfaction to find that retribution has so swiftly followed the commission of the act, and this will no doubt have its due effect on any other of the irresponsible Extremists who may harbour similar intentions towards Egyptians in authority. It is true that the man did not live long enough to supply any information, or give any clues to enable the authorities to lay their hands on the criminal organisation at the back of all these attempts; but, as pointed out on previous similar occasions, these enquiries had hitherto never led to really useful results, and have only conduced to delaying punishment—even then not always sufficiently severe—until it was too late to act as any real deterrent. The immediate and drastic punishment of bomb-throwers is the only satisfactory way of dealing with them, and the significance of the assassin in this case dying by his own hand without in any way injuring his would-be victim, after every one of the other Ministers whose lives have been attempted had escaped scot-free, will by this time undoubtedly have dawned on the rest of the clique.

The Attacks on British Soldiers.

Since my last letter there have been no further authentic attacks on British officers and soldiers, but the General Officer Commanding the Cairo Brigade has issued an order closing all shops, cafés, and places of amusement from 7 p.m., in a prescribed zone in each of the localities where attempts were made the preceding week. It is not understood why an interval of a week has been allowed to elapse before introducing this punitive order, but it is better late than never. In any case, the people of the district, who had expected some measures of this sort immediately to follow the attacks, will probably have been lulled by the intervening silence into thinking nothing was going to be done, and so the measure will have all the greater effect.

The Non-Official British Community.

During the March troubles, when the non-official British community was somewhat exercised in its mind as to the policy which was being followed in this country and the effect which it would have on British prestige, a number of members met together and decided to ask the President of the Cairo British Chamber of Commerce to call a meeting for the purpose of considering the question. At the meeting a number of delegates were elected to wait upon the High Commissioner and submit to him certain resolutions which had been passed by the British community.

During the intervening period the desire to have some more or less permanent body to watch over British interests in general and those of the non-official British community in particular has become more pronounced. At a meeting held at the British Recreation Club last week, when a report on the work done by the delegates during the year was submitted and the situation reviewed, it was decided that some permanent body of the kind should be constituted; and the delegates who had waited on the High Commissioner last year were elected as a Council to consider a scheme having the object mentioned in view, and to submit it at a subsequent general meeting of the community.

The Industrial Situation.

The latest development in the industrial situation is a strike amongst the printers, as a result of which several European papers in Cairo have had to suspend publication for several days. Meanwhile, one of the leading clothing factories is also having trouble with its men, and although in other directions things are fairly quiet there is still considerable restlessness, which may manifest itself in further strikes at any moment.

YUGOSLAVIA.

BELGRADE, May 6.

The Cabinet Makers.

The negotiations for the formation of a Coalition Cabinet have been continuing for several weeks. M. Vesnitch has been in constant conversation with M. Protitch, leader of the Radicals, and M. Drashkovitch, who is now leader of the Democrats. Several times the rumour has gone round that an agreement had been reached, and the Press of both parties has been optimistic, forecasting an early settlement. It appears that the difficult personal questions have been solved, but the chief difficulties are the question of a draft Constitution, on which parties must be more or less agreed, and the electoral law, from which controversial points must be eliminated to enable the new composite cabinet to carry out its programme, which is the summoning of the Constituent Assembly. Yesterday evening it was reported that the final arrangement had been achieved.

Riots and Rumours.

The hostile Press has been making much and inventing more out of the various incidents connected with the railway strike last month and the affair at Subotitsa, and THE NEAR EAST has already referred to the reports of riots and conflicts between the strikers and the military at Liubliana, Belgrade, and Zagreb. Your Correspondent did not leave Belgrade for the whole time of the strikes, but he never saw a sign of disturbance. Even the First of May passed without incident and without demon-

stration. The truth is that the wish is father to the thought on the part of anti-Yugoslav writers, especially in Italy. The best comment is that *Il Messagero* came out with a detailed description of the "revolution" at Subotitsa a day before it happened. The Subotitsa business was, of course, quite a serious affair; there were several hundred casualties; but it has been abundantly proved that it was an old and carefully organised plot on the part of the Hungarian Nationalists, who are moving heaven and earth to stultify the Peace Terms.

It is true that there was bloodshed also on the line between Liubliana and Zagreb. A party of some thirty odd strikers, with a good proportion of Communists—which in this country, it cannot be too often repeated, practically means the non-Slav, discontented, and disappointed minority—attacked a train run by troops. But they caught a Tartar, for the train was carrying a contingent of the Royal Guard. The survivors of the "Communists" bitterly regretted their indiscretion in the cold atmosphere of the cells.

The Fiume Question.

Dr. Trumbitch, after consulting with the Government, has returned to France, where he is joined again by M. Pashitch, and the public is watching with interest the direct negotiations which they are now carrying on with the Italians on the Adriatic question. As proceedings through the Conference have dragged on for a year and done nothing but irritate both sides and bring about an intolerable situation, it is to be hoped that direct negotiations may be more productive. There is at least the advantage that both sides know what they are talking about. The fall of the Nitti Cabinet, reported here, has caused great interest, and everybody is waiting eagerly to see what will be the attitude of the new Italian Government. The Slavs are adamant on the vital necessity to them of absolutely free and untrammelled access to the sea at Fiume, and also, what is usually overlooked in England, on the freedom of Albania. Their policy here is "the Balkans for the Balkan peoples," and surely public opinion in Great Britain will sympathise with their support of the Albanian demands for freedom and objection to a tutelage under a Power whom they do not want. After all, Albania as a State was created in London, to oblige Austria, it is true, but it would now be ridiculous for us to place it under Italian mandate to oblige Italy.

The Balkans and the Powers.

There is another danger in this question which seems to have been overlooked. All the political unrest in the Balkans during the last hundred years or more, all the delay in liberating the Christian peoples under Turkey, have been due to the mutual jealousies of Russia and Austria, two non-Balkan States. Now these have ceased to exist, at least as Balkan Powers, and the great disturber of European peace is removed. To admit Italy, another non-Balkan State, into the peninsula means opening the door to new intrigues, new policies of expansion and Imperialism, which must keep Europe in a ferment. It is too fashionable to blame the Balkan peoples for all the famous "unrest" of the peninsula. This is not fair—the hatred between Bulgaria and Serbia was purely artificial, deliberately created, encouraged, and fostered by Russia and Austria, who treated both these States as pawns in their game. Fifty years ago the Serbs actually helped the Bulgars, with men and money, in their anti-Turk movement, in full sympathy for their desire for freedom. Prince Michael of Serbia in the middle of the last century laboured to bring about the liberation of all Balkan Slavs under his own sceptre, which would have been the logical thing. But Austria and Russia could not allow that.

The "Samouprava" and Dr. Seton Watson.

The *Samouprava* has been having a dig at "Scotus Viator." Dr. Seton Watson's name is so well known and so respected, especially in Yugoslav circles—he has even been proposed for membership of the Serbian Academy of Sciences—that this occasions some surprise. The reason of the attack by the *Samouprava* is a recent article from his pen in the *New Europe*, in which he is accused of taking a pro-Italian view of the Adriatic question, of taking his information from the anti-Serb *Obzor*, and of giving a one-sided account of the case. The article comments with vigour on Dr. Seton Watson's proposal for the partition of Albania, by giving Valona and its district to Italy, and the southern districts to Greece and supporting the suggestion of an Italian mandate, which the Albanians themselves object to.

BULGARIA.

SOFIA, May 1.

The Question of Thrace.

Since the San Remo Conference there have been persistent rumours that the fate of Thrace is definitely decided, and that that province will shortly be handed over to Greece, in spite of the wish expressed by the majority of the population: for autonomy under international administration. These rumours have alarmed the Government and the people alike, and the resulting excitement is certainly hindering that concentration upon peaceful development which is so greatly to be desired. The local newspapers are filled with comments from the foreign press on this burning question, which is to Bulgarians one of life and death. The French and Italian papers that are favourable to the Bulgarian view are quoted literally; and they afford a little hope that all is not yet over, and that at the eleventh hour other counsels may prevail.

The editor of the *Journal des Débats*, returning here from a ten-days' stay in Thrace to study the question on the spot, has made a declaration to a Bulgarian journalist as follows: "I cannot understand the insistence of the Greeks on their demand for Thrace, when statistics taken by the French administration have proved that they do not form more than a quarter of the population (56,000 in a total of 204,000 inhabitants), and when the great majority has pronounced in favour of autonomy under our protectorate. Those very wise words used by M. Venizelos in the Greek Chamber in March, 1913, when he declared his unwillingness to annex 'Thrace full of dangers' and said that he would treat as national evildoers those who pressed for this Imperialistic policy, are perhaps, more true to-day than at the time they were spoken. What gust of unwisdom has changed his policy? Let us hope, for the sake of justice and of peace, that the Conference will not imitate him in changing front."

The Bulgarian Orange Book.

By decision of the Cabinet, the "Green Book" which the Ministry of Foreign Affairs has been preparing, and in which are to be published the documents relative to the intervention of Bulgaria in the war, is to be known as the "Orange Book," after the election colour of the Agrarian party. M. Stamboliski has appointed a special committee to verify the documents, which are now in the hands of the printers at the State Printing House.

Diplomatists Dismissed.

Desiring to reduce the diplomatic service, and to leave in it only the most capable and indispensable servants, M. Stamboliski has dismissed many diplomatic servants, especially those serving in Turkey and with the Central Powers.

The Chamber and the Elections.

Last Thursday's sitting of the Chamber was stormy and eventful. The Order of the Day was the verification of the elections at Vratza, where five Communists and one Progressist—Dr. Daneff—were returned. Several petitions, on the ground of violations of the election laws, had been presented against the validity of these elections. The Communists and Progressists, supported by the Broad Socialists and the Democrats, stoutly defended the legality of the election, while the Narodniaks and Agrarians demanded its cancellation. The attacking force was in the majority; so eventually the five Communists and the leader of the Progressists lost their seats. Thus the total number of deputies is diminished to 223, of which number 109 are Agrarians.

A Soviet Protest.

A protest has been addressed direct by the Russian Soviet Government to the Bulgarian Government against the alleged supply of arms and ammunition to the "revolutionary" troops fighting against the Bolshevist army. M. Stamboliski, the Prime and Foreign Minister, has replied that since the Armistice and the occupation of Bulgaria by the Allies' troops Bulgaria has been disarmed, that all Bulgarian arms have been handed over to the Allied Command, and that the Bulgarian Government treats all Russians alike.

The "First of May."

According to an order issued by the Ministry of the Interior, the Communist and Socialist Labour organisations will be allowed to make their customary street manifestations and celebrations in honour of the First of May only in Sofia, Rustchuk, Varna, Pleven, Phillipopolis, Burgas, Kustendil, Trojan, Sliven, and Lom. The participation in such manifestations and demonstrations of State or municipal employees is prohibited.

Smallpox.

Smallpox has been brought into the city by the Russian refugees, and has caused a good deal of anxiety. I am sorry to have to report that it has found a victim at the British Legation, in the person of Mrs. Elder, who died after only four days' illness.

The Cabinet has voted a second credit of two million levas for the support of the poor Russian refugees.

MOROCCO.

TANGIER, MAY 16.

A Daring Crime.

A most regrettable event took place recently in the Spanish zone two or three miles from one of the military posts between Tangier and Larache. A party of four Spaniards, three engineers and an interpreter, and some fifteen natives were working on the Spanish section of the Tangier-Fez railway near Sok et Nain, and money for wages had just arrived, when they were attacked at night, two of the engineers were killed, and the third taken prisoner. The interpreter, hidden in a tent among old wood and bags of cement during the butchery, escaped the following day. From what he heard it appears that the affair was a vulgar robbery, and had no political significance.

The two engineers were killed before the arrival of the leader of the band, who, when he found them dead, rated his men severely, pointing out how much greater value they would have had alive and held to ransom. The murdered men were highly connected, one being a relative of the Spanish Prime Minister, and the other a son of a member of the King's household.

Patriotic League and Overseas Club.

The annual meeting of the Tangier Branch of the Patriotic League and Overseas Club was held on May 10 at the rooms of the British Chamber of Commerce. A new and representative committee was elected, which at a subsequent meeting appointed officers. The committee also decided what form this year's celebration of Empire Day should take, and formed a strong ladies' committee to make the necessary arrangements.

Kaid Sir Harry Maclean was president of the branch from its formation, and considerable sums had been sent to London for patriotic purposes during the war. Sir Harry and Lady Maclean had undertaken most of the expense of the Empire Day celebrations, but this year a special list was opened, and a sufficient amount was obtained.

A new effort will be made to interest the British colony and to bring about more frequent gatherings, and it was decided to study the possibility of founding a British Sports Club in Tangier. A special committee was elected for this purpose.

A Destructive Gale.

On Tuesday, the 4th, and two days following Tangier experienced the worst gale from the east for many years. One authority estimated the velocity of the wind at 90 miles an hour, and this lasted during Tuesday night and part of Wednesday, declining in violence to some extent during Wednesday night and Thursday. Steamers which came into the bay for shelter risked dragging their anchors and being carried on to the beach, and most of them decided it was better to go out to the open. Bland's boat from Gibraltar, with quite a number of passengers, including Viscount and Lady Bryce, arrived in the afternoon and anchored. Communication with the shore was impossible, and she put to sea in the evening without landing her passengers for Tangier, whom she carried on to Casablanca, where on landing, though they were leaving by the same steamer in a couple of days, they had to conform to the annoying regulations and submit to vaccination. Bland's steamer from Casablanca to Tangier had a terrible time, as she came through the worst of the gale.

Fortunately only one accident was reported—an employee of the Electric Light Co.—but material damage was very great. Broken electric light wires resembled a display of fireworks; telephone wires hung in confused loops in every thoroughfare; while flat cement roofs did not suffer, tiles were lifted in hundreds, and many windows were blown in and shutters blown off and carried away. Native huts suffered by far the most. Built largely of any material, from soap-boxes to stone, and roofed with tiles, galvanised sheets and thatch, they were an easy prey, and roofs were raised and carried whole many yards. In some cases roofs and walls were entirely blown away, leaving sleepers uncovered on the ground. It was almost impossible to walk, and even horses found it difficult to get along.

The effect this east wind *(levante)* has had on vegetation is very curious: trees, shrubs, and plants have the appearance of being subjected to a wave of heat, shrivelled and dried up, and all moisture seems to be drawn from the land. Tangier is famous for her gardens—most of her best belong to English residents—and all have suffered greatly, many being nearly ruined. Fruit and vegetables have practically all been spoilt, and this means a further increase in the cost of living, which is already high enough.

It has been unusually hot, but we have had one night and morning of really heavy rain which has freshened everything up and cooled the air.

Work on the new water supply is progressing, and there appears to be a possibility that the public service will be at work before very long.

CYPRUS.

NICOSIA, MAY 24.

The Legislative Council.

The session was opened on April 19, and the proceedings might have been predicted with complete accuracy by anyone acquainted with the State of Affairs and who has followed the Greek tactics of the last few years. The officer administering the Government, Mr. Malcolm Stevenson, in his opening speech, referred to the very satisfactory condition of the island finances, which allow of provision being made for public works, including roads, on a more liberal scale, and also for an increase of the emoluments of those employed in the public service; for which latter £74,000 would be required, or £35,000 in addition to the £39,000 which had been provisionally granted during the war. About twelve draft laws were mentioned as calling for the consideration of the Council. The Acting High Commissioner then left the Chamber, the Chief Secretary taking his place as President. A sub-committee was as usual entrusted with the duty of preparing a reply to the address, the members being the King's Advocate, the Principal Forest Officer, the Ottoman member Irfan Bey, and two Greek members, MM. Sevéris and Emphiczi. The official members and Irfan Bey supported a proposal that the reply should only convey the thanks of the Council to his Excellency for his address. The Greek members attempted, as in late years, to add a paragraph stating that the Greek representatives, in present circumstances, desire to inform the Central Government that the Cypriot-Greek community desires no legislative work to be undertaken, seeing that a political change is impending in accordance with their aspirations, and that the Government should not proceed to discuss any measures except those absolutely necessary for enabling the service of the Administration to be carried on. The other members objected, and the matter was subsequently submitted to the full Council. The proposal was opposed by Irfan Bey, who stated that even if the dreams of the Greek members regarding any political change were likely to be realised, this did not exempt members from their duty of dealing with measures which aim at progress in the island. The other two Turkish members, Hamid Effendi and Said Effendi, also opposed the motion at length. Said Effendi did

not believe that Great Britain would commit an error comparable to that of the cession of the Heptanese and Heligoland, or would abandon a place whose geographical position rendered its retention most valuable and necessary. The Greek proposal being put to the vote was rejected by the votes of the official and Turkish members. It may be well to mention how matters stand. The Council consists of six official members and twelve elected. The latter include three Moslem (Turkish) and nine non-Moslem (practically always "Greek") members. When all are present the Greek votes equal those of the official and the Turkish members together. As the Turkish representatives almost invariably vote with the official, and the Greeks are generally in opposition, the casting vote of the High Commissioner turns the scale in case of equality; and the fate of measures has been sometimes thus decided. At present, as four Greek members are absent with the deputation, the official and the Turkish votes together outnumber the Greek by four. As it is obviously the intention of the Greeks to obstruct the passing of laws, or to abstain from voting, it is satisfactory in the interests of legislation that this should be so.

Sir Hamilton Goold Adams.

At a sitting on April 21, news having been received of the death of Sir Hamilton Goold Adams, a Greek member, M. Loues, proposed a resolution expressing the profound sorrow with which the Council and the people of the island had received the sad announcement of the death of one who, during his administration of the Government, had rendered signal services to Cyprus. These would always be remembered with gratitude, and the Council begged that his Excellency would convey to Lady Goold Adams the heartfelt sympathy of the island in her bereavement. The resolution was supported by the Chief Secretary and carried unanimously. High tribute is paid by all classes to the memory of Sir Hamilton. The *Phoné tes Kypron*, which presents his portrait, devotes two columns to a warm appreciation, eulogising the work carried out by him for the promotion of agriculture, of health, and especially of education—work interrupted by his transfer to the Government of Victoria.

Personal

Mr. Stanley Fisher (Chief Justice). Mr. Bowring (Receiver-General), and Major Bolton, O.B.E. (Commissioner of Limassol) are shortly proceeding to England on leave; also Mr. A. K. Bovill (Principal Forest Officer). Mr. J. R. Holmes (Puisne Judge) is shortly retiring.

SYRIA.

BEYROUT, May 10.

The Lebanon as a Summer Resort.

The Lebanon has perhaps been the most sorely tried among the countries involved in the war. After losing about one-third of its population by starvation and disease, its remnant of vitality has, since the Armistice, been gradually drained by wholesale emigration, due mainly to the undue prolongation of an impossible political situation. Now, however, that the situation is getting more clearly defined, and a return to normal conditions, as regards both security and the cost of living, is being rapidly reached, it would be wicked folly to allow exaggerated and ill-intentioned reports to prohibit the application of the one great remedy—viz., the influx of summer visitors from abroad. In the interests, therefore, of the Lebanon, as well as of the thousands of Syrians who have been prevented during the long years of the war, and the first equally hard year of the Armistice, from enjoying a welcome and much-needed change from the enervating climate of Egypt, it is necessary that the real facts of the case should be made known. Public security reigns in the Lebanon, and especially in those regions which summer visitors are in the habit of patronising; while the cost of living is falling fast, and is expected to reach in summer an even lower level than that obtaining in Egypt. Already meat is more than 100 per cent. cheaper than it was a few months ago, eggs and milk 50 per cent., some vegetables over 300 per cent., butter about 100 per cent., flour 50 per cent.; and, now that the political fate of Syria has at last been decided, and free intercourse with the interior is expected shortly to be resumed, it is more than probable that a further considerable drop in the prices of all foodstuffs will take place in summer, and that the average cost of living will be considerably cheaper than in Egypt, especially as active steps under official patronage are being taken to that end. All crops promise to be plentiful, including that of oil. But even if the average cost of living were to be about the same as in Egypt, the abundance and cheapness of fruit, especially of grapes, should constitute a singular attraction, not to speak of the greatest attraction of all—the fine mountain air and scenery. But matters are not being left to chance, and it is most gratifying to learn that the authorities are giving this important matter their serious attention. The military governor, Commandant Labrue, convened last week at the Seraglio of Baabda a body of men composed of the President and some members of the Administrative Council, the Director of the Secretariat, an official of the Railway Administration, an official of the Supply Department (*Service de Ravitaillement*), some of the leading hotel-keepers, and a few representatives of the Press. Commandant Labrue opened the discussion with a brief enumeration of the benefits accruing to the Lebanon from summer visitors, and explained the necessity of using every possible means for securing the utmost comfort for them. He deplored the reports that had been published in certain Egyptian papers about the alleged lack of security in the Lebanon, which were calculated to make intending visitors turn away from the Lebanon, and he urged the native Press to gainsay these reports and let the real facts of the case be widely known—viz., that perfect security prevails, and that even minor cases of individual aggression have not been recorded lately. He finally spoke of the necessity of forming a Union of Hotel Keepers.

A well-known journalist who has been displaying recently a commendable initiative in this matter then described at length the advantages of such a union and the manner of its formation, and further proposed that a Touring Association should also be formed and affiliated with the Union, both working for a common aim. The Union will have an Information Bureau at Beyrout. The Touring Association would seek the collaboration of similar institutions abroad who would help, through the usual channels of publicity, such as an exhibition of pictures of Lebanese scenery, descriptive articles, and so forth, to attract tourists to the Lebanon.

The hotel-keepers were then asked to express their opinion on the subject for eventual consideration by the Government, and finally the representative of the Railway Administration was charged with the drawing up of a time-table to suit the convenience of summer visitors.

Commandant Labrue promised every possible assistance to the hotel-keepers, and that the *Service de Ravitaillement* was ready to supply them with all their needs by means of special tickets. He further promised that the Beyrout authorities should be asked by the Lebanese Government to watch specially over the welfare of summer visitors coming from abroad, and to issue special instructions to the Port and Passport officials in this connection.

CORRESPONDENCE.

CHRISTIAN CROSSES AT JERUSALEM.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—It was with much pleasure that I read Dr. Weizmann's letter in your issue of the 20th inst.

My letter was an appeal to Jewish leaders to influence their people in the right direction, and his reply is a proof that he will do so. But his denial that there has been any sectarian intolerance, I fear, he will find is not justified. Travellers returned from Palestine quite recently confirm the reports which I had heard; and I understand on very good authority that a proposal was being considered in Jerusalem to substitute headstones with crosses on them for a cross, in order to meet the objection raised by Jews.

Enlightened Zionists like Dr. Weizmann will doubtless agree that the principle underlying the symbol of the Cross —viz., self-sacrifice—was latent in Judaism (see Isaiah l.iii); but less religious and enlightened Jews may regard the cross as an enemies' flag to be dragged down and dishonoured.

I should be glad to be able to believe that Dr. Weizmann is right, and I wrong, about the facts. Time will make that clear.

I recently received a communication from a gentleman who has been writing in *The Times* on a cognate question, thanking me for my "profoundly important letter."—I am, etc.,

AZERBAIJAN.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—In your issue of April 1 (unlucky date!) you were good enough to publish a letter of mine regarding the Azerbaijan Republic, in which I denied that the then Government was intriguing with the Young Turks. In this letter I admitted that there were many Young Turks in Baku and district, working hard to further their own ends, but I protested against the allegation that they were working with the Government.

Recent events would seem to show that I was wrong—that we all were wrong in our estimation of the Azerbaijan leaders, for the change of government in Baku last week was not so much a Bolshevist victory as it was a triumph of Pan-Turkism. Nevertheless, the circumstances were such as may well excuse me.

On many occasions President Ussubekov and Fatali Khan Khoisky, the Foreign Minister of Azerbaijan, have expressed their loyalty to the Allies and their determination

to have nothing to do with the schemes of Nuri Pasha and Co. They also stated that any attempts of the Bolshevists on their independence would be strongly resisted. But they asked for help: without material assistance, at least, they felt that they would be unable to put up any continued fight. In January of this year a British officer arrived in Baku for the purpose of finding out exactly what arms, ammunition, and equipment were required. He received the figures—but nothing further was ever heard on the matter. The promised help did not arrive. Meanwhile, the Volunteer Fleet left Petrovsk, called in at Baku, and finally left for Enzeli, where it was interned. This in April, when the ice in Astrakhan was breaking up and when the Bolshevist ships were able to set out to sea. And Azerbaijan had no ships of her own with which she could defend Baku. Meanwhile, also, the Armenians launched an attack against the Tartar posts and villages in Karabagh, and drew the greater part of the Azerbaijan army away from Baku, leaving the front open to any attack from the north. So that it came about that the Azerbaijan Government was faced with the possibility of a bombardment of Baku from the sea and an attack by land from the north. The Tartars might have been able to resist a Bolshevist advance for a few days, or at the most a very few weeks, but such resistance would only have resulted in the probable wrecking of Baku and very serious damage to the oil wells.

There was really only one thing to do—hand over the power to the local Communists. This Ussubekov did. But it is all very regrettable, and the outcome of the Turko-Bolshevik alliance may well prove very serious for the British.

I have consistently urged that the Allies hold the Batoum-Baku line. This could have been done with quite insignificant forces. The mere presence of several hundred Allied troops in Baku would have been sufficient to save the situation. Now, of course, it is too late.—I am, etc.,

SCOTLAND LIDDELL.

Tiflis, Georgia,
May 3, 1920.

LITERATURE FOR SERBIA.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—Last year the Committee for the Reconstruction of Serbian Libraries (working under the Entente Committee of the Royal Society of Literature) issued an appeal for gifts of books for the reconstruction of Serbia's ruined libraries, to which you were kind enough to give publicity in your paper. As a consequence of the appeal, local Committees have been, or are being, formed in University and other towns in England, Scotland, Ireland, and Wales, and about 7½ tons of books are already being shipped to Serbia, representing about 6-7000 volumes. The Natural History Museum (South Kensington) has, moreover, despatched books to the value of several hundred pounds, and has also promised to send a selection of specimens from the duplicates in store.

Last year we hesitated to appeal for money, owing to the more pressing material needs of Serbia, but the time has come when financial help is absolutely necessary in order to buy volumes that have not been given, but without which a library would not be thoroughly representative, and also to pay for the heavy cost of freightage, which has already reached £80.

May we again ask for the kind help you gave us last year? It is hardly necessary to recall to the minds of the British public the tragedy and the heroism of the Serbs; but we should like to emphasise the peculiar desirability of fostering that mutual understanding between Great Britain and Yugoslavia, in which books are bound to play so large a part, and of keeping up the interest in this country of those Serbian boys who have been educated here.

Cheques should be sent to the Hon. Treasurer, Lord Charnwood, the Royal Society of Literature, 2, Bloomsbury Square, W.C.1. The Hon. Organising Secretary, Miss L. F. Waring, will be glad to receive lists of books offered, at the same address.

Yours, etc.,

(Signed) CHARLES OMAN, Chairman.
CHARNWOOD, Hon. Treasurer.
HENRY NEWBOLT, Hon. Foreign Sec.

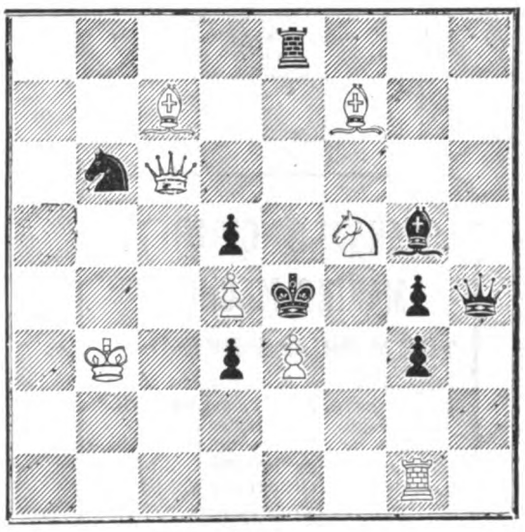
The Royal Society of Literature,
2, Bloomsbury Square,
London, W.C.1.

INDIA AND THE OLYMPIC GAMES.

The Selection Committee of the Indian Olympic Association have finally chosen the following team to represent India at the next Olympic Games in Belgium:—For the Marathon and long-distance races: P. D. Chaughule, of Belgaum; H. D. Kaikadi, of Satara; and S. V. Datar, of Sangli. For the athletics: P. C. Banerji, of Calcutta. For wrestling: K. T. Navale, of Poona, and D. R. Shinde, of Kolhapur. Mr. S. R. Bhagwat, general secretary of the Indian Olympic Association, accompanies the team, which will undergo special training in England before going to Belgium.

CHESS.

Problem No 19.
Black.



White.

White to mate in two moves.

The above problem was given in last year's Victory Problem Tournament.

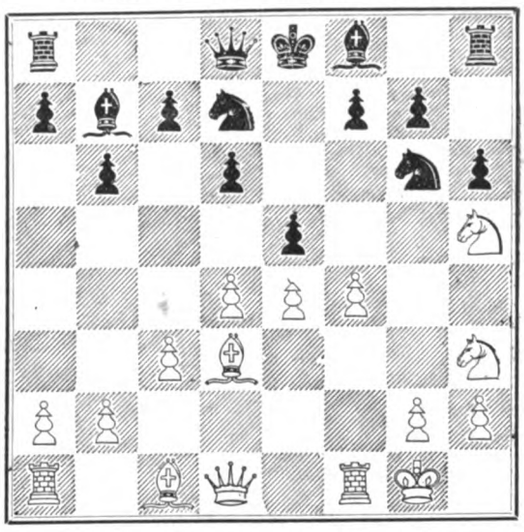
At a meeting of the London Chess League it was decided to revert to 20 boards a-side in London League matches, and to start matches at 7 p.m.

The following is another game from the current Murton Cup competition, White receiving two moves:—

1	P—Q4		
2	P—K4	P—QKt3	
3	Kt—QB3	B—Kt2	
4	Kt—B3	P—K3	
5	B—Q3	B—Kt5	
6	0—0	Kt—K2	
7	Kt—K2 (1)	Kt—Kt3	
8	P—B3	B—K2	
9	Kt—Kt3	P - Q3	
10	Kt—R5	B—B (2)	
11	Kt—Kt5	P—KR3	
12	Kt—R3	P—K4	
13	P—KB4	Kt—Q2	
14	P x P (3)	P x P	
15	B—QB4	Kt—B3	
16	Q—Kt3	Q—K2	
17	Kt—Kt3	P x P	
18	P—K5 (4)	Kt x P	
19	B—B4	Kt x B	
20	Q x Kt	0—0—0	

and Black ultimately won.

Position after Black's 13th move, Kt-Q2.



(1) This move greatly improves White's game. Black is now under the necessity of finding a loophole for the B.

(2) Apparently the best move. 0—0 would have been inviting difficulties.

(3) A mistake. P—B5, Kt—K2; 15 Q—R4, followed by B—Q2 and QR—Q, would have given White a winning attack.

(4) The culminating mistake. P x P was the proper answer, when Black would have found it extremely difficult to save the game. The text move left Black two pawns up with the better position.

CARO-KANN.

A number of distinctions have been accorded to Egyptians, mainly in recognition of services rendered in connection with the disturbances last year.

A new organisation in Yugoslavia—the Middle Classes Committee—has been started for the protection of civil rights. Its aim is the formation of a well-organised body of strike-breakers, thus making the strike weapon ineffective.

PRESS ON THE NEAR EAST.

The Turkish Treaty.

The *Manchester Guardian* of May 28, in dealing with the above subject, dilates upon the "impossibility" of the Peace terms, and says that under them there can be no independent Turkey. It proceeds:—

The horrors committed by the Turkish Government against certain of its subject Christian races—in the old days against the Bulgarians and in the later days on a vastly enlarged scale against the Armenians—ought not to blind us to all considerations of policy and justice in the treatment of the Turks to-day. The problems presented are in any case hard enough, but unless something of equity and of humanity, even in relation to a barbarous and defeated foe, is permitted to enter in, it is indeed hopeless. The crucial question of Armenia, which on every ground of honour and humanity should most strongly have appealed to us, is, it would seem, the last which has been considered. It was sought to shuffle off responsibility first on to the League of Nations—which would have accepted it, if granted adequate material support—then on to the United States, which it was known with certainty in advance could not, owing to domestic differences, accept it. These are ignominious shifts as to which history will pronounce no hesitating verdict. In the same way there has been a total lack of any large and generous principle in the treatment of the future of the former dominions of Turkey. There is room here for reconsideration and a better mind, but unless the whole matter here, as in Turkey proper, is approached definitely from the point of view of the interests of the populations concerned, and not from that of the supposed interests and material greed of the intended "mandatories," no tolerable or stable solution is possible. It is here that this country may do something by way of example and to redeem the credit of the whole transaction. In Mesopotamia, as in Palestine, it is open to her to show that she is capable of a wise and disinterested policy in the true spirit of the League of Nations whose mandate she aspires to hold. The conception of disinterested rule over peoples of less advanced civilisation is, happily, not alien to her traditions, and here she is called upon not to rule but to guide and support a native administration which in time may stand alone. It is a difficult task, but a great opportunity. It is perhaps the only road of escape from chaos or the return of the Turkish tyranny.

Greece and Italy in the Levant.

In the *Gazette de Lausanne* of May 24, M. Charles Vellay makes some very interesting comments in an article called "Italy at the Gates of Constantinople." He commences by remarking that, though the European frontiers of Greece have been advanced to the borders of Constantinople, in Asia Minor she has found innumerable obstacles. These, he says, have been provided by Italy, who, holding the metalled route from Aidin, detracts greatly from the value of Smyrna, and, in installing herself in the Gulf of Edremid, closes to Greece the route from Constantinople. He proceeds to state that all Italian policy during the last few years has been directed towards barring the Greek route from Smyrna to Constantinople.

It seems that to-day this has been almost accomplished. Italy has not cloaked her ambition of holding an exceptional position, exceptional as much from the economic as from the diplomatic point of view, in what is to survive of Turkey. She finds before her the firm opposition of England in what concerns Constantinople and the Straits; but there remains an immense field of action in Anatolia, and, if the actual moment is not very favourable to the installation of a great European Power in this zone, it is not less true that Italy has forsaken none of her hopes, and that she reckons on taking up to-morrow her policy at the exact point where she now finds herself checked. Will she succeed, as she hopes, in making a friendly and fruitful working arrangement with Turkey? The answer is uncertain, for the state of mind of thousands of Mussulmans is so agitated at this moment that Italy, in spite of her smiles, is in this respect in no happier a situation than is France, for example, in Cilicia or in Syria.

The article concludes with a word of disapproval of French policy and a comment on the possibility of strife between England and Italy. It refers to

The French diplomats, who, blinded by an unreasoning hatred of Greece, have done their utmost to reduce to the lowest limits the sphere of Greek influence, without seeing that, to the detriment of France and of French interests, they have merely aided the expansion of Italy.

Is a conflict coming between England and Italy for Constantinople? It is not probable, first because England has economic and military resources far superior to those of Italy, and, secondly, because British diplomacy with supreme skill has ranged Greece on her side, and, finally, because the support of the Greek element in these regions is of almost decisive importance. That is what Italy and France have failed to understand, or have understood too late. . . . In trying to support themselves on the Turks against the Greeks, France and Italy have placed their hopes on the least sure ground, for, from whatsoever point of view one looks, the Turks represent nothing or almost nothing. But, if England has incontestably chosen the wisest course, Italy, which has vast ambitions, and whose policy of reconciliation with the Central Powers becomes daily more marked, is beginning to entertain a scheme which will have as field of action the whole of Asia Minor, and the evolution of which it will be extremely interesting to follow.

Albania.

In the May issue of the *Contemporary Review*, Mr. H. Charles Woods writes on "Some Adriatic Problems." His opinion on the Albanian question is as follows:—

Much as I admire many of their characteristics, I do not think that the Albanians can at present manage their own affairs without some kind of foreign assistance, and that, under the circumstances, they are either face to face with the necessity of accepting some form of unpopular protection, or of risking what in fact, if not in name, will amount to early and definite partition. As a firm supporter of the cause of small nations, therefore, I feel, unless the League of Nations is in a position to undertake direct responsibility in Albania, that her people would be well advised to accept an Italian mandate. That mandate, the unpopularity of which would be considerably decreased were Italy to accept it in place of the full possession of Valona, should be carefully defined in its scope, strictly limited in its duration, and absolutely dependent upon the recognition of nothing less than the pre-war frontiers, which are already guaranteed by Europe.

Palestine.

The *Glasgow Herald* recently commented upon Great Britain's new mandates. Of Palestine it said:—

In Palestine our task is not likely to be an easy one; but our difficulties will be much lighter than would be those of any other Power to whom the mandate might conceivably have been assigned. Our past record in regard to both Jews and Mohammedans is as clear as such a record could well be, and it will be strange if, with a due regard for Jewish nationality, Mohammedan religious susceptibilities, and Arab territorial rights, we cannot combine the closest possible respect for the associations, tender and tragic, historical and spiritual, which the Holy Land has for all Christianity. That our control will have to be a firm, as well as a tactful one, is already sufficiently obvious. Moslem fanaticism and Zionest self-assertion will alike need to be restrained, and from time to time we have trouble with Arab incursions induced by the growing prosperity of the lands under our rule. But we are no strangers to the circumstances in which our mandate will be exercised. It must, moreover, be remembered that under the new arrangement Palestine becomes *de jure* as well as *de facto*, at any rate so long as our mandate is retained, an outpost of Egypt, and that the whole military position in regard to it has been entirely altered by the railway across the Sinai Peninsula and along the coast. Should any hostile combination ever be effected between the Syrian Arabs and the Arabs of the Hejaz, we could, with very little difficulty, reinforce our garrison in Palestine sufficiently to make a violation of the frontiers of the latter a very risky proceeding. Happily, such a contingency is probably remote, as all our policy has been in the direction of maintaining friendly relations with the Arab auxiliaries who helped us to turn the Turk out of Palestine and Syria. The British Government has been blamed, more especially by the Zionists, for standing by the Emil Feisul. But if the Zionists were to be given in Palestine the free hand the extremists among them appear to crave, they would soon find Arab pressure from without as well as from within a formidable menace to their security.

A reception was held at the Ritz Hotel on May 26 in honour of the Jewish delegation from Jerusalem, which is in London for the purpose of meeting fellow Zionists and discussing the future of Palestine. The delegation consists of Rabbi Jacob Meir, Mr. David Yellin, and Mr. Reubini. They were received by Dr. Weizmann, and the company included about 150 sympathisers.

MUSICAL NOTES.

Mme. Cella Delavrancea, the Roumanian pianist, gave a second recital at the Steinway Hall on May 27, but to my remarks last week on her first appearance there is little to add. She is an accomplished, but not a distinguished, pianist. At this concert her programme was made up of some sonatas of Scarlatti, Beethoven's Sonata, Op. 31 (No. 2), the twenty-four Preludes of Chopin, and Schumann's "Etudes Symphoniques" (Op. 13). Now, in all of these there were different, if not equal, faults. Scarlatti's compositions chiefly need exquisite polish; they are not deep, and were written only to please. Mme. Delavrancea's persistent indulgence in *rubato* was therefore misplaced, and took away the charm of these sonatas. Scarlatti is still popular, in the best sense; but while his charm is real it is superficial, and any attempt to credit him with profundity can but fail. In her Beethoven Mme. Delavrancea was certainly original, but it was an originality that one simply could not agree with; it did not, moreover, make her reading anything but thin. She was much better in some of the Chopin preludes; in those like Nos. 5, 8, 10, and 16, for instance, her neat technique served her extremely well; but one missed some of the poetry in the deeper ones, like Nos. 6, 15, or 20. I do not think, however, that Mme. Delavrancea was in her best form at this recital; and it must be added, in justice to her, that an inconsiderate audience, which thought a verbal accompaniment to Beethoven and Chopin should have been included in the composer's directions, and that the unity of the twenty-four preludes would not in the least be affected by their continuous departure, must have been a sore trial to a sensitive pianist.

The number of young violinists in this country who bloom in the spring is vast, but some at least of their recitals one must attend, because nearly all of them are hailed as a budding Heifetz, and one day this claim must more or less of necessity be verified. Now, there is no denying the skill of the majority of these violinists: what one does deplore is their lack of wisdom. At his recital at the Wigmore Hall on May 27, M. Emanuel Compinsky, who was a pupil of the late Emile Sauret, commenced his programme with Bach's Concerto No. 2, in E, and Paganini's Concerto in D. Both these things are immensely difficult, and to say that M. Compinsky failed in them would be an unnecessary cruelty. He can play, one might say, very nicely; but when he chooses to play such a thing as the Paganini, he is not asking, to say the least of it, for kind words. There is no reason, however, why, when he has learned the limitations of youth, and when he has acquired confidence, he should not become an accomplished musician. He will certainly be heard of again; but, I hope, not too soon. It can be mentioned that he was not helped readily by his accompanist, M. Roger Jalowicz, a rather unsympathetic and not very capable player whose work, I think, has been noted before on this page.

We are constantly being told in London that the capital is about the worst place in England for music; that what takes place in this city is no criterion of the culture of the rest of the country. (And lest foreign readers should take these notes as representative, I would remind them that it is only London concerts that I attend, and that I hope and believe that London is a poor reflex of England.) In particular, the North of England is pointed out as the place where things are ordered better than here, where musical sense, both natural and cultivated, abounds. I was more than ordinarily interested, therefore, in the violoncello and pianoforte recital which Messrs. Carl Fuchs and Edward Isaacs gave at the Wigmore Hall on May 28, for hitherto they had confined their performances to the North. The result was not overwhelming. The audience welcomed the two musicians, and was pleased; but it did not appear to recognise any inferiority on its own part. A Sonata in D for violoncello and pianoforte, by Frank Bridge, was the first thing played; but, apart from a few isolated passages of great beauty, it is not a work that appeals. Mr. Fuchs then played Max Reger's Suite, Op. 131 C. for violoncello alone. It was the first time it had been played in London, but it proved very attractive, and will doubtless be heard again soon. Reger has a way of saying very little in a great many words, but in this suite he has abstained from the habit. Mr. Fuchs played the music very finely; there was none of that useless refinement and subtlety which mar so many of the works and presentations of the modern Bach. The other things that Mr. Fuchs played—some slight pieces by Corelli, Arensky, and Sinding—were very pleasing, but scarcely required a master's hand. That he is a master is pretty certain, but one would like to hear him in stuff of greater requirements. Of Mr. Isaacs' pianoforte playing there is not a great deal to be said. He played Bach's Italian Concerto, Ravel's Sonatine, and Liszt's "Mephisto Waltz," and he was by far the best in the Liszt. The colour, the gusto, and the general vividness of this Faust piece seemed to suit his temperament, and he gave it quite brilliantly. In Bach and Ravel he was not particularly distinguished; for the most part he was content to play the notes as they stood, without giving them an individual interpretation. Of the two Mr. Fuchs is without doubt the finer artist.

Some of the best British singers have come from the colonies, and it was with hopes derived from this fact that I went to the vocal recital given at the Wigmore Hall on May 28 by Miss Irene Ainslie, a New Zealand contralto, and Miss Dorothy Hugh, a soprano. But those hopes were not realised. It is some time since I heard a voice of so unpleasant a quality as Miss Ainslie's. She has a good range, and her upper notes are pure; but her lower notes, while strong, are harsh and almost grating to the ear. She possesses, moreover, but small musical sense. Miss Dorothy Hugh's singing was altogether on a higher plane. She sings naturally and pleasantly, and has some command both of tone-colour and of atmosphere. Popularity is assured to her. A word may be said upon the composition of the programme: it was, but for the inclusion of some songs by Percival McGuire and Landon Ronald—the proper place for which is at the ballad concert—extremely good. Another word may be said on the New Zealand pronunciation of French: it was just as bad as the English way of doing it.

ANDANTE.

OLD FORTIFICATIONS OF CONSTANTINOPLE.

At a meeting of the Central Asian Society, held on the afternoon of May 19 at the rooms, 74, Grosvenor Street, London, under the chairmanship of Lord Carnock, a paper on "The Old Fortifications of Constantinople" was read by Mr. E. H. Freshfield. In opening the proceedings the chairman mentioned that Mr. Freshfield had quite recently been in Asia Minor, and had been good enough to expedite his return to this country in order to read the paper. Mr. Freshfield, who dealt with his subject from an historical and a technical standpoint, said that the fortifications of Constantinople had been famous in two very important respects. Nothing equal to them had previously been attempted, and they were subsequently used as the model for most of the Byzantine constructions of later periods. The walls were built to protect civilisation from the barbarity of Asia, and were in all respects successful for the purpose for which they were intended. They were originally built to protect Constantinople against the onslaughts of the Huns of Attila, and latterly were restored, rebuilt and added to in order to protect the city against the Avars, then the Saracens, then the Bulgarians, then the Latins, and last of all the Turks. It was no exaggeration to say that they stood practically alone during the period from 600 to 750, when the Roman Empire ceased to exist, to protect civilisation from utter and complete destruction. It was not without reason, therefore, that the walls were dedicated, not once but over and over again, to the service of God. He happened to be one of the trustees of the British School at Athens, and he hoped it was going to be the duty of that body to make investigations relating to the archæology of Constantinople and Anatolia. Their efforts would be directed to seeing whether there was any trace of the ancient, pre-historic city which he was sure undoubtedly exists. It was quite certain that an ancient Greek city occupied the site of Constantinople, because, oddly enough, a portion of the old walls of the ancient city still exists and formed part of the kitchens of the great Seraglio of the Sultan's Palace. Two or three months ago a suggestion was made that the fortifications should be pulled down in order to form streets. It seemed to him, however, that this was quite impossible, partly because of the tremendous expense involved and because of their great length. The total length of the outer wall was about 7,000 ft.; it was 30 ft. high and 12 ft. thick. The inner wall, on the other hand, was 5 ft. high and had about 180 towers. There was only one other work like it in the world, and that was the Great Wall of China, and it had to be noted that both walls were designed and built to protect civilisation against the same treacherous foe and the same traitors who provided the thrones of Constantinople and Pekin with sovereigns before these cities were peopled with the same race.

Lord Carnock, at the conclusion of the lecture, said he was glad that Mr. Freshfield had been able to assure them to a certain extent that there is no intention of actually demolishing the fortifications. He confessed that it was with some consternation that he recently read in the papers a notice to the effect that such a measure was in contemplation. At the same time he could not have absolute confidence, in these progressive days, that ancient, historical monuments which could not be said to be of any immediate practical utility were likely to be allowed to stand in the way of modern improvements. He could only express the hope that his fears would not be realised with regard to the walls of Constantinople. He must say, having visited both, that one's associations and feelings were more stirred by seeing the Walls of Constantinople than they were by visiting the desert regions through which the Great Wall of China runs. In thanking Mr. Freshfield on behalf of the meeting for his address, Lord Carnock expressed the hope that the colleagues of that gentleman, the Trustees of the British School at Athens, would extend their investigations not only to Constantinople but to Asia Minor.

NEAR EAST BOOKSHELF.

I.—"INDIA'S SILENT REVOLUTION." By Fred B. Fisher. (New York: The Macmillan Company. 7s. net.)

II.—"A PRISONER IN TURKEY." By John Still. (London: John Lane. 7s. 6d. net.)

I.—AN AMERICAN ON INDIAN UNREST.

The European official in India finds himself at some disadvantage when he attempts to gauge the wants and aspirations of the people; his interlocutors being more anxious to stand well with him by re-echoing his sentiments than to disclose their own. They are apt to be more outspoken with a non-official, from whom they have nothing to gain or lose. Mr. Fred B. Fisher belongs to the latter class, and it must be admitted that his views on Indian unrest reflect the opinions of the masses more faithfully than any Blue-book. On the other hand, he has approached a thorny subject with many ingrained prejudices, and ignores the enormous difficulties encountered by the handful of British administrators who are responsible for the happiness of 315,000,000 Asiatics. His cardinal mistake lies in treating Indian unrest as an isolated phenomenon. Everyone knows that volcanic conditions prevail throughout the world. The first rumblings of the approaching upheaval were heard more than a generation back; and it has received a mighty impetus from the world war. Everything points to a cataclysm which will change the entire current of civilisation. For ages unnumbered India was severed from the rest of the world by a mountain barrier on the north and the perils of navigating the ocean which surround her other sides. Rapid means of communication have brought her into touch with the centres of Western thought, and English education gives malcontents a *lingua franca*, which, indeed, bids fair to supersede the eighty-five dialects spoken in the peninsula. It would be nothing short of miraculous if India had remained immune from the unrest which rages from China to Peru.

Mr. Fisher discourses on some of the underlying causes. The "dumb millions," of whom we heard so much, found a mouthpiece in the Congress agitation of 1885, engineered, as our author states, by the late Mr. A. O. Hume, who, however, was not "in the confidence of the Viceroy, Lord Dufferin." Twenty years later Japan's victory over Russia dissipated the legend, which took shape at Plassey—that Asiatics led by Asiatics were no match for a fraction of their number under European leadership. The Great War elicited a magnificent outburst of sympathy with the Entente's cause; but it produced a virulent anarchistic propaganda, which has distinctly lowered British prestige. India's 2,500 castes are as many water-tight compartments separated by mutual jealousy, and her 57,000,000 "untouchables," who stand outside the hierarchy of caste, are clamouring for recognition of their right to live as human beings. An ever-growing proportion of Indian womenfolk are up in arms against the subjection which law and custom impose upon them. The Mohammedan community—nearly 60,000,000 strong—is disgruntled because the lion's share of official loaves and fishes is that of the suppler Hindus. Lastly, Mr. Edwin S. Montagu fed fuel to the flame of political unrest by his violent onslaught on the administration of India. Just before his appointment as Secretary of State he told an astonished House of Commons that the Governmental machine was "illogical, antediluvian, inelastic, and inefficient." Mr. Fisher writes with perfect truth that "Mr. Montagu's words disparaging the old order have called up vivid hopes and wild dreams in Indian hearts" (p. 181).

But other causes are at work, which find no mention in these pages. The world-wide battle royal between capital and labour has extended to India; strikes are of constant recurrence, and keep the industrial class in perpetual turmoil. More important still as a generator of unrest is the enormous increase in the cost of food and clothing, which is acutely felt in a land of microscopic incomes. Mr. Fisher has confined himself to the politico-social side of his "silent revolution," albeit that its genesis must be sought for in the economic sphere. Unless a remedy be found for the dislocation of industrial life, the Montagu-Chelmsford constitution will prove little more than the proverbial "scrap of paper."

F. H. S.

II.—A PRISONER IN TURKEY.

Some months ago Mr. Still published a volume of verse which derived its main value from its existence as a personal, human document, written under every conceivable kind of disability. In this, his latest book, he has not laboured under that disadvantage, and its worth, both because of this and because it is a record both of "facts and opinions," is proportionately increased. Although this work makes little pretension to literary form—it is altogether a plain, ungarnished account—it is most readable, and should, in fact, be studied by everyone interested in the fate of the Turk.

Of the facts here dealt with (which concern mainly the bad treatment of British and other prisoners of war in Turkey), this is not the place to speak; for it would appear that those responsible for the Turkish Treaty are not without knowledge of the war-behaviour of the Turk. Mr. Still is perfectly right to insist upon his facts, which, of course, inform his opinions; but it is his opinions which are at the moment the more interesting. It should be noted that he completely controverts the statement made by Major-General Sir Charles Townshend that the Turk is a sportsman and a clean fighter. His experiences in captivity were those of a subaltern, and these do not tally, except in very rare detail, with the dictum above expressed. For Mr. Still the Turk was everywhere and at all times "unspeakable"—the instances where a spark of decency was shown are carefully and generously put down, and merely make the author's final opinion all the stronger. And just as his experiences were worse than those of British Staff officers, so, he justly could surmise, were privates' experiences worse than his. The official Turk is beneath his contempt; but he has respect for the bravery, patience, and generosity of the peasant Turk.

What Mr. Still says of the Armenians is worth transcribing:—

> Englishmen don't like Armenians. I don't myself. Turks loathe them. Greeks dislike them. In the Caucasus the Georgians hate them. This almost universal unpopularity is no excuse at all for massacre, but—in Turkey—it helps to explain it. Where the European avoids, the Turk, having a different standard, slays. To him they are vermin. . . . If the Armenians are protected; allowed to be successful, and to enjoy their success themselves; allowed to be independent and not suffer for their independence; allowed to be brave and not to die for their courage: allowed, in a word, fair play, they will grow into a fine people.

This book consists of the narration of a series of trials, commencing on August 9, 1915, when the author was captured at Suvla, until November 1, 1918, when he left Smyrna to be repatriated. It tells of the treatment of prisoners in general at the camp at Angora and at Afion-Kara-Hissar, and although its first purpose is merely to tell a story, its achievement is that it constitutes a most convincing indictment of the character of the Turk. No one can read unmoved of the vile treatment accorded to British prisoners, and no one can accuse the author of any but the honestest motives in writing his book. "A Prisoner in Turkey" has, both in what is said and in what is left unsaid, the ring of reality about it; and it is to be hoped that it will not escape the notice of those folk who are already clamouring for mercy to be shown on behalf of an uncivilised and a beaten foe. First-hand evidence like this as to what the Turk is, is worth a thousand guesses as to what the Turk might have been, or what he may become.

BOOK NOTE.

We have received a copy of the pamphlet "Analecta," by Theodore D. Moseonas. (Manchester: Norbury, Notzio and Co., Ltd., 6d. net.) It contains a short account of the Holy and Apostolic Church of Alexandria and the story of the Greek Pilgrim Fathers (eighteenth century).

7	25	Monday	20	21
8	26	Tuesday	21	22
9	27	Wednesday	22	23

Major Morrison-Bell, M.P., is on a visit to Malta.

M. Aristide Blank, late Roumanian Minister of Finance, has left Claridge's for Brussels.

Lieutenant Moffat, who has been held captive by Mustapha Kemal Pasha at Adabazar, has now been released.

M. Titulesco, Roumanian ex-Minister of Finance, and the present head of the Peace Delegation, left London last week for Paris.

Major-General Sir Charles Townshend, K.C.B., is to receive the honorary degree of Doctor of Laws from the University of Toronto.

The Cairo correspondent of *The Times* states that Sir Paul Harvey, Financial Adviser to the Government of Egypt, will retire in the autumn.

The Czecho-Slovak Foreign Minister, Dr. Edward Benes, and Dr. Alice Masaryk, the eldest daughter of President Masaryk, have arrived in London.

It is announced from Baghdad that the Shah of Persia is seriously indisposed, and that he has been obliged to cancel all his engagements. He left on May 28 for Persia.

A communication has been received from Central Arabia stating that Prince Faisal, the young son of the Emir, Ibn Saud, who was at the head of the Central Arabian Mission to this country, has married his first cousin, the daughter of Mohammed Ibn Saud.

Under the auspices of the Royal Society of Arts, Sir Valentine Chirol will deliver on June 18 the Sir George Birdwood Memorial Lecture. His subject will be "The Enduring Power of Hinduism," and the lecture will be presided over by the Right Hon. Lord Meston, K.C.S.I., LL.D.

A Requiem Mass was held for the late Sir Dennis Fitzpatrick, G.C.S.I., at the Brompton Oratory at 10 a.m. on May 25. The service was attended by members of the family and the following:—Sir Charles Rivaz, Sir Louis and Lady Dane, Sir Charles and Lady Lyall, Sir Charles Bayley, Sir Alexander Diack, Mr. W. Coldstream, Colonel C. E. Yate, M.P., Colonel Dallas, Mr. C. E. Buckland, Sir James Dunlop Smith, representing the Secretary of State for India, Sir Michael O'Dwyer, Sir Richard Udny.

The Hyderabad Contingent Dinner took place on May 31 at Oddenino's Restaurant, Regent Street, and was attended by the following officers:—General W. W. Warner, C.M.G., Major-General Sir Norman Stewart, Bart., C.B., Major-General T. H. Hardy, C.B., Colonels H. Greany, R. F. M. Johnstone, H. Lowther, C. H. Macdonald, C. E. Macquoid, D.S.O., R. G. Ouseley, C.B., C.M.G., D.S.O., E. G. W. Pratt, G. W. Priestley, D. W. Purdon, E. A. W. Stotherd, E. W. Welchman, C.B., F. W. Whittall, Lieut.-Col. K. E. Nangle, Major F. Welchman, and Mr. Austin Low, C.I.E., hon. secretary.

Our Sofia Correspondent writes (May 1):—The great event of the past week has been the marriage of Captain Walter Collins, of the British Military Mission in Bulgaria, with the young and charming daughter of General Zagorsky, Mlle. Yanka Zagorsky. The marriage took place last Monday in the ancient church of St. Sophie, a Bulgarian Orthodox priest, Archimandrite Chivatcheff, officiating. The ceremony attracted a large and fashionable crowd, among others present being H. E. General Gondrecourt, who commands the Allied troops in Bulgaria, and many members of the *corps diplomatique*. Afterwards a reception was held at the quarters of the British Military Mission. The following day the happy couple left for Vienna, by way of Belgrade.

The following are recipients of the Egyptian Order of the Nile:—Third Class: Maj. R. P. S. Elderton, Maj. Viscount Hawarden, Maj. S. E. H. Giles, D.S.O.; Maj. A. G. Cummins, M.C., M.B.; Mr. B. Burnett, Director of Works, Sudan Government; Mr. H. Fraser, Director of Lands, Sudan Government; Mr. M. F. Simpson, Ministry of Public Instruction, Egypt. Fourth Class: Maj. A. H. Betterton, Capt. J. J. M. Soutar; Mr. O. Bentley, Senior Inspector, Nuba Mountains Province; Mr. W. A. Davie, Inspector of Agriculture, Sudan Government; Mr. S. C. Dunn, Geologist, Sudan Government; Mr. A. W. Fraser, Assistant Director, Cadastrial Surveys, Sudan Government; Mr. G. E. Mason, Assistant Mechanical Engineer, Sudan Government Railways; Mr. A. E. Robinson, Inspector of Accounts, Customs Department, Sudan Government; Mr. C. J. Slade, Divisional Engineer, Public Works, Sudan Government.

The following were present at the Indian Police Dinner, which took place at Oddenino's Restaurant, Regent Street, on May 28:—Mr. Douglas Straight, C.I.E. (in the chair), Major T. C. Annesley, Colonel S. Babington, Mr. A. C. J. Bailey, Mr. L. M. Bavin, Mr. E. B. Belcher, Lieut.-Col. J. F. C. Carter, Mr. C. W. Chichele-Plowden, C.I.E., Lieut.-Col. E. G. Gregson, C.M.G., C.I.E., Mr. A. J. Shappell, Mr. O. A. Harker, Mr. A. St. J. Ingle, Mr. I. A. Innes, Mr. J. B. Jenkins, Mr. H. R. Langtree, Mr. A. E. M. Le Marchand, Mr. Austin Low, C.I.E. (hon. secretary), Mr. C. A. Macpherson, Mr D. Petrie, Mr. J. R. Phillips, Mr. M. C. Conway Poole, Mr. H. E. C. Paget, Mr. R. E. A. Ray, Mr. A. W. Richardson, Mr. G. Archer Rundle, Mr. W. Moyle Sherer, Mr. J. Slattery, Mr. W. Sloane, Mr. F. A. M. N. Vincent, C.I.E., M.V.O., Mr. B. Wardle, Mr. W. H. A. Webster, Mr. N. Williamson, M.B.E., and Mr. N. L. K. Wilson.

APPOINTMENTS, ETC.

The King has been pleased to approve the appointment of Mr. Abdur Rauf to be a Puisne Judge of the Lahore High Court, in the vacancy created by the recent appointment of Mr. Justice Shadi Lal to be Chief Justice of the Court.

OBITUARY.

A report has reached London that the Sirdar Nasrullah Khan, brother of the late Ameer, is dead. He had been under some kind of surveillance either at Jallalabad or Kabul since the accession of the present ruler, and it is not quite clear how much political influence he exercised lately.

Air Commodore Groves, Commanding the Royal Air Force in Egypt and the Middle East, and Flying Officer C. O. Bird were killed in an aeroplane accident at Heliopolis on May 27.

THE RUSSIAN REVOLUTION.

At the Alpine Club Gallery is being held an exhibition of pictures called "The Russian Revolution." They are the work of Mr. Edward Saltoft, who was from 1916-1918 chief of the Danish Red Cross in Russia. "He also was entrusted," the catalogue tells us, "with a special mission in the spring, 1919, when he carried out negotiations with the Soviet Government on behalf of British, French, American, and Roumanian subjects in Russia." Readers of this journal will probably recall the fact that Mr. Saltoft was well known before the war in Caucasia and South Russia. (It is possibly this experience that enabled him to draw so faithfully such types as No. 17. "An Old Persian from Tiflis"; No. 35, "A Tartar with Yellow Muffcap"; No. 36, "A Persian with Yellow Muffcap"; and No. 43, "A Boy from Caucasus with Red Cap.")

Including some portraits which are not particularly arresting, there are sixty-seven exhibits altogether, but they are by no means of equal value. To our mind, Mr. Saltoft's best work is that devoted to the drawing of the Red Army on the march; he has here no moral to convey, and he seems to have caught admirably the fatalistic spirit which inspires the soldiers to march across the desolate wastes of snow. There is also very fine drawing in No. 39, "The Red Gate in Malajamorskaja, July 6, 1917, 11 p.m.," a most vivid and brilliant piece of work. In those pictures which appear to have direct value as propaganda, such as those upon "The Cry of the Revolution," or No. 27, "The Dead Horse, January, 1918," or No. 42, "Assassination of General Stackelberg, March 10, 1917," we do not see much merit; for there is in them a vagueness of detail and of outline which mars what might otherwise be very effective craftsmanship. It may be said that these pictures are perhaps more of contemporary and practical interest than of artistic interest, but, quite apart from their subject matter, they are worth seeing.

NEWS IN BRIEF.

The Ras-el Bahr post office was opened on June 1.

In view of the disturbed situation in Syria, French warships have been despatched to Tyre.

It is officially announced that Greek troops have occupied Dedeagatch, as well as Gumuldjina.

On May 6 the headquarters of the Red Sea Province were moved from Port Sudan to Erkowit.

It is announced that General Mahmud Mukhtar Pasha, Turkish Minister of War, and one of the members of the Peace Delegation, has resigned both offices for reasons of health.

A Bill has been submitted to the Greek Chamber regulating Mussulman religious institutions and Turkish schools in Mussulman communities in Greece.

A short time ago two dispensaries were opened by the Sudan Government, Medical Department, in Merowe Province—one at Kareima and the other at Tengassi.

Platten, the Swiss Bolshevist leader, who was imprisoned in Roumania, and who afterwards fled to Moscow, will be brought back to a Swiss prison in a day or two from Königsberg.

The Viceroy has provisionally fixed August 20 as the date for the first autumn meeting of the Imperial Legislative Council at Simla, and September 24 as the date of the final meeting of the session.

Credits asked for by the French High Commissioner in Syria and Cilicia and also on account of the French armies of the East and the Eastern Mediterranean have been passed by the French Chamber.

On behalf of the Palestine Restoration Fund £2,500 was collected in the New Synagogue, £1,000 in the Stoke Newington Synagogue, and £1,400 in the Borough Synagogue during the Jewish Festival on May 23 and 24.

A telegram from El Arish states that a number of Moroccans who were concerned in the murder of the two Spanish engineers, reported by our Tangier Correspondent, have been tried by court-martial and executed in the presence of their compatriots.

The Jewish Correspondence Bureau states that Mr. Herbert Samuel, the first High Commissioner for Palestine, will be responsible directly to the British Government. Lord Allenby, who has under his command the chief administration of Palestine, will thus be relieved.

The *Bombay Chronicle* states that Yaqub Hasan Sahib Bahadur, an elected member of the Madras Legislative Council, has resigned from the council of the Prince of Wales's Reception Committee, the Madras Corporation, and the Madras Port Trust as a protest against the terms of the Turkish Peace Treaty.

NEW ASSYRIAN PATRIARCH.

The vacancy in the Patriarchate of the Assyrian Church, caused by the death of Paulus Mar Shimun on May 9 (as recorded in our issue of May 20), has been filled by the election of his nephew, Ishai (Jesse) to that office.

The Patriarch-elect is the son of David d'Mar Shimun, brother of the late Patriarch and Sirdar of the Assyrian contingent now in British service. The fact that the new prelate is a lad of scarcely thirteen years of age is no obstacle by the customs of this nation, and he has received formal consecration to all the grades of the hierarchy of his church up to and including that of Metropolitan or Archbishop. The formal anointing of the Patriarchate will probably take place shortly.

The Patriarchate, which carries with it the chieftainship of the wild highland clans that form the bulk of this nation, is hereditary in the "Shimunaia" family, but this fact does not prevent the "notables" of the nation from exercising a choice within its limits. In the present case it was these notables who over-rode the wish of the bishops of the church for a period of delay before raising this boy to so high a dignity, and they also demanded the lad Ishai as Patriarch, to the exclusion of his elder brother Theodore. The practice of electing a member of the house who seems most fitted to the honour of the chieftainship, and disregarding the strict rule of primogeniture while respecting the right of the family, will remind historical students of the custom of our own ancestors.

One might expect that such a custom would cause family quarrels, but, as a matter of fact, that has not been the case in the past to anything like the extent that might have been anticipated.

One difficulty, however, does arise at times in cases where, as at present, the father of the Patriarch is alive and vigorous. Then at times there is a conflict between the obedience which a son naturally owes to his father all the East over and the obedience which a mere lay member of the church owes to the Patriarch and head of the "millet" who happens to be his own child! However, members of the Church of England are well aware of the great truth—that an arrangement that is quite intolerable in theory may yet work very fairly well in practice.

APPOINTMENTS WANTED.

THE Ladies' League (under Royal Patronage), 118, New Bond Street, successfully recommends Lady Secretaries, Chaperons, Housekeepers, Companions, Secretaries, Governesses, Nursery Governesses, Nurse Companions, Lady Nurses, etc.

WHERE TO STAY.

For the convenience of visitors from overseas "THE NEAR EAST" offers its services in booking rooms at hotels in the United Kingdom, on receipt of instructions preferably a week before the date of arrival. When instructions are telegraphed the message can be abbreviated as follows:—

"EASTAPROX. LONDON. TWENTIETH MATLOCK TWO

(The visitor's name and place of residence abroad to be added)."

which would indicate that two rooms were required at Matlock on the 20th of the month.

THE LESSON OF THE PUNJAB.

The publication of the documents relating to last year's disturbances in India at length makes it possible to view the facts of the situation as a whole, and to form a just idea of their bearing on the future. The delay in the appearance of these papers is doubtless susceptible of explanation, but it has none the less produced unfortunate results; discussions based on partial knowledge have tended to obscure the real issues, the public has been pressed to take sides, prejudice of almost every kind has had free scope, and if we were to be guided by some sections of the popular Press, we should expect to find in the Report of Lord Hunter's Committee all the elements of a transpontine melodrama, in which heroes and villains should hold the stage in turn. The only effective treatment of such a situation is an authoritative exposition of the facts, and this is now available. It is true that the members of the Committee have been unable to make a unanimous report, but the divergence is much less than it seems. A purely judicial enquiry would almost certainly have resulted in unanimity, and while the decision to make the Committee representative, as the phrase goes, involved the abandonment of that ideal, comparison of the findings in the two reports shows that the essential facts are no longer in dispute. The divergence is one of standpoint, and we are shown the facts from two widely different points of view, but such controversies as remain relate to the significance of particular events rather than their course. On these controversies the last word necessarily rested with the British Government, and the somewhat unusual wording of Mr. Montagu's closing despatch makes it easy to distinguish the considered orders of the Cabinet from the views expressed by the Minister on matters of departmental import. The case is thus ripe for the final decision of the public.

The story as now presented is indeed no melodrama, but a natural development from the operation of causes of a type familiar to Indian historians, if not easily appreciated by men whose memories are short. In the spring of last year Indians in the mass were upset by a variety of causes; war restrictions, bad crops, high prices, epidemics, and other occurrences combined to produce this result, and it should never be forgotten that when the minds of Indians are upset they draw on centuries of experience, and conclude that a change of dynasty is impending. We are told that the hooligan element in Lahore raised their ragged regiment by proclaiming that King George was dead; similar cries have been the prelude to disorder for at least a thousand years, and the incident is significant of one of the most strongly marked characteristics of Indian mass-psychology. The onset of such mental disturbances is watched for by experienced administrators, but Indian politicians are unfortunately still inexperienced, and they chose this dangerous moment to initiate a raging agitation against the provisions of the Rowlatt Act, a measure which had already been seriously whittled down, and was little more than a shadow of what had been recommended by the full weight of an impartial tribunal. The agitation thus started came as a godsend to the criminal elements, intent, as always, on creating active hostility to any form of government; wild stories were spread abroad, and, of course, readily believed; all the materials for a conflagration were on the spot, and only a spark was needed to produce it. That spark was struck by the men who, actuated by academic theories, preached disobedience to the law. We need not recall the details of the outrages which were committed; suffice it to say that things were done which Englishmen may forgive, but which they will find it hard to forget: in the worst centres of disorder the civil administration found itself helpless, and the ordinary machinery was displaced by martial law. The Minority Report argues that this extreme measure was unnecessary, but the arguments advanced have been brushed aside in the final pronouncement of His Majesty's Government, and in truth they called for no more respectful treatment; the military authorities took charge of the situation, and their administration succeeded in meeting the emergency, but, owing mainly to lack of guidance, some mistakes were made, while in the case of the most spectacular incident, the officer in command acted on a theory which has been condemned by the entire Committee, and has been formally disavowed by the Cabinet and the Indian Government. The results of these mistakes were in some cases deplorable, and it is, therefore, all the more necessary to insist on the fact that they were exceptional, and that in an exceedingly difficult situation the officers employed kept their heads and acted as British officers are expected to act. The mobs were rapidly brought under control, the leaders received exemplary punishment, the general population was at last convinced that authority stood firm, and while it must be admitted that feeling still runs high in some parts of the affected area, the danger of a recurrence of disorder has seemingly passed away.

What lesson for the future may be drawn from the events thus briefly chronicled? The Home and Indian Governments are agreed in recognising that, since the need for martial law must be expected to recur, suitable instructions for its execution should be laid down in advance, and arrangements made to avoid the risk of such mistakes as have been indicated. We have no quarrel with this conclusion, which accords with the canons of sound administration, but we desire rather to direct attention to the major premiss on which it is based, the great and pregnant truth that the rule of law is not yet firmly established in India. That truth needs to be constantly borne in mind. Indian memories are long, and the people have known too many changes of dynasty to realise either that modern Governments tend to be stable, or that stability is the essence of a prosperous and progressive state. Combustible material abounds, and precautions are still needed in India which may safely be dispensed with elsewhere. We are not sure that this truth has always been fully realised in practice by the administration during the last ten or fifteen years, but we are now concerned less with past administrations than with the Indians who aspire to control the administration in the near future. They have not yet learned to realise the danger of the firebrand; too many of them are inclined, on trivial pretexts, to play that part themselves. Within the last few months we have seen many of them adhere to the doctrine of organised disobedience, while others have proposed to turn India into a bear-garden if their peculiar views on European politics are not accepted *ex cathedra* by the world at large; and, apart from these notorious activities, it must be admitted that in almost every corner of the country there are men who threaten disorder if they are not obeyed. It would be superfluous to argue that such action is the very negation of democracy, but in India it is much more than that: the chances of disorder are far too great for such threats to be permissible, and politicians who aspire to become statesmen or administrators must, before it is too late, school themselves in the theory of political responsibility, and in the practice of political restraint. That is the true lesson of the events with which we are now concerned. In the atmospheric conditions which prevail in India just now, fires are easily kindled, but are hard to quench; and while the Government is very properly concerned to improve the efficiency of its remedial apparatus, the leaders of the people are faced with the even more urgent duty of seeing that sparks are not struck.

BRITISH COMMUNITIES ABROAD

FOREIGN OFFICE ACTION.

While in recent years knowledge of the Empire has become general, and the life of our brethren overseas a topic of perennial interest to people at home, it must be confessed that very little attention has been paid to the problems associated with the lives of those British communities in foreign lands on whose enterprise our commerce is so largely dependent, and by whose general conduct our status among the nations is to a great extent determined. Sometimes one is inclined to think that they understood these things better in the Middle Ages, when there was hardly a nation unrepresented in the great cities of Europe. Each little foreign colony, with its compact organisation, secured rights, and definite status in the body politic, performing a definite duty to the land of its origin in spreading abroad knowledge of its resources, manners, customs, and ideals. We cannot, of course, revive the ancient system of corporations specially chartered to trade in various countries, even if we can claim for it advantages not always discoverable in the haphazard methods of international intercourse holding good today, but we can at least seek to revive a little of its ancient spirit by giving something suggestive of a coherent organisation to our British communities abroad, and it is with immense satisfaction that we note the great step forward in that direction made by the publication of the report of the Foreign Office Committee specially charged with the examination of the subject for the information of the Government. As might be expected, the report covers a very wide field, in spite of the care that has been taken to keep within the terms of reference. These, divided into eleven headings, refer as much to British propaganda in foreign countries as they do to the conditions of life among British communities abroad, but the report shows us plainly that the two subjects are so closely interwoven that the title given to it need not be cavilled at by even the most critical.

The question of the education of British children abroad is dealt with very thoroughly, and nobody is likely to quarrel with the committee for urging that "His Majesty's Government should make it their aim to see that any British child has the opportunity of receiving a British education." The recommendations are, briefly, that the Government should obtain information from its representatives abroad as to the approximate number of British children in their districts requiring primary and secondary education, and that when they number as many as twenty or thirty in one place the amount the parents could contribute in the shape of school fees is to be ascertained. A grant in aid from the Treasury is recommended in all cases where the setting up of a British school is practicable, and it is suggested that facilities should be given to the more promising children in primary schools to enter secondary schools in this country. The subject obviously bristles with difficulties, but these are by no means insuperable, and several examples may be quoted of British communities having succeeded in solving their local education problem without any financial assistance from the Government. Among these, Constantinople stands out conspicuously, the excellent record of its British schools being familiar to many of our readers.

It is not perhaps sufficiently realised how often this educational difficulty deters many men of the best stamp from applying for situations abroad for which they possess every qualification needed. This applies to all classes, but perhaps most to men in the lower ranks of life. In their case, only too often, to take their children out with them to a foreign country is tantamount to depriving them of the privileges of their British nationality, and when the sacrifice is made it not infrequently results in the loss to the Empire of several useful young citizens. How clearly this is appreciated by the Committee is evident from their report, and it is to be hoped that the Government will act on the very full recommendations made for remedying the unsatisfactory conditions existing at many important places. We notice with some regret that British communities in the United States are ruled out of the inquiry, but this could hardly be avoided, since it cannot be denied that the British child in America probably gets, in most cases, as good an all-round education as he would in his own country. Still, one cannot shut one's eyes to the fact that an English and a British education are not one and the same thing in this case, since it is admittedly one of the objects of American education to denationalise the foreign child as a preliminary to giving him a distinctly American outlook on life; and this, in the case of the British child, entails the viewing of eighteenth-century history in a form unrecognisable to his relations at home. It is suggested in the report that at places where the establishment of a British school appears to be feasible, an endeavour should be made to ascertain whether it might be possible to attract to it a certain number of foreign children. This is a most valuable suggestion, and we hope it may be widely acted upon, for it is rarely one comes across a foreigner who has received his education in a British school who does not in after life entertain friendly feelings towards this country; and in the great campaign against wars and international misunderstandings inaugurated with the founding of the League of Nations the services of such men are likely to be invaluable.

Curiously enough, the report makes no reference to the subject of interchange of undergraduates between universities in different countries. Is it because the Committee were trying to forget that we had German Rhodes' scholars with us before the war? Or is it because they think this is a matter better left to the universities themselves to settle? The omission is remarkable, however, when we recall the presence of so many Belgian and Serbian students in our universities during the war years and all the mutual advantages accruing to the nations concerned. Schemes for the interchange of students between the universities in this country and those in the dominions overseas are now under consideration, but our duty to think Imperially does not relieve us from the obligation to be "good Europeans," as Lord Morley once put it, and we should like to hear that schemes were also in the making for giving our young university men the chance of studying in Athens, Belgrade, and Bucharest, their places being taken here by some of their Greek, Yugoslav, and Roumanian contemporaries.

We admit that we are viewing the question from a sectional point of view, but since this is precisely what this Foreign Office Committee advocates we make no apology for doing so. Not the least valuable of the recommendations of the Committee in advocating the setting up of an inter-departmental committee to advise the Foreign Office on a number of questions involving the welfare and usefulness to the Empire of British communities abroad is that it should be supplemented by sub-committees whose business it would be to advise on matters affecting different groups of countries, and these it is suggested should be as follows:—(1) South America, (2) Far East, (3) Western Europe and Morocco, (4) Turkey, the Levant and Egypt, (5) Central Europe and the Balkan Peninsula. The principle is excellent, but the grouping proposed is certainly open to criticism. The countries of the Balkan Peninsula, among which presumably Greece is included, as otherwise she would appear to be left out of the scheme, have a closer connection with Turkey than they have with Central Europe, while Egypt, now a British protectorate, can hardly be said to fit in with it at all.

One of the most interesting sections of the report is that dealing with "institutions which tend to produce

a spirit of solidarity among British subjects abroad," and among these kind things are said of the English Church. We are so accustomed to having the tale of the Church's sins of omission recounted to us that to find it blessed has all the charm of novelty about it. The report states that the evidence given before the Committee shows that

"the English Church is, quite apart from any question of religion, usually a valuable centre for the British community, and that the chaplains have opportunities for being in touch with sections of the communities which do not come within the scope of the ordinary activities of the Diplomatic and Consular officials."

It may be added that in the Near East the work of the Anglican and Orthodox theologians who are seeking to promote reunion between their respective Churches is likely to have a very good effect in the near future.

That admirable institution the "Alliance Francaise" is held up to us as a model of what can be done by voluntary effort in the spreading of knowledge of the literature of a country among the people of foreign lands. Hitherto the Englishman has been content to leave to commerce the spread of British influence abroad, but during the war we discovered that thought probably counts for more even than trade when international relations are concerned. In the Near East, France has never aspired to commercial predominance, and she has never there aggressively asserted her power, yet, without any obvious effort, she has succeeded in giving the spirit of civilisation in several rising countries a distinctly French tinge. French culture has proved in its way a force no less potent than British trade, even more so, perhaps, because of it is everywhere born that spirit of understanding which makes for sympathy between individuals and friendship between nations. Germany recognised this long ago, and in her great pre-war push in the Near East exported professors as liberally as commercial travellers, and yet she signally failed to eradicate French culture even when she succeeded in ousting British trade in the countries she marked down for peaceful penetration. Far be it from us to suggest that it is desirable to aim at the substitution of British for French culture in the countries where the latter has taken firm root, but it amounts to a national duty that we should strive by all means in our power to break down the barriers of ignorance and prejudice which separate us from so many of even our "best customers." Much might be done towards the attainment of this object not only by encouraging the study of our language and our literature in foreign countries, but also, as the committee point out, by endeavouring to get many of our best technical works translated into foreign languages. Very few of the books in common use in our schools and universities are even known by name on the Continent, where French and German text-books are widely circulated; and as a result the young generation in many countries are quite unaware of the fact that Britain's contribution to science, literature and art is capable of standing the test of comparison with the result of the labours of her neighbours in the same fields.

In dealing with the value of British Chambers of Commerce in foreign countries as a means for developing British trade and for promoting the spread of British ideals and culture, stress is, we think very rightly, laid on the fact that such work is in many cases hampered by the constitution of individual chambers. In some cases membership is strictly limited to British subjects, in others foreign representatives of British firms are eligible, while in others again membership is practically open to all. The committee think that a British Chamber of Commerce should confine the privileges of full membership to British subjects, while the foreign representatives of firms or possibly foreigners trading with this country might be admitted as associate members without a vote.

One sometimes feels that as a people we should not be so profoundly misunderstood on the Continent if the British retail trader was more in evidence in foreign cities. Here in England French and Italian restaurants and shops are to be found in nearly every town but one can travel for days through populous tracts of Europe without coming across a single place where an Englishman can be found selling English things to the foreign public. Whether this can be altered is an open question, but many of our readers will doubtless be able to name places where it would seem likely that good business might be done by an English book-shop supplemented by a reading-room and a circulating library, and one would imagine there is considerable scope for a retail trade in other lines in many Continental cities. An English restaurant one feels, however, could only flourish in a place possessing a sufficient British population to support it, for until he is completely denationalised one doubts whether any foreigner is capable of appreciating English cookery. Still, this matter of retail trading seems to deserve the attention of our British Chambers of Commerce abroad. Exhibitions of samples have their uses, and they have proved of value in stimulating trade in British manufactured goods, but a shop offers temptations to the general public to buy many things the existence of which is only made known to them by the best of all advertisements—open display. Ladies do not buy French hats out of catalogues!

Considerations of space make it impossible for us to attempt to deal with many of the subjects covered by this most interesting and suggestive report, but we hope at least that we have been able to convey something of its spirit to our readers. That spirit suggests that the new Imperialism will have much in it conspicuously lacking in the old. One feels, for instance, that it will recognise that Englishmen who go abroad to foreign countries have as good a right to claim that they are doing the work of the Empire as their brethren who prefer to seek their fortunes in lands marked red on the map of the world. British communities abroad contributed thousands of good soldiers to our armies during the war, and among them were many whose knowledge of foreign languages and customs were of special value to the State. The Briton resident abroad claims no special privileges, but he has the right, at least, to expect that his Government will do all in its power to secure for him those to which his nationality entitles him in common with the rest of the King's subjects. This, in effect, is the message conveyed to the nation in the report of the Foreign Office Committee on British communities abroad, and it is sincerely to be hoped that, taking it to heart, the nation will support the Government in giving prompt effect to the recommendations contained in it.

