Their interest at the moment appears to be mainly in economics and politics, studies which lie, so to speak, on their doorstep; but many are investigating the hitherto hidden treasures of English literature, and while the middle classes are satisfied with Miss Ethel M. Dell and Mr. Charles Garvice, the working-man appears to prefer Shakespeare and Shelley. There is reason to believe that several publishers have their eye on this new development, and are ready to cater for the demand with cheap books. The difficulty is that cheap books must be non-copyright books, if authors are to live, and that restricts the new working-class audience to works of the mid-Victorian period. It is not easy to see how this trouble can be surmounted.

The League of Nations.

The first business meeting of the League of Nations was held last week in St. James's Palace. Mr. Balfour made an ideal chairman for the occasion, and signalised the opening by a very happy and dignified speech, in which he deplored, as was but natural, the absence of the United States' representative, owing to the dispute as to the ratification of the Treaty in Washington. By a curious coincidence a portrait of King Henry VIII. looked down on the assembled statesmen. In his days there were the same aspirations for the abolition of war and the union of the nations, and these aspirations found classic utterance in "Utopia," the work of Henry VIII.'s Chancellor, Sir Thomas More. The lapse of four centuries leaves us with the same aspirations and the same problems.

The Washington Embassy.

Rumour is again busy with the appointment to the British Embassy at Washington, and some papers have declared that Lord Reading is, after all, likely to take it, and to relinquish the Lord Chief Justiceship, which would be offered to Mr. Asquith in the event of his being beaten at Paisley. The one thing that seems certain in the fog of gossip is that Lord Grey will not return.

B

Digitized by Google

But matters are to a certain extent complicated by the very curious position at Washington itself. If one were to believe half the things Americans in London say about their home politics, George Washington must be turning in his grave; but the Wilson-Lansing correspondence is a sufficient indication that matters are far from normal, and they seem likely to remain abnormal until the next President is installed. In the present circumstances there is, unfortunately, little scope for anything beyond the formalities of diplomacy —a fact which is the more to be regretted because the American Ambassador in London is having the usual success of American Ambassadors in London.

Germany in London.

The German Chargé d'Affaires has arrived at the great house in Carlton House Terrace which Prince Lichnowsky made a social as well as a political centre in the days before 1914. The house is the same,but for some time political relations will be confined to absolutely necessary business, and there will hardly be any attempt to revive social relationships on either side for some years. It has been rumoured that the German Embassy may seek more modest quarters, but the German representative has wisely refused all interviewers, and keeps his own counsel.

The Stock Exchange.

The flood of new issues has again begun, once more mostly for industrial companies, and speculation is rather less on the Stock Exchange, partly on this account, partly because the income-tax man is displaying that intimate interest in our personal affairs which culminates every February. The City is frightened of the rumour that the new Budget will tax the issue of bonus shares, which have been a feature of the enlargements of many old-established companies appealing for fresh capital; but it is also taking an interest in the prospective amalgamation of the great drapery companies in the West End. Gossip is busy with several names which have not yet come into the recent purchases, and it is suggested that in the long run there will only be three great drapery trusts in keen competition with each other and the smaller fry which do a more specialised business. Many of the big premises are to be pulled down and rebuilt on a still larger and more elaborate scale, and in another ten years Oxford Street will present a very different appearance. Another new development is that some of the great retail drapers are now opening their own factories in the country, and thus rendering themselves more independent, and this policy, which secures economies both in manufacture and sale, is compelling the reorganisation of the whole trade, and accounts for some at least of the demand for more capital.

A Wife's Value.

An important statement has been made by Mr. Justice McCardie as to the assessment of damages in divorce. This is a principle peculiar to the English law; in the judge's opinion, damages should be assessed according to the actual value of a wife to a husband, and also "the proper compensation for a husband for injury to his feelings, the blow to his marital honour, and the seriousness of the hurt to his matrimonial family life" should be considered, as well as the character of the husband and the pecuniary position of the co-respondent.

Damages can be awarded against a man for taking away another man's wife. but "it is doubtful whether one woman can sue another for taking away her husband, as apparently the law takes the view that a wife has not such a right to the control of or claim to the husband's services as is possessed by a husband in regard to his wife." Whether this is another "scandalous injustice to women," and the result of "man-made laws," need not be discussed here: but as the point is apparently doubtful, perhaps some woman will bring an action against another woman for the loss of her husband's society. It would be an interesting test-case for the lawyers, and would give a further fillip to the discussion on divorce law reform, which seems to light up and die down from time to time without apparent reason.

Thackeray Filmed.

One wonders what Thackeray would have said had he been told that Colonel Newcome would be filmed at the Charterhouse—a sight which attracted some curious spectators this week. But even more, one wonders how many of the people who go to the pictures have ever heard of Thackeray? I remember when they were showing the "Inferno" pictures in town a few years ago hearing one shopgirl say to another on a Putney 'bus, "Who is this man Dante? I don't think he's half as good as John Bunny"; which made one ponder over the limitations of fame.

But there is another cinema story going the round. it is said that a cinema producer recently entered a music shop, and asked one of the young ladies to play a few selections from Haydn's "Creation." After listening a little while to an arrangement of the oratorio for the piano, he thanked her, and said regretfully, "No, I'm afraid it won't do, miss. You see, I'm reproducing the 'Creation' on the pictures, arranging for a whole company to go out to Mesopotamia, *where it took place*: I wanted a little incidental music, but your friend Haydr is too thin for my stage effects. He'd turn the Flood itself into a trout-stream."

The Week's Books.

There has been another outburst of war literature during February, this time mainly naval. Commander Carlyon Bellairs, one of the few naval members of the House of Commons, has indicted the whole school of naval education in "The Battle of Jutland: The Sowing and Reaping" (Hodder and Stoughton). He ruthlessly criticises Lord Jellicoe's handling of that action, and suggests that what might have been a decisive naval victory was in some ways little better than a defeat in its results. Mr. A. H. Pollen, another of the anti-Jellicoe school, some time ago said much the same thing, but this view appears to be held only by a small minority.

Copious extracts have been published from an authoritative account from the German side of the battle in Captain Georg von Hase's "Die Zwei Weissen Völker." He was chief gunnery officer on the German battle-cruiser Derfflinger. He gives a graphic account of the German Admiral being forced to abandon his flagship, the Lützow, owing to her damaged condition, and proceeding in a destroyer to "the least damaged ship" in the squadron. Derfflinger, next in line, was disqualified by damage to her wireless, secondary armament, and a large hole in her bows. Seydlitz, next addressed by Hipper, had lost her wireless and shipped several thousand tons of water; the Admiral thereupon remained on board the destroyer until a lull in the firing enabled him to join Moltke.

In von Hase's opinion, Jellicoe acted in accordance with strategic requirements when he refrained from pushing on into German territorial waters; the German fleet was in any case checkmated, and further pursuit could only have added to the possibility of British loss without adding to the real as distinguished from the spectacular results of the victory. He describes the British gunnery as "admirable" and "remarkable"; "salvo after salvo landed close to us, and hit after hit shook our vessel." When the action was broken off, "Derfflinger" was on fire fore and aft, only two heavy guns forward and two six-inch guns were still in action. She was in dock for six months. "Seydlitz" only reached Wilhelmshaven two days after the battle.

An authoritative account of a very different kind of military enterprise—the Salvation Army—has appeared in Mr. Harold Begbie's full-dress "Life of General Booth" (Macmillan). As the biography contains about half-a-million words, the present writer will not swear that he has read it from cover to cover; but in some ways it promises to be as interesting as "John Wesley's Journal," that classic of the eighteenth century. Booth was, indeed, the greatest emotional religious leader since Wesley's day, and to the student of psychology, as well as to the followers and admirers of that extraordinary man his letters and views are of profound interest. The book, reduced to more reasonable compass, and shorn, perhaps, of some of Mr. Begbie's exuberances, will attain standard rank.

THE NEAR AND MIDDLE EAST.

(From Our Own Correspondents.)

EGYPT.

CAIRO, February 1.

Another Attempt on a Minister.

The Extremists this week had to their credit another attempt to murder a Minister. This time it is H.E. Sir Ismail Sirry Pasha, Minister of Public Works, War and Marine, who narrowly escaped falling a victim to the results of the intemperate campaign which the Extremists have been conducting during the past few months. Sirry Pasha was on his way home on Wednesday morning, when, just before he reached the turning to his house, a bomb was thrown at his motor car. A loud explosion ensued, but no one was hurt, and his Excellency ordered his chauffeur to continue. That he had a narrow escape is proved by the fact that the bomb was a very powerful one, and that the back of his car was damaged. Unfortunately, the thrower of the bomb managed to get away. Both the Pasha and the chauffeur of a car standing by noticed a young man throw something, and, as far as they could do so, they have given his description to the police, but the latter have not yet been able to identify him. The attempt created a great sensation, for Sirry Pasha is the last man whom one would expect Egyptians to want to put out of the way. He has held the post of Minister of Public Works for nearly twelve years, and is considered to be one of the ablest engineers Egypt has produced. He is well-known to have a dislike for politics, and merely consented to retain his portfolio because of his interest in the development works which are under consideration, and because he felt it his duty to try to serve his country in this respect. That an attempt should be made to remove such a man merely shows to what limits irresponsible Egyptians have been excited by the Extremists, for his death could not possibly advance the interests of the latter, and would certainly be a very serious loss to the country.

The Situation in the Provinces.

The situation in the provinces is unchanged. There have been no further demonstrations, and Tantah, the scene of trouble a week ago, has remained perfectly quiet. The arrest of Abu Shadi Bey, the man responsible for creating the demonstration, has evidently had a good effect on the rest of the agitators. The inquiry into the train attack in Upper Egypt reported last week has made very satisfactory progress. All the loot has been recovered, and the men implicated have been arrested.

The Milner Mission.

Lord Milner has left with his secretaries, Mr. A. T. Loyd and Mr. H. M. B. Ingram, for a short trip by river to Upper Egypt, so no important development in the political situation need be anticipated for the next week or so.

The expected reply from Zaghlul Pasha has been received. He first of all sent a telegram stating that he approved of the attitude adopted by his Cairo Committee towards the note issued by Lord Milner, and that as regards the action taken by the ex-Ministers he knew that they had been actuated by feelings of patriotism and prudence. A couple of days later, a letter was received from him, confirming his telegram and dealing at length with the terms under which he would consent to a discussion with the mission. These terms are the old ones which have been reiterated *ad nauseam*, and the latter itself does not in any way change the situation. Nevertheless, there are signs that the pessimism displayed in some quarters is not justified. Indeed, it does not do to attach too much importance to what the Extremists say, especially at the present juncture. Those who can read between the lines with knowledge of what lies behind are of opinion that all this reiteration on the part of the Extremist leader and his refusal to listen to wise counsels of moderation are due to his fear of the rank and file, and that for this reason Zaghlul will neither agree to return to Egypt nor give a proxy to anyone in this country to take up official discussions with the Mission on the lines suggested by the ex-Ministers.

This, however, would not prevent him from joining in a discussion with the British Government outside Egypt, and there is reason to believe that eventually the Egyptians will form a body representative of the nation in which Zaghlul Pasha and some of his fellow delegates will participate, and that it will go to London with a view to coming to an agreement with the British Government when the Mission returns home and reports upon its labours. Opinion certainly seems to be inclining more and more in this direction, and such would not be at all a bad solution to the present absurd *impasse*.

YUGOSLAVIA.

BELGRADE, February 6.

Serbo-Hungarian Relations.

Although the point of Hungarian national movement to-day seems directed more particularly against the Roumanians, Serbs are watching the course of events at Budapest with close attention; they dreaded especially a restoration of the Hapsburgs, and welcomed with relief the recent statement from Paris categorically denying that the Allies would permit such a thing. Meanwhile, the Magyars are doing all in their power to stir up national feeling in the districts of mixed population, especially along the demarcation line. A dozen agitators have recently been expelled from Novi Sad and sent across the frontier into Hungary. It is reported that the Magyars have made not only a National League, but also a League of the Lands torn from Hungary, of which Count Pereli is president. While nobody can blame the Magyars for cherishing their national ideal, it must be remembered how signally they have abused their power in the past and it is to be regretted that they cannot reconcile themselves to the situation and make an honest attempt to cultivate the goodwill rather than the enmity of the young States formed from the peoples whom they have systematically maltreated for so many generations. It is true that Budapest has apologised officially for the attack across the demarcation line in the Prekomurje some weeks ago, and has punished the guilty officers, but reports continue to come in of bands of regular troops collecting on the north side of the line threatening the adjoining districts and encouraging bitter feeling between the different races of the mixed population. The Serbs of Parania and Prekomurje are living in a state of constant anxiety.

The Dearness of Living.

To combat the dearness of living, the Government has decided to stamp out profiteering in essential foods by making a monopoly of grain foods, and it is stated that similar measures will probably be applied to meat and other essential foods. It is earnestly to be hoped that some good will come of this proposal, for the high cost of most of the necessaries of life is pressing very hardly upon many sections of the population. Those who feel it least are the artisans; for there is so great a demand for skilled labour that bricklayers, masons, painters, carpenters, and men of kindred trades are earning wages that seem fabulous compared with the pre-war standard. Architects state that they are paid less than the bricklayers who work under them, and it is a common thing for a groom-gardener to get 200 dinars a month and his keep. Those on whom the dearness of living falls most heavily are officials and

Digitized by Google

officers, who receive rates of pay fixed before the war. The former have mostly organised co-operative buying syndicates, and succeeded in getting special allowances from the Government, as have the railwaymen. The latter in particular deserve all they get, for in the present disordered state of communications the life of a guard or engine-driver is tiring in the extreme. But most heavily of all, the prevailing dearness falls upon the officers; any extra allowances that they may get are inadequate. The pay of a lieutenant-colonel is said to be only 400 dinars a month; in the heyday of Serbia's prosperity a man could live like a prince on this pay, especially if he had a little property of his own, such as practically every Serb has, and usually one well stocked. They also have certain privileges and special allowances. But to-day, with the cost of food and fodder, and extortionate price of rents, many officers, especially those with families, find it almost impossible to make both ends meet.

A Royal Fugitive.

At the time of the Nevesinje rising and the armed opposition to the Austro-Hungarian occupation of Bosnia and Herzegovina in 1881, one of the most redoubtable voivodas, or leaders of insurgent bands, was one Petar Mrkonjitch. When at last the Imperial troops, by sheer strength and numbers, succeeded in imposing their will upon a resentful people, the bands scattered, and many of their members emigrated. Among others, Petar, hunted like a fox, with a price on his head, closely pursued by gendarmes, sought refuge with a family named Politsa, who hid him so successfully that he escaped his enemies' vigilance, and saved his life. It is, indeed, a romantic life he has led, for Petar the voivoda, after passing many years as a refugee at Geneva, lived to become Petar I. of Serbia. In his old age he has had to see his beloved country entirely overrun by a hated enemy, and once more to seek safety in the sanctuary of a foreign country; but he has been spared to see the land liberated and his scattered and much-divided people reunited. The gallant peasants that played the *rôle* of Flora Macdonald to this Serbian Prince Charlie have since passed away, but the old King has ordered a plaque to be put up in their house in remembrance of the time when the old folk saved the life of the royal fugitive.

TURKEY.

CONSTANTINOPLE, January 19.

The Opening of Parliament.

In spite of the absence of a quorum, Parliament was opened on Monday afternoon by the Grand Vizier, the Sultan being "indisposed." Whether his Majesty's indisposition was of a diplomatic nature or not, it is certainly significant that neither the Heir Presumptive nor any other member of the Imperial House was invited to represent the monarch. I was unable to state the exact situation last week, but it now appears that the Sultan was opposed, up to the last moment, to the opening of Parliament, and only signed the decree of convocation under pressure exerted by the Nationalists, who are resolved to have a popular assembly as an additional instrument.

The Speech from the Throne was more empty and meaningless than is usual even with those meaningless pieces of rhetoric, and as he read it the Grand Vizier seemed to want to get it over as quickly as possible. There was but one point worthy of mention about it: the frightful crimes committed during the war were passed over with a casual expression of regret at certain "misdeeds" committed by persons unspecified. Not a word of punishment for the wholesale murders and pillage that made the war years in Turkey one long nightmare of blood and tears; not one word of repentance! Then the house adjourned on account of the quorum being incomplete.

Mass Meetings.

Both in Constantinople and in the provinces mass meetings have been held during the past week to protest against the expulsion of the Turkish Government from Constantinople. On Tuesday an enormous crowd gathered in the square of the Sultan Ahmed Mosque in Stambul, and many passionate speeches were made. The porters and lightermen struck work for a few hours to attend the meeting, and many Turkish ladies were also present. The following is the text of the circular convening the meeting, and its contents are a good guide to the tenor of the speeches made:—

Citizens! Your right to live is being taken from you! By your faith in God, let Europe hear your voice; upon this day of sadness, lift up your voices and invoke the names of liberty, law, and justice. You are threatened with expulsion from the capital and from your country, which is in danger of partition. Let all Moslems be present. Your country is being broken in pieces and your honour is being trampled underfoot. Turkey is in danger of being divided up. A sovereignty of seven centuries is being attacked, and the Europeans are daily curtailing and amputating our boundaries. They are even discussing the removal of the Khalifate.

Citizens! Until now we have borne suffering and loss in the defence of our country, but we cannot allow our right to exist to be infringed. We believed in the honour of the Great Powers, but now we must make them listen to us.

The meeting was perfectly orderly, and the Allied Police who were in attendance had no trouble of any kind. It would be a mistake to interpret these meetings as symptomatic of any popular determination to create disturbances, much less as foreshadowing an organised outbreak. When there is going to be trouble out here no one knows anything about it until the affair is actually under way. Such was the case with the Armenian massacres of 1896, the Counter-Revolution of 1908, and the *coup d'état* of 1913. Mass meetings out here usually end in "hot air."

Political Undercurrents.

A careful study of the local Press reveals the existence of two noteworthy tendencies in Turkish politics at the present moment. The collapse of General Denikin's armies seems to be regarded as an opportunity of obtaining better peace terms in exchange for Turkish opposition to Bolshevism. Turkey is held up to Europe as the sole barrier against the spread of Bolshevism in the Orient. The threat is obvious, of course; but its potency is considerably discounted by the fact that Bolshevism has certain views concerning women which could never be reconciled with Turkish ideas, while the Osmanli *intelligentsia*, which has for so long battened upon the Anatolian peasant cultivators, would hardly welcome a government of soviets composed of Ahmeds and Mehmeds from the wilds of Asia Minor.

Next there is a distinct and steady cultivation of amiable sentiments towards Italy. While it is perfectly true that the conduct of the Italian military, naval, and police forces has been exemplary ever since their arrival, there is something in this movement that is more than mere recognition of courtesy and tact. Public speakers have declared that if there is to be a mandate over the country, an Italian mandate would be preferable to any other; and certain papers which take their cue from the Unionists, who have hitherto been all in favour of an American mandate, now plead for Italian "assistance." Thus the *Vakit*, edited by Ahmed Emin, a quondam friend and associate of Talaat, remarks that both the Italian Press and Italian statesmen have "worked hard in favour of truth," and have "followed a policy in harmony with our national interests." The *Vakit* further remarks that this is not so much a matter of sentiment, but is rather due to the fact that "at the head of the Italian Government are far-seeing men who are fully aware of the real interest of their country." This is a transparent allusion to Smyrna, and it must not be forgotten that the Italian landing at Adalia, without the slightest preliminary hint to the other Allies, was the prelude to, if not the reason for, the Hellenic occupation of Smyrna. It looks as if the *Vakit* has let the cat out of the bag, and the "far-sighted men" alluded to may suddenly discover that they have been playing the part of pawns in the good old-fashioned game so long practised by the Turks, of playing one Power off against another. If reports from the Greeks are to be believed, the Italians, whose zone of occupation is contiguous to that of the Hellenes, have certainly carried complaisance to a degree that invites remark.

The Nationalists.

Ekrem Bey, the President of the Kurdish Club of Diarbekir, and a protagonist of Kurdish independence, has arrived in Constantinople, where he has made some interesting statements to the Press with regard to the Nationalists, who, it appears, made things too hot for him in Anatolia. While admitting that Mustafa Kemal possesses certain fine soldierly qualities, Ekrem Bey states that the Nationalist leader, upon arriving in Diarbekir, installed himself magnificently and embarked upon a series of debauches which recalled the "stories of

Digitized by Google

ancient Rome." Not only was there the wine which delighted Omar Khayyam, but the celebrated rose and violet brandy of Diarbekir cleared to-day of all its cares, while cypress-waisted houris danced to the music of youths whose complexions rivalled that of the peach. And after the joyous night, there were baths where—but here we must refer the reader to the unexpurgated edition of the "Arabian Nights."

Ekrem Bey also stated that the persecution of the Kurds by the Unionists during the war and by the Nationalists after the Armistice have caused the death of 300,000 to 400,000 Kurds! And yet the Sublime Porte denies the existence of a Kurdish Independence movement.

Echoes.

The *Times* article concerning the Turko-German treaty of 1914 has given rise to further interesting revelations. The *Vakit* has been publishing the results of the Government inquiry into Turkey's entrance into the war, which was held about the time of the Armistice. With regard to the arrival of the Goeben and Breslau, the German Ambassador, upon being informed that the ships must either leave or be disarmed, flew into a rage, and declared that the ships had arrived at the request of the Turks themselves. The *Stambul* states that as a matter of fact, a wireless telegram to this effect was actually sent to Admiral Suchon by the Turkish station at Osmanieh, which *had been forcibly seized for the occasion by the crew of the German Embassy yacht, Lorelei*, the publication of which incident was strictly forbidden by Jemal Pasha, then Minister of Marine. Thus, little by little, details of the whole foul plot are coming to light.

BULGARIA.

SOFIA, January 20.

Socialist Strikers.

For three weeks past the State officials belonging to the two Socialist parties—the Communists and the Moderate Socialists—have been on strike in the railways, post, telegraph, and tramways services, as have the workers at the Pernik coalfields. Their companions of the bourgeois and agrarian parties did not follow suit; so that the desired stoppage of the State machine and the overthrow of the Government were not brought about.

In connection with the strikes, M. Dimitroff, Minister of the Interior, replying to an interpellation by the Socialists in the Chamber, made clear the Government view and its policy on the subject; which amounts to the preservation of order throughout the country and the enhancing of authority. The Government will use every means at its disposal to break attempts at rebellion and any *coup d'état* on the part of the Communists; and as a matter of fact every attempt at creating a state of disorder and excess has been broken thus far, both here and in the provinces. The Government, supported by the Chamber, and backed by the nation, has succeeded in keeping order and in supplying the country with the necessary provisions. Since the 14th inst., the bread ration has been increased from 500 to 600 gr. per head, at the price of 1.60 levas the kilogramme for the poor and of 3.60 levas for the well-to-do. Railway communications have never been brought to a complete standstill; though fewer trains than usual have been running. The tramway men have resumed work, and so have some 2,000 coal miners at Pernik. The Government refused to make any compromise with the strikers, allowing only those to resume who signed a declaration of submission to the existing regulations. It is hoped that all the strikers will very soon capitulate.

The Prime Minister to the Nation.

M. Stambolisky, the Prime Minister, has addressed an appeal to the nation, in which, after giving some account of his stewardship of Bulgarian interests before the Paris Conference, he expresses the belief that the country will ere long win diplomatically what it lost through fighting and the old, foolish Bulgarian diplomacy. But henceforth Bulgarians must devote themselves steadily to work, in order to prove that they are not a mad nation, ready to create troubles or be disseminators of Bolshevism. After condemning the Socialists' strikes and reiterating the intention of the Government to break them, the Prime Minister thanks the peasants and citizens who supported the Government, and declares again that Bulgaria must win the sympathies of the world and repair the misfortunes brought upon her by the war.

A Turkish Inspectorate.

A Turkish Inspectorate has been established at the Ministry of Public Instruction. It will be directed by an Inspector-General, for Sofia, and two assistants, one for Plovdiv, the other for Shoumen. Mustafa Djepoun, former director of the Turkish Gymnasium at Souhindol, has been appointed first Inspector-General for Sofia.

Land for Refugees.

M. Janeff, the Agrarian deputy, has brought before the Chamber a proposal to appropriate fifty decares of land for cultivation by families of refugees of Bulgarian origin whose native lands have been placed under foreign rule by the Peace terms.

Trial of Radoslavist Ministers.

A Royal decree has been issued appointing the Crown judges for the trial of the Ministers of M. Radoslavoff's Cabinet on charges of causing Bulgaria to enter the war against the Entente Powers. M. Stefan Kyriakoff, a member of the High Court of Cassation, is president of the examining committee, and M. Nicholas Tchehlaroff, Vice-President of the Sofia Court of Appeal, and M. Boyan Ivanoff, Vice-President of the Sofia District Court, are members, in association with six National Deputies. Thus constituted, the examining commission has begun its labours by examining the former War Minister, General Naidenoff, and M. Apostoloff (Ghenadievist) and M. Veliko Koznitchky (Stambolovist), former Ministers of Railways and Communications in the Radoslavoff Cabinet. When the examination of the remaining Ministers and National Deputies of the same party is concluded the trial proper will take place before a tribunal specially appointed by the Chamber.

ASIA MINOR.

SMYRNA, January 29.

A battle, which raged from January 16 to January 20, between the Greek and the Turkish forces in the environs of Cassaba in the Hermus Valley has apparently been indecisive, as neither side has been able to advance its lines. Both sides had considerable losses, and the Turks showed that they were astonishingly well equipped and able to keep up a sustained effort. Their action is generally re-

garded as an attempt to mark their disapproval of the rumoured decision that the Turks will have to clear out of Constantinople.

The train service between Balajik and Sokia on the Aidin Railway (British) is now definitely suspended, as the Turks have blown up a bridge. Communication between Sokia and Smyrna is now effected by mule to Ephesus over the mountains, a station on the Aidin Railway. The Italians, who are established in Sokia, have their base at Scala Nuova, which port is connected with Sokia by a good road over the Michaelian range of mountains.

For Armenian Orphans.

To-day the Armenians collected subscriptions, by means of "cocardes," for the large number of orphans left to their community through the Turkish massacres in various parts of Asia Minor. The Turkish authorities around the Government House disapproved of this appeal for funds; and seized many of the collectors and confiscated their money. The Armenians appealed to the Greek authorities, who were only too happy to compel the Turks to release the Armenian collectors and refund the money. After this incident the collections continued and a considerable sum was obtained in Smyrna. Almost every Greek officer wore cocardes showing that he had given several subscriptions; and civilians of all nationalities and all ranks generously subscribed.

CYPRUS.

January 25.

Legislative Council.

The Council met on January 23; four of the Greek deputation attending, as well as the one, M. Zeno, who remained on the island. The Acting High Commissioner, Mr. Stevenson, opened the Sitting, which was convened in order to pass a Bill to establish offices for the verification of debts due by British to German subjects and *vice versâ*. The King's Advocate having moved the first reading of the measure, it was at once opposed by a Greek member, M. N. Lanitis. On the Chief Secretary seconding the motion, the objects of which were fully explained by the King's Advocate, another Greek member, M. Sevéris, opposed it on the ground that there was one question only to which Greek Cypriots had to give attention, viz., that of union with Greece. The motion, as well as one for the third reading of the Bill, was then put to the vote and passed by majority, on the votes of the British and Turkish elements. The occurrence is quite characteristic, and indicates the spirit of predetermined obstruction and subordination of all island interests to that of the party's political aim.

Salaries of Officials.

It is rumoured that all salaries are to be increased from April 1. It is insisted in the papers that the rise in all grades, overdue as it is, should be a substantial one, corresponding proportionately with the actual increase in the cost of living, and not masquerading under the title of *bonuses*. The winter, with greatly advanced cost of fuel, has been pressing very heavily on all but the well-to-do classes. The finances of Cyprus have reached a point at which it can well afford to pay its public servants properly for their services; and those who have retired on the slender pensions which existing regulations allow should also be enabled to live respectably.

Generosity of Rich Cypriots.

Greeks who have made fortunes outside the limits of Hellas are often very generous benefactors to their country and the places of their birth; as many of the educational, municipal, and other institutions testify. Cyprus has been no exception. Cypriots who have enriched themselves in the island, and others in Egypt, have been late examples. One such benefactor, Mr. Y. Metellas, has recently died at Limassol, having given liberally for some years past to various town institutions and charities. Another wealthy Cypriot in Egypt, Mr. Mantsouras, is founding a Poor-house at Famagusta, which is among the needs of the town, and he intends to bear the whole cost of its equipment.

Personal.

Mr. A. L. C. Stuart, President of the District Court of Larnaca, has been appointed Puisne Judge.

The Chief Medical Officer, Dr. R. A. Cleveland, has been invalided, and is in hospital at Nicosia.

Lt.-Colonel Gallagher, D.S.O., Chief Commandant Military Police, has been appointed to be a member of the Legislative Council, during the absence of Dr. Cleveland, C.M.O.

MALTA.

Valetta, February 4.

The arrival of Russian refugees has created a temporary sensation here, with all the usual rumours of disease and famine in the train; in fact, the matter was made the subject of special comment in the Council Chamber. For the time being, hospital accommodation was afforded for 500 wounded or sick, but this arrangement has had to be subjected to considerable alteration in local interests, with the result that the Panama, conveying the wounded, has been ordered to sail for Constantinople at once.

Malta Militia.

The Governor has issued a special fortress order on the disembodiment of the 1st and 2nd Battalions King's Own Malta Regiment of Militia, in which His Excellency wishes to place on record his appreciation of what both officers and men have accomplished.

Social News.

There is much gaiety and sport here. During this month a golf competition, open to all ships, regiments, corps, and departments, will be held. The struggle is to be carried on on tournament lines, one round of 18 holes in the preliminary rounds, and two rounds of 18 holes in the semi-final and final round. There is grand opera at the Theatre Royal, and the Malta Amateur Dramatic Society are busy rehearsing another play for early production.

Personal.

The death of Mr. Lewis Paris at Port Said has occasioned great regret. It was he who showed great zeal and charity in doing so much for the Bishop's Bread Fund of 1919. We understand that his loss has been felt just as keenly at Port Said.

Capt. A. E. Austin, attached to the Rifle Brigade, has been assigned the duties of Senior Censor, *vice* Major Fox (Reserve of Officers).

The greatest social event recently has been the marriage of Major H. Brooke, M.C., West Yorkshire Regiment, with Marjorie Constance, youngest daughter of F.M. Lord Plumer. The ceremony, highly fashionable and select, took place at St. Paul's Cathedral Church, Valetta. The Reverends Canon Fargus, F. J. Walker, S.C.F., and A. C. Moreton, Naval Chaplain, officiated. Amongst the lavish list of wedding presents was one from the people of Malta. This consisted of three large bowls on an ebony stand, richly ornamented with gold coins of the Order of St. John of Jerusalem, Malta Crosses and Roses of England.

SYRIA.

Jerusalem, January 19.

The Hule Trouble.

News has just been received of the very bad state of affairs in and around the Hule (Merj-Ayun) region, south-west of Damascus. The Bedouin and the Metawalis of that region have, since the arrival of the French High Commissioner at Beyrout, caused great disturbance. I gave an account last week of some of their doings, from which they have not desisted. The French, either because they did not have a force large enough to cope with the situation, or for some other reason, did not deal with them drastically enough. They allowed matters to drift, thus causing harm to the Christian natives, both in lives and material. When the French authorities became aware of the situation they sent a small detachment which, according to people who were actually present, could not stand against the thousands of Metawalis and Moslems. They were naturally defeated, and the natives began, with the captured guns and ammunition, to storm the Christian villages. Whole Christian villages were spoiled and burned. It is not yet known how many persons were killed, but it is certain that many villages, including Khiam, Judaidet, and Deir Mimas, were destroyed.

The French have since sent an army to this district, and this has succeeded in reaching the residence of the chief of this notorious tribe, Kamil Assad, lately a Turkish M.P. His house was destroyed and burned by the French, but he himself succeeded in escaping to Damascus.

News from Damascus is obscure. Emir Faisal was accorded a big reception on his arrival at Beyrout. It is understood now what his mission to the Arabs means, as the whole matter has been discussed in the Arabic Press of Cairo. The Arabs desire independence, but all these recent riots do harm to their cause, and it would not be a matter for surprise if all the Christians who voted for independence under Shereefian rule should now decide that the country is not yet fit for it, and should prefer to stay for purposes of protection under a Christian Power.

TURKISH CABINET CHANGES.

Reuter's Constantinople correspondent writes (February 12):—The appointment of Fevzi Pasha to the Ministry of War has necessitated the partial reconstruction of the Cabinet. Hazim Bey becomes Minister of the Interior, Seppa Bey Minister of Justice, and Kiazim Bey Minister of Foreign Affairs.

CORRESPONDENCE.

ROUMANIA AND THE DOBRUJA.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—The very hospitable welcome accorded to Dr. Vaida-Voevod, the Roumanian Prime Minister, in London should convince him and his fellow-countrymen of the genuine friendship which exists in this country towards Roumania. Roumania unquestionably has a grievance in regard to the division of the Banat. I was in Bucharest in the summer of 1916, and had knowledge of the negotiations which then took place between M. Bratiano and the Russian Minister Plenipotentiary, who practically represented the Entente Powers at the time. Roumania, like Italy, declined to participate in the war until all her claims were fully satisfied. Among these was the boundary formed by the rivers Danube and Teiss. This, on the whole, would have been the best arrangement, for the Danube from its confluence with the Teiss to its mouth is the real southern boundary of the Roumanian race. The Ruman population which occupies the north-eastern corner of Serbia may be regarded as counterbalancing the Serbian element in the south-western regions of the Banat. But M. Bratiano, while rightly insisting on the importance of the river frontier as regards Serbia, would not hear of the application of his own doctrine as regards Bulgaria in the lower reaches of the river. In point of fact, that doctrine was peculiarly valid with respect to the Dobruja, which is mainly inhabited by Bulgarians, Tartars, and Turks, and where there is no Roumanian element comparable to that in north-eastern Serbia.

Subsequently, M. Bratiano apparently relented—at least as regards the Southern Dobruja, which Roumania appropriated in 1913 without the assent of Europe or the shadow of an ethnic claim, after a war made, as you observe, without a quarrel, inasmuch as her difference with Bulgaria had been settled a few months previously by the award of the ambassadors at Petrograd. It was commonly stated in "well-informed circles" in London and Paris at the beginning of last year that Roumania was ready to restore the captured province to Bulgaria, whose title-deeds date from the Berlin Congress (this intention was alluded to by M. Venizelos in an official memorandum to the Paris Conference), but after his disappointment regarding the Banat, M. Bratiano hardened his heart. It is earnestly to be hoped for the tranquillity of the Balkans, for the sake of justice and for the welfare of Roumania herself, that his successor will take a larger view of this question. His principal difficulty will probably be found in the chauvinism of military coteries at Bucharest. In this respect he may be compared with Dr. Trumbitch and other enlightened leaders in the newly-liberated lands of Yugoslavia, who find their policy hampered by similar opposing tendencies at Belgrade.

The restoration of the Southern Dobruja to Bulgaria would be an act of high statesmanship on the part of Roumania. It would increase the respect with which she is regarded by Europe, and would secure for her the good-will of a neighbour whose friendship is of the utmost importance for her future career. The fortunes of the two riverain States, the guardians of the lower Danube, are linked together. In past years an almost ideal friendship prevailed between them to which no parallel can be found in the history of Balkan relationships. Roumania was ever the refuge for Bulgarian patriots who maintained the long struggle against Turkish tyranny; when one of these, Stamboloff, afterwards became all-powerful in Bulgaria he did his utmost to strengthen the ties of cordiality between the two peoples. There is no reason why those ties should not be restored, but this can never take place so long as the Southern Dobruja remains a Bulgarian "Alsace-Lorraine."

In view of the immense accession of territory which she is now receiving, Roumania can hardly regard the surrender of this small and alien region as a serious sacrifice. It may be painful to pluck a thorn from one's side, but the little operation is salutary and brings relief. The Dobruja was forced upon Roumania in exchange for kindred Bessarabia; her reunion with the cognate province should be marked by the restitution of at least a portion of the alien region to its rightful owners.—I am, etc.,

JAMES D. BOURCHIER.

SIR EDWIN PEARS: AN APPRECIATION.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—Five names are closely connected with our liberation. They are those of Dr. G. Washburn, Dr. Long, Sir Edwin Pears, Mr. Macgahan, and Mr. E. Schuyler. Sir Edwin Pears was the last alive of these five eminent men; he died on November 27 last, while on his way from Constantinople to England, in the island of Malta. The four companions of Sir E. Pears were Americans.

I have known Sir E. Pears since 1870. My personal relations and correspondence by letter with him were uninterrupted from 1876 down to a couple of months before his death. It was in 1876 that he fearlessly addressed his first telegram to the *Daily News*, giving to the world the first news of the atrocities committed upon the Bulgarian people. From 1876 down to the day of his death he never ceased to interest himself in the destiny of the Bulgarian nation, towards the setting free of which he contributed so greatly.

Drs. Washburn and Long, confiding in their friendship with Sir Edwin Pears, entrusted him with the details received by them of the wholesale massacres of Bulgarians, and he sent off his first telegram to the *Daily News*, but, as he has himself told me, with a strain upon his heart, so improbable did the story of the massacres appear. Sultan Abdul Hamid had not yet developed his bloodthirsty instincts; it was with these massacres of Bulgarians that he inaugurated his reign of blood.

The publication in the *Daily News* of Sir Edwin Pears' telegrams raised a storm in British public opinion. Gladstone zealously took up the matter, and the then Turcophil British Government was driven to send out a commission of inquiry. Simultaneously with this British Government's inquiry, another was carried out by the United States Consul-General in Constantinople, Mr. E. Schuyler and Mr. Macgahan, specially sent out for the purpose by the *Daily News*, on Sir E. Pears' demand. To relate how the inquiry resulted in the Constantinople Conference and the Russo-Turkish war, etc., would be, I think, to repeat well-known history. My present object is to point out the principal part Sir Edwin Pears played in saving the Bulgarian people from destruction and starting it into new life—the liberation of the Bulgarians. The great national Sobranye, the Constituante, fully appreciated the services rendered by Sir E. Pears to the nation and voted him an expression of gratitude. Later he received further recognition of his services in the shape of decorations from the Bulgarian Prince. As he defended the Bulgarian people and its establishment, so, in the same manner, and with the same faith, he defended the Armenians; he was ever the friend and supporter of the oppressed. In Constantinople he was popularly known as the Ambassador of the *Daily News*, and was a constant thorn in the side of the Turkish Government. More than once the authorities attempted to expel him from the country, but his courage and decision, which proved that he would be even of greater danger to them outside than within, saved him, and he was left to his work.

I remember his visiting Sofia three times. After each visit he felt, as he told me, more proud of the progress which the Bulgarian people was uninterruptedly making and more happy in the memory of the great effort he had made with his telegrams to the *Daily News*. I say great effort because only men such as the Drs. Washburn and Long could have induced him to make it, and these founded their belief on letters received by secret ways from men personally unknown to them!

Sir E. Pears established himself as barrister in Constantinople in 1870. For decades past he was the leading figure of the British colony in that town. His favourite residence was in his villa in the island of Prinkipo. There was no man better acquainted with the questions of the Near East and the peoples of the Turkish Empire. He was an eminent archæologist, and the best authority on the archæology of Constantinople.

The last survivor of the five men who contributed so greatly and so successfully to save the Bulgarian people from the ashes to which Abdul Hamid had condemned it, to obtain its liberty and to astonish the world with its energy for progress and enlightenment, was Sir E. Pears. His name is well-known to all Bulgarians, and his memory, along with that of his four companions, will be fittingly preserved in the country. The late wars only interrupted the carrying out of plans formed to this effect.—I am, etc.,

Sofia, January 3, 1920. P. M. MATTHIEFF.

A Salonika message says that, according to a telegram from Sofia, 230 railway workers, alleged Communists, have been arrested at Sofia, 350 at Philippopolis, and 300 at Plevna.

The Turkish Government (says a Constantinople telegram) has made representations to the Entente Governments, asking them to prevent the landing at Constantinople of Russian refugees fleeing from Russia, in view of the shortage of housing accommodation and foodstuffs in Turkey.

The Ministry of Social Welfare, Belgrade, has invited the Committee of the Serbian Relief Fund, London, to organise and operate the bulk of their institutions for disabled and invalid Serbian soldiers, of whom there are between 175,000 and 200,000 in Yugoslavia. The English staff will work in close co-operation with the Serbian Government; and orthopædic hospitals, tubercular sanatoria, workshops, and agricultural schools will be established. A formal acceptance of the offer of the Ministry of Social Welfare to undertake this great responsibility is being conveyed by Major Hardwicke, Director of the Serbian Relief Fund in Serbia, who will hand it to the Ministry of Social Welfare.

PRESS ON THE NEAR EAST.

Pan Turanianism.

The *Berliner Tageblatt* has recently published some remarkable articles from the pen of Ernst Paraquin, who was formerly Imperial German Colonel and Head of Halil Pasha's General Staff. In the summer of 1918 Colonel Paraquin was attached to the Turkish army under the command of Nourri Pasha, who was fighting against the mixed force commanded by Major-General Dunsterville, at Baku. In the issue for January 24 he gives a report of conversations that he held at Mosul with Halil Pasha, commander of the former Goltz army and youthful uncle and confidant of Enver Pasha. The following are extracts from the plans which Halil Pasha put forward for a Pan-Turkish Empire.

In the first place, it was necessary to unite all Turkish-speaking peoples. The national element stood in the foreground. Therefore, the conquest of Turkestan, the cradle of the Turkish Empire, was the first thing necessary. Next, connections must be formed as far as the Siberian Jakuts, whom Halil Pasha regarded, on account of their kinship in language, as the extreme outposts of Turkdom in the East. The Tartars in the Caucasus, akin to the Turks by race, were next to be included in this union. The national minorities in the Caucasus, of whom those most important to consider were the Armenians and the Georgians, must submit, either voluntarily or under compulsion. The Armenian question has certainly, through the war, come nearer to "solution," for the annihilation of the Armenian race had been furthered by all the Turkish departments concerned with ruthless decision. It was regrettable that the Georgians, fearing to incur a similar fate, had thrown themselves into the arms of the Germans, and that the German Empire had officially taken them under its protection. But the future rôle of Germany in the Caucasus Halil Pasha did not estimate very highly. Turkish policy would certainly find means, even perhaps by a game of intrigue with England and Russia, to shove us out of the way, perhaps to a place where we had just as little to gain as the Turks had in Courland. Then the time would come when the Georgians, surrounded by Turks and Tartars, at variance among themselves through their religious division into Mohammedans and Christians, would fall under Turkish rule. Decisive for the execution of this plan was the possession of the most important Georgian port, Batum, which had been granted to the Turks by Germany by the Treaty of Brest-Litovsk, with incomprehensible facility and short-sightedness.

This great nationally-exclusive Turkish Empire must, as a Mohammedan Supreme Power, have a great attraction for Afghanistan and Persia. In Afghanistan, the country bound to Turkey by the common Sunnite creed, the Turks reckoned on strong Turkish sympathies. The heir to the throne was to be brought up in the Turkish spirit. The incorporation with Turkey of Azerbaijan, the richest Persian province inhabited by Tartars, was a requirement of which the fulfilment was hoped for in the near future. The rest of Persia Halil Pasha rightly estimated as of very little value. He was aware of the hatred borne by the Shiites to the Sunnites, but he thought Persia incapable of organising adequate resistance. Besides this, there was the Pan-Islamic movement, which was doing its best to allay the hostility between the opposed co-religionists.

The position of Arabia was interesting, where the skilful co-operation of the different members of the Young Turk clique is conspicuous. While Halil Pasha defended the Pan-Turk position, Enver Pasha played, in a masterly way, the rôle of the Pan-Islamite. Halil Pasha made no secret of his contempt for the "Arab swine." He regarded Arabia as an appropriate article of exchange in negotiations with England. He was sure that England would make no objection to an establishment of Turkey in Turkestan if she had in exchange the great Arabian land-bridge between Egypt and India. If we decisively won the war against England, and a withdrawal from the Arabian provinces were therefore, unnecessary, so much the better for the Turkish dreams of world-dominion. Enver Pasha, who since the defence of Tripoli had become the hero of Islam, considered the Arabian policy, above all, from the standpoint of Turkey as an Islamic Great Power. With great skill he employed Arabs as Turcophil propagandists in the Caucasus, who were there admired and venerated among the simple mountain folk as the holy people of the Prophet. The resuscitation of the ancient Arab Empire under the Turkish Khalif, together with the addition of provinces of the Turco-Tartar race, would make Turkey the undisputed Great Power in Asia, whose influence, with the help of Islam, would extend as far as Africa.

The writer proceeds to show that the realisation of these dreams was systematically pursued.

In the frame of this decidedly Nationalist policy the annihilation campaign against the Armenians proceeded. The Armenians residing in the Turkish vilayets had been "transplanted" into the Arabian vilayets. As a matter of fact, they had, in thousands, been starved to death or had succumbed to sickness on the marshes or in the desert steppe. . . . Against Armenian atrocities of this kind, of course, all official German protests are in vain, as the Turkish Government, with hypocritical indignation, denies all barbarous conduct against Armenians. The evacuation of Anatolia by the Russians furnished the desired opportunity to clear out also the Russian Armenians, who lived between the Ottoman Empire and the Turkish fresh establishment of Azerbaijan. Over the frontiers fixed by the Treaty of Brest-Litovsk pressed the Turkish divisions, which could be ill-spared from Palestine, into the Russian Caucasus, expelled the Armenians from house and home and drove them, amid murder and robbery, to the desert mountain country round the Goltsche Lake. Alexandropol had already fallen; the Turkish columns stood just before Erivan—when the unheard-of happened. To meet the victorious march into the Georgian Tiflis came, unexpectedly, German troops with arms in their hands. It came to skirmishes, there were wounded and prisoners. But before the seriousness of the German arrival the Turkish pride in victory recoiled, with gnashing of teeth. But one of the main aims was achieved, the fruitful Plain of Aras was in Turkish possession, the Russian Armenians, like their Turkish companions in misfortune, were abandoned to poverty and misery. Again had the achievement of the object, viz., the extermination of the Armenians and the creation of an exclusive district inhabited only by Mohammedan Turks and Tartars, stretching from the Mediterranean to the Caspian, come an important step nearer. And as on September 16, 1918, in conquered Baku the Caucasian song was played, as my Turkish *Sous-Chef* assured me: "We shall regain our old possession."

With the same inexorable ruthlessness the Armenians living in Persian Azerbaijan were treated, as well as all persons who did not unconditionally further the Turkish plans. To combat English influence, as a preparation for a gigantically planned enterprise for the reconquest of Bagdad in 1919, on the road through Persia, Turkish troops, under Kiasim Pasha, were quartered in Tabriz.

The writer concludes this article with an incident which, he says, demonstrates "how little respect Turkish politicians and authorities had for German prestige and German interests, if it were a question of the effective prosecution of their own national aims."

Bolshevism and the Middle East.

The *New Statesman* of February 7 has some outspoken comments on what by some journals has been called the Great "Red" Plot. It refers to what it calls the "fallacy" of hoping to tranquillise the East by smashing Bolshevism in Russia. It proceeds:—

But it also is absurd—and dangerously absurd—to attribute the state of the Middle East to the machinations of Bolshevism. Are we really asked to believe that Egypt and Syria and Persia and the rest would be nice quiet places at this moment but for the wickedness of Lenin and his friends? Are we to believe that Arab sheikhs and Cairene effendis are in sympathy with Marxian communism, or that Mohammedans, even if they do not like Christians, can conjure up an honest affection for "blatant atheists"? And if we are told that it is the simple, illiterate Moslem and not the enlightened leaders of Pan-Islam who are being deluded by the Bolshevik agitator, we reply that the simple, illiterate Moslem will follow the enlightened leaders of his own race and creed in a Holy War, or for any other purpose, without Russian propaganda. What it comes to, in fact, is this—that there is a great body of Moslems hostile to British or French domination, and another body of Russian Bolsheviks also hostile to Britain and France, and that these two bodies find it convenient to make common cause against us for the moment. But the folly of supposing that it is the Bolsheviks who dominate the Moslems and are mainly responsible for our troubles, is precisely that we blind ourselves to what is really the matter with the Middle East. What is the matter with the Middle East is that it, like other parts of the world, has been infected not with Bolshevik doctrines, whatever these may be, but with ideas of liberty—perhaps vague, perhaps ill-understood, ideas, but, nevertheless, ideas, and that our statesmanship has blundered, and is still blundering, in dealing with the situation. Some of our scandalous diplomacy, no doubt, merits a harder name; but we will call it blundering. The list of blunders begins with the declaration of the Protectorate over Egypt in 1914, it includes many of our dealings with the Hedjaz Arabs, the manner, if not the matter, of the Anglo-Persian agreement, our shufflings with the Turks, and other lesser but not unimportant matters. Nor is it only in its acts that our statesmanship has failed, but in its spirit and outlook also. We can see little evidence of a consistent British policy in the Middle East. The Foreign Office, the War Office, the India Office, and capitalists behind the scenes have all had their fingers in the pie—and they have made a mess of it. . . . . We have involved ourselves in difficulties with France—we do not say, of course, that in the actual issue France has been right and we wrong; but our point is that a straightforward and honest policy from the beginning would have avoided the difficulties. We have made ourselves disliked from the Caucasus to the Persian Gulf, from Constantinople to Cairo. It is true we have got control of the oil wells of Baku and Tekrit, of Palestine and Kurdistan. We have got a promise in the Caucasus of some sort of a buffer for India. We have got a commanding position in Egypt for our aviation services to Baghdad and India and the Cape. But all these things we have got at a heavy price—the profound suspicion or fierce hostility of most of this vast region, difficult and expensive to hold, easy to lose. And now when we are assailed by angry Nationalists in Egypt, Syria, Anatolia, the Caucasus, Kurdistan, and Persia, we are urged to fight the Russian Bolsheviks! The Bolsheviks, we repeat, are not the real danger. The real danger, not merely to the progress of liberty and order, but to actual peace, is to be found in our own "old-gang" politicians and their Press.

THE CARAVANSERA I.

Think, in this batter'd Caravanserai
Whose Doorways are alternate Night and Day,
How Sultán after Sultán with his Pomp
Abode his Hour or two, and went his way.

So Dr. von Rosen has been rejected by Spain, and Germany will have to look around for some other representative at the Court of Madrid. As I understand it, his rejection was due to his having supported some French claims at the Algeciras Conference; and Spain has not forgotten, or forgiven, him for that. He has served his country diplomatically at Teheran, Jerusalem, and Baghdad, and has, I believe, a somewhat uncommon acquaintance with Oriental languages. I never met him personally, but a friend who knew him well—as far as any Englishman can be said to have "known" any German in the East, that is to say, for the Germans never showed themselves frankly to us, as we now recognise—has quite pleasant memories of him. The German used to make frantic efforts to play tennis, but never gained any real mastery over his racquet; but he took his failure philosophically and with good nature, and used to remark that he thought he would do pretty well at it—in twenty years. Let us hope he will take the disappointment over Madrid in the same philosophic spirit.

***

The following passage is extracted from a letter written by a correspondent in Constantinople shortly after the opening of the Turkish Parliament, to which it refers. If the shade of Abdul Hamid could see Turkey now, would he smile cynically, I wonder, or weep Weep, I fancy; for in his own way he loved Turkey. Perhaps his instinct that Parliamentary institutions were not good for his country was not so very far wrong after all! Here is the extract:—The opening ceremony was a mournful affair, and as the seventy-two deputies came forward to take the oath, one could not help contrasting their subdued air and the general lack of enthusiasm with the scenes that occurred at the opening of the first Parliament in 1908. On that occasion Sultan Abdul Hamid, surrounded by a brilliant retinue, occupied the Imperial box, while the gold lace and cocked hats of the numerous diplomatic representatives added a further touch of colour to the scene. After the deputies, nearly three hundred in number, had taken the oath and the Speech from the Throne had been read, the air rang with cheers, "Vive la Constitution! Vive la Liberté!" But never a word for the Red Sultan, who, leaning upon his gold-hilted yataghan, looked silently down upon the scene from beneath his heavy eyelids and—who knows?—already plotted the destruction of those who had dared to clip his despotic powers. On Monday, gone was all the enthusiasm, the colour, the brilliance, and—the high hopes that twelve years ago filled the hearts of all but a handful of pessimists, whose prophecies have been justified by events. Nervously and amidst a chilling silence the handful of deputies took the oath on the Koran. "Wallahi, Billahi!"

***

What seems to be an amusing story comes from a Serbian correspondent:—In the pleasant village of Bela Tsrkva, or Whitchurch, as it may be translated, two priests returned from their military duties as army chaplains to find themselves widowers of some years' standing. They applied to the ecclesiastical authorities for permission to marry a second time; long they waited; then as no answer came to this constitutional question, they took the law into their own hands. Widowed Pop Popovich married his comrade, widowed Pop Laushevich, to Miss Darinka Ohradovich, who in his turn promptly married his friend to Madame Smilja Novakovich, widow of a schoolmaster, on the principle of "one good turn deserves another." All the local notables attended the double ceremony, which passed off with great success.

CORSAIR.

TOPICS IN PARLIAMENT.

The subjoined headings are those given in the official report:—

ALBANIA. PEACE TREATIES: Turkey. WIRELESS SQUADRON, MESOPOTAMIA. INDIA: Cost of Living.—Retired Civil Servants (Directorships). DARDANELLES AND GALLIPOLI (GUNS AND AMMUNITION). ARMENIAN REFUGEES. BAQUBA CAMP. (February 12.)

THE MIDDLE DANUBE.

Lecturing at King's College on February 11 on "The Problems of the Middle Danube," Dr. R. W. Seton Watson said it was almost a fashion now to speak of the Balkanisation of Central Europe, and the phrase was presumably a protest against the substitution of a number of small States for a powerful empire, implying that the new organisms rested on a less healthy and natural basis than the heterogeneous and slow-growing organism which they had replaced. But the new forms had their basis in history, and, *mutatis mutandis*, there was a very strong resemblance between the Europe of to-day and that of the closing Middle Ages. The Austrian Empire had been mainly the creation of the House of Hapsburg, when the Turkish danger had brought many divergent peoples together in the countries round the Middle Danube and had enabled the Central Government to curtail liberties in a way that would otherwise never have been dreamed of. But by the nineteenth century Turkey had utterly ceased to be a danger, and the great mission of the Hapsburgs had been achieved. Thenceforth the policy of that house had consisted in finding a new basis for the Austro-Hungarian combination in the circumstances of the modern world.

Dr. Watson described the political conditions of Austria-Hungary during the reign of Francis Joseph up to the break-up of the Austrian Empire, which, he said, was not destroyed by the Allies, but fell by its own weight. The States which succeeded it were not the creation of Paris; Paris had merely ratified accomplished facts. Czecho-Slovakia was the strongest and most flourishing of these States, and seemed as if it would have the brightest future, provided it could surmount certain internal problems. The first of these was that of the German minority; there were over two million Germans in the new Republic, living in compact masses on its periphery adjoining their co-nationals in the neighbouring States. Czecho-Slovakian statesmen had begun well in their handling of the problem: the difficulties that arose were due to chauvinism on both sides. The second internal problem related to the Slovaks; there was a difference of temperament between the Czechs, who were the most go-ahead of all the Slavs, and the Slovaks, who were a backward mountain people. The real issue here, however, was not between Czech and Slovak, but between Clerical and Anti-Clerical. The natural development of the future, said Dr. Watson, was to form a league of States, consisting at first of Czecho-Slovakia, Austria, Yugoslavia, and Roumania. Hungary would afterwards come into line, a working arrangement would be made with Poland, and, finally, Greece would be admitted as an adjunct, and possibly at a later date an economic arrangement might be made with Bulgaria.

PROPOSED SANATORIUM FOR MERCHANT SEAMEN.

Lord Inchcape, immediately before his departure at the end of January for India, issued an appeal for funds with which to equip and endow a much-needed sanatorium which is to be conducted under the ægis of the Seamen's Hospital Society. The existing sanatoria are of insufficient capacity to meet the general demands made, and presently to be made, upon their resources, and, although the percentage of cases among seamen is not abnormal, the circumstances of the sailor's calling render it difficult for him to await his turn on the long list of those seeking admission. Thus, the temptation of the tuberculous sailor is to put to sea again with the disease still active, but the conditions of life there tend to aggravate his own condition and to make him, at the same time, a special source of danger to his shipmates. It is felt, therefore, that in no way can the merchant seamen's courage and devotion to duty, so manifest during the war, be more usefully recognised than by providing for the immediate treatment of such as may be attacked by tuberculosis. An initial grant has been allocated by King George's Fund towards the purchase, for such uses, of Bramshott Place, Hants. The chosen site has been approved by the Ministry of Health, and provides the essentials of good air, suitable soil, sufficient immediate accommodation, and ample space for extension. For the establishment of the sanatorium a sum of £70,000 is needed: £1,000 will suffice to endow a bed. The P. and O. Company and its associates have promised £10,000, and Messrs. Furness, Withy and Company £2,500. In Lord Inchcape's absence, communications on the subject may be addressed to Commander Hodgkinson, R.N., at 122, Leadenhall Street, London, E.C.3.

TO AMATEUR PHOTOGRAPHERS.

The Editor will be glad to consider photographs of Near Eastern scenery, types, places of interest, etc., etc., suitable for reproduction in THE NEAR EAST. *When desired, payment will be made for the right of producing such photographs. Readers should state, when forwarding pictures, whether payment is desired or not.*

Photographs should be sent either packed between stout cards or rolled in a cardboard tube, and should on no account be folded. Titles and notes should be attached to each photo, and should be very clearly written.

NEAR EAST BOOKSHELF.

I. "A Brief Description of THE HOLYS EPULCHRE, JERUSALEM, and other Christian Churches in the Holy City: with some account of the Mediæval copies of the Holy Sepulchre surviving in Europe." By George Jeffery, F.S.A (Cambridge University Press. 10s. 6d. net).
II. "INDIAN NATIONALITY." By R. N. Gilchrist. (London: Longmans, 7s. 6d. net.)
III. "MORNING KNOWLEDGE." By Alastair Shannon. (London: Longmans Green and Co. 14s. net.)
IV. "SIR LIMPIDUS." By Marmaduke Pickthall. (London: Collins. 7s. net.)

I. THE CENTRAL SHRINE OF CHRISTENDOM

There is no fascination in the world equal to that of old buildings; for architecture is both the record of a country's past and a faithful register of its mental growth and equipment. Few countries are more rich than Palestine in ancient buildings. It is strange how many have survived the storms of wars and changes; it is no less strange that they are all of Christian origin, with the one exception of the Harames-Sherif.

The Church of the Holy Sepulchre holds an unique place in Christendom. Throughout long ages Christian devotion has flowed eastwards to its doors, and Christian blood and treasure have been poured out like water in its defence. No church in the world has such a "storied past," yet, despite all the conflict of which it was both cause and centre, it has preserved inviolate its sanctity, its haunting beauty, its mysterious and elusive charm.

Mr. Jeffery is fully alive to the fascination of the church he describes so minutely, but he has not allowed it to enslave him. With quiet measured steps he traces the strange, eventful story of the church, from a thoughtful account of "Primitive Christianity" down to "Modern Times." The largest portion of the book describes the church and its surroundings, and here the trained hand and eye of the architect are clearly discernible, technical knowledge, balanced by strong artistic and literary taste, giving weight to his argument. Mr. Jeffery is singularly free from bias. He rides no pet theory to death, but is content to sift and weigh with patience and judgment, leaving his readers to form their own conclusions upon the most hotly debated subject in the world. Whether or no the author believes in the authenticity of the site, the reader must decide for himself; but even an extremist will find it hard to quarrel with the clear, dispassionate, and reverent manner in which the subject is handled. "The finding of the Holy Sepulchre is described by the Bishop of Cæsarea (Eusebius) as a simple operation. We are given to understand that the site was well known, and the presence of the pagan temple built to desecrate it was sufficient to indicate its exact position. Eusebius seems to have been present at its discovery when a boy; he speaks as an eye-witness. The temple . . . was first pulled down; then the podium or platform was completely carried away. . . The Holy Sepulchre when laid bare by the removal of the temple podium seems to have astonished the explorers by its intact condition" (p. 3). "It is true that we have at present no very clear historical evidence of the condition of the Holy Sites before c. 333 A.D., but to most minds this fact is reasonably accounted for by the known circumstances of the Christian era. The Gospel history is not out of harmony with this state of oblivion, or at least absence of records, succeeding the Apostolic age, and such records may even still survive for future explorers to unearth in Egypt or elsewhere" (p. 219). We can all respect a tradition so old and reverend, even if we regard it as a tradition only.

The long and careful description of the church, past and present, is the most absorbing part of the book. The author has made a minute study of the chronicles of the old Pilgrims (translated by the Palestine Pilgrims Text Society, Palestine Exploration Fund), and from these he rebuilds the church for those who know it only in its days of mourning. The church no longer "glows with mosaic work of incomparable beauty," as when Theodoric saw it in 1175, but we have from him and others vivid pictures of its glories. "Few buildings of the twelfth century rivalled it in size. Perhaps the only churches resembling it of equal or greater proportions, at that time in existence, would have been Santa Sophia, Constantinople, or the older rotundas of the Pantheon and San Stefano, Rome; and certainly none other excelled it in boldness and novelty of construction. The great Basilicas of Rome . . . were of so utterly different a style as to admit of no comparison with the new church of Jerusalem and its Gothic vaults and domes of an unprecedented fashion" (p. 72).

"The old circular church was carefully retained by the Crusaders, and indeed survived in an almost intact condition until the unfortunate fire of 1808" (p. 76). "After this fire, which calcined and destroyed the encircling arcades with their columns, and consequently reduced the surrounding galleries to a complete ruin, the rotunda was reconstructed *de novo*. The outer semi-circular wall, following the rock cutting of the earliest period, seems the only part to have been retained." Thus perished one of the fairest jewels of the Christian Kingdom. "The general proportions and dimensions seem to have been adhered to with Chinese exactness," however, in rebuilding. "No such remarkable case of restoring an ancient building has ever taken place before or since the rebuilding of the Holy Sepulchre rotunda"; the reason being that, while "the Christians were permitted by their Turkish landlords to rebuild the premises," the latter insisted on "the most scrupulous reproduction in dimensions of all that had been burnt" (p. 78)..

There are some interesting and suggestive notes upon European churches built after the pattern of the Holy Sepulchre. These notes are the result of personal observation and study, and are illustrated by delightful little sketches and plans. It was Mr. Jeffery who first suggested that the apse mosaic of St. Pudenziana, Rome, was a contemporary representation of the fourth century buildings at Jerusalem. Churches within and without the city are also touched on, though not in detail. We hope that Mr. Jeffery will some day make an exhaustive study of these, and of other churches in Palestine, many of which are now used as mosques. No one could do it better. He is justly severe upon certain "quite deplorable" modern buildings around Jerusalem, which are "marked with a singularly commonplace utilitarianism"; but modesty forbids more than a passing reference to the stately group known as St. George's College, built by Bishop Blyth, of which Mr. Jeffery was the architect; described by the late Sir Charles Wilson as being "the most beautiful and appropriate modern buildings at Jerusalem."

It seems ungracious to draw attention to one or two weak points in a book so thoroughly admirable, but that very excellence "makes them visible. The dictionary gives us no such word as madre*pearl*," and it seems unnecessary to render the familiar name of Felix Fabri as "Faber." We think it misleading to describe the futile crusades of Frederick II. and Richard of Cornwall as "*restoring*" the Latin Kingdom. Frederick's treaty with the Saracens secured a nominal possession of Jerusalem for fifteen years, but he was barely one month in the Holy City, where his coronation by himself was purely an act of defiance of the Pope; and we believe we are right in saying that Richard of Cornwall entered Jerusalem only to worship. The Greek Patriarchate seems too interesting a building to be dismissed thus: "Some of the whitewashed buildings have a venerable appearance, and may, indeed, be of the Middle Ages" (p. 170). According to Conder ("Latin Kingdom of Jerusalem," p. 104), "The kings of Jerusalem fixed their abode where now the Greek Patriarch resides . . . It included many vaulted rooms, and could with comfort contain a hundred persons" (F. Fabri, vol. i., part ii., p. 394).

Mr. Jeffery has done full justice to his subject. He has given us a scholarly, substantial, and unbiassed account of one of the chief shrines in the world. The book is packed with information, which the clearness of its style and the ample notes given make yet more valuable. The illustrations and plans (many of them the author's own work) enrich and explain the text. Though it embodies the labour of years, it appears most opportunely now, after the liberation of the Holy Sepulchre by the last Crusade: one fruit of which, we trust, will be the opening of Palestine (like Egypt) to legitimate and systematic archæological research. Mr. Jeffery's aim, as he says modestly enough, has been "to be permitted to assist in elucidating the exceedingly interesting mass of information which has accumulated around this most important monument." We think the unhesitating verdict will be that he has made a valuable and convincing contribution to this end.

II. A NATION IN THE MAKING.

Principal Gilchrist here attempts to set forth the fundamental facts of Indian social, religious, and political life, and their possible bearing on Indian responsible Government. He brings to his task wide reading, clear thought, and absolute fairness; in fact, he is too fair to satisfy partisans, and his book will be appreciated best by serious students in search of materials for a reasoned estimate of the future of the great experiment. The writer takes the ordinary tests of nationality one by one, and has little difficulty in showing that India does not satisfy them in regard to race, language, religion, or social institutions; but at the same time he gives reasons for thinking that the forces now in operation may overcome these obstacles, and that a definite Indian nationality may emerge. He realises, better, perhaps, than most recent writers, the danger that local chauvinism may wreck the evolution, but he considers

Digitized by Google

that the difficulty can be met by a rather loose federal organisation, coupled with almost unfailing wisdom in the central Government—in other words, that we have taken up an exceedingly difficult task, but that we ought to be able to secure its accomplishment. We think these conclusions are in the main sound, but, as Professor Ramsay Muir points out in the introduction, the aim of the book is not to spread doctrine, but to present the relevant materials for an intelligent opinion; from this point of view it must be described as a success, and we wish that its study could be enforced on the extremists of both sides.

III.—CREATIVE TRUTH.

It is a commonplace, but it is untrue, to say that the war has left no one unchanged. Some there are whom it has not affected, others who through it have lost themselves, and still others who through it have found themselves. It is to the third category that Mr. Shannon, the author of this very remarkable book, belongs; and it is solely because of the surprising joy at finding himself in this third category that he has written his book.

For two and a-half years Mr. Shannon was a prisoner in the hands of the Turks. It was in the last year of his captivity at Afion Kara-Hissar, that he resolved to set down the workings of his mind, and the whole of Volume I. of this book is taken up with the process of his thought. It is written in the form of conversation, and shows how he drew from his fellow-prisoners types of the opposition with which his philosophy has to contend. First, he meets the scientist, and disposes of his view of life by asserting that his (the scientist's) world is one of pure intellectual vision, a world in which nothing happens, but where everything is governed by the laws of necessity. Next he fells the theologian, who has a belief in History. To him he says: "The more we study history the more liable we are to become bound by precedent, the more liable we are to assume that present cures can be effected by past remedies." Thus having overcome the main intellectual obstacles of man, he proceeds to a discussion of pure philosophy, and it is at this point that his book gathers both strength and interest.

Always with sympathy, and often with contradiction, we follow our author. His lot has been, in a sense, one of the finest that can befall a man: like many others, he has seen Life and Death, and has experienced Suffering and Joy. And from these experiences it is that he has gained his vision. It is not an unique vision, but is one which those who partook (and some who did not partake) in the war possessed in a supreme degree. It is the vision of the New World, the realisation of which will alone compensate for the grief of mankind. In one part of the book the author says that it was through Activity that he obtained his vision, and that it was through Loneliness that he was able to understand it. This experience was undergone by thousands of other men, but Mr. Shannon is the first Englishman, we believe, to set it down in terms of philosophy.

Briefly, his belief is that Creative Truth is the only thing which matters, that it is in fact the explanation of Life. His is a difficult conception because as he says: "Unless I *make* it (Truth), there is no Truth either for me or for the universe about me. Mystics have tried to express this experience, and they have failed. In the very act of putting it into words so that you may hear, I slay the meaning of it for ever." It is this belief in the personal necessity of creating Truth that leads him on to say that Man is essential to God's knowledge of himself, that Man is in short part of God, that God, therefore, is not infinite but finite. To support this contention the author necessarily indulges in Mysticism, and (perhaps necessarily also) in a little mystification. But he glows with the passion of his discovery, and reaches his highest eloquence towards the end of Volume I. After insisting on the paramount value of Silence and of Freedom, he brings to an end his inquiry into the meaning of Life, and says to his comrade in his mental process: "We can only hope to produce Morning Knowledge. Noonday or perfect knowledge can only come where *every* individual has found for himself that Silence and that Freedom which make him God in Expression." But at the end of his thought he knows he is just beginning, and says: "All life seems only introductory somehow."

In Volume II. the conception of Creative Truth is applied to life through the medium of Love, and it is in this volume that the author's statements are at once the most strong and most disputable. In the first volume, for the sake of the right conclusion, we suffered much: we endured the very dull conversational form of the writing, we let pass almost unnoticed the introduction from German and American philosophers of such ugly compounds as "view-points," "thought-evolutions," and so on, and we read (though most unwillingly) the numerous footnotes which had been appended in the true academic manner. But in Volume II. the author discards these tiresome forms, and changing from Logic to Love, becomes much more readable. For the most part he uses the apostrophic method, and in impassioned vocatives pleads for the application of his principles to the world. Slipping into poetry as he does it cannot be supposed that all he says will be accepted. He is indeed guilty of such shining inexactitudes as was another young man when he wrote "Beauty is truth, truth beauty." Naturally men are more successful in the construction than in the application of their principles, but as a matter of fact, Mr. Shannon's Creative Truth is, much more than most philosophers' convictions, capable of application to modern life. His "discovery," one which many men unconsciously made in the war, is indeed the hope, and the only hope of the future, but it seems to us that he does not state it quite accurately. Take, for instance, his views on the present Western economic system. He implies that if employers and employees alike would allow this passion for Creative Truth, this Love, to inform all their actions, the present system would "do." But is it not the case that nearly all present systems have been established without the application of Creative Truth, and that they would therefore be destroyed upon its application? Again, in this connection he says, "The more wealth in the world, the more progress"—a notoriously untrue statement. Indeed, almost all through this volume it would be possible to pick minor quarrels with the author.

Yet this is a most notable book that Mr. Shannon has produced. He is, we understand, a young man, but his mental ability and his humanity are large—larger indeed than his power of expressing them. He is certain to develop, though in which direction we confess we cannot guess; but even if it were only for the things he says with which we disagree, we should say that he will make a name as a thinker. There is, however, much more for agreement than disagreement, and in any case, the author knows, as is shown by his introduction, where his weak spots are. His book is one of the most stimulating that the war has produced—it is literally thoughtful—and to those whom the war has changed, but who know not how, we recommend "Morning Knowledge" very heartily. Its purpose is admirable, and its achievement, of whatsoever use, will surely be of much avail.

IV.—THE FINISHED PRODUCT.

In this his latest novel Mr. Pickthall has deserted the field which he had made his own—the Levant—and has joined the already overcrowded regiment of social critics. He tells the life-story of Sir Limpidus, who, born of a baronet, and educated at a public school and the university, proceeds naturally to the diplomatic service and to fame. The author shows very clearly the side of our "best men's" life which one does not commonly talk about, and certainly achieves his aim in demonstrating that the possession of vice, ignorance, and other easy qualities in no way prevents, encourages rather, the inevitable development of our "born diplomats." Sir Limpidus does precisely what he ought to do, leaves undone exactly what he ought to leave undone, and so becomes what he ought to become—a Cabinet Minister. You do not notice the steps of the ladder which he climbs—Mr. Pickthall is as skilful as Du Calion with the ladder business—and when he has arrived at Cabinet rank, you do not marvel at the achievement, you merely know that it is time for the book to stop. And this it does.

The author is only partly successful. He succeeds in the setting of the story, and fails in his characters. His conversations are extremely interesting of themselves, but never as the speech of human beings. His thesis—that a creature produced, not a creature producing, is a fit and obvious person to rule others—is convincing, but those who demonstrate it are not. With feeling the author always writes, sometimes with knowledge, but rarely with imagination. His satire is too flat and direct; he lacks delicacy and subtlety. A little more inconsequence and fantasy would not have spoiled his theme, it would have made his novel a great work. For instance, the visits of Sir Limpidus to Russia and to Albania are not sufficiently accidental; one suspects that Mr. Pickthall deliberately chose these places for exhibiting his hero's folly. There is really not enough fun in the book; its tragi-comedy often makes one smile, but seldom can one laugh. However, it is a thoroughly readable work, and as a story it is enjoyable; but as a book it suffers through Mr. Pickthall's forgetting the fact that indirect fire has its uses as much in satire as in war.

MUSICAL NOTES.

Even if we have no Paganinis with us now, there are in England at the present time some very competent violinists. Among these may certainly be named Mlle. Jelly d'Aranyi. She has a large and very enthusiastic following, and I believe is admired greatly by musicians. At her recital at the Wigmore Hall on February 9 (she was assisted by Miss Ethel Hobday at the pianoforte), she gave grounds far more for wonder than for admiration. Granted that her technique is quite remarkably fluent, and granted that she has individuality, yet of her genius one could not (presupposing no previous knowledge) be sure. Her choice of pieces was very reproachable: the Schumann Sonata in A minor, with which she started, was good, but the Joachim Concerto in Hungarian style was quite insupportable. It is not music, and even if the unhappy country which gave it birth is still proud of it, it should be granted a monopoly in its pride. There were in addition worthless pieces by Wieniawski and Bazzini. At times there were serious differences of opinion between Mlle. d'Aranyi and Miss Hobday: the one is intensely individual, and plays with a waywardness with which the rigid classicism of the other could not cope. Their temperaments are poles apart, and in music, at any rate, the Arctic and Antarctic have qualities that cannot be merged. Of Mlle. d'Aranyi's genius, however, one is quite certain, though her programme on this occasion did look as if she were presuming upon that certainty.

The concert of classical music which Miss Rhoda Backhouse (violin), assisted by Mr. Harold Samuel (pianoforte), and Mr. Felix Salmond ('cello), gave at the Wigmore Hall on February 12, did not arouse much enthusiasm in me. The things played were Brahms' Trio in C Minor (Op. 101), Mozart's Sonata for Pianoforte and Violin, No. 1, in A, and Beethoven's Trio, No. 1, in D (Op. 70). A balance between the players was not maintained, and though the piano and 'cello had great powers of interpretation, Miss Backhouse possessed little individuality. The work by her left hand was rather rough, and she played incorrect notes in quite alarming abundance. Mr. Samuel's playing I do not admire; he is very neat, and he can phrase beautifully, but his dynamic and demonic force sounds mechanical. Mr. Salmond is a superb player, and he did much that was excellent, but his lonely efforts were of little avail. One had to wait until the very last movement of Beethoven's Trio to find an *ensemble* achieved, but for this movement (*Presto*) one forgave, however unreadily, all that had preceded.

During the war Russian music had an opportunity of obtaining popularity in this country, and it made at least a good attempt to avail itself of it. But it has not yet conquered the British public, and before the Russian "Musical Dramatic Art Society—Lahda" there is plenty of scope. At the concert which this society gave at the Wigmore Hall on February 13 there was no new music played, but the Russian Trio, consisting of M. Doré (violin), Dr. Rumshisky (piano), and M. Charles Hambourg ('cello), made their first appearance. In addition, a fine singer, M. Nicolai Nadejin, sang some songs in Russian. The trio played pieces by Arensky and Tchaikowsky, two composers who are ranked, probably, more highly than they deserve. For their inspiration they looked not to their native land but to the West, and to that extent lose, not in greatness, but in interest. However, the trio made much of them, the violin and piano in particular bringing out the meaning of the music; the 'cello was not sufficiently assertive. Dr. Rumshisky is a sound musician who makes an excellent member of a trio. M. Doré maintains an extraordinarily full tone, more full, indeed, than rich, and seems a most capable exponent of Slavic music. M. Nicolai Nadejin, who is a singer new to me, has a resonant voice, full of dramatic fire. His songs were by Tchaikowsky, Napravnik, Rimsky-Korsakoff, Borodin, and Arensky. Of the Rimsky-Korsakoff—the arietta of Griaznoi from "La Fiancée du Tsar"—he made a very fine thing, and "Prince Igor's Aria" he sang with most passionate art. The familiarity of his songs makes it not difficult to judge him; and one can say that, without approving of his choice of songs—Tchaikowsky and Napravnik do not wear very well—he is a distinguished singer whose future, unlike that of many who perform, is what he chooses to make it.

ANDANTE.

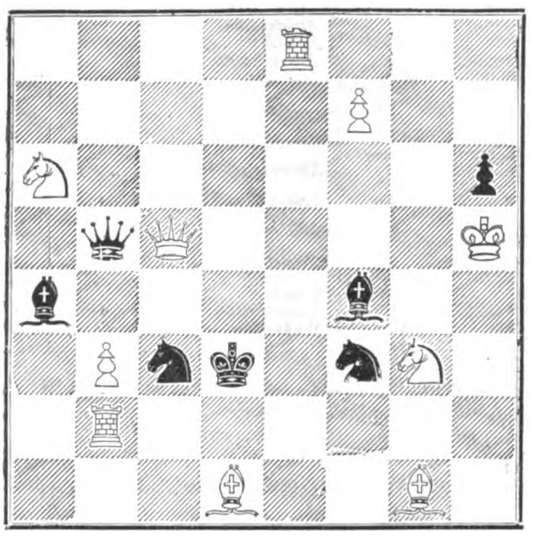
AN ALBANIAN PROTEST.

As we go to press the following telegram reaches us:—Albania, whose independence was confirmed at the London Conference of 1913, and who has not been a belligerent throughout this war, will not recognise the right of the Paris Conference to dispose of any of her territory among other States. At the same time, whilst energetically protesting against so flagrant an injustice, the Albanians declare that they will never submit to any foreign domination, and will hold the Conference responsible before the world for all future conflicts that will surely arise in the event of this inequality of justice being carried out.—The Delegates of the Albanian National Committees to Canada, the United States, and Switzerland.

CHESS.

PROBLEM No. 14.

Black.



White.

White to mate in two.

The above problem by Dr. J. J. O'Keefe, Sydney, was awarded the first prize in the December competition of the Good Companion Chess Problem Club.

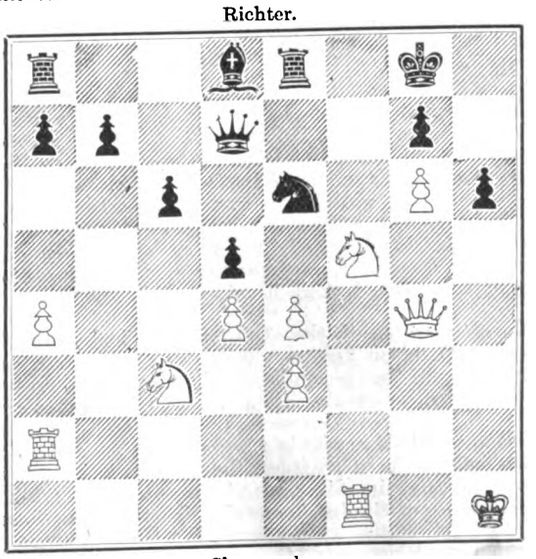
Solution to last week's problem:—1. Kt—Kt5; if R x R (ch.), 2 P x R mate; if R x Kt Q x R mate; if Q x R (ch), 2 Kt x Q mate; if R—K5, K4, etc., 2 Kt x P mate.

Since 1910 the University match has been held at the City of London Chess Club, and this year's match, the precise date of which I have not yet heard, will be played there. The last match took place in the club's old premises, and I think there is no doubt that the rooms at Wardrobe Court will be found much more convenient. The University contest will, of course, be preceded by the usual series of London matches against the City, the Metropolitan, Hampstead, and other clubs, in which the University teams will be aided by the strong contingent of past-members who are always available on these occasions.

There is little or no change in the positions in the chief London tournaments. In the City Championship, Sir G. A. Thomas and Mr. R. P. Michell stand in the best positions. The Metropolitan Championship lies between Mr. E. E. Colman, Mr. R. H. V. Scott, and Sir G. A. Thomas. Mr. Colman has only Mr. Scott left to play, and it is more than likely that the result of that game will decide the contest. The Murton Cup tournament is now in progress at the City Club. This ever-popular event has attracted a very large number of entries. Three sections of eleven each have been started, and a fourth section will shortly be commenced.

Here is an interesting ending from a game between Charousek and Richter:—

Richter.



Charousek.

Play proceeded:—1. Kt x KtP! B—Kt4; 2. R—B7, Q—B; 3. Kt—B5, Kt—Q; 4. Q x B! Kt x R; 5. P x Kt., dbl. ch. and mates in seven by . . . K x P; 6. Q—Kt7 (ch.), K—K3; 7. Q—Kt5 ch.), K—B2; 8. Kt—Q6 (ch.), K—B; 9. Q—B6 (ch.), etc.

PERSONAL AND GENERAL.

CALENDAR OF THE WEEK,

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian (New Style).	Julian (Old Style).	—	Moslem.	Jewish.
1920. February. 19	1920. February. 6	Thursday	1338. Jumada I. 29	5680. Shebat. 30 Adar.
20	7	Friday	30 Jumada II.	1
21	8	Saturday.....	1	2
22	9	Sunday	2	3
23	10	Monday	3	4
24	11	Tuesday	4	5
25	12	Wednesday	5	6

Count Zamoiski, the Yugoslav Minister for Foreign Affairs, has arrived at Claridge's Hotel.

The Aga Khan sailed from Marseilles for Bombay by the P. and O. mail steamer on February 14.

The Earl and Countess of Sandwich have left for Spain and Tangier, where they will be until after Easter.

Viscount Allenby was expected to arrive at Cairo on February 14 on his return from his visit to the Hejaz and the Sudan.

Colonel Rosetti, Military Attaché to the Roumanian Legation, has now recovered from his illness and has resumed his duties.

Sir Marshall Reid has resigned his membership of the Council of the Secretary of State for India on the ground of important business calls in the City.

Dr. Anté Trumbitch, the Yugoslav Foreign Minister, arrived in London from Paris on February 12 in connection with the proceedings of the Peace Conference.

Sir Charles Eliot, who has been appointed his Majesty's Ambassador Extraordinary and Plenipotentiary to Tokyo, left London on February 14 for Japan to take up his duties.

The King has been pleased to approve a special posthumous award of the war medals, the 1914 Star, the British War Medal, and the Victory Medal, to Earl Roberts and Earl Kitchener.

It is understood that Sir Edyard Denison Ross, director of the School of Oriental Studies, London Institution, has been offered and has refused the Vice Chancellorship of Hong Kong University.

The Shah of Persia, accompanied by the Persian Minister for Foreign Affairs, arrived in Rome on February 14. He was received by the King, and is to be the guest of his Majesty at the Quirinal.

The relinquishment of his appointment by Major-General G. F. MacMunn, K.C.B., K.C.S.I., D.S.O., as General Officer Commanding-in-Chief the Mesopotamian Expeditionary Force, is announced in the *Gazette*.

On February 2 the Roumanian University of Cluj (Transylvania) was inaugurated, the King and Queen of Roumania presiding at the ceremony. The Universities of England telegraphed their hearty congratulations.

Colonel Bailey, of the Indian Political Department, arrived at Delhi on February 9 (states the *Times* correspondent). It will be remembered that he was arrested by Bolshevists while on a political mission in Turkestan.

Viscountess Esher, who is a Lady of Justice of St. John of Jerusalem, has been awarded the medal of the Reconnaissance Française in silver-gilt, in recognition of her work as inspectress of British hospitals with the French armies.

M. Yovan Plamenatz, the Montenegrin Prime Minister and Minister of Foreign Affairs, arrived in London on February 12 from Paris. He is accompanied by M. Popovitch and M. Labud Tatar, who is acting as secretary and interpreter.

Under the auspices of the Egypt Exploration Society, a lecture will be given by Mr. H. Idris Bell to-morrow at 8.30 p.m. The lecture is entitled "The Historical Value of Greek Papyri," and it takes place in the rooms of the Royal Society, Burlington House.

Dr. Mackichan, four times Vice-Chancellor of Bombay University and Principal of Wilson College, Bombay, for the last 41 years, has arrived in London from India. Dr. Mackichan has now retired from the Principalship of Wilson College, and will reside in this country.

M. Venizelos, the Greek Prime Minister, attended by Commander Talbot, specially attached, arrived in London on February 15, from Paris. M. Caclamanos, the Greek Minister, and the personnel of the Legation were present at the station. M. Venizelos is staying at the Ritz Hotel.

The King has granted to Mrs. Mary Harriet Carey, widow of Bertram Sausmarez Carey, C.S.I., C.I.E., V.D., Commissioner of the Saigang Division, Burma, the style and precedence to which she would have been entitled had her husband survived to be invested with the insignia of a K.C.I.E.

Sir James Brunyate, Member of the Council of the Secretary of State for India, and Sir Solomon Bandaranaike, Maha Mudaliyar, of Ceylon, had the honour of being received by the King on February 12.

A dinner will be held on March 1 at the Wharncliffe Rooms, Great Central Hotel, to give an opportunity for social re-union to those who have worked abroad during the war on behalf of Serbia. Tickets may be obtained from the hon. sec., Miss Marx, 24, Melcombe Court, Dorset Square, N.W.1.

Mr. H. Charles Woods will give an illustrated lecture on "Turkey and the Straits," in the Lincolnshire Room, National Liberal Club, 4, Victoria Street, S.W.1, at 5.30 p.m. to-day. Colonel the Hon. Aubrey Herbert, M.P., will preside. The meeting is open to ladies and gentlemen, who are not members of the club.

The marriage took place on February 12, at St. Mary Abbot's, Kensington, of Miss Edith Wratislaw, the eldest daughter of Mr. Albert Charles Wratislaw, C.B., C.M.G., recently appointed Consul-General for Beyrout in Syria, and Mrs. Wratislaw, and Mr. Noel D. Agabeg, son of Mr. E. C. Agabeg, a partner in Agabeg Brothers, in India.

On February 12, states the Cairo correspondent of the *Morning Post*, a Ministerial Decree announced the birth of a son to the Sultan. This is the Sultan's first son. By his first wife he had a daughter, who is now wife of the Governor of Cairo. A salute of twenty-one guns was fired in Cairo and Alexandria, where in official quarters the day was a holiday.

In a delayed Reuter message from Delhi, dated February 7, it is stated that the engagement was announced on that date of the Hon. Joan Thesiger, the eldest daughter of Lord and Lady Chelmsford, and Captain A. F. Lascelles, Bedfordshire Yeomanry, son of the Hon. F. Lascelles, of Sutton Waldron House, Blandford, Dorset, and A.D.C. to the Governor of Bombay.

The Athens correspondent of the *Times* writes (February 4):—

Vice-Admiral Coundouriotis, who commanded the Greek Navy in the Balkan War and defeated the Turkish Fleet at Mudros and the Dardanelles, has now retired from active service with the rank of full Admiral. He is the first officer to reach Admiral's rank, which until now has been held by the King alone.

APPOINTMENTS, ETC.

Dr. Koessaiwanoff has been appointed Bulgarian Chargé d'Affaires in Berlin.

M. Karovitch has been appointed Secretary to the Legation of the Kingdom of Serbs, Croats, and Slovenes.

Mr. Katiravelpillai Balasingham has been re-appointed an unofficial member of the Legislative Council of the Island of Ceylon.

The *Sudan Times* of January 24 states:—

Mr. A. D. Home, Assistant Director of Intelligence, is leaving Khartoum during the coming week to take up another appointment in the Government service as Com-

mercial Agent in Abyssinia. Mr. Home is no stranger to Abyssinia and its peoples, having been at Adis Abeba previously to joining this Government. He has also been appointed His British Majesty's Consul for North-West Abyssinia.

OBITUARY.

Lord Dormer died on February 9 at Varenna, Italy. He was for some time Sub-Director of the Secretariat of the Egyptian Ministry of Finance, Cairo. Lord Dormer married in 1897 Marie Hanem, eldest daughter of the late F. Eywaz, of Cairo, but leaves no issue.

A telegram has been received at the Legation of the Kingdom of Serbs, Croats, and Slovenes, announcing that Prince Alexis Kara-Georgevitch, a relative of King Peter, died at St. Moritz on February 13.

NEWS IN BRIEF.

All Bombay mills are again working normally, the strike having ended.

Work has been resumed in the Indian Marine Dockyard, Bombay, on the basis of a daily increase of four annas.

Yugoslavia has compensated Italians whose shops were looted and devastated during the recent disorders at Spalato.

As a part of its amnesty scheme, the Madras Government will reconsider the question of the securities deposited by the newspapers under the Press Act.

An Egyptian student has been arrested on suspicion of being the man who threw a bomb at Sirry Pasha, the Minister of Public Works, on January 28.

Agitation against the Poona municipality's proposal to introduce compulsory primary education for girls as well as boys is being conducted by the Nationalist Party.

Georgia, in declining the proposal of Lenin that it should take joint action with Soviet Russia against General Denikin, says it hopes ultimately to establish good neighbourly relations with Russia.

Election to the Hyderabad Legislative Council by direct suffrage, representation of all important classes and interests, and the protection of minorities are guaranteed in a new *firman* by the Nizam.

On the motion of Mr. Surendranath Banerjee, the Indian Legislative Council has appointed a Select Committee to meet deputations from British Guiana and Fiji to discuss colonisation schemes and Indian emigration.

A memorandum addressed to the Pope by Mussulman and Catholic Arabs inhabiting Palestine protests against what it calls the British pro-Zionist policy, and in particular against Mr. Balfour's statement to the effect that Palestine must be a country for the Jews.

The *Bombay Chronicle* states that the Jallianwala Bagh in Amritsar, the scene of the disturbances in the early part of last year, has been definitely acquired by the leaders of the Indian National Congress, as an Indian national memorial, for about 5½ lakhs of rupees.

Speaking before the Commission for Foreign Affairs of the French Chamber, M. Millerand, the Premier, declared that 30,000 men are necessary for the occupation of the territory of Mosul, Aleppo, and Damascus, which are at present still occupied by the British.

It is officially announced in Washington that Admiral Bristol has submitted a demand to the Turkish Government that Turkey shall take steps for the apprehension and punishment of the murderers of the American relief workers who were attacked by Turks while accompanying a convoy on January 22.

The French Minister of Marine has issued a Note describing the flags of the new States which have been recognised by the Allies, and which will consequently be entitled to recognition at sea and in port. Georgia has a striking flag in rich crimson, with a rectangle, half black and half white, in the upper corner. The Hejaz has black, green, and white in horizontal stripes.

Abdallah Koury, head of the Lebanon Peace Delegation, arrived at Marseilles on February 9. He proposes to submit the following three claims for the consideration of the Peace Conference in Paris:—(1) The independence of the Lebanon; (2) the extension of the country's frontiers, viz., the return to the Lebanon of the provinces seized by the Turks; (3) the granting of a mandate to France on behalf of the Lebanese.

The "Bulletin" of the League of Red Cross Societies (February) states: The development of typhus in Roumania has assumed the character of an appalling catastrophe. In Bucharest 580 to 590 cases are notified daily. In Serbia epidemics are progressing steadily, and the misery is appalling. The Greek Red Cross, it affirms, has assisted 30,423 Greeks in Smyrna, besides 5,369 Turks. 5,028 Jews, 1,467 unorthodox Armenians, and 1,343 Catholics, malaria being rampant among the 12,000 emigrants living in this province of Asia Minor.

WHERE TO STAY.

For the convenience of visitors from overseas "THE NEAR EAST" offers its services in booking rooms at hotels in the United Kingdom, on receipt of instructions preferably a week before the date of arrival. When instructions are telegraphed the message can be abbreviated as follows:—

"EASTAPROX, LONDON. TWENTIETH MATLOCK TWO

(The visitor's name and place of residence abroad to be added)."

which would indicate that two rooms were required at Matlock on the 20th of the month.

INDIA AND BURMA.

Among the numerous problems which have been raised, but not solved, by the framing of the new Indian Constitution, perhaps none is more perplexing than the ultimate place of Burma in relation to the vast federation of predominantly peasant-states into which India is apparently destined to develop. The ordinary Englishman is puzzled that there should be any problem at all: he knows Burma only as a province of India, and he does not realise that that position is at once novel and artificial, dating as it does only from the year 1825, and arising from the accident that British power was at that time located at Calcutta. For centuries before that period the countries which now form Burma had lived their own life; some of them had occasional frontier troubles with Bengal, but taking the Burmese peoples as a whole they regarded Indians with the complacent disdain due to unimportant foreigners, and if they admitted Indian merchants to their seaports, it was merely to secure the brightly-coloured cloths, and still more the opium, which India was so eager to supply. Burmans are marked off from Indians by fundamental differences of race and language, religion and culture—in a word, by all the characteristics which we are accustomed to regard as tests of distinctive nationality; they have never in the mass had experience of Indian rule, and the armchair student of political institutions would declare without hesitation that the unnatural relation now subsisting should be abolished without delay. He would argue that to incorporate twelve millions of Burmans in a polity of three hundred millions of Indians is merely to invite disaster: India has a fundamental unity of mental outlook which in favourable circumstances may ultimately harmonise the jarring elements so prominent to-day, but Burma stands definitely apart; it is certain that sooner or later she will develop an ardent nationalism of her own, and whatever views individuals may take of the eternal Irish question, they will at least agree that the Empire wants no more questions of the kind. The conclusion to be deduced from this line of thought is obviously that the connection between the two countries should be severed forthwith, and the smaller, like the greater, allowed to work out its own destinies under the guidance of Imperial statesmen and officials.

The armchair student has a strong case, but before we accept his conclusions it is necessary to take account of certain possibilities and tendencies other than those to which we have referred. For one thing, there is the danger on the North-East. At the present time no prudent man would venture on a confident prediction regarding the future of China, and until the future can be predicted Burma must stand prepared to face the worst. The military measures dictated by this consideration might well prove to be beyond the reach of a State organised independently of India, and thus prudence suggests the maintenance of the existing relations at least until frontier liabilities can be estimated in terms of the resources of the country. More important, perhaps, than this measure of insurance is the group of tendencies now at work which have been described collectively as the pull from the West. In the course of the last century Burma has become closely linked to India by the ties of commerce and finance, by the influence of common laws and by the working of the Indian administrative machine; uniform standards of conduct have been set before the two countries, uniform courses of action have been enjoined, and those who best realise the reflex influence of administrative activities on the men who carry them out are best able to judge of the effect produced where almost every literate family takes part in the work of administration. The influence of administrative uniformity is probably greatest in the field of education; as yet Burma has no university of its own, and Burmese students have learned to draw their inspiration from Calcutta, the most distinctively Indian of all the Indian universities. The effect of this inspiration has been obvious of late in the agitation conducted by young men of the class described as educated in favour of Indian institutions for their motherland, and in the evidence tendered before the Joint Committee of Parliament. Opinions differ widely as to the weight to be attached to these manifestations of opinion, but their mere existence is significant in a region where sentiments are the things which matter most, and those who are not in a position to determine their importance will be well advised to suspend judgment until the facts become clear. The pull towards the West undoubtedly exists, though its strength may be uncertain at the moment; we do not know whether it is destined to increase or to diminish, and both possibilities must be taken into account.

Such, in our opinion, is the position as things stand to-day. There are opposing forces at work, their present strength is not easily ascertained, and their future development is almost beyond the possibility of forecast. In the long run the destiny of Burma will be decided by Burmans alone, but the time has not come when the nation can speak with a convincing voice, and the essential thing now is that the question should not be prejudged, or any action taken which may place difficulties in the way of giving effect to the future national decision. We believe that this formula will furnish a definite policy for the present, and for some time to come. The political and administrative connection with India is an existing fact, and calls for no immediate alteration beyond the measures of decentralisation which are to be applied to all provinces alike. The interests of Burma should be represented in the new Indian Legislature as they are represented in the existing Legislative Council, and such measure of administrative supervision as is reserved to the Central Government should apply to Burma as it applies to the various Indian provinces, but it should be applied from the outset with a difference, based on recognition of the fact that the future is still uncertain. In other words, the Provincial Administration should have a somewhat freer hand than is necessary in the case of Bengal or Bombay, so long as it provides an opportunity for the voice of Burma to be heard, and its constitution should be settled with this definite object in view. We are entirely unable to accept the contention of the Indianising party that the particular form of governmental machinery devised for India is of necessity equally suitable to Burma; the question is one for dispassionate examination, and the determining factor must be the provision of means of expression adapted to the genius of the people. For all practical purposes Burma is still dumb; the first requirement of the situation is that her people should find their collective voice. When this has been achieved, and a certain amount of political experience has been acquired, we believe that the future will rapidly become clear. If the people should then elect to throw in their lot permanently with their great neighbour on the West, the decision will be accepted without question by the authorities of the Empire; should they decide to play a separate part as one of the smaller but still important members of the Imperial family, we trust that their decision will be accepted with equal readiness. The official tie between Burma and India will in any case be slight, and its severance will be a matter of little difficulty; it will be for Burma to decide, and for the Empire to meet Burma's wishes with a prompt and generous response.

THE FUTURE OF MESOPOTAMIA

The liberation of Mesopotamia is an accomplished fact; that reawakening of the historic land to which a German Chancellor referred in a poetical moment has been brought about, but the spell has been broken by a British, instead of a Prussian, Prince Charming. The good work has been accomplished by Great Britain at a heavy cost, and our interest in the future of the country can be second only to that of its Arab inhabitants. Of the many problems in connection with what was formerly the Turkish Empire, the future of Mesopotamia is for us one of the most, if not the most, important; and though it has been discussed to some extent, it is remarkable that the discussion has not been wider and fuller.

Four articles which appeared in *The Times* from the pen of Sir George Buchanan constitute perhaps the most important, and certainly the most widely read, contribution to the subject published thus far. Sir George went to Mesopotamia from Burma with a great and well-deserved reputation. But conditions in the two countries are different, and it is possible that the temptation to apply to one country rules and theories which are perfectly sound for another may hamper the judgment of even the greatest of experts. Moreover, in any case, Sir George Buchanan left Mesopotamia some time ago, and with the change from war to peace, conditions there have altered materially. His views, therefore, though entitled to all the respect with which

Mesopotamian Arabs.

we naturally receive the opinion of an acknowledged expert, need not be regarded as beyond criticism. His articles, however, even if we regard them as too pessimistic in tone, form an admirable basis for discussion of the question; and the following notes are inspired largely by his remarks. They are compiled from sources which we know to be absolutely trustworthy, and chiefly from information supplied by an engineer of high standing, who enjoyed rather unusual opportunities of studying the subject from the inside.

I.—THE COUNTRY.

For practical purposes the region which we have to consider may be divided into three parts. From north to south these are: (A) The Kurdish hill country; (B) the rolling desert country, and (C) the irrigated land south of this and below Baghdad. Roughly, a line drawn east and west some 30 miles north of Baghdad may be regarded as the division between "B" and "C."

The Kurdish hills, of "A," run in a curve from the north of Mosul to the east of Baghdad, where they are continued in the Pusht-i-Kuh. For the greater part they consist of series of jagged ridges and deep valleys, covered with scrub oak. From any point of view it is not an easy country to travel in, the existing tracks being few, and difficult for pack transport, even when Kurdish brigands do not add to the difficulties of Nature's providing; and, from a military point of view, it is exceedingly difficult—according to competent judges, far worse than the Indian frontier. Timber for building does not exist. The chief export is raisins, as vines are extensively cultivated. The prospect of obtaining revenue from this region is not a bright one, and even if it were peaceable, it would hardly pay for its control and administration.

(B) Between the Tigris and the Kurdish hills the winter rainfall allows of extensive cultivation without recourse to irrigation, though the two Zab rivers have been used in the past to provide canals. Good crops can be grown in this area, and it is worth keeping. Between the Tigris and the Euphrates, except for strips of ground along the river and the immediate vicinity of Mosul, the country is rolling desert, and is uncultivated. It is inhabited, if it can be said to be inhabited at all, chiefly by the Shammar Arabs, one of the principal Bedouin tribes, and the great rivals of the Anazeh.

North of Baghdad the signs of oil are common everywhere: sulphur springs and gypsum abound in the desert; bitumen is plentiful at Hit and in its neighbourhood, and at Hammam Ali; and there are oil outcrops at Zakkho (our northernmost outpost), Qaiyarah (where it has been refined for use by our forces), Kerkook, the Fathali gorge, etc. Thus the region between Baghdad and Mosul should pay well, if occupied by us, and adequately worked.

(C) Years of neglect have converted the rich alluvial plain south of Baghdad into desert and swamp. As a result of rains and the melting of the snows in the north, the rivers come down in heavy floods from January to the end of May; the floods top the banks and spill over the country, dropping silt at once, and hence the rivers run along the tops of ridges above the level of the plain. Cultivation clings to the river banks or flood channels, and is protected from inundation by *bunds*. To get water for their land, the Arabs open *bunds*, or canal heads, and as they cannot close them again, the water that they do not use runs to waste, and usually creates, or adds to, a swamp miles away. In many places old canals have been converted into inundation channels, all control being lost. On one occasion* it became necessary for our engineers to carry out something like ten million cubic feet of earthworks to keep the Euphrates from breaking away and running into the Tigris at Baghdad. There is a very considerable fall between the two rivers, and had the work referred to failed to achieve its purpose, the result would have been a disaster of the first magnitude.

Corn can be, and is, grown in this area, and though doubt is expressed regarding the possibility of its being made to pay for export, the experience of the past would indicate that it should pay well. In pre-war days wheat from this Lower Mesopotamian area was sold in London at prices between 30s. and 40s. per quarter of 492 lb., c.i.f. London, giving a very good profit for both producer and exporter. As a matter of fact, some of the finest small-grain wheat in the world was produced in these parts, and can be produced again. In the old days the only serious bar to export was the placing of an embargo upon such export by the Turkish Customs at certain seasons. The record of the region in Babylonian days also points to its great possibilities as a corn-growing and exporting country.

It would seem possible, however, that it might more profitably be made a cotton-growing country. On a special experimental farm astonishing results have been obtained from both American and Egyptian cotton, the yield outclassing indigenous products. Cotton-growing would mean working in the hot weather, which, in turn,

* This was after the fighting at Ramadi.

Digitized by Google

means storing the river floods, for after May the rivers fall steadily, and they are very low from August to December.

A factor to remember in connection with these subjects is that while it is possible to construct new canals at a fairly low cost, the population to cultivate fresh areas simply does not exist. This fact is generally recognised: differences of opinion only arise over the pos-

Hit on the Euphrates.

sibility of making up for the deficiency in population by bringing in emigrants from India or elsewhere. It is true that before the war a certain number of Indians were resident in Baghdad, where they had intermarried with the natives. But, upon the whole, it is generally agreed that the Arab despises the Indian—at any rate, the Indian cultivator—and Indian colonisation would probably lead to endless trouble, especially in view of the newly-awakened national consciousness of the Arabs.

What appears to be required, in the first place, is a body of irrigation experts to prepare a scheme which can be worked out gradually, as money and increase of population permit. Incidentally, medical institutions should be provided, to check the heavy infant mortality and introduce sanitation amongst the natives. Given these things, the irrigation engineers could, as finances and other considerations allowed, work upon: (1) River control (which is urgent), (2) new canals, (3) drainage of irrigated lands, (4) storage of flood, and (5) drainage of swamps. The last would come automatically, as the control of the rivers became assured.

II.—TRANSPORT QUESTIONS.

Assuming that Mesopotamia remains under British guidance, it is obvious that the military authorities must for some time to come have much to say in regard to all questions of transport. A Director-General of Transportation was appointed for the Mesopotamia Expeditionary Force, but before he had got into his stride the post was abolished, and at present there would seem to be ample room for improvement. The advisability of co-ordinating transport is obvious: it would lead to very great saving, financially and in other ways; and the sooner it is effected, the better will it be. Existing transport may be divided into: (*a*) river transport, (*b*) railways, (*c*) motor transport, and (*d*) animal transport.

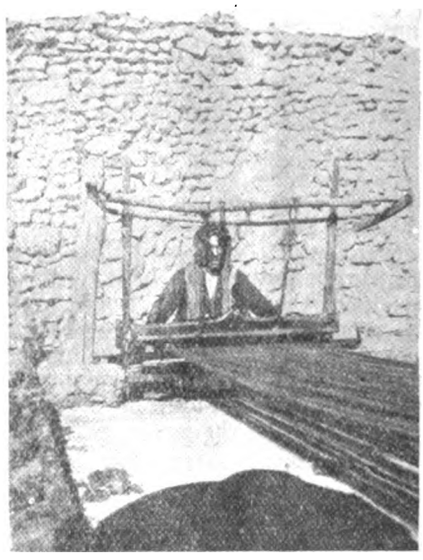
(a)—River Transport.

The Euphrates between Hillah and Samawah and between Nasirieyeh and its junction with the Tigris is merely a succession of swamps. Boats can get through during the flood season, but continuous river transport is out of the question under existing conditions. Between Baghdad and Kut the navigation of the Tigris is extremely difficult at the season of low water, and south of Amarah (or Kut el-Amarah), as far as Kurnah, the Tigris is a narrow and tortuous stream, which has lost half its water in swamps. In his report* Sir William Willcocks describes how the Bitera, the Chala, the Majar Kabir, the Machera, and other branches deprive the Tigris of water in low supply, and how the river in the reach below Kaleh Saleh has shrunk from a width of 350 metres (near Baghdad) to about 60 metres, and from a depth of 8 metres at flood to one of 4 metres. He also estimates the cost of regulating works to remedy the waste at less than fifty thousand pounds Turkish (£T48,380).

It must be remembered that while river control will improve conditions to a certain extent, barrages and other irrigation works designed to draw off water during the low season will naturally tend to hamper river traffic very considerably. It is to be hoped, therefore, that as long as river transport is used, or is useful, the effect upon it of any such irrigation works will be carefully considered before they are sanctioned.

(b)—Railways.

The railway policy for the country has been changed so frequently that it is practically impossible to-day to say what is intended, or what system will eventually work itself out. The completion of the German "Baghdad" railway appears, for the time, at any rate, to have been cancelled.[1] The idea is to construct a line (all-British) from a Levant port (probably Acre) across the desert to the Euphrates, and then down the valley of that river to Busreh.[2] The line from Busreh to Baghdad (which is metre gauge) was lately completed and opened for traffic, and the branch line of the "Baghdad" railway, from the city of the Khalifs to Hillah, is we understand, either already being converted or about to be converted to a metre-gauge line. From Baghdad also there is a metre-gauge line up the Dialah and on to the Persian frontier, and a branch line to Kifri was begun with the intention (it was understood) of carrying it on to Kerkook and Erbil. The idea was, apparently, to change the main Mosul communications to the left bank of the Tigris, thus allowing the line north of Samarra, on the right bank, to be picked up. The construction of the Kifri line was, however, stopped—it was understood, by the War Office—and the future of this branch is at present in the



A Weaver of Lower Mesopotamia.

air. To connect Mosul with Kifri by way of Erbil would be a big undertaking, necessitating two large bridges over the two Zab rivers; and that over the Greater Zab especially would be a stiff problem. Even then, the railway would only reach the Tigris on the bank *opposite* to Mosul, which is on the right bank of the river. From the military point of view, however, this might be no great disadvantage.

It is worth while adding that Decauville and light railways have not been used to any extent.

(To be continued.)

---

* "The Irrigation of Mesopotamia" [Spon, 1911], sec. 16.

[1] By the Sykes-Picot Agreement it was agreed that the Baghdad Railway should not be prolonged southwards beyond Mosul or northwards beyond Samarra until a Baghdad-Aleppo line following the Euphrates Valley route should be completed by the French and British Governments. The line has however, been carried north beyond Tekrit.

[2] By the same Agreement, Great Britain was granted the right to construct a line from Haifa, to "facilitate the junction of Baghdad and Haifa."

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

The question of future railway developments in Persia was discussed at length in these columns in an article published on November 28, and it was pointed out that the first need was to improve Persia's communications with the outside world to enable her to receive and to export goods more easily, and that the first main route to be constructed would be from Baghdad to Teheran, providing Persia with rail communication with the Persian Gulf, and ultimately, when a Damascus-Euphrates line has been built, with direct access to the Mediterranean. It was stated that steps had already been taken to make a start with railway construction, and this week a message is published from the special correspondent in the Middle East of *The Times* stating that the Persian Government has granted an option to a powerful British syndicate for the survey of a railway from Kuretu, near Kasr-i-Shirin, via Kermanshah, Hamadan and Kasvin to Teheran, with a branch line from Kasvin to Enzeli in the Caspian. The correspondent states that the syndicate represents the Anglo-Persian Oil, Armstrong-Whitworth, Vickers, and Weetman Pearson, and that when the survey, to be immediately commenced, is completed, the Persian Government will have the right either to build the railway itself by a system of loans from the syndicate or to give the syndicate the concession for construction.

***

Lord Faringdon made it clear in his speech at the annual meeting of the British Trade Corporation that the profit of £88,339 shown in the accounts was very far from representing the results achieved during the past year. Explaining that such credits as might be forthcoming from the operations of the various subsidiaries and branches had been left over for inclusion in next year's accounts, he stated that there were only credits to be taken into account. As regards the Near Eastern interests of the corporation, he mentioned that the Levant Company—which has opened branches or has established subsidiary companies in Batoum, South Russia, Serbia, Roumania, Bulgaria, Baghdad, Greece, Egypt, and the Sudan—reported that the profits they were making were quite satisfactory, and that the National Bank of Turkey, of which the corporation holds 96,810 shares out of 100,000 and which, it may be noted *en passant*, has offices now at Galata and Stamboul and in Smyrna, reported a great growth of business. From Lord Faringdon's survey of the various activities of the corporation it is evident that in its short existence the institution is fully justifying the hopes based upon it, and is, in short, proving itself an invaluable "spearhead" for the promotion of British interests in hitherto largely neglected fields.

***

A Greek correspondent, whose letter will be found on page 264, raises two very important points. In connection with the Athens Exhibition, it has been emphasised in these pages, notably in the article to which the writer refers, that it is essential in the interests of British trade that orders taken should be promptly executed. In this matter British firms are not acting merely for themselves, they are also representing *ipso facto* the whole body of British traders from whose ranks in due course the Near East markets may be expected to receive recruits. Their future must depend largely on the previous experiences of buyers in those markets, and if the methods of the pioneers have appeared dilatory it is not improbable that they will be unsuccessful. The correspondent in question gives a regrettable instance of delay in connection with an order he placed with a British firm for cloth for winter suitings. It was, as a matter of fact, four months before he received what he required, and that was almost at the end of last month, with the winter more than half over. This is the first complaint of the kind that has come to my notice, and I can only hope that it is an isolated example.

***

The second point raised by the correspondent is in regard to the parcels post service. I have constantly been receiving complaints concerning the deficiencies of the postal and telegraph services between the United Kingdom and the Near East and India, but they have invariably been on the score of delay. The correspondent raises a new issue, stating that a number of parcels which arrived at Salonika recently had been emptied of their contents. The parcels go by way of France and Italy, and the writer states that it is thought that the parcels must have been tampered with in the latter country. I have long been urging the authorities to take steps with a view to the improvement of the various services mentioned, and I hope that this last instance will induce them to make representations to the authorities responsible for the present unsatisfactory position. I have no doubt that an inquiry would bring to light the fact that the delays in the services take place in one or other of the countries mentioned. It is unfortunate that this country lacks the means of direct communication with the Near East, but that is no excuse for inertia on the part of our authorities.

***

Now that exports from America are restricted by the adverse exchange, which necessitates the strict limitation of purchases, British tobacco firms may be reminded that they can replenish their stocks to advantage in Bulgaria, which produces tobacco of excellent quality and fragrance, and has at the present time large stocks ready for export. On another page will be found the advertisement of the Bulgarian Tobacco Company "Nicotea" to which those interested in the import of tobacco or of cigarettes of extra fine quality and deliciously fragrant may be recommended to apply.

***

Elsewhere in this issue will be found the prospectus of British Cotton Seed Products, Limited, which has been formed for acquiring and working under patent rights the "Segundo Cottonseed Defibrator" and the "Segundo Cottonseed Hull Defibrator." The authorised capital of the company is £250,000, and the present issue is one of 220,000 shares of which 150,000 are offered for subscription at par. The company has been formed under influential auspices, and among the directors are Mr. J. W. Pearson, chairman of the British Oil and Cake Mills, Ltd., and Mr. N. B. Foster, managing director of the British Oil and Cake Mills, Ltd., and Mr. E. C. De Segando, who is also the consulting engineer to the company. It is the purpose of the company to encourage the import into this country of the "woolly" varieties of cottonseed, and by removing the cotton fibre to make the seed readily crushable, and thus to extend greatly the available supplies. The value of the residual fibres is, of course, very considerable, and the development of the company's undertaking will mean the provision of an invaluable source of raw material for paper-making and other industrial purposes.

***

The cotton trade has special reasons for watching with keen interest the progress of this company, since it is evident that the development of cotton seed utilisation may prove a factor of no slight importance in connection with the extension of cotton growing within the Empire. While on this subject, it is interesting to note that Mr. Cross, in his first Cantor lecture at the Royal Society of Arts, on February 16, on "Cellulose," gave an account of Mr. Segundo's work in establishing the value of the residual fibres of cotton seed for many industrial processes based upon cellulose, such as paper-making, explosives, artificial silk, and the like. The Segundo machine, he explained, had turned to account a hitherto neglected by-product, and he went on to refer to the immense importance of the residual fibres in industry,

Correspondents throughout Greece.

Established June, 1905, by the National Bank of Greece and a group of Capitalists.

CAPITAL - Drs. 1,500,000.
RESERVE FUND - Drs. 2,500,000.
Deposits and Credit Accounts, Drs. 100,000,000.

The Bank specialises in the collection of Bills payable in Greece; it accepts goods on consignment, and undertakes their sale, and transacts every kind of Banking business.

General Manager: D. LOVERDO.

TRADE WITH THE NEAR EAST.

The Bank of Athens extends special facilities for business with the Near **East** to manufacturers, exporters and importers.

The Bank has offices in all the principal towns in **Greece,** also in **Egypt,** Cairo and Alexandria, in **Cyprus,** Limassol, in **Constantinople,** in **Smyrna,** and in **France,** Marseilles.

Inquiries from interested parties are invited.

BANK OF ATHENS.

PAID-UP CAPITAL : £1,920,000. **HEAD OFFICE IN ATHENS.**

London Office: 22, Fenchurch Street, E.C. 3.

COMMERCIAL BANK OF GREECE, LIMITED.

CAPITAL PAID-UP - Drs. 15,000,000.
RESERVE FUNDS - Drs. 2,845,010.45.

Head Office: ATHENS.

Branches:—**Piræus, Salonika, Patras, Volo, Syra, Calamata, Corfu, Cephalonia, Candia, Chios, Argos, Pyrgos, Vostizza (Ægion), Nauplia. Larissa.**

AGENTS IN ALL PARTS OF GREECE, THE LEVANT, AND ABROAD.

The Bank conducts every kind of Banking, Commercial and Stock Exchange business and extends special facilities to traders interested in business with Greece. It acts as Agent for many Foreign Banks. It is specially organised for Exchange, the execution of mail and cable transfers throughout Greece, and for the collection of clean and documentary Drafts.

MERCHANDISE DEPARTMENT:
The Bank undertakes the warehousing and sale of goods consigned.

GREECE.

Area 43,522 square miles. The cultivated area amounted to 5,745,300 acres, of which about 2,253,400 were under cereals, 518,900 under grapes and currants, 370,600 under oak trees, 295,500 under olives, and 2,223,900 were forests.

Population (1914), 5,000,000 approximately.

Chief Products (with average annual production):—Currants, 142,000 tons; wines, 3,000,000 casks; tobacco, 9,000,000 lb.; cereals, 8,000,000 bushels; olive oil, 200,000 casks.

The MINERALS of Greece include:—Iron, Marble, Magnesite, Emery, Lead, Lignite.

IMPORTS (1914), Old Greece only:—Total value £7,000,000, of which £2,000,000 from the United Kingdom; £1,800,000 from Germany and Austria Hungary; £1,000,000 from Russia.

EXPORTS (1914), Old Greece only:—Total value £4,000,000, of which £3,000,000 came to the United Kingdom.

COINAGE.—The unit is the Drachmæ, equivalent to a Franc (10d.). The current rate of exchange is about 26·89 Drachmæ to £1.

FREIGHT.—From England, 160/- + 10 % primage.

WEIGHTS AND MEASURES.—It was decided in 1898 to introduce the metric system. The change is to be gradual from the old system, which is:—Oke = 2·82 lb., stater = 123·20 lb., livre (Venetian) = 1·05 lb., baril (wine) = 16·33 imperial gallons, kilo = 0·114 imperial quarter, pike = ⅓ of a yard, stremma = ·242 of an acre.

BANK OF NATIONAL ECONOMY (of Greece)

Head Office: ATHENS.

Branches:

PIRÆUS, SYRA. PATRAS.

Capital Paid Up - Drs. 10,000,000

Fully represented in all parts of the world for all kinds of commercial, financial, and shipping business.

President. L. EMBIRICOS. *Manager.* D. MIAOULIS.

BANK OF PIRÆUS.

For COMMERCE, INDUSTRY and SHIPPING.

Capital Paid-up - Drs. 5,000,000. Reserve Fund - Drs. 3,095,000.

OFFICES at PIRÆUS and ATHENS.

Every kind of Banking business transacted.
The Bank's connections throughout Greece enable it to offer foreign clients special facilities for the collection of Bills, etc.
Correspondence invited.

BANK OF INDUSTRY OF GREECE.

Head Office: 14, Stadium Street, Athens.

Capital Fully Paid-up - Drs. 15,000,000

The Bank has been established for the encouragement and development of Industry and Commerce, and undertakes every description of banking business.

BANK OF ORIENT.

Capital Paid up - Drs. 25,000,000

Head Office: ATHENS.

Branches: SALONIKA, SMYRNA, ALEXANDRIA, CAIRO, MITYLENE, SERRES, ZAGAZIG, MAGNESIA, PERGAMA, SOMA.

Every kind of Banking Business transacted

and to their having also "political" importance, the reference being no doubt to the increased value of the cotton crop resulting from their adequate utilisation.

***

The Dunlop Rubber Company, Ltd., is second to no concern in the assiduity with which it caters for foreign markets, among them the wide field included in the Near East, and it is, therefore, not surprising in the circumstances that the report of this undertaking, which has just been issued, shows that during the year ended August 31 record results were achieved. The net profit, after providing for excess profits duty, interest on income, stock and depreciation, amounted to £1,368,400, as against £649,500 for 1918, and £435,100 for 1917. In addition to this amount £178.000 has been retained for development in the rubber estates and subsidiary companies. The special allocations amount to £370,000 as against £121,300, the dividend on the ordinary shares is raised from 23¾ per cent. to 31¼ per cent., and £402,600 iscarried forward as against £122,800. Truly a result which emphasises the value of enterprise. I hope that those concerns which have hitherto ignored the Near East Markets will read the moral correctly.

COMMENTATOR.

COMMERCE AND INDUSTRY.

YUGOSLAVIA.

BELGRADE, February 6.

Recalling the Krone.

The recall of the krone has begun; for some time past Belgradians have been accustomed to see carts laden with white packing cases, guarded by a soldier or two, slowly wending their way between the Ministry of Finance and the Uprava Fondova. It was possible to read the inscription of some of the boxes, "1 million-10Din.," really enough to make one's mouth water. Now at last, the serious work has begun, and at the banks high value notes of the Austro-Hungarian Bank, a legacy of the occupation, can be exchanged for the new notes. These are handsome in design and colouring, of typical French style. The 1,000-dinar notes are an innovation, as the highest denomination hitherto in Serbia has been the 100-dinar note; the 1,000-dinar note has the inscription in French on one side, and in Serb, Croat and Slovene on the other; beyond the value, the inscription simply reads "Ministere des Finance du royaume des Serbes, Croates et Slovene," and on the other side appears the signature of Dr. Nivchitch, late Minister of Finance with a warning of the penalties of forgery. One notices at once the absence of any statement about the metallic cover or guarantee, and also of the name of the issuing bank which is coming into existence on purpose to father the issue, which it is expressly stated, is not a Government issue. But the most striking feature about the note is the overprint in red, done at Belgrade, "4,000 Kruna-Kron"; so it is finally officially settled that the ratio of the krone to the dinar is four to one. The Austrian krona notes cease to be legal tender after due delay, which varies with the locality according to date of recall.

ROUMANIA.

BUCHAREST, February 1.

Industrie Chimique Roumanie.

A limited company with a capital of 10.000.000 lei has just been founded under the above title. The list of directors includes the names of several well-known engineers and professors of chemistry, some ex-deputies, and one ex-minister—all men of very high standing. The object of the company as announced in the prospectus is to manufacture chemicals in Roumania and from raw materials to be found in the country. Before the war chemicals to the value of 14½ million lei were imported from Germany (at the present rate of exchange 140 million lei), including oils, fats, dyes, cellulose, sulphuric acid, hydrochloric acid, salts of ammonia and other salts, for most of which the raw materials are available in Roumania, and it is hoped further to use petroleum residues for the preparation of certain pharmaceutical products and dyes. A factory provided with some of the necessary machinery has already been purchased in Bucharest and another is shortly to be established for the production of pure alcohol from wood. It is proposed by degrees, and as circumstances permit, to open other factories in connection with the various branches of industrial chemistry.

CYPRUS.

CYPRUS, January 25.

After good rains, cold, bracing weather has set in. There have been heavy snow falls, and the mountain heights are all snow-capped. The plains are looking their best, showing a green expanse of rising cereal crops. Agriculturists are well satisfied, as prospects are all that could be desired.

THE DANUBE COMMISSION.

Present System of Dues.

We have received the following report from Messrs. Watson and Youell:—

At a meeting of the delegates of the principal Powers representing the European Commission of the Danube held in Paris last October it was decided to raise the Danube dues to seven times what they used to be *in gold francs*. The dues are paid at Sulina, and are leviable in gold currency. At present payment in gold not being practicable the delegates fixed the equivalent in paper currency, and they decided that the rate in francs as per tariff (after the multiplication by seven as above) should be converted into pounds sterling at the par rate of gold (25.22) and then converted into French currency at the sight rate of the day in Paris for cheques on London. As the sight Paris rate on London fluctuates, it was decided that the rate on the 1st and 15th of each month should apply for the ensuing fortnight. As a matter of fact, the dues are now usually paid in Roumanian lei, and these are calculated at the day's rate in Roumania for French francs. This means that the rate per ton in lei will vary from steamer to steamer and will be fixed by the E.C.D. staff at Galatz.

To give a concrete example of how it works: The old rate on ships over 1,500 tons register (Suez Canal) was 1.77 francs, multiplied by seven equals 12.39 gold francs as a basis, which at 25.22 (par rate of gold) is equal to £0.4912 or 9s. 10d. Assuming 40 to be the Paris-London exchange, this equals 19.65 francs per ton on E.C.D. measurement, which is similar to Suez Canal measurement. Assuming the franc to be worth 4 lei, this would make 78.60 lei per ton.

Roumania not being represented at the October meeting of the delegates at Paris owing to political differences which have been subsequently adjusted, no effect was given by the Roumanian delegate (who was the only delegate in Roumania at the time) to the decision arrived at, and it was only put into force on January 1.

Lieut.-Commander Stone, of H.M.S. Ladybird, on service in the Upper Danube (Budapest-Belgrade), has lately been appointed Acting British Commissioner. He has been taking a great interest in questions affecting the navigation of the Danube. Hitherto the Danube has been considered navigable for sea-going vessels only as far as Braila, which is the limit of the jurisdiction of the European Commission as hitherto constituted, and the limit, therefore, of their operations. Small sea-going vessels have, however, in the past been as far as Giurgiu when the river was high, and it is suggested that with a little dredging the river might be made navigable for vessels drawing 16-17 feet as far as Oltenitza, at least, during the greater part of the year. As most of the general cargo liners discharge part of their cargoes at intermediate ports and arrive in the Danube drawing about 16-17 feet, they might advantageously be sent up to Oltenitza when they have on board cargo destined for Bucharest and district. This would have been extremely useful during the present autumn, when many thousands of tons that have helped to congest the port of Galatz to the point of being paralysed would gladly have been sent by their shippers to Oltenitza direct, whence they could have been taken to Bucharest by motor lorries. These goods, including arrivals as far back as September, are still lying at Galatz and cannot be moved.

Lieut.-Commander Stone is of opinion that by a rearrangement of the work of the pilots a large reduction in their numbers is possible, and no doubt other improvements tending to greater efficiency and economy would be evolved from the practical naval mind.

On pointing out to the E.C.D. that the greatly increased dues will affect freight rates from and to the Danube, they state that the increase will only be imposed during the period required for liquidating the debts which have accumulated during the war, and it is considered advisable for these liabilities to be discharged as early as possible and in circumstances the least onerous to the shipping community. In normal times the E.C.D. dues are regulated by their annual budget, and unlike the Suez Canal Co. no profits have to be provided for.

The suggestion to extend the limit of jurisdiction to a port on the Danube higher than Braila is especially refreshing, and we trust that all support and encouragement may be given to it and others of like importance and interest. Perhaps it will be found possible to put into execution at an early date the proposal to extend the piers at Sulina further into the Black Sea, so as to maintain and improve the depth of water on the bar.

ROYAL SCHOOL
FOR
Daughters of Officers of the Army.

Patrons
Their MAJESTIES THE KING AND QUEEN
and HER MAJESTY QUEEN ALEXANDRA.
Chairman: Lt.-Col. A. GRUBB. J.P.
Vice-Chairman—Surgeon-Gen. SIR WILLIAM TAYLOR, K.C.B.

Daughters of Officers of the Army are admitted to the above Schools according to the circumstances of their parents, at rates of £20, £45, £65, and £80 a year. Granddaughters of Officers are admitted at £45, £65, and £80 a year according to circumstances, and a limited number of daughters of civilians are admitted at £120 a year when there are vacancies. There are 15 Scholarships, open to competition, in the School, of amounts varying from £10 to £20 up to one of £50.

As half of the School consists of pupils on the £15 foundation, which includes both board and education, a deficiency of about £2,500 a year has to be met by contributions, which are earnestly solicited. Donations of £5 5s., giving one vote for life, or subscriptions of 10s. 6d., giving one vote for the year, may be sent to

F. W. T. ATTREE, Colonel (late R.E.), Secretary.
Office: Panton House, 25, Haymarket, S.W.1.

THE DEVELOPMENT OF PALESTINE.

AN IMPORTANT TRADE OUTLET.

By Estelle Blyth.

If we would gleam some small idea of what England has done in and for Palestine during the two years that have elapsed since the liberation of Jerusalem, we shall find it, not in the pages of a grateful Press, but in the cold statistics of a Customs report. Probably not many care enough for Palestine to read through the pages of such a report as this brief article is based upon, namely, the second report issued by the Occupied Enemy Territory Administration (South), covering the period July-September last, and giving a detailed summary of the import and export trade of Palestine. A useful comparison is added, showing the increase or decrease on the preceding quarter (April-June). These are the only authoritative figures yet published showing the economic development of the country under British rule. The report is fascinating reading (even to one guiltless of a "head for figures") as the sober, detailed record of a great achievement.

It begins with a tabulated statement of total exports and imports of the O.E.T.A. (South), which we subjoin:—

Countries.	Imports. L.E.		Exports. L.E.
Great Britain	315,433	.....	8,288
Egypt	183,417	.....	108,988
France	20,863	.....	3,641
Italy	13,193	.....	1,100
Greece	19,702	.....	450
Holland	94,202	.....	—
India	35,179	.....	—
Japan	38,170	.....	—
America	24,194	.....	38
Other Countries	38,472	.....	—
Postal Parcels	79,044	.....	7,214
	861,869	.....	129,719

Egypt's high standing on the list may show, perhaps, that her position under British suzerainty has not been wholly disadvantageous to her. Holland, rather surprisingly, comes in a good third; while the disorganised condition of France at home is shown by her being able to take only the seventh place.

Great Britain heads the import trade in cotton goods (£E210,300), woollen goods (£E4,340), silks (£E3,280), clothing (£E23,923), and also in iron and steel manufactures (£E11,086). Egypt is the second great importer, with rice, petroleum, cigarettes, ground nuts, and sugar; Holland third, with sugar, valued at £E90,893. It is interesting to note that Japan's cotton imports are valued at £E15,878. Cotton is, of course, the largest import, being £E240,180, though that is a reduction of £E194,685 on the previous quarter. Sugar is second, the figures being £E102,124, an increase of £E70,640 on the previous quarter. Rice, clothing, petroleum, cement, and cotton yarn are all large and important items of the import trade.

There is a noticeable decrease in imports for the second quarter, imports dropping by £E237,069 and exports by £E744. This is due to various causes. (a) The dislocation of trade in Egypt. (b) Difficulties on the Palestine military railways in coping with goods, owing to the want of locomotive power, and also the introduction of Syrian personnel to replace demobilized British railwaymen; the Syrian, though talented, is far from methodical, and method is almost as necessary as talent in running a railway. (c) British firms have been unable to meet the demands of the market. (d) British shipping firms have shown too little eagerness to trade with Palestine, their unwillingness being in marked contrast to Italian and French lines.

The export trade has been largely hampered by bad harvests, and the consequent inevitable prohibition of the export of cereals. Wheat and barley were formerly the staple exports to Great Britain, but are now prohibited; dhurrah (maize), an important article of export to Egypt, is also restricted. Necessities of military rule have also placed heavy obstacles in the way of the exchange of commodities, thus restricting the free development of export trade. Political uncertainty is another important factor, combined with unrest in parts of the country, and this is likely to continue until the future of Palestine is definitely and courageously settled. The export of fruits—melons, dates, oranges, and nuts—has been rendered difficult by the high rates for freightage and the uncertain steamship communication. Egypt is Palestine's largest buyer in soap, dhurrah, melons and lentils (£E108,988), followed by Great Britain (£E8,288), and France (£E3,641). Soap, which is the greatest export of Palestine (376 tons), is made at Nablous from olive oil; and is valued at £E33,770; next come dhurrah (1,457 tons, £E15,750), and melons (£14,746). The exports are valued at £E122,505, a decrease of £E7,958 on the previous quarter.

These figures show that in Palestine there are now really splendid opportunities for British and Colonial firms. Timber, building material, iron and steel, woollen goods, agricultural machinery (imported free of dues), chemical manures (also duty free), live stock for breeding purposes, crockery, glass, and crystal ware, are essential to the reconstruction of Palestine. The country has been stripped for years by the Turks, ably seconded during the four years' terror by the Germans. It is crying out for the things that Great Britain and the Britains over the seas can supply; these are to Palestine necessities of everyday life, and if she cannot have them from us she will turn to Germany, Austria, and America. In authoritative circles a great development in trade is expected during the coming year, and signs of its approach are already apparent. It is indeed a mortifying reflection that Palestine, which has been freed by British troops at no light cost, is being neglected by British firms at a time, moreover, when Great Britain cannot, for her own sake, afford to neglect openings for trade. Nor should it be forgotten that Palestine is most important as an emporium for Northern Arabia, Damascus, and Trans-Jordania, the inhabitants of which will eagerly absorb western goods. The Haifa-Deraa-Damascus railway, passing as it does through some of the most fertile and adaptable parts of Palestine, offers greater facilities for trade with Damascus than the Beyrout-Rayak line; and the unsettled state of the Lebanon and Syria will drive importers south to Haifa, where a large port is planned. In passing, it is interesting to remember that as far back as 1877 Lord Kitchener (then only a lieutenant of Royal Engineers, surveying for the Palestine Exploration Fund), noted the importance of Haifa, and laid stress on it in his reports (*Quarterly Statement* of P.E.F., 1877, pp. 115, 120). A port here will be easier of construction than at Jaffa, which the reef of sunken rocks makes so dangerous; and its situation midway up the coast gives it a better command of Palestine and Syria than Jaffa. There are, however, dangerous currents which make a big détour necessary in rounding Carmel.

To those who have known Palestine under Turkish rule, the curt statistics of this report reveal the patient and faithful work of the British Administration in the Holy Land. When we add to these the fact that within six months of the liberation of Jerusalem a plentiful supply of fresh water had been introduced into Jerusalem, that roads and railways have been made and repaired, education and agriculture encouraged and assisted, and British justice firmly established, and all this with due regard to the sanctity of this unique land—we may surely feel proud of the work done by Englishmen in Palestine. All the prouder, it may be, that we find its record, not in high-sounding phrases, but in the sober details of a Government report, wherein the name of no single individual appears. For that is England's way.

CAPITAL ISSUES IN BRITISH INDIA.

At the end of June, 1919, the total paid-up share capital of companies registered under the Indian Companies Act (VII. of 1913) in British India amounted to over Rs.109 crores, and the debenture capital of such companies to nearly Rs.13 crores, showing a net increase of over Rs.6 crores in paid-up share capital, and of about Rs.12 lakhs in debenture capital, as compared with the preceding half-year ending December, 1918. In the paid-up share capital Bombay shows a net increase of Rs.3,43,88,000, Bengal of Rs.2,54,11,000, and Madras of Rs.15,99,000, while the Central Provinces and Berar show a net decrease of Rs.7,95,000, and Delhi of Rs.6,51,000. In the debenture capital Bombay shows a net increase of Rs.9,04,000, and Bengal of Rs.7,79,000, while the Punjab shows a net decrease of Rs.2,49,000, and Madras of Rs.2,70,000. Since the outbreak of war there has been a steady increase in the paid-up share capital of companies registered under the Indian Companies Act.

An increasing number of commercial travellers, representing London firms, are being carried to the Continent by aeroplane.

The Minister of Finance of Czecho-Slovakia is credited with the intention of introducing a Bill providing for the appropriation by the State of 75 per cent. of the profits realised on the exportation of all kinds of merchandise from the Republic.

H.M. Acting Consul-General at Paris states that the special train which has been running under the control of the Allied Food Commission from Paris to Vienna and Warsaw, is now available to ordinary travellers. Travellers from Paris should apply for places at the offices of the Compagnie des Wagons-Lits, 5, Boulevard des Capucines, instead of at the French Ministry of War.

MOTOR TRANSPORT IN THE SUDAN.—II.

By Joseph Rhodes, A.M.I. Mech. E., A.M.I. Auto. E. S.G.S.

The most suitable tractor for a test service is a chain track driven model similar to the "Clayton" or "Holt." The Clayton tractor is a most powerful chain track vehicle of British design and manufacture with an original method of supporting the front. This tractor has undergone severe trials in England, and has been used successfully for handling heavy guns over trackless country impassable to other forms of vehicular traffic. It has been proved to be reliable and amply strong. The best type would only be found after tests, and it is quite possible that the tractor successful in Kordofan and the North would not be at all suitable for work in the marshy Southern Provinces. Even where the ground is so sandy or swampy that no horse or wheeled vehicle could haul a load at all it will present no difficulty to the chain tractor, sometimes called the caterpillar type.

During the dry season in the cotton soil districts, such as the Gezireh, and the Eastern Sudan, the ordinary standard tractor with broad driving wheels would be quite suitable. The tractor and waggons would transport a paying load of several tons. Unless at least a fortnightly service could be reasonably expected it would be inadvisable to inaugurate a service. Statistics are lacking as to the running cost of the mechanical transport service in the Sudan, but information on the subject is probably available from the military authorities who have had experience under similar conditions in Palestine and the Western Egyptian desert.

A short time ago the use of a large chain track tractor or traction engine was considered impracticable on a commercial basis under the onerous conditions which would be met with, but it is not absolutely impracticable in the present stage of development of that class of design. Loads have been hauled across the Sinai Peninsula, and the following records were taken whilst travelling over very bad country in the Sinai desert. The machine was a "Holt" 75 h.p. caterpillar with a ten-ton paying load. On a fifteen mile journey it was found that the following fuel and lubricant was used:—petrol, 30 gallons; best heavy oil, 2 gallons; crude oil for track chains, 3 gallons; grease, 10 lb. The machine hauls 14 tons on reasonably good ground. The waggons are fitted with broad wheels 14 inches wide. The water tank holds 60 gallons, and the loss per day is approximately 3 gallons.

Motor Transport in England.

The Great Western Railway Company amongst many others have gone very thoroughly into the question of motor transport, and have now a fleet of over 200 petrol vehicles and a few steam ones. Some convey passengers, and others freight, all acting as feeders to the railway in rural and urban districts, and in some cases for a considerable distance from the main line. There is no doubt that such companies would be pleased to supply information as to running costs and revenue.

It is easy to make a rough estimate of the revenue from a weekly service of tractors as outlined. The present cost of camel transport is 1s. per ton mile. Even at the same price the merchants would prefer to send goods by tractors rather than camels, as they would be less likely to suffer damage and delay. It is quite a common occurrence for a large camel caravan to wait as long as a fortnight while the camel men all search for one stray camel. They do not put the smallest value on time. As such produce as gum could be sheeted over to keep off the rain it would always be sent by tractors. The risk of damage by rain is so great that the movement of gum by camel is stopped if there is the smallest possibility of a shower.

The trade would increase as a result of better transport. After experience with one service, other districts would be tapped, and as the use of tractors became more general there would be a reduction in the running costs. The development of possible timber trade from the extensive forest in the Southern Sudan is impossible until some such method of transport as the one under discussion is available.

It is not intended to give the impression that the actual time of journeys would be accelerated, as it would be a mistake to use heavy motor tractors for high speed or light work. The speed of such vehicles varies from 1.25 to 3 miles per hour, or very nearly the same speed as camel transport. Motor-car services could be run by the same staff for passenger traffic.

Agricultural Tractors in America.

At the present time the slow-moving haulage tractor is much to the fore in England and America for agricultural work. On one farm of 75,000 acres in Western Canada there are in use three 25 h.p. steam tractors and eight 30 h.p. oil tractors. When used for hauling, each tractor pulls from six to eight waggons containing four tons of grain. A 30 h.p. "caterpillar" tractor is also used on the same farm. Some of the early models of chain tractors still in use have been in use in the U.S.A. since 1904 in the agricultural and mining districts of Arizona to negotiate long stretches of sand and mud, and to work through sage brush and among sand dunes. It is obvious that the machines used in such country would be well worth trying in the Sudan. There is no satisfactory method known at present for estimating the resistance presented by land, sand, or mud so soft that the wheels can sink in to a depth of several inches, and actual tests must be made to discover the capabilities of any particular tractor in bad country.

A Suggested Test Service.

Amongst the most suitable roads for a test service would be from Wad Medani, in the Blue Nile Province, to Kassala and Gallabat, *via* Gedaref. This could be weekly to Gedaref, and alternate weeks forward to Kassala and Gallabat. The types suitable for such a service have already been mentioned. As far as possible, tractors and waggons would require to be of the same pattern to enable the interchange of parts, and to reduce the stock of essential spares necessary at each depot.

Such a transport service has already been tried and found to be a commercial success for transport of mineral products in Eretrea. Running sheds and small repairs shops would be necessary at Wad Medani, Gedaref, Kassala, and Gallabat. European drivers and mechanics would have to be employed at the commencement, but cheaper native labour could be trained and introduced as the service extended.

There is a definite demand for transport in this area. The cotton crop of Kassala district, and the gum crop from Gedaref, would provide sufficient freight for a fortnightly service. Gallabat is a collecting centre for all classes of Abyssinian produce. At the present time there is a steady demand for transport from Gedaref to Kassala for (Durra) maize. The price at Kassala is £E2 higher per ton than at Gedaref, which is entirely due to lack of transport.

The service Kassala-Gedaref would have to be suspended in the Atbara flood season, as the river has to be forded at Fasher. The muddy roads during the rains would not prevent the working of the chain tractors. To build a railway to the above towns would cost from £E1,000,000 to £E1,500,000 at least, and such an expenditure cannot be entertained for the present.

Cost of Fuel.

It is impossible to attempt any accurate estimate of the fuel required by tractors working as suggested. It depends on the type of vehicle used, the waggons, and the condition of the roads. The question need not be considered too seriously, as in normal times the oil fuel used is not very expensive. The usual form of engine fitted is designed to start on petrol and to work on paraffin. The combined use of petrol and paraffin complicates the carburettor and piping, and entails carrying an extra tank, but the ease in starting up is well worth it. Splash lubrication is generally fitted for the engine, though some makers fit a combined splash and forced system. Crude oil is run on to the track chains as lubricant. The power of the engines fitted varies from 25 h.p. to 110 h.p. High tension magneto ignition is usually fitted.

It is hoped that this paper will draw attention to the importance of applying mechanical power to haulage purposes in districts of the Sudan away from the river and railway. The demand for transport is so scattered and intermittent that the use of tractors is the only possible means of dealing with the question. One season there are surplus rains crops in one area, and the year following there may be a failure of the crops, with the result that there is nothing to export. The camels used at present would be employed collecting the produce to the tractor routes. The more thinly populated areas have not sufficient trade to provide traffic for the lightest of railways.

The cost of the service already outlined could be easily estimated. The main items of expense would be:—Capital, tractors, waggons, depots, machinery and spares, yearly depreciation, fuel and oil, spares, staff, and contingencies. In estimating what a trial service would cost it should be assumed that 60 to 70 per cent. of tractors and waggons will always be under repair in the workshops. As the service developed, one could expect the running cost to

Digitized by Google

decrease and the districts to develop. The small workshops necessary for repairs would also be of great local utility in each of the towns.

MISCELLANEOUS TOPICS.

Duralumin Research.

The remarkable properties of duralumin have caused it to be one of the most largely used alloys, and it will be agreed that the time is ripe for an exhaustive investigation into the alloy, its present uses, and the prospect of their development, together with the advantages or disadvantages of adding percentages of other metals, in addition to manganese and magnesium, to this copper-aluminium alloy. Such an investigation is at present being undertaken on as large and exhaustive a scale as possible, and some of the conclusions arrived at may now be made public. So far the investigations have been chiefly into the heat treatment of alloys of the duralumin type, and the effect on the mechanical properties observed of variations in these heat treatment conditions.

One of the first points mentioned is that it has been conclusively proved that when this alloy is cooled by quenching from temperatures ranging from 250 to 500 degrees Cent., and aged thereupon at the temperatures up to 200 degrees Cent., the hardness and ductility both increase, the latter to a more marked degree than the former. The deduction has been drawn that the actual values of hardness and ductility depend upon the temperature at which the alloy is quenched, increasing as does the temperature within certain limits. It does not seem, however, as though research had as yet proceeded sufficiently far to enable such a conclusion to be arrived at. In the Scientific Papers of the U.S. Bureau of Standards it is pointed out that in order to develop the best mechanical properties of this alloy by heat treatment a quenching temperature of about 510 degrees Cent. is the maximum allowable, as the alloy would spoil, for certain metallurgical reasons, if heated much beyond that temperature. It appears that the period of time at which sheet duralumin should be held at the quenching temperature is between 10 and 20 minutes, but heavier sections, as bars, might require more time owing to the greater coarseness of their structure. Research has shown that it is not advisable to quench duralumin in cold water, but that better results are obtained when the quenching water is first heated to boiling point.

Sawdust Briquettes.

Briquettes are now being made from wastewood products, as sawdust and shavings. It is found that under pressure these materials can be briquetted without a large percentage of binding material, but where this is used it is found that waste and spent grain from breweries can be used. The plant required consists of a drying apparatus, a press and baking oven, and about 16 h.p. is all that is required to work the presses. The briquettes are comparatively light, and are of the slow burning type, and their use is principally for keeping furnace fires alight during periods when little or no pressure of steam is required. It is said that about 10,000 kilogrammes of the briquettes are equal in heating power to about 6,000 kilogrammes of steam coal.

Nitrates from the Air.

The Nitrogen Products Committee, which was appointed in 1916 to consider the establishment in this country and other parts of the British Empire of some of the power processes for fixing atmospheric nitrogen, has issued a report, in which it is pointed out, among other things, that the world-demand for nitrogen products doubled during the decade 1903-13, and that practically the whole of it was met by Chile nitrates and the by-product ammonia industries; that the present demand for agricultural nitrogen in the United Kingdom is double what it was before the war; and that the interests of the Empire demand a greater independence of foreign supplies. The Committee recommends the immediate establishment of the synthetic ammonia (Haber) process and its extension as quickly as possible to a scale of 10,000 tons annually, and of the ammonia oxidation process on a scale sufficient to yield an equal weight of strong nitric acid or the equivalent in nitrates, in addition to a plant with a yearly output of 60,000 tons of cyanamide. It is hoped that the recommendations of the Committee will be seriously and promptly considered, for, indeed, few important countries in Europe have not installed plants for the manufacture of nitric acid from the atmosphere and nitrates for the purposes mainly of fertilisers and (of course up to recently) explosives.

Cheap Power Needed.

The industry, as a rule, flourishes on cheap power, and as water power is at present the cheapest, countries which nature has endowed with waterfalls were the first to avail themselves of that power and to develop the industry with success. America, with the Niagara, and Norway, with her unique waterfalls, are prominent in the development of the industry on a large scale; while Switzerland, Italy, Germany, and Austria were prompt in utilising similar resources for the purpose. In Great Britain nothing has been done yet, although the waterfalls in Scotland and in some parts of Wales could easily be utilised for such an important industry. It is often said that if other European countries can boast of such water-power energy, Great Britain is blessed with abundance of coal; but apart from the warnings given by various British scientists regarding the economy with which coal must be used by steam users, and, we may add, the warnings by the "prospects" of the nationalisation of the mines, the difference in the cost of production of nitrates as between water-power and steam-power is worth consideration.

Methods of Production.

Nitric acid is obtained from the atmosphere by means of large and powerful arcs. Taking a general figure, it may be stated that one kilowatt hour yields 63 grams. of the acid. One ton of the 100 per cent. acid thus requires nearly two kilowatt years, or nearly 3 h.p. years. Much discussion has waged around the relative consumption of energy in the direct method, or arcing through air, or the indirect method, viâ calcium carbide, cyanamide, and ammonia. Both methods are in use. In either case energy consumption is large, even if, as in the one case, raw materials are without cost. With steam-generated energy at £8 per h.p. year the energy per ton of acid amounts to about £21, as compared with slightly less than £1 in Norway and £10 at Niagara. Now, £8 per h.p. year represents .29d. per unit, while the Niagara figure is about 0.15d. per unit. This difference ought to encourage prompt action in this country.

Prospects in the Near East.

In many districts in the Balkan Peninsula the industry could be developed with great success, and particularly in Serbia and Montenegro, where there are spots, naturally convenient for the purpose, in which the manufacture of nitrates from the air by the utilisation of water power can be established, with results as regards cost of production very much approaching those in Norway. In Serbia, apart from other secondary water-power sources, the Morava and Vardar rivers can afford immense power for the purpose; whilst Montenegro, with the rivers Boyana and Drin, could be one of the greatest producers of nitrates in Eastern Europe. There was a scheme before the war to divert the River Drin to its original bed, and dredge the Boyana river for the reclamation of the barren marsh lands around Lake Scutari. The Drin, through Turkish negligence, had gradually forced a new course for itself from the sea into Lake Scutari, which is now 36 to 40 ft. higher than the Adriatic. The scheme was, by means of a huge barrage, to lower the level of the lake for about 16 ft., and this would enable the reclamation of the low-lying and once fertile land surrounding the lake to the extent of some 75,000 acres, and in the vicinity of the Boyana to the length and breadth of another 75,000. It was also proposed to dredge the Boyana to make it navigable for coasting vessels right up to Scutari from Palai, a small town at the mouth of the Boyana. In carrying out these works an immense water power could also be secured, which could be utilised for the production of electricity, and consequently for the production of nitrates.

Great waterfalls are also available in Macedonia, Bulgaria, and in Greece.

DELAY IN DELIVERING GOODS.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—In the article on "The Athens Exhibition," which appears in THE NEAR EAST of December 19, your correspondent says: "It is sincerely to be hoped that the orders that were taken will be executed within *a reasonable time*." This is, of course, our only wish, but it seems unfortunately to be not realisable. I ask permission to explain to you my own case. On *September* 22, 1919, I ordered some cloth for winter suits, which order was executed on November 28 (with two months delay, unfortunately!), and the goods sent by post did not reach me till to-day, *January* 23, 1920, that is a time of *four months*!

Ano another very important question, too. Parcels are sent to Greece through France and Italy. A lot of such parcels arrived here the other day *quite empty*, their contents being appropriated on the way through Italy it is supposed.

Are these circumstances favourable for trading with Great Britain? Is it possible to get a remedy?—I remain, Yours, etc.,

MAROPES.

Salonika, January 23.

H.M. Commercial Secretary at Bucharest desires to point out to British firms the inconvenience caused by them in addressing samples to him personally, or to his office. He therefore requests that samples should be addressed from this country direct to the firms for whom they are intended, by ordinary mail. The Parcels Post Service is not at the present time so irregular as it has been in recent months.

APPOINTMENT WANTED.

ADVERTISER (31), holding Diploma in Agriculture, has occupied responsible position with large agricultural merchants, requires position abroad; has had experience in estate management, all classes of stock and crops, and is considered an expert on wheat; could commence duties immediately.—Reply to "K.B.", 42, Walnut Street, Southport.

CHROME ORE DEPOSITS IN ASIA MINOR —II.*

Below we give the remainder of the report of the American Consul-General at Constantinople on chrome ore deposits in Asia Minor:—

At one time the working of the chrome-ore deposits of the Smyrna Province was carried on extensively, and proved to be highly remunerative. For a long period this province supplied almost the entire requirements of the world in this mineral. The Smyrna ore contains from 40 to 55 per cent. chromic oxide. The annual production in chrome ore of the Vilayet of Smyrna varied between 7,000 and 15,000 tons. If the mines were properly and economically worked they might be made to produce from 50,000 to 60,000 tons per annum; but under present conditions it would not be possible to transport more than 15,000 or 20,000 tons. The lack of transport facilities within this province also compelled mine owners to put a limit to their activity, as the charges incurred would not allow them to compete with ores of New Caledonia and Rhodesia. Construction of light railways may offer facilities for future development. In this province twenty research permits were issued in 1912. Many holders of permits expect to sell them, but they generally ask exorbitant prices. In spite of the inactivity now reigning, and which may continue to reign in this branch of industry for a certain time in consequence of the high cost of labour and other difficulties, it is almost sure that very important mining operations will be undertaken in this province in the near future.

Kemikli Mine.—This chrome mine is situated in the Kaza of Makri (Sanjak of Menteche), at a distance of nine miles from the sea and twelve miles from the town of Makri. It consists of two distinct deposits—the Kesser-Ali and the Tumbachi. The Kesser-Ali deposit is formed of two pear-shaped masses lying in inverse directions; the grade is 48 to 50 per cent. This deposit is located at the top of a hill; the ores extracted are conveyed to the Kizil-Dere River by shoots and are transported in carts to the washing plant at Imbachi. The other deposit of this mine consists in a vein from 6 to 13 feet thick, of vertical direction, and of a grade of 42 to 45 per cent. The work is carried on by shafts. Ore obtained at this mine is transported by caravans to Ichalish-Iskelessi, a small pier, whence it is taken by sailing boats to Mem-Pacha, on the opposite shore, to be shipped.

Katrandjik Mine.—This mine, situated near the seashore, consists in weak seams containing ore graded 40 to 42 per cent. Thus far it has not proved to be of importance. The owner of the mine is Ragheb Pasha. The present stock available is 700 to 1,000 tons.

Kodjek Ali Pasha Mine.—The mine is situated in the interior of Kodjek, Kaza of Yuksek-Koumou, at a distance of fifty to sixty-two miles from the sea. It consists of seams 9 to 10 feet thick, the grade of the ore being 45 to 50 per cent. and the inclination 45 deg. A great quantity of ore is available from this mine, which has not been worked for 20 years.

The Hadji Nicola Mines.—The grade of the ore is from 40 to 48 per cent., and the work is carried on by quarrying as well as underground systems.

Patterson Mines.—These are from four to twelve miles distant from the sea, and consist of very rich seams graded 40 to 52 per cent.

Hadji Mehmed Mine.—This mine is quite near the locality of Makri, at a small distance from the sea. It consists of seams 6 to 7 feet thick with an inclination of 45 deg., and a grade of 46 to 50 per cent. It is not possible to give an idea of the real production of this mine.

*The first part of this report appeared in "The Near East" of January 29th.

Besides the above-mentioned mines, there are other less important ones belonging to French, Greek, or Turkish firms. No definite opinion can be expressed as to their real value, since they have been worked in the past with very primitive means. The grade of the ore obtained is from 42 to 48 per cent. Research works in these localities can be effected with the proprietors' consent.