It is announced in the *London Gazette* that four camels (two male and two female) and a camel calf, and one Indian spotted deer, have been allowed by the Ministry of Agriculture to be landed in this country under the powers given to the Minister by the Diseases of Animals Act in regard to "animals intended for exceptional purposes." The camels have come from Oran, Algeria, and are the property of Mr. Arthur Collins; the deer belongs to Mr. John D. Hamlyn. All the animals have to be kept in quarantine for twenty-eight days.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

The remarkable recuperative power which Egypt has always displayed is well illustrated in the financial statistics for the eleven months ended February. The revenue for that period is £E4,000,000 above the figures for the corresponding period of 1918, and, it may be added, is in excess of the Budget estimate, while the approximate available surplus is £E4,500,000. After the disturbances in the spring of last year, such a forecast would have been regarded as somewhat optimistic. The outbreak, however, had no more than a transitory effect on the country, and at the present time, but for the fact that Egypt's prosperity has had a very unequal incidence, conditions there might be regarded as uniformly favourable.

***

According to a correspondent, the disposal abroad of Bulgaria's surplus grain this year is likely to be a matter of very considerable difficulty because of the attitude of holders in regard to quotations. It is not merely that the price is unreasonable, but also the fact that it is impossible to get a quotation for the grain on board ship. The grain has to be put in Roumanian barges for shipment, and a very high price is quoted for it put into a barge; but the holders will not quote for anything beyond that. I understand that the price in a barge works out at as much as wheat delivered in London from the River Plate. Naturally, business cannot be transacted on such terms.

***

My recent remarks with regard to the apparent neglect of the Indian market by British motor manufacturers are fully borne out by a letter in the current issue of the *Bulletin* of the Federation of British Industries from a correspondent in Calcutta. "As I am anxious to assist British trade in any way within my power," he writes, "I take this opportunity of bringing to your notice the extraordinary indifference of British motor-car manufacturers to the Eastern trade. Although it is almost eighteen months since the Armistice, I doubt whether there are a dozen post-war English motor-cars in Calcutta to-day, while on the other hand a single steamer from America, which arrived two weeks ago, brought as many as eighty-five."

***

One reason for the indifference to the claims of this and other markets has been the fact that manufacturers have been overwhelmed with orders for the home market. But that phase as regards motor-car manufacturers is rapidly passing. The wave of home orders has slackened, production is overtaking demand, and there is evidence that attention is again being paid to the markets overseas, so that I think it may not unreasonably be hoped that the time is not far distant when the Americans, instead of having things more or less their own way in the Indian market, will find that a very hard struggle is necessary to retain even a part of their trade in motor-cars.

***

Egypt is another market for motor-cars which ought not to be overlooked. Here again America is in front of this country. The imports from the United States in 1919 amounted to 180 motor vehicles and chassis, as against 56 from the United Kingdom. Discussing the position, the *Journal* of the British Chamber of Commerce of Egypt says that British cars were never so much in demand in the country as they are at the present time. "Although there does not seem to be an all-British prototype of the famous 'Tin Lizzie' produced by Mr. Ford, which has been so popularised here during the war," our contemporary adds, "the present boom has created such a demand that there is a large market for almost every class of British car. A little experience has already convinced the discriminating public that a car built on the 'made-to-last' principle, well painted and varnished and generally well finished, is easily the cheapest in the long run."

I understand that the British Chamber of Commerce of Egypt intends to establish a permanent sample room of British manufactures at Alexandria. This project should prove invaluable in furthering British trade enterprise in this most important market, and I trust that our manufacturers and exporters will not hesitate to give the scheme their fullest support.

***

Holders of the guaranteed stock of the Great Indian Peninsula Railway have every reason to congratulate themselves on last week's dividend declaration. In addition to the guaranteed interest of 3 per cent. they are to receive a dividend of £3 and a bonus of £1 compared with the payment of 35s. for 1918-19, or in other words, a substantial increase of 45s. It represents the highest payment out of surplus profits since the railway was vested in the Secretary of State for India in 1900, the previous highest figure being the declaration for 1911-12 of 32s.

***

There was a considerable decrease in the profits of the India General Navigation and Railway Company for the past year, due mainly to the disorganisation of traffic resulting from a severe cyclone in Eastern Bengal, which caused the total loss of one steamer and three flats, and serious damage to other vessels. The gross profits fell from £247,500 to £161,400, and the net profits were £9,300 lower at £81,000. The dividend is maintained at 10 per cent., and the carry forward is £25,600, as against £28,600. It is stated in the report that every effort is being made to restore the company's fleet to its pre-war standard, and that in addition to re-purchasing nearly all the vessels which were taken to Mesopotamia a programme of new construction has been undertaken, which will involve the expenditure of about £800,000.

***

In an interview which appears on page 799 Mr. Bellasis makes a very complete reply on behalf of the Federation of British Industries to certain criticisms of the Athens Exhibition by the American Consul-General at Athens. It was, of course, inevitable that the exhibition should be somewhat incomplete, having in view the time at which it was held, and as it happened some of the goods which it was not possible to include were those for which there is a special demand in Greece. But if it was not absolutely comprehensive—and what exhibition ever merits that term?—it was at any rate wonderfully effective. The exhibits represented goods which British manufacturers were in a position to supply without undue delay, and the result of the exhibition and the prompt carrying out of orders has been to establish British goods in firm favour in the market. Manufacturers of several of the commodities which were not exhibited at Athens, such as cigarette-making machinery, are now, I believe—or very soon will be—in a position to meet orders, and with the happy experience of other trades before them it is to be hoped that they too will make every effort to enter the Near Eastern markets.

COMMENTATOR.

BANK OF ROUMANIA LIMITED

(FOUNDED 1866.)

Head Office: 27, THROGMORTON ST. LONDON, E.C. 2.

Branch: 11, CALEA VICTORIEI, BUCAREST.

Directors:

THE EARL OF BESSBOROUGH, K.P., C.V.O., C.B.
E. W. H. BARRY, Esq.
THE VISCOUNT GOSCHEN.
GENERAL THE HON. SIR H. A LAWRENCE, K.C.B.
P. NAVILLE, Esq.

Bankers: BANK OF ENGLAND. MESSRS. GLYN, MILLS, CURRIE & CO.

A general Banking business with Roumania is conducted, and correspondence from those having interests in that country is invited.

Commerce and Industry.

(Reports from Our Own Correspondents.)

YUGOSLAVIA.

Belgrade, May 16.

Currency Questions.

All restrictions on dealing in foreign currency of certain specified countries are now extended to all foreign currency except Austrian and Hungarian.

The krone is finally dead, the recall being completed. The organisations for effecting the exchange of the krone for the new currency are now being demobilised.

Banking Amalgamation.

It is reported from Zagreb that an amalgamation has been arranged between the Yadranska Banka, the Banka i Shtedionitsa za Primorje (Coast Region Savings Bank), the Zagreb Industrial Bank, all of which will be fused with the Yadranska (Adriatic) Bank. The combined capital will be 100 million krönen, which will shortly be increased to 250 million krönen. These krönen, of course, count at the rate of four to the dinar, as the values are expressed in the new currency.

Orders for Agricultural Machinery.

The Ministry of Agriculture is about to place orders, through the Union of Agricultural Associations, for a large quantity of agricultural implements to be distributed in the devastated southern regions. A credit of two million dinars has been voted for this purpose.

BULGARIA.

Sofia, April.

The Director of the Bulgarian State Railways, M. Morpoff, leaves for Paris on May 4 to represent the Bulgarian Government at the conference which is to arrange the time-table of the Orient Express. The conference opens on May 10.

SYRIA.

Beyrout, May 11.

Crop Outlook.

In spite of reduced sowings, due in most cases to lack of corn seed, lack of cattle, and other legacies of the war, perpetuated during the Armistice by conflicting political interests, the cereal crops in Syria and Palestine are reported to be most promising. This is also the case with regard to fruit. This was fully expected from the excellent rainfall, which was above the average (about 39 inches) and came at a most timely juncture in the spring. If the country had enjoyed settled rule, and the people had received a little help in the shape of corn seed and cattle, a year with such a record rainfall should have been enough to set the country on its feet.

In the Gaza district the barley crop is estimated at about 40,000 tons, the highest maximum ever reached before the war. There, of course, the occupying Power started organised help even before the Armistice, and there was a comparative freedom from unfavourable circumstances.

The olive crop promises to be very abundant, and will, it is hoped, compensate to a certain extent for the damage caused by the phenomenal snowfall in late winter. The greatest damage was sustained by Sahret el Scheifat, by far the largest and richest olive grove in the whole of Syria. There some of the trees lost one quarter, and others even one-third, of their branches. Curiously enough, the olive groves in the Tripoli district were scarcely affected, and the same may be said of the olive tree gardens in the hills. Of course, the trees in the latter regions are inured to snowfall, which is regular in winter. Two main causes are assigned for the particularly heavy damage sustained by the vast olive tree plantations of Sahret el Scheifat. In the first place, the trees there are scarcely ever lopped or pruned, so that the quantity of weak and old branches is larger than on the pruned trees, where only vigorous shoots are left; secondly, the trees in that low-lying plain are unaccustomed to snow.

Sericulture.

A serious question that is now engaging the attention of Syrian cultivators, but more especially the French, is the gradual disappearance of mulberry plantations and their replacement by fruit orchards. If mulberry tree growing and silk worm rearing were being increasingly neglected before the war, when labour and other conditions were far less unfavourable than they are at present, there is every reason to think now that unless organised and efficient help, as well as practical scientific advice, be given promptly by the French authorities, their silk industry at home will ultimately lose the Syrian market.

The mulberry trees this year are bearing abundant foliage, thanks to the good rainfall, and yet the silk production is estimated at not more than 1,500 bales, against a normal pre-war crop of 4,000 bales, according to the export statistics. It is rumoured that some merchants are already advancing as much as PE 60 (about 12s. 6d.) per oke (about 1,200 grammes) of cocoons; but one is rather sceptical about such reports, because so far the cocoon growers have been invariably the victims of the merchants, who have taken advantage of the fact that the cocoon can remain whole only for a few days, and that, unless they are steamed, they become useless for spinning purposes. Therefore, the merchants have usually dictated their prices at the last moment, knowing well that the growers have had no other option but to part with their cocoons within a limited number of days. Now, in order to place the growers in a secure position, the authorities are recommended to help in the formation of a co-operative society, which will undertake to have the cocoons steamed at a reasonable price, also to make advances to the growers, who are in the majority of cases poor and are unable to wait until the cocoons are steamed and sold.

The greatest gain was reaped by the silk merchants in France, who controlled the Syrian market and dictated prices far too much in their own favour. This, however, ultimately reacted on them with prejudice, and their case recalls in a way the fable of the golden egg. It is now in their interest to use their influence with the authorities not only to prevent the further decline of sericulture in Syria, but to help it to regain its former importance.

The silk worm is a delicate insect, and the utmost care and scientific treatment are required for its successful growing, and the processes must be so modified in each case as to suit local conditions, both physical and meteorological. So far, this industry has been carried on in Syria in the most primitive and unscientific manner, and that is why the yield is said to have always been from three to four times less than in France. For example, the same seed (egg) would be used indiscriminately in the hot plains and the cold hills. Further, certain native merchants, neither well equipped nor qualified for such minute scientific work, have up till now been allowed to sell so-called individually selected eggs, with the consequence that the simple folks on whom these seeds were foisted lost sometimes half of their crops or more, through disease of the worms. What should be done is to found under official control a special laboratory for supplying seeds tested one by one under the microscope by expert specialists, and to provide each locality with the kind of seeds that suits it best. Then, the whole system of breeding should be reformed and practical hygienic measures should be introduced. Often successive crops have been partially destroyed by the continued use of the same reeds for the huts, shelves and trays whereon the worms are reared. Only in the hills, where it is cold and more rainy, are the worms reared in permanent stone houses. Unfortunately, it has never occurred to the growers to destroy or disinfect the reeds, where, through the failure of the crop, germs might have been suspected to be lurking, with the result that the disease persisted year after year with disastrous consequences.

MOROCCO.

Tangier, May 16.

The Currency.

The withdrawal of Hassani money, in those districts of the French Protectorate where the State Bank will buy it in at 200 francs to 100 pesetas is going on quietly, but it appears that, notwithstanding the large amount of silver bought in the coast towns, the natives still retain a great deal, and, though the authorities do not admit it, Hassani is still used by them in villages for transactions among themselves. Probably much of what they have kept will be melted and used for the ornamentation of their women.

It is stated that a Moorish peseta or franc note will be issued, and that a silver coin of that value will be minted when the price of silver appears to be favourable.

The State Bank at Tangier is cashing Hassani notes (100 pesetas) in Hassani silver, and at present there does not appear any great shortage of this silver money. The country people around will accept nothing else.

Favourable Crop Reports.

Excellent crops are reported from the agricultural districts, and the decision as to the quantities of grain which will be freed for export is anxiously awaited, though there seems some doubt whether the withdrawal of Hassani may not affect the native willingness to sell.

THE ATHENS EXHIBITION.

THE F.B.I. AND AMERICAN CRITICISMS.

In a recent report the American Consul-General at Athens, Mr. W. Weddell, makes some severe criticisms with respect to the Athens Exhibition. Admitting that the greater part of the exhibits were sold, and that large orders were placed for future delivery, he comments adversely on the size of the exhibition, the absence of various kinds of machinery in use in Greece and the introduction of others unsuited for that country, the lack of adequate advertising, and the time at which the exhibition was held.

Interviewed by a representative of THE NEAR EAST, Mr. Bellasis, the organising secretary of the Athens Exhibition, remarked that the Consul-General had largely discounted his criticisms by admitting the success of the exhibition as far as immediate and future orders were concerned.

"In stating that it was a failure, 'considered in its larger aspects,' he presupposes that much greater and wider effects were aimed at than would be possible in the circumstances. It may not have compared in size with 'the average State fair in America,' but it served adequately the purpose for which it was intended, and it was by far the largest concerted trade effort seen either in Greece or in any other Near Eastern country. It might, in fact, be compared with the average successful trade exhibition in London, the area covered being about equal to the Agricultural Hall. The exhibits included practically all the goods for which there is a special opening in the Near East. The exceptions Mr. Weddell signals out for specific mention—cigarette-making machinery, currant-cleaning machinery, olive and wine pressing machinery, weaving, spinning, and hosiery machinery, and wood-working machinery.

"For all these commodities there is unquestionably a great and growing demand, and the firms making these classes of machinery were not represented at Athens simply because of conditions arising out of the war. Exhibits had to be ready for shipment within six months of the Armistice, and manufacturers were either not ready to supply, or else they had so many orders for home consumption that they could not consider the development of an export trade at the moment. The latter was the case particularly with regard to spinning, weaying, and leather-working machinery.

"The great value of the exhibition lay in the fact that it represented commodities which could be supplied either at once or for near delivery. To exhibit goods which could not be quickly supplied would have rendered a grave disservice to British trade with the Near East. Imagine the feelings of buyers on being told that they might have to wait months, or even years perhaps, before firms could 'deliver the goods!' Most of the firms who exhibited were able to promise fairly early delivery, and it is eminently satisfactory to be able to state that, despite the difficulties of the past few months, they have in practically every case performed what they promised.

"This was not Greece's experience with regard to the American traders with whom the country was filled about the time of the exhibition, and our exhibitors, as a matter of fact, profited to no small extent by the failure of American houses to fulfil orders given earlier in the year. The exhibition, it may be noted, materially checked the American commercial invasion, which had up to that time been almost unopposed. Before it opened, the hotels were full of American travellers brimful of confidence. Their demeanour noticeably changed as the success of the exhibition became apparent, and by the time it was over most of them had vanished away."

Regarding the criticism of the time at which the exhibition was held, Mr. Bellasis pointed out that this factor was governed entirely by the urgent need to keep pace with what commercial rivals were doing in the Near East. "To be of the fullest utility," he continued, "it had to take place when it did. Obviously, it would have been preferable in many ways to have held the exhibition this spring. There would have been more time for organising, and the exhibition, in consequence, would have been more comprehensive, more complete, and more far-reaching in its appeal. But it was the time factor that counted over all other considerations, and there is no doubt that the psychological moment was chosen for success."

"It was the first All-British Exhibition ever held overseas," he added; "possibly, indeed, the first 'one nation' exhibition of any kind held in a foreign country, and as such it can fairly claim to create a standard of its own to be judged by rather than to be compared to its disadvantage with an absurdly large standard which could not possibly have been reached in the circumstances. A previous American report characterised it as 'one of the best-staged exhibitions ever held.'"

A Bill is to be submitted to the Bulgarian Sobranje to regularise imports.

The revenue of the Sudan Government for the present year is estimated at £E3,500,000, against £E2,685,000 during last year.

Messrs. Sir W. G. Armstrong, Whitworth and Co. announce that, while their Central Commercial Department is at No. 3, Woodstock Street, Oxford Street, London, W.1, all correspondence regarding locomotives, ship construction, or civil engineering should continue to be addressed to the head London office at No. 8, Great George Street, Westminster, London, S.W.1.

THE MINERAL RESOURCES OF ARMENIA.

By G. T. Agababian, E.S.N.M. (Paris).
(Chief of the Department of Mines of the Armenian Republic.)

Armenia was the cradle of metallurgy and mineral exploitation. Mining tools discovered in Armenian mines (Koghp, Khatar, etc.), besides various metallurgical products revealed by the excavations undertaken by De Morgan and other archæologists, enable us to follow the origin and development of these national industries of the country since the Stone Age.

The smelting of metals, practised at a very early date, and the manufacture of weapons and metal implements and ornaments, created a prehistoric civilisation in Armenia, an echo of which is found in the numerous cuneiform inscriptions encountered in the country. In ancient times, according to the Latin historians of the First Triumvirate, Armenia was rich enough to excite the covetousness of Rome, and the principal reason of her prosperity was her metallurgical products—viz., gold, silver, copper, iron, etc.

These archæological and historical evidences, together with hundreds of abandoned mines and ruins of forges and foundries that are to be found in the country, justify the classing of Armenia among the metallurgical countries of the world at the dawn of our civilisation. The ancient industries disappeared beneath the flood of the Mongol and Turcoman invasions, but with the Russian conquests of the nineteenth century the liberated provinces of the north became the centre of a mining and metallurgical renaissance.

In the following analysis of the present condition of the industry, of its resources and its prospects, the latest statistics published by the Administration of the Mines of the Caucasus are taken as a basis.

The mining industry of Russian Armenia is represented by twenty-two copper ore, rock salt, and iron pyrite enterprises, eighteen of which exploit old mine workings. Seven copper foundries comprise the metallurgical industry of the country. The average annual production during the years 1911, 1912, and 1913 was as follows:—

	Number of Mines exploited.	Average annual output in metric tons.
Copper Ore	13	154,900
Iron Pyrites	4	10,000
Rock Salt	5	25,400
Copper Metal	7 (smelters)	6,614

This total production is made up of the output of the following mines:—

Copper Ore.—Allah Verdi 66,116 tons, Chamlouk 11,147 tons, Chahali 29,955 tons, Achtala 1,460 tons, Sissi Madan 476 tons, Ghedabek 33,576 tons, Sunik 750 tons, Kavart 4,492 tons, Khatar 1,779 tons, Aralikh Kabir 972 tons, Beuk Zami 2,000 tons, Barabatoum 1,151 tons, various 1,026 tons—total 154,900 tons. These copper ores contain silver and gold.

Iron Pyrites.—Tchraghi Dzor 2,000 tons, Allah Verdi 1,000 tons, Ghedabek 2,000 tons, Tanzoute 5,000 tons, total 10,000 tons. These iron pyrites contain from 1.5 to 2.5 per cent. copper.

Rock Salt.—Koghp, 11,300 tons; Nakhitchevan, 3,840 tons; Souste, 3,310 tons; Olti, 1,150 tons; Kaghiswan, 5,800 tons. Total, 25,400 tons.

Refined Copper.—The production of the various works is as follows:—Allah Verdi, 3,000 tons; Chamlouk, 343 tons; Meuhis, 360 tons; Ghedabek, 1,443 tons; Sissi Madan, 22 tons; Sunik, 716 tons; Oughourtchai, 730 tons. Total, 6,614 tons.

This modest and not very varied output shows that the industrial activity is not very great. It should be noted that from its very beginnings the Armenian mining and metallurgical industry has encountered serious obstacles in the commercial, industrial and administrative conditions of the country, and especially in the slow and restricted development of railway communications. The first Armenian railway dates only from the year 1900, and the total length of the system to-day is not more than 370 miles. 17 mines and three foundries, that is to say, 71 per cent. of the two categories of enterprises, are without railway or even of metalled road communication.

Armenia's output of rock salt and iron pyrites represents 100 per cent. of the production of the whole of Transcaucasia, and 69 per cent. of the production of copper. Her output represented 20 per cent. of the total Russian production of copper before the war.

We have no figures concerning the mineral and metallurgical output of Turkish Armenia, nor of Persian Armenia.

With regard to the preceding figures relative to the present state of the mining industry of Russian Armenia, the official information collected by the Mines Administration concerning the total mineral resources of the country, shows that the mines in this region number 450. Of this total 60 contain lead and silver, 10 gold, 210 copper, 11 zinc, three molybdenum, one antimony, six cobalt, 16 manganese, 58 iron, one chrome, eight arsenic, 23 iron pyrites, nine sulphur, eight graphite, 47 coal and lignite, one jet, four combustible schist, nine peat, six oil, one ozokerit, 32 rock salt, six salt springs, one carbonate of soda, one glauber salik, three borax, and 15 alum.

It will be noticed that this list, which is nothing more than the assembling of scattered information, contains no mention of: (1) marble, china clay, asbestos, phosphates, sulphate of barytes, etc. (2) Numerous other mineral areas referred to in the literature of the country or known to local administrations.

Our incomplete knowledge of Turkish and Persian Armenia does not permit us to give similar lists relative to the mineral wealth of those parts of the country.

(To be concluded.)

AGRICULTURAL MACHINERY FOR CRETE

A considerable market for agricultural machinery of all kinds undoubtedly exists in several countries bordering the Mediterranean and in the adjacent islands, and British firms might consider it desirable to study the question of selecting the best centres from which the various markets can best be exploited. It may be that any one market, particularly one of the islands, such as Crete, does not of itself possess sufficient attractions to justify a firm organising for a permanent market, but taken in conjunction with neighbouring markets it is more than probable that the total business to be secured might form the basis of a commercial proposition.

H.M. Consul at Canea, Crete, states that the director of agriculture of one of the prefectures is prepared to bring to the notice of the agricultural community any small working models of machinery submitted to him. He will also supply a detailed list of the agricultural and farm machinery most needed, and for which there would be a substantial demand in Crete. Among these a large number of small iron ploughs, some benzene ploughs of from 4 to 5 h.p., small reapers and binders, threshers and winnowers (fitted also to cut up straw for fodder), hand oil presses, and small mills for breaking up the olive for the press, are urgently required. Crete is at present a primitive country agriculturally, and most of the above are not known to the country. It is considered that once the advantages of these can be shown to the agricultural community there will be a continuous demand. British firms desiring to cultivate this market should communicate direct with H.M. Consul, Canea, Crete.

GENERAL BANK OF GREECE.

Paid-up Capital, Drs. 3,000,000.

Head Office - ATHENS.

BANKING OPERATIONS:
Every description of Banking business transacted.

FINANCIAL OPERATIONS:
Investigations in connection with, and the promotion, organisation and financing of, Limited Joint Stock Companies, with a view to exploiting agricultural, industrial and mineral resources, executing technical works, etc.

COMMERCIAL AND SHIPPING DEPARTMENT:
Purchase and sale of goods on account of clients. Warehousing, Advertising and placing foreign products on the market. Agents for foreign companies and large commercial and industrial firms abroad. General Shipping Agents.

POPULAR BANK OF GREECE.

Head Office, ATHENS. Branch, PIRÆUS.

Correspondents throughout Greece.

Established June, 1905, by the National Bank of Greece and a group of Capitalists.

CAPITAL - Drs. 1,500,000.
RESERVE FUND - Drs. 2,500,000.
Deposits and Credit Accounts, Drs. 100,000,000.

The Bank specialises in the collection of Bills payable in Greece; it accepts goods on consignment, and undertakes their sale, and transacts every kind of Banking business.

General Manager: D. LOVERDO.

TRADE WITH THE NEAR EAST.

The Bank of Athens extends special facilities for business with the Near **East** to manufacturers, exporters and importers.

The Bank has offices in all the principal towns in **Greece,** also in **Egypt,** Cairo and Alexandria, in **Cyprus,** Limassol and Nicosia, in **Constantinople,** and in **Smyrna.**

Inquiries from interested parties are invited.

BANK OF ATHENS.

PAID-UP CAPITAL : £1,920,000. **HEAD OFFICE IN ATHENS.**

London Office: 22, Fenchurch Street, E.C. 3.

COMMERCIAL BANK OF GREECE, LIMITED.

CAPITAL PAID-UP - Drs. 15,000,000.
RESERVE FUNDS Drs. 2,845,010.45.

Head Office: ATHENS.

Branches:—**Piræus, Salonika, Patras, Volo, Syra, Calamata, Corfu, Cephalonia, Candia, Chios, Argos, Pyrgos, Vostizza (Ægion), Nauplia. Larissa.**

AGENTS IN ALL PARTS OF GREECE, THE LEVANT, AND ABROAD.

The Bank conducts every kind of Banking, Commercial and Stock Exchange business and extends special facilities to traders interested in business with Greece. It acts as Agent for many Foreign Banks. It is specially organised for Exchange, the execution of mail and cable transfers throughout Greece, and for the collection of clean and documentary Drafts.

MERCHANDISE DEPARTMENT:
The Bank undertakes the warehousing and sale of goods consigned.

GREECE.

Area 43,522 square miles. The cultivated area amounted to 5,745,300 acres, of which about 2,253,400 were under cereals, 518,900 under grapes and currants, 370,600 under oak trees, 296,500 under olives, and 2,223,900 were forests.

Population (1914), 5,000,000 approximately.

Chief Products (with average annual production):—Currants, 142,000 tons; wines, 3,000,000 casks; tobacco, 9,000,000 lb.; cereals, 8,000,000 bushels; olive oil, 200,000 casks.

The **MINERALS** of Greece include:—Iron, Marble, Magnesite, Emery, Lead, Lignite.

IMPORTS (1914), Old Greece only:—Total value £7,000,000, of which £2,000,000 from the United Kingdom; £1,800,000 from Germany and Austria Hungary; £1,000,000 from Russia.

EXPORTS (1914), Old Greece only:—Total value £4,000,000, of which £3,000,000 came to the United Kingdom.

COINAGE.—The unit is the Drachmæ, equivalent to a Franc (10d.). The current rate of exchange is about 33·85 Drachmæ to £1.

FREIGHT. — From England, 160/- + 10 % primage.

WEIGHTS AND MEASURES.—It was decided in 1898 to introduce the metric system. The change is to be gradual from the old system, which is:—Oke = 2·82 lb., stater = 123·20 lb., livre (Venetian) = 1·05 lb., baril (wine) = 16·33 imperial gallons, kilo = 0·114 imperial quarter, pike = ⅔ of a yard, stremma = ·242 of an acre.

BANK OF NATIONAL ECONOMY (of Greece)

Head Office: ATHENS.

ENGINEERING.

MOTOR CYCLES FOR THE NEAR EAST.

Now that the stress of the reorganisation work necessary for the change-over of British engineering works from war time to peace conditions is practically over, strenuous efforts are to be made to supply the demands of the Near East for the various commodities of which they have been deprived during the war. Other goods, engineering devices and appliances are to be produced and sold at a greater rate than heretofore, and amongst these may be mentioned motor cycles of light, medium, and heavy power.

The British motor cycle has not been used to so large an extent in Eastern Europe as have the products of certain other countries, a feature due merely to geographical position and to some extent to a sad lack of enterprise on the part of British makers. Now, however, all that is to be changed, and within a few months fairly large supplies of British-made machines are likely to be available for use.

I have recently had an opportunity of examining and testing a machine, designed and built for the export trade, which possesses several novel points of interest. It is apparently just the machine for anyone who wants a thoroughly reliable turn-out of moderate power which can be relied upon for use on medium and even bad roads, which is fast and yet easily controllable, and which is extremely economical as regards both tyres and petrol consumption. The maker tells me that the machine represents the outcome of his experiences as a motor-cyclist using a machine in all weathers and under all road conditions, and he has adopted all those features in its manufacture and design which experience has shown him are necessary for the comfort of a rider.

Without going too technically into the question of the stresses and strains which have to be met by the motor cycle, its engine and its frame, it may be said that these have been the study of the designers of this new machine, and they claim that ample allowance has been made in every part to meet even abnormal conditions of running. The aim has been to secure maximum strength of detailed construction combined with simplicity, and as much protection for the rider as can be secured. A further object has been to reduce the number of parts which require cleaning, adjusting, or overhauling, so as to render this in all truth a "no-trouble" machine. From a buyer's point of view it is interesting to note that the makers have paid the greatest possible attention to the standardisation of every part, and consequently, should anything go wrong or any part meet with an accident, renewals are not only easily obtainable, but can be supplied at a very moderate price. Agents and importers also will be able to obtain a stock of all such parts to hold against eventualities.

In general design the machine is particularly handsome, and is made with pressed steel wheels, tanks, and panels, so that there the cost of extensive brazing and of building up wire wheels has been eliminated.

I understand that the machine will be obtainable in two forms as regards the engine. One model will be fitted with a twin two-stroke engine with the cylinders opposite to each other, whilst the other will have a single-cylinder engine rated at 2¾ horse power. The makers say that the points to be considered with regard to the horizontally opposed engine are that the compression is beautifully balanced, and both firing and engine thrust are perfectly even. Both cylinders are so arranged that they fire at the same moment, and the thrust on the crank pin is consequently evenly balanced and wear on the bearings correspondingly reduced. The flow of the gases is also even, and the cylinders are quickly and perfectly cleared of all exhaust gases before the fresh supply of fuel and air enters. The construction is also such that no "dead" gases can remain near the sparking plug.

The arrangements also permit of a reduced overall length of engine, so that there is ample room for any part to be taken down for cleaning or examination. The combustion chamber is fitted with wide fins of ample area, so that the engine keeps cool under the hardest of working conditions.

The frame is composed of pressed steel panels with an under-frame of high-grade steel strips. Additional cooling of the engine is secured by adopting a system of air admission borrowed from aeroplane practice. The tank is of ample size, and will hold 2¼ gallons of petrol and ¾ gallon of oil. The front of the machine is beautifully sprung, and at the back the frame is supported on springs in connection with the carrier. These springs are of the volute or flat spiral type, and are self-cleaning. Brakes of ample power are provided, and the transmission is by means of a chain and a shaft to the hub of the back wheel.

BRITISH INDUSTRIAL ART.

(From a Correspondent.)

With the opening last week of its first exhibition the British Institute of Industrial Art commences a career which should prove one of singular usefulness to British industry and British art. The Institute owes its inception to the recognition of the fact that if this country is to maintain its pre-war supremacy in overseas markets it can only be by the stamp of quality. In furthering this object the Institute has before it a wide and most useful field of endeavour. Since the dawn of British industry quality has put British goods in the front place, and has kept them there, and they have almost invariably been given the preference abroad over cheaper products simply because buyers knew what they would obtain. But there is no standard that will not admit of improvement, and it may be hoped that the efforts of the Institute will result in putting British trade abroad on a firmer basis than ever before.

The present exhibition constitutes a modest beginning of the Institute's ambitious programme, which includes the organisation in London, in the provinces and abroad of special temporary and travelling exhibitions, and a bureau of information on all questions relating to industrial art and to markets both at home and abroad. But its extent is not the thing that matters, but the fact that it represents the first stage in the working out of a vitally important scheme for the well-being of British industrial enterprise. As a matter of fact, the exhibits make a remarkably good showing. Limited they are in number, it is true, but what is lacking in this respect is amply made up for by quality. The examples of tapestries are particularly notable, though in some cases the tints were not calculated to appeal to the plain man. But, then, it is foreign markets that are concerned, and I should imagine that these wonderfully fashioned cloths would one and all meet with wide appreciation in the Eastern and especially the Near Eastern markets. Hung against the wall—a glorious medley of gold and blues, silver and greys, red and orange—they brought to modernity a touch of the East. It was as if an Eastern bazaar had come for a moment to the Knightsbridge Road. A glance to the side, and the vision vanished before an exquisite fresco in wood, a typical product of the skilful modern school of artists. The grain of the wood has been most cleverly utilised, and the whole, faintly coloured in light grey with a narrow strip of blue across the centre, has a most charming effect. A word of praise must be given also to the finely carved fireplaces and overmantels, while the ceramic exhibits give a very interesting though limited glimpse of the capacity of the British china and pottery trade.

An agreement has been reached between Roumania and Czecho-Slovakia for an exchange of foodstuffs from Roumania in return for sugar, iron, and agricultural machinery from Czecho-Slovakia.

It is reported that in demonstrating the value of their patent process the Universal Ore Crushing Co., Ltd., have discovered silver lode in Bengal close to the Tata Iron and Steel Co.'s works.

CIVIL ENGINEER wishes to invest £2,000 in a commercial concern engaged in structural, railway or similar work in the Near East, with a view to taking an active interest at a later date. English, public school, A.M.I.C.E. Fourteen years' experience England and the East.—Box 166, THE NEAR EAST, 1, Devonshire Square, E.C.2.

THE NEW EGYPTIAN CO., LIMITED.

Notice is Hereby Given that the Nineteenth Ordinary General Meeting of the Members of the New Egyptian Co., Limited, will be held on Monday, the 14th day of June, 1920, at 12 o'clock noon, at Winchester House, Old Broad Street, in the City of London, to receive and consider the Annual Statement of Accounts and Balance Sheet and the Reports of the Directors and Auditors thereon; to elect Directors and Auditors; to declare a Dividend; and to transact any other ordinary business of the Company.

The Transfer Books of the Company will be closed from the 7th day of June to the 14th day of June, 1920, both days inclusive.

Dated this 10th day of May, 1920.

By Order of the Board,
THOMAS DAY, London Manager and Secretary.

Pinner's Hall, Austin Friars, London, E.C.2.

Shareholders who hold Warrants to Bearer are reminded that if they wish to attend and vote at the meeting, either personally or by proxy, they must, three clear days before the day appointed for the meeting, deposit their Warrants at the Registered Offices of the Company, Pinner's Hall, Austin Friars, London, E.C.2, or at the Offices of the Company in Alexandria, or at any of the principal banks in Alexandria, a list of which can be obtained at the offices of the Company in Alexandria. Shareholders who have deposited Warrants to Bearer in Egypt, and who desire to vote by proxy, must lodge their proxies with their certificate of deposit of Warrants or Cards of admission at the registered office of the Company in London forty-eight (48) hours at least before the hour of the meeting.

THE "UNIVERSAL" CIGARETTE MACHINE.

Designed to make round, oval or Egyptian cigarettes with creased edges of any desired diameter or length with wide or narrow pasted laps, and, by an interchange of parts, also crimped cigarettes.

IN DAILY USE THROUGHOUT THE NEAR AND MIDDLE EAST.

Embodies the following advantages:—

Works satisfactorily with any kind of tobacco. Apparatus supplied for printing cigarettes in one or two colours or one colour and bronze. Manufactures and tips cigarettes at one and the same time. Automatically sorts the cigarettes. Apparatus for pasting with starch or liquid paste as required. Fitted with device for stripping waste cigarettes or cigarette rods.

NEAR EAST MARKETS.

LONDON PRODUCE REPORT.

Dried Fruits.

Currants have been in improved request, and damaged stocks have been freely taken up round about 30s. The better qualities are in fair demand at the controlled rates. The imports during April amounted to 787½ tons, making the total for the period January-April 11,974½ tons. For the same months the consumption was 12,630½ tons.

Sultanas continue in fair demand. The import of raisins for April amounted to 607¼ tons, making the total since the beginning of the year 10,008 tons. Of this total 1,105 tons came from Turkey. For the same period the consumption amounted to 5,977¼ tons.

There are ample supplies of figs available, and lower rates have brought about an increased demand.

Sugar.

A firm tone has characterised the market for free sugar. West Indian crystallised has been done at from 145s. to 150s., white Java at 160s. and American granulated at 160s. Home refined continues in good demand at the controlled rates.

Coffee.

The effect of the holidays has continued, and in general the market has been rather dull. Costa Rica has been done at 160s. to 170s., Indian at 140s. to 160s., Mocha at 175s. to 190s., Brazilian at 110s. to 116s., and Uganda round about 135s. The futures market has been very quiet.

Oilseeds.

Linseed is a shade firmer, Indian being 44s. and La Plata 39s. Refined has continued round about 40s. Cottonseed has been a quiet feature.

Oilcakes, etc.

Oilcakes have been in fair request during the week. Coconut cake has been done at 13s., ground nut cake at 12s. 6d., soya bean cake at 21s., palm kernel cake at 9s. 6d., and rapeseed cake at 12s.

Rape oil has been quiet, the refined being quoted at 106s. and crude at 96s. Egyptian deodorised cotton oil has come to business at 105s., and the crude variety at 85s. Turpentine has been steady at 185s. spot and 177s. May-August.

SUDAN PRODUCE.

The following extracts are taken from the C.E.B. report for March:—

Gum.

The exports during March were as follows:—Via Port Sudan, 1,483,330 kilos of hashab of the value of £E71,517.

Kordofan Province.—15,115 kantars were sold in El Obeid market during March, as against 17,062 kantars during the same month last year, at an average price of £E1.481 per kantar of 100 rottles (45 kilos). Arrivals from Nahud were 11,208 kantars, as against 6,146 last year. The amount sold at Um Ruaba was 1,857 kantars, as against 4,515 last year, the average price being £E1.480 per kantar. At Rahad 1,907 kantars were sold, as against 2,176 last year, at prices ranging from £E1.550 to £E1.450 per kantar.

Cotton.

Red Sea Province.—Tokar: The crop is ripening slowly, and it is probable that the cotton market will have to be kept open until the end of May. The cotton, in kantars of 315 rottles (unginned), sold during the month was:—First class, 8,473; second class, 1,689½; third class, 23½; total, 10,186 kantars.

Dura and Dukhn.

Berber Province.—White dura (average), PT450 per ardeb of 380 rottles; feterita, PT420 (171 kilos).

White Nile Province.—Dura is stated to be scarce at Geteina, but elsewhere there is dura in the markets.

Blue Nile Province.—The dura market during March was much steadier than during February, and prices did not fluctuate so much. There has been a tendency for prices to drop.

Kordofan Province.—Sales in El Obeid market in ardebs of 420 rottles (189 kilos): Dura, 113 ardebs at an average price of £E3 per ardeb; dukhn, 396 ardebs at an average price of £E3 per ardeb.

Wheat and Barley.

Dongola Province.—Barley and wheat crops are excellent, being much above the average. The area sown, however, is less than usual owing to scarcity of seed at the time of sowing.

Berber Province.—The wheat crop is in general good and early, but the area small owing to shortage of seed. A good many people are eating barley, which matures quicker than wheat. At Bouga, except for the north of the desert area, the wheat is in general distinctly good, and the poor results there are probably almost as much due to late sowing as to the quality of the soil

Halfa Province.—Reports from Mahas district show that the early wheat and barley crops have been harvested, and are good. There were no pests except a few birds, which did not do much harm. These are apparently now causing much trouble to the cultivators of the later wheat crop. The barley in Sukkot district is in, and gave an average yield of three ardebs per feddan. All other crops are good.

Sesame.

Kordofan Province.—469 ardebs of sesame were sold in El Obeid market at an average price of £E5.450 m/ms. per ardeb of 330 rottles (148 kilos).

Nuba Mountains Province.—February: In Dilling district the sesame crop was better than last year's.

Ground Nuts.

Kordofan Province.—81 ardebs of 210 rottles (94 kilos) were sold in El Obeid market at an average price of £E3.135 per ardeb.

Nuba Mountains Province.—February: In Dilling district the ground nut crop was better than last year's. A large quantity of ground nuts have been exported during the month, going out via El Obeid, Tonga and Kaka.

Sennar Province.—February: 28 tons of ground nuts were exported by rail during January and 2 tons in February.

SPECIAL REPORTS.

The following information is compiled from the weekly bulletins received at the London offices of the Imperial Ottoman Bank from its correspondents in the Near East:—

STAMBOUL, May 1.

There is no improvement in the position. Communications with Anatolia remain interrupted, and the import and export trade with that region is completely paralysed.

HAIFA, May 3.

Owing to the very satisfactory climatic conditions and the rains that have fallen of late, the crops in general ought to be abundant.

Prices of cereals and notably those of barley are markedly lower than in March, the reason for this being that holders are trying to dispose quickly of their old stock before the new crops appear on the market.

OPIUM MARKET REPORT.

Messrs. Barker Brothers, Smyrna, report as follows for the week ended May 8:—The sales this week on our market amount to twenty-eight cases at piastres 980 to 1,250 per oke as to quality, which is equivalent to 16s. to 22s. per lb. c.i.f. port of destination. The exchange to-day has dropped to piastres 455 for cheque per £ sterling and 0.86 dols. for 1 Turkish paper pound. The arrivals are 1,600 cases, against 375 at same date last year.

THIS YEAR'S CEREAL CROPS.

The Ministry of Agriculture has received the following information from the International Agricultural Institutes at Rome:—

In the United States the estimated yield of winter wheat is 58,600,000 qr.; this is 66 per cent. of last year's yield and 86 per cent. of the five previous years' average; winter rye is estimated to yield 9,000,000 qr., or 90 per cent. of last year's and 138 per cent. of the average yield.

In the Argentine the maize crop is stated to amount to 30,000,000 qr. (115 per cent. and 132 per cent. of last year's and the five years' average respectively).

The condition of cereals was average on May 1 in France, Hungary, Portugal, Egypt, and Morocco. A drought is reported in South Italy and Algeria.

OIL OUTPUTS.

Anglo-Egyptian Oilfields.—Hurgada production for week ended May 23, 2,407 tons (last week, 2,206 tons).

Algerian Oilfields.—Production from leased area for April, 44,524 kilos.

It is proposed to establish a commercial museum in Colombo.

The area under cotton in India for the past year was 13,302,000 acres, an increase of 2,066,000 acres on the area planted in 1918.

The new offices of the Royal Privileged Commercial Agency of the Kingdom of the Serbs, Croats, and Slovenes are at 110, Strand, London, W.C.2.

Seven thousand tons of Caucasian ore are being delivered at the United Steel Company's works at Workington. This is the first consignment to reach this country since 1914.

SHIPPING INTELLIGENCE.

Forthcoming Sailings.

The Cunard Line s.s. Brescia, for Malta, Patras, Piraeus, Syra, Smyrna, Volo, Salonika, and Constantinople, will close for cargo at Liverpool on June 5.

The Ellerman Line's s.s. Polo, for Malta, Syra, Smyrna and Constantinople, will leave Liverpool on June 12.

The Papayanni (Ellerman Line's) steamer City of Oxford, for Algiers, Malta and Alexandria, will leave Liverpool on June 5.

The Prince Line s.s. Italian Prince, for Tunis, Malta, Alexandria, Syrian coast ports and Cyprus, will close for cargo at Manchester on June 5.

The Moss Line s.s. Karnak, for Gibraltar, Oran, Malta, Syra, Smyrna, Constantinople and Beyrout, will close for cargo on June 5.

The Bibby Line s.s. Leicestershire, for Marseilles, Port Said, Colombo and Rangoon, will close for cargo at Birkenhead on June 23.

The Henderson Line s.s. Arracan, for Port Said and Rangoon, will close for cargo at Birkenhead on June 9.

The Clan Line s.s. Baron Minto, for Colombo, Madras, and Calcutta, will close for cargo at Birkenhead on June 10.

Notes.

The steel screw steamer Jeypore, built by Messrs. Wm. Gray and Co. (1918), Ltd., Sunderland, to the order of the Peninsular and Oriental Steam Navigation Co., Ltd., underwent an entirely satisfactory trial trip on May 22. The main dimensions of the vessel are: Length, 400 ft.; breadth, 52 ft. 3 ins.; depth, moulded, 31 ft., with a d.w. carrying capacity of over 8,000 tons. The propelling machinery, built at the Central Marine Engine Works of the builders, consists of triple-expansion engines with cylinders 27 ins., 44 ins., and 73 ins. diameter, by 48-in. stroke, and three boilers, 15 ft. 6 ins. diameter by 11 ft. 6 ins. long, adapted for a working pressure of 180 lb. per square inch, and fitted with Howden's system of forced draught.

The steel screw steamer Aviemore, built to the order of the Johnston Line (Messrs. Furness, Withy and Co., Ltd.), Liverpool, for their service to the Danube, was launched on May 18 by Messrs. Irvine's Shipbuilding and Dry Docks Company, Ltd., Middleton. The dimensions of this vessel, which has been built to British Corporation classification, are:—Length, 372 feet; breadth, 52 feet extreme; depth, 26 feet 9 inches moulded; carrying about 6,150 tons d.w., with poop, bridge, and forecastle, with upper deck and a tier of beams, stringers, and ties at the main deck level for special trades; six bulkheads, five hatches, grain divisions throughout, and water ballast in cellular double bottom and fore and after peaks. The vessel is provided with all the latest facilities for the rapid handling of cargo, including ten steam winches, fifteen steel derricks, etc.; and electric light is fitted throughout. Triple expansion engines are being supplied and fitted by Messrs. Richardsons, Westgarth and Co., Ltd., West Hartlepool, with three large boilers fitted with Howden's forced draught, and capable of driving the vessel at a speed of 11½ knots loaded. In addition to the usual coal-burning arrangements, the boilers are arranged for burning oil fuel. The fuel oil will be carried in the double bottom and two wing-tanks forward of the boiler-room bulkhead, two settling tanks being also fitted to clear the oil of foreign matter before going to the furnaces.

The Hall Line, Ltd., 9 and 11, Fenchurch Avenue, E.C., announce that owing to alterations in their offices which have now been completed the following departments of their business, temporarily carried on at 5-6, Billiter Avenue, London, E.C., have reverted to the premises previously occupied at 9 and 11, Fenchurch Avenue, London, E.C.3:—Passenger department (Ellerman Line, City Line, Ltd., and Hall Line, Ltd., to Egypt and India; Ellerman and Papayanni Lines to Mediterranean ports; Mediterranean freight department (Ellerman and Papayanni Lines) to Portugal, Mediterranean ports, Black Sea, etc.

TENDERS INVITED.

Egypt.

(The London agent of the Egyptian Government is Sir A. L. Webb, K.C.M.G., Queen Anne's Chambers, Westminster, S.W., at whose office particulars of tenders marked (L) are to be obtained.)

Steel Angles.—The Financial Secretary, Egyptian Army, Cairo, invites tenders for the supply of mild steel angles, tees, flats, wrought-iron bars, etc., c.i.f. Port Sudan. June 26.

Filing Cards.—The Central Stores, Ministry of Finance, Cairo, invites tenders for the supply of 374,000 filing cards. July 1.

Wrapping Paper.—The Central Stores, Ministry of Finance, Cairo, invites tenders for the supply of 750 reams thick wrapping paper. July 8.

Iron Safes.—The Central Stores, Ministry of Finance, Cairo, invites tenders for the supply of 180 iron safes. July 12.

Rails.—The Surveyor-General of Egypt, Giza (Mudiriya) invites tenders for the supply of cut rails in accordance with specification and conditions available at Survey Offices, Giza. Contractors are invited to put in their offers for any quantity available for immediate delivery or for delivery during the current financial year. Tenders should show quantity, weight per yard run, rate per ton of 1,000 kilos, period required for delivery, place of delivery, and any other details necessary. March 1, 1921.

The Ministry of Public Works, Cairo, invite tenders for the laying of 10 kilometres of railway track, together with fifty steel double-tip wagons. The latest date for receipt of tenders is June 15. (Particulars may be seen at the Department of Overseas Trade, 35, Old Queen Street, S.W.1.) (L.)

Greece, Roumania, Etc.

Greece: Ministry of Communications.—Supply of telegraphic materials. (Particulars may be seen at Department of Overseas Trade, 35, Old Queen Street, S.W.1.) June 20.

Roumania.—The Frontier Guards of Roumania desire offers, preferably in the French language, from British houses for the following medical supplies, instruments, etc.:—Boric acid, pure carbolic acid, antipirene, aspirin, quinine sulphate, dermatol, iodine, iodide of potash, permanganate of potash, protargol, sulphate of soda, bismuth salts, and vaseline; graduated syringes and needles, platinum needles, surgeons' knives with straight metal handles, probes, and general surgical instruments; cotton wool, gauze, rubber sheeting and bandages. As the amount of money at the disposal of the medical staff is limited, the quantities to be purchased are not mentioned, as these will depend upon the prices quoted. Offers should be addressed to: Monsieur le Commandant I Cerna, Corpul Greniceri, Boulevard Bratiann (Colt cu Batiste), Bucharest.

Greece.—The President of the Rice Cultivation Association of Messinia invites inclusive offers from British firms for the supply of rice threshing, peeling, and polishing machinery, and motor lorries for the conveyance of the rice. Tenders made out to the President of the Rice Cultivation Association of Messinia should be made on the basis of delivery c.i.f. Piraeus or Kalamata (Morea), and accompanied by designs, terms of payment, and any other relevant information, and addressed to The Commercial Secretary, H.B.M. Legation, Athens, Greece.

Morocco.—His Majesty's Vice-Consul at Rabat has forwarded a copy of the specification and general conditions of contract for the supply of 25,000 oak sleepers or other timber of a similar nature to the Service des Chemins de Fer of the French Protectorate. The latest date for receipt of tenders is July 1. Copy of the specification and general conditions, which are in French, may be inspected upon application at the Department of Overseas Trade, 35, Old Queen Street, Westminster, S.W.1.

The Handley Page W/8 aeroplane, which established a British record on May 4, will be exhibited at the Olympia Aircraft Exhibition, to be held from July 9-20.

ROYAL SCHOOL
FOR
Daughters of Officers of the Army.

Patrons
Their MAJESTIES THE KING AND QUEEN
and HER MAJESTY QUEEN ALEXANDRA.
Chairman: Lt.-Col. A. GRUBB. J.P.
Vice-Chairman—Surgeon-Gen. SIR WILLIAM TAYLOR, K.C.B.

Daughters of Officers of the Army are admitted to the above Schools according to the circumstances of their parents, at rates of £20, £45, £65, and £80 a year. Granddaughters of Officers are admitted at £45, £65, and £80 a year according to circumstances, and a limited number of daughters of civilians are admitted at £120 a year when there are vacancies. There are 15 Scholarships, open to competition, in the School, of amounts varying from £10 to £20 up to one of £50.

As half of the School consists of pupils on the £15 foundation, which includes both board and education, a deficiency of about £2,500 a year has to be met by contributions, which are earnestly solicited. Donations of £5 5s., giving one vote for life, or subscriptions of 10s. 6d., giving one vote for the year, may be sent to

F. W. T. ATTREE, Colonel (late R.E.), Secretary.
Office: Panton House, 25, Haymarket, S.W.1.

COMPANY MEETING.

EGYPTIAN MARKETS.

The ordinary general meeting of the Egyptian Markets, Limited, was held on May 26 at Winchester House, Old Broad Street, E.C., Lieut.-Colonel A. St. John Cooke, D.S.O. (director), presiding.

The Managing Director (Mr. F. J. Horne) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen,—I regret very much to have to inform you that your chairman, Major W. I. Le Breton, is not well enough to be present to take the chair to-day, and in consequence the duty has devolved upon me. I am sure you will all join with me in wishing him a speedy recovery from his illness. He has prepared the speech which he would have delivered, and I propose to read it to you.

Gentlemen,—You will, I am sure, allow me to take as read the directors' report and the accounts for the year 1919. In view of the conditions which you know have prevailed in Egypt, they will, I believe, have afforded you considerable satisfaction. A year ago I was able to convey to you what has proved to be a fairly accurate account of the serious disturbances that had taken place, and of the losses we have suffered thereby. The later figures differ but little from the estimates then given to you. They are:—Damage to property, £19,206; loss of receipts, £13,945; goods stolen, £1,813. And the position in regard to them, so far as we are at present informed, is as follows:—

The legitimacy of our claim on account of the first item is admitted by the Commission appointed by the Government for the purpose of investigating such claims, but there is some uncertainty as to how much of it will be paid to us. We are given to understand that we shall receive a pro rata proportion of a million pounds, set aside by the Government of Egypt for the satisfaction of claims of this nature. We are told that of such claims there are some 5,000, but this conveys to us no more than that there must be delay in their examination, and consequently in reaching a settlement. In the meantime we have received on account the amount we have already expended to meet pressing repairs, £E5,800. For goods stolen we hope to be paid in full, but on the other hand we are told not to expect any consideration for earnings of which we have been deprived. You will not be surprised to hear that, owing to the disturbances, the earnings of our markets were very nearly £14,000 less than they should have been—in other words, that the receipts we show are due to a working period of less than ten months; yet they are the best we have ever enjoyed, and it is additionally satisfactory to note that the improvement extends to cattle, general and outside markets and also to slaughter-houses. The misfortune is that we have to couple with it declines in our miscellaneous trading business and increases in our expenses, both of which are considerable and must to a great extent be regarded as having come to stay. Generally speaking, our regular miscellaneous business should again become satisfactory as more settled trading conditions prevail.

Of our expenses I have unfortunately to speak as of the earnings of our markets. They are the highest we have ever experienced, and there is, indeed, no room for uncertainty as to their continuance and growth. There are occasions when increased earnings *ipso facto* lead to increased expenses, but unfortunately I cannot offer that as an explanation in the present case. We have had to follow the examples set by the Government and by practically the whole of such undertakings as our own in Egypt, and to grant to our Egyptian staff in its entirety costly concessions in the form of increased pay, war bonuses and other allowances. Our one and only satisfaction is that we honestly believe that in our case the staff deserves it.

You will very naturally expect to hear that we propose to adopt the natural and, indeed, the only remedy—namely, to increase our charges to meet these heavier costs. I told you at our last meeting that we had applied for the permission of Government thus to meet our then increased expenses, but our representation was not favourably entertained. We have recently renewed our application, and our case was, of course, very much stronger than before. The Government of Egypt has now, I am pleased to tell you, yielded to this inevitable course, and our revised charges are somewhat more in keeping with existing circumstances.

I do not propose to detain you with any details or comparisons of the figures in the account before you. Everything of interest in this direction has been given prominence to in the directors' report, but I may be permitted to add that we are particularly gratified on this occasion to be able to repeat our 10 per cent. dividend for the ninth year in succession. I have told you that our staff deserves the extra remuneration recently granted to them. I now wish to add that they also deserve our best thanks for their behaviour generally during very trying conditions. The position at times has been very difficult, but it has been very ably handled by our general manager, Mr. Duffield, and his assistants. These gentlemen have, I feel, a very strong claim to our gratitude.

The Chairman then moved:—"That the report of the directors dated May 12, 1920, together with the audited statement of accounts and balance-sheet for the year ended December 31, 1919, be and they are hereby approved, confirmed and adopted."

Mr. W. Home, C.I.E., seconded the motion, which was carried unanimously.

A motion that a dividend of 4 per cent., declared on the ordinary share capital, be confirmed, and that a further dividend of 6 per cent., making 10 per cent. for the year, be declared, was unanimously agreed to. The chairman then moved that £6 6s. 49.100d. per share be declared as dividend on the deferred share capital. This motion was seconded by Mr. G. H. Redwood, and was carried unanimously.

The retiring directors were re-elected, a resolution was passed that the remuneration of the directors should be paid free of income-tax, the auditors were re-appointed, and after votes of thanks to the chairman and the board and the staff in Egypt the proceedings terminated.

COMPANY NOTES AND REPORTS.

New Egyptian.

The accounts for the year 1919 show a credit balance of £110.778; less debenture service, £4,032; profit for the year, £106,746; and £46,201 was brought in, making £152,947. An interim dividend of 5 per cent. was paid in December last, and the directors recommend a final dividend of 20 per cent., carrying forward £61,207. The net income derived from the estates amounts to £36,456, as compared with £23,210 in the previous year. Considering the large reduction by sales of the areas let during the year, the return from this source must be considered satisfactory. The area of land sold aggregates 1,754 feddans, against 1,160 sold in 1918; 588 feddans situated in Upper Egypt reached an average price of £162 0s. 2d. per feddan, and 799 feddans in Lower Egypt £154 3s. 8d. per feddan, compared with £134 12s. 7d. and £118 4s. 9d. respectively in the previous year. In addition, the remaining area of the Feshn Estate in Upper Egypt, consisting of 367 feddans—which includes 100 feddans of sandy lands—was sold for £14,770. A further 714 feddans were sold during the year at an average price of over £167 per feddan, but the deeds not having been signed by December 31, these sales have been carried forward to the current year. An estate of 412 feddans has been purchased in Upper Egypt at a cost of £19,016. Since the closing of the financial year an additional area of 1,143 feddans in Lower Egypt was purchased at a cost of £84,506. Since the close of the financial year the directors accepted an offer of 33s. per share for 53,623 shares, being the balance of unissued capital. During the year the company's loans were reduced by over £5,000, and the debenture debt by £6,400. Since the closing of the accounts the debenture debt has been further reduced by £88,350, and now stands at £50,000. Meeting, Winchester House, June 14, noon.

Land and Mortgage Company of Egypt.

The report of the Land and Mortgage Company of Egypt for the year ended March 31, 1920, states that the gross receipts amount to £29,135 and the net profits to £12,022, to which must be added balance brought forward, £8,529, making together £20,551. The directors recommend a dividend of 6 per cent. for the year, less tax, leaving £11,551 to be carried forward. Meeting, Cannon Street Hotel, E.C., June 4, noon.

LANCASHIRE COTTON.

(From Our Own Correspondent.)

Manchester, Monday.

Business in the market during the past week was considerably disturbed by the Whitsuntide holidays, and very few buyers and sellers have been in the mood to attempt transactions of importance. A very unsettled feeling continues to prevail with regard to Egyptian cotton. Wide fluctuations have occurred in futures, and the downward movement has been checked for the time being, but Lancashire believes that prices are still artificially dear, and local users are not likely to buy freely at current rates. Private telegrams relating to the crop refer to the favourable conditions in most parts. No increased activity can be recorded in yarn made from Egyptian cotton. Users have purchased as little as possible. Spinners are still not selling the output of the machinery, with the result that order lists are running down. Favourite marks and specialities, however, remain firm. Common styles are easier in price when tested. Operations in piece goods for Egypt have been restricted. A good deal of attention has to be paid to the completion of old contracts. Trade prospects in the Levant are uncertain, and merchants are not inclined to anticipate future requirements of dealers in that part of the world. Little has been done for China, and there has been no business of importance for South America. Lancashire manufacturers as a body continue to lose ground, and more cases are being mentioned of sellers offering to take less money and give earlier delivery terms. Home trade buyers remain cautious. American yarns for home use continue dull of sale. Prices tend to give way, especially in the poorer qualities. Very little trade is coming round at the moment in yarns suitable for shipment abroad.

NEW COMPANIES.

Anglo-Serbian Commercial Trust.

The Anglo-Serbian Commercial Trust has been registered as a private company with a capital of £25,000 in £1 shares and 12,500 preference shares. Objects: To act as commercial, industrial, agricultural, or financial agents for Government Departments in Great Britain and in the Kingdom of Serbs, Croates, and Slovenes, and elsewhere, or other public or private corporations, institutions, or undertakings in any part of the world, to carry on business as exporters, importers, shipowners, aircraft owners, merchants, bankers, and financiers, etc. The first directors are: R. Hughes, 17, Oxford Road, Ilfracombe, district representative for Marston, Thompson and Evershed, Ltd., Burton-on-Trent; D. Zebitch, Brussels; Otto Fulton, New Oxford and Cambridge Club, Pall Mall; D. Richards, Tinydail, Ammanford, colliery proprietor; A. H. Masters, 4, South Parade, Weston-super-Mare, company secretary. 8, St. John's Square, Cardiff.

INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following cabled news received from the Director-General of Commercial Intelligence, Calcutta, dated May 26:—Rain has fallen fairly generally in Kashmir, United Provinces of Agra and Oudh, Bihar, Bengal, Chota-Nagpur, Madras, and Western Central India. Local elsewhere, with thunderstorms in North-Western India. General crop conditions good. Bombay cotton market dull. Fully good broach July-August Rs. 426. Piece goods market very quiet with slightly easier prices. Calcutta jute market quiet, some business done. Hessians steady. Heavy goods quiet. No change in Bank rates.

The Jadransko Trgovacks Dionicko Drustwo (Adriatic Trading Co.), whose main object is to supply communes with provisions, has been established in Agram with a capital of 10,000,000 kronen.

ON CHANGE.

(From Our Own Correspondent.)

Throgmorton Street, Monday.

We have had another quiet week, with the exception of Egyptian Government stocks, in which a very fair business has been doing, and to-night both Egyptian Unified and 3½ per cent. Prefs. are ½ higher at 68½ and 56½ respectively. City of Alexandria Bonds have further dropped 1½ points to 62½. There has also been some demand for Turkish 3½'s (1894), which have put on one point to 54½.

In Bank shares, Agriculturals, after dropping to 3 15-16, are closing only 1-16th down at 4 3-16. Nationals, after business at 13⅞, finish ⅛ up at 19¼. Land Banks have come back ¼ to 5¼. Agricultural Bank of Egypt Prefs. have changed hands at 5¼, but are closing firmer at 5⅜, a drop of ⅜ since last week. There is also a fall of three points to be recorded in both classes of this bank's bonds, the 5½'s being now quoted at 63 and the Guaranteed at 65.

In Railways Delta Lights are ⅛ lower at 5¾.

In Land shares Béneras have been knocked down nominally 1½ points to 15½, and the Prefs. have dropped ¼ to 3¾. Egyptian Consolidated Lands have dropped 6d. to 2s. 7½d., and Egyptian and Foreign Trusts are fractionally easier at 14s. 6d. Mortgage Company of Egypt are half a point down at 6¼, Union Foncières have lost ⅛ at 5, and Sudan Plantations have had the proportionately heavy fall of 7-16ths to 4. On the other hand, New Egyptians have remained firm on the excellent report and dividend, whilst Gharbieh Lands are actually ⅛ higher at 3⅛.

In miscellaneous descriptions Alexandria Waters, on the new issue of capital, have come down with a run to 8⅞, a drop of over one point. Associated Cotton Ginners are nominally ⅛ down at 1¼, but the projected repayment of this company's debentures at 104 ought eventually to improve the position of the ordinary shares. Egyptian Markets are about unchanged at 1 1-16 x.d. Salts and Sodas have improved 3s. 6d. to 53s. 6d.

In Oil shares Anglo-Egyptian B. after dropping to 2 13-16 close 3 1-16, a decline of 3-16ths on the rather disappointing dividend. Roumanians have shed ⅝i. at 18s. 9d., and Traians are fractionally easier at 8s.

In Greek securities, apart from Bank of Athens shares, which are ¼ higher at 5¼, and the 5 per cent. Government Loan of 1914, which remains in constant demand round 50, there is a more or less general decline to be recorded. The 1881 and 1884 Loans have both come back 2 points to 50, the 1890 Loan and Rentes are one point lower at 53 and 38 respectively, whilst the 1893 Funding Loan is 2½ points down at 48½.

COMPANY NEWS IN BRIEF.

The receipts of the Smyrna-Aidin Railway for the week ended May 25 amounted to £6,958.

The transfer books of the New Egyptian Company will be closed from June 7 to June 14, inclusive.

The register of the Bengal-Nagpur Railways will be closed until June 30.

On and after June 10 the offices of the Bombay, Baroda and Central India Railway will be at the White Mansion, 91, York Street, Westminster, S.W.1.

The receipts of the Egyptian Delta Light Railways, Ltd., for the week ended April 30 amounted to £E11,895, making the total for year £E34,823. For the corresponding period of 1919 there were no receipts owing to the entire suspension of train service.

According to the Hamburger Correspondent, the Prague Company for Trade with the Far East is proposing to purchase sea-going vessels for the Black Sea.

Sir Thomas S. Highet, C.B.E., M.I.C.E., has joined the board of the Delhi Umballa Kalka Railway, vice the late Mr. Alexander Izat, C.I.E.

Sir Thomas Holderness, Bart., G.C.B., has joined the board of the Bengal and North-Western Railway, vice the late Mr. Alexander Izat, C.I.E.

The directors of the Imperial Bank of Persia announce an interim dividend for the half-year to March 20 at 3s. per share, free of tax, payable June 18.

NOTES OF THE WEEK.

Supporters of ex-King Constantine have been active of late both in Greece and outside it, and signs have not been wanting that the ex-King himself still hopes to be able to return to the throne that he lost by his own folly. M. Venizelos has retorted by restoring martial law, and has gone so far as to declare in the Chamber that if the Opposition should at future elections raise the question of King Constantine's return they would thereby bring under consideration the maintenance of royalty itself. It was almost certainly in connection with these intrigues that rumours were spread to the effect that King Alexander intended to meet his father in Italy, and that his abdication was under contemplation. These rumours have been officially denied by the Greek Legation in London.

In his letter published on another page our Constantinople Correspondent takes a somewhat gloomy view of the situation brought about by the receipt of the Peace Terms by Turkey, and the opinions he expresses are fully borne out by other communications from Turkey which have reached us from trustworthy sources. These make it clear that not only in Turkish circles, but also among Europeans who certainly hold no brief for the Turk, the opinion is widely held that M. Venizelos has practically been allowed to dictate the terms, and as a result grave fears are entertained of trouble in the Moslem world. For reasons that need not be recounted, the decision regarding Thrace is less criticised than that on Smyrna; and it becomes clearer every day that if Turkey should be driven into any rash course it will be over the latter question. A point on which the Turks are particularly sore is that the Greeks were allowed to occupy the city before the signing, or even the presentation, of the Peace Terms. This is regarded by them as a breach of the spirit of the Armistice.

In the circumstances we need feel little surprise that the Ottoman Government displays no haste to reply to the Allies' proposals. It is, in fact, rather difficult to ascertain exactly when the reply is likely to be presented. Last week it was stated that the Grand Vizier would take it himself to Paris in a few days; but it is now announced that the Peace Conference has granted a delay of a fortnight as from June 6. Meanwhile, Constantinople appears to be in a hopeless welter of plot and counter-plot, intrigue and recrimination. The report of an attempt on the Grand Vizier's life three weeks ago proves to have been unfounded; but, on the other hand, we learn of a widespread Unionist plot for his assassination and that of his principal supporters and for a Unionist *coup d'état* in the capital. At this distance it is difficult to understand how such things can ever be planned seriously, and there is a very strong temptation to conclude that they are made possible only by that lack of loyalty between the Allies to which we have had to refer so often.

Having received strong reinforcements, the French have, near Anitab, given the Turkish Nationalists such a lesson that the latter have since kept discreetly quiet. General Gouraud has agreed to an armistice in Cilicia, and Mustapha Kemal's followers apparently prefer to turn their attention westward rather than try further conclusions with the French just yet. The experience of the French in this region should provide the Allies with an invaluable object-lesson: the Turks have not such a high opinion of Western troops that a small force will awe them into inaction, and if it is necessary to employ force in dealing with them, it is sound policy to have ready a striking force sufficient to secure success at once, instead of at the second time of asking.

During the past ten days there has been some discussion regarding the attitude of Great Britain towards the Arabian problem, and notably towards King Hussein of the Hejaz and the Emir Ibn Saud of Nejd. It has been stated, on no less authority than that of Colonel T. E. Lawrence, that Great Britain has been supplying arms and money to both these rulers, and it is suggested that while the Foreign Office and the War Office have been "backing" the Hejaz, the Indian Government has been similarly "backing" Ibn Saud. In view of the recent fighting between the forces of the Hejaz and those of the Nejd, such a policy would be, to say the least of it, illogical, and it is not surprising that comments, by Press and public alike, have been decidedly caustic. In the House of Commons, however, Mr. Cecil Harmsworth sought to put a different complexion on the case, stating roundly that no guns or ammunition are being supplied to the King of the Hejaz by the Foreign Office. He added that King Hussein and the Emir Ibn Saud are independent rulers, with whom our Government entered into relations during the war; and that "the question of the subsidies which any of these rulers may receive in the future is under consideration." Owing to its limitations, the answer is unlikely to satisfy the critics of the Government, who not improbably know no more now than before it was given. But the raising of the

Digitized by Google

question was, doubtless, what they chiefly desired, and if it helps towards the definition of our policy in Arabia it will have served a good purpose.

A year ago the Hon. W. Ormsby Gore, M.P., sketched out in our columns a proposal for a new Government department to take charge of Great Britain's interests in the Near and Middle East. The advantages of such a scheme have now become very generally recognised, and we understand that the Government has been considering the plan, and that it is likely to be put into effect in the not distant future. Details will, of course, have to be most carefully thought out, but in our opinion by far the most important thing to consider will be the type of man entrusted with the running of the new machine, especially in its early days. Orientals think more of men than of measures, and if the new Department is to be a success it will be necessary to staff it with men who recognise the spirit of the Orient and to see that as far as possible men in charge of a particular section are personally acquainted with the idiosyncracies of that section and in sympathy with the people with whose concerns they have to deal. Fortunately we need fear no shortage in the supply of such men: the only risk is in the failure to make a wise selection.

The pourparlers between the representatives of the Egyptian Nationalists and the British Government have been so far satisfactory that Zagh'oul Pasha, the Nationalist leader, arrived in London himself on Saturday night. He had an interview with Lord Milner on Monday, and has telegraphed to his supporters in Egypt that he has hopes of a satisfactory settlement. Largely because the Nationalists have been coming round lately to a more reasonable point of view, it is possible to think that the hope may be realised. The negotiations must, however, be delicate, and it may well be that some little time must elapse before agreement is reached. On what lines it will be reached, and what form it will take, it is as yet too early to say. The *Morning Post* thinks that certain predictions may be made with some confidence. The Capitulations, it says, will remain, and, as a matter of form, there will be some special provision for guaranteeing the public debt; the Suez Canal will be treated on a footing distinct from that of the rest of Egypt; and though the form of Government will remain monarchical, it is an open question whether the present Sultan will remain, or whether he will abdicate in favour of his infant son. Our contemporary has shown itself well informed on the subject, and its predictions are interesting, but how far they will be justified by events remains to be seen. In the meantime, we congratulate the Nationalists on accepting the advice offered them in THE NEAR EAST when Lord Milner's Mission returned to this country.

The public hearing by the Nile Projects Commission of the charges brought by Sir William Willcocks and Colonel Kennedy against the Egyptian Ministry of Public Works is now in progress, the first sitting having taken place on May 25. The most interesting point thus far dealt with is that of the gauge readings at Sennar, which Sir William Willcocks originally asserted, and in his evidence now reiterates, had been falsified. On this, and other points, it would obviously be improper to comment at present; but we may note that the Commission has declined to accept evidence regarding the effect that the various projects would have upon the water supply of the Sudan, and may express our regret for the decision. For though this question may be regarded as a mainly political one, it has nevertheless a purely technical side, and it would have been extremely useful to have the opinion on this side of the subject of such experts as the Commissioners.

The Shah of Persia re-entered his capital on June 2, and received a warm welcome from his people. It was unfortunate that his illness cut short his tour in Mesopotamia, and that he was unable to visit the sacred shrines of Baghdad; but in other respects the visit was a great success, and the fact that he was able to make it in so much comfort and so short a time will have been duly noted and appreciated in Persia and the neighbouring countries. Happily the report that Teheran had been invaded by the Bolshevists, which gained currency at the end of last week, turns out to have been false; but the Shah and his Ministers evidently have anxious days ahead of them. The League of Nations, at the request of the Persian Government, is holding a special meeting "to discuss the situation created by the action of Soviet forces in Persian territory," but it is to be feared that the only argument likely to carry weight with the Soviet Government is that of force. And with anarchy rampant just beyond her frontiers Persia is in no enviable position.

The Indian sections of the Birthday Honours Lists bear in advance the traces of what may be expected at the New Year. "Everyone" will then be looking for something from the Prince's hand; meanwhile the bulk of such few distinctions as are available fall to eminently deserving officials, and as a necessary consequence the lists make rather dull reading. There will, however, be widespread approval of the knighthood conferred on Mr. Walter Crum, who has been a worthy representative of Calcutta in the field of Indian politics; Cawnpore will welcome the admission to the Order of the Indian Empire of Mr. C. T. Allen; and Nagpur will be not less gratified at the selection of Mr. Bezonji Mehta for the same distinction. We are glad to see in this list the names of Mr. Hutchinson, agricultural bacteriologist, and Mr. Pearson, forest economist; their work is already well known in the world of science, but it is well that its merits should be acknowledged before a wider audience.

The recent announcement that the impending reconstitution of the Executive Council in India will include the appointment of three Indian members appears to have aroused anxiety in some quarters regarding the strength and capacity of the body by which the government of the country has to be carried on. In our opinion there are valid grounds for anxiety regarding the near future, but the nationality of individual members is not the only or the chief ground. The real danger arises from the growing cry for specialist and expert Ministers. Every progressive Department wants a Minister devoted solely to its interests; no up-to-date Commission fails to include such a recommendation in its report, and it almost looks as if the next Council would consist mainly of eminent departmental heads, at a time when wise and broad statesmanship is infinitely more necessary than any increase of merely departmental efficiency. Law, commerce and education are already represented; industry has been promised a seat; communications, sanitation, "science," and other interests are busily putting forward their claims; and it seems time to insist that government means something higher than administration, and that the central organ should be designed for the performance of its most important functions.

Let it be freely admitted that each separate proposal is by itself attractive, and that if the number of Ministers were not limited by obvious considerations, each of the interests we have named, and various others, might well be represented. The essential facts remain that the Council must be small enough for prompt and energetic action, and that statesmanship is its greatest need. It would be a poor prospect indeed for the next Viceroy if he were dependent on a Council of administrative experts, and what a picture to present to the new India! The engineer and the doctor, the analyst and the vet., hurrying to the Council Chamber, each with his bundle of departmental axes to grind, and united only by the bond of hostility to the Minister of Finance. *Non tali auxilio.* Most of India's troubles in the last ten or fifteen years are directly traceable to the want of statesmanship on the Council, and if the new India is to do better than the old, the recent line of development must be promptly reversed.

We do not, however, suggest that the experts should be content with their present position. We should like to see them better paid, and given much wider authority to dispose of, say, nine-tenths of the cases which now cumber the tables of the council. We would go further,

Digitized by Google

and give the head of each department the right to be heard by the council as a whole, though not to take part in its deliberations, on the larger questions of policy affecting his activities; and we believe that any expert fit for his post would find that the conditions we have outlined would give him ample scope. The cranks would doubtless continue to murmur, but in new Delhi there will be no room for cranks. If the great experiment now on foot is to be brought to a successful issue, the central organ of government must above all things be sane. The new Council will have to bear almost the greatest burden ever imposed on any group of statesmen, and it must be able to depend on the unreserved co-operation of every branch of the administration; the man who sets the efficiency of his department in competition with the interests of the country is always a nuisance, but in India just now he is too serious a danger to be tolerated at headquarters.

THE WEEK AT HOME.

War Profits and Ireland.

Politically the week has been one of undercurrents and backwashes, whose exact force and strength it is difficult to measure. The Cabinet has abandoned Mr. Austen Chamberlain's proposal to tax war fortunes, and certain repercussions of that decision are already evident. Business dislikes the Excess Profits Duty, but it dislikes the tax on war fortunes still more, since it is convinced that this can hardly be distinguished from a levy on capital.

The public is fully conscious of the weak point of the Excess Profits; it penalises the new business at the expense of the old-established concern, which is a bad thing in itself; but it also leads to extravagance in business, and all manner of "expenses" are charged up to overhead working costs in the very human desire to reduce the amount of excess profits payable. More serious still for the community is the fact that a large part of the Excess Profits Duty is passed on to the consumer; it is felt that a tax on war fortunes could not be passed on in this fashion.

But the public simply will not believe that it is impossible to construct the levy on war fortunes on ethical lines; they want, in a word, to distinguish between the man who by thrift and self-denial increased his fortune and the mere profiteer, and the failure of the Government to do so has caused very considerable resentment. The feeling may be illogical, but human beings often are; and the opposition are making a good deal of the cry that the Government are afraid of the capitalist. I should have said personally that the boot is on the other leg; the capitalist is more than a little afraid of the Government, and he will continue to be while the problem of the floating debt remains.

The formal business of politics has been the Home Rule Bill debates in the Commons. But it has been an unreal business, with Ireland in its present hopeless condition. Another side of the question has cropped up, in the refusal of Irish Labour to handle munitions. The English railwaymen have been asked to take direct action on similar lines, but it is notorious that Mr. Thomas, their leader, although sympathetic to Ireland, disagrees with direct action, and Mr. Lloyd George's warning, repeated emphatically last week, that Labour cannot be permitted to usurp the functions of Government while it is in opposition, will hardly fail to appeal to reasonable men. The Prime Minister's statement was categorical and conclusive, "We are here to-day. You may be here to-morrow." What is sauce for a Coalition Government may equally be sauce for a Labour Government, and, in that event, the functions and possibility of Government would be at an end.

The Soviet Negotiations.

The discussions with M. Krassin, the Soviet representative, do not appear to make much progress. The Russian agent has taken a flat in Curzon Street for four months, which indicates that he expects the negotiations to be protracted; but meanwhile the doubts are increasing whether he has anything to offer in the shape of exports of Russian grain and other commodities. He is said to be baiting his offers with promises of vast concessions, but how much those concessions are worth is another matter. An air of impenetrable secrecy hangs over the interviews, and Parliament shows signs of increasing impatience at this particular form of "secret diplomacy." There are indications that the Cabinet's policy is unstable in this matter, and veers from day to day. Both the French and the Poles are watching the discussions with some anxiety; the Poles in particular have reason to dread "a change of heart" in Downing Street.

"Fodder Wages."

The railwaymen recently asked for an increase of a pound a week, and after a long discussion the National Wages Board has awarded them four to eight shillings and sixpence a week advance, according to grade. It remains to be seen how long this "settlement" lasts; it will certainly not go unchallenged.

But the most interesting point about the discussions, at least to those who are not railwaymen, was their repudiation of the old theory of wages. It has always been assumed by economists that wages are fixed by reference to the cost of living, which, in effect, boils down to this, that the bare wages of an unskilled adult should work out at the cost of food plus rent and clothes for a married man supporting a family; the skilled man gets more than the unskilled, theoretically, in proportion to his skill, but practically in large measure in proportion to the supply and demand for his particular class of labour. A rise in prices, therefore, almost necessarily means an increase of wages for the unskilled, since otherwise they cannot live.

On this ground most of the demands for increased wages have been framed during the past four years, and since the rise in prices began in August, 1914, and demands for increased wages only began several weeks later, the demand could not in justice be contested. But it happens that among the railwaymen and one or two other classes of labour the advance in wages outstripped the advance in prices, and they were therefore relatively better off than before. Consequently, it became necessary to find a new basis for further claims. It was easily done. The dockers, who were badly underpaid before the war, have now received their "charter," and the railwaymen say that the docker consequently ranks superior to the railwayman, judging by his earnings, and the wives of the railwaymen—so ran the argument put before the Board—do not like being looked down upon by the wife of the docker when she goes shopping.

It is very human and laughable, and if we go on like this, George Robey would make an admirable Professor

of Economics. But it is difficult to say where it will end, for when one introduces *amour propre* into matters of wages, anything may happen. The dustman's wife and the street-sweeper's daughter may have something to say; while in country towns, where the parson ranks above the doctor and the doctor above the solicitor, the parson's wife may object to her husband's stipend being less than the doctor's fees, and demand a clerical strike.

A Draper's Strike.

Not all strikes are successful, however, even in these days. Six hundred young ladies, and, I suppose, the attendant shopwalkers, marched out of the drapery store of Mr. John Lewis, of Oxford Street, recently. The public was sympathetic, for the ladies were pretty and talkative, but Mr. Lewis calmly carried on. The ladies said they would never, never go back on the old terms, and Mr. Lewis replied that he would never have them back on any other terms. The irresistible force in the attractive form of shop assistants had met the immovable object in the shape of an indomitable shopkeeper, and a serious scientific problem which has puzzled us all seemed ripe for solution. It was the irresistible force that had to give way; Mr. Lewis, like his shop, proved an immovable object, and when I passed the emporium two or three days ago the place seemed as crowded as usual with purchasers, while the young ladies, apparently, have resigned themselves to looking for other posts. Mr. Lewis should put up a statue to himself as the triumphant draper, depicted as selling the mysterious things that decorate his windows with an air of determination combined with detachment.

Rents and Prices.

The absurdity of the cry that prices were falling, on which I commented last week, has speedily been demonstrated. The new Rents Bill is going through the House of Commons—it allows an increase of 30 to 40 per cent. on the annual rent—and there are indications that this will at once be used as a basis for higher wage claims, as is indeed inevitable, for higher rents mean still higher rates, and these are already a substantial item. This will wipe out any possible fall in the price of food a dozen times over.

Derby Day.

Last Wednesday London was perceptibly emptier, and well it might be, for close on a million people went to the Derby by taxi, motor-bus, wagon, and pony-trap. As usual, an outsider won; the most extraordinary thing about the race was that Mr. Asquith, whom we had not previously suspected of sporting proclivities, confessed afterwards that he had "spotted the winner." (One hardly likes to suggest that his recent failure as a politician is due to excessive study of the racing columns, but the coincidence is a little suspicious.)

The racing crowds since the war have become perfectly extraordinary, and more than one racing man has complained in my hearing that it is impossible to see a race with any comfort in these days. It is very much the same thing at cricket, which is overburdened with popularity. England seems determined to make up for five years' abstention from sport by putting in double time.

Journalistic Difficulties.

The steady increase in the cost of paper and printing is slowly turning Fleet Street from the most cheery thoroughfare in London to an abode of pessimists. One or two of the smaller papers are in serious difficulties. The *World* came to an end a few weeks back—and others are becoming very thin. The pity of the thing is that some of the specialised journals, which do valuable work in scientific or artistic fields, find it difficult to enlarge their circulation or to raise their price, and as their proprietors are not always rich men, some of them may have to retire from the struggle and shut down during the next year or so. I imagine the prospect for young writers is not very brilliant for some time to come. But the aspirants appear to be as numerous as ever; the old story of the man who failed to make a bare living out of journalism, but amassed a large sum by writing a book called "How to Make a Fortune With Your Pen," seems still to have its point.

A Garden City Frost.