In the neighbourhood of Mersia, near the village Elvanli, there are several mines of chrome which contain 50 to 51 per cent. of chromic oxide. As regards transport facilities, these mines are well situated. The ore is taken by mules to Toumouk, near Mersina, where there is a small pier to facilitate direct loading on steamers. The average annual production of these mines can be estimated at 1,000 tons. This ore was exported to France and Germany. The other chrome mines of this province are at present of no importance, as they have been only superficially explored. The lack of a port, of labour, and of roads are the three stumbling blocks to the further development of the chrome deposits in this province. The chrome resources of the province of Konia appear inadequate to allow further development. The average annual output of the chrome mine situated near Adalia is about 1,000 tons.

Mining Methods.

In general, chrome is extracted by the quarrying system; but galleries are resorted to, as well as inclined and vertical shafts, either to follow the eruptive vein or to attack the mass of rock beneath the surface stratum when the latter has been impoverished below the limit of profitable production. The usual method of extracting the mineral is the most primitive; the tools used are limited to the pick and shovel, and when it is necessary to remove hard rock, which may be encountered in the drifts, the work is done with the hand drill and sledge hammer, while the blasting is done with ordinary coarse black gunpowder. There are no mechanical or compressed-air drills in use in any part of Asia Minor.

The only transport available, in general, from the mines to the seashore or the railroad station is that afforded by camels, mules, or donkeys. No properly built roads are maintained which are available for the beasts of burden; they must carry their loads over the footpaths and tracks which meander down the mountain sides, and practically double the distance to be traversed. It would not be a difficult matter to link up all the best mines by a common aerial cableway, like the one at Dagh Ardi. This would very greatly simplify matters and be of enormous advantage from every point of view; it would probably reduce the cost of transport by 70 to 75 per cent. If an aerial ropeway were established it would be an easy matter to extend it later on to other valuable mines, further inland, which have never yet been worked because the cost of transport exceeds the value of the ore.

Makri, from whence most of the ore is shipped, is safe and protected as a port; but the greater part of the water is shallow, and it is only in the south-west part of the bay of Makri that the depth offers a good anchorage. Shipments are, therefore, made on small lighters carrying from 10 to 15 tons, which lighters have to be towed by a steamer from the port of Makri to the place of shipment at Ikinjik, which is only an open roadstead.

Available stocks at Makri in July, 1919, were estimated at 20,000 tons. The ore already extracted, but still at the mines, could not be transported to the shipping point and was therefore not available. At Denizli the ready ore was (same date) estimated at 500 to 800 tons. This ore grades 40 per cent. Although the railroad to Smyrna from the Denizli district is in operation, it would be very difficult and costly to transport the ore from Denizli to Smyrna at present, owing to freight charges, limited car space, and high cost of labour

During the war no chrome mines were worked. The stocks on hand consist of ore extracted before the war. Mine owners say that it is impossible to commence the extraction of new ore before the beginning of the year 1920, owing to high wages, the lack of workmen, poor transportation, and the lack of tools. Most of the tools were commandeered by the Turkish Army. The total of chrome ore in Turkey was estimated in mid-July to amount to about 35,000 tons.

SWEDISH ORIENT LINE.

Direct regular steamship service with about weekly sailings outwards and homewards between

GOTHENBURG and ALGIERS, PIRÆUS, SMYRNA and SALONICA.
„ „ ALEXANDRIA, JAFFA and BEYROUTH.
„ „ CONSTANTINOPLE, ODESSA and other Black Sea Ports.

Also calling at other ports in Scandinavia, Levant and Black Sea (as inducement offers).

For further information apply to the following agents of the Line:

At LONDON: J. E. Hyde & Co., 1, Lime Street Square.

NEAR EAST MARKETS.

LONDON PRODUCE REPORT.

Currants and Sultanas.—There is little change in the position as regards either of these commodities. Inquiry is rather firmer, and is unlikely to be satisfied.

Sugar.—A strong demand is in evidence for home refined at controlled rates. The market in raw has been somewhat livelier. Reports from Cuba continue to be most favourable.

Coffee.—The market has been somewhat inactive, though certain qualities have been in fair request. Costa Rica has been done at 145s.-160s., Indian at 146s.-169s., Brazilian at 136s.-143s., and Colombian at 140s.-159s. A steady tone has characterized the futures market. It is noteworthy that American consumption is on the up grade. For the period July to January 31 there was an increase in the deliveries compared with the corresponding period of the previous season of 909,000 bags. Messrs. Reynolds and Gibson state that the effects of prohibition have not yet had time to show results in further demands for coffee, but presumably an expanding inquiry may be expected which will tend to larger calls for the article as the year progresses.

Oilseeds.—A rather quiet tone has obtained. Linseed has been a shade firmer, with La Plata at 47s. 6d. January-February, 46s. February-March, 44s. 9d. March-April, and 44s. 3d. April-May. Rapeseed is a firm spot. Cottonseed has been quiet, with Bombay, Hull, spot, at 24s., and 25s. 6d. for February-April, and Egyptian, spot, Hull, at 32s. 6d. and 32s. February.

Oilcakes, etc.—Linseed cake has been done at 505s., upwards. Cottonseed cake has been easy with English at 355s., Egyptian at 335s., and Brazilian at 330s. Coconut cake is 400s. There is no change as regards arachis cake and soya bean cake.

Oils have been firm, linseed being 114s. 6d. spot, and 114s. March-April. Rape oil deodorised came to business at 135s., and the crude at 15s. less. Turpentine is a firm spot at 202s., and 203s. February-April. Ground nut at 130s. is unchanged.

LANCASHIRE COTTON.

(From Our Own Correspondent.)

Manchester, Monday.

There has been more activity in the market during the past week than in any week since the beginning of this year. A stronger feeling has prevailed in all quarters. Prices have hardened, and fresh high records have been established. Owing to there being very little probability of lower values in the near future, buyers of yarn and cloth have been stimulated to place orders on a freer scale, and distinctly more business has been done, especially in piece goods. A feature of importance has been a further rise in Egyptian cotton, the advance since a week ago being about 1s a pound in Liverpool. No special news has come through, and the upward movement seems to be almost entirely due to the persistent demand in Alexandria and the extensive speculative buying which is taking place. Most Lancashire spinners are well bought, but there are users who have been caught short and scarcely know what to do. Business in yarns has been thoroughly disorganised. The high rates are now undoubtedly checking trade. In cloth for Egypt there has been increased activity in sized goods and miscellaneous fabrics. Not very much has been done for the outlets of the Levant. More orders are now being secured for Turkey. A revival of demand has sprung up for India. Extensive operations have occurred in a variety of goods for the several outlets, and many makers have extended their engagements. Substantial buying has also taken place for China and Java. A steady business has been done for South America. Manufacturers as a body are more independent than ever. American yarns for home use have attracted rather increased attention, especially twists. Export bundles have been in active demand for India.

OPIUM MARKET.

Messrs. Barker Brothers, Smyrna, report for the week ended January 31:—The sales this week on our market amount to 59 baskets at Ps. 930—1,000—equivalent to 18s. to 24s. per lb. c.i.f. The exchange for cheque is to-day Ps. 405 per pound sterling, and for dollars 0.88 cents for one Turkish paper pound. The arrivals are to-day 1,425 cases against 175 at same date last year.

It is reported that a remarkable bed of chalcostilite has been discovered in Morocco in the valley of the Ouad Cherrat at a place called Rar el Anz, about forty miles east of Casablanca. The crystals of the chalcostilite are stated to be remarkable both for their size and for their beauty.

SHIPPING INTELLIGENCE.

Forthcoming Sailings.

The Moss Line s.s. Sitra, for Gibraltar, Algiers, Malta, Alexandria, transhipping to Moroccan and Syrian coast ports, will leave Liverpool on January 21.

A Papayanni Line boat for Algiers, Malta, and Alexandria (taking cargo for Beyrout, Alexandretta, Mersina, Cyprus, etc.) will leave Liverpool on February 21.

The Ellerman Line s.s. Andalusian, for Malta and Alexandria, taking cargo for Beyrout, Alexandretta, Mersina, Cyprus, etc., will leave Liverpool on February 28.

The Anchor-Brocklebank s.s. Anchoria, for Calcutta direct, will close for cargo at Birkenhead on February 28.

The Harrison Line s.s. Astronomer, for Calcutta, will close for cargo at Liverpool on February 28.

The Bibby Line s.s. Leicestershire, for Marseilles, Port Said, Colombo, and Rangoon, will close for cargo at Birkenhead on February 28.

SHIPPING AT MALTA.

(From Our Own Correspondent.)

Malta, February 4.

The most prominent of the latest arrivals have been s.s. Eden Hall from Novoorossis, Submarine L.33 from Portsmouth, s.s. Orthia from Bombay, Albert Hanet from Constantinople, and the Norman Monarch from Alexandretta; whilst the Haliside for Buenos Aires, the Ulm for Falmouth, the Orthia for Genoa have just left, and this in spite of a more than usually severe sea. A squadron of naval craft has just arrived, and is staying till February 13.

BULGARIAN TRADE REGULATIONS.

Below we give the new Bulgarian regulations regarding imports and exports of commodities sanctioned by the Minister of Finances on January 16:—

Imports.

1. In order that importers of foreign merchandise may be able to utilise their own credit, they are permitted in general to enter into engagements abroad in cash or foreign exchange against the importation of merchandise of which the entry is permitted by law and by the regulations of the Direction de Prevoyance Sociale. In future a special licence from the Central des Devises will not be required for each individual case, the Customs having received instructions to allow merchandise to enter free and without licence, the import of which is not forbidden by law and the regulations of the Direction de Prévoyance Sociale. 2 The merchandise imported will be paid for with available exchange resulting from the export of Bulgarian produce (50 per cent—70 per cent.), or with acceptances, transfers of account, etc. It is strictly forbidden to pay for imported merchandise either with Bulgarian bank notes exported from Bulgaria, or with Bulgarian cheques in leva, or to enter into engagements in leva. 3. The speculative sale of leva on account of Bulgaria abroad, and the purchase of leva in Bulgaria for foreign account, is not permitted in any case.

Exports.

4. By virtue of Articles 4 and 5 in conjunction with Articles 11 of the regulations concerning exchange, and the application of the law of the Central des Devises, the National Bank of Bulgaria will purchase in future only a part of the foreign exchange proceeding from the export of Bulgarian produce, as follows:—30 per cent. on the proceeds of the export of Xanthi tobaccos and attar of roses, 40 per cent. of the proceeds of the export of Bulgarian tobaccos and the quality of tobacco called "Basma," 35 per cent. on the proceeds of the export of tobaccos of Southern Bulgaria and of the quality known as "Bachi Bali," 30 per cent. on the proceeds of the export of tobaccos of Northern Bulgaria and "Bachi Bali," 35-40 per cent. on the proceeds of the export of skins of sheep, lambs, goats, and wild game, 35-40 per cent. on the proceeds of the export of native cord (gaetan), 30-35 per cent. on the proceeds of the export of vegetable seeds, 30-35 per cent. on the proceeds of the export of all other articles of Bulgarian merchandise not coming under the prohibition of the laws and the regulations of the Direction des Prévoyance Sociale.

5. The balance of exchange resulting from exports is to be placed at the disposal of exporters to assist them in all operations that are permitted, chiefly in necessary banking transactions, as well as in payment of merchandise to be imported and of which the entry is permitted by the laws and the aforesaid regulations. 6. Holders of free exchange on foreign countries are obliged to inform the National Bank of Bulgaria—Centrale des Devises—in regard to every transaction whatever in regard to this exchange, giving the name of the purchaser, the amount of the transaction, and the rate at which it will have been carried out. 7. Foreign exchange which must be handed over to the Centrale des Devise following the export of Bulgarian produce will be calculated on the basis of the price of merchandise f.o.b. a Bulgarian port or the Bulgarian frontier c.a.d., including customs duty for export, expenses of transport to the port (frontier), etc. 8. By decree of the Administrative Council of the Centrale des Devises less than 30 per cent. of the proceeds of the exports of certain articles of merchandise and classes of commodities may be demanded; the export may even be authorised to import goods if the first necessity for the total value of the exports which he shall have made.

J. W. Nicholson and Son, 2, High Street, and Stock Exchange, Sheffield.

SECRETARY AND OFFICES.

Percy Fish, Dashwood House, New Broad Street, London, E.C.2.

ABRIDGED PROSPECTUS.

The Company has been formed for the purposes set out in the Memorandum of Association, and in particular for acquiring and working under the patent rights referred to below the "Segundo cottonseed defibrator" and the "Segundo cottonseed hull defibrator."

Those two machines, the result of many years' research and experimental work, effect what has hitherto never been accomplished, viz.:—(a) The removal from the woolly varieties of cottonseed of their residual fibres (to whatever extent desired) without injury either to the seed or to the fibre removed, and (b) the separation of the residual fibre from the decorticated hulls (the empty shells) of cottonseed, free from any pieces of shell or other débris.

It is the purpose of the Company to encourage the increased importation into Great Britain of the "woolly" varieties of cottonseed, and by removing the cotton fibre to make the seed readily crushable and thus to extend greatly the available supplies for the British industry. The treatment of the heavily fibred cottonseeds by the Segundo processes not only largely increases the market value of such seed, but also provides a much needed addition to the supplies of raw material for paper-making and many other industrial purposes. The market value of the fibre so removed is considerably in excess of the cost of removing it from the seed

At the request of the Council of the Textile Institute, the "Segundo" cottonseed defibrating machine was exhibited in operation at Manchester in May, 1919, and at the invitation of the British Science Guild, the machine was exhibited at the British Scientific Products Exhibition held in London in July, 1919, and was shown defibrating cottonseed three times a week.

Attention is drawn to the full Reports printed in the inset enclosed with the prospectus, not only as proof of the claim made for the "Segundo" processes in connection with the additional value thereby given to the seed, but also as indicating the commercially established value of the cotton fibre obtained thereby for the manufacture of artificial silk explosives, paper, etc.

The Company proposes forthwith to erect defibrating plant and accessory apparatus at two seed-crushing mills in England (provisional arrangements having been made for space at a rental and for power at cost) for the treatment in the aggregate of up to 20,000 tons of heavily-fibred cottonseed, or about 50,000 tons of lightly-fibred cottonseed per annum, should the Company so desire. From the figures given in paragraph (12), it will be seen that 50,000 tons is less than one-tenth of the quantity of cottonseed crushed in Great Britain annually before the war.

The cost of construction of the two plants is estimated not to exceed the sum of £25,000.

The Directors are advised that the premium obtainable for the heavily-fibred varieties when defibrated may reasonably be taken at about £3 per ton, and on this basis the following estimate of profits on the treatment of 20,000 tons of heavily-fibred cottonseed per annum can, it is considered, be regarded as reliable:—

Sale of products:—		
About 18,600 tons defibrated cottonseed at, say, £21 per ton		£390,600
About 1,400 tons of lint-products at £45 per ton		63,000
20,000 tons of heavily-fibred cottonseed at, say, £18 per ton	£360,000	£453,600
Cost of treatment, carriage, baling lint products, general working expenses and depreciation of plant and machinery, at, say, 30s. per ton of seed	30,000	
Office and administration expenses, say	10,000	400,000
		£53,600

thus showing a return available for distribution in dividends (subject to the creation of a reserve fund) at the rate of over 20 per cent. on the authorised share capital from the treatment of the relatively small quantity of 20,000 tons of seed per annum.

Trade statistics show that the average import into the United Kingdom of cottonseed during the six years preceding the War was about 600,000 tons per annum.

The British Oil & Cake Mills, Limited, will purchase from the Company up to 50,000 tons of defibrated cottonseed per annum at the market price.

No difficulty is anticipated in disposing of any quantity of defibrated seed at highly remunerative prices. The market for the cotton fibre may also be said to be practically unlimited.

Apart from the defibration of cottonseed the Company confidently expects to earn additional substantial profits from:—

(A) Licenses for the use of "Segundo" machines in other cotton-seed crushing mills in the United Kingdom.

(B) The formation of subsidiary companies for the development and working of the seed-defibrating machine in India and in other countries on the continents of Europe and Africa.

OPTION ON INDIAN RIGHTS FOR SEED-DEFIBRATING MACHINE.—16.—India produces from 1,500,000 to 2,000,000 tons of cottonseed per annum There should, therefore, be a wide field for the employment of the seed-defibrating machine in that country. The establishment in India of a cottonseed defibrating industry should, moreover, tend largely to increase the available supplies of suitable cotton-seed for British oil mills.

The Company has secured the option for twelve months from March 25th, 1920, to acquire, from Cotton By-Products, Limited, the Indian rights for the seed-defibrating machine at the price of £25,000.

Letters have been received by Cotton By-Products, Limited, from several well-known firms in India desiring to be associated with the development of the business in India.

An Agreement dated the 10th February, 1920, has been entered into between Vickers, da Costa and Company, of Warnford Court and Stock Exchange, London, E.C., and J. W. Nicholson and Son, of 2, High Street and Stock Exchange, Sheffield, of the one part, and the Company of the other part, whereby Messrs. Vickers, da Costa and Co. and Messrs. J. W. Nicholson and Son jointly and severally agree to underwrite 150,000 shares of the present issue for a commission of 5 per cent. in cash and an overriding commission of 1¼ per cent. in cash, the Company granting them an option on 50,000 shares in the Company's Capital (not forming part of the present issue) at the price of £1 10s. 0d. per share, exercisable within one year from the date of the Company first going to general allotment.

Applications for shares on the terms of the full prospectus dated 12th February, 1920, may be made on the form below or that accompanying the full prospectus and forwarded with a cheque for the amount payable on application to the Bankers or Brokers, or to the Secretary of the Company.

Copies of the Memorandum and Articles of Association of the Company, the originals of the reports and letters and other confirmatory reports, and documentary evidence, and copies of the contracts may be inspected at the office of the Company's Solicitors, Messrs. Cox and Co., 17, Tower Royal, E.C.4, between the hours of 11 a.m. and 4 p.m., on any day while the list remains open.

Copies of the Full Prospectus on the terms of which applications will alone be received and Forms of Application can be obtained from the Bankers and Brokers, and at the offices of the Company.

THIS APPLICATION FORM MAY BE USED.

No. .....

Issue of 220,000 Shares of £1 each at par. **35**

To the Directors of
BRITISH COTTON-SEED PRODUCTS, LIMITED.

Gentlemen,—Having paid to the National Bank, Limited, the sum of £....., being a deposit of 2s. 6d. per Share on..... Shares of the Company, applied for by me herewith, I request you to allot me that number of Shares upon the terms of the Company's Memorandum and Articles of Association, and the Company's Prospectus, dated 12th February, 1920, and I agree to accept the same or any less number that may be allotted to me, and to pay the balance payable in respect of the said Shares as provided by the said Prospectus; and I authorise you to register me as the holder of the said Shares. I hereby declare that this application is not made by me for the benefit of an enemy subject within the meaning of the "Trading with the Enemy (Amendment) Act, 1916."

Ordinary Signature .....

Name in full .....
(State whether Mr., Mrs., or Miss.)

Address .....

.....

Description or Occupation ..... Date.....1920.

All Cheques to be made payable to "THE NATIONAL BANK, LIMITED, or Bearer," and crossed, and when altered from "Order" to "Bearer" the alteration must be initialled by the Drawer. A separate Cheque must accompany each application.

An acknowledgment will be forwarded in due course, either by Allotment Letter, or by return of the deposit.

This Form, when filled up, should be sent with a Cheque for the amount payable upon application, to THE NATIONAL BANK LIMITED, 13, Old Broad Street, London, E.C.2.

COMPANY MEETING.

British Trade Corporation.

The third ordinary general meeting of the British Trade Corporation was held on February 11 at the Institute of Chartered Accountants, Moorgate Place, Moorgate Street, the Lord Faringdon (governor of the corporation) presiding.

The Secretary (Mr. G. De B. Brounlie, A.C.A.) having read the notice convening the meeting,

The Chairman said: It is with pleasure that the directors meet the shareholders and lay before them a review of the work done in 1919. I ought, perhaps, to begin by explaining the reason which weighed with the board in placing before you to-day only a partial statement as far as revenue is concerned. If we had waited until the result of the operations of our various subsidiaries and branches and of the National Bank of Turkey had been ascertained, it would have been many months before we could have submitted accounts, and, in the meantime, the financial position of the corporation might have undergone substantial changes. We thought, therefore, that it was better to follow the usual bank custom and submit our figures so far as ascertained without delay, leaving such credits as may be forthcoming later for inclusion in next year's accounts. I say "credits" because we believe there is nothing on the other side of the account that has to be considered. In future years we shall close the accounts at our branches on September 30 in each year so as to include their figures in our statement at December 31.

The branches I have just mentioned are, in the order of importance, Danzig, Batoum, and Belgrade. At Batoum, business has been difficult owing to the political situation, but we are the only British bank in that part of the world, and some important transactions have passed and are passing through our hands. At Belgrade great difficulty has been experienced in getting suitable premises, the housing trouble seeming to be as great there as it is with us here, and our manager, Mr. J. B. Clarke, has not yet been able to do more than preliminary work. He has, however, been there for so short a time—less than two months—that it is not reasonable to expect much.

In conjunction with the London and Westminster, Lloyds, and the National Provincial Banks, we formed the South Russia Banking Agency, and we have in Mr. A. E. Eayres-Gardner an able manager who will be ready, when present difficulties are removed, to transact such business as may offer, backed, as he will be, with resources provided by the parent institutions. Under contract with the Disposal Board of his Majesty's Government, we have realised large quantities of surplus stores at Salonika and in the Black Sea, setting up for the purpose an extensive organisation. From the balance-sheet presented you will see that our capital remains at £2,000,000, our current, deposit, and other accounts are £1,864,302, and our acceptance on account of customers were at December 31 £1,147,385, against £212,181 at the end of 1918.

On the assets side it will be seen that we have cash in hand and at bankers £63,541, money at call and short notice £510,000, Treasury bills £700,000, and under the heading of investments we hold £350,000 National War Bonds and £175,000 Exchequer Bonds. Other high-class securities and sundries, after writing down to the market price of the day, stand at £854,286. Bills discounted, loans, advances, and sundry debtors amount to £1,201,057, while capital invested in subsidiary companies amounts to £346,993.

At the present time our chief interests are the Levant Company, the Trade Indemnity Company, and the Anglo-Brazilian Commercial and Agency Company. The Levant Company came into existence at the beginning of last year, and is operating principally in the Near East. It has acquired a substantial stake in the business of J. W. Whittall and Co., Limited, of Constantinople, and has opened branches or established subsidiary companies in Batoum, South Russia, Serbia, Roumania, Bulgaria, Baghdad, Greece, Egypt, and the Sudan. The company reports that the profits they are making are quite satisfactory, and we believe we have reason for congratulating ourselves upon the assistance we have given them in opening to British trade parts of the world which in the past have been somewhat neglected. The Trade Indemnity Company, of which Mr. Cuthbert E. Heath is now chairman, has made substantial progress.

The next item in our balance-sheet is our investment in National Bank of Turkey shares, of which we hold 96,810 out of a total of 100,000, costing £243,119. Our able manager, Mr. Bilinski, reports a great growth of business. Offices now exist in both Galata and Stamboul, and as a measure of the growth I have just mentioned I find that the credits and credit balances amounted to £855,000 when we acquired the business a year since, and are now £5,456,000. Accounts have not yet been received to December 31 last, but anticipatory statements point to very substantial profits. For the reasons I have just given—namely, the non-inclusion of any return from the investment of upwards of £600,000 and the fact that we are still in the development stage, which means expenditure without any great net result, I hope that the profit of £88,339 17s. 5d. shown in our accounts will not be deemed unsatisfactory.

We can claim that, while proceeding upon commercial lines, we have endeavoured to do our best to provide facilities for the extension of overseas trade, particularly in places where British interests in the past have been somewhat neglected, and where no British institutions were in existence. I ought, perhaps, to mention one item in our balance-sheet to which I have not so far referred, namely, "Premises, £25,831 10s." We have acquired the leases of the premises we now occupy and the house next door, and we shall shortly proceed with alterations that will provide us with room that is sorely needed. I do not like to conclude my remarks without referring to the excellent work done by our staff. They have worked under many inconveniences with commendable zeal. Our manager, Mr. Dickson, has not yet returned from a visit to Constantinople and other places where our interests lie, and we are greatly indebted to him for what he has done and is doing. The Chairman concluded by moving: "That the directors' report and the statement of accounts for the year ended December 31, 1919, be and are hereby received and adopted."

Mr. F. Dudley Docker, C.B., seconded the resolution, which was carried unanimously.

On the motion of the Chairman, seconded by Mr. F. Dudley Docker, a dividend of 8s. per share on the issued capital of the Corporation was declared.

The retiring director (Sir Henry Babington Smith, K.C.B., C.S.I.) and the auditors (Messrs. Deloitte, Plender, Griffiths and Co.) were re-elected, and after a hearty vote of thanks had been accorded to the directors the meeting terminated.

COMPANY NOTES AND REPORTS.

Crossley Motors.

The report of Crossley Motors, Ltd., for the year ended October 31 states that the profit, after reserving for depreciation on capital expenditure specially incurred for munitions of war, amounted to £147,490, to which must be added the balance brought forward of £161,079, less amount paid and reserved for excess profits duty for three years ended October 31, 1918, amounting to £126,743. The balance available is £121,825, and the directors recommend a final dividend of 5 per cent., making 10 per cent. for the year, and a bonus of 1s. per share, leaving a balance, subject to excess profits duty for year ended October 31, 1919, to be carried forward of £61,825. Meeting, Memorial Hall, Manchester, February 23, at 2.30 p.m.

Dunlop Rubber Company, Limited.

The report of the Dunlop Rubber Company, Ltd., for the year ended August 31 states:—The net profit for the year, after providing for interest on income stock, commissions, management expenses, depreciations, and excess profits duty up to August 31, 1918, amounted to £1,368,432 2s. 8d.; add amount carried forward from last year, £122,759 14s. 3d.—total, £1,491,191 16s. 11d. The following payments have been made: Quarterly dividends on the "A," "B" and "C" preference shares to August 31 1919, amounting to £249,849 6s. 2d.; a first interim dividend on 1,500,000 ordinary shares at the rate of 1s. 3d. per share, amounting to £93,750; a second interim dividend on 1,500,000 ordinary shares at the rate of 3s. per share, amounting to £225,000—£568,599 6s. 2d.—£922,592 10s. 9d. The directors propose to pay a final dividend on 1,500,000 ordinary shares at the rate of 2s. per share, amounting to £150,000; to write off the expenses of new capital issues, £120,000; to transfer to income-tax reserve account, £250,000—£520,000, leaving a balance to be carried forward, subject to excess profits duty for 1919, of £402,592 10s. 9d. There has been retained in the rubber estates and subsidiary companies, for development and as additional working capital, a further sum of approximately £178,000. Provision has been made out of profits during the year of approximately £325,000 for charges that will not recur in the future and for excess profits duty up to the period ended August 31, 1918. The sales and profits record a further great advance, and are the largest in the company's history. During the year under review the entire shareholdings of the Nile Spinning and Doubling Company, Ltd., and the Ross Spinning Company, Ltd., and also the interests of the outside shareholders of D.R. Cotton Mills, Ltd., were acquired. The large extensions at Fort Dunlop continue in progress, and extensive additions are also being made to the company's capacity for the production of cotton cloth at the Rochdale Mills. The completion of all these works has been much delayed by the reduced working hours and the labour troubles, which have much retarded the supply of machinery. Since the last annual meeting the business of the company in France hitherto carried on as a branch has been transferred to a separate company registered in France. The development of the company's rubber estates continues, the total planted area at the end of December, 1919, being over 38,000 acres. The trading for the first five months of the current financial year shows again substantial increase. The directors have taken steps to procure a report from experts as to the best method of bringing the capitalisation of the company into proper relation to the present value of its assets, but a recommendation will not be made until such report has been received and thoroughly considered. Since the close of the financial year a further issue of 1,000,000 ordinary shares has been successfully made at a premium of £7 per share, which will strengthen the resources of the company and provide funds for its expanding programme of output. The director retiring by rotation is Sir Henry Dalziel, Bart., P.C., M.P., who, being eligible, offers himself for re-election. Lord Hindlip, Sir Harry McGowan, K.B.E., Messrs. J. J. C. Craig, and Wilfrid Dawson also retire, and being eligible, offer themselves for re-election. The auditors, Messrs. E. Bishop and Co. and Messrs. Stokes Brothers and Pim, retire and offer themselves for re-election. Dividend warrants will be posted on March 8. Meeting, 14, Regent Street, S.W., February 25, 11.30 a.m.

BANK OF INDUSTRY OF GREECE.

M. Constantin Mezas, joint manager of the Piræus branch of the bank, has retired to enter into business on his own account. M. Leonidas Dascalopoulos, chief accountant, has been appointed sub-manager of the head office. M. Efstathios Paparrodopoulos, chief accountant at the Piræus branch, has been appointed sub-manager.

SUPPLIES AND PRICES IN TURKEY.

The following extracts are taken from recent reports received by the Imperial Ottoman Bank:—

ADRIANOPLE, January 28.

Crop Outlook.

Agriculture in our vilayet is progressing favourably, although the area sown up to the end of the month—60,000 hectares—is about half that of previous years at the same time in consequence of the termination of compulsory agriculture for all citizens, which measure was introduced by the Ottoman Government during the war. Nevertheless, the forecasts are excellent for the early sowings, especially as regards maize, for which the cultivators have a special predilection.

No new factor is to be noted in our market since the date of our last report. The uncertainty regarding the future of the town of Adrianople causes stagnation as regards commerce in general, business being restricted for the most part to transactions of small importance.

STAMBOUL, January 24.

The rise in exchange recorded in our last report, caused in part by speculation, has led this week to a marked decline in rates, which stand at about Ps. 410 for cheque on London against 440, 10.60 francs for cheque on Paris against 8.60, and Ps.476 for gold against 540.

Imports.

Prices on the Manchester market are maintained, and deliveries are difficult. Here prices are firmer, and the increase recorded last week (of 10 to 15 per cent.) remains. Actually the level of price at Constantinople is not more than from 10 to 15 per cent. below that of Manchester.

For some days the demand for Roumania has caused a certain activity. Batoum and Anatolia continue their purchases on a small scale. Despite the arrival of several vessels recorded in our last report, there have been relatively few demands for exchanges, the necessary covering having been assured for the most part last week.

Oils.—The high price realised—£17.60 the case—is maintained.

AYAHS' HOME,
26, King Edward Rd., South Hackney, London.
ESTABLISHED 1825.
IN CONNECTION WITH THE LONDON CITY MISSION.
Hindustani spoken. Ayahs boarded and lodged at 18s. per week each until their Return Passage is paid or a Situation secured for them to return. Ayahs met at any Dock or Railway Station in London. Experienced, well-recommended Ayahs taken entirely off Ladies' hands for a certain payment, which differs according to time of year. Ladies proceeding to India or China requiring an Ayah can generally obtain one by applying to Mrs. FLETCHER, Matron.

(Over 80 Branches in the Near East.)

The Bank has been established for over 55 years, and has its own Branches or Agents in every important commercial town in the Near East.

The Offices of the Bank at 26, Throgmorton Street, London, and 25, Pall Mall, Manchester, can now enter into transactions with all the above-mentioned places, subject to British Government regulations and local restrictions where in force.

Manufacturers, Traders and others are invited to correspond with the Bank, where all possible facilities will be afforded for the re-opening of business.

The Bank makes advances upon Bills of Lading and other export documents.

Drafts and telegraphic transfers issued.

Letters of credit granted.

P. Charlas, 10, Montague Street, W.C.1, author and journalist; W. J. Beech, 26, Doughty Street, W.C.1, accountant. A. P. Charlas signs as managing director. Registered office: 6, Broad Street Place, E.C.

COMPANY RESULTS.

National Bank of Greece.—The Bank of Athens announces that coupon No. 14 for the dividend on the shares of the National Bank of Greece for the second half of the year 1920, amounting to 160 dr. per share, will be paid at its London office, 22, Fenchurch Street, E.C.3. Coupons must be left three clear days for examination.

Nestor Gianaclis.—The Bank of Athens announces that debenture coupon No. 17, due February 1, 1920, will be paid on presentation at London offices, 22, Fenchurch Street, E.C.

Southern Punjab Railway.—The directors of the Southern Punjab Railway recommend a final dividend on the ordinary stock of £9 per cent., together with a bonus of £1 per cent. (less English income-tax at 4s. 11.74d. in the £), making £16 per cent. for the year ended September 30, 1919.

Ottoman Railway (Smyrna to Aidin).—The half-yearly general meeting will be held at Winchester House, 50, Old Broad Street, E.C., on March 26, at 12 p.m.

Egyptian Guaranteed Three per Cent. Loan.—Dividend (due March 1) will be paid by Messrs. N. M. Rothschild and Sons on that day and on each succeeding day (Saturdays excepted) between 11 and 2.

The directors of the Jorehaut Tea Company have declared an interim dividend of 5 per cent. (actual), less tax (on the increased capital), payable on and after February 24.

The Commercial Company of Salonika, Limited, publish the numbers of share warrants for which they have received application for the issue of duplicate warrants on the ground that the warrants were destroyed in the fire at Salonika in August, 1918.

'ON CHANGE.

(From Our Own Correspondent.)

Throgmorton Street, Monday.

Our market has been rather irregular and erratic this week; some securities continue to be pressed for sale from the Continent, whilst, on the other hand, some absorption is taking place here locally, and Egypt also is buying here and there.

City of Alexandria Bonds close ½ a point down at 68½; a similar drop has taken place in Egyptian Unifieds at 74½, and the 3½ per Cent. Pref. close 1¾ down on balance at 61¾. Turkish Fours (1891) are exceptionally ½ a point up at 69½, but the 3½ per Cent. 1894 Bonds have dropped 1½ points to 59. Turkish Unifieds are 1½ points up at 37½, probably owing to the decision to allow the Turk to remain at Constantinople.

In Bank shares, Agriculturals, both Ordinary and Preference, are 1-16 lower at 5 7-16 and 6½ respectively. National Banks have been a firm spot, and close ⅛ up at 22⅞. A feature has been the continued rise in Anglo-Egyptian Banks, which, after rising to over 23, close 1¾ higher at 21½.

In Railways, Delta Lights have receded ⅛ to 6⅝.

Amongst Land descriptions, Behéras, after dropping to 22½, finish only ½ down at 24¼. Aboukirs have been persistently bought, also New Egyptians, and both shares close unchanged, the Egyptian buying offsetting the London selling. Consolidated Lands, after weakening to 3s. 3d., close 1d. firmer at 3s. 6d. Delta Lands have been in demand for Egypt, and, after dropping to 20s., close 6d. firmer at 21s. In Egyptian and Foreign Trusts some sustained buying has carried the price up 1s. to 19s. Sidi Salems have improved 1-16 to 3¼, at which some business was done to-day. Sudan Plantations have gone back ⅛ to 8⅜, but, on the other hand, Union Foncières are closing ¼ up at 6¼.

In Miscellaneous shares, Abyssinian Corporations are fractionally quieter at 12s. 6d. and Salts and Sodas are 1-32 firmer at 61s. 10½d. Khedivial Mails continue wanted round the current level, and Morums Stores are quoted at 19s. 6d. x.d. The feature, however, has been the big rise in Associated Cotton Ginners, which have risen 7s. 6d. to 30s., after business as high as 30s. 6d.

In Oil shares, Anglo-Egyptians B are fractionally easier at 4 13-16, Roumanians have dropped 1s. to 22s. 6d., whilst Traians are 9d. higher at 10s.

In Greek securities there has been a fair amount of business doing, but the only changes in prices are a rise of one point to 54½ in the 1890 Loan, of two points to 54 in the Funding Loan, and one point to 92 in the 5 per Cent. "Currant" Loan; whilst the 1902 Loan has dropped 3 points to 54, the 1910 Loan ½ a point to 44, and the 1914 London issue one point to 65.

RAILWAY MATERIAL FOR ROUMANIA.

H.M. Commercial Secretary at Bucharest states that firms desiring to sell any of the materials required by the Roumanian State Railways should place themselves in touch with La Direction des Ateliers, Chemins de fer Roumaina, Bucharest. It is stated that there is little likelihood of business being done by British firms who merely write on such matters, and it is suggested that capable agents should be sent out or local representatives should be employed for the purpose of putting forward their offers of materials to any Department of the Roumanian Government.

INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following weekly cabled news received from the Director-General of Commercial Intelligence, Calcutta, dated February 4:—Rain nearly general in Northern India. Local in Central India and South-Eastern Madras. All-India first wheat forecast, 27,429,000 acres (corresponding forecast last year, 23,472,000 acres). General crop conditions good. Bombay cotton market weak. Fully good Broach, April-May, Rs.548. Piecegoods market quiet but firm. Calcutta jute market inactive owing to uncertainty regarding exchange. Hessians quiet. Heavy goods quiet, with prices unchanged. No change in Bank rates. Mill hands' strike ended.

Mr. Thomas Smith, managing director of the Muir Mills Company, Ltd., Cawnpore, has been elected President of the Upper India Chamber of Commerce for the current year.

BRITISH TRADE CORPORATION.

(Incorporated by Royal Charter),

13, AUSTIN FRIARS, LONDON, E.C.2.

Telegrams: "Trabanque, London."

CAPITAL: Authorised - £10,000,000 Subscribed and Paid Up - £2,000,000

Governor - THE LORD FARINGDON.

Manager, A. G. M. DICKSON. London Manager, P. C. WEST. Secretary, G. De B. BROUNLIE.

The Corporation has been established with the object of developing the Trade of the British Empire in every part of the world, and brings to the notice of all interested that it is prepared to grant financial facilities to British Manufacturers and Merchants for the increase of their Import and Export Trade.

It will be prepared to assist in opening up new channels for enterprise, and will afford financial facilities for the enlargement of works and the extension of plant.

The Corporation is appointing representatives in the chief cities of the world, and will open credits at home and abroad. It invites inquiries, **and will endeavour where necessary to put export advice at the disposal of correspondents regarding the financing of their foreign** and overseas **business. Moneys received on fixed** deposit. Terms on application.

NOTES OF THE WEEK.

The British public is in danger of being stampeded by a catch-cry. There can be only one justification for the removal of the Turkish Administration from Constantinople, and that is the simultaneous fulfilment of two conditions:—

1. That a satisfactory Administration can be set up in its place; and

2. The removal will terminate the unsatisfactory condition of things associated with the Turkish possession of the city.

There is a third consideration which weighs with a number of people, and which, it must be admitted, is calculated at first to make a strong appeal to Western nations. It is that, on the ground of a traditional antagonism between the Crescent and the Cross, the Turk has been weighed in the balance and found wanting, and the opportunity must, therefore, be taken of reversing the Mohammedan victory over Christendom of five centuries ago. If the question of Constantinople could be confined within a politically watertight compartment, and if it could be settled without reference to any state of affairs outside the walls of the city, there might be something to be said for taking up the quarrel where the Turks left it in 1453. It is difficult to believe, however, that in all the existing circumstances any evenly balanced body of opinion in Great Britain would deliberately run the risk of an explosion throughout the Moslem world—the brunt of which would have to be borne almost wholly by British arms—in order to see Constantinople placed under a jurisdiction professing one or more of the three great divisions of Christianity—Protestantism, Roman Catholicism, and Orthodoxy.

A moment's reflection will show that the joint fulfilment of the two conditions mentioned is out of the question. It may be admitted that no administration could be worse than the Ottoman, and that any other must be considerably better. But that is by no means the whole point at issue. Granted that the ideal is unattainable, it can still be claimed that such a momentous step should require the substitution of at least a satisfactory regime. The opponents of the policy of retaining the Turkish administration in Constantinople have no concrete proposals to make on the subject. They have only the vague solution to offer: "Constantinople for the League of Nations." The words convey no practical suggestion for the administration of a city of a million inhabitants, representing a score of different nationalities—a problem which, by common consent, can never be satisfactorily solved by the introduction of any form of international jurisdiction.

We come, then, to the "acid test" of the whole question—that the removal of the Turkish Administration should terminate the unsatisfactory condition of things associated with its presence in Constantinople. What are the facts? The Turk, as we have known him hitherto, is admittedly an incompetent and vicious ruler. He has occupied a certain expanse of territory which has rendered him important geographically and commercially to Europe. Thanks to the moral shortcomings of the Great Powers, all attempts to reform his administration have failed, as he could always rely upon the support of one or more Powers in resisting the pressure of the others, and could even indulge with comparative impunity in the time-honoured policy of solving his own domestic problems by the massacre of subject races who threatened to become troublesome. This state of affairs was entirely independent of the exact locality of the Porte within the limits of the Ottoman Empire, and given the extraneous influences with which the Turks were confronted before the war, would remain unmodified by the transfer of the Turkish capital to Brussa, Konia, or any other town in Asia Minor. On the other hand, it may be taken for granted that the further the Turkish Administration is removed from the physical reach of European influence, the worse it will become. If it is desired to ameliorate the lot of the non-Moslem races under Turkish rule, is it likely that the Turk will be more amenable to reason in the highlands of Asia Minor than under the guns of Allied men-of-war in the Bosphorus?

What is required, and what is being lost sight of in the controversy regarding Constantinople, is the reform of the Turkish administration. The protagonists of ejection from Europe write and talk as if the removal of the Porte across the Sea of Marmora would, *ipso facto*, bring peace to Europe, as well as happiness, good government and prosperity to the unfortunate people still left under Turkish rule. Such a contention is as dangerous as it is untrue. It is dangerous to Europe, it is dangerous to the peace of the world, and it may mean destruction to yet more hundreds of thousands in Asia Minor. Honour, justice, and self-interest combine to compel the Allies to undertake the reform of the Turkish Administration—in earnest this time, with no loophole for failure. This cannot be done by any

Digitized by Google

international Commission; it can certainly be done far more easily with the Turkish Government in Constantinople than if it were removed to Asia Minor. It must be the undivided task of a single Power, acting of necessity under the mandate of the League of Nations, but with a free hand to inculcate upon the Turks the art of self-government from the earliest rudiments until they are able to stand alone and to guarantee justice and security of life and property to all non-Turks under their jurisdiction. It would be well if the United States were to take over the work. If they will not, a substitute must be found. In the meantime, the Allies might bear in mind that the reform of Turkey carries with it some reform on their part, for it will require no small measure of self-denial to place the necessary confidence in the Mandatory Power with the inevitable restrictions upon the grant of concessions to other States.

In the face of the agitation now being carried on with a view to reversing the decision of the Supreme Council to leave the Turkish Administration in Constantinople, we need not apologise for labouring the matter. A specious appeal is being advertised in broad columns in the daily Press under the title, "Shall We Leave Constantinople to the Turk?" The wording may do credit to the heart of the authors, but it is not flattering to their intellect. If Mr. Lloyd George's pledges are to decide the point, then surely the latest from 1918 onwards are as valid as those of 1914. *It is not true* that the retention of the Turkish Government in Europe implies the abandonment of persecuted thousands to their fate, or that its ejection will bring them safety. On the contrary, the immediate effect of ejection, as the authors of the document well know, will be to complete the massacres which the Allies' differences and dilatory policy have instigated. *It is not true* that, with Constantinople a free city under the League of Nations, world Peace will necessarily be within reasonable distance of realisation. World Peace can never come so long as the Allied Governments can make of a Peace Conference what General Smuts has described as "a seething cauldron of human greed and passion." *It is not true* that the retention of Constantinople by the Turks need add one penny to the burden of armaments; but it would certainly mean an increase of military expenditure if pressure could only be brought to bear on the Turkish Government by means of a military expedition into the heart of Asia Minor. Any views regarding the unreality of Moslem feeling on the subject of the future of Constantinople have behind them, consciously or unconsciously, the feeling that a trial of strength between Islam and Christianity is, sooner or later, inevitable, and that it may as well come now as hereafter. This view would not be supported by the majority of the British public.

Provided that no agitation is successful in forcing the Supreme Council to reopen questions upon which a decision has already been taken, there is some hope that the terms of the Draft Treaty with Turkey will be known early in March. In the face of the interest attaching to frontier demarcation, we trust that the importance of making strict provision for the future government of Turkey will not be overlooked. No paper stipulations are likely to protect the neighbouring peoples in the existing circumstances, and it would be unfortunate if the Allies came to regard them as an equivalent for troops and equipment. The French experiment of arming Armenians, but without giving them the requisite measure of support, has proved disastrous to these unhappy people in Cilicia. It would seem also as if a more unfortunate moment for withdrawing part of the British garrison at Batoum could hardly have been chosen, as the step is likely to be misunderstood by the Nationalists, who will feel encouraged to give fresh displays of their strength. This tendency may be checked by the arrival of a strong British squadron off Constantinople, but any further withdrawals from Transcaucasia will inevitably undo the good already done, which consists in having set the Georgian and Armenian Republics on their feet and in giving them some confidence in their preparations for withstanding Bolshevism from the north and Turkish aggression from the west and south.

A further stage has been reached in the long parliamentary crisis from which Yugoslavia has been suffering with the formation of a new Cabinet under M. Protitch, head of the Old Radical Party. In view of the ill-success attending the efforts of other politicians to form a Government with any degree of stability owing to the strength of the Radical Opposition, the recall of M. Protitch was, perhaps, inevitable. But the new Ministry is a Coalition one, and indeed so wide was M. Protitch's net originally thrown that two portfolios had to be withdrawn on the ground that one of the recipients was under the cloud of charges connected with his conduct as an Austrian officer during the war, and that the other had recently identified himself with Republican views. Any Yugoslav Government at this time has a very difficult part to play, and interest in Great Britain will centre in the promise afforded by the new Cabinet of the maintenance of a level-headed foreign policy in most trying circumstances. The portfolio of Foreign Affairs has been offered to M. Trumbitch, and his acceptance will be the best augury that Yugoslavia will ultimately win through to a just settlement of the Adriatic question.

Another bomb outrage in Egypt is reported, the intended victim being Shafik Pasha, Minister of Agriculture, who was regarded as a possible successor of Sirry Pasha at the Ministry of Works. Fortunately, the attempt failed to injure Shafik Pasha. The assailant has been arrested, together with an accomplice. Both are of the student class, and they have pleaded that they threw the bomb in order to frighten, not to kill. As the same plea was successfully urged in the case of Wahba Pasha's assailant, who was sentenced to ten years' penal servitude, it will be held in Egypt that the student mentality needs a stronger deterrent than hard labour to disabuse it of the idea that bombs are meant to play an educational rôle in politics.

News from the North-West Frontier of India is still somewhat unsatisfying. On the one hand, we are again asked to believe that the Mahsuds are giving in, and the statement is in accordance with probability, but probability is a treacherous guide in this corner of the world. On the other there are as yet no signs that the Afghans intend to make overtures for the reopening of friendly relations, a matter in which the initiative rests with them, while the reports of military activity in the neighbourhood of Jelahabad may possibly indicate a desire to resume relations of a very different kind. For ourselves, we are quite prepared to see things worse before they are better. The Afghans have the Bolshevists at their backs, and, while that is true, they are likely to adhere to their traditional policy of fishing in troubled waters, not necessarily because Bolshevist principles appeal to them, but because external offers of support are assets which should be realised. The final solution of the Afghan problem lies, as we have previously argued, in the country further north.

As to the internal affairs of India, the most interesting news of the week is the appointment of Lord Meston as arbitrator in the vexed question of the allocation of representation between the Brahmins and non-Brahmins of Madras. The procedure recommended by the Joint Committee is thus being followed: the parties were brought together, but they failed to agree, and the arbitrator has the difficult, and, we fear, thankless, task of finding a way out. In one way Lord Meston's position is similar to that occupied by the Speaker in the Conference, by which the lines of our present electoral system were laid down. The difference is that the members of that Conference were in the mood for compromise, while so far as we see few signs of that mood in Madras. Lord Meston's personal qualifications for such work are exceptionally great, and it is possible that he may succeed in effecting a settlement by consent, but the probabilities are that his decision will evoke heated protests from one side if not both. The one thing certain is that in the end

Digitized by Google

the non-Brahmins constituting the great majority of the population, must enjoy preponderant power, but they have a long way to go before that position can be reached, and India is so full of anomalies just now that measures for protecting a majority cannot be refused on merely theoretical grounds.

There are some signs that the Indian States are moving cautiously, as is their way, in the direction of political reform. A recent cablegram informs us that the people of Hyderabad, the premier State, are to enjoy the benefits of direct representation in the Legislature with due protection of minorities, while not long ago the Maharaja of Dewas, an interesting little principality in Central India, announced that he is about to grant his people a substantial voice in the internal administration of the State. Students of the subject are now awaiting a pronouncement from the Maharaja of Gwalior, who has a way of taking a line of his own, and whose remarkable experiments in financial and industrial development justify the expectation that any political schemes will be at once interesting and fruitful. But His Highness is taking his own time, and students must be content to wait for news from Gwalior, and also, we suppose, from the various Rajput States, in which autocracy is likely to survive for some time yet.

The Judicial Committee of the Privy Council have now disposed of the group of appeals arising out of the Punjab disturbances of last year, and, as was expected by most lawyers, have given no comfort to the extremist politicians, who have been counting, or pretending to count, on the result as a snub to the executive authorities. The question raised in the appeals was purely technical, relating to the legality of the Commissions appointed to administer justice under martial law, and the judgment delivered by Lord Cave leaves no room for doubt that the Government of India acted strictly within the powers conferred by Parliament. The decision has, of course, no bearing on the political question of the desirability and the wisdom of the action taken by the authorities; for light on that topic we must await the Report of Lord Hunter's Committee, the publication of which will probably interrupt for a season the present lull in Indian political affairs.

THE WEEK AT HOME.

Tobacco and Cotton Increases.

The main topic of the week has been the sudden increase in the prices of tobacco and cotton. The one hits every man and the other every woman, and the public in consequence is irritable and angry. Pipe tobacco is now a shilling an ounce, instead of fivepence before the war; a reel of cotton is tenpence. The rise is explained by high costs of production and the adverse American exchange, but the man in the street and his female counterpart both ascribe it to the wickedness of the trusts. It is the fact that trusts practically control both these indispensable commodities, and although a Committee of Inquiry have reported that neither trust has been profiteering, the newspapers point effectively to the high dividends paid by both, and the monopolistic character of their undertakings—the *Times*, in particular, published an extremely strong leader on the subject, which has been widely quoted and discussed.

The immediate result of the increase has been a further demand for higher wages, and the evil race between wages and prices, in which each accuses the other, has again begun. Labour has again put forward its panacea of nationalisation, but without evoking any enthusiasm outside the regimented Socialist ranks. On the other hand, it must be admitted that the public is becoming distinctly less averse from the doctrine of a limitation of profits in the necessaries of life.

Capital and Labour.

What was practically a Capital and Labour debate in the Commons last week provided an interesting side-light on the present economic discussions. Both sides recognise—at least, theoretically—that production must be increased; but in this debate on the existing unemployment in the country (which is not serious) the Labour members accused the employers of not taking back ex-Service men into their old jobs, while the employers accused the trade unions of refusing to permit partially disabled men to engage in a trade—the accusation particularly referred to engineers and bricklayers. By general admission, even of the newspapers which are friendly to Labour, the Labour members made a miserable show. They had to admit, but they could not justify, their policy; and no serious defence was made against the criticism that limitation of output, time instead of piece work, and refusal of profit-sharing or bonus schemes were general. On the other hand, the verbatim report in *Hansard* shows that the Labour members did not substantiate their accusation against the employers of refusing to employ ex-Service men by one single concrete instance. Since there are bad and mean employers as well as inefficient workmen, such cases must exist, and it should be easy to cite one; but a mere general indictment is both ineffective and absurd.

It is notorious that most employers are only too glad to have their men back; what difficulties there are have arisen largely through incongruity. Two cases I have heard of personally, may be mentioned. An office boy, whose main duty in life in 1914 was to lick stamps and post letters, returns in 1919 as a celebrated air-pilot, with the D.S.O. and other decorations. No post suitable to him existed in the rather small firm which employed him, and it was suggested to him that, although, of course, he could come back to the stamp-box, if he really wished to carry out the old bargain, it would be more fitting if he were to find something else.

The second instance is more extraordinary. A hall-porter in a great block of City offices joined up in 1914 on the usual terms that his employers would make good any deficiency in his Army pay. By 1915 he had won a commission; the deficiency was at an end, but his employers naturally congratulated him and sent him a bonus. By 1917 he was a colonel; in 1918 he had become a brigadier-general. In 1919, on demobilisation, he applied for his old post as hall-porter! His employers demurred a little, on the ground that generals did not generally work lifts, and suggested that they would find something better suited to his new position in time; but to their astonishment he declared that his only wish was to return to his lift and cloak-room. In the end they took him back.

A By-Election.

Government and Opposition alike have been disconcerted by the result of a by-election this week, for the Wrekin constituency rejected both the Coalition and

the Labour candidate, and elected an independent—a most emphatic way of saying "a plague on both your houses." The blushing victor is Mr. Charles Palmer, sometime editor of the *Globe*—which the Censor suppressed under his régime during the early part of the war; the new member is associated with Mr. Horatio Bottomley, but he has more fire and less humour than his leader. His oratorical record is unknown to me, but if he speaks with the same vigour with which he writes there will soon be breezes in the House of Commons. He knows Parliament well, having served for many years in the Press Gallery, thus adding one more to the rather small list of Parliamentary journalists who have descended from the gods to the pit; the only others I can call to mind are Sir Edward Clarke, Mr. Harold Cox, and Mr. S. L. Hughes, whose death is just announced.

A Labour Lawyer.

The Labour Party have won a curious recruit this week in the person of Mr. E. G. Hemmerde, who has deserted the lean pastures of Liberalism for the more promising fold. He is a distinguished barrister, but better known to the general public as a successful playwright. The *Westminster Gazette*, faithful among the faithless found, has criticised the desertion, or conversion, or whatever one likes to call it, with some acerbity, but Mr. Hemmerde has replied with such vigour that the newspaper has precipitately retreated.

But it is noteworthy that the older ranks of Labour are rather suspicious of these intellectual conversions, in much the same way that the old Roman Catholic families of England were suspicious of the new converts who, in 1845-60, reached Rome by the curiously roundabout route of Oxford. The new conversions to Labour are unkindly stigmatised as more timely than sincere, and there is more than a little fear that those who have borne the burden and heat of the day may yet be deprived of their due share of the fleshpots by more agile hands when the party emerges from the wilderness. Nobody, of course, would accuse Mr. Hemmerde of such sordid considerations, for a man who can command theatre royalties can afford to despise mere political promotion; but there are others in whose case the reproach does not seem altogether unjust.

The New Currency.

The British shilling has fallen from its high estate. Before the war, owing to the low price of silver, its real value was about sevenpence; it is now well over a shilling, owing to the extraordinary rise in silver, and the coining of silver involves the State in heavy loss. Besides that, it conduces to melting down—a crime, no doubt, but a profitable one. Our silver coins are therefore to have more alloy. Mr. Austen Chamberlain had no serious difficulty in defending this decision in Parliament, for his critics, who might have made out a rather good case against the change, only made out a rather bad one.

The chief critic was Professor Oman, of Oxford, a distinguished historian; but some special microbe seems to attack all professors in Parliament and make them ineffective, Lecky, a greater man than Oman, being the standard case in point. The first result of the change will be that the existing silver coinage will speedily disappear; if nickel is eventually introduced the revolution will be complete.

It is perhaps not generally known that in Germany an iron coinage was introduced during the war. I have seen some of these iron coins, and they are excellently executed; we might do worse than imitate them. Incidentally, the carrying of them in the trousers pocket is said to cure rheumatism. They are, at any rate, less cumbersome than the two potatoes which the old farm labourers still believe in as a remedy for that complaint, and perhaps preferable even to the new medical theory that the true cure is to have all one's teeth out.

Summer in Winter.

British weather is proverbially capricious, but this last week has surpassed most previous records for change. On the same day it was snowing at Harrogate, while visitors were sitting coatless in the bright, warm sun at Felixstowe, and in Cornwall there was a sea-fog and rain. Primroses are reported from the Isle of Wight, and one newspaper alleges a butterfly. But all the portents now are for a speedy return of winter—or, rather, so far as the South of England is concerned, the beginning of winter, for hitherto there has been practically no cold weather. Last year it will be remembered that the worst cold snap occurred, ironically enough, in the week when summer-time started.

Prayer-Book Revision.

The revision of the Prayer-Book, which has engaged the attention of the Anglican Church since 1906, is now approaching completion. It is understood that changes have been made in certain collects, various forms of service have been revised, and the Athanasian Creed is differently rendered. The two older creeds are unchanged. Controversy still rages round the proposed alterations in the Communion service; but the full alterations will be brought before the next meetings of Convocation, and after Convocation has discussed the matter the laity will then have their say, and subsequently the Primate will report to the Prime Minister. It is, therefore, not likely that the revised services will be used in churches for some two or three years, and even yet there are many opportunities for those who wish to obstruct. It is believed, however, that the alterations have generally been made on conservative lines.

The Week's Books.

Everybody who likes to know what other people read will find interest in Miss A. Sayle's "Village Libraries" (Grant Richards). She started a village library in Hampshire, and instead of trying to make the villagers read what she thought good for them, she set out to give them "what the public wants"—in other words, encouraged them to choose the kind of books they liked. The results were curious. They did not care for Dickens; Scott they read still less; and Thackeray they read not at all—not one copy of a whole edition of his works being borrowed in four years. But of Miss Ethel M. Dell and other popular writers of to-day they could never have enough. The record helps to explain the amazing popularity of the novelette and the feuilleton and sentimental tale, with colours thick and crude, villains and immaculate heroines and wedding bells. It would be interesting to have similar confessions from librarians in "respectable" suburbs and working-class districts.

THE NEAR AND MIDDLE EAST.

(From Our Own Correspondents.)

EGYPT.

The High Commissioner.

CAIRO, February 8.

The High Commissioner and Lady Allenby are expected back at the end of the week. Their Excellencies have already left Khartoum, but are returning to Cairo by the Nile. From all one hears Lord Allenby's tour has been most successful. He has had an admirable opportunity for seeing the more important parts of the Sudan, and must have gained an insight into the problems, economic, social, and political, which almost daily confront the administrators of that vast territory. At the same time his presence cannot have been without influence over the peoples amongst whom he moved or whose representatives he met, and will undoubtedly conduce to the enhancement of British prestige throughout the country.

The Flight to the Cape.

The great event of the week has been the departure of the first aeroplane attempting the direct flight from Cairo to the Cape. Your readers will already have read in the Home papers that this machine, a Vickers Vimy bombing machine converted to commercial type, has been chartered by *The Times* to convey Dr. Chalmers Mitchell as an ordinary passenger, with a view to proving the commercial possibilities of the air route from Cairo to the Cape. The G-EAAV, as it is called, with its two pilots, Captains Broome and Cokerelle, arrived at Heliopolis on the afternoon of the 3rd instant, having experienced extremely bad weather, as well as difficulty in finding petrol, on its way across from England, via Naples, Malta, Tripoli, and Sollum. The same afternoon Dr. Chalmers Mitchell arrived by the overland route via Trieste, it being considered that it would fit in more with the idea of proving the commercial possibilities of the flight if he picked up, or, more strictly speaking, was picked up by, the aeroplane in Cairo.

Two days were spent in thoroughly overhauling and testing the machine before it started on its 5,000 miles' flight, and it was decided to start at about 10 o'clock on the morning of the 6th instant. The venture had aroused considerable interest, and by the time fixed for the departure there was collected on the aerodrome a very large and representative crowd, including members of the Residency's staff, the members of the Milner Mission, the Ministers for Communications and Agriculture, the Advisers to the Interior and Communications, the Under-Secretary for Agriculture, the higher officials of the State Railways and Telegraphs Administrations, the Sudan Agent, a number of high staff officers, and, of course, the staff of the Mid-East Air Force.

At a little after 9.30 a.m. all was declared in readiness, and the pilots made a final test of the engines. Then, after taking leave of their friends, they got into their places, and Dr. Mitchell, dressed only as any railway passenger might be dressed, in thick suit and travelling cap, got into the cabin in which the two mechanics also took their seats. The G-EAAV is constructed to take eight passengers in addition to the pilots, but on this voyage, especially as it is a pioneer voyage, and all the aerodromes have not sufficient supplies, it is only carrying Dr. Mitchell and the two mechanics, and is filling up the spare weight with petrol and oil.

Punctually at 9.45 the G-EAAV left the ground amid the cheers of the watching crowd, and after circling round the aerodrome it flew off in a south-easterly direction on its long and weary flight to the other end of this continent. The machine passed Assiut (205 miles) at 12.10 p.m., and reached Luxor (345 miles) at 2.10, when it landed to get water. It continued its journey to Aswan, which it reached at about five o'clock, and where it remained for the next day owing to engine trouble. On the 8th it left Aswan (455 miles) at 7.15 a.m., and reached Khartoum (1,172 miles) at about 6 p.m., having had to make a landing at No. 6 station (767 miles) for water. At Khartoum it has been held up owing to leaking water-jackets, but it is hoped that it will be able to resume its journey to-morrow at dawn.

Meanwhile another Vickers Vimy has appeared on the scenes, having arrived at Sollum on the morning of the 7th from London, which it left on the 5th inst. This machine, the "Silver Queen," is piloted by two South-Africans, and is detained at Sollum owing to damage to the tail plane, which it suffered on landing there. The arrival of this other plane in order to fly to the Cape, causes the whole venture to assume the nature of a race, but, whatever may be the intentions of the "Silver Queen" and of the other planes following her, such is not the purpose of the G-EAAV which, whether other planes catch her up or not, will continue her flight at the pace originally laid down, and will stop wherever Dr. Mitchell considers that it will be useful for his mission to stop. Thereby it will fulfil its purpose, viz., to prove not that it is possible to fly from Cairo to the Cape as other competitors who carry no passengers are trying to do, but that the flight from Cairo to the Cape can be made a commercial possibility, and from this point of view the subsequent progress of the G-EAAV in its voyage through Central Africa will be watched with the liveliest interest.

The Bomb Outrage.

So far efforts to find the man who threw the bomb at Sirry Pasha last week have proved fruitless. Several arrests have been made, and the men have been confronted with the "chauffeur" with whom the assailant is said to have collided when he was making good his escape; but he has not been able to identify him, and it looks very much as if the miscreant will not be brought to book.

The Political Situation.

There is no further development in the political situation except that certain extremist papers are abusing each other, and the leading notables whose cause their opponents have espoused, and that in the ensuing controversy, which is by no means edifying, a good deal of muddy water is being stirred up. This is a phase which does not at all surprise students of local psychology, but those participating in these "pen-fights" can only be satisfying their own personal venom, and perhaps that of the particular notables on whose behalf they have taken up the cudgels, and they can by their present activities do little good to the cause of their country which they have sustained so actively during the past year.

Meanwhile, Lord Milner and his secretaries remain on the river south of Cairo, where, rumour has it, he is engaged in writing his report. It is not expected that the Mission will remain in Egypt after the end of the month, unless some decided change takes place in the situation.

The "Tiger" in Egypt.

Monsieur Clemenceau arrived on Sunday in Alexandria, where he was met by the authorities, the French representatives, and Colonel J. K. Watson, Military

Secretary to the Residency, who had come down from Cairo to welcome him unofficially on behalf of the High Commissioner. M. Clemenceau proceeded by special train to Cairo, where he was met by M. Pontalis Lefevre, the French Diplomatic Agent, and his staff, and by Lieut.-General Sir Walter Congreve, Commanding the British Force in Egypt. The ex-Premier is staying at Shepheard's Hotel, where he will remain for two or three days before going for a trip up the Nile.

ROUMANIA.

BUCHAREST, February 12.

Hungarian Plots.

The court-martial held by the Sixth Army on the Oradea Mare conspirators has resulted in the condemnation to death of six of the accused and a sentence of fifteen years' hard labour on the 7th. The defence of the prisoners was based on the statement that the preparations were intended to supply a civic guard to take over the policing of the town in case the Roumanians should be ordered to evacuate Oradea Mare by the Supreme Council, and that there was never any intention of stirring up trouble during the Roumanian occupation. An appeal from the sentence of the court-martial will be made.

By-Elections.

The Senatorial by-elections have resulted in the election of the Averescan candidates, General Averescu himself being elected for the district of Rimnic Sarat. It is quite probable that the Cabinet will be re-organised after Dr. Vaida-Voevod's return from Paris, as the necessity of negotiating a foreign loan will involve strengthening the Cabinet by the inclusion of one or two leaders of parties of the Old Kingdom. The Transylvanian Nationalists have decided not to put up a candidate in opposition to M. Take Jonescu in case the Democratic leader should decide to stand for one of the vacant Ardeal constituencies.

Cluj University Inauguration.

Scenes of the greatest enthusiasm have marked the celebrations in connection with the inauguration of the Roumanian University at Cluj. The special trains conveying the Royal Family and the Ministers, Deputies, and foreign representatives were met at every station by cheering crowds assembled from the surrounding villages. These, unfortunately for the travellers, had ample opportunity of expressing their enthusiasm; for numerous breakdowns detained the trains at many of the stations. The trains were not heated, and as several feet of snow lay on the ground in the mountain regions, the journey must have been a particularly trying one, and the banquet in the evening peculiarly comforting in the circumstances. In Cluj itself, it has been claimed by one of the professors present that the enthusiasm accompanying the ceremonies outrivalled even that displayed recently at Strassburg. Besides the diplomatic representatives of the Allied and neutral Powers, delegates were present from many of the leading universities of these countries, including those of Paris and Strassburg. The inauguration ceremony took place at 9.30 on February 1, and at 2 p.m. a banquet was given by the Rector of the University (M. Sextile Pushcariu), at which the King, the Queen, Princess Elizabeth and Prince Carol were present. In a few cordial words the King thanked the foreign representatives and the delegates of the Western universities for the sympathy and hearty felicitations they had expressed towards the University of Cluj, and said that, supported in its foundation by the good wishes of so many of the ancient centres of European learning and science, the horoscope of the new Roumanian university was indeed a favourable one.

The Spanish Chargé d'Affaires (M. Basterra) delighted his audience by speaking in Roumanian, and made an interesting allusion to the ancient connection existing between Spain and Roumania; for the Emperor Trajan, the conqueror of Dacia, from whose legions the Roumanians proudly trace their descent, was born in Spain, and, before making his triumphal entry into Rome after his Dacian conquest, awaited the arrival of his mother from his native country, so that she might share in his honour. Thus, through her, said M. Basterra, Spain was in a sense the grandmother of Roumania.

Immediately after the banquet there was a gala performance at the National Theatre, and from there a huge torchlight procession marched to the great square, where stands the Cathedral of St. Michael. The square was decorated with flags and illumined by fireworks; and, when the torches arrived, lighting up the falling snowflakes in iridescent colours, the whole scene was fairy-like. Here a scene of wild patriotic enthusiasm ensued and continued until a late hour of the night, the King and Royal party watching it from the windows of a house looking out on to the square.

January 24.

This has been a week of patriotic celebrations. Friday, February 6 (O.S., January 24), was an official holiday to celebrate the union of the two principalities of Moldavia and Wallachia (1859). In the evening about a thousand troops marched with torches down the Calea Victoriei and assembled round the statue of Michael the Brave, where large crowds joined them, singing the national anthem and dancing the national dance called the "Hora." Fortunately the frost held and the streets were clean.

Roumanian Prisoners.

It is reported that a military commission is proceeding to Cluj to arrange with the Hungarians an exchange of prisoners of war taken during the Hungarian Bolshevist offensive.

A good deal of anxiety is felt as to the fate of 30,000 Roumanian prisoners who have not yet been returned from Germany, and have not been accounted for by the German authorities, in spite of repeated applications from the Roumanian Government.

Prince Carol.

Prince Carol has been promoted from the rank of Lieutenant-Colonel to that of Colonel.

Madame Pia Bratiano.

The newspapers of all parties announce with regret the death of Mme. Bratiano, wife of the Roumanian patriot, Jean Bratiano (one of the leading statesmen at the time of the union of the Principalities) and mother of Mr. Ionel Bratiano, ex-Prime Minister and leader of the Liberal Party. She was over eighty years of age, and has seen her country develop in half a century from two small Principalities under Turkish sovereignty to a united nation of over 17 million inhabitants, her husband (and later her sons) taking a prominent part in making the history which has ended in this happy consummation.

YUGOSLAVIA.

BELGRADE, February 12.

Politics Again.

After a lull, domestic politics are coming to the front again. For the past few weeks Radicals have been stumping the country, especially in the new provinces, while the anti-Radical papers have been printing pages of vitriolic abuse of their rivals. During their long reign the Radicals seem to have made plenty of enemies. It is difficult to gauge the strength of the main parties: but certainly the Radicals have lost a great deal of ground in the old kingdom, where their autocratic régime during the Salonika exile has alienated a large proportion of the people. They were at first welcomed in the new provinces owing to their great prestige: for it was while they were in power that the Turks were expelled and Macedonia liberated, and, finally, the great union was achieved. But this prestige gradually diminished when, at closer quarters, it was found that the Radical leaders were just ordinary men. The Democrats, for their part, are a new party, and by their administration of the country without Parliament for so many months they have given their opponents a chance of calling them Democrats in name only. In fact, both parties roundly accuse the other side of being reactionary.

The Democrats are out for a unified centralised king-

Digitized by Google

dom, organised on the old Serbian model. The Radicals, by flirting with Dr. Koroshets and his clericals, and with the separatist Croats of the National Club, expose themselves to the criticism that they are coquetting with the Papacy and countenancing the Separatist movement. How far they are prepared to go with a programme of decentralisation remains to be seen. To the foreigner it would seem but a scheme of federation, something like the model of the United States would be most suitable to the conditions, where each province has had so distinct a history; but there is no doubt that a very large and influential proportion of educated Croats are powerful Unionists. One-third of the population of Croatia are Serbs, and this is a strong brake on any separatist movement, which probably the country people would resent and resist vigorously.

Meanwhile, Parliament is due to be summoned or dissolved on February 15, so Dr. Davidovitch is negotiating with the Opposition *bloc* with a view to forming a coalition Cabinet which shall carry out some urgent matters and call together the Constituent Assembly. Negotiations are proceeding as they did in the days of the long-drawn crisis of last summer.

The Radicals now ask for the portfolios of the Interior, and of Foreign Affairs, and for the Presidency. The Radicals demand the immediate summoning of Parliament with the following programme:—Budget, agrarian reform, municipal laws, war pensions, Constituent Assembly, National Bank. The Democrats ask for the elections of the Constituent Assembly to come first, so that that body can deal with these pressing problems, which, they maintain, the present Parliament is incompetent to do. They maintain that the Radicals are afraid to go to the people, and wish to work for a year on pressing questions, so as to have time to prepare the ground; and this appears to be sound reasoning, for if the Radicals were sure of themselves, they would welcome the Constituent Assembly, which would place them firmly in the saddle. But it looks as though they are playing for time.

In Montenegro.

There is reported to be the greatest distress in Montenegro. In peace time there was never abundance in that rocky country, and to-day the people are virtually dependent on foreign charity and such supplies as the Government can send. The chief difficulty is in communications: roads are few and far between, and in a terrible condition; the Italians hold the only railway, the little line from Bar (Antivari) to Vir Pazar, while the Albanians and Zelenashi are blocking ingress by the Boyana. Carts are scarcely to be had, and transport is very dear. With the shortage of food and clothing and the difficulty of importing, the people are in a pitiable condition; there is no work for them to do, and so they are favourable soil for propaganda and political intrigues. Yet the Zelenash movement is dying out, and they are surrendering in bulk. When they made an attack on Tuzi country some time back, helped by Albanians, the Government called upon the Piperi, Kuchi and Bijelopasljchi to help them, and these tribes rose and drove them out, just as did the Tsrmrichani against the Italians at Vir Pazar and on the Sutorman Pass. From the beginning of December up to date, the authorities have taken 471 Zelenash, including Bulalovitch, one of their most vigorous leaders, and it is thought in Serbia that the Nikolite movement in Montenegro has come to an end. Meanwhile, to help the people, conditions of transport should be improved.

BULGARIA.

SOFIA, January 25.

The Blessing of the Waters.

Last Monday the Orthodox Epiphany was celebrated with all the traditional observances. The King had gone to Varna to welcome the prisoners of war returning from France. At a very early hour the bells called the worshippers to Mass at the Cathedral. Afterwards the clergy, headed by the Bishop and followed by a great crowd, marched in procession through the main streets to the Alexander I. Square. Here they halted in front of the Royal Palace, where, under a specially erected pavilion, decorated with flowers and flags, the ceremony of the Blessing of the Waters was performed in the presence of the Cabinet Ministers, headed by M. Stambolisky, General Nerezoff (Chief of Staff), the officers of the garrison, and many high civil and military dignitaries, as well as a great crowd of citizens and soldiers. After the Blessing and the sprinkling with the water of all present by the Bishop, the troops marched past in review. They were saluted by M. Stambolisky, as War Minister, and their smart bearing created an excellent impression. They and M. Stambolisky came in for hearty recognition from the crowd.

At Varna, owing to the presence of King Boris, the festival was observed with extra *éclat*. The citizens gathered in great crowds to welcome his Majesty, who, before the arrival of the procession, inspected the troops. Mgr. Simeon, Archbishop of Varna, headed the procession and blessed the water and sprinkled those present, beginning with the King. His Majesty was made the object of an extraordinary demonstration of loyalty and affection by the crowds, for which he thanked them in a short but effective speech; after which he was again loudly cheered, and his motor-car was smothered in flowers.

More False Rumours.

The telegraphic agencies of Bulgaria's neighbours continue to spread alarmist rumours regarding this country, such as revolutions, assassination of the Prime Minister, fall of the Cabinet, the proclamation of a Soviet Republic, and so forth and so on. It is hardly necessary to inform regular readers of THE NEAR EAST that these rumours are absolutely false. As a matter of fact, both King and Government enjoy much popularity, and have the country's support in their effort to crush out the trouble caused by the insignificant minority of Anarchists in the pay of the Bolshevists, and order and peace reign throughout the country. The strike of State officials shows signs of ending in a manner satisfactory for the Cabinet, and both the Akrarian and Bourgeois parties are determined that a small minority of 10,000 Communists must not be allowed to terrorise the 5,000,000 population of the country.

After the declaration of the general strike the peasant supporters of the Communists in the villages renounced their communism, tearing up and burning their red flags, and at once enrolling themselves members of the Agrarian Associations. As typical I quote here a letter forwarded from the district of Doupnitza, which was regarded as a Communist stronghold, to a prominent deputy. It was sent by the notables of the village of Gornya Banya, district of Doupnitza, January, 1920:—"In our name and in the name of our community we send you best wishes and greetings for the New Year. May it bring peace to humanity, progress, and good fortune to all; while to the foes of our country (the Communists and the Broad Socialists) may it bring disaster and dissolution. After the demonstration on December 24 almost all the Communists in our village repented and severed themselves from those parties. They brought to our club their most sacred emblem, the red flag, and tore it up in our presence. We keep the strips."

Sofia's New Municipality.

The newly elected Municipal Council of the capital was summoned on January 22 for the election of a mayor and three vice-mayors. The former mayor, Dr. Kalinkoff, a Democrat, was re-elected, and the vice-mayors chosen were: Dr. Papazoff (a lawyer), M. George Angeloff, and M. Sarafoff. The latter is a Democrat, the two others are Narodniks. The hope of the Communists to hoist the Red flag over the municipal building was thus happily frustrated.

SCHOOL OF ORIENTAL STUDIES.
London Institution, Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.

ASIA MINOR.

SMYRNA, February 6.

The Turkish forces operating against the Greeks in the Hermus Valley refused to allow the train on the Cassaba (French) line to circulate on the Soma branch unless and until two Turkish women imprisoned in Smyrna should be released. The French company at once applied to the Greek authorities for the release of these two women, and as soon as the Turks had received the word of the French officials that the release had been effected they allowed the train to run as usual. A sequel of this incident is that the French have landed troops at Panderma, evidently to protect their railway more effectively, and this has started rumours in Smyrna that British and French troops have disembarked to attack the Turkish troops in the Hermus Valley.

The villages around Smyrna are now occupied by Greek artillery, and it would seem as if precautions were being taken to protect Smyrna at all costs.

PALESTINE.

(FROM A CORRESPONDENT.)

Jerusalem Water Supply.

Although the water supply of Jerusalem was probably a burning topic from time immemorial for its people, and a matter of proper care for some of its Governments, only now perhaps are hygienic rules being enforced in connection therewith. Before winter set in the public was duly notified that the new water supply, after satisfying Army and railway requirements, was only sufficient to serve public standpipes, hospitals, charitable institutions, schools, and certain trades, and could not supply private houses. All residents were therefore called upon to make full and proper use of cisterns, to conserve water, and to provide for repairing the need of oiling) exist; and these can be obtained at covered, when not in use, with stone and mortar. Every tank and well must have suitable protection from impurity unless a pump is affixed, and their condition must satisfy the Public Health Department. The oiling of all wells and cisterns is obligatory except where suitable pumps (obviating the need of oiling) exist; and these can be obtained at cost price from the municipality. They can be installed under Government supervision. It has been fully explained that water which has been oiled is in no way injurious to health when drunk. Any owner or occupier on whose property a cistern, cesspit, or drain is found in an insanitary state must carry out any remedial work as specified by the health officer. Any defaulter or person on whose property mosquitos are found to be breeding is liable to a fine of £5 or a month's imprisonment; and the Military Governor may have any necessary work carried out at the occupier's expense. The municipality now undertakes the oiling of cisterns, etc., and repairs; and all classes, in this dawning of a new era, are beginning to realise how much of the sickness prevalent in the city is traceable to contaminated drinking water.

Sanitation.

Another good regulation, long needed in the Holy City, provides that all owners and tenants are held responsible for keeping their walls in good order, and clearing thoroughfares adjacent to their premises of stones and rubbish, and maintaining their drains and gutters in proper state. So satisfactory are the results already that the *Jerusalem News* exclaims with enthusiasm that "Jersualem's spruceness—the coats of paint about Jerusalem gladden the hearts of those who love cleanliness," and it adds: "If you let repairs go to-day, to-morrow will cost you more."

General.

Fishing rights in the Sea of Galilee are being put up for sale for a period of from one to three years from next March; also those of the sea coast at Acre, Haifa, Jaffa, and Gaza. A railway line from Afule to Jenin has been opened by the military authorities, and a mixed train runs daily to and from the latter and Haifa. At Beersheba a telegraph office has been opened.

In the third examination in Arabic of officers and officials of O.E.T.A. (South), out of twenty-five candidates ten satisfied the examiners.

Lieut. A. Lowther, 10th Royal Hussars, is gazetted as aide-de-camp to Major-Gen. Sir Louis Bols, K.C.B., D.S.O.

TURKEY AND THE STRAITS.

Lecture at the National Liberal Club.

Colonel the Hon. Aubrey Herbert presided at the National Liberal Club on Thursday afternoon, February 19, when Mr. H. Charles Woods delivered an interesting illustrated address upon the subject of Turkey and the Straits. After paying a tribute to Sir Edwin Pears, whose death was a loss to this country and to Liberalism, Mr. Woods went on to explain that the present highly critical situation in the Ottoman Empire resulted largely from the delays by the Peace Conference in arriving at any decision as to the future of that Empire. These delays were a direct cause of the strength of the Nationalist forces of Mustapha Kemal and of the renewed Armenian massacres which are now taking place.

Turkey having acted as a tool of Germany and having perpetrated the greatest persecution of Christians of all time, two conditions were necessary of realisation in the Peace Treaty. First, absolute safeguards must be established to prevent the occurrence of a renewed and successful Pan-German policy in the East. Secondly, the Allies were under a direct obligation to put an end to the misgovernment and oppression to which Christians in Turkey have been subjected. Mr. Woods thought that the Peace Conference was right to maintain the Sultan at Constantinople, provided the Straits were open, unfortified, and internationalised. The adoption of this policy was more satisfactory than any other available, because it fulfilled the promise made by Mr. Lloyd George in 1918, because the Moslems were the chief element of the population, and because it avoided the difficulties and dangers (especially to this country) which might result from any interference with the position of the Khalif. Moreover, were the Turkish capital to be established in Asia Minor, the means of controlling the Ottoman Government would not be so easy and effective as would be the case in Constantinople. Mr. Woods considered it would not be sufficient merely to internationalise the waterways of the Straits, and thought that an international zone should be established on each side of the Bosphorus and the Dardanelles. This zone should be demilitarised and neutralised, and, as is the case with the Suez Canal, no belligerent act should be allowed to take place there except in the event of an attack from without. As America was unwilling to accept a mandate, recourse would have to be had to international control. The lecturer said that it was absolutely necessary to create an Armenia sufficiently strong and large to maintain its independent existence. The two or three Turkish villayets now suggested would not be sufficient, and there would have to be some compromise between this suggestion and the more extreme claims of the Armenians. With regard to the remainder of Asia Minor, Mr. Woods considered there were two alternatives open, either that territory could be split up among the Allies, or Turkey could be left in possession of all Western Anatolia, where the greater proportion of the population is Turkish. The adoption of the first alternative would be contrary to the declared policy of Mr. Lloyd George; it would be unfair, and it would not work. The only hope, therefore, was to leave the Turks all Asia Minor except Armenia, taking adequate precautions to secure the non-Turkish inhabitants against further misrule or injustice.

CORRESPONDENCE.

THE FUTURE OF CONSTANTINOPLE.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—The decision of the Peace Conference to allow the Turks to remain at Constantinople has raised a storm in the British Press, and, judging from the articles in *The Times* of the 21st and 23rd inst., the British public will arise in its wrath and not only drive the Turks from Constantinople, but also Mr. Lloyd George from office. If I read correctly the "Notes of the Week" in your last week's issue, the editor of THE NEAR EAST is taking a saner view of the situation, and, all things considered, has come to the conclusion that the Conference decision is a wise one. There is no question, however, that the Turks have a bad Press, and it behoves those who, like myself, admit their faults but recognise their many good qualities, to do all they can to counteract this Press campaign. With your permission I will endeavour to discuss the question on its merits, and without, I trust, unnecessary heat. First, as regards these massacres, we all know the old saying, "Scratch a Turk and you will find a Tartar." This means that the Turkish soldier has only a veneer of civilisation, like many others of the semi-barbarous States' subjects, and his methods of restoring order are not our Western methods. During the Russian advance in the early part of the war he found himself with enemies in front and enemies in his rear, as the Armenians were certainly not fighting on his side. I do not argue for a moment that the action of the Turkish authorities was justified. But did the Greeks, Bulgarians, and others behave any better during the first Balkan War? If one may judge from the independent testimony of foreign correspondents, rapes and murders of the worst description were by no means confined to the soldiers of Turkish nationality. On the other hand, did not our people bear witness to the "clean fighting" of the Turks when opposing us both in Gallipoli and Mesopotamia? As regards the recently reported massacres, until we have further details we cannot judge; but it seems reasonable to suppose that, the French having armed the Christian population, there was a pitched battle and the murders were really "casualties." Possibly in India it might be described as vigorous but justifiable measures to stamp out rebellion. Let the British public reserve judgment. Again, I am sure that the fact that the St. Sophia Mosque was once a Christian Cathedral has a tremendous influence with our Churchmen's desire to remove the Turks from Constantinople. Fanaticism is, I fear, not confined to Mohammedans; but perhaps, having lived so long in the East, I am too broad-minded. Anyhow, 400 years of Moslem worship should give the Turks some rights, surely.

But perhaps the most extraordinary contention of *The Times* article is that we should not be influenced by the pro-Moslem wishes of our Allies, though we are the greatest Mohammedan Power in the world, and although the removal of the Turks might set the whole East in a blaze.

In conclusion, I can only urge that if the Turks be given another chance, with no more wars, a little financial aid, and possibly advice, we should soon see a marked change. There is no question that the Turkish Government may be bad, but has it ever had a fair chance from Europe?

I am, etc.,

COLES PASHA.

Rushton, Taunton,
February 23, 1920.

ARE FIUME AND ZARA ITALIAN TOWNS?

TO THE EDITOR OF "THE NEAR EAST."

Sir,—Fiume and Zara figure prominently in the Adriatic dispute. The main Italian contention, as to why these two towns cannot be left within the new Yugoslav State, is that they are Italian, or, as Italian Nationalists prefer to say in the superlative, "most Italian." By an intense and lavishly financed propaganda, by D'Annunzio's wild outbursts and a deafening clamour raised in the Italian Press, the true facts of the situation have been obscured and the public at large induced to believe a falsehood.

The town proper of Zara has 13,000 inhabitants. According to Austrian statistics, 7,000 of these are Italians, 6,000 Yugoslavs. Zara, therefore, is Yugoslav almost by half, and very far from being "most Italian." But are these figures reliable? Foreign readers must know that in the former Austro-Hungarian Empire the municipalities were the organs entrusted with the census-taking. The Municipality of Zara was in Italian hands, and consequently it may be supposed that statistical accuracy as to the national character of the population of Zara would be decidedly strained in favour of the Italian element.

The following figures go to prove my contention:—

For the school year of 1919-20—that is to say, under the Italian occupation—there were entered in the town proper of Zara:—

In Yugoslav public schools ..... 627 pupils.
In Italian public schools ..... 591 pupils.

In the public schools of the suburbs of Voshtarnitza and Stani, 233 Yugoslav and no Italian pupils at all. That would give a total attendance of 860 in Yugoslav and 591 in Italian public schools, figures which speak most eloquently for the national sentiments of the parents.

There are two secondary schools at Zara called "Gymnasia," one Yugoslav, the other Italian. There is also one technical school with Italian as the language of instruction. These three schools are attended by 352 Yugoslav and 295 Italian students from the town proper; from the district of Zara and the Province of Dalmatia the attendance is: 134 Yugoslavs and 132 Italians. Thus the normal and secondary schools in Zara have, collectively, 1,346 Yugoslav and 1,018 Italian pupils.

I hope that I may now ask of every impartial reader: Is Zara an Italian town?

At Fiume, according to the census of 1910, there were 24,212 Italians and 15,692 Yugoslavs. In 1880 Yugoslavs were in the majority in Fiume. In 1890 they were almost equal in number to the Italians. In 1900 the Italians numbered 17,300 and the Yugoslavs 16,200. In 1910 the Yugoslavs had "fallen" to 15,692, whereas the Italians had "jumped" to 24,212. Was this by a natural process? Certainly not. First of all, the census was taken by the Municipality, which was hostile to Yugoslavs; secondly, immigrants from Italy flocked to Fiume and were readily admitted as citizens; and, thirdly, Yugoslav new-comers, even after years of residence in the town, were persistently denied its citizenship.

That is the method by which Fiume became the major part "Italian."

But that is not the only way. Between 1880 and 1890 every Yugoslav school was ousted from Fiuman territory. Yugoslavs were not even allowed to keep private schools there at their own expense. Yugoslav children were forced to attend Italian normal and high schools, which served more as instruments of denationalisation than of education. A glance at the surnames of the inhabitants of Fiume will show that four-fifths of them end in "itch," which means that their owners are of pure Yugoslav stock. At Fiume, as well as at Zara, there are innumerable cases in which the parents still cling to their Yugoslav nationality, while the children have become "Italians" through school propaganda. The former "Italian" Mayor of Fiume, Dr. Vio, who retired in November last, has a professedly Yugoslav brother, and his father is the recognised leader of the Yugoslavs of Fiume. Not ten years ago, one of the most rabid adherents of D'Annunzio, Dr. Rubinitch, was a fanatical Croat, who, later on, "became" Italian.

The Yugoslav origin of the population of Fiume is so evident in the names that, since the Armistice, the National Council has undertaken the wholesale Italianisation of Yugoslav names. I have before me an Italian newspaper of Fiume, *La Bilancia*, of April 29, 1919, publishing the decision of the National Council of Fiume of March 27, 1919, No. 2,140, whereby in 48 cases the change of surnames was approved. Just to quote a few examples of the changes, Marashitch became Marassi; Komanditch, Comandini; Radetitch, Radetti; Petritch, Petris; Vukelitch, Visintini; Doreitch, Dorini; Batistitch, Battisti; and so on.

Such "decisions" are being taken constantly by the National Council, especially since D'Annunzio, who is of pure Italian origin, could not live in a "most Italian" city infested with bearers of "barbaric" Yugoslav names.

Among the "Italians" of Zara you will find the same conditions. Here, also, four-fifths of the Italians answer to names such as Krekitch, Rajcevitch, Nakitch, Gilyanovitch, Kristitch—nothing but "itchs" and "vitchs," which prove that the Italianity of Zara, no less than that of Fiume, is only an artificial creation of recent date, built up by propaganda in the past, in order to be exploited for imperialistic aims when the moment should arrive—as it has now arrived.

I have stated the facts; I beg the reader to judge for himself.—I am, etc.,

J. F. L. V.

THE ADRIATIC SETTLEMENT.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—May we call your attention to the joint meeting of the Balkan Committee, the Serbian Society of Great Britain, and the Anglo-Albanian Committee held at the House of Commons on Thursday, February 19, and largely attended?

The following resolutions were passed:—

That this joint body, representing the Balkan Committee, the Serbian Society of Great Britain, and the Anglo-Albanian Committee, wish to record a solemn protest against the partition schemes on the East Adriatic shores which the Supreme Council is stated to have adopted.

In what concerns Yugoslavia they regard the proposal, which, while making Fiume and Zara free cities under an international guarantee and giving Italy (besides strategic islands) the frontier of the Isonzo watershed and the Wilson line in Istria, as the utmost limit of concession.

They desire to point out that even this proposal, which included some 400,000 Yugoslavs under Italian dominion, as against a few hundred Italians within Yugoslavia, would be wholly inacceptable, unless accompanied by the same guarantees for those of Slav nationality as those claimed by Italy for her nationals.

They consider that the absence of these guarantees and the proposal to extend still further the Italian boundary beyond its geographical limit and along the head of the Adriatic to the gates of Fiume, thereby placing another considerable Yugoslav population under an alien yoke, as contrary alike to the principles of justice and of expediency.

They are particularly struck with the levity of these proposals when it is remembered that the representatives of France and England, in agreement with those of the United States, had put forward a reasoned condemnation of the latter proposal in a joint memorandum issued on December 9 last.

They regard the proposals for partitioning Albania and for placing large parts of its population under foreign dominion as contrary to the Treaty of 1913 (which they would maintain as a minimum) and as a violation of the pledges given by Allied statesmen during the war, as a wrong to a brave and high-spirited people, and in conflict even with the declared wish of the Italian and Yugoslav Governments that the independence of Albania should be respected.

They also urge that guarantees should be secured to Albanians coming under foreign rule similar to the guarantees assured to minorities in like circumstances.

In conclusion, they wish to point out that the above proposals violate at every turn the principles of national rights to which the Conference had bound itself; that they have already imperilled our friendly understanding with the United States: and that they cut away the foundation of even justice and reciprocal treatment on which the League of Nations must rest.—We are, etc.,

NOEL BUXTON.
(Chairman, Balkan Committee.)
ARTHUR EVANS.
(Chairman, Serbian Society of Great Britain.)

BRITISH RESPONSIBILITIES IN THE MIDDLE EAST.

Speaking before the Central Asian Society at Burlington House on February 18, Capt. Ormsby-Gore said that in order to consolidate our position in the Arabic-speaking world we needed to establish a new British civil service. In Sir Percy Cox and Colonel Wilson, Mesopotamia had had at the head of its administration men of exceptional knowledge and character, but it might be questioned whether the Indian Civil Service could go on producing or could spare a large number of men of this type. The Indian Government and India Office should surrender all existing responsibilities west of the immediate entrance to the Persian Gulf, and a new civil service should be recruited in England on a separate examination and with a clearly defined contract. It should not be a numerous service; a few first-class men would be better than ten times the number of lower quality. Leave should be frequent, pay very good, and it should be well understood that men not up to the required standard would be quickly weeded out. He hoped eventually there would be a separate Ministry formed in London to deal with British interests in Mesopotamia and contiguous countries; until this was done those interests should be in charge of a separate department of the Foreign Office. As far as possible the men on the spot should be given the freest possible hand, only being interfered with for Imperial or international reasons. It would be a service where personality would count. Jews and Arabs were people who would never regard themselves as subject races. The Arabs were anxious to have Englishmen to guide and direct them, but not on terms of subservience, barely of equality; and in Palestine it must be realised that Patriarchs and Chief Rabbis in Jerusalem must be treated in a particular way. So men were needed of very special capacity who had the feeling of the Middle East in their blood, and were not subject to any other tradition. As to the military aspect, the smaller we could keep the garrisons the better; with aeroplanes and light armoured cars we should not need to keep a large army in the country. The development of Palestine should be left to the Jews; the British should make themselves responsible for Mesopotamia. In the case of the latter country, Indian immigration had been suggested, but the Indian, whether Sunni, Mohammedan, or Hindoo, did not mix well with the Shiah Arabs. Further, India had capital now, and would be able to absorb in her own industrial activities any labour surplus she may previously have had. Another suggestion had been for Jewish colonisation, but he did not think it would work; the Jews would not find, as they did in Palestine, the inducement to turn themselves from townsmen and merchants into a peasant population for the sake of an ideal. Somalis had been proposed, but he did not think they were suitable. The first thing in Mesopotamia was drainage and irrigation; the Government should leave it as far as possible to private enterprise.

Colonel Younghusband said with regard to great schemes of drainage and irrigation, in this country we were accustomed to private enterprise, but in the East it was better these great works should be carried out by the State. If you got a firm of contractors coming into a country like Mesopotamia without any experience of dealing with the inhabitants, you would very likely have trouble. In India, canals, railways, and similar works were an important source of revenue.

NEWS IN BRIEF.

Severe weather is reported from Egypt and Palestine. Nine inches of snow fell in Jerusalem on February 11.

At the request of the Turkish Government, Switzerland has taken over the care of Turkish interests in Germany.

A Persian delegation has arrived at Erivan with the object of establishing commercial and economic relations between Persia and Armenia.

An unprecedented fall of snow, 39 inches deep, crippled Jerusalem's communications for a week in mid-month, and caused great distress and hunger.

A deputation is to be sent from Ceylon to the Viceroy of India to protest against the high prices charged for the rice supplied from India to Sinhalese labourers.

Fresh negotiations are stated to be taking place between the Transcaucasian Republics of Georgia, Armenia, and Azerbaijan, with a view to the conclusion of an alliance.

The Malta correspondent of the *Morning Post* announces that his Majesty's ships Queen Elizabeth and Wessex have left harbour, and that nearly all warships are now away.

Mr. Jacob Schiff, of New York, has purchased the Jewish Technical Schools, Haifa, from the Hilfesverein of the German Jews, and has presented them to the Zionist Organisation.

A special Mission is being sent from Warsaw to the Southern Caucasus. Besides political and economic objects, the Mission will be entrusted with the organisation of a Polish Consulate.

Part of the Bombay Institute of Science has been lent by the Government for the convenience of travellers passing through Bombay. Accommodation is thereby provided for 400 travellers a day.

Ten thousand pounds is being distributed among the poor of Cairo, Alexandria, and other towns, and £2,400 to local charities in Cairo, to celebrate the birth of an heir to the Sultan of Egypt.

The Air Ministry state that regulations governing civil flying in India, to be known as Indian Aircraft Rules, 1920, were promulgated on January 31, from which date civil flying in India was permitted.

A telegram from Adalia dated February 18 states that, in spite of unfavourable weather, the 450 h.p. Caproni biplane, piloted by Lieutenants Negrini and Origi, in connection with the Rome-Tokyo flight, had landed there safely. It was starting again on February 19 for Aleppo.

PRESS ON THE NEAR EAST.

Constantinople and Islam.

The *Manchester Guardian* of February 18 published an article entitled "The Allies' Decision About Constantinople," in which the writer disapproves very strongly of the retention of Constantinople by the Turks. England's decision has presumably been brought about, he says, by fear of the Moslems in India; but he affirms that this decision will not achieve its end of pacifying the Moslems. He describes the Moslem view of it all, and says:—

We must not delude ourselves with the consolations of "Real Politik," or fancy that we have secured, at any rate, one solid advantage: the gratitude of the great Indian Moslem community. A decision obviously dictated by expediency, and not by a belief that it is right, will not arouse their gratitude, because it will not secure their respect. On the contrary, it will confirm the impression made on Moslems by the war that the moral and physical ascendancy of Europe is departing from her, and that another reversal in the relations between West and East may be at hand. One has only to remember that to Moslems, with their distant view (and perhaps truer perspective), the European world is essentially one. It was "the Franks," without distinction, who fell upon Islam in the Crusades and were beaten back by a joint Moslem effort, and it is the Franks again who have repeated the attempt during the last few centuries, and who by 1914 had actually brought under their dominion the greater part of the Moslem world. And then, at the moment when the extinction of Islamic liberty seemed inevitable, Allah sent madness upon the unbelievers and plunged them into a ruinous civil war. They turned their devilish weapons against each other; each faction published through the Moslem world all the evil that the other party did, the Moslems believed both reports, for are not all Franks like one another, and all alike evildoers? When Frank speaks evil of Frank, then he speaks truly. This internecine and unmitigated war has been God's punishment for the wickedness of Frankistan, and see how they continue to lacerate each other after the fighting has ceased. Consider the terms imposed by the victors on Germany, how they have broken up Austria-Hungary and even blockaded their former ally, Russia. Frank has shown no mercy to Frank, and now, how do they deal with the Empire of the Caliph—an empire which, as good Christians, they ought to hate more than they hate each other, and against which, in fact, with characteristic unscrupulousness, they have made blasphemous accusations of atrocities during the war? They dare not lay hands on it. They dare not even apply to it the misguided principles in which they believe. They give way before the solid opposition of the Moslem world, and treat Turkey with a consideration which they have failed to show to any of their Christian opponents. And so they ask our gratitude because they have yielded to our coercion? They will not get our gratitude but our scorn. This may not be the effect of the Constantinople decision on the minds of those educated Moslems who are leading the Turcophil movement in India, but the masses who still think in terms of Islam and Christendom will surely react in this way, if they react at all.

Albania.

In the *Manchester Guardian* of February 13 appeared an article upon "The Future of Albania." After briefly describing the things that make for disunion and union in Albania, the writer says:—

We see, then, that Albania ought to exist as a State, and that it is possible, though in places only provisionally, to trace out her frontiers. But the consolidation and development of the Albanian nation cannot be accomplished in a day, and perhaps not at all without foreign assistance and instruction. What is to be the regime in the interim? It seems a clear case for the application of the "mandate" idea, and Italy is the Power on whom the mandate would naturally be conferred, if only for the cynical reason that her rivalry with Yugoslavia and Greece would incline her to stand up for Albania if she were debarred *a priori* from bargaining Albanian territory away. Yet this solution arouses certain misgivings. The very motives which would make Italy champion Albania in disputes with her two Balkan neighbours might make her less active in promoting good relations between them—relations which are really more important to Albania in the long run than any local advantages in the settlement of her frontier. And the mandate must be so drawn that it cannot transform itself into a protectorate. The League of Nations, by whom the mandate will be conferred, must be an effective party to the relationship, and a time limit must be laid down in the mandate itself, after which the relationship shall come up for reconsideration. And there is one local question of importance. The mandate for a united Albania ought only to be conferred on Italy on condition that she renounces her claim to annex Avlona, the finest Albanian port and one of the chief Albanian towns. If Italy, within the term of years prescribed in the mandate, can make Albania prosperous, united, strong, and capable of governing herself, she will have earned Albania's lasting friendship, and provided far better for her own strategic security in this part of the Adriatic than if she annexes Avlona at the price of Albania's enmity.

Pan-Turanianism.

We give further extracts from Colonel Paraquin's articles in the *Berliner Tageblatt;* the following are from the issue for January 28:—

When in December, 1917, the Mesopotamian front was once more in danger of being completely broken up, Halil Pasha said to me, half bitterly, half jestingly: "Let us leave to the English this accursed desert! Let us go to Turkestan; there will I found the new empire for my little Genghis." He had significantly named his youngest son after the great conqueror and destroyer. And when, in the autumn of 1918, he was speaking in Elisabetpol to his Tartar brothers in the Caucasus, again and again the name "Turkestan" resounded from his lips and elicited hearty applause from the audience.

The Entente threw Halil Pasha into prison at Constantinople, but he escaped, and is continuing his plan for a pan-Turk empire. The success of his plans, says the writer of these articles, will depend on whether Russia or England can or cannot gain a decisive influence in Turkestan.

Turkish policy in the East stood outside all relations to the particular powers of any country. The alliance with powerful Germany alone, which was to overthrow Russia and England, could bring the fulfilment of Turkish schemes for achieving the position of a Great Power. It is an entire misunderstanding of the facts to think that Turkey was adopting a policy friendly to Germany. She only hoped from us support in the execution of her own plans and never thought of reciprocity or thanks. The Russian Colonel Oern asked Halil Pasha at a banquet at Mosul in celebration of the Armistice, whether Turkey were not anxious about her powerful ally. "Why?" asked Halil, smiling. "Rich Germany has lent us a great deal of money with which we are employing the Russians and English in Asia. Germany knows that she will never get the money back. But if Germany should try to get anything back by force, then—his fiery eye flashed—Germany is our enemy!"

He then expatiates on the disregard for Germany which Turkey showed when it suited her interests.

But, moreover, official Turkey did not shrink from open and injurious disregard of German interests. During the well-known strained relations between Turks and Arabs, the German ally had interposed as mediator. As, moreover, the support of the Turkish operations through the Arabs was only a question of hard cash and Germany alone provided the required gold, it was clear that the German rulers reserved to themselves a certain influence on the expenditure of the hard cash. As Germany made great sacrifices, she might also expect that, by this means, she might be able to form connections with the Arabs which might bring economic advantages in time of peace. There appeared in the spring of 1918 a short informal order of the Turkish Government, commanding the immediate suspension of all German-Arab relations. This was the result of jealousy of the German allies. The impression which was made on the Arabs by this humiliating order to Germany meant a further weakening of our prestige in the East, which had already been sufficiently lowered through the loss of Baghdad and the unsuccessful military undertakings in Persia.

Colonel Paraquin refers to the vagueness with which German Eastern policy was pursued, and mentions in particular the "Holy War." Of it he says:—

When in the autumn of 1914 the Holy War was declared for the first time, I happened to have a conversation with a French diplomat, Pierre Guerlet by name, a former attaché at Vienna, who had also been in the Delcasse Ministry. He asked me satirically: "Do you think much of it?" I said I did not, but I nevertheless expressed the hope that the "Holy War" would at least hold back the Entente colonial troops on the spot. Even this did not happen. The "Holy War" was a complete fiasco just because it was not a holy war! The moment Christians fought on the side of Mohammedans, this war lost its fanatical stimulus, its distinctive characteristic. How could one Christian be a deadly enemy of the religion when the other Christian was a friend and ally? The wise Bedouin soon perceived that this was a quite ordinary business war, and with their peculiar aptitude for money-making they offered their services to that Christian who seemed to possess the larger amount of hard cash. Although, if I am correctly informed, we squandered on the Orientals at least 100 millions of coined gold, in the long run, the English had at their disposal larger stores of hard cash.

The article concludes with a plea for clarity of thought in regard to German policy in the East.

THE CARAVANSERAI.

Think, in this batter'd Caravanserai
Whose Doorways are alternate Night and Day,
How Sultán after Sultán with his Pomp
Abode his Hour or two, and went his way.

Having once had to persuade an R.T.O. to send a cow a long way up the line "on urgent private business," I know that the military authorities as a rule are inured to shocks of this nature. But I understand that the Indian Army has recently been able to add a particularly precious document to its archives. It was a griffin, a tenderfoot, a greenhorn—or whatever term you prefer—who had reached Busreh and was anxiously checking his kit to see whether he had brought everything that was necessary for the great adventure that lay before him. A fellow-officer was helping him, and called his attention to the absence of one very important item. He seemed to have brought everything else from Bombay, but he had not got an "ayah." Fearful of showing his ignorance, the newcomer asked whether an ayah was absolutely necessary, and on receiving the assurance that in his case one would be indispensable, he was easily persuaded to cable to India for one. History only records that the telegram exists in some military archives somewhere.

***

My remarks a few weeks ago on the follies and inferiority of women have, as I feared, provoked a cutting protest. My first correspondent, whose sex I shall not disclose, pulls my conscience over burning cinders in the following words: "I do not understand how you can seriously suggest that the Western woman should be reduced to the level of that of the unfortunate Turkish slave. Such sentiments as you express are both obnoxious and offensive to the modern woman's sense. Of course, if you *are* a misogynist, I can imagine how your closed-in mind would explode into these fond utterances; but if you are not, for Heaven's sake don't make fun of serious subjects." I must pause to take a fearful breath. Another extract from this letter runs:—"Although I have always read your column, 'Caravanserai,' I must say that I should like to know occasionally what you are driving at. You seem to me always to be writing either with your tongue a long way in your cheek or else a still longer way out of it. More often than not I disagree violently with you, but your attitude towards the modern woman filled me with *so* much disgust that I was forced to write this letter. I hope that, at any rate, it will have the effect of causing you a little to revise your opinions; if it doesn't, my hitherto rigid admiration of the writers for THE NEAR EAST will become elastic, and the first string to snap will be 'Corsair.'" Whew!

***

Another letter, written by one who I think was at Newnham College, is not quite so cutting; but it hurts all the same. Here we are:—"Dear Mr. Corsair, your observations on female education in Mesopotamia are very foolish. The education of woman is the only hope of the world. Just look at what the supremacy of man has brought the world to, and tell me if you are really proud of it. . . . What do you think Oxford and Cambridge would be without their girl colleges? Narrow, unprogressive, unrepresentative places of non-human freaks! . . . When you say that Turkey and Arabia will never be influenced by the progress of women, and that they will never accept the new ideas of emancipation, you are talking about something that I don't think matters at all. . . . Why don't you say something really sensible about the peoples of the Near East? It would be an awfully welcome change, and one might then reach almost to the bottom of your column."

***

On second thoughts (which are always best where women are concerned) I have decided to print without comment the views of my two correspondents. Lest it should be thought, however, that silence means anything, I ought to tell my readers that Corsairs are not converted in a day (and also that they know when to beat a strategic retreat!).

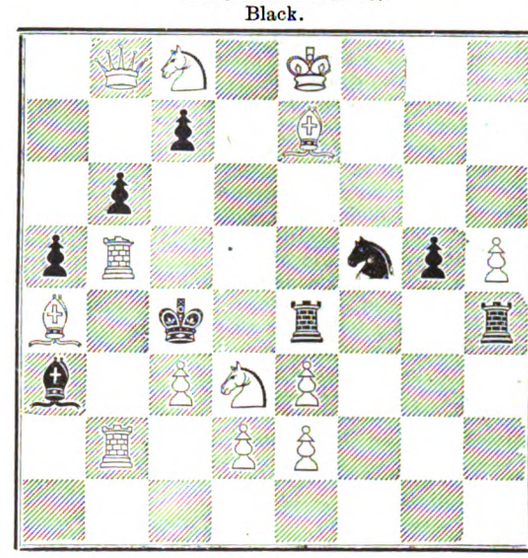
CHESS.

PROBLEM No. 16.
Black.



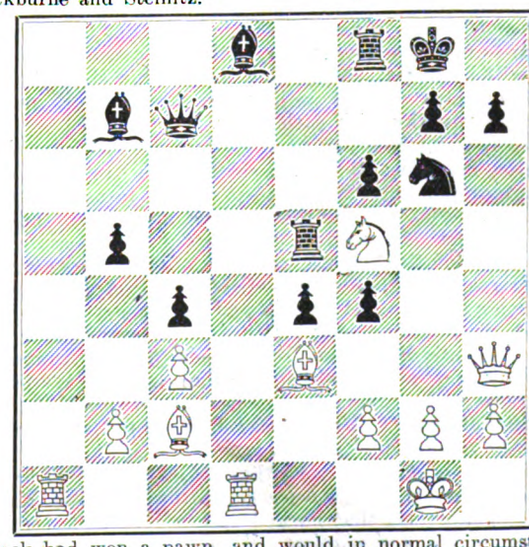
White.
White to mate in two.

Solution to last week's problem:—1, Kt—K2; if Q x Q (ch) 2, Kt x Q mate; if Kt x Kt; 2 B x Kt mate.

The University match is to be played on Friday, March 19, commencing at 2.30 p.m., and adjudication will take place at 10.15. A Friday match is an innovation. Hitherto the match has invariably been played on Mondays, and I presume that the alteration means a much curtailed tour. On the previous Wednesday the combined University teams will meet the City Club.

College Chess at the universities is a very intermittent factor, especially as regards the smaller colleges. An enthusiast comes into residence, starts a club, which for a few years has a most active existence, and as quickly the club ceases to exist on the disappearance of its principal supporters. I am led to make these observations by a paragraph in this week's *Cambridge Review* recording the activities of the chess club of St. Catharine's College. I missed that college from the recently published list of entries for the college competition, and I am unfeignedly glad to see its reappearance, for from time to time it has played no small part in University chess, and as recently as 1910 had two members in the University team.

The following position occurred in one of the games between Blackburne and Steinitz.



Black had won a pawn, and would in normal circumstances have been justified in assuming that it would only be necessary to play steadily to win. But one of those opportunities had arisen which so often confuse all calculations, and Blackburne played R—Q7, to which there is no adequate reply.

NEW YUGOSLAV CABINET.

M. Protitch has succeeded in forming a Cabinet from the Opposition groups. The following is the list of new Ministers:—Minister-President and Minister for the Constituent Assembly, M. Protitch; Vice-President and Minister of Communications, M. Koroshets; Interior, M. Trifkovitch; Foreign Affairs, M. Trumbitch or M. Spalajkovitch; Commerce, M. Ribaratz; Finance, M. Jankowitch; Woods and Mines, M. Kovatchevish; Agrarian Reform, M. Krnitsch; Food, M. Stanischitch; Posts, M. Drinkovitsch; Social Policies, Dr. Schurmin; Education, M. Trifunowitch; Religion, M. Jankovitch; Public Works, M. Jovanovitch; Justice, M. Nintchich; Agriculture, M. Roskar; Health, M. Miletich. In the Cabinet there are four Croats, three Slovenes, one Bosnian, and ten Serbians.

MUSICAL NOTES.

Mr. Hugh Marleyn, whose reputation as an artistic singer is wide, gave a recital at the Wigmore Hall on February 14. An artist he certainly is, but a most unequal one. In songs with a sense of atmosphere, in songs with a tendency towards the dramatic, and in operatic extracts he is very fine. His knowledge of tone-colour in these things he fully exploits, and his vocal resources, though not inexhaustible, are very considerable. His chief success, in my opinion (though not in that of the audience), was in César Franck's "La Procession": as he sang it you could feel the religious atmosphere, you could hear "God traversing the peasants' field." Again in extracts from Verdi, he made all that can be made of this music. It is in purely lyrical songs or in folk-songs that his deficiencies come strongly to the front. In every tone he seeks to find a colour, and he sings folk-songs so sophisticatedly that they cease to be what they are. Some of his own songs which he included in his programme are not noteworthy: his "Bredon Hill" made one doubt whether he knew the contents of the poem, so violently unnatural was his treatment of it. He was assisted by Miss Genevieve Griffiths (solo pianoforte); but as she played such notorious things as McDowell's "Sonata Eroica" and Liszt's "Rhapsodie Hongroise, No. 2," it is unnecessary to pass judgment. No one can make music of these two pieces, and all that can be said is that she failed no more thoroughly than anyone else would have done in the effort. A word of only very slightly qualified praise I give to Mr. Marleyn's accompanist, Mr. George Reeves: Mr. Marleyn is not an easy singer to accompany, but Mr. Reeves contrived admirably to conceal this fact.

During the past week at the Wigmore Hall I attended three concerts by pianists, two of chamber music, and one song recital. On February 16 Miss Olga Carmine, assisted by the New Queen's Hall Orchestra under Sir Henry Wood, gave a performance which was notable for its inclusion of Scriabin's Concerto in F sharp minor (Opus 20). This concerto was written when Scriabin was a young man (about twenty-five), and it is an immature work. The first and third movements are not of great account, being derived too directly from Chopin; but the second (*andante*) is a set of variations upon a most beautiful theme. It was excellently played by Miss Carmine, who has delightful freedom of technique and a well-rounded tone. Later, in works by Mr. York-Bowen, she showed a very strong sense of rhythm and a clear interpretation. Apart from the Scriabin, however, the works she played (including Debussy's "Little Shepherd," which she gave as an encore) called more for clarity than depth of interpretation; so that, before judging her as more than a pianist one must wait until she plays deeper and broader music. It can be said that first impressions are extremely favourable, which, moreover, I do not think will be upset. Miss Carmine and Sir Henry Wood, whose orchestra is very well under his control, showed excellent sympathy with each other.

It was worth hearing Mr. Howard-Jones's pianoforte recital on February 18 for the sake of the Brahms Sonata in F minor (Op. 5). This pianist's style leans towards a heavy sweetness, and in the Brahms atmosphere he was quite at home. Apart from some roughness of scale, his performance of this sonata was good. This, however, was not the case in other pieces—Beethoven's Andante in F and Bach's Chromatic Fantasia and Fugue were performed without distinction. A novelty in his programme was Harry Farjeon's Fugue and Bacchanale (first performance), but it was poor stuff, unless one admit that a scampering up and down the chromatic scale shows evidence of the true Bacchanalian spirit. Mr. Howard-Jones is not an inspiring player: he is too soundly orthodox.

Orthodoxy is the last word that could be applied to Mr. William Murdoch, who gave a recital on February 21. To me it seems certain that he will eventually find himself in the very forefront of pianists. His development is remarkable, for he has a waywardness of temperament which, though it will out on occasions, he is striving most successfully to control. His technical ability is immense, and his interpretative faculties are very wide. It is in modern music I think, that he excels—in things so different as Mr. Julius Harrison's "Four Worcestershire Pieces" (which will become most deservedly very popular)—and in Debussy's "Images" he was charming; but he was every note as good in severer stuff by Bach and César Franck. Why Mr. Murdoch should have played as a final encore Chopin's fifteenth Prelude is a mystery, for it is precisely in music of this feminine nature that he is least distinguished. Mr. Murdoch, whose beauty of playing is primarily intellectual, does not successfully indulge in "linked sweetness long drawn out"; and one left the concert remembering his Debussy and trying (though in vain) to forget his Chopin.

The third concert of the London Chamber Concert Society (February 17) was a most interesting one. Of the Borodin Quartet (D Major, No. 2), the Philharmonic String Quartet gave a beautiful rendering, though the glorious melodies in the quartet would have been improved by being made a little more "liquid." Borodin did not know much about orchestration, but he did know how to write a tune. Lady Maud Warrender sang "Chrysilla," from Dr. Ethel Smyth's cycle, but the presence of the triangle in the accompaniment made one welcome the end. The two songs which Mr. Percy Grainger has composed, with accompaniment for strings and harp—"The Willow Song" and "Died for Love"—are most charming, but the performance of them was not. For Lady Maud Warrender's voice, though sufficiently pure, is colourless. The best thing in the evening was Ravel's Septet for harp, flute, clarinet, and string quartet. Here is most delicately beautiful music, and I do not know any composition in which the harp is made more essential or more effective. (It was very worthily played by Miss Gwendolen Mason.) Generally speaking, the romance and beauty which are attached to the harp are a fiction of the most transparent kind: this fact was exemplified in Mr. Julius Harrison's Quintet for two violins, viola, 'cello, and harp, in which some exceedingly fine writing was in great part spoiled by the intrusion of the harp. But in his septet, Ravel has most cunningly overcome his difficulty and has strung together a most gorgeous chain of coloured fancies. His work was played supremely well.

When I remarked in these columns the first appearance of the Modern Trio, I noted their probable popularity. At their second concert, on February 21, they played before a very large audience, but they failed to come up to common expectation. It is true that the pianist (Mr. Krish) is more restrained, and that the 'cellist (M. Mannucci) maintains a beautiful tone; yet the elements of disruption in this trio have not decreased. Their attack was poor, and in the first piece (trio in A minor by Sir Charles Stanford) a faulty sense of rhythm made a dull work appear almost worthless. They were better, however, in Jean Hure's suite, "Sur des Chants Bretons," though here the pianist was guilty of a wrong note or two and the violinist of incorrect intonation. But in the Brahms Trio in C major, they were, after a bad start, really very good, and in the third movement (*Scherzo*) the efficiency and beauty of their playing were most marked. They played Brahms as he should be played, with weight and vividness. Mr. Krish and M. Melzak also played a sonata in G minor for piano and violin, by a modern French composer, Guillaume Lekeu, but it was a dull affair. It avoided the commonplace, but in its anxiety to do this forgot to say anything. This is true at least of its first and last movements; in the second, however (*très lent*), it gave M. Melzak an opportunity that he needed of demonstrating his possession of a rich and full tone.

Miss Iseult Morice, who gave a vocal recital on February 19, has much to eradicate and much to acquire before she becomes a good singer. She is called a soprano, but her low notes are so much better than her high ones that she could easily be called a contralto. Her high notes, when not vibrant, are wrongly produced—there is more breath than voice in them. She has not the breadth of style necessary to the Italian airs which she sang, and she is best in simple melodies that call for delicacy rather than depth in interpretation. Her English songs were of very poor quality; some of them came perilously near the ordinary common ballad. Miss Morice was accompanied by Miss Margaret Tilly—a fact that proves she is a far better judge of an accompanist than of a song.

NEAR EAST BOOKSHELF.

I. "THE JEWISH PERIL: Protocols of the Learned Elders of Zion." (London: Eyre and Spottiswoode, Ltd. 2s. 6d. net.)

II. "KOSSOVO: HEROIC SONGS OF THE SERBS." Translated from the original by Helen Rootham. (Oxford: B. H. Blackwell. 4s. 6d. net.)

I.—A NIGHTMARE TO THE NATIONS.

There are people in this world who believe there is a universal explanation to all evil, and probably the most conspicuous among these is the thorough-going anti-Semite who thinks that the potential capacity of the Jew in wrong-doing is unlimited. Ever since this race was dispersed, all nations have known what the presence of the Jew in their midst means; and while some have liked and some have tolerated it, others have always hated it. To these last the existence of the Jew has seemed a peril, and both in word and in act they have demonstrated their belief. But not until we read this book did we ever hear of a Jew himself supplying alleged reasons for such hatred.

This is a most amazing document. It consists of the translation of a book published at Tsarkoye Sielo, in Russia, in 1905. It was presented to the Russian public by Professor Sergyei Nilus, and it contains an introduction and epilogue written by him in 1905, and a series of notes on lectures delivered to Jewish students in Paris in 1901. It is these notes which make the remarkable reading. Upon their authenticity we can offer no opinion, for we have no ground upon which to forward one. This being so, we will merely give a few points from these lectures.

The methods by which the Jews are said to propose to obtain supremacy in the world are described in some detail. No system, whether it be religious, political, social, or financial, exists which will not be bent, or which is not already bent, to the one purpose of obtaining Jewish supremacy. There are some most striking statements in connection with systems which Jews are said already to have allowed deliberately to be perverted from their original use. For instance, this is what is said of Masonry:—

> The Gentiles are like a flock of sheep—we are the wolves. . . For what reason were we induced to invent our policy and to instil the same into the Gentiles? We instilled this policy into them without letting them understand its inner meaning. What prompted us to adopt such a line of action, if it was not because we could not, as a scattered race, attain our object by direct means, but only by circumvention? This was the real cause and origin of our organisation of Masonry, which those swine of Gentiles do not fathom, and the aims of which they do not even suspect. They are decoyed by us into our mass of lodges, which appear to be nothing more than Masonic in order to throw dust in the eyes of their comrades.

In these lectures it is stated that the Jews have control of the gold of the world; that they therefore are able, by withdrawing the gold from circulation, to arrange at will economic crises in any country that has adopted the gold currency. Besides controlling the financial world, it is claimed that the power of Israel is extending and will gradually become complete in matters of religion, the Press, law-making, and so on. On this side of the document the argument is rather technical, and of the possibility of its realisations experts must be left to judge. But besides details there are some extremely interesting generalisations which it is not easy to refute. For instance, here is the explanation of modern interest in Economics and Politics:—

> It was we who, with complete success, turned the brainless heads of the Gentiles by our theories of progress towards Socialism; there is not to be found a brain among the Gentiles which would perceive that in every instance behind the word "progress" is hidden a deviation from the truth, except in such cases where the word refers to material of scientific discoveries. For there is but one true teaching, and in it there is no room for "progress." Progress, like a false idea, serves to conceal the truth in order that nobody should know truth besides ourselves, God's Chosen People, whom he has elected as its guardian.

The main opposition to these Jewish plans will be found, says the lecturer, in the Catholic Church and in Holy Russia. But he is convinced that even these barriers will be broken down, and that the circuit which the Jews are drawing round the world will then be complete—in other words, that the symbolic serpent which started on its course at Jerusalem will have united its head with its tail.

If authentic, this is a most remarkable document. Certainly it should be read, studied, and refuted. Its claim alone that Jews are responsible for Revolution should make it of interest to the modern reader. It cannot be treated (but it surely will by some be treated) as idle nonsense; it is matter for serious discussion and for illumination. Professor Sergyei Nilus, whose epilogue was written twelve years before the Russian Revolution, frankly feared, when "the Protocols of the Elders of Zion" came into his possession, the advent of anti-Christ—"the King born of the blood of Zion—the anti-Christ—is near to the throne of universal power." Whether his opinion was justified we must leave to the readers of this book; but at any rate we hope to see it treated on its merits or demerits.

II.—KOSSOVO.

Everyone who knows the Serbian's soul and its habit of looking backward also knows that Kossovo, the "Field of Blackbirds," upon which Serbian independence was vanquished, is the central point in his retrospect. For it is possible to date from this battle the enslavement of that proud and unforgetful race. Far more easily than to other campaigns upon which epics have been based is it to point to Kossovo as the definite moment before which all was light and after which all was dark. Even in epic poetry such as the Iliad or the Chansons des Gestes, no such sudden climax to a nation's tragedy appears. It may be said in short that to understand Kossovo, its content and aftermath, is to understand the Serbian race.

It is an ineradicable habit of the Serb to compose ballads on the great events in his nation's history. Indeed, as M. Janko Lavrin points out in a short but excellent historical preface to this book, "These ballads, in which the entire history of Serbia has been embodied, far from dying out, are still sung all over the country, playing a very important part in the Serbian national life. Among Serbian masses, poetry is in general so closely connected with life that it is impossible to separate them; they sing while working, they sing when they are joyful, they sing when they suffer." There have been but few attempts to translate these ballads into English, but interest in Slavonic literature is undoubtedly increasing, and we may reasonably suppose that eventually we shall have all the cycles of Serbian ballads in English.

There are four cycles of Serbian ballads: the first mythological, the second dealing with Kossovo, the third concerning the national hero, Marko Kralyevitch, and the fourth modern. It is the second cycle which Miss Rootham has here translated, but happily it is her intention to follow this volume with ballads belonging to the other cycles.

This translation retains both the form and spirit of the original. All these ballads are written in trochaic pentameters, and Miss Rootham has contrived most admirably and without any awkwardness to preserve this metre. As in all epic poetry, the chief qualities in these Serbian songs are clarity, simplicity, and dignity. It is not easy at once to conserve these high qualities and to give a literal translation, but Miss Rootham has been most successful. Compare with the original, for instance (the original is printed on every left-hand page), the tale of Milutin, the servant in "Tsar Lazar and Tsaritsa Militsa"; he comes from Kossovo bearing his sad tale to his lady, the Tsaritsa Militsa:—

> And the Jug Bogdan has fallen also,
> And with him eight Jugovitchi, lady;
> There where no man would desert his brothers,
> Whilst a single one could move his weapon,
> Boshko Jugovitch still fought, oh lady;
> Raged the battle round him on Kossovo
> And he threw the Turks into disorder
> As the falcon strikes the homing pigeons.
> And there perished mighty Ban Strahinya,
> There, too, perished Milosh, oh dear lady,
> By Sinitsa, by the chilly water,
> There where many Turks have fallen.
> Milosh slew the Turkish Sultan, Murad.
> And he also slew of Turks twelve thousand.
> May God bless the woman who has borne him!
> He left glory to the name of Serbia
> While there lives a story and a teller,
> While there lives a people and Kossovo.

That is both splendid translation and fine verse.

To this book there is a frontispiece by M. Rosanditch, for which we do not greatly care, and an introduction by the Hon. Maurice Baring, which is exactly what it should be. But even without these things the book commends itself. Every English student of the Serbian language must get it, and every lover of verse for the sake merely of the translation should get it. It remains to say that the book is most tastefully produced, and is a credit to all those who partook in its publication.

PERSONAL AND GENERAL.

CALENDAR OF THE WEEK,

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian (New Style).	Julian (Old Style).	—	Moslem.	Jewish.
1920. February.	1920. February.		1338. Jumada II.	5680. Adar.
26	13	Thursday	6	7
27	14	Friday	7	8
28	15	Saturday.....	8	9
29	16	Sunday	9	10
March.				
1	17	Monday	10	11
2	18	Tuesday	11	12
3	19	Wednesday	12	13

The Sultan of Egypt's infant son has been named Prince Farouq.

M. Athos Romanos, the Greek Minister in Paris, has returned to London from the Continent.

Dr. Trumbitch, the Yugoslav Minister for Foreign Affairs, left London on February 20 for Paris.

Señor Don José Antonio de Sangroniz, Secretary to the Spanish Embassy, has left London for Tangier.

The Prince of Wales received Sir Solomon Bandaranaike, Maha Mudaliyar of Ceylon, on February 19.

Lord Esher's Army Committee will leave Delhi on March 10 for Poona. It will then proceed home to conclude its report in London.

The Shah of Persia and his suite have left Rome for Cannes. The King of Italy and members of the Cabinet were present to bid his Majesty farewell.

Sir Chettur Sankaran Nair, member of the Council of the Secretary of State for India, had the honour of being received by the King on February 19.

Hussein Kuli Khan Nawab, the Persian Minister at Berlin, and Davood Khan Meftahes-Saltaneh, the Persian Consul-General in India, have arrived in London.

The Roumanian Chargé d'Affaires, M. Boresco, visited Mr. Lloyd George on February 20 in connection with the forthcoming visit of the Roumanian Prime Minister.

The *London Gazette* of February 18 contains the announcement that Lieut.-Gen. Sir E. A. Altham relinquishes his appointment as Quartermaster-General in India as from February 18.

Major-General R. A. Cassells, of the Indian Army, has been made an Additional Companion of the Order of the Star of India for services in connection with military operations in Kurdistan.

Brevet Colonel (temporary Brigadier-General) M. R. W. Nightingale, 5th Gurkha Rifles, has been appointed an Additional Companion of the Order of the Indian Empire for military services in Kurdistan.

Sir Aurel Stein is in Italy, having taken leave from India to assist the early issue of the record of the archæological and scientific results of the second of his three great expeditions in Central Asia, under the title of "Serinda."

In a supplement to the *Gazette* for February 20, it was announced that Lieut.-General Sir J. A. L. Haldane had been appointed General Officer Commanding-in-Chief of the Mesopotamian Expeditionary Force, dated February 9.

Viscount and Viscountess Allenby returned to Cairo on February 14 from the Sudan. The Royal Munster Fusiliers, with their colours and band, formed a Guard of Honour. Lord Allenby expressed himself as delighted with his tour.

The managers of the Craven Fund (Cambridge University) have made a grant of £100 to the Managing Committee of the British School at Athens in aid of the proposed excavation at Mycenæ.

Mr. N. M. Joshi, who was appointed by the Government of India to represent the working classes of that country at the International Labour Conference, Washington, is now studying factory conditions in England.

Mr. Lowden, the British representative at Odessa, Reuter's Agency understands, left that city on February 8, and has since arrived at Constantinople. He has with him two British Vice-Consuls, Mr. Rogers and Mr. Dobson.

For services rendered in connection with the military operations in Central and Southern Kurdistan the King has awarded to T./Brig.-Gen. W.H. Wooldridge, I.A., the Order of St. Michael and St. George (Additional Member of the Third Class).

A deputation from the Corporation of London, headed by Mr. A. C. Stone, waited on the Persian Chargé d'Affaires on February 7 and presented the gold casket which it was decided to present to the Shah on the occasion of his visit to the Guildhall a few months ago.

A message from Busreh announces that Lord Inchcape has been empowered to sell the surplus river craft in Mesopotamia on the Government's behalf. It was previously stated that Lord Inchcape was travelling to India, but it now appears that Mesopotamia was the objective of his journey.

Sirry Pasha, the Egyptian Minister of Public Works, who resigned a few days ago, and then withdrew his resignation when the Government conceded his demands for the inclusion of an Egyptian on the Nile Irrigation Projects Commission, has now issued a statement definitely resigning his portfolio.

The Honorary Treasurer of the Montenegrin Red Cross and Relief Fund, Lady Roper Parkington, has just remitted to the Montenegrin Croix Rouge, Paris, 100,000f. for the relief of destitute Montenegrins in that city; and has contributed £400 for the purchase of drugs to be shipped to Montenegro by way of Bari.

According to a message from Cairo, dated February 16, M. Clemenceau had then arrived at Luxor. Later he met Lord Allenby, who was passing through on his return to Cairo, and remained to dinner with the High Commissioner. M. Clemenceau left Luxor the following day for Assuan, Wadi-Halfa, and Khartum.

Rear-Admiral Richard Webb, Assistant High Commissioner at Constantinople, had the honour of being received by the King on February 19, when His Majesty conferred upon him the honour of knighthood and invested him with the insignia of a Knight Commander of the Most Distinguished Order of St. Michael and St. George.

The Shah has conferred on Sir Horace Brooks Marshall, who was Lord Mayor when his Majesty visited the City in November, the Order of the Timsal in diamonds, on Mr. Sheriff Ashdown and Mr. Sheriff Eves the grade of Grand Officer of the Order of the Lion and the Sun, and on Mr. A. C. Stanley Stone, chairman of the Reception Committee, a Knight Commandership of the latter Order.

The Central Asian Society has arranged the following lectures for the remainder of the 1919-20 session:—(1) March 17: Colonel the Hon. Dudley Carleton on "From the Adriatic to the Oxus." (2) April 21: Miss Louise Peralta on "A Mid-Asian Continuity of Influence." (3) May 19: Mr. E. H. Freshfield on "The Old Walls of Constantinople." (4) June 23: Mr. H. St. J. B. Philby, I.C.S., on "The Highways of Central Arabia."

At the Greek Church, Moscow Road, Bayswater, a Mass of Requiem for Ukrainian troops fallen in the war was celebrated on February 21. The Archimandrite, the Rev. J. Basdecos, was the celebrant, assisted by the Deacon, the Rev. P. Korsunovsky. The musical part of the service was rendered by the Ukrainian National Choir, under the conductorship of Mr. A. Koshitz. Among those present were M. Morgoline, head of the Ukrainian Mission in London, D. Olesnigtsky (Counsellor), M. Bazalevitch and M. Vish-

Digitized by Google

nitzer (Secretaries), Dr. N. Stakhovsky, formerly chief of the Ukrainian Mission in London, M. Gennadius, the Honorary Greek Minister, representatives of Georgia, together with many members of the Greek and Ukrainian colonies in London.

APPOINTMENTS, ETC.

Lieutenant-Colonel O'Connor, Resident of Nepal, has been placed on special duty under the Government of India in the Foreign Office. Lieutenant-Colonel Kennion succeeds him in Nepal.

Mr. Sydney A. Armitage-Smith, an Assistant Secretary of his Majesty's Treasury, has been appointed Financial Adviser to the Persian Government, in accordance with the terms of the Anglo-Persian Agreement of August 9 last, and will proceed very shortly to Teheran to take up his duties.

DEATH OF TWO LEADING ANGLO-EGYPTIANS.

(From Our Own Correspondent.)

Cairo, February 1.

Anglo-Egypt has during the past week suffered the loss of two valuable and esteemed members. The first is Lieutenant-Colonel E. M. Sowerby, who died as a result of an operation. Col. Sowerby had seen considerable service in the Near East. He joined the Sudan Government in 1901, and entering the Railways rose to the post of Chief Engineer. When war broke out his services were requisitioned by the Army, and he was engaged for a time on Gallipoli and later at Salonika, at both of which places he did excellent work. When it was decided to push across into Palestine, Col. Sowerby was appointed Deputy Director of Military Railways under Brigadier-General Sir George Macauley. At that time the railway had advanced but a short distance into the desert, and to Col. Sowerby fell the task not only of directing the laying of the line into Palestine, but also of co-ordinating and running the service. It is generally admitted that the success with which the transport behind the lines was handled was to a very great extent due to his energy and ability. When last summer the Ministry of Communications was formed, and General Macauley became its Adviser, it was only natural that he should offer the Under-Secretaryship to his former Deputy Director of Military Railways, and the work of development will undoubtedly suffer very much by the premature death of this gallant and able engineer, who is mourned by his subordinates as much as by the large circle of friends which he possessed here and in the Sudan. In conclusion, it may be mentioned that Col. Sowerby had not been home for a long time, and there is no doubt that his was a case of too long a sojourn in a tropical climate.

The other Anglo-Egyptian whose death we have to mourn this week is Mr. J. P. Foster, who died suddenly at Luxor on Saturday last. Mr. Foster was a member of the leading legal firm in Egypt. He was a perfect French and German scholar, and had deep knowledge and wide experience in legal matter, especially in international and commercial law. He was regarded as one of the most brilliant lawyers at both the British and the Mixed Bar, and never failed to command the attention of any Court in which he pleaded. Of late years he had suffered a great deal in health, and had undergone several serious operations, but this did not lessen his energy or the conscientious manner in which he carried out his duties towards his clients, and it is certain that in his case, again, devotion to duty was one of the main causes of his death. Mr. Foster was keenly interested in the judicial organisation of the Courts, and whilst many did not see eye to eye with him, since in their opinion he wanted to go too far, one and all are agreed on the question of his clearness of vision, his straightforwardness and his sincere desire to make the judicial institutions of the country as up to date and as perfect as possible. It is particularly unfortunate that at the present time such a brilliant and experienced jurist should be lost to us. Mr. Foster, who was but 46 years of age, will be deeply mourned by his colleagues of the Bench and Bar and by the British and foreign and native communities who had had many opportunities to appreciate his sterling qualities and his kind heart.

WHERE TO STAY.

For the convenience of visitors from overseas "THE NEAR EAST" offers its services in booking rooms at hotels in the United Kingdom, on receipt of instructions preferably a week before the date of arrival. When instructions are telegraphed the message can be abbreviated as follows:—

"EASTAPROX, LONDON. TWENTIETH MATLOCK TWO

(The visitor's name and place of residence abroad to be added)."

which would indicate that two rooms were required at Matlock on the 20th of the month.

BRISTOL
GRAND SPA HOTEL.

EXETER
ROYAL CLARENCE HOTEL
(facing beautiful Cathedral).

LONDON
HOTEL CRANBOURN
67a, Shaftesbury Avenue, W.C.2.
Self Contained Suites.

MANCHESTER
The Victoria House, 254, Oxford Road.

MATLOCK
SMEDLEY'S HYDRO.

TORQUAY
VICTORIA & ALBERT HOTEL.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

THE ONLY ENGLISH HOTELS IN ALEXANDRIA.

THURSDAY, FEBRUARY 26, 1920.

THE TURKISH SETTLEMENT.

While we believe that in deciding to retain the Turkish Government in Constantinople the Allies have stumbled upon the only possible solution of the Turkish question, there can be little doubt that the Supreme Council has added to its many mistakes by divorcing the announcement regarding the fate of the Ottoman capital from the details of the whole Turkish settlement. The reason for the step is to be found in the naïve supposition that the decision to leave the Turkish administration in Constantinople will placate Turkish, and particularly Nationalist, opinion, and prompt Mustapha Kemal to put a stop to the massacre of Armenians. In informing the Porte of its intention the Supreme Council conveyed the warning that the continued persecution of the Armenians might cause the Peace Treaty with Turkey to be considerably modified. Mr. Bonar Law had to admit that the attempt to bring pressure upon the Turkish authorities might not be as effective as the Allies would desire; but they considered that it would have some effect, "as there was some connection between the Nationalist movement and the Ottoman Government, and the Allied influence ought to have some effect upon anyone who desired the continuance of Turkish nationality." Not much store, we fear, can be set upon these pious aspirations. Immediately after the Armistice all things were possible in Turkey. The decision to restrict Ottoman jurisdiction to Asia Minor might have been enforced without encountering any serious obstacles; it would have been equally easy to have established effective control over Turkish administration and to have secured order throughout the territory left to the Turks. Whether the existing situation will yield to the blandishments or threats of the Allies we have no means of knowing; but on the general evidence of the recent course of events we should hazard the opinion that, if not more drastic measures, at least a show of force is required, together with a very clear intimation that the Allies, in common parlance, mean business. The men in Turkey with whom the Powers are at issue are not fools. The last thing that they want to do is to make their administration conform to Western standards. They have successfully staved off the danger for the last forty years by the simple device of combining passive resistance with the playing off of one Power against another, and nothing has happened since the Armistice to convince them that this time-honoured method is in the least degree exhausted.

The course of events in Asia Minor during the last twelve months has been the reflex of the Allies' failure to understand the Turkish question. A *sine qua non* in regard to reform in Turkey is that the Great Powers should first reform themselves in the matter of their dealings with the Turks. It has required no profound knowledge of human nature to discover that the delay in the Turkish settlement has been due to acute differences of opinion among the Allies. Individual Turks in Constantinople may have been anxious to take advantage of the opportunity to rehabilitate Turkey; but the Committee of Union and Progress represented the strong man armed in the country, and until the ground has been cut away from under the feet of that organisation there will be no reformed Turkey. Unfortunately the Allies have consistently played into the hands of the Committee and its adherents, and the recrudescence of Armenian massacres has been the measure of the confidence that these have gained as the months passed and the Supreme Council proved itself unable to come to any decision in regard to the Turkish settlement. In these circumstances it is unlikely that the Turkish Nationalists will be much impressed by the mere threat that they stand to lose Constantinople, if the persecution of Armenians does not cease. What is required is that the Allies, having come to an agreement on this vexed question, should now proceed to show themselves at one in regard to all other details of the settlement by an early announcement of the terms of the Treaty to be imposed upon Turkey. No heroic measures are called for; adequate control of Turkish administration should be established, and here again it should preclude all possibility of friction, preferably by leaving the control in the hands of one Power; there should also be as clean a cut as possible in frontier demarcation, so as to leave a minimum of non-Turkish people under Ottoman jurisdiction, and only those who do not avail themselves of the opportunity to migrate voluntarily and free of expense to one or other of the neighbouring States.

The method of announcing the Turkish settlement piecemeal has given the opponents of the retention of the Turkish Administration in Constantinople an opening to agitate for the reversal of the decision. We hope that they will pause to consider the effect of such an agitation on the future of the Near and Middle East. They are concerned over the enormity of keeping the Turk in Europe in the face of his past record; the Porte in Constantinople, they say, must always be a centre of intrigue, and there can be no peace for the Continent so long as he remains there. The Moslem question, it is pointed out, unmistakably requires a war before it can be settled, and the cry of "The Turks out of Constantinople" offers a good rallying signal. The moral consideration, it must be confessed, would make a strong appeal, if the war had evolved a new world in the moral sense; but the Porte's capacity for evil, after the first exhibition of massacre as a definite policy, was entirely proportionate to the moral shortcomings of the Great Powers. It is idle to suppose that, given the Porte and the Powers acting according to their respective moral standards of pre-war days, the transfer of the Turkish capital a few score or a few hundred miles into Asia Minor will modify the effect on the peace of Europe of intrigues similar to those for which Constantinople was famous. If the Allies, now that Germany and Austria-Hungary are eliminated, can so remodel their own diplomatic conduct that there shall be no fruitful soil provided for Turkish intrigue, then the exact locality of the Turkish capital is more or less immaterial. For it has to be remembered that no alternative whatever to the continuance of the Turkish Administration in Constantinople offers itself, which is free from the certainty of intrigue, if the Allied standard of diplomatic morality rests on the same plane as that on which it was before the war. If it can reach a higher plane, then all things are possible—even the regeneration of Turkey with the Porte in Constantinople. When Britons are confronted with the spectacle of two antagonistic schools of thought citing the pledges of a Prime Minister in support of two mutually contradictory policies, it is time to cry halt to any attempt to ride the high horse of morality or to leave unsettled any longer the Turkish question, which will yield to the first application of honesty, common-sense, and strength of character on the part of the Allied Governments.

THE FUTURE OF MESOPOTAMIA

II.—TRANSPORT QUESTIONS.

(Continued.)

Motor Transport.

The motor transport provided for the use of our Mesopotamia force consisted of light vans and heavy lorries. Of their merits and their suitability for the country an officer with much experience reports as follows:—"The vans are the most expensive transport

The Baghdad-Kazimaim Tramway.

of all. They carry about 5 cwt. only, and in drivers, petrol, etc., are, therefore, very expensive. The lorries were kicked out of France because they cut up the *pavé* roads. They were therefore sent out to Mesopotamia, where there are no roads at all, and these lorries are responsible for very heavy expenditure on roads at the present moment." In one district alone, nearly £500,000 was spent on roads in one year. If those roads were going to be of any permanent benefit to the country, this very heavy expenditure might be justified; but they will not be anything of the kind. For every road used by lorry convoys it is necessary to employ Indian labour corps, a corps being required for about every forty miles of road. Indian labour has to be employed because Arab labour is practically unobtainable, and the cost of a corps works out at a lakh of rupees a month. The work to be done consists of digging out holes, covering the track with shingle, backloaded in otherwise empty lorries, etc. In one district in six months the heavy lorries destroyed a strip of country about a hundred yards wide, with the result that all bridges, culverts, etc., had to be shifted, and the destruction of a fresh strip of country then began. The same tale is, of course, repeated over and over again, and not only in one district but up and down the country. There is, thus, no true progress; no good roads are made; labour is employed in merely delaying destruction.

During a state of war such conditions as these were inevitable: certain transport was available for certain routes, and all that could be done was to make the best of what was there. Because a particular type of lorry was cheap to run, cheap on petrol, cheap on drivers, and carried two tons, these lorries were considered inexpensive, and the colossal cost of the roads they used up was not regarded. The cost of a road for light vans over the same ground, once a few bridges and culverts were constructed, was practically *nil*.

But now that peace conditions rule, it is no longer necessary to follow such expensive methods, and the remedy for the evil lies in the introduction of the right type of motor transport. The Fiat (1-ton), with its pneumatic wheels, does little more damage than the lighter car; the Autocar (15 cwt.) has been proved a great success in East Africa; and doubtless there are other suitable cars and lorries. The obvious policy is to substitute them for the solid-tyred lorries that do so much harm to the roads, and for the vans that are so expensive by reason of their limited capacity. Motor transport will then cost much less, while the upkeep of roads will be reduced to next to nothing.

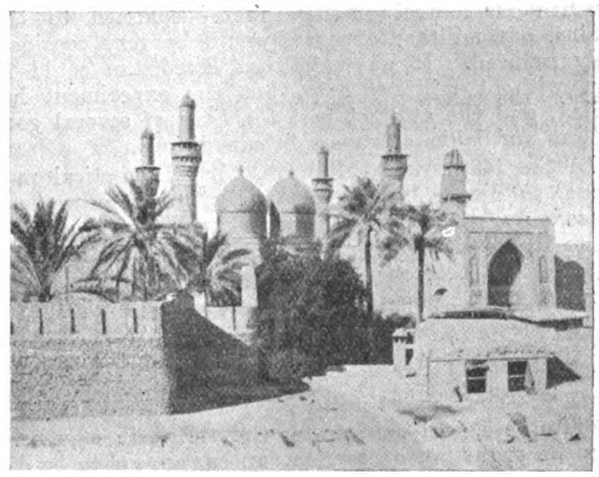
In connection with this subject of motor transport, it may be pointed out that, in the light of the facts set out above, certain criticisms of a road four or five miles long, made of cement concrete at Busreh, are shown to be unjustified. The number of the heavy lorries running daily on this road was very large, and nothing less solidly constructed could have stood the traffic. Thus, although the stone had to be brought from Koweit and the cement from India, the cost of its construction was fully warranted.

III

Having considered some of the physical aspects and material requirements of the country, we may now glance at one or two of the points connected with its government and administration. At the present time no good purpose would be served by any discussion of the form under which the country will be governed; but we may assume that we shall co-operate with the Arabs, and perhaps with the Kurds also, and that for some few years we shall have to keep a strong military force in the country to keep order among the rival tribes and factions, and to deal with frontier raids and other disturbances.

This military force must of necessity be a heavy expense to the country at first. But troops in cantonments are cheap compared with troops on expeditions; hence, if only on the ground of expense, it is clear that the more we can reduce the chances of trouble with the Arabs and Kurds the better it will be. It is to be hoped that the lessons we have had since we first entered the country have been laid to heart. That we have much to learn seems evident from the troubles in Southern Kurdistan.

As far as it is possible to piece the story of those troubles together—for no clear and complete official statement regarding them has ever yet been given to the world—they might have been avoided by a different handling of the Southern Kurds. The latter were told, apparently, while the war was still in progress, that if they helped us against the Turk, Southern Kurdistan should be granted its independence. When we first went to Mosul a political officer was sent to Suleimanieh, where he adopted the attitude of an adviser. Later he was replaced by another officer, who talked about a British protectorate, and, as one correspondent put its, "started collecting the rent." It is hardly surprising that this led to the Kurdish rising, the imprisonment of some British officers in Suleimanieh, the dash to their rescue, which ended in something like disaster, and various unfortunate incidents. Finally, an expensive



The Golden Domes of Kazimaim.

expedition entered the country, after a well-planned flight, released the prisoners, and sent columns out through the region. Troops have had to be left behind in the Bazian Pass to watch the country, thus locking up troops that might otherwise have been set free, and necessitating an expensive road and extra transport for their provisioning. The whole incident is typical of what we must endeavour to avoid in the future.

In Central Kurdistan, *i.e.*, the hills N. and N.E. of Mosul, conditions are similar to those in Armenia: Kurd and Christian cheek by jowl in neighbouring villages. It is necessary to add that they are described as "both equally treacherous" by more than one

Digitized by Google

British officer. The conditions hardly tend to make the task of maintaining order in this region a light one.

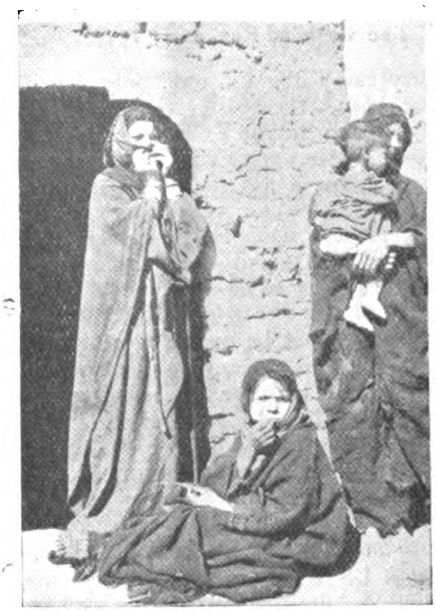
The Turk, of course, has been, and continues to be, so far as it is in his power, very active in stirring up trouble." "Now that the English have come," he says, "they will restore the Christian refugees to their homes —Unfortunately, you and we did not make a clean job of clearing them out!—and unless you Kurds become Christians it will be your turn now, and you will be wiped out." The Christian refugees, it is only fair to add, have certainly lent force to these prophecies by publishing far and wide what they will do to the Kurd when they get back, thanks to British protection; and in the circumstances it is not at all wonderful that the Kurd does not trust us. His mistrust manifests itself in an old-fashioned way: he waits until he finds a British "Political" guarded by local levies and then treacherously murders him. At least six officers have been thus lost to us. In each case we have to collect troops from up and down country, hire transport (at expensive rates), and push straggling columns into a country of terrific hills and ravines, densely wooded, and roadless, after the elusive Kurd. Thus far audacity has carried through, but by degrees the Kurd will learn how to fight us more effectively; and in any case the cost of such expeditions is very heavy, and we cannot always have sufficient troops available to carry them out. Moreover, even if we succeed in pacifying the local Kurd, we shall still have his cousin from across the border raiding the Christians on our side. There would seem to be no end to it until we should occupy Armenia, Kurdistan, West Persia, Azerbaijan, and the Caucasus! It is unlikely that we shall follow that policy, and the alternative would be to leave the Kurds in their hills, and confine our attention to the plains. With aeroplanes and light-armoured cars we could stop any raids, or punish the raiders; but in all probability there would be no raids worth speaking of—the hill folk would wish to trade with us, and to fight one another. The Christian refugees might be given the choice between staying on in Mesopotamia, where they could receive land and settle down, or receiving rifles and being left to look after themselves. There has been some talk about the plains being too hot for them; but they have not proved too hot for British troops or British civilians; and considerable numbers of Assyrians have been settled in Baghdad for many years. Mosul, too, is not really a hot place except for a few weeks in the year.

With our control of the country confined to the plains, our military expenses would be very considerably reduced. It was said that Kurdistan could be run without military help, but the experiment has failed, and the attempt cost the lives of several good officers and lakhs of rupees in expeditions.

In the plains we shall have, for all practical purposes, to deal only with Arabs, with whom we may reasonably hope to work upon friendly terms. It is quite likely that they may at first find some difficulty in choosing their own ruler, or head. That has been recognised all along as the chief stumbling block in the way of Lower Mesopotamia unity; and the problem seems to be no nearer solution to-day than it was five years ago. The subject is an interesting—indeed, a fascinating—one; but it is too big and too complicated to go into here. In this matter Great Britain may help, but she ought not on any account to appear to be dictating, or desirous of dictating, to the Arabs in making their own choice. The temptation to make suggestions is well-nigh irresistible, but, officially, suggestions should only be offered with extreme care.

To sum up, what is wanted, first and foremost, if Mesopotamia is really once more "to flourish as the rose," is a fixed policy, steadily applied by a trained administrator, assisted by men of the Sudan Civil Service type. Possibly some recruits might actually be obtained from the Sudan and Egypt, if they could be spared. Secondly, we should make up our minds either to clear out of the Kurdish hills, or to face very serious trouble and expense in keeping our foothold there. If a binding alliance with the Kurds could be arranged it might solve the difficulty; but in that case we should have to make the Christians understand quite clearly that *they* must make no trouble. For the rest, it would be advisable to have a clear scheme of transport—rail, river, and motor—and especially to see that only really suitable types of motor cars are allowed in the country. Similarly, an irrigation policy is urgently called for. It should be one that would allow of gradual expansion or development, and one that will not put a stop (for practical purposes) to river navigation until the country can entirely dispense with that means of transport. The experiments in the direction of cotton growing should certainly be continued and extended. As readers of THE NEAR EAST are well aware, the world wants cotton badly to-day, and is like to do so for some years to come; and though Mesopotamia will be unable to do much to supply the want at present, it will always find a market for its cotton, if it produces good quality, as it is expected to do. Lastly, the country's oil supplies should be developed without loss of time, thus providing it with cheap fuel and at the same time with much-needed revenue.

In the interests of economy and efficiency a defined railway policy for the country is urgently required. Unless there are strong military reasons against it, one unbroken main line through the length of the country would seem to be the ideal to aim at, although a second



Types of Mohammedan Arab Women.

Mediterranean-Euphrates Valley line would still possess certain advantages and find strong support. Branch lines would be constructed as desired, and where the country is boggy or liable to inundation it is suggested that light railways should connect up with the trunk line.

In regard to motor transport, experience shows that the lorry best suited to the country is one carrying from 15 cwt. to a ton, and doing no damage to the beaten earth roads. Such lorries should be supplied for military use, and lorries for private use might quite easily be controlled with a view to prohibiting types that would injure the roads.

Animal transport (for military purposes) could be reduced to what might be required for an expedition, and could be employed on station duties or hired out to irrigation, works, and other departments. By such means very great savings could be effected. Apart from military transport, pack animals, the mule or camel caravan, are doomed to disappear, though it is probable that they will still hold their own on the byways for a while. With them and their ruffianly but usually hard-working attendants and owners much of the picturesqueness of travel in Mesopotamia is bound to disappear. But these are the days of efficiency and progress, and the world cannot wait upon the gurgling camel or the grumbling *munkari*. It is unlikely that Mesopotamia will be allowed to relapse into the deep slumber that has held it since the Tartar hordes reduced it to a wilderness.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

The event of the week has been the opening of the British Industries Fair—or, perhaps, it would be more correct to use the term Fairs, since it is being held this year simultaneously in London, Birmingham, and Glasgow. The Fair, which is described in detail in another place, has developed from small beginnings into an institution of the first importance, and one which I sincerely hope and believe will put the Leipsig affair into the shade. The British business community owes a very deep debt of gratitude to the Department of Overseas Trade for this admirable opportunity for coming into touch with foreign buyers. The present Fair, as was to be expected, is far in advance of last year's, and I think we may confidently anticipate even greater developments in the future. In one respect I must admit to a feeling of disappointment this year, and that is on account of the comparative absence of buyers from the Balkans and other parts of the Near East. I have noticed that considerable attention has been paid to the Fair in local papers and I had hoped that there would have been quite a crowd of Greeks, Roumanians, Serbians, and Bulgarians. However, that will doubtless be the case next year.