It was a little surprising to see that the issue of Welwyn Garden City stock was so badly subscribed for. The investing public is no doubt more interested in the yield than the nature of the enterprise, and the profits were limited, so far as I remember, in the prospectus; but one would have thought that more of the future tenants on the estate would have put up money, as shortage of capital must hamper the whole thing. It is the more curious, as the past week has given further indications of success in the Housing Bonds, and the Essex issue is now fully subscribed.

The Week's Books.

Biography has been the main note of the week in the bookshops. Mr. William R. Thayer has published a Life of Theodore Roosevelt (Constable). It seems almost the ideal political biography, and it gives a striking picture of a very notable man. Mr. Thayer does not conceal the fact that the ex-President was anxious for the United States to enter the war far earlier than she did, and his denunciation, and those of the statesman whose life he records, of President Wilson and his policy, are extraordinarily forcible. Seldom were two men more opposite in character; "watchful waiting," the motto of the Democrat, was the last thing in the world that the Republican admired, and there was a personal as well as a political difference between the two men in their later years. Mr. Thayer, however, does not make an idol of Roosevelt, for he criticises his tariff policy adversely.

A smaller public probably awaits the record of "Frederick Locker Lampson" (Constable), which Mr. Augustine Birrell has written. Mr. Birrell has obtained a literary reputation more easily and on more slender grounds than any man living, for only a politician could think "Obiter Dicta" anything but a trivial collection of essays. But in this particular book there is fortunately a great deal of Locker Lampson as well as of Mr. Birrell, and the minor poet was not altogether an uninteresting person. He was one of those people who, like Henry James, thought more of the form than of the matter—it is the sure mark of the second-rate; to him style was practically everything. (It is curious how often this is associated with physical disability; Lampson was practically a lifelong invalid, as was Stevenson, and with both one is always more conscious of the polish on the table than of the table itself.) "He sometimes seemed to me to be all taste," says Mr. Birrell of Lampson; "his favourite word of commendation was 'pleasing.' He very soon wearied of those he called 'strong talkers.' His critical method was in a conversational manner, to direct your attention to something in a poem or picture, to make a brief suggestion or two, perhaps to apply an epithet, and it was all over." That is a just and accurate summary.

A word may be given to "The New Psychology" (Allen and Unwin), by Mr. A. G. Tansley. The writer is not an original thinker, but he summarises accurately a great deal of the work that has been published recently in this field of work.

There are certain books that one feels one ought to read, but an accommodating conscience, after one brief glance at the contents, allows one to put them on a shelf for some convenient occasion which somehow seldom comes. Grote's "Greece" is the outstanding example of books that ought to be read but never are read; and one that will rank in a similar class, at least with this individual, is "Life and Labour in the Nineteenth Century" (Cambridge University Press), by C. R. Fay. Frankly, it is the fault of this reader, and not of Mr. Fay, whose work appears to be thorough and impartial.

Some literary editor with a sense of humour and a distressing knowledge of my deficiencies has sent me a copy of the latest volume of the Oxford English Dictionary, with a request to review it for his journal, which shall be nameless. It has given me a profound insight into such things as vixens, vampires, and volumes, and it can be infallibly recommended to anybody who thinks he knows his own language thoroughly. A glance through the pages of this and the preceding volumes would speedily convince even Mr. Garvin, whose vocabulary seems excessive to the ordinary man, that he has touched only the fringe of possible knowledge.

THE NEAR AND MIDDLE EAST.

(From Our Own Correspondents.)

EGYPT.

CAIRO, May 24.

Retirement of Wahba Pasha.

Dame Rumour has, after all, proved right, and the Ministerial crisis about which there was so much gossip at the time of my last letter has come to pass. On Wednesday Sir Yussuf Wahba Pasha presented his resignation to the Sultan for reasons of health, and after a little delay, due to endeavours to get him to reconsider his decision, his resignation was accepted. Next day it was announced that Tewfik Nessim Pasha had undertaken to form a Cabinet, and on Saturday, the 22nd, the decree was signed, approving its composition, which is as follows:—Tewfik Nessim Pasha, President of the Council, and Minister of the Interior; Ahmed Ziwer Pasha, Minister of Communications; Ahmed Zulfikar Pasha, Minister of Justice; Mohammed Shafik Pasha, Minister of Public Works, War, and Marine; Hussein Darwish Pasha, Minister of Wakfs; Tewfik Rifaat Pasha, Minister of Education; Mahmud Fakhry Pasha, Minister of Finance; and Yussuf Suleiman Bey, Minister of Agriculture.

All those who have watched events during the past year and have been able to take an impartial view of the situation, unite in their regrets at the retirement of Wahba Pasha, in their admiration of his pluck and public spirit, and in their recognition of the really valuable services he has rendered to his country. He took office at a most critical juncture, when the visit of the Milner Mission was imminent, and it was not known what effect this would have on the country at large. He knew that he would call down upon his head the vials of wrath of the extremists, and he had before him, as an example of what awaited him, the fate of his predecessor, Boutros Pasha Ghali. Yet he considered it his duty to respond to the call made to him, and fortunately contrived to collect around him as colleagues men of the same moral calibre as himself. Wahba Pasha had not long to wait for an indication of the attitude of the less instructed and more irresponsible of his fellow-countrymen. He was publicly disowned by his co-religionists, torrents of abuse were poured upon him and his colleagues, letters threatening them and their families were delivered to them almost daily, and attempts were made, first on the life of the Premier, and then on those of Sirri Pasha, of Shafik Pasha, and of Darwish Pasha. Sirri Pasha was forced to resign, owing to the effect of this campaign on his health. But nothing turned the rest of the Cabinet from the execution of the duty which they had taken upon their shoulders, and which they have continued to carry out, in spite of everything.

However, on a man of his advanced age and ailing health, the anxiety was bound to tell, and it is not surprising that, after eight months of possibly the greatest moral strain that any man could be put to, Wahba Pasha has at last found himself unable to continue any longer, and has now had to give way to the decision of his medical advisers. To say that the Wahba Cabinet has rendered valuable services to Egypt is to put it very mildly. They have, thanks to their determination to carry on, in spite of the actions and machinations of the Extremists, steered the barque of State safely through a most critical period, and have preserved thereby the continuity of government which, in the interests of the country, was most vital to it.

The New Cabinet.

The new Cabinet comes into office under much more propitious circumstances than its predecessor, to whom it undoubtedly owes this improvement in the situation, but there is no disguising the fact that until the Milner Mission has delivered its report, and the future government of the country has been decided on, it will have a somewhat difficult time. The new Premier is held in high esteem, having gained a great reputation in the Parquet for his moral qualities and his ability. He first entered the Cabinet as Minister of Wakfs, under Said Pasha, just a year ago, and in the Wahba Cabinet held the portfolio of the Interior, which he now combines with the Presidency of the Council. Of his colleagues, four held office in the out-going Cabinet, and now retain their former portfolios. The three remaining Ministers are new, but are well known to the public.

The first, Tewfik Rifaat Pasha, who goes to the Public Instruction in the place of Yehya Pasha Ibrahim, has had a distinguished career in the Courts, and became Procureur-General last May, in succession to Tewfik Nessim Pasha. Yussuf Suleiman Bey, who becomes Minister of Agriculture, was Councillor of the Native Court of Appeal, and, being a Copt, fulfils the unwritten law, according to which every Cabinet must include a Christian member. Mahmud Fakhry Pasha, who goes to the Ministry of Finance, was Governor of Cairo, and has done excellent work in connection with the settlement of the industrial disputes which have arisen during the past year. He is a most intelligent man, and has a brilliant career before him. It might be added that he is only thirty-five years of age, and so is following in the footsteps of his distinguished father, the late Hussein Fakhry Pasha, who established a precedent by entering the Cabinet at the age of thirty, and was one of the most valuable colleagues of the late Mustapha Pasha Fahmy during his long term of office as Prime Minister.

Cairo Waifs and Strays.

One of the most serious public nuisances of Cairo are the waifs and strays, the little boys and girls who hang about the streets begging and importuning passers-by, jumping on and off trams, etc., and who, mixing with the low-class element, bid fair in time to swell the latter's numbers, and eventually turn to life of vice and crime. There is undoubtedly a serious moral obligation on the authorities in regard to these children, whom, if they are abandoned by their parents, or, as is the case with so many, are orphans, it is the duty of the community at large to look after and train up to be useful members of society.

The Cairo police have for some time carried on a small school, in which a limited number of these waifs and strays have been sent, and where they are given some elementary training, but the problem is so serious, owing to the large number of these children now on the streets, that the Government has decided to take action itself. The Ministry of Education has now drawn up a scheme for the creation of a certain number of industrial schools to which the younger of these waifs and strays can be sent, and where they may receive instruction and training—physical, moral, and vocational—which it is hoped may fit them to earn their own livelihood and become respectable citizens. These schools are not intended to interfere with the work of the reformatories, which are for children who have committed offences against the law, but they will be limited to boys and girls who, as far as is known, have committed no serious legally punishable offence, and who are physically and mentally sound. The Government is to be congratulated on having made a move in this matter, and it is to be hoped that no obstacle will be set up to the carrying out of what is undoubtedly most vital rescue work.

The Bombing Campaign.

On Saturday last the two men accused of throwing a bomb at Mohammed Shafik Pasha on February 22 were brought before a Military Court. They were defended by M. Harrold Cateaux, and were, as was expected, found guilty of attempted murder. Sentence will be promulgated as soon as it has been approved by the Commander-in-Chief.

YUGOSLAVIA.

BELGRADE, May 20.

The New Cabinet.

The formation of the Coalition Ministry under M. Vesnitch has inspired a feeling of optimism, as it is believed that the long period of political uncertainty has at last reached its close; for the new Cabinet, composite and heterogeneous as it is, has for its main programme the carrying out of the general elections and convoking of the Constituent Assembly, which, it is felt, is bound to give a stable Government. While the two chief parties, the Radicals and the Democrats, are exerting all their powers to obtain success, the non-party man does not really care which wins at the poll, provided one party has a good working majority, for it is the evil of balanced parties, producing a deadlock in the Skupshtina, which has done so much harm to the country during the past twelve months. Yugoslavs look with envy at their Czecho-Slovak cousins who have been more fortunate and completed their fundamental organisation, and so obtained a good start.

The new Cabinet will be a difficult team to handle, but, as M. Vesnitch is an experienced diplomatist, it is hoped that he will rise to the occasion. By birth he is a native of the Sandjak of Novibazar, that wild district which was so much talked of at the time of the Berlin Treaty, with a mixed population of Serbs, Arnauts, and Turks, only united to Serbia as a result of the Turkish War of 1912. It is a district which has given many capable servants to Serbia. M. Vesnitch is, therefore, not unfamiliar with the primitive conditions and mentality still obtaining in the interior of the Balkans, and at the same time his many years' experience in the diplomatic world, and, above all, in Paris, has qualified him to deal with difficulties of a totally different kind.

The eventual success of his negotiations is largely attributed to the personality of the Regent, who used all his influence to put an end to a situation which was becoming intolerable and had done incalculable harm to the country. For it is generally believed that it was the energetic intervention of the Crown Prince which put a stop to the intrigues of politicians and brought matters to a head.

An Improving Outlook.

There are still plenty of difficulties for the country to face, but they look less formidable. The railway strike is satisfactorily terminated, ending with a proclamation by the Union of Railway Workers disavowing political motives and warning its members against the machinations of the national enemies, Hungarians chiefly, now abetted by the Italians, who under the guise of Communism attempted to seduce the men from their patriotism. Still, there are strikes in other countries, and the Orient-Simplon express has stopped running for over a week through Italy. It is consequently a difficult and very tiresome journey from Belgrade to Paris and London, and mails have stopped. We have been isolated for nearly two days, but after the series of railway strikes in England, France, and in Yugoslavia, we are really getting accustomed to living without mails and newspapers.

The Hungarians are vigorously carrying on their nationalist agitation, not only in their own country, but across our border in Yugoslavia. It is reported from Pechuj that the Hungarian General Molnar is busily concentrating troops near the demarcation line, and that 4,000 more men recently arrived at a base near Nagy Kanjizha and at Sekesc Fehervary. It is stated that meetings are being held protesting against the terms of the Peace Treaty, and insisting that Medjumurje shall belong to Hungary and not to Yugoslavia. Their nationalist society, "Move," is said to be at work on this side of the line, and it is reported that a battalion of officers has been formed secretly, corresponding to the four which already exist in Hungary. They are spreading pamphlets and seditious literature in Yugoslavia, inciting the Magyar section of the population to rise. As the boat Goliath, out of Budapest, came to Novi Sad, some Magyars on board attempted to land a whole collection of pamphlets, seditious papers, and propaganda literature, but the police were too smart for them.

An Appointment.

Dr. Koyitch, of Kragujevats, recently Chargé d'Affaires of the Kingdom of the S.H.S. in London, has been appointed *chef de cabinet* of the President of Council.

ROUMANIA.

BUCHAREST, May 6.

General Election.

The electoral campaign is in full swing, and all lists of candidates were to be handed in by May 4. There is feverish activity among the various parties who are negotiating agreements with each other to form *blocs* in favour of or against the Government of General Averescu. A kind of provisory federation has been formed, composed of the strongest parties of the late Parliament—*i.e.*, the National Democrats (led by M. Iorga), the Transylvanian National Party (M. Maniu), and the Peasants' Party, with which federation the Democratic Union of Bukovina (M. Nistor) is at present treating. This federation, as a whole, is naturally opposed to the Averescan Government, as it represents the parties which this Government superseded, but the position is complicated by the fact that many of the most influential members of these parties are opposed to the federation. It would appear that the Socialist party is also working against the Averescan Government. On the other hand, General Averescu can count upon the support of the National Liberals (M. Bratiano), the Conservative Democrats (M. Take Jonescu), and the Progressive Conservatives (M. Marghiloman).

The Liberal Party is very well organised, and possesses great influence through its connection with many of the most important financial and industrial concerns in the country. The Conservative Democrats are popular, but not well organised, while the Progressive Conservatives, being Germanophile, are unpopular, and not very numerous. General Averescu's own party, the League of the People, or, as it is now called, the People's Party, is the only one in the Old Kingdom which has organised an electoral campaign in the annexed provinces (Transylvania, Bessarabia, Bukovina, Maramuresh, and the Banat), and is so strong and so popular that it seems to stand a good chance of returning candidates even from these provinces, especially from the more distant constituencies. On the whole, therefore, the position would appear to be favourable to the Averescan Government.

Whatever happens, one must hope that the Parliament elected will be strong enough and representative enough to get to business, and avoid the bitter party intrigues that have for so long blocked all its useful activities, and kept the country in its present unsettled state.

Inter-Allied Danube Commission.

The Inter-Allied Danube Commission, of which Admiral Troubridge is President, and which has its offices at Budapest and Belgrade, has decided, it is reported, to call a meeting in Paris in May to discuss a proposal for the increase of navigation taxes on the Danube.

The First of May.

It was officially decreed that the 1st of May was to be a general holiday. Accordingly, all shops, offices, and schools were closed. Great lorries filled the roads, carrying excursionists out of town, and the Socialists made a huge procession, but there were no disturbances of any kind.

St. George's Day.

This is St. George's Day, and many of the shop doors are gaily decorated with green boughs or branches of flowering acacias. Roumanians are very fond of flowers, and the baskets of street hawkers are often decorated with any green or flowering thing that can be found. The trees suffer accordingly. It appears to be *de rigueur* to be weighed on St. George's Day, and

Digitized by Google

possessors of weighing machines have dragged them out, clothed in bowers of green, to the pavements or some other conspicuous spot, where they have no lack of patrons.

Erika Morini.

A young violinist of this name has recently given three concerts in Bucharest. She is only fifteen or sixteen years of age, and is endowed with really remarkable genius. She has the most perfect command of her violin, her tone is exquisite, and her interpretations robust and strong, and amazingly mature—in fact, she is a finished musician, with no trace left of the student. It is said that for several years she has been playing to large audiences in Vienna. Her reception here was certainly enthusiastic to the last degree; every seat in the Athenée Hall was occupied, and every passage and floor space, including the stage, crowded, so that, after fighting their way in at the doors, many people were only able to reach their seats after half the concert was over. Her programme included Mendelssohn's Concerto, a Vieuxtemps Concerto, Sarasate's Zigeunerweisen, and Beethoven's Romance in G.

BULGARIA.

SOFIA, May 22.

Cabinet Reconstruction.

In conformity with the choice of the Agrarian party, the Cabinet has been completed by the addition of MM. Oboff and Omarchevsky. The various portfolios are distributed as follows:—M. Alex. Stambolisky is Prime Minister, Acting Foreign Minister, Minister for Public Worship, and Minister for War; M. Alex. Dimitroff remains Minister of the Interior and of Public Health; M. Alex. Radoloff retains the portfolio of Justice; M. Omarchevsky is Minister of Public Instruction; M. Marco Turlakoff, hitherto Minister of Railways, etc., becomes Minister of Finance; Dr. Raiko Daskaloff, hitherto Minister of Agriculture, becomes Minister of Commerce and Labour; M. Alex. Oboff takes the Ministry of Agriculture; M. Dedelko Athanasoff exchanges the Ministry of Public Works for that of Railways, Posts, and Telegraphs; and M. Tzanko Bakaloff, formerly Minister of Public Instruction, becomes Minister of Public Works.

The Royal Decree regarding the appointment of the new Ministers and the reconstruction of the Cabinet was issued yesterday, read in the Chamber last night by M. Stambolisky, and received with applause by the Agrarian majority. As now constituted, the Cabinet is purely Agrarian, the other parties having refused to collaborate with them. The Agrarians are in a slight majority, holding 109 seats against 107 held by all the other groups combined.

The New Ministers.

M. Stoyan Omarchevsky, who is thirty-six years old, was born at Omarchevo, in the district of Stara Zagora, and educated at Sofia University, where he graduated in both the Historico-Philological faculty and in Law. He entered the Agrarian League in 1904, and has represented the district of Widin in three Parliaments before the present one. He has journalistic and literary leanings.

M. Oboff is a native of Plevna, and, being only thirty-two years old, is the youngest Minister. After passing through the Middle Agricultural School, he also studied law at the University of Sofia. He has represented Plevna for some time, and has been for several years assistant editor of the Agrarian League's journal.

Allies' Financial Delegates.

The Bulgarian Government has been notified that on June 1 the five inter-Allied Commissioners charged with the supervision of the fulfilment of the terms of the Peace Treaty will arrive in Sofia. Measures have already been taken for their reception and lodging.

Refugees from W. Thrace.

Since General Charpy's announcement of the imminent withdrawal of the French troops from Thrace in the direction of Constantinople, great masses of Bulgarian refugees have been streaming across the frontier into Bulgaria, leaving their homes and fields at the mercy of the invaders, and bringing with them only the few belongings they could carry easily. Some American correspondents have gone to the frontier for the purpose of taking cinematographic pictures of the sad processions; and it is understood that these will be sent to President Wilson, to show him how his principles regarding nationalities are being observed by the Allies. The total number of the refugees is said to exceed 30,000. The Bulgarian Government has ordered Bulgarian officials to leave Thrace together with the French authorities. Up to the time of writing the Greek occupation has not begun. As to the form Turkish opposition may take, it would be unwise to prophesy at all.

The Prime Minister and the Minister of Railways yesterday received a telegram from Dedeagatch, saying: "The local railways have, by order, stopped the granting of railway carriages to private persons for emigration. The population is excited, since it is deprived of the chance of saving the last remnants of its modest property. Have pity, for we, too, are Bulgarians. Send trains, and grant us carriages."

Bulgaria and Roumania.

The newly appointed Bulgarian representative in Roumania, Dr. Theodore Nedkoff, has arrived with his family in Bucharest. To the representative of one of the leading Roumanian journals Dr. Nedkoff made a statement as follows:—"For a long time I have been the friend of the Roumanian nation, and now I am sent by my Government to work for a *rapprochement* between your country and mine. I shall do my best to bring about a good understanding, and to accomplish what my predecessors were unable to do. We desire a sincere and lasting friendship between the Roumanian and Bulgarian nations, and the realisation of that ideal should be accomplished early, for it is indispensable to both of us."

Bulgarian Prisoners in Greece.

Yesterday the Prime Minister, M. Stambolisky, addressed a note to the diplomatic representatives of the United States, Great Britain, France, and Italy, requesting their intervention with the Greek Government on behalf of the Bulgarian prisoners of war in Greece. The French Minister at Athens had undertaken to make the necessary representations to the Greek Government in this connection.

TURKEY.

CONSTANTINOPLE, May 15.

The Peace Terms.

The peace terms have not yet been published here in detail, but their general significance is known, and has aroused the deepest consternation. The retrogression of Turkey's European frontier to the Chatalja lines has especially made a very painful impression, which is mixed with the bitterest resentment. The accordance of such extensive territories to Greece—the Power which played such a doubtful part during the war, and which was borne to victory on the backs of the Allies—is regarded as an insupportable humiliation and injustice. The Cabinet is now in possession of the detailed Treaty, and it is understood that the response of the Turkish Delegation in Paris will be discussed and approved by the Cabinet before being presented to the Allies. As has already been indicated in previous letters, there is every

reason to believe that unless the Treaty is modified, so far as the clauses relating to Thrace and Smyrna are concerned, the Government will resign, and it is doubtful whether any Cabinet could be formed that would undertake to sign the Treaty as it stands. No doubt, a refusal to sign the peace terms would not affect the territorial situation, except so far as Armenia is concerned, but a situation will be created which will be full of danger and difficulty.

The Anatolian Situation.

The punitive operations undertaken against the Nationalists by the Government have almost come to a standstill. A considerable proportion of the troops under the command of Suleiman Shefik Pasha deserted to the rebels, and the little fighting that has taken place has been of a desultory and indecisive nature.

Some details are now available of the provisional government established by the Nationalists at Angora. A Great National Congress met in that town on April 23. It consisted of 174 members elected by the communes of every province in Asia Minor; and Mustapha Kemal was elected first president of the assembly, and Jellaleddin Arif Bey, who was president of the defunct Constantinople Parliament, was chosen as second president. An "executive committee" of eleven members was then formed, including several well-known Nationalists who fled from Constantinople when Damad Ferid Pasha became Grand Vizier. It is significant that the members of this council are called "vekils," and not "nazri," which is the usual appellation of a Minister. "Vekil" may, in this instance, be translated "commissioner," but there was no hint in the proceedings that this was due to any other reason than that the Nationalist Government is regarded by its own creators as having been forced into existence by the subordination of the Sultan's authority to foreign influence, and Mustapha Kemal himself stated that as soon as the Khalif is once again a free agent, the powers of the provisional government will be transferred to him.

On the other hand, there is no longer any room for doubt that Bolshevist propaganda, adapted to the needs of Islam, is being freely disseminated in Anatolia. Eski Shehir appears to be the principal centre of activity, and in that town is published a newspaper called the *Ishji*, or "Worker," the object of which is to further the interests of "all kinds of workers and cultivators." It has only been in existence for a short time, and is evidently feeling its way; for in view of the fact that the doctors of Islam deny all possibility of a reconciliation of Mohammedanism with Bolshevism, the need for caution is obvious. Exactly how far the Nationalists are compromised with the Bolshevists is not easy to determine; but that there is some kind of an understanding with them is now almost certain.

The Caucasus.

In view of the above, recent developments in the Caucasus have a peculiar interest for the student of Turkish politics. There have been all sorts of conflicting rumours as to the present state of affairs in the Caucasian republics, but it seems to be clear that Soviets have been established at Baku and Erivan, if not in Tiflis. At the same time, a state of war is said to prevail between the Armenians and the Azerbaijanis in the Karabagh, while the Turks, under the command of Kiazim Karabekir Pasha, are said to be advancing into Armenia through Olti. The establishment of Bolshevist rule—or, rather misrule—in Baku is reported to have been carried out with the assistance of the adherents of the Ittihad party, which is known to be strongly pro-Turk. Undoubtedly the position of Armenia is critical, and it was perhaps a wise move to bow to the storm; but is it probable that the Russians will aid and abet the Turks in their cherished scheme of wiping the Armenians out of existence in order to realise their goal of a great Pan-Turkish hegemony extending into the heart of Asia? There seems every reason to believe that we are on the eve of surprising developments in Russia, the nature of which is foreshadowed in the appointment of Kuropatkin as dictator in Turkestan, and in the presence upon the Bolshevist military council of men like Brussiloff. For some days past nothing has been heard from the great wireless station at Moscow, and it is believed that there are important events occurring in that centre of Bolshevism. In any case, it seems abundantly clear that Russia is about to abandon Bolshevism for—what? Is it not possible that the new Russia will be remarkably like the old Russia, at least as far as her foreign policy is concerned? In the opinion of competent observers, this is something more than a mere possibility, and Mustapha Kemal may yet find himself hoist with his own petard. If I remember rightly, a little more than twelve months ago, M. Sazonoff reminded the Allied representatives in Paris that a treaty with Russia had been signed in 1915.

Unrest in Constantinople.

Last Tuesday the employees of the Tram and Tunnel Company came out on strike, with the result that life has become even more uncomfortable than it was already. The dispute is apparently about hours and wages, and public sympathy seems to be with the men, who demand what amounts to £2 3s. for a 48-hour week. The company, however, states that it would have to double its personnel if these demands were granted, and that, as fares have recently been reduced in the public interest, it is unable to consider such a development. As a matter of fact, the company was allowed to raise its tariff 500 per cent. last year, in order to recoup, but although a reduction has been made, the first-class fares still amount to about three piastres a mile.

The men seem to be very well organised, and it is worthy of note that the strike leaders are Moslems belonging to the recently formed Turkish Socialist Party. The company's premises have been strongly picketed, and hitherto all attempts to start the trams again with independent labour have failed.

The development of unions in Constantinople has proceeded rapidly since the Armistice. Until then, with the exception of the guilds of *hamals* and lightermen, there was only a very futile union of shop assistants, and a rather stronger union of working tailors. Now, however, there are several unions which embrace all the most important branches of industry, and it is said that attempts are being made to bring about a general federation for the purpose of utilising the powerful weapon of a general strike, in order to obtain better conditions of work and remuneration. Although there is very little evidence of open propaganda, there can be no doubt that occult influences have been at work, and no one who is closely acquainted with Turkey can doubt that those influences come from without.

Anti-British Propaganda.

Since the occupation of Constantinople, anti-British propaganda in the provinces has increased in virulence, until it has reached a point on a level with the most violent fulminations of the period of hostilities. Every rag published in Anatolia describes us as "base," "cowardly," "treacherous," "tyrannical," "brutal," and so forth; but what strikes even the most superficial observer is that, while our Allies, the French, are seldom referred to, and then only indirectly, the Italians come in for open compliments . . . which they doubtless deserve, but which few will envy them. The explanation which I received from a Turk who sympathises with the Nationalists is that if only the British could be discomfited, the others would not give much trouble. There may be some truth in this.

The Extreme Penalty!

The Government is determined to play the game, even in its details, and has recently condemned the Nationalist leaders to death. Among the list is the Turkish feminist and exponent of pan-Turanianism, Halide Edib Hanum. As none of the condemned persons are here, the Government was pretty safe in promulgating such sentences. After all, have not Enver, Talaat, Jemal, and company also been condemned to death? And are they not all in the best of health? In fact, no Turk who has not been condemned to death once or twice can be said to have done his duty as a patriot.

CYPRUS.

Nicosia, May 15.

The Greek Deputation.

It would be superfluous to say more at present regarding the revived mission to London. Letters are received from the Archbishop and M. Theodótou. The former has promised to pay a visit to the Greek Community at Cairo on his return journey to Cyprus. The office of High Commissioner remains vacant in the island, but general opinion now accepts the view that no political change affecting the island is likely to take place as part of the Near East settlement.

The New Scale of Salaries.

The proposed increments affecting all Government officials, now under discussion, while generally welcomed, are not such as to satisfy all. The police also consider that their rates of pay should be revised on a more liberal scale, and the movement on their part will no doubt be carefully considered. It is proposed that the expenses of officials, and of their families, going home on leave should be paid once in every three years. This will apply to those who receive up to £500 a year. There seems, however, no good reason why an official with a rather higher salary should not be similarly helped, considering that he might have a family, whereas one receiving rather less might have none. According to a proposed amendment of the "Pensions Law," public officers will be retired at the age of sixty. The High Commissioner may, however (subject to the approval of the Secretary of State), extend the period of service.

More Refugees.

Several hundred more Armenians have arrived and some more Greeks are expected. There are already 2,000 Russians, including some of the highest rank, and 1,000 more are expected. The total number of those, together with the Jews, who are seeking asylum in Cyprus is thus considerable. There is no little anxiety as to the possible introduction of disease, especially typhus. Dr. Corsellis, District Medical Officer, is acting as Chief Medical Officer. Precautions at the ports are as far as possible being taken.

Censorship Delays.

Strong complaints are made regarding the continued application of censorship on letters and papers, the distribution of which is often delayed for more than three days after arrival of the mails. If, it is urged, the Government still consider that the time has not come to revert to pre-war postal conditions, let there be at least more speed and efficiency in carrying out the work, so that correspondence may be delivered within twenty-four hours after arrival.

ALBANIA.

May 23.

The Situation.

Essad Pasha no longer inspires any fear. After the little storm there is now a calm. The Government appears to be strong and to have confidence in itself. There are, however, some people who say that the calm is deceptive, and that the storm is close and threatening. They think that Essad will not give up the struggle, nor will those who serve Essad. By the last expression we must understand the Yugoslavs (or rather the Radical Party and M. Pashitch) and the Italians. Essad is known to be an intimate friend of the Prince Regent, but since the new Albanian Government follows openly an anti-Italian policy, that Power does everything it can to attract Essad towards itself and to make use of him against the National Albanian Government, or at least to inspire the latter with fear. There is talk of certain Italian functionaries who have had mysterious interviews with Essad in Paris, and it would not be at all surprising to learn one day that the Albanian leader had gone to Rome. Here in Albania people regret the lack of foresight shown by the Serbian Government, which maintains its relations with Essad and works in this manner against the Albanian Government, which is so openly and fully committed as Italophobe.

An Italo-Albanian Incident.

Colonel Castoldi, Commissaire of the Italian Government, resides at Durazzo; the Government of Tirana did not wish to recognise him as Commissaire, and asked for his credentials entitling him to be treated as a Minister. Relations between them were very strained, when a tragi-comic incident cropped up—the disappearance of a small gun and two machine guns. The Italians are withdrawing all their troops from the interior and concentrating them at Durazzo, Skutari and Valona. When they were leaving Tirana some Albanian officers asked the Italian military authorities to hand over to them a small mountain gun, but the latter refused, and an Albanian petty officer conceived the idea of carrying off one of these small pieces and two machine guns. Colonel Castoldi took advantage of this incident to take possession of the Durazzo Customs House. Fortunately, the money there had been sent away the same day to Tirana, and MM. Kadri Prishtina, Minister of Justice, and Cioba, Minister of Finance, went to Durazzo and gave satisfaction to the Italians by the arrest of the guilty petty officer (a native of Skutari), who is to be tried by a court-martial, and it was thus that the Customs House was returned the day before yesterday to the Albanian authorities.

Meanwhile I learn that the Albanian Government has sent a note to Rome demanding the recall of Colonel Castoldi, whose attitude is not calculated to create good relations between the two States.

It is hardly to be expected that the Consulta will give the satisfaction asked for. Nevertheless, many Italians of standing criticise the policy followed up to now by the Italian Government in regard to Albania—a policy all the more to be condemned because the Consulta has never given any clear and frank explanations of its intentions regarding Albania.

BULGARIA AND THRACE.

A message of the Bulgarian Telegraph Agency, dated Sofia, May 29, states:—

The present events in Thrace are provoking grave excitement in Bulgaria: interpellations have been made in the Sobranie. The Prime Minister, M. Stambolisky, answering on behalf of the Government, declared that the Bulgarians are leaving Western Thrace *en masse*. The number of those who have already arrived in Bulgaria is over twelve thousand. But (said the Premier) the Bulgarian Government will not oppose the Greek occupation, and will try by all possible means to stop the passage of any Bulgarian bands in Thrace, because the Government are convinced that only a loyal policy on the part of Bulgaria may urge the Great Powers to examine again the decision taken at San Remo in regard to Thrace, a decision which is full of most grave consequences for Bulgaria.

CORRESPONDENCE

CONSTANTINOPLE OR SMYRNA.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—We learn from your last issue, also from other notices in the Press, that the Turks have asked for time to complete their case, and July 11 is now the date fixed for them to come up to receive sentence. As I cannot communicate with the Turkish authorities, except through the medium of the Press, will you once more allow me the hospitality of your columns to offer them a final word of advice, now that the full details of the Treaty have been published. THE NEAR EAST has treated me so generously over this Turkish Treaty that I need not explain that my sympathies are entirely on the side of the Turks, and my advice, such as it is, is an earnest endeavour to assist their cause.

In the first place, let the Turks dismiss from their minds that they can look to anyone as a friend amongst the Western Powers. For the moment Italy, and possibly France, may appear less exacting than England, but let there be no mistake, it is not from any sympathy which they have for the Turkish Government. All the Powers are, I fear, actuated by the same motive, of obtaining the best vantage-ground whence Turkey in Asia may be the more easily exploited in the future, her European possessions having been all absorbed. In diplomatic language, it is terms—spheres of influence for economic purposes. I make no distinction, but after Greece, Italy is probably more to be feared, as the Italians think that they have a grievance and have not obtained their fair share in Mesopotamia, Syria, and elsewhere!

I will not enter into all the details of the Treaty except to say that unless words have no meaning the Turkish Government would, in an ordinary Court of Justice, have no difficulty in showing that the terms which they are being called on to accept cannot in any way be reconciled with either Mr. Wilson's famous fourteen points, the fundamental principles laid down for the guidance of the League of Nations, or Mr. Lloyd George's pleading on the behalf of the British Government. But I doubt the Turks advancing their cause in any way by such pleading; they are being dealt with by a Court in which Judge, Jury, and Prosecution are all one and the same.

Judging from the British Press, too, any appeal to public opinion will be quite useless. The *Observer* and the *Manchester Guardian* are the only papers that I know of which speak of the "impossibility" of enforcing such a Treaty; all the others (including, alas! THE NEAR EAST) refer to the terms as drastic but just.

What use, either, is there in a continuation of the war? Even if assisted by Bulgarian bands in Thrace, the Turkish Nationalists cannot fight the whole world! Guerrilla warfare in Asia Minor may possibly be carried on for some years, and make government very difficult, but it will be the unfortunate Anatolian peasant who will suffer most in the end. Of course, we have yet to learn what action the Moslems in Central Asia and India will take, but the British Government is apparently satisfied on this score. Altogether the situation is desperate, the more especially as, with the Greeks at Smyrna, the chance of the Turks retaining even their "renowned homelands" for any length of time is indeed a poor one. As far as I can see, the Turkish Government has only one card that can be played with any chance of success, and that card is Constantinople, or rather what will be left of Constantinople after the requirements of the newly-created Straits Commission have been met. Let this, then, be the bargain: *Constantinople* for *Smyrna*, which would thus become the capital of Turkey. I am fully aware of what a bitter pill this will be for the Turks to swallow; but let them believe me, it is now their sole chance of maintaining any semblance of independence.

With the Powers in their present mind, it is hard to say whether even this enormous sacrifice on the part of Turkey would be accepted without a mandate of some description being insisted on, and I strongly advise the Porte to ask for a joint mandate of *two* Powers rather than *one*. Even at this eleventh hour, if France and England were to undertake this mandate jointly, pooling their respective interests in Syria, Palestine, and Mesopotamia, we should have travelled a long way on the road to peace, not only in Asia Minor, but also in Central Asia and Arabia. In India and Northern Africa, too, all but the extremists would settle down and confine themselves to legitimate agitation on constitutional lines.—I am, etc.,

COLES PASHA.

Ruishton, Taunton.
June 5, 1920.

RELIEF IN PERSIA.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—With reference to "Traveller's" letter in THE NEAR EAST of May 20, may I be allowed to state that whilst it is perfectly true that Lady Marling and those associated with her rendered a noble service during these distressing months, the less well-known but equally good work done by the American Relief Committee over a very wide area, and involving the expenditure of many thousands of tomans, should not be overlooked? The most striking effort was that made by a local committee of Persians. They provided the funds, organised a hostel, caring for a very large number of poor and destitute villagers during these severe months, fighting typhus and typhoid.

The famine, having exacted a very heavy mortality, fortunately was soon over, but as a result of it hundreds of orphan children were thrown on the streets to herd with the dogs for warmth. Here, again, a sympathetic native, an Armenian, in the employ of the Opium Administration, organised an industrial school, the funds being provided by a small tax on the employees of the administration. This has now been greatly enlarged and extended by funds given by the American Relief Committee for the housing and care of these children.

The Persians are fully aware of Lady Marling's efforts, and over and over again have I heard them express their gratitude.—I am, etc.,

ANOTHER TRAVELLER.

THE TOMB OF ST. DEMETRIUS.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—With reference to the correspondence in THE NEAR EAST under the above heading, I find in a Greek pamphlet of popular character, *Μαρτυρολόγιον Ἁγίου Δημητριου* some details which might further elucidate the matter.

It is said therein that a certain General Leontios, being sent to Wallachia under Constantine the Great, before his departure from Salonika fell seriously ill. None but St. Demetrius through a miracle could heal him. In gratitude he thought of building a church and carrying away for this purpose part of the body of Demetrius preserved in Salonika. But the saint whispered him in a dream: "Do not divide me!" Leontios then took some earth from the tomb of Demetrius; he also managed to get a handkerchief and a ring which belonged once to the saint. With these sacred relics in his possession he arrived on the left bank of the Danube. As he hesitated to continue his journey on account of the river being in flood, St. Demetrius again came to him in a vision and said: "Have no fear, hold up in your hands my kerchief and my ring. . . ." This Leontios did, and crossed over safely to Wallachia, where, the pamphlet adds, he built a church to St. Demetrius.

Now, whether this church exists, and whereabout, I cannot tell. There are two churches dedicated to St. Demetrius in Bucharest; neither has any relics whatever connected with the above story.

Mrs. Will Gordon is quite right. She saw, indeed, the body of St. Demetrius; it lies there in the cathedral at Bucharest, only it is that of another saint—a different person altogether, of slave origin, I presume, as he is still called "St. Demetrius Bassaraboff."

One cannot help being rather perplexed with these saints, the more so if one remembers how a regular traffic in their remains was carried on. Priests used at one time to quarrel and accuse one another of contriving to raise the value of some saints to the detriment of others.—I am, etc.,

King's College, Strand. M. BEZA.

Major-General the Maharaja of Bikanir, who is well known in Europe as the representative of the Indian Princes at the Peace Conference, has been spending a month and a-half in the Kotah and Nepal jungle. Eighteen tigers and one Arna buffalo fell to his rifle, and on April 21 his Highness shot his 100th tiger, a fine specimen measuring 10 ft. 1 in. In Nepal the Maharaja shot what is believed to be the record tigress. She was a magnificent specimen with a total length of 9 ft. 7 in.

PRESS ON THE NEAR EAST.

Mesopotamia.

The Times of June 1 has a long leading article on Mesopotamia in which great stress is laid on the expense of undertaking obligations in that region. Its conclusion is:—

We lay stress upon this matter of expenditure because we feel that the public are being misled, that accounts should at once be laid before the House of Commons showing every penny that is being spent, either directly or indirectly, in or upon Mesopotamia and Persia, and that there should be an independent investigation into the financial aspect of the whole matter. Its military, political, and economic aspects will require investigation no less independent and complete. The problem of Mesopotamia cannot be dissociated from the whole question of our commitments in Asia Minor; and this in its turn is vitally connected with the commitments of our Allies, and of France in particular. But whatever policy we may ultimately elect to follow, we can never agree to the maintenance of a great army in these regions, or to the interpretation of the mandate in a form which would inflict immense additional burdens upon the British public. The right course for the Government is to make a clean breast of their plans to Parliament.

Palestine.

In the *New Europe* of May 27 there is an instructive article on "Jew and Arab in Palestine," by Professor Musil, the occupant of the Chair of Oriental History and Languages at Prague University. He briefly recounts the history of Zionist efforts to enable Jews to return to Palestine, and proceeds to enumerate "the enormous difficulties attached to the settling up of an autonomous home for the Jewish nation in Palestine." On this point he says:—

The Zionists are faced with difficulties both within and without. The former originate in the nature of the natives and in the climate of Palestine, the latter in the Jewish colonists themselves. In Palestine there is no fertile soil which is not cultivated; there is no soil without owner. Almost 90 per cent. of the soil belonged to the State, to the Sultan, to the ecclesiastical institutions, or to the great landlords, and only an insignificant fraction of it was in private ownership or belonged to the communities. The purchase of land for the purpose of colonisation was difficult, and it was almost impossible to carry it out in a legal way. As soon as the Zionists bought a settlement, voices of dissatisfaction made themselves heard among the natives, and the Arab Press accused some official or other of having taken a bribe, and complaints were sent to Constantinople. So long as the Jews did not disturb the state of affairs as it existed before the purchase and the natives worked for them, the Turkish authorities maintained peace As soon, however, as the Jews attempted to cultivate land by their own people a new outcry arose. The Turkish Government favoured the Jews and defended their interests against the native Arab population, whom they either hated or at least treated with contempt. They saw in the Jewish colonists their natural allies.

Under the Arab Government matters will be quite different. Even to-day, when the English are still in Palestine and the civil home government is not established, voices make themselves heard among the Arabs that this or that purchase was illegal, and that the land ought to be distributed among the native farmers who tilled it all their lives. The Arab population was roused by the demand of some groups of Jews that Palestine should be proclaimed a Jewish State, while, further, the Arab spirit is roused by the ceaseless cry of a Jewish weekly published in Jerusalem for the land of Israel to be restored to the Israelites.

Not only the educated classes but also the common Arab people look upon the Jews as dangerous interlopers and unite against them. The excited minds of the people cannot be calmed by official statements from leading Zionists or from the British Government to the effect that nobody designs the establishment in Palestine of an independent State, but only that the Jews desire to settle down there beside their neighbours as in their old homeland. The Arabs ask the English Government, and especially their own King Feysal, not to permit the Holy Land to be taken from the Moslems and Christians and be given to the Jews. Feysal, by his very origin and education, hates the Jews, and will never support them in anything; on the contrary, he would do all in his power to make their stay in Palestine if not impossible at least unpleasant. The English Government will with difficulty be able to carry out its promises. The speech of Mr. Balfour, in which the Jews were promised some sort of autonomy in Palestine, was translated into all Islamic languages and interpreted in a manner very unfavourable to the British Government. Political organisations agitating against England utilised this speech in their favour, pointing out that England wants to deprive the Moslems even of their third Holy City, Jerusalem, and that she wants to hand over to the Jews the tombs of the great prophets Ibrahim and Jacob, the city of Hebron. In numerous cities public prayers were offered to the prophets worshipped by Moslems, asking them to intercede to prevent the dishonouring of their Moslem land.

The writer's conclusion is: "So long as the Jewish colonists regard the colony as merely a provisional stopping place on the way to a more agreeable mode of life, all the efforts of the Zionists to set up in Palestine an autonomous Jewish home will be in vain."

The Trials of Armenia.

The special correspondent of the *Morning Post* at Erivan gives an interesting account of conversations that he held with two Armenian leaders—Major-General Araratov, the War Minister of the Armenian Republic, and General Nazarbekov, the Commander-in-Chief of the Armenian Army. Of the immediate prospects of the Republic General Araratov said:—

It's very difficult to be precise in trying to give an idea of the present condition of things military in Armenia. What I would say of our people is that it is one on which you can build. And that is more than can be said of some of our neighbours. But at present we are very tired. For three summers now we have been holding the Turkish frontier, to which before the war the Russians used to send regularly special Cossack and other forces to guard. The Kurds have already begun their attacks upon our villages; as soon as the snows are melted, we shall be up against it again.

We have called up everybody from the ages of twenty to twenty-five and even over; in fact, practically every one we can get hold of between twenty and thirty or thirty-two is in the army, unless they are busied on some other Government service. Desertion is rife. Of course it is; what can you expect? Still, I would say that our army has a minimum strength of about 20,000. Some of them are very good; others are not of much use.

The correspondent proceeds:—

I asked General Araratov what he thought of the neutralisation of Batum. He replied that it was a solution that satisfied Armenia. Had Batum, he added, been handed over to any one of the other nations of the Transcaucasus, this would have been the last straw for the Armenian Republic, which could not have survived. To another question the War Minister said that Armenia would regard Russia in the future with cautious if not unfriendly eyes.

"Finally," he said, "there is one thing that you must know Remember that I am speaking, not as Minister for War, but as an old soldier and an Armenian. You European Powers must keep a tight hold upon us Asiatics! Stand no nonsense!"

General Nazarbekov was not in an optimistic mood:—

Why hide it? he said. Our people are worn out. They have been fighting for seven years. They are now almost unclothed. They have no cartridges for the rifles they have and no rifles for their cartridges. Consequently desertion is fairly heavy. After all, how are we to know who are soldiers and who are not, when a great part of our army is not even in uniform? The only thing they have is boots. When I go through the streets here I don't know who are my soldiers until they salute. And some of them, of course, don't even salute.

Everybody knows what is going on in this part of the world. The Bolsheviks and the Turks are seeking to unite against the British in Persia and India, and one of the conditions of their agreement is that the Caucasus shall be left as it stood at the time of the Armistice. Well, they are already beginning to show their hand. The Turks at Erzerum will soon, we suppose, advance upon Kars. The Bolsheviks are also beginning to move.

MUSICAL NOTES.

England at the present time does not abound in notable tenors, but Mr. John Coates, who gave a love-song recital in English and French at the Queen's Hall on May 31, is in that small class whose fame is deservedly known outside this country. Mr. Coates is both a beautiful and a great singer—qualities which are by no means always found together; and if or when he errs it is in a matter of taste and of nothing else. For this recital he chose a most delightful programme, which consisted (excluding a most generous number of encores) of eight French and thirteen English songs. The whole road of passion, from fickleness to faithfulness, from sorrow to joy, from disappointment to achievement, was trodden by this fine singer, and of each mood he was a complete master. Most of the songs he sang were well known, but there was scarcely a phrase upon which he did not throw a fresh light. He had the remarkable ability wholly to steep his audience (which, by the way, was small, tolerably discerning, and exceedingly enthusiastic) in the atmosphere he created. This faculty was, of course, quite independent of any merely technical accomplishments, such as his excellent diction, his superb phrasing, and so on: for it was that indefinable but absolutely unfailing something which demarks the artist from the singer. One did not always agree with his interpretations, but the least one ever did was to respect them. There were a few songs, such as Duparc's "Le Manoir de Rosemonde," or Gretchaninow's "Triste est le steppe," which, although we know them by heart, came from Mr. Coates with the freshening stab that all pure art brings: I do not think they could possibly be sung with more sincerity and conviction. In this recital there was no song that was not both music and literature (with the possible, but uncertain, exception of M. G. Davidson's "In Fountain Court" and Gerrard Williams' "Love Outwitted"), and it was where the setting and the words were equal that Mr. Coates' greatest triumphs lay. Where the setting predominated, as in Purcell's "What Shall I Do," he indulged in liberties, especially in the matter of *portamento*, a habit that most quickly becomes tiresome. Purcell sung sophisticatedly is an abomination; and though Mr. Coates did not do this, his Purcell made us think of what went before and long for what was coming afterwards. It is quite worth noting that as a final encore he was sufficiently strange, homely, and contented enough to give Balfe's "Come Into the Garden, Maud." For myself, I thought it an unnecessary resuscitation, but Mr. Coates can be forgiven any mortal (or even dead) thing.

Which is the best choir in the South of England is a question upon which much discussion rages and experts alone can decide. But the Philharmonic Choir, which was responsible for some very fine music at the Queen's Hall on June 2, has strong claims. For one thing, it chooses works much more difficult to sing than those with which most choirs are content; for there are few bodies which would venture in one evening upon Gustav Holst's "The Hymn of Jesus," "The Song of the High Hills" of Delius, and Beethoven's Ninth Symphony. To remark minor faults in the first two of these would be unfair: the music is so strange and so lovely that one is full of nothing but gratitude to the choir for bringing them before the public at all. "The Hymn of Jesus," which is written for two choruses, semi-chorus, orchestra, pianoforte, and organ, is the hymn which, according to Gnostic tradition, the Lord sang in secret to the Holy Apostles. The composer conducted his work, and it was most noble and moving. The presentation did not appear to be so good as the work itself, largely owing to the fact that the composition is made up of elements both too old and too new to be easily sung. There was the additional difficulty (and it was not always overcome) of fitting in with a large orchestra. But the rich antiphonics, some winding "Amens" of the semi-chorus, and a most satisfying *ostinato* in the orchestra created a deep and indeed unforgettable impression. Few other English, or foreign, composers are capable of such stuff as this.

"The Song of the High Hills," which is as individual as the rest of the works of Delius, is conceived in a mood very different from that which inspired "The Hymn of Jesus." The sublimity of Delius is utterly different from the exaltation of Holst; and whereas the appeal that Holst makes is religious in the deepest and least commonly understood sense, Delius attracts all but those nice, rare minds which are unmoved by the sublime. His music here is of quite extraordinary beauty; it is of sheer, ethereal, almost heavenly loveliness. For the choir there are no words, merely vowel sounds; but its work is amazingly important to the whole. That there is a meaning in this is certain, but the desirability of apprehending it is by no means certain; for the whole composition is suffused with that rare ecstasy which if analysed turns out to be at the worst madness and at the best illusion. It would seem that Delius writes as we listen—because neither can help it. His work, conducted by Mr. Albert Coates, was performed most beautifully, and it was the triumph of the evening. In the Choral Symphony the weakest feature was the part-singing of the soloists, Miss Carrie Tubb, Miss Margaret Balfour, Mr. Webster Millar, and Mr. Cecil Canning. It was a great pity that what should have been the best was the worst, but it was obvious that the soloists had not sufficiently rehearsed together. When singing alone Mr. Fanning, an American baritone, was very good, his lack of affectation being very pleasing. As a whole the Symphony was hurried, but in places both the singing of the choir and the playing of the orchestra were extremely good. Mr. Coates showed that he can conduct Beethoven when he likes, but the lateness of the hour appeared to cause him to play this Symphony rather as he liked. However, it was a wonderful evening, for which he was as much as anyone responsible.

I cannot even guess how long the present vogue of Scriabin will endure—I hope for ever, but that is most improbable. However, there were no signs at Miss Lilias Mackinnon's recital of Scriabin at the Queen's Hall on June 4 that there is any slackening of interest in this Russian composer. But it appeared to me that the audience was most enthusiastic in the pieces (chiefly studies) which most resembled Chopin, and that where Scriabin was merely himself a puzzled politeness pervaded the hall. Encores were demanded of the G flat major Prelude in Op. 16, and of the B major and A major studies in Op. 8—pieces which are undeniably beautiful, but which could not have been even thought of had Chopin never lived. However, there is an increasing number of artists both courageous enough and capable enough to play the later works of Scriabin, and when people know these works as well as they know the early ones, they will perceive that Scriabin's reliance on Chopin is no greater than Beethoven's reliance on Haydn, and that he is one of the most vital and original personalities in all music. In this task of education Miss Mackinnon is leading the way in this country (i.e., for Scriabin's pianoforte works: of Mr. Albert Coates' love for Scriabin's orchestral music this is not the place to speak), and she certainly is most fitted for the position. She is playing more beautifully now than ever. In her first recitals an unusual insight into the subtleties of Scriabin was at once noticeable, but there was a slight hardness in expression. At her last recital she showed that she has altered all this, and her playing contained real poetry. She is not a wonderful pianist, but she is a very fine artist indeed. It is, therefore, in no sense of ingratitude that one points out a few minor disagreements with her interpretations, but she seemed to me to expose unduly the melody from its thick harmonic shroud, and in the diabolical (are there two sources of inspiration?) places of things like "Poème Nocturne" (Op. 61) or the Ninth Sonata, she steeped herself too deeply in the pessimism of the music. One can treat Scriabin's mystical pessimism as one treats Thomas Hardy's hopeless pessimism; as a reality it has no value, but as an artistic expression it is of the highest worth. Miss Mackinnon appeared too much to believe in the evil of the music she was playing, and the gaieties and whimsicalities were illumined rather by the light of the moon than by that of the sun. But in spite of tendencies that can only be called crepuscular, Miss Mackinnon gets as near to the heart (or soul, as I ought, in deference to the Theosophists who worship him, to say) of Scriabin as anyone I have heard. Yet one can, without disrespect, suggest that the middle movement of the Gothic sonata is too good a thing to be played, when she is tired and a little careless, as a final encore: a much smaller thing would have done.

ANDANTE.

FUTURE OF PALESTINE
under British Mandate.
A MEETING
WILL BE HELD
in the GREAT HALL at the
CHURCH HOUSE, WESTMINSTER
(entrance Gt. Smith Street).
On TUESDAY, JUNE 15th (5.30-6.30 p.m.).
Speakers:
The BISHOP in JERUSALEM.
GENERAL SIR PHILIP CHETWODE, Bart., K.C.B., K.C.M.G., D.S.O. (late G.O.C. 20th Corps in Palestine).

NEAR EAST BOOKSHELF.

I.—"DAVID URQUHART: SOME CHAPTERS IN THE LIFE OF A VICTORIAN KNIGHT-ERRANT OF JUSTICE AND LIBERTY." By Gertrude Robinson. (Oxford: Basil Blackwell. 25s. net.)

II.—"THE SPIRITUAL REBIRTH OF EUROPE." By the Right Reverend Nicholai Velimirovitch. (London: The Faith Press. 1s.)

I.—AN ADVOCATE OF INTERNATIONAL JUSTICE.

Miss Robinson does not pretend to give us a Life of David Urquhart—she says so in her opening sentence; and it is further apparent from the sub-title of the book and from the headings of its three parts, which are "The Knight," "How he fought for Justice in England," and "How he went to Rome to bring Justice down from Heaven," that she is definitely working out her impression of him as a modern St. George who spent his life in warfare against the Dragon of injustice, brought about by lawlessness, and that her purpose is to show us the different phases of that life-long struggle.

She is fervent in her desire to show us Urquhart's determination to seek out the truth, to disinter it from the mass of words and generalities under which it is so easily buried. He believed, we are told, that "a man to be right must first cast aside the self he received from his age, and must set his true self to work at the acquisition of knowledge and self-discipline, striving all the time against allowing himself to be infected by the modern spirit and public opinion; when he was himself instructed he must teach others."

To him that secret diplomacy and setting aside of law, which brought about unjust wars, were represented in their worst form by Russia, and in his own country by Palmerston, whose foreign policy—as with everything else that he considered evil—he attributed to Russia's influence.

The good for which he strove seemed, on the other hand, to take tangible form in that mode of life which he had learnt to love and respect in Turkey and the Near East generally—a life which seemed to him to rest on the foundations of courtesy and mutual respect and true, as opposed to apparent, liberty—and which found a counterpart in life under the institutions of mediæval England. David Urquhart gained his intimate knowledge of the Near East at a very early age; when he was twenty-six the singularity of this knowledge led to his being sent to Turkey on a secret mission by Sir Stratford Canning. And when, before he was thirty, he was made Secretary to the Embassy at Constantinople, "Daoud Bey," "with his extraordinary knowledge, his private friendship for the Sultan, his great influence in the Turkish Government, stood forth the most conspicuous figure in Constantinople." Probably the position was too unusual to make an ordinary diplomatic career possible—at any rate, for various reasons, his connection with the Diplomatic Service came to an abrupt end when he was recalled in 1837.

Of the next stage in Urquhart's life—his propaganda work in England and his formation of the Foreign Affairs Committees amongst working men—Miss Robinson writes with feeling and enthusiasm. She is eager to prove that what her hero sought was the great ultimate good of his country and the whole world, not a mere opposition to a Government whose foreign policy he so hated. He taught indefatigably that it is in the power of each individual citizen to save his country, and that for this it is necessary to gain real knowledge of the country and its concerns, and to strive to abolish secrecy in international transactions. It is a stirring and vivid picture that she draws for us of Urquhart's devoted followers, nearly all of whom came from the worst-paid sections of the working classes, and of their magnificent efforts to live up to the almost superhuman standard set for them by their leader. Certainly nothing in the book convinces us more of the spark of true greatness that was in Urquhart than the touching tribute written after his death by one of his disciples and given in the last chapter.

After 1864 Urquhart was obliged, on account of his health, to live abroad, and made his home in the mountains of Savoy. Here he continued his study of International Law, and came in contact with many eminent French Catholics. It seems that gradually the Catholic Church came to stand in his mind for the embodiment of those principles of law and order for which he had always fought, and, as she had never repudiated her right to interfere in affairs of State—the Pope seemed to be the one man who had it in his power to enforce those principles. Fired with enthusiasm, he went to Rome at the time of the Vatican Council to petition Pius IX. to proclaim the ancient Canon Law of the Church as a means of restoring law and justice amongst the nations.

It is obvious that to his biographer this is the culminating point of the narrative, and the note of triumph over the fact that this champion of liberty and truth should have seen in the Head of the Roman Catholic Church the only hope left for the world's peace is unmistakable. It is accentuated by an undercurrent of regret that Urquhart did not see his way to joining the Church of Rome. There is an interesting account of Urquhart's busy life in Rome, before the long-drawn-out delays of the Council were smothered in the outbreak of the Franco-Prussian War, and he saw all his hopes frustrated. His last attempt—an endeavour to establish in France a National Tribunal "without whose sanction no war shall be declared and no treaty ratified"—was also doomed to failure.

We feel that in an account of Urquhart's life we should have liked to hear more of his doings in the Near East, of which his knowledge was so extensive and on which his writings are of such real value: more of the part that he played as the champion of the Circassians against the aggression of Russia, when he so gained the love and confidence of the people that many years afterwards they still trusted that Daoud Bey would be their saviour. For this we would willingly have sacrificed some of the many details of Urquhart's activities in Rome.

There is an introduction to the book by Mr. F. F. Urquhart, Fellow of Balliol College. The Appendices are interesting and to the point, particularly one which gives details of a Land Scheme which was successfully worked by one of Urquhart's followers. Miss Robinson has certainly achieved her purpose, and has drawn an inspiring portrait of a man whose life was given unsparingly for the attainment of a very great ideal.

II.—A GREAT SLAV THINKER.

In this small volume are to be found a lecture delivered in King's College, London, two sermons, one of which was preached in St. Paul's Cathedral, and an essay contributed to the *New Europe*. By far the most important of these is the lecture, from the subject of which the book takes its title. Herein the Bishop of Zica analyses with remarkable acumen the prospects of European civilisation. His thesis, which he maintains with striking examples, is that Europe, having put aside the Christian religion as the centre of her civilisation is, if she persists in her present course, doomed. His words in illustration of this statement are profound and convincing. On the question of Russia, the issue of the struggle in which he says will be the issue for Europe, we do not see eye-to-eye with him; but in all his other points he appears to be perfectly sound. His conclusion is worthy of being pondered:—

> And yet, if Europe's fate is not definitely sealed in Heaven, because of Europe's—not crimes, but criminality, i.e., criminal mentality—there is still a gleam of hope for Europe's salvation at the eleventh hour. And this gleam of hope could be justified only by possible signs of the Christian religion being brought back to its central position in the life of European humanity. And this I should call the Spiritual Rebirth of Europe.

Bishop Velimirovitch has the advantage of English theologians and thinkers in the universality of his outlook, but in addition to this he has a rare intensity of vision. This lecture, indeed, is one of the finest addresses given in England by a foreign philosopher—for it is no less than a religious philosopher that he proves himself to be.

The other things in the book consist of "The Principle of the Eastern Orthodox Church," which will not be forgotten at the forthcoming Lambeth Conference, a short and impassioned, rather than reasoned, plea for "The Redemption of St. Sophia," and "Freedom's Reality and Delusions," which is an extension of the thesis contained in the main lecture.

To all those interested in the momentous questions of the future of Europe, the union of Christendom, and like matters, we commend this little book. For in it are some of the acutest criticisms of modern times, made by one who, by virtue of his position and calling, is especially qualified to speak with authority.

GREEK (Modern) SELF-TAUGHT
(In Greek and Roman Characters.)
By NICOLAOS ANASTASSIOU,
Bachelier Diplômé du Collège Grec de Halki.

PERSONAL AND GENERAL.

CALENDAR OF THE WEEK.

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish Dates.

Gregorian (New Style).	Julian (Old Style).	—	Moslem.	Jewish.
1920. June	1920. May.		1338. Ramadan.	5680. Sivan.
10	28	Thursday	23	24
11	29	Friday	24	25
12	30	Saturday	25	26
13	31	Sunday	26	27
	June.			
14	1	Monday	27	28
15	2	Tuesday	28	29
16	3	Wednesday	29	30

The Yuvaraj of Mysore has arrived from India.

Prince Djelaleddin has arrived at the Berkeley Hotel from Cairo.

The Sirdar of Kapurthala has arrived at Claridge's Hotel from Paris.

Lord Oranmore and Browne has left 12, Cavendish Place, for Dublin.

A. Coopers-Hill Dinner will be held at the Café Monico, Piccadilly Circus, on June 22.

General Deedes will accompany Mr. Herbert Samuel to Palestine as his First Assistant.

The Maharaja of Alwar is staying at the Hyde Park Hotel.

Colonel Sir John Norton-Griffiths, M.P., and Lady Norton-Griffiths have arrived at Claridge's Hotel from their house in Surrey.

It is stated that the Right Rev. Bishop Gwynne will sail from Alexandria for England on June 24 to attend the Lambeth Conference.

Mr. Geoffrey Clarke, Director-General of Posts and Telegraphs, will represent India at the Postal Congress at Madrid in October.

Princess Bibesco, the wife of Prince Bibesco, the Roumanian Chargé d'Affaires, gave birth to a daughter on June 5 at their residence in Grosvenor Road.

The 40th annual Burma Dinner will be held at Princes' Galleries, Piccadilly, on Thursday, the 17th inst., at 7 for 7.30 p.m. Mr. Arthur W. Bibby will preside.

Mr. Theodore D. Mosconas, of the Dodecanesian Delegation in Manchester, has been elected member of the Manchester Egyptian and Oriental Society, University of Manchester.

Colonel the Earl of Stradbroke and the Countess of Stradbroke are remaining in Egypt until the end of June. They intend to be at 23, Pont Street for the month of July with their family.

Our Sofia Correspondent writes (May 22) :—Sir Herbert Dering, who has been on leave of absence in England, returned here with his wife last Tuesday, and resumed his office in the British Legation. Mr. R. Leslie Craigie left with his wife last Wednesday for Berne.

On June 8 a joint meeting of the Royal Asiatic Society and Central Asian Society was held at the School of Oriental Studies, Finsbury Circus, E.C.2. Sir Aurel Stein, K.C.I.E., delivered a lecture on "A Chinese Expedition Across the Paniers and Hindukush, A.D. 747," and the Right Hon. the Lord Reay presided.

As a result of the Sudan Civil Service Test examination in Arabic, the examiners placed the probationers in the following classes :—

Class I.—D. Newbold (Oriel, Oxford).

Class II.—J. M. Bruce-Gardyne (Balliol, Oxford); C. Empson* (Magdalene, Cambridge); C. W. Williams (Oriel, Oxford).

Class III.—G. B. Crole (University, Oxford); D. Kennedy-Cooke (Worcester, Oxford); A. S. Redfern (Trinity, Cambridge); A. C. Walker (Caius, Cambridge).

*Mesopotamian Service.

M. Nicolas Titulesco, formerly Finance Minister of Roumania, and now the principal delegate from his country to the Conference of Ambassadors in Paris, has been spending several days in London with the object of discussing with the British Government questions concerning the union of Bessarabia and Roumania.

In Convocation at Oxford University on June 1, the honorary degree of Doctor of Letters was conferred on Dr. Temistocle Zammit, C.M.G., Professor of Chemistry in the University of Malta and Curator of the Valetta Museum. In presenting him for the degree, the Public Orator, Dr. Godfrey, referred to his great services to the island of Malta both in the discovery of antiquities and in the detection of the local causes of fever.

Sir Arthur Crosfield, Bart., and Lady Crosfield, after a long stay in Greece, left Athens on May 30 for Venice *en route* to England. Two days previously they had entertained at luncheon on the yacht Narcissus (belonging to M. Embiricos) in Phaleron Bay, M. Venizelos and the members of his Cabinet. Later in the afternoon, with a still larger party on board, which included Lord and Lady Granville, an excursion was made to Sunium.

The Archbishop of Canterbury and the Council of the Archbishop's Mission to the Assyrian Christians are anxious that a meeting of the friends and supporters of the Mission should be held before the visit to England of Surma Khanum, sister of the late Patriarch, closes. Accordingly a meeting will be held at the Church House on June 14, at three o'clock, when the Archbishop of Canterbury will preside, and Surma Khanim and Dr. Wigram and others will speak.

Arrangements have been made with the Ministry of Education in Bucharest for the Rev. Dr. H. B. Gray, of Bury St. Edmunds, and formerly Headmaster of Bradfield College, to make an official educational mission to Roumania, more especially with a view to developing a system of education there on English Public Schools lines. Dr. Gray will leave for Eastern Europe when the journey is possible, having regard to the present railway strike in Roumania.

The arrangements for the Lambeth Conference of Bishops, which will open on July 5 and end on August 7, are now practically complete. The archbishops and bishops who are to be members of the Conference are arriving daily from all parts of the world. Up to the present the list of Indian Bishops is as follows:— Bishop Azariah of Dornakal, Bishop Westcott of Lucknow, Bishop Chatterton of Nagpur, Bishop Fyffe of Rangoon, and Bishop Waller of Tinnevelly.

It is understood that Lord Milner, Sir Henry McMahon, and others interested in Egypt and Palestine, will be present on the platform at the meeting of the Bishop in Jerusalem's Mission on June 15, at Church House, Westminster. The speakers will be the Bishop in Jerusalem and General Sir Philip Chetwode (late G.O.C., 20th Corps in Palestine). There will also be present Mr. G. K. Chesterton, who has lately paid a visit to Palestine and Jerusalem, and who, it is understood, is publishing a book on his experiences, and Mr. E. T. Richmond, whose excavations in the Temple area at Jerusalem since the Armistice have awakened so much interest.

In response to the request of the Greek Government, a service in memory of Dr. Ronald M. Burrows, Principal of King's College, was held on June 6 at the Greek Church in Moscow Road, Bayswater. The Great Archimandrite (Dr. Pagonis) officiated, assisted by two Archimandrites. The Archbishop of Cyprus and Bishop Ridgeway attended the service, and the congregation included the Greek Minister (representing the Greek Government) and the personnel of the Legation, M. Gennadius, Honorary Greek Minister, and Mme. Gennadius, the Minister for Yugoslavia, the Roumanian Chargé d'Affaires, M. Ivan Laichter (representing the Czecho-Slovak Legation), the Greek Consul-General and Miss Stavridi, and the Hon. W. Pember Reeves, together with a large number of prominent members of the Greek colony in London and many representatives of King's College and London University.

APPOINTMENTS WANTED.

THE Ladies' League (under Royal Patronage), 118, New Bond Street, successfully recommends Lady Secretaries, Chaperons, Housekeepers, Companions, Secretaries, Governesses, Nursery Governesses, Nurse Companions, Lady Nurses, etc.

Digitized by Google

APPOINTMENTS, ETC.

Dr. Mastny has been appointed Czecho-Slovak Minister in London.

The Government of India have sanctioned the appointment of Mr. A. E. Ryves, barrister-at-law, the Government Advocate, and Rai Gokul Prasad Bahadur, Advocate, to be additional Judges of the High Court at Allahabad for the next two years.

The King has been pleased to approve the appointment of Sir John Alexander Strachey Bucknill, K.C., Chief Justice in the Straits Settlements, to be a Puisne Judge of the Patna High Court in the vacancy caused by the death of the late Mr. Justice Atkinson.

OBITUARY.

A correspondent informs us of the death, which took place in Jersey on May 31, of Mrs. Florence Emily Tulloch, widow of Mr. E. W. Spencer Douglas. Mr. Douglas, who died a few years ago, was in the Irrigation Department of the United Provinces, India.

The death is announced, says the *Manchester Guardian*, from Madras of Professor Srinivasa Ramanujam, F.R.S., one of the most brilliant mathematicians of modern India, and the first Indian to be made a Fellow of the Royal Society. He was only thirty-two years of age. His extraordinary talent was discovered by English mathematicians eight years ago. A special scholarship to Cambridge was awarded him by the Madras University, and he entered Trinity College in 1914. He became an exhibitioner of the College in 1917. He was elected to a Fellowship of Trinity in 1918, the year of his being awarded the signal honour of the F.R.S.

NEWS IN BRIEF.

The National Congress will meet at Calcutta in August.

The King of the Hellenes has presented the town of Verdun with the Greek War Cross of the First Class.

The King's birthday was celebrated at Jerusalem, where the Governor received the chiefs of all communities.

The Paris-Athens aerial express is now making the journey thrice weekly. Owing to delays at Uskub and Belgrade the journey takes 105 hours.

Reports come from Tabriz that the platoon of Indian troops stationed at the disturbed centre has been withdrawn, and is rejoining headquarters at Kazvin.

A Constantinople telegram reports the arrival on May 30 of the Turkish delegates with the text of the Turkish peace terms and the memoranda of Tewfik Pasha on the subject.

A number of Turks have been arrested in connection with a Nationalist plot against the present Turkish Government, which was hatched at Angora, and worked out in detail at Brusa.

At a meeting in Alexandria of the citizens of Castellorizo residing in that city, in Cairo, Port Said, Ismailieh, and Suez, a protest was placed on record against the recent handing over of the island to Italy.

The War Office state that, in view of the present conditions obtaining in the Eastern theatres of war, no facilities can be given for visits to graves in Gallipoli, Syria, Palestine, and Mesopotamia.

General Silvestre, the Governor of Melilla, Morocco, has offered to the Spanish Minister of the Interior 6,000 Moors for agricultural work in Andalusia. They are prepared to work eleven hours a day for 4s. and a loaf of bread.

A number of medical men from Belgrade, sent to Berlin, Hamburg, and Vienna to study measures to combat tuberculosis, received such scant courtesy at the hands of the German authorities that they have been obliged to leave Germany.

The Palestine Exhibition, which is to be opened by the Bishop of London at the Central Hall, Westminster, to-day, and remain open for a month, will include numerous special features, such as new films of the Holy Land, costume lectures, collections of oil paintings, and models.

A notice has been published stating that wool and hair from the Sudan exported to foreign countries through Egypt, unless packed in sealed packages and consigned in transit, will be liable to disinfection by the Egyptian authorities before export from Egypt.

The mysterious theft of 60,000,000 Roumanian lei, which took place about a year ago at Spandau Citadel, has now been cleared up, four men who were then in the army and entrusted with the protection of the treasure having been arrested and confessed their guilt.

The Secretary of the European Association, a Calcutta message states, has cabled to the president in London pointing out that the Press, Parliament, and the general body of Europeans in India strongly uphold General Dyer and condemn the action of the Government of India and the Secretary of State.

It is officially announced that the King has been pleased to command that the "India General Service Medal, 1908," in silver, with clasp "Afghanistan, N.W. Frontier, 1919," shall be granted to the troops who took part in operations against Afghanistan in 1919. Officers and men already in possession of the medal will receive the clasp only.

WHERE TO STAY.

For the convenience of visitors from overseas "THE NEAR EAST" offers its services in booking rooms at hotels in the United Kingdom, on receipt of instructions preferably a week before the date of arrival. When instructions are telegraphed the message can be abbreviated as follows:—

"EASTAPROX, LONDON. TWENTIETH MATLOCK TWO

(The visitor's name and place of residence abroad to be added)."

which would indicate that two rooms were required at Matlock on the 20th of the month.

COAST-HUNGER IN THE NEAR EAST.

Switzerland is probably the only European country entitled to claim that she has never succumbed to the lure of the sea, and now that the territorial readjustments consequent on the war have increased the number of the inland States of the Continent from two to four, it is devoutly to be hoped that the spectacle of her happy and prosperous condition will not be lost on Austria and Hungary, and will console them for their present coastless condition. If they harbour any designs for getting to the sea they had much better abandon them forthwith, since the Allied Powers are little disposed to consider any modifications of the 1919 settlement at present. The same advice may be proffered to Bulgaria, sore at having been deprived of the second-rate ports on the Ægean which she possessed for a few years, and disposed to resent bitterly the handing over of Thrace to Greece, partly on racial grounds, but partly because she thinks it will have an adverse effect on her commercial future. We doubt whether she need be a prey to any such fears, being firmly persuaded that under the new order of things, many of the ports of Europe are likely to acquire something of an international character. The theory that the trade of a nation is necessarily restricted if it cannot find its outlet in a port within its own territories rests on no substantial basis of fact, and the prosperity of Switzerland alone suffices to dispose of it; but the tendency of trade routes to ignore political frontiers supplies an even better argument against it. Antwerp and Rotterdam will always in a sense be German ports, to the great content of the Belgian and Dutch peoples, and if the natural development of Salonika is not strangled by Greece the city is destined to be a Yugoslav and Bulgarian no less than a Greek port. In the past, we suspect, nations were cut off from the sea less frequently by international influences than by the narrow commercial rivalries of individual ports. Before the war it was common talk that the politicians at Athens—bent on the development of the Piræus—were little disposed to give Salonika a chance, and to-day people in Trieste are saying the same things about Venice, the pampered protégé of the politicians at Rome. If we are not careful we may soon be hearing of the starvation of Fiume in the interests of Trieste, and unless this kind of thing is sternly suppressed by the voice of Europe making itself heard through the League of Nations, the war will have been fought in vain. Our insular position has denied us all opportunities for interfering with the commercial development of our neighbours by obstructing their natural maritime outlets, but we are really the last people in the world to set up as judges in this matter, since in our own country we have allowed local jealousies to deprive many of our great industrial areas of the ports which would best have served their needs: Liverpool watches the growth of Southampton with mixed feelings; Bristol does not rejoice at the prospect of Plymouth coming to the fore; and it may be said that every port authority in the kingdom is as much concerned with obstructing the development of its rivals as with looking after its own business. Have we not recently set up a brand new Ministry of Transport largely with the object of checking this evil tendency?

In considering this question we cannot, of course, disregard international boundaries, and the Peace treaties all serve to remind us that we have not yet emerged from the era of strategic frontiers, but it is surely time that the people of Europe realised that the Continent consists of certain fairly well-defined economic areas which, even if not officially recognised and marked on the new maps, they cannot afford to ignore. The Austro-Hungarian Empire embodied one of these areas, and in Trieste and Fiume it possessed two ports admirably situated to serve the needs of all the provinces of the territories administered respectively from Vienna and Budapest. With the great highway of the Danube to supplement its railway system, the Empire was well provided with communications, but its coastline was confined to the Adriatic, and when with the acquisition of Bosnia and Herzogovina the expansion of the State began to take a southerly direction, Salonika became the goal of her statesmen. The fact that Serbia not only barred the way towards Salonika, but also harboured designs for acquiring it herself very largely explains the persistent hostility of Austria-Hungary towards Serbia before the war. If Russia had not come to the rescue of Serbia in 1914 it is doubtful whether France would have taken any measures to protect her, and in the state of public opinion in this country at the time no government would have run the risk of a war with the Central Powers on her behalf. But for the timely intervention of Russia, Serbia would have been overrun by the Austro-Hungarian armies, and within a few days' march of Salonika they would hardly have stopped at the Greek frontier. From the commercial point of view the instinct which drove the Dual Empire southward in the direction of Salonika was probably a sound one, and Yugoslavia might fairly claim that she is just as much cut off from the sea by the Greek possession of Salonika as she is by the Italian occupation of Fiume. The port of Salonika is the natural outlet for the trade of Yugoslavia in the South as Fiume is in the North, and if this summed up the functions of the two she would have a legitimate grievance in being denied possession of either of them. It may be argued that the question of the ownership of Salonika having been decided after the Balkan war, does not arise in connection with the present settlement, and this might be admitted if this matter of maritime outlets for inland territories could be disposed of by the delimitation of land frontiers; but this is far from being the case, and if we hope for a permanent European peace it behoves us to view the commercial problems of the Continent from an international standpoint, even if our ideas regarding the political future of its states are dominated by the principle of nationality.

From the standpoint of human progress half a dozen small states, each one surrounded by a Chinese Wall of customs houses, each one bent on strangling the commercial development of its neighbours, make up a poor substitute for a great Empire constituting a single homogeneous economic unit. It will only be when Yugoslavia recognizes that Fiume was intended by nature to serve the needs of Hungary as well as her own, and that Greece recognizes that Yugoslavia and Bulgaria have an equal economic claim to her own for the use of Salonika, that these obstacles standing in the way of progress in South-Eastern Europe will be cleared away. The thing can be done if only all the States concerned will loyally co-operate for the common good. There is no need to introduce the League of Nations into the business—ports under international control rarely prosper—and the particular national flag flying over a port serving the needs of several nations is really a matter of no great moment. What is required is that the spirit as well as the letter of the last great European settlement be observed by all the parties concerned, and that with one accord they all agree to cease from obstructing one another's progress. Given the adequate development of the existing ports in the Near East and the improvement of the railways serving them, the ownership of coast lines becomes a matter of secondary importance to the nations concerned. A little intelligent co-operation fortified by mutual goodwill and forbearance would go far to solve a problem needlessly complicated in the past by racial antagonism.

ALBANIA.

By Lieut.-Col. the Hon. A. H. Herbert, M.P.

To supply a student of THE NEAR EAST with new facts on any of the numerous problems in which it has taken an interest is not easy. I shall therefore confine myself in this article to recapitulating briefly recent events concerning Albania.

In this summary my aim is to be impartial, but in stating the case of a gallant people that has suffered cruelly, complete neutrality on the part of a friend is neither possible nor desirable.

The Turkish Revolution occurred in 1908. It began in Macedonia, at Resna, by the insurrection of 200 Albanians under Niazi Bey.. The Albanians, in growing force, proceeded to occupy Uskub (Skople), and from that town they treated with Yildiz. The revolution was successful, but the Young Turk policy of Ottomanisation failed first of all in Albania. The Albanians were determined to conduct their national affairs in their own way. They were prepared to fight for their land, their language, their schools. In 1910 they attacked the Turks fiercely, and though they were ill-equipped, unorganised, and without modern arms, they fought for three years until they could negotiate advantageously. In 1912 I saw Sienitza occupied by the Albanians. The Young Turk Governor of Berane, a Serbian, Popovitch, was killed passing through, and farther south, at Mitrovitza, the guerilla forces of Issa Boletin faced the Turkish troops, under Torgut Shevket, on a footing of equality. When I passed through, I was the guest of both the Turkish General and the Albanian leader.

Then came the Balkan war. Albania was invaded by the Serbs and Montenegrins in the north, and by the Greeks in the south. These invaders were at first looked on as liberators by the Albanians. Issa Boletin, the Moslem, had a Serbian priest as his comrade in arms. Later, when it became apparent that the Balkan States were actuated by motives that had nothing to do with other peoples' liberty, and that they desired to possess the country, the Albanians turned and fought, though by that time, after their struggle with the Turks, their resources were almost exhausted. The Balkan war ended, and the Ambassadors' Conference took place in London. In this Conference Lord Grey of Fallodon declared that the Albanians had the same right to a national existence as any other Balkan people who had fought for its land and for its independence. A mixed Commission went to Albania to delimit the frontiers. This Commission was composed of French, Russians, British, Italians, Austrians, and Germans.

Here it is well to speak frankly; for if peace is ever to be achieved in Europe, it is essential to recognise the compelling ambitions of the various European states, whether they are our friends or our enemies, for it is upon interests that alliances are built. The Austrians were desirous of a great Albania; the Germans supported the Austrian policy, except in the south, where dynastic reasons made them anxious to see Greece gain territory. The British, having no interest but peace to serve, desired to see the Albanians masters in their own house, and the frontiers settled upon genuine ethnological lines. The Italians largely supported this view. The Russians, answering the call of the blood, worked strenuously to give all that was possible to the Slavs. The French policy, that was, unfortunately, not aloof from French finance, followed the Russian policy, for the French favoured a settlement that would give their friends and customers, the Greeks and the Serbs, great possessions.

A long wrangle ensued.

There had been much destruction in the north, and the Greeks had advanced and burnt many towns and villages in the south. The *régime* of the Prince of Wied, who had been nominated as ruler by the Great Powers, started under impossible auspices. Albania was a State that was mutilated at its birth. The Albanians were left their unproductive mountains and their fastnesses, but their market towns were taken from them. They lost Ipek, Djakova, Prisren, and Dibra.

The contention of the Greeks is that southern Albania is inhabited by a Greek population. They claim the towns of Tepeleni and Liaskoviki, and many villages besides these towns, that are ruins which the traveller can see to-day upon the high road between Valona and Salonika. The fact that these towns were burnt by the Greeks is a confutation of this Greek claim, for though the Balkans have customs that are strange to Europe, they are not sufficiently eccentric to burn their own people's property.

Intrigues of the Powers continued until the Great War broke out, when Prince William of Wied returned to Germany. Albania was then occupied by the Italians in the south and by the Austrians in the north.

On April 25, 1915, the Pact of London was signed. This Pact gave the north of Albania to the Slavs, the south of Albania to the Greeks, Valona to the Italians, and central Albania to Essad Pasha. Essad Pasha is an unlovely figure that has stepped out of the Middle Ages. His patriotism is to his purse. It was he who, after the violent death of a gallant soldier, Hassan Riza Pasha, outside Essad Pasha's house, surrendered Skutari to the Montenegrins. It was he, in co-operation with the envoy of a European State, who helped to destroy the Wied *régime*, and it was he who was the only Albanian beneficiary of the Pact of London. He looked to his county, and not to his country. The Pact of London suited Essad Pasha very well, for it left him a nearly homogeneous Mohammedan population round Tirana and Durazzo. To the north of his county there would be continual trouble, where the Albanian Catholics and Mohammedans would be fighting the Slavs; the south would be in a state of perennial disturbance, owing to the hatred of the Albanians, both Orthodox and Mohammedan, for the Greeks.