***

The Report of the Currency Committee met with a mixed reception in India. On the one hand, we heard from Calcutta that it has been received with almost universal approval on the Bengal side, while from Bombay comes the information that the adoption of the measures recommended has been strongly condemned. It may be interesting to inquire why a scheme which apparently finds support on one side of India should be so adversely criticised on the other. The immediate effect of linking the rupee with gold was to raise the Indian exchange from 2s. 4d. to 2s. 9d. The premium which had been established on the price of gold placed the value of the rupee nearer 2s. 10d., and the Indian Government offered most attractive rates to remitters in the shape of Reverse Councils, which were sold as high as 2s. 10$\frac{7}{8}$d. in the second week of February. Since then the Government rate has come down, but a wide divergence has been shown between Reverse Council rates and those obtainable in the market. The sudden and serious jump in exchange upset the calculations of shippers, and exports came to a standstill. It may be assumed that the bulk of the jute crop from Calcutta had already been financed or contracted for, otherwise exporters would have had more to say; but the movement of cotton from Bombay is only just gathering force, and does not reach its maximum until March; therefore the rise in the rupee has imposed a heavy burden on cotton shippers, who have naturally resented it. Therein seems to be the reason for the difference in opinion.

***

Cable advices from Bombay indicate that the price of cotton has fallen over fifty rupees per bale, which affords ample evidence that buyers are holding off. Exchange rates quoted by the Banks have come down with a run. I understand that remitters bought freely early in February at 2s. 10d. for telegraphic drafts, but the price has now fallen to 2s. 7d., and forward quotations are weaker, so that the outlook is extremely uncertain. It is no doubt regrettable that exporters of Bombay cotton will be penalised by the unforeseen rise in exchange, but the crop this season promises to be one of the best, and the surplus available for shipment is estimated to be about 2,250,000 bales. Of this amount Japan will probably take one and a-half million bales and the Continent 750,000 bales.

***

The policy of the great joint stock banks in obtaining a controlling interest in other banks operating abroad has had its latest development in the provisional agreement entered into by Barclays Bank for the purchase, subject to Treasury consent, of the shares of the Anglo-Egyptian Bank, on the basis of the exchange of nine fully-paid "B" shares of £1 each in Barclays Bank for each share in the Anglo-Egyptian Bank.

The consequences of the delay in settling the Turkish peace terms are emphasised in the latest report of Messrs. Giraud on the fruit crop of the Smyrna district, which will be found elsewhere in these columns. They point out that a year ago, when hopes of a speedy peace existed, there was a marked revival of confidence, resulting in satisfactory progress in agriculture, but that the events of May caused a serious setback, and that to-day "the agricultural outlook cannot be regarded as satisfactory." Of course, as long as uncertainty exists it would be impossible to expect anything else, but the fact that there was such a rapid improvement immediately after the Armistice at any rate provides grounds for hope that as soon as the peace is definitely arranged matters will take a marked turn for the better.

***

Of course, the situation in the Smyrna district is much more complicated than in other parts of Turkey for reasons which will be obvious, and until a *via media* is arrived at which will enable the conflicting interests to live together in harmony the outlook must perforce remain obscure. In this connection I think my readers may be interested to read the following extracts from a letter I have received from a valued correspondent on the general position in the district:—"As you are doubtless aware," my correspondent writes, "this province is practically separated into two districts; one part of the province being under the occupation of the Greek military authorities, and the rest—except for a small zone at Scala Nova occupied by the Italians—being under the control of the National Government. The Cassaba Railway Company, which is a French concern, is running its trains without interruption along the whole length of its line. As regards the Ottoman Railway Company, which is British owned, communications beyond the town of Aidin are entirely interrupted. The National Government, although not interfering with the running of trains on the Cassaba line as far as Ushak and Apion Carahissar, exercises a control on the goods coming down to Smyrna, and for some time has prevented cereals, cattle, and all foodstuffs from being sent to Smyrna."

***

"Throughout the districts under the direct control of the Greek military authorities," my correspondent adds, "security prevails and agricultural operations are being freely undertaken, but any marked development has been checked by the exodus from these districts of the bulk of the Turkish population. As an example, in the rich grain-growing district extending from Menemen to Pergamos, the area under cultivation is reported this season to be much less than last year, and this is entirely due to the dispersal of the farming population in the whole of that district. The outlook generally for the coming summer as regards all crops is unfortunately somewhat gloomy. All cereal produce will be in smaller supply, and it is more than likely that if the present existing state of affairs continues for another two or three months the returns for the vineyards and fig orchards will be decidedly smaller than last season."

COMMENTATOR.

BANK OF ROUMANIA LIMITED

(FOUNDED 1866.)

Head Office: 27, THROGMORTON ST., LONDON, E.C. 2.

Branch: 11, CALEA VICTORIEI, BUCAREST.

Directors:

THE EARL OF BESSBOROUGH, K.P., C.V.O., C.B.
E. W. H. BARRY, Esq.
THE VISCOUNT GOSCHEN.
GENERAL THE HON. SIR H. A. LAWRENCE, K.C.B.
P. NAVILLE, Esq.

Bankers: BANK OF ENGLAND. MESSRS. GLYN, MILLS, CURRIE & CO.

A general Banking business with Roumania is conducted, and correspondence from those having interests in that country is invited.

Digitized by Google

GENERAL BANK OF GREECE.

Paid-up Capital, Drs. 3,000,000.

Head Office - ATHENS.

BANKING OPERATIONS:
Every description of Banking business transacted.

FINANCIAL OPERATIONS:
Investigations in connection with, and the promotion, organisation and financing of, Limited Joint Stock Companies, with a view to exploiting agricultural, industrial and mineral resources, executing technical works, etc.

Commerce and Industry.

(REPORTS FROM OUR OWN CORRESPONDENTS.)

EGYPT.

CAIRO, February 5.

Finances During September.

The finance returns for September make a little pleasanter reading than did those of the preceding month, for they show that the leeway lost is beginning to be made up. At the end of the half-year, revenue amounted to £E12,269,077, as against £E12,399,958, and expenditure to £E11,409,365, against £E10,255,778. There is, therefore, a falling off of £E130,881 in revenue and an increase of £E1,153,587 in expenditure, leaving a surplus of receipts amounting to £E859,712, as against £E2,144,180 at the end of the corresponding half-year in 1918.

On the revenue side, the main increases were tobacco dues, £E290,372; ghaffir cess, £E190,040, interest on funds, £E102,853, and sale of land, £E115,687; whilst the more important reductions were in Customs, £E400,451, judicial fees, £E125,880; railway receipts, £E371,585, and military exemption fees, £E71,720. On the expenditure side the more important changes were increases, railways, £E716,694; ghaffirs, £E127,326; war gratuities, £E444,099; and claims arising out of the recent disorders, £E116,765; decreases, War Office, £E125,970; extraordinary war expenditure, £E203,504.

ROUMANIA.

BUCHAREST, February 12.

The Exchange Problem.

The rapid fall in the value of the lei is causing great uneasiness in commercial circles; a fortnight ago it was possible to obtain exchange on London upon payment of 140 to 150 lei to the pound, whereas to-day there is difficulty in finding exchange at 210. The importing merchants, who last summer bought goods in France and England on long credits generally subject to payments on account of a certain amount every three or six months, are discovering that they have sold their merchandise to local retail merchants for less (in lei) than they now have to pay for it, and are, therefore, naturally reluctant to part with any more until they have first purchased exchange to cover the transaction.

The retail shopkeeper who bought his goods in lei has nothing to worry about save the annoyance and fatigue of changing price-tags daily. For this he puts the price up with each point the lei loses in value, excusing himself with the statement that if he had to replace his stock it would cost him so much more. The peasant coming to town with three chickens and two pounds of butter to sell discovers that his new shirt is going to cost him more, so he increases the price of his produce, and thus the merry round goes on.

It is difficult to account for this sudden drop in the value of the lei. The general depreciation is undoubtedly due to the enormous fiduciary issue, unguaranteed for all practical purposes save by a paltry three or four million pounds in gold which the Bank of England holds for the Roumanian Banca Nationala, for as yet nothing definite is known about the bulk of the gold reserve which was sent to Moscow in 1916. One of the many rumours current is that the Germans are continuing to print Banca Generala notes by means of the blocks prepared by them for the purpose during the occupation, when 2,000 millions of these Banca Nationala notes were put into circulation by the Germans, the guarantee being certain bonds deposited in Berlin. These blocks the Germans took with them when they left.

The Roumanian Government upon its return to Bucharest, not being in a position to redeem these German notes by Roumanian Banca Nationala notes, stamped them with a rubber stamp which is easily imitated, and forbade the importation of any more. But it is almost impossible to prevent smuggling, and it may well be true that large quantities of these notes have been sent into the country. It is certain that a large number of nice new one-leu notes have made their appearance quite recently, and these bear no stamp, real or imitation.

Amongst the proposals made to improve the finances of the country is that of a forced loan. M. Ilie Beu suggested in the Senate that the Government, when exchanging the roubles, crowns, and Banca Generala notes, should only pay one-half in Banca Nationala notes and the other half in Treasury bonds, thus reducing the fiduciary issue by one-half. The Minister of Finance in his reply stated that the Banca Nationala were prepared to help the Government to the extent of advancing notes to redeem one-third of the non-official currency, the Government to issue bonds for the other two-thirds.

Forthcoming Loan.

A new internal loan is to be floated within the next few weeks in order to cover the budget deficit, and it is to be hoped that the loan will yield a surplus which will be applied to the redemption of the crowns and roubles and the reduction of the fiduciary issue. Otherwise we may look forward to one of those "healthy reactions" they welcome on the Stock Exchange. The terms of the new loan are favourable: issue price 87, interest at 5 per cent., and amortisation by annual drawings. The subscription lists will remain open until the total of 2,000 millions be reached. As a publicity campaign is to be carried out in the villages to point out the advantages of the loan to the rural population, chief of which is the fact that the loan will be received at par in payments of expropriated land, the peasant should respond well.

PALESTINE.

(FROM A CORRESPONDENT.)

The weather has been very varied. Good rains have fallen, and there has been bitter cold, the thermometer falling below 32 deg. F. Rising crops are doing well. Cultivation should be considerably extended this year, owing largely to the money advanced to the fellaheen in large and small loans. The *Official Gazette* continues to give useful advice, and the circulars to Mukhtars, as well as leaflets in Arabic for general distribution, are of importance. Agriculturists are urged to sow as early as possible, and to be careful in selecting seed, avoiding that which is from areas known to have been infected by disease. The dressing of seed with a solution of copper sulphate is fully explained. Farmers are warned that failure to carry out preventive measures will not justify applications for remission or reduction of tithe. Advice is also given in regard to diseases of fruit trees, and agriculturists are directed to submit specimens of animal and vegetable pests to the Government.

Among the British companies registered in accordance with late regulations are the Anglo-Egyptian Bank, Lipton Limited, and the Anglo-Palestine Company (Banking). The Imperial Ottoman Bank is, of course, registered.

BRITISH INDUSTRIES FAIR.

(From a Correspondent.)

Some Impressions.

The impressions that can be gained from one day's visit to the Fair at the Crystal Palace are wide rather than deep. It is an immense enterprise, and it is not possible in a few hours to obtain more than a rather vague impression of the whole. There are some things, however, both bad and good, that stand out clearly, and being human, we propose to take first that side of the Fair which could be improved.

First, there is the train journey to the Crystal Palace. The much advertised 15-minute service from Victoria and London Bridge proved to be a fiction. Next, there is the unsuitability of the approach to the Palace; one has to climb literally scores of stairs to see the exhibits. By the time one has completed the painful ascent, one is, therefore, very critical. Thirdly, there is the unnecessary heat with which the building is supplied; huge stoves send out enormous heat waves which almost overcome one's already tired body. And lastly, there is a most wearisome difficulty in obtaining one's lunch. After waiting in a queue and obtaining just a sniff of an oppressive atmosphere inside the restaurants, one learns wisdom and proceeds to a buffet to take in cold comfort a bitter and sandwiches.

It is a fatiguing task to walk round any fair, but it must be admitted that at the Crystal Palace there are certain very real compensations. Looking at the matter from a non-commercial point of view, one is most struck by the artistic way in which both the Department of Overseas Trade have organised the exhibition and the private firms have displayed their goods. For there is nothing tawdry and vulgar in the structure of the stands or in the exhibits themselves. On the contrary, some of them, particularly (and naturally) in the pottery trade, reach a very high artistic standard. The Upchurch Pottery, for instance, which manufactures salt-glaze pottery, exhibited its goods in a most charming setting; and the Burslem Pottery wares showed up exquisitely. For the most part, indeed, the pottery and glass stalls were very attractive, but there were some which were needlessly overloaded. This criticism applies to other goods besides, especially pictures; when standing by them one seemed to be more in a pleasure fair than in a trade exhibition. It was not difficult to imagine the assistants (who actually in every case were most helpful and polite) shouting out invitations to come and throw a ball at something to win one of their handsome prizes! But these cases of the overloading of stands were comparatively few, and it is due to the general excellence of the exhibits that one noticed these things at all. The organisers of this Exhibition have, in fact, proved that there is no insuperable barrier between commerce and art.

As far as one could judge, there is among the exhibits nothing shoddy or cheap (the last word is not used in a financial sense!), but, like everything of British manufacture, each article is either beautiful or useful—some, indeed, are both. It is obvious that Britain has since the war made great strides to supplement some deficiencies that she suffered in pre-war times. In the stands where the toys are, or where the scientific instruments are, it is possible to see that she has made a definite attempt to prevent trade from falling back into rivals' hands. In such things as sporting goods, cricket bats, footballs, golf balls, etc., there is, of course, no touching goods of British manufacture, and one could have wished that this unique side of our country's industry had been given more space in this Exhibition. But these omissions are quite insignificant when the amazing magnitude of the enterprise is taken into consideration. The Department of Overseas Trade deserves great credit for thus collating the energies of private firms, and for producing a show which it is not a misnomer to call representative.

FEATURES OF THE FAIR.

(From Our Own Correspondent.)

With only the dimmest recollections of a previous visit to the Crystal Palace in what I might almost call the Dark Ages—so long ago does the period seem which began to draw to a rapid close with the Serajevo assassination—I must confess that I was a little doubtful as to the suitability of that huge erection for the purpose of the London section of this year's British Industries Fair. But if I came a sceptic I went away convinced that the Palace is a most acceptable building as a permanent home for this annual event. It has, however, one serious shortcoming, for though the area of its floor-space is seven times that of the building utilised last year at the Docks, it will evidently require extensive additions in future years to meet the demands likely to be made upon it. So much is evident from the number of firms desiring space in the first year in which something approaching normal conditions obtains. Of the position at the Birmingham and Glasgow sections of the Fair I must leave others to write, only remarking that I understand that the applications from firms have exceeded expectations; but as regards the Crystal Palace I may say unhesitatingly that the serried rows of stands which occupy almost all the available space point very plainly to the fact that were no further extensions practicable it would be a question of another home next year or else restricted entries, and the latter course would naturally be unthinkable.

I was very much struck by the new names which confronted me on the stalls all over the building. Famous houses which for one reason or another have hitherto been unrepresented have now come in to take advantage of the priceless opportunity which the Fair affords of coming into touch with foreign buyers. Their presence is one more tribute to the great success of the Fair in years when the conditions were as adverse as they well could be. But I need not refer to what has happened in previous years. The tale of the constantly increasing progress of the Fair has been told annually in these columns, and I will merely state my view that if last year's results—when orders to a vast amount were booked— are reckoned satisfactory, this year's should be a veritable triumph. It is the first time that foreign buyers have really been able to come in their masses, and they have not failed to take advantage of the opportunity. The Near East, I am glad to say, has its representatives, though not nearly so many as would have been the case in more favourable circumstances, and will be on future occasions. The main reason why more have not come this time is, of course, the adverse position of the exchanges, but this, in the case of Near Eastern countries, is happily not incapable of a fairly speedy remedy, and if only production in these countries progresses apace during the coming year, Near Eastern visitors may be a conspicuous element in 1920.

On the previous occasions on which the fair has been held the exhibits have been restricted to what might be termed the smaller manufactures, and the London section, which is, of course, the largest of the three fairs, is confined to goods similar to those that were shown before. The trades covered include stationery and printing, jewellery and cutlery, fancy goods, musical instruments and furniture, pottery and glass, drugs and druggists' sundries, scientific instruments, photographic and cinematograph apparatus, hard haberdashery, and bookbinding and upholstery. The list, it may be remarked, is noteworthy because of the inclusion of not a few trades which played a very small part in the pre-war commercial life of the country. This year's fair shows the enormous progress made since 1914, stall upon stall being crowded with goods which were before the war the special province of other countries. The British manufacturer has once again demonstrated the fact that he is quite capable of rivalling the specialities of his competitors. That is really the keynote of the fair. I hope the Germans present—it is said there were a few—noted the fact, for it is the products which they were almost alone in producing which are now being equalled and surpassed by British firms. Germany may possibly be a stern competitor in foreign markets in the future, but the enterprise emphasised in the fair leaves no room for doubt that never again will the German in every country have practically a monopoly in certain classes of goods.

And now for the actual exhibits. But before commencing to comment on the fair I must take leave to be excused for any omissions, for the fair is far too vast to be viewed in detail at one visit—it is a three and a-half mile walk round the stalls—and I must perforce confine my

Digitized by Google

observations, therefore, to a few of the sections. At all the fairs the glass and pottery exhibits have been among the most notable sections, and the present occasion is no exception. Indeed, from some points of view I should be inclined to regard this section as one of the most attractive. Taken as a whole, the quality of the exhibits is remarkably good, and some of the glass and pottery reached a very high standard of excellence. A stand particularly deserving of mention is that of the Worcester Royal Porcelain Company, where are displayed some exquisite examples of china and porcelain; in particular, some finely worked vases in blue with a gold ornamentation, and bearing on them pictures of country and other scenes. Messrs. Doulton and Co. have on view an admirable selection of their well-known wares, including decorative art pottery, while another very interesting stand was that of the British Art Pottery Company.

It need scarcely be added that chinaware of all kinds finds a ready market throughout the Near East, and the manufactures of these firms and others, such as Messrs. Bridgwood Sampson and Sons, manufactures of earthenware and china, and the British Anchor Pottery Company should find that field an excellent outlet. Precisely the same thing applies to glassware, the exhibits of which are one of the features of the exhibition, and merit very high praise. Designs of glasses and other table requisites are shown which are certainly equal to anything of the kind that has hitherto been produced. The cut-glass deserves special eulogy. I was particularly struck by some extremely dainty sets of wine glasses and decanters. The deliciously fragile appearance of some of the glasses would be calculated to make the fairer sex tremble with anxiety, but *pour moi* I must own that I eyed some of the sets of champagne glasses with no little envy. Among the exhibitors, special mention may be made of Messrs. R. Wilkes, who show examples of fancy cut-glass of all descriptions, and Messrs. Webb, Thomas and Corbett, whose specialities include table and fancy flint glass, and crystal glass.

For oleographs and similar art productions there is normally an excellent opening in the Constantinople and other Near Eastern markets, and it is satisfactory to notice that a number of firms are exhibiting these things. An interesting stand was that of the Medici Society, where were displayed examples of the Medici prints and of the publications of the society. Other stands of interest in the Printing and Stationery Section—I use that term for short, for the full title of the section is actually much longer—are those of Messrs. Louis Wolff and Co., whose productions reach a high standard of art; the Cambridge University Press, who show a unique collection of their productions of religious works, including Bibles bound in solid ivory, minute Prayer-books, etc.; and Messrs. Eyre and Spottiswoode, who display some notable examples of their productions, including their reproductions of famous pictures.

I was unimpressed with the section containing musical instruments, which struck me as being somewhat unrepresentative. Noteworthy were the stands of Messrs. J. and J. Hopkinson and the British Pianoforte Manufacturing Company, who both show some extremely interesting exhibits. I think these firms and others should find an excellent market in the Near East for pianos and piano-players. The Scientific Instrument Section is of much greater interest than that I have just noted. This year its ranks are swollen by many firms which have hitherto been unrepresented at the Fair. Among the most interesting stands are those of Messrs. W. Watson and Sons, manufacturers of microscopes, microtomes, cameras, etc.; Messrs. Hall Bros., whose productions include theodolites and prismatic compasses; Messrs. Houghtons, Ltd., who show an excellent selection of their cameras; Messrs. E. R. Watts and Son, manufacturers of surveying and other scientific instruments; Messrs. Barr and Stroud, whose exhibits include range-finders, fire control instruments, and cinematographs; and Messrs. Negretti and Zambra, who show a variety of their meteorological instruments, etc.

Two stands which I noticed with particular interest on my way through the various sections were Messrs. Dunlop's, showing their excellent golf balls, and that exhibiting the Goddard patent hammock bed, which, it is emphasised, is particularly useful for tropical countries. If I had to give a prize for the most artistic stand my choice would fall on Messrs. J. C. Eno, whose "Fruit Salt" exhibits are most tastefully displayed amid a miniature vinery of black and white grapes. I lingered looking for quite a time.

POSSIBLE TUNISIAN CROP SHORTAGE.

H.M. Consul-General at Tunis states that a long-continued drought, or, more exactly, a protracted delay in the arrival of the winter rains, has irremediably compromised the prospects of crops in all the southern area of this Regency. And it has now become a matter of great anxiety whether these rains may still come in time to promote the crops of the north, later sown, and which, throughout the region of Mateur (principally), include large grain areas. However, this may issue, it seems already certain that under no conditions will any surplus be available for export in the coming year—especially wheat, corn, barley, and olive oil. It is possible that sacrifices may have to be made, or that such reserves as still exist may have to be drawn upon in order, as far as possible, to meet official demands from France. Limited supplies may also be granted to Italy (for the sustenance of Tripoli) in probable exchange, however, for an equivalent supply of other foodstuffs—potatoes, rice, or whatever might be available.

AMERICAN BID FOR EGYPTIAN COTTON.

Rumours have been current at Milan to the effect that American agents in Milan are trying to buy options in long-staple Egyptian cotton from certain Italians, and enquiries made by H.M. Commercial Counsellor at Rome suggest that they are correct. The American Commercial Attaché in Rome explains this by quoting the steady decline of the Sea Island cotton crop, in consequence of the devastations of the boll weevil.

ROUMANIAN MARKET FOR GOODS.

There is a large market in Roumania for socks, threads, cotton cloth, and shoes. Roumania was not devastated as were Belgium and France, but the Germans and Austrians carried off everything of value during their occupation. The result is that Roumania must purchase manufactured articles immediately, and there is consequently a good market there for United Kingdom goods of all sorts, especially those mentioned, and clothing, stockings, and textiles, particularly cotton cloth.

COMPANY MEETING NOTICES.

NATIONAL BANK OF EGYPT.—Notice is Hereby Given that an ORDINARY GENERAL MEETING of the Shareholders of the National Bank of Egypt will be held on Monday, the 29th March, 1920, at 4 p.m., at the Head Office of the Bank in Cairo for the purpose of:—Receiving the Directors' Report; Receiving the Auditors' Report; Submitting the Accounts for the year ended 31st December, 1919; Declaring a Dividend; Re-electing Directors; Electing Auditors for the year 1920 and fixing their remuneration.

NOTICE IS HEREBY GIVEN that an EXTRAORDINARY GENERAL MEETING of the Shareholders of the National Bank of Egypt will be HELD on Monday, the 29th March, 1920, at 4 p.m., at the Head Office of the Bank in CAIRO for the purpose of ALTERATION OF THE STATUTES as follows:—

Article 23.—For the present £150 to two Government Commissioners to substitute £1,000, to be paid by the Bank yearly to the Ministry of Finance for the Commissioners' service.

Article 25.—Last paragraph.—£600 to be increased to £1,000.

Article 50.—Last line.—To substitute the words "Pourra être" for the word "est."

All Shareholders holding a minimum of 20 shares have the right to take part in the General Meetings, provided the shares be deposited under the following conditions at one of the following places, where cards of admission or proxy forms will be delivered:—

In Egypt, at the latest, the 23rd March, 1920: At the Head Office, Cairo; at the Branch at Alexandria; at the Agencies of the Bank at Assiut, Assouan, Benha Beni-Suef, Chebin-el-Kom, Damanhour, Fayoum, Keneh, Luxor, Mansurah, Minieh, Port Said, Rod-el-Farag (Cairo), Sohag, Tantah, Zagazig, and Mousky (Cairo); at the Office of the Anglo-Egyptian Bank; Bank of Athens; Banque Belge pour l'Etranger; Imperial Ottoman Bank; Banque d'Orient; Banco di Roma; Cassa di Sconto e di Risparmio; Comptoir National d'Escompte de Paris; Credit Lyonnais.

In the Soudan, at the latest, the 17th March, 1920: At the Agencies of the National Bank of Egypt at Khartoum, Port Soudan, and Suakim.

In Europe, at the latest, the 10th March, 1920: In Paris, at the Offices of the Société Marseillaise; in Italy, at the Offices of the Banca Commerciale Italiana; in London, at the Agency of the National Bank of Egypt, 6-7, King William Street, E.C.4.

F. T. ROWLATT, Governor.

EASTERN MARKETS FOR MOTORS.

I.—The General Trade Outlook.

In the dark days of the early part of the war, I remember one of our Generals on active service in Egypt saying: "I do not know how long the war will last, but the peace is going to be worse than the war." Whether this lugubrious forecast was merely inherent pessimism or a thought-out deduction hardly matters, for it clearly expressed with picturesque exaggeration a truth we were naturally all too absorbed to think about. From the present standpoint, however, it is easy to see how inevitable were the sufferings, the difficulties and dangers of the period of transition from war to peace *régime*. There could never at any moment have been a doubt as to the results of a cessation for five years (so far as the bulk of the working world is concerned) of the work of producing the ordinary necessities of life. Never for a moment could there have been any doubt whatever that this was going to leave the entire world desperately short of most of the real necessaries of life, and that in consequence the scramble to get these necessities, the competition to secure a share of what there is, was certain to put up the price of the same not merely in proportion to the scarcity, but much higher.

Equally obvious was it that the only conceivable remedy would be for the whole world to set to work on the termination of hostilities to produce all those necessaries with the utmost speed—to breed cattle, to grow corn, to dig minerals, and to make all the useful industries of the world hum with activity, until there was enough to go round and to spare. Could there ever have been a doubt that this would automatically bring down the prices and relieve distress? Can there now be any doubt that this is the only possible way to prevent the general increase of wages becoming a mere useless illusion to the recipients? The world has been incredibly slow to realise this as the one supreme necessity of the moment. Indeed, one might, until recently, have taken up a newspaper in any part of the world and hardly have gathered that such a necessity existed. Any and every issue was discussed—politics, class questions, international affairs, war settlement, demobilisation, anything but the great paramount economic necessity for the immediate production of food, clothes, and everything the world needs. As in the Press, so in their actions did the nations ignore the course which offered the obvious main road to human happiness and prosperity, to complete recovery from the wreck of the last five years.

This evil phase is also passing, and the race has begun. Industries are beginning to hum—if not satisfactorily, still they have begun—and if (that eternal "if") we can only get all to pull together, we shall hum still better. The race is to the strong, but it is also to the first starter, if the others won't start. The flag has fallen, and the start was disappointingly slow.

So much for our circumstances and the world we find ourselves in—and it is an inestimable advantage to us that that world is crying aloud for all the produce we can turn out. Yes, and as transport in general and motor vehicles in particular is the subject we are dealing with here, we may rest happy in the knowledge that there will be purchasers for all we can produce for years—unless we go out of our way to avoid them.

The Motor Show.

It was impossible to visit Olympia this year without realising that there are plenty of ideas, plenty of originality, plenty of workers on the road of progress. The war has not left us sterile; on the contrary, it has given us a great deal, and much of the progress of the immediate future will owe its origin to aero work during the war, just as aero work owed much to motor experience in the past. But perhaps the leading impression conveyed by a visit to that wonderful show is the change that is coming over the motor world. Heretofore, so far as passenger vehicles are concerned, motoring has been rather the pastime of the rich and the instrument of the prosperous. They have led the van in this item of human progress, as in so many other ways. They had the means, the pleasure and advantages of motoring were obvious, and they have led the industry through the experimental stage and have brought it to a point where the luxury turns into a necessity. The professional and business man found that their range of usefulness was vastly increased by rapid and easy transit, and the recent military operations have been facilitated a hundredfold by the internal combustion engine. The competition of war has demanded the utmost that the industry could give, and what a stride in progress has resulted! Now motoring is no longer a luxury or a mere instrument of successful business; it is becoming the necessity of the smaller man, and he is legion.

A whole generation of young people of both sexes has become mechanically minded, and even more or less expert in motor transport and the use of the motor-car and lorry. It is no longer a rather despised branch of knowledge; it (mechanics) is one of the best reputed and most interesting branches of science, a necessary adjunct of a normal education. In America, it is said, one in twenty of the population owns a car. In England perhaps it is about 1 in 70. Be that as it may, there can be little doubt that the figure for Europe will in time become something like the one in twenty of America.

Let us say that there are half-a-million or more cars in England now; there can be little doubt there will be three times as many a few years hence. And who will be the owners of the additional million cars? Beyond a doubt they will be almost entirely those who have been unable to afford a car heretofore. Think of it—a million cars, cheap light cars, to be demanded from the motor industry in the next few years. It is almost impossible to over-estimate what that will mean to the industrial activity of the country both in regard to the manufacture of the cars themselves, as well as to the reaction on other industries. England should fairly hum with activity—and why not? Why should not many industries have a similar future? Why should not increased productivity and efficiency restore us (every class, that is, from the lowest to the highest, especially the former) to such a degree of prosperity as to throw the burden of this unhappy period to the winds, just as the tragedies of individual life are mellowed by time, and, if not forgotten, well buried in the past? Beyond a doubt it will be our own fault, our inability to see the obvious in the future, our inability to co-operate, if we do not rise again to prosperity, and a prosperity outshadowing the past.

I should have liked to have seen Olympia far fuller than it was of the car of the future—the light, cheap car. Those light cars that were there represent the pioneers, who will undoubtedly reap their well-earned reward. They were the obvious centres of interest throughout the week, and might have booked ten times the number of orders they did if the cars could have been produced. I should have liked to have seen a light car Olympia show from which the car-de-luxe—the £700 and over—was rigorously ex-

STANDARD COMMERCIAL TRADING CORPORATION

(Incorporated in the United States of America),

4, London Wall Buildings,
LONDON, E.C.2.

GROWERS AND PURVEYORS OF LEAF TOBACCOS OF ALL TYPES FOR CIGARETTES AND PIPE.

The above Corporation can supply large quantities of Virginian, Carolina, and Kentucky Tobaccos; and Oriental (Turkish) Leaf direct from its own buying organisations on the markets abroad. Considerable quantities are now available in U.K. and Continental Ports.

EXPORTERS AND IMPORTERS OF RAW AND SEMI-RAW PRODUCTS FROM AND TO THE NEAR EAST.

The above Corporation is prepared to consider and handle propositions for any products from the Near East, and represent firms.

cluded; that will come as soon as our manufacturers and designers enter more thoroughly into the spirit of the future—but there is no time to lose. We are an individualistic nation, and are tackling this new problem of light cars (for in the present stage it is practically a new problem) from all sorts of aspects. This is, of course, an immense advantage, opening up as it does a wider range; but when sufficient experience has been obtained we shall eliminate all but the most promising lines—if we are wise, that is to say, for individualism resists being brought into line. Then mass production on a large scale, after the brilliant example of Henry Ford, is earnestly to be hoped for both in the interests of the industry as well as of the nation.

In the next article we will endeavour to review the leading requirements of over-sea countries and to investigate the type of design that will meet the particular service likely to be required.

MISCELLANEOUS TOPICS.

Handling Grain.

A large installation of electric power for the driving of grain-handling equipment has recently been completed on the Mersey side. It comprises a telescopic elevator fixed outside the warehouse and extending over the water for convenience in handling the barges, a couple of large capacity elevators inside the warehouse, and two automatic weighing machines. There are also two loading-out shoots—one from the warehouse and the other from the head of the elevator.

Every section of the machinery is electrically operated, with the result that a great deal of time is saved in handling the grain. Not only are the elevator buckets driven by suitably-sized motors, but the raising and lowering gear for the telescopic elevator is also operated electrically. From a description it appears that the elevator is fitted with a telescopic arrangement whereby the delivery buckets can be raised or lowered in accordance with the depth of the barge or vessel to be unloaded. Unloading can thus be carried out at any stage of the tide, and the whole elevator is so supported that further limits of travel up and down are obtainable by the movement of an ingeniously designed supporting arm of the lattice girder type. At its inner end this is pivoted on the wall of the building and at its outer extremity at the elevator head. In its normal state this elevator is 45 ft. in length, but can be extended to any additional length required up to 77 ft. by means of the electric winch provided.

Three motors are provided for the operation of the telescopic elevator. One, of the type usually employed in connection with electric cranes, is of 22 horse-power capacity, and is carried on a frame at the elevator head, where it drives the chain of buckets. A second motor of the same type but of 13 horse-power, is fixed at the warehouse end of the movable girder arm which supports the elevator and drives a small winch which serves to raise or lower the telescopic leg of the elevator. The third motor, which is of 10 horse-power and is also of the crane type, drives a winch, through suitably stepped gearing, for raising or lowering the lattice girder arm: and in order that an even load on the motor may be ensured, a counter-weight system is employed which adjusts the balance weights according to the position in which the telescopic elevator may have to be fixed to suit the depth of the grain-carrying vessel.

Steam Measurement.

In connection with the efficient operation of industrial plants, it is evident that steam measuring has become of primary inportance. The same holds good in equal measure of those industrial operations in which steam is sold, as in both of these it is necessary that the user or buyer should know that he is paying for perfectly dry steam and not for moisture derived from condensation. In just the same way it may be desirable to know the output of boilers in order to measure their efficiency. Water meters, in the latter case, are not conclusive, as, although they register the amount of water passing into the boiler, it does not necessarily follow that all that water is converted into useful steam. It is also frequently necessary that the amount of steam supplied to gas producers or used in heating vats for industrial work should be accurately measured and the instruments for this purpose should not only be correctly designed, but should be made with particular accuracy.

Two principles of operation are available, according to an authority writing recently in *The Times*. There may be a slight constriction on the pipe-line, resulting in a pressure difference on the two sides, varying with the amount of steam passed; or the velocity may be measured by a kind of a Pitot tube by difference of pressure taking effect at an instrument connected by tubes. By suitable mechanism, the instrument may simply show the rate of flow or record the rate on a graph or chart divided into time squares and with a time-recording device. It may merely give the total quantities of steam passing, or, in cases where considered desirable, the instrument can carry out all these various functions. With the constricted pipe the quantity of steam passing per unit time is taken as being proportional to the square root of the pressure difference, if the pressure and superheat are constant.

The Pitot tube device in its simplest form consists of two tubes inserted in the same steam-pipe, one with one end flush with the inside, and the other with its end bent to face the flow of steam. The dynamic effect of velocity in increasing pressure is readily evident, the difference of pressure being in this form the means of gauging flow. The Pitot tube priciple is open to the objection that there is no convenient mode of adjustment for low velocities, and the readings then become somewhat unreliable. It is possible, however, with the restricted tube method to make use of certain devices which will correct or assist in correcting such inaccuracies. But, under commercial conditions, accuracy to within 2 per cent. should be easily forthcoming with any fairly efficient type of steam-meter.

MOTOR TRANSPORT IN TURKEY.

The Constantinople Market.

An interesting report has just been published from the American Consul-General at Constantinople, Mr. G. Bie Ravndal, on the market for motors in Turkey.

It was only in 1912, he points out, that an impetus was given to motor traction, and in July, 1914, the number of automobiles circulating in Constantinople was not less than 400. The outbreak of the war and the requisition of cars which ensued, paralysed this trade, and private cars disappeared completely. During the war approximately 1,000 automobiles were imported by Germans and Austrians. Part of these were shipped back after the armistice, a few were scrapped, quite a number were requisitioned by the Allied military authorities, and some were

sold at low prices to private parties. The number of such cars is not known.

The progress realised from 1912 to 1914 in the matter of motor cars promises a heavy increase in their importation in the future. Success is assured by the insufficiency of railroad communications throughout the country, and heavy loss in beasts of burden during the war. European manufacturers are perfectly aware of this state of things; they consider the Near East as an important market for their goods. Besides the importation of cars and stocks of equipment, it is of great importance to establish repair shops. The work has to be organised from the very beginning, as the three wars waged by Turkey during the last 10 years have not only prevented progress, but destroyed previously existing order and organisation. The number of private cars in Constantinople to-day does not exceed 50, but this number is certain to increase considerably in the near future, when things political become more settled. Besides expensive touring cars, cheap small cars also should be imported. Wealthy families are not very numerous in this country, and cheap cars would sell more readily and in greater number.

Motor trucks were introduced into this country during the war, and in view of their proved great utility, the demand for them is at present widespread and urgent. A few Italian (Fiat) motor trucks have been imported since the armistice. These were immediately sold at prices varying from $2,640 to $4,800, according to size. One firm intends to establish agencies all over Asia Minor, and push their goods in the interior. French and British firms are also active. The number of motor trucks in Constantinople belonging to private parties does not exceed 12. These are all Benz and Mercedes cars. Those sold to private individuals and held in secret places are not included.

Motor cycles are attracting attention in Turkey because of their commercial utility, their use by the Allied military authorities and by the A.C.R.N.E. having demonstrated that they can be used to advantage for messenger service and for the transport of small parcels. The Ottoman Post Office recently purchased two motor cycles for mail distribution, and the system will probably be adopted by other Government offices and by business houses as well, there being no doubt that they will be found of great value in solving a difficult labour problem. The number of privately owned motor cycles in this city does not exceed five, but they are growing in popularity, notably the type with the side-car attachment, which is recognised as a cheap and durable substitute for the automobile. The question of roads and road houses, particularly, offers an obstacle to a widespread introduction of these vehicles for sporting purposes; but much has been accomplished by the Allied military authorities in the repair of roads, and, undoubtedly, extensive road construction will sooner or later be undertaken. Motor cycles would sell readily in Constantinople to-day, and their sale will increase as soon as the political status of Turkey is settled. The current prices vary from $380 to $630

Smyrna District.

The position in the Smyrna district is reviewed by the American Consul-General at Smyrna, Mr. George Horton, in a recent report. At the present time, he says, probably a dozen or 15 touring cars are in use by civilians. This office has secured from the Greek military authorities a schedule showing the numbers and kinds of motor vehicles used by them in Asia Minor. The list includes 39 small ambulances, 17 small 1½-ton trucks, 30 trucks of 3-tons capacity, and 33 touring cars. Twenty-nine of the touring cars are of American makes; most of the other vehicles scheduled are of British manufacture. The British and French military missions, most of the foreign consuls, and the American Relief Committee for the Near East employ about 20 cars, half of which are American models. The Italian military mission uses the Fiat model exclusively. The only motor cycles in use in Smyrna are some half-dozen belonging to the Greek Army and the Allied Military Missions. Roads suitable for motor use are as yet a rarity in Asia Minor, though during the war the Turkish Government, under German direction, somewhat improved those radiating from Smyrna. There were previously two or three good roads connecting the city and its widely flung suburbs, and these have been improved. The streets of Smyrna are very poorly paved, if at all, and have not been repaired in many years. The constant flow of heavy traffic, both during and since the war, has put them in an extremely bad shape for motors of any kind.

The Aleppo Market.

Before the war there were but half a dozen automobiles and lorries in the Aleppo district, says the American Consul at Aleppo, Mr. J. B. Jackson, in a recent report, but there are now several hundred, all of which have been and still are in the use of the military forces. For the greater part they consist of lorries of 2 to 3 tons capacity, light trucks, and passenger cars—the latter mostly American, with a sprinkling of German cars taken by the British Army upon its occupation of Syria. Prior to 1914 this district and adjacent territory contained some two millions of people, but the population has probably decreased, for obvious reasons. There must be something like one and three-quarter millions still, among whom a great many are financially able to support the expense of an automobile. There is also a tendency toward self-reliance that did not previously exist, and which will eventually induce many to act as their own chauffeurs, whereas formerly it was considered belittling for a person of means to occupy himself with any kind of manual labour similar to that of running his own car. On the other hand, there are many capable chauffeurs and mechanicians among the troops, from whom local inhabitants have learned driving and engineering to the extent that this void will rapidly disappear. Already a number of the inhabitants are contemplating the purchase of passenger cars and roadsters, and several have the idea of bringing in trucks for local freight service.

There being no railway connections between Aleppo, Killis, Aintab, Marash, Ourfa, Antioch, and Alexandretta, there is soon bound to be a demand for motor freight and passenger service. On previous occasions this matter was studied by Aleppo business men, but the difficulties seemed insurmountable and the question was dropped. Conditions have changed since then, and it is likely that the affair will have more serious attention in the future. The only means of passenger conveyance being by horse and carriage, and that of freight transportation by camel and on mule and horseback, it is evident that more modern methods must soon supersede. The entire country is essentially agricultural, which will produce another strong demand for motor power in connection with ploughing, threshing, etc.

The more moderate-priced cars will be in demand, as the public highways and city streets are not in condition to lend themselves to heavy vehicles. There are no Governmental restrictions at present against the operation of such conveyances, and the procuring of city licences is purely formal.

OPIUM MARKET.

Messrs. Barker Brothers, Smyrna, report as follows for the week ended February 6:—The sales this week on our market amount to 36 cases at prices ranging from 16s. to 19s. per lb. c.i.f. as to quality. The exchange has dropped to piasters 405 per pound sterling for cheque, but dollars are still maintained at 0.87 centimes per one Turkish paper pound. The arrivals are now 1,450 cases against 165 at same date last year.

NEAR EAST MARKETS.

TURKISH FRUIT REPORT.

Sultanas.

Messrs. C. J. Giraud and Co., of Smyrna, report as follows under date February 1:—

In our preceding report of January 1 we estimated stocks remaining in Smyrna and in the country at about 4,500 tons. An active demand has prevailed throughout the month against orders received from the United States, Canada and Germany. To the United States and Canada about 1,200 tons have so far been shipped, and there are still outstanding orders which, for want of supplies and advancing prices, have not been executed. American buyers have followed the market, and, starting purchases at about 105s. c. and f. New York for good average quality, have continued buying up to 115s. c. and f. There is plenty of tonnage offering for the United States, and freight has varied from 5 to 10 dollars per ton gross, which is considerably under the prevailing rates for U.K. and Continental ports.

The Continent has drawn some fruit, and some speculative buying has also taken place. Total sales for the month reach up to about 1,700 tons. Stock on our market has been reduced to about 500 tons, mainly very inferior qualities, and supplies from the country have continued moderate. It is now estimated that total stocks remaining in Smyrna, Vourla, and the interior included, do not exceed 2,500/3,000 tons. A proportion of this fruit, however, is of very low grade and in deteriorated condition, suitable only for distillery purposes. It is doubtful whether much over 2,000 tons will be available for export until the advent of the new season. Fine qualities are exhausted.

Market closes strong with advancing tendency.

Figs.

No interest attaches to this fruit. Arrivals from the interior have ceased, and the small stock on our market, consisting mainly of inferior quality, will slowly be absorbed. Apart from a speculative purchase of some 150 tons, very little business has been recorded during the month.

According to reports received from the U.K., the figs bought by the Food Ministry have reached too late for timely distribution to the grocery trade, and considerable dissatisfaction has resulted both as regards delay and qualities secured. The Food Ministry does not appear to have taken into proper consideration the requirements of the trade.

Previous to the war, imports of our figs into the United Kingdom averaged the following quantities and description: 2,500 tons in layer and locoum packing, 4,000 tons Genuine Naturals, 500 tons G.A.Q. Naturals, 1,000 tons F.A.Q. Naturals. Quantities varied to some extent according to the size of the crop. Shipments were rushed forward as early as possible in the season to assure distribution for the Christmas demand. Imports of G.A.Q. and F.A.Q. Naturals were mainly utilised for manufacturing purposes.

The Food Ministry, if impartial criticism be permitted, has not shown the same discrimination in its purchases of figs as it did in the case of sultanas. It started buying much too late in the season, and limited its purchases to G.A.Q. grades, of which it secured about 4,000 tons, a quantity which, in view of the grading, it was to be feared might prove in excess of trade requirements. Had purchases been started a month earlier and a suitable proportion of Genuine Naturals been bought at about 70s. to 75s. c.i.f., and a smaller quantity of G.A.Q. at the Ministry's limit of 63s. c.i.f., supplies would have been available in time for distribution for the Christmas trade, and, both in regard to qualities and date of distribution, would have been more in line with the requirements of the consumer.

General Outlook.

Agricultural progress is so closely connected with the political situation in the province that a reference to the developments of the past twelve months can hardly be avoided. A year ago, following on the signature of the Armistice and in the hope that a speedy peace would result, a marked revival of confidence set in. Security increased in the country and agricultural operations on an extended scale were undertaken in all districts. Farmers spared no effort to increase cultivation, and with the high wage offered labour was steadily being attracted to this province. By the month of May agriculture had widely progressed, and prospects pointed to a marked improvement in the returns as compared with the previous year or two. The events of May, unfortunately, caused a serious set-back. Part of the population of the rich valleys of the Hermus and Meander was scattered, many farms were abandoned, and communications with part of the province have been interrupted since that date. Viewed as a whole to-day, the agricultural outlook cannot be considered satisfactory. It is in the opening months of the year that vines and fig orchards require proper tending; but with the insecurity existing in most districts, the scarcity of labour, etc., serious apprehensions are entertained that not only the fruit crops, but cereal and other products of the province will suffer by the existing state. This continued uncertainty and the delay in arriving at a peace with Turkey are checking all enterprise and retarding a return to more normal conditions throughout the country.

LONDON PRODUCE REPORT.

Coffee.—The market has been very steady during the week, with a slight upward tendency in evidence, as is only to be expected in view of the prevailing circumstances. Costa Rica has been done at from 162s. to 168s., while Mocha has come to business at from 180s. to 185s. The futures market is very firm, with March at 127s., May at 125s. 9d., July at 125s. 3d., September at 122s., and December at 119s. 6d. Messrs. Reynolds and Gibson report that the latest cable advices from America state that the situation may be acute before the next Brazilian crop is available, that interior stocks require replacing, and a stimulating demand is expected from these centres. There is as well the fact, they point out, that Europe has not been able to obtain supplies that she badly needed, owing to financial difficulties. This demand will come gradually and receive impetus as the year progresses; already some progress has been reported in other markets, where financial arrangements have been concluded for the supply of raw materials.

Sugar.—There is little change to report. Free sugar has continued in good demand for manufacturing purposes, while there has been a brisk market in refined at controlled rates. Reports from producing centres are good.

Oilseeds.—Linseed is steady, with La Plata at 48s. 3d. spot, and 46s. 6d. February-March. Rapeseed has been a firm spot, with Toria March-May Hull at 55s., after being up to 56s. in consequence of the strong demand mainly from the Continent. Cottonseed has been quiet, and is quoted 29s. for Egyptian and 22s. 6d. Bombay. Since the commencement of the year the imports of linseed have totalled 540,000 cwts.

Oilcakes, etc.—Linseed cake has been done at 495s., Soya bean cake at 500s., and cottonseed meal cake at 480s. Other transactions have included cottonseed cake at 340s., ground-nut cake at 380s., coconut cake at 320s., rapeseed cake at 360s., and palm kernel cake at 250s. In regard to a number of varieties, prices in the provinces have differed appreciably from those current in London. Oils have generally been firm, with linseed at 117s. 6d. spot and 113s. 9d. May-August. Crude Egyptian cotton has been a strong spot at 120s., while Bombay has been 112s. Turpentine is harder at 202s. There is no change to record as regards other oils.

EGYPTIAN CROPS.

The bulletin of the Egyptian Ministry of Agriculture gives the following particulars of crop conditions in January:—

Wheat and Barley.—The weather was favourable. Heavy rains fell towards the middle of the month in the northern Delta and appear to have had a beneficial effect, especially on the early-sown fields. The crop is generally in a very good state of growth and is free from pests, with the exception of minor attacks of rust and cut-worm in certain provinces. In advanced fields the plants are already in ear. The quantities of sodium nitrate applied, although below the demand, have been nearly four times as much as last year.

Beans.—Weather was favourable. The early crop is healthy and in a good state of growth, while in the late-sown fields the plants appear stunted. Flowering is general, and pods have been formed in the early-sown fields. Slight attacks of broom rape have been reported from various localities.

Helba.—Weather has been favourable. The crop is in flower, and pods have been formed in early-sown fields. Cultivators continue to cut part of the crop to be sold green for local consumption.

Onions.—Transplanting was over by the beginning of the month. Weeding is in progress. The crop is growing satisfactorily, although in some parts it has been affected by cold.

Lentils.—The crop is in flower, and pods are formed in early-sown fields.

Sugar-cane.—The crop is in good condition, and has suffered from pest attacks very much less than usual. In the province of Minya the bulk of the crop has already been shipped to the factories, and elsewhere cutting for this purpose is proceeding. The yield in Girga, Qena, and Aswân is reported to be particularly good.

Bersim.—The crop has maintained the improvement reported last month. The first cutting is nearly over, while the second has begun in early fields, and the third in the canalised areas of Upper Egypt. The greater part of the catch crop has already been ploughed up to give place to cotton.

SHIPPING INTELLIGENCE.

Forthcoming Sailings.

The Cunard s.s. Corby, for Gibraltar, Malta, Patras, Piræus, Smyrna, and Constantinople, will close for cargo at Manchester on the 13th and at Liverpool on March 20.

The Moss s.s. Siptah, for Syria, Smyrna, Constantinople, and Beyrout direct, will leave Liverpool on March 20.

The Papayanni (Ellerman Lines, Ltd.), s.s. Malatian, for Malta and Alexandria (taking cargo for Beyrout, Alexandretta, Jaffa, Cyprus, etc.), will leave Liverpool on March 6.

The Papayanni (Ellerman Lines, Ltd.) s.s. Belgravian, for Algiers, Smyrna, and Constantinople, will leave Liverpool on March 13.

The Anchor Line s.s. Varzin, for Bombay, will close for cargo at Liverpool on March 4.

The Anchor line s.s. Mahratta, for Calcutta direct, will close for cargo at Birkenhead on March 13.

The Power Line s.s. Petworth, for Rabat, Larache, Tangier, Casablanca, Mazagan, Saffi, and Mogador, will leave London early in March.

Notes.

There was launched, on February 19, at Hebburn-on-Tyne, by Messrs. R. and W. Hawthorn Leslie and Co., Ltd., the steel-screw steamer Sirsa, on account of the British India Steam Navigation Co., Ltd., London. This vessel has a carrying capacity of about 8,000 tons on a draft of 25 ft. 3¾ in. Accommodation is arranged for a limited number of first-class passengers, and captain and officers, the crew being berthed in the poop aft. The ship is well equipped with derricks and 13 steam winches for rapid handling of cargo. She has two generating sets and, in addition, an emergency set for dealing with the electric power pump, and wireless. The triple expansion engines, having cylinders 27 in., 47 in., 73 in., by 48 in. stroke, with three single-ended boilers having a working pressure of 180 lbs., are being built by Messrs. Hawthorn Leslie and Co., Ltd.

The s.s. Kidderpore, which has just been handed over by the builders, Messrs. Swan, Hunter, and Wigham Richardson, Ltd., to the owners, the Peninsular and Oriental Steam Navigation Co., Ltd., was intended to be a "standard" ship for the Shipping Controller, but was subsequently acquired by the P. and O. Co. and altered for their Eastern trade. The leading dimensions of the Kidderpore are 400 ft. in length between perpendiculars, 52 ft. in width, with a moulded depth of 51 ft. She has been built to the survey of Lloyd's Register, and is to carry 8,250 tons d.w. on a draught of 25 ft. 3 ins. The triple-expansion engines are of the direct-acting reciprocating type, working a single propeller, and the boilers have been built at the Neptune Engine Works of Messrs. Swan, Hunter, and Wigham Richardson, at Walker-on-Tyne. On the bridge deck amidships there are cabins for the officers, engineers, and a number of cadets. The dining-room is planned to seat eighteen persons, and adjoining it are staterooms and the chief officer's cabin. On leaving the River Tyne the ship went to Middlesbrough to load cargo, and during this preliminary trip the Peninsular and Oriental S.N. Co. were represented by Mr. Deane and Mr. R. T. Clarke.

The receipts of the Egyptian Markets, Ltd., for the week ended February 4 were:—Cattle markets, £1,726; general markets, £683; total, £2,409.

APPOINTMENTS WANTED.

THE Ladies' League (under Royal Patronage), 118, New Bond Street, successfully recommends Lady Secretaries, Chaperons, Housekeepers, Companions, Secretaries, Governesses, Nursery Governesses, Nurse Companions, Lady Nurses, etc.

GOVERNESS Companion, desires post abroad. All English subjects, fluent French, El. Italian & German, Music, Drill. £100. M. M. The Ladies' League, 118, New Bond Street, London, W.

A YOUNG LADY, with knowledge of literature, history, art, and occultism, good tempered, well dressed, desires Secretarial Work abroad for few months from end of February in return for expenses. Address Box 151, "THE NEAR EAST," 1, Devonshire Square, London, E.C.2.

LIEUT.-Q.M., retiring end of month, age 45, 26 years Regular Army, continuous service, five years B.E.F., requires Position of Trust as Manager, Secretary, Confidential Agent, or Courier; working knowledge of several European languages; travelled all over the globe and willing to proceed on any mission requiring delicacy and tact. Box 150, "THE NEAR EAST," 1, Devonshire Square, London, E.C.2.

INDIA.—Young Lady (Scotch) would engage with lady going India as Maid or Children's Nurse. Excellent references.—Box 15D, THE NEAR EAST, 1, Devonshire Square, London, E.C.2.

LANCASHIRE COTTON.

(FROM OUR OWN CORRESPONDENT.)

MANCHESTER, Monday.

The market throughout the past week has presented a strong appearance. On the whole, however, business has been rather quieter. The recent upward movement in prices has checked operations in some quarters. The conditions prevailing result in some merchants being compelled to restrict trading. Egyptian cotton, after advancing to fresh high levels, has given way somewhat, but it is understood that certain weak speculators have now liquidated contracts and the tone is steadier. Business in the article has been very difficult to arrange. In Egyptian yards trade has been of small dimensions. Numerous spinners do not want to sell, and buyers realise the danger of purchasing freely at current rates. Producers have plenty of work to go on with, but there is some irregularity in order lists. In cloth for the Near Eastern outlets a fair miscellaneous trade has been put through, but most shippers have been less disposed to place large orders for distant delivery. Goods are said to be in excessive supply in Constantinople, and shipments are being stopped pending better clearances. The conditions in Cairo are said to be encouraging. For India less business has been about than a week ago. Shippers have not been in the mood to anticipate future wants, and most of the offers from the other side have been too low. White shirtings and fancies have been sold in moderate quantities for China and some business has been about for Java. The offtake for South America has been healthy, especially in printed and dyed descriptions. A steady demand has been met with in home trade circles. There is a good deal of irregularity in the engagements of manufacturers, and now and again delivery terms are offered by makers which were scarcely expected. American yarns for home use have been stiff at quotations, but trading has not been on free lines.

BRITISH COTTON-SEED PRODUCTS, LTD

The issue of 150,000 shares by the British Cotton-Seed Products, Limited, was very greatly oversubscribed. The lists were opened on February 19, and the issue was oversubscribed by noon on the following day. The lists were closed that evening, but applications received on the morning of February 21 were entertained.

The prospectus of this company was advertised in last week's issue of THE NEAR EAST.

A statement recently appeared in the Press to the effect that the bridge over the Save, between the Semlin and Belgrade, had been condemned as unsafe, and was accordingly closed to traffic. It has been ascertained that this statement gained prevalency owing to the temporary closing of the bridge to traffic for a few days in January because of the abnormally high water of the river. When the river subsided, traffic was resumed, and the information at present available is to the effect that it is still open for communication across the Save.

A meeting of prominent business men connected with the Ligne Variose was held recently in France with a view to the establishment of a line of steamers between Toulon and Algeria. An exchange of views took place, and the view was taken that private initiative should be invited to take the project up. Consequently steps are to be taken immediately (says a Paris contemporary) to obtain from the Minister of Shipping the necessary sanction.

BANQUE D'EXPORTATION PRIV. DU ROYAUME DE SERBIE.

(Royal priv. Serbian Bank for Exportation.)

BELGRADE, SERBIA.

Capital, Paid-up, 5,000,000 Dinars

Reserve - - 1,200,000 Dinars

SUPPLIES AND PRICES IN TURKEY.

The following extracts are taken from recent reports received by the Imperial Ottoman Bank:—

Stamboul, January 24.

Produce.

Sugar.—The market presents a somewhat weaker aspect, after a prolonged period of high prices. No change is reported in countries of production. The price of sugar in the Customs is £T56 100 kilos.

Coffee.—A new rise in Brazil is reflected in the prices here, which are Ps.80-88 in transit, Ps.95-105 in Customs. 1,500 bags of Brazil have arrived.

Exports.

The rise in prices continues, despite the improvement in the exchange, influenced by the demand, as well as by the shortage of various commodities.

Opium.—Sales of the week: 45 cases druggist at Ps.1030-1050 the oke. Fine qualities are quoted at £T11 the oke. The market is firm, and the disposable produce is small.

Mohair.—The arrivals of the week have increased to 200 bales, and the sales to 300. Prices are: Extra, Ps.120-125 the oke; No. 1, Ps. 110-115 the oke.

Wool.—Prices have risen from Ps. 60 to Ps.66 the oke. The demand is strong, but the produce is lacking.

Silk.—A new rise from £T22½ to £T25 the kilo; only four bales have been done at that price. Syrian is quoted nominally at £T15 the kilo.

The market remains quiet for the reasons previously indicated, namely, the dead season as regards Anatolia, and the complete cessation of transactions with Russia. Prices are maintained, despite the stagnation, especially as regards white goods, because of the high level in places of production. There is a demand for gold and a certain uneasiness, but nothing in the nature of a crisis. Even the small merchants are taking steps not to diminish their stocks, anticipating high prices at which they will hope to be able to do business later.

A number of Roumanian merchants who arrived here a week ago to obtain supplies have left without making any purchases, the marked depreciation in the leu having put a stop to business.

NEW COMPANIES.

Oilfields of Egypt.

The Oilfields of Egypt, Ltd., was registered on February 18 with a capital of £750,000 in £1 shares. Objects: To acquire and turn to account oil-bearing lands and mines, minerals and other properties in Egypt and elsewhere. The subscribers (each with one share) are:—C. T. Twort, 87, Holmdene Avenue, Herne Hill, S.E.; B. J. Weaver, 16, Northumberland Road, Linford, near Stanford-le-Hope; and five other clerks. Minimum cash subscription, seven shares. The first directors are not named. Registered office: 5, Bishopsgate, E.C.

British Darjeeling Tea.

The British Darjeeling Tea Company, Ltd., was registered on February 16 with a capital of £80,000 in £1 shares. Objects: To carry on the business of tea planters and merchants, etc., and to enter into an agreement with the British Darjeeling Tea Company, Limited (in liquidation) and Lloyd and Company, Limited, liquidators thereof. The first directors are:—E. J. Wehle, Belgrave House, Preston Road, Brighton; G. G. Gordon, The Elms, 60, Queen's Road, Richmond; S. Thompson, 3, East India Avenue, E.C., solicitor; C. Bold, Selborne, Gaylon Road, Harrow-on-the-Hill. Solicitors: Thompsons, Quarrell and Jones, 3, East India Avenue, E.C.

COMPANY RESULTS.

Madras Railway Annuities.—Registration books will be closed from March 4 to 31, inclusive.

Southern Punjab Railway.—The registers of the ordinary stock will be closed from February 26 to March 10, inclusive.

The directors of the North Anantapur Gold Mines have declared a dividend at the rate of 20 per cent. (less tax at 6s. in the £) on the preference shares for the year ending June 30, 1920, payable March 11 next to holders on the books on February 19.

The directors of the Nundydroog Company have declared (subject to audit) a balance dividend for the year 1919 of 1s. per share, less tax at 6s. in £, payable March 16, to holders registered February 18. This with the interim dividend paid in September last will make a total distribution for the year of 1s. 6d. per 10s. share, less tax.

MOROCCAN TRADE WITH NANTES.

The port of Nantes is well placed for trade with Morocco, and as a result of recent conferences between the Chamber of Commerce at Nantes and various commercial interests in Morocco a new company, called La Loire Maroc, has been founded. The object of this company is to organise the import and export business on a large scale. It will also undertake commission agencies, accept consignments of goods, and see to their forwarding. The Loire Maroc will establish a general agency at Casablanca, and other similar agencies will be established in various ports of Morocco. In order to develop trade, an exhibition of Moroccan products is to be formed at Nantes. Connected with this, an exhibition of samples of French goods likely to find a market in Morocco is to be established at Casablanca. The organisers propose to issue a bulletin, in which merchants and manufacturers, importers and exporters, will find all the necessary information as regards current prices of products and goods, freights, etc. On account of the length of the voyage, imports of cattle and sheep via Nantes are not satisfactory, but large cold-storage plants at Casablanca, which are now being built, will in the near future probably overcome this difficulty. In a few years' time it is expected that there will be an abundance of wheat, barley, oats, frozen meat, skins, wool, etc., imported from Morocco.

In the interests of consumers in Bengal the Government has prohibited the export of rice to other countries, except by special permit to countries which are absolutely dependent upon supplies from India, and even then export will only be permitted in minimum quantities and on condition that the requirements of the purchasing country cannot be met from Burma, says a Reuter message from Calcutta dated February 13.

ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Street, Monday.

Our market during the past week has again been rather irregular, with business on a more restricted scale than for some time past. In Government stocks City of Alexandria have dropped a further half-point to 68; but, on the other hand, both Egyptian Unified and the 5½ per cent. Pref., after falling back somewhat, have recovered, and close very firm to-night with a rise of ¾, at 75¼ and 62½ respectively. Turkish 4 per cents. of 1891 have dropped ½ to 69, and Turkish 4 per cent. Unified are 1½ down at 36.

In Bank shares Nationals, after receding to 22¼, close 7-16ths down at 22 7-16; and Agriculturals, after being 5⅜, close unchanged at 5 7-16. There has been some demand for Bank of Athens at the current level, but there are no sellers at the moment. Land Banks are ⅛ easier at 6⅛; Ottomans, on the other hand, are ¾ up at 10¾.

In Railways, Delta Light have been persistently supported, and close ¼ up at 6⅞.

In Land shares, Aboukirs are 9d. down at 44s. 9d., and Anglo-Belgians ⅛ easier at 17s. 6d. Béhéras, after dropping at one moment to about 23, finish unchanged at 24¼; the Pref. are nominally ⅛ easier at 3⅞, but there are no sellers. Consolidateds have receded 3d. to 3s. 3d., but Delta Land have gained a like fraction at 21s. 3d. Foreign Trusts, after rising to over 20s., have lost all the improvement, and close 6d. lower at 18s. 6d. Gharbieh Land have dropped ¼ to 3¾. New Egyptians are finishing 9d. lower at 37s. 9d., but there have always been good buyers for the latter share on every small drop in the price. Mortgage Co. of Egypt Pref. have advanced ⅜ to 7. On the other hand, Sidi Salem have dropped 3-16ths to 3 1-16, and Union Foncière have gone off ¼ to 6.

In miscellaneous descriptions, Alexandria Water are ⅛ lower at 10¾; Associated Cotton Ginners, after various fluctuations, close 1s. up at 31s. Salt and Sodas have dropped 3-32nds to 3. Khedivial Mail ordinary have advanced ⅛ to 5⅝; Levants are 9d. better at 19s. 6d.; and Morums Pref. have improved 6d. to 20s.

In Oil shares, Anglo-Egyptian B have dropped 5-16ths to 4½, and Roumanians have dropped 6d. to 22s.

In Greek securities the 1881, 1884, and Monopoly Loans are all half a point up at 55 and 49 respectively. Rentes have jumped one point to 46, but, on the other hand, the 1902 Loan has receded one point to 53. Some business has been done in Currant bonds without change of price.

INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following weekly cabled news received from the Director-General of Commercial Intelligence, Calcutta, dated February 11:—General rain in Northern India and Orissa; local in Central Provinces, Madras Coast, Assam, and Upper Burma. General crop conditions good. Bombay cotton market weak. Fully good broach. April-May, Rs. 509. Piece goods market steady. Calcutta jute market quiet but steady, with prices unchanged. Hessians steady. Heavy goods quiet. Bank rate in Madras 8 per cent., Bombay 7 per cent., Bengal 6 per cent.

EXPORT TRADE OF MARRAKESH.

According to figures obtained from local commercial houses and from Customs returns, the value of the export trade of Marrakesh during the last official year was estimated approximately at 12,000,000 francs. The articles exported were caraways, bitter and sweet almonds, goat skins and hair, washed and unwashed wool, gum arabic, dried rose leaves, beeswax, nuts, apricot kernels, iris roots, bones, horns, euphorbium gum, eggs, and honey. Leather slippers (babouches), valued at some tens of thousands of francs, the only native manufacture yet exported, went to Egypt and Western Africa, while vegetables (cabbages, onions, tomatoes, and potatoes) were sent in large quantities to Casablanca for local consumption. While already very prosperous, a great improvement in the trade of Marrakesh is anticipated, and it is probable that in the near future live sheep and pigs will be available for export, and that with the development of local European industries—oil mills, flour mills, rope works, tanneries, preserved fruit and vegetable factories, paste factories—manufactured goods will be added to the agricultural products at present exported.

BRITISH TRADE CORPORATION.

(Incorporated by Royal Charter),

13, AUSTIN FRIARS, LONDON, E.C.2.

NOTES OF THE WEEK.

The agitation for a reversal of the decision of the Supreme Council of the Allies to leave the Turkish Administration in Constantinople resulted in a debate in the House of Commons on the subject on February 26. It cannot be said that the discussion was a very illuminating one. The adherents of the "bag and baggage" policy refrained from pressing their point to a division, and it was evident that the Prime Minister, speaking early in the debate, had substantiated his case for the retention of Constantinople as the capital of Turkey. But his speech, for the most part, was merely an exhibition of successful parliamentary oratory, and did not reveal any profound appreciation of the gravity still attaching to the Turkish question.

The points made by the Prime Minister may be briefly enumerated. His declaration last December to the effect that the Turks could not be left as gatekeeper of the gates referred to the waterway; the statement of January, 1918, that the Allies were not fighting to deprive the Turks of Constantinople was given after full consultation with all parties, and was a pledge at once to British Labour and to Indian Mohammedans; the only reasons advanced for setting those pledges on one side was the desire to gratify vengeance—"a poor thing for a great country"—and to punish the Turks, who would be found to have been terribly punished. Further, there was no satisfactory alternative to the retention of the Turks in Constantinople. International government would inevitably mean mischievous intriguing, rivalry, and trouble; it would have to be military government, as self-government would be out of the question, and it would be very expensive; there would be a far better chance of protecting minorities, if the Turkish Government remained under the guns of an Allied Fleet in Constantinople than if it were withdrawn to the highlands of Asia Minor.

As the Prime Minister was defending a specific item in the Turkish settlement—the retention of the Ottoman Administration in Constantinople—it may not be quite fair to lay much stress on the parts of his speech which dealt with the whole settlement. But we confess to considerable disappointment in regard to the passage in which Mr. Lloyd George set out "the main purpose of the peace" or "the principal peace aim." He enumerated two points: (1) The freedom of the Straits; and (2) The freeing of the non-Turkish communities from the Ottoman sway, with the preservation for the Turk of self-government in communities which are mainly Turkish, subject to two most important reservations—adequate safeguards for minorities and the elimination of the Turkish power of veto upon the development of the rich lands under his rule. To our mind these are at best negative aims, the prevention of some of the worst aspects of Turkish rule. To what should be the Allies' great positive aim, the betterment or uplifting of the Turks, Mr. Lloyd George made no reference. But surely if the Allies are minded to create a better world, one of the first steps should be the raising of the Turks to Western standards—the more so, if they are to remain in Europe.

Much was made by the Prime Minister of the steps to be taken to curtail the Turk of his capacity for evil; but he ignored entirely the fact that the Turks were not solely to blame for the evil reputation of Constantinople as a hotbed of intrigue. The intriguers were not only Turks; among them were those who owed allegiance to one or other of the Great Powers, and they used the Turk for their own ends as much as he used them for his. The Allies are leaving the Turkish Administration in Constantinople, but Mr. Lloyd George made no reference to any measures that would ensure the good government of Turkey. Indeed, his speech suggested that there was to be no mandate in regard to Turkey, and that the Ottoman Government was to draw its inspiration from the contemplation of the guns of the Allied Fleet. A more fatal decision could not be taken. It would be unfair to the Turks, prejudicial to Europe, and dangerous to the non-Turkish minorities. In this matter the Allies have a grave responsibility placed upon them, and they cannot lightly divest themselves of it by pious regrets over the defection of the United States. Turkey, in her own interests and in the interests of Europe, has to be regenerated. The Allies alone can achieve this. Whether the term applied be a mandate or not, definite provision must be made that for a period of years the principles of sound government shall be inculcated in the Turks until such time as a competent and trustworthy Civil Service has been created.

In this matter we may take a leaf out of the German book. During the war German assessors sat, we believe, in the rooms of practically all the Ministers and were distributed throughout the Departments. If the Ottoman Government tolerated this from an ally, it cannot complain if the practice is continued under the terms of the Peace Treaty about to be imposed on Turkey. In

Digitized by Google

the past the Turks of their own accord have expressed the desire to have British advisers, and they would doubtless prefer that the men to help them now in the regeneration of Turkey should be British. We hope that they will be; if not all, at least a large proportion. Care should be taken, however, that the adviserships do not become sinecures, and that the holders of the office are not allowed to lose sight of the fact that they are there solely to train the Turks as rapidly as possible in the art of good government.

After one or two unsuccessful ventures the British Labour Party has recognised its limitations in the realm of foreign affairs by deciding to go outside its own ranks for the compilation of a statement of its policy in regard to Turkish and Moslem matters. The result has been an erudite and carefully reasoned document, which reflects credit upon and, no doubt, the mature judgment of the "Round Table" organisation. But the Labour Party has yet to learn that, when declarations are issued in its name, it is advisable that its leaders should read them, and, if possible, master their contents. The reply to the communication from Indian Moslems stated that the Labour Party "are opposed to the separation of Stamboul from Turkey, unless it is proved that international control of the Straits is impossible without it, but on the evidence available they are not convinced that this is the case. . . . Stamboul itself (including the mosque of St. Sophia) might be left under Turkish sovereignty and remain the capital of the Turkish State, if the Turks desire it." Thus the Labour declaration, as published in the Press on Wednesday. The following day Mr. Adamson, leader of the Labour Party, speaking in the House of Commons, said: "The Labour Party were of opinion that the Turkish power over Constantinople, the Straits, and the hinterland should be ended, and that these places should be handed over to the League of Nations." It is to be hoped that the Labour Party's views on the subject of Constantinople will be brought to the notice of Mr. Winston Churchill as proof positive of the Party's ability to hold its own with any politician of the present day.

Inconsistency, however, is the order of the day, both among politicians and in the attitude of the public towards them. Mr. Adamson himself drew attention to the fact that the Prime Minister's pledge of January, 1918, guaranteed to the Turks the possession of "the rich lands of Thrace" as well as of Constantinople, and he added that he had been informed that these same lands "had been promised to somebody else." In his correspondence with the British and French Governments President Wilson lays stress on many other inconsistencies to which the two Governments have exposed themselves in their unequal trial of strength with the master minds of Italy and the Near East. His allusion to the frontier agreements already reached in Northern Italy "which depart from the Treaty of London line and which were made with the understanding that negotiations were proceeding on quite a new basis," and to some "of the many proposals upon which tentative agreements have long been reached, and which would be upset by an application of the Treaty at this late day" will, it is to be hoped, cause the last to have been heard of that ill-conceived document.

The fresh light thrown on the Adriatic question by the publication in a White Book of correspondence on the subject is dealt with elsewhere in this issue. Here it is right to point out that the case made out for themselves by the British and French Governments is that the keystone of the December agreement, to which President Wilson was a party, had been removed when "they found that nobody desired the constitution of the free state of Fiume." They regard the proposals of the January memorandum as the natural outcome of the policy of the previous agreement, and they emphasize the fact that they had to carry on the negotiations in the absence of any representative of the United States. When all is said, however, on their behalf, the British and French Governments cannot be surprised if public opinion endorses President Wilson's view that the terms of the compromise were altered materially in favour of Italy and to the prejudice of Yugoslavia. The effect of the President's intervention is that the Italian and Yugoslav Governments are to be invited to settle their grievances among themselves by mutual consent. In view of Signor Nitti's statesmanlike utterances there is just a chance that a sane solution will yet be reached by this means. It is, however, impossible to disguise the point that, although the ground dividing the disputants is comparatively narrow, the whole of the distance will have to be traversed by the Italian Government.

The White Book has temporarily raised the veil on Albania to disclose the fact that it was proposed that this unfortunate country should be partitioned, against the vehement protests of the people, among three different alien Powers. No quibble to the effect that the details of the administration of this country by Yugoslavia, Italy, and Greece have yet to be elaborated or that sight will not be lost of the feelings and future interest of the Albanian people could avail to correct this impression. It is, therefore, satisfactory to learn that the British and French Governments have suggested that by a reconsideration of the Albanian question a settlement can be reached which will satisfy the aspirations of the Albanian people for full self-government "while taking into consideration the vital interests of all other parties concerned, together with the necessity of assuring to Yugoslavia an outlet on the Adriatic in the region of Scutari." Little is likely to be heard of the latter point if the just requirements of the Yugoslavs in regard to Fiume are met. If there is to be a general scramble for Albanian territory, Yugoslavia will not wish to be left out in the cold; but there is no desire to expose herself to an Albanian irredentist movement for the sake of an indifferent port on the Boyana River. The Entente Powers must get back to first principles, and remember not only that they are pledged to self-determination for the peoples of Europe, but also that in honour bound they must try to evolve a settlement which has some chance of proving permanent. The partition of Albania will prove no more successful than the Hapsburg régime: there will, however, be this difference, that the Albanians, whether left to themselves or under alien jurisdiction, will make no attempt to solve their national problem by constitutional means, but will have recourse to the time-honoured methods of battle, murder, and sudden death.

A definite stage in the discussion regarding India's capital city is marked by the recent debate in the Legislative Council. Judging by its journals, Calcutta has never accepted the decision to abandon it for Delhi, but the claims of Calcutta seem to be finally ruled out by Mr. Cram's admission that there is now no room for the Government in that city; and if Calcutta is overcrowded the case of Bombay is probably even worse. Accordingly the alternatives lie between making the best of Delhi with its summer branch at Simla, and choosing among a dozen or so other places, the only resemblance between which is the lack of any reasonable accommodation. There might be something to be said for some one of these if Indian opinion showed a marked preponderance in its favour, but opinion is in this matter decidedly parochial, and when nearly every speaker wants to have the Imperial capital in his own back garden, the prospects of a change are obviously slight. Much money has already been spent on Delhi, and its abandonment now would require a far stronger case than has yet been put forward.

For ourselves we question whether Lord Hardinge and his Council were right in looking to the past rather than the future. Granting that a central location was desirable, the choice of Delhi was determined mainly by its historical associations, and the Government thereby accepted all the evil legacies left them by unnumbered pre-

Digitized by Google

decessors. Three centuries ago the official chronicler of Akbar's administration recorded that Delhi was noticeable chiefly for its tombs; the city, he said, was in ruins, but the cemeteries were populous, and his observation has symbolic as well as literal significance. Statesmen of a different type might have preferred to follow the American precedent and build their capital on virgin soil, but the opportunity was lost, and it is not likely to recur. Delhi is there, and the most that can be hoped for is that it will be able to sink, though not to forget, its evil past: that the new India will leave the traces of past administrations to that slow decay of which the poet speaks, "that what we are and have been may be known"; and that, "at the coming of the milder day" her monuments may be overgrown by the nobler ideals which it has been our privilege to plant and tend.

The full reports of the proceedings of the Industrial and Commercial Congress at Bombay appear to us to give grounds for a certain amount of anxiety. The most prominent speakers were industrial leaders in Western India, and while the speeches were definitely Indian in form, the impression left by them is that Indian capitalists stand very much where the crudest of the English capitalists stood sixty or eighty years ago; they recognise that much should be done for labour, but they evidently shrink from the idea of labour doing anything important for itself, and the description of trades unionism as "a peril to civilisation and a canker to the trades and industries of Europe and America" reads rather strangely in the England of to-day. The proceedings help us to understand the persistence of industrial unrest on that side of India, but give little hope of an early advance towards a permanent peace: they add point to the Joint Committee's recommendation that the workers should from the outset be directly represented in the new Legislatures; and they will probably strengthen the hands of those critics who have been contending that the wage-earning classes stand to lose heavily under the new régime.