The tide of war ebbed and flowed, and at the end of 1915 it ebbed with a vengeance for the Allies. The Serbians retreated across the Albanian passes, to be transported from San Giovanni di Medua to Corfu. It is to the credit of the Albanians—and Essad Pasha, whatever his motives may have been, can claim a good mark—that during this retreat the Serbs were not attacked; but the presence of General Phillips and of Admiral Troubridge, who accompanied the Serbs, reminded the Albanians of Sir Edward Grey's promise, and contributed to the safety of the Serb army.

Meanwhile, the Italians did what was possible for the people in the south. There was much starvation, and many ruined villages, and the Albanians were frateful for this help. General Ferrero, a man of the highest principles, and the most generous heart, won the people by his sympathy and his care for the land. Work was begun upon model farms outside Valona, and a fine road built from Valona to Santiquaranta, and from Valona across the high ranges of the Acroceraunian mountains.

A declaration of General Ferrero confirmed the faith of the people in their national future, and Baron Sonnino stated that Italian policy favoured the independence of Albania. But General Ferrero left, and little more was said about Albanian independence. The

relations between the Albanian populace and the Italians grew less friendly, as the suspicions of the former were aroused.

After the Armistice, the Albanians, at a national gathering, elected a Government, and a Delegation went to Paris for the Peace Conference. At the head of this Delegation was the Catholic, Monseigneur Bumci, whilst colleagues of his were the well-known Orthodox physician Dr. Tourtoulis and Mehmed Bey Konitza, a Mohammedan, who, during the war, had represented his country in London.

In the Peace Conference, the Albanians were at the disadvantage of not having a Press or wealth to back their claims. It was certainly a case of "from him who hath not shall be taken." On December 9, 1919, an agreement was concluded, to which President Wilson, Mr. Lloyd George, and M. Clemenceau adhered. This agreement gave the mandate for Albania to the Italians, but it was a mandate in which there were reservations and safeguards. The League of Nations was invoked, and though the eloquence of M. Venizelos had won from the Great Four the mainly Mohammedan town of Argyrocastro, Albania was not dismembered. In the January of this year, however, Mr. Lloyd George and the French Prime Minister proposed the partition of Albania; Scutari and the north to go to the Serbs, Valona and the centre to the Italians, and the south to Greece—in fact, the Pact of London again, but made in peace and not in war time, and made, not before, but after President Wilson's Fourteen Points, and after Mr. Lloyd George's fervent declarations about small nationalities. On President Wilson's objecting to this cynical arrangement, the Prime Ministers of France and England answered in an aggrieved note that their plan would have satisfied all parties, which, if the Albanians were excepted, was the truth, since no one objects to being enriched at the expense of another. The Yugoslavs, however, unexpectedly refused this offer of Skutari, declaring that Albanian nationality and rights should be respected. Thus an edifying spectacle was presented to the world of the Balkans admonishing the Great Powers on a question of political justice.

The Yugoslav Foreign Minister, Dr. Trumbitch, was absent from the Conference of San Remo, and the Albanian question was, consequently, not discussed. The position at the present moment, then, is this: The Pact of London, the promise to partition Albania as Poland was once partitioned, with its certainty of future trouble to all concerned and to many who had no part in it, has been put on paper. The decision taken on December 9, 1919, which maintained the principle of Albanian nationality, while giving a restricted mandate over the country to Italy, under the League of Nations, has also been agreed to by England, France, and America. The Albanians, meanwhile, as far as circumstances allow, have done what they could to work out their own salvation. Their Government has the support of the people, but until this Government is recognised, the country remains in danger. The Yugoslavs are in force to the north, the Greeks in the south, and the Italians occupy the coast towns. Albania can only communicate with the outside world through the medium of interested neighbours.

It is at this critical moment that General Phillips and Mr. Morton Eden have been withdrawn from Albania, and that Great Britain is left without a representative from Patras to Yugoslavia.*

It is safe to say that Albania cannot be politically extinguished; if the victorious Powers were to forget their promises of freedom, which have made the nationalism of small countries burn with a fiercer flame, the neighbouring Balkan States, though enlarged, have been weakened, and can hardly partition the country. Trouble is preparing for them within their own frontiers, and it is not to their interest to swallow what they cannot digest. There is no race that loves its country more passionately than the Albanians, and the thousands of exiled Albanians who mean to return to Albania will bring new knowledge with them from Canada and the United States of America.

* A British Representative is shortly to proceed to Albania.

The arguments in favour of an independent Albania which must weigh with an Englishman are these:—

(1) Albanian independence was solemnly promised, before the war, and this promise was endorsed by a British statesman.

(2) Without the independence and integrity of Albania, peace cannot be maintained in the Balkans, and peace is the main British interest.

(3) Justice is the raw material of peace, and any decision which denies to Albania her independence and her integrity is an injustice, that may be perpetrated, but which cannot be honourably defended.

THE BIRTHDAY HONOURS.

The following names, taken from an extensive list of Birthday Honours, will be of interest to our readers:—

BARONET: Wingate, General Sir Reginald, G.C.B., G.C.V.O., G.B.E., K.C.M.G., D.S.O. For long and distinguished public services.

KNIGHTS: Crum, Walter Erskine, O.B.E., Partner of Messrs. Graham and Company, Calcutta, Bengal. Hayden, Henry Hubert, C.S.I., C.I.E., D.Sc., Director, Geological Survey of India. Ward, Thomas Robert John, C.I.E., M.V.O., Inspector-General of Irrigation, Punjab.

C.B. (MILITARY DIVISION): Richardson, Major-General Charles William Grant, C.S.I., Deputy Quartermaster-General, India. Moberley, Colonel (temporary Brigadier-General), Frederick James, C.S.I., D.S.O., Director of Military Operations, India.

K.C.B. (CIVIL DIVISION): Hurst, Cecil James Barrington, C.B., K.C., Legal Adviser to the Foreign Office.

C.B. (CIVIL DIVISION): Norman, Herman Cameron, C.S.I., C.B.E., British Minister, Teheran.

K.C.S.I.: Barnes, Sir George Stapylton, K.C.B., Ordinary Member of the Governor-General's Executive Council.

C.S.I.: Howley, William John Joseph, Chief Engineer, Public Works Department, Madras. Maffey, John Loader, C.I.E., Indian Civil Service, Chairman of the Corporation of Calcutta, Bengal. Payne, Charles Frederick, Indian Civil Service, Chairman of the Corporation of Calcutta, Bengal. Rieu, Jean Louis, Indian Civil Service, Bombay. Standen, Bertram Prior, C.I.E., Indian Civil Service, Commissioner, Central Provinces and Berar.

C.I.E.: Allen, Charles Turner, Cooper, Allen and Co., Cawnpore, United Provinces.

K.C.M.G.: Archer, Geoffrey Francis, C.M.G., Governor and Commander-in-Chief, Somaliland Protectorate.

C.M.G.: Vansittart, Robert Gilbert, M.V.O., Counsellor of Embassy in His Majesty's Diplomatic Service. Rattigan, William Frank Arthur, First Secretary in His Majesty's Diplomatic Service. Talbot, Commander Gerald, R.N.V.R., O.B.E., Naval Attaché to His Majesty's Legation at Athens. Summers, Colonel Gerald Henry, Deputy Commissioner and Officer Commanding the Troops, Somaliland Protectorate.

IMPERIAL SERVICE ORDER: Mackay, William James, Chief Collector of Customs, Cyprus.

FOREIGN DECORATIONS.

The following are among the decorations and medals awarded by the Allied Powers at various dates to the British Forces for distinguished services rendered during the course of the campaign: the King has given unrestricted permission in all cases to wear the decorations and medals in question:—

CONFERRED BY THE KING OF THE HELLENES.

ORDER OF THE REDEEMER.

Chevalier.

Temp. Lieut. (temp. Capt.) C. A. Maguire, R. Irish Fus.; Temp. Lieut. S. W. Simmonds, R. Lanc. R.

MEDAL FOR MILITARY MERIT.

3rd Class.

Brev. Maj. (actg. Maj.) G. S. W. Rushbridger, W. Rid. R.

CONFERRED BY THE KING OF ROUMANIA.

ORDER OF THE STAR OF ROUMANIA (WITH SWORDS).

Officer.

Bt. Lt.-Col. (temp. Lt.-Col.) W. H. Gribbon, C.M.G., C.B.E., R. Lanc. R.; Maj. (temp. Lt.-Col.) R. N. W. Larking, C.B.E., S. Gds. (Res. of Off.); Capt. (Hon. Maj.) C. R. E. Radclyffe, 1st Life Gds. (Res. of Off.).

Chevalier.

Lt. (temp. Capt.) E. Ainger, 3rd Hrs.; Lt. C. F. S. Chichester, 4th Hrs.; Capt. D. C. L. Fitzwilliams, C.M.G., M.D., F.R.C.S., R.A.M.C. (T.F.); Lt. J. Foley, R. Innis. Fus. (Spec. Res.); Lt. F. M. Luttman-Johnson, 19th Hrs. (Spec. Res.).

ORDER OF THE CROWN OF ROUMANIA (WITH SWORDS).—Chevalier. Temp. Lt. T. Friar, York. L.I.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

The brief announcement of the sudden rise of the Nile at Roseires of more than two metres means for Egyptian cultivators a relief not one whit less than that felt in India when the eagerly awaited news comes of the satisfactory opening of the Monsoon. The rise has enabled the authorities to increase the discharge at Aswan to last year's volume, and this year's crop may be said to be practically assured. Thus Egypt may look forward to yet another year of prosperity.

***

I have just received particulars of an important new company which has been formed in Belgrade by the heads of the leading industrial enterprises in Serbia, with the object of assisting businesses, which, as a result of the war, have lost touch with foreign manufacturers and exporters, to purchase machinery and other material necessary for the purposes of reconstruction. At present the company, whose secretary is Dr. Preditch, secretary of the Belgrade Chamber of Industry, will limit its operations to Serbia, but it is proposed eventually to extend its activities to the whole of Yugoslavia. I would suggest that British manufacturers and exporters interested in this market would be advised to send copies of their catalogues to this company (addressed to the Secretary, Industrijska Nabavljacka Zadruga, Industrijska Komara, Belgrade, Serbia), and also, if represented in Yugoslavia, to instruct their agents to enter into communication with it.

***

In the first of a series of articles on "The Egyptian Cotton Position," which will be found on page 837, Professor Todd emphasises the extremely unfavourable outlook with regard to the American cotton crop. The comparative failure of this source of supply will mean, among other things, that there will be increased competition for Egyptian cotton, considerable quantities of which have been going to America during the past year. In the circumstances the outlook for Lancashire would appear unpromising, to say the least of it, and it becomes more and more evident that the most determined efforts to increase cotton cultivation within the Empire will be necessary if within a measurable space of time the British cotton industry is not to go short of supplies.

***

A very notable improvement is reported in the Yugoslav exchange, which now stands at about 62 dinars to the pound sterling. As in the case of other Near Eastern countries, the high level of the Yugoslav exchange has been an unreal index of the true position. It has been high for the simple reason that an agricultural country which has been a battle-ground and in enemy occupation for several years must naturally for some time be unable to establish credits abroad by means of exports. But a country dependent on agriculture for its wealth may be looked to to make a speedy recovery given favourable conditions and good organisation, as has been the case here. Our Belgrade correspondent emphasises the extremely satisfactory crop prospects, and speaks of the probability of a "bumper" harvest. If this expectation is realised, it will mean that the dinar will advance to very much nearer parity than it is to-day, and it has already made a very notable move in that direction.

***

The importance of this development from the commercial point of view scarcely needs emphasis. The resumption of trade with Yugoslavia as with other Near Eastern countries has been seriously hampered by the adverse movements of the exchanges. With the improvement of the dinar the position is radically altered, and the way is becoming clear for the restoration of commerce. And this brings me to the point which I wish to impress on British traders. Some of them, I have only too good reason to know, have taken up the attitude that trade with certain Near Eastern countries is impossible at the present time because of the exchanges; and, therefore, they refuse to interest themselves in these markets. It is the most short-sighted policy imaginable; for, as I have explained above—I might almost add for the *n*th time—the exchanges do not represent the real position, and in due course there will be the same rapid recovery in all these cases that is now taking place in regard to the dinar. I hope that the lesson of the dinar will be taken to heart, and that we shall hear no more of counsels of needless caution so utterly out of keeping with British commercial tradition.

***

All the commercial nervousness in regard to the exchanges is not on this side, however, judging by what a correspondent tells me regarding the position in another Balkan country, whose exchange at the moment is extremely high. "The faith of the country in the improvement of the exchange," he writes, "has been absolutely pathetic. For the last two years they have been saying it will improve, and it has not. In the hope that it would they have delayed making purchases of Government stores which have been on offer during what, for want of a better term, I will call the demobilisation period, at exceedingly moderate prices—commodities such as boots and sacking, for which the need is very great. While they have been waiting, the other Balkan countries have been buying, and the chance is slipping away."

***

The position with regard to the supply of synthetic dyes for Egypt is discussed in the current issue of the *Journal* of the British Chamber of Commerce of Egypt. Egypt's pre-war imports amounted to over 500 tons of artificial indigo and about 300 tons of aniline dyes, of which the whole of the former and two-thirds of the latter came from Germany. During the war efforts were made to promote trade in British-made dyes—efforts which were successful, despite freight and other difficulties, the place of the German commodities being taken by United Kingdom products. Our contemporary points out that it had been anticipated, that with the cessation of hostilities the opportunity would have been taken to develop this trade. "Shipments from Continental sources, however, have been arriving, and are freely sold on credit by the agents. The position gained by British products is being prejudiced as a consequence. This is not as it should be. The trade was originally a British one, and was lost by apathy at home. A severe lesson was taught us by the plodding Germans, with their painstaking and sometimes dubious methods, and it behoves us to prevent history repeating itself."

***

The revenue of the Suez Canal Company in 1919 was double that for 1918, the figures being 184,708,395 francs, as against 92,969,910 francs. Transits were much below the pre-war level, and the greatly improved results were due mainly to the increased charges, while the company made a profit on the exchanges of about 28,000,000 francs. It is proposed to pay a dividend of 191.87 francs on the ordinary shares. This is a record distribution, the previous highest having been 165 francs, which was paid for the three years preceding the war.

Commerce and Industry.

(Reports from Our Own Correspondents.)

ROUMANIA.

Bucharest, May 6.

British Trade in Roumania.

As the value of the leu continues low Roumanian merchants have almost ceased to import goods from Britain, finding it impossible to pay for them in cash. On the other hand, several important contracts have been signed by the Roumanian Government with American firms, payments to be made in Government Treasury Bonds, and extending over a period of several years.

Considering the great natural wealth of Roumania in agricultural products and minerals, which should enable her to recover from the ravages of war more quickly than an industrial country could, it seems a pity that British manufacturers should lose their present opportunity of opening up a market for the agricultural and other machinery which she is obliged to import because of their unwillingness to meet her present financial situation by accepting State Treasury Bonds and allowing a reasonable credit. It is obvious that unless an opening is made and a hold secured now, it will be difficult later on for British firms to compete with Roumania's industrial neighbours, Austria and Germany. Already an ex-Austrian firm, the Ressita Steel Company, has secured the contract for the repair of the Cernavoda Bridge, an important piece of work, and other similar contracts seem to be tending in the same direction.

A contract has recently been signed by the Roumanian War Office with the Société Intercontinentale (late S. W. Hoffmann), in Bucharest, by which this company is authorised to transport goods from Pressburg, Vienna, Budapest, and other Danube ports in some twenty barges of 40 to 60 tons load, belonging to the Roumanian State, which had been removed by the enemy and are now lying up the river at ex-enemy ports. It is reported that considerable quantities of German goods are being imported in this way.

Government Requisition of Seed Corn.

With a view to ensuring a sufficient reserve of seed corn for next autumn's sowings, the Government has recently promulgated a Decree Law requisitioning for this purpose a certain proportion of the coming harvest. The calculation of the required quantities of seed corn will be made by the district officials of the Department of Agriculture, and the crops concerned are those of wheat, barley, rye, and rapeseed. Payments are to be made to the producers in two instalments, i.e., on June 1 and on delivery of the grain, through the "Casa Centrala" of the Popular Banks, and the price to be paid is 12,000 lei per wagon of 10,000 kilos for wheat weighing 74 kilos per hectolitre with 5 per cent. of alien matter; 10,000 lei per wagon for rye weighing 70 kilos per hectolitre; 9,000 lei per wagon of autumn barley; 18,000 lei per wagon of rapeseed "navette" and 20,000 lei per wagon of rapeseed "caizo."

Art. 10 of the law provides that in order to facilitate the importation of machinery utensils and materials necessary for agricultural enterprise (of which there is a great shortage in Roumania to-day) the Agrarian Committee shall be authorised to export 15,000 wagons of maize, barley, and millet from the 1919-1920 harvest. Of this the Agrarian Committee will assign 4,500 wagons for the benefit of the agricultural syndicates, 500 wagons for the vineyard syndicates, and 10,000 wagons for the Central Administration of the Village Co-operatives. The method and conditions of exportation and the kind of goods to be imported and their distribution shall be regulated by the Agrarian Committee.

Art. 11 is obviously designed to encourage the peasants to cultivate their newly acquired lands to the best of their resources, as it provides that in the distribution of machinery, etc., preference shall be given to those who have sown at least one hectare in the autumn. Art. 12 provides that if the autumn sowings attain 80 per cent. of the normal area the maximum price for 1921 will be raised to 15,000 lei per wagon of wheat with corresponding increases for the other crops.

Bucharest, May 28.

Banat Coal.

An extraordinary credit of two million lei has been granted to the Ministry of Industry and Commerce, to be used for continuing the exploitation of the coal mines of Cozla and anthracite mines of Baia-Noua, both in the Banat.

The Internal Loan.

The subscription list for the Internal Loan will be closed to-day. The shares have been taken up well, and the Government is so far satisfied with the result. It is expected that the subscriptions will amount to about two milliards of lei.

Transport Agreement with Czecho-Slovakia.

An agreement has been concluded between the railway authorities of Czecho-Slovakia and Roumania to facilitate the transport of goods between the two countries. For the transport of petrol for Czecho-Slovakia to Giurgevo on the Danube (whence it will be carried up the river), the Czecho-Slovaks have put five locomotives at the disposal of the Roumanian railways along with the necessary coal and personnel. These locomotives may also be used for transport between Ploesti, Campina, and Brassov.

Further, the Czecho-Slovaks have put at the Roumanians' disposal the necessary locomotives for three trains per week between Oradea-Mare and Beregszasz on the Czecho-Slovak frontier. From Brasow to Oradea-Mare the trains will run with Roumanian locomotives. Trains coming in from Czecho-Slovakia must contain at least 40 per cent. of goods destined for Roumania. Trains are now running with through first-class carriages from Bucharest to Karlsbad, but there are no wagon-lits.

YUGOSLAVIA.

Belgrade, May 20.

Improved Position.

The fine weather and warm sun, following upon the wholesome rains of a week or two ago, are having a great effect upon the countryside, and everybody predicts a bumper harvest. The financial measures undertaken by the recent Cabinet, the control of foreign currency, the prohibition of the import of luxuries and restriction of export of money are producing the desired effect, and as a consequence of the brighter outlook and general confidence in the future there is a marked and rapid improvement in the dinar; a week or two ago it was fluctuating about 150 to the £, but has recently improved to 120 and 110, and looks like improving still more. Once it rises beyond 100, the merchant community will be able to make purchases abroad, and a revival of trade may be anticipated.

BULGARIA.

SOFIA, May 22.

Crop Conditions.

Owing to the abundant rains that have recently fallen, the crops generally are most promising except in the north-western part of Widin district, and in the Shumla, Varna, and Rustchuk districts, where there has been no rain.

Export of Grain.

The Consortium is now making arrangements for the export of the 8,000 wagons of maize which have been sold to Austria. When this is completed, further contracts for the export of grain will be concluded. Since the beginning of last week there has been a considerable rise in the value of the leva.

The Decouvile Railway Project.

The inhabitants of Tatar-Pazardjik have presented a petition asking that Tatar-Pazardjik should be made the station of the projected Decouvile Railway for the Rhodope forest instead of Soraur Bey. It is pointed out that Tatar-Pazardjik has important economic and other advantages over Soraur Bey.

CYPRUS.

CYPRUS, May 15.

Forest Protection.

Another striking example of the awakening of Cypriots to their own interests is afforded by the action of a group of five villages in the Limassol district, who are submitting through the Commissioner a petition to the Secretary of State for the Colonies protesting against the alleged excessive felling of trees in the neighbourhood of their villages. These are among the most picturesque in the island. Many of their hill-sides are well clothed with trees. The petitioners complain bitterly of the threatened destruction of a forest which constitutes the beauty of their villages, and contributes to their health.

The havoc wrought in all the Cyprus forests was one of the most lamentable features which the island presented at the time of the British occupation. District Commissioners were urged to stop by every means in their power the denudation of what remained; and a good forest ordinance was passed to supplement the existing Turkish law. But unfortunately the mischief could not be arrested in many areas, e.g., along the military road to Mt. Troodos, and in only too many other places where shady and beautiful wooded slopes were soon swept bare. Ottoman law, as practised in the island, was the cause. One of the first things the British Government had to do was to delimit the State Forests. Once these were marked out, action could be taken for offences within their boundaries. But outside the forests lie vast tracts which come under the category of land called *khali*, within which private property can be held, after cultivation, by title, and much land is so held.

Turkish titles, however, are elastic and illusory. Boundaries only are recognised, not the real extent of the holding. A man, e.g., with a title to five acres might legally claim fifty or much more. The owner can cut trees standing within the boundaries of his title; and thus innumerable trees have disappeared, and lands been laid bare. Now we find villagers protesting against Government fellings! A stranger turn of affairs could hardly be imagined. But villagers are coming to recognise more and more the value of their forests, and some members of Council, especially M. Theodotou, have in late years given praiseworthy support to a strict forest policy. Officials of old days would, indeed, hardly credit the fact that villagers, having presumably found local efforts availing, should now be actually praying the Secretary of State to intervene. Reference is made in a Greek paper to the "Draconian severity" with which Government protected the forests, as contrasted with the action taken in the instance now referred to.

GREEK DEBT SERVICE.

The Council of Foreign Bondholders issues the following information compiled from figures published by the International Financial Commission at Athens with regard to the revenues assigned under the Law of Control for the service of the Greek Debt from January 1 to March 31, 1920 (New Style January 14 to April 13, 1920).

	Monopolies, tobacco, stamps, stamped paper & Naxos Emery	Piræus Customs.
	Drachmae.	Drachmae.
Gross receipts, March, 1920	5,332,765	5,989,892
Do. do. 1919.....	3,309,855	5,056,405
Estimated receipts for 3 months (Law of Control)	7,225,000	2,675,000
Actual do. do. 1920	14,520,101	15,818,315
Do. do. do. 1919	10,594,341	10,407,415
Difference between estimated and actual receipts for 3 months 1920	+ 7,295,101	+ 13,143,315
1919	+ 3,369,341	+ 7,732,415

Of the surplus over the estimated receipts from monopolies, tobacco, stamps, stamped paper, and Naxos Emery, 49 1/5 per cent. is applied towards increasing the minimum rates of interest and sinking fund on the External Gold Loans of 1881 to 1893. The receipts in gold from both Naxos Emery and the Piræus Customs are converted into drachmae at par when the average rate of exchange for the month is par or below par, but when the average rate for the month is above par the conversion is made at that average rate.

Plans have been prepared by the Bombay Corporation for the improvement of the housing system and water supply.

Naphtha wells have been discovered near the village of Bonia-vitza, in Pakratz district, Yugoslavia.

Emigration from Malta since the Armistice has increased to an average of 350 persons a month. Of 5,600 emigrants, no fewer than 2,886 were skilled workmen.

Sanction has been given by the Government of India for the construction by the Mysore Darbar of a line of railway on the metre gauge from Nanjangud to Hardan Halli, a distance of 27½ miles.

Indian Treasury bills outstanding on March 31 amounted to Rs53,40,20,000; issued from April 1 to May 15, Rs10,97,28,000; total, Rs64,37,48,000. Discharged from April 1 to May 15, Rs10,49,50,000. Outstanding on May 15, Rs53,87,98,000.

The traffic receipts of the Smyrna-Aidin Railway for the week ended May 22 amounted to £6,797.

GENERAL BANK OF GREECE.

Paid-up Capital, Drs. 3,000,000.

Head Office - ATHENS.

BANKING OPERATIONS:
Every description of Banking business transacted.

FINANCIAL OPERATIONS:
Investigations in connection with, and the promotion, organisation and financing of, Limited Joint Stock Companies, with a view to exploiting agricultural, industrial and mineral resources, executing technical works, etc.

COMMERCIAL AND SHIPPING DEPARTMENT:
Purchase and sale of goods on account of clients. Warehousing, Advertising and placing foreign products on the market. Agents for foreign companies and large commercial and industrial firms abroad. General Shipping Agents.

POPULAR BANK OF GREECE.

Head Office, ATHENS. Branch, PIRÆUS.

Correspondents throughout Greece.

Established June, 1905, by the National Bank of Greece and a group of Capitalists.

CAPITAL - Drs. 1,500,000.
RESERVE FUND - Drs. 2,500,000.
Deposits and Credit Accounts, Drs. 100,000,000.

The Bank specialises in the collection of Bills payable in Greece; it accepts goods on consignment, and undertakes their sale, and transacts every kind of Banking business.

General Manager: D. LOVERDO.

TRADE WITH THE NEAR EAST.

The Bank of Athens extends special facilities for business with the Near **East** to manufacturers, exporters and importers.

The Bank has offices in all the principal towns in **Greece,** also in **Egypt,** Cairo and Alexandria, in **Cyprus,** Limassol and Nicosia, in **Constantinople,** and in **Smyrna.**

Inquiries from interested parties are invited.

BANK OF ATHENS.

PAID-UP CAPITAL : £1,920,000. **HEAD OFFICE IN ATHENS.**

London Office: 22, Fenchurch Street, E.C. 3.

COMMERCIAL BANK OF GREECE, LIMITED.

CAPITAL PAID-UP - Drs. 15,000,000.
RESERVE FUNDS Drs. 2,845,010.45.

Head Office: ATHENS.

Branches:—**Piræus, Salonika, Patras, Volo, Syra, Calamata, Corfu, Cephalonia, Candia, Chios, Argos, Pyrgos, Vostizza (Ægion), Nauplia. Larissa.**

AGENTS IN ALL PARTS OF GREECE, THE LEVANT, AND ABROAD.

The Bank conducts every kind of Banking, Commercial and Stock Exchange business and extends special facilities to traders interested in business with Greece. It acts as Agent for many Foreign Banks. It is specially organised for Exchange, the execution of mail and cable transfers throughout Greece, and for the collection of clean and documentary Drafts.

MERCHANDISE DEPARTMENT:
The Bank undertakes the warehousing and sale of goods consigned.

GREECE.

Area 43,522 square miles. The cultivated area amounted to 5,746,300 acres, of which about 2,253,400 were under cereals, 518,900 under grapes and currants, 370,600 under oak trees, 296,500 under olives, and 2,223,900 were forests.

Population (1914), 5,000,000 approximately.

Chief Products (with average annual production):—Currants, 142,000 tons; wines, 3,000,000 casks; tobacco, 9,000,000 lb.; cereals, 8,000,000 bushels; olive oil, 200,000 casks.

The MINERALS of Greece include:—Iron, Marble, Magnesite, Emery, Lead, Lignite.

IMPORTS (1914), Old Greece only:—Total value £7,000,000, of which £2,000,000 from the United Kingdom; £1,800,000 from Germany and Austria Hungary; £1,000,000 from Russia.

EXPORTS (1914), Old Greece only:—Total value £4,000,000, of which £3,000,000 came to the United Kingdom.

COINAGE.—The unit is the Drachmæ, equivalent to a Franc (10d.). The current rate of exchange is about 33·85 Drachmæ to £1.

FREIGHT.—From England, 160/- + 10 % primage.

WEIGHTS AND MEASURES.—It was decided in 1898 to introduce the metric system. The change is to be gradual from the old system, which is:—Oke = 2·82 lb., stater = 123·20 lb., livre (Venetian) = 1·05 lb., baril (wine) = 16·33 imperial gallons, kilo = 0·114 imperial quarter, pike = ⅔ of a yard, stremma = ·242 of an acre.

BANK OF NATIONAL ECONOMY (of Greece)

Head Office: ATHENS.

Branches:

PIRÆUS, SYRA. PATRAS.

Capital Paid Up - Drs. 10,000,000.

THE EGYPTIAN COTTON POSITION.—I.

By John A. Todd, B.L.

Since the date of the writer's previous series of articles in THE NEAR EAST* on the Egyptian cotton crop, the movement of prices of Egyptian cotton has been absolutely unprecedented. At that time the spot price of fully good fair sakel in Liverpool was about 80d. On February 17 it touched 99d., making the premium of Egyptian over American 207 per cent., and on June 2 it was back to 74d., or 160 per cent. premium. In the meantime the Egyptian premium, owing to the relatively greater fall of American, had been as high as 219 per cent. on May 4. During the same period, November futures have fluctuated between 78.75d. and 50d., and the premium over American, which was 240 per cent. in February, is now down to 110 per cent.

In Alexandria the movement has been equally erratic. In February spot reached 187 dollars per kantar, with November futures at 141.50 dollars. Since then spot has fallen to 126 dollars, according to the latest mail advices, and November has been as low as 91.25 dollars.

The following table gives the recent movements of Egyptian prices in Liverpool and Alexandria, with American prices in Liverpool for comparison.

Date.	LIVERPOOL. (pence per lb.)						Date.	ALEXANDRIA. (F.G.F. Sakel).		Premium Spot over Futures.		
	Spot.			November Futures.				Spot.	Nov. Futures			
	F.G.F. Sakel.	Fully Middling American.	Egyptian Prem. %.	Egyptian.	American.	Egyptian Prem. %.		Dollars per Kantar.		Liverpool Egyptian.	Liverpool American.	Alexandria.

The maxima are printed in italics.

It is obvious that such extreme fluctuations do not represent actual changes in the conditions of supply and demand. They have admittedly been largely the result of speculation, and it is very difficult to say how far the speculative element in the market is likely to give place in the immediate future to true economic forces. These, again, are extremely difficult to estimate.

Poor American Crop Outlook.

As before, it is necessary to base any review of the Egyptian position upon such estimates as can be formed at this stage of the season of the prospects of the coming crop in America. It is becoming every day more certain that the American crop this year is going to be a very great disappointment to those who looked for a rapid recovery of the American supply after the war. It is quite clear now that 1920 is going to be the sixth short crop in succession in America. The acreage, which everyone expected to be considerably above that of last year, in view of the high prices last winter, is now unlikely even to touch the reduced figures of last year. This is mainly due to the very serious diminution of the labour supply available in the Cotton Belt. Labour is scarce everywhere in America, and cotton is feeling the pinch probably worse than anything else, which is only to be expected in the case of a crop that requires so much intensive labour at particular periods of the year. Further, the crop has made just about the worst start on record. The weather during the winter has been so continuously wet as to interfere very seriously with preparation, and the latest reports show that there has been no cessation of this almost continuous downpour, with the result that where cotton had been planted it has not made a good "stand," the seed having simply rotted in the ground. In the earlier districts, where cotton is already up, the labour difficulty and the weather are making it impossible to keep pace with the necessary chopping (thinning out) and cultivation, so that the fields are already becoming foul with grass and weeds, and unless conditions improve very markedly forthwith there is likely to be a serious abandonment even of the reduced acreage planted. In many districts re-sowing has become necessary on a large scale, and the seed supply, owing to the loss of a large proportion of last year's crop by heating during the wet weather, is now extremely scarce and very unsatisfactory in quality. The combined result of these adverse conditions is seen in the first condition report as at May 25, which gives a percentage figure of only 62.4, against the previous lowest on record of 69.5 in 1917.

Egypt is, of course, specially interested in the progress of the staple areas in America, and there the record of the crop up to date is, if anything, worse than elsewhere. In the Mississippi Delta there has been very heavy flooding, with the result that a considerable acreage of the Delta has not yet been planted, on account of water. In the Hartsville (South Carolina) staple area, cotton is reported to be the smallest ever seen at this stage of the season, though in this district conditions otherwise are much less unfavourable than in Mississippi.

In the Western areas of Arizona and California the acreage this year is going to show a very large increase on that of last year; 200,000 acres as against 97,000, which should give a crop of at least twice as much. Unfortunately, however, the crop has made a very bad start here, too. Owing to unfavourable climatic conditions, it is said to be a full month late, and the stand very bad; and it is feared that the yield per acre will be lower than that of last year, when less than 40,000 bales was obtained.

It appears, therefore, that Egyptian cotton has very little to fear this year from American competition. It remains to consider, in a future article, the prospects of the Egyptian crop itself, and the probable effect on prices.

* The articles appeared on January 16, January 29, February 5 and February 12.

The total approximate gross earnings of the State Railways in India from April 1 to 24, amount to Rs.50.88.442 more than the figures for the corresponding period of 1919.

The directors of the Bengal-Nagpur Railway Company have declared an interim dividend of 15s. per cent. and a bonus of 30s. per cent. on the capital stock in respect of the first half of the year ended March 31, payable July 1, together with the guaranteed interest of £1 15s. per cent. then due, making a total distribution for the half-year of £4 per cent.

THE OIL SUPPLIES PROBLEM.

British Empire's Resources.

Professor Sir John Cadman read a paper on "The Oil Resources of the British Empire" before the Indian and Colonial Sections of the Royal Society of Arts on June 4.

Referring to the world's resources of petroleum, Sir John pointed out that the Continent of North America produced to-day over 85 per cent of the world's output of crude oil. The United States at present produced in her own territory nearly 70 per cent. of the world's oil output, while if the quantity produced by the United States in Mexico was added the total United States control in North America was at least 80 per cent of the world's oil supply. The British Empire produced only about 2½ per cent. of the world's supply, or if Persia might be said to be under British influence about 4½ per cent. of the whole. All the newspaper chatter as to the imminence of British domination in oil was shown to be absurd when this tremendous disparity was realised.

They had depended on the United States for oil supplies in the past, and they must continue to draw largely upon her in the future and for the invaluable assistance which they had received from her in war and peace every sane-thinking person could not fail to feel profoundly grateful. It was only too true that the United States was herself consuming ever-increasing quantities of oil, and that her available exportable surplus of oil was dwindling. It had been said that the United States reserves of oil were becoming rapidly exhausted, but it was difficult to accept the very pessimistic reports which had lately been made public. Oil was not a commodity that could be easily measured, and no estimates, however conservative, could be strictly relied upon. They had seen in this country a parallel in the alarming rumours which predicted the early exhaustion of their coal supplies, and they had repeatedly seen how far from the truth the alarmist figures were.

Nevertheless, it was true that the greatest producer of oil to-day was absorbing more and more of her own supply, and it behoved them to look round to see, in the most friendly way, from where they were going to be served when the United States found it difficult to supply them, and they, too, were calling for more and more of this vital product.

It was most unfortunate that the Press of this country and the Press of the United States should at this juncture be hurling wild statements about, many of which were most misleading and inaccurate. It had been stated that Great Britain was developing an oil policy which definitely excluded the foreigner from participating and helping to develop any of the Empire's 2½ per cent. production to-day, and that she was deliberately shutting the door to foreign capitalists. To those statements which had appeared in the Press the following comments might be offered:—

1. Certain requirements as to British directorates and domicile were imposed on petroleum-producing companies in some parts of the British Empire, but there was no general ban on foreigners of the nature alleged. Even where such restrictions were in force American interests were to be found at work—*e.g.*, in Canada the Imperial Oil Company, a direct and very powerful subsidiary of the Standard Oil Company, occupied a commanding position, and in Trinidad an American company, the General Asphalt Company of Philadelphia, controlled one of the principal operating companies. While foreigners were excluded from India, there were no restrictive measures in Australia, New Zealand, South Africa, or Egypt.

2. It had been suggested that it was our settled policy to prohibit the sale of British oil companies to foreign interests, and even the transfer of shares in British oil companies to aliens. Any regulations of this kind were war measures of a perfectly natural and legitimate kind, and it was quite inaccurate and misleading to refer to them as part of the permanent policy of His Majesty's Government, and as indicating a determination to exclude foreigners from participation in British oil enterprises.

Again, in regard to Persia, the suggestion that Americans were under any special disability in that country was absolutely incorrect. As the Anglo-Persian Oil Company held the concession, other British and foreign interests were naturally excluded, but there was no truth in the statement that the Anglo-Persian Oil Company's rights had been in any way strengthened by the Anglo-Persian Agreement of 1918. The concession was acquired in 1901 through the individual enterprise of Mr. W. K. D'Arcy, and it was equally open to Americans or any other nationals to secure it.

As regards occupied areas, it had, as stated, been the policy of His Majesty's Government to prevent prospecting for minerals by British or foreign companies until the future administration of those territories was settled. When this had been done, rights claimed by American and other nationals would presumably be considered. The restrictions imposed had been considered essential by the Foreign Office to prevent confusion and friction.

Reviewing briefly the present position of the oil supplies of each zone within the Empire, Sir John said that as regards India practically the entire production came from Burmah and Assam, amounting at the present time to about 1,150,000 tons per annum. Production had been fairly constant at this rate for the last six years. Prospecting work had been carried out in the Punjab, and it was claimed that the existence of an oilfield has been definitely proved at Attock. In Egypt the Anglo-Egyptian Oilfields, Ltd., had been operating for some time at Hurgada, and the annual production was at the rate of about 250,000 tons of a heavy, crude oil. Several other areas were about to be tested, both in Egypt and Sinai.

The oilfields of Persia were now well known and established, and although only some 1,500,000 tons per annum were being produced, the potential source of this area was prodigious, and a very large output might be expected. Indications of petroleum in Cyprus appeared to be confined to a dark bearing phase of the crystalline limestones, and it seemed doubtful whether oil in commercial quantities would be discovered. There were rocks of suitable age and structure in Malta, and it was probable that test drilling would be undertaken. Very little was definitely known of the prospects of Mesopotamia, although it was believed that the geological conditions were not dissimilar from those of Persia, and that an important source of products might be anticipated from this region. This interesting area was at the moment much in the public eye, and the Government was considering various claims and proposals which naturally made it inopportune to discuss the question now. Surface indications of oil had been found in Palestine, and this territory was likely to come under practical examination at an early date.

BANQUE D'EXPORTATION PRIV. DU ROYAUME DE SERBIE.

(Royal priv. Serbian Bank for Exportation.)

BELGRADE, SERBIA.

Capital, Paid-up, 5,000,000 Dinars

Reserve - - 1,200,000 Dinars

The Bank transacts all Banking Operations, undertakes all manner of financial, commercial and industrial enterprises and effects Money-Transfers to and from Foreign Countries.

The Commercial Department of the Bank deals mainly in the Export of Native Products on its own account and on commission basis.

Cable Address: Exportbank, Belgrade.

ENGINEERING.

Superiority of British Aeroplanes.

The San Francisco Aeronautical Show served once again to prove the great superiority of British-built aeroplanes over any others. The opening day of the show was marked by the holding of the race for the Del Monte Aero Classic. Enormous interest had been displayed in this event, and there was great speculation as to the type of machine which would most speedily cover the course of 220 miles. A Bristol two-seater tourer, fitted with a 230-240 h.p. Siddeley "Puma" engine, owned by Mr. Menzel, of California, was amongst the competitors. This machine made an excellent start, and from the early stages of the race displayed its superiority over its rivals. Proceeding without a hitch, the course was completed in 102 minutes, an average travelling speed of 129 miles per hour, and it was easily the first home. The machine had recently been acquired by the owner through the New York branch of the Bristol Aeroplane Co., Ltd.

A New Car.

I am informed that the Mercedes car for this year will only be supplied in one model, of 16-45 h.p. Its specification and equipment includes electric starting and lighting, Silent Knight engine, high-tension ignition, pointed radiator, double cone leather-faced clutch, four forward speeds, water-cooled foot-brake, detachable rims, two spare rims, five tyres, tools, etc.

The sterling quality of the Mercedes is proverbial. Its efficiency and durability are world renowned, while the performance of the Mercedes team in obtaining first, second, and third places in the last Grand Prix is a feat unexampled in a contest requiring vigour, vitality, and reliability under the most exacting conditions.

The concession for Great Britain and the Empire has been secured by a group of well-known Yorkshire business men. Temporary showrooms have been arranged at 21, Mercer Street, Long Acre, London, W.C.2, where the sales organisation is in the hands of Mr. A B. E. Cheeseman, A.M.I.M.E., M.I.A.E., F.A.I., who is well known in the motoring world, and was at one time technical manager and engineer to the Automobile Association and Motor Union.

Tractor Trials.

The subject of tractors has always been of interest to British engineers, who were amongst the first to recognise the value of these highly efficient aids to agricultural and general progress. Reference has been made in these columns to the respective performances of various makes and types, from the Austin and Fiat to the lesser-known American productions, and the results of such tests as have been made have been recorded and checked again and again as fresh results from other trials have come in.

An Italian correspondent has just sent me some interesting particulars of some trials which were made a few weeks ago at Nagpur, in India, and as I have not seen a full record of these elsewhere, I may as well quote the exact words of Mr. R. G. Allen the Principal of the Agricultural College at Nagpur. He says:—

"The soils on which the trials were held varied between a medium black to a stiff hard-baled black cotton, and the tests were in consequence of a severe type, particularly in the case of the latter soil. For work on stiff, hard soil in India between the months of January and June it would appear that a tractor of what is termed the medium class, or even heavier class, is essential, and that during the season lighter tractors would be restricted in use to certain soil, types and depths of ploughing when using a 2-3 furrow plough. Though the lighter tractors did reasonably well on medium soil, they barely ploughed to the depth required, which was 7 in. to 8 in., and in the heavier and harder soils they failed as a class to cope with the conditions. Most agricultural tractors have a reserve power, and in these trials it was brought into use, and certainly without this reserve power none of them would have stood the strain for long. The Fiat and Lauson were in a class to themselves, and in the actual trials the Fiat showed up very well. It has a well-finished engine, and, in my opinion, was the best finished of all tractors competing.

"The Lauson has, I think, more reserve power. It took the second position because it was not so well handled, and the ploughs it was drawing were not so suited to the soil conditions, neither were they so well adjusted. It drew three furrows at a slower rate per mile as against two furrows by the Fiat at a slightly quicker speed. In the acre test it was first, but the depth and quality of its ploughing were of a poorer grade. As to suitability of each of these machines for working in India, there was very little to choose between them. So far as belt work was concerned the Fiat was, perhaps, more easily handled and more adaptable. Originally the light tractors were placed in the same class, but as a result of their inability to tackle the third test the judges decided to judge their work principally on the first and second tests. The Fordson was the best handled, and grouping tests one and two together was on the whole ploughing on slightly stiffer plots. In the first test the Austin was on distinctly lighter soil, whilst the Fordson was working on a medium black cotton. In the second test the Fordson had rather the easier plot of the two. On the results of the awards by the judges the Austin performed better than the Fordson; particularly was this apparent on belt work. The Cletrac, I consider, did not do itself justice, and I believe that on looser surfaces and wetter soils it will be found a very useful tractor, especially if provided with a low gear in order to allow of heavy plough work. It suffered from going too fast, and hence not ploughing as well as it might have done.

"It must be realised that the tractor is only a part of the outfit, and that a proper design of plough to deal with the special classes of soil is essential. The difficult soil conditions did not appear to suit the Oliver general-purposes plough, but the Oliver breaker used by the Fordson tractor was much better, whilst the two-furrow 12-in. plough pulled by the Fiat—an International—appeared to be the best suited to the soil. All the ploughs which were used were of the self-lift type. As a result of the trials the judges awarded the Fiat tractor the gold medal and 500 rupees, the Lauson the silver medal and 500 rupees, and the Austin 1,000 rupees, the latter being a special award in the light tractor class."

It is estimated that the Indian wheat crop will amount to 10,095,000 tons.

Extensive coal seams, as well as copper and iron deposits, have been discovered near Néboïan, in Yugoslavia.

The new Industrijska Banka in Spalato is contemplating an increase of its capital from two million to fifty million kronen.

The Bulgarian Direction de Prevoyance has decided to prohibit the export of building materials, copper, bronze, etc., or of old or new articles of these materials. Owing to the present shortage old copper articles are being re-melted for making household utensils.

The Department of Overseas Trade advise that as the direct parcel postage service to Samsoun has been interrupted, United Kingdom firms should address their catalogues to the British Control Officer, Samsoun, under cover to the Commercial Secretary to the British High Commissioner, Constantinople, who will have them forwarded to their destination.

NEAR EAST MARKETS.

LONDON PRODUCE REPORT.

Dried Fruit.

The demand for currants of good quality has increased owing to the reduced prices. It is understood that the control will shortly be removed, but it is impossible at present to forecast the effect this may have on prices.

Sultanas are in good demand, and figs are also in fair request.

Sugar.

Home refined continues in active request at Government control rates. The free market has been much more lively, there being a strong demand for manufacturing and preserving purposes. West Indian crystallised has been done at 147s. to 154s., and American granulated and white Java have come to business at 160s.

Coffee.

The market has been rather quiet, but prices have been maintained. East Indian has been done at 147s. to 160s., and Ecuador at 138s. to 160s., while special Costa Rica has realised 157s. An inactive tendency is to be noted as regards futures. July is 108s. 6d., September 106s., December 98s. 9d., and March 99s. 6d.

Oilseeds.

Linseed has been a weak spot, Indian being on offer at 41s. 9d., while La Plata afloat has been done at 37s. 6d. Rapeseed has been quiet, with brown Cawnpore at 36s. Indian cottonseed is steady at 14s. 9d. spot and for June-July, while Egyptian has been done at 19s.

Oilcakes, etc.

Oilcakes have been a brisk feature. Linseed cake has come to business at 410s. to 415s., and soya bean cake at 410s. to 430s., while other kinds in demand have been coconut cake at 240s., cottonseed cake at 260s., and ground-nut cake at 260s. to 270s.

Oils have been quiet, and for the most part featureless. Linseed oil has been done at 91s. spot, while soya oil has come to business at 84s. Turpentine is weaker at 170s. spot, 168s. 6d. for June-August, and 152s. 3d. for July-December.

SUDAN PRODUCE.

The following are further extracts from the C.E.B. report for March:—

Tobacco.

Darfur Province.—A February report states that 454 kantars of tobacco were sold in El Fasher market during the month.

Dates.

Halfa Province.—A March report states: The flowering of the date trees is late this year, especially the old trees. A greater part of last year's dates sent via Dongola have now arrived in Halfa. There is a large quantity of dates now stored in Halfa for Egyptian Ramadan market.

Live Stock.

Berber Province.—378 cattle and 4,368 sheep and goats were sold in the market, the average prices being P.T.750 and P.T.166.

Darfur Province.—11 horses and 80 head of cattle have been imported from Wadai.

Red Sea Province.—111 cattle and 91 sheep were exported during the month.

Cultivation.

Halfa Province.—Reports from Mahas district show that the ful masri, tirmis and gilban crops have been harvested and are good. There were no pests except a few birds, who did not do much harm. The termis should all be in by the end of April. The sagia cattle have improved a good deal in condition. Reports from Sukkot district are also good. From Halfa district reports are not so good, and birds have done a lot of damage. The area under crop is much less than previous years.

SPECIAL REPORTS.

The following information is compiled from the weekly bulletins received at the London offices of the Imperial Ottoman Bank from its correspondents in the Near East:—

ALEPPO, May 14.

The crisis continues in our market owing to communications with the interior being impossible in present conditions.

The forecasts of the cereal crops are promising. It is to be hoped that the prohibition on the export of grain abroad will bring about a decrease in the price of certain food products. The yield of butter, wool, sheep skins, etc., is commencing.

OPIUM MARKET REPORT.

Messrs. Barker Brothers, Smyrna, report as follows for the week ended May 15:—The sales this week on our market amount to sixty-three cases at piastres 1,070 to piastres 1,100 per oke for extra selected druggists' qualities, notwithstanding, however, these piastre prices represent a drop of piastres 75 per oke from last week's figures; the sterling value has not changed owing to a heavy drop in the exchange. Above figures therefore represent fully 19s. 6d. to 21s. per lb. c.i.f. To-day's exchange is piastres 410 for cheque per £ sterling and 0.94 dols. for the Turkish paper pound. The arrivals are 1,650 cases, against 375 at same date last year.

Messrs. Barker Brothers, Smyrna, report as follows for the week ended May 29:—We have to report a decline of about 4d. per lb., with sales of 20 cases at 15s. 6d. to 20s. as to quality and strength. Fine manufacturing carahissar of 12 per cent. test can be done now at present exchange at 18s. 9d. per lb. c.i.f. The exchange is 432 piastres per pound sterling for cheque, and 0.89 dollars for one Turkish pound. The arrivals are 1,665 cases, against 662 at same date last year.

H.M. Consul-General at Tripoli reports that, in virtue of a proclamation which has recently been issued, export licences will not in future be granted in respect of local produce—namely, grain, oil, butter, cattle, and sheep.

According to an official statement the losses of the Greek merchant fleet during the war were 227 steamships, with a net tonnage of 301,653 tons, and 300 sailing ships with a net tonnage of 15,271 tons.

The import of motor-cars *de luxe* to Bulgaria has been prohibited.

NATIONAL BANK OF EGYPT.

Forthcoming Sailings.

The Johnston Line s.s. Cranmore, for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Tulcea, Galatz and Braila, will close for cargo at Liverpool on June 25.

The Moss Line s.s. Sitra, for Gibraltar, Oran, Algiers, Malta and Alexandria, will close for cargo at Liverpool on June 12.

The Moss Line s.s. Karnak, for Gibraltar, Malta, Syra, Smyrna, Constantinople and Beyrout, will close for cargo at Liverpool on June 15.

The Ellerman Line s.s. Polo, for Malta, Syra, Smyrna, and Constantinople, will close for cargo at Liverpool on June 12.

The Ellerman Line s.s. Destro, for Gibraltar, Malta, and Alexandria, will close for cargo at Liverpool on June 19.

The Papayanni Line (Ellerman Lines, Ltd.) s.s. Douro, for Algiers, Malta, Syra, Smyrna and Constantinople will close for cargo on June 26.

Olivier's Levant Line s.s. City of Smyrna, for Tangier, Oran, Algiers, Tunis, Piræus, Salonika, Smyrna, Constantinople, Varna, Odessa, Sulina, Galatz and Braila, will close for cargo about the middle of this month.

The Cunard Line s.s. Corby, for Gibraltar, Algiers, Malta, Patras, Piræus, Syra, Smyrna, and Constantinople, will close for cargo at Liverpool on June 19.

The Anchor Line s.s. Massilia, for Bombay, will close for cargo at Glasgow on June 11, and at Liverpool on June 22.

The Bibby Line s.s. Leicestershire, for Port Said, Colombo, and Rangoon, will close for cargo at Liverpool on June 23.

The Henderson Line s.s. Martaban, for Port Said and Rangoon, will close for cargo at Birkenhead on June 16.

The R.M.S.P. Co.'s s.s. Asra, for Gibraltar and Morocco, will close for cargo in London on June 16.

Notes.

There was launched on May 18, at the Weir shipyard of Messrs. Wm. Gray and Co. (1918), Ltd., for the Ellerman-Hall Line, Ltd., the fine geared turbine steamer City of Adelaide. The new vessel has been built to Lloyd's highest class, her dimensions being:—Length, 451 feet; breadth, 57 feet; and depth, moulded to upper deck, 32 feet 10 inches, her estimated deadweight carrying capacity being, approximately, 10,800 tons. The cargo appliances are of the most modern type. The two forward hatches are worked by four steam winches and six steel tubular derricks supported on tables connected to the mast, and each of these derricks is capable of lifting from 10 to 12 tons. The two after hatches are similarly worked by the same number of winches and derricks, while two Samson posts are fitted on each side of the bridge deck, each with a winch and derrick to lift seven tons for handling cargo amidships. Electric light is being installed throughout the vessel.

The trial trip took place, on June 1, of the s.s. Garmula, built by Palmers Shipbuilding and Iron Co., Ltd., at their Hebburn Yard, originally ordered by the Shipping Controller and taken over by the British India Steam Navigation Co., Ltd. The dimensions of this vessel are: Length 400 ft. between perpendiculars, breadth, moulded, 52 ft., depth, moulded, to upper deck, 31 ft. She carries about 8,200 tons d.w. on a draught of 25 ft. 3 in. She is of the two-deck type, with poop, bridge, and forecastle. The vessel has triple-expansion engines supplied by Palmers Co., the cylinders being 27 in., 44 in., and 73 in., by 48 in stroke, steam being supplied by three single-ended boilers 15.6 diameter by 11 ft. 6 in. long, 180 lb. working pressure, Howden's forced draught, and generally has been completed to comply with the special requirements of the owners for their Eastern trade. The trial was successful in every respect, and the vessel was afterwards handed over to the B.I.S.N. Co., who were represented by Capt. W. M. Isdale.

Earle's Shipbuilding and Engineering Co., Ltd., Hull, recently launched from their yard the single-screw steamer Nagpore for the Peninsular and Oriental Steam Navigation Co., Ltd. The dimensions of the vessel are: Length between perpendiculars, 400 ft.; breadth, moulded, 52 ft.; depth, moulded, to upper deck, 31 ft. Her carrying capacity, approximately, is 8,150 tons d.w. on a draught of 25 ft. 3¼ in., and she is built to Lloyd's highest class.

New Bland Steamers.

Our Morocco correspondent writes (May 16):—

The Bland Line have purchased the ex P. and O. mail steamer Isis, of 2,000 tons and 21 knots speed, with accommodation for over 100 first-class passengers, and it is understood that this steamer will be put on the Gibraltar-Casablanca run early in June. This news is very welcome to travellers in Morocco, and the company are to be congratulated on this addition to their fleet. This firm have also bought two other steamers for cargo service with Morocco.

SHIPPING SERVICES TO MOROCCO.

A French company with headquarters in Paris has inaugurated a monthly cargo service in each direction between Casablanca and New York (says H.M. Acting Consul at Casablanca). The itinerary is New York, Casablanca, Tangier, Algiers, Tunis, Marseilles, and back to New York.

A Liverpool company has also established a service direct from Liverpool to Casablanca, and thence home via Gibraltar and Spanish ports. This service will be welcomed, as it will diminish the transhipment of Moroccan cargo at Gibraltar, a custom created by the exigencies of the war, which gave rise to much dissatisfaction in Moroccan commercial circles.

SHIPPING AT MALTA.

(From Our Own Correspondent.)

Malta, May 20.

The latest arrivals have been the Dutch s.s. Agamemnon from Amsterdam, the s.s. Luciline from Cette, the s.s. Brescia from Constantinople, the s.s. Malatian from Alexandria, the s.s. Asturian from Liverpool, the s.s. Maritza from Alexandria, the P. and O. Poona, and the American s.s. Brompton from Newport. The s.s. Alster for Benisaf, H.M.S. Weymouth for sea, the Glengorm for England, the Berbice for Constantinople, H.M.S. Emperor of India, the Ajax, and Monitor H. 18 have just left.

COMPANY NOTES AND REPORTS.

Calcutta Electric Supply.

The report of the Calcutta Electric Supply Corporation for the year 1919 states that the figures have been adjusted by the auditors in accordance with their views as to the incidence of exchange, instead of being calculated at the rate of 1s. 4d. per rupee adopted in previous years. During the year 31,881,710 units of electrical energy were sold, compared with 30,431,132 units in 1918. The number of houses connected at December 31 last was 10,271, an increase of 374. The profits amount to £237,207, which with the balance brought forward and interest received on money at deposit, etc., makes £298,460. After deducting the interim dividend of 4 per cent., paid on the ordinary shares in November, 1919, dividends paid and accrued on the preference shares, £34,408 which has been placed to the credit of the depreciation and renewals account, the balance of excess profits duty in respect of 1917 and 1918, £27,724, and an estimated liability in respect of 1919 for similar duty of £34,070, also other charges, there remains an available balance of £136,893. The directors recommend that £55,000 be added to the reserve fund, £5,000 to the insurance fund and £5,000 to the retiring gratuity fund, and that a final dividend be paid on the ordinary shares for the second half-year of 6 per cent., making 10 per cent. for the year. It is further recommended that, subject to the alteration of the articles of association proposed, one fully paid preference share be issued as a bonus for each ten ordinary shares held, fractions being paid in cash at the rate determined by realisation of the shares in question.

Grand Central (Ceylon) Rubber.

The report of the Grand Central (Ceylon) Rubber Estates for 1919 states that the profit amounted to £244,305, from which £7,678 has been written off for depreciation of buildings and machinery, £1,450 for depreciation of War Loan and Funding Loan, and £6,066 has been added to coast advances reserve, leaving £229,111, plus amount brought forward, £68,740, making available £297,851. The directors recommend a final dividend of 10 per cent., less tax, leaving to be carried forward £114,101, subject to excess profits duty for the year.

CULTIVATION OF FLAX IN MOROCCO.

Experiments in flax growing which were commenced in the Casablanca district in 1918 proved so encouraging that in 1919 the firm (French) conducting the operations inaugurated a flax-growing farm some forty kilometres south of the port and erected a flax-spinning mill thirteen kilometres from the town (says a British Consular report). At the same time they gave out seed to farmers who were ready to grow flax, making contracts for the purchase of the crops. The results in 1919 again proved encouraging, and it would now appear as if the flax-spinning industry has come to stay. The straw produces 10 per cent. of flax, and the quality of the flax is reported to be on a level with the Russian article.

DYEING INDUSTRY AT FEZ.

At Fez, one of the principal centres of the dyeing industry in Morocco, the colours produced are made chiefly from aniline dyes, which before the war were imported mainly from Germany, but which are at present obtained from a French firm at St. Denis, Paris (says H.M. Acting Consul at Fez). The only other dyes used are cochineal, indigo, madder, and pounded pomegranate peel, which last gives a yellow dye. The colours most used are a deep magenta, deep emerald, bright yellow, orange, and red. Other colours are obtained by mixing these in different proportions. Black is obtained from a mixture of sulphate of iron and crushed pomegranate skins.

Silk and wool are dyed in the same way, but silk requires to be left for a somewhat longer period in the dyeing solution, as wool holds the dye more easily. Leather is also dyed. Silk is imported into this country in hanks, which before being dyed are plunged into a cauldron of boiling soap and water. After being washed, the silk is hung up in the sun to dry. The dyes, which are in the form of crystals or powders, are mixed with water at or near boiling point in small wooden tubs. In some cases lemons or oranges are added. The liquid is then kept at a moderate temperature until it ferments. After being dyed, the silk or wool is dried in the sun.

The dyers belong to a guild, at the head of which is an *amin*, who is an expert in the industry. There are some twenty dyers' shops in Fez, each of which employs three or four persons. The wool used in the manufacture of carpets in Fez under French supervision is all dyed at Casablanca by French chemists.

YUGOSLAV EXPORTS.

H.M. Minister at Belgrade reports the issue of a Decree of the Council of Ministers, laying down new regulations affecting the exportation of goods from the Kingdom of the Serbs, Croats, and Slovenes. Under this Decree goods are divided into two categories. The first category consists of eighteen classes of articles of prime necessity, and the export of these is prohibited except in a case of duly declared surplus over the needs of the country. The exportation of such surplus will be confined to the Central Society for Provision and Export, in which the State is to participate to the extent of one-half the shares, and all the members of which are to be nationals of the Kingdom. The second category consists of all other goods, and the exportation of such goods will be permitted to anyone under the conditions of sale for sound currency and the payment of the relevant export tax (which conditions also apply to the export of goods in the first category).

LANCASHIRE COTTON.

(From Our Own Correspondent.)

Manchester, Monday.

The tone of the market has continued irregular, and business has not shown any particular development. In some respects the outlook for producers is not quite so cheerless as a week or two ago, and many people who have anticipated lower values are not disposed to back their views so strongly. It is realised that whatever happens later on the American crop for next season will be comparatively small. There has been some improvement in the demand for Egyptian cotton, chiefly for the Continent. Prices have been rather steadier, but the growth is reported to be doing very well, and there are fears of a further fall in values. A very restricted business has transpired in Egyptian yarns for home use and export. Weak sellers are increasing in number. Now and again producers accept very low offers. Quite a distinct change has come over this section of the market since the beginning of the year. No increased activity can be recorded in piece goods for Egypt and the Near East. It is possible, however, that larger clearances will be effected if arrangements are made for the opening out of business in Russia. Some manufacturers are still being asked by shippers to delay deliveries. An improved inquiry has been met with in cloth for India, but very little fresh business has been booked, the rates quoted being out of the reach of dealers on the other side.

If the Monsoon rains develop on right lines, it is reasonable to expect freer operations before very long. Practically nothing has been done for China. Buyers for South America have been cautious. Home trade buyers have been inclined to adopt a waiting policy. More cases are being mentioned of manufacturers wanting to deliver goods before contract time. American yarns have been in slightly improved request, but trade generally has been slack. Export numbers for most outlets have been inactive.

ON CHANGE.

(From Our Own Correspondent.)

Throgmorton Street, Monday.

Our market in Egyptian securities has been an improving one this week, and Egypt, besides continuing to purchase Government stocks, has been sending over buying orders for various other descriptions, with the result that we have to record a general improvement in prices practically all along the line.

In Government stocks Egyptian Unified close half a point up at 69, and the 3½ per cent. Pref. have advanced 1¼ points to 57⅞. Turkish Unified are slightly easier at 34½. Greek Government bonds have been in request, and here also there has been a general advance more or less in quotations. The 1881 and 1884 Loans are three points up at 53, the 1890 issue has advanced two points to 55, the 4 per cent. Rentes and Funding have gone up half a point at 38½ and 49 respectively, and the 1902 and 1914 Loans are both one point up at 43 and 51.

In Bank shares Nationals have been in persistent demand and are closing ⅝ higher at 19⅞, whilst Agriculturals have put on a quarter at 4 7-16. Bank of Athens shares are 1-16th easier at 3 3-16, Imperial Ottoman Banks have gone back ¼ to 9½, whilst Land Bank of Egypt are a similar fraction higher at 5½.

In Railways, Delta Light have improved ⅛ to 5⅞, and Piræus Athens 3 per cent. bonds are down one point to 49; but the market is a nominal one.

In Land shares Aboukirs are 1s. 6d. up at 35s. 6d., Béhéras have put on 1½ points at 17, Consolidated are fractionally firmer at 2s. 9d., Delta Lands have jumped up 1s. 3d. to 15s., and Gharbieh Land are ¼ higher at 3⅞. Foreign Trusts have been exceptionally dull and close 1s. down at 13s. 6d. New Egyptians have been in good demand, and are closing a further 1s. up at 36s. Sidi Salem are 3-16 higher at 2 3-16, Sudan Plantations have jumped ⅜ to 4⅜, and Union Foncière are about ¼ up at 4⅞ x.d.

Among the Oils, Anglo-Egyptian B close at 3 1-16, Roumanians at 17s. 6d., and Traians at 8s.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned :—

Egypt.

(The London agent of the Egyptian Government is Sir A. L. Webb, K.C.M.G., Queen Anne's Chambers, Westminster, S.W., at whose office particulars of tenders marked (L) are to be obtained.)

Steel Angles.—The Financial Secretary, Egyptian Army, Cairo, invites tenders for the supply of mild steel angles, tees, flats, wrought-iron bars, etc., c.i.f. Port Sudan. June 26.

Filing Cards.—The Central Stores, Ministry of Finance, Cairo, invites tenders for the supply of 374,000 filing cards. July 1.

Wrapping Paper.—The Central Stores, Ministry of Finance, Cairo, invites tenders for the supply of 750 reams thick wrapping paper. July 8.

Iron Safes.—The Central Stores, Ministry of Finance, Cairo, invites tenders for the supply of 180 iron safes. July 12.

Rails.—The Surveyor-General of Egypt, Giza (Mudiriya) invites tenders for the supply of cut rails in accordance with specification and conditions available at Survey Offices, Giza. Contractors are invited to put in their offers for any quantity available for immediate delivery or for delivery during the current financial year. Tenders should show quantity, weight per yard run, rate per ton of 1,000 kilos, period required for delivery, place of delivery, and any other details necessary. March 1, 1921.

The Ministry of Public Works, Cairo, invite tenders for the laying of 10 kilometres of railway track, together with fifty steel double-tip wagons. The latest date for receipt of tenders is June 15. (Particulars may be seen at the Department of Overseas Trade, 35, Old Queen Street, S.W.1.) (L.)

Greece.

Greece: Ministry of Communications.—Supply of telegraphic materials. (Particulars may be seen at Department of Overseas Trade, 35, Old Queen Street, S.W.1.) June 20.

Morocco.

Morocco.—His Majesty's Vice-Consul at Rabat has forwarded a copy of the specification and general conditions of contract for the supply of 25,000 oak sleepers or other timber of a similar nature to the Service des Chemins de Fer of the French Protectorate. The latest date for receipt of tenders is July 1. Copy of the specification and general conditions, which are in French, may be inspected upon application at the Department of Overseas Trade, 35, Old Queen Street, Westminster, S.W.1.

COMPANY NEWS IN BRIEF.

The numbers of 467 Egyptian Government 4 per cent. Irrigation Trust certificates which have been drawn for redemption on July 1 are announced by the Bank of England.

Obligation holders in the Constantinople Telephone Co. who have not already done so are requested to lodge their bonds at the Imperial Ottoman Bank, 26, Throgmorton Street, E.C.2, in accordance with the scheme of arrangement now in force.

The traffic receipts of the Egyptian Delta Light Railways for the week ended May 10 amounted to £E11,989, and the total from the commencement of the year amounts to £E46,812. For the corresponding period of 1919 the receipts amounted to £E1,584.

The receipts of the Egyptian Markets, Limited, for the week ended May 19 are:—Cattle markets, £945; general markets, £645; total, £1,590; total for year, £38,512. For the corresponding period of 1919 there were no receipts owing to local disturbances.

The directors of the Indian and General Investment Trust recommend final dividends on the preferred stock at the rate of 5 per cent. per annum for the half-year to April 30, and on the deferred stock at the rate of 12 per cent. per annum for the half-year to April 30, making 10 per cent. for the year.

OIL OUTPUTS.

Anglo-Egyptian Oilfields.—Hurgada production for week ended May 30, 2,545 tons (last week, 2,407 tons).

NOTES OF THE WEEK.

The Albanian question has entered on a new phase within the past week. The Shkipetars are a fine people, with many virtues; but among those virtues patience was never reckoned the foremost; and it is perhaps rather surprising that they should have held themselves in so long in face of provocation offered and of temptations to which they have been exposed. They have pleaded hard for a hearing by the Peace Council, and, being a simple folk in matters political and diplomatic, they have probably continued to believe that in view of all the professions of respect for nationalities they would certainly secure justice in the long run. The belief has, however, been strained severely by recent developments; and though, on the authority of a statement by Mr. Cecil Harmsworth in the House of Commons, we are able to say that "the Supreme Council will continue their efforts to secure the proper settlement of the Albanian question," the Albanians, or a considerable section of them, have apparently decided to act on their own behalf. The principle which guides them is quite clear: they are determined that Albania shall be for the Albanians, and they are prepared to fight anybody, Greek, Serbian, or Italian, who wishes to annex Albanian territory.

The Italian attitude towards Albania was described in the article which the Hon. Aubrey Herbert, M.P., contributed to THE NEAR EAST last week, and it need not be dealt with here. In fairness to the Italian people, however, it may be remarked that many of them disapprove of this official attitude. The Albanians, who dislike it intensely, last week rose against the "invaders," drove them out of several positions, and, according to one account, appear to have pressed their initial advantage so strongly that the Italians had to withdraw their troops from Valona, and to hand over the defence of that port to their navy. The latter report is probably untrue, but it appears to be a fact that the Albanians, who are reported to be well provided with light guns and ammunition, have got decidedly the best of the encounter so far. Italy, with plenty of other pre-occupations, may feel disposed to regret her Albanian adventure; but while it may be impossible to sympathise with her in this matter, it is necessary to bear in mind that those who countenanced her in the adventure must share with her any disgrace attaching to it.

Last Saturday Mr. Herbert Samuel was appointed High Commissioner for Palestine, and was at the same time knighted by the King. He has made a statement to the Press regarding the general principles which he will follow in administering the country. The fulfilment of most of the promises therein given should undoubtedly make for the welfare and prosperity of the land and its inhabitants, and if trouble comes it will be due to causes too deep-seated to be got rid of by any mere surface treatment. It would be unfair to expect the new High Commissioner to make any pronouncement on these very delicate questions before he has studied them on the spot; and, indeed, even after study on the spot, promises will avail nothing. The troubles will have to be treated firmly and with extraordinary tact. And it will be by his handling of them that Sir Herbert Samuel —and Great Britain's exercise of her mandatory powers —will be judged.

In the House of Lords last Thursday, Lord Sydenham asked for information about Montenegro, the position of Montenegrins abroad who might wish to return to their country, and the relations between Serbs and Montenegrins. He also moved: "That it is necessary that the Serbian troops should be withdrawn in order that a free vote of the Montenegrin people as to their future form of government may be obtained." Lord Curzon, who replied, refused to take a gloomy view of the case, and went near to suggesting that if Montenegro was in fact in an unsettled state, her people rather liked it. In a country where conditions were as unstable as in Montenegro, he remarked, the number of ex-Ministers bore a considerable ratio to the entire population, and it was useless to expect the spirit of tolerance prevailing in more advanced communities. But it would be unfair to describe local disorders as a state of war between two peoples. Unfortunately, his lordship had to admit that as Great Britain has no representative in Montenegro, reports and details do not come direct to the Foreign Office; but he could not agree that the situation was growing worse. On the contrary, he was of opinion that the position was perceptively ameliorated.

One of the details that had evidently not found its way to the Foreign Office was information whether ex-Ministers and members of the late Montenegrin Parliament were still detained in their own country by the Serbians; for Lord Curzon could give no specific information on this head. As to the presence of Serbian troops, however, his statement was reassuring to a certain extent, for he declared that his information went to show that the forces in Montenegro were "chiefly Montenegrins in agreement with the population among whom they were." But by far the most satisfactory point in his speech was the definite statement that what the British Government wished to secure was that when

Digitized by Google

the Constituent Assembly was summoned, Montenegrins should have free votes to decide their own issues. It also desired to see free elections in the country; and if it were suggested that the presence of Allied officers would result in the elections being free, Lord Curzon added, he would be ready to make such a proposal. If these things be secured, there would be no further ground for the uneasiness that has undoubtedly existed lest the future of the little country should be decided in some hole-and-corner fashion; and if Montenegro freely decided to throw in its lot with Yugoslavia, it would be a poor friend indeed who sought to hold her back. King Nicholas, unless our memory plays us false, has indicated that he personally is willing to become a loyal Yugoslav. We may, therefore, join Lord Curzon in hoping that by a mutual display of goodwill it will be possible to secure a solution representing the dominant feeling of the Montenegrin people.

Telegrams received from Egypt last week announced that the two men who attempted the assassination of Shafik Pasha had been sentenced to death, but added that the sentence had been commuted to hard labour for life. Three days after the announcement of this leniency came news of yet another outrage of a similar character, a bomb having been thrown at Tewfik Nessim Pasha, the Prime Minister, by a young Egyptian, who is said to be an employee of the Health Department. The attempt bears a striking resemblance to those others which have been made upon Ministers so frequently of late, and it is impossible to avoid the suspicion that it must have been inspired and directed from the same centre. Two points to note in this instance are: the youthfulness of the assailant, who is said to be only eighteen, and the powerful character of the bomb used. The chauffeur and several passers-by were injured by the explosion, and the car was riddled by missiles, but fortunately the Prime Minister was unharmed. It is much to be regretted that leading Egyptians of all shades of opinion do not unite in publicly denouncing these methods of terrorism.

The Shammar Arabs, one of the two great tribes who move northward into Mesopotamia in the season—the other being the Anazeh—are a force to reckon with in that region, as anyone who has seen one of their far-stretching camps, or come across them on the move from one camping-ground to another, will readily agree. For many years under Turkish rule they enjoyed a certain amount of official favour, and their sheikhs were often ready to co-operate with the Vali of Baghdad if called upon to do so. In the war, it seems, they showed more loyalty to the Turkish cause than many of their brethren, and it is possible that some of that loyalty still survives. More probably since the occupation of Mesopotamia they have found some of their privileges curtailed and much of their importance vanished. At any rate, they have been restive, and it is now announced that a band of some 300 of them on June 3 attacked Tel Afar, forty miles west of Mosul, sacked the Government offices, and killed all the Government officials. Three officers and a private thus lost their lives, and the following day the crews of two armoured cars that visited the place met a similar fate. From the disjointed reports available, it appears that there has also been fighting at other points, notably at Hammam Ali (below Mosul, on the Tigris) and in the neighbourhood of Kalat Sherghat. At the former place the Arab losses are estimated at 100; and a punitive force is reported to have reached Tel Afar.

The situation in Persia is discussed in our leading article. The Persian appeal that the League of Nations should intervene in regard to the Bolshevist invasion of Persian territory was considered at a meeting of the Council of the League held at St. James's Palace on Monday. The proceedings were private, but it is understood that after the Persian Foreign Minister had placed his country's case before the Council, it was found that the representatives held somewhat divergent views, and that it became necessary to arrange for special meetings between some of them. The result of this meeting, it was announced, would be made known at a public meeting of the League to be held on Wednesday.

The Amritsar business is apparently destined to drag on for some time, for the Commons debate, originally fixed for last week, has been postponed indefinitely, while the Lords have not yet been able to select the day for what is likely to be the more important discussion of the two. The delay is, of course, justified by the fact that General Dyer has been permitted to present a written statement to the Army Council; not even the most extreme partisan would suggest that sufficient time should not be allowed for the preparation of such a document, and Ministers must obviously consider it before they can decide on their attitude towards the criticisms they will have to face from both sides. It is clearly unfair, therefore, to suggest, as has been done in some quarters, that Mr. Montagu is deliberately evading the issue; probably he is as anxious as anyone else to get the whole thing out of the way, but in any case the postponement of the debate cannot be laid to his account.

A nice constitutional point was raised in the course of the conversation on this topic in the House of Lords, the Earl of Midleton asking for an assurance that no vital decision would be taken before the debate; while Lord Curzon, speaking for the Government, insisted that it would be not only undesirable, but unfair, to have a discussion while the case was still undecided. This dictum may perhaps suggest to some readers the leading case of the King's Messenger: "He's in prison now, being punished, and the trial doesn't even begin till next Wednesday"; but from the strictly constitutional standpoint Lord Curzon is doubtless correct. The Government must decide, and if Parliament dislikes the decision, it can turn the Government out. The fact that there is no risk of the Government being turned out on a particular issue does not affect the case, but it may serve as a reminder of the magnitude of the responsibility which falls upon Ministers even in the most democratic country in the world.

The University of Cambridge is certainly to be congratulated on the choice of Lord Meston to deliver the annual Rede Lecture, and his discourse on "India at the Crossways" was worthy of the occasion and the lecturer. It has, however, been very badly reported in the daily Press, and we have not the space necessary for an adequate summary of his compact and closely reasoned pronouncement, so that we can only advise our readers to wait for its publication and obtain copies for themselves. An idea of its quality can perhaps be formed from his happy illustration of the hard fact that democracy has come to India in a hurry; six centuries elapsed between Runnymede and the first Reform Bill, but in India, as he said, the same amount of ground has been covered in about fifty years. For the "unchanging East" that is tolerably quick work, and there is always some risk when an elephant gets into a hurry; but risk and disaster are very different things, and the lesson suggested by his comparison is not the desirability of a sudden halt, but the need of wise and far-seeing guidance from above.

An illustration of the rate at which matters move in India nowadays may be found in the present perplexities of the great landholders. A few months ago they seemed to be quietly confident of their ability to control their tenants' votes; they are now getting distinctly anxious on this score, and there is increasing doubt regarding the strength of their position in the new provincial legislatures. Political organisers are, of course, at work among the tenants who will shortly be enfranchised, and they are finding that in India, as elsewhere, peasants prefer economics to politics; the offer of such boons as compulsory education leaves them cold, but suggestions regarding rents and tenures at once incite their interest, so it is possible that, even in this year's elections, the agrarian question will take a prominent place, and it is quite certain to become more and more prominent as time goes on. That means that the power of the landholders is already doomed, though it may be impossible to predict the date of its demise.

THE WEEK AT HOME.

Levy on War Profits.

On Tuesday last the Government definitely turned down the proposed levy on war profits, and the profiteers slept soundly in their beds for the first time for weeks. Mr. Chamberlain spoke well, but rather in the manner of a man who was convinced against his will; and undoubtedly a levy on war profits would have simplified his next Budget. As things are, it leaves him with the extremely serious problem of the floating debt as a permanent menace; and he cannot fail to recognise that a continuance of the Excess Profits Duty cannot be relied on indefinitely, for the simple reason that if we once encounter a period of bad trade, excess profits will vanish altogether.

Fortunately we need not anticipate lean years for the present. The City is apprehensive—it always is—but the last trade figures have broken all records, both for import and export, and Mr. Kahn, the American banker, who has just gone back to the United States, has told his countrymen that the trade future of England is assured. It is quite true that business men have noticed a slackening off of the demand in certain branches of home commerce, more particularly in clothes and food, during the last few weeks, and this has led to a certain amount of shaking-out of stocks and a slight tendency to falling prices in a few classes of goods, but on the whole demand continues steady, and the general trend of prices is still upward.

While the demand for houses continues, indeed, prices cannot fall, and that particular trade must continue active for years, for factories as well as houses are wanted in many parts of the country. The demand for higher wages still continues; there is trouble among the provincial printers this week, and the coffin-makers have secured another advance. Those who complain of the high cost of living will not even be able to console themselves with the reflection that it is cheaper to die in future.

Dear Sugar.

Young England has a grievance, for the price of sugar is up again, and will apparently increase still further. The trouble is that Central Europe is not growing sugar-beet, the Americans are eating more sugar than ever (owing to prohibition), and the Cuban planters are taking advantage of the occasion to profiteer. It is useless to complain; we brought our trouble on ourselves by our Free Trade and bounty-fed sugar policy before the war, and the sins of the fathers are visited on the children, who promptly retaliate on their parents by asking for more pocket-money on the unassailable ground that "you say yourself that everything is so dear nowadays."

Foreign Policy.

The Government's foreign policy, especially in regard to France, is causing a good deal of apprehension. There is a certain amount of strain between the two Governments, and its effect has not been lessened by some rather hasty journalistic writing on both sides of the Channel. It is felt that Mr. Lloyd George or Lord Curzon might with advantage make a statement in Parliament; for while one recognises that the Governments cannot always see precisely eye to eye on every question, the last thing that anybody wants is for the long and tried friendship between the two countries to be affected.

More particularly is this the case in view of the results of the German elections, which have undoubtedly rendered the position of the existing Government at Berlin a very difficult one, and strengthened the extremists and reactionaries there. The corner-stone of our foreign policy is, and must remain, friendship with France.

Oxford in Lincolnshire?

An extraordinary rumour, which it is not necessary to believe implicitly, has been spread about by one of the University correspondents. There have been some rather serious town-and-gown squabbles at Oxford recently, and in consequence it has been suggested that the authorities have been considering the removal of the University. It has even been hinted that they have pitched upon Stamford, an obscure town in Lincolnshire, as a likely spot to pitch their tent. Fortunately there is no thought of Cambridge migrating to Wigan.

The New Bishops.

Whatever may be the troubles of Oxford at home, she at least seems able to secure preferment for her sons. Of the four new Bishops whose appointment is announced, not one comes from Cambridge or even Dublin; yet Cambridge rather prides itself on its divinity, which is mainly of the Broad Church variety. Only one of the four Bishops is well known to the general public, and that is Dr. Hensley Henson, who is translated from Hereford to Durham, where he was Dean until two years ago. He has now received preferment successively from Lord Salisbury, Mr. Asquith, and Mr. Lloyd George—a notable record for a man still under sixty. Durham is, of course, one of the few great prizes of the Church, and the new Bishop is very popular in the diocese. His plain-spokenness, which has not always been relished by his fellow-Bishops, is appreciated in the North Country.

County Cricket.

This year's cricket is on a distinctly higher level than that of last season, and by 1921 we shall be approaching the pre-war standard of play. At the moment the chances of the championship seem to be equally divided between Yorkshire and Kent, for neither county has yet been defeated, and both teams are easily superior to the rest of the competitors. It is not so much that they have any outstanding players, so far as one can see, but they seem to have a higher general level, and both pay great attention to keenness in the field. Many a county with admirable batting and first-rate bowling has lost the championship in the past because it has forgotten that fielding is at least as important as the more showy parts of the game, and in this respect history seems to be repeating itself.

Another New Port.

The idea has been mooted of developing Langstone Harbour, which lies between Portsmouth and Chichester, into a first-class port. Langstone Harbour is said to be practically the same size as Portsmouth Harbour, with a large area of mud flats adjacent, and the scheme is understood to present no particular engineering difficulties.

All the way along this coast are opportunities for shipping development, for the land is broken in many places. It was in this neighbourhood that the Romans made one of their first centres, building Chichester as a fortress guarding the end of Stane Street, which runs direct to London through Billingshurst, and eventually through Tooting and the Kennington Road and Newington Butts. There is a harbour at Chichester, which has been the site of a cathedral since the original church at Selsey was washed away by the sea; but the harbour, as befits a cathedral city, is a sleepy place, and the haunt of wild birds rather than ships, while Chichester itself has no trade. But a hundred years ago there used to be a great deal of smuggling in those waters.

The Week's Book.

Undoubtedly the book of the week is the conclusion of the "Life of Disraeli," the fifth and sixth volumes of which have been completed by Mr. G. E. Buckle, late Editor of *The Times*, and are published to-day. The work is very full and frank, and contains both the intimate letters and the official correspondence of Disraeli and Queen Victoria. It will be particularly interesting to readers of this paper, since it throws a flood of light on Russian and British policy towards Turkey between 1874 and 1880, and deals at length with the acquisition of Cyprus.

It is noteworthy that Queen Victoria, whose letters to her Prime Minister are extremely outspoken, had no great opinion of the Christians of the Near East, and it is clear that their main supporters in England were the High Church party, headed by Liddon. Neither the Queen nor Disraeli, as belonging to the extreme Low Church wing, had any sympathy with the attempts of the High Churchmen to come to an understanding with the Orthodox Church, and Disraeli had other reasons for disliking the Ritualists and High Churchmen. In fact, he writes to Lord Salisbury in 1875: "Can you recommend me a High Churchman for a Dean who isn't a damned fool?" Mr. Buckle unfortunately does not make it clear whether Lord Salisbury answered in the affirmative.

One curious point that emerges from the book is the revelation that Bismarck proposed a treaty of alliance with England in 1880. He had been immensely impressed by Disraeli at Berlin in 1878, and Disraeli received the proposal with interest, but when he discovered that it might be used as a handle by the ambitious Prussians against France he dropped it. He thought, quite correctly, that good relations with France were more important than a treaty of alliance with Germany; and by that time Queen Victoria had been cured of her early German predilections by Bismarck.

Much personal interest attaches to the private life of the statesman. It appears that he proposed marriage to a lady when he was seventy and a Prime Minister; she refused him, but they kept up a constant correspondence, and these intimate letters, which he wrote her from day to day, throw a great deal of light on the current gossip and party politics of the day. OCELLUS.

PALESTINE EXPLORATION FUND.

On June 9 the Palestine Exploration Fund held its annual general meeting at No. 2, Hinde Street, London, W.

In moving the adoption of the report and accounts, the Chairman (Commander D. G. Hogarth) mentioned the losses which the Fund had sustained by death and resignation. Among these was that of the late Professor Leonard W. King, Assistant Keeper of the Department of Oriental Antiquities at the British Museum, and Chairman of the Executive Committee of the Fund. Professor King, he said, had been taken rather suddenly ill in 1918. The illness continued, but hopes were entertained of his recovery. But in the summer of 1919 a turn for the worse was taken, and Professor King passed away. No greater loss could have been sustained by the society or by Oriental studies in this country: he had been their one absolutely reliable cuneiformist—the one person who could deal with the extraordinarily difficult subject of Babylonian and Assyrian documents. His reputation was great not only in this country, but also on the Continent of Europe and in America. Other losses were those of Mr. J. D. Crase (Hon. Secretary), Sir Edwin Pears, Sir William Ewart, Mr. Joseph Offord and the Rev. Dr. Howard Bliss. Besides these, Mr. Walter Morrison (Treasurer) and the Rev. Dr. Horton (Executive Committee) had resigned.

The report was adopted, Commander D. G. Hogarth, Sir Charles Close, and Dr. E. W. G. Masterman being afterwards elected to the offices of Chairman of the Executive Committee, Hon. Treasurer, and Hon. Secretary respectively.

In moving the election of the General Committee—which was the business that followed—Sir Herbert Samuel referred to his appointment as High Commissioner for Palestine. He said that a British Administration would profoundly affect the work of the Palestine Exploration Fund, and, he trusted, wholly for the better. It would be the duty of an enlightened and progressive Administration to give the utmost facilities for archæological research. There would be a Department of Archæology, but, for sordid reasons of pounds, shillings, and pence, it would probably be a very small one, and the Fund, so far from running the danger of being ousted and superseded by an arrogant Administration, would, on the contrary, find itself looked to by the Administration to continue its work with even greater activity than before

THE NEAR AND MIDDLE EAST.

(From Our Own Correspondents.)

EGYPT.

CAIRO, May 31.

The Nile Projects Commission.

The Nile Projects Commission commenced its public hearings last Tuesday for the purpose of hearing the charges brought by Sir William Willcocks and Colonel Ralston Kennedy against the Ministry of Public Works in regard to the data on which the irrigation projects on the Upper Nile have been based. The Commission, which consists of Messrs. S. J. Gebbie, Simpson and Cory, is sitting with a judge (Mr. G. A. Booth) of the Mixed Courts, who is directing the public hearing. Sir William Willcocks and Col. Kennedy are conducting their own case. Mr. Maxwell is representing the Ministry of Public Works, while Judge Wasey Sterry, Legal Secretary, is watching in the interests of the Sudan Government.

During the three days on which the Commission has sat this week there has been a very good attendance, the Egyptian element in the audience becoming more prominent as the hearing progressed. After the usual preliminaries and an explanation from Judge Booth on the main lines of the procedure which will be followed, Col. Kennedy made a formal protest regarding the competence of the Commission, and also regarding its terms of reference, of which the Commission merely took note. He then protested that whereas the charges made by Sir William Willcocks and himself have been brought against Sir Murdoch MacDonald, the answer is being made by the Ministry of Public Works. The Commission over-ruled this objection, since it considered that it had not any jurisdiction to inquire into charges against individuals, and that it could only take cognisance of these charges in so far as it was necessary in order to deal with the criticisms of the projects in question.

So far the Commission has only dealt with the first charge made by Sir William Willcocks, with which the first three charges of Col. Kennedy correspond. This charge is that gauge-readings at Sennar between December, 1913, and February, 1914, have been altered so as to give an apparently increased volume in the river at that period, and that an important document in connection with the Blue Nile projects has been lost. It is impossible in the short space available to give any clear and concise account of what has so far transpired. A good deal of time has been taken up with discussions of procedure; the Government has called several witnesses —mostly native, it is interesting to note—to prove the manner in which the river gauges are recorded, and to explain various points on which Sir William Willcocks and Col. Kennedy have based their charges; while several members and ex-members of the Sudan Government have been called to answer the statements made by the accusing parties with regard to the alleged missing Blue Nile memorandum. To the ordinary looker-on it would seem as if a good deal of time is being wasted over the elucidation of what would appear to be relatively minor points; but as the accusing parties have based their charges partly on these points, I suppose this importance must be given to them, and all these discussions are necessary, although at times some of them appear to be capable of such very obvious explanation.

Three sittings have now been devoted to the first charge, and in connection with it we have yet to hear the technical experts presented by the Government. As usually happens in such cases, it is to be expected that when these witnesses are put in the box a gladiatorial fight will take place between them and Sir William Willcocks and Col. Kennedy, and it looks very much as if the public hearing will be prolonged to a very great length unless some means is found of expediting the remaining charges. This week's hearing has had one very interesting feature, viz., the excellent manner in which the Egyptian witnesses have given their evidence and have stood their cross-examination.

The Death of Commodore Groves.

A very sad accident took place on Thursday last on the aerodrome at Heliopolis. Air-Commodore Groves had decided to fly with Flying Officer Bird in a Bristol aeroplane to Kantara. He took off very well, but when he was about 150 ft. up the engine failed. Commodore Groves turned in order to come to earth, but the machine got out of control, and as he was not high enough up in order to regain control it crashed. Help was available at once, and when the two pilots were extricated from the wreckage Lieut. Bird was found to be dead, and the Commodore was so grievously injured that he died two hours later. The funeral took place on Friday afternoon, and was a very impressive one. The two coffins, covered with the Union Jack and with wreaths, were conveyed on a trailer drawn by a motor tender. The chief mourners consisted of the Air Force staff, with whom was Lewa Castle Smith Pasha, representing the Sultan; Col. J. K. Watson, representing the High Commissioner; Lieut.-General Sir Walter Congreve, Sir Paul Harvey, and Col. G. S. Liddle, representing the Ministry of Communications. The Munster Regiment provided the firing party and the band, while detachments from all the regiments at present in Cairo and a representative delegation of the Middle East Air Force completed the procession. At the graveside there were also a large number of Army nurses and personal friends.

Air-Commodore Groves will be a serious loss to the Air Ministry in general and to the Middle East Air Force in particular. He had a most brilliant career in the Navy before the War and in the Air Force since, and was indeed regarded as one of the most capable and reliable men in his profession. He only came to Egypt last September in order to fill the post of Chief of Staff to Air-Marshal Salmond, for whom he has acted during most of the time; but in that short period his energy and his personality have worked wonders with the Air Force, and go where one will, amongst the mechanics as well as amongst his fellow officers, one hears nothing but expressions of sincere regret at his sad death, of intense admiration for his courage, and of personal affection for him.

The Political Situation.

I do not find that the news of Zaghloul Pasha's latest move towards London has created much surprise here. The fact that Adly Pasha Yeghen intended to discuss the situation with him and try to bring about a rapprochement with the British Government had somewhat prepared the more instructed and intelligent section of the community, while Zaghloul Pasha himself had in his interviews and letters given more than one hint of some such development which those who run could read. The idea of negotiating with the British Government at the present juncture does not, of course, please the ultra-Extremists or those who have a direct interest in the prolongation of the agitation, but when the time comes it will be found that these opponents of any compromise whatsoever will not carry much weight, for generally speaking the Egyptian public is weary of the state of affairs which has existed since November, 1918, and which has brought the country no material benefit.

The main discussion I find at present centres round the point as to whether Zaghloul Pasha is going to London as the recognised representative of the Egyptian nation or whether he will be heard merely as representing a particular element of the Egyptian population. Whether it is in the one capacity or in the other will in the end make little difference, for if, as is hoped, after he has been heard in London, an agreement on the Egyptian situation is reached, there is every reason to expect that, apart from the student element which as ever will be the one disturbing—but not determining—factor in the situation, the settlement will be thankfully received.

PORT SAID, May 28.

Empire Day.

Empire Day here was a great success. The arrangements were in the hands of a committee of the residents, who received great help from both the naval and military authorities, the former represented by the captain, officers and crew of H.M.S. Calypso, which had replaced H.M.S. Ceres two days previously. The Sporting Club ground, kindly lent for the occasion, was gaily decorated, and a course for the races was marked out. The proceedings were opened by a ceremonial hoisting of the flag, which was followed by ten girls carrying flags representing different parts of the Empire, saluting Britannia, who was seated on a platform under the flag. After a speech by the British Consul, Senior Chaplain Day gave a very fine address on the Empire and its responsibilities for the individual. Tea was then served, and afterwards some most successful children's sports were held, in which children of all ages up to sixty and over thoroughly enjoyed themselves. The band of H.M.S. Calypso played selections during the afternoon, and at the conclusion Mrs. Freeman, the wife of the British Consul, distributed the prizes.

Sale of Work.

A most successful sale of work in aid of the English Church funds was held in the garden of the Port House a fortnight ago. The feature of the afternoon was a pastoral play performed by the children, with fairies, brownies, toadstools, and a witch all complete. It was thoroughly enjoyed by everybody. The amount raised was about £E113. This does not necessarily mean that people are getting more religious here, but simply in the afternoon's entertainment they got a good run for their money.

Moral Port Said.

Papers out from home seem to be quoting a certain Brigadier-General J. H. Bateson, a Wesleyan chaplain, to the effect that he knows all the vice shops in the East, but that he has found more filth in Port Said in an hour than in all the rest put together. One can only surmise that this worthy chaplain spent that hour in a frantic search for what most decent people do not look for. Port Said, no doubt, has its plague spots, being the supply created by the demand. But anyone who really knows Port Said can say that it compares favourably with any other place in the East.

YUGOSLAVIA.

BELGRADE, June 2.

The Improving Outlook.

The Coalition Cabinet is settling down to its work, and there is a general feeling of confidence and optimism throughout the country. It is generally believed that M. Vesnitch is succeeding in driving his very mixed team with success and tact. The chief point at issue appears to be the draft constitution to be submitted to the Constituent Assembly, but we may feel hopeful that the ship will not be wrecked upon this rock. The general feeling of optimism is increased by the really excellent prospects of the harvest; reports from the fat lands of the Banat give glowing accounts, and in old Serbia there is every reason to anticipate a "bumper." Both the grape and plum crops are exceedingly promising, though the owners of plum-orchards are handicapped by the shortage of drying plant and vessels for distilling *rakia*, or plum-brandy. The whole situation is reflected in the recovery of the dinar, which had improved from 105 to the £ before the Orthodox Whitsun, and jumped 25 points when the banks reopened after the holidays, and then in two days to 63. This is, of course, an enormous benefit to Serbs, and especially to importers; but many will be hit who were compelled to buy foreign manufactures and pay when the dinar was at its lowest ebb. The foreign colony will naturally feel the difference, especially if prices do not fall quickly in proportion to the exchange.

A marked decline in prices is noticeable: sugar has fallen to 25 dinars per kilo retail—bad enough in all conscience, but better than 30 and 35; flour is down a dinar a kilo; bread is still very dear, as the millers hold big stocks; meat is falling. There is as yet no sign of improvement in imported goods, such as paper; an ordinary packet of common foolscap, for instance, costs no less than 70 dinars to-day. Nor is there any sign of reduction in rents. The authorities are taking a firm stand in this respect, to prevent profiteering, and visitors are allowed only a week to stay, unless they can show good reason to satisfy the authorities. One of the causes of the scarcity of lodgings is the great quantity of Russian refugees. It is said that there are about 30,000 Russians at present in Yugoslavia.

Smokers are far from content, for the price of tobacco and cigarettes has gone up 50 per cent.

The Scottish Women's Hospital.

The Scottish Women's Hospital is now wound up, and very many grateful Serbs have said good-bye to the lady doctors and sisters who have tended them so devotedly all through the war. The decision to wind up was received with very great regret throughout Serbia, and as much by the staff as by anybody. They had been through much together, and it was hard to break up an association of five years or more. Several of the sisters and staff have joined some of the American units which are doing such good work at Chachak, Krushevats, and elsewhere, but the doctors have either gone or are about to go. They will be missed, indeed, not only by their innumerable grateful patients, but by their friends in the social world.

An Anglo-Serbian Hospital.

There still remains the Anglo-Serbian Children's Hospital, which now occupies the premises which were formerly the headquarters of the British Naval Brigade. This admirable institution is doing splendid work, and has a summer camp in the charming glades of the Koshutniak forest at Topchider. The hospital has felt the cost of living and the scarcity of funds, and so an entertainment was recently organised for its benefit. In connection with which great credit is due to the energy and organising power of Mrs. Clarke, who took the lead, which the entire British colony supported. The colony is not numerous, but has revealed a surprisingly high average of talent, both dramatic and musical.

The concert was contributed by Serbian as well as British talent. It is impossible to single out individuals among this galaxy of talent; but the names of Mlle. Hrististch, with her charming rendering of eighteenth century Italian songs; M. Mokranjac, with his 'cello solo; of Mr. Knight, who gave us the benefit of his experience in organising the divisional entertainments in France; and of M. Holub, with a highly pyrotechnic violin solo, cannot be passed over; while Mme. Anchier-Casteran revealed the possibilities of that beautiful but unfamiliar instrument, the harp. His numerous Salonika friends were glad to welcome M. Miat Miatovitch, whose tenor voice, once the delight of the mess and camp fire, has now won him recognition at the Albert Hall. A charming item was a ballet by a young English dancer who made her *début* under these not unromantic circumstances in her butterfly dance, supported by a ballet of little English and Serbian girls, a very picture of charm and grace. More will be heard of "Rowena," her interpretation of a Spanish dance, and a cymbal dance in Oriental costume showed not only training but talent.

The concert was followed by a farce executed by six prominent members of the British colony, who revealed a degree of dramatic talent quite unexpected, and enormously amused the Serbian contingent in the audience, for whose benefit a synopsis in Serbian was printed on the programme, explaining the Englishman's eccentricity of attaching even more importance to his daily bath than to the two prime factors in our character, according to general Continental belief—to wit, Time and Money.

ROUMANIA.

BUCHAREST, May 20.

Aviation.

An aeroplane competition will take place at Bucharest on June 1 between fifty of the pupils of the Army School of Aeronautics.

A squadron of six army aeroplanes recently made a speed trial from Bucharest to Craiova, and covered the distance of about 200 kilometres in 1 hr. and 10 mins.

Storm in Moldavia.

A severe storm raged in Moldavia on May 12, in consequence of which the telegraph and telephone wires were destroyed in several places, and communications with Moldavia and the Bukovina were temporarily interrupted.

M. Marghiloman on the Political Situation.

It must be admitted even by those who disagree with his politics and deplore his Germanophil tendencies that M. Marghiloman is one of the ablest politicians and most eloquent speakers among Roumanian public men at the present time. At a recent meeting of the Progressive Conservatives in Bucharest he said that the two burning questions of the moment were the peasant question and the question of administration. On the latter subject he planted his arrows most dexterously in each of the rival parties. He emphasised the importance of proceeding as rapidly as possible with the distribution of the expropriated land to the peasants as well as with the payments for the land expropriated, so that every one may know where he stands and be able to get to work—the all-important thing for the country. He deprecated the confusion of ideas which he said existed in this country between Socialists and workmen. "Socialism," he said, "is a political doctrine, whereas the interests of the workers are of a professional order. It is true that to-day we often see the workers led by the Socialists. The fault lies with the various Governments who have been in power during the last few years. Our workmen are not legally organised so as to be able to defend their professional interests. When we have a legislation which will permit the workmen to have legal syndicates competent to intervene in the conflicts between them and their employers, syndicates conducted by recognised persons and able to accept responsibility, syndicates entrusted with work of social and mutual benefit which will raise them in their own esteem and in that of the workers, then we shall have emancipated the working-classes from the tyranny of socialism. I should see no objection, gentlemen, to our working-classes remaining under the moral guidance of Socialism if Socialism in this country were really a doctrine. But unhappily our Socialism is lacking in culture, and as it is not a product of original reflection, nor the outcome of the exigencies of local circumstances, it is but a pale imitation of Socialism abroad, and as is always the case, the less men are educated, the more exaggerated are their imitations; we therefore see our Socialism adopting the most anarchical and the most extravagant ideas, without perhaps understanding the ends to which they will lead."

"Hero Day."

May 20 has been decreed a national holiday, to be called "Hero Day," in memory of those fallen in the war. An impressive service was held to-day at a military burying ground near the end of the Chaussée, where were assembled large numbers and the pupils of all the State schools in Bucharest. After the service the priests led a funeral procession down the Calea Victoriei to the statue of Michael the Hero, the school children following in groups, carrying flags and singing national songs; then came the Boy Scouts, and the regular troops brought up the rear. The procession took more than an hour to pass, but the children at least seemed to be enjoying it, and flowers were thrown to them and to the soldiers as they passed. The private schools assembled at two other cemeteries on the outskirts of the town, where requiem services were also held.

May 28.

The Elections.

The Parliamentary Elections which began on Wednesday, May 26, mark an important epoch in the political history of Roumania. The Parliament about to be elected will have a very hard task before it. As was pointed out in my letter a fortnight ago, Roumania, before the outbreak of the war, had just succeeded in attaining a degree of prosperity unknown in her history, and now it would be difficult to exaggerate the difficulties under which she is labouring, both because of the general disorganisation of her transport, commerce, and agriculture resulting from the war, and because the conditions of peace have doubled her territory and introduced into the administration of the country many new problems, material and moral. The populations of the annexed territories, though Roumanian by race, have lived for centuries under a different political régime, different laws, and a foreign currency, and it will be no simple matter to reorganise the whole country so as to meet the present needs. The question of the minority populations presents a further problem, and to all these considerations must be added the social unrest caused by the influence of Socialist propaganda upon the working classes, and the very high price of living which now weighs so heavily upon the middle and lower classes.

The peasants, however, who form a large majority of the population do not seem at all inclined to be led into communistic agitations. They are peace loving, have few wants, and have been greatly enriched by the redistribution of land under the Expropriation of Land Law; and though they are now taking more interest in politics they have not at recent by-elections shown any Socialist tendencies whatever. Nor do they on the whole adhere to any of the old political parties, but they appear rather to be warm supporters of General Averescu, whom they call "the great General."

It is still too soon to make any confident predictions, but on the whole the position seems to favour the election of a strong Government which should be competent to tackle the hard task of reorganisation.

Provincial Tour of the King and Queen.

The King and Queen returned on the 26th inst. from their tour of the provinces of Bukovina and Bessarabia, having been everywhere received with the greatest enthusiasm. It has only now been made known publicly that the Queen met with an accident at the beginning of her tour which threatened to have serious results. On the arrival of their Majesties at Suceava quantities of flowers were thrown to them, and one large bouquet, probably mounted on wire, struck the Queen full in the face, so injuring her right eye that she was unable to appear at any public functions on the following day. Her Majesty, however, would not consent to return to Bucharest, and insisted upon carrying out her programme. Her eye is now quite well again.

Lady Muriel Paget in Bucharest.

Lady Muriel Paget's Mission to Czecho-Slovakia is probably well known already both in England and the Balkan States. Under this organisation 100 Baby Welfare centres are already at work in Czecho-Slovakia; one has been opened at Dvinsk in Poland also, and Lady Paget is now arranging to send 30 workers to Roumania. The Mission is working under the auspices of the League of Nations Red Cross, one of the main aims of which at present is to combat the spread of epidemics in the half-starved countries of Eastern Europe.

BULGARIA.

SOFIA, June 5.

Criticisms of San Remo.

I append below the views of some intellectuals of this country upon the decision of San Remo.

The Prime Minister, M. Stambolisky, says:—The Ægean Sea coast was wrested from us on the strength of the Neuilly Peace Treaty. To-day it is awarded to the weakest State in the Balkan Peninsula. But from this national disaster Bulgaria may extract a precious lesson, and will shortly be able to gain in a peaceful way what she lost through the madness of war.

M. Ivan Eustatieff Gueshoff, the leader of the Conservative or Narodniak Party, emphasises the fact that when Bulgaria was under a foreign yoke she was united, but when she gained her freedom her national unity began to break. In those times of bondage moderation and wisdom distinguished the champions of the spiritual regeneration of Bulgaria. This veteran statesman ascribed the catastrophe to the absence of these two high moral principles in the government of the country.

M. Mouchanoff, a leading Democrat, says the Entente Powers have not fulfilled their promises to bless the world with a peace based upon the principles of justice and of nationality. Bulgaria's peace is a complete negation of these humane principles. By being deprived of the Ægean Sea coast of Thrace, which is so indispensable to her economic progress, she suffers a most cruel injustice. Thousands of Bulgarians are abandoning their father-

land, and are leaving their fields and homes to fate. The policy of the victors follows the well-trodden road in its disregard of justice and equity, and in its devotion to self-interest. But from the vanquished nations will arise a generation which will reorganise the world upon the eternally young principles of right, justice, and humanity. In this triumph Bulgaria will play her part.

M. Pastouchoff, a leader of the Moderate Socialists, says:—By this decision of the Thracian question the Entente tramples upon President Wilson's principles, and the international treaties in their hands are only scraps of paper. Its imperialism is as bad as the Germans' before the war, threatening in the same way the peaceful development of the world. The fate of Thrace is connected with Asia Minor and the hidden struggle between England, France, and Italy for the partition of the booty. Owing to the policy of the Entente the causes of conflict are increasing rather than diminishing, and the future of the Balkans again becomes insecure. The Bulgarian Government should abstain from all actions which may hinder that peaceful development which Bulgaria so much needs.

M. Kosturkoff, the Radical leader, says that the responsibility for the decisions of the Paris Conference lies upon the American President, who proclaimed as his motto the self-determination of the peoples. The present terms, by which a great part of the Bulgarian race is thrown into the bondage of three hostile States, is a false solution of the Balkan problem.

Dr. Moutatoff, a leading Progressive, says:—For three years we Thracians and Macedonians lived united. After that we were beaten, and lost, first, Macedonia, then the Dobruja, and now Thrace. But we will drink the bitter cup to the dregs, and ever remembering our legacy from the past, will surely regain, by peaceful means, these provinces lost in an unwise struggle.

TURKEY.

CONSTANTINOPLE, May 15.

The Tram Strike.

The dispute mentioned in my earlier letter has been settled by the intervention of the Grand Vizier, and the men's demands have been granted almost integrally. There were scenes of great enthusiasm when the result was announced to the strikers, but the public, although delighted at first, has discovered a drop of bitterness in the cup, for fares are to be increased 25 per cent. But, after all, the public here is already exploited to such an extent that the new imposition is a mere trifle.

ALBANIA.

June 4.

The General Situation.

It is claimed here in Albania that the country has not, within the memory of man been so happy as it now is. The southern regions are—*pace* the Greek Press campaign to prove the contrary—very glad to be united again with the rest of Albania.

On May 27 the French evacuated the Pogradetz district, handing over the military and civil administration to the Albanian authorities, and the following day Kortcha (Koritza) was similarly evacuated. Thus the Albania of 1913 is united for the first time. There had been rumours that the Greeks were assembling forces at Florina, to seize Kortcha on the departure of the French, and that the Serbs had similar intentions regarding Pogradetz. These rumours excited the Albanians, who made ready for a prolonged struggle, but happily nothing of the kind expected took place.

It will be remembered that the French found themselves in Kortcha at the beginning of 1915, and that General Sarrail created there the Albanian Republic. Since then the town has been under a mixed, or rather a purely Albanian, administration; for the officials, judges, and police were Albanian, and Albanian was the language used. At the last there were twenty-one French officers in the region and 700 French colonial troops. The administration was quite satisfactory, and the local finances show a balance on the right side of five million francs—which has not yet been handed over to the Albanian exchequer.

Administration of Evacuated Areas.

The central government at Tirana has had the happy inspiration of entrusting the administration of Kortcha and Argyrokastro to Christian prefects: Dr. Constantine Kota at the former place, and M. Nicholas Tromara, ex-President of the pan-Albanian society "Vatra" of America, at Argyrokastro.

At Kortcha there is an armed force of 2,200 men, with a large number of volunteers, and at Argyrokastro there are 2,000 men and 250 volunteers, known as the "National Guard." Further forces are being raised by enrolment of men chosen by ballot.

Finances.

The Government has claimed, and is awaiting the handing over of, 4,300,000 francs from the treasuries of Argyrokastro and Agia Taranta. The Consulta has not yet replied to the demand. Meanwhile, in view of the success of the two-million-franc loan, the Government proposes a further internal loan of ten million francs, which, it is believed, would be very easily covered. Should that be so, the nation would have given conclusive proof of its faith in the Government.

Lack of Communications.

One of the country's greatest difficulties lies in the lack of means of communication. Turkey made no roads in Albania, and the only road worthy of the name in independent Albania is that from Saranta to Kortcha, which passes through Leskoviki and Kolonia; and the southern part of this road lies in territory occupied by the Greeks since 1912. During their occupation the Austrians constructed a narrow-gauge railway from Scutari to Berat; but they destroyed it on their retreat, and the old stone bridges, dating back many centuries, met a similar fate. Thus the country is now almost without any means of communication. What is almost worse, the Austrians and the Italians carried off practically all the telegraphic apparatus, and it has been only with the utmost difficulty that the authorities have now re-established communications to some extent. We are, however, promised improved postal and telegraphic services shortly. Yugoslavia, Greece and Italy refuse to assist in the matter, and things are rendered still worse by the lack of a constant service of boats. These conditions naturally render communications with the outside world extremely difficult.

MALTA.

VALETTA, May 20.

More Petitioning.

A petition signed by practically 700 men of business has been presented to the Governor as a protest against the proposed new taxes. There can be but little doubt that, for the size of the Island, its limited resources and its critical economic condition, the time has come when some drastic reform in taxation must be made. The precise nature of this reform is a difficult thing for our politicians to determine. The above petition lays down specific objections against the liquor taxes, those on medicines, cigarettes, sugar and wheat. It is pointed out that in all these cases it is the poor who will feel the pinch the most keenly; and herein lies the strength of the argument against these taxes. The petitioners advocate a tax of one per cent. on the value of land after sundry deductions. But it is not made clear what approximate sum such a tax would realise, if adopted. The usual official stereotyped reply has been received that the communication will receive attention. Till this is issued we must simply wait—and grumble.

A Gift.

The Secretary of State has decided to hand over to the civil authorities the Auberge d'Italie, which is to be converted into a public museum. This is a much appreciated gift, as the present Museum is too cramped to exhibit adequately the many historic antiquities, the number of which, by the way, is increasing at a rapid rate.

Reparation.

An echo of the local riots of June last comes forward in the form of assessed damages. Although these are not as high as the claims put forward, they are very tangible. The looting of the offices of the *Daily Malta Chronicle* means practically £10,000, and there are altogether fourteen claims, some of which will be naturally very heavy. The few who danced to the tune little thought how high the pipers' fees might prove.

Personal.

Colonel Henry W. Engerer has retired from the position of Superintendent of Posts owing to ill-health.

Lieut. Edward de Visme Drummond, R.N., of H.M.S. Emperor of India, died after an illness of but a few hours. Being one of the most popular officers on the ship, his sudden loss has been very keenly felt.

CORRESPONDENCE.

CHRISTIAN CROSSES AT JERUSALEM.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—Archdeacon Beresford Potter writes in your issue of May 13 "that the Zionists in Jerusalem are objecting to the crosses on our soldiers' graves, and that the crosses are either being removed, or that such a thing is in the air."

I wish to give the most emphatic denial to this false and malicious statement. No Jews, whether Zionists or not, have ever raised the slightest objection, or could think of raising any objection, to the crosses on Christian graves. I passed the cemetery yesterday—the crosses have not been removed, nor do we Jews know anything about their removal being in the air. I have never heard of anyone, Jew or not, making any such suggestion.

I trust that the Archdeacon will reprove his correspondents, and that he himself will refrain from making statements of this kind in the Press without full inquiry.

—I am, etc., M. D. EDER,
Zionist Commission.

Jerusalem, May 31, 1920.

ALBANIA.

TO THE EDITOR OF "THE NEAR EAST"

Sir,—With reference to Lieut-Col. the Hon. A. H. Herbert's most interesting article on Albania, may I be permitted to point out that the hatred now existing between Albanians and Greeks is partly due to agents of foreign propagandas during the last forty years? I cannot deny the fact that the reciprocal feelings and sentiments of the Albanians and Greeks are now very much like those cherished of old between the Highlanders and the Lowlanders of Scotland. But, if we go back as far as 1880, the then leading Albanian chieftains, both of South and North Albania, saw clearly that their only hope of escaping Charybdis and Scylla was by a close alliance with Greece. Nor, speaking Greek as most of them do even to-day, had they any objection to the Hellenisation of Albania, or, indeed, to its more or less complete absorption by Greece in the future. They only asked that such an offensive and defensive alliance, as they believed to be no less necessary for Greece than it was for themselves, be not jeopardised by any immediately attempted or forcible annexations. In other words, the Albanian leaders were in favour of a federal Union under the suzerainty of the late King George of Greece, and the most curious thing to be noted was that both Greeks and Albanians were looking forward to Great Britain, the then only disinterested Power in the Balkans, to act as the intermediary between the two nations.

Forty years passed since, and the friendly sentiments have been changed into a bitter enmity and a mutual suspicion between the two branches of the great Pelasgic family. Greeks, however, looked always with sympathy upon the Albanian difficulties in 1913 because they also passed through the same chaotic ordeal in the early decades of the establishment of the young Hellenic Kingdom. We have a proverb in Greek: "Blood cannot be changed into water," and this applies to the Greco-Albanian differences. Albanian blood runs profusely in the veins of most of the leading families of the Greek aristocracy. The heroes of the Greek War of Independence, who are worshipped in the hearts of every Greek, were nearly all of Albanian descent, and the Fustanella, the kilt of the Greek highlander, came over to Greece from the Shkipetarland.

There is yet time; next year Hellenism will joyfully celebrate the centenary of the War of Independence, in which Albanians took a prominent part and gave a willing hand to the Greeks against the Turks, and the Greco-Albanian Confederation may then take place instead of the present sharpening of knives for a fratricidal struggle between the two sister nations. I understand from a reliable source that Admiral Coundouriotis and General Danglis (ex-members of the Salonica Triumvirate), who are of Albanian blood, are in favour of such a Greco-Albanian confederation, and that M. Venizelos shares their opinion. This mutual understanding would simplify the differences of the two countries, but will Great Britain now step in as the negotiator of this Confederation once that we know very well the dislike of both Greeks and Albanians of any interference of a well-known Adriatic Power into their private affairs?—I am, etc.,

THEODORE D. MOSCONAS.

32, Oxford Street, Manchester,
June 10.

GOVERNMENT AND MISSION HOSPITALS.

The Government of India have granted, says the *C.M.S. Gleaner* for June, a valuable concession to mission hospitals in India and Burma—namely, the purchase of medical stores at the rates prescribed for Government institutions. This concession will mean a great saving in time and money, and medical missionaries will be able to take advantage of the efforts now being made by Government experts to develop local manufactures.

Refractory tribes in Morocco have surrendered and have agreed to accept the conditions imposed on them by the French authorities.

Gibraltar residents are feeling acutely the present scarcity of passenger accommodation in liners bound for England. Many Service men have found a difficulty in getting home with their families even in Government transports.

THE EGYPT EXPLORATION SOCIETY.

Under the auspices of the Egypt Exploration Society, on May 28, Professor B. P. Grenfell, F.B.A., lectured on "The Present Position of Papyrology." The lecturer had recently returned from Egypt, which country he had visited in order to work at Oxyrhynchus papyri in the Cairo Museum, and to purchase papyri for English museums.

Among his remarks were the following:—

Egypt, after its conquest by Alexander the Great, was no longer isolated, but connected with the main stream of European culture until the invasion of the Arabs. For nearly a thousand years Greek was the principal language spoken. In the competition of various nations during the last thirty years to obtain Greek papyri the largest share of the prizes has fallen to this country, the chief collections being at the British Museum, which has the best literary papyri, Oxford, Manchester, and Dublin. At Queen's College, Oxford, is the collection of unpublished papyri from the excavations of Professors Grenfell and Hunt, and of Mr. J. M. Johnson at various sites in Middle Egypt. The Oxyrhynchus series has reached Part XIV., which was issued in April, 1920, and contains non-literary documents, including several interesting private letters of the third century. Part XV. will consist of literary texts, among which are some lyric fragments (Sappho, Alcæus and Pindar), elegiacs by Callimachus, epigrams intended to be sung to the accompaniment of a flute, fragments of an history describing the battle of Issus, short lives of celebrated literary persons, early papyri of Sophocles' "Trachiniæ," Theocritus "Idyll 22," and Aratus, and in the theological section a fragment of the Greek original of the "Apology" of Aristides, and a remarkably early liturgical extract (about A.D. 300) with musical notation. There are still many literary fragments in the unopened boxes of papyri from Oxyrhynchus, and of the non-literary documents much less than half has been published.

Next in importance to the British collections come the German, of which the largest is at Berlin. In 1919 was issued a most valuable papyrus of A.D. 150 containing the official rules for guiding the Idiologos, one of the chief revenue officials, in the performance of his duties. The Austrian collection at Vienna, though large, has not been made accessible, nor has the publication of it been placed on a satisfactory basis.

The principal French collection of papyri at Lille was not injured in the war, and the publication of it is about to be resumed. Italy is making progress with the editing of the Herculaneum papyri, and has flourishing schools of papyrology at Florence and Milan. The Societa Italiana per la Ricerca dei Papiri is about to issue Volume VI. of its series, completing the publication of the Florentine section of the third century B.C. Zeno papyri.

America has not yet obtained very many papyri, but has recently acquired an important early papyrus book containing the minor Prophets in the Septuagint.

In the literature of papyrology, apart from the publication of texts, British scholars have made valuable contributions with regard to palæography and the relation of papyri to the New Testament; but it has been mainly left to others, principally German and French scholars, to utilise the evidence of papyri for historical purposes.

The destruction of ancient town ruins in Egypt for the sake of the nitrous earth is going on more actively than ever, and the chief sources of papyri are now nearly, or in some cases quite, exhausted. The outlook for further excavations in search of papyri is not encouraging, but papyri can still be bought from dealers in antiquities.

A serious fire has destroyed the machinery in the spinning room of the Keshoram cotton mills at Calcutta, involving a loss of five lakhs of rupees (nominally £50,000).

"STANDARD" CIGARETTE MAKING MACHINE.

A badly made cigarette will never command a good sale—there are too many well-made Brands on the market. One of the most valuable features of the "STANDARD" Machine lies in its capacity for enormous output (up to 36,000 per hour) with the utmost perfection of quality equal to hand-made goods. Its extreme simplicity of operation admirably adapts it to regions where skilled labour is scarce.

PRESS ON THE NEAR EAST.

The Unredeemed Greek.

Under the above title the Constantinople correspondent of the *Morning Post* has, on June 14, some interesting notes. He says:—

The Greek has a smile on his face these days. He was always the most cocksure of the peoples in the Near East—not to say, the cockiest. He had a moment of depression, it is true, when he more or less blundered into Smyrna, and when nasty persons spread exaggerated tales about this. But it soon passed. He has one philosopher's stone which he never fails to rub when anything unpleasant comes in his way, and that is the name of Venizelos. It is impossible to go to any meeting, gathering, or theatrical representation at which he is on his own account without hearing something in the way of vociferant panegyric of his chief. Probably no other Premier in the world has such a position or is acclaimed exactly so; and this, as the Greek himself will be the first to point out, really shows the main weakness which threatens the future of expanding Greece.

He proceeds to show the unredeemed Greek as a dreamer, and concludes:—

Yet the Greek has shown himself extraordinarily practical; without losing his dreams, without for a moment believing that they can ever be permanently pushed aside, he accepts the decisions that he shall now be "redeemed" just up to such and such a point as the Allies determine. He has not the smallest hesitation about his rights or his abilities, and all the uncomplimentary remarks which other people make about him (saying that he is unproductive, unsound, scampy, and the rest) leave him quite cold. For, as he himself says: Put a Greek on a table and upset the table (plus the Greek) topside over, and the Greek will land on his feet. Yet though he thus flatters himself, he is also extraordinarily susceptible to the flattery of others, and if you call yourself a Philhellene you can almost get free lodging for a year and free drinks at every moment of the day, not to speak of the decorations which will be pinned upon your breast.

All this has its amusing side, as it has also its very moving side, for there is truly in the hearts of these men who look back to Athens a true passion of patriotism and resurrection. Far more so than among the Armenians—and it is not for profit and not for exploitation, but for the full re-establishment of the link with home. It is a sentiment which, so strong is it, cannot be neglected in forecasting the statesmanship of the future, for there is no doubt that Greece is, under the settlement, the dominant factor of force in the Near East and the instrument of execution.

The Middle East.

In the *Sunday Times* of May 30 Colonel T. E. Lawrence writes on "The Middle East." He commences by referring to the high reputation held by Great Britain at the time of the Armistice, since when, however, he says, "disillusionment has come upon these peoples of the East." He proceeds to comment upon the delay in framing the Peace Treaty with Turkey:—

The terms of the Turkish Treaty are admitted as impossible by those who had a hand in framing them. No account was taken of the actual conditions of the former Turkish Empire, or of the military and financial strengths of the countries devouring it. Each party making the terms considered only what it could take, or rather what would be most difficult for her neighbours to take or to refuse her, and the document is not the constitution of a new Asia, but a confession, almost an advertisement, of the greeds of the conquerors. No single clause of it will stand the test of three years' practice and it will only be happier than the German Treaty in that it will not be revised—it will be forgotten.

A good way to see how much ground we have lost by our jealousies and false-playings in Asia is to compare our friendly reputation in the end of 1918 in Persia, Caucasus, Turkey, Mesopotamia, Arabia, Syria, and Egypt with our position there today. Persia awaked one morning to read in the Press that her Shah and his Ministers had concluded an agreement with Great Britain which gave us as much of the independence and control of their country as we liked to take. They were informed that we meant to be generous, and not to eat our cake; but meanwhile we infringed her neutrality towards Russia by using Persia as base for two expeditions—one against Russian Turkestan, one against the Caspian. In each expedition are a half-dozen battalions of mixed troops. Lord Curzon assured his colleagues that these two brigades were holding Persia quiet, and stemming the Bolshevik flood into Asia. They must be remarkable brigades! Recently the Bolsheviks began to come: then he informed the Persian Government that we had no obligation or intention to defend it. . . . .

Meanwhile in Persia our shares fell in value. The Court party, which had signed the Anglo-Persian agreement so irresponsibly, was despised by every good Persian. The Shah left hurriedly for Europe, and is not yet back in his former country. The "Young Persians" (for Persia is a country politically advanced, in which much guild-organisation persists) found no countenance in the British Government, and were driven to seek help from Russia, their old and inveterate enemy. Russia imposes as a condition of her alliance that the two British military adventures cease. If we can evacuate these handfuls of troops back to our own areas, through five hundred miles of wild country without railways, rivers, or fit roads, we will have reason to be grateful to the forbearance of the Persian people.

Of the Caucasus, Turkey, Egypt, Syria, and Arabia, much the same thing is said. Col. Lawrence's concluding statement is: "It was not for such policies I fought."

THE CARAVANSERAI.

Think, in this batter'd Caravanserai
Whose Doorways are alternate Night and Day,
How Sultán after Sultán with his Pomp
Abode his Hour or two, and went his way.

OMAR KHAYYAM.

Is Romance dead? According to the sensational Press it is very much alive; but, then, the cheap-and-nasty papers are given to referring to sordid murders or suicides, to almost equally sordid divorce cases, and to the very vulgar elopements of mendacious suburban young women with young bounders of foreign extraction as "romances"; so perhaps we had better ignore their guidance in the matter. It seems to me that, taking into account the time it lasted and the wide area over which it extended, the late war produced comparatively few romantic stories, and that of those few the Sea and its servants accounted for by far the greater portion. And now that we have gone back to the "piping times of Peace"—more or less!—it is still to the Sea that we must look for most of the light and colour that still loom up from time to time in the grey, prosaic life of to-day.

***

These reflections have come to me as a result of reading recently two items of sea news. The first reported the arrival in the Downs of a "large, four-masted, double-funnelled steamer, the Gul-Djemal," which, I need hardly add, is a Turkish name. And—here is a surprise—the steamer is Turkish, too; though formerly she was a White Star liner (the Germanic). She was bound from Alexandria to Hamburg, when the Admiralty interrupted her voyage off Deal; and—here is another and greater surprise—she is reported to have had "a Turkish captain in command and a crew of 150 Turks." I suspect that not one of the 150 was a *genuine* Turk; but, even so, the idea of a "Turkish" steamer of any size actually finding its way out of the Mediterranean under the guidance of a Turkish skipper takes my breath away. For was it not a Turkish captain who reported: "Malta *mafeesh*" (There is no Malta), after hunting for weeks for that island? I almost find it in my heart to hope that the Gul-Djemal may continue to fly the Turkish flag. But ——.

***

The second sea story that has captured my interest is that of the Russian Volunteer steamer Orel, which lately turned up at Calcutta, with some 300 cadets of the Vladivostok Naval College on board. She had been used as a transport during the war, and when she went to Calcutta she was still under the command of Captain Kititsin of the Russian Navy. She left Vladivostok just two hours before the Bolshevists arrived, and had since been cargo-carrying to pay expenses. The cadets, said the captain, had been drafted on board to save them from the Bolshevists; and I think they owe him a heavy debt of gratitude. To me, the story seems to be a true romance, full of the spirit of courage and adventure, and I wish the Orel, her captain, and his cadets the best of luck.

MUSICAL NOTES.

The Glastonbury Players.

The "Old Vic" is the one theatre in England in which nothing, whether music or drama, of inferior value is produced. Its standard of excellent intentions is universally recognised. I do not say that the presentation of works is always as good at this theatre as the works themselves—that is scarcely possible in the present commercialised condition of British art—but whatever the "Old Vic" intends to do is meritorious. When it was decided to bring the Glastonbury Festival Players to London there was, therefore, only one theatre to which they could fittingly come. For it is precisely in this matter of good intentions that these players most resemble the "Old Vic." These people are attempting at their school in Glastonbury to reawaken in the English people interest in all that is beautiful in art, in music, drama, dancing, and so forth. With this end they are reviving old English masques, and are presenting what they consider the best of modern English works. It is a most worthy ambition.

The visit to London interested the capital enormously, even though it was, judged absolutely, a failure. Hundreds of musicians flocked last week to see the chief event of the Festival, "The Immortal Hour," a music-drama by Rutland Boughton. And although it was poorly staged, poorly sung, badly acted, and badly played by the orchestra, I have heard no one deny the original loveliness of the music. The libretto of "The Immortal Hour" is adapted from the play of poems of Fiona Macleod; it is a legendary tale full of Irish symbolism. Though poetically conceived, Fiona Macleod's work is not poetry; but Rutland Boughton's work is both musically and dramatically conceived, and is music of most striking and haunting beauty. It deserved a much better presentation. On it should be expended, indeed, such genius as the Irish Players used to put into their productions. I know of no English work where with such simple material so many colours, such certain atmosphere, and such direct loveliness are obtained. It is a marvellous work.

Not much need be said of the players and singers themselves, seeing that it is the aims and not the agents of the Glastonbury School that matter. Mr. Clive Carey, for whom generally I have great respect, was in the part of Dalua, a shadow-god: but it sounded and looked as if he were singing rather through a fog than through shadows. Mr. Johnstone-Douglas (whose excellent possibilities I have noted before in this column) spoiled some fine singing by most *gauche* acting. He was Eochaidh, King of Ireland, but the uncertain way in which he stumbled about made one think he was a mere eccentric lord of London who had just celebrated his promotion to the peerage. Miss Gwen Ffrangcon-Davies, as Etain, a lost færy-maiden, sang very sweetly, but it was a monotonous sweetness, so that it was too easy to mistake her for a human being. And Mr. Arthur Jordan, as Midir, a prince of færy, found the possession of legs and arms a great encumbrance. His good voice suffered, moreover, from insensitive phrasing. But despite all these things, the peculiar qualities of "The Immortal Hour" were fully recognised. Its genius will survive the most inadequate of performances and all the fads and fancies of the age.

The chief work in the remainder of the programme (which lasted three nights and was repeated three times) was "Venus and Adonis," a masque by John Blow, the teacher of our greatest composer, Henry Purcell. The wealth of invention in this old work is amazing. There is, of course, no realistic portrayal of the characters, and the artificiality of the whole thing is, owing to the purity of the music, mostly delightful. There are, however, places in this masque where a too facile use of the idiom of the time becomes a little monotonous. It was these bare patches that made impossible the arousing of any emotions, and even in the last (and the best performed) act, "The Death of Adonis," one did not feel the sting of mortality at all, so conventional was its treatment. But the masque, better performed, is well worth reviving.

The dancing of these players is on a low level. There is but one who really has grace and originality, Miss Laura Wilson; and only one who shows signs of promise, Miss Ruby Boughton. In modern works this deficiency does not matter overmuch, but in music of the sixteenth and seventeenth centuries, where the dance is of as much import as the words, it is a most serious disadvantage. No doubt it is an extremely difficult thing to find dances and steps fit for this music, but the present condition of the Players' dancing is inexcusably juvenile.

The smaller items included dances from the Fitzwilliam Virginals Book, Purcell, Adela Maddison, and Ethel Smyth (the last two being unworthy of such company), and some choral dances by Rutland Boughton and Napier Miles. They were unequally done, the enforced and deliberate simplicity of the settings being sometimes convincing and sometimes irritating. The "natural" method of treating music has its disadvantages as well as its merits.

However, my sympathies are all with the Glastonbury Players. It is easy to scoff at little movements like theirs, and to point out the impossibility of their founding a school of opera in England. But they have already accomplished something: their director, Mr. Rutland Boughton, is a man of proved genius, and there is no question of their zeal for both old and new. Whether they will succeed in their aim of making England once more the leading musical nation in Europe I cannot say. The musical genius of this people, which has been allowed to stagnate for two centuries, is alternately undermined by commercialism and nourished by such sects of people as the Glastonbury Players. It is a question of transferring the power of the first to the uses of the second.

At the Wigmore Hall on June 8 we had another Serbian violinist (M. Yovanovitch Bratza, whose playing I have already noted, being the first) making his first appearance in England. His name is Zlatko Balokovitch. A player of the rugged type, he has gifts that are not inconsiderable. His technique is by no means flawless, and his intonation is easily improvable, but he infuses a good deal of feeling and some spirituality into his playing. His opening piece, Saint-Saëns' Concerto in B minor (No. 3), is tawdry stuff, and the violinist and (especially) his accompanist, M. Vjekoslav Kraus, were quite merciless in emphasizing its deficiencies. The fascination of this concerto for foreign fiddlers is not easy to understand. M. Balokovitch proceeded to Bach's "Chaconne," and both because of the fineness of the music and because of the absence of his accompanist, his playing was much better. It was not a perfect performance, the difficulties being surmounted too slowly, but it was quite sufficient to stamp M. Balokovitch as a violinist of insight. Then were played a "Psalm" by Peter Konjovitch; "The Dance of the Widows," by Kosta Manojlovitch, and a "Danse Serbe," by Miloje Molojevitch. Of these "The Dance of the Widows" was by far the most attractive, the obscure atmosphere being most faithfully suggested by M. Balokovitch. (Yugoslavia must abound in pieces of equal merit with this, and one could wish that Yugoslav artists would more commonly perform their native music.) The other two pieces, though written in a mode foreign to English ears, did not appear to be distinguished compositions. In the audience, it may be noted, were many of M. Balokovitch's fellow-countrymen.

With the playing of Mr. Walter Rummel, who gave a pianoforte recital at the Æolian Hall on June 9, I was greatly disappointed. He has been acclaimed by French critics as one of the finest of British pianists, but this is not the case. Much as I admire the French, I must admit that their musical critics are a strangely errant crowd. Mr. Rummel's playing was extraordinary. He commenced with four of Bach's Choral Preludes, for which he had made a pianoforte arrangement. The first was quite unbearably noisy, the second ("Mortify us by Thy grace") was perfect, the third scarcely tolerable, and the fourth again beautiful. What Mr. Rummel can do was shown by the second Prelude; it was played with a soft restraint that made its serene loveliness a thing of great joy. But what Mr. Rummel chooses most often to do was shown by the inclement vigour with which he assailed Schubert's "Wanderer" Fantasia. This sonata is not a very notable work at any time, but in this pianist's hands it sounded like hell let loose with but a very occasional glimpse of heaven between the crashes. (As a matter of fact, much more than half the disaster was due to a wrong use of the pedal.) When Mr. Rummel played Chopin he gave further proof that he has individuality, if that word may be applied to those who have the confidence in such a thing as the Polonaise in E flat to give notes their wrong time-value. If Mr. Rummel were younger one might say that he is full of possibilities, but one cannot now say that. In pieces where there are no passages above a *forte* he is a refined and really beautiful player; but where this is not the case one's thoughts are concentrated upon the endurance of the instrument he is using.

II.—"THE PORTRAIT OF A SCHOLAR and OTHER ESSAYS WRITTEN IN MACEDONIA, 1916-1918." By R. W. Chapman. (The Oxford University Press. 5s. 6d. net.)

I.—LANDMARKS IN THE WORLD'S ANNALS.

Until recent years the average school history was little better than a dreary record of human ignorance, ferocity, and folly. Its compiler failed to realise that the course of events is determined by a never-varying interaction between the brain of mankind and the physical environment. What men have done men will do; a knowledge of the past gives us the key to future happenings. The new Orientation is admirably illustrated by Professor Flinders Petrie's latest literary feat. Under the modest title, "Some Sources of Human History," he has followed the sagging course of civilisation for 650,000 years. His book reveals the effects on climate, geology, and life of changes in the elevation of the globe's surface. For ages unnumbered its level sunk progressively; the belt of Polar cold extended far southwards, and men vegetated in "thrilling regions of thick-ribbed ice." Then came an æon of gradual up-thrust, which gave a semi-tropical climate to our northern hemisphere. Not less startling were the changes wrought in the world's geography. In prehistoric times India formed part of Africa; a lost continent stretched far into the Atlantic; Great Britain was itself continental, and its present coast-line eastwards was not reached till 1,600 B.C. Considerations of space have doubtless precluded Professor Flinders Petrie from describing the vast migration of mankind caused by alterations in the globular crust. Prior to the third millennium B.C. the Aral and Caspian Seas formed part of the Polar ocean, and the adjacent plains of Central Asia were inhabited by a congeries of races termed "Aryan," who lived luxuriously by agriculture and stock-raising. Owing to an upheaval of the world's surface, their rich pastures became a trackless desert, the rivers which irrigated them shrunk enormously in volume, and the northern ocean receded for 2,000 miles. Driven by dessication from their ancient habitat, the Aryans invaded Europe and India in successive swarms.

Professor Flinders Petrie proceeds to sketch the evolution of human society, as shown by its arts, crafts, and literature, but judiciously avoids discussing the momentous influence of organised religions. Especially interesting is his account of the process which converted habit into custom, and clarified custom into law. Legislators of our day might obtain many useful hints from the code of Hammurabi, who reigned over the Middle East from 2,130 to 2,088 B.C. It proves that commercialism is not a modern development, and that many characteristics of twentieth-century civilisation were known in Western Asia 4,000 years ago. If, for instance, an agent cheated his employer, he was mulcted in thrice the amount of his defalcations, and if a robber escaped capture, the city in which he had operated had to make all losses good. Builders were held strictly responsible for defective work, and shipwrights for damage to cargo due to scamped construction. He who reclaimed waste land lived rent free for three years, while a heavy fine was imposed on a cultivator who neglected or misused an irrigating channel. Hammurabi's provisions affecting family life were equally admirable. No child could be disinherited without a judge's approval; a wife's dowry was settled on her children, and if she had none, it reverted to her father's family. Of the laws promulgated by Moelmud, who flourished 2,500 years later in Wales, Professor Flinders Petrie writes:—

Across all the turmoil of past centuries comes this account of the indispensable matters of society: (1) Good sense, (2) justice, (3) brotherly affection between country and country, between man and his country, and between man and man; where these are wanting it is hardly possible to guard against convulsions in the State caused by quarrels and injustice.

It is significant of the age of transition in which our lot is cast that a book published by the venerable Society for Promoting Christian Knowledge should tacitly ignore the Mosaic account of Creation, which, within living memory, was accepted as gospel truth. Despite inevitable *lacunæ* in his narrative, Professor Flinders Petrie has done well in placing the results of modern research in so attractive a form; and his bird's-eye view of human history might be studied with great advantage in our secondary schools.

F. H. S.

II.—A SCHOLAR IN MACEDONIA.

This book is a collection of essays which, excellent in themselves, are the more remarkable in consideration of the circumstances in which they were written. One would not imagine that fragrant thoughts and scholarly phrases would spring to the mind in camps, dug-outs, and troop-trains in Macedonia; but to Mr. Chapman this fortune came.

Most of these essays concern the bones of letters, such as "Textual Criticism," "The Art of Quotation," "The Decay of Syntax," but they are nevertheless very delightful reading. The author has a rare choiceness both of matter and of manner, and though his work is steeped in academicism, it is of the liberal if not creative kind. There is a tendency in modern times to forget that Oxford and Cambridge exist, to despise learning for its own sake; but so long as academicism can produce such books as this, that loose tendency will never become a wide habit. To produce good English prose from such places as Snevce, Bralo, Kalinova and so on, is a feat of which any one might be proud. These essays are not the work of imagination: they are rather the discreet display of knowledge. Only once does the author let his fancy play, and that is in a charming essay on "Silver Spoons," an essay which is based upon, or at least is ended by, the wistful statement that "there are no spoons in Macedonia."

We shall not quarrel with this correct author, even though he does commit himself to "I doubt if" and "None are," for he has afforded much enjoyment. The quiet taste of an ordered mind is a most refreshing thing to encounter in these days. It may be added that the Oxford University Press have done their work according to their best traditions—that is to say, the book is beautifully printed.

Prince Carol of Roumania left Hong-Kong for Canton on June 11.

Field-Marshal Lord Plumer is leaving Malta for Greece on six weeks' leave.

Prince and Princess Jean Ghyka of Roumania have arrived in London from Paris.

The King and Queen received the Raja of Pudukota and the Rani Tondiman on June 8.

Prince Nicolas of Roumania visited the King and Queen on June 13, and remained to luncheon.

Prince Jemil Toussoun and Prince Mohammed Sabit have arrived at the Carlton Hotel from Cairo.

The Hon. Montague Waldegrave is at present in Serbia studying the opportunities of Y.M.C.A. work in that field.

The annual dinner of the Egyptian Army Dinner Club will take place this year at Claridge's Hotel on July 20.

Suleiman Pasha, Egyptian Minister of Agriculture, and Midhat Pasha, Governor of Cairo, arrived at Venice on June 6.

Captain George Panas, upon his appointment as Greek Naval Attaché, had the honour of being received by the King on June 8.

Our Cyprus Correspondent writes (May 22):—The Director of Agriculture, Mr. W. Bevan, is to act as Commissioner of Famagusta.

It is stated by the *Jewish Chronicle* that Lord Allenby has subscribed £1,000 to the Palestine Restoration Fund of the Zionist Organisation.

M. Nastas Ilitch, First Secretary to the Legation of the Kingdom of Serbs, Croats, and Slovenes, has left London to take up an appointment at the Foreign Office in Belgrade.

General Lyautey, French High Commissioner in Morocco, has received from the King of the Hejaz a piece of the Holy Carpet, which honour is usually reserved exclusively for Mussulman sovereigns.

The Hon. Mrs. Hamilton Smith, wife of the Hon. F. Hamilton Smith, eldest son of the Right Hon. Lord Colwyn, was presented on June 10 by Lady Elmslie Carr at the Court held at Buckingham Palace.

The Jam Sahib of Nawanagar was received by his Majesty on June 8, when the King invested him with the Insignia of a Knight Grand Cross of the Most Excellent Order of the British Empire, Military Division.

Sir George Lloyd, Governor of Bombay, and Lady Lloyd left Poona on June 8 for Ootacamund, Sir George having been medically advised to undergo a course of treatment at the Pasteur Institute at Coonoor, as he has contracted rabies.

Viscount and Viscountess Bryce were among the passengers who arrived at Southampton on June 12 from South America by the R.M.S.P. Avon.

M. Venizelos arrived in London from Paris on June 14. On the following day he attended the wedding of Commander Talbot, Naval Attaché of the British Legation in Athens.

DR. HOWARD BLISS.

(By Our Beyrout Correspondent.)

The American College, first known as the Syrian Protestant College, has just sustained an irreparable loss in the premature death of its president, Dr. Howard Bliss. He and his father before him, the elder and the younger Bliss, had left so deeply the imprint of their outstanding personality on this grand monument of education in the East that it has become identified with their life and work. The old spirit of the college died with Daniel Bliss, its founder and first president, and its younger spirit has just passed away with Howard Bliss, its second president. It is strange how father and son fitted in, each so happily, with the spirit of his time. The elder Bliss, with his grand Puritan simplicity, his quiet but impressive manner, and his silent power of organisation, was the very man to lay the foundations of the college and build up its solid framework at an epoch when Syria was just beginning to shed its primitive shell and emerge into the new order of the Western world. The thirst for knowledge was then so great that it transcended even the Syrian's religious sense, which was then as unsophisticated as it was narrow. On the advent of the son Syria, especially Beyrout, had already made a long stride along the path of modern progress. The spread of education and freer intercourse with the fast evolving West had led to a broadening of the national mind and to an awakening of racial consciousness. The college roll was growing larger every year, and its multitude of students were recruited from the far-flung corners of the Middle East. In order to weld together that strange medley of races and creeds, a high ideal conforming to the aspirations of every race and to the noble essence of every belief was required, and the younger Bliss, with the vision of a leader, presented to the stirring souls of his young army this ideal embodied in the college as their Alma Mater. At the risk of offending the principles of the trustees, who originally endowed the college as a Protestant institution, he preached the religion of Christ as that of higher humanity wherein all the religions, with what is best in them, meet. Greeks and Syrians, Arabs, Egyptians and Persians, even some Indians; Christians and Moslems, Jews and Druses, all made a harmonious mosaic in this grand temple of education, all met as brothers in the sporting field and in the class room, and all sang with one spirit the college song.

This extreme breadth of mind, combined with diplomatic skill and a personal charm of manner, won him the confidence of the authorities, and that popularity stood him in such great stead during the war that he was enabled not only to carry on the work of the college under the most trying of circumstances but to make of it also a sort of haven of refuge, a centre of mercy. He worked with such untiring zeal, and such burning devotion and self-sacrifice, that he finally succumbed a victim to duty. The college was to him the one high goal of his life. It is said that a year before his death his doctor told him, once, that if he were to go on working in the way he did he would be risking his life. "It would not matter," he replied, "if the college cause were to be furthered thereby."

The deceased was an orator of distinction, and had he chosen for his vocation politics instead of theology he might have been one of the great politicians of his time.

He was born in the Lebanon in the year 1860, and was sent by his father to the States to complete his education at Amherst College, where he took his B.A. degree in 1882. After a further two years' college course he entered the Union Theological Seminary, where his power as a preacher revealed itself. The Faculty then asked him to go at its expense to Europe to take higher courses in some of its universities, among which were those of Oxford and Berlin. He then returned in 1889 to Brooklyn, where he assisted the famous preacher Lyman Abbott in the ministry of one of its leading churches. In 1890 he was ordained, and in 1902 the title of Doctor of Divinity was conferred on him by the New York University.

He was a friend of President Woodrow Wilson, who honoured him with his confidence and esteem by asking him to make a statement on the political problem in Syria before the Peace Conference.

This deeply lamented friend of Syria leaves a widow and two sons and three daughters, one of whom is married to Mr. Dodge, son of the millionaire benefactor, and one of the trustees of the college.

ESSAD PASHA TOPTANI.

Essad Pasha, who had been living in Paris for some little time, was shot dead in that city on June 13 as he was leaving his hotel. His assailant, who gives his name as Aveni Rustem, is a young Albanian, and though he denies that his action was prompted by any political motive, his denial is not generally received. Essad Pasha, who was head of the Toptani family, of Tirana, had had an adventurous and remarkable career. Not all the incidents in that career were regarded as being entirely to his credit, but during the war he stood staunchly on the Entente side, and fulfilled his obligations honourably, and he had latterly felt deeply aggrieved by the treatment he had received from the Allies and the Peace Conference.

APPOINTMENTS WANTED.

THE Ladies' League (under Royal Patronage), 118, New Bond Street, successfully recommends Lady Secretaries, Chaperons, Housekeepers, Companions, Secretaries, Governesses, Nursery Governesses, Nurse Companions, Lady Nurses, etc.

TOPICS IN PARLIAMENT.

The subjoined headings are those given in the official report :—

PERSIA. MIDDLE EAST (June 1). INDIA: Census Report.—Amritsar Disturbances (Hunter Report). PERSIA. PEACE TREATIES: Armenia.—Turkey (June 2).

PERSIA. MIDDLE EAST. EGYPT (MILNER REPORT). INDIA: Amritsar Disturbances (General Dyer). PEACE TREATIES: Mesopotamia.—Mandatory Territories (Administration). INDIA: Waziristan Casualties (Transport Facilities) (June 3).

INDIA: Income Tax (June 4).

PEACE TREATIES: Mesopotamia.—Palestine. Armenia. ARABIA. LEAGUE OF NATIONS: Persia. SMYRNA (CAPITULATIONS). EGYPT (MILNER COMMISSION). INDIA: Gazetted Officers (Retirement).—Army Officers' Pre-War Pensions.—Punjab (Lord Hunter's Committee).—Military Operations, Afghanistan and Waziristan (Medal).—Afghanistan (Mussoorie Conference). ALBANIA. PERSIA (June 7).

ARABIA. INDIA: General Dyer. BRITISH ARMY: Troops in Mesopotamia and Persia. INDIA: Government of India Bill (Transferred Subjects).—Punjab (Arms Act) (June 8).

INDIA: General Dyer.—Hospital Transport.—Army Uniforms.—Officers' Pensions. PEACE TREATIES: Armenia. BRITISH ARMY: Medical Boards, Egypt. INDIA: Hunter Commission Report (Acting Deputy Commissioner, Gugranwalla). CEYLON (CONSTITUTIONAL REFORM). PERSIA (SOVIET DETACHMENTS). (June 9.)

MIDDLE EAST. INDIA: Lord Hunter's Commission. DISTURBANCES (JERUSALEM). MR. JABOTINSKY. MONTENEGRO. (June 10.)

INDIA: Army, Warrant Rank. (June 11.)

THE ARAB HORSE SOCIETY.

A council meeting of the above Society was held at the Grosvenor Hotel, London, on May 26, Mr. S. G. Hough (vice-president) being in the chair. There were also present Messrs. E. R. Calthrop, H. V. Musgrave Clark, A. Stanley Cochrane, C. W. Laird, Capt. J. Hamilton Leigh, Major G. B. Ollivant, and the secretary, the Rev. D. B. Montefiore (Islip).

The following new members were elected:—Calmady-Hamlyn, Miss S.; Bidlake Vean, Bridestorne, Devon; Illingworth, Thomas; Ellerslie, Brownswood Park, Willesden; Perkins, Miss M. Puggie Stone House, Changford, Devon.

Entries for the Arab Horse Stud-Book, Vol. II., and also for the Arab-bred Register, were accepted.

The Council had the honour of receiving letters from His Majesty the King, Her Majesty Queen Alexandra, and His Royal Highness the Prince of Wales, graciously accepting copies of the Arab Horse Stud-Book, Vol. I.

After dealing with correspondence the Council adjourned until the next meeting on October 27 at the Grosvenor Hotel, London.

PALESTINE IN LONDON.

At the Central Hall, Westminster, an exhibition, which was opened on June 10, and is lasting until July 7, is being held to demonstrate to the British public the life and customs of Palestine. The exhibition is thoroughly well organised, and the utmost care has been taken to ensure accuracy in the representation of Palestine life. Lectures are given daily on "Life Scenes in the Holy Land." The New pictures, illustrative of Palestine life, are excellent. The stands, which contain such things as a raised map of Palestine, the Palestine garden and water-wheel, agricultural implements, and Herod's Temple, to name but a few of the most interesting exhibits, are tastefully arranged, and cannot fail to give the onlooker a vivid impression of conditions in the Holy Land. All those attracted by one of the most fascinating of all lands should visit "Palestine in London," which will undoubtedly arouse much interest. The exhibition is organised by the Society for Promoting Christianity Among the Jews.

NILE PROJECTS COMMISSION.

Reuter's Cairo correspondent reports (June 14):—After protracted public sittings the Nile Projects Commission has found that the charges of falsification of figures and suppression of documents brought by Sir William Willcocks and Colonel Kennedy against the Ministry of Public Works here are unfounded.

NEWS IN BRIEF.

All the bank clerks who had been on strike at Alexandria resumed work on June 12.

Italian seamen are opposing the dispatch of reinforcements to Albania.

Sir Robert Baden-Powell, the Chief Scout, has received a message of greeting from the Boy Scouts and Girl Guides of Erivan, the capital of the Republic of Armenia.

The Postmaster-General announces that goods can no longer be accepted for transmission by letter post to Teheran and other places in the north of Persia, and the parcel post to Northern Persia has not yet been reopened.

Part of the Bombay Institute of Science has been loaned by the Government for the convenience of travellers passing through Bombay. Accommodation is thereby provided for 400 travellers a day.

Mustapha Kemal's delegates, who intended to proceed to Europe to submit the Nationalists' claims to the Peace Conference, have been refused permission to embark by the Italian authorities at Adalia, and have been compelled to abandon their

WHERE TO STAY.

For the convenience of visitors from overseas "THE NEAR EAST" offers its services in booking rooms at hotels in the United Kingdom, on receipt of instructions preferably a week before the date of arrival. When instructions are telegraphed the message can be abbreviated as follows:—

"EASTAPROX, LONDON. TWENTIETH MATLOCK TWO

(The visitor's name and place of residence abroad to be added)."

which would indicate that two rooms were required at Matlock on the 20th of the month.

THE BOLSHEVIST MENACE TO PERSIA.

The Prime Minister has been at great pains to defend the new policy towards Soviet Russia which he has initiated by negotiating in London with M. Krassin. He has not had an easy task, though he has a singularly docile House of Commons to deal with, and there are many of his fellow-countrymen outside the House to whom so rapid a change of front would still remain intensely repugnant, even if it could be justified on grounds of material expediency. To those who, like ourselves, are specially interested in the restoration of peace in the Near and Middle East, his defence would carry more conviction if he were able to convey some reasonable assurance that a *modus vivendi* with Soviet Russia would mean a cessation of aggressive Bolshevist activities in regions where they are obviously and indeed avowedly directed to the subversion of British influence and British interests. Whilst M. Krassin is being received and treated with every mark of courtesy and goodwill by British Ministers and inspired organs are prompted to give him excellent certificates of character, and he himself proceeds to open spacious premises for the transaction of business, as if every cloud had already been dispelled on the horizon of Anglo-Russian relations, the Moscow wireless continues to report the triumphant invasion of Persia by Bolshevist forces that take their orders from the Soviet Government. Whether these reports are entirely accurate we have no means of knowing, but some of the details at least may for the present, we hope, be dismissed as imaginary embellishments. We do not, for instance, believe for a moment that Resht has been evacuated by the British because "the Indian troops were opposed to fighting against the revolutionaries," or that "a considerable part of the Indian troops" went over to the well-known revolutionary Persian leader, Mirza Kutchuk, who, we are told, has dutifully notified the "revolution" to his employers in Moscow. But that Lenin and Trotsky should use the Moscow wireless in order to disseminate these stories throughout the world, including the very restless world of the Orient, affords, we fear, a much more significant illustration of the real aims of Soviet Russia than the mellifluous accents which M. Krassin has been instructed to lavish on British Ministers in the seclusion of Downing Street.

For the situation in Persia is just as much the touchstone to-day of our relations with Soviet Russia as it was in former days of our relations with Tsarist Russia. Our interests in Persia now, as then, are concerned solely with the maintenance or re-establishment under a stable government and administration of settled conditions which shall enable the resumption of commercial intercourse and the development of the natural resources of a country adjacent not only to our Indian Empire but to those regions of the old Ottoman Empire for whose first steps towards future independence we are about to make ourselves responsible by accepting mandatory authority in Mesopotamia. Our greatest stumbling-block formerly was the ambitious policy of Tsarist Russia, and we had ultimately to make considerable sacrifices in order to avert the mere danger of conflict. During the war Anglo-Indian forces and, until the Russian revolution, Russian forces had to be moved into Persian territory in order to preserve Persia, who was powerless to defend her own neutrality, on the one hand, in the south, from the depredations of mercenary bands raised by German and Austrian emissaries, and, on the other hand, in the north, from the invading armies of Turkey. When the Russian forces melted away after the downfall of the Tsar, Anglo-Indian troops were forced to take over the defence of the western provinces of Persia against the Turks from Mesopotamia right up to the Caspian. But as soon as the war was over, and Russia for the time being off the stage, the British Government hastened to show that this country remained, as it had always wished to remain, entirely free from any territorial ambitions or even from any craving for political supremacy by concluding with the Persian Government an agreement that recognised the complete integrity and independence of Persia, whilst promising her whatever assistance she might need to put her house in order; and as a further proof of good faith they undertook to communicate that agreement to the League of Nations. Since then Bolshevist Russia, after having spread chaos throughout the Asiatic dominions of the Tsarist Empire and helped to stir up war between Afghanistan and India, has turned her destructive energies on to Persia, and has recently descended on to the Persian shores of the Caspian. She appears to be far more determined than Tsarist Russia ever was to defeat any policy of peace, and unfortunately she is in many ways better equipped to do so. For she is not restrained by any international engagements or by any of the decencies which an organised Government knows it can only violate at its peril. Nor can we close our eyes to the fact that, especially in Northern Persia, there is a strong Turkish or semi-Turkish element which, in spite of the fundamental antagonism between Bolshevism and the first principles of Islam, is ready to make common cause with every enemy of England in the name of Turkish Nationalism, or that throughout Persia the oppression and corruption practised for generations past by many of the indigenous ruling classes as well as the predatory instincts of many turbulent tribes have brought the prestige of the Shah's Government terribly low, and created conditions of popular distress and distrust in which revolution, from whatever quarter it comes, finds ready aiders and abettors.

It is difficult to believe that the dangers of the present situation, to which events have been visibly working up for many months past, have taken British Ministers by surprise. Yet had they foreseen it, would they have ventured to remove from the Teheran Legation, even for the benefit of Mesopotamia, a Minister who had acquired an influence with Persians of all classes, which no British representative has for many years past possessed, and transferred the reins from Sir Percy Cox to a new Minister, who, however able he may be, has no experience whatever of the country and the people? We do not envy Mr. Norman his job, nor the young Shah, who has just returned to his capital. For only some 200 miles of relatively good road, with merely a couple of rather difficult mountain passes, and a very small British force to defend them, even if they were instructed to defend them, separate Teheran from the Bolshevist invaders, whose operations have already far transcended the alleged purpose of their landing at Enzeli—viz., the capture of Denikin's helpless fleet. Lord Curzon knows Persia, and with the help of a map he can surely enlighten even Mr. Lloyd George's ignorance of geography. Not so many months ago he was ready enough to discourse eloquently on the beneficent policy embodied in the Anglo-Persian Agreement. Can he not be moved to speak with the same pertinence as to the bearings of the Anglo-Persian Agreement upon the untoward developments which are now taking place? We are quite aware that there is nothing in that agreement that formally binds Great Britain to defend Persia even against Bolshevist aggression, but the British people—and the Persians, too—are surely entitled to know whether the British Government are taking any steps, and if so, what steps, to preserve the integrity and independence of a country upon which we have recently lavished so many assurances of friendship, from dangers that threaten in a very acute form not only its own peaceful existence, but our interests and position throughout the East. We believe even that, if M. Krassin is in earnest, his mission would be far more likely to lead to a satisfactory issue if the British Prime Minister were to intimate at once, and quite clearly, through him to the ruling powers at Moscow, that their conversations could not proceed any further

Digitized by Google

until orders were sent out and carried into execution for the withdrawal of all Soviet forces, regular and irregular, from Persian territory. Such an intimation would at the same time be a suitable reply to the preposterous message which Lenin has just sent to the British working classes with the undisguised purpose of stirring them up to rebellion against the very Government with whom he professes his anxiety to negotiate in a friendly spirit through M. Krassin.

MESOPOTAMIAN HUMOURS.

By the Rev. W. A. Wigram.

A sight to make surrounding nations stare,
A kingdom trusted to a schoolboy's care!

So wrote an enemy of the younger Pitt at the commencement of one of the longest and most successful administrations in English history. It was a tremendous experiment, and it worked well. Something of the same sort was done in Mesopotamia in the early days of the occupation and administration; there were, indeed, older men at the top, but, speaking broadly, the work of administering the kingdom of the Khalifs, of Nebuchadnezzar, and of Tiglath-pileser, was in the hands of youths who, when the war began, were learning the first outlines of the great art of ruling men as prefects at school, and who had matured their powers as subaltern officers during the Great War. And for the result? Let us pray that Allah, in his mercy, will inspire the big-wigs at home to keep their hands off it, and to let those who have learnt to know and like the people rule them with the promptness and humorous tolerance which make the Oriental forgive almost any number of blunders in those whom he sees to be honest in intention. Naturally, things were done which would make the hair of any code-worshipping administrator to rise upon his head, but they were done with the absolute approval of those who were most affected. Once, for instance, when coming out of the Government *serai* of a certain provincial capital, we found the square before it packed with serried rows of donkeys, guarded by a few rather disconsolate Arabs. "What on earth is this?" we enquired of H. E. the local Governor. "Are you raising a regiment of cavalry, or anything interesting of that sort?" "No, those are my plunder, not my army," said the Governor, and he detailed how a certain tribe of Arabs had carried off nine horses, property of King George. Wherefore he had impounded all the donkeys belonging to that tribe in the town, and they were to work on the new roads till such time as the horses came back. "I think I am ahead on that deal," said authority. In due course the stolen goods were returned, and the donkeys restored to a tribe who quite understood and approved the notion of communal responsibility, and who would have understood nothing else.

When British rule was new, it was, of course, an unheard-of thing that any conquering power should listen to a complaint against its own men, but when it was found that accusations were heard and cases tried, complaints came in in sufficient numbers to be a nuisance. Surely the shade of Haroun-al-Rashid must have chuckled in Paradise when he heard of the measures taken to stop it; for an order went out that any charge against any British soldier of any rank would be heard and investigated most strictly, but any proved false accuser would be taken to the market and flogged forthwith. It is said that a certain archbishop fled from the face of the Governor when asked if he was ready to have his complaint enquired into on those lines!

Mesopotamia, however, if the most ancient of lands, seemed to be anxious to prove itself up-to-date, and so produced that which is a weariness to flesh and spirit alike at home—an education problem. It was the Yezidis, those ancient and most respectable "devil-worshippers" of the Mosul district, and Jebel Sinjar, who produced this diversion, and it came of the attempt to introduce schools among them.

A deputation of their most venerable ecclesiastics (for this rather peculiar church has an elaborate and complicated hierarchy) came in to Mosul to protest their loyalty but the impossibility of obeying this particular command. King George had no more loyal subjects than they, they said, but when it came to learning to read and write, they must represent, in all humility, that the Devil had told them that they musn't!

This problem was handed over to the writer, with the suggestion: "This comes into your province, Padre. I was brought up to believe that the Devil rather encouraged access to the Tree of Knowledge than otherwise. Now, perhaps you will explain to me why the devil does the Devil forbid it now?" The only suggested explanation was a rather mundane one—viz., that the clergy (who have pushed division of labour to the point of having one grade of the hierarchy whose exclusive business it is to say the prayers, so that nobody else need trouble to do so at all) felt that the key to knowledge was also the key to power, and did not fancy sharing it with the laity. Anyhow, the Governor declared that he was not going to be beaten by the Devil, and ordered the institution of a school in the Sinjar hills. It was started, and seemed to be in the way to succeed, for the younger men, at any rate, were alive to the charms of progress, but when it was just getting into its stride there came an earthquake! "There," said the older men, "we told you so," and, in fact, both sides declared that the Devil was in the business, though they drew different conclusions about his presence.

That a little raiding and "dacoity" should still go on in the land is only human nature. Marsh Arabs have been bad boys since the days of Sennacherib, at any rate, and his complaints of their misbehaviour, recorded in cuneiform, read much like those of a Civil Commissioner of to-day. Incidentally, it is worth noting that the tactics employed by the king against them had a strong family resemblance to those of General Townshend at the battle of Kurnah in 1914.

If, however, the Arab is feloniously inclined by nature, even if he is learning better in these days, the trader in the land sometimes tries that tender plant, Arab virtue, rather severely in his confidence in the British Government and its justice. A case was known at Mosul of a caravan of traders which turned up in a most injured frame of mind, minus all its donkeys, which had gone amissing one night.

"Well, how did it happen?" said authority; "some of you were sitting up on the watch to look after the beasts, I suppose?" "Oh, no, sahib! Is it not the British Government now, Allah be praised? We all went to sleep!" A generous suggestion was made, to the effect that if the Government would get back the goods, and pay full compensation, they might be allowed to keep the donkeys as their share!

On another occasion, an A.P.O. of Mosul district turned up triumphant with the captive of his own bow and spear. He had seen a man on the highway carrying a rifle, against strict standing orders to the contrary and had called on him to come up and give an account of himself. The Kurd, however, had taken cover on the other side of the road and opened fire, on which the A.P.O. followed suit. Finally, the fellow had been driven to surrender (his position being made untenable by a masterly flank movement executed by the Sikh orderly), and then had explained that it was all a mistake. He had thought that the officer was a German, and that it was no more than his duty to kill him! Meantime, it was delightful to see the attitude taken up by the country people while the combatants were shooting at one another from opposite sides of the King's highway. They continued to stroll casually along it on their way to market, hardly even walking faster when they entered the field of fire! Two gentlemen had a difference, and were settling it in a manner entirely lawful and laudable, but what had that to do with quiet folk?

In spite of his ingenious defence, the criminal retired into Mosul prison for a period, where it is to be feared that he will not get the indulgence accorded to a brother criminal at an outlying post. In this case, the A.P.O. was seeking to influence the Arabs by means of the educative influence of polo, and, be it remarked *en*

Digitized by Google

passant, that the scheme was an excellent one, and the Arabs take to it as kindly as King Yunan in the "Arabian Nights." Unluckily, however, it became needful for the polo enthusiast, in his capacity as judge, to send the best native player to the local prison, on account of a slight misunderstanding connected with sheep that got into a fold that was not theirs. However, shall a great educational movement be delayed for a trifle like that? What is the use of being a Governor if you cannot arrange things better? Therefore, on polo mornings the criminal's horse came round to the prison, and he came out to play, he being captain of one side, and the judge of the other. The game over, the two had a drink together, and the criminal went back to prison till next time.

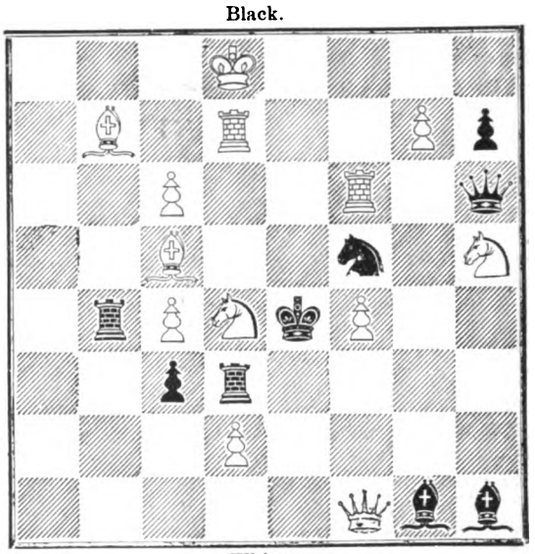
Some few misunderstandings have arisen, no doubt, and the matter of the new streets in Mosul was one of them. Turks, or maybe Germans, had begun the driving of wide thoroughfares through the tangled heart of the old city, but had left the work half-done at the end of the war. British authority continued it, but whereas their predecessors had declined to pay any compensation for a destroyed house, the British promised to do so for every house that they pulled down. What the Turks had done before their arrival, however, was declared to be "not on our neck." The position was quite reasonable to a Western, but to the Oriental it put a high premium on ingenious perjury, and the number of false claims (backed with most solemn oaths) that came in wore out the patience of junior officials. At last, in one case of a scandalously false and perjured claim—it was the third or fourth that this applicant had brought in—the British official scrawled on the document, "give the bearer thirty of the best," and sent the applicant off to the police-station with it. He solemnly presented the document, hoping that the "thirty" referred at the least to pounds sterling, but found that it was to be interpreted "lashes," which he duly received. To do the rascal justice, he bore no malice; he had tried to score off the Government, and had been scored off himself, and to "do" the Government is an Oriental's notion of sport. In fact, he regarded the chaff he incurred from his friends as a far worse infliction that the sticks he ate. However, two days later, there was another order. The owners of *all* destroyed houses were to receive compensation. So our too-ingenious friend was summoned again to the *serai*, and on going with some natural trepidation, found that he was now to receive many rupees for the very thing that he had been soundly beaten for demanding a few days before. "Who *can* understand the ways of the English? At the least, one could comprehend the licking I got for trying to cheat, but why should they give me money after?" Truly, one's sympathies are with the puzzled Oriental.