Recent messages from India tell of various projects on foot for memorials to record Mr. Montagu's achievements in constitutional reform. A cynic might suggest that the old Greek warning against premature felicitation is particularly applicable in the field of practical politics, but he would not expect to be listened to in the India of to-day, and it is more pertinent to urge that the inevitable memorials should be appropriate to the occasion. Calcutta, for instance, is reported to be hesitating between a public hall and a university chair of constitutional history, but surely there can be no question as between these alternatives. The face of India is blistered with public halls, of questionable utility and even more questionable beauty; the mind of India is starved for want of sound learning in politics, as in almost every region of thought. Could not the leaders agree on a concerted movement to commemorate the new constitution by establishing chairs of political science in every Indian university? Each institution might fitly choose its own eponymous hero, Montagu or Chelmsford, Meston or Sinha, as the case may be, and the men who have done the work would have the satisfaction of knowing that their names would be associated with continuous effort for its ultimate success.

Apropos educational matters, it gives us particular pleasure to record that the London School of Oriental Studies is making steady progress, and can already claim to have established itself as a necessary organ of sound learning. Some idea of its scholarly activities can be formed from the last issue of its *Bulletin*, a severely scientific publication which contains a mass of valuable work, ranging from China to the Iberian Peninsula, but rather too technical to be recommended to the general reader. The names of such contributors as Sir George Grierson, Dr. Barnett, or M. de la Vallée Poussin will, however, convince the layman of its importance, and as he turns over the pages he will probably be conscious chiefly of his own colossal ignorance. To the Oriental scholar the *Bulletin* is obviously indispensable.

THE WEEK AT HOME.

H. H. Asquith, M.P.

Mr. Asquith's victory at Paisley is generally popular. The Independent Liberals look upon it as their salvation at the eleventh hour; the Government are really not very sorry to have a stronger Opposition; the general public will welcome his gifts in debate—the standard of discussion in the Commons has often been deplorably low since the catastrophe to the Liberals in 1918.

The only politicians who are really disappointed are the Labour Party. Their nominee at Paisley was a strong man with a local following, and all the shining lights among the Labour leaders were brought down to speak for him. The fact that this is the second defeat of Labour in a week has caused many searchings of heart, but it will do the party no harm. Its head was rather swollen by its unbroken successes in 1919, and a period of adversity will probably restore its sense of proportion. As a fact, its successes in the country have been out of all proportion to its success in the Commons, where quantity does not altogether make good deficiency in quality. Its members must learn to speak better, and not merely to speak better, but to say something more worth saying, before they seize the imagination of the general public, who are not all so easily influenced as Lord Haldane.

Ireland.

The new Home Rule Bill is out. It sanctions the partition of Ulster, sets up two single-Chamber Parliaments in Ireland, refuses the right to levy Customs, and grants a subsidy from Britain towards Irish finances. Its other details, which occupy no fewer than twelve columns of *The Times*, can obviously not be discussed here. By general admission, even on the part of those not usually friendly to the Government, it represents a genuine attempt to settle the Irish question. There have been so many already that one can only hope it will succeed, while recalling the pessimistic remark of a mediæval historian that the Irish question would only be really settled shortly before the Day of Judgment.

Home Agriculture

There are all the indications of an approaching political fight over the vexed question of agriculture. Despite the Corn Production Act, which the Radicals, with their curious antipathy to the farmer, opposed, the wheat acreage of the country has gone down since the war; for the simple reason that foreign wheat fetches a higher price in the open market than home wheat, which is controlled. The Government, quite wisely, refuse to allow British agriculture to sink back to its pre-war state, not merely on the ground of national security in the rather remote contingency of another war, but on account of the world-shortage of food, and the fact that every ton of wheat grown at home reduces imports and assists the exchanges; they are therefore about to encourage increased wheat production.

But the Radicals are at once up in arms. The *Westminster Gazette*, which is perceptibly losing ground during Mr. Spender's absence in Egypt, has denounced the development of home agriculture as though it were one of the deadly sins, and the *Daily News*, in the teeth of all the evidence, hardily suggests that there is no shortage of cereals to be feared. Others have argued that any step in aid of home agriculture means a distrust of the League of Nations, although it is not quite clear how much food per head of the United Kingdom that admirable organisation is to produce; nor does Sir Eric Drummond strike one as precisely the beau ideal of an agricultural labourer.

These protests are probably a sign of nervousness; perhaps more forcible arguments will be evolved later. But the proposition that an increase in home-grown

Digitized by Google

food will weaken the security and industry of the country does seem a little difficult to prove. With an increasing population and an increased demand there should clearly be an increased supply.

The National Health.

Less comment than might have been expected has been caused by the publication of the physical census of the National Service Medical Boards. Yet the figures are startling. Of two and a-half million men of military age who were examined it is stated that only 36 per cent. could be regarded as up to the normal standard of health and strength for their age, while more than 10 per cent. were judged to be totally and permanently unfit for any form of military service.

It must be remembered, of course, that these figures only apply from November, 1917, by which time the first-class men of every age had largely joined up, so that we were getting near "the bottom of the basket," and also that the standard for military service is necessarily far higher than for many civilian occupations. All the same, the report is a disquieting document, for it throws up in relentless detail all the defects due to bad housing, industrial dangers, and carelessness and ignorance; but in one sense it is hopeful, for it shows that most of these defects are remediable.

It indicates, by the way, that one of the healthiest classes in the community is the miners, so that Mr. Smillie's appeals *ad misericordiam* have evidently been overdone, as many suspected at the time. Apparently the least healthy class is the barbers—probably because they so often work underground in a bad atmosphere.

The Boat Race.

The Oxford and Cambridge crews are now busily engaged in practice for the boat race, the former on the Thames, the latter at Ely. Neither crew is finally settled yet, so that predictions of the result would be absurd; but it seems to be generally agreed by the critics on the towing-path that the standard of oarsmanship is perceptibly below that of pre-war days. When one remembers last year's county cricket, with its frequent surprises and often deplorable exhibitions of batting and bowling, one can hardly be surprised that other sports have suffered in like fashion.

Antiques, Old and New.

Quite apart from the sale of houses, which fills so large a section of the advertising columns just now, are the sales of valuable works of art and other contents of old mansions, which is keeping the auction rooms and the dealers busy. Largely a result of high prices and the war, I am told by a friend in the antique business that he has more requests from prospective sellers than he can tackle, more demands from prospective buyers than he can satisfy. The sales are mostly from old English country-houses, the buyers almost entirely Americans, it appears that the newly-rich and the war profiteers of England do not haunt the art sale-rooms. But Americans will buy anything apparently—genuine, honest imitation, and "semi-genuine"—the latter a delightful term.

New Art Possibilities.

Lovers of the old course deplore this ransacking of our treasures, but at least one artist regards it with cynical pleasure. His reasons are simple. In the past, the rich man would sooner pay twenty thousand pounds for a canvas by a dead master than ten pounds for a painting by a new man; the dealer made the profit, the living artist starved. The argument is that when the dead men are all safely out of the way, in Minnesota museums, the new man will stand a chance not only of living, which is a small matter, but of being more original. At present he is expected to copy his predecessors, a method which is destructive of all true art.

To Curb the Lawyers.

England is still a free country, and anybody has the right to found a society for any lawful purpose. But surely the most hopeless of all the many propagandist bodies which are now appealing for funds is that of the organisation which demands the suppression of the lawyer-politician. It seems to advocate the exclusion of lawyers from the House of Commons, not on the sensible ground that the clergy are excluded—because the spiritual arm is a separate estate of the realm, already represented in the Lords—but for the reason that lawyers are bad men, an organised trade union which regards its own professional and personal interests before those of the Commonwealth. The lawyers are not perturbed by any fear that the society will succeed.

Recent Books.

One of the most useful books published this year is Professor Pollard's "Short History of the Great War" (Methuen). It gives a concise and lucid account of the origin and history of the struggle that is valuable both for reading and reference. With this may perhaps be bracketed a very different work, "Realities of War" (Heinemann), by Philip Gibbs. Mr. Gibbs was a war correspondent on the Western front during the whole period from 1914 to 1918, and he has produced two or three books already on the subject. The present volume paints the horrors of war as he saw them, and it contains the usual condemnation of G.H.Q.—a matter on which there is perhaps more to be said than Mr. Gibbs succeeds in saying. He is a voluble, persuasive, and occasionally rather rhetorical writer.

Extracts have now been published from the official German account of the Battle of Mons, drawn up by the German Great General Staff. It is, of course, claimed as "a victory, even though it brought no decision, even though the trophies and the number of prisoners do not dazzle the eyes of the untrained observer, and the British leader succeeded in escaping by retiring before the attempted envelopment. But his heavy losses in dead, wounded, and missing, and still more his hurried retreat, shook the moral of his troops. He abandoned all hopes of victory when he occupied his position at Mons and submitted his power of initiative to the will of the enemy." Seeing how great was the disparity of numbers, the power of initiative could hardly remain in British hands at that time. But it is clear from this record that the German Staff did not know where the British were until they encountered them, and they are forced to pay tribute to the quality of the Old Contemptibles: "Well entrenched and completely hidden, the enemy opened a murderous fire; then the casualties increased. The rushes became shorter, and finally the whole advance stopped; with bloody losses the attack began to come to an end."

It is announced that Mr. J. L. Garvin has undertaken to write the official life of Mr. Joseph Chamberlain. The work will obviously be one of first-rate political importance, and no better choice could have been made for the task—always provided that Mr. Garvin can spare time from editing (and writing most of) the *Observer*. There is one other political biography of which the world still stands in need, and that is the life of the late Lord Salisbury. The ideal biographer would be Lord Robert Cecil, but he does not appear to show any desire to undertake the work.

To the biographical list may also be added "The Letters of Anton Tchehov" (Chatto and Windus), translated by Constance Garnett. Russian writers are like Trichinopoli cheroots; you either prefer them to the products of kindlier soils, despite their formlessness and their rather bitter flavour, or you abjure them altogether as too strong and coarse. I therefore only record the publication, and leave comment to others.

A biography of a very different man, and in very different style, is Mr. Osborne's "Life of Arthur Hugh Clough" (Constable). The vogue for Clough has rather declined of late years, but it is the fact that in "The Bothie of Tober-na-Volich"—what a title to hang round the neck of an epic!—Clough wrote the best hexameters in modern English, and his short poems can still be read with pleasure. A biography of him will therefore be useful, and the present work is rather brilliantly written.

One of the few good novels I have read lately is "The Branding Iron," by Katharine Burt, an American story dealing with primitive passion, which Constables have published. Another which deserves to rank high is "Shepherd's Warning," by Eric Leadbitter (George Allen), a tale of English rural life in the genre of Hardy and Phillpotts.

THE NEAR AND MIDDLE EAST.

(From Our Own Correspondents.)

EGYPT.

CAIRO, February 16.

An Heir to the Sultanate.

Since the evening of Wednesday, the 11th, the succession to the Sultanate of Egypt has been rendered more sure, for on that evening a son and heir was born at Abdin Palace to the Sultan Fuad I. His Highness, it may be remembered, was married last spring to the daughter of Abdel Rehim Pasha Sabri, at that time Minister of Agriculture, and the happy event has been anxiously expected, as by his first marriage, contracted when he was quite a young man, he had only had a daughter. The Sultan announced the news in a Rescript to the Prime Minister, who at once ordered the customary salutes to be fired, and declared the day a Government holiday. His Highness has given his little son the name of "Faruk," the surname of Sultan Omar Ibn El Khattab—meaning "he who distinguishes between right and wrong"—and at the same time gave over £E10,000 to be distributed in alms. In this connection, it may be mentioned that according to the letter from the British Government offering the throne to Prince Fuad, the succession was reserved to his heirs, and not as in the case of Sultain Hussein to the Family of Mohamed Ali, and that, therefore, more than usual importance attaches to the birth of the son to the reigning Sultan.

Return of the High Commissioner.

Lord and Lady Allenby returned to Cairo on Saturday on the conclusion of their five weeks' tour in the Sudan. On his way down from Halfa Lord Allenby met Monsieur Clemenceau at Luxor, and had a long conversation with him. Monsieur Clemenceau, who has been badgered by local correspondents for interviews, stoutly maintains that there is no political object to his present visit, and that he is simply seeking a complete rest and change, for which purpose he hopes to travel well to the south of Khartum, probably as far as El Obeid.

The Milner Mission.

Lord Milner, who has spent the last fortnight on a "Dahabieh" on the Nile, has now returned to the Semiramis, where Sir Rennell Rodd, Mr. Spender, and Mr. Hurst are continuing their inquiries into the administration of the country. Meanwhile, Sir Owen Thomas and Sir John Maxwell have gone for a short visit to the Sudan. It would appear that the Mission will not remain much after the end of the month.

Resignation of Sirry Pasha.

For some little time there have been rumours of a Ministerial crisis, but, taking into consideration the circles where these rumours originated, it has been evident that it was a case of the wish being father to the thought, and little attention has, therefore, been paid to them. This week, however, to everyone's surprise, his Excellency Sir Ismail Sirry Pasha presented his resignation of the post of Minister of Public Works, War, and Marine. The official reason is that the development works on which he, together with his English subordinates, has been occupied for so long have reached a point where they are to be finally examined by an independent Commission, and that he can, therefore, feel himself justified in seeking the rest to which his thirty-three years of service entitle him. The real reason is, however, believed to be that he formulated certain conditions in regard to the Sudan projects, conditions which could not be accepted in their entirety, and that, having been attacked in his public capacity as Minister responsible for these projects, he had come to the conclusion that he no longer enjoyed the confidence of his compatriots, and so considered it best that he should retire. I understand that efforts are being made to get him to reconsider his decision, and that there is every hope that these efforts will meet with success. Failing that, the Cabinet will be reconstructed, and there might after all be a Cabinet crisis.

The local Press continues to indulge in the pleasant occupation of vilifying those of the leading Egyptians of whom the party which each journal represents does not approve, and all the explanations issued by the Pashas in question do not have any effect on the situation. At the same time it is amusing to note how wrath the local Press is with the special correspondents who have been sent here to report on the situation, and who one and all are accused of purposely misrepresenting facts in order to further the Imperial aims of the papers they represent. The correspondents in question are those representing the *Daily Mail*, the *Daily Express*, and the *Daily News*. *Verb. sap.*

The Cape Flight.

Misfortune has certainly dogged the path of those who last week attempted the flight from Cairo to the Cape. In my last letter I reported that the G-EAAV had been held up at Khartum owing to leaking water-jackets. It was able to resume its journey southwards on the morning of the 9th, but trouble with the engine occurred again when it was near Renk, 281 miles south of Khartum, where it had to make a forced landing in the open desert, and whence it managed to hobble back to the aerodrome at Jebelline. At the time of writing news has just come in that the G-EAAV has resumed its southerly flight, and that it has reached Mongalla. [This aeroplane was subsequently wrecked at Tabora on February 27.—ED.]

Meanwhile the "Silver Queen," which arrived at Sollum on the 7th, has also met with a mishap, and in its case the results have been fatal to its venture. The "Silver Queen," which reached Sollum after a twelve-hour sea trip by night from Italy, during which it had terrible experiences, came on to Cairo on the 9th, and after spending a day overhauling, started on its journey to the Cape at 11.30 p.m. on the night of the 10th. The pilots intended to make a non-stop flight to Khartum, and up to Shellal all went well, the machine doing 100 miles an hour. Unfortunately, shortly after that the cock of one of the reservoirs worked lose, and, the water running out, the pilots had no alternative but to land to save the engine, and in the dark they came plump down on some boulders, which broke the back of the machine. The engines are, however, intact, and are being brought back to Cairo, where the pilots hope to be able to get permission to purchase another machine in which they can instal their own engines and resume the flight to the Cape.

YUGOSLAVIA.

BELGRADE, February 18.

The Ministerial Crisis.

The Democratic-Socialist Government, that has been in power since the provisional settlement of the crisis last summer, has been ruling without Parliament for the past several months, thus enabling the Radicals to taunt it with being reactionary and conservative, in spite of its socialistic tendencies, which were pronounced. Parliament was due to be summoned on the 15th, and so negotiations had been carried on for some time, in the hope of finding a common ground for collaboration between the two parties. But both were adamant, and party feeling was running very strongly, when the Radicals persuaded the Regent that they commanded a majority, and could administer the country through the Skupshtina. The consequence was that when Dr. Davidovitch took to the Regent for signature the proclamation dissolving Parliament and summoning the Constituent Assembly as soon as possible, the Prince declined to sign. Dr. Davidovitch then had no alternative but to tender the resignation of the Cabinet, which was accepted. The Prince consulted the Speaker, Dr. Drazhi Pavlovitch, who declined to take any active steps on his own behalf, owing to the cool reception which he had met with in some quarters in the summer, when he had tried to form a Government. He reported to the

Digitized by Google

Crown that the two groups of parties were of about equal strength in the Chamber, which is really the cause of the dead lock. On Sunday, the Prince had long conversations with several prominent Radicals, and it is interesting to note that apart from the professional politicians, there took an active part in these conversations two prominent diplomatists who are members of the Radical party. The Prince also received M. Svetozar Pribichevitch.

Finally, on Monday afternoon, the Prince entrusted M. Milenko Vesnitch, late Minister in Paris, with the task of forming a Government representing all parties. M. Vesnitch visited Dr. Davidovitch, but the Democrats declined to associate themselves, or indeed to negotiate, until they were assured that he held a mandate for dissolving Parliament. The Speaker summoned a meeting of the Skupshtina on Monday afternoon, where, to a very feeble attendance, he announced the fall of the Government, for many deputies were away, and the notice was very short. Moreover, the Democrats and Socialists absented themselves, declaring that they could not attend a meeting of a Parliament which they wished to dissolve as incompetent. On Tuesday afternoon M. Vesnitch announced his failure to the Prince, who sent for M. Protitch and entrusted him with the task of forming a Cabinet which could work with the present Parliament. The Radical leader maintains that he can, for he counts on 145 members of his own party, and on the Montenegrins, Socialists, and members from the districts occupied by Italy as well as on the minor groups, including that of Dr. Ribarats, and the Slovene Clericals and the Croat Nationalists, and on the unattached members. A few days will show whether he is an optimist, for well-informed authorities will grant him only the following supporters:—Radicals, 77; Slovene Clericals, 19; Croat Nationalists, 26; Ribarats' group, 6; Medakovitch's group, 5; and Independents, 5, making a total of only 138.

Croats and Serbians.

One of the most interesting features of the crisis is the attitude of the Narodny Club, that is, the Croatian Nationalists, whose leader, Dr. Laginja, has just arrived in Belgrade. It is stated that the conditions under which they will consent to join the Radical Government in coalition are as follow:—First, that the exchange of kronen for dinars at the rate of four to one be immediately stopped, and kronen redeemed at par; secondly, that the commandant of the Fourth Army Area at Zagreb be General Plivelitch, a general of the former Austro-Hungarian army, and that his Chief of Staff be Colonel Kvaternik, who was formerly head of the Political Department of the Austrian Governor of Belgrade during the occupation: and, thirdly, that the Ban, or Governor, of Croatia and the greater part of the Executive for Croatia be selected from the Narodny Club. This programme is too strong even for the Radicals, and they deny its accuracy, but that there is a pact between the two groups is known and admitted, and there is no doubt that the Radicals have lost a decided following on the grounds of their coquetting with separatism. What is the strength of the Separatist party in Croatia is very difficult to judge; it is probably confined to the towns, and even in Zagreb itself the Unionist Croats roundly deny that Dr. Laginja's followers are in any great strength. It is probably with a view to gauging this that the Regent, yesterday, received M. Pribichevitch, leader of the Croat Unionists.

In Parliamentary circles it is affirmed that Parliament will be dissolved as soon as the new electoral law is complete and the final settlement made in Paris: for it is clear that there can be no elections for the Constituent Assembly until the frontiers are finally determined. Meanwhile M. Protitch is busy collecting his Cabinet.

The Theatre in Belgrade.

Like all Slavs, the Serbs are a musical people, and in spite of the great scarcity of accommodation in Belgrade, they have succeeded in converting the old riding-school into a very nice little theatre, which will do at least until the new opera house is built, for the old theatre was battered to bits by shell-fire. And so in the old Manele, all Belgrade attended a few evenings ago to hear "Madame Butterfly." The performance was an acknowledged success; the orchestra, conducted by Major Binitchki, the popular "kapelnik" of the band of the Royal Guards, rose to the occasion, and MM. Turinski and Ertl, and Mlle. Lovshinska surprised even their admirers, in circumstances of considerable difficulty, for in the midst of the love scene the electric light failed, which is a regular occurrence in Belgrade, and the orchestra at once stopped. Not the loving couple, however, who gallantly continued Puccini's wonderful duet quite unconcernedly. Oddly enough, the audience accepted this fine performance of these artists as a matter of course.

The Sokols.

The Sokols, or Falcons, is an organisation somewhat resembling our Boy Scouts, except that its main object is gymnastics and physical drills. In Bohemia and in Poland, as well as throughout Yugoslavia, you will find them, and their exhibition performances are well worth seeing; in the bad old days, they contributed largely to fostering a feeling of comradeship among all branches of the Slav peoples of Austria, and acted as a strong anti-German, anti-Magyar, anti-Italian bond of union. Now that union is an accomplished fact; at the suggestion of the Sokols themselves, they will come under the Ministry of War, and a special official will be detailed to attend to their needs.

Relief Measures.

It is announced that the Serbian Relief Fund will collaborate with the Government in the erection of homes for broken soldiers, of whom there are said to be 200,000 in the kingdom. Orthopædic institutions, sanatoria for consumption, as well as agricultural and technical schools will be founded. It is most gratifying to learn that this fine organisation is continuing its splendid work.

ROUMANIA.

BUCHAREST, February 19.

New Political Crisis.

After two months' tenure of office, the Cabinet is faced with the necessity of another reorganisation. Yesterday four resignations were announced, including the Ministers for War and Industry and the Ministers representing the provinces of the Bukovina and Bessarabia. It has been known for some time that the Cabinet was not working harmoniously together; the radical reforms insisted upon by the Minister of the Interior and the Minister of Agriculture were not approved by all their colleagues, and the present crisis is probably due more to internal dissension than to the violent attacks which the Liberal opposition have been making, although the latter are openly jubilant at the turn affairs have taken. The Prime Minister has been informed by telegram that his immediate return is advisable, and it remains to be seen whether an Averescan Cabinet will be rushed through before Dr. Vaida-Voevod's return or whether the present "bloc" Government will be able to carry on until the Prime Minister gets back. The meetings of the Chamber have been stormy in the extreme, the Liberals bringing wholesale accusations of plunging the country into Bolshevism against the Minister of the Interior. Dr. Lupu has defended himself with his usual vigour, and his former position as a trusted agent of the Liberals has supplied him with ample ammunition, which he used with dramatic effect.

Press Lock-out.

Following the method pursued by the Paris newspaper owners last November, fifteen local papers have declared a lock-out against the typographical union, and are issuing an "omnibus paper," in which the lion and the lamb appear on adjoining columns and address one another in language unknown in lands where the freedom of the Press is hedged around by libel laws. The wonder is that the sheet holds together at all, even considering that the paper is supplied by the journal using the best quality of any of the Bucharest papers. Were the *Morning Post* and the

Digitized by Google

Daily Herald to publish a joint edition, an equally piquant effect would be obtained, although the style would certainly be less forceful than that of our "Press of the Capital." The newspaper owners declare that the workmen have become so irregular in their attendance, and their demands for increased wages so preposterous, that the publishing of a paper is too difficult a task. So they have shut up their respective shops and refused to re-open until the men are willing to listen to reason.

Fugitives of Denikin's Army.

Large numbers of fugitives belonging to the defeated army of General Denikin who have attempted to take refuge in Roumania have been met at the Bessarabian frontier by gunfire, as the Roumanian Government has decided that no Ukrainian soldiers, except natives of that province, are to be admitted within the Bessarabian frontiers. The dread of Bolshevism may possibly be a factor operating towards this decision (especially as it has recently been stated in the Chamber that Bolshevist propaganda is rife among the barracks of Bessarabia), but the important reason was officially stated yesterday to be the fear of infection from the Pneumonic Plague which is raging in the Ukraine.

Increased Cost of Living and Dread of Bolshevism

There seems to be an increasing dread of Bolshevism getting a hold upon this country, and on all sides rumours are heard of a coming revolutionary rising. These rumours probably arise more from a dread of what might happen under the present hard conditions of life than from any knowledge of the existence or activities of revolutionary organisations. It is true that a great deal of discontent does exist among the poorer classes owing to the exorbitant prices of food and clothing; and this is not surprising, indeed, one wonders how they manage to live at all after reading the following figures published recently in the Bulletin of Statistics:—

Increase, as from October, 1911, to October, 1919, in the retail price of:—

	%		%
Rice	2,018	Maize Meal	837
Cheese	1,471	Firewood	804
Lard	1,321	Cooking Oil	725
White Bread	1,246	Nuts	718
Duck	1,166	Pork	650
Meat	955	Milk	614
Eggs	937	Potatoes	600
Sugar	900	Coffee	566
Chicken	872		

Since the date of the above publication prices have continued to rise from month to month, and there seems little prospect of any improvement until the transport difficulties are removed so as to facilitate an exchange on commodities. Increased wages have been granted to the employees in Government departments, but, needless to say, these do not by any means correspond to the increase in prices.

More Strikes.

The workers in the cloth factories of Ploesti and Buhusi and the Tobacco Monopoly (Regie) workers of the Jassy factory have all come out on strike.

Roumanian Decorations for British Soldiers.

The *Moniteur Officiel* publishes a long list of officers and men on whom Roumanian military Orders have been conferred, including the following:—

FIELD-MARSHAL SIR DOUGLAS HAIG, Order of Michael the Great, 1st Class.

MAJOR H. A. ROBERTS and LT.-COL. J. G. WEST, Order of Michael the Great, 3rd Class.

GENERAL SIR HERBERT A. LAWRENCE, Order of the Star of Roumania.

GENERAL SIR EDMUND ALLENBY and SIR GEORGE F. MILNE, Order of the Crown of Roumania.

The Order of Michael the Great was founded in honour of the same Voevod Michael who is the subject of M. Iorga's play, and who succeeded in the year 1599 in uniting the three Roumanian provinces of Muntanca, Moldavia and Transylvania under one sceptre. It is the highest honour which the King of Roumania can confer upon any man for distinguished services, and is regarded by Roumanians much in the same light as is the Order of the Garter by Englishmen. The moment seems a happy one for publishing this list of distinguished honours conferred upon our soldiers by the King of Roumania, and surely this sign of appreciation will help to cement the good relations established by the visit to London of M. Vaida-Voevod.

New Plays.

A fairy play, entitled "Ilderim," by Queen Marie, was performed for the first time last Monday and repeated last night. It is a charming play, and the costumes and setting are beautiful, but it seems a pity to make a play of that nature so long that the spectators do not reach home till 2.30 a.m. It was nevertheless received with great enthusiasm by a large audience. An historical play, "Michael the Brave," by M. Iorga, President of the Chamber and Historian of Roumania, was performed at the recent anniversary of the Union, and was variously criticised by the party Press, the Opposition reproaching M. Iorga with having made the national hero little more than a brigand. But these are not unbiassed criticisms. The impartial spectator, however, is bound to admit that this play is also of rather fatiguing length.

TURKEY.

CONSTANTINOPLE, February 9.

The Cabinet and the Chamber.

After postponing the occasion five or six times in one week, the Cabinet has at last appeared before the Chamber with an announcement of its official programme, and has received a vote of confidence. Although the local press has not been allowed to breathe a word about the reasons for the successive postponements, it is commonly known that the Grand Vizier was unable to ensure a vote of confidence until he had satisfied the requirements of Mustafa Kemal Pasha's parliamentary representative, Rauf Bey, ex-Minister of Marine, one of the Turkish delegates who signed the Armistice of Mudros, and the hero of the Turkish navy. The scheme of reforms which the Cabinet had offered to the Powers without consulting the Nationalist Committee shook the latter's confidence in Ali Riza Pasha, and as the Nationalist agent in the Cabinet, Jemal Pasha, had been obliged to retire on account of Allied pressure, before the Nationalists would allow the Chamber to give the Government a vote of confidence, the Cabinet had to be reformed in accordance with Mustafa Kemal's desires. Ali Riza Pasha himself is not all that the Nationalists desire, but the time is not yet ripe for Mustafa Kemal himself, or one of the other members of the Central Committee, to take the reins of office, and it would be difficult to improve upon the present Grand Vizier, from the Nationalist point of view, for the moment. Hence, once the Cabinet had been "re-plastered," to use the term in favour with the local press, according to the Nationalist leader's orders, the Chamber demonstrated its confidence in the Government by 104 votes against 2. The Ministerial declaration was not very favourably commented upon by the Turkish press, the Unionist section of which was dissatisfied on account of its sketchy, non-committal character, while the opposition papers pointed out that the Government programme omitted all reference to the apprehension and punishment of the persons responsible for the disasters which have befallen the Empire. It is indeed noteworthy that there was not even the remotest reference to the authors of the terrible crimes committed in the name of the Turkish nation during the war, and one can therefore hardly accept the reference to projected reforms as anything more than *poudre aux yeux* intended for the Allied Powers. The speeches made in the debate which followed the Ministerial declaration not only tended to confirm this judgment, but were far more interesting than the declaration itself. Jelaleddin Arif Bey, the most prominent jurist in Turkey, referring to the engagement of foreign inspectors to supervise the application of reforms, stated that Turkey had agreed to this long ago, and still agreed to this, provided that the inspectors in question *became Ottoman subjects!* The reports of other speeches were mutilated by the Censor, as well they might be, for they contained open attacks upon England in par-

Digitized by Google

ticular. Rauf Bey's remarks were particularly virulent, and he declared that the Turks had been obliged, after having appealed in vain for justice, to take up arms for the defence of their rights. He added that this defence was born of the very soul of the Turkish nation, and that there were no bands in Anatolia. Another singular, perhaps significant, feature of the debate was that, while the English, French, and Hellenes were attacked, not a word was breathed against the Italians.

The French Occupation.

Conflicting and startling accounts are arriving about the events which are taking place at Marash, Aintab, and at other places in the French zone of occupation. From Armenian sources come reports of massacres and deportations, and, unhappily, there is every reason to believe that something of the sort has occurred, although the reports may be exaggerated in certain respects. No doubt the French are accepting Armenian volunteers, and this would be ample justification in the eyes of the Turks, especially in their present state of mind, when they believe that the whole Moslem world is ready to take up arms on their behalf, and that the Allies are afraid of them, to take any measures they may think fit against the unfortunate Christian populations in adjacent parts of the disturbed districts. It is difficult to say exactly how the trouble arose, but the root of the matter is that the French occupation of the district formerly occupied by the British gave rise to friction from the beginning, chiefly because it was supposed that the evacuation by the British was final, and would not be followed by another occupation. Nationalist propaganda did the rest. It is to be hoped that the folly of coquetting with Mustafa Kemal will now be realised, and that the French will give the Nationalists a salutary lesson, of which they are very much in need. One sometimes wonders whether the forbearance of the Allies has any limits. Every wretched rag in the provinces openly flouts us; public speeches are made in the capital, and the British are referred to as that "cowardly nation which was unable, in spite of its army and navy, to force the Straits"; the terms of the Armistice are flagrantly ignored—and all that happens is that a War Minister is forced to resign with his Chief of Staff.

The New Ministers.

Jemal Pasha, who retired in accordance with the demand made by the Allied High Commissioners, was succeeded by Fevzi Pasha, who, a month or two ago, made a tour of inspection in Anatolia in order to enable the Cabinet to assure the public that the elections were being carried out in complete fairness, and that the Nationalists were nothing but high-souled patriots. The Ministers of Foreign Affairs and of the Interior had especially incurred the mistrust of the Nationalist Committee, the former on account of the scheme of reforms which so annoyed Mustafa Kemal, and the latter because he had for long objected to the irregular situation whereby the Government becomes the tool of an irresponsible party of adventurers securely out of reach in the wilds of Anatolia. They therefore had to go. The new Minister of Foreign Affairs is Sefa Bey, ex-Minister at Sofia and *persona grata* with the Unionists. Hazim Bey, hitherto unknown to the general public, emerged from comparative obscurity last year when he became Governor of Brussa in succession to the nominee of Damad Ferid Pasha, the Kurdish notability, Mustafa Pasha, who is now being tried by court-martial for having made statements displeasing to the Nationalists. Hazim Bey's first act when he became Governor of Brussa was to recall the officials who had been dismissed by Damad Ferid Pasha on the grounds of their complicity in the criminal acts of the Unionist Government.

In these persons the Turkish Government offers security for its sincerity in the matter of reforms!

SMYRNA, February 12.

Anti-Gambling Regulations.

An order has been issued by the Greek authorities suppressing all gambling in Smyrna. The measure, as might be expected, has caused considerable consternation in the clubs and to hotel and café proprietors. It appears that Greek officers have participated too freely in the gambling rife in Smyrna, with results unsatisfactory to the Greek Government. The French and Italian Consuls have secured a permit for gambling for the Hospital St. Antoine ball, but all other permits have been refused. Some fear is expressed that the drastic action may herald further encroachments on the personal liberty of the inhabitants. British subjects have had reason to complain of the excessive zeal of Greek gendarmes, and formal representations on the subject have been made to M. Sterghiades, the Greek High Commissioner, by the representative of the British High Commissioner.

General.

The Senegalese troops which have been used to protect the French Smyrna-Cassaba railway since the Armistice are now being embarked for France. This measure has pleased the Greek troops, who have always suspected the "fezzed" Senegalese of fraternising with their co-religionists, the Turks.

News has reached Symrna from Mr. George Perry, American Y.M.C.A. Secretary at Konia, that his brother, Mr. James Perry, and a Mr. Johnson, have been shot by brigands near Aintab, in Armenia. Mr. James Perry was the General Secretary of the American Y.M.C.A., and was on his way to Aintab, to establish a Y.M.C.A. there. Mr. Johnson intended to proceed to India, via Mesopotamia. He was accompanied by Mrs. Johnson, but there is no news what has become of her.

Not since 1907 has Smyrna experienced such cold weather as now obtains, and, as the "flu" reigns supreme in the city, the death rate has increased considerably.

Among the several members of the British Colony who have succumbed to the prevailing epidemic is Mr. Richard J. Whittall, eldest son of the senior partner of C. Whittall and Co. The deceased Mr. "Dick" Whittall was but fifty years of age, and unmarried, and is much regretted by the Colony. He was one of the promoters of the British Chamber of Commerce, and a willing worker in the interests of British trade and the welfare of the Colony.

BULGARIA.

Our Sofia correspondent, in a telegram dated February 22, states: By Royal Decree the Chamber was dissolved on the 20th inst. The new Parliamentary elections are fixed for March 28, or at the latest April 18. The old Cabinet remains intact. Yesterday the two vacant seats were filled by the appointment of two prominent Agrarians—M. Adoloff, as Minister of Justice, and M. Nidelko Atanasoff, Vice-President of the former Chamber, as Minister of Public Works. The new appointments have been favourably received by public opinion.

The general strike collapsed yesterday, and the majority of the workers resume work to-day. Perfect order has been secured throughout the kingdom.

MOROCCO.

TANGIER, February 20.

Kaid Maclean.

The most important, and the most unfortunate, event recently has been the death of Kaid Maclean, as he was best known in Morocco. Particulars of his life are well known, but a few notes upon his funeral may not be out of place. The funeral was very impressive. The coffin, draped with the British colours, on which were placed the Kaid's turban and sabre, was carried on a French 75 gun-carriage, which was nearly hidden by handsome wreaths, and was

Digitized by Google

drawn by native troops. H.B.M. Agent and Consul-General Sir Herbert White, K.C.M.G., representatives from all the Diplomatic Agencies, the representative of the Sultan and other Moorish notables, and the Committee of the British Chamber of Commerce and of the Patriotic League were present at Drimnin House, the Kaid's residence.

The public lined the whole length of the route, and the crowd increased in density as the town was approached. The procession reached St. Andrews, the English church, about 5.15 p.m., and the Rev. Waldo Burnett conducted the service. The Kaid's own servants and soldiers from the British Agency carried the coffin from the church to the grave. The crowd was very large and cosmopolitan, and the churchyard was crowded.

Moulai Hafid.

Ex-Sultan Moulai Hafid has been in Spain since early in the year, and the payment of his pension from France was suspended some time ago. For economy's sake, the Resident-General decided to remove his household from Tangier to Rabat. Some 200 men and women from the Palace were sent by steamer a week ago, and yesterday the remaining twenty ladies of high native families left by the Bland boat for Casablanca. The wives were fearfully upset at being obliged to leave, for, according to Mohammedan law, if a wife quits her husband's domicile in his absence it is considered as desertion and a disgrace to him. As the Moroccan Royal Family claim descent from Mohammed, they are regarded with special veneration by orthodox Mohammedans, and the removal of Moulai Hafid's wives has given rise to great indignation.

The Weather.

After a dry period of glorious weather lasting several weeks, we at last have had rain, which was badly needed, and which is exceedingly welcome to the agriculturists, who were getting anxious. It is true that we have had some ten days of very strong east winds, which were not agreeable. Several days the Spanish mail from Algeciras did not cross, and even the steamer from Gibraltar missed sailing once owing to the gale. But such a long spell of *Levante* is not at all usual here.

SYRIA.

JERUSALEM, February 9.

Emir Faisal.

Emir Faisal has at last arrived in Syria. He was very ceremoniously received, being met by both the French and Arab Governments in the harbour of Beyrout and by many delegations from the interior of Syria. On the first day in Beyrout, he dined with General Gouraud, and left the following day for Damascus. The great demonstration which took place in his honour, in which 12,000 native horsemen paraded through the streets, is almost indescribable. It was certainly the largest and most powerful demonstration that the inhabitants of Damascus ever gave to anyone. The reason for this effusiveness was that the people were extremely anxious to see the Emir, who is their representative in the final settlement of their country. They had heard many rumours, but wanted to hear what the Emir had to say to them officially. Since his arrival he has made several unofficial addresses on the political situation, and they have been partly published in the Press. It would appear from his rather cautious statements that he is still trying to accept nothing short of the total independence of Great Syria.

The Beyrout papers mention the fact that Emir Faisal held a gathering of 500 notables and sheikhs of the Eastern District, when it is stated that he said that "Both America and England refused to help us, while all Europe congratulated us very heartily because France agreed to lend us all possible assistance."

The Hule.

The situation around the Hule (Marjyoun), though better, is not yet settled. It is stated in a Beyrout paper that Kamil Bey Amad, the head of the rebellious tribe, has submitted to the French Governor, through the mediation of one of the notables of Mt. Lebanon, Habib Pasha.

Slight disturbances have also occurred around Aleppo and Marash, in which many tribes gathered to attack French soldiers. Losses on both sides are reported.

On the whole, it may be said that whereas the Southern part of the occupied territory (Palestine) is enjoying safety under the English Administration, the people of the North and East live still in constant fear and uncertainty.

BEYROUT, February 12.

The Gloom of Syria.

The grand ball which was given last week by General Gouraud and attended by a brilliant crowd of French civil officials and military officers, as well as of high functionaries and notables from Beyrout and the Lebanon, with their wives and daughters, and the series of brilliant functions that followed the arrival, soon after, of Cardinal Dubois, who was received with full military honours, have served to relieve the atmosphere of gloom that still enshrouds the war-wrecked town of Beyrout. Few countries in the old world are suffering as Syria is now from the state of political uncertainty which the hanging up of the Peace Treaty with Turkey has been so unduly protracting. Perhaps only in Bolshevist Russia the economic dislocation and the impossible dearness of living are worse; and, as in Russia, the economic tension is exasperating the minds and breeding disorder and brigandage, and reacting in its turn on the body politic. The various political parties that once existed, or, rather, were propped up by foreign agencies, are now united in one common sentiment of disgust and despair.

Administrative Services.

It might seem hardly credible, but it is none the less true, that under the stifling Turkish régime during the war, when Syria was under a strangling blockade, the cost of living was appreciably lower than now, when steamers are arriving in such numbers that some have to lie sometimes for days outside the harbour waiting for a berth inside. The political uncertainty is striking, indeed, the whole administrative body with partial paralysis. At the Custom House the congestion—due more to chaos than lack of space—is such that weeks pass sometimes before packages can be traced and cleared. In the harbour the steamers suffer disastrous detentions, mostly through lack of lighters. The Police seems to be a mere name, like every administrative body that is understaffed and underpaid, and cases of murder and robbery—some of a glaring character—are of such frequency that people are actually refraining from venturing out at night. The tramway service is hopelessly inadequate, and only a few days ago an accident resulted in several fatal casualties through an old brake that failed to operate. The Post Office, which is doing the work of the former Turkish post offices, and all the other foreign post offices combined, is, with a wretchedly paid manager and staff, carrying on as well as can be expected. The Telegraph Office is rather worse off than its sister administration.

Brigandage and Snow.

In the interior—where French armed control has not been allowed to extend—brigandage, which takes occasionally the form of organised incursions and regular fights, is crowning the work of a war that has drained the life of the country to the dregs. Following the Marjyoun disorders, which were characterised by looting and the destruction by fire of some villages, there has been an exodus of destitute refugees to the coast ports, such as Tyre (Sour) and Sidon. Quantities of foodstuffs and 400 garments and as many blankets have been supplied by the French authorities at Beyrout, but this can only be a poor palliative to the acute misery prevailing. The continued absence of any armed force to punish the offenders and maintain order in those regions—due, of course, to the political uncertainty—is said to have led to another outbreak of lawlessness during the last few days. Nemesis would seem to have singled out this hapless country for its insatiable vengeance, for, to crown these accumulated miseries, a snowstorm of unprecedented severity, the like of which has not been known within living memory, has just been sweeping over the country. Beyrout emerged from the snowstorm yesterday shrouded in white, looking, with strange irony, like a fairy city of white marble. Snow lay about a foot deep on the red-tiled roofs. The effect on the various crops is not yet known, but some damage will result to the fruit trees, and to some of the half-dilapidated and ill-cared-for buildings in the higher regions of the Lebanon, where the snow must have fallen several feet deep, since in the coast, where it was only about a foot deep, the boughs of trees broke down. Of course, the railway between Beyrout and Damascus has been blocked. Already grain and other produce from the interior had, owing to the disturbed political situation, ceased coming down to Beyrout, and it is feared that the railway, requisitioned a few days ago entirely for military transport, will remain closed for traffic for some time to come. Expectations for the future are damped by reports concerning the forthcoming grain crops being estimated at about one-quarter of the normal average.

Naturally enough, the French themselves, who are sick enough of the miseries of the aftermath of the war at home, are the first to join in the chorus of loud protests that are to be heard on every side against the perpetuation of this most pitiful of states—the worst that a country has been condemned to endure. Syria is now like a beautiful woman starved, dirty, and in rags.

CORRESPONDENCE.

THE ADRIATIC PROBLEM.

The Yugoslav Point of View.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—The Italo-Yugoslav controversy began in the spring of 1915, when M. Sazonoff, then Russian Minister for Foreign Affairs, pressed by the late Yugoslav leader, F. Supilo, admitted the existence of the London Treaty, by which nearly a million Yugoslavs were turned over to Italy in the event of the Entente's victory. During the war the Yugoslav Committee of London, headed by the present Yugoslav Minister for Foreign Affairs, Dr. Trumbitch, did all that was possible to persuade the Allied Governments of the need of a revision of the 1915 Treaty, but in vain. Old diplomacy, in the face even of the great changes in human thought which the long duration of the war brought with it, stuck to its "rights" of bartering peoples, regardless of their will and wishes. The defenders of the London Treaty contend that the Allies were at war with Austria-Hungary, and therefore had the right to reward Italy with parts of Austrian territory. The injustice of the contention lies in the fact that "Austria-Hungary" was only a geographical idea, and the contested parts assigned to Italy belonged then, as they belong now, to the Serbian race. Long before Italy had made her bargain with France, England, and Russia, the Serbian Parliament, sitting in Nish, in the month of December, 1914, solemnly proclaimed as Serbia's war aims the liberation of all Serbs, Croats and Slovenes from the Austro-Hungarian yoke. Austro-Hungarian Yugoslavs showed themselves as faithful friends of the Allies from the beginning to the end of the war. Within Austria-Hungary they paid for their Ententophil sympathies with over 40,000 lives, shot, hanged, or dead in internment camps, and of all oppressed nationalities they were the first to organise the Voluntary Divisions which excited the admiration of the world by their exploits on the Roumanian and Salonika fronts. Over 15,000 Yugoslav volunteers who came from North and South America, Australia, South Africa, and even from New Zealand, to fight on the Allied side for the liberation of their country, hailed mostly from those parts which the London Treaty assigned to Italy. Though consisting, in ninety-five cases out of a hundred, of simple labourers, Yugoslav emigrants contributed nearly ten million francs in money for the common cause. How could such a people be treated as enemies, and be passed from one foreign master to another?

When America threw in her lot on the Allied side, Yugoslav hopes rose; for it was obvious that America would bring about a decision, and she would not recognise any secret treaties. Finally, when the disaster at Caporetto sobered Italian Chauvinism, and Italian patriots sought and obtained an agreement with the leaders of the oppressed Austro-Hungarian nationalities; when the Italian Government officially adhered to the Pact of Rome, and the Allied Cabinets, as well as the American Government, endorsed it, the Yugoslavs thought that the London Treaty was dead and buried, and that Italo-Yugoslav frontiers would be settled in the spirit of the Pact of Rome. That agreement seems to-day to be a neglected and side-tracked document, although in its time it did a great service both to Italy and to the Allied cause. The sudden collapse of Austria-Hungary brought about the end of the war a year earlier than everybody expected; but very few will admit that fact, and still fewer will admit that it was the Pact of Rome which destroyed Austria-Hungary. Italy forgot the Pact of Rome on the day that she signed the Armistice with Austria; and, instead of regulating "amicably the various territorial controversies *on the basis of the principles of nationality and of the right of peoples to decide their own fate*, and in such a way *as not to injure the vital interests* of the two nations," as stipulated in Rome in April, 1918, she stuck to a policy which is to-day menacing Europe with a rupture of relations with America, and Italy herself with economic collapse.

Every conceivable method has been tried to bring about the Adriatic settlement, but, as we all know, without success, because the competent factors, Italy among them, refuse to apply the *only possible* way to a solution as mentioned above, and agreed to in the Pact of Rome.

When the Adriatic question came before the Supreme Council, President Wilson, seeing the difficulty created by the London Treaty on the one side, and the justice of the Yugoslav case on the other, proposed a settlement which would extricate both the Allies and Italy from an impossible situation by meeting Italy's demands half-way beyond the line of her just claims. For it must be remembered that, were the principles of nationality and self-determination applied, Yugoslavs ought to receive almost the whole of Gorizia and Istria, the whole of Dalmatia and all the islands, and the Yugoslav frontier would reach to the very walls of Trieste! President Wilson, who is advertised the world over as a special friend of the Yugoslavs, acted, indeed, as a special friend of Italy in proposing a settlement totally at the expense of the former, giving to Italy Gorizia and almost the whole of Istria, with over 400,000 compact Yugoslav masses. As against 400,000 Yugoslavs left to Italy, his line gave Yugoslavia 44,000 Italians—27,000 in Fiume and the rest scattered over dozens of places in groups of tens or hundreds. It cost the Yugoslavs a superhuman effort to consent to such an arrangement, to sacrifice nearly half a million of their westernmost, and consequently most cultured, brethren; but they consented—they made the enormous sacrifice for the sake of peace, for the sake of President Wilson and the Allies, and in the firm conviction that the Allies and Italy alike would accept President Wilson's proposals as final. But Italy refused to accept the arrangement, whereupon President Wilson published his Note of April of last year.

Until October 29, the date of the United States' last direct Note to Italy, several counter-proposals were made on her behalf, but all were declined by America. Then the joint Note of England, France, and America was presented on December 13 last year, in London, to Signor Scialoja, the Italian Minister for Foreign Affairs, with further concessions to Italy; but these she refused to accept.

Why all these refusals and difficulties? Because neither the Wilson line of April, 1919, nor the joint proposals of December 13, 1920, gave Italy what she is resolved to obtain—*i.e.*, complete mastery over the economic life of Yugoslavia. The Wilson line leaves to the Yugoslavs a strip of Istrian territory and Fiume; the joint proposal denies to Italy Fiume and this strip of Istrian territory—hence the non-acceptance.

Finally, Mr. Lloyd George and M. Clemenceau, at the Conference in Paris last December, hit the nail on the head and brought forward a plan acceptable to Italy. They gave her the Istrian "corridor" and Fiume—although somewhat in disguise—and she immediately abandoned the pretensions guaranteed her in the London Treaty and proclaimed herself to the world as a "warm" and "sincere" friend of Yugoslavs! A campaign was started, first in the Italian and then in the Allied Press, advertising Italy's "good" intentions towards Yugoslavia. Italian journalists travelled to Belgrade, interviewed Ministers, and, in contradistinction to their attitude of a few days previously, wrote in friendly tones about the Yugoslavs and the stability of their State. M. Clemenceau invited the Yugoslav Delegation, and very gently explained to it the great success that he obtained for Yugoslavia, etc. The Yugoslav delegates objected to the "corridor," which literally shuts off Yugoslavs from the Gulf of Quarnero. M. Clemenceau replied that, if we had not yielded the corridor to Italy, we would not have obtained the remainder. The Yugoslav Delegation expressed its surprise that, while the town of Sushak was left within Yugoslavia, its port was given to Italy. Thereupon Mr. Lloyd George said that "no further changes could be made."

The Yugoslav Delegation having declined to accept the proposal, while referring it to Belgrade, a new and different campaign in the Italian and the French Press started. Emphasis was laid on the great differences as to the settlement existing between two chief Yugoslav delegates, M. Pashitch and Dr. Trumbitch; on the differences existing between Croats and Serbs; how that the Serbs were ready to accept, while the Croats were intransigeant, etc. Certain circles in all Allied countries will not believe that in Yugoslavia, as regards the Adriatic problem, there are no differences.

When the Belgrade Government declined the project and made counter-proposals, M. Clemenceau became angry and invited the Yugoslavs on December 20 to answer in four days' time whether they preferred the submitted project or the Treaty of London. The Belgrade Government replied that they preferred neither, because both pills alike contained poison, and they could not be expected to swallow either. Then President Wilson "threw his bombshell," and the world now waits aghast for what may be the outcome.

The Yugoslavs seem resolved to wait—what else can they do? Italy persists in declining both the plebiscite and arbitration; persists in demanding the body and the soul of Yugoslavia. What renders the matter more difficult is a strong suspicion that there must exist a secret arrangement by which Central Europe and Yugoslavia were assigned to Italy for economic exploitation. The Yugoslavs proposed that the Adriatic question should be laid before the League of Nations for decision, but the Allies declined their proposal. So we have the following situation: Yugo-

Digitized by Google

slavs do not accept, and America refuses to sanction, either the project of December 20 or the London Treaty. Italy occupies of Yugoslav territory more than the London Treaty assigned to her; D'Annunzio keeps Fiume; Yugoslavia remains—the only country in Europe—blockaded. But, fortunately, she has plenty of food, so that the provisioning of her army costs her little. The krone, from 24 to £1 normal, has sunk to 500 now, and if it sinks even lower it makes no difference. Blockaded, anyway, there can be no trade between Yugoslavia and the outside world. But the position of Italy is infinitely more precarious. In November, 1918, the exchange was 30 liras to one pound sterling; to-day it is 63 liras. Italy owes to England and America one milliard pounds sterling. In other words, since the Armistice, Italy's debt abroad has increased, through the falling of exchange, 33,000,000,000 liras. Her mobilised army costs her one milliard monthly. Coal and bread must be bought abroad and paid in gold, or at a disastrous rate of exchange. Let the Adriatic crisis drag on until Mr. Wilson goes out of office, as some thoughtless "friends" of Italy prefer to suggest, and the lira will fall 100 to a £; Italy's debt to England will rise to 50 milliards, to the United States to 110 milliards, and who will supply her with coal, cotton, iron and bread?

Talk about the application of the Treaty of London! No enemy of Italy could do her a worse disservice. The application of the Treaty of London would mean keeping a large army mobilised in order to preserve the acquired regions by force of arms. But who is to finance such a mad enterprise?—I am, etc.,

J. F. L.-V.

INDIA AND BURMA.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—The Burmese will appreciate the fairness and impartiality of your article on the relations between their country and India. But it is incorrect to say that for practical purposes they are still dumb. There was already some movement towards self-government before Mr. Montagu's visit to India, and since then this movement has increased by leaps and bounds, until it now embraces all Burma. In the last two years the entire position has been transformed. Everywhere there is hope for the future, a desire to govern themselves, and a confidence in their national destiny. These feelings have found expression in numerous meetings, of which the August one in Rangoon and the November meeting in Bussein have been the most notable, and in the activities of various bodies, such as the Y.M.B.A., throughout the country. The Burma Reform League, of which Maung Pu is President, forms the centre of the movement. Its chief organ in the Press is the *Burma Observer*. The *risorgimento* in Burma is not imported from India especially—though in this matter the Burmese owe to Indian patriots a profound debt of gratitude—but is part of the movement throughout Asia for self-determination, which is one of the fruits of the war.

Again, Burma has little to fear from the Chinese Republic, even if it had not Great Britain at its back. Are not the two countries separated by the Kachin Hills, a broad and rugged mountain system? Are not the Chinese the most peaceful of people, placing ever intellect and trade before arms, unless, indeed, goaded to violence? If only they are treated with justice they wish for nothing better than to live in peace and amity with their neighbours. It is the Western Powers and Japan that, by their acts, preach militarism to the Chinese.

The Burmese people, as a whole, desire to work out their destiny uncontrolled by the Government of India; that is, provided they receive, as Mr. Montagu has promised they shall receive, an adequate measure of self-government. The true difference between the two countries is a difference of culture. The culture of Burma is based on Buddhism; that of India on Hinduism and Islam.—I am, etc.,

BERNARD HOUGHTON.

St. Helens, Hastings,
February 24, 1920.

TOPICS IN PARLIAMENT

House of Commons.

The subject headings are those given in the official report:—
OPERATIONS AGAINST MULLAH (CASUALTIES). (February 20.)
TURKISH PEACE TREATY: Occupation of Baghdad. MESOPOTAMIA (TRANSPORT). PERSIA (Strategic Railway). INDIA: Royal Indian Marine.—Furlough Pay (Officers).—Fort Sandeman (Attacks on Convoys and Supplies). CEREALS AND FOODSTUFFS (IMPORTS FROM ASIA MINOR). (February 23.)
PEACE TREATY (KURDISH STATE). KUBAN PARLIAMENT (EXPULSIONS BY DENIKIN). BUSINESS OF THE HOUSE: Constantinople (Day for Debate). INDIA: Indentured Labour (Crown Colonies and Surinam). RUSSIA: Daghestan (February 24).

PRESS ON THE NEAR EAST.

Syria.

In the *Nineteenth Century* of February, Mr. D. G. Hogarth writes a very illuminating article upon "The Burden of Syria." Upon the new nationalism in Syria, he writes:—

But fanaticism is an endemic disease of Syria, as of all Near Eastern lands, and with general disillusion and disappointment it is only too apt to become epidemic. Such a development, unfortunately, has been evident in Syrian Nationalism during 1919. That it has gone no further than it has to-day is due to Feisal, and his persistent preference of Arabism to Islamism. Fortunately his prestige, especially with the intellectual class, has been enhanced by long sojourns in Paris and London, which are credited with having purged the last traces of Meccan barbarism, and set him in the forefront of European politics and progress. Despite his influence, however, Syrian Nationalism, it cannot be denied, is now distinctly anti-European, and in a majority of the people anti-Christian. At the first moment of national discontent both sentiments found expression most generally and easily in an anti-French agitation, which has kept Syria in ferment for a year, and may be fraught with worse trouble yet. Its inconvenient popularity is due to a combination of causes, first among which stands a Moslem prejudice. France, though a secularist Power at home, is conspicuously Christian abroad—she keeps her religion for export; and in Syria there are particular griefs scored by the Moslems against her militant Christianity for what happened in the Lebanon sixty years ago and for her constant insistence on behalf of the Maronites since. Further, she is credited with pursuing an anti-Islamic policy in North Africa, many of whose notables have long had asylum in the Syrian towns. The anti-French fanatics can count on sympathy from many of the intellectual class (among them not a few Christians), who dread the assimilative process which France applies, with singular success, to her subject races; from others (again often Christians) who fear for their material interests should French finance envelop Syrian affairs; and, finally, from the evil report of some features of French social life which is widespread among the common folk of the Near East. If, however, this spirit found satisfactory vent at first in agitation against one Christian Power, it was not long in including other Christians in the common damnation. We have not wholly escaped. If the chief anti-French griefs of Syria do not apply to us, we have offered a new and serious grievance by our Zionist policy for Palestine; and only our close relations with Feisal, our colonial reputation for pro-Moslem policy, and, perhaps more than these, our recent display of victorious force—the argument of strongest appeal to Eastern minds—have kept anti-British agitation from manifesting itself except by fits and starts. The native Christians, who have no such arguments in their favour, fare much worse. However loudly they have shouted with the Moslem Nationalists, there is no doubt that a gulf widens steadily between the creeds. Experienced observers report it wider now than before the war, and see in Damascus evidence of just that nervous tension which some accident has often surprised into a blind fury of massacre in Moslem lands.

He concludes his article thus:—

Nothing, however, is yet settled irrevocably. It is not too late to ask at the least a free port for Syrian independence, if not a port of its own: it is not too late to secure to it the hope, at least, of being master some day in all its house. Let it be recognised in the Peace settlement with Turkey that, formally and nominally, all Syria is the one undivided domain of an Arab Government, constituted in Damascus whether under monarchical or republican forms. If under the former, let Feisal, or whatever individual a constituent assembly may elect, be acknowledged Emir or Prince of the whole, but on condition precedent

that his Palestinian province be leased without term or consideration to us, and his Phœnician province, from Tyre to Alexandretta, be leased on a similar understanding to the French. In the face of our Zionist pledge on the one hand and of popular Christian sentiment on the other, we shall hold Palestine for some generations to come. More cogent, because more widely dominant in the national mind, is the belief of the French that they have the indefeasible right to be the predominant European Power in Syria. As a claim based on history you may tear this French right to tatters; but even so it will remain at least as good as our own right to Egypt and to much else we regard as incontestably ours. We are about the last people that, in the name of self-determination or any formula, can afford to gainsay it. In this transaction, however, let the door be not closed for ever against the honourable sentiment of Syrian unity, and if the Arab State be summoned to accredit representatives to the discussion of it, the self-respect of the nascent nation will be saved, even if, in the end, it must bow rather than consent. So perhaps we may make a little better of what has been, is, and will be for long to come a bad business.

Palestine.

In the *Manchester Guardian* recently, there have appeared some articles upon "The Future of Palestine." In the sixth of these, published on February 27, some important features in the Zionist programme were reviewed. The general attitude of Jews to this programme the writer describes as follows:—

Jews do not rest their claims in respect of Palestine on the relatively small number of Jews at present living there. They make their claim to Palestine as the Jewish national home in the name of the whole Jewish nation, some fourteen or fifteen million strong, scattered throughout the world. True, there is a small minority of Jews who deny that the Jews are a nation or have at best any but a religious interest in Palestine. But the overwhelming majority of Jews are conscious of their reality as a nation, and they feel that the lack of a national centre in which the Jewish genius can create a society and a civilisation in its own image and through which the Jewish nation can take an equal part in the exchange of the nations is the cause of much of their spiritual and social suffering. In this they are at one with the understanding Gentile minds. Jews do not expect that all Jews, or even most Jews, can or will desire to make their home in Palestine, but they know that a sufficiently large body will go to make the Jewish Palestine a real seat of a significant Jewish life and civilisation, and that most Jews, even if they do not make their own home in Palestine, will co-operate in building up the Jewish national home there. The Jew outside Palestine will not be a citizen of Palestine; he will have no political tie with it and owe it no political obligation. His relation with the Jewish Palestine will be purely voluntary and ideal. It will influence him according as he is interested in a society which is the model of what the Jewish genius in its freedom can create. He may send his children to receive part of their education there; he may study its literature, art, and philosophy; he may look to it for guidance in his own religious pilgrimage.

He then shows how the war has laid stress on the tragic aspect of the Jewish question, and says that the mandatory power which succeeds in building up a Jewish Palestine will be rewarded. This fact is thus exemplified:—

Political and material gains here go hand in hand with moral. The sympathy of fourteen million Jews throughout the world is assured to the Power which fulfils faithfully the mandate in Palestine. A Jewish Palestine will be the solidest pillar of British influence in the Near East and a stout bulwark to the Imperial sea road of the Suez Canal. As it grows it will be equal to its own self-defence, and in time of trial will render substantial help to the mandatory. A Jewish Palestine will be the chief gate for the economic penetration of most of Asia. The Palestinian Jews will know the languages and the ways of the East. There are notable commercial settlements of Jews in Baghdad, in Persia, in India, in the Straits, in Hong Kong, in Shanghai. For all these the Jewish Palestine will be the base, and all this tremendous machinery of commercial expansion will be at the service of the industry and the commerce of the mandatory power of Great Britain. A Jewish Palestine under a British mandate is the surest and most powerful support of the British merchant and the British manufacturer in the East. But it must be a Jewish Palestine largely conceived, generously executed.

It concludes by demonstrating a practical way in which a Jewish Palestine may be built up.

On public works the possibility turns on immediately employing a large volume of Jewish labour and permanently occupying a lesser volume. Jewish labour and Jewish professional men have a Western standard of life. By seeking the cheapest labour and the cheapest service it might be possible to exclude Jews almost completely from participation in public works. That would be to make the policy of the Jewish national home something of a mockery. On a small scale it has already happened. The salaries offered to police and many civil servants and railway workers are too low for a Jew to live upon, and the pay offered to roadmakers—almost the only "public work" now being executed—is impossible for Jews. Against such dangers Jews have every right to be safeguarded. This is not unfair to the other elements of the population. As the vast majority of the Palestinian Arabs are peasants there is very little surplus local Arab labour. That is why a notoriously anti-Zionist official proposed to import Maltese to build the projected Haifa harbour, and why others are talking of importing Egyptian labour. For large-scale public works the practical alternatives are between immigrant Jewish labour come to build up a Jewish commonwealth, and imported alien labour—the surplus local Arab labour can readily be absorbed along with Jewish labour. In the same way there is no Palestinian Arab capital available for large undertakings. If they are not to be carried out by the State itself—and under existing conditions the Palestine Government would find it difficult to finance them—the alternatives are between Jewish national enterprise and non-Jewish alien concessionaries with no interest in the country except to extract from it the maximum profit, no matter what social or political evils are created in the process. Jewish national enterprise will not be seeking profits. It will be under the control of the Jewish people and of the Government, which will secure that the general interests are adequately safeguarded. Such in outline would appear to be the minimum which must be granted if, indeed, the Allies and the British Government are to carry out their avowed policy of a Jewish national home. These measures would do no injustice to any other element in Palestine, and the building up of a Jewish national home will be of the greatest advantage to all productive forces in the country.

EGYPT EXPLORATION SOCIETY.

On February 20 Mr. H. Idris Bell gave an intensely interesting lecture on "The Historical Value of Greek Papyri." He pointed out that there is a general tendency to regard history as a succession of great events, a drama of exceptional personalities, and to lose sight of the economic and social conditions of the times and of the ordinary individuals. This is not our attitude towards our own time. For us, the great events and the heroes of the day are regarded from a purely personal standpoint—their importance is largely judged from the degree in which they add to our personal safety and comfort. The study of papyri leads to the understanding of the routine of daily life and shows us the practice rather than the theory of administration of laws and of religion, while history books, law books, and religious treatises are all taken up with the theory only, and theory and practice seldom coincide with any exactitude. The lecturer quoted many interesting instances from papyri to prove his points, and laid stress on the value of the study of these. Further, he stated that this country is doing a great deal in the publication of papyri, but is falling behind other countries in the work of comparison and tabulation of results, and that it behoves the Universities to look to it that we hold our own in this respect also. Sir Frederic Kenyon, K.C.B. (chairman), in thanking the lecturer for his admirable discourse pointed out that the study of papyri was a field in which there was room for many more workers. It had the advantage of offering fresh and untrodden soil and untold possibilities.

BUDDHISM IN LONDON.

Mr. W. A. de Silva, who has recently returned to London from Ceylon, gave a lecture on "Buddhism" at 2, Scarsdale Studios, London, W.8. He pointed out that at a time when India was full of strife, the Buddha came to restore peace. The fundamental tenet of Buddhism was, not the postponing of one's duty on the pretext of inquiring into the life hereafter, but the immediate execution of that duty. Buddhism taught that each human being was like another, and that was part of an organic whole. The lecture was delivered under the auspices of the Western and Eastern London Lecture Society.

MUSICAL NOTES.

The chief musical event of the last week was, of course, the beginning, on February 24 at Covent-Garden, of a six weeks' season of opera in English. The repertoire consists of four Wagner, three Mozart, two Bizet, one Delius, one De Lara, one Bach, one Leoncavallo, one Gounod, and one Saint-Saëns. It is an excellent list, and by all accounts the operas are being worthily performed; but as I have not yet seen them, comment is impossible.

It is an unusual, because quite superfluous, thing for critics to talk about audiences; but after seeing the people who applauded the Gresham Singers at the Wigmore Hall on February 24, a few words are as inevitable as they are after a foozle of an easy putt at golf. If it were possible to tell artists by the followers they drag about after them, the Gresham Singers would have a very thin claim to the name. Clerks and clerkesses who entrancedly sigh "Top-hole" and "Perfect," and old men who, having outgrown nothing, shout "Bravo!" to the pieces with least music in them—these are they who came to the Wigmore Hall with great jubilation. Of the quartet of singers themselves little need be said. They are exceedingly skilled in avoiding monotony in their singing; that is to say, they rely on "effects" for the applause they get; and though they do this as cleverly as may be, it cannot be said that it is music that they express. Of popular necessity they take liberties which neither the music nor the word justifies. If you can make up your mind that it is pleasant sound alone that you want to hear, it is quite advisable to hear the Gresham Singers. With the exception of the baritone, they all have quite pleasing voices, and their *ensemble* is for the most part certain. They sang especially well Elgar's "After Many a Dusty Mile," and rendered "Bold Turpin," by Sir F. Bridge, excellently. But one can but feel that these singers were best placed in the Albert Hall or the Palladium; there, for democrats who love and understand little more than a tune, they are a very good turn. But it is easier to indulge in one of their performances when one has a pipe with which to blow away some of their superfluous effects, and when there is, as a means of escape from at least two or three of the encores, a bar close by. *Hoc dictu*, it need scarcely be added that the Gresham Singers concluded their programme with Sullivan's "The Long Day Closes." It should, however, be mentioned that, still further to break the monotony of the evening, Mr. William Murdoch played some Bach and Debussy. I do not know who he did this thing, for his audience upset him, and he was forced to play down to them. Once, indeed, to decrease a little the audience's verbal accompaniment to Debussy, he had to look down to them. I felt very sorry for Mr. Murdoch, because I have an immense admiration for him; but I suppose it really served him right.

At the Wigmore Hall on February 25, Mme. Eurydice Draconi, the Greek pianist, gave her second recital. It was not so successful as her first, which was devoted entirely to Scriabin. In works by Debussy and Ravel, Liszt, Roger-Ducasse, and Korngold, the defects which were apparent in her Scriabin were more plainly visible. I mean chiefly the degeneration of warmth with a heady fervour, and a lack of *cantabile* in melodic outline. If only she could eradicate those two faults, she would be a fine pianist indeed. Debussy's "Sarabande," "Soirée dans Grenade," two preludes of Roger-Ducasse, and one waltz of Ravel, she played beautifully. Normally, her technique is clear and very free, and she thoroughly understands the idioms of modern music. But in the "Toccata" of Debussy, her enthusiasm became clouded over, and in pieces like these wrong notes have a way of falling like rain-drops. As a matter of fact she kept the shower at a good distance, though at times, by means of beautiful playing, she had to put up a rainbow to try to persuade us that those wrong notes were all over. From the endurance and courage which Mme. Draconi displayed in her Scriabin recital, one could know that Liszt's Sonata in B minor, a work regarded (and quite rightly) as being the peculiar property of the male pianist, would not frighten her. She commenced it extremely well, and her control endured far longer than is the case with most female performers; but towards the end she grew tired, and really the close was merely the ostentation of a courageous memory. It seemed that all her playing after this Sonata suffered, and one must, while applauding as highly as possible her valour, decry her wisdom. When, at the end of the evening, she was called upon for an encore, her response showed that she was utterly weary. In one sense, this recital was a disappointment. After her Scriabin, which, though certainly not so good as Miss Mackinnon's, was far better than that of many male pianists, I had very high hopes; but it will take longer than I thought to see them fulfilled. However, there is plenty of time for Mme. Draconi to attain excellence, and I think she knows the road well enough.

The concert which the Blagrove Trio gave at the Steinway Hall on February 28 did not arouse great enthusiasm, but it provided much quiet pleasure. All the members of this family play like amateurs, in the good as well as in the bad sense. By this I mean that, while not possessing the polish and the brilliance of the professional, they have no affectation, and they appear to play not to impress others but to enjoy themselves. The Rachmaninoff Trio (Op. 9), with which they started, I found rather dull: the attack of the strings was poor, and the pianist seemed content with mere correctness. But the Ravel Trio in A Minor, with which they finished, was very different. It is a much more original work than the Rachmaninoff (who seemed to borrow both the form and substance of his ideas from Tchaikowsky), and the Blagrove Trio made it wholly delightful. In the third movement particularly, a most beautiful Passacaglia, the strings maintained a splendid fullness of tone; but all through a keen understanding was displayed. The only faults were an exaggerated slurring of notes in both the violin and the 'cello, and an over-indulged fondness for increasing the swell of a note on the strings while that played by the piano was dying away. Miss Ida Blagrove in piano solos by Ravel and Leschetizky showed sensitiveness and a light freedom of technique: there was little else necessary in the pieces she chose. Mr. Stanley Blagrove played violin solos by De Grassi and Kreisler, in which (and also in Beethoven's "Minuet," which he played as an encore) great facility in double-stopping was evident. But in both the piano and violin solos one was startled and held by nothing: one just agreed. It is the Ravel Trio which one remembers the afternoon by; if the Blagrove Trio always achieved the standard to which they attained in that, they would make a wide reputation.

ANDANTE.

THE NEAR EAST IN COLOUR.

A very attractive series of sketches and water-colours, by Lieut.-Col. G. W. R. Jenkins, is being shown at the Royal Colonial Institute. The sketches are of Stamboul, Egypt, and Palestine; they show considerable power in the use of colour in the technical sense, and they succeed in conveying that indefinable something which is called "atmosphere." One picture in particular, of the desert of Sinai, stands out for its delicacy and subtlety of tone, conveying the melancholy and solitude of the waste to everyone who looks at it. "A Street in Stamboul" is also certain to catch the eye; but practically all the sketches, except, perhaps, one or two of landscape and sky, without other detail, in which Colonel Jenkins hardly excels, are worthy of close examination.

THE BALKAN COMMITTEE.

A meeting of the Balkan Committee was held in London on February 27, with Mr. Noel Buxton in the chair. Among those present were:—Sir Edward Boyle, Bart., Lady Boyle, Sir Arthur Evans, and Miss M. E. Durham. The question of Thrace was discussed, and the following resolution adopted unanimously:—"In view of (a) the mixed population of Thrace, in which no one race has an absolute majority; (b) the imperative necessity of securing for ever the freedom of the Straits, on which depends the economic welfare of vast territories both in Europe and in Asia, in particular Roumania, Russia, Ukraine, Georgia, and Armenia; and (c) the promise of an outlet on the Ægean Sea given to Bulgaria, the Balkan Committee considers that the interests of the inhabitants and of the Powers themselves require that the whole of European Turkey shall be placed under some form of real international control."

THE ANGLO-PERSIAN COMMISSION.

The Anglo-Persian Commission, of which, says the *Times* correspondent in the Middle East, in a message dated February 17, Sir H. Llewellyn Smith is the principal British member, is now sitting at Teheran with the assistance of a Belgian director of Customs, to revise the Persian tariff, as contemplated in the Anglo-Persian agreement. It is anticipated that the work will be carried out rapidly, as there are no great inherent difficulties in altering the existing duties so as to provide Persia with more revenue, with due regard to the interests of foreign trade. No attempt will be made to manipulte the Customs unfairly in the interests of any country, but the existing tariff contains some excessive duties and other anomalies which require correction. It was negotiated secretly in 1913 between the Shah Muzaffer-ed-Din and Russia.

NEAR EAST BOOKSHELF.

I. "A HISTORY OF THE INDIAN NATIONALIST MOVEMENT." By Sir Verney Lovett, K.C.S.I. (London: John Murray, 12s. net.)

II. "THE STORY OF THE FIFTH AUSTRALIAN DIVISION." By Captain A. D. Ellis, M.C., 29th Battalion A.I.F. London: Hodder and Stoughton, Limited. 15s. net.)

I. INDIAN NATIONALISM.

Sir Verney Lovett has made a serious contribution to the recent political history of India, and his work may be recommended with confidence to students who want to see the facts of the nationalist movement set forth without adventitious colour. His qualifications for such a task are indisputable. For about 30 years he lived in close touch with the people of the United Provinces, people who weigh and measure the political ideas started in other parts of India, and whose judgments are usually decisive in the long run; more recently, his knowledge and experience have been drawn on by the central government, and he has access to large stores of information which have not yet seen the light. With this equipment, he has set out to trace the history of the nationalist movement and summarise existing political conditions; he writes well and clearly, he is studiously fair, he allows people to speak in their own words, and the result is a balanced and proportioned presentation, which will serve for many years as a standard authority on the period of transition. The only criticism we have to offer is that, to use an appropriate biological metaphor, the book tends to lay stress on the environment as opposed to the organism. The external influences promoting and moulding the growth of nationalism are, in our judgment, admirably traced, but more might have been said of the development of psychological energy among the classes who have begun to think. We do not mean to suggest that this side of the movement is ignored, but merely that it deserves somewhat greater prominence. The central fact of the situation is that during the last half century or so the mind of India has come to life; we are still a long way distant from complete national self-consciousness, but growth is active, and external influences are assimilated and transmuted in the process. We cannot, therefore, estimate their effect as if they were physical forces acting on inert matter. It is no use saying that this factor or that should produce merely so much effect; it that were the position there would be few difficulties, and fewer hopes. An event which we judge to be trivial may serve to generate some formative idea, and thus yield a result out of all apparent proportion to the cause; another may surprise the prophets by producing no result at all; and the attitude of the administration must be the watchfulness of the nurse rather than the confidence of the mechanical engineer. Our author, as we have said, realises this important truth, but he has not given it the prominence which, in our judgment, it deserves, and the result is that his book needs rather more careful reading than would otherwise be required; he can, however, fairly claim that the subject calls in any case for thought, and under his guidance serious students will have little difficulty in reaching a just appreciation of the nationalist movement of the last half century.

II. THE FIFTH AUSTRALIAN DIVISION.

The objects which this large volume sets out to achieve, and succeeds very thoroughly in achieving, are sufficiently indicated by its title. It is the complete story of the 5th Australian Division, from its formation in Egypt in March, 1916, to its dispersal after the final victory to which it so greatly contributed

It is to the Australian public that this book will appeal most, as, of course, there will be so many who will find familiar names as they read; and it gives a little the impression of having been written for readers who were many miles from the battlefields of France and the scenes of their countrymen's heroic fighting. But, indeed, it is a book whose readers should belong to no limited circle. It is a great contribution to the history of the war—this detailed, carefully put together account of the doings of one division.

No one can read of the exploits of this portion of the A.I.F. without being impressed anew—however fully he had realised it before—by the greatness of the Australians' share in the success of the Allied armies, both in the grim, dogged holding on against the enemy for two years in Flanders and on the Somme, and in the victorious advance of 1918. The character of the Australian soldiers is well portrayed, and with great admiration and affection. "Casual and easy-going while there is no apparent need for special exertion, they are never to be found wanting in the pressure of a real emergency." And in the introduction, Lieut.-General Sir J. J. Talbot Hobbs writes:—

They will not only follow; they will lead, through fire and water, to death itself. They can adapt themselves to any situation that arises, cheerfully endure the greatest hardships and privations and, under the most trying and difficult conditions, work and fight all day and all night when the necessity requires it. But they cannot be fooled they must have confidence in their leaders. They are *men*, and can only be led by men.