Among the administrators whom we set to manage this land, by no means the worst are those drawn from the ranks and from among the N.C.O.'s. The power of "Sergeant What's-his-name" in that direction is a thing known of old, and many a "Tommy" in these days has shown that he is the possessor of the same gift. One genius indeed (a driver in the M.T. corps) turned his gift to private profit. He set up as a doctor, and treated all who came to him with such striking results, that when at last a "pukka" medico came to the district, no man would have anything but the "same good medicine that the Kamon gave (Kamon—*i.e.*, "Come on" is the local name for the British soldier). The doctor had to put his professional pride in his pocket, and ask his amateur colleague what he had been giving. The M.T. man had no wish to make a secret of it; he had been giving every man who came to him table-spoon doses of the lubricating oil of his motor lorry, arguing that what would lubricate the interior of the engine would do the same for the interior of a man.

Mesopotamia will settle its own problems, under the British subaltern and the British private, provided always that a petition is granted, which might profitably be added to the Litany for local use: "From the mean white, and from Whitehall, good Lord deliver us."

CHESS.

Problem No 20.
Black.



White.

White to mate in two.

The above problem by Frank Janet, New York, took the first prize for two-movers in the Victory Tournament of the British Chess Problem Society.

Has analysis all but spoilt chess? The point is raised by a correspondent who argues that, judging by present conditions, in another twenty years the real play will not commence until about the third hour, and that then, thanks to the unwearied efforts of the analysts, it will be possible to foresee the result. That, of course, is an exaggerated view; but at the same time, I cannot believe that chess has benefited by the publication of innumerable treatises on the openings. The result has been to handicap all those who have no leisure to study the openings, and to place a premium on "cramming." Despite all that has been done so far, however, those who have a gift for the game can still get their own back by leaving the openings in the first few moves, and then it is more than amusing to see what happens when those who depend on the text-books find themselves left entirely to their own resources.

For myself, I must confess that as a general rule I always select both for White and Black a series of opening moves which will take my opponent out of the "book" as quickly as possible. For White the simplest thing is to play some form of the Queen's Opening, which up to the present, despite what the experts say, has very largely defied analysis; while for Black, one at least of the irregular replies gives the second player considerable freedom from analysis.

It is only in recent years that analysis has made any real headway, and it must be confessed that once it began to make progress its strides have been extremely rapid. The complaint is not seldom heard that modern tournaments fail to produce games equal in brilliance to those of the last century and the early years of the present one. Undoubtedly that is the case, and the only reason for it is to be found in the fact that modern lines of play leave little or no scope for it. A Morphy has no place in "book" chess. To-day one wins in the end game, not by a continuation in the middle game. It is more certain, but romance has passed from the game

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

It has been found impossible to extend the Simplon-Orient Express's route beyond Belgrade at present on account of the unsatisfactory condition of the line between Belgrade and Constantinople, but a connection is established between Belgrade and Sofia by a service of three trains each week. One estimate puts the time at three months that will be required before conditions are satisfactory enough to warrant running the express through. It is stated, however, that should the new service run smoothly a much earlier date may be looked for. In this connection it may be noted that a Bulgarian contemporary announces that the first through Orient Express will leave Paris on July 1. The re-establishment of the through service is a boon for which all who have business relations which necessitate travel to the Near East are eagerly waiting, for the substitute routes that have had to be followed have proved far from attractive alternatives, to say nothing of the additional time that has had to be devoted to journeys.

***

I am informed that a leading British firm at Casablanca is contemplating opening showrooms for the display of British commodities, provided it is assured of the co-operation of commercial circles here. There is no doubt that this project would prove most beneficial to the development of British trade with Morocco, and I trust that United Kingdom firms will not be slow in giving this undertaking their support.

***

The announcement this week that the great carpet manufacturing business of Tabriz, which until the war was carried on by Germans, has been purchased by a British firm, is excellent hearing, and Mr. V. Behar, governing director of Messrs. Cardinal and Harford, Limited, of High Holborn, is to be heartily congratulated in bringing off such a notable coup on behalf of his firm. The property, which is stated to have changed hands at over £500,000, was acquired in the face of keen competition on the part of American and European business firms, and thus provides gratifying proof that the old spirit of commercial enterprise which placed this country in the leading position in the past is still very much alive among us to-day. Besides the chief factory at Tabriz, the business has centres at Teheran, Hamadan, Tiflis and elsewhere, and the employees number some 30,000 hands. Messrs. Cardinal and Harford intend to send out 1,000 British workpeople as soon as possible, and propose to introduce new methods. The question of transport is also to receive attention, and the camel, it is interesting to note, is to be replaced by the motor-car, Persia, as a writer of recent articles in our columns pointed out, presenting favourable conditions in certain regions for that form of transport.

***

Trials of tractors and motor-ploughs are to be held in Egypt in January, under the auspices of the Ministry of Agriculture, and it is to be hoped that British manufacturers will not fail to take advantage of this excellent opportunity of introducing their machines to this market. Purely an agricultural country, the efforts now being made to extend the area under cultivation promises a great opening for machines of a suitable type. Firms taking part in the trials should note that it is absolutely essential to send out experts who can do full justice to their exhibits.

***

I see that the Agricultural Department of India is also proposing to hold tractor trials on a large scale next year. At the recent trials at Nagpur, reference to which was made in these columns last week, the practicability of utilising tractors in the difficult conditions in India was fully demonstrated, and already a number of tractors are in use there. Unfortunately the market has hitherto not received much attention on the part of British firms, while foreign makers have, on the other hand, been assiduous in cultivating it, and in consequence have received a number of orders. The forthcoming trials should enable British firms to recover the lost ground, and to establish a firm footing in a large and growing market for these machines.

The continued low value of the leu, coupled with a lack of accommodation on the part of British traders, has given our commercial rivals a considerable advantage in Roumania at the present time. British firms want payment in cash, and as this cannot be effected at the present rates of exchange, the result has been that imports from Great Britain have practically ceased. On the other hand, American firms, our Correspondent points out, have obtained a number of important contracts, as they are willing to take payment in the form of Government Treasury Bonds extending over a period of several years. Is there any reason why British firms should not do likewise, except an innate conservatism which keeps them to methods which may have been adequate in pre-war days, but will not meet the situation now?

***

It cannot be too strongly emphasised that it is what happens now that matters. If British firms meet the requirements of the market now, then they will be in a satisfactory position when normal competition returns; but if, on the other hand, they will not go out of their way to make concessions, then their chance of obtaining a footing in the market later on will be far from good, for there is bound to be very serious competition on the part of Germany and Austria. The Roumanian market, I would once again impress upon British traders, offers special opportunities for the development of British business enterprise, for the people are keenly desirous of establishing close relations with us, and, provided they are afforded adequate facilities, there is no doubt that British goods will be given the preference.

***

Exceptionally good results were obtained by the New Egyptian Company during the past year. The gross profits were almost doubled at £143,523, as against £79,456, while the expenditure amounted to £36,477, leaving a net profit for the year of £106,745. At this week's general meeting the chairman emphasised the strength of the company's position, pointing out that the balance-sheet showed an excess of assets over liabilities of £279,500, equal to 12s. 6d. per share, and that this was arrived at by taking the lands at cost—namely, £49 15s. 7d. per feddan. He went on to mention that recently the company sold 240 feddans at over £245 per feddan, and that as much as £256 had been secured for a small area.

***

There was a very considerable expansion of the profits of the Burmah Oil Company in the past year. The net profits amounted to £4,654,000, as against £3,420,124 in 1918, and £2,858,063 in 1917, and this it is proposed to utilise to pay a final dividend of 8s. per share, which, with the interim distribution, makes the rate for the year 50 per cent., free of tax. In addition to this, shareholders are to receive a substantial bonus, as there is to be a share distribution on the basis of four new shares for every five already held.

EGYPT.

Cairo, May 24.

Favourable Financial Outlook.

The finance accounts for February, just issued, reveal some remarkable figures. The total revenue for the eleven months amounts to £E28,859,650, as compared with £E24,703,335, and the striking feature about this figure is that it exceeds the total budgetted for the complete year. On the other hand expenditure amounts to £E24,397,130, as against £E20,711,651 at the end of February, 1919, and already there is a surplus of £E4,462,530, which it may be anticipated will be increased to £E5,000,000 when the March account is published.

Compared with the corresponding period of 1919 the main increases are Customs, £E1,931,701; tobacco dues, £E958,504; judicial fees, £E271,307; domains receipts, £E292,724; ghaffir cess, £E212,706; interest on funds, £E137,076; extraordinary receipts, £E295,755. Almost every head of revenue exceeds the total budgetted for the complete year, the chief examples being Customs, £E5,824,863, against £E4,200,000; tobacco dues, £E2,969,019, against £E2,350,000; domains receipts, £E1,208,059, against £E856,000; and ghaffir cess, £E1,040,659, against £E855,000. The only noteworthy exception is interest on funds, which amounts to only £E510,639, compared with an estimated £E2,026,000, but as this item includes profit on the bank note issue there is reason to expect that the final account will show a substantial increase on the present figure.

Cairo, May 31.

Great Trade Expansion.

The Customs returns for the first quarter of the current year reveal what can but be regarded as phenomenal figures. During the period imports amounted to £E20,545,180, against £E10,380,815, and exports to £E50,555,666, against £E15,833,856 at the end of March, 1919. In other words, imports have doubled and exports more than trebled, and the figures for the first quarter of this year are not far short of those for the whole of last year.

Under imports the more important items are:—Preserved fish, £E178,406; boots and shoes, £E123,776; flour, £E323,797; fruits, £E418,894; coffee, £E478,265; vegetable oils, £E272,527; petroleum, £E604,541; oil-fuel, £E154,926; coal, £E614,124; construction wood, £E425,763; chemical manure, £E415,706; household soap, £E168,422; cotton yarn, £E481,681; cotton textiles, £E5,853,756 (about treble the value in the first quarter of 1919 and a little more than double the quantity); woollen textiles, £E789,642; silk yarn, £E234,509; silk textiles, £E517,264; sacks, £E279,055; manufactured iron and steel, £E754,782; and tobacco, £E789,261.

Most of these items show a considerable increase in value over the corresponding quarter of last year. It is to be foreseen, however, that during the coming month textiles, which represent practically half of the first quarter's imports, as against less than one-third at the end of March, 1919, will show a considerable reduction, as the country is at present overstocked with Manchester goods and similar articles, and local prices are dropping.

Under exports, cotton, of course, bulks largest as usual, and accounts for £E47,378,456, or about 90 per cent. of the total. The rise in the price of cotton can be seen from the fact that whereas the increase in value has risen by 250 per cent., that in quantity has risen by barely 40 per cent. Other important items under exports have been eggs, £E274,632; hides and skins, £E294,336; cotton seed, £E838,459; cotton cake, £E213,433; sugar, £E324,993; cigarettes, £E266,570.

As regards the share taken by foreign countries, under imports the United Kingdom slightly increased its share, rising from 40 per cent. to just under 50 per cent., Italy increased from £E364,000 to £E1,470,000, China from £E314,000 to £E530,000, Japan from £E453,000 to £E827,000, and the United States from £E471,000 to £E1,127,000.

Under exports, for once in the way, Great Britain has taken second place, the United States heading the list with £E21,199,000, as against our £E19,460,000. As can be seen these two countries have absorbed four-fifths of the exports, the only other important items being France with £E3,575,000 and Italy with £E1,878,000. All these figures for all practical purposes represent cotton.

Trade between Egypt and the Sudan was quite brisk during the quarter. Imports from the Sudan amounted to £E956,882 and exports to the Sudan to £E1,015,001, against £E538,663 and £E744,285 respectively during the corresponding period of the previous year. The principal imports into Egypt were livestock, £E313,580; sesame, £E272,566; ground nuts, £E90,711; charcoal, £E31,976; gum, £E17,388; while the main exports to the Sudan were rice, £E10,042; flour, £E23,589; sugar, £E242,500; groceries, £E101,808; cotton textiles, £E231,168; and sacks, £E70,051.

Port Said, May 28.

Shipping News.

Shipping, which has been very slack lately, is showing signs of renewed activity. Among several noteworthy ships which have lately passed the Canal may be mentioned the Cap Polonio, which up to date is the biggest ship that has passed through the Canal. The famous yacht Sunbeam, in which Lord Brassey circumnavigated the globe, has also passed through here. She now belongs to the Pangbourne Nautical Training College.

Passages home, or indeed anywhere, are still almost impossible to get, and people are spending their leave and also their money in Port Said, waiting in the ofttimes vain hope of a berth on a steamer.

Attempts are being made to raise the Italian warship which sank some months ago near the southern entrance of the Canal owing to a boiler explosion. Two large cylinders have recently arrived, which will be used to try to float her into shallow water, where she can be repaired.

Nothing is being done yet to raise the several torpedoed vessels lying in the shallow water off Port Said, and possibly those responsible think the expense now would be more than the value of the vessels if raised. The wreck of the Tiber, which was loaded with cases of benzine, and blew up while being towed down the harbour, is now practically cleared away, and no longer interferes with navigation. The Proton, which was loaded with ammunition (with hay on deck to keep it warm, which caught fire), and was sunk at her moorings at the entrance to the Canal just in time to save Port Said from the fate of Halifax, is still there, no attempt having been made as yet to get her up or remove her.

ROUMANIA.

BUCHAREST, May 20.

Petrol Production.

The following figures have recently been published in the *Moniteur du Petrole Roumain*, showing the total production of petrol for the first three months of this year: January, 69,987 tons; February, 66,339 tons; March, 79,096 tons. The apparent drop in February is really only due to the fact that there are fewer days in that month, as the average daily production amounts to some 2,000 tons.

Exports.

According to the same official organ the export of petroleum and petroleum products in 1919 was as follows:—Benzine, 2,298 tons; lamp oil, 26,281 tons; gas oil, 5,568 tons; residues, 1,200 tons; crude oil, 3,600 tons; total, 38,947 tons. Against this the export in 1913 was 1,036,446 tons, *i.e.*, almost a million tons more.

The whole of the above export was transported by way of the Danube out of the country, none of it having been shipped from Constantza. The largest quantities went to Czecho-Slovakia, Bulgaria, and Turkey.

Condition of Pipe Lines.

In an article in the *Moniteur du Petrole*, M. Corneliu Tordceanu, director of the pipe-line service, gives an interesting account of the working of the conduits, and suggests a future programme. He says that although the pipe lines are not doing anything like their normal work, it is really surprising that they have not broken down altogether, for in their present condition they would not have been passed as fit for transporting the oil in normal times. Nevertheless, between March 10 and September 1, 1919, 5,470 wagons were pumped to Giurgevo, *i.e.*, about 33 wagons per day, or 1,442,540 kilometric tons per month; and from September 1, 1919, till March 8, 1920, 8,618 wagons were pumped from Baicoi to Giurgevo and 3,733 wagons from Baicoi to Constantza, *i.e.*, about 2,060 wagons per month or 70 wagons per day, which is double the amount for the former period.

Maize for Czecho-Slovakia.

It is reported that the Roumanian Government is treating with the Government of Czecho-Slovakia for the export of 1,000 wagons of maize in exchange for other commodities exportable from that kingdom.

YUGOSLAVIA.

BELGRADE, June 6.

Save Railway Bridge.

The replacement of the temporary railway bridge over the Save by the permanent steel structure from the Reshitsa Steel Works is now complete, and in future trains will be able to cross the bridge at normal speed.

CYPRUS.

NICOSIA, May 22.

The Crops.

Good cereal returns are now assured; but considerable damage has been caused to wheat in several places by further violent hailstorms. All tithe will be taken in kind, except in a few hill villages; and all must be delivered at the different Government stores by September 30. The yield of potatoes has been good in most parts of the island, and there has been but little disease. Permission has been given to export certain quantities during the whole month of June, preference being given to actual growers. The quantity allowed for export in the Nicosia district is 250 tons. A mere fraction of what might be profitably grown, especially in the east of the island, is cultivated. The wheat pest (*Tinea temperatella*), which has so long been a trouble, still clings to the west of the island. Native agriculturists make practically no attempts to deal with it, always regarding all measures to fight both animal and vegetable disease as work for the Government. One landowner has made a successful practice of sowing rye after a fallow year in affected areas; but the Cypriot farmer will seldom follow even a manifestly good lead. Rye might be a profitable rotation crop, but Government efforts to introduce it have failed. Even its name was not known in Cyprus before the present generation.

Mail Service to Egypt.

The Government has entered into an agreement with the Khedivial Mail Steamship and Graving Dock Company under which the present mail service to Egypt is to remain in force till December 31. There is thus no improvement in the tri-monthly despatches and arrivals of mails. Passenger communication with Egypt is now curtailed, and owing to the great difficulties as to accommodation it is well this should be so. By a recent order no person in Cyprus can proceed to Egypt unless domiciled there, or well-to-do, or joining a family with a view to taking up definite employment.

Scarcity of Money.

Both in towns and villages a lack of money is being felt, which some attribute to the heavy payments for imported wheat and flour. Others refer to the reckless spending of money on articles of luxury by those of all classes who have made money during the war. In Cyprus, as usual, the first impulse and inclination is to blame the administration. The Government is accused of neglecting its duty in failing to import sufficient flour long ago when prices were comparatively low. Also it should have restricted the importation of all needless luxuries, which it is urged to do forthwith, while vigorous anti-profiteering measures, as well as control of prices, should be enforced.

Fire at Tobacco Factory.

The inhabitants of Nicosia were alarmed a few days ago, about midnight, by the ringing of church bells and shouts, to find that a fire had broken out in the large tobacco factory of M. Vergópoulos. Thousands soon collected about the place. Fortunately, through the exertions of the police, aided by some municipal employees, the fire was extinguished in about half an hour. Had it spread to neighbouring bazaars the consequences would have no doubt been very serious.

The cigarette factory is widely known for the excellence of its cigarettes, which have been snt to all parts of the world, H.M. King Edward VII. being among the patrons.

ICE AND REFRIGERATING MACHINES FOR YUGOSLAVIA.

Ice and refrigerating machines are in great demand in Yugoslavia, especially this year, as the winter was a very mild one, and but little natural ice could be obtained from the rivers and pools. Not only are many brewers compelled to obtain refrigerators and ice machines, but it is proposed to set up abattoirs for export at Novi Sad (Neusatz), Lubljana (Laibach) and other places. There are now works in Yugoslavia able to put in such plants. At the present moment some of the breweries are very much in need of ice machines, and any price demanded is paid. Before the war German industry was well established in this region, nearly all the ice and refrigeration plants being supplied by German makers.

This year's Greek citrus fruit crop is estimated at 302,000,000 oranges and 53,000,000 mandarins.

The traffic receipts of the Egyptian Delta Light Railways Ltd., for the ten days ended May 20 amounted to £E12,072. total for year £E58.884. For the corresponding period of 1919 the receipts amounted to £E6,142, total for year £51,158.

THE EGYPTIAN COTTON POSITION.—II.

By John A. Todd, B.L.

The history of the Egyptian crop during the war has been, in many respects, very unfortunate. From the time of the British occupation until 1914 the acreage under cotton had been showing a steady increase, due largely to the continued extension of irrigation facilities. At the outbreak of the war further schemes of drainage and irrigation were on foot which would have still further extended the maximum area possible, while at the same time remedying the harm that had been done in the lower parts of the Delta by over-watering. The prospects of an increased Egyptian supply were therefore very promising, and the only adverse factor in the situation was the appearance of pink boll-worm, which from about 1912 threatened to reduce the average yield per acre materially.

The war played havoc with these prospects of improvement, and materially aggravated the difficulty of dealing with the new insect pest. In Egypt, as everywhere else, there was, of course, a substantial reduction of the acreage in 1915, due to the war slump in prices; but a fair recovery was made in 1916, which, however, was nullified by the fact that the yield per acre that year was the lowest on record. In 1917 the area was again slightly better, and as the average yield per acre was considerably higher the crop came out about 82 per cent. of the pre-war maximum. In the following year, however, owing to the necessity for the extended cultivation of cereals, legislative restriction of the area had to be enforced, and as the average yield per acre was again lower, though not so bad as in 1916, the crop was the lowest on record for many years, being well below even that of 1909.

On the cessation of hostilities it was hoped that the acreage would at once return to pre-war dimensions, but this hope was only partly realised. Nevertheless, the season started off with high hopes of a good crop, estimates being placed as high as 6¼ or even 6½ million kantars; but, as has so often happened in Egypt, the optimists have not been justified, and the actual crop looks more like 5,750,000 to-day. Even this will give an average yield slightly better than 1918, though by no means so good as pre-war records. The following table gives the history of the crop in detail during the war period and since:—

ACREAGE, YIELD AND PRICES OF THE EGYPTIAN CROP, 1913-1920

Season.	Acreage.	Per cent on 1913.	Crop.	Yield per acre.	Liverpool prices (pence per lb.)		
					Lowest.	Highest.	Average.
	Feddans.		Kantars.	Lb.	F. G. F. Brown.

The figures in italics are estimates. * Sakel.

With regard to the prospects of the coming season, the enormous prices received for Egyptian cotton during the past winter have naturally resulted in every effort being made to increase the area under cotton this year. Estimates of the probable increase of area vary from 12½ to 25 per cent., and it appears certain that the area this year will break all previous records. The question of the probable amount of the crop therefore depends on the average yield per acre that may be expected, and this depends mainly on two factors—the water supply and the pink boll-worm.

The situation with regard to the water supply is rather problematical. The supply of water depends on the storage capacity available, on the height of the 1919 flood, and the expected date of arrival of the 1920 flood. A great deal has been said about water scarcity, and it is very probable that with so large an area as is expected the water supply this summer will be strained to its utmost capacity, with the result that considerable areas at the tail-ends of the canals are likely to be short of water. It is easy, however, to make too much of the question of the water supply in Egypt, for the fact remains that during the years detailed in the above table, the best crops have been those in the years when the flood was lowest. The reports of water shortage may, therefore, be discounted to some extent.

With regard to pink boll-worm, the situation is perhaps less satisfactory. Up till last year, the work which had been done in combating the pest had been distinctly successful, and there was reason to hope that, while the pink boll-worm would never be eradicated, the damage done by it would be considerably reduced. Unfortunately, however, there are two reasons for fearing that this expectation may not be fully realised. The first is that owing to the disturbed state of the country it will be more difficult to enforce the regulations for dealing with pink boll-worm, such as the early pulling up of the cotton sticks in autumn, the careful destruction of infested bolls, the fumigation of seed at the ginneries, and the prevention of the escape of the moth in spring. The second is that there has been during the past year a noted tendency for the ginneries which were largely owned by Europeans to pass into the hands of natives, who have selected this channel of investment for part of the fortunes they have made out of the high price of cotton; and it must be regarded as probable that under their new native owners the regulations regarding the handling of seed in the ginneries will be less carefully enforced. It is, therefore, necessary to take into account the probability that the pink boll-worm damage this season will not continue the downward tendency which had resulted from the work of the last few years.

With regard to the quality of the coming crop there are also certain considerations to be noted. In Egypt a great deal depends on the seed supply, and there has been a very marked change during the war in the general distribution of the principal varieties of cotton grown. Before the war the old Brown Egyptian cotton (Affifi) formed the bulk of the Delta crop, but during the war Sakel practically swept everything before it, and had become the main variety throughout all parts of the Delta. Sakel, however, had one disadvantage. The average yield per acre was distinctly less than that of Ashmouni, or Upper Egyptian cotton, with the result that even with the high prices realised for good Sakel, the Upper Egyptian grower sometimes made more money out of his crop than those in the Delta. This has accentuated the tendency to introduce Upper Egyptian cotton into the Delta, which had even before the war given some trouble. Some of the ginners in the Delta were not above buying Ashmouni in Upper Egypt and bringing it down to the Delta to be mixed at the ginneries with Delta cotton. The result was that both the lint and seed of the two varieties became hopelessly mixed, and to prevent this legislation was introduced some years ago making it illegal to move unginned Ashmouni from Upper to Lower Egypt. If now a tendency develops to grow Ashmouni in Lower Egypt, there will be no possible way of preventing its mixture with Delta cotton, with the inevitable result of deterioration of the Delta varieties.

In this connection it is also to be noted that two new varieties have lately been propagated—(1) Zagora, in Upper Egypt, and (2) Pillion, in Lower Egypt. Zagora seems to be, on the whole, an improvement on the old Ashmouni; but Pillion, while it has the advantage of a heavier yield, is distinctly inferior to Sakel in length of staple. It seems, however, to be catching on very fast, and there is a possibility that it may drive Sakel out of the field, in the same way as Sakel a few years ago superseded Affifi, and with a much less desirable result. In the old days Lancashire protested that they did not want the whole of Egypt turned over to long-staple cotton such as Sakel, because the quantity of such cotton that they could use was very small. During the war, however, they found under the spur of necessity that they could do very well with a large supply of Sakel. If now that supply begins to diminish in favour of a cotton which is even shorter than the old Affifi, the disturbance to the fine cotton industry in Lancashire may be very awkward. It must be kept in view, however, that a large part of the demand for Egyptian cotton is now for tyre fabric purposes, and this new shorter cotton might prove perfectly suitable for that. It would, however, only be taken by them at a price, and Egyptian growers might find the price a great deal less satisfactory than what they used to get for Sakel.

Again, it must be remembered that the demand for Sakel is likely in the near future to be much keener than formerly, because of the failure of the Florida and Georgia Sea Island crops. These crops have now almost disappeared. In pre-war times the total American Sea Island crop has often exceeded 100,000 bales; last year it was not 7,000, and this year there will be practically none at all. Under these conditions the world will be dependent for its really fine cotton supply on the very small Sea Island crop of the West Indies, say, 7,500 bales, and the best varieties of Egyptian cotton. Should the tendency develop in Egypt for these finest varieties to disappear or to diminish seriously in quantity, it may create a very serious situation for the higher end of the fine cotton industry in Lancashire.

FLAX CULTIVATION IN MOROCCO.

According to the *Action Commerciale*, the cultivation of flax in Morocco is yielding excellent results, and it is possible to foresee that in the near future Morocco will replace Russia as the principal source of supply of French flax spinners.

The first attempts at cultivation were made in 1917 by Boutemy Defives and Co., and 500 hectares were sown in 1919. The crop is of good quality, equal to the flax produced in France, and the land which could be utilised is enormous in extent.

GENERAL BANK OF GREECE.

Paid-up Capital, Drs. 3,000,000.

Head Office - ATHENS.

BANKING OPERATIONS:
Every description of Banking business transacted.

FINANCIAL OPERATIONS:
Investigations in connection with, and the promotion, organisation and financing of, Limited Joint Stock Companies, with a view to exploiting agricultural, industrial and mineral resources, executing technical works, etc.

COMMERCIAL AND SHIPPING DEPARTMENT:
Purchase and sale of goods on account of clients. Warehousing, Advertising and placing foreign products on the market. Agents for foreign companies and large commercial and industrial firms abroad. General Shipping Agents.

POPULAR BANK OF GREECE.

Head Office, ATHENS. Branch, PIRÆUS.

Correspondents throughout Greece.

Established June, 1905, by the National Bank of Greece and a group of Capitalists.

CAPITAL - Drs. 1,500,000.
RESERVE FUND - Drs. 2,500,000.
Deposits and Credit Accounts, Drs. 100,000,000.

The Bank specialises in the collection of Bills payable in Greece; it accepts goods on consignment, and undertakes their sale, and transacts every kind of Banking business.

General Manager: D. LOVERDO.

TRADE WITH THE NEAR EAST.

The Bank of Athens extends special facilities for business with the Near **East** to manufacturers, exporters and importers.

The Bank has offices in all the principal towns in **Greece,** also in **Egypt,** Cairo and Alexandria, in **Cyprus,** Limassol and Nicosia, in **Constantinople,** and in **Smyrna.**

Inquiries from interested parties are invited.

BANK OF ATHENS.

PAID-UP CAPITAL : £1,920,000. **HEAD OFFICE IN ATHENS.**

London Office: 22, Fenchurch Street, E.C. 3.

COMMERCIAL BANK OF GREECE, LIMITED.

CAPITAL PAID-UP - Drs. 15,000,000.
RESERVE FUNDS Drs. 2,845,010.45.

Head Office: ATHENS.

Branches:—**Piræus, Salonika, Patras, Volo, Syra, Calamata, Corfu, Cephalonia, Candia, Chios, Argos, Pyrgos, Vostizza (Ægion), Nauplia. Larissa.**

AGENTS IN ALL PARTS OF GREECE, THE LEVANT, AND ABROAD.

The Bank conducts every kind of Banking, Commercial and Stock Exchange business and extends special facilities to traders interested in business with Greece. It acts as Agent for many Foreign Banks. It is specially organised for Exchange, the execution of mail and cable transfers throughout Greece, and for the collection of clean and documentary Drafts.

MERCHANDISE DEPARTMENT:
The Bank undertakes the warehousing and sale of goods consigned.

GREECE.

Area 43,522 square miles. The cultivated area amounted to 5,746,300 acres, of which about 2,253,400 were under cereals, 518,900 under grapes and currants, 370,600 under oak trees, 296,500 under olives, and 2,223,900 were forests.

Population (1914), 5,000,000 approximately.

Chief Products (with average annual production):—Currants, 142,000 tons; wines, 3,000,000 casks; tobacco, 9,000,000 lb.; cereals, 8,000,000 bushels; olive oil, 200,000 casks.

The **MINERALS** of Greece include:—Iron, Marble, Magnesite, Emery, Lead, Lignite.

IMPORTS (1914), Old Greece only:—Total value £7,000,000, of which £2,000,000 from the United Kingdom; £1,800,000 from Germany and Austria Hungary; £1,000,000 from Russia.

EXPORTS (1914), Old Greece only:—Total value £4,000,000, of which £3,000,000 came to the United Kingdom.

COINAGE.—The unit is the Drachmæ, equivalent to a Franc (10d.). The current rate of exchange is about 33·85 Drachmæ to £1.

FREIGHT.—From England, 160/- + 10 % primage.

WEIGHTS AND MEASURES.—It was decided in 1898 to introduce the metric system. The change is to be gradual from the old system, which is:—Oke = 2·82 lb., stater = 123·20 lb., livre (Venetian) = 1·05 lb., baril (wine) = 16·33 imperial gallons, kilo = 0·114 imperial quarter, pike = ⅔ of a yard, stremma = ·242 of an acre.

BANK OF NATIONAL ECONOMY (of Greece)

Head Office: ATHENS.

Branches:

PIRÆUS, SYRA. PATRAS.

Capital Paid Up - Drs. 10,000,000.

Fully represented in all parts of the world for all kinds of commercial, financial, and shipping business.

President. L. EMBIRICOS. *Manager.* D. MIAOULIS.

BANK OF PIRÆUS.

For COMMERCE, INDUSTRY and SHIPPING.

Capital Paid-up - Drs. 5,000,000. Reserve Fund - Drs. 3,095,000.

OFFICES at PIRÆUS and ATHENS.

Every kind of Banking business transacted.
The Bank's connections throughout Greece enable it to offer foreign clients special facilities for the collection of Bills, etc.
Correspondence invited.

BANK OF INDUSTRY OF GREECE.

Head Office: 14, Stadium Street, Athens.

Capital Fully Paid-up - Drs. 15,000,000

The Bank has been established for the encouragement and development of Industry and Commerce, and undertakes every description of banking business.

BANK OF ORIENT.

Capital Paid up - Drs. 25,000,000

Head Office: ATHENS.

Branches: SALONIKA, SMYRNA, ALEXANDRIA, CAIRO, MITYLENE, SERRES, ZAGAZIG, MAGNESIA, PERGAMA, SOMA.

Every kind of Banking Business transacted.

THE MINERAL RESOURCES OF ARMENIA.—II.

By G. J. Agababian, E.N.S.M. (Paris), Chief of the Department of Mines of the Armenian Republic.

In 1917, in the course of a geological expedition in Turkish Armenia, I visited forty-three mineral areas in the vilayets of Erzerum and Van, fifteen of which contained coal, ten lignite, one peat, five oil, two rock salt, five salt springs, two carbonate of soda, two copper, and one lead.

Between 1915 and 1918 some of the twenty-five coal and lignite deposits mentioned were worked regularly to supply the needs of the Russian Army. They were those of Mollah Soulaiman (lignite), which is connected by a branch railway with the Karakilisse-Chahtakhti railway, Pagadjouk and Kirchavan (lignite), four or five miles from the Erzerum-Sarikamish railway, Sivichli (lignite), two and a-half miles from Erzerum; Kukurtli (coal), on a branch line connection with the Erzerum-Mamakhatoun railway, which is now under construction; Vartik (coal), five miles from the same railway; Medjidié (coal), ten miles from Erzinghian; Kissik (coal), two and a-half miles from Khnis-Kala.

The 450 deposits to which I have referred constitute, according to the figures of the Mines' Administration, the total mineral resources of Russian Armenia. A valuation of this mineral domain would necessitate first of all an estimate of the value of each of the deposits—at present almost totally unexplored. Although it is practically impossible to obtain this, some idea may be gained by an examination of (1) the separate estimates of the Mines' Administration; (2) industrial statistics, and (3) information derived from geological surveys of the country.

The Mines' Administration has published the following figures concerning the eleven iron-ore and rock-salt deposits:

A.—Iron Ore.—1.—Karhat or Dachkessan, magnetic iron ore, averages 65 per cent. iron; quantity explored, 13,500,000 tons. 2.—Deposit near Nusgher, titanic iron ore, averages 50 per cent. ore; quantity explored, 100,000 tons. 3.—Tchatak, Olegist iron (Fe_2O_3), averages 53 per cent.; quantity explored, 1,000,000 tons; total 14,600,000 tons.

B.—Rock Salt.—The estimated deposits of the following mines (in tons) are:—Koghp, 51,640,000; Nakhitchevan, 5,380,000; Souste, 4,300,000; Olti, 46,000; Kaghisvan, 2,114,000; Todan, 1,550,000; Akh Tchai, 1,446,000; Boulanuk, 1,030,000; total, 67,506,000 tons.

C.—Aluminium (alunite).—The outcrops at Pib or Zaglik run to a length of four miles, their widths being about seven yards; average, 37.58 per cent. of alumine (Al_2O_3).

D.—Carbonate of Soda.—The lake of Van (the surface of which exceeds 3,600 square kilometres, and which in places is more than 1,200 ft. deep) contains about 20 grams of carbonate of soda per litre (1¾ pints). This would give 72,000,000 tons of salt for a depth of one metre below the surface of the lake.

The output figures given above are important indications concerning the 22 deposits to which they apply. It must be remembered furthermore that: (1) The production recorded is the result of very moderate financial and technical efforts disproportionate to the possibilities of the mines. (2) The twenty-two deposits exploited do not constitute even 5 per cent. of the total number of the known deposits of Russian Armenia. (3) The present industry, limited to the copper, rock salt, and iron pyrites categories, furnishes no indication as to the twenty-three other categories of deposits, including those the ancient exploitation of which made the renown and prosperity of the country, such as gold, silver, iron, etc.

A geological survey of the country and of its mineral wealth facilitates a general estimate of the resources, and if less precise than the official statistics, is of a wider import.

The geological constitution of Armenia is characterised by an abundance of volcanic rocks and by a predominance of tertiary rock soil. Its tectonic is the consequence of the remarkable intersection of the two zones of feeble resistance: (1) The Alpine and (2) the Ural. The mountains of the Lebanon and of the East Coast of Africa mark the direction. The position may be compared to that of Central America. Armenia forms a horst amid great depressions, and a theatre of disjunctive dislocations and volcanic activity, the beginning of which goes back to the secondary though the maximum of intensity coincides with the tertiary epoch.

Theoretically there is a close connection between these phenomena and the metal deposits that justifies the classing of Armenia among the young countries of the tertiary mineralisation. The importance of this mineralisation may be judged by its large share in the world's metal production.

By a happy coincidence, the tertiary sedimentary series of Armenia comprises large salt formations extending from Tortoum to Lake Urmiah. It includes the salt springs and rock salt beds of the vilayet of Erzerum, as well as the lakes of Van and Artchac, in Turkish Armenia, and the salt pits of Nakhitchevan, Koghp, Kaghisvan, and Olti, in Russian Armenia.

The same sedimentary series comprises a coal formation which we have traced from Erzinghian to Ach Kala, and a lignite formation from Erzerum to the former Russian frontier, a total length of 220 miles, in the basins of the Arax and the Euphrates.

The above indications as to the mineral resources of Armenia, especially in metal, salt, and coal, suffice to prove the immense possibilities of the country if properly developed in accordance with the requirements of modern industry.

OPENING OF AGADIR HARBOUR.

The opening to commerce of the port of Agadir is expected to take place in January next year. In the meantime communications with Marrakesh will soon be possible via Imintanout, whilst the track between Mogador and Agadir will be improved.

The port now approaching completion is a lighter port of some 10 acres, which can receive small steamers, and is so planned as to be capable of eventual conversion into an important port (says the Acting British Consul at Casablanca). The depth of water close in shore at Agadir is, with the exception of Saffi, the greatest on the Atlantic coast of Morocco. Agadir, like Saffi, is exposed to south-westerly gales, but good protection to shipping is afforded from the north and east.

Plans for procuring a water supply are on the point of being put into execution. As regards the future of Agadir and its hinterland, there can be little doubt that the improvement of agricultural methods, the cultivation of new products, such as, for instance, cotton, and the exploitation of mineral deposits in the Anti-Atlas and Atlas ranges, will combine to make the port an important one, while much of the commerce of Mogador may be expected to be transferred to the new outlet.

Dr J. Collis Browne's Chlorodyne

Of all Chemists, 1/3 and 3/-.

Cuts short attacks of HYSTERIA, SPASMS, PALPITATION.

A true palliative in NEURALGIA, GOUT, TOOTHACHE, RHEUMATISM.

Checks and arrests FEVER, CROUP, AGUE.

The Best Remedy known for COUGHS, COLDS, ASTHMA, BRONCHITIS.

THE "UNIVERSAL" CIGARETTE MACHINE.

Designed to make round, oval or Egyptian cigarettes with creased edges of any desired diameter or length with wide or narrow pasted laps, and, by an interchange of parts, also crimped cigarettes.

IN DAILY USE THROUGHOUT THE NEAR AND MIDDLE EAST.

Embodies the following advantages:—

Works satisfactorily with any kind of tobacco Apparatus supplied for printing cigarettes in one or two colours or one colour and bronze. Manufactures and tips cigarettes at one and the same time. Automatically sorts the cigarettes. Apparatus for pasting with starch or liquid paste as required. Fitted with device for stripping waste cigarettes or cigarette rods.

UNITED CIGARETTE MACHINE CO. Inc.,
80, Coleman Street,
LONDON, ENGLAND.

ENGINEERING.

Diesel Oil Engines.

There seems a strong probability of early development in connection with Diesel oil engines of the marine type. Some time ago it was known that reversing could be effected by moving the cams operating the spray and scavenging valves through a common angle. One cam-shaft running along the tops of the working cylinders operates all the valves; there is one cam for each spray and scavenging valve, and the cam-shaft is shifted for reversing through an angle of 30 degrees. A year or so ago the method was adopted of moving the cam-shaft automatically by a slip coupling having an angle of that number of degrees between the jaws, so that when the engine starts in the reverse direction the crank-shaft revolves 30 degrees before the cam-shaft starts, that is when the timing becomes right for the new direction of rotation. Two separate cams operated the air starting valves, one for ahead and the other for astern, and the direction of rotation of the engine is determined by bringing into action the proper cam, which in turn times the starting valve. Mr. J. W. Anderson, who had made a special study of the subject, recently pointed out that this automatic reversing mechanism may, and frequently does, fail to work when the engine is operated at low speeds, because then the engine does not turn exactly uniformly, and since the slip clutch is of the friction type, with jaws to limit the extreme travel to an angle of 30 degrees, and since the cam-shaft and its parts have inertia of their own, this slip clutch fails to hold the cam-shaft in exact relation to the crank-shaft. This naturally upsets the timing of the valves, which in the case of the spray valve is of importance.

As he pointed out, generally speaking stationary engines and marine engines with clutches between the engine and propeller are fitted with starting valves on only half of the working cylinders. This means that while the engine is being turned over by starting air on part of the cylinders, the others are being warmed up by the compression, and even under very adverse conditions they soon reach such a temperature that ignition is obtained. In the case of reversing engines the handling gear is sometimes modified to cause the starting air to be turned on and off the cylinders in groups.

The question of manœuvring is principally one of obtaining sufficient starting air capacity, either by carrying a large number of flasks or, better still, in the case of a large ship, by having an auxiliary compressor unit of good capacity. While the ship is manœuvring the compressor unit is kept running all the time and pumps into the starting flasks. With such a provision an engine can be reversed repeatedly with only a small starting flask capacity. In the case of small powers it is much more economical and convenient to use a clutch between the engine and propeller and to employ a non-reversing engine which is kept running all the time.

It is often said that it is impossible to slow down a Diesel engine materially. This is true, as Mr. Anderson admits, to a certain extent with the ordinary type of construction, but with proper modifications any Diesel engine can be made to slow down and operate as easily at the lower as at the higher speeds. The solution of the problem, he says, consists in having a regular enough turning moment to keep the engine running fairly smoothly and to obtain definite and regular ignitions in the cylinders. The case is much simpler for a large heavy engine which has a big mass in the moving parts, and where there are a large number of cylinders, say at least six for a two-cycle engine and eight for a four-cycle engine, than it is for a small light engine. In the propulsion of a ship the power drops off very rapidly as the revolutions are reduced, and therefore at very low speeds the power is so small that when divided up among all of the cylinders in the engine there is not enough fuel injected into each cylinder to give regular ignitions. This can be remedied in a large measure by cutting out half of the number of cylinders. The load per cylinder will then be more than doubled, and the engine will run with very light loads at low revolutions. In the view of the authority quoted the advisability of fitting some sort of gear for controlling the timing and lift of the spray valve depends upon the type of the engine and the place where it is going to be installed. Without such gear an engine can be slowed down to about half speed without difficulty, hence for installations of small power in ships having a maximum speed of ten knots or thereabouts it is unnecessary, because half speed then means little more than steerage-way. On the other hand, in larger vessels having a higher maximum speed it is very desirable to be able to slow the engine down to quarter speed or less, and then the installation of such a gear becomes almost a necessity. The whole subject is very interesting and more may be said regarding it at an early date.

A Big Amalgamation.

More than usual interest is attached to the amalgamation of the three famous motor engineering firms, the Sunbeam Co. and Messrs. Talbot and Darracq. The name of the new organisation will be S.T.D. Motors, Ltd., using the initials of Sunbeam and Talbot, as well as that of the parent company, Messrs. A. Darracq and Co. (1905), Ltd. Probably the Sunbeam cars will continue to be made at the well-known Wolverhampton works, which are so adequately equipped in all that is best and most modern in machine tools, and which possess so expert a staff. It is certain that three of the Darracq directors will join the Sunbeam board, but I should say it is extremely unlikely that any alteration will be made in the working arrangements of the old company. The growth of the Darracq concern, whose name dates back to the oldest days of motoring, has been remarkable, and it would be a bold man who would venture the opinion that it is now completed. It will be remembered that the company acquired the Clement-Talbot interests last year, and as it already possessed the controlling interest in the Darracq Motor Engineering Co., and also in the Société Anonyme Darracq, which owns large works in France, it held a strong position as regards the internal combustion engine side of the business. Two years ago it acquired a controlling interest in the well-known hydraulic engineers and air compressor makers, Heenan and Froude, of Worcester, who were largely specialising in the production of refrigerating plant, and since that date it has purchased the business of Jonas Whitehead and Sons, of Leeds, who are amongst the leading manufacturers of springs for almost every purpose. It would appear that the concern should be almost, if not entirely, self-supporting, and quantity production at a low price may be expected, provided the new organisation is not hampered by labour troubles.

Shop Lighting.

Apropos of my recent notes on electrical subjects, a correspondent sends me the following letter, which presents several points likely to be of interest to readers during the coming months. He says:—

A tour of the shops reveals astonishing differences in the use made of artificial light. The movement towards earlier closing may perhaps account for some of the indifference displayed to the subject of window lighting, but it is an open question whether it would not be advantageous to make any further restriction of shopping hours at the beginning rather than at the end of the day. Certainly the display made by shops after dusk is a powerful attraction, and brings business to many trades which, not catering for absolute necessities, must make their appeal to a large section of the public after working hours.

The poor results achieved in so many examples of shop lighting seem due rather to lack of advice than means. The medium generally employed, electricity, lends itself to any scheme, whether correct illumination or frank advertisement is sought,

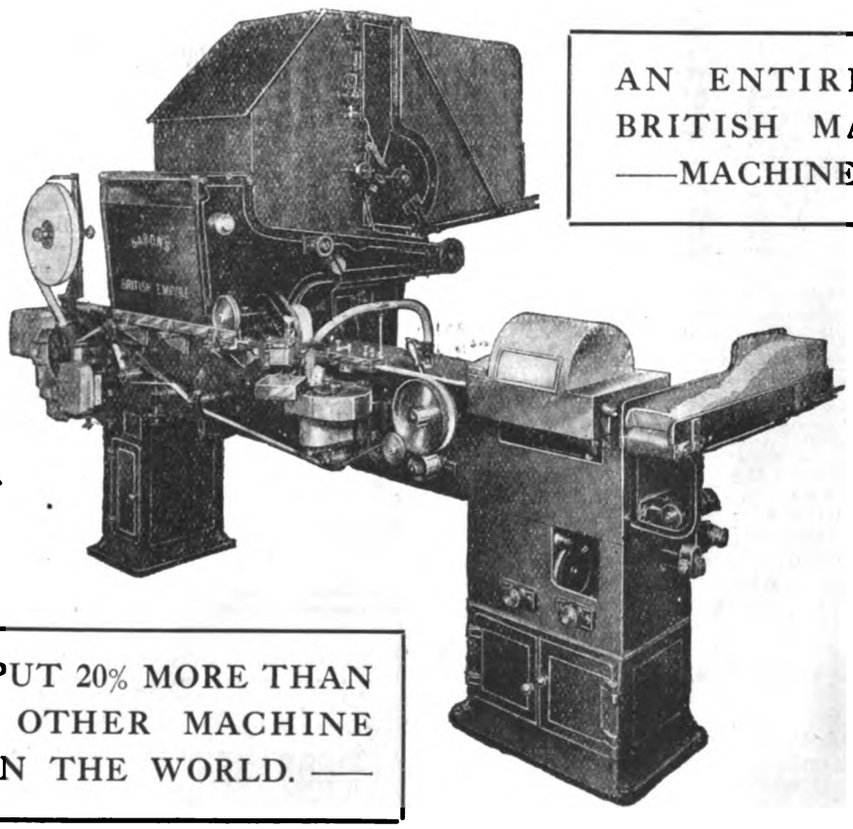
THE BARON
"BRITISH EMPIRE"

THE FASTEST AND MOST UP-TO-DATE

CIGARETTE MACHINE

IN THE WORLD



AN ENTIRELY BRITISH MADE —MACHINE.—

OUTPUT 20% MORE THAN ANY OTHER MACHINE — IN THE WORLD. —

MAKES cigarettes any length, oval or round, long or short, large or small. It will print in two colours or one colour and bronze. The Machine **makes 650 cigarettes per minute.** The power required to drive it is ¾-h.p. The frame is very rigid and there are no small intricate parts. Where practicable ball bearings have been used to ensure easy running and minimum of noise. The machine is fitted with an Automatic Feeding Device specially constructed so as not to break the tobacco. A small Stripping Device is attached to the Machine for tearing up imperfect cigarettes and separating the tobacco from the paper, the tobacco can therefore be used again immediately. Any metallic substances that may find their way into the tobacco are taken out when passing through the feeder. The simplicity of working the Baron "British Empire" Machine is no less wonderful than its great speed. Consequently any man of ordinary intelligence is capable of operating it after a very short trial. To facilitate replacement, all parts of the Machine are interchangeable and numbered. The Machine can be quickly changed from one size of cigarette to another. The cigarettes made on the Baron "British Empire" Machine cannot be equalled owing to the even distribution of the tobacco, the smallness of the lap and perfection of finish. The cost of production is reduced to a minimum. The Machine will make up any kind of tobacco. Until the arrival of the Baron "British Empire," it was impossible to make on a high-speed machine a very narrow and smooth lap on a cigarette. This the Baron "British Empire" does. The Baron "British Empire" represents all the latest improvements in Cigarette Machines; it is the most perfect in construction, and in the quality and quantity of work it produces it cannot be equalled. The Machine is L shape. It is packed in two cases, the gross weight for shipment being 35 cwt.

PRICES ON APPLICATION TO:—

BARON CIGARETTE MACHINERY COMPANY, LTD.,
238-240, City Road, LONDON, ENGLAND.

and in most cases the large stores and multiple shops show an appreciation of its possibilities which suggests that the work has been done by experts, but it is too often obvious that the very facilities offered by the electric lamp to the window dresser have only been taken advantage of to the abuse of the simplest principles of good lighting. Contracting firms who sell and fit electrical apparatus are much to blame for this state of affairs, and indeed sometimes show an inability to light their own windows correctly or seize the opportunity presented of showing their wares as they should be used by their customers.

Inspection of the best shopping thoroughfares of the West End of London reveals an almost entire absence of electrical window displays of any value and none devoted to the interest of the retail shopkeeper. Those who wish to keep their installations up to date are expected to take the initiative and, penetrating into more or less gloomy showrooms, to inquire for appliances of the existence of which they may be unaware. If successful in finding them they will possibly be asked to judge of their effect amongst a heterogeneous collection intended for every class of use to which electric lighting can be put. The same reproach may be made against the electrical traders in regard to fittings intended for the home. They are able to offer a variety of pieces of apparatus of attractive appearance and great usefulness, but few venture beyond a timid window display of unpriced goods, which, even if new and attractive, suggest to the unanitiated a discouraging rarity and expensiveness.

The electrical retail trade has not yet learned the first lessons in salesmanship; most of its shops present either a medley of apparatus mixed with cable and tubing, in which the user takes no interest, or else offers a prospect of brass-plated emptiness suggestive of the tailor who is so high class that his prices may not be known and his goods inspected only by those who will venture within.

The average electrical contractor has for so long been accustomed to send his clients to the manufacturers' or factors' showrooms to choose fittings that he has not awakened to the possibilities of a direct counter trade or realised how much business, both on apparatus and in wiring, awaits the electric shop which shows the passer-by attractive appliances in use, and so creates in his mind a desire which did not exist. The sale of electrical apparatus is so bound up with wiring alterations and extensions that it would be a pity were it to fall entirely into the hands of hardware retailers and house furnishers, who, however, may at any time become alive to its possibilities, and by business-like window displays secure much trade to which the electrical firms are properly entitled.

A little examination of the "single purpose" displays made by leading firms in the photographic, office equipment and certain other trades at once suggests possibilities for those who sell the more portable and attractive electrical appliances, such as kettles, flatirons, small cooking pots and pans. Given the courage to concentrate on a good stock of a few lines and to enlist the aid of the skilled window dresser, always with the proviso that figures of selling price and cost of operation at the local rate for electricity be marked plainly, then the electric shop may take its proper place amongst the features of our trading thoroughfares, and incidentally become a powerful business-getter for every branch of the industry.

OIL OUTPUTS.

Anglo-Egyptian Oilfields.—Production for week ended June 7 was:—Hurgada, 2,856 tons (last week, 2,545 tons); Gemsah, nil (same).

British Burmah Petroleum.—Total production of crude oil by this and the Rangoon Oil Company amounted to 65,652 barrels for May.

A building society has been founded at Ragusa with a capital of 5,000,000 kronen.

The traffic receipts of the Smyrna-Aidin Railway for the week ended May 29 amounted to £8.757.

The directors of the Anglo-Persian Oil Co. announce that the transfer register of Debenture stock will be closed from June 17 to 30 inclusive.

Forthcoming Sailings.

The Johnston Line s.s. Cranmore, for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Tulcea, Galatz and Braila, will close for cargo at Liverpool on July 2.

The Johnston Line s.s. Ponadon, for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Tulcea, Galatz and Braila, will close for cargo at Liverpool on June 18.

The Cunard Line s.s. Coya, to Piræus, Constantinople, Galatz, and Batoum, via Antwerp, will close for cargo in London on June 19.

The Papayanni Line (Ellerman Lines, Limited) s.s. Destro, to Malta and Alexandria, will close for cargo at Liverpool on June 26.

The Papayanni Line (Ellerman Lines, Limited) s.s. Douro, for Algiers, Malta, Syra, Smyrna and Constantinople, will close for cargo on June 26.

The Anchor Line s.s. Massilia, for Bombay, will close for cargo at Liverpool on June 22.

The Bibby Line s.s. Leicestershire, for Port Said, Colombo, and Rangoon, will close for cargo at Liverpool on June 23.

The Harrison Line s.s. Astronomer, for Calcutta, will close for cargo at Liverpool on July 3.

The Henderson Line s.s. Henzada, for Port Said and Rangoon, will close for cargo at Glasgow on June 21 and at Birkenhead on June 30.

The Clan Line s.s. Clan MacBride, for Colombo, Madras and Calcutta, will close for cargo at Glasgow on June 24 and at Birkenhead on July 1.

The R.M.S.P. Co.'s s.s. Staffa, for Gibraltar and Morocco, will leave London on June 30.

The Power Line s.s. Petworth, for Rabat, Larache, Tangier, Casablanca, Mazagan, Saffi and Mogador, will leave London on June 25.

New Ellerman and Bucknall Line Service.

The Ellerman and Bucknall Steamship Co., Ltd., announce that they are inaugurating a regular monthly service from Montreal to Port Said, Port Sudan, Aden, Bombay, Colombo, Singapore and Java, with the title of the Ellerman and Bucknall Canadian, Indian and Java service. The arrangements are so far advanced that the company's steamer Katuna is to load at Montreal in the second half of next month, the agents at that port being the New Zealand Shipping Co., who, jointly with the Shaw, Savill and Albion Co., now maintain a service to Australia.

Negotiations for the new Eastern service have been proceeding for some time, and although a similar service, under the auspices of the Canadian Government Merchant Marine, Ltd., has recently been announced, no date has yet been fixed for its commencement. The s.s. Katuna will therefore be the first to load on the new route.

COMMERCIAL CARS, LIMITED.

In order to cope with the large volume of business arising from the unprecedented demand for "Commer Cars," Messrs. Commercial Cars, Ltd., have opened offices in London, and all business connected with home and export sales hitherto dealt with at Luton will now be transacted at the new address. To ensure immediate attention any communications relating to sales matters should be addressed to Commercial Cars, Limited, Ulster Chambers, 168, Regent Street, London, W.1.

COMPANY MEETING.

NEW EGYPTIAN COMPANY.

The nineteenth ordinary general meeting of the New Egyptian Co., Limited, was held on June 14 at Winchester House, Old Broad Street, E.C., Mr. Arthur A. Baumann, the chairman, presiding.

The London manager and secretary (Mr. Thomas Day, F.C.I.S.) having read the notice convening the meeting and the auditors' report.

The Chairman said: Gentlemen,—I will now take the balance-sheet, and the total assets, taken at or under cost, amount to £917,747. Our liabilities amount to £638,246, showing an excess of assets over liabilities of £279,500, which is equal to 12s. 6d. per share. This result is taking the lands at cost—namely, £49 15s. 7d. per feddan. It is inconceivable, to my mind, that agricultural lands in the delta of Egypt can ever fall below £100 per feddan, but if you value them at £150 per feddan it is very much less than we have been selling at during the past year. If you value them at £150 per feddan the value of the shares will work out at £2 13s. 6d. Recently, notwithstanding the sudden fall in the price of cotton, the company sold 240 feddans at over £245 per feddan, and as much as £256 per feddan has been secured for a small area. As stated in the report, 714 feddans were sold at an average of over £167 per feddan, but the deeds not having been signed by December 31 they have been carried forward. From January 1 to March 31—that is, after the close of the financial year—deeds have been signed for 762 feddans, sold for £157,435, or £206 12s. per feddan. In addition there is a large number of sales accepted, but not passed. The gross profits, made up of revenue from the company's lands, profit on sales of land, sundry profits and interest, amount to £143,523, compared with £79,456 the year before. The total expenditure, including debenture interest, amounts to £36,777, leaving a net profit for the year of £106,745. Adding the balance of profit brought forward, £46,200, you get a final balance at the credit of profit and loss account amounting to £152,946. An interim dividend of 5 per cent. was paid on December 13 last, absorbing £16,739, leaving us a balance to deal with to-day of £136,207, and we now propose that a final dividend of 20 per cent. be paid on the present issue of 500,000 shares, less income-tax, which will absorb, after providing for the tax, £75,000, leaving a balance, which we propose to carry forward, of £61,207.

During the last two years, particularly during the last year, there has been a steady buying of the shares of the New Egyptian Company by residents in Egypt. It being the fact that a large amount of share capital has been bought by the Egyptians, it is only natural, and, indeed, it was inevitable, that the Egyptian shareholders should expect and request that the control of the company should be transferred from London to Egypt. I have received, not wholly unexpectedly, a letter from shareholders in Egypt holding 50,000 shares in the company, or 10 per cent. of the capital, which I will now read to you:—

"We, the undersigned, who are entitled to the number of shares in the New Egyptian Company, Ltd., which are set opposite to our respective names in the schedule hereto, are desirous that the constitution of the New Egyptian Company, Ltd., shall be modified in such manner that the business of the company shall in future be carried on and managed by a board of directors in Egypt, and that such board of directors in Egypt shall be affected only by resolutions of general meetings held in Egypt, and shall have full powers vested in them so as to enable them to exercise all the powers of the company requisite for carrying on the business of the company in Egypt. We therefore beg to request you to give this matter your consideration and to convene extraordinary general meetings of the shareholders of the New Egyptian Company, Ltd., for the purpose of considering and, if thought fit, passing such special or other resolutions as may be necessary in order to effect the result above specified. The course we have proposed would necessitate the dissolution or reconstitution of the board of directors of the company in London, as the only functions to be performed there would be of an administrative character in complying with the requirements of the English Companies Acts, including share register and transfer work, and in payment of dividends remitted from Egypt for payment to shareholders resident in England. In these circumstances we consider that the present directors of the company should be reasonably compensated for their loss of office, and in convening the extraordinary general meetings of the company above-mentioned we should desire that resolutions should be submitted which would enable the shareholders to authorise such compensation to be paid."

We have consulted counsel with regard to altering the articles of association, and we propose to summon an extraordinary general meeting towards the end of July for the purpose of submitting to the shareholders, if they so decide, resolutions for carrying out those alterations.

He then moved the adoption of the report and accounts, and that a dividend of 20 per cent. or 3s. per share less income tax be paid. The resolution was seconded by Sir Ernest Spencer, and was carried unanimously. The retiring directors were re-elected, the auditors re-appointed, and after a vote of thanks to the chairman and staff the meeting terminated.

The directors of the Bengal and North-Western Railway, after placing, as usual, £35,000 to sinking fund, have declared an interim dividend for the half-year to March 31 last of 4 per cent., with a bonus of 1 per cent., or 5 per cent. in all, on the ordinary stock, both less tax at 4s. 9d. in the £, payable July 26.

NEAR EAST MARKETS.

LONDON PRODUCE REPORT.

Dried Fruit.

Trade in currants has further improved, and during the week considerable business has been done. The chief demand is for lower grade fruit, the price of the better qualities having a restrictive effect.

Sultanas are in good request at high rates, and figs, also, are in fair demand.

Sugar.

A quiet tone has characterised the market in free sugar. West Indian crystallised has been done at from 150s. to 155s. American granulated is quoted at 160s., and white Java at a similar figure. Home refined is in good request at the official prices.

Coffee.

Supplies are more than adequate to meet the present demand, and prices are lower on balance. Costa Rica has been done round about 158s., while Indian has come to business between 140s. and 168s. Imports during May amounted to 130,033 cwt. as against 175,560 cwt. in the corresponding month last year. The futures market has been quiet, and quotations have been lower.

Oilseeds.

The market has been inactive and dull. Indian linseed has been on offer at 39s. 9d. Rapeseed has been quiet, with Toria at 38s. Ferozepore at 38s., and Brown Cawnpore at 35s. Indian cotton-seed has come to business at 12s. 6d.

Oilcakes, etc.

There is not much demand for oilcakes at present, and prices are lower on balance. Linseed cake is quoted at about 20s. 6d., and palm kernel meal at 8s.

Oils have been quiet. Linseed oil has come to business at 82s. spot, 79s. 3d. June-August, and 77s. 9d. September-December. Egyptian deodorised cotton oil is 100s., and the crude quality 72s. Turpentine is firm at 170s. spot, and 169s. June-August.

LANCASHIRE COTTON

(From Our Own Correspondent.)

Manchester, Monday.

There have been no indications of increased activity in the market during the past week. Both spinners and manufacturers have had a very poor tale to tell. Ground continues to be lost in all sections, and, owing to lack of support, producers are more prepared to meet buyers in price when definite business is put before them. Rates in Egyptian cotton continue to decline, and if crop reports continue healthy this tendency is bound to go on. Lancashire spinners are still disposed to purchase very sparingly, although rather more inquiry has been mentioned for the United States. In Egyptian yarns quotations have been very irregular when tested. It is said, however, that in certain counts and qualities more trade may come round before very long. Of course, spinners are prepared to accept much less money than two or three months ago. According to letters and telegrams from Egypt, stocks of cloth are fairly substantial, and dealers are not in want of fresh supplies. Buying, therefore, has been restricted to sorting-up lots. Very little trade has been about for the Levant, and the political situation in the Near East still causes anxiety. The amount of practicable demand in piece goods for India has not improved. Bids in grey shirtings for Calcutta have been over 30 per cent. too low. Makers of dhooties are pressing for orders. Shippers to China continue to look on. Miscellaneous fabrics have attracted some attention for South America. More looms are being stopped in Blackburn and Burnley for want of orders. American yarns have continued slow, but producers of favourite marks are keeping their end up fairly well. There has been no activity in shipping counts.

It is reported that natural gas in considerable volume has been discovered near Boniavitza, in Yugoslavia.

COMPANY NOTES AND REPORTS.

Bombay, Baroda Railway.

The report of the Bombay Baroda and Central India Railway for the year ended March 31 states that the gross earnings totalled Rs9,58,51,374 against Rs9,58,01,450 previous year, and working expenses Rs5,33,09,234, leaving net earnings Rs4,25,42,140, compared with Rs5,33,48,843 previous year. The share of surplus earnings accruing to the company in addition to the guaranteed interest amounts, after allowing for Indian taxation and also the amount due in respect of advances for capital expenditure made from the provident fund, to approximately Rs11,15,000. The balance now available is Rs9,75,000, which will produce about £101,000, subject to English income-tax and excess profits duty. The directors recommend a final dividend of 2 per cent., together with a bonus of 1 per cent., making, including the guaranteed interest for the half-year of 1½ per cent., 7 per cent. on the capital stock for the year, against 6½ per cent. for each of the two previous years. The balance, about £5,000, remaining after payment of income tax will be carried forward.

Mortgage Co. of Egypt.

The report of the Mortgage Company of Egypt, Ltd., for the year ended March 31 states that after providing for interest on the 4½ per cent. first charge Debentures and on temporary loans, and applying a sum of £1,854 12s. 6d. in writing down the value of the freehold premises of the company in Cairo, the accounts show a profit for the year of £117,488 16s. 1d. Deducting the amount of the dividend paid and accrued on the 5 per cent. Preferred shares to March 31, 1920, viz., £50,000, there remains a balance of £67,488 16s. 1d.; adding the amount brought forward from last year's account £35,450 6s. 2d., there is available for distribution a total sum of £102,939 2s. 3d., which the directors propose to allocate as follows: (1) To payment of a dividend of 12 per cent., being 3s. per share, on the amount paid up on the ordinary shares £30,000, (2) to general reserve £20,000, £50,000; leaving a balance to be carried forward to the next account of £52,939 2s. 3d. Since the date of the directors' last report, the very high price of cotton and other produce has brought increased prosperity to Egyptian agriculture. This is reflected in the balance sheet by a further reduction in the instalments in arrear, from £171,163 to £111,158, and in the amount invested in first mortgages, from £2,756,380 to £2,589,083. The decline in mortgage investments is common to all companies of a similar nature in Egypt. The directors are glad to report that all the properties acquired by foreclosure have, with one very small exception, been disposed of, the aggregate sale price being substantially in excess of the total amount of the company's claims against those properties. It will be noticed in the balance sheet that during the period under review the company has purchased and cancelled £594,700 of its 4½ per cent. first mortgage Debentures; up to June 11, 1920, a further £36,380 Debentures were purchased and cancelled. H.E. V. Harari Pacha, C.M.G., Brig.-Gen. the Hon. Everard Baring, C.V.O., and Mr. Edward W. P. Foster, C.M.G., directors of the company, retire by rotation, and, being eligible, offer themselves for re-election. Messrs. W. B. Peat and Co., the auditors, retire, and offer themselves for re-appointment. Meeting, Cannon Street Hotel, London, E.C.4, June 24, 2.30 p.m.

Bengal's foreign trade returns for the past official year have reached the unprecedented total of 231 crores of rupees £231,000,000, at the rate of 2s. to the rupee).

It is announced that a civic union has been formed at Agram in order to carry on work in the event of any strike. Similar unions are being instituted in other Croatian towns.

A company is being formed in Prague with the title "The Czecho-Slovak Hellenic Joint Stock Company for Trade and Industry," for the promotion of business relations between Czecho-Slovakia and Greece.

The receipts of the Egyptian Markets, Ltd., for the week ended June 2 were:—Cattle markets £866, general markets £713, total £1,579; total for year £41,658. For the corresponding period of 1919 there were no receipts owing to local disturbances.

ON CHANGE

(From Our Own Correspondent.)

Throgmorton Street, Monday.

Apart from a certain amount of activity in Government stocks there has been exceedingly little doing this week, and, generally speaking, the tendency has been dull, and in many instances there has been a sagging in prices. Among Government stocks both Egyptian Unifieds and the 3½ per cent. Prefs. have been in persistent demand, and close unchanged after having been dealt in to a certain extent at a somewhat higher level. City of Alexandria Bonds have dropped 2½ points to 60, and Turkish Unifieds are a ½ point down at 34; but Greek Bonds show a further advance in the old loans. The 1881, 1884, and 1890 issues have all improved 1 point to 54 and 56 respectively, the Rente Loan is ½ a point up at 39; and a similar fraction has been gained by the 1902 issue.

In Bank shares National Bank of Egypt and Agricultural Bank have been dealt in to a fair extent; but, whilst the latter have kept firm, the shares of the National Banks close ½ a point down at 19⅜. Agricultural Bank Prefs. have dropped 1-16 to 5 5-16, Bank of Abyssinias are ⅛ lower at 1½, and Ionian Banks have dropped ½ a point to 5. On the other hand, Bank of Athens shares have improved 1-16 to 3¼.

In Railways, Delta Lights have dropped ⅛ to 5⅜.

Amongst Land shares the tendency has been downwards. Aboukirs have lost 6d. at 35s., Béhéras are down £1 at 16 nominal, and the Prefs are ¼ easier at 3½. Consolidated Lands are exceptionally 3d. higher at 3s. Delta Lands have lost 6d. at 14s. 6d. New Egyptians have dropped 1s. 6d. to 34s. 6d., Sidi Salems 1-16 to 2⅛, Sudan Plantations ⅛ to 4¼, and Union Foncières ⅛, also, to 4¾. Gharbieh Lands are a similar fraction down to 3¼.

Amongst miscellaneous descriptions Salt and Sodas have dropped ⅛ to 2⅜, and Morums Stores are 6d. lower at 18s.

In Oil shares Anglo-Egyptians B have shed 1-32 at 3, Roumanians are exceptionally 3d. firmer at 17s. 9d., and Traians are 1s. lower at 7s.

FOREIGN EXCHANGES.

* Approximate.

This week's Indian cable states that:—Rain has fallen fairly generally in Orissa, Hyderabad, Central Provinces, East Rajputana and Sind. Local elsewhere. Monsoon not yet established. The wheat forecast is:—29,864,000 acres, yield 10,095,000 tons, as against 23,566,000 acres, and 7,407,000 tons for 1919. Rape and mustard forecast is:—6,016,000 acres, yield 1,174,000 tons; as against 4,833,000 acres and 758,000 tons. Linseed forecast is:—3,101,000 acres, yield 433,000 tons, as against 1,972,000 acres, and 229,000 tons. General crop conditions good, but more rain required in Bengal. Preparation of land and early sowings started in Assam, cotton and jute; in Punjab cotton. Bombay cotton market irregular. Fully good Broach July-August Rs. 422. Piece-goods market steady with poor demand. Calcutta jute market very quiet with prices unchanged. Heavy goods very quiet with no large business.

NOTES OF THE WEEK.

Last week a deputation from the League to Abolish War was received by Mr. Lloyd George. The situation would have been piquant had not the circumstances that gave rise to it been so serious; for, as far as it is possible to understand the subject from the published reports, what the deputation urged was that the League of Nations should be placed in a position to make war effectively, as a step presumably towards the abolishment of war. The proposal is not so Gilbertian as it appears, but judging from the reception accorded to the deputation by the Prime Minister, Mr. Balfour, and Lord Curzon, it seems improbable that it will find favour with politicians or statesmen just yet. What the deputation asked for, in effect, was an International Police Force. Mr. Lloyd George, in his reply, admitted that such a force was a possible ideal, but was sure it was not now a practicable one. The Powers that have available forces are so absorbed in other duties (he said) that they cannot support the decisions of the League, while the Power that has the means and is free from entanglement, the Power that seemed at one time to have all the enthusiasm, has withdrawn. The Prime Minister concluded with the declaration that before we could have a standing International Army, he felt that there must first be international contributions levied upon States for specific purposes.

Mr. G. N. Barnes, M.P., and Bishop Gore, who were the chief speakers on behalf of the deputation, dwelt upon the humiliation and pathos of the position of the League of Nations in relation to the offer of the Armenian Mandate. The Prime Minister urged once more that nothing was left undone that could have been done; the United States being "out," there were only three Powers left to call upon—France, Great Britain, and Italy. But France "has not got the force available to hold her own in Syria and in Cilicia"; Great Britain is "full up. We have got Constantinople, Mesopotamia, Palestine . . . . and to a certain extent we have difficulties in Persia"; and "Italy has her difficulties, too, which are as much as she can manage." A little later, replying to Mr. Barnes, who raised the question of the Dardanelles, Mr. Lloyd George remarked that at the present moment the obligation of keeping "that place" free is practically upon us, France and Italy, who supply a certain number of troops, not having kept their quota. In view of the increasing uneasiness in this country regarding the situation in the Near and Middle East and the extent of our commitments in those regions, it is rather surprising that these remarks of the Prime Minister have not attracted wider attention.

To take the second point first, it would be interesting to be told *why* "France and Italy . . . have not kept their quota." Is it entirely because of their "difficulties" elsewhere—in Cilicia and Albania, it is to be supposed—or is it because they do not entirely approve of the Eastern settlement—or proposed settlement? If they have not fulfilled their promises, or carried out their share of a bargain, why were we not told at once, and why is not Parliament given an opportunity to express an opinion on the matter? It would be useless to tell the average Briton to-day that Parliament could make a worse muddle of the business than the Big Four or Three or whoever is responsible for allowing things to drift to the present state: he simply would not believe it. We do not think he would blame Mr. Lloyd George for speaking plainly on the subject. On the contrary, what he would and does resent is hearing his own country always blamed for the shortcomings of others; and he would like to know why Great Britain should be, apparently, expected to do all the unpleasant work in the Near East.

For the rest, it is becoming every day more clear that our own difficulties in Mesopotamia, Palestine, and Persia—to say nothing of Constantinople—are likely to prove very serious ones, and to require more forethought and care in handling than they appear to have received up to the present. If we have to shoulder responsibilities in regard to the Dardanelles which should by rights be shared by others, our ability to do justice to Mesopotamia is obviously reduced, while Persia's chances of help in her troubles are also further jeopardised. But our responsibility for Palestine and Mesopotamia is certainly greater than our responsibility for Constantinople, and it is possible to argue that the same is the case with regard to Persia. It is right that Great Britain should do all she can to help her Allies, but it is no less right that they should help her; and if their united efforts are not equal to any particular task, it would be wise for them not to attempt it, and certainly not to announce their intention of performing it. If, however, they find themselves in a false position, the only wise thing for them to do is to get out of it without further delay, rather than follow the Micawberish policy of waiting for something to turn up to get them out of their trouble.

On the same day that he assisted Mr. Lloyd George in receiving the deputation from the League to Abolish War, Lord Curzon presided over a meeting of the

Digitized by Google

League of Nations at which the decision of the Council of the League upon the appeal addressed to it by Prince Firouz was announced. The net result appears to be that the League had tendered its sympathy to the Persian Government in its difficult position, and had expressed its approval of the course pursued by Persia in entering upon a discussion with the Soviet authorities—thus anticipating, the Council remarks, the action which it would have recommended had it been called upon to advise. The Council felt that it was only right and proper to await the further progress of the communications thus opened, and it requested the Persian representatives to keep it informed of developments. It must be admitted that it is very difficult to see what other course the League could have followed, and it is, of course, permissible to hope that the Soviet authorities may give some weight to the opinions expressed and the views advanced. We suspect, nevertheless, that the Persians must have felt a good deal of sympathy with the L.A.W. deputation's point of view.

It is clear in view of the foregoing that to expect the League of Nations to intervene effectively in the adjustments and settlements that must be attempted in the Near East forthwith would be to expect the impossible. During the first two months of its existence the League has done some good work and, as Mr. Balfour said in the House of Commons last week, many people will think it has done more than might reasonably have been expected of it. But, things being as they are, it seems certain that the Persian problem, the Armenian problem, and all the other problems of the Near and Middle East, must be solved without the aid of either America or the League of Nations; though President Wilson has accepted the task of settling the Armenian frontiers. This means, in practice, that the work will have to be done by France, Italy, and Great Britain. But Italy not only has her hands full but, we are told, is in serious financial difficulties; and it looks, therefore, as if France and Britain must in the long run be left to bear the brunt of the burden between them. If that be so it surely behoves them to take stock of the position afresh and, resolutely putting aside false pride and the blandishments of all advisees who have axes of their own to grind, to readjust their policy in accordance with the facts of to-day.

The most urgent question is that of the enforcement of the terms of the Turkish Peace Treaty, if they are to be enforced, or their revision, if they are to be revised. It is almost incredible that any uncertainty regarding these two points can exist at this late hour; but such is actually the case: the former alternative has been under discussion at Hythe and Boulogne within the past few days, and the latter has been raised, first in Paris last week, and latterly in London this week. Nor have the official statements on the subject been reassuring. In regard to measures for enforcing the Treaty, we are told that M. Venizelos has offered the armed forces of Greece —upon conditions, if any, unknown at the time of writing—that he obtained the approval of M. Millerand and Mr. Lloyd George for his plan, and that Marshal Foch and Field-Marshal Sir Henry Wilson withheld their blessing from it. If the latter statement is correct, we can only deplore the rashness of the politicians. Both in France and in this country it is earnestly hoped that no action to enforce the terms will become necessary.

Whatever may be decided as to enforcing the Peace terms offered, it is certain that something must be done, and quickly, to show Mustapha Kemal and his supporters that they cannot with impunity attack Allied troops. A French battalion on the march has been surrounded by the Turks some twelve miles from Adana and forced to surrender, owing to lack of ammunition; and at Ismid a British outpost of Punjabis was attacked on June 15, and, being compelled to withdraw, was treacherously fired on in spite of the Nationalist commander's promise not to interfere with the retirement. Over thirty men were wounded and the intelligence officer was taken prisoner. Reinforcements were at once dispatched, and our warships were able to give the Nationalists something to think of; but the fact that such an attack can have been made so near Constantinople is in itself significant of the growing confidence of the Turkish Nationalists—who now appear to number nearly all the Turks outside Constantinople. It is understood that the Boulogne Conference discussed the situation thus created, and that the Allied Prime Ministers believe that the action decided upon will prove adequate to the occasion.

In referring last week to Sir Herbert Samuel's appointment as High Commissioner for Palestine we referred to the difficulties that will confront him on his arrival in the country. One of these was touched on by the Bishop of Jerusalem in a speech which he delivered at the Church House last week, when he told his audience that whereas after the taking of Jerusalem the people were so grateful to us that we could have done anything with them, they are to-day asking why we had not left them to the Turks rather than hand them over to the Jews. Bishop McInnes has won for himself in the Near East a reputation for breadth of view and charity, and as his good faith cannot be impugned his statements cannot be disposed of by asserting that they are due to fanaticism or any political motive; nor is it possible to argue that his view is based on inadequate opportunities of studying the situation for himself. Moreover, what he says is supported by the testimony of many travellers returned from the Holy Land, who agree that while the British Jews there conduct themselves as a rule both wisely and decorously, Jews from other countries too often show an overbearing and intolerant spirit.

This may be very natural; for persecution is apt to beget a similar spirit in the persecuted; but it cannot and will not be tolerated in Palestine under British administration; and the sooner this is made clear the better it will be for everybody concerned. Sir Herbert Samuel, we are sure, will lose no time in grappling with the evil, and Jews throughout the world can do much to render his task easier for him, if they will make it clear that they disapprove such things as the Bishop in Jerusalem denounced. In any case, it must be proved to the Mohammedans and Christians of the country that their rights and liberties are not to be curtailed in any way so long as Great Britain has any responsibility for their well-being, and that even if any section of the Jewish immigrants should wish to ignore those rights they will not be allowed to do so. Lord Allenby's name, we are informed, has been very freely made use of by the more truculent of the Jews, who claim that they have his special favour and support. That should be stopped at once.

There are storm clouds over Syria as well as over Anatolia, and though they are less black, they are undoubtedly highly charged with electricity. The Emir Faisal, it is announced, will not come to Europe, and it is reported that anti-French feeling is now stronger than it has been at any time since the Armistice, chiefly as a result of the change in French policy towards Turkey, which is regarded as favouring the Turk at the expense of the Arab. As a matter of fact the long period that has elapsed since the signing of the Armistice has given every chance for the growth of national feeling in Syria and Arabia as well as in Turkey, and the state of uncertainty regarding the future of all this region has still further helped this growth. Other causes have contributed to the same end, and whereas almost any settlement arranged by the Allies soon after the Armistice would have been accepted without any serious opposition, serious opposition is now likely to be offered to almost any settlement suggested. Probably the best course to follow in regard to the Arab problems that confront us and the French would be for us both to appoint one or two representatives who know the Arabs and are known to them to work out with representatives of all the Arab interests an entirely new scheme, which the politicians of Paris and London should agree in advance to accept.

THE WEEK AT HOME.

Government and Economy.

The critics of the Government are to unite this week in a series of debates, or attacks, on the extravagance of Whitehall. The Opposition have a good case, and they are rather pleased at having discovered the obvious a year after the *Daily Mail*, but they may easily spoil it by exaggeration. Mr. Lloyd George is not, and never has been, an economist of the old school; Mr. Churchill simply does not know the meaning of the word, and the minor lights of the Cabinet are all ready to imitate the Prime Minister and the Secretary for War and Air, or, as somebody once called him, the Secretary for Earth and Heaven.

But it must be remembered that the bulk of the expenditure of which complaint is made is an indirect legacy of the war, and could only have been avoided at the cost of some risk to the Government's general policy, during the railway strike and in Ireland and elsewhere. This, with the exception of Mesopotamia, is not really in question, and those who do not attack the policy can, therefore, hardly attack the cost of the policy. "Mespot.," for some reason which escapes me, comes into a different category. Once a blessed word, it now seems to irritate the critics to madness, and the mere suggestion that that country may be worth developing excites instant wrath.

With all respect to the critics, they are on a wrong tack. The real mistake of the Government is not the development of a Middle Eastern policy, but its failure to cut down the expenditure at home on "the new Civil Service." Nobody would be a penny the worse if the Labour Exchanges and several other departments were abolished altogether, and the Exchequer would be a good many millions better off. It is here that Mr. Austen Chamberlain has failed, and his failure is creating a difficult situation. If the Opposition had any real weight, they would hammer away at this until they scored a victory that would raise them considerably in the eyes of the public; but they are an invertebrate crowd:—

> "Strange to tell, among that earthen lot
> Some could articulate, while others not."

Never was there so tame and feeble an Opposition, and its futility is the real cause of much of the Government's slackness.

An Autumn Session.

What the debates lack in quality, however, they will gain in quantity. It is announced that the House will rise as near the end of July as circumstances permit, and reassemble some time in October for an autumnal session. The Government have done their best to avoid it, but these bad habits, once formed, can hardly be shaken off. The continuous sittings of Parliament are steadily making it more difficult for the old type of country gentleman and independent business man to give effective service to the Commons, and the professional politicians are taking their places.

In many ways the change is unfortunate, for the professional politician looks on politics as a game to which a sufficient number of prizes must be attached to make it worth playing; and since he must keep his seat or drop out of the running, he is amenable to any sectional pressure, and his course is apt to become a strange and wonderful series of zig-zags.

Over-Taxation.

Mr. McKenna, who has been little in the public eye since he left the Exchequer for the management of a bank, has given it as his opinion that the country is overtaxed. His speech, which was delivered at a meeting of the National Union of Manufacturers, was evidently carefully prepared, and it has had a distinct influence on public opinion. When taxation is too heavy it tends to lessen enterprise because it cripples the finance on which industry depends. It is always difficult for the layman to decide when the line between under and over-taxation is passed, since the ordinary man naturally regards all taxation as excessive, and a form of public robbery by the State; but a banker's opinion is usually of value.

Incidentally, Mr. McKenna wants the Excess Profits Duty abolished. As this was his own war baby, this appears at first sight to be a form of filicide, but it is the fact that when he introduced it he expressly declared it to be a temporary expedient. The trouble with the excess profits is not so much the principle as the amount. If it were reduced to 20 or 25 per cent. probably few business men would object to it seriously, but 60 per cent. is declared to be intolerable. The fact that Mr. Austen Chamberlain, while officially unyielding, is making small concessions here and there as to the incidence of the duty is, however, regarded as of hopeful augury. Little real reduction is anticipated this year, but it is very doubtful if the 1921 Budget will maintain the present high rate. On the other hand, any reduction in the E.P.D. is likely to mean an increase of the present small tax on the profits of companies; and while the Government is thus between the devil and the deep sea, the advocates of the capital tax continue to preach their favoured solution of all our economic ills.

The Louth Election.

The Government was heavily defeated in the Louth by-election. The result came as a great surprise, for while the Independent Liberals had a good local man, the Coalition candidate was Mr. C. Turnour, an authority on agriculture, and to all appearance an ideal member for a purely agricultural division. But the electors thought otherwise. All sorts of reasons have been given for the defeat, including the inevitable one of administrative extravagance; but the most likely conjecture is that the agricultural interest declines Lord Lee's policy at the Board of Agriculture.

Lord Lee, who came into prominence by his generous gift of Chequers to the nation, is a very forcible person, and he not only wants to get things done, but intends to get them done. He realises that it is dangerous for England, with a steadily increasing population, to depend for so much of her food on imported corn, and he is forcing Legislation through Parliament to ensure larger crops on our own acres. The Radicals, who have never liked the farmer, have said as much against it on Free Trade principles as they dared, but we all remember the war bread of 1918 and the Cuban sugar profiteers of 1920 too well to object seriously to anybody who really wants to make the country more productive.

But the farmers hate the idea, for the simple reason that the farmer is an individualist, and he hates any form of State control. Also he argues that arable costs more to farm in the shape of labour than pasture, and that labour costs more now than before. With low wages, he says, he would not mind arable farming, but with high wages he cannot take the risk. All of which is no doubt true except the last; for with low wages he still objected to arable, and with high wages he gets high prices.

Probably the real truth of the matter is that there are not really three cuts from the agricultural joint—for landowner, farmer and labourer—and that the whole land system wants reforming. Until we look on a farm as a food factory, and run it on business lines, we shall not get things on a satisfactory footing. I suppose the average farmer and landowner would say this is Bolshevism, but as a matter of fact I heard the argument from a duke before Bolshevism was born.

Two New Judges.

The pressure of legal work, more particularly in the Divorce Court, has become so great that two new judges have been appointed. There has been some criticism on the score of expense, but this argument is not conclusive, for the delay in trying cases amounts in some cases almost to a denial of justice. But in order to reduce the pressure on the taxpayer court fees are to be raised, despite the old dictum that expensive law is no law at all. But although Lord Birkenhead is understood to be contemplating the reform of our legal system, and has confessed that he would like to abolish the present wasteful judicial circuits, he has not yet been able to carry his reforms into practice. Even the Long Vacation remains—the Long Vacation.

Digitized by Google

Promotions and Rumours.

Gossip has been busy with rumours of new promotions. Sir Gordon Hewart could have had one of the new judgeships if he wanted, but he did not want. Sir Ernest Pollock, who was mentioned for the Speakership, was also favoured as a judge. Sir E. Marshall Hall, a popular member of the House of Commons and the Bar, is also discussed; his promotion would be deplored by every murderer, for he has established a sort of prescriptive right to defend the accused in murder trials, and whether murderers would appreciate him so much on the Bench as at the Bar is very doubtful. Sir Leslie Scott's name has been urged by the Bar itself, and his promotion would be extremely popular, not only because he would make a good judge, but because he has an enormous practice, and the briefs would be divided up among the less fortunate. As the Bar is in such a condition of genteel destitution that it even looks upon Fleet Street as prosperous, the removal of a great advocate would be a matter of professional thanksgiving. But the most extraordinary rumour of the week is that Lord Birkenhead desires to become Viceroy of India! We shall be told next that Lord Curzon is to be the next Pope.

Ascot.

There never were such frocks—what there was of them—as at Ascot last week: also there never were such thunderstorms. The meeting was a triumphant success, and although the puritans were shocked at the jollity and the economists at the extravagance, most people enjoyed themselves. But it was very curious to see the *nouveaux riches* there; they felt it was the right thing to go, and they were very visible and audible. Their manners were painfully correct and proper, and I fancy some of them had studied the Books of Etiquette: they knew exactly what to do, but they were not quite so sure of the right time to do it. But they learn so fast that by Goodwood they will be quite proficient, and before they cross over to Cowes they will almost have grown an aristocratic ancestry.

Keble Jubilee.

Keble College, Oxford, celebrates its Jubilee this week. The youngest of the Oxford colleges, it seems to have specialised in the production of bishops, twenty of its students having reached the bench in fifty years. The present Bishops of London, Southwark, Stepney, Kensington, Winchester and the Primus of Scotland are all Keble men; the Bishop of Winchester was its first Warden.

Golf Streets.

The borough council of Acton, West London, is adopting golf terms for the names of its new streets, and has already put up the names of Long Drive and Brassey Avenue. This does not argue much originality, and one hopes the fashion will not spread to other sports or localities. Foozle Terrace is not very attractive, and if our local authorities discover tennis, Love—Fifteen Road would be too suggestive of super-bigamy for most ordinary householders.

But there is a story that once when a town council, which shall be nameless, was in a difficulty over the names of its new garden suburb, somebody of a literary turn suggested that they should call the roads after great writers. The chairman was commissioned to find out the names of the greatest British authors, and after visiting an adjacent library, he returned with the names of Liddell and Scott, Crockford and Kelly, which were faithfully adopted by the municipal fathers.

The Week's Books.

The place of honour must be given this week to Mr. John Masefield's "Enslaved, and Other Poems" (Heinemann), and a single quotation will give some idea of its beauty:—

"So, one by one, Time took them to his keeping,
Those broken lanterns that had held his fire;
Dust went to dust, and flesh had time for sleeping,
And soul the stag escaped the hound desire."

Those who recognise in these lines the authentic note of true spiritual vision will add the new Masefield to "The Everlasting Mercy" and other prized volumes: those who can see nothing here had better go and read Mrs. Hemans, for that is about their true level. Mr. Masefield had already "made his name," as the saying goes; but with this volume I think he passes definitely from the rank of mere achievement into the line of great English poets.

Mention should also be made of "The Elfin Artist" (Blackwood), by Alfred Noyes. It would be absurd, and unjust to Mr. Noyes, to compare him with Mr. Masefield; his verses are pleasant, occasionally a little strident, and they may be read with enjoyment. Perhaps it is my own fault that I cannot see greatness in them.

Mr. H. G. Wells, who began his career as a serious writer with "Mankind in the Making," has again surveyed the earth, and in his "Outline of History" (Newnes) has written its record from the time it left the sun till our own day. It is an astonishing achievement, and if he is more appreciative of the greatness of the mastodon than of the littleness of Ancient Greece, it is idle to complain. Personally, I prefer the "History of Mr. Polly" to Mr. Wells on the Roman Empire, but even while dissenting from some of his judgments, I admire the force and vigour of the earlier part of this work and respect the originality of its latter pages. The illustrations are magnificent, but they make the book a little heavy.

I was recommended to read "The Group Mind" (Cambridge University Press), by Mr. W. McDougall, who is Reader in Mental Philosophy at Oxford University. But I was frankly disappointed, both with the author's grasp of the subject of racial psychology, and his singularly inconclusive survey of facts.

The Bampton Lectures are generally good reading, and Canon Headlam's "Doctrine of the Church and Christian Reunion" (John Murray), which formed the subject of these lectures last year, give a scholarly and impartial survey of the whole subject. Dr. Headlam recognises that reunion between the Anglican and Roman Churches is impossible, but I gather that he is rather more hopeful of better relations between Anglicans and Nonconformists.

Despite the shortage of paper, new novels pour from the press—among them a new melodramatic masterpiece, "The Top of the World," by Miss Ethel Dell, who sells by the hundred thousand to a public which loves dark and brutal villains and willowy and winsome heroines. It is the fashion to laugh at Miss Dell for drawing impossible people; but whether my tastes are those of the back-kitchen or not, her characters do not seem more impossible to me than those of Meredith in a different genre, and frankly I would sooner read her than Henry James, and although her sentiment makes me laugh, it does not make me feel bilious, like Mrs. Barclay She does not pose, like Hall Caine; and if she sometimes murders her characters rather unexpectedly, at least she does not murder the English language.

THE NEAR AND MIDDLE EAST.

(From Our Own Correspondents.)

EGYPT.

CAIRO, June 6.

Political Hopes and Fears.

There is trepidation among a section of the native population over the visit of the head of the Egyptian Delegation to London; and there is expectation among the foreign communities, and particularly among the British. Among the Zaghloulists there is considerable satisfaction; for they realise that the postponement of the Milner Commission's report pending the negotiations in London infers the possibility of a settlement—and a settlement is what they are ardently hoping for. The Extremists are wroth, but hardly as indignant as they make themselves out to be. They are gradually realising that the Big Stick as a political weapon may develop the properties of a boomerang, and they are solacing one another with the assertion that it may be better to accept what Saad Zagloul can get now, and trust the future to bring them the rest.

The Nile Projects Commission.

To-day's was the eighth sitting of the Nile Projects Commission. Last week's sittings were occupied chiefly with the evidence for the defence against the first charges, which allege wilful suppression of public documents. The document over which there has been most wrangling is one called the Blue Nile Memorandum, which the defence at the outset would not admit. It was a typewritten document of two pages, and was stated to have been sent to the Governor-General of the Sudan (Sir Reginald Wingate) in February, 1914, by Sir Murdoch MacDonald; and a copy was later forwarded to Colonel Kennedy by Sir Reginald Wingate. Colonel Kennedy produced the second page, and stated that the first page was not available. Counsel for the defence objected to the admission of part of a document, but on the evidence of Colonel Kennedy that the missing page contained nothing relevant except the figures in the bottom line the Commission admitted the document. The evidence of Mr. Burnett, Director of Works in the Sudan, and the successor of Colonel Kennedy to that post, seemed typical of the prevailing confusion concerning what is undoubtedly a most important document. "I left the Sudan to come and give evidence in this case," he said, "firmly believing that no such document existed. Now I am rather mystified." Subsequently, native officials were called to prove that they had received the gauge readings in question in 1914, and had entered them in the gauge-books as soon as received. The last three days have been occupied with the statement for the prosecution on the next series of charges, which are really technical arguments concerning the amount of water at certain places in the Nile, notably at Sennar, in 1914. Sir William Willcocks says there could not have been as much water as was alleged; and produces his observations over the last twenty years in support of his contention. The Public Works Ministry say that since 1914 there has been some natural phenomenon at work which has caused the gauges to record larger discharges at the places mentioned. Briefly, the issue has got down to this: incorrect figures have been published; the prosecution say they were published purposely, and in bad faith: the defence submit that the incorrect publication is an honest mistake. The Commission is going into the physical data to solve the matter.

The King's Birthday.

Last Thursday, the King's birthday, there was very little business doing in town during the day, but the official celebration was in the evening at the Residency. By half-past nine the road to the Residency was like the approach to the course at Epsom on a big race-day. Motor-cars and carriages were lined up almost back into the city proper, and many visitors had to get out and walk along a street or two before they came to the detachment of Indian Lancers which lined the immediate approach to the gates. The guests were received by Viscount and Viscountess Allenby, and then were able to wander out to the enticing lawns, where the band of the XIth Hussars—the best band in Egypt—was stationed in a corner, playing selections that set many a young visitor's feet twitching. There were two buffets, innumerable seats, and a large crowd. Towards half-past ten the High Commissioner and Lady Allenby came out on to the lawns, and mingled with their guests, who included representatives from the Government and official departments, the higher military officers, representatives from the Consulates, and the leading commercial men of the city. To my mind it was the most representative gathering assembled in Cairo during the last few years. It was a quiet ceremony, as all formal functions usually are, but the evening was so oppressive that most guests were quite content to sit out in the cool air, enjoy cool drinks or ices, and listen to the band.

New British Hospital for Cairo.

Considerable interest has been aroused in Cairo by the publication recently of a report by a committee appointed by the High Commissioner some months ago to inquire into the proposal to erect a new British hospital in Cairo. The present British hospital, known as the Anglo-American Hospital, is situated on the far side of the Nile, adjacent to the Gezira Sporting Club. For various reasons it has not been a success, but the root of all the trouble lies in its distance from the city proper and its resultant comparative inaccessibility, as no tram goes near it and the expense of a carriage to it is too much to be borne frequently by the poorer classes of the community. The Committee has recommended that an attempt should be made to raise about £E60,000 for another hospital to be built in Cairo; but adds that the local subscription of anything like that amount would be most improbable, and suggests that an appeal should be made to wealthy philanthropists at home for assistance. There is a feeling that the Committee is correct in assuming that such a sum could not be subscribed here, but there is also a fairly wide opinion that the scheme as propounded is too ambitious. In a quiet spot in the centre of the city there is a hospital known as the Deaconesses' Hospital, and I understand that it would be possible to secure this institution. If so, the place is one that could be adapted to meet the needs of British and American residents here, and would in every way fulfil the requirements that it is sought to provide for with the proposed new institution. The cost of acquiring and adapting it would be comparatively small; and with the amount of money available this certainly seems to be a preferable scheme to the expensive one mooted by the Committee.

Syrians and French.

Some perturbation has been caused among a section of the Syrian community in Egypt by the report, published by the Italian telegraphic agency, that General Gouraud, Governor-General of Syria, had counselled his Government to evacuate the country. This agency has so often distinguished itself by the setting free of *canards* that its news on this occasion has been received with some degree of scepticism. I have no doubt, however, that, if General Gouraud had his own way, Beyrout would soon see the last of French officials and troops. It is an open secret that he has on more than one occasion expressed himself as being thoroughly dissatisfied with his task, rendered highly ungrateful by the attitude of open hostility to the French displayed by a large portion of the population. The French Government has, it appears, recently despatched a delegation to Syria to inquire into the present situation there, and the results of its investigations will be awaited with considerable interest by the local Syrian community.

A Day of Prayer.

Friday last was a day of prayer throughout Egypt. Those in the counsels of the Nationalist movement had argued that, as victory to the Allies in the late war followed on their repeated public prayers to the Almighty, it would be well, now that their Delegation is engaged in negotiations with the British Government,

Digitized by Google

to offer up public prayers for the success of these negotiations in all the mosques and Coptic churches of Egypt. A special invocation was composed for the occasion, of which the following is a translation:—

O God, Conqueror of emperors, Humbler of the mighty, Helper of the helpless, Support of the weak and sole Substance of their strength, Inspirer of the strong with Thy fear and reverence, between whose creatures none other judgeth: This is Thy Egypt who sons are taking refuge in Thee, whose inhabitants have fled to Thee, followers of the Crescent and of the Cross, far and near, young and old, men and women, hastening to Thy venerated Churches, which Thou has raised to Thine own Holiness, wending to Thy revered Mosques, the doors of which Thou hast opened to Thine own Honour. In these we beseech Thee, by Jesus the Spirit of Truth, and Mohammed the Prophet of Truthfulness, and Moses who fled from slavery; we implore Thee by the Holy Month and those who keep its fast; by its illumined nights and those who watch thereon; and by this universal prayer of Copts and Moslems in this valley, to emancipate us from all save Thy guardianship, to humble us to no servitude save Thy Providence, to commit us to no rule save Thy Rule and Governance.

O God, our people and their people have called upon each other to take wise action and final decision in regard to our just plea. Give us, therefore, O God, our rights in full, and make our Delegation in their country Thine own Delegation, and our forces, whose only armour is the Truth, Thy forces; and invest them, O God, with success and right guidance and protect them with Thy Mighty Support. Establish, O God, our representatives in a true position, and overshadow them with Thy widespread Shade, and be Thou our Guardian with no limit to Thy Guardianship. Glory to Thee, O measurelessly Generous and Bountiful, Thou to Whom the whole matter doth return, Whose Command cannot be gainsaid. Cause that people to be our Allies, not our opponents, and make the thoughtful of them think of us as Thou dost. From Thee we ask for our diadem, and from Thee we beg for our throne, and by Thee we claim our complete independence. Therefore do Thou put the reins into our hands, and invest us with the governance. Make the Truth our leader, and perfect to us the joy in that beyond which we desire naught beside, nor doth aught else exist to desire. Suffer us not, O God, to commit injustice nor aggression, but register us amongst the well-doers on the Earth, not the evil-doers thereon, nor those who have gone astray. Amen.

YUGOSLAVIA.

BELGRADE, June 13.

Politics and the Exchange.

The sudden drop in the value of foreign money was followed by a sharp reaction, as the rise in the dinar was too sudden and too great to be natural. It was rumoured that one speculator lost a couple of millions and shot himself as a consequence, but of course, Serbs, on the whole, were delighted to see their money better than the lira, and expected to see it equal to the French franc before long. In a couple of days, however, it dropped again, not quite to the figure of the previous week, but near it; but it has been rising again more steadily and is certainly improving. In spite of a cold snap, the prospects of the harvest are very good indeed, and travellers report brilliant prospects from the fat lands of the Banat and Bachka.

One of the contributory causes is the relief at the end of the political squabbles, of which even the politicians themselves had had enough, and confident hope that the Coalition Government, under M. Vesnitch's suave direction, will carry the country through to the general elections for the Constituent Assembly. The Government is hard at work, and it is hoped that the new electoral law and unification of the system throughout the new provinces will be complete by the autumn, and that we may see the elections by October.

Although everybody earnestly desires and hopes that the Cabinet will hold together, there has been a dangerous incident that may lead to the resignation of one or perhaps even two Ministers. This is the affair of the Central Association. During the winter the export of goods was permitted only under license, and there was a good deal of abuse under the system. The Radical Government, and the Coalition afterwards, abolished the system, and proposed to form a Central Association which would do all the exporting; in this association the Government would find half the capital and certain agricultural and co-operative associations and banks the rest. Of the profits, one-quarter was to go to the benefit of war-invalids and a quarter to establish agricultural credits, one-eighth to the Government and three-eighths to form depots of supplies. In order to reduce the prices of necessary commodities, pending the actual formation of the Central Association, the economic-financial committee of the Cabinet granted some of the founding institutions provisional permission to act as though the institution was actually in working order. This gave occasion to certain parties to make political capital, describing this as an abuse of privilege and accusing the authorities of being directly interested; and a handle was given to these charges by some indiscretions committed by some of the institutions, although it is extremely improbable that the authorities were aware of, much less privy to, these indiscretions. However, it led to questions in the House, and it is likely that the Ministers concerned may be obliged to resign. It is unfortunate for the gentlemen in question, but would be still more unfortunate if it led to a split in the Coalition. It seems, however, that this disaster will be avoided, and the incident localised.

A Waiters' Strike.

Belgrade has been suffering for some time from a strike of hotel and restaurant waiters. The waiters of half the leading hotels struck, and those of the other half were promptly locked out. The proprietors are prepared for a battle, and at once imported strike-breakers from all sides; consequently, most of those serving in the best restaurants are Slovenes, Russians, Croats, and so on, supported by a number of enterprising students. The strikers ask a 50 per cent. rise in their share of the turnover, and certain advantages for the kitchen staff; but there is more in it than this, for the proprietors explain that the men were earning from 50 to 100 dinars a day and getting breakfast, dinner, and supper into the bargain, which is very respectable pay. The waiters make no reference to tips in their manifesto, and there is a general belief that the knights of the napkin were one of the most flourishing communities in Belgrade, so they will have little sympathy from the public. The real point at issue is the recognition of the men's union, and it is said that most of them are anxious to return to work, but their leaders will not let them.

News of Fiume.

A native of Fiume, a representative business man, and a director of important works there, has come to Belgrade on business. He states that people in Fiume think that d'Annunzio is certainly crazy, and will be heartily relieved to be rid of him. He complains that the egregious poet is very polite to him as compensation for the fact that he helps himself freely to the products of his works, but never pays for it, as he has no money. He states that the Fiumians do not want to belong either to Yugoslavia or to Italy. "If we go to Italy," he says, "Fiume will decay and wither as Trieste has done as the result of its unnatural mesalliance. The bulk of our business is with Yugoslavia, but we wish to be independent and free." This is interesting, as authentic news from the scene of d'Annunzio's tragi-comedy is difficult to obtain.

Bad Time for Brigands.

One manifestation of the aftermath of war in the Balkans is the appearance of a number of brigands. Some of these, in the wilder districts, are merely Albanian mountaineers, whose hobby is raiding the villages of the plains and cattle-lifting; others are Serbs who took to the mountains when the enemy occupied the country, and have stayed there ever since, having meanwhile lost everything they had, and others are demoralised soldiers who have nothing left to lose. These ruffians, when enough facts are proved against them, are proclaimed as outlaws, with a heavy price on their heads. In consequence of the energetic measures undertaken by the Minister of the Interior, a large number have recently been captured.

The train service in Serbia has been greatly improved. The daily through train Nish-Salonika now leaves at 6 p.m. instead of in the early morning, and there is usually a through coach to Athens on it. It is hoped that the sleeping-car service to Salonika and Constantinople will shortly be restored.

Personalia.

H.R.H. the Crown Prince-Regent has been visiting Serajevo, where the Bosniaks gave him an enthusiastic

Digitized by Google

reception. His Royal Highness spent several days resting, in strict incognito, at the famous baths of Ilidzhe.

The concert recently given by the British colony in aid of the Anglo-Serbian Children's Hospital is reported to have realised over twenty thousand dinars. This very gratifying result is due to the unselfish efforts of all participants, and reflects great credit on the energy of Mrs. J. B. Clarke, who spared no effort, no pains, in organising what resulted in a very successful production.

Lieut.-Colonel E. C. Fitzwilliams, C.M.G., formerly O.C. British Adriatic Mission, which contributed so largely to save the broken Serbian army at Skadar, Durazzo and Valona, shipping them to Corfu and Bizerta for rest and reconstruction in 1915-16, has been visiting some of his old friends now restored to their homes in Belgrade. Colonel Fitzwilliams has now left for Vienna.

Dr. Seton Watson has had an enthusiastic reception in Zagreb, and is expected shortly in Belgrade.

GREECE.

ATHENS, June 6.

The Re-enactment of Martial Law.

The sitting of the Chamber on May 3, two days before the date originally fixed for the departure of M. Venizelos to sign the Treaty of Peace with Turkey in Paris, was full of surprises. A Bill was introduced by the Minister of Justice dealing with offences against the safety of the realm, with special reference to attempts to challenge the position of King Alexander by an agitation for the return of ex-King Constantine. After M. Tsirimokos had explained the position which had caused the Government to frame the measure and had justified its provisions, the Bill was roundly denounced by M. Pope, an Independent, who characterised it as a further addition to the absolutist decrees of Bavarian (King Otho's) days. He was immediately followed by the Prime Minister, who appeared to have been so impressed with M. Pope's remarks that he admitted that certain clauses were a mistake, and announced that the Bill would be withdrawn for further consideration.

M. Venizelos added, however, that it was easier for him to refrain from pressing the Bill, as he was obliged to ask the Chamber for its assent to the re-imposition of martial law. He went on to explain that, on his return to Greece a few weeks ago with the text of the Treaty of Peace, he had hoped that his opponents would appreciate the extent of Greece's great success and reserve their criticisms on domestic affairs. But as soon as martial law was withdrawn the agitation for the return of ex-King Constantine was started. M. Venizelos proceeded to analyse at some length the "Constantine question," of which there are three aspects—the constitutional, the political, and the international aspect. Examining the matter from each of these standpoints the Prime Minister declared emphatically that there could be no question of the return of ex-King Constantine. His abdication was a constitutional proceeding—the contention that he had avoided the use of the word in order to make a revision of the step possible was a quibble which might be advanced in some lower court of law, but could not be sustained by self-respecting politicians in the Chamber—the accession of King Alexander had been in accordance with the Constitution. The ex-King's recall would mean an upheaval of the established order, and an agitation to this end constituted a political offence. Finally, the ex-King's return would be an outrage upon the Entente Powers, who had accepted his assurance that ex-King Constantine was "finished," and that if any responsible politician proposed his return the answer of Greece was certain and sound. In the course of his speech M. Venizelos also repudiated the idea that the next Chamber would be in any sense a constituent assembly with the right to consider the question of the deposed King; it would be revisionary and would be called upon to justify certain acts of the Government.

The Political Situation.

The Opposition—in which term their press must be included—have themselves to thank for the re-introduction of martial law. With the removal of restrictions on the liberty of speech and of the press political animosities found vent in a press campaign of considerable virulence, and it must be supposed that the Government realised late in the day that time had brought little or no balm to the feelings which manifested themselves in the first week of December, 1916. It is unnecessary to explain this bitterness, and it is impossible to state with any degree of certainty the extent to which the people as a whole is actuated by it. Political differences are always exploited acrimoniously in this part of the world. The case for a strictly constitutional Opposition in Greece at the present moment would be that elections ought to be held at once as the present Chamber, which was elected in 1915, dissolved by King Constantine and then reinstated by M. Venizelos, has outlived its constitutional term and is kept in existence by special decrees. But in view of the fact that M. Venizelos has been away from the country for eighteen months or more, that peace with Turkey has not yet been signed, and that the Greek army is still in the field in Thrace and in Asia Minor, the Government can make out a good case for postponing the elections. Obviously, however, it is a long cry from a difference of opinion as to the holding of elections to the enforcement of martial law, and one wonders whether the bulk of the people are not far more exercised over the cost of living and the prospect of a bad crop season owing to the late rains than over the questions which are made to loom large in political discussions. Certainly, if there were any ground of unrest to be worked upon, the Opposition cannot blame the Government for coming to the conclusion that they would stick at nothing in order to gain their ends.

Hence the return to martial law. It would seem to be the Government's intention to keep it in force until the elections, which cannot well take place before September. Without martial law it is feared that passions may be worked up until there would be the probability of bloodshed, and M. Venizelos held that a measure that saved the lives of five or, may be, a hundred Greeks, required no further justification. He is anxious, moreover, that the violence of the Opposition press should not be misunderstood abroad and be thought to reflect the views of the people as a whole.

The Government is strengthened in its attitude by the fact that apart from the complaint about the postponement of the elections the Opposition have no policy of their own and no leader. They are officially represented by a body known as "The Sixteen," from the number of signatories—ex-Ministers and diplomatists—of a manifesto to the people of Greece against the Government. But, so far as one is aware, it is not contended that the Sixteen are held together by anything more substantial than common antipathy to the Prime Minister, that they have any constructive programme, or that they could form from among their number a Ministry with any prospect of carrying on the Government of the country, in spite of the individual talent that there is to be found in their ranks. Undoubtedly the political bitterness existing is a misfortune for Greece; but it must be remembered that M. Venizelos's long absence from the country has severely handicapped him. With the possibility of further delay in the signature of the Turkish Treaty some time must elapse before the full effect of the magnetism of his personality can be exercised in his own country.

The Prime Minister left Athens on June 5 for Paris. He will probably take advantage of any delay in the signature of the Peace Treaty to visit London again.

MESOPOTAMIA.

BAGHDAD, May 10.

The Mandate for Mesopotamia.

The official announcement which reached here a few days ago in the news cables that the Supreme Council, during its sitting at San Remo, had decided to entrust the mandate for Mesopotamia to Great Britain was the most welcome news that has been published here since the Armistice, both to the British community and to the local inhabitants, except for the small minority of the latter who are still

inclined to support the lost cause of the Turk. There had been good ground for a long time past for regarding the decision as inevitable, but the long delay in the definite pronouncement had naturally caused uncertainty and restlessness in certain quarters, and had given rise to many constantly changing rumours in the bazaars and coffee shops. That the San Remo Conference evidently saw considerable progress towards a Turkish settlement, and particularly that it brought to an end the long and weary period of waiting for a definite decision on the question of the Mesopotamian and other mandates are matters for great satisfaction and relief in this country. That the British Administration in Mesopotamia has the highest possible conception of the duties of the mandatory Power under the League of Nations is indicated by the message to the people of Mesopotamia contained in the form of a leading article published in the *Baghdad Times* and other Government organs, vernacular and English, just after the arrival of the news from San Remo. In case you have not already received the article from any other source, I quote it below :—

The inhabitants of Mesopotamia may rest assured that the British Government has not accepted the allotted task without full realisation of the responsibility it implies. The position of mandatory makes high demands upon any Power which strives to fulfil the intentions of the League of Nations under which it works. The ideal at which it must aim is the creation of a healthy body politic, guided and controlled by healthy public opinion. Care for the material prosperity of the mandated country would not alone suffice for the attainment of this end. It is the duty of the mandatory Power to act the part of a wise and far-seeing guardian who makes provision for the training of his charge with a view to fitting him to take his place in the world of men. Mesopotamia has suffered under centuries of misrule during which the versatility of her people and the productivity of her lands have been checked or stayed. The memorials of her past, strewn over the length and breadth of Mesopotamia, bear witness to the civilisation which was created by the ancestors of the existing population out of resources which have not diminished. It is the creative power of the people which has been held in abeyance by the lethargy and indifference of their rulers.

Reconstruction will not be the work of a day, but with a race such as the Arabs, quick to learn and eager to seek advantage of the attainments of science, progress should be rapid. Already the signs of revival are everywhere apparent; security has replaced disorder, the barren waste blossoms into fertility, the poor man is safe from oppression and the rich enjoys his wealth in peace. Such results could not have been accomplished without the help and co-operation of the people themselves, and it is upon this spirit of co-operation that the British Government relies. The establishment of civil administration will give an ever widening field to native energies, while the diffusion of education will enable the inhabitants of Mesopotamia to profit by the opportunities which the future holds in store. And as the guardian rejoices over the growth of his ward into sane and independent manhood, so will the guardian Power see with satisfaction the development of political institutions which shall be sound and free.

The supporters of the lost cause of the Turks, to whom I have already referred, replied to this by posting up a number of seditious notices in the bazaar, but they were soon torn down by the police, and the incident may be regarded as of little significance.

The Visit of H.I.M. the Shah.

Great preparations are being made in Baghdad, as well as in Korbellah and Nejef, for the reception of the Shah of Persia, who is expected here about the 20th inst. The intimation has been received here with much pleasure, particularly by the Persians—nearly 80,000—resident in the country, and his Majesty is assured of a very cordial reception. It is very desirable that he should be able to examine conditions in Mesopotamia, and learn something at first hand of the improvements in communications and in other directions that have been made during the past few years in the country. The trade relations between Mesopotamia and Persia are of rapidly growing importance. This has been brought about as much by Anglo-Persian friendship and the better communications in Persia and Mesopotamia as by the stoppage of Persian trade with Russia. Since trade through the Caucasus has been closed, a greatly increased proportion of Persia's exports and imports have passed through Mesopotamia, and Customs statistics show that since 1914 Persia's imports from the British Empire and India, which go by way of Busreh and Baghdad, have considerably more than doubled. Good progress has already been made with the arrangements for the wagon train ferry at Baghdad, which is shortly to be ready, and will complete the through railway connection between Busreh and the Persian border. This and the extension of the railway to Teheran is calculated within the next few years to give a further fillip to the growth of trade and other relations between Mesopotamia and Persia. Our Royal visitor will, therefore, have the opportunity of studying various questions of practical concern to his country's welfare during his stay here, which is sure to be full of interesting events.

The Racing Season.

In spite of the rising temperature, racing has continued well into May in more than one centre in Mesopotamia; but I believe to-day, which brings the May meeting at Amarah to a close, will see the last of the sport in the country until next autumn, except at Busreh, where they have decided to continue the meetings during the hot weather. This is a good indication of the popularity which racing has gained during the British occupation among the local population of Mesopotamia, who are now in various centres actively co-operating with British officers in its management. Arabs and Britons are at one in their enthusiasm for a good horse, and their association in connection with racing is one of the various influences tending to foster friendly relations between the two communities. The racing has in all cases proved a decided success financially as well as from the sporting and social standpoints.

The New Baghdad and the Baghdad Sporting Club.

The Baghdad April meeting, which was the most successful yet held in the country, was the last to take place on the present race-course in the grounds of the Baghdad Sporting Club to the north of the city. At a general meeting of the members of the club, under the presidency of Major-General Leslie a few days ago, it was decided to leave the present premises and to re-establish the Sporting Club at Hinaidi, some four miles to the south of the city, on the left bank of the Tigris, on a site conveniently situated between the new civil lines and the proposed new cantonment. Considerable progress has been made with the new civil lines, which are being constructed of mud brick, and about a dozen houses are already occupied by officers of the civil administration. The plans for the new cantonment have not yet been definitely settled, but as soon as possible in order, among other things, to relieve the difficulties of the housing question in Baghdad, all military departments, as well as civil officials, will move to their new quarters to the south of Baghdad, and very few of them will be left residing in the city. The Sporting Club could hardly continue to exist six or seven miles away from where nearly all those eligible for membership live. The move is, therefore, inevitable, but there will be some pangs of regret at leaving the old home of the club, which has become a very pleasant retreat, and has seen many exciting and enjoyable sports tourneys. The present club-house will not be disturbed until October next, and in the meantime the laying out of the new grounds at Hinaidi will be proceeded with.

Public Libraries.

Mesopotamia was so backward educationally as well as in every other way during the Turkish régime that it is not surprising to learn that in those days such institutions as public libraries were unknown in the country. No Arabian Carnegie has yet come forward to devote his surplus millions to supplying them, but—better still—people in Busreh and Baghdad have been persuaded to start public libraries for themselves. Both Busreh and Baghdad now possess a public library, managed by a Committee of the local population. Both the libraries owe their foundation to the lead given and the energetic work of Mrs. Forbes, the wife of Mr. H. F. Forbes, C.I.E., I.C.S., President of the Court of Appeal. About a year ago she gave an excellent start to the Tajaddad (Rennaisance) Library at Busreh. She got together a committee of local people, and helped them in the local collections of money for the purchase of books and the lease of a house. Many books were also presented, and the library was opened with a reading-room well stocked with periodicals and a nucleus of some thousands of standard works in Arabic, English, and other languages, and with a comfortable money balance in hand. Mrs. Forbes shortly afterwards came to Baghdad, upon her husband's transfer here, and initiated a movement for the provision of a library on lines similar to those on which she founded the Tajaddad Library. The Baghdad Public Library was opened at the end of last month in a temporary home in a garden in the neighbourhood of New Street. This library also has an excellent nucleus of books, and a considerable sum of money to tide it over the early period of its career. The library has been called the Salam (Peace) Library, this name having been chosen some time ago when the Committee trusted that the opening of the library might coincide with the celebrations on the occasion of the final peace with Turkey. We can only express the pious hope that the too-optimistic calculations on this score will not prove a very long way out. The extent of the support gained by Mrs. Forbes in starting the libraries is sufficient indication that there is a demand for them already, and as the schemes at present being organised by the Department of Education bear fruit, the libraries should grow in importance and popularity.

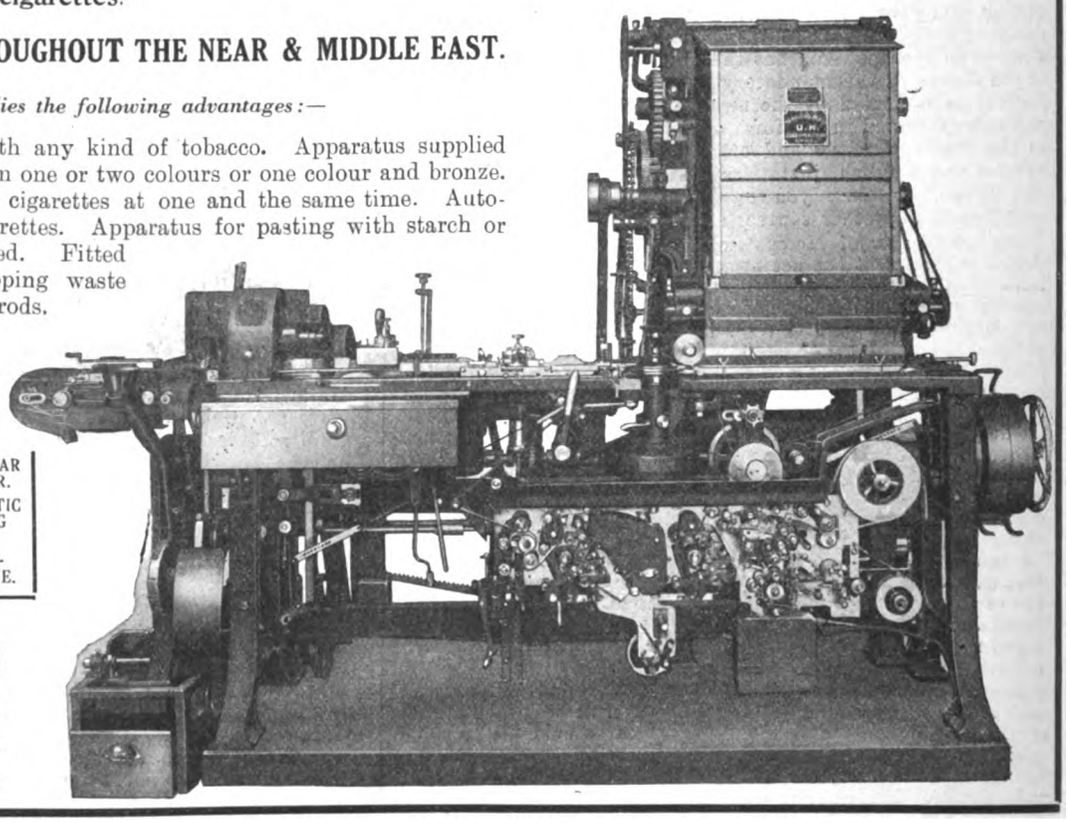
The "U.K." CIGARETTE MACHINE.

Designed to make round, oval or Egyptian cigarettes with creased edges of any desired diameter or length with wide or narrow pasted laps, and by an interchange of parts also crimped cigarettes.

IN DAILY USE THROUGHOUT THE NEAR & MIDDLE EAST.

Embodies the following advantages:—

Works satisfactorily with any kind of tobacco. Apparatus supplied for printing cigarettes in one or two colours or one colour and bronze. Manufactures and tips cigarettes at one and the same time. Automatically sorts the cigarettes. Apparatus for pasting with starch or liquid paste as required. Fitted with device for stripping waste cigarettes or cigarette rods.



Also:—
THE "UNIVERSAL" CIGARETTE MACHINE.
THE "S.A." DOUBLE CIRCULAR KNIFE AND TOOL GRINDER.

Boy Scouts of Baghdad.

The Boy Scout movement is flourishing in Baghdad, and at their annual display, held a few days ago, over 2,000 people were present. As a social event the gathering was remarkable, for it was equally well attended by the Notables of Baghdad and by the British community, military and civil. The trophies (including a flag presented by the Beckenham Boy Scouts in 1918) were distributed to the members of the various troops by Maj.-Gen. Leslie. The movement was inaugurated in Baghdad in May, 1918, and there are now 18 troops in the city and suburbs, with a total of 650 scouts and 80 wolf cubs, a very creditable record of progress for the first two years. The movement is warmly supported by the Department of Education, and should lead the coming generation to take to more healthy ways of spending their leisure time than are to be found in the coffee shop and theatre, to the attractions of which many Baghdadis are apt to confine their ideas of recreation.

ALBANIA.

(From Our Own Correspondent.)

The Anti-Italian Movement.

The Anti-Italian movement in Albania is the logical result of the Italian conduct and Albanian psychology. The Italians behaved as if they were in a conquered country, regardless of hurting the national spirit of the Albanians, and I have referred in previous letters to the very incorrect attitude of Col. Castoldi, who, at Durazzo, proclaimed himself as the Commissaire Royal for Albania, but to whom the Government at Tirana refused recognition in that capacity. Moreover, the Albanians have had enough of being treated as pariahs, and have decided not to allow foreigners to encroach on the rights of their country. The movement is, therefore, national and spontaneous, and without any prompting from outside. Moreover, there cannot be any question of Greek or Serbian assistance, for Greece was on the point of attacking Albania over the question of Koritza (Kortcha), and the Serbians are no less disliked by the Albanians on account of their attempts to overthrow the movement at Tirana by the assistance which they lent to Halit Lleshi, the creature of Essad Toptani. By its purely national policy the Albanian Government has earned the enmity of the Italians and of the Serbians. The reports of Greek and Serbian intrigues are the invention of the Italian agencies, which seek to throw discredit on Albania.

After the return of the Albanian gendarmerie from Argyrokastro, Permetti, Leshkevik, and Delvina, a League was formed to bring about the union of the rest of Albania with the Government at Tirana; there were, in fact, only Valona, Tepleni, and Himara which still remained under Italian military and civil administration. The headquarters of this league was at Valona, and its supporters were in touch with the Nationalists and the chief, Salih Budka, who is in command of the volunteers, with the National Guard, organised by the pan-Albanian Society "Vatra," of America. But there was no intention to attack the Italian army; the aim of the league was simply to ask from the Italians authority to effect the administrative union of all the country.

Unhappily, the Italian military authorities had become very sensitive, and, getting wind of the state of affairs, they arrested and deported to Italy the leaders of the Valona league—fifteen notables of the district. At the same time, they announced that they would never withdraw the garrisons from Albania, and that Italy would never give up Valona or its hinterland.

The reports are still very conflicting, but it seems to be certain that the first incidents took place at Himara and Tepleni. In a very short time the Albanians were before Valona, and, but for the warships, they would have taken the town without difficulty. The garrison at Tepleni surrendered after four days, not in consequence of lack of water, as the Italian agencies stated, but because the soldiers refused to fight for a cause which they themselves regarded as unjust.

The Italians wreaked their vengeance on the inoffensive and peaceful population. The entire population of Valona has been interned, that is to say, penned in like sheep, on the desert island of Sasseno, where there are neither houses nor any water fit to drink. Moreover, guns from the warships have been landed for use against the villages around Valona, some of which have been almost totally destroyed.

Italian Troops Refuse to Attack Albania.

If the military authorities and the Consulta show an arrogant and merciless spirit towards Albania, the Italian people themselves have some sympathy for this country and its inhabitants. In Albania the Italian soldiers have always behaved well and humanely, and have complained of their Government which persisted in keeping them far from their homes and their families, in spite of the Peace. It may be said that no Italian soldier has behaved badly towards the Albanians except in obedience to the orders of his superiors and against his own wishes. The anti-militarist manifestation in Italy will support this statement.

In short, the anti-Italian movement is the result of the Nationalist movement, which is making itself felt in Albania just now by efforts to realise administrative and national unity and to assure the independence and absolute sovereignty of Albania. But it is not to be denied that the Imperialist Italian authorities have seized upon this pretext of the awakening of nationalist sentiment to act against the Albanians and to attempt to overthrow the Government at Tirana—which they were not able to do by supporting the Essadist movement of Kroya-Tirana at the end of last April. The support which Colonel Castoldi lent to Osman Hali and his followers, happily without any effect, is still remembered.

The Assassination of Essad Pasha.

The removal of Essad Pasha from the various rivals to power has produced perceptible amelioration of the Albanian situation. Essad was widely mistrusted as the head of the reactionary party, and he was always found leading retrograde movements in Albania. He was disliked as the blind instrument of Greek, Serbian and Italian intrigue; for he himself had no ambitions for his country. Those who will regret him are MM. Pashitch, Venizelos, and the Italians.

MOROCCO.

Tangier, June 9.

An "At Home."

With two popular and successful fêtes within ten days, the British Colony at Tangier hardly recognises itself, and is wondering what really has happened. Mr. A. J. Clark Kerr, H.M. Chargé d'Affaires, who is not only doing excellent work in the interests of British trade but is also bent on making the colony feel that it *is* British, invited every British resident in or visiting Tangier to an "At Home" at his private residence on the evening of June 3 to celebrate the King's birthday. Mr. Clark Kerr received his guests, and then "Here's a Health unto His Majesty" was splendidly rendered. Several British solos were sung, supper was served, and dancing commenced with a Scotch reel to appropriate airs played by two pipers brought over by Mr. Clark Kerr from Gibraltar specially for the occasion. After the reel dancing became general, and was kept up with great vigour. The gathering closed with the singing of the National Anthem, three cheers for Mr. Clark Kerr, and "For he's a jolly good fellow," which were given with all the greater enthusiasm as the host had expressed a wish against speeches or votes of thanks.

MALTA.

Valetta, May 20.

Tardiness.

Malta gets self-government as regards local affairs at the beginning of next year, but with the present year well gone there has been practically nothing done. The general public are emphatic in demanding that the articles of the Constitution shall be subjected to inspection, and, if necessary, criticism before the affair is promulgated. This is reasonable, for very much depends on the exact wording of the new Act, whilst the position of Malta is unique, for it will be seen that many occasions are bound to arise where Imperial and local interests clash. A thorough perusal of the various articles may help to avoid this; at all events, it cannot but be a foolish policy for the Powers that be to adopt a *sub rosa* attitude, which, if followed, might handicap the self-government from the very start.

CORRESPONDENCE.

APPEAL OF THE ALBANIANS IN ROUMANIA.

TO THE EDITOR OF "THE NEAR EAST"

Sir,—If anyone has doubted that the Albanian nation wished freedom and independence, the recent action of the Albanians, weary of waiting for justice from the Powers, ought to have convinced him. Further proof of the fact I have just received in the form of the following appeal of a large number of Albanians in Bucharest, which, by the way, was one of the first towns in which, during Turkish times, the Albanians were permitted to publish books and papers. The appeal, which has been sent to the Powers, states:—

Alarmed up to the point of despair by the recent plans for settling the Adriatic question, we, the thousands of Albanians who are settled in Roumania, together with the refugees who have fled thither from their native land and who represent the sorrow and the cry of revolt of the Albanians, united, at a meeting, protest with our utmost energy against the enslavement of the Albanian State, the independence of which has been recognised by the Treaty of London and guaranteed by the Great Powers. Our soul's filled with pain, we protest against the violation of the desire for life and liberty which the Albanians have shown for so many centuries.

In the name of your glorious dead, by whose sides the sons of Albania have generously poured forth their blood in the mountains of Albania and of Macedonia; in the name of the great principles which you inscribed upon the standards with which you entered into war and around which you united the despair and the ardent love of liberty of the whole world: in the name of the justice and liberty which the heads of the Allied Governments and their political men have solemnly promised to the oppressed, we implore Allied diplomacy not to destroy the oldest ethnical group in the Balkans at the very moment when so many peoples of Europe, and even of Asia, are recovering their liberty and independence.

We desire absolute independence and the complete integrity of the territories which we have contrived to keep up till to-day in spite of the most cruel tyranny of the Ottomans. Centuries of fire and blood have passed over the Albanian nation, which has nevertheless remained alive and has ceaselessly aspired to freedom. This gives us the right to hope for its vitality and its future conservation; above all, to-day, when the Albanian national consciousness has penetrated every corner where an Albanian dwells, and when from the four corners of the world the wind of democracy blows for complete liberty. Under the domination of the Turks we resisted bravely, and shed our blood when arms were used against us. We ask for liberty, both for our repose and for our honest labour in the fields and mountains of our holy fatherland, where lie the bones of our ancestors who fell in the fight for freedom.

Their sons will know how to be faithful to the appeal of their forefathers, and, whosoever may be the oppressors, they will revive the heroic days of old, and will submit to no foreign domination.

Signed by
ARCHIN H. CEALAMANI, President.
STAVRI LUNESY, Secretary.

Bucharest.

Like the Italians of the Risorgimento, the Greeks in 1820, the Serbs under the leadership of old Black George in the early days of the 19th century, the Albanians are now fighting for freedom and their national existence, fighting to save their country from being torn to pieces as was Poland. Let us hope that the sympathy and aid given to the above countries may not now be grudged to Albania.—I am, etc.,

M. E. DURHAM.

June 17, 1920.

AMERICA AND THE LEAGUE OF NATIONS.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—I recently wrote in the *New York Times* an appeal to the American people to support their President and realise their obligations in Europe. My letter was inserted under a heading which showed sympathy with the object in view.

I wish to ask permission, through your columns, to appeal to Englishmen not to hinder this object by unfair and untrue representations of American conduct and American ideals. A member of a Russian Mission, whom I met on the Pacific, said to me: "We Europeans have a completely wrong idea of the American people. We think them dollar-worshipping, materialistic, selfish. This is true of another nation. It is not true of America." That opinion, after a considerable residence in U.S., I entirely endorse. Is there any European country which has favoured as purely an idealist policy as that of President Wilson? Is it fair to expect a great nation of 110 millions to have somewhat the same kind of representation in the League of Nations as a British colony of 7 or 4 or 1½ million inhabitants.

Is it an altogether idealistic policy to ask America to take over the control of thorny Armenia, while England takes over German S. West Africa, German East Africa, Mesopotamia, Egypt, Cyprus, Palestine, and New Guinea.

If we accuse America of dollar worship, is she altogether wrong in charging us with land worship.

What I plead for is a fair view of ourselves and of others, in order to gain the inestimable advantage of a brotherly feeling towards our cousins in the West.—I am, etc.

BERESFORD POTTER.

Rake Manor, Milford, Surrey, June 13.

"OXFORD IN LINCOLNSHIRE?"

TO THE EDITOR OF "THE NEAR EAST."

Sir,—The following citations from Maxwell Lyte's "History of the University of Oxford" will explain the somewhat laboured humour of the *Observer* to your contributor (see THE NEAR EAST, June 17, page 851). Page 134:—

"There were grave troubles at Oxford in 1334. . . . Many of the more studious clerks, chiefly Northerners, resolved to quit Oxford for ever, and betook themselves to Stamford, where there were already some flourishing schools." The emigrant students were compelled to return. "At Oxford the memory of the secession of 1334 was preserved even longer in an oath that was administered to all candidates for a degree." . . . . "Having been retained in the Laudian code of 1636, it received fresh sanction in 1800, and was not expunged from the statute-book of the University until 1827."—I am, etc.,

E. A. BARBER.

BULGARIA'S PENANCE.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—I read your excellent editorial on Bulgaria in your issue of March 13. I am very much pleased with your spirit of fairness. After all, those who encourage the Balkan peoples to hate one another by taking sides with them violently are not the best friends of the Balkan peoples themselves.

It is very unfortunate, as you state, that the practical and hard-working Bulgarian people should have gambled so long for a dream, which it had learned to dream first from her liberator, Russia, and, later, from her military teacher, Germany. Mistakes, even if they are very serious, should now be forgotten. Serbia, Greece, and Roumania, the victors, should be the first to extend a friendly hand to Bulgaria, and grant to her every possible commercial facility, and give her evidences of their sincere desire for amity and neighbourly collaboration in their common efforts to redeem the long-tried Balkans from those age-long bloodsheds and rancorous hatreds which have ruined the marvellous civilisations of the ancient and the Byzantine Greeks.

Truly, the Bulgarians cannot so soon renounce their dreams of conquest, nor can the Serbians cast into oblivion their suffering during the war. But the duty of those who are neither Bulgarians, nor Serbians, nor Greeks is to impress upon these peoples that their salvation lies only in their determination to forget the past and endeavour to live in harmony with one another.

I am very glad that your editorial, far from taking sides with one of the Balkan peoples, is fair to all.

I hope that all enlightened Britons will follow your example, and that the policy of all of us, Britons and Americans, interested in the Near East, shall be no longer "Pro-Bulgarian," "Pro-Serbian," "Pro-Greek," nor "Pro-Roumanian," but "Pro-Balkan."

I am, etc.,

N. J. CASSAVETES,
Vice-President, League of Friends of Greece in America.
7, Water Street, Rooms 509, 510, Boston, Mass., June 1, 1920.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—It is with the greatest interest that we Bulgarians have read your article of May 13 entitled "Bulgaria's Penance." It is always well to know what other people think of you, and England is one of the countries for whose good opinion we really do care.

Your mention of the pro-Bulgarian movement in your land is very unexpected news for us, and how could we have known of it? What has England done just now to show us that her people sympathise with us, understand us, and want to help us? Once upon a time great Gladstone raised his voice in defence of our cause; then his countrymen seconded him, and we had a real proof of English goodwill. Now, as you say, we have still friends in England—the much-respected Mr. Bourchier, the brothers Buxton, and others. Well, they have repeatedly said that Macedonians, Dobroujans, and Thracians are Bulgarians by language, religion, and political conviction. Why has not English goodwill made a move for the plebiscite we so earnestly desired in those countries? Why?

However this may be, if there really be a pro-Bulgarian sentiment on your side, it shall be a comfort to us the day we know more of it. For the present we wish to thank you for the few good words you have said in our behalf, for having called us good soldiers, hard workers and sportsmen, and for the expression "We cannot help liking an enemy who accepts defeat like a gentleman, and who pays the price of it without whining."

Now, please allow me, though "only a girl," to take up some of the points of your article and tell you how we feel about them. First of all, we do not consider ourselves defeated—nay, impartial history will prove one day that had it not been for Mr. Wilson's fourteen points, his promise of plebiscites in all disputable lands, just treatment between the enemies, and no war indemnities whatever, we might have continued fighting with the same success as before. But we believed

Digitized by Google

in this promise of impartial judgment, and saw ourselves robbed of lands that illustrious foreigners had a few years before proclaimed Bulgarian. Thrace, which was given to us by the London Treaty of 1913, Dobrouja, which the Roumanians themselves declared unnecessary to their State not long ago, Macedonia, which has cost us so many sacrifices and has made us the "thorn in the flesh of all our neighbours," and Tzaribrod—they have all been taken away from us as a punishment for our crimes.

And what has our crime been, please? Had the Great Powers, had all the other fighting countries a better excuse for taking part in the war than we? Had they unfortunate brothers under the yoke of others crying to them for help? Had they poor, restless refugees within their boundaries telling them for ever: "Now is the moment for you to act; strike, and we shall be free!" France was the only one among them who led a war of liberation; but France has refused us her sympathy and support because we dared fight against her. And we fought against her, we fought against England and Russia, not because we had "succumbed to the lure of a great Bulgaria to be fashioned out of the territories of our neighbours," but because we wanted to give freedom and a peaceful life to our oppressed countrymen in Dobrouja and Macedonia, because the hardships and persecutions they were submitted to were felt here as only people of one family can feel the misfortune of its different members, and because as long as there was suffering and tears in those lands we could not go on living quietly and enjoying our own freedom. With that aim in view we had no choice but take the side of those States who promised us the annexation of above lands. And the refugees from Macedonia, Dobrouja, and Thrace, who now flee from their new masters and seek refuge in "defeated" and diminished Bulgaria are sufficient proof of our having fought for a noble ideal.

Bulgaria has been most severely and unjustly treated at the Peace Conference. She has been treated like an innocent person accused of the basest crime, with no right to have lawyers and defenders, with no right to ask revision of his sentence, like a person whom bad-wishers-judges have condemned to death with no pity for his youth, his bravery, and his self-sacrifice.

Such is Bulgaria's short history. Had we been bad soldiers and cunning diplomats, we might have had to-day all the lands we wanted and twice as many we never thought of before; but as it is we must try to hold our heads up and believe in a brighter future.

If England's people really feel for us, let us have a proof. Friendship is best known in misfortune.—I am, etc.,

SONYA KRAEVA.

Sofia, June 12, 1920 (Guerlovo St. 9).

PRESS ON THE NEAR EAST.

Armenia.

The *Manchester Guardian* of June 15 deals in a leading article with "The Fate of Armenia." Circumstances have formed the Armenian people, it says, into two compartments—the Republic of Erivan and the scattered people of Cilicia. It comments upon what it calls the "abandonment" of Cilicia by the French, and proceeds:—

Whatever consideration the Cilician Armenians may receive from Mustapha Kemal, they are likely to owe more to the Russians and their own compatriots in Erivan than to any other cause. This little Republic, overcrowded by refugees from other provinces, harassed by the two republics on its northern and eastern borders, threatened by the Turkish Nationalists from the south, and hampered by the refusal of Allied assistance, has lived precariously under the imminent threat of annihilation. Despairing of the Allies, it has turned to Russia and made an arrangement which for the time being protects it against the Turks. The British Armenian Committee have addressed a memorandum to the Foreign Office in which the plight of the Republic is described and an appeal is made for help. They make the astonishing statement that "until recently, in spite of all promises, aeroplanes, arms, etc., bought by the Armenian Government were being held up by the British authorities at Batoum." This embargo, which merely illustrates the perversity of our policy in the Middle East, has now been removed, but the Committee still have to plead for the same facilities for receiving military stores which have been given to Georgia and Azerbaijan. We do not know whether the Government will consider the negotiations which have passed with Russia too great a blot on the Armenian character to allow of any privilege. But our statesmen may reflect that Armenia is situated between Mustapha Kemal and the Bolsheviks. The Allies, who at one time might easily have rescued the people and set them on their feet, neglected their duty, and, as we have shown, have now abandoned their compatriots in Cilicia. What are the Armenians of Erivan expected to do? It is not a question of Bolshevism or anti-Bolshevism. It is a question of throats cut or whole. The Allies have left them no choice but to seek what safety they can from whomsoever they may induce to protect them. What are we throwing away politically in the meantime, what avenues we are opening for Russia and what we are closing for ourselves in the Middle East, it is for those who fostered our anti-Russian and Laodicean Turkish policy to reflect. The best thing we can now do for these regions is to complete a general understanding with Russia which may keep Turkish barbarity within limits and preserve respect for the life and freedom of the little cluster of republics that have arisen out of the old empires.

Great Britain and the East.

The *Daily Express* of June 16 lays down in forcible terms its policy in connection with British commitments abroad. After commenting upon what it calls the "death" of the League of Nations, it states its policy:—

We must withdraw at once from every field on which our resources may be squandered and our strength dissipated. Where we have trading rights, as in the Persian and Mesopotamian oilfields, we must secure the due observance of our rights. For the rest, we cannot afford to meddle in affairs which do not concern us or to play God's providence to all the peoples upon earth. Our armies and detachments, our fleets and gunboats, should be withdrawn from all lands that lie outside the British Empire. We should have no commitments or entanglements in Europe or Asia outside our just concerns. The Foreign Office should be instructed to establish and maintain one simple policy—that we will trade with all who wish to trade with us, so long as they deal with us fairly and honestly, that we shall make no inquest into forms of government or national rivalries, that revolutions and petty wars in distant corners shall not concern us. We ought to abandon the "mandate" for Mesopotamia as America refused a mandate for Armenia, to leave Syria exclusively to France, and to refuse any responsibility for Palestine. We ought to cancel, even at the eleventh hour, the despatch of Sir Herbert Samuel as High Commissioner for Palestine and to revoke all interest in the tribal rivalries of Arabia. Within the fixed borders of the British Empire we have all that we can do. In the barren wastes outside we dissipate our fortunes and jeopardise our life.

Persia and Mesopotamia.

The *Irish Times* of June 17 lays great stress on the necessity of caution in regard to the British mandate for Mesopotamia. It points out the complication that arises from the proximity of Persia to Mesopotamia. It says:—

Lord Curzon's recent agreement with Persia and the Russo-Persian Convention are quite incompatible, and the Bolsheviks are very anxious to obtain the privileges which the latter conferred upon the Tsar's régime. Here, then, is the situation which may confront British statesmanship before very long: Asia Minor will be dominated by Young Turks; Kurdistan will be, as it now is, a hot-bed of bitter Anglophobia; Azerbaijan and Persia will be either Bolshevist States or closely allied with the Moscow Soviet—a distinction with a very small difference; all the hostile elements in Mesopotamia and Mosul will be encouraged to harass British authority in those lands; Afghanistan and India will watch our prestige in the Middle East retreating down the Tigris and Euphrates, to be drowned in the Persian Gulf. The picture is sombre, but its pessimism is not unjustified. Unless we are prepared to garrison Mesopotamia—and incidentally Persia—with large and well-equipped British armies for an indefinite period, we shall be forced to quit. Therefore the British public should make up its mind. Delay is highly dangerous. The success or failure of British policy in Mesopotamia will determine to a large degree the future of our Mahommedan Empire. The issues involved are supremely important, and should be treated with infinite care.

The Near East.

The *Daily Herald* of June 18, in a leading article under the above title, says that the statesmen of the Entente Powers, in drawing up their peace treaties, took no thought of the inhabitants of the lands which they were "plundering." But, it states, a devastating thing has happened—the Near Eastern peoples have begun to speak:—

That startling revelation, that Arabs and Turks and Syrians and Armenians are human beings with human wills, in no way inclined to be the complacent puppets of three old gentlemen in a far-away city, has blown the Near-Eastern settlement sky-high. The Big Three may wander from San Remo to Spa, or, appropriately enough, to Jericho; but they are not going to settle the Near East. The Near East intends to settle itself. Those disconcerting Russians have seen this while the British and French were playing their complicated map games. They persist in regarding the Near and Middle East as the dwelling-place of peoples, not as a Tom Tiddler's ground for financiers. They come with the friendly counsel of neighbours, not with the designs of plunderers. That is why they are already succeeding. If the Big Three would quietly tear up their treaties and withdraw their troops, the Near East would settle itself. But if they persist in trying to impose their treaties and their armies upon unwilling peoples, they will provoke an upheaval which will destroy more than, even now, they imagine.

MUSICAL NOTES.

Upon the possibilities of Mr. Arnold Bax I have remarked before in this column. He is certainly a composer of genius, even if of unequal and fickle genius. At the Wigmore Hall, on June 15, Miss Harriet Cohen and Mr. John Coates gave a quite representative selection of his pianoforte works and songs, and from this recital, which was very worthily done by both artists, it is not difficult to point out the good and the weak points of Mr. Bax. His prime distinction is the richness of his imagination. Now on his original Celtic genius he has superimposed the imaginative technique of the Russians and the French. Where this imposition is unnoticeable his work is of very high order. But, although his imagination rarely fails, the *cadre* within which he attempts to force it is often insufficiently elastic to allow it full scope, and sometimes the imagination overflows its frame and becomes a rather chaotic mass of notes. An example of the first is "The Slave Girl," where the Russian technique, while of superficial effectiveness, cramps him; and an example of the second is his Sonata, where, side by side with passages of great and quite original beauty, there are places where the words appear to have no meaning. (This sonata, by the way, which was very warmly received by the audience, seemed to me to need two things, decision and excision.) But some of the pieces which Miss Cohen played were very fine music—such as "What the Minstrel told us" and "Nereid." There is a delightful elusiveness in these compositions which Miss Cohen most admirably suggested. (Without doubt she is an artist, whose temperament, moreover, seemed peculiarly apt for the coloured works of Mr. Bax.) The same achievements and limitations that can be seen in his pianoforte pieces are present in Mr. Bax's songs. The mixture of his styles, which is bearable and sometimes effective in his other compositions, often causes confusion in his songs; in things like "Christmas Carol," and a "Roundel" of Chaucer, for instance, a style which is perfectly suited to the words is suddenly and with disastrous results forsaken. In other things, like "The Enchanted Fiddler," "Far in a Western Brookland," and "Ideala," his imagination is consistently expressed, with the consequence, I should say, that they are songs for all time.

Miss Jelly d'Aranyi, who gave a sonata recital with Mrs. Ethel Hobday, at the Wigmore Hall, on June 17, is one of the best fiddlers in this country. Technically speaking she is almost irreproachable, but she has also interpretative gifts of uncommon merit. Her temperament, which is of the warm, passionate sort, was not particularly well suited to the rather cold, dispassionate playing of Mrs. Hobday. This difference in the styles (and also the fact that the atmosphere of this evening was very bad for the playing of a stringed instrument) made the start of the first Sonata—Mozart's in B flat—a little uncertain. But it was not long before Miss d'Aranyi, bowing with most admirable restraint, achieved a fine *ensemble* with Mrs. Hobday, and the two gave a most graceful and charming performance of this sonata. In César Franck's Sonata in A major Miss d'Aranyi's emotional abilities were allowed a larger scope, and she infused very deep feeling into her version; but Mrs. Hobday, whose soundness is best exemplified in classical music, rather overdid her part, almost making the violinist force her tone. The best performance was that of Beethoven's Sonata in C minor, in which both artists played with a finish and breadth that were magnificent: it was so good indeed that one could never have guessed the sex of the artists

Pianoforte quartets are not often satisfactory, for the differences between the pianist and the first violin in regard to leadership are difficult to overcome. But whatever obstacles exist in this combination have been surmounted by the Elzy Pianoforte Quartet, whom I heard at the Æolian Hall on June 18. They are fortunate in possessing a pianist (Mrs. Herbert Withers) of genius, but the three string players are also very good. The Quartet with which they commenced—a fresh, but scarcely individual work by Herbert Howells—sufficed to show that they have common feeling and refined, unselfish instincts. They also played Bridge's "Phantasy" Quartet—a pleasing effort, with some rankly bad patches—and Chausson's Quartet in A major. Apart from climaxes, in which they were sometimes inclined to be loose or weak, they were good in every particular. Their tone and their craftsmanship are especially sound, and they certainly have a future before them. At this concert Miss Dilys Jones sang half a dozen good songs, but the diversion she caused from the quartet playing was hardly necessary. At present she has more of the vices than the virtues of natural singing: possibilities she possesses (she already has taste and manner), but they will never develop without serious training. A cultured voice is as nothing to a cultivated one.

ANDANTE.

THE ZIONISTS IN PALESTINE.

Speaking at a meeting of the Jerusalem and the East Mission, held on June 15 in the Church House, the Bishop in Jerusalem said that he was endeavouring to be a link between the Church in Jerusalem and the Church throughout the world. After referring to the efforts to promote the cause of reunion with the Eastern Churches that had done so much in Jerusalem in the days of Turkish rule, he expressed the hope that the Moslems and Jews might be included in something more than the friendly relations with himself that already existed.

The most interesting part of his lordship's speech was that dealing with Zionism as he sees it on the spot. There was serious danger, he said, just now lest an enduring conflict be begun between those who were being encouraged to settle in Palestine as their national home and those who actually lived in the country, and had lived there for centuries. The present population of Palestine from Dan to Beersheba was 670,000. Of these some 540,000 were Mohammedan, while the Christians and Jews numbered about 65,000. Thus the Jews now resident in Palestine were less than 10 per cent. of the entire population. Most of those Jews were what might be called orthodox or religious Hebrews. Many of them had belonged to Palestine for generations. Zionists were only a certain proportion, though a rapidly increasing proportion, of the thirteen million Jews who were found throughout the world. There were, however, many thousands of devout and religious Jews all over the world who did not support Zionism, and who did not believe that it could ever prosper as a State if it entirely ignored that which was the glory of the ancient Jewish State—religion.

The Bishop went on to say that there was no doubt whatever that Jews could help enormously in the development and regeneration of Palestine. Many of their notable qualifications were just what was required. When Mr. Balfour's Declaration was first made most of the people in the country accepted it quite placidly. Everyone admitted that the coming in of the Jews in reasonable numbers would be heartily welcomed and very useful. But what was the position now? There had been a startling and deplorable change during the past eighteen months. There was now intense and unanimous opposition not only on the part of Christians and Mohammedans, but also on the part of many Orthodox Jews who lived in the country. He was forced wholly and most explicitly to combat the Zionist statement that the people did not mind their coming, or that the number who objected was very small indeed. The opposition was not only very widespread, but just now was very intense. Of the 670,000 people who lived in the country, he would not be the least surprised if more than 600,000 were to vote solidly against Zionism coming in as they saw it and understood it to be. Zionists said that this opposition was due to intrigue and misunderstanding; but he was prepared to say that it was largely due to the behaviour of Zionists. They had not been able to control all their members, and some had behaved and spoken as if the country was already theirs. They had talked freely of what they should do to the holy places. For instance, the Church of the Holy Sepulchre: should they burn it or raze it to the ground? He was very glad that Sir Herbert Samuel had said that the holy places should remain in the hands of the religious bodies to which they belonged; and he believed that he was strong enough to see that policy enforced. The plans for immigration were on a very large scale—the idea being, apparently, to equalise the native population in numbers, and then demand full control of the government. Up to the present very few of the immigrants were of reputable character. They were mostly Russians, Poles, and Roumanians, and many were thoroughly Bolshevistic in their ideas. They had declared that it would be necessary for owners of property to have only a quarter of what they owned now, and articles in the Hebrew Press had been highly inflammatory. The attempt to intimidate the inhabitants had led to a deplorable state of things, and the general attitude which the Zionists had taken up had turned the acceptance of Mr. Balfour's statement by the inhabitants into strong hosility. The British had gone as far as they could in giving privileges to the Zionists. Their growing power and influence had encouraged them to claim far more than a national home; they spoke of the day when the government of the country would be entirely in their hands. By what right and according to what rules of justice did the British Government contemplate handing over the destinies of Palestine to a people who never ruled there for more than five hundred years, and that was three thousand years ago?

The loss of British prestige had been enormous. After the taking of Jerusalem our nation could have done anything with the people, so grateful were they. As he went through Palestine he found the same thing being said everywhere: "We had such ideals of your British Government. Now we wish you had never come here. Why did you not leave us to the Turks? They would never have left us to the Jews." All this had been brought about by the injudicious action of Zionism, by the ill-advised behaviour of its members, by the definitely Bolshevist, and in many cases anti-British, attitude of some of them, and by the intolerance of many of its followers. Britain had not yet taken in the seriousness of the position. It would be said that he was anti-Semitic and opposed to the movement. This he repudiated, for he believed that the Jews would once again be the means of a blessing to all nations. The remedy lay with the Zionists themselves. He had had a talk with Sir Herbert Samuel, and that had been very reassuring, but he had made the foregoing remarks after much consideration.

NEAR EAST BOOKSHELF.

I.—"EASTERN NIGHTS AND FLIGHTS." By "Contact" (Alan Bott). (London: Blackwood's. 7s. 6d. net).

II.—"STUDIES IN JEWISH NATIONALISM." By Leon Simon, with an Introduction by Alfred E. Zimmern. (London: Longmans, Green and Co. 6s. net).

I.—A NEW ARABIAN NIGHTS.

Few of the many volumes of adventure that are published in this country of adventurers are remembered for long, and those that outlive their period of publication are scarcely ever among the "best sellers" of the year, but this book is an exception. A war book it is certainly not, neither is it a mere record of escapes and escapades, still less a chronicle of captivity. These features are indeed present and deftly portrayed, but that which gives the book its enduring value, apart from its subject matter and apart form its literary quality (which is of a very high order) is the characterisation. There is the whole pageant of the gorgeous and the squalid East in its pages. From the Syrian-Græcian-Jewish interpreter who introduced himself as "George, translator of English. I am friend of English, honest to God," to "Michael Ivanovitch Titoff, some time chief engineer of the tramp steamer Batoum," who helped the escapers and "proved to the dissatisfaction of Captain White and myself that he was a thief, a mean blackguard, a cunning liar, a cringing coward, a rat, and an altogether despicable cheat. Otherwise he was not a bad sort of fellow" . . . the conspirators and rogues who crowd its pages are intimate, human, real, touched in with a skill and sympathy that make them live

Realising that only from Constantinople could a successful escape from Turkey be arranged, the author feigned mental derangement, and persuaded a Turkish doctor to send him to hospital in the capital. There he met Captain Tom White, with whom he was eventually to escape. This latter, for purposes of escape, had managed to malinger with "tubercular disease of the ankle" induced by the heroic application of hot poultices until his ankle had acquired a very ominous appearance. . . . From that time the story mounts in a crescendo of excitement. Captain White escaped by jumping from a train during a collision, and Captain Bott followed him soon afterwards by bolting from a café near Galata Bridge, with the help of a Greek waitress. For weeks the escaped pair lived in Constantinople in disguise, waiting for their ship to sail, and experiencing all the terrors of suspense and all the agonies of blackmail, to say nothing of mere physical discomforts. Finally, in the ballast tanks of the Batoum they crouched trembling in the darkness during the police inspection, listened to the noises of the engine-room, the creaking of the anchor chain, and at long last to the churning of the screw as their ship steamed up the Bosphorus. The officers and men of the crew were all rogues, engaged in smuggling opium, cocaine, leather and human contraband to the Ukraine. The experience of the captain of the Batoum, who was taking a passportless woman to Odessa, must be mentioned among a host of other entertaining stories. He had hidden this woman in a deep locker in his chartroom. Into the same locker the kitchen wench, unbeknown to him, had stowed a gentleman friend—a grimy deserter from the Turkish army, with untrimmed beard and odorous clothes. When the Batoum was beyond the Bosphorus and all danger of a search, the captain opened the locker to release his friend. He inserted his arm, and jumped with fright when, instead of a woman, he produced a coal-blackened man! . . . Arrived in Odessa, Captain Bott and his companion obtained false passports with the help of a Russian lady, and lived in the working-class quarter. Odessa was then occupied by German and Austrian troops, but the Ukrainian Bolshevists had hidden a store of arms in cellars and garrets, and there were street disorders every evening. After an exciting fortnight in these surroundings the two escaped prisoners hid in an Ukrainian Red Cross ship, and so reached Varna on the Bulgarian coast, a few days after the British had occupied that port. There, looking like a "third-class scarecrow," Captain Bott reported for duty and gave some very valuable information to the authorities about the enemy-occupied Ukraine.

The last chapter, "A Postscript from Damascus," gives some extraordinarily apt sketches of the cities of the Near and Middle East. Thus Port Said is "a dull heat-heavy hell," from which one "gladly glides down the turquoise-toned canal" to Suez, "a harbour-landlady for squat-sailed dancing dhows." . . . Captain Bott pays tribute also to a noble Englishwoman who risked her life and liberty in helping her countrymen to escape from Constantinople, and who afterwards married one of the officers she had befriended. Truth is stranger than fiction; no novel could provide happier endings or more enthralling reading than "Eastern Nights and Flights." "Time, the greatest of romantics," the author tells us, "has nearly persuaded me that I enjoyed it all." . . . And time, for the reader, will pass all too quickly in Captain Bott's company, for this is one of the most delightful books of the year.

II.—"WHAT WILL HE DO WITH IT?"

The Christian and the Agnostic inquirer who may read these nine restrained and clearly reasoned essays will obtain a very fair insight into the aspirations of modern Zionism. The author, when a Balliol scholar (1902) and the most brilliant classic of his year, carried off the Ireland Scholarship. He seems here not only to call a warning to the more extravagant Zionists, but to insist that the God of Jew, Christian, and Moslem is, to all thinking members of these faiths, a universal God—one and the same—"Hear, O Israel, the Lord thy God is one"—differently interpreted and conceived. The Jewish Jehovah, says Mr. Simon, was of course originally a tribal god, like Baal or Chemosh; from tribal He became national, and now is admittedly universal. He then insists on the difference between the religion of the French, Germans, and English as something forced upon these peoples from the outside, and so foreign to their national instincts and usages that they have never yet wholly conformed to the priestly dogmas—and that of the Jewish people, who, on the contrary, had their religion of themselves or from within; in other words, that their knowledge of a One and Universal Omnipotent and His Law was given them by Him. That they did not obey, that they backslided and still backslide, does not alter the contention that He was not forced upon them through foreign channels. He is not only their National God, but also the Universal God. This very plain English we have here ventured to paraphrase; but the most muddle-headed Christian Sectary from Cromwell to Ignatius Loyola would have to admit that it is a very logical foundation for a claim to a national Jewish homeland, which, indicates Mr. Simon, is his conception of honest Zionism—that and nothing more. Very dispassionately and forgivingly the author handles anti-Semitism in its differing phases in Eastern and Western Europe, and the sum of his nine essays amounts to a contention that a Palestinian Jewish homeland acknowledged by the justice of mankind is the surest means for abating anti-Semitism and the shortcomings of the Jews themselves, which have admittedly at times occasioned it.

In Mr. Leon Simon modern Jewry possesses a very able pleader at the bar.

PERSONAL AND GENERAL.

CALENDAR OF THE WEEK.

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish Dates.

Gregorian (New Style).	Julian (Old Style).	—	Moslem.	Jewish.
1920. June	1920. June.		1338. Shawal	5680. Tamuz.
24	11	Thursday	7	8
25	12	Friday	8	9
26	13	Saturday.....	9	10
27	14	Sunday	10	11
28	15	Monday	11	12
29	16	Tuesday	12	13
30	17	Wednesday	13	14

Monsignor Poli, the Bishop of Allahabad, was received by the Pope on June 14.

The annual dinner of the Sikh Brigade will take place at the Trocadero on July 7.

The Pope on June 15 received in private audience Monsignor Barlassina, the Patriarch of Jerusalem.

Major Morrison Bell, M.P., has returned to London from Malta.

Lady Hermione Buxton has returned to 41, Buckingham Palace Mansions, after spending the spring in Abyssinia.

M. Misu, the Roumanian Minister for Crown Lands, leaves London this week for Bucharest.

Mr. T. B. Hohler, British High Commissioner in Hungary, has arrived at 4, Albemarle Street.

Mr. Alfred Silley has recently returned to this country after a short stay in Constantinople.

M. Constantin Constantinesco, Secretary to the Roumanian Legation, returned to London on Monday from Paris.

Mr. H. H. Sartorius has arrived at Brown's Hotel from the American Legation, Athens, on his way to Warsaw, where he has been appointed Third Secretary.

Durham University has decided to confer the honorary degree of D.C.L. on Sir Theodore Morrison, Principal of Armstrong College, Newcastle-on-Tyne.

On his forthcoming visit to Agram and Laibach the Prince Regent of Serbia will be accompanied by M. Vesnitch, the Premier, and three other Ministers of State.

The 40th annual Burma dinner was held on June 17 at the Prince's Restaurant, Piccadilly, Mr. A. W. Bibby, of the Bibby Steamship Company, Ltd., presiding. Among those present were Sir George Buchanan, Sir F. W. R. Fryer, Sir Charles Addis, and Sir G. B. Bell.

The anniversary meeting of the Central Asian Society took place on June 23, Lord Carnock, P.C., presiding. After the reception of the Council's report for 1919-20 and the election of members of Council for the ensuing session, Mr. H. St. J. B. Philby read a paper on "The Highways of Central Arabia."

Reuter's Paris correspondent reports:—"The Lily of Life," a play written by the Queen of Roumania, is to be performed at the Paris Opera on July 1. Not more than one performance will be given. Queen Marie will probably arrive in France towards the end of June, and is expected to be present at the representation of her play.

Sir Herbert Samuel, first British Governor of Palestine, left London on Monday morning for the Holy Land. In a final message Sir Herbert said: "We are engaged in a high enterprise, and efforts and sacrifices will not be lacking to carry it to a successful issue. With unity among those who care for the development of Palestine, and goodwill of the Arab and Christian population, I hope to secure a future for Palestine which will not be wholly unworthy of the greatness of its past." Lady Samuel will go out later.

An informal reception was given by the Union of East and West on June 17 at the house of Mrs. Geoffrey Lubbock in Lennox Gardens to meet Indian gentlemen now in London. The company included the Princess of Monaco, the Marchioness of Bath, Lady Louise Loder, Sir Rabindranath Tagore and his son, Lord Sinha, the Countess of Coventry, Lady Beecham, Sir Jagadis and Lady Bose, Mrs. Alfred Lyttelton, Sir Krishna Gupta, Sir William and Lady Barrett, Lady Waterhouse, Mr. Charles Roberts and Miss Roberts, Sir Sankaram Nair, Miss Woodhull, the Hon. Mr. Kasim, Mr. and Mrs. N. C. Sen, Mrs. Kingscote, Miss Nesta Coventry, Miss Clarissa Miles, Mrs. Constance Villiers-Stuart, Dr. F. W. Thomas, and Mr. J. N. Das Gupta.

Professor E. G. Browne has presented to the Cambridge University Library a portrait of Emir Faisal, son of the Emir of Nejd, who visited Cambridge last November with his two cousins and three attendants. This was presumably the first time that any Emir of Nejd has visited England.

Commander Gerald Francis Talbot, C.M.G., O.B.E., R.N.V.R., late Naval Attaché at Athens, youngest son of the late Colonel Gerald Francis Talbot and of Mrs. Talbot, Grey Lodge, Bidborough, Kent, was married on June 15, at Holy Trinity Church, Sloane Street, to Mme. Hélène Labouchere, widow of Captain Charles Labouchere, Army of France, of 50, Avenue du Président Wilson, Paris. M. Venizelos, the Greek Prime Minister, who made a special journey from Athens to attend the ceremony, was accompanied by the Greek Minister, M. Demetrius Caclamanos, Mr. M. Embiricos, Captain Tsateonas, and Mr. K. P. Tsolainos, and others at the church included Prince and Princess D'Obolensky, Mrs. Gerald F. Talbot, Major Bertram and Mrs. and Miss Talbot, Mr. Ernest and Mrs. Sotham, Earl Brownlow and Mrs. Adelbert Cust, Mr. Humphrey Talbot, Major-General and the Hon. Mrs. George Leveson-Gower and Miss Leveson-Gower, Sir Reginald and the Hon. Lady Talbot, Mrs. Algernon Talbot and Miss Talbot, Sir John and Lady Thornycroft, Rear-Admiral Sir Douglas Brownrigg, Sir John and Lady Stavridi, Sir Arthur and Lady Crosfield, Commander Howard, R.N., Captain and Mrs. Panas, Major Venizelos, and several of the *personnel* of the Greek Legation. The Greek Government presented the bridegroom with a table service of centrepiece and tray, and massive candelabra, as well as a set of dessert plates, and M. Venizelos gave an antique ivory chess set.

APPOINTMENTS, ETC.

M. M. B. Gavrilovitch has been appointed Secretary to the Legation of the Kingdom of Serbs, Croats, and Slovenes.

It is announced from Princeton (New Jersey) that Professor E. Capps, of the Department of Greek of Princeton University, has been appointed United States Minister to Greece.

The King has given unrestricted permission to the undermentioned to wear the following decoration conferred by the Sultan of Egypt:—

ORDER OF THE NILE.

Capt. R. F. Thom, R.N.; Capt. A. G. Alston, C.M.G., R.N.

OBITUARY.