Captain Ellis tells the following anecdote to show "the marked dislike exhibited by the average Australian towards disciplinary correction at the hands of any but Australian officers":—

An Australian private attached to an English formation was accused of some offence, and was about to be tried by a court consisting entirely of English officers. The President of the court, a major of courteous and polished bearing, followed the prescribed routine, and asked the accused: "Do you object to being tried by myself, as President, or by any other member of this court?" "Certainly, I do!" answered the Australian, promptly. "What is your objection?" the President inquired, politely. "Well, to start off with," said the Australian, "you're all Tommies. In fact," he added, frankly, "I've never clapped eyes on such a pack of duds in my life!"

At present we are too near the war to be able to judge as a whole such a story as this of the experiences of the 5th Australian Division, we think of the details, of occurrences on special dates, still so near in time, and the only effect of the months that have elapsed since the fighting in France ceased, is to give to any account of it a nightmare unreality, an added horror. But the time will come when such a book as this will rank with the great heroic romances—the adventure of the coming of these thousands of young men across "the width of the world" to give all their strength and devotion to the cause of freedom.

Captain Ellis writes with deep feeling of the Division's journey through France, from Marseilles, where they landed, to Flanders—the enthusiasm, eagerness, and wild spirits only a month before their terrible entrance into actual fighting, when they struggled with such desperate courage and perseverance against inevitable defeat in the Battle of Frommelles.

The author dedicates his work "To our Fallen Comrades," the great number of whom is shown by the list which forms one of the appendices to the volume. It is, indeed, a fitting memorial that the world should be told the story of their heroic endurance. Marshal Foch contributes a foreword, in which he sums up the chief achievements of the 5th Australian Division and writes enthusiastically of its magnificent exploits, especially of the fighting at Polygon Wood in 1917, and of the taking of Peronne in September, 1918.

There are appendices showing the honours gained by the Division, and the dates and list of important contemporaneous events at the head of each chapter are a decided help. But we are surprised to find such a detailed, careful work without an index.

PERSONAL AND GENERAL.

CALENDAR OF THE WEEK,

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian (New Style).	Julian (Old Style).	—	Moslem.	Jewish.
1920. March.	1920. February.		1338. Jumada II.	5680. Adar.
4	20	Thursday	13	14
5	21	Friday	14	15
6	22	Saturday.....	15	16
7	23	Sunday	16	17
8	24	Monday	17	18
9	25	Tuesday	18	19
10	26	Wednesday	19	20

The Gaekwar of Baroda has left London for St. Moritz.

The Shah of Persia left Cannes on February 24 for Lausanne.

Mr. Edwin Freshfield left London on February 29 for Athens and Smyrna.

The Maharaja of Cooch Behar will arrive in London early next month from India.

M. Nano, Secretary to the Roumanian Legation, is leaving London this week for Bucharest on leave.

On February 28 the Roumanian Crown Prince arrived at Cairo, where he is staying at the Residency.

Sir Hugh Bell left England on February 27 for Baghdad. He will probably be absent until the end of May.

Sir Victor Warrender and Miss Dorothy Rawson have left London for Algiers, where they will stay with Lady Leconfield.

Mgr. Zaven, the Patriarch of the Armenians of Turkey, is now in France to co-operate with the Armenian Delegation to the Peace Conference.

Since Mr. H. T. Cory, the American expert, has arrived in Cairo, the Nile Irrigation Commission is expected to proceed to the Sudan shortly.

M. Vaïda-Voévod, President of the Roumanian Council of Ministers, had the honour of being invited to luncheon with their Majesties on February 26.

Dr. Trumbitch, the Yugoslav Foreign Minister, M. Pavlovitch, chief of his Cabinet, and M. Radovitch, delegate to the Peace Conference, arrived in London on February 25.

The King of Serbia has conferred upon Capt. (Acting Maj.) C. L. St. John Tudor, O.B.E., M.C., R.A.S.C., the Order of the White Eagle, with Swords, for distinguished services rendered during the course of the campaign.

At a meeting of the Hellenic Community in London, held on February 27, at the Baltic Exchange, it was decided to appoint a Committee, with Sir Lucas Ralli as Chairman, to arrange, when the time comes, for the reception of M. Venizelos, the Greek Premier.

Prince Antoine Bibesco, Counsellor of the Roumanian Legation, and Princess Bibesco gave a dinner party on February 28, in honour of M. Vaida-Voevod. Among the guests present to meet the Roumanian Premier were Mr. Asquith, M. Albert Thomas, Sir Eric Drummond, and Sir William Tyrrell.

The Admiralty have given instructions for the surveying ship "Endeavour," Commander F. A. Reyne, which has been in dockyard hands at Malta undergoing an overhaul and repair, to be recommissioned at Malta, with a new crew from the Chatham Naval Depot, for surveying service under the orders of the Commander-in-Chief of the Mediterranean Station.

Prince Nicolas of Roumania, who arrived from Eton on February 27, honoured Colonel N. Arion with his presence at dinner on February 29. Among the guests to meet his Royal Highness were M. Vaida-Voevod, the Roumanian Premier, M. Michel B. Boeresco, the Roumanian Chargé d'Affaires, the members of the Roumanian Peace Delegation, and the *personnel* of the Legation.

Field-Marshal Lord Plumer, Governor of Malta, on February 15, unveiled two memorial brass tablets in the Scotch church at Malta—one to perpetuate the memory of Dr. and Mrs. Wisely, and another as a memorial to Lieut. R. M. Morrison, 1st Battalion East Yorks Regiment; Lieut. A. S. Pratt, 7th Battalion, Scottish Rifles, and Sergeant Morrison, 1st Battalion Cameron Highlanders, who were killed in action in France.

The following announcement appears in War orders: The Lords of the Admiralty desire to convey to Commodore David T. Norris, C.B., and to the officers and men of the Caspian Flotilla, an expression of their warm appreciation of the good work performed in the Caspian Sea. The organisation, by which an efficient fighting force was evolved out of material necessarily inadequate, reflects great credit on all concerned, not less than the brilliant manner in which the objects aimed at were achieved, when the Bolshevist Naval forces were destroyed on May 21, 1919, off Alexandrovsk.

Mr. Sydney A. Armitage-Smith, whose appointment as Financial Adviser to the Imperial Persian Government was announced last week, left London on February 27 to take up his duties, and was accompanied by Lieutenant-Colonel J. J. H. Nation, R.E., whom he selected, with the approval of the Persian Government, to be one of his assistants. The Hon. J. M. Balfour, who has also been selected to act as an Assistant to the Financial Adviser, will follow shortly. Mr. Armitage-Smith has appointed Mr. G. G. Crocker to be his private secretary, and Mr. Crocker is accompanying him to Teheran.

The Indian Caliphate Delegation, consisting of Mohammed Ali, formerly proprietor and editor of *Comrade;* Syed Hussein, formerly editor of the *Independent;* Moulana Syed Suleiman Madivi, a distinguished Oriental scholar and divine and head of the Shibly Academy, and Mr. Hanyat, of Aligarh College, who is secretary to the Delegation, arrived at Victoria on February 26 from India. The Delegation were met by undergraduates of Oxford, Cambridge, and London Universities, the Iman of the Mosque at Woking, and representatives of the British Committee of the Indian National Congress, and Mr. Kedai.

A largely attended Armenian banquet was held on February 28 to celebrate the visit to this country of Mgr. Zaven, the Armenian Patriarch of Constantinople; Nubar Pasha, President of the Armenian National Delegation; and Mr. A. Aharonian, who are in London, to lay the Armenian case before the Peace Conference. Mr. D. A. Malcolm, President of the Armenian Association, presided over the gathering, which included the Greek Minister, the Great Archimandrite, Pagonis, the Assyrian Archbishop, the Chaldean Patriarch, representatives of the Archbishop of Canterbury, representatives of the Georgian and Azerbaijan Republics, Mr. Aneurin Williams, M.P., Mr. Brayley Hodgetts, chairman of the British Armenian Chamber of Commerce, Professor Toynbee, Mr. Nahum Sokolow (Zionist Organisation), M. Albert Thomas, M. Mantoux, the Rev. J. A. Douglas, Sir Robert Perles, Mr. Bartley Denniss, M.P., Sir Samuel Hoare, M.P., Mr. N. P. Hacobian, Mr. S. P. Stephens, Sir J. D. Rees, M.P., General Sir Frederick Sykes, Mr. Noel Buxton, the Rev. Harold Buxton, the Armenian Prelate of England, Major Glyn, M.P., Colonel Rhea, Colonel Castoldi, Signor Galli, His Excellency Massehian Khan, and General Gorganoff.

APPOINTMENTS, ETC.

The King of Montenegro has appointed Colonel Sir Roper Parkington Minister Plenipotentiary (Hon.) in the United Kingdom.

Sir A. E. Garrod, recently appointed Director of the Clinical Unit at St. Bartholomew's Hospital, has been recommended for appointment to the Regius Professorship of Medicine at Oxford University, in succession to the late Sir William Osler. Throughout the war he served in the Mediterranean as Temporary Colonel A.M.S.

OBITUARY.

M. Auguste Marcel Dieulafoy, known for his archæological researches in Syria and Persia and his discovery of the remains of the Temple of Darius, has died in Paris, aged 75.

Mr. Loftus George Evans, late of the Indian Civil Service, of Doonside, Cobham, Surrey, has died in Dublin. He entered the Indian Civil Service in 1876. He served in the North-West Provinces and Oudh till 1891, when he was appointed Judge of the Small Cause Court, Allahabad, and District and Sessions Judge, and was afterwards from 1906 till 1911 Judicial Commissioner of Oudh.

LT.-COLONEL F. M. BAILEY, C.I.E.

Lieut.-Col. A. C. Yate, Hon. Secretary of the Central Asian Society, writes:—

When one looks back upon the record of British life expended on the advancement of British political interests in Central Asia, when one revives the memories and the romance that are interwoven with the names of Burnes, Conolly, Stoddart, Wyburd, and many more, and when one reflects that the Ameer of Bokhara who did Stoddart and Conolly to death and who spared Joseph Wolff was an angel of mercy compared with the Bolshevist, there is indeed cause for thankfulness that Colonel F. M. Bailey has at last succeeded in working his way out of territory subject to Bolshevist sway. It was known at the India Office on January 20 last that Colonel Bailey had reached our Consulate-General at Meshed on the 14th of that month. The telegram announcing his arrival took, seemingly, six days to find its way to London.

The British officer in command at, or near, Meshed appears to be Brigadier-General Wilfrid Malleson, C.B., C.I.E., though what force he has at his disposal and what is the area of his command we are alike uninformed. "Blackwood" for January, 1920, has presented us with Colonel Dudley Carleton's lament over the withdrawal from the Trans-Caspian Railway of the British force which for some time, aided by Turcomans and anti-Bolshevist Russians, held the Bolshevists in check between Merv and Amu-Darya. However, General Malleson, it appears, was in a position to send off promptly as soon as he heard that Colonel Bailey had reached the Persian frontier an escort to bring him into Meshed. The intensity of the relief of those who are his nearest by blood may be left to the imagination. It suffices to add that the intelligence was warmly and thankfully welcomed by the Royal Geographical and Central Asian Societies, of both of which he is a member. Of the distinction of his previous services as an explorer the Gill Memorial and the Patron's Medal of the Royal Geographical Society are adequate testimonies.

I do not deem it necessary or desirable to repeat here what either geographical or Central Asian journals or the *Morning Post* of January 29 (the last-named, evidently, an excellent authority) have already made known. I may mention, however, that having been twice wounded in Europe in the first two years of the Great War, he returned to India, and, resuming his "political" functions, was sent up to Kashghar, and from there in the latter half of 1918 found his way with Sir George Macartney to Tashkent. Now that it is known that Colonel Bailey is safe, the Central Asian Society intends to publish the extremely interesting lecture which Sir George Macartney read before it in June, 1919, entitled "Bolshevism as I Saw it in Tashkent in 1918." An epitome of this lecture did find its way into *The Times* of June 12, 1919, but in the later edition or editions of that paper of the same date it does not appear. The Central Asian Society's Council, actuated by its own judgment as well as by Sir George Macartney's wish, at once decided that until Colonel Bailey was known to be safe the less said about him in the Press the better.

NEWS IN BRIEF.

The Cairo tram strike has come to an end.

A scheme is under consideration for the formation of a hostel at Mecca for Moslems from all parts of India.

On the proposal of M. Venizelos, the Greek Parliament has decided upon the establishment of a Pasteur Institute at Athens.

A law has been promulgated in Cairo forbidding house rents to exceed by more than 50 per cent. the rental on August 1, 1914.

Nothing is known in French official circles of the reported occupation of Alexandretta by Turks and Arabs, as rumoured at Cairo.

It has been officially declared at Bombay that, as rice is being unreasonably withheld from the market, the Director of Civil Supplies is empowered to take over any supplies of rice which may be found in the city.

Two smallpox cases were landed for treatment at Malta on February 26 by the liner Patricia, which is bound for India with 500 first-class passengers and over 2,000 Indian troops. The cases were among the Indian soldiers.

Natives are offering passengers passing through Aden port thirty-seven shillings each for sovereigns. Even thus they are able to make a good profit, for the sovereign fetches over fifteen silver rupees in the bazaar at Bombay, so great is the demand for gold.

It is announced from Delhi that there is a movement afoot in Bengal to subscribe a sum either to establish a chair of Constitutional History in the University of Calcutta, or to erect a public hall in Calcutta, in the name of Mr. Montagu, as a memorial of his work in India.

A sanguinary encounter is reported to have occurred in the region of Balikesri, Asia Minor, between a Nationalist band under the leadership of Hamdi and an anti-Nationalist band under the command of a certain Anzavour, a Circassian. Hamdi's band was defeated and he was killed.

The Postmaster-General announces that, according to a telegram received from the Indian Post Office, the Air Mail Service recently established between Bombay and Karachi will be discontinued after the arrival of the mail which left London on the 19th inst. No further packets should be posted for transmission by this service. The special fee of 1s. per ounce prepaid on packets posted since the 19th inst. will be refunded to the senders on application to the Secretary, General Post Office, London, E.C.1.

WHERE TO STAY.

For the convenience of visitors from overseas "THE NEAR EAST" offers its services in booking rooms at hotels in the United Kingdom, on receipt of instructions preferably a week before the date of arrival. When instructions are telegraphed the message can be abbreviated as follows:—

"EASTAPROX, LONDON. TWENTIETH MATLOCK TWO

(The visitor's name and place of residence abroad to be added)."

which would indicate that two rooms were required at Matlock on the 20th of the month.

THE ADRIATIC QUESTION.

The Note in which President Wilson cried "Halt" to the British and French Governments in their attempt to force through an unjust and unworkable settlement of the Adriatic question, is calculated to evoke a feeling of humiliation among the thinking section of the British public. Never, we imagine, can so scathing a document have been addressed to a British Government, and the fact that no answer can be given to any one of the counts of the telling indictment must sooner or later affect the nation's estimate of the man or men who exposed it to this rebuff. Whether it be true or not that every country has at the moment the Government that it deserves, there can be no doubt that the whole handling of the Near Eastern question with all its ramifications during and since the war has been at variance with most of the qualities that have built up the prestige of the British race. Courage, fair play, straightforwardness and consistency; all these have been missing in the pitiful story of the attempt to draft the post-war settlement of the Near East. Owing to the general ignorance prevailing in regard to the details of the subject, the inwardness of the negotiations, and of the decisions taken, has been lost hitherto upon the British people as a whole. With the publication of President Wilson's Note, however, it is impossible to mistake the trend of things in the case of the Adriatic question, and it does not require much imagination to infer that kindred matters handled by the same Governments must reveal to the seeing eye the same shortcomings. A hasty settlement conforming to a rough and ready conception of justice would, at least, have had something to commend it. But the Governments concerned have taken a year or more over problems for which a solution ought to have been found while the war was still in progress; they have multiplied experts and inquiries, only to ignore the recommendations presented to them; they have lent their support to the most one-sided verdicts of notoriously prejudiced arbiters, and they have not hesitated to throw over the matured decisions of yesterday, whether any reasonable excuse could be advanced or not.

The story of the attempt to settle the Adriatic question is a long catalogue of ineptitude piled upon ineptitude. It begins with the Pact of London of 1915, the agreement for which Mr. Asquith and Viscount Grey were responsible when Italy's co-operation in the war was accepted. In the circumstances of the moment the Italian Government was not to be blamed for trying to obtain the best terms possible; but we may give them credit for surprise at the amazing ignorance of the problems of the Near East or at the Machiavellian cynicism shown by the British and French Governments in accepting Italian help on such conditions. The efforts of the Yugoslav authorities to secure modifications of some of the clauses of the Treaty remained unavailing until the Caporetto disaster reduced the Italian Government to a more amenable frame of mind. Negotiations with the Yugoslavs led to an undertaking that the settlement of the Adriatic question would be approached in a reasonable spirit by both parties, having regard to the principle of nationality and the wishes of the peoples concerned. At this stage a great opportunity was missed of clinching this *rapprochement* between Italians and Yugoslavs by a cut-and-dried agreement; but it was in keeping with the general ignorance prevailing in regard to the conditions in South-Eastern Europe that this vague arrangement was considered adequate. With the signing of the Armistice and the removal of the Austro-German menace the Italian attitude towards the Yugoslavs underwent a marked change. Not only did the terms of the Pact of London prove more attractive than the spirit of the *rapprochement* formulated at Rome in April, 1918, but Fiume, which had been specifically left to Yugoslavia by a footnote to the Pact of London, was also brought into the Italian claims. It is unnecessary to record here all the different stages in the Adriatic negotiations; we are concerned for the moment with the turn of events that brought about President Wilson's intervention on February 10 last. On December 9 the British, French, and American Governments had drawn up a Memorandum which offered a reasonable settlement of the conflicting claims of Italy and Yugoslavia, and the British and French representatives were apparently expected to have this arrangement carried into effect. As soon as President Wilson's back was turned, Italy would seem to have experienced no difficulty in twisting Great Britain and France round her little finger. The Memorandum of December 9 was to all intents and purposes scrapped; a new settlement was drawn up, and this was presented on January 14 to the Yugoslav Government with a verbal warning that, if this settlement were not accepted, the Peace Conference was resolved to apply the Treaty of London. A week later President Wilson began to inquire as to what was happening in respect of the Adriatic settlement, and, regarding the replies as unsatisfactory, he addressed to the British and French Governments the remarkable Note of February 10. The British and French Premiers had declared that their proposals in the Memorandum of January 14 left untouched practically every important point of the joint Memorandum of the French, British, and American Governments of December 9. They are told in the Note that this statement is untrue, and the measure of its inaccuracy is trenchantly elaborated in detail; in conclusion, President Wilson conveys the definite threat that unless the British and French Governments modify their whole outlook on life and mend their ways in their handling of European problems, the United States will have nothing to do with them.

We have purposely given in ordinary terms the literal meaning of the communication that President Wilson is at no great pains to wrap up in circumlocutory language. Fortunately, its tenour was unmistakable enough to break down the self-complacency of the men who had tried to persuade him that the Memorandum of December 9 had not been superseded. The Prime Ministers of Great Britain and France have now offered to withdraw both the December and the January documents, and they appeal to President Wilson to help them once more to settle the Adriatic question by encouraging the Italian and Yugoslav Governments to settle it between themselves. We are not very hopeful that at this stage Italy and Yugoslavia can of themselves find the *via media* that is so essential to the interests of both. It will certainly expedite a solution if they know that the United States, Great Britain, and France are once more united in a determination to have a speedy settlement. Unfortunately, the events of the past year show that it is not so much the nations and national characteristics that have been represented at the Peace Conference, as that the delegates have been a collection of individuals actuated by personal considerations. The result has been that no State, whether small or big, has shown any disposition to regard advice or threats; for behind that advice or those threats stood not a nation or group of nations, but a single individual or a body of men who could be flattered or flouted, defied or ignored, as occasion required. To this circumstance we owe the unsatisfactory handling of the Near Eastern problem, and we see no hope of improvement until there is a chance of the settlement being radically modified by a body of men better instructed on the points at issue and less susceptible to cajolery and interested argument.

THROUGH PERSIA IN WAR-TIME.

By Ernest Betts.

III.

At Hamadan, which we reached after a tortoise-crawl up the Asadabad Pass—an ascent of over 12,000 ft.—the critical phase through which the Baku campaign was passing had thrown everything into a disgraceful state of chaos. Hamadan was at that time the headquarters of Norper Force (the abbreviation for Northern Persian Force), and, in addition to the gravity of the position at Baku, operations locally were also approaching calamity.

It appeared that on the Zindjan* front three Turkish divisions were actively engaged in a wide outflanking movement which was intended to envelop Kazvin, gain command of the road, and cut off all communication between our advanced base at Hamadan and our troops on the Caspian. Already, it was said, we were falling back from Mianeh, on the Zindjan road, and preparations were being made for the evacuation of Kazvin. At Bijar, which lies about 70 miles north of Hamadan, a light force of our cavalry was supplying outposts on a front which threatened at any moment to collapse. Lack of transport and consequent difficulty in the distribution of supplies were making the slippery footing they had gained but a degree more precarious.

As if this were not enough, it was hinted that the authorities at Baghdad, who, from the first, apparently, had opposed the idea of a hasty and improvised onslaught on Baku, were not backing up the expedition with the least enthusiasm. In short, the military machine at Hamadan was not only incomplete, but what there was of it was clogged to immobility with rust—the deadly rust of incompetency. This was perfectly evident on the surface of things. Orders for troops to proceed to certain places were issued and cancelled; then issued and cancelled again. There were few enough infantry in any case; but, apart from the futility of sending out reinforcements in twos and threes, it seemed clear that there was no definite plan for their disposition. Men seen departing one day were on their way back the next. The motor transport depot was crowded out with broken-down cars, all of them useless for want of spare parts. The ordnance depot was hopelessly short of essential stores, and when we pushed on it was without many articles of which we stood badly in need.

In common with other reinforcing units, we were detained several days at Hamadan, and we employed this little holiday to the best advantage. We explored the town and its reputed eleven miles of vaulted bazaars. Unlike Kerind—a beautiful village which we had passed through five days earlier—it had not been set ablaze and pitifully ravaged during the Russian advance of 1917, though a Greek merchant who kept what he chose to call a "British Restaurant," and supplied, I gladly own, the most delicious omelettes, stated that the Russians had stolen all his furniture and dispossessed many others of the bulk of their worldly store. But the town, as I have said, had not the appearance of wanton destruction that marked Kerind. Its shops were well stocked, especially those dealing in fruit and confectionery, and their goods were displayed with an almost European care and cunning. There were many artistic bargains in blue glazed pottery and beaten copper ware, but strict orders regarding the weight of personal kit forbade us to become purchasers.

Suddenly an order was issued for every fit man and every round of ammunition to be sent "up the line" with all possible speed. Reports as to the danger to Kazvin, with an additional one that Kermanshah was being threatened, made it imperative that "something should be done." This new instalment to the serial adventure of the British in Baku, with its sensational account of their inextricable position and of the overwhelming superiority of the Turks, was quite the most thrilling we had been given to read. The climax to the narrative was reached with the announcement that we were practically hemmed in at the Russian town, with our backs to the sea. The Armenians on our right flank had broken and fled; the Turks had got in behind us; and our only hope now was to escape by the Caspian or surrender. The enemy, however, was making it impossible for us to escape, and, naturally enough, the Russians, with whom we were fighting, gave no great welcome to the idea.

It was with the conviction that we were to participate in desperate encounters on the Kazvin-Enzeli road that we packed up our 40 lb. of kit and hurried out of Hamadan. The weather was glorious, and the immense spaces of the plains spoke only of peace. Looking back on the city as it became more distant—a city shrouded now in deep forest green and backed by a vast range of mountains—you could not but feel regret at the sheer callousness of war in a country so remarkable for its beauty.

However, these reflections were hardly likely to assist us in repelling a vigorous enemy. But on the day we left we heard, to our astonishment, that the enemy had been outwitted. Baku had been evacuated with complete success, and this, be it observed, a bare three weeks after the announcement in the *Baghdad Times* that we had occupied the city! The completeness of this success, we concluded, must have been dependent on the eighteen hours' severe fighting which had preceded it. Or perhaps that was part of the success! At all events, it was marvellous to think that a situation of such unparalleled gloom had suddenly given way to one of opposite brightness, and splendid to know that our men—or the major portion of them—had rescued themselves from a position of such extreme peril.

The situation in Persia itself, however, was unaffected by this operation, and when we reached Siah Dehan, at the junction of the Zindjan and Kazvin roads, we found a company of Glosters waiting to proceed to the former place as reinforcements. A trifling deficiency in the shape of transport was delaying them.

Notwithstanding our retirement from Baku, it became evident that, unless something occurred to avert our retreat from Zindjan to Hamadan, our withdrawal from Baku could only place us once again in the very position from which we had escaped. That is to say, the Baku force would be cut off, all communication along the Baghdad-Enzeli road ceasing automatically with the arrival of the Turks. Local opinion discussed this situation funereally. "Something might happen," was the remark you heard—implying how impossible it was that anything should happen. "You never know!" came the phrase, clutching at miracles.

But Persia proved to be a country of traditional magic, and the spell acted in a most efficient way. The danger was removed; the calamity of severed communications disappeared. Instead—"something happened." It was observed that Turkish troops were being withdrawn from the Zindjan front, and considered strategically it was clear that the tremendous pressure that General Allenby was exerting behind his advance to Aleppo had made the transfer of every available Turkish soldier to Palestine an immediate necessity. A few months later we ourselves withdrew, leaving only a small force in the whole of Persia to control the situation.

IV.

The dramatic events of the past few days were now followed by anti-climax. When we reached Kazvin—a large, prosperous-looking town with some lurid colour-schemes in architecture—everything was normal. That is to say, nobody knew what was going to happen next, though they were fairly clear over what had happened already.

At Resht, the last big town south of the Caspian, we found that our battalion, instead of keeping up a persistent vigilance in hastily-cut trenches, were enjoyably lunching in the garden of a house they had occupied. Notwithstanding the comfort of a roof and regular meals, officers and men were all terribly depressed and worn out. Their faces expressed the short, sharp ordeal of anxiety and hardship they had endured up at Baku. I remember how bitter was their condemnation of the Armenians, on whose shoulders they placed, without qualification, the entire responsibility for our failure—a judgment not altogether just. Our flight, they said, had been the last word in lightning evacuations—so rapid, in fact, that nobody had had time even to gather together the few necessary articles of kit they had with them in the trenches. They were at present almost destitute. Many of them had no blankets, no tunics, and no overcoats. Luxuries like towels and razors had to be borrowed.

It was in this dispirited and unclothed condition that the battalion began their task of putting Resht into a state of defence. I will not go into details of the tedious pre-

* Zindjan lies roughly on a line drawn from Tabriz to Hamadan at a point about 150 miles south of the former town.

perations we made to secure the town from invasion. It was not from the Turks that we feared attack, but from a troublesome tribe known as "Jungalis," who were led by a local chieftain euphoniously named Kushi Khan. (Whether he spells his name in this way or prefers one of the fifty variations common to most Oriental names I am unable to say.) This warlike gentleman's influence had spread far and wide, and his tribe, though small, was very well equipped and organised. In the previous July (1917) fifteen hundred of his men had attacked our small garrison at Resht, giving us some anxious moments. However, we had now established "friendly relations" with him (an uncertain phrase), and, incidentally, were putting large sums of money into his pocket by the purchase of local produce. His reported exit from the battle area was a wise policy both as regards ourselves and the Persians, for the latter were beginning to tire of his exploits, though they still believed in his prophetic vision that one day he would become King of Gilan.

Their attitude towards ourselves was more conciliatory. Our presence was, at all events, less oppressive to them than that of the Russians, whose visitation in 1917 had been such a thing of terror. Wherever those armies went they had spread destruction. They shot harmless people in the small outlying villages for no other reason than that they were Persians, and the exorbitance of the levies they had made on the people of the larger towns was an injustice not readily forgotten.

It was not surprising, therefore, that our own occupation of Resht led the townsfolk to expect a repetition of these atrocities. A missionary of seventeen years' experience in Persia told me that the townspeople fully expected us to behave like barbarians towards them. They could not understand why we did not pillage and murder, burn and desolate, as the Russians had done. Possibly they were grateful to us for kindly restraint, but, if so, they were slow to show it. Nor did they seem in the least appreciative of the impulse given to trade by our almost daily excursions into the town, whose bazaars we materially helped to empty. But the Persian is discreetly unemotional to the foreigner.

We spent several weeks at Resht, perfecting our elaborate schemes of defence. These completed, a company of the battalion was ordered to march back again to Kazvin, in conformity with pre-ordained dispositions. It was my misfortune to be with this company, and for a few days we experienced some of the stiffest marching we had undertaken or dreamed of undertaking since we got into khaki. The weather, moreover, was atrocious. We covered the 51 miles to Menjil, viâ Kudum, Jhemshedabad, and Rudbar, slowly and with difficulty, and for many miles followed the magnificent ravine that directs the greasy course of the river Safed Rud. It was a wet but a glorious adventure, and, looking at the river, I was inspired to the following couplet:

"Remote, unfriendly, melancholy mud—
This, I maintain, describes the Safed Rud!"

But I am informed that the last syllable of the second line has a long vowel, which rather upsets the rhyme.

We had scarcely time to admire the lonely and quite amazing beauty of Menjil, with its sad olive groves, before definite news came through of the armistice with Turkey, and we were ordered to return immediately to Resht. After a day's rest, we began the march back again. Considering the precipitous mountain paths we were following, and the escalatorial character of the road generally, the three days in which we completed the return journey were (we all thought) a credit to us.

Overnight we bivouacked in the open fields, not having with us any tents—or, for that matter, any time to put them up had they been available. Very vividly I remember a certain evening when we arrived at a rather bleak spot near Lusiadabad. (I mention the name for its music, not because you will find it on any map). Lusiadabad is a small village enveloped in trees which lies about half-way between Menjil and Resht. We had all turned in after an exhausting march across the country, and just as I was closing my eyes I heard a low, slow rhythm of bells ringing from the distance. Its steady, plodding beat indicated a camel convoy, the peculiar swaying motion of these creatures giving a leisurely chime to the bells they wear. As the convoy reached the road bordering our bivouacs the clang and jangle of the camel bells fell like hammer-strokes on the ear. Yet they were far from being unmusical. There was something extraordinarily thrilling in the sound of these bells, in their deep throbbing tones echoing through the night. Although I could not see the convoy, I knew it was moving along the curved road to Lusiadabad and winding up the hill that marked the beginning of our march next day. In the suggestion of awakening movement which the bells had made from afar, in the crescendo of tones as the convoy drew near, and finally in the dying away of the chimes till they were a far-away murmur of music, there seemed an analogy with the course that local history had taken during the past few weeks. First, the indefinite hints of battle down in Mesopotamia, then a succession of noisy events rising to a climax; lastly, anti-climax and a descent to the normal life of Persia again.

For myself, the country had been far more wonderful than the campaign that had taken place in it, and because of its mystery and splendid colour and wonderful mountains I felt regret at the prospect of departure. Unfortunately personal inclination and military expediency seldom agree, and a day after our arrival at Resht we were marched a further 22 miles to Enzeli, where we waited in the pouring rain for a boat to take us across the Caspian. Our destination was Baku. We were to occupy it a second time—it was hoped—more permanently.

But that, of course, is quite another story.

CHESS.

A Game at Odds.

So far as I can gather, both Universities are likely to have teams considerably below the average this year. This is only to be expected, for chess is not a game which can be dropped for a year or so without untoward results, and it will probably be some little time before University chess reaches the pre-war standard.

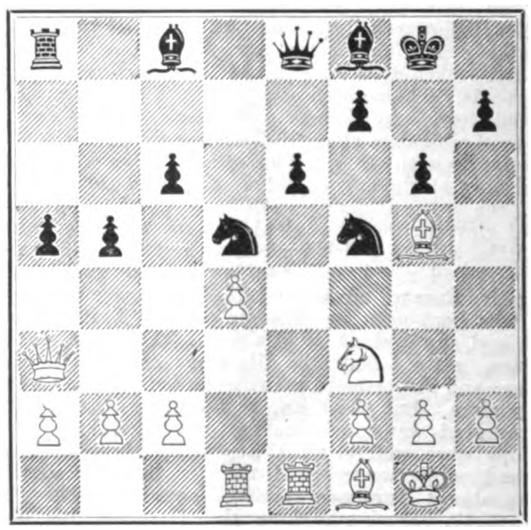
Solution to Problem No. 16:—1. R—B5, etc.

M. Kostitch gave a notable simultaneous display in Paris recently, playing ten games without seeing the board and not losing a single game.

This month Mr. Winter is playing a short match with M. Marchand in Holland.

The following game was played last week in Section C of the Murton Cup Tournament, White receiving the odds of two moves:—1. P—K4; 2. P—Q4, P—Q4, (1); 3. P x P, Q x P; 4. Kt—QB3, Q—Q; 5. Kt—B3, P—KKt 3; 6. B—B4, P—K3; 7. 0—0, B—Kt2; 8. R—K (2), Kt—K2; 9. B—KKt5, P—QB3; 10. Kt—K4, 0—0; 11. Q—Q2, Kt—Q2 (3); 12. Q—Kt4 (4), R—K; 13. Kt—Q6, P—QR4; 14. Q—R3, Kt—B3; 15. Kt x R, Q x Kt; 16. Kt—K5, Kt—B4; 17. QR—Q, P—Kt4; 18. B—B, Kt—Q4; 19. Kt—B3, B—B.

Position after Black's 19th Move. B—KB.



20. Q—Q3, Kt—Kt5; 21. Q—Q2, Kt x P (5); 22. P—B3, B—QKt2; 23. R—R, Kt—Kt5; 24. P x Kt, B x P; 25. Q—B4 (6), B—Q3 (7); 26. Q—K4, Q—Kt; 27. Q—Q3 (8), P—KR3; 28. B—B6. Q—QB; 29. P—KKt4, Kt—K2; 30. B x Kt, B x B; 31. Kt—K5 (9), Q—K; 32. B—Kt2, R—Q; 33. QR—B, R—Q3; 34. Q—R3, B—Kt4; 35. R—B2, Q—Q; 36. B x P, P—Kt5; 37. Q—B3! (10), Q—K2; 38. B x B, and wins.

1. The adoption of the centre counter is scarcely the most satisfactory defence to adopt in view of the handicap. As will be seen, White makes full use of his opportunities.

2. Now White's development is as promising as it well could be. Black has only one piece out, and is in no position to resist an attack.

3. A mistake; but there was no really good move. As it is, White takes a slight advantage on the Queen's side at the expense of the King's side attack, which almost certainly would have succeeded.

4. Something must go now.

5. This manœuvre leads to the exchange of two pieces by Black for a Rook and two pawns, leaving Black's pawns predominant on the Queen's side. But White's threatened attack on the King prevented Black from taking the Rook.

6. Threatening P—Kt4, B—B6, etc.

7. A last attempt to attack.

8. If 27. . . . P—B4; 28. P x P, and if Black plays B x Kt, then 29. P x KB, winning easily

9. Intending Kt x P, which would win at least four pawns for the piece, to say nothing of giving White an irresistible opening by R x P.

10. And White either mates in two or wins another piece.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

I learn that the crop prospects in Morocco are very favourable, and that a good season is anticipated. This would solve one of the principal difficulties of the Protectorate Government, which has been endeavouring since the war, by prohibiting the export of wheat, to build up the diminished reserves of this commodity. Wheat was exported to France alone during the war, all available supplies being sent to that destination. The result was that the reserves were largely depleted, and as last season was a bad year for crops, the remarkable position has arisen that Morocco, a wheat-exporting country, has been subsisting since the middle of last month on imported wheat, and must so continue until July.

***

I was only able to refer briefly last week to the important provisional agreement entered into between Barclay's Bank and the Anglo-Egyptian Bank. By the terms of the offer, nine fully-paid B shares of £1 each of Barclay's are to be given in exchange for each Anglo-Egyptian £15 share on which £5 has been paid up. The ratification of the arrangement is dependent on the acceptance of the proposals by the holders of at least fifty per cent. of the issued capital. It may be added that if the project is carried through, as I have little doubt it will be, the Anglo-Egyptian Bank will remain a separate institution with its own board of directors.

***

The Anglo-Egyptian Bank, it is interesting to note, was established in 1864, and from its foundation its history has been one of almost constant progress. It now has eight branches in Egypt and the Sudan, and, in addition, has offices in Haifa, Jaffa, Jerusalem and Gibraltar. The total assets of the bank stood in last year's balance-sheet at £19,567,200; deposits and other accounts, including contingency account, amounted to £17,113,500, while the reserve fund was then £720,000. The bank paid a dividend of 15 per cent. for a number of years before the war, and the prosperity of Egypt since 1914 has resulted in an improvement on this excellent yield, the last distribution equalling 17½ per cent., free of income tax.

***

The proposal to establish a new bank in India, to be known as the Imperial Bank of India, by the amalgamation of the Bank of Bengal, the Bank of Bombay, and the Bank of Madras, has now been approved by the shareholders of the three Presidency Banks, opposition being offered to the project at only one of the meetings. How soon the proposal will be carried into effect I am unable to say, but I assume that no time will be lost in the process. The outstanding advantage of the new bank to India will be the provision of much more extensive banking facilities, of which there is an undoubted need in the country, especially in view of the industrial development which is now proceeding apace.

***

A notable example of the neglect of the overseas markets by our manufacturers is forthcoming from India. Some tractor trials have just been held in the Central Provinces, and of the eleven entries ten were American and one British. The fact that India is the most important market in the world for the manufactures of the United Kingdom gives added significance to this incident, which from what I gather is not a unique instance of what is happening with regard to the Indian market. Of course, the trouble is, as I have pointed out before, that the home demand for commodities of all kinds is so great at the moment that manufacturers yield to the temptation to take the easy trade offered to them, overlooking the fact that at no far distant period they will need the markets they are now taking little trouble to cultivate.

***

I have emphasised in these columns often enough the fact that of all Near Eastern markets Egypt ought to be paid special attention by British exporters. Conditions there are greatly in favour of the extension of British trade, since I think we may regard the political uncertainty as being a purely temporary factor. But judging by comments in a contemporary, the market is being neglected to some extent by the British merchant and manufacturer. If this be so it would be more than regrettable, for through the position created by the war British traders have been given a unique opportunity of regaining the ground they lost before the war to Germany and Austria, and these are not times in which a chance of this nature to establish a permanent market can lightly be thrown away.

***

Attention is drawn in a contemporary to the very unsatisfactory state of affairs in regard to the Simplon Express. Robberies on the train, it appears, are of frequent occurrence, and it is stated that it is rather exceptional for travellers to reach their journey's end without losing some of their baggage. It is after leaving Trieste that the passenger's difficulties begin, despite the fact that from that point onwards there is a military guard on the train. From the account referred to it is evident that the guards might as well be off the train for all the good they do, for while despite the utmost vigilance on their part occasional robberies might be carried out, what can be said of their failure to prevent frequent visits to the train of individuals for the purpose of levying illegitimate "taxes" on the travellers? The matter is one which affects all the regions of the Near East served by the line; and it should not be too much to hope that the countries concerned will take steps to remove what cannot fail to be a serious hindrance to free relations with Great Britain and other Western countries.

***

One of the most interesting of recent oil enterprises is the Oilfields of Egypt, Ltd., the prospectus of which has just been issued, offering for public subscription £300,000, in £1 shares, out of a nominal capital of £750,000. The company has acquired three concessions of about seventy square miles in a district, bordering the Red Sea, which has been proved to be highly productive, and it is stated that there is ample evidence that the same series of formations found to be so productive at Hurgada underlies the fields in question. If that is the case, the success of the company should not be in doubt. It is to be noted, however, that the development work carried out in these areas has as yet failed to demonstrate the existence of oil in commercial quantities, as the borings have not gone deep enough so far.

***

In an interesting address at the general meeting of the Dunlop Rubber Company, the chairman, Mr. Ormrod, said that the present need of the company was increased output. Their sales were limited for the moment by this factor, and their power to take advantage of their opportunities had been restricted by labour troubles elsewhere. In the current year their returns showed an increase of over 30 per cent., but the rate of increase had been affected by the difficulty of obtaining plant and machinery.

THE PORT OF BRAILA.

SURVEY OF FACILITIES.

We are indebted to Messrs. Watson and Youell for the following particulars of the Port of Braila:—

The port of Braila, situated on the left bank of the Danube at a distance of ninety-two miles from the Black Sea and ten miles above Galatz, is the centre of the grain trade and the chief port of export in Roumania and where the chartering of steamers, booking of cargo, and the large business in the transport of grain between the Iron Gates and Sulina is conducted. The lighters are built of iron and steel, and range from 500 tons to 2,500 tons capacity each. Braila is on the main railway line, Galatz-Bucharest.

The area of the Basin is about 20 acres, with wharves about 1,830 ft. in length. The depth varies in accordance with the volume of water in the Danube and dredging operations, and is based upon 5 metres at the zero mark of the river established by the European Commission of the Danube.

The Basin is used by steamers bringing general cargo other than those of the French and Italian Lines, which have their own discharging pontoons and sheds on the river side. The offices of the Dock Administration and Customs and Captain of the Port face the town. On the quay frontage are built the sheds and bonded warehouses, alongside of which are the general cargo berths. Adjoining, townwards, are the engine house and grain elevators (silos) of a total capacity of 25,000 tons, but which at present can only receive 15,000 tons of grain, the remaining silos being in want of repair. Two shoots from the silos, with machinery in full working order, are each capable of loading into steamers alongside about 100 tons of heavy grain per hour. For the landing and manipulation of general cargo the following cranes are available:—Two steam cranes of a lifting capacity of 1½ tons each, two electric cranes of a lifting capacity of 2½ tons each, one electric crane of a lifting capacity of 5 tons, one hand crane of a lifting capacity of 8 tons.

Accommodation for Steamers.

There are twelve berths within the Basin which will accommodate two steamers discharging general cargo, two steamers discharging coal, two steamers loading grain at elevators, one steamer loading grain in the rear of the Administration building, three steamers loading timber near the entrance, and there are two berths for lighters. On the river side there are three berths for loading or discharging. Timber is stacked on the space in front of the three berths near the entrance. Coal, briquettes and coke are stacked on the space between the river and the basin and railway lines, and sidings encircle the dock enclosure, and are connected with the main line. Staging between steamer and quay is required at all berths except when loading is effected from silos, and in the case of the three riverside berths iron pontoons, provided by the port authorities, are placed, on which the staging rests.

The quay, which extends from dock territory up stream, is a sloping revetment, and pontoons and staging are required to connect the steamer with the shore. Only loading operations are permitted outside dock territory, except in the case of river passenger steamers and at berths allotted to mills and factories situated close to the river. In the event of steamers having cargo to load from or discharge into lighters, permission is given when required to effect such operations in the stream. When the port is congested with shipping, steamers have to load two and sometimes three abreast at the respective berths. Railway lines running the whole length of the quay connect the port with the main railway system.

Loading from the shore, except from elevators (silos), is effected by labourers carrying the goods in the case of grain, etc., in bags on their shoulders from cart or truck on the quay over the staging to steamers' hatchways, where it is dumped into the holds. When floating elevators are not used, the loading is done in the same manner ex lighters alongside and over staging up the side of the steamer. In the event of more than one steamer occupying the berth, the goods have to be carried in both instances over the decks of the intervening vessel.

In pre-war times Braila possessed the greatest warehouse accommodation in the kingdom. These warehouses, or stores, belong to private owners, and are nearly all built of masonry with roofs of tile or sheet-iron, and are of one storey, some with a loft. They are situated in the port in proximity to the quay and dock. These at present are in a dilapidated state, owing to the damage done during enemy occupation. Some are roofless, and the flooring of all has been removed, together with some other woodwork. Slight attempts are being made at repairs, but progress is very slow, and probably only about 10 per cent. of the total storage space is at present tenantable.

The port possesses seventeen floating elevators of the "Paternoster" type and one pneumatic, twelve of which are owned by private firms and six by the Dock Administration. Of these, fourteen, including the pneumatic, are at present under repair; their working capacities range from 60 to 120 tons of heavy grain per hour. Beyond the dock enclosure and in the direction of Galatz are situate a pumping station and ten tanks capable of storing 15,810,000 litres of oil, and delivering it on board a vessel lying alongside a small wooden jetty. These oil tanks have not been much used for export purposes since their erection some years ago, as the extra time, expense and risk incurred by "tankers" coming to the Danube caused owners to prefer Constantza as a loading port. Furthermore, the oil had to be brought from the petroleum districts by rail, which was more costly than by pipe-line, and the Roumanian Railways have only a limited number of tank trucks, which are also required for inland distribution purposes.

There is always sufficient depth of water to accommodate the loading and discharging of steamers moored alongside pontoons at riverside quay berths. The soundings made and reported daily by the European Commission of the Danube govern the loaded draft of steamers navigating in the Danube between Sulina and Braila. The present depth of water on Sulina Bar is about 20 ft. Pre-war depth was 24 ft., and this latter depth will again be attained when the dredging plant is put in working order and a sufficiency of coal is available. Plans are under consideration for the provision of increased facilities at all the ports on the Danube and for improving the shipping conditions generally at all the Roumanian ports.

"THE DEVELOPMENT OF PALESTINE."

TO THE EDITOR OF "THE NEAR EAST."

Sir,—In your article, "The Development of Palestine," in the current issue of your paper, you say: "These figures show that in Palestine there are now really splendid opportunities for British and Colonial firms." As an interested observer, having been through the Palestine campaign as a rifleman, might I ask whether the firms in question are fully aware of it, and are such opportunities properly brought to their notice and *driven home* by the right people? Without doubt, what you say is true, and the great thing is to get some *practical* result from such an article!

In my own opinion, there are great opportunities in many ways in Palestine, and one would have thought that the British Government might have seen its way clear to encourage any efforts made by Britons. Personally, I thought Britain seemed badly represented—compared with other nationalities—in Palestine; one hopes this will before long be greatly improved. After a campaign such as this last, the country should surely be almost ideal for any British undertaking, for one may say without any attempt at conceit that the British were extremely popular generally.

It occurred to one that the Plains of Sharon and Esdrael stood badly in need of developing when seen in 1918—overgrown with thistles and weeds for the most part. The opportunity is there, but it badly needs bringing to the notice of the proper people. One could write at some length (from a personal point of view) on these things.

However, my main point is that, as we cannot afford to lose sight of *any* opportunities at the present time, what is needed is that your article should be brought to the notice of the proper authorities. None would regret the passing of Palestine markets from our hands through apathy more than the men late of the E. E. F.—although it is possible that they would never openly admit it!

One hopes that your paper gets into the proper hands each week—just now it seems vitally important that it should do!

I am, etc.,

"INTERESTED."

Eastleigh, Hants, February 20.

TO AMATEUR PHOTOGRAPHERS.

The Editor will be glad to consider photographs of Near Eastern scenery, types, places of interest, etc., etc., suitable for reproduction in THE NEAR EAST. *When desired, payment will be made for the right of producing such photographs. Readers should state, when forwarding pictures, whether payment is desired or not.*

Photographs should be sent either packed between stout cards or rolled in a cardboard tube, and should on no account be folded. Titles and notes should be attached to each photo, and should be very clearly written.

Commerce and Industry.

(REPORTS FROM OUR OWN CORRESPONDENTS.)

EGYPT.

Further Trade Improvement.

CAIRO, February 16.

According to the Customs' return for November just published, imports during that month amounted to £E5,254,864, and exports to £E11,779,925, as against £E3,468,071 and £E2,269,515 during the corresponding month of the previous year. Imports for the 11 months total £E40,959,398, and exports £E59,495,417, which, compared with the same period in 1918, represents a swing over in the balance of trade of £E24,000,000 in favour of Egypt.

During the month the principal imports were: Coffee, £E66,133; kerosene, £E258,560; paper and printed matter, £E122,007; sawn timber, £E92,634; coal, £E188,585, natural indigo, £E56,586; medicinal preparations, £E37,375; household soap, £E59,690; cotton yarn, £E150,478; cotton piece goods, £E1,673,615; mixed textiles, £E91,828; woollen and worsted cloths, £E150,636; silk cloths, £E101,148. hosiery, £E96,594; and tobacco, £E234,173. Almost the whole of the increase of £E1,786,793, registered during the month was accounted for by yarns and textiles; decreases were registered under wood and coal and meat, whilst slight increases were recorded under cereals, metals, and wines and spirits.

Under exports the principal items during the month were hides and skins, £E166,102; rice, £E30,946; cotton seed, £E485,485; sugar, £E91,647; cotton, £E10,536,433; and cigarettes, £E86,086. Practically the whole of the increase in the value of the month's exports was contributed by cotton, cotton seed, and hides and skins.

As we are so near the end of the year, I am leaving over an analysis of the share taken by the trading nations of the world in the foreign trade of Egypt and of the traffic between that country and the Sudan until next month, when we shall have the complete figures for the whole of 1919.

A Commercial Submarine.

PORT SAID, February 16.

Last week we had a commercial submarine in port. Few people realised the presence of the vessel in harbour, and fewer still saw it. She was flying the Italian flag, and was bound to Massawa, escorted by two tugs. Pearl fishing was given as the reason for its conversion to peaceful use, and it is said to have a full complement of divers, and to be fitted with a means of ingress and egress for them while submerged and lying on the bottom.

Two Japanese cruisers, the Tokiwa and the Adzuma, have been lying in port some days, but have now left for Italy.

TURKEY.

CONSTANTINOPLE, February 9.

A Probable Crisis.

I have referred in previous letters to the disheartening obstacles to commerce in Constantinople. Unhappily, so far from there having been any improvement, matters have gone from bad to worse, and there is every reason to believe that we are on the verge of a severe commercial crisis, which may become catastrophic unless measures are promptly taken to circumscribe the trouble. Ever since the port has been reopened to commerce, there has been nothing but a multiplication and aggravation of every conceivable kind of obstacle to commerce. The congested condition of the port, the outrageous charges for discharging cargo, and for the storing of goods, combined with the high rate of exchange, all combined to make business transactions one long nightmare of trouble and anxiety. For a short period last autumn, when South Russia was open to commerce, it looked as if there might be some improvement in the situation, and there was a rush of orders and buying for the Russian market. But even that short spell of prosperity was seriously marred by the existing evils. Now that the Russian market has suddenly been closed, the situation has become chaotic. Enormous quantities of goods that were in transit for the Black Sea ports have had to be held up here, while further huge cargoes have been brought back to make matters worse still.

Landing charges have been again increased, and now amount to the respectable sum of £T50 a ton, or £12 10s. sterling, more than the freight from Liverpool. The exchange has jumped in a very short time from 340 to 400 piastres to the £ sterling, and the importer who ordered goods three months ago finds that he has to revise his estimate of his gross cost in drastic fashion. As others who obtained stocks before the present situation arose can base their prices upon a much smaller gross cost, and as no one can foretell what further fluctuations may occur, naturally the importer hesitates about taking up his bills of lading. And when he finds that he has to wait weeks before he can get his goods, which are meanwhile lying in a leaky, unsheltered lighter, and will most probably be pilfered in the meanwhile, as well as damaged, he often decides to forfeit any advance he may have paid, and let the exporter stand the racket. Such a state of affairs cannot endure indefinitely, and sooner or later someone is going to feel the pinch. So far as can be judged at present, that someone is likely to be the manufacturer whose goods will be sold by auction to defray expenses, which are so heavy that the balance will hardly be a source of congratulation. Nevertheless, that seems to be the only way out of the difficulties of the situation—unless the Russian market is suddenly reopened.

Needless to say, under the above conditions it is useless even to attempt to obtain orders for future delivery. Goods that are already here warehoused can be disposed of, but the rate of exchange places the present purchaser at a very great disadvantage, and the general result is stagnation so far as business is concerned. The only people who seem to have plenty of business are the "sarrafs," or money brokers, who serve the purposes of the speculators in foreign currencies and gold. These individuals are often largely responsible for the sudden and unreasonable slumps in values, which do an immense amount of harm, for, of course, the rate quoted by the banks for cheques has to keep pace with the exchange for currency values. Thus, it is no uncommon occurrence for the pound sterling to fluctuate as much as 15 per cent. in a few hours. What is a merchant to do when he finds that he has paid 440 piastres to the £ sterling in order to get his bills of lading, and the following day the rate drops to 410? It hardly encourages him to take up his documents promptly next time.

The remedy is not easily devised, for the habit of speculation in currencies seems to have become an ingrained vice of the Constantinople public, and legal measures have hitherto merely aggravated the evil. Nothing short of a complete abolition of the "sarrafs" will be of the slightest avail, and even that will be useless unless membership of the "Bourse" is not a very much less facile matter than it is at present.

ROUMANIA.

BUCHAREST, February 19.

The position of several financial institutions, including the Bucharest Tramway Society and the Banca Nationala, has come into prominence of late. Both those named are recognised Liberal institutions and the Tramway Company has already figured in several Government crises before the war. Dr. Lupu stated in a recent debate that the exploitation of the trams would be taken over by the municipality in case of need.

As for the Banca Nationala, Dr. Vlad, the Minister of

BANQUE D'EXPORTATION PRIV.
DU ROYAUME DE SERBIE.
(Royal priv. Serbian Bank for Exportation.)

Head Office - ATHENS.

BANKING OPERATIONS:
Every description of Banking business transacted.

FINANCIAL OPERATIONS:
Investigations in connection with, and the promotion, organisation and financing of, Limited Joint Stock Companies, with a view to exploiting agricultural, industrial and mineral resources, executing technical works, etc.

COMMERCIAL AND SHIPPING DEPARTMENT:
Purchase and sale of goods on account of clients. Warehousing, Advertising and placing foreign products on the market. Agents for foreign companies and large commercial and industrial firms abroad. General Shipping Agents.

POPULAR BANK OF GREECE.

Head Office, ATHENS. Branch, PIRÆUS.

Correspondents throughout Greece.

Established June, 1905, by the National Bank of Greece and a group of Capitalists.

CAPITAL - Drs. 1,500,000.
RESERVE FUND - Drs. 2,500,000.
Deposits and Credit Accounts, Drs. 100,000,000.

The Bank specialises in the collection of Bills payable in Greece; it accepts goods on consignment, and undertakes their sale, and transacts every kind of Banking business.

General Manager: D. LOVERDO.

TRADE WITH THE NEAR EAST.

The Bank of Athens extends special facilities for business with the Near **East** to manufacturers, exporters and importers.

The Bank has offices in all the principal towns in **Greece,** also in **Egypt,** Cairo and Alexandria, in **Cyprus,** Limassol, in **Constantinople,** in **Smyrna,** and in **France,** Marseilles.

Inquiries from interested parties are invited.

BANK OF ATHENS.

PAID-UP CAPITAL : £1,920,000. **HEAD OFFICE IN ATHENS.**

London Office: 22, Fenchurch Street, E.C. 3.

COMMERCIAL BANK OF GREECE, LIMITED.

CAPITAL PAID-UP - Drs. 15,000,000.
RESERVE FUNDS - Drs. 2,845,010.45.

Head Office: ATHENS.

Branches:—**Piræus, Salonika, Patras, Volo, Syra, Calamata, Corfu, Cephalonia, Candia, Chios, Argos, Pyrgos, Vostizza (Ægion), Nauplia. Larissa.**

AGENTS IN ALL PARTS OF GREECE, THE LEVANT, AND ABROAD.

The Bank conducts every kind of Banking, Commercial and Stock Exchange business and extends special facilities to traders interested in business with Greece. It acts as Agent for many Foreign Banks. It is specially organised for Exchange, the execution of mail and cable transfers throughout Greece, and for the collection of clean and documentary Drafts.

MERCHANDISE DEPARTMENT:
The Bank undertakes the warehousing and sale of goods consigned.

GREECE.

Area 43,522 square miles. The cultivated area amounted to 5,745,300 acres, of which about 2,253,400 were under cereals, 518,900 under grapes and currants, 370,600 under oak trees, 296,500 under olives, and 2,223,900 were forests.

Population (1914), 5,000,000 approximately.

Chief Products (with average annual production):—Currants, 142,000 tons; wines, 3,000,000 casks; tobacco, 9,000,000 lb.; cereals, 8,000,000 bushels; olive oil, 200,000 casks.

The **MINERALS** of Greece include:—Iron, Marble, Magnesite, Emery, Lead, Lignite.

IMPORTS (1914), Old Greece only:—Total value £7,000,000, of which £2,000,000 from the United Kingdom; £1,800,000 from Germany and Austria Hungary; £1,000,000 from Russia.

EXPORTS (1914), Old Greece only:—Total value £4,000,000, of which £3,000,000 came to the United Kingdom.

COINAGE.—The unit is the Drachmæ, equivalent to a Franc (10d.). The current rate of exchange is about 31·75 Drachmæ to £1.

FREIGHT.—From England, 160/- + 10 % primage.

WEIGHTS AND MEASURES.—It was decided in 1898 to introduce the metric system. The change is to be gradual from the old system, which is:—Oke = 2·82 lb., stater = 123·20 lb., livre (Venetian) = 1·05 lb., baril (wine) = 16·33 imperial gallons, kilo = 0·114 imperial quarter, pike = ⅔ of a yard, stremma = ·242 of an acre.

Finance, stoutly opposes the demand of the bank for territorial extension of its note-issuing privileges, and, as a Transylvanian, naturally prefers to have a system of regional banks whereby the new provinces will be financially independent of the great Liberal bank. At the present moment even the existing rights of the Banca Nationala in the old territory are being threatened by the energetic Minister of Finance, who states that the Government, having been refused by the Banca Nationala the same facilities which the bank granted to previous Liberal Governments, will issue its own currency. As the Banca Nationala holds the gold reserve (in theory, at least; the gold is in Russia), it is not clear what the State will offer as a guarantee of this currency—outside treasury bonds, of course. A foreign loan might suffice, but would place the entire Roumanian national credit at the mercy of the fluctuations in price of the money of the lending power, as it is difficult to see how, in these days of scanty gold reserves, any nation could see its way to placing gold at the disposal of the Roumanians. Most of us need our gold to bolster up our own sadly depreciated paper.

Exploitation of State Forests.

The Minister for Agriculture, M. Mihalache, has published his decision that henceforward the State forests may only be exploited by the peasant co-operative societies, and to the peasants also shall belong the exclusive right of supplying the towns with firewood. No details appear to have been published as to the methods of supervision to be employed, but no doubt the Ministry will take such measures as are necessary to protect the forests from the unscientific methods usually employed by the peasants. A recent article in a technical journal deplores the fact that large tracts of forest allotted to the peasants for firewood and building purposes are being gradually reduced to waste land, no provision being made for future growth. But the Government is fully alive to the importance to its revenues of the timber industry, and, in allowing the peasants the above monopoly, will no doubt take steps to prevent the waste which took place under former conditions.

MOROCCO.

TANGIER, February 22.

British Trade Outlook.

Notwithstanding that British trade is handicapped by the difficulties of the exchange, the natives are beginning to take a renewed interest in British goods, which is a very good sign. It is also encouraging to see so many representatives of British firms travelling about the country, and especially the fact that quite a number of important firms who have hitherto taken little or no interest in Morocco are sending their travellers here.

The clauses in the new Dahir establishing a Bourse de Commerce which give the monopoly of marine insurance and chartering to sworn brokers is very much criticised, and it is hoped that the Dahir will not be applied to British subjects by Order in Council, at least until its possible effects have been thoroughly studied from every point of view.

French Motor Transport Company.

A company was formed lately in Paris which was guaranteed a subvention by the Government for the motor transport of goods and passengers in the French Protectorate of Morocco. This places all the other motor businesses in the Protectorate at a very great disadvantage, and is resented by all interested. It seems open to question whether such action is strictly in accordance with the international undertakings regarding Morocco.

The conditions under which German goods may be imported into Morocco have been published in the *Bulletin Officiel*. Special conditions are applicable to German goods entering the French Zone viâ the Spanish Zone, which are subject to a higher customs duty than those entering direct.

The port is more animated to-day. There are twelve steamers at anchor, four of which are British (one Royal Mail, one Power Line, and two Blands), which makes one feel quite cheerful!

CYPRUS.

February 15.

Free Export of Carobs

The Government has removed the restriction against the free export of carobs, on condition that a sufficient quantity is kept for the needs of the island. For a long time export has not been allowed except to the United Kingdom, and this has given great dissatisfaction both to growers and merchants, who have not profited from advantages enjoyed by some other classes. Great satisfaction is now expressed. The present price is 34s. to 35s. the kantar (of 180 okes). The island price is two piastres the oke. The general agricultural outlook is regarded as very satisfactory.

THE BRITISH INDUSTRIES FAIR.

SECOND IMPRESSIONS.

(FROM OUR OWN CORRESPONDENT.)

Of the success of this year's fair, there can be no question. All accounts agree that the business so far transacted promises record results. What has been happening may be gathered from the experiences of the china and pottery manufacturers represented at the Crystal Palace. They have found an immense demand for their wares on the part of overseas buyers and in many cases orders have been booked for long periods ahead. It all goes to show the immense value of systematic advertising, whether by way of fairs or in the Press. Attempted individually, it would have entailed enormous expense on the part of firms seeking the opportunity to bring their wares before buyers that they have through the medium of the Fair. As one observer put it, "The wonder is it was not instituted fifty years ago." Now that they have this invaluable selling medium, firms are placed in a position of unique advantage for the successful entrance of foreign markets, notably those of the Near East, provided, of course, that they realise that the Fair is not the be-all and end-all of enterprise on their part, but merely the channel which will help them to bring to a successful conclusion a campaign judiciously executed by them in the countries with which they are attempting to do business. It is, in short, the shaft of trade enterprise, and it is for the firms themselves to supply the spearhead.

I was very much impressed with the general arrangement of the Fair this year. It has always been a notable exhibition, but the circumscribed space available on previous occasions has detracted from the general effect. No such complaint can be made on the present occasion. The demand on the disposable space, as I have pointed out, has been very great—so much so, indeed, as to make it certain that further accommodation will be subsequently required—but those responsible have not allowed this factor to prevent their giving exhibitors rather more space than before, which, combined with the vastness of the building, helps to give a most pleasing effect. The Palace is crowded with stalls, but one does not notice the denseness.

In my previous article I touched on only a few of the many classes of exhibits on view at the Palace, and I will now attempt to amplify that description by a reference to some of the more notable among the remainder. One of the most interesting sections was that devoted to cutlery, which has not previously been included among the exhibits at the British Industries Fairs. Needless to say, Sheffield is predominant. Features of the section are the display of artisans' knives, pocket knives, razors, rustless and stainless cutlery (which is shown by no less than twenty firms), scissors and table cutlery. Perhaps more than in the case of other exhibits is the quality of British goods in evidence as regards cutlery. Some stands of special interest were those of the Sheffield Steel Products, the Sheffield Silver Plate and Cutlery Company, and Messrs. Lockwood Bros.

One of the most comprehensive sections is that devoted to toys and games. I should imagine that it includes examples of the vast majority of articles that come under that title. Everything is there, from the doll to the billiard table, from constructional mechanism to indoor table games, from scooters to sport goods. It is really a wonderful exhibition of the capabilities of a branch of industry in which this country has always been foremost, but which has been greatly developed since 1914. Among the well-known firms showing billiard tables are Messrs. Thurston and Co., while Messrs. F. H. Ayres, Messrs. John Jaques and Son, Messrs. Lillywhite Frowds and Messrs. Frank Sugg are prominent among the firms showing sports requisites. A feature of the stands in this section is the great number of new firms which have been established in the last few years for the manufacture of toys and dolls. In regard to these goods, British traders were far behind their continental rivals before the war. That they have now caught them up and passed them will be clear from the most cursory inspection of the really notable display of novelties.

Finally, a word is called for with regard to the jewellery, silver, and electro-plate exhibits, all of which are calculated to make a special appeal to overseas buyers, particularly in markets like those of the Near East and India, where there is always a great demand for ornaments of every description. As regards jewellery and silver and electro-plate, one might with propriety write the word Birmingham, since these are typical industries of that great centre, and the Birmingham firms predominate in the list. Very interesting were the stands of Messrs. Adie Bros. and the Wilmot Manufacturing Co., while Messrs. H. Williamson had on view notable examples of their watches.

ROYAL SCHOOL
FOR
Daughters of Officers of the Army.

Patrons
Their MAJESTIES THE KING AND QUEEN
and HER MAJESTY QUEEN ALEXANDRA.
Chairman: LT.-COL. A. GRUBB. J.P.
Vice-Chairman—SURGEON-GEN. SIR WILLIAM TAYLOR, K.C.B.

Daughters of Officers of the Army are admitted to the above Schools according to the circumstances of their parents, at rates of £20, £45, £65, and £80 a year. Granddaughters of Officers are admitted at £45, £55, and £80 a year according to circumstances, and a limited number of daughters of civilians are admitted at £120 a year when there are vacancies. There are 15 Scholarships, open to competition, in the School, of amounts varying from £10 to £20 up to one of £50.

As half of the School consists of pupils on the £15 foundation, which includes both board and education, a deficiency of about £2,500 a year has to be met by contributions, which are earnestly solicited. Donations of £5 5s., giving one vote for life, or subscriptions of 10s. 6d., giving one vote for the year, may be sent to

F. W. T. ATTREE, COLONEL (late R.E.), Secretary.
Office: Panton House, 25, Haymarket, S.W.1.

EASTERN MARKETS FOR MOTORS.

II.—Flexible Light Cars Essential.*

(From a Correspondent.)

In my last article the future of the motor industry, so far as passenger cars were concerned, was discussed, and I ventured to express the opinion that the openings were truly enormous and the possibilities almost incredible. That if we could but utilise them by the exercise of sound commonsense, adaptability, and the co-operation of all classes, the nation need have no fear of putting the nightmare of the past behind it, and entering upon a period of prosperity which should carry us all (all classes) as far along the road to happiness and contentment as is possible in an imperfect world.

It now behoves us to look a little into the question of where our markets are and what is required for them. It needs no great flight of imagination and foresight to indicate that the demand for cars, as for other manufactures, is not going to be limited to the requirements of these islands, nor will such requirements permanently fill our needs. We must at once look abroad to the colonies, to the countries of the Near, Middle and Far East to discover what they need, and design our productions accordingly as early as possible, and, even at the expense of keeping the home market short, begin now to secure a footing before the opportunity is lost to us and gained by others as the boom comes.

I fear that it is not possible to speak nearly so optimistically about the future of our prospects abroad, unless there is a great change in British adaptability. The importance of these markets, however, is very great. It was not easy to find cars in the Olympia Exhibition that were designed for colonial use or that, in my opinion, were specially suited for the same. The roads of Great Britain are so excellent—yes, grumblers notwithstanding, excellent—that cars designed merely to travel comfortably over them may be, and are, barred entirely for colonial use except in the big towns. Far too many makers, I am afraid, direct their attention almost wholly to the production of cars suitable for these roads. There are notable exceptions, but more than that it is not possible to say.

For the colonies and the great outlying places of the world, what is required of the designer is a car that will cross over tracts where no roads exist without knocking itself to pieces; that can live, in other words, where other cars would simply collapse. We are not concerned with its holding the record at high speeds, nor with the luxurious comfort of the passenger; the sole purpose of such a car is simply *to get there*. Reasonable comfort should be provided, but to get through at all is the main thing. The alternative is probably to ride a camel, and the advantages of a car that can get through safely and unhurt are more than obvious. Such a car will make districts accessible that would otherwise be without communications until financial considerations make a railway possible—if ever.

Let us take the case of the Sudan. A reference to the map will show what immense tracts there are without any means of communication. The rivers are mostly studded with cataracts at various points, which render them useless as main arteries of transport. The soil is fruitful, and where water is available is highly productive. Further railway extension, owing to the enormous distances, involving an expenditure which the finances of the country do not warrant, cannot be hoped for on any large scale. There are oases where cattle are bred in large numbers, but cannot be brought away, for they would die of thirst before they reached civilisation. All these places have to be visited, and the only means of transit are the camel and the motor-car. The provinces of Darfur and Kassala and others are in absolute need of easier access, and the demand for light cars is considerable and will increase.

It must be emphasised that the use of such cars will not be limited to passenger-carrying purposes. They have been used after the manner of tradesmen's vans for light loads throughout the war. Who shall say that an equally flexible light lorry will not make its appearance, and, if it does, will establish connection with those oases by means of watering-places for cattle en route? This would enable the cattle to escape into civilisation, carrying a load of produce with them. Some such development seems indicated to my mind. Without a doubt there is a future for the development of light cars of a flexible type, not only in the Sudan, but in scores of outlying places. Is industrial England to remain somewhat backward in the production of these cars?

The manufacturers must remember that there are no roads, so the cars need not be designed to hold the road at high speed. They should be designed to enable the car to go at moderate speed over "anything on earth" as near as may be, in which characteristics the Ford has certainly led the way. I recollect seeing what was for courtesy called a road starting from Gebet or one of those stations at the head of the ghats above Port Sudan, where the railway leaves the tableland and starts its descent to the Red Sea. This was stated to represent a road to Kassala some hundreds of miles off. It consisted of a mere attempt to clear the stones off the track and to stack them in lines either side. A few miles further on this was done only in a perfunctory sort of way, and further on again the effort ceased altogether.

Just as in the Sudan the light car was invaluable in the operations against the Senussi, so it has been in the western desert of Egypt both for passenger traffic as well as a carrier of light loads. That spectacular dive of the Duke of Westminster's into the desert to rescue the crew of the "Tara" was performed by armoured Rolls-Royce cars. The reason for this is suggestive, and provides a useful hint for designers. The standard light cars are not up to the weight-carrying capacity necessary for an armoured car. Had there been a car identical as to flexibility with the light car—but capable of carrying four times the load—it would have made an excellent armoured car. The flexible light car of the future might reasonably have a heavier brother to do duty as a light lorry—a sort of farm-cart for the colonies.

In our next article we will refer to the needs of a few other countries, and go more particularly into the requirements of car design.

* The first article of this series appeared in The Near East of February 26.

MISCELLANEOUS TOPICS.

Fuel Saving.

It has been estimated that in this country alone over twenty million tons of coal per annum could be saved were the efficiency of the steam-raising plants increased by 15 per cent. Some time ago a Commission stated that were all our steam plants as efficient as the best in use, quite 50 per cent. of the coal used for steam-raising might be saved. These are striking figures, and every effort should certainly be made to improve combustion wherever possible. All experts are agreed that the criterion of good combustion is a high percentage of carbon dioxide in the flue gases,

Digitized by Google

and this, of course, depends on the correct amount of air being burned in the furnace. To ensure this, boiler furnaces are fitted with dampers, but it is obvious that unless some means is provided by which the amount of carbon dioxide can be ascertained, the use of these must be largely a matter of guesswork. Perfect combustion should give about 19 per cent. of this gas in the flue, but it is to be doubted whether more than 5 per cent. is to be found in the gases passing through the flues when this damper regulation is left to the unaided judgment of the stoker. Proper air manipulation in a boiler, just as in an internal combustion engine means a saving of fuel, which in itself means a saving also of labour, as the stoker has so much less coal to shovel on the fire. With a view to eliminating this guesswork and to bringing about a consequent saving of fuel, instruments known as CO_2 recorders have been on the market for some time, some of which have been almost too sensitive and complicated to come into general use. Some types have even given so much trouble that their use has been discontinued, and in a recently-issued report on coal economy, the U.S. Bureau of Mines says: "Furnace control devices, especially of the CO_2 recorder type, are indispensable to modern boiler installations, and their use would become general were they not so complicated." All that appears to be needed, therefore, is a simple instrument which shall be accurate, reliable, and free from complications, and I have just received particulars of one which appears as though it should answer all these requirements. Known as the "W.R." CO_2 Indicator, it appears to be made at Leeds, and the claim is made that it is within 1 per cent. of absolute accuracy. It responds quickly to all changes of the flue gases, and gives a continuous reading of the CO_2 present in the furnace, and so far as I can judge there is no part of the instrument which is liable to get out of order. As regards its economy, it is claimed that an average inefficient plant using 50 tons of coal per week could save by the installation of one of these instruments from £200 to £500 per annum, in which case the instrument would pay for itself in a few weeks.

Coal and Heat.

It has been said that fuel users as a class are not scientific in their method of purchasing coal, but the present price of fuel has a teaching force which was never found in the days of cheap coal, and there is hardly a power user but is anxious to economise where possible. At the same time, it must be admitted that the methods of a past generation are still in fairly general use, in spite of the information available as to the use of pulverised coal, the suitability of certain kinds of briquettes, etc. An authority once said that no other raw material of equal importance to the economic conduct of our industries is purchased with such an absence of effective means for checking the quality of the supplies as coal. The usual method of selecting the coal, so far as such selection is possible, is also open to criticism, while the means taken to ensure that deliveries of the selected coal are up to the standard of the sample are generally insufficient.

In purchasing coal, it is not sufficient to order several sample car loads from different dealers, and to burn these under the boilers and note results. These samples, as has frequently been pointed out, may have been subjected to very different conditions as regards weather. The conditions in the boiler-room may change, and the results thus obtained not be any true indication of the respective value of the different supplies. Everyone who has conducted boiler tests is familiar with the variations which may occur and which will yield different results. Further, as Mr. J. C. Kershaw once said, the methods used for checking the quality of the deliveries under the contract with the dealer are hopelessly inadequate.

The method offered as a substitute for these rough-and-ready methods is simply that used for testing and controlling the supplies of other raw materials—namely, chemical and laboratory tests carried out by chemists who have had experience in this class of work. In these tests it is usual to heat the sample to a certain temperature, about 230 degrees Fahr., so as to dry off the moisture. It is then raised to a red heat in a closed crucible, so as to drive off the hydrogen gases and sulphur. It is then heated with access of air so as to burn the remaining carbon, leaving the ash. This gives the moisture the volatile contents, the fixed carbon, and the ash. It is also desirable, when convenient, to check the results obtained in this way with calorimeter tests. When such tests are made, it is a comparatively simple matter to determine which is the best or cheapest of a number of different classes of fuel and grades of coal, from the cheapest to what is often sold, without good foundation, as being the best obtainable.

Modern Dyeing Machines.

Apart from the native dyers (the ever-busy Oriental *boyatjis*), with their archaic vat equipments and methods for dyeing textile materials, who, nevertheless, do considerable business all the year round, there are several steam and other power cotton and wool factories in the East, which, in spite of their modern plant of textile machinery, still adhere to the old, cumbersome *boyatjis'* methods of dyeing. But there are modern machines of the vat system which could be obtained at a very reasonable outlay, and which give far better results at a much lower scale of working expenses. We may allude to one of these machines, which is especially adapted for vat colours. It is so constructed that the operation of dyeing, washing, diazotising, developing, oxidising, and hydro-extracting can be performed without disturbing the material in any way, once it has been placed in the machine. In this machine the hydro-extractor is self-contained in the dyeing chamber, so that as soon as dyeing is complete, hydro-extracting commences. Dyeing takes place in a partial vacuum, which ensures perfect and even penetration. Air may also be blown through the material for oxidising purposes when necessary. A great saving of labour and dye-stuff, a larger output, improved conditions of the manufactured goods, and economy of power and space are claimed as characteristics of this machine.

Tire Setting Machine.

Agriculturists, and those who use vehicles or implements with wooden wheels, are in a position to know the trouble attached to such wheels in hot weather, and the inconvenience experienced when tires become slack and wheelwrights or blacksmiths are not near at hand. It often means suspension of work and loss of time at an important period of the year. All these can be prevented by a compact little machine which was viewed at a recent show. According to those who were using it, the machine is "a very powerful tool," and is much quicker than the old-fashioned style of putting on tires. In addition, the machine is useful when the tires become slack, as they will do in hot weather especially. Instead of rewelding the tire—a method occupying considerable time—all that the operator has to do is to set the wheel in the tire of the machine and tighten it up, a matter of ten minutes or so, which means that it is effecting a considerable saving in labour. It is claimed that two men can put on about fifteen pairs of tires a day. One of the chief advantages of this machine is that it has a key-adjusting device which forces the grip keys against the tire, making them work evenly, and preventing their slipping on the tire. The keys are made fast in the machine with a movement of the hand in forcing the lever down, and the keys are absolutely obliged to work evenly and cannot slip. It is claimed to be the only machine with draw-heads moving on a circle to conform to the circle of the tire, and, in the writer's opinion, is a most-needed machine in the East, where there are not many skilled wheelwrights, and many vehicles and implements have to remain idle when needed most through the want of capable men to effect repairs.

A Mechanical Ship Scraper.