At St. Malo, France, on June 17, the death took place of Mr William James David Ansell, I.S.O., late Chief Collector of Customs, Cyprus, and of St. Martin's, Jersey, member of the Constitutional Club, Royal Colonial Institute, and a Fellow of the Royal Horticultural Society.

The death is announced of Mme. Anna Raffi, widow of the Armenian writer. Mme. Raffi had lived in this country for over a quarter of a century, and devoted her energies to the publication of her husband's literary work. She died at the age of 72, as the result of an accident.

LORD WOLSELEY'S STATUE.

The Duke of Connaught will unveil to-morrow an equestrian statue of Field Marshal Lord Wolseley, which has been erected by public subscription on the Horse Guards Parade. The statue, which has been placed in the recess of the Horse Guards building to the north of the central archway, is from the design of Sir William Goscombe John, R.A., and is cast from the metal of guns taken in Lord Wolseley's campaigns. It is mounted on a pedestal of Portland stone which stands on a granite base of two steps. This has been designed by Mr. R. J. Allison (chief architect), and the work of erection executed by the Office of Works. On the front of the pedestal is the single name "Wolseley," and on the back of it is the following inscription:—

"Field-Marshal Viscount Wolseley, K.P., G.C.B., O.M., G.C.M.G., 1833-1913. Commander-in-Chief of the British Army, 1895-1900. Burmah 1852-3, Crimea 1854-5, Indian Mutiny 1857-9, China 1860-1, Red River 1870, Ashanti 1873-4, South Africa 1879, Egypt 1882, Soudan 1884-5.

NEW ROUMANIAN CABINET.

BUCHAREST, June 21.—The new Ministry has been formed as follows:—

Premier	General AVARESCU
Foreign Affairs	M. TAKE JONESCU
Interior	M. ARGETOYANU
War	General RASCANU
Public Instruction	M. NEGULESCU
Fine Arts	M. OCTAIRAN GOGA
Communications	General VALECANU
Public Works	M. GRECEANU
Finance	M. TITULESCU
Agriculture	M. CUDALCU
Labour	M. FRANCOU JASI
Justice	M. CANTACUZENE
Industry and Commerce	M. OCTAIRAN TASLAVANU
Reconstruction and Food Supply	M. ANASTASIU
Bukovina	Baron STARCEA
Transylvania	M. MOSCONY
Bessarabia	M. SERGEIE
State and Agriculture	M. GAROFLID.

—*Reuter.*

AN APPEAL.

We have received the following appeal addressed to all free and democratic people of Europe and America from M. Athanas Dontcheff, a Bulgarian prisoner of war, writing on behalf of his 11,750 comrades still detained in Greece as hostages of war since the Armistice of 1918, according to the clauses of which they were temporarily handed over to the Allies for repairing the lines of communication in Macedonia:—

"Free brothers! We turn our voice to you to beg your support for our liberation to return back to our homes. It is enough all that long time of imprisonment and punishment we have had until now. Have we not already redeemed by our sufferings, being far away from our families during so many months after the war, all our human sins? It is twenty months that we remain hostages of war. We live a deplorable life. We have no news whatever from home, not knowing how are our mothers, fathers, wives, and children. Our life is miserable; every elapsed day kills our feeling, and one day, when we return back home—if that ever happens—we shall be almost all sick and invalided people. A great many of us, not cared for, have died on the Greek islands. Nobody has shown a sign of sympathy with us. What is it for that we are to be held responsible in prison for such a long time after the peace has been signed and all other prisoners of war all over Europe long ago released?

A last appeal to the free people of Europe. Shall we not get your voice of protest in favour of our being released? Shall we have still to suffer? Is there left in Europe any sympathy and human feeling for us living dead—the hostages of war?"

NEWS IN BRIEF.

General Gouraud's deferred visit to Egypt is expected to take place in about a week.

It has been established that damage amounting to £90.000 was done during the riots in Jerusalem last April

A daily service of omnibuses from Tangier to Tetuan has been inaugurated, for the first time giving the public facilities for communication between Tangier and the interior.

To prevent the waste of the coal wealth of India the creation of a controlling authority is recommended by a Committee appointed by the Government of India.

It is announced from Paris that at a meeting of the Foreign Affairs Commission of the Chamber on June 12 it was decided to appoint a delegation to carry out investigations in Constantinople, Syria, and Cilicia.

It has been announced that the formation of a Revolutionary Committee had taken place in Western Thrace, and a manifesto has been issued by the Turco-Bulgarian Revolutionary Committee.

The room at the British Museum containing Phœnician antiquities, antiquities from Carthage, etc., and the room containing Himyaritic, Palmyrene, and other inscriptions was opened to visitors on June 21, and remains open.

Reports received at Belgrade state that vessels laden with war material are constantly arriving at Budapest *viâ* the Danube, and the Allied Military Commission has asked the Supreme Council to give it control over the Danube shipping so as to prevent the arming of Hungary.

Under date of June 20, Reuter's Belgrade correspondent reports:—"The Serbian official agency states that the Italian troops having withdrawn from Antivari and Dulcigno and the whole Montenegrin coast, Serbian troops immediately occupied the evacuated districts. The Italian troops have finally left Montenegro, and there are now no foreign troops in the country."

APPOINTMENTS WANTED.

THE Ladies' League (under Royal Patronage), 118, New Bond Street, successfully recommends Lady Secretaries, Chaperons, Housekeepers, Companions, Secretaries, Governesses, Nursery Governesses, Nurse Companions, Lady Nurses, etc.

WHERE TO STAY.

For the convenience of visitors from overseas "THE NEAR EAST" offers its services in booking rooms at hotels in the United Kingdom, on receipt of instructions preferably a week before the date of arrival. When instructions are telegraphed the message can be abbreviated as follows:—

"EASTAPROX, LONDON. TWENTIETH MATLOCK TWO

(The visitor's name and place of residence abroad to be added)."

which would indicate that two rooms were required at Matlock on the 20th of the month.

THURSDAY, JUNE 24, 1920.

INDIA: A NATION?

As the time draws near for the first elections under the new Indian constitution, and practical politicians devote increased energy to the details of organisation and campaigning, the detached observer finds himself less and less disposed to plunge into the burning questions of the moment, matters of franchises, or constituencies, or qualifications, and concentrates his attention on the wider aspects of this, perhaps, the greatest constitutional enterprise undertaken in the whole course of history. We have set out to transform India from a Dependency into one of the free nations of the Empire; what auguries can we draw of the result? Shall we succeed in conferring on India that effective national unity towards which she has always tended, but which, unaided, she has never been able to achieve? Will existing cleavages prove fatal? Will new cleavages develop to imperil the attempt? Such are the great questions underlying the work on which the Empire is engaged. The most important factor in the problem is unquestionably the existence of a fundamental unity of outlook, perceptible throughout the length and breadth of the country, obscured sometimes, but never wholly destroyed, by the temporary predominance of local or sectarian ideals, and justifying the use of the word India in a sense which is not merely geographical. Recognition of this underlying unity was perhaps the most striking feature of the lecture delivered last week by Sir Valentine Chirol in commemoration of the life and work of Sir George Birdwood, but it is no new discovery, for it has been seen, or at least felt, by every Englishman who, like Sir George Birdwood himself, has penetrated below the surface of Indian life; it is something entirely different from the superficial unanimity of expression forced upon Indian politicians by the experience of the last few years, and already disintegrating under the breath of a new reality; its very depth is a guarantee of its stability, and, in the widest sense, it constitutes the foundation on which we have to build. Our task is to bring this unity to the light; to make Indians in the mass conscious that it is there; and to enable the world to realise that, amidst the infinite diversity of race and language, religion and culture, there is this distinctive characteristic which brings all Indians together and separates them from other nations. When that fact is fully recognised on both sides, the Indian nation will at last be a reality.

Of the existing obstacles to its realisation, by far the greatest is the cleavage between Hinduism and Islam. We are not speaking now of concrete differences of creed, but rather of the difference in mentality, of which accepted beliefs form only a part. The frame of mind consistent with the strict Moslem creed is in fact very different from that in which Hinduism finds congenial soil, and if the two religions were adequately represented by their professional exponents, we should be forced to the conclusion that national unity is definitely and permanently impossible. On both sides, however, changes have taken place, which make it possible to hope for an eventual concordat. The recent revival of Hinduism has been accompanied by a certain adjustment of Orientation. The old creed, based doubtless on many centuries of stern experience, taught that life is in its essence evil, and that escape from it is the sole hope for the individual. In the conditions resulting from British rule, many classes have begun to realise that life is worth living for itself, and the gradual spread of this attitude is bound to bring the community as a whole more nearly into line with men of other ways of thought. Indian Moslems, on their part, have moved some distance from the strictest interpretation of their creed; taken in the mass, they are now hesitating between the national and the sectarian ideal, and there is little doubt that while the latter still preponderates, the vision of a united India is gaining ground among the classes from which future leaders will be drawn. The struggle is by no means over; various incidents have occurred in recent years to suggest the possibility of a revival of militant orthodoxy among the rank and file, while it must be anticipated that the outrageous agitation conducted on the question of the Khalifate has operated to put back the clock. Notwithstanding these considerations, we incline to the belief that the national ideal will ultimately win, and that a time will come when the phrase Indian Moslems can be discarded, and the members of the community can be described with justice as Moslem Indians. Taking into account, therefore, the changes in the attitude of both parties, we are justified in expecting that a gradual approximation will result, and that, given wise and cautious leadership on either side, the religious cleavage may eventually be eliminated from the political field.

Apart from this momentous question, no very serious obstacle to national unity is apparent at the moment, but some observers discern the possibility of an even greater danger in the future through the growth of racial and regional patriotism, a development which might conceivably split all India into fragments once again. In attempting to estimate the future play of these forces, it is essential to realise that all the internal influences of the last sixty years have worked strongly in favour of national unification. Legislation applied equally throughout the country, the English language as the only passport to responsible office or to the fruits of Western culture, most of all, perhaps, the growing pressure of administrative uniformity, these forces in particular have combined to bring home to Indians the conception of a single nation. The educated classes have been quick to develop this conception in the favourable conditions furnished by cheap and speedy means of communication; its realisation has been accepted, perhaps without sufficient consideration, in the Press and on the platform as an accomplished fact; and the unanimity of politicians sufficed at one time to mislead even the central administration, which proceeded on the assumption that racial and regional patriotism did not exist, and that the boundaries of provinces could be adjusted to meet the convenience of the changing times. The agitation evoked by the partition of Bengal destroyed that false impression once for all, and at the same time gave a marked impetus to the expression of similar aspirations in other parts of India; to-day no one questions the unity of Bengal, while from East and West alike we have insistent demands for the adjustment of provincial boundaries on racial lines. Now it is quite certain that the growth of such aspirations will be fostered by the provisions of the new constitution. Under the highly centralised régime of to-day, a province has machinery, but not a policy; from next year onwards each province will have to develop a policy of its own, and the real strain will come when a policy is developed at variance with that of neighbouring administrations or of the central Government itself. Decentralisation is the note of the new India, but in the historical period administrative decentralisation has ordinarily been the prelude to political disruption, and the great question which has to be decided is whether the strength of the forces making for unification will suffice to overcome the new centrifugal impetus. It is a question on which prophecy would be wholly out of place, and if we insist on its importance, our object is to impress on the Indian statesmen of to-day and to-morrow the magnitude of the responsibility which rests upon them. It is certain that the disruptive forces will increase in strength; the demands of racial or regional particularism may at any moment break all bounds; and it will indeed be a statesman's task to harmonise such local aspirations with the permanent and vital interests of India as a whole.

AUSTRALIA AND THE MANDATE FOR ARMENIA.

By Estelle Blyth.

This is the day of the rebirth of little nations. We have seen Belgium, Serbia, and Poland stripped and tortured, sold into slavery, bleeding and hurt unto death; and yet out of the ashes of each a little winged life is slowly rising in radiant promise for the future. The tragedy of Armenia has been a longer and a sadder one even than these; for generations she has endured sufferings that would have exterminated a people less virile and tenacious in character. The Armenians are pre-eminently a combatant race. Their country, with its great mountains, its mighty rivers and vast inland lakes, and the rigours of its climate, has bred men whose national characteristics have been moulded and stimulated by incessant conflict with nature for a livelihood and with man for the right to live. They are hardy both in mind and body, fiercely independent at heart, passionately conservative in all matters affecting national life and thought—and this after centuries of alien rule.

An Armenian writer has called Armenia "the mountainous island," as, owing to the fact that it lies between the seas and the immense plains of Mesopotamia, it looks like an immense island. Its rugged mountain chains make both for protection and for insularity, but its position in relation to other countries has rendered impossible the preservation of its integrity as an independent kingdom. A sea-island can isolate itself provided it has a navy, but can never be isolated against its will. A land-island cannot maintain either its isolation or its integrity; the mountains that hem it in are no harder to overcome than to defend, and may betray either side.

Much of the ancient Empire of Armenia is now distributed amongst Russia, Turkey, and Persia, those powerful surrounding oceans which have encroached upon the inland isle. In ancient times its independence was more easily ensured by the difficulty of access by an invading army, and by the almost impossibility of such an army maintaining open communications through regions whose natural and climatic inhospitality was intensified by proud, hostile, and relentless inhabitants. So it was that when from time to time Armenia's independence was overthrown, it was repeatedly recovered up to the Middle Ages, though with varying boundary-lines. When Armenia became a regular trade route between East and West, however, its isolation was subtly undermined; by its growing economic dependence upon other lands it opened the door to influences too many and too strong for any one nation to control. The ancient geographers distinguished a greater Armenia, as expressed in the larger and eastern portion limited by Mesopotamia, Assyria, and the Caspian Sea, from a Lesser Armenia, west of the Euphrates. This Lesser Armenia is now included in what is known as Turkish Armenia, which has also closed upon the vilayets of Van, Bitlis, Dersim, and Erzerum, together with portions of the vilayets of Diarbekr and Kharput. Russian Armenia is the north-eastern portion of old Greater Armenia, with Erivan, Elisabetpol, and Kars, and part of Tiflis, all once a portion of Persian Armenia; while to Persia now belong the south-eastern angle of Greater Armenia and the province of Azerbaijan. The history of these altered and readjusted boundaries is that of the religious strife, political greed, and racial enmity which have torn and distracted Asia from the dawn of the ages onwards, rendering her both the sport and the prey of human passions.

The Armenian question of modern times was born of a good impulse, and nursed by selfishness and jealousy of the Great Powers. By the Treaty of San Stefano Turkey engaged to Russia to carry out reforms in the "provinces inhabited by Armenians, and to guarantee their security against Kurds and Circassians." This was superseded by the Treaty of Berlin, Turkey renewing her promises to six signatory Powers; it was, of course, much easier for Turkey to play a good game with six cards instead of one. Unfortunately, Russia helped Turkey, whether ignorantly or not, by her severity to the Armenians after the assassination of Alexander II. The Armenian language was discouraged, Armenian schools were forcibly shut down, and there was much religious coercion. The Armenians then essayed to start a national independence movement with the help of the Turkish Armenians, which led to much revolutionary propaganda and talk, much bitterness and futile nationalism, to the endless spinning of webs of intrigue (in which the Armenian is a past-master), and to small blazes here and there. Turkey took advantage of their restlessness, and struck down rebellion with a heavy hand, being ably supported and assisted in all punitive measures by the Kurds, who were exceedingly jealous of the sympathy for Armenia manifested by Europe. And so it began, that ghastly tale of Armenian struggles for independence which, under the Turkish lash, became a struggle for bare survival—disturbances, riots, intrigues, risings, on Armenia's side, and on Turkey's the massacres.

No race has suffered such terrible and incessant martyrdom. The sufferings of Jewry pale in comparison. The Armenians are the most tragic, the most mysterious people in the world. There seems no reason to our eyes why they, as a race, should have been singled out for such appalling suffering throughout so many centuries; there is no great stain upon their history while they were yet a kingdom. The Jews rejected the Messiah because He came in the form of a servant. "Not this Man but Barabbas!" they cried, and "His blood be on us and on our children!" Judaism to-day is not a religious force; it is an extinct volcano. Neither is Zionism a religious movement, but a political. But the case of Armenia is utterly different. With many unlovely qualities, as well as many that are admirable, the Armenians are first and foremost a people animated by a vital religious spirit. They have lost their independence as a people, but they have kept their national Church intact; it is separate, distinct, national; it acknowledges no foreign head, it brooks no foreign control; it adheres to its own laws of government without interference or assistance from outside; perhaps of all the Eastern Churches it is the most virile.

The future of Armenia is still in the balance, owing to the distracted state of Europe and America's unwillingness to undertake any outside obligations. As soon as the terms of the Turkish Peace Treaty begin to be *felt* by Turkey much of Armenia's trouble will automatically be eased; but she is not strong enough to stand alone, surrounded as she is by powerful and antagonistic neighbours who dread her love of intrigue. The natural protectress of Armenia is Russia, who has always been regarded by Turkey's Christian subjects as their champion; but Russia is unable to assume the responsibility she would never have shirked under normal conditions. Possibly if some Power would undertake the Armenian Mandate for the next ten or fifteen years, Russia by then would be able to take over the charge. It was hoped that America would have stood sponsor to Armenia during her time of

weakness, but it now seems certain that America will not share the white man's burden in Europe. Deeply disappointing as her aloofness is to those who hoped for her as a comrade in peace as well as in war, and heavily as the extra burden falls on England and France (already so weighted with responsibility), we must not therefore judge her too harshly. She stands to-day at the cross-roads, facing as grave a spiritual peril as any she has had to meet in all her history; will she repudiate the spirit of the Great Charter of Liberty from which she, too, derives the inspiration of her freedom? "To no man will we *deny* or *delay* justice."

Sympathy for America, however, will not settle the question of the Armenian Mandate. It is very unlikely that Armenia would settle down under a Roman Catholic power; there would be constant friction, and worse, between subordinates on both sides. Religion looms so terribly large in the forefront of Eastern politics. France is likely to have her hands overfull in Syria; England is heavily burdened with world-wide obligations, and fresh, though uncoveted, responsibilities in Africa and the East.

But why not Australia, that great self-governing Dominion, equally a signatory of the League of Nations with England and France? There is, perhaps, no country in the world so strong and lusty, so eager of achievement, possessed of such a vital instinct for freedom. Indeed, the instinct is so strong that in individuals it will often escape as licence, but Australia is young, and she will grow up straight of back and limb. To govern and guard Armenia will be no easy task; outside pressure there will always be, and also intrigue from within; but Australia has a clear head and a certain hardness of character which would carry her far in such a task. The East worships strength, and not in this generation will the fighting fame of Australia be forgotten—Gallipoli, France, Palestine! Again, Australia is singularly sound at heart; in an age when the foulness of Bolshevism has crept like an infection from one country to another, Australia has kept freer, perhaps, than any other country. Her anxiety in former years over Japanese proximity to her inviolate shores, and the presence of many Syrian strangers within her gates, have given her training and understanding in Eastern affairs. It may be urged that the occasional indiscipline or lawlessness of her magnificent fighters would weaken her as a Mandatory Power. It is improbable. Responsibility is a great teacher. Why should we fear that Australia, who has shown herself so prodigal of life, and talent, and wealth in the war, would suddenly turn selfish and so fail as a Mandatory Power? No one can deny that she has all the elements of true greatness, for whose ripening only time is necessary. The debates in the Federal Parliament are informed by an infinitely wider spirit than is the average in the American Senate. Australia's generosity, her fierce instinct of freedom, personal and national, would give her a most sympathetic understanding of Armenia's unique difficulties; and she, too, would gain by contact with a people who have preserved their faith and ancient ideals undimmed through centuries of unparalleled suffering.

This is but the outline of a scheme which others are better qualified to fill in and amplify. In assuming the task, Australia at least would be unfettered by old-world prejudice and jealousy. In accepting Australia's protection, Armenia would find herself allied to one who will eventually take rank as one of the great world Powers. Left to herself, Armenia, in her weakness and misery, becomes a centre of danger to both East and West, however unwillingly; for the land that was once the trade-route between the two hemispheres may also, if unguarded, become a highway for triumphant Bolshevism.

A message from Temesvar reports an explosion at the dynamite depot of a mine just as the miners were leaving the shaft. One hundred and seventy-three bodies have already been recovered.

The Moslem festival "Id-ul-Fitr" was celebrated at the Woking mosque on June 17. Mohammedans from all parts of the United Kingdom, including the members of the Indian Khalifate Delegation, attended. The festival marks the termination of the month's fast in Ramadan, and is the occasion for rejoicings and fraternal greetings among the "faithful."

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

In view of the conditions that have obtained in a great part of the sphere of operations of the Levant Company, the first report of that undertaking can only be regarded as extremely satisfactory. The company has been able to transact an extensive business with Turkey on remunerative terms, and has established branches in Serbia, Roumania, Bulgaria, Mesopotamia, Batoum, Odessa, and Novorossisk. Those at the last two centres, however, have had to be temporarily closed owing to the occupation of the towns by the Bolshevists. Besides the branches mentioned, subsidiary companies have been formed to work in Egypt and the Sudan, and several transactions of considerable importance are in hand which, it is believed, will result in satisfactory profits.

***

The profit and loss account shows a net profit of £33,850, a notable result when it is borne in mind that the company had the full use of the ordinary share capital for only a short period of the year, and that in order that there should be no delay in submitting the accounts, no profits in respect of the branches or of the company's holding in J. W. Whittall and Co., Ltd., are included, though provision has been made for possible losses in connection with the closing of the branches at Odessa and Novorossisk. It is proposed to pay a dividend of seven per cent. on the ordinary and deferred shares, calculated on the dates on which the instalments were due, absorbing £24,730, leaving £830 to be carried forward.

***

Particulars are given in another column of the new Indian Government rupee loan. The amount is unlimited, but the loan is in two forms. One is a long-term loan issued at 95, and repayable at par not earlier than October 15, 1945, and not later than October 15, 1955. Indian War Bonds will be accepted at par in subscription to this issue except the 1925 and 1928 series, which will be accepted as equivalent to Rs. 102.4 and Rs. 103.4 respectively for every Rs. 100 nominal value of War Bonds tendered. Indian Treasury Bills will also be accepted.

***

The other form of the loan takes the shape of ten-year bonds issued at par and repayable at par in 1930, bearing interest at 6 per cent. per annum. Indian War Bonds of the 1920 and 1921 series will be accepted at par in subscription to this loan. Those of 1921 will carry interest at 6 per cent. from the date of tender, and those of 1920 from the date of tender or August 15, 1920, whichever is the earlier. Both forms of the loan are free of Indian income-tax. Cash subscription will be received in India from July 5 to August 14, 1920, but subscriptions in the form of Indian War Bonds will be received in India up to October 15.

***

The latest information that reaches me with regard to crop conditions in Bulgaria is, generally speaking, most satisfactory. The favourable climatic conditions during the spring encouraged sowings, and the area under cultivation has been very considerably increased. With the exception of one area, the rainfall has been adequate, and the crops promise well, particularly rye and barley. The outlook as regards otto of roses is, however, unpromising. The rose-fields suffered greatly through the drought of 1919, following on the neglect during the war, and it was found necessary to plough up the greater part of the rose-fields, principally in the region of Kazanlik. The rose-fields that have been spared have been carefully looked after, and their condition is reported to be satisfactory, but, in the circumstances, a rich harvest is naturally not to be expected.

***

The report of the Burmah Oil Company, which has just been issued, shows that, as was evident from the dividend statement, the company has had an exceedingly prosperous year. The gross profits amounted to £4,655,000, as against £3,305,100 for the previous period, and the ordinary dividend is increased from 30 to 50 per cent., free of tax, while there is, in addition, to be a bonus distribution of shares in the proportion of four new shares for every existing five shares to holders on the register as at July 8. The allocations include £1,291,000 to the general reserve, bringing that fund up to £2,291,000, this increase being due to the necessity for providing capital for the development of the business. The excess profits duty is estimated at £1,300,000, and the carry forward is £236,900, as against £196,900.

***

The remarkable increase in the profits of the company has been mainly due to the rise in the value of the rupee, though other factors have played a considerable part, notably reduced fuel consumption, and the greater yield of the more valuable products of crude petroleum as the result of improvements at the refineries. No strikes of oil have been made in the outside districts, but it is stated that developments of a more favourable nature have attended the drilling operations in Assam, where oil of a very low grade was struck some four years ago, and the higher price obtainable for oils of this character gives rise to hope that a paying yield will be developed in the locality. In general the outlook for the current year is favourable.

***

A contemporary states that an important deposit of iron ore has been discovered in Morocco between the river El Abid and the Robia, in the neighbourhood of El Bourdoudj. The deposit is said to be on the surface of the ground, and to contain some hundred millions of tons of rich ore. Its development will be facilitated by the fact that power for driving machinery can be obtained from the river El Abid, and the transport problem will be solved by the construction of the railway which is to be built to connect the phosphate deposits at El Bourdoudj with the port of Casablanca.

***

A communique issued by the Government of India this week announced the decision to put into force three measures with a view to giving effect to the policy laid down by the Currency Committee. An ordinance is being issued by the Governor-General declaring that sovereigns and half-sovereigns will cease until further notice to be legal tender, though they will be received by Government at the present ratio of Rs. 15 during a period of twenty-one days—that is, until July 12. On the expiry of that period the restrictions over the import of British gold coin will also be withdrawn. As from June 21, however, restrictions over the import of gold bullion and foreign coin have been removed. At the forthcoming session of the Legislative Council, a Bill is to be submitted prescribing the new ratio of Rs. 10 to the sovereign, at which the sovereign will become again legal tender. The announcement is also made by the Government of India that, having regard to the fall in the market value of sterling, the rates of Reverse Councils will be 1s. 11 19-32d. for Immediates and 1s. 11 11-16d. for deferred, these being the rates which will ultimately hold when sterling once more returns to par with gold.

Commerce and Industry.

(REPORTS FROM OUR OWN CORRESPONDENTS.)

GREECE.

ATHENS, May 29.

Crops Damaged by Rains.

The heavy rains which have fallen in various parts of Greece, and which are most unseasonable—it being comparatively rare for rain to fall in Greece after the end of April—are reported to have caused considerable damage. In Thessaly the cereal crop, which is a good one this year, has been practically unaffected, but in the Calamata district the damage to the vines and cereals is estimated at about 5 per cent., and in the provinces of Achaia and Elidos the damage is stated to be much more serious. The vines and fruit trees have suffered severely. Rains at this time of the year are extremely detrimental to the currant and grape crops, as the heavy showers, followed by severe heat, produce perinosporos, and considerably reduce the yield of the vines.

The prospects for the olive and oil crop are extremely good.

Trade and the Drachma.

The continued depreciation of the Greek exchange, sterling being quoted at 34.25 and the dollar at 8.95, has had the effect of considerably diminishing the imports from Great Britain and America, and merchants are very chary of making new purchases at the high rates of exchange at which foreign bills are now obtainable. The trade lull has had the effect, incidentally, of improving somewhat the congestion at the Piræus.

Some British and American firms who have forwarded goods on consignment have been rather badly hit by the rise in the sterling and dollar exchange. In some cases merchants have refused to take up bills of lading for goods ordered by them, even occasionally sacrificing advances made when ordering. It is desirable for British firms to ascertain the standing of the firms with whom they are dealing, and where deemed necessary, when accepting orders, to demand a sufficient advance to cover them against a possible loss on exchange in the event of consignees refusing to take up documents, or, as an alternative, to demand cash against documents in London before shipment.

Imports of Canadian Meat.

The Dominion liner Port Adelaide has arrived in the port of Piræus with a cargo of about 3,500 tons of Canadian frozen meat for account of the Greek Government. This is the second cargo this year from Canada, the former being carried in an American steamer. Owing to lack of cold storage facilities, these ships have been retained in port as depôts for their cargo, the first steamer to arrive having been in port for practically three months, her cargo having been discharged to keep pace with the daily consumption. It seems probable that the Port Adelaide will likewise serve as a depôt ship for some considerable time.

These are the first consignments of frozen meat that have arrived in Greece, and there is naturally a certain amount of prejudice to be overcome before people take to it. The Government, however, are taking energetic measures to introduce this meat into Greece, and to familiarise the people to its use. It is unfortunate that there is no adequate cold storage either at Piræus or Athens, as Canadian frozen meat is a boon to the working classes, since it is sold at about half the price of fresh meat and is very much more palatable than the native fresh beef. The Canadian export firms interested might well take some steps towards securing the erection of adequate cold storage at Piræus or at Athens, as once the initial prejudice has been overcome there would appear to be no reason why Piræus should not almost rank with Genoa as a meat-importing port, since Greece has never been a cattle-raising country.

ATHENS, June 6.

The Second Domestic Loan.

The result of the loan for 300,000,000 drachmæ—Greece's second internal loan—has been announced. Public subscriptions amounted to 245,000,000 drachmæ, and the remainder has been covered by the banks.

YUGOSLAVIA.

BELGRADE, June 13.

Crop Prospects.

The grape harvest is so promising that a substantial surplus production is anticipated, and the wine-growers of Srem, the Banat and Bachka have petitioned the Minister of Finance for a reduction in the export duty. The Minister has met their wishes by lowering the duty from 100 to 5 dinars per hectolitre.

The unlimited export of beans has been permitted until August.

Export of Cattle.

The Government has authorised the export of a thousand head of oxen to Czecho-Slovakia, as that country requires huge stocks of meat to supply the demands of the immense number of visitors from all parts to the forthcoming Concourse of Sokols from all Slavonic lands.

The Minister of Agriculture has forbidden the slaughtering of cattle on two days per week throughout the country.

Miscellaneous.

The Minister of Finance has forbidden banks to operate on the Bourse as buyers of foreign money. This has been done with the object of preventing speculation by certain banks which have been endeavouring to keep down the value of the dinar.

The heads of a commercial treaty with Austria have been agreed upon, and the details are now being settled, defining commodities and prices.

MOROCCO.

TANGIER, June 9.

Another Strike.

There is another strike at this port. This time it is the men who discharge the lighters and handle the goods in the Customs warehouses. It is hoped that the dispute will be settled in a few days.

Identity Cards for Travellers.

In the *Bulletin Officiel* of the French Protectorate for May 25 a Dahir is published instituting identity cards for commercial travellers. The journal has not arrived at the time of writing, and the terms of the Dahir are not known. It is expected, however, that it will not be made applicable to British subjects without the strictest examination by the authorities at home, as the object of instituting identity cards is very obscure.

THE EGYPTIAN COTTON POSITION.—III.

THE PROSPECTIVE DEMAND.

By John A. Todd, B.L.

In the previous articles the writer has dealt with the position of supply both of long staple and short staple cotton. It may be summed up in this way, that while the prospects of the long staple crops this year are distinctly better than last year, the outlook for short staple is extremely unsatisfactory. Making all allowances for the wonderful recuperative power of the cotton crop if the weather should be favourable from now onwards, there is no possibility of more than a twelve million bale American crop this year; while if the conditions continue unfavourable the crop may quite well be even below ten million bales. We have, therefore, to face the practical certainty of a short American crop for the sixth year in succession. The question is, what effect these conditions are likely to have on the price not only of American but also of long staple cotton. The supply side of the equation is now fairly well known, and the problem is almost entirely one of demand.

The conditions which rule the effective demand for cotton to-day throughout the world are three-fold. The first factor in the situation is the world's potential demand for cotton goods of all kinds. The second is the capacity of the world's mills to spin and weave cotton, while the third is the financial problem of the capacity of the world, especially of Europe, to pay for the raw cotton and cotton goods which it requires.

The first of these three factors is comparatively simple. The world's potential demand for cotton goods to-day is at least as great as it was before the war, which means that it is substantially larger than the present actual output. Cotton is still the cheapest textile available for clothing purposes and many others, and the world's demand for clothing depends on the standard of living which the great bulk of its population, especially in tropical and semi-tropical countries, can afford to maintain. That standard has certainly not been lowered as the result of the war. The industrial classes of Europe and America have attained a level of wages during the war so much in excess of pre-war standards that they are able to buy a great deal more of the essentials of life, such as clothing, than ever before; and the same condition holds among the huge populations of Oriental and other agricultural countries, whose raw materials have been commanding unprecedented prices. At the same time the blockade of Central Europe has exhausted their stocks of cotton goods of all kinds, while the agricultural countries of the East and West have been unable, owing to shipping and other difficulties, to get the goods which they had the money to buy. This state of affairs will continue substantially unaltered until the supply is materially increased, unless there is a financial cataclysm, which, by producing a world-wide fall of wages, or a serious amount of unemployment, will again reduce the working classes to a relatively impoverished condition. So long as that does not happen, the problem of the world's demand for cotton goods is largely a question of prices. There is not nearly enough being produced in the world to satisfy the potential demand, and prices must rise high enough to restrict the actual consumption within the limits of the available supply.

This, however, involves the second factor in the question above referred to. The supply to-day is not simply a question of the supply of raw material, but, rather, a question of the amount of goods which can be produced by the world's mills. The fact is that for some time back the reduced supply of raw material, though far short of the potential demand for goods, has been about as much as the mills could handle, because of their restricted output. The reconstruction of the cotton mills in the devastated areas of France and Belgium was bound to be a slow process, yet it is already becoming clear that long before they reach their pre-war output they will be faced with the same difficulty as has affected England and America, namely, the shortage of labour. The shorter working hours everywhere have, of course, directly and almost proportionately reduced the output of the existing plant, and that reduction must be faced as a more or less permanent factor in the situation. It could have been very substantially modified if it had been possible to introduce labour-saving machinery, but that, again, will take time, because the output of the world's textile machine makers is far short of the present demand, and will be so for some time to come.

Against this, however, it must be remembered that spindles and looms are being turned out at the maximum rate possible, and the world's capacity to manufacture cotton goods is certainly increasing every day, and will continue to do so as long as the profits of the industry are anything like as high as they have been lately. This recovery has proceeded to such an extent that already the world is actually spinning more cotton than is being produced; and, as far as American cotton is concerned, the stocks of raw cotton, on which we have to a certain extent been living during the past year at least, are being eaten into at a rate which must bring us within sight of a definite shortage at a very early date. The consumption in America to-day is getting dangerously near the rate of seven million bales per annum, mostly American. Our own consumption of American cotton alone before the war was nearly 3½ million bales. The American crop this year is not likely to exceed the total of these two figures. How much is left for the rest of the world?

One reason why the position has not yet been fully realised by the trade is probably the fact of the large carry-over in America of nearly seven million bales at the end of last season, and the large stock at present in Liverpool of cotton of all kinds, which is well over a million bales, a figure that has not been equalled since 1915. With regard to the carry-over in America, however, it must be remembered that the quality of a great deal of it is extremely doubtful. A special census recently taken showed that 1,039,769 bales of it were unspinnable, consisting of linters, bollies, and ginned cotton. Going round the Belt, two months ago, the writer found convincing evidence that a very large part of the balance was untenderable against the New York contract owing to its low grade, and the trade must realise, if they are relying upon this large carry-over, that it is likely to prove a broken reed. Much of it could, no doubt, be made spinnable if the trade as a whole had the necessary margin of carding machinery to handle it, but at present such a margin only exists among the Continental spinners. They, however, have such difficulty in getting cotton at all, as well as in getting the necessary coal and labour, that they cannot afford to waste their restricted productive capacity on inferior cotton at present. Thus it will only be under the stress of dire necessity that this low-grade cotton it likely to be utilised, so that the bulk of the carry-over is not really available for production under existing conditions.

(To be continued.)

CENTRAL BANK OF GREECE

Head Office: 12, Aristeides Street, ATHENS.

Paid-up Capital - - - 3,500,000 Drs.

Administrative Council: LEONIDAS SKENDER *(Chairman)*, GEORGE EMBIRICOS *(Vice-Chairman)*, K. SALLIARIS, A. DAMBASIS, Ph. LOUKISAS, M. EVLAMBIOS *(Director of the National Bank of Greece)*.

General Manager: GEORGE MOUSTAKAS. *Manager:* G. A. KARYSTINAKIS.

EVERY KIND OF BANKING BUSINESS TRANSACTED.

Fils de G. A. ERRERA & Co, Ltd.

SALONIKA.

GENERAL BANK OF GREECE.

Paid-up Capital, Drs. 3,000,000.

Head Office - ATHENS.

BANKING OPERATIONS:
Every description of Banking business transacted.

FINANCIAL OPERATIONS:
Investigations in connection with, and the promotion, organisation and financing of, Limited Joint Stock Companies, with a view to exploiting agricultural, industrial and mineral resources, executing technical works, etc.

COMMERCIAL AND SHIPPING DEPARTMENT:
Purchase and sale of goods on account of clients. Warehousing, Advertising and placing foreign products on the market. Agents for foreign companies and large commercial and industrial firms abroad. General Shipping Agents.

POPULAR BANK OF GREECE.

Head Office, ATHENS. Branch, PIRÆUS.

Correspondents throughout Greece.

Established June, 1905, by the National Bank of Greece and a group of Capitalists.

CAPITAL - Drs. 1,500,000.
RESERVE FUND - Drs. 2,500,000.
Deposits and Credit Accounts, Drs. 100,000,000.

The Bank specialises in the collection of Bills payable in Greece; it accepts goods on consignment, and undertakes their sale, and transacts every kind of Banking business.

General Manager: D. LOVERDO.

TRADE WITH THE NEAR EAST.

The Bank of Athens extends special facilities for business with the Near **East** to manufacturers, exporters and importers.

The Bank has offices in all the principal towns in **Greece,** also in **Egypt,** Cairo and Alexandria, in **Cyprus,** Limassol and Nicosia, in **Constantinople,** and in **Smyrna.**

Inquiries from interested parties are invited.

BANK OF ATHENS.

PAID-UP CAPITAL : £1,920,000. **HEAD OFFICE IN ATHENS.**

London Office: 22, Fenchurch Street, E.C. 3.

COMMERCIAL BANK OF GREECE, LIMITED.

CAPITAL PAID-UP - Drs. 15,000,000.
RESERVE FUNDS Drs. 2,845,010.45.

Head Office: ATHENS.

Branches:—**Piræus, Salonika, Patras, Volo, Syra, Calamata, Corfu, Cephalonia, Candia, Chios, Argos, Pyrgos, Vostizza (Ægion), Nauplia. Larissa.**

AGENTS IN ALL PARTS OF GREECE, THE LEVANT, AND ABROAD.

The Bank conducts every kind of Banking, Commercial and Stock Exchange business and extends special facilities to traders interested in business with Greece. It acts as Agent for many Foreign Banks. It is specially organised for Exchange, the execution of mail and cable transfers throughout Greece, and for the collection of clean and documentary Drafts.

MERCHANDISE DEPARTMENT:
The Bank undertakes the warehousing and sale of goods consigned.

GREECE.

Area 43,522 square miles. The cultivated area amounted to 5,745,300 acres, of which about 2,253,400 were under cereals, 518,900 under grapes and currants, 370,600 under oak trees, 295,500 under olives, and 2,223,900 were forests.

Population (1914), 5,000,000 approximately.

Chief Products (with average annual production):—Currants, 142,000 tons; wines, 3,000,000 casks; tobacco, 9,000,000 lb.; cereals, 8,000,000 bushels; olive oil, 200,000 casks.

The **MINERALS** of Greece include:—Iron, Marble, Magnesite, Emery, Lead, Lignite.

IMPORTS (1914), Old Greece only:—Total value £7,000,000, of which £2,000,000 from the United Kingdom; £1,800,000 from Germany and Austria Hungary; £1,000,000 from Russia.

EXPORTS (1914), Old Greece only:—Total value £4,000,000, of which £3,000,000 came to the United Kingdom.

COINAGE.—The unit is the Drachmæ, equivalent to a Franc (10d.). The current rate of exchange is about 30·15 Drachmæ to £1.

FREIGHT.—From England, 160/- + 10 % primage.

WEIGHTS AND MEASURES.—It was decided in 1898 to introduce the metric system. The change is to be gradual from the old system, which is:—Oke = 2·82 lb., stater = 123·20 lb., livre (Venetian) = 1·05 lb., baril (wine) = 16·33 imperial gallons, kilo = 0·114 imperial quarter, pike = ⅓ of a yard, stremma = ·242 of an acre.

BANK OF NATIONAL ECONOMY (of Greece)

Head Office: ATHENS.

Branches:

PIRÆUS, SYRA. PATRAS.

Capital Paid Up - Drs. 10,000,000.

Fully represented in all parts of the world for all kinds of commercial, financial, and shipping business.

BULGARIA'S ECONOMIC POSITION.

(From a Correspondent.)

The visitor to Bulgaria to-day cannot fail to be impressed with the evident determination of the people to restore the country to its former prosperity. Speaking generally, Bulgaria's outlook in the face of the uphill task of reconstruction is one of hope and cheerfulness. The difficulties are fully realised, but confidence springs from the consciousness of the people in their recuperative powers.

So far it has not been possible for the country to settle down to work in earnest, for at every turn the effect of the lack of certain raw materials, machinery and other commodities has been felt. Still progress is being made, and once conditions improve the advance should be rapid.

Industrial development is one of the principal problems to be solved. It is fully realised by the Bulgarians that they cannot hope to develop their industries as quickly as they desire to do without co-operation from outside, and they are very anxious that this assistance should come from Great Britain. Indeed, it would not be too much to say that they are prepared to go to any length to encourage British participation in their industries, and would willingly subscribe capital to any enterprise initiated by British interests.

Bulgaria's efforts to develop her trade have so far been greatly hampered by the low value of the leva, which now stands at about 260 for sterling. That the level is wholly fallacious is true, but that fact is poor consolation to a country which for months has been trying various expedients to improve the exchange, but without success. There is plenty of grain and other produce available for export, with which to create credits abroad and thus to improve the exchange, but, unfortunately, communications are still very defective. The railways are not yet in good working order, and it is frequently very difficult to obtain trucks. Thus it has not so far been possible to take the fullest advantage of the country's grain surplus for the establishment of credits abroad, for the grain cannot be carried regularly and up to contract time. At present exports go by way of the Danube, and quotations are f.o.b. barge, to which has to be added the charges for transferring to ships at the Roumanian ports. The Consortium hopes shortly, however, to be able to quote prices f.o.b. Varna and Bourgas, which will, of course, materially help the export of this commodity.

Despite the various difficulties which have been enumerated it must be emphasised that excellent business can be done now with Bulgaria, provided British firms are willing to show a little enterprise, and will grant reasonable facilities for payment. The Bulgarian market has great possibilities, and those firms who establish relations with the country now will have every reason to congratulate themselves in years to come that they did not let the opportunity pass by.

It is of interest in considering the prospects for the development of trade between Bulgaria and Great Britain to note that for practically all the principal exportable products of Bulgaria—cereals, tobacco, skins, and otto of roses—there is a good market in this country. The one exception is otto of roses, which must be so ranked temporarily, as the market is now flooded with otto of roses from America, who imported it in payment for flour, and is now exporting it to Europe at a low price.

There has been a great improvement in the tobacco crop in recent years, and while territorial readjustments have deprived Bulgaria of the very best qualities, at least two varieties, of which large quantities are to be had, should find a good market here. At the present time Bulgarian merchants prefer to dispose of the tobacco on the spot rather than undertake its shipping, despite the knowledge that by so doing they could have obtained a far higher price. The skins exported by Bulgaria include sheep, marten, and fox; these represent another way by which Bulgaria can pay for imports by sending them on consignment to London.

As it is only by exports that imports can be paid for, the question naturally arises whether Bulgaria's production of these commodities can be increased to any great extent. Of this there is not the slightest doubt. Given the means and the organisation, a considerable expansion should be possible. One of the most urgent needs as regards agriculture is the increased use of machinery, and this and an improved transport service, and the establishment of grain elevators, will lead to the increased production of cereals. There is great promise, too, in the development of other exports, notably lignite (which, if briquetted, could be readily exported), copper, zinc, and iron, of all of which minerals extensive deposits exist in the country.

Then there are certain essential industries to be developed which, while decreasing the imports of certain commodities, will help to increase the purchasing power of the country, thus bringing about a wider market for imports. The principal industries in question are spinning, weaving, cement making, and the production of electricity. Finally, there is undoubtedly great scope for the development of the forest industry. The area under forest is very extensive, and in the future may represent a very considerable value.

(To be concluded.)

C.O.D. SYSTEM WITH EGYPT.

H.M. Commercial Agent for Egypt is anxious to draw the attention of firms and individuals in the United Kingdom to the cash-on-delivery system for the exchange of parcels between the two countries, as merchants and the public in Egypt fully appreciate its commercial advantages. The average number of cash-on-delivery parcels received in the four years 1915-18 was 37,015 per annum, valued at £113,584 per annum. In 1919 similar parcels to the number of 40,004 and the value of £158,276 were sent. The sender of a cash-on-delivery parcel from the United Kingdom to Egypt pays 2½d. per £1, or fraction thereof, plus a posting fee of 2d. per parcel; no posting fee is chargeable in Egypt. Parcels must not exceed £40 in value. On the arrival of a cash-on-delivery parcel in the United Kingdom, the addressee is required to pay the trade charge amount, plus a delivery charge of 4d. per parcel. No delivery fee is chargeable in Egypt, because there is no house-to-house delivery of parcels. Cash-on-delivery parcels from the United Kingdom for Egypt must be withdrawn by the addressees within fifteen days from the date of their arrival in Egypt; if not removed from the Post Office within this delay, they are either "to be returned to origin" or "to be considered as abandoned." Senders are required to inscribe one or other of the above annotations on the despatch notes, as well as on the cover of the parcels.

The representatives of India at the International Financial Conference, which is being convened at Brussels by the League of Nations, will be:—Mr. H. F. Howard, C.S.I., C.I.E., Controller of Finance, India Office, lately Secretary to the Government of India, Finance Department; Sir Fazulbhoy Currimbhoy, C.B.E., member of the Legislative Council of the Governor-General; and Sir Marshall Reid, C.I.E., lately member of the Council of India.

THE "STANDARD" CIGARETTE MACHINE

is of robust design and construction. Long experience of actual working conditions has conclusively demonstrated the necessity for substantial build if machinery of this description is to be durable, and render consistently satisfactory service.

An output of 36,000 Cigarettes per hour can be **maintained under working conditions,** as distinct from "stunt" speeds calculated, if prolonged, to rack to pieces developed machinery of this class.

ENGINEERING.

Practical Coal Mining.

It has been said that the majority of our colliery proprietors are far from up to date in their methods, and that a good deal of the plant used is not only inefficient but is actually obsolete. It is true that comparatively little use is made in this country of coal-cutting machinery, but I think that examination would show that the reason is that all labour-saving machinery is viewed with such suspicion by the workmen that its introduction is followed almost invariably by such serious unrest that proprietors actually find production less when it is used.

Theoretically, the employment of coal-cutters should effect a saving in cost as well as an increase in output. An increased percentage of large coal should be obtained also, and the coal should be in a better and firmer condition when brought to the surface. A more regular line of "face" should be obtained which facilitates ventilation, and leads to more systematic and regular timbering, and there is consequently not the same difficulty in keeping up the roof as there is in hand-cutting. From the point of view of welfare the men find their work safer and easier, and where a fair trial has been given, it has been proved that better wages result. By the way, whilst on this subject, I have just been reading the new edition of Mr. G. L. Kerr's book on the subject of Practical Coal Mining, which has been published by Messrs. Charles Griffin and Co., Ltd. It is, of course, the standard book on the subject, and owes its popularity to its close attention to detail as well as to its comprehensive character. Mr. Kerr knows how to write clearly, and he gives his information in a concise and pleasing style that few technical writers achieve. The book is one which I can confidently recommend to all readers interested in coal getting and collieries.

Suitable Oil.

With every class of machinery the suitability of the oil used is of far more importance than the user commonly imagines. Especially is this the case with internal-combustion engines, and there is a good deal of truth in the remark so often heard, "Bad oil has spoiled more engines than has hard work." It is not too much to assert that every owner of high-speed machinery of any type should take expert advice as to the oil he is using. Generally speaking, the best thing to do is to go to the engineering department of some well-established firm of oil suppliers who enjoy a high reputation. The interests of the oil supplier and of the machinery owner are identical; the one wishes naturally to conserve his plant and to get as much out of it in the way of power as possible, whilst the other wishes to show that his oil enables that result to be obtained. He wants a customer for his oil, and, having got one, is ready to do everything in his power to keep him.

The Right Grade.

I recently had an opportunity of giving an extended test to some oil supplied for the purpose by the British Motor Trading Corporation, Ltd., and whilst I was at first sight inclined to think that the oil was rather too thin for my engine, I found that it possessed an exceptional degree of viscosity, and was far more economical in use than that which I had been employing before. As a matter of fact, the saving was considerably larger than anyone could have expected, and I am consequently pleased to be able to give this testimony to the oil. I understand that two competitors who secured gold medals in one of the most trying of recent road contests have written to the British Motor Trading Corporation, Ltd., expressing satisfaction with B.M.T. oils. Mr. R. C. Staunton, A.M.I.E.E., writes: "My engine (4 h.p. Triumph) ran faultlessly throughout the trial, and on the return to London some very fast running was maintained, but the engine still displays no loss of power. The total distance (about 850 miles) was completed on under one gallon of B.M.T. motor oil, heavy." Mr. L. T. Gilson, who rode a Zenith in the same event, experienced tyre trouble some miles from Kirkstone Pass, and had to travel at high speed to make up for lost time. In spite of this he states that his "engine was remarkably cool at the summit"—a testimony to the value of the B.M.T. lubricant.

I hear that the company have prepared a specification table which shows at a glance recommended grades of oil for every type and make of automobile, including farm tractors as well as commercial and pleasure vehicles. The tables, in addition, contain a good deal of information regarding lubrication, and any reader interested will be supplied with a copy on application to the head office of the company at 50, Pall Mall, London. The oil is supplied at present in five grades, and is to be obtained in 1-gallon cans, 5-gallon drums, and also in barrels.

Motor Accessories.

I am informed that the Rapson unpuncturable tyre is now being made, and delivered by Messrs. Rapson Automobile Patents, Ltd., in two sizes, namely 895 by 150 to fit 895 by 135 rims, and 815 by 120 to fit 815 by 105 rims. Deliveries may be expected at almost any moment of 820 by 135, 880 by 135, 935 by 150, and 875 by 120; other sizes following as rapidly as the moulds can be made. The firm are doing an extensive business in connection with their "Rapid" jacks, which are certainly the strongest and most generally useful car jacks I have seen. The Rapson plugs and the Rapson carburettor have only just been invented, and arrangements for manufacture are not yet completed. I hope at as early a date as possible to be afforded an opportunity of testing both these appliances, when I shall have more to say concerning them.

Fastnut Washers.

Some time ago I was asked to test a few "Fastnut" washers on a piece of high-speed machinery which had acquired a reputation for shedding nuts at every opportunity. The Fastnut washer, by the way, is a punched-out piece of thin steel, with three indentations in the central opening, and an attached spring which will engage the sides of a hexagon nut. Its function is to fasten the nut used, without the aid of castellations, slots, pins, spring washers, or any other locking device. All that has to be done is to drop the Fastnut over the bolt, teeth downward, and screw up the nut. The action of screwing up flattens the teeth, and holds the washers to the bolt, whilst the spring referred to prevents the nut from slacking back, although it does not prevent it from being tightened up or loosened with a spanner.

I find that the washer does all that is claimed, and since I "washered" the machine referred to, I have not had a single nut work loose. I found it was not necessary to screw up the nuts with anything like the pressure I had been in the habit of using, and that the only precaution to be taken was to see that the head of the bolt was up in place before the Fastnut was put on.

Motoring Facilities.

I am asked to say that, in view of the large number of motorists now using the roads during week-ends, the Automobile Association recently communicated with over 3,000 garages holding the A.A. appointment in various parts of the country, urging the desirability of having some responsible employee available for meeting the requirements of passing motorists for whom Sunday is often the only day of the week that they can use the road. It

was pointed out that cases have frequently arisen in which members of the A.A. have been unable to obtain petrol and other requisites. With a very few exceptions the garages signified their willingness to adopt the suggestions put forward by the A.A., which included a recommendation to display in a conspicuous position in the garages a scale of charges, which, as motorists know, vary considerably in different parts of the country.

Thermo-Electric Progress.

The May lecture of the Institute of Metals was delivered by Prof. C. A. F. Benedicks, Ph.D., the subject chosen being "Recent Progress in Thermo-Electricity." I was rather struck by some of his views on the metallic conduction of electricity; and although, if accepted, they would explain much which is not made clear by the electron theory, I am not at all confident that they will be generally accepted. For example, it has hitherto been believed that before thermo-electric currents could occur it was necessary that two dissimilar metals should be present and exposed to temperature effects. If the Professor's theory is to be accepted it must be concluded that even in a single homogeneous block of metal, of the same composition throughout, thermo-electric currents could be generated. It is to be hoped that a number of our younger school of experimentalists, with adequately fitted laboratories, will give some attention to this aspect of the subject, with a view to determining once for all whether Prof. Benedick's conclusions are sound. It is true that at the lecture some concise demonstrations were given as to the truth of the new contention, and various metals were used for the purpose. But every engineer will agree that on so important a matter the utmost care should be taken lest any error should creep in which should falsify the results of any experiments made.

The Professor stated that it had been possible for him definitely to prove the existence of thermo-electric currents in liquid mercury, thus disproving the negative results of previous workers. As a metallurgist myself, as well as an engineer somewhat accustomed to research matters, I may say that it would require something more to convince me as to the truth of this. A consequence of what the lecturer termed his homogeneous thermo-electric effect was that there must exist the reverse effect, or homogeneous electro-thermic effect. The reality of all this is to some extent and in some respects largely a matter of opinion. A specially interesting demonstration given was that of a new rotating thermo-electric apparatus made entirely of copper and rotating in a magnetic field, the driving force being originated by heating thin strips of copper by means of a small gas jet.

The point at which the new theories brought forward by Prof. Benedicks might have some practical interest lay in the possibility of reducing the thermal conductivity of metals by insulated subdivision into fine wires without impairing the electrical conductivity. During the lecture and demonstrations I was impressed with the accuracy and good finish of the galvanometer used, which was one of those made by the new Cambridge and Paul Instrument Co., resulting from the amalgamation, I believe, of the Cambridge Scientific Instrument Co., Ltd., and Messrs. R. W. Paul and Co.

Tours in France.

I hear that the Automobile Association and Motor Union has received a communication from the Minister of Public Works, Paris, explaining that the pink and grey cards which are to be issued to motorists landing in France are intended exclusively for Americans. This arrangement has been made because American tourists cannot obtain the international passes in the States. The Minister points out that English motorists already have the facility of the international pass, so that the new concession does not concern them. This official statement to the Automobile Association disposes of the misleading paragraph which has recently gone the rounds of the Press, but which did not appear in THE NEAR EAST, which stated not only that these cards could be obtained by English motorists on landing in France, but also that they would be necessary.

The Iron Industry.

It may be that Belgian competition will shortly be felt in the iron and steel industry. In one large works a second blast furnace has been put in commission, and a total of 300 tons of steel per day will result. Another firm has just re-lighted a block of 40 ovens, and the gas from these is being used for new Martin furnaces. The Belgian Government has granted 100 million francs to a third concern for the purpose of putting its works and plant in order, and a fourth company has received from Germany its big rolling mill which had been "won" by the Prussians, and has been able to get it in working order again. Another steel company has been able to re-light two furnaces this month, and a very large number of puddling ovens are being built at different works.

Roadside Benzole Supply.

The second of a series of benzole roadside supply stations to be provided by the Automobile Association has been opened at Coombe Hill, at the junction of the Cheltenham Road with the main road from Tewkesbury to Gloucester.

The installation consists of a Bowser storage tank (with a capacity of 500 gallons) and delivery pump, and only benzole, the quality of which conforms with the specifications approved by the A.A., is supplied. Should, however, other home-produced fuel, such as power alcohol, be marketed, it is probable that it will also be supplied. In addition to motor fuel water is supplied for the filling of radiators. Yet another useful adjunct for motor tourists at the station is the A.A. roadside telephone, which is available to A.A. members at all times during the day and night.

Thieves and Motorists.

The Automobile Association road patrols have been especially instructed to assist the police in circumventing cyclist thieves who follow cars and cut the straps securing luggage. Motorists travelling slowly—particularly when held up by temporary obstructions—are advised by the A.A to "look behind" occasionally.

Aircraft in Spain.

The Spanish Government have been in negotiation with the naval and military authorities of France and Portugal, and have announced their intention to permit aircraft of any nationality to enter, fly over, and land, if necessary, in any part of Spain.

The traffic receipts of the Smyrna-Aidin Railway for the week ended June 5 amounted to £7,456.

Egyptian Hotels.—The annual general meeting will be held at 11, Ironmonger Lane, E.C., June 30, at 11.30 a.m. Transfer books will be closed from June 21 to July 7, inclusive.

Mr. C. J. H. Tolley, winner of the Open Amateur Golf Championship used a Dunlop "31" golf ball throughout the competition.

NEAR EAST MARKETS.

LONDON PRODUCE REPORT.

Dried Fruit.—An improvement in the demand for currants is again to be recorded. Consumption is evidently increasing rapidly, the reduced prices being mainly responsible for this. Most grades seem to be taken up well. Sultanas have been in much better request. Stocks are not very large, and prices are high, and, so far as can be seen, are likely to remain so.

Sugar.—The free market has been quiet, but firm. West Indian crystallised is 152s. to 155s., and American granulated and white Java are quoted at 160s. There is a fair demand for home refined.

Coffee.—The market has been fairly steady. Costa Rica has been done at from 144s. to 156s., Indian at 152s. to 160s., while Mocha has been done at 175s. to 190s. Transactions have taken place in Central American at from 127s. to 160s., in Uganda from 115s. to 135s., and in West Indian from 150s. to 172s.

Oilseeds.—Indian linseed is steady at 38s., June-July, while La Plata afloat Hull has come to business at 36s. Rapeseed is firm, with Toria at 37s. and Brown Cawnpore at 34s. 6d. Indian cottonseed has come to business at 12s. 6d., and Egyptian at 18s.

Oilcakes, etc.—Linseed cake is making as much as 20s. 6d. per cwt. Cottonseed cake has come to business at 12s. 6d., and rapeseed cake at 12s. Arachis cake has been making 13s., and soya bean cake 21s. Oils have been quiet. Linseed has been done at 76s. spot and 74s. 6d. June-August. Crude rape oil has come to business at 85s. Turpentine is about the same.

Egyptian Crops.

The bulletin of the Egyptian Ministry of Agriculture gives the following particulars of crop conditions in May:—

Cotton.—In Lower Egypt and Faiyûm the weather was changeable and windy and at night often cold; local heavy showers fell in the north of the Delta during the first half of the month. Elsewhere, in spite of occasional winds and spells of cold, the weather was on the whole favourable. The water shortage continued to be felt for some time in the early part of the month, but the supply improved later, and was adequate except at the tail ends of canals. Re-sowing continued in part of the Delta and in Faiyûm during the period under review. Sore-shin, cut-worm, and aphis have been observed in most provinces; the aphis attack was particularly severe in the provinces of Daqahliya and Sharqiya, where it seriously affected whole fields of cotton. Towards the middle of the month, however, it subsided. A few egg-masses of cotton-worm are reported from some localities in Beheira, Daqahliva, Sharqiya, and Gûza. Buds have appeared in early-sown fields in Upper Egypt. The crop may be said to have improved, but is still backward. Even on the best land, while the crop looks sturdy, it is much later than usual. The unusually extensive re-sowing which has taken place at various stages since the beginning of the sowing season has resulted in a most uneven appearance of the cotton fields almost everywhere, with the exception of Minûfiya. The notation figures for the crop are almost the same as those for the same period last year.

Wheat.—Harvesting is approaching completion in Upper Egypt, and is far advanced in Middle and Lower Egypt. Threshing and winnowing are in progress. This month's reports confirm last month's estimate of the yield, and even raise it slightly.

Bersim.—The weather has been, generally speaking, favourable. The shortage of water previous to the total prohibition of irrigation on May 10 affected the crop to a considerable extent, and may, it is feared, have a bad effect on the yield and the quality of the seed in some districts.

Sugar-cane.—The weather was generally favourable and the water supply satisfactory. Planting is practically over. Watering, manuring, and hoeing are in progress. The area under this crop is reported to be smaller than last year. The crop looks healthy and is above the average.

Rice.—The weather was favourable on the whole, though somewhat windy and variable. Sowing, which had been delayed by shortage of water supply, is making good progress.

Millet (Sefi).—The greater bulk of the crop was sown by the end of May, and the growth of the plants is satisfactory. A few early areas are coming into flower in the southernmost provinces.

OPIUM MARKET REPORT.

Messrs. Barker Brothers, Smyrna, report as follows for week ended June 5:—Early this week several buyers came forward and started buying everything in the shape of opium at piastres 750 to piastres 950 per oke for low grades, and piastres 1,025 to piastres 1,100 for Carahissar and Yerlis, according to quality and strength. Three cases of eight-year-old very low grade stuff also changed hands at piastres 480. The purchases this week, amounting in all to 114 cases—mostly, we presume, to fulfil contracts for Japan—and above piastre prices, are equal at to-day's rate of exchange to 14s. to 17s. 8d. for current qualities per lb. c.i.f., and 19s. to 20s. 6d. for the higher grades. Piastres 480 per oke is equal to about 9s. per lb. c.i.f. The market closed firm with buyers. To-day's exchange is piastres 430 per £ sterling for cheque and 0.92 dollars for one Turkish paper pound. The arrivals to date are 1,700 cases, against 695 at same date last year.

The traffic receipts of the Egyptian Delta Railways, Ltd., for the week ended May 31 amounted to £E11,015; total for year, £E69,899. For the corresponding period of 1919, receipts amounted to £E8,817; total for year, £E16,543.

LANCASHIRE COTTON.

(From Our Own Correspondent.)

Manchester, Monday.

We have again to report a very slack market, and during the week there has been no indication of increased activity. Spinners and manufacturers have lost further ground, and there has been more pressure for fresh orders, but buyers seem to be just as determined as ever to hold aloof. Many leading traders are quite pessimistic as to the future course of trade, but it is believed that there will have to be further deflation of values before a fresh buying movement is likely to take place. Prices in American cotton have fluctuated from day to day, and there has not been any definite tendency either up or down. The crop in the States, as a whole, is now doing better. Favourable advices have again come through relating to the Egyptian growth. Prices in Liverpool and Alexandria continue to decline. In commercial circles the opinion is expressed that there is plenty of room for a further drop. Spinners have purchased very sparingly. There has been no life whatever in Egyptian yarns. It is now and again suggested that there is no market at the moment, as demand worth mentioning is absent. It is quite impossible to say what prices are for particular qualities. The offtake in piece goods for Egypt has been poor. Very little has also been done for the Levant. It is believed if business with Russia is opened out, healthier clearances would take place in Constantinople, but the political situation in the Near East causes anxiety. More cases have been mentioned of China wanting to cancel contracts. Leading shippers to India have not been in the mood to place orders on a freer scale. Manufacturers are still selling much less than production, and more firms are pressing for fresh contracts. American yarns for home use have been flat, and prices have given way owing to lack of support.

SHIPPING INTELLIGENCE.

A new steamer, the City of Brisbane, has just been added to the fleet of the Ellerman Lines, Ltd., of Liverpool, for their Hall Line service to India. The ship has been built to Lloyd's highest class by Messrs. Swan, Hunter and Wigham Richardson, Ltd. Her d.w. carrying capacity is 12,000 tons on a draught of 27 ft. 10 in. This vessel has a cruiser-shaped stern, and her chief dimensions are: Length between perpendiculars, 462 ft. 9 in.; an extreme width of 58 ft. 5 in.; and a moulded depth of 33 ft. 5 in. The main engines, built by the Wallsend Slipway and Engineering Co., Ltd., drive a single propeller, and consist of double reduction geared turbines of the Brown-Curtis type.

Forthcoming Sailings.

The Johnston Line s.s. Cranmore, for Piræus, Volo, Salonika, Bourgas, Varna, Constantinople, Sulina, Tulcea, Galatz, and Braila, will leave Liverpool on July 2.

The Papayanni Line (Ellerman Lines, Ltd.) s.s. Douro, for Algiers, Malta, Syra, Smyrna, and Constantinople, will leave Liverpool on June 26.

The Harrison Line s.s. Astronomer, for Calcutta, will close for cargo at Liverpool on July 3.

The Henderson Line s.s. Henzada, for Port Said and Rangoon, will close for cargo at Birkenhead on June 30.

The Clan Line s.s. Clan MacBride, for Colombo, Madras, and Calcutta, will close for cargo at Birkenhead on July 1.

The R.M.S.P. Co.'s s.s. Staffa, for Gibraltar and Morocco, will leave London on June 30.

The Prince Line s.s. Algerian Prince, for Tunis, Malta, Alexandria, Syrian Coast ports, and Cyprus, will close for cargo at Manchester on July 7.

COMPANY NOTES AND REPORTS.

G.I.P. Railway.

The report of the Great Indian Peninsula Railway for the half-year to March 31 last states that the gross receipts were Rs.7,12,43,141, an increase of Rs.62,57,385; expenditure, Rs.4,23,11,459, an increase of Rs.36,46,455; and net revenue, Rs.2,89,31,682, an increase of Rs.26,10,930. The ratio of expenditure to gross receipts was 59.39 per cent., compared with 59.50 per cent. in the previous corresponding period. The company's proportion of surplus profits, after deduction of income-tax, amounts to Rs.8,09,019. From this amount, Rs.50,972 has to be deducted for Indian super-tax, and this will be adjusted in the next half-year's accounts, sufficient money having been retained for the purpose. The sum of Rs.8,09,019 has been remitted to England at the exchange of 2s. 1¼d., producing £85,116, which, with £1,322 brought in, plus interest thereon due on June 30, makes a total of £85,868. The directors propose a dividend of 3 per cent., in addition to the guaranteed interest of the half-year, and also a bonus of 1 per cent. out of the money reserved to meet a possible claim for excess profits duty, it now having been ascertained from the Inland Revenue authorities that the company is not liable for this duty for any accounting period up to March 31, 1919. Meeting, 48, Copthall Avenue, E.C., June 25, at 12.30.

Levant Company.

The report of the Levant Company, Ltd., for the year ended December 31, 1919, the first year of the company's operations, states that the delay in the resettlement of political affairs in the Levant has to some extent hampered the company's activities, but, nevertheless, much useful work has been done in organising the business so as to be ready to take full advantage of the opportunities for trade which will necessarily occur as soon as the countries included in the sphere of its operations are more settled. Notwithstanding all difficulties, the company has transacted an extensive business with Turkey on remunerative terms, and has established branches in Serbia, Roumania, Bulgaria, Egypt, Mesopotamia, Batoum, Odessa, and Novorossisk. Those at the two places last mentioned have been temporarily closed owing to the occupation of the towns by the Bolshevist forces, but the company's commercial position is well established there, and business will be resumed at the first opportunity. In addition to the branches already mentioned, subsidiary companies have been formed to work in Greece and the Sudan. Several transactions of considerable importance are now in hand which, in the opinion of the directors, will result in satisfactory profits, and they look forward to the future of the company with confidence. With a view to submitting accounts to the proprietors without undue delay, no profits in respect of any of the branches or of the company's holding in J. W. Whittall and Co., Ltd., have been incorporated in the accounts submitted, but provision has been made for any possible loss in connection with the temporary closing of the Odessa and Novorossisk branches. The company had only during a short period of the year the full use of the £400,000 ordinary share capital, which was issued in June last and which was paid by instalments, the last one being due on December 1, 1919. The accounts show a net profit for the year, after payment of all expenses, of £33,851 9s. 10d., of which the directors propose to devote £4,283 19s. 4d. to the reduction of preliminary expenses and to place £4,000 to reserve for contingencies. There remains the sum of £25,567 10s. 6d., from which the directors recommend the payment of a dividend at the rate of 7 per cent. per annum, less income-tax, calculated from the respective dates on which the instalments were due on both the ordinary and deferred share capital. This absorbs the sum of £24,732 11s. 9d., leaving a balance of £834 18s. 9d. to be carried forward. In accordance with the provisions of the articles of association of the company, Mr. Robert Grosvenor Perry, C.B.E., retires from the board of directors at the ordinary general meeting of the company, and, being eligible, offers himself for re-election. The auditors, Messrs. W. B. Peat and Co., who retire in accordance with the provisions of the articles of association of the Company, offer themselves for re-election. Meeting, Institute of Chartered Accountants, Moorgate Place, Moorgate Street, London, E.C., June 24, 12 noon.

Anglo-Egyptian Oilfields.

The report of the Anglo-Egyptian Oilfields, Ltd., for 1919 states that the total production of crude oil for the year amounted to 231,180 tons, as compared with 277,300 tons in 1918. The net profit, after making provision for drilling costs and for depreciation on the property of the company, including investments, amounts to £411,481, and £76,551 was brought in, making £488,032. Deducting interest on income bonds, £13,500, there is left £474,532. The directors recommend that £354,571 be applied to the payment of the following dividends: 6 per cent. dividend on preference shares, £15,000; "A" shares—5 per cent. on £336,000, £16,800, and 35 per cent. of surplus divisible profits, £99,600—£116,400; "B" shares—5 per cent. on £664,000, £33,200, and £35 per cent. of surplus divisible profits, £99,600—£132,800; "C" shares—5 per cent. on £100,000, £5,000, and 10 per cent. of surplus divisible profits, £28,457—£33,457; and on preference shares—20 per cent. of surplus divisible profits, £56,914, payable July 30, leaving to be carried forward £119,961, subject to excess profits duty and other taxation. The proportion of the profits, in accordance with the articles of association, allotted to the "B" shares, allows for the payment of a dividend equal to 20 per cent. upon the "B" share capital, less tax. There are now several wells in course of drilling on the fields, most of which it is hoped to bring in during the present year. Every effort is being made to increase the output, and the field is being provided with a number of new rigs. Considerable additions are being made to the refinery plant with a view to more efficient handling of the crude oil, and large quantities of imported oils have been treated in the refinery, thus increasing the company's revenues. The directors wish to emphasise the opinion expressed in last year's report that they do not consider the company possesses a sufficient margin of productive territory to ensure the creation of a lasting oil industry in Egypt, or to meet the needs of the country for greatly increased quantities of oil. This view has been urged upon the Egyptian Government. The directors have shown their willingness to co-operate with the Government by undertaking the exploration and development of some new territories under the standard regulations. Meeting, Winchester House, July 14, noon.

Empire of India Life Assurance.

The report of the Empire of India Life Assurance Company for the year ended February 29 states that the proposals received totalled 5,241 for Rs.95,63,500 and 3,977 policies were issued for Rs57,55,500, the annual premiums being Rs3,70,026. The total number of policies in force is 30,039, assuring Rs4,91,01,900, and of this amount Rs7,65,173 is reassured. By the death of 326 policyholders, claims amounting to Rs.5,91,214, with bonus, have arisen. Endowment assurances which have matured amounted to Rs4,42,969, with bonus. The life assurance fund has been increased by Rs15,90,151, and, including the amount placed to investment reserve, now amounts to Rs1,48,76,249. The assets in both branches are Rs1,69,32,921. Fidelity guarantee bonds for Rs10,95,400 have been issued, and the premiums in respect thereof amount to Rs11,278. Claims for Rs3,454 have arisen.

NEW COMPANIES.

Abbott's Emery Mines.

Abbott's Emery Mines, Ltd., has been registered, with a nominal capital of £500,000 in £4 shares, to acquire, under a Board of Trade Licence, the undertaking of Abbott's Emery Mines, Ltd., and to carry on in Smyrna, Asia Minor, or elsewhere, mining operations of any kind. The subscribers (each with one share) are: S. Abbott, 3, Belle Vue, Smyrna; R. G. Abbott, Local Whittall, Smyrna; H. O. Whittall, Local Whittall, Smyrna; Fr. T. Hatton, Local Whittall, Smyrna; F. E. Ballard, Rue Gallagio, Smyrna; E. Whittall, Local Whittall, Smyrna; E. A. Magnifico, Quais, Smyrna. The first directors are: E. A. Magnifico, R. Abbott, and E. A. Whittall. Registered office, 3, London Wall Buildings, E.C.

INDIAN INTELLIGENCE.

This week's Indian cable states:—Rain has fallen fairly generally in North-Western India, Bay Islands, Assam, Lower Burma, Chota-Nagpur, Konkan, West Coast of Gajarat, and Central India. Local elsewhere. General crop conditions good, but more rain required, parts Bengal, Bihar, and Orissa. Prices food grains steady or rising. Bombay cotton market weak. Fully good Broach, July-August, Rs.442 8 annas. Piece-goods market no improvement, but prices nominally firm. Calcutta jute market quiet, with prices unchanged. Hessians very firm. Heavy goods quiet, with little business, but prices well maintained. Bank rate is Bengal 6 per cent., Bombay 7 per cent., Madras 8 per cent.

According to the *Welthandel*, all efforts to increase the output of the Heraklea mines have proved fruitless up to the present.

Anglo-Ottoman Tobacco.—On and after July 5 preference coupon No. 8 and ordinary coupon No. 7 will be payable at 39, Duke Street, Aldgate, E.C.

The directors of the East Indian Coal Company recommend a dividend at the rate of 15 per cent., less tax, for the half-year to April 30, making 30 per cent. for the year, payable July 12.

NEW RUPEE LOAN.

Long and Short Term Issues.

The Government of India announce the issue of a Loan of unlimited amount in two forms, viz:—

(a) Ten-year bonds issued at par and repayable at par in 1930. Interest payable at 6 per cent. per annum on February 15 and August 15. Indian War Bonds, 1920 and 1921, will be accepted at par in subscription to the 10-year bonds. War Bonds, 1921, will carry interest at 6 per cent. from the date of tender and War Bonds, 1920, from the date of tender or August 15, 1920, whichever is the earlier.

(b) Long term loan issued at 95 and repayable at par not earlier than October 15, 1945, and not later than October 15, 1955. Interest payable at 5 per cent. per annum on April 15 and October 15. To provide against depreciation in the market value of the long term loan, 1½ per cent. of the aggregate amount of the loan, inclusive of the 1919 issue, will be set aside annually as a fund to be used for its purchase and cancellation when the market value falls below the issue price.

Indian War Bonds, 1920, 1921, 1922, and 1923, will be accepted at par in subscription to the long term loan, and for this purpose Indian War Bonds, 1925 and 1928, will be accepted as equivalent to Rs.102.4 and Rs.103.4, respectively, for every Rs.100 nominal value of War Bonds tendered. Interest at 5 per cent. will accrue from date of tender, and half-yearly interest due on August 15, 1920, in case of the 1920 and 1922 Indian War Bonds and on September 15, 1920, in case of the 1921, 1923, 1925, and 1928 Indian War Bonds will also be paid in full.

Interest on both issues will be free of Indian Income tax throughout their currency, but will be taken into account in determining the rate of tax leviable on other income and will be liable to super tax.

Cash subscriptions to the issue in both forms will be received in India from July 5 to August 14, 1920, but subscriptions in the form of Indian War Bonds will be received in India up to October 15. Indian Treasury Bills will also be accepted up to August 14, subject to discount of 4 per cent. a year on unexpired portion of currency of bills. Applications may be tendered up to a maximum of Rs.10,000 at Indian post offices, during the same period as for the main section of the loan.

Securities will be issued in form of stock or promissory notes, which will, if desired, be exchanged free of cost for bearer bonds when latter are available. Brokerage of ⅛ per cent. will be paid to recognised bankers and brokers on applications bearing their stamp, the rate of brokerage being 1-16th per cent. when payment is made in the form of Indian Treasury Bills.

OPENING FOR HOUSE BUILDING AT ZAGREB

His Majesty's Consul at Zagreb (Agram) reports that an American firm is interesting itself in building propositions in Croatia, where housing accommodation is very scarce. The firm intend building in concrete, while a Dutch concern propose erecting wooden houses. If any British firm is interested in the question, the possibilities would appear to be well worth studying at the present time, which is regarded as affording a favourable opportunity. There is a great shortage of buildings, and it is stated that house property could not fail to become more remunerative in proportion as the exchange recovers. The supply of suitable labour and other local circumstances would probably interpose difficulties, but these could no doubt be successfully surmounted.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned :—

Egypt.

(The London agent of the Egyptian Government is Sir A. L. Webb, K.C.M.G., Queen Anne's Chambers, Westminster, S.W., at whose office particulars of tenders marked (L) are to be obtained.)

Steel Angles.—The Financial Secretary, Egyptian Army, Cairo, invites tenders for the supply of mild steel angles, tees, flats, wrought-iron bars, etc., c.i.f. Port Sudan. June 26.

Wrapping Paper.—The Central Stores, Ministry of Finance, Cairo, invites tenders for the supply of 750 reams thick wrapping paper. July 8.

Iron Safes.—The Central Stores, Ministry of Finance, Cairo, invites tenders for the supply of 180 iron safes. July 12.

Rails.—The Surveyor-General of Egypt, Giza (Mudiriya) invites tenders for the supply of cut rails in accordance with specification and conditions available at Survey Offices, Giza. Contractors are invited to put in their offers for any quantity available for immediate delivery or for delivery during the current financial year. Tenders should show quantity, weight per yard run, rate per ton of 1,000 kilos, period required for delivery, place of delivery, and any other details necessary. March 1, 1921.

Bathbricks.—The Egyptian War Department invites tenders for bathbricks. Tenders are returnable by noon on June 29, and are to remain open for seven days. (L)

H.M. Commercial Agent for Egypt has forwarded copies of the specification, conditions of tender, and tender form in connection with a call for tenders by the Ministry of Public Works, Cairo, for the supply and delivery of eight steel house barges for the Upper White Nile Division. Sealed tenders, on the proper forms, will be received by the Director-General, Mechanical Department, Ministry of Public Works, Cairo, up to noon on July 20. A provisional deposit of 2 per cent. or a bank guarantee of 10 per cent. of the value of the offer must accompany each tender. The above-mentioned copies of the specification, etc., may be consulted by British firms interested at the enquiry office of the Department of Overseas Trade, 73, Basinghall Street, London, E.C.2 (L.).

The Egyptian War Department invites tenders for the supply and delivery of the following:—(1) Manila rope, (2) tin solder (tenders due June 30); (3) heel-balls, (4) jute sacks (tenders due July 5); bits and chains (tenders due July 13). Tenders will remain open seven days. (L.)

Roumania.

The Roumanian Government invite tenders for the supply of the following military equipment:—16,000 outfits, each consisting of two shirts, two pairs drawers, two hand towels, two handkerchiefs, two pairs socks, one pair woollen gloves, one clothes brush, one boot brush, one overcoat, two jackets, two pairs of trousers, one military cap, one sweater, two pairs of boots, two pairs of puttees, one hood, two blouses, one blanket, one mattress cover, two pillowslips, and two sheets. Tenders should be submitted to His Majesty's Commercial Secretary, Bucharest.

Morocco.

Morocco.—His Majesty's Vice-Consul at Rabat has forwarded a copy of the specification and general conditions of contract for the supply of 25,000 oak sleepers or other timber of a similar nature to the Service des Chemins de Fer of the French Protectorate. The latest date for receipt of tenders is July 1. Copy of the specification and general conditions, which are in French, may be inspected upon application at the Department of Overseas Trade, 35, Old Queen Street, Westminster, S.W.1.

Malta.

The Council of Government invites tenders from British firms for the construction of a first-class shipbuilding and repairing yard.

India.

The South Indian Railway Co. invites tenders for the supply of bridgework, two spans, 50 ft. each, about 45 tons. (Spec., £1 office of the company, 91, York Street, Westminster.) June 29.

ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Street, Monday.

This has been another uneventful week, with, generally speaking, very little business passing and a tendency, with few exceptions, to somewhat lower prices.

In Government stocks, Egyptian Unified and 3½ per cent. Pref. have continued in persistent demand, but sellers have been fairly scarce, and whilst Unified close ¼ up at 69¼, the 3½ per cent. Pref. have lost a similar fraction at 57½. In City of Alexandria bonds some small business has been passing round the current quotation; Turkish bonds are all unaltered; Greeks are generally higher. The 1881 and 1884 loans have both risen a point to 55, and a similar rise has to be recorded in the 1902 and 1910 loans at 44½ and 39 respectively. On the other hand, the Greek 1890 loan is about one point down at 52 xd.

Amongst Bank shares, National of Egypt have remained a firm spot at 19⅜, but Agriculturals have eased off ⅛ to 4 5-16. Land Banks are somewhat quieter at 5 3-16 x.d. Bank of Athens have risen 1-16 to 3 5-16.

In Railways, Delta Light have changed hands to a small extent, and are closing ⅛ lower at 5⅝.

Amongst Land shares, Aboukir are 1s. down at 34s., and the debentures have dropped 5½ points to 135. Consolidated Lands are fractionally lower at 2s. 10½d., and Foreign Trusts have dropped 6d. to 13s. New Egyptians have been a particularly firm spot, and are closing 6d. higher at 33s. x.d. Sudan Plantations have been pressed for sale, and closed ¼ down at 4. On the other hand, a small buyer of Sidi Salems has caused an improvement of ¼ in the price to 2⅜, there being no sellers about.

Amongst Miscellaneous descriptions, Alexandria Water have experienced a further sharp decline, closing 8¼ x.d. Egyptian Hotels have been marked down ¼ to 2¼. Salt and Sodas have shed ¼ at 2½.

In oil shares, Roumanians have improved 1s. 3d. to 19s., and Traians 6d. to 7s. 6d.

FOREIGN EXCHANGES.

Country.	Method of Quoting.	Parity of Exchange.	Latest Quotations
Alexandria	Piastres to £	97½	97 7/16

OIL OUTPUTS.

The Anglo-Egyptian Oilfields, Ltd., report as follows:—Hurgada production for week ended June 13, 2,909 tons (last week 2,856).

The receipts of the Egyptian Markets, Ltd., for the week ended May 26 were:—Cattle markets, £897; general markets, £670; total, £1,567; total for year, £40,079. For the corresponding period of 1919 there were no receipts owing to local disturbances.

The directors of the Assam Railways and Trading Co. have declared the following dividends:—"A" stock, at 8 per cent. per annum, payable June 22, for the half-year to December 31, 1919; pre-preference shares, at 8 per cent. per annum; and on new 6 per cent. preference at 6 per cent. per annum, payable July 5, for the half-year to June 30, 1920.