As is known, the very limited number of dry docks in the Mediterranean is causing considerable inconvenience to the shipping in those waters and the Black Sea. The existing dry docks at Piræus, Malta, or Genoa are either occupied by warships, which in all cases have priority, or are engaged for days or weeks in advance, and a ship in such case will have to wait, if she can afford it, for her turn. But apart from these difficulties, dry docking and scraping is an extremely expensive business; while, on the other hand, a foul bottom slows a ship very seriously and means a great wastage of fuel on a long voyage. The invention, therefore, of a means of cleaning a ship without going into the dry dock will be of much interest to the Mediterranean shipowners and others. A mechanical brush has been invented, which is driven by a submersible electric motor, and which promises to be of great assistance in reducing the expense and time needed to keep a ship's hull clean. With it the ship can be cleaned while lying in port, and even while unloading her cargo. The brush is lowered from a derrick or a special barge, equipped also with a small generating plant, and is held close up to the vessel's side by a propeller driven by the brush motor. The side of a ship is treated in circumferential strips about four feet wide, the brush overlapping slightly the strip just treated. A 5,000-ton vessel can be scoured in about six hours.

Goddard Patent Hammock-Bed.

Among the exhibits at the British Industries Fair at the Crystal Palace to which reference was made in these columns last week is the Goddard Patent Hammock Bed, one of the many invaluable inventions of war time which are equally of use for the purposes of peace. Mr. Goddard's hammock, a most ingenious invention, was used extensively by the British Armies on all fronts and by the Belgian forces in Flanders in the dual capacity of bed and stretcher. The hammock bed when packed is no larger than the size of a golf bag, three feet in length and weighing 18 lb. When in use it is seven feet long and twenty-two inches in width. The hammock, it may be added, is made of green rot-proof canvas, and can be washed when required. Among its most valuable features is the fact that it can be erected or packed almost instantaneously. For camping-out purposes or for use in gardens or balconies, etc., it is most useful, and should prove most popular throughout the Near East and India.

MOTOR TRANSPORT IN THE SUDAN.

TYPE OF TRACTOR REQUIRED.

Messrs. Ransomes Sims and Jeffries, of Ipswich, write as follows with regard to the articles with the above title by Mr. Joseph Rhodes, A.M.I.Mech.E., A.M.I. Auto E., S.G.S., which appeared in the issues of THE NEAR EAST of February 12 and 19:—

"We notice it is stated that in places deep sand drifts would have to be negotiated. For such conditions the caterpillar tractor would be necessary. But it is also stated that there are hundreds of miles of firm, cleared roads in many parts of the country. For such roads a steam tractor, burning wood fuel, would be the most economical and practical form of motive power, especially as it is mentioned that wood fuel would be cheap, and easy to obtain. Would it not be possible to use the steam tractors for the decent roads and the caterpillar tractors for the districts where the conditions are adverse?

"We should recommend using a steam wood-burning tractor wherever possible, as having considerable advantages in many ways. In the first place, it is the simplest form of tractor which exists, requires the least skilled attention, and is not subject to the tremendous wear necessitating a yearly refitting which is attached to the caterpillar tractor, while it has none of the complicated mechanism and tricks of management associated with petrol tractors. Further than this, of course, if, as stated, wood fuel is available at a low cost, it would give an enormous economy in expense for fuel, and would provide a fuel in regard to which there would be no uncertainty of supply. The only question is that of water. With the standard tanks on the engine a supply would be required about every eight miles, but with additional tanks it would be possible to go for a twelve-mile run with load. Would it be possible to arrange for such supplies? We notice that Mr. Rhodes, in his article, lays stress upon the point that steam tractors would be the most suitable in many ways, for the reasons we have given, but that it would be necessary to arrange these to condense their own steam and travel 100 miles between water supplies. An attempt has been made to produce a practicable working engine for somewhat similar conditions, but the complication is so enormous that we should never recommend the idea. If you can arrange for a suitable water supply every twelve miles, then there is no doubt the steam tractor would be the best; but if this cannot be done, then, as Mr. Rhodes mentions, the only possible tractor is an oil tractor.

"We may mention that we had a call the other day at our works from a military officer who had been in charge of the transport in a large sector on the Western Front, and he told us that he had tractors of all kinds, all sizes, and all classes, but the two most popular of all were two of ours—i.e., our R.C.T. 35 b.h.p., as illustrated at page 21 of Catalogue 6990 E, which we send you herewith. This engine is shown in the illustration with the kind of wheels we should recommend for roads inclined to be soft and sandy—i.e., fitted with waved cleats—and we should recommend extra wide wheels—say, 24 in. wide. The officer referred to told us with regard to our two tractors that when he divided up the work for the day the drivers always begged to have one of the two Ransome tractors. He said that these tractors were strong enough to do all the hauling required, but on account of their lightness and perfect manœuvring capabilities, they never got into difficulties, while the more powerful engines were continually being stranded and having to be dug out. Mr. Rhodes, in his article, mentions that the conditions of the roads on the Western Front were worse than anything likely to be met elsewhere, and as these light R.C.T. steam tractors gave such unqualified satisfaction there, we think that their use in the district mentioned for the purpose specified is worth consideration."

BRITISH EXPORTS TO ROUMANIA.

The attention of the Department of Overseas Trade has been called by His Majesty's Commercial Secretary at Bucharest to the fact that recent shipments of British goods to Roumania have shown much to be desired in the matter of packing. In some instances, bales and packages on arrival from England have not been suitable to withstand the extremely hard usage which they receive, and in consequence quantities of goods have been damaged or lost through robberies, encouraged no doubt by the ease with which goods could be pilfered from broken packages.

In order to facilitate entries through the Customs and the classification of goods contained in bales or packages, exporters are advised where possible to give a specification of the contents of each bale or case showing the kind of goods, weight, both gross and nett, and in the case of cottons and linens, the number of threads to the square centimetre and the weight per square metre in grammes. In the case of woollens or mixtures the exact composition should be clearly stated, *i.e.*, the percentage of silk, cotton, or other textile therein contained. Invoices should, if possible, relate only to the bales in each parcel shipped and not, as has occurred in some cases, to several parcels shipped on different steamers. Exactitude of detail is very necessary in order to enable the entries through the Customs to be carried out expeditiously. Careful attention to such points will well repay shippers of British goods to Roumania.

OTTOMAN PUBLIC DEBT.

The Council of Foreign Bondholders communicate the following information with regard to the gross receipts of the Council of Administration of the Ottoman Public Debt on account of the United Debt and Lots Turcs:—Provisional receipts, nine months (March to November), 1919, £T5,214,963 (paper). Definitive receipts nine months (March to November), 1918, £T3,620,724 (paper). For the same period in 1913 the definitive gross receipts were £T3,873,632 gold. The above receipts do not include interest on the reserve fund, Tripoli contribution, Treasury account, etc. In the returns published by the Council on the 6th and 17th ult. these items were included in the case of the receipts for 1913. With the omission of these, the figures should be:—Receipts to end of September, 1913, £T3,123,297. Receipts to end of October, 1913, £T3,491,040.

The taxes collected at the Pirœus Customs House during November, 1919, amounted to 5,453,600.45 drachmæ.

Pig-breeding is a growing source of wealth to Morocco and the French Zone, which six years ago possessed no pigs, but has at the present time 150,000.

The traffic receipts of the Suez Canal for the fortnight ended February 8 amounted to 6,790,000 francs, against 4,650,000 francs.

It is officially announced that Mr. H. V. Kaye, late joint manager with Mr. L. D. Anderson of the Overseas Branch of the London Joint City and Midland Bank, has been appointed joint general manager of Messrs. Cox and Co. with Mr. C. S. Clarke.

LIONDA & COMPANY, Ltd. 3, Broad Street Buildings, Liverpool Street, LONDON, E.C.2.

Tel.: "EXPLIONDAC AVE, LONDON." Cables: "EXPLIONDAC, LONDON."

Export Department: Heavy and Light Chemicals, Colonial Spices, Metals, Dried and Salted Fish, Matches, etc. Paper of any description, and all kinds of British, Scandinavian, Dutch and American Produce.

Hellenic, Sudanese and Egyptian Produce: Are always Buyers of Currants, Figs, Olive Oil, Locust Beans, etc., Gum, Senna Leaves, Beeswax, Hides and Skins, Cotton Seed, Onions, etc., etc.

SHIPPING INTELLIGENCE.

Forthcoming Sailings.

The s.s. Cranmore, for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Tulcea, Galatz, and Braila, will close for cargo at Liverpool on March 6.

The Ellerman s.s. Falernian, for Gibraltar, Malta, and Alexandria, taking cargo for Beyrout, Alexandretta, Mersina, Cyprus, etc., will close for cargo at Liverpool on March 20.

The Ellerman s.s. Maromian, for Syra, Smyrna, and Constantinople, will close for cargo at Liverpool on March 24.

The Prince Line s.s. Cyprian Prince, for Tunis, Malta, Alexandria, Jaffa, Haifa, and Beyrout direct, will close for cargo at Manchester on March 13.

The Papayanni (Ellerman Lines, Ltd.) s.s. Malatian, for Malta and Alexandria (taking cargo for Beyrout, Alexandretta, Jaffa, Cyprus, etc.), will close for cargo on March 6.

The Papayanni (Ellerman Lines, Ltd.) s.s. Belgravian, for Algiers, Smyrna, and Constantinople, will leave Liverpool on March 13.

The Anchor Line s.s. Freinbels, for Bombay will close for cargo at Glasgow on March 13, and at Liverpool on March 23.

The Cunard s.s. Corby, for Gibraltar, Malta, Patras, Piræus, Smyrna, and Constantinople, will close for cargo at Manchester on March 13, and at Liverpool on March 20.

The Cunard s.s. Coya, for Piræus, Constantinople, Galatz, and Batoum, will close for cargo at Antwerp on March 6.

The Bibby Line s.s. Gloucestershire, for Marseilles, Port Said, and Colombo, will close for cargo at Birkenhead on March 24.

LANCASHIRE COTTON.

(From Our Own Correspondent.)

Manchester, Monday.

The tone throughout the market has continued quieter. Although trading has been less active than a few weeks ago, there is evidence of a good deal of demand not yet satisfied; and if there should be any signs of higher values a larger turnover would undoubtedly be experienced. As matters stand at present, sellers are very indifferent as to booking fresh orders; and if goods are wanted, buyers have to operate on the terms of producers. The further fluctuations in Egyptian cotton prices have again caused uneasiness, and business has been of smaller dimensions. It is feared that the current crop will be less than 6,000,000 kantars. There is no probability of the acreage for next season being limited. In Egyptian yarns users have been afraid to purchase with any freedom. Perhaps, on the whole, spinners are not quite so deeply sold as at the beginning of the year. Quotations are beginning to show a little more irregularity, and fine counts are stronger than coarse numbers. In cloth for Egypt there has been a reduced turnover, and for the Near Eastern outlets generally there has been less activity. This development has been chiefly due to the stiff prices of makers. Very few workable bids have been met with for India, but some encouraging sales have been put through for China in grey and white shirtings and fancies for delivery up to the end of the year. Some useful lines have been negotiated in printed and dyed cloths for South America. In American yarns for home consumption the turnover has not been important, but prices have been very stiffly held, especially in twists. In export yarns India continues to be the best outlet.

Cotton Mills Amalgamation.

Great interest has been taken this week in Lancashire cotton trade circles in the amalgamation of mills under the style of "Crosses and Winkworth Consolidated Mills, Ltd." In addition to the mills of Messrs. Crosses and Winkworth, Bolton, containing 400,000 spindles, the combine will include Messrs. Lord, Hampson and Lord, Bolton, 87,000 spindles; Messrs. Ward and Walker, Bolton, 103,000 spindles; Messrs. Ainsworth Bros. and Co., Great Lever, 98,000 spindles; and Messrs. W. and C. Ainsworth, Ltd., Great Lever, 88,000 spindles; making a total of nearly 800,000 spindles. The capital of the new company is £7,000,000 in 5,000,000 £1 10s. per cent. participating preference shares and 40,000,000 1s. ordinary shares. The leading directors will be Messrs. E. Challinor, of Southport, and H. P. Kearton, of Bury.

FIRST-CLASS REFERENCES.

THE ADEN SKIN MARKET.

The year 1919 has been an unprecedented one in the Aden market for goat and sheep skins, says the American Consul at Aden, Mr. Addison E. Southard, in a recent report. Supplies of good quality have continued to arrive regularly, and there has been a steady upward trend in prices owing largely to the insistent demand from American tanners. The latest quotations are on the average 20 per cent. higher than what was considered the high level reached in June of the present year.

The enhanced exchange value of the rupee is not necessarily considered by the local native who has goat and sheep skins to sell. His rupee is usually expended or invested in this district, and a rupee therefore remains a rupee to him, regardless of its bank exchange value. The increased purchasing power of the rupee in foreign markets has had practically no effect upon local prices, for the reason that the bulk of Aden's imports are from or through India, where the rupee is also the currency unit. The Arab, the Somali, or other Red Sea native who contributes goat and sheep skins to the Aden market does not, therefore, generally benefit from the increased exchange value of the rupee, and neither does he benefit largely from the increased number of rupees received for his skins, as the cotton cloth, kerosene, hardware, and bulk foodstuffs (rice, flour, and dates) which he buys have all arbitrarily gone up in rupee prices as well. Prices for goat and sheep skins in the Aden market are considered to be greater than they should be, owing to the competition of buyers for the American markets.

Good Quality of Skins.

Abyssinian goatskins lead the local market at prices ranging from 55 to 60 rupees per score. Goatskins of this class arriving from Abyssinia since the end of the rainy season in that country in September have been of excellent quality, and have exceeded by from 5 to 10 lb. the average weight of 120 lb. to the hundred skins. For a few weeks considerable shipments of Abyssinian skins stopped in Jibouti owing to the developing there of a demand which sent prices somewhat above the Aden level. Aden prices are again ruling, and not so many skins will stop in Jibouti for the present at least. Skins bought in Abyssinia are usually paid for in Maria Theresa dollars.

Blackhead sheepskins, coming principally from the Somaliland coasts, are arriving in good quantities of good quality. Prices offered are from 50 to 57 rupees per score. Arabian goatskins are also in good supply with prices at from 40 to 45 rupees per score for the better sorts. Last sales of Yemens were at 41 rupees, and of Konfidahs and Ghizans at 47 rupees per score. There is a demand for whitehead and redhead Arabian sheepskins at 25 rupees per score for the first named and at 24 rupees per score for the redheads. Good supplies are available, and some new sources of supply for both goat and sheep skins have been developed owing to the demand and the excellent prices ruling. All prices quoted above are for skins without selection; that is, lots offered are bought at these prices before selecting or grading.

Export Duty on Hides and Skins.

Although Aden is still partially under the jurisdiction of the Bombay Presidency to the extent that Indian laws rule in Aden and its Government is administered by officials of the Indian Government, the local authorities are quite aware that free trade is a decidedly important element in Aden's position as the commercial centre of the Red Sea district, and they do not, therefore, intend, for the present at least, to impose the 15 per cent. export duty on hides and skins which recently went into effect at Indian ports. To impose this duty at Aden would very likely throw more of the Red Sea trade in hides and skins to Jibouti, Massowah, and Jiddah, which places have not the superior shipping connections or accommodations available at Aden, but which would probably be able largely to overcome this handicap if Aden ceased to be a free port as regards either import or export duties. The present export duty at Jiddah is 5 per cent., and at Massowah it is 8 per cent. for goods shipped to places other than Italian territory, in which latter event it is reduced to 1 per cent. There is a small tax on exports from Jibouti. It is also probable that Aden buyers can afford to pay more in the Aden market for goat and sheep skins as compared with buyers in Indian markets, who have to consider the export duty. This has not, however, yet been demonstrated.

TRADE OPPORTUNITIES.

Contractor having several large contracts in the NEAR AND FAR EAST which involve excavating canals, river improvement work, excavation for docks and harbour improvements, etc., wishes communicate those having excavating equipment, new or secondhand to offer. For convenience prefer communicate Eastern representative. Write Box 154, "The Near East," 1, Devonshire Square, London, E.C. 2.

NEAR EAST MARKETS.

LONDON PRODUCE REPORT.

Currants.—There is little fresh to report. A rather more pronounced demand has been in evidence, and there is no question that the market is, on the whole, increasing. Imports of currants during January amounted to 7,407 tons, as against 3,589¾ tons for the corresponding month of 1919. Home consumption for the month amounted to 4,306 tons, as against 552 tons a year ago.

Sultanas.—The demand for this commodity continues to be very steady. Stocks are reported to be sufficient at the moment, but it cannot be said that supplies in sight are in any way adequate.

Sugar.—A quiet tendency has been in evidence as regards the raw commodity, but prices are well maintained for free sugar. Reports from Cuba continue to be favourable, though the latest returns of stocks are somewhat below those of this time last year.

Coffee.—The market has ruled firm, and a fair amount of business has been transacted. Costa Rica has come to business round about 168s., while East Indian has been done at 167s. Nairobi varieties have been somewhat dearer, while Jamaica qualities have been done at prices ranging between 140s. and 170s. The future market has been a trifle uncertain, and has closed a shade up on balance. Messrs. Reynolds and Gibson report that their advices are to the effect that prohibition is making its mark upon coffee in America, and that consumption shows an increase as a result of this measure, that interior stocks are small, but deliveries restricted by transportation delays. They point out that should the dollar exchange maintain its present level and continue without violent fluctuations, it should impart a degree of steadiness to coffee in New York, while an improvement of moment in the value of the £ sterling would cause an advance in prices there.

Oilseeds.—The position remains much the same. There is a fair demand, and prices are firm. Indian linseed has been done at about 55s., while Argentine has come to business at 47s. Rapeseed has been strong, with Toria at 56s. Egyptian cottonseed is quoted at about 31s., and the Indian variety at 24s. 6d.

Oilcakes, etc.—Lack of demand for oilcakes has given a somewhat weak tone to the market. Linseed cake has been done at 24s. per cwt., ground nut cake at 17s. 2d., and soya bean cake at 24s. Oils continue firm. Linseed oil has been quoted about 117s., while rapeseed oil has been a strong spot at 125s.

SUDAN PRODUCE.

The following extracts are taken from the C.E.B. report for December :—

Gum.

Exports during December were, via Port Sudan, 797,212 kilos of hashab of the value of £E33,655, 16,955 kilos of bleached of the value of £E848, and 50,673 kilos of talh of the value of £E1,376, and, via Halfa, 128,688 kilos of hashab of the value of £E5,370 and 12,471 kilos of talh of the value of £E310.

Kordofan Province.—Amount of gum sold in El Obeid Market in December was 7,323 kantars, as against 9,349 kantars during the same month last year. The average price was £E1.451 per kantar of 100 rottles (45 kilos). Arrivals from Nahud were 11,304 kantars, as against 4,968 kantars during the same month last year; 2,210 kantars were sold at Um Ruaba at £E1.300 per kantar, as against 4,306 kantars last year; 5,206 kantars were sold at Rahad at £1.415 per kantar, as against 4,458 kantars last year.

Cotton.

Red Sea Province.—Tokar: Though there has been little or no rain during the month, climatic conditions have been favourable, and the cotton crop prospects are rosy, and there seems every hope of a crop of some 31,000 kantars of 315 rottles (unginned) at the least.

Berber Province.—On the Gendetto pumping scheme the cotton is again very fine. At Kitiab the cotton is poor, except at the south end of Kitiab Island.

Dura and Dukhn.

Berber Province.—On the Gendetto pumping scheme the per ardeb of 380 rottles (171 kilos) to P.T.378 in November and to P.T.360 in December. Feterita dura rose from P.T.307 to P.T.324 per ardeb in November, but fell to P.T.300 in December. Dura on the Kelli Basin is very fine, and only slightly affected by stemborer.

White Nile Province.—Dura has arrived on the markets in considerable quantities during the month. There was a heavy demand for Omdurman at high prices in the early part of the month. Prices have since fallen, but are still high.

Blue Nile Province.—Large quantities of dura are being brought into the Morades of Medani and Hassaheissa, as the following figures show:—16,481 ardebs of 300 rottles (135 kilos) to Medani, 5,815 ardebs of 300 rottles to H. Heissa. The price has continued to rise. The lowest price for the month was £E1.92 m/ms. per ardeb and the highest £E.607 m/ms. per ardeb.

NEAR EASTERN SAMPLES EXHIBITION.

The Department of Overseas Trade has recently organised an exhibition of samples of various classes of goods (textiles, hardware, etc.), collected from a number of Near Eastern markets. The samples are all of pre-war origin, and have been furnished in most cases in connection with special reports on the markets concerned. The exhibition, which is being held at the Foreign Samples Section of the Department of Overseas Trade, 3, Guildhall Courtyard, London, E.C. 2, is open to United Kingdom manufacturers, and admission to it may be obtained by the presentation of a business card.

OPIUM MARKET.

Messrs. Barker Brothers, Smyrna, report as follows for the week ended February 13:—The sales this week on our market amount to thirty-three cases Selected druggists' Karahissar, at piastres 920 per oke, which is equivalent to 17s. per lb., c.i.f. The position is easier, and we foresee a drop to 16s. 6d. soon. The exchange to-day is piastres 408 per pound sterling for cheque, and 0.82 dollars for one Turkish paper pound. The arrivals are 1,480 cases, against 165 at same date last year.

OIL OUTPUT.

Anglo-Egyptian Oilfields.—Gemsah production for week ending February 15, nil (last week nil); Hurgada production for week ending February 15, 1,907 tons (last week 2,236 tons).

COMPANY NOTES AND REPORTS.

Bank of Bombay.

The net profit of the Bank of Bombay for the half-year ended December 31, including Rs.4,33,898 brought forward from the previous half-year, amounted to Rs.18,32,339. The directors recommend a dividend and bonus at the rate of 15 per cent. and 5 per cent. per annum respectively. Rs.4,00,000 is placed to the reserve fund, Rs.50,000 to the pension fund, and the carry forward Rs.3,82,339.

Bank of Madras.

The profit of the Bank of Madras for the half-year just ended, including Rs.3,99,488 carried forward from the last account, is Rs.13,30,435. A dividend of 10 per cent. per annum and a bonus of 2 per cent. per annum are declared, absorbing Rs.4,50,000. Rs.2,00,000 are placed to reserve for depreciation of investments, and the carry forward is Rs.2,80,947.

Alliance Bank of Simla.

The net profit of this bank for the six months ended December 31, including Rs.1,87,000 carried forward from the last half-year, amounted to Rs.6,65,016. The dividends are 14 per cent. per annum on the ordinary shares and 6 per cent. per annum on the preference, absorbing Rs.4,05,541, leaving a balance of Rs.2,59,475 to be carried forward.

Bank of Bengal.

The available profits of the Bank of Bengal for the half-year ended December 31, after providing for the payment of a bonus to the bank's staff, including Rs.5,51,065-8-5 brought forward from the previous half-year, amounted approximately to Rs.29,25,442-0-4, which sum was disposed of as follows:—Payment of a dividend of 17 per cent. per annum, free of income-tax, Rs.17,00,000; transferred to reserve fund, Rs 6,00,000; transferred to gratuity and pension fund, Rs.1,00,000; leaving Rs.5,25,442 to be carried forward.

Travancore Tea.

The report of the Travancore Tea Estates Company for the year ended September 30 states that the net amount at credit of profit and loss account, including balance brought forward, and after providing for directors' fees, debenture charges, and interest, etc., is £24,275. It is proposed to pay a dividend at the rate of 20 per cent. per annum on the ordinary shares, placing to redemption of debentures sinking fund £2,000, and carrying forward £8,576. The tea crop harvested was 2,971,275 lb., against an estimate of 2,944,950 lb., and compared with the previous season's figures of 2,629,843 lb. The estimate for the current year is 3,188,875 lb. The average yield was equivalent to 578 lb. per acre, compared with 511 lb. In July last 28,300 ordinary shares and 22,069 preference shares were issued and allotted to shareholders, the former at a premium of £1 per share and the latter at par. Of the premium £18,771 was received up to the end of the financial year, and the balance of £9,529 has been received since and will appear in the current year's accounts. Meeting, 20, Eastcheap, E.C., March 8, noon.

Darjeeling Himalayan Railway.

The report of the Darjeeling Himalayan Railway for the half-year ended September 30 states that the capital expenditure during that period amounted to Rs.1,367. The balance of net earnings, after providing for debenture interest and the estimated payment due to the Government and other items, amounts to Rs.2,74,642, and sum brought forward is Rs.2,29,898, making total net earnings available Rs.504,540. The directors recommend a dividend of Rs.6 per share on ordinary shares, carrying forward Rs.2,87,159.

Southern Punjab.

The net revenue of the Southern Punjab Railway Company for the year ended September 30 was £422,612, of which £150,866 is payable to Secretary for India as share of surplus profits due to Government and £10,000 is transferred to "contingencies" account. This leaves £261,745, to which must be added £116,215 brought forward, making £377,960. Dividend on preference paid in respect of six months to March 31, with dividend and bonus on ordinary for same period, reduce balance to £271,960. Dividend on preference for six months to September 30 was paid on December 1, leaving £225,960. Directors recommend final dividend on ordinary of £9 per cent., and further bonus of £1 per cent. (making total distribution £16 per cent. for year), from which English tax at 4s. 11.74d. will be deducted, leaving £125,960 to be carried forward, subject to excess profits duty if found due. Meeting, 36, New Broad Street, E.C., March 10, at 2 p.m.

INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following cable received from the Director-General of Commercial Intelligence, Calcutta, dated February 17: Rain nearly general south-eastern Bengal, local Orissa and Assam. General crop conditions good. Prospects wheat crop Central Provinces unusually good; second forecast is 3,085,631 acres. Bombay cotton market firming up. Fully good Broach April-May was as low as Rs.476 on February 10, but is now Rs.504. Piecegoods market quiet with small demand. Calcutta Jute market quiet but steady. Hessians in poor demand with prices fairly steady. Heavy goods in fair demand, prices steady. Bank rate is Bengal and Bombay 7 per cent., Madras 8 per cent.

According to the Paris *Vie Financière*, a new company has been formed under the style of the Compagnie Tunisienne des Phosphates de Djebel-Mdilla for the working of Tunisian phosphates. The capital of the company is 16 million francs.

COMPANY NEWS IN BRIEF.

An extraordinary general meeting of Sucrerie et Raffinerie de Roustchouk was held at Brussels on March 3.

Dacia-Romania Assurance.—A meeting is called for March 14 at Bucharest to consider the accounts and dividend for 1919.

Mr. M. Lascaris, manager of the Bank of Athens at Cairo, has been appointed a member of the Board of Directors of the Credit Foncier Egyptien.

It is announced that the British Overseas Bank, Ltd., have completed a scheme for the formation of an Anglo-Polish Bank, in conjunction with the old-established banking house of A. Peretz and Co., of Warsaw.

The directors of the Mysore Gold Mining Company have declared a balance dividend for the year 1919 of 1s. per share, less tax at 6s. in the £, in respect of 610,000 fully-paid shares of 10s. each, payable April 8 to shareholders registered February 26

The directors of the Bengal Doors Railway recommend a final dividend on the ordinary stock of 3½ per cent. and a bonus of 2 per cent., both subject to tax, payable March 26, 1920, making 9 per cent. for the year ended September 30, 1919.

Compagnie Industrielle du Levant.—At the general meeting held on February 19 it was stated that in the absence of documents it had not been possible to submit the balance-sheets, and that about six or seven months would be needed to prepare the balance-sheets in arrears.

Tramways du Caire.—The necessary number of shareholders not being represented at the general meeting on February 12, a second extraordinary general meeting is to be held at Brussels on March 11.

GREEK DEBT SERVICE.

The Council of Foreign Bondholders issues the following information compiled from figures published by the International Financial Commission at Athens with regard to the revenues assigned under the Law of Control for the service of the Greek Debt from January 1 to December 31, 1919 (New Style January 14, 1919, to January 13, 1920).

	Monopolies, tobacco, stamps, stamped paper & Naxos Emery	Piræus Customs.
	Drachmae.	Drachmae.
Gross receipts, December, 1919.....	5,012,399	4,967,575
Do. do. 1918.....	1,968,846	2,241,797
Estimated receipts for 12 months (Law of Control)	28,900,000	10,700,000
Actual do. 1919.....	50,468,063	50,376,884
Do. do. 1918.....	36,264,901	31,185,797
Difference between estimated and actual receipts for 12 months 1919	+ 21,568,063	+ 39,676,884
Difference between estimated and actual receipts for 12 months 1918	+ 7,364,901	+ 20,485,797

Of the surplus over the estimated receipts from monopolies, tobacco, stamped paper, stamps and Naxos Emery, 49 1/5 per cent. is applied towards increasing the minimum rates of interest and sinking fund of the External Gold Loans of 1881 to 1893. The receipts in gold from both Naxos Emery and the Piræus Customs are converted into drachmae at par when the average rate of exchange for the month is par or below par, but when the average rate for the month is above par the conversion is made at that average rate.

SUPPLIES AND PRICES IN TURKEY.

The following extracts are taken from recent reports received by the Imperial Ottoman Bank :—

STAMBOUL, January 31.

There have been few arrivals this week ; it is to be foreseen that there will be very few arrivals until the situation becomes stable.

Coffee.—Despite the high prices in the countries of production, a fall has taken place here owing to the arrival of large supplies intended for Odessa and other parts of Russia, and which the holders are trying to realise.

Oil.—An arrival of 40,000 cases of American has brought about a drop in the price from £T9 to £T7.20-7.47 the case.

Dates.—It is to be noted that this week 5,000 tons of dates arrived from Busreh.

STAMBOUL, February 14.

Imports.

The market is very quiet. Prices of manufactured goods are very weak, despite the high level of the exchange and the high prices of commodities in centres of production, notably in England.

During the week a vessel arrived from England with a consignment of manufactures, but in the smallest quantity. They were the deliveries of the months of October and November. A gradual decrease is anticipated in the deliveries while there is no change in the situation.

The congestion of goods in the port continues, the sales being actually further reduced. But the situation does not give rise to any anxiety, for the reasons which we have previously given.

Produce.

Sugar.—The market is stronger, because of the position in centres of production and by reason of a certain demand from Batoum as well as for the want of arrivals in our market. So prices have risen to £102-103 the ton in transit and £T54-55 for sugar in Customs.

Coffee.—Rice.—The market is quiet ; no change is to be recorded.

Oil.—Arrivals from America and Batoum have resulted in a marked drop in prices. The case of two bidons is sold at £T7.40 against £T7.60 last week.

(Over 80 Branches in the Near East.)

The Bank has been established for over 55 years, and has its own Branches or Agents in every important commercial town in the Near East.

The Offices of the Bank at 26, Throgmorton Street, London, and 25, Pall Mall, Manchester, can now enter into transactions with all the above-mentioned places, subject to British Government regulations and local restrictions where in force.

Manufacturers, Traders and others are invited to correspond with the Bank, where all possible facilities will be afforded for the re-opening of business.

The Bank makes advances upon Bills of Lading and other export documents.

Drafts and telegraphic transfers issued.

Letters of credit granted.

Hardy, 144, Station Road, Crayford, Kent, accountant. The subscribers are to appoint the first directors.

Mediterranean Merchant Bank.

The Mediterranean Merchant Bank has been registered as a private company with a capital of £100, in £10 shares. Objects: To carry on the business of bankers in London, with branches or agencies in all countries bordering the shores of the Mediterranean and elsewhere. The signatories are to appoint the first directors. Registered office: 60, Wilson Street, Finsbury, E.C.

EGYPT AND GERMAN TRADE.

H.M. Commercial Agent at Cairo states in a recent report that commercial relations between Germany and Egypt seem to progress daily. The commodities which are shortly expected comprise ironmongery, household articles, colours (dyes), and especially glassware. Heavy payments are being effected by the merchants in Alexandria. The despatch of these goods will be made by way of Trieste. It has been noticed that German manufacturers do not seem inclined to supply pharmaceutical products in spite of having received considerable orders for them. Relations with Italy and America are gaining a foothold, but those with France do not seem to have revived. It has also been observed that huge orders have recently been placed with Japan.

THE BIRMINGHAM BRITISH INDUSTRIES FAIR.

The British Industries Fair held at Birmingham will be illustrated and described in a Special Supplement of THE NEAR EAST, to be issued in two or three weeks' time.

ON 'CHANGE.

(FROM OUR OWN CORRESPONDENT.)

THROGMORTON STREET, Monday.

On the whole we have had a quiet week with a dull tendency, and to-night the tone has become distinctly weak, so that it would not be surprising to see prices still lower during the next few days. The weakness is said to be due to some financial trouble in Egypt caused by the heavy fluctuations in cotton, and securities have undoubtedly come out for sale to pay for the losses incurred.

In Government stocks City of Alexandria Bonds have dropped one point to 67, Unified are 1¼ lower at 74, and the 3½ per cent. Preference stock is a like fraction down at 61¼. Turkish 3½'s (1894) have dropped a point to 58, and Turkish Unified, after dropping to 30, close 4½ points down at 31½.

In Bank shares Nationals are 5-16 lower to-night at 22⅛, but Agricultural have been a firm spot all the week, and are closing 1-16 higher at 5½. Anglo-Egyptian Banks are one point lower at 20½, on profit taking after the news became known regarding the arrangement with Barclay's Bank. Land Bank of Egypt have been a firm spot.

In Railways, Delta Light close ¼ down at 6⅝.

Amongst Land shares Aboukir have lost 1s. 9d. at 43s., and Anglo-Belgian are ⅛ down at ⅞. Allotments are firm and unchanged at the ex. div. price of 3¾. Béhéras have had a smart set back to 21, a drop of 3¼ points, and are quite a nominal market at the moment. The Preference shares have dropped ⅛ to 3¾. Building Lands have receded 3s. to 32s. Consolidated Lands (now 4s. 5d. paid) are slightly lower at 3s. 4½d., Delta Lands have come back 1s. 9d. at 19s. 6d., and Foreign Trusts have declined 6d. to 18s. Land and Mortgage shares are about ¼ down at 1 9-16, and Mortgage Company 4½ per cent. debentures have dropped 3 points to 72. New Egyptian, after being comparatively firm, are closing 2s. 9d. lower at 35s., and Sidi Salem have dropped back 3-16 to 2⅞. Both Sudan Plantations and Union Foncière are ¼ down at 8⅛ and 5¾ respectively.

In Miscellaneous shares Abyssinian Corporation have dropped 6d. to 12s., and Salt and Sodas are 3-16 lower at 2 13-16. Morum's Pref. are 6d. down at 19s. 6d. On the other hand Associated Cotton Ginners are closing 1s. 6d. higher at 32s. 6d.

In Oil shares Anglo-Egyptian B close ⅛ down at 4 7-16.

Amongst Greek securities the 1881 and 1884 Loans are both half a point lower at 54½, Monopoly have dropped back two points to 47, the 1910 Loan has dropped one point at 43, and the 1914 Loan is about unchanged at 61 x.d. Bank of Athens shares are ¼ lower at £3.

TRACTORS IN MOROCCO.

H.M. Agent and Consul-General at Tangier states that by an Arrêté Viziriel, dated December 20, 1919, a grant of a bonus is provided for cultivating land by the use of tractors. It is to be for the present season only, and payable only to persons not receiving any other subsidy. The amount of the bonus is 50 frs. per hectare cultivated by tractor in excess of the area formerly cultivated, and 25 frs. per hectare for the rest of the land so cultivated, the object being to encourage farmers to bring new lands under cultivation.

The traffic returns of the Egyptian Delta Light Railways for the ten days ended January 20 amounted to £E14,004, making the total for the year £E308,619.

The receipts of the Egyptian Markets, Ltd., for the week ended February 11 were: Cattle markets, £1,228; general markets, £601; total, £1,829; total for year, £14,300.

The directors of the Chargola Tea Association have declared an interim dividend of 5 per cent., less tax, on account of the year ended November 30, 1919, on the ordinary shares.

Anglo-Egyptian Land Allotment Co.—The Anglo-Egyptian Bank announces that Coupon No. 11 of the ordinary shares and Coupon No. 3 of the founders' shares may now be presented for payment at their office, 27, Clements Lane, E.C., at the following rates: Coupon No. 11 ordinary shares P.T.30, Coupon No. 3 founders' shares P.T.1.5, less income-tax at 6s. in the £.

BRITISH TRADE CORPORATION.

(Incorporated by Royal Charter),

13, AUSTIN FRIARS, LONDON, E.C.2.

Telegrams: "Trabanque, London."

CAPITAL: Authorised - £10,000,000 Subscribed and Paid Up - £2,000,000

Governor - THE LORD FARINGDON.

Manager, A. G. M. DICKSON. London Manager, P. C. WEST. Secretary, G. De B. BROUNLIE.

The Corporation has been established with the object of developing the Trade of the British Empire in every part of the world, and brings to the notice of all interested that it is prepared to grant financial facilities to British Manufacturers and Merchants for the increase of their Import and Export Trade.

It will be prepared to assist in opening up new channels for enterprise, and will afford financial facilities for the enlargement of works and the extension of plant.

The Corporation is appointing representatives in the chief cities of the world, and will open credits at home and abroad. It invites inquiries, and will endeavour where necessary to put expert advice at the disposal of correspondents regarding the financing of their foreign and overseas business. Moneys received on fixed deposit. Terms on application.

NOTES OF THE WEEK.

Fortune is not smiling upon the Supreme Council in its attempt to solve the Turkish question. As was to be expected, a piecemeal settlement is proving no less disastrous than the original delay, for it has encouraged all the conflicting interests to redouble their efforts to influence the final decision. Above all, the Turks were being led to believe that Mustapha Kemal and his Nationalists are the real masters of the situation, until finally it was resolved to try an avowed Nationalist Cabinet in Constantinople. The position is still obscure, but it may be supposed that the Allies indicated that there were limits to their patience or indifference. According to the last reports the appointment of Izzet Pasha as Grand Vizier has been abandoned in favour of a politician whose personal hostility to the Entente Powers is less pronounced. The worst of all these complications is that they prolong the chaos in Turkey indefinitely, and render any attempt on the part of the Allies to restore order and good government more and more difficult. Inevitably, too, the settlement tends to assume an *ad hoc* character instead of being based broadly on recognised and sound principles.

The recent massacres in Cilicia provide a case in point. It is impossible that the Supreme Council should ignore them, and yet they introduce no new feature. The unhappy Armenians have had to undergo a further martyrdom to complete the Council's education in Turkish history. There seems to be no doubt that the origin of the tragedy was the folly, or worse, of the French Government in employing Armenian troops to garrison districts with a Turkish population in peace time, or at least at a time when it was most desirable that peace should be maintained between antagonistic elements among the people. The same mistake was made by the Allies in employing a Greek army to take over the Aidin district from the Turks. If the decision was that Smyrna must be given to Greece, the least knowledge of Turkish affairs would have prompted the Supreme Council to entrust the formal occupation of the territory to any other troops than the Greek, and then to have handed it over to the latter. However exemplary the conduct of France's Armenian troops may have been during the war or after the armistice, their employment had only to be extended far enough to produce some such incident as that which is reported to have applied the torch to Turkish fanaticism at Marash.

Allied ignorance affords no extenuation of Turkish excesses; but it needs to be emphasised, because it is solely responsible for the disastrous muddle that has been made of the whole Near Eastern settlement. It would have been thought that, if nothing else were known about South-Eastern Europe and beyond, at least the Allies would have been familiar with the bitterness of feeling between the different races, and the methods adopted to give expression to mutual animosities. But this feature is being ignored in Asia Minor, and has been treated as non-existent in the Balkans. No greater mistake could be made than to suppose that the Supreme Council has evolved a peace settlement in the Balkan Peninsula. The most we can hope for is that the existing lull there will be continued until the various peoples concerned have appreciated the wisdom of redrafting the terms, which in many cases have merely created fresh sores.

In quarters opposed to leaving the Turkish Administration in Constantinople a vigorous attempt will be made to use the Cilician massacres as an argument for reversing the decision already taken by the Supreme Council. The sufferings of the Armenians—all the more pathetic and harrowing as they were preventable—have, however, nothing to do with the fate of Constantinople, the determining factor in regard to which is that no satisfactory alternative has been proposed as yet to the retention of the city by its present rulers. No one regards the possession of Constantinople by the Turks as an ideal state of affairs, and it is, no doubt, a great misfortune that the only possible successors are not in a position yet to make good their claim. These facts vitiate all the protests that are being raised against the Supreme Council's decision, whether they come from the Bishop of Western Pennsylvania, who wants it to be known by Great Britain and France that he "will not take hold of their hands while they hold the bloody hand of the Turk," or from those who are prepared to play their part in the betterment of the Eastern world. The Cilician massacres prove what was already known, that only close supervision and the avoidance of provocation, however remote, will save the non-Turkish population of Turkey from similar outrages. It is an axiom that, as far as possible, alien peoples are to be removed from Turkish jurisdiction; but when this principle has been acted upon to the fullest extent feasible, there will still remain a remnant—probably a substantial remnant— of non-Turks in the truncated Ottoman Empire. These will have to be safe-

Digitized by Google

guarded, and, until a new spirit actuates Turkish officialdom, the only practical method will be the personal supervision of Turkish officials.

As has been mentioned before in these pages, nothing is more disheartening to those who looked that good might come out of the war than to note in the discussion regarding the future of Turkey the absence of any consideration for the improvement of the Turks. An agitation among the Churches of Christendom to this end could have been understood, but to-day the one cry is "Punish the Turk," and no one gives a thought to the fact that after the punishment he will remain precisely the same danger to the world that he was before, whether his capital city be Constantinople or Konia. If the Allies could plumb the depths of the Nationalist mind they would discover that the only punishment that was actually dreaded was real reform. Deprive every Turkish official of the opportunity of misgovernment, give the country good administration, justice, security and the incentive to material progress, and the old order in Turkey will quickly pass. But such a programme to carry conviction must have conviction behind it, and it remains to be seen whether that word will yet be found in the Supreme Council's vocabulary.

It is to be hoped that the Allies will not overlook the fact that whatever General Denikin's position may be now, it is likely to become far worse when the winter passes and the Bolshevist armies become more mobile. Even if the anti-Bolshevists are to be left to their fate, some attempt ought to be made to protect the Caucasian Republics. Whether the Turkish Nationalists are acting to-day in concert with the "Reds" or not, we may be sure that the latter will not lose the opportunity of urging the Turks to attack the Caucasus from the south when the Bolshevist army moves down from the north. To prevent this eventuality no time should be lost in strengthening the resistance of the Caucasus, and in enabling the new Armenia to keep watch over its own borders. The report that an agreement has been reached between Armenians and Kurds seems to confirm the belief of the former that they would have no difficulty in establishing a *modus vivendi* with the Kurds if the evil genius of the Porte could be eliminated. Unfortunately, however, the Kurds are divided amongst themselves, and some tribes may not accept the foreign policy inaugurated by others. If the Kurds show the least sign of political organization, the greatest care should be exercised in affording them an opportunity of homogeneous development. In this way the more civilized element will have a chance of leavening the whole lump, and Kurd irredentism will not be added to the troubles of a tired world.

It is now generally accepted in Greek circles that the part of Thrace taken by the Allies under the terms of the treaty with Bulgaria is to be handed over to Greece, and that the new Hellenic kingdom will realise the ambitions of M. Venizelos—a compact circular sea and land State, the geographical centre of which will fall in the Western Aegean. In the matter of defence it is held that Thrace as well as the coastlands of Asia Minor can be more rapidly and adequately protected by sea communication than if they were separated by land an equal distance from the capital. The test of this settlement rests with the future. We believe that territorial gains or losses are immaterial in the Balkans compared with the necessity of peace, co-operation and uniform progress. If the settlement now made by the Supreme Council, which notoriously does extreme violence to Bulgarian opinion, does not stand in the way of the three desiderata, then all will be well, Greece will be justified of her statesman, and the Bulgarian wound will have been healed. If, on the other hand, merely an armed peace is maintained in the Balkans by the exercise of *force majeure*, while co-operation and uniform progress for the different States are lacking, then Greece will have won a Pyrrhic victory, and her development, with that of the Peninsula as a whole, will have been retarded. The English observer who wishes to see the world progress must look beyond the quarrels or enmities of the day, and for this reason will want to find both the countries concerned endeavouring to give the new arrangement a fair chance. Thrace will be more valuable to Greece if she can persuade the Bulgarians to acquiesce in her ownership of it. Bulgaria will make far more headway in material prosperity if she accepts what she is not in a position to challenge, and devotes all her energies to her economic advancement.

The Albanians are in danger of being regarded by the Entente Prime Ministers as most inconsiderate people. There was no reason to suppose that the word "self-determination" existed in the Albanian language, and it was a great advantage to the Supreme Council to keep a fairly large piece of cake up its sleeve, in order that bits might be cut off from time to time and thrown to the more obstreperous of the unruly family of which it had been put in charge. Several compromises were to be carried through by this means, but at the eleventh hour the cake has protested with some determination. It is not likely that the outside world will be able to form any very accurate idea of what is happening in Albania, but we may be confident that there would be neither justice nor finality in the Allies' proposal to partition Albania among three or more States. Most people will be amazed at the hardihood of any responsible statesman who has paid lip-homage to the principle of nationality making such a suggestion. A mandate is comprehensible, but it should leave the people over whom it is exercised united. Whatever difficulty there may be in piercing the veil of propaganda by which Albania is now shrouded, it may be taken for granted that the Albanians will never keep the peace under any system of partition.

The Adriatic controversy drags unprofitably on. In Italy the publication of the correspondence on the question that has passed between the Powers appears to have increased the unreasonableness of public opinion, and the prospect of the Italian and Yugoslav Governments coming to an agreement is far from bright. The Italian case, it is not generally recognised, has been entirely prejudiced by the fact that no claim was originally advanced to Fiume. At best, the port would be a sentimental luxury to Italy, whereas to Yugoslavia it is a matter of economic life or death. For this reason there seems to be little chance of the Yugoslavs accepting any compromise that does not provide for access to Fiume that is incapable in any circumstances of being closed to them.

President Wilson has administered a further correction to the British and French Governments over the Adriatic question. He refuses to consent to the withdrawal of the Memorandum of December 9, and insists that compensation for disappointments elsewhere must not be found at the expense of the Albanians. The mistake made by Great Britain and France was in allowing one party to the controversy to alter the agreement arrived at by the three Powers. In this way they took sides with Italy against the Yugoslavs, and now find it difficult to go back on the Italians at the bidding of President Wilson. Whether the change in the French Premiership has made it easier for France to explain her mistake to the Italian Government remains to be seen. If it has, there is a strong reason why Great Britain should fall into line. A solution of the difficulty cannot be long postponed, and as soon as it is clear that Italy and Yugoslavia cannot agree between themselves the solution will have to be imposed from above. As it can only take the line already agreed upon by the United States, Great Britain, and France, the next step should be clear sailing. But it is to be hoped that Italy, in her own interests, will make in time a virtue of necessity.

In spite of the fact that his presence is urgently required in his own country, the Prime Minister of Roumania has felt constrained to remain in London until the

Digitized by Google

finishing touches have been put to the treaty with Hungary. Dr. Vaida-Voevod has the satisfaction of knowing that Roumanian claims to Bessarabia have received recognition and it is to be hoped that, if any attempt is to be made by the Bolshevists to challenge the decision, ample support will be given to Roumania by the Allies. On the subject of the Banat it is inevitable that the Roumanians will have to be content with less than the full measure of their aspirations. The more unsatisfactory from an economic point of view the division of the territory with Yugoslavia may be, the greater the need for a wise statesmanship which will evolve hereafter a working agreement between the two countries to the maximum advantage of both.

THE WEEK AT HOME.

Gold and the Exchange.

The best news of the week is that the American exchange has shown strong signs of recovery, and the British and French Governments have arranged to repay part of their loans to the United States. "Money talks," and lately it has been talking very loudly about the bankruptcy of Europe; and our good friends across the Atlantic have been perhaps a little too much inclined to believe all the glowing predictions of impending ruin. The present step will perhaps convince them that the patient shows signs of convalescence.

So far as Britain is concerned, our difficulty at the moment is to get enough raw materials and manufactured articles, not to pay for or sell them. Business men who are usually shrewd judges tell me they see no signs of supply catching up demand for four or five years, and they are making their plans accordingly; it may therefore be taken that there will be no fall in prices for that period. But the present activity encourages new industries, for the element of risk is reduced to a minimum; in one Sunday paper this week I counted the prospectuses of fourteen new limited companies, several with share capitals of over a million. (Sunday is now a favourite day for advertising new issues: the old dilemma about serving God and Mammon evidently no longer applies in the new world.)

Political Torpor.

In a Parliamentary sense the week has been dull in the extreme. Mr. Asquith has not yet tried his hand on the new House of Commons, and the second thoughts of politicians on his return are that it will not make much difference for some time. He had a great public welcome from London Liberals in the streets on his reappearance, but an organised rag of the medical students contrived to make the whole thing ridiculous; they damaged the statesman's motor-car, stole his top-hat, and covered him with confetti. Mr. Asquith bore it all with smiling good temper, but his private reflections on the episode are best left to the imagination.

Home Rule.

The new Home Rule Bill has had the usual fate of such measures. England has promptly forgotten it. In Ireland it has become the prey of the leader-writers, who have discovered with startling unanimity that it is the most hopeless measure ever put forward. Destructive criticism is, of course, easy enough, but one of the real tragedies of Ireland to-day is that it seems to have no constructive policy. Her politicians have been asked time and again to put forward their own scheme, but nothing ever comes of the invitation. In these circumstances it cannot be said that the prospects of a settlement are very bright.

Taxation Questions.

The rumours of a radical reform of the income-tax have been steadily growing in volume. The exemption limit may be raised—this is a mere recognition of the decreased purchasing power of money, the earlier stages regraded more lightly, the later stages more heavily; and there has been some talk of the super-tax, which has now become an anomaly, being directly incorporated in the new graduated income-tax.

Meanwhile economists and politicians continue to discuss the subsidies. One school demands the abolition of the present subsidies on bread, sugar and other commodities, on the grounds of sound finance; another school holds that while this is the correct policy in normal times, in the present transition period the decision to raise the loaf, for instance, from ninepence to a shilling would merely result in a demand for increased wages all round. The demand could not be resisted, and there would be an immediate increase in the cost of living in consequence, which would more than counterbalance the advantage of dropping the subsidy. This school contends that the subsidies must be maintained until supply and demand are more nearly attuned; they can then be dropped, to the great advantage of the State without any real disturbance of industry. The latter school appears to have the more convincing arguments.

The West Indies.

A great deal of unfavourable comment has been evoked by the suggestion put forward a few days ago by Mr. McAdoo of the American Government, that Britain should "wipe out part of her large war debt" to the United States by selling the West Indies. There has been no response in Jamaica or the other islands in favour of the transfer, and, at home, the idea has been ridiculed both by the Government officials and by the planter interest, which has a certain quiet influence. These colonies had a difficult time for many years, but their prospects have recently improved; but through all the period of adversity there has been no diminution of loyalty. The matter has been settled by the official announcement that the British Empire is not for sale.

The Third Archbishop.

For twelve centuries there have only been two Archbishops in England and Wales. But the Disestablishment of the Church in Wales has led to many changes. On March 31 the formal separation becomes effective—the Welsh Bishops will no longer sit in the House of Lords, and will cease to be members of Convocation. At the same time that the four Welsh Dioceses are separated and the Welsh Church becomes a self-governing unit, an Archbishop will be elected; it is understood that the choice will fall upon the doyen of Welsh bishops, the Bishop of St. Asaph, who has held his present post for over thirty years.

Owing to the disendowment the Welsh Church is now very poor, although, fortunately, the scheme has been modified to a certain extent. But the national spirit is strong in Wales, as well as religious enthusiasm, and there has been a good rallying of support to the new body now that it is fully autonomous.

It is understood that the movement towards reunion of the Scottish Churches is making some progress; but one hears at the moment rather less about the fraternisation between Anglicans and Nonconformists, and

B

Digitized by Google

the opposition of High Churchmen, who are by far the strongest party in the Church, to any *rapprochement* remains acute.

The African Flight.

In aircraft circles there is keen disappointment at the failure of both the trans-African flights. But the failure has its compensations. It has brought home to flying men the existence of many new climatic and aerial problems, and these will probably be studied from the full reports that are still awaited before the attempt is resumed, as it certainly will be. The Cape-Cairo flight has struck the imagination, and not only the ordinary world but the men of science and the geographers are anxious to see the project revived in due course.

Newspaper Prices.

The steadily increasing cost of paper and printing, which has made every daily except the *Daily Graphic* double its price, and has caused even the *Nineteenth Century* to jump from half a crown to four shillings, is now beginning to affect the weekly press. The *Spectator*, which has been sixpence for more years than anybody can possibly remember, has gone up to ninepence, and it is possible that its numerous competitors will have to follow suit in the long run. *Nature*, which has a world-wide reputation, was forced to double its price not many weeks back.

I hear that the average novel, which is now seven shillings net instead of the old four shillings and sixpence, hardly pays either author or publisher at the new price, and it will probably have to go as high as nine shillings. But at present the publishing houses are experimenting in prices, and the problem is not an easy one.

The Biter Bit.

Obviously those who hold that everybody has the right to strike should admit that the organisers of strikes possess the same rights; but if human beings were not inconsistent, there would be no fun in a sorry world. Recently an old and much respected clerk of the Independent Labour Party was dismissed. His colleagues protested against what they declared to be victimisation; the protest was treated with the "cynical indifference" that the I.L.P. orators regard as the exclusive property of the bloated capitalist and the soulless business man, and the whole office downed pens. Their union took the matter up and fought the cause of labour with the Labour Party, and—the rest of the world smiles. What is sauce for the industrial goose is apparently not sauce for the headquarters of iconoclastic propaganda.

The Bookshelf.

The books of the week are rather a thin lot. Mention should perhaps be made of "A Brazilian Mystic" (Heinemann), being the life of Antonio Maciel, a fanatic who misled thousands of people; but the main interest of the book for me, I confess, is that it is by Mr. Cunninghame Graham.

Anglo-Indians will wish to read "The Life and Letters of George Alfred Lefroy" (Longmans), who was sometime Bishop of Calcutta. The ordinary life of the ordinary bishop is, perhaps, one of the most certain soporifics ever discovered by man—"not poppy nor mandragora" equal it—but I must frankly place this book in another class.

"Fleet Street and Downing Street" (Hutchinson), by Mr. Kennedy Jones, M.P., is rather disappointing. Mr. Jones made a fortune in Fleet Street, and I hoped he would tell us, not exactly how it was done, but about the things he did and the persons he met, but he says that the time has not yet come for those personalia. On the old principle that the only proper Pussyfoot is a reformed drunkard, I suppose there is nobody quite so reticent as a reformed journalist.

A book of pleasant small-talk and social reminiscences is "The Manners of My Time" (Grant Richards), by the late Miss Dempster. It will pass an hour, or even an hour and a-quarter, quite pleasantly.

There seems to be a conspiracy among authors and publishers at the moment to produce only bad novels; but an exception may be made for "The Triumphs of Sara" (Hutchinson), by that old favourite, W. E. Norris.

An interesting experiment in translation has been made by Mr. H. de Vere Stacpoole, whose fame is mainly as a novelist. He has published a version of "Sappho" (Hutchinson) in English verse. One cannot honestly say that it conveys the full beauty of the original, because that would be impossible to preserve in another language, but the rendering is pleasant. In a prefatory note the author raises the difficult question of destiny: "What fate," he asks, "gave us the shipping lists of Homer, yet denied us Sappho, preserved Apollonius, yet cut the song to Anactoria short, and reduced the song of the orchard to three lines?" Mr. Stacpoole does not answer his own question, but it is a dreadful thought that our age, in turn, may suffer a similar fate, that blind chance may destroy Kipling and other masters, while remote generations possess and judge us by the complete works of Hall Caine and Harold Begbie.

Believers in spiritualism may be advised to read "Contact with the Other World," by J. H. Hyslop (Werner Laurie). It is a very large volume, and, so far as I have examined it, it appears to contain most of the evidence that one expects in a book of this kind, with certain new phenomena. Those who do not follow the current fashion, on the other hand, may enjoy "The Menace of Spiritualism," by E. O'Donnell, which is introduced by Father Bernard Vaughan. With fine impartiality, it issues from the same publishers.

Those who have a taste for theology and metaphysics will do well to read Canon Green's "The Problem of Evil" (Longmans). In part this treatment is on familiar lines, but the author holds that if it had not been for the fall of man there would have been no pain; and it is his belief that the fall did not take place in this world at all, but on some other sphere, and its result has been to hurt our nature by making it selfish instead of altruistic, as it was intended to be. The individual has developed at the expense of society, and physical suffering is the inevitable outcome of moral evil; the opportunity for change came with Christ. Possibly few will agree with this theory, but its enunciation makes an extremely original and thoughtful book. OCELLUS.

WAR WORKERS FOR SERBIA.

A reunion of War Workers for Serbia brought some 180 people together at dinner at the Wharncliffe Rooms, Great Central Hotel, on March 1. Colonel William Hunter presided, and among those present were M. Gavrilovitch (Serbian Minister), Colonel Ostoyitch (Military Attaché), Sir Thomas Lipton, Sir Cecil Hertslet, Sir Edward Boyle, the Rev. Dr. Dearmer, Major Spurway, and Miss Marx (the hon. secretary). The Serbian Minister expressed his gratitude to those who had helped his country during the most tragic years of her life. They would never forget, he said, the devotion of those who worked so splendidly in the face of such grave danger. Sir Cecil Hertslet advocated the formation of an Anglo-Serbian Union. Other speakers were Dr. Alice Hutchison (Scottish Women's Hospital), Dr. Christopherson (Berry Unit), and Mr. Crawfurd Price. In the course of his remarks Dr. Christopherson, the chairman of the committee who arranged the dinner, referred to the experiences of the British missions that were interned in Austria. They were liberated after a reasonable time. He continued: "This was due to two reasons: (1) The correct treatment by the British missions of the Austrian prisoners. The Austrian Prisoners in Serbia no doubt had a bad time owing to typhus fever, but their welfare was faithfully guarded by British missions. (2) To the fact that the chief of the Prisoners of War Section of the Austrian Red Cross was Baron Slatin Pasha.

"I should like to take this opportunity to say a word about Slatin. Both the British prisoners in Austria and the interned British missions in Serbia owe him a debt of gratitude. Slatin before the war had for many years been doing valuable work in the Sudan for the British Empire. He had from long association acquired a high opinion of British administration. He had formed many friendships among his British colleagues. At the outbreak of the war he was on his way to the Sudan. He turned back at once. No one can doubt the patriotism of Slatin for his country, but he was also loyal to the friendships which he had made in former years. He was placed at the head of the Prisoners of War section of the Austrian Red Cross, the result being the correct treatment of the British prisoners of war in Austria and the liberation of the interned mission in Serbia."

"THE NEAR EAST" INDEX TO VOL. XVI.

The Index to Volume XVI. of "The Near East" (July 4—December 26, 1919) is now ready, and will be sent to subscribers on application to the Manager, "The Near East," 1, Devonshire Square, London, E.C.2.

THE NEAR AND MIDDLE EAST.

(From Our Own Correspondents.)

EGYPT.

CAIRO, February 23.

Sirri Pasha's Resignation.

What one might call a Ministerial crisis still exists notwithstanding that the Government has conceded the points on which Sir Ismail Sirri Pasha insisted and because of which he had tendered his resignation. On Wednesday a *communiqué* was issued stating that it had been decided to add an Egyptian member to the Nile Projects Commission, that all the details in connection with those projects would be made public, and that it had been agreed that the Sudan would not take from the Nile more water than might be necessary to irrigate 300,000 feddans in the Gezira without previous reference to the Egyptian Government. These points having been conceded, Sirri Pasha withdrew his resignation, and all was believed to be well. Next day, however, he again presented his resignation, giving this time as his reason that whilst he was much gratified at having been able to serve his country by obtaining the concessions in question, he felt that his long services entitled him to a thorough rest, and as ordinary leave would not give him such rest he had decided to retire from public affairs.

Attempt on Life of the Minister of Agriculture.

The Minister of Public Works proved obdurate, and negotiations were in progress for a reshuffling of portfolios, etc., when on Sunday morning an attempt was made on the life of Mohammed Shafik Pasha, who had been mentioned as a possible successor to Sirri Pasha at the Ministry of Public Works, War and Marine. The attempt was made whilst he was driving from his house at Heliopolis to the Ministry of Agriculture, a bomb being thrown at his car just after he had passed the church erected to the memory of Butros Pasha Ghali on the Boulevard Abbas. The bomb exploded without injuring anyone, and merely slightly scratched the door of the car. As soon as he had thrown the bomb the assailant jumped into a carriage in which another man had been waiting near by and drove off at high speed, his companion holding a revolver at the coachman's head. The chauffeur, who had at once stopped the car, leaped out and gave chase, calling upon a cyclist who was passing to assist him. When the carriage reached a certain point the two men jumped out, followed by the coachman, who marked the house they had entered and informed the police when they arrived. The house was a Jewish girls' school, and the two men were found hiding in the lavatory. They were at once taken off to the Governorate, and, meanwhile, an Army chauffeur who was passing came to the assistance of Shafik-Pasha and drove him to the police-station. The two men were confronted with witnesses, who identified them. The man in the carriage declared he knew nothing of the bomb, but was forced by his companion to drive on. The thrower of the bomb has admitted that he threw it, but declares that he had no intention of killing Shafik Pasha, but merely wanted to frighten him. The two men are a student and an ex-student of a private secondary school, and the inquiry is now proceeding.

There is little doubt that whilst this attempt is part of the general plan of intimidating all those who in any way are prepared to assist in the government of the country at the present juncture, it is at the same time the outcome of the Public Works controversy that has been going on for some time now, and of the unprecedented attacks which have been made in the Extremists' Press and outside in this connection. Two of these organs have now been suspended for these attacks on the Government.

It is indeed somewhat significant that on Friday last—*i.e.*, two days before the attempt—a conference was given on the subject at the Printania Theatre by a native engineer, who violently attacked Sirri Pasha, the Nile projects and the Egyptian, Hussein Pasha Wassef, who had been nominated as an Egyptian member of the Nile Projects Commission. The fact that Shafik Pasha was generally believed to be Sirri Pasha's successor naturally marked him out for such an attempt, which, had it been successful, would have been all the more regrettable from the purely Egyptian point of view, seeing that besides being one of the few able engineers Egypt has produced, he has for some time been taking a prominent and most useful part in the solution of the economic and especially the food supply problems with which the country is being faced.

It is thus to the point of putting out of the way just the men who are their most distinguished and useful compatriots, that the tactics of the Extremists in appealing to the baser passions of the people have brought the country, and this will no doubt not be lost on the British Government or on those of the Powers whose subjects may have sympathised with the national aspirations of the Egyptians, but whose consent must be obtained before any radical changes are made in the internal regimé of the country.

YUGOSLAVIA.

BELGRADE, February 22.

The New Cabinet.

The early days of the new Radical Block Government have not been without incident. The Opposition Press came out on Saturday with a list of the new Cabinet, in which there figured several unfamiliar names of Croats and Slovenes nominated by the Narodny Club and the Slovene Clericals. Among these were a Dr. Hanzhek, who became prominent as the result of an article which he wrote in the paper, *Nezavisnost* (Independence), at Djelovar on February 12, in which he declared himself a Republican. As he was appointed a Minister under the Crown, M. Protitch requested him to withdraw this statement, but Dr. Hanzhek declined, and resigned his appointment.

There is at least one other Republican in the Cabinet; the most notable is the veteran, Stoyan Ribarats, who earned notoriety for his merciless suppression of the mutiny and revolt at Zayechar in 1883, when he was Minister of the Interior. In 1893 he was tried for the murder of eighteen persons in this connection, but acquitted, as his enemies allege, thanks to the intervention of King Alexander. As a supporter of the extinct Obrenovitch dynasty, he has shown his hostility to the Karageorgevitches by declaring himself a Republican in his old age, but the modest Republican Party in Belgrade declined to receive him into the fold. He is now Minister of Commerce in the Radical Government. He leads a small party of some half-a-dozen members, the survivors of the old Liberal Party founded by Johan Ristitch in 1860, which was in power so long under King Milan.

But the crowning sensation was the nomination by the Narodny Club of Dr. Halil-Beg Hrasnitsa, a Mahommedan Bosniak. This gentleman had been a reserve officer in the Austro-Hungarian Army, and served as a Judge of Courts-martial at Kragujevats during the occupation. The Opposition Press at once appeared with a howl of rage and indignation, averring that he is on the list of war criminals "wanted" by the Peace Conference for the condemnation to death by hanging of thirty innocent peasants, women, and children, and the Belgrade Municipality at once voted a protest against his appointment by sixteen votes, there being three abstentions on the ground of non-proven. In to-day's *Tribuna*, a Radical organ, appears a formal *dementi* from Hrasnitsa, in which he states that though he did serve as Judge at Kragujevats from February, 1915, to February, 1917, he never condemned anyone to death, and that only afterwards he read of

Digitized by Google

the condemnation of seventeen persons by his successor. Whatever are the rights of this piquant incident, he has been obliged to withdraw from office, and the Democratic papers have issued an appeal to the citizens, shopkeepers, and restaurateurs of Belgrade to boycott him.

Consequently, the Narodny Club have nominated others in the place of Dr. Hanzkek and Dr. Hrasnitsa. The four nominees are: Dr. Mata Drinkovitch, a Dalmatian, Minister of Posts; Dr. Djuro Shurmin, Professor of Serbo-Croatian Literature at Zagreb University; Dr. Ivo Krinz, a Croatian lawyer, and prominent member of the old Starchevist Party; and Mr. Ivan Korachevitch, a Croatian judge. These men are not yet well known in Belgrade, and the Opposition Press naturally regards them with suspicion, as the Narodny Club is generally regarded as a separatist body which is a danger to the Union.

The fact is that the exact aspirations of the Narodny Club are not definitely known; they certainly demand a very full autonomy and the maximum of decentralisation, but is is doubtful whether they desire complete independence. The *Tribuna* asserts that Dr. Drinkovitch spent three years in prison for high treason against Austria; that Dr. Laginja, leader of the Narodny Club, defended him; that Dr. Shurmin sturdily opposed the Khuen-Hedervary *régime* in Croatia, and so lost his professorship under Ban Rauch; and that they are all good patriots, not only towards Croatia, but towards Yugoslavia.

It may be that this is true, and that they only seek wide decentralisation, which, to the foreigner, seems the best solution for this country, where each province has so different a history, or it may be that they have modified their opinions. The Democrats look upon them with alarm and hatred, but, at the same time, we can hardly think that the conservative Radical party would, even for the sake of power, ally themselves with a frankly separatist party.

The Slovene Clericals have three portfolios—Dr. Korochets, their leader, himself a priest, is Minister of Communications, and the others are M. Roshkar, a landowner from Maribor, and M. Jaukovitch.

The remainder of the Cabinet are Serbs, whose careers are better known in Belgrade. M. Protitch is a veteran politician and leader of the Radical Party. His enemies accuse him of political cynicism, reactionary and autocratic tendencies, and an extremely arrogant manner, which makes him difficult to work with. It will be remembered that in the early summer the Slovene Dr. Gostinchar resigned on grounds of personal incompatibility with M. Protitch, who was Prime Minister of the then Coalition Government, and his chief grounds for the long crisis was personal antagonism between him and M. Probitchevitch, who is a strong man.

M. Slavko Miletitch is the son of a well-known politician, Svetozar Miletitch; M. Misha Trefunovitch is a rich man with some political experience; M. Momchilo Ninchitch was Minister of Finance in the late Radical and then Coalition Government; it was he who first stamped the krone, and the new banknotes, engraved in Paris, bear his signature. He now receives the portfolio of Justice, while his old department of Finance is taken by Dr. Velizar Jankovitch, one of the energetic younger generation, who owes much of his political success to his connection with M. Pashitch. Dr. Jankovitch was Minister of Commerce in the Radical Cabinet at Salonika, and afterwards member of the Delegation at the Peace Conference.

M. Miroslav Spalajkovitch, formerly Minister at Petrograd, is Minister without portfolio, the idea being that he shall take over foreign affairs when Dr. Trumbitch has done with the Peace Conference and the thorny problems of the Adriatic Question. M. Govan Jovanovitch is an engineer by profession, and he has qualification for his office; he is not to be confused with his namesake, who was Minister at Vienna in 1914. His inclusion is not without personal interest, because he was obliged to leave a former Government under M. Pashitch on account of a personal quarrel with M. Protitch. The two remaining Serbs, Dr. Stanishitch and General Dranko Jovanovitch, are not known in the political arena.

M. Protitch's Difficulties.

The Skupshtina is to assemble at the end of the month or early in March; it will be interesting to watch events, for M. Protitch has his "mandate" from the Crown on the condition that he works with Parliament. It remains to be seen whether he will have a quorum; it is doubtful whether he will; the Democrats and Socialists have announced their intention of abstaining, which is perfectly consistent with their point of view that the present Parliament does not represent the people and is incompetent. The attitude of he Independent Montenegrins is awaited with interest, for every vote counts. and they are ten in number. They supported the recent Cabinet on general grounds, and one was a member of the Government. And it is probable that a number of Radicals will take offence at the concessions to the elements of separation, the more Chauvinistic will dread Papal influence through the Slovenes, and many will dislike the inclusion of M Ribarats. The Hrasnitsa incident will also very likely cost the Government some votes. The attitude of the oddments referred to in previous letters, such as Buevetsi, and the one Wild Man, is quite unknown.

The Cabinet will certainly have a difficult task, and it is doubtful whether so headstrong a man as M. Protitch, in spite of his great political experience, will be able successfully to handle so mixed a team. His difficulties began early. When the opposition Press gleefully commented on his admission of impossible persons, a *communiqué* was issued stating that the Cabinet was complete on Friday, whereas the first list was full on Thursday. They denied that M. Hanzhek and Dr. Hrasnitsa were ever included, but the *Pravda* asserts that the Regent signed the *ukaz* on Thursday evening, and the new list was complete only on Saturday, so that the new Government began with a crisis, as M. Hanzhek submitted his resignation in writing even before taking over.

One effect of the formation of the new Government has been a further slump on the Exchange owing to the published programme of the Narodny Club to stop the recall of kronen at four to one dinar, and to insist on exchanging them with dinars at par. A few days ago the French franc stood at 216 dinars for 100 francs, having been reduced from the neighbourhood of 230 by Government sales on the Exchange. Yesterday the dinar slumped to 260, and it looks as though it would drop still more.

Meanwhile, the Provincial Governments all over the country have sent in their resignations.

BELGRADE, February 26.

The Future of Albania.

The *Politika* publishes a proclamation which it has received from the new Albanian Government formed at a congress held at Lusnia. All the tribes were represented except those from the districts of Skadar, Ljesh, and Krojà, where the Italians prevented the delegates from coming. The National Congress declares the Provisional Government of Durazzo to have forfeited the nation's confidence for acting against the declared wishes of the nation; it protests against the rumoured proposal of a partition of the country and of an uncalled-for Italian protectorate. It also elected new delegates to the Peace Conference, namly, Bishop Bumchi, Mehmed Konitsa, and Dr. M. Turtuli; they have nominated a Supreme Council of Four to rule pending the election of a king; these are H.E. Atzif Pasha, Abdi Toptani, Bishop Bumchi, and Dr. Turtuli. A Provisional Government is elected as follows:—President, Suleiman Bey Delvina; pending his return from Paris Eshref Bey Frasheri will be acting President; the Minister of the Interior is Ahmet Bey Zogli Matia; of Foreign Affairs, Mehmed Konitsa; of Finance, Nots Choba; of Justice, Hodja Kadri; and of Education, Sotir Petsi; Director of Posts and Telegraphs is Ilomenci Kosturi, and Director of Public Works, Eshref Bey Shraperi. A National Council of thirty-seven has been elected as qualified for Parliament.

Their programme is distinctly national, but the names

Digitized by Google

suggest at least a majority of Mohammedans. It is to be hoped that the Christians are represented, especially the powerful clan of the Mirdites, and that Albanian unity will prove a practical proposition. The proclamation has been issued officially throughout Albania.

Statistics and Investigators.

The terrible statistics recently published by Sir William Goode, showing the appalling danger of tubercular trouble among Serbian children, due to malnutrition during the time of enemy occupation, are probably correct, but such figures are sometimes misleading. An American mission is now doing splendid work in different parts of the country, and is applying modern methods, and especially investigating the proportion of feeble-mindedness. Unfortunately, they are compelled to do all their oral examinations through interpreters, and it is well known that an interpreter who is at once competent and honest is indeed a rare bird. As the examiners do not realise that during the recent terrible years there has been little or no schooling in the villages, they cannot understand that a large number of young children, growing up in a cabbage sort of way, all ignorant of the names of the neighbouring villages, hardly, indeed, aware of the name of their own, and sometimes do not even know their own names, at least their own surnames; in many parts of Serbia surnames are not yet crystallised out. The results of oral tests are accordingly very untrustworthy unless conducted by an examiner who, apart from other qualifications, has considerable knowledge of local conditions and psychology. The consequence is that for one district they have returned no less than 90 per cent. of the children as mentally defective. Things are bad enough, but not so bad as this. Feeble-minded children are, as a matter of fact, rare in Serbia, owing to the healthy, natural, rather vegetable-like existence of all purely agricultural villagers, and a British doctor, who has worked all over the country for five years and knows the language well, states that mentally defective children are exceedingly rare in Serbia, though the profoundest ignorance is common.

The One-Step in Belgrade.

The British colony in Belgrade, which has by now assumed quite respectable proportions, has resolved not to be dull, and a series of dances, some quite informal, some in fancy dress, and some more solemn, have given plenty of opportunity to introduce modern dances to Belgrade society. Quite a sensation was caused by the one-step, two-step, and fox-trot, to which many Serbs took gladly, rapidly becoming proficient, while there were a smaller number who had already qualified. But Mrs. Grundy is not a peculiarly British character, as we used fondly to imagine; her sister, Madame Grundovitch, lives in Belgrade, for a week or two ago there appeared a letter in the *Politika* condemning these ultra-modern inventions, characterising them as degenerate and assaulting them with many flails, to the discontent of the younger generation, who had been having quite a good time. The old-fashioned, well-meaning folk, however, had their own way, and in purely Serbian society these dances were banned. But now a champion has appeared in the *Pravda*, pointing out that these dances, whose names look very quaint in Cyrillic characters, are exactly what the dancers make them; that in spite of old-fashioned opposition they have made their way through Europe, for the reason that they are easy to learn, though difficult to dance well, and that, properly danced, they are graceful and innocent. Some people will see degeneration in a cow and suggestiveness in an orange.

TURKEY.

CONSTANTINOPLE, February 16, 1920.

South Russia.

Although it had been announced that refugees from Russia were not to be allowed to come to Constantinople, several thousand arrived in the course of last week, and were accommodated for the most part at Prinkipo. With their arrival, some interesting information with regard to the situation in South Russia became obtainable. It is reported, for instance, that when Odessa was about to fall into the hands of the Bolshevists there were no fewer than 50,000 officers of the Volunteer Army in the city. Not only did they fail to put up a fight, but the majority of them would have sold the city to the enemy had an attempt been made to defend it. As it was, when the Bolshevists entered Odessa the Volunteer Army had already begun indiscriminate plunder, and the entry of the Red Army had no further terrors for the unfortunate citizens. There seems to be a good deal of truth in the reports affirming that a considerable number of Russian officers are decidedly pro-German, and that Denikin's greatest enemies are within his own lines.

Yesterday, one week after the Bolshevist entry into Odessa, a Ukrainian army led, according to all reports, by General Makhno, recaptured the city from the Bolshevists. General Makhno's army is composed to a great extent of Galician Ukrainians, who are not welcomed by the Poles in their native country, and who are therefore trying their luck in that happy hunting-ground for adventurers of all nations—Russia. One cannot help feeling that we are well out of the Russian adventure, and that it is a pity we ever invested lives and money in what has proved, so far, to be little better than a swindle. If the Russians really want to get rid of the Bolshevists, they should be left to do it; but they seem to prefer a quiet life anywhere than at the front. Here, in Constantinople alone, there are thousands of great, strapping fellows swaggering about in uniforms or in civilian clothes, and thronging all the most expensive restaurants and gambling clubs, where they spend money lavishly—as long as they have anything left.

To-day it is confirmed that the British are evacuating Batum, which is being handed over to the Georgians. We thus leave the unfortunate Armenians to shift for themselves. Although it is said that Denikin has recaptured Rostov, there does not seem to be any serious obstacle to a Bolshevist advance through Caucasia, which means that if any Armenians are to survive at all Armenia will also have to bow the knee to the Bolshevists. With the Georgians, the Azerbaijan Tatars, and the Turks all around them, the Armenians stand a poor chance of a free and peaceful existence. Unless present indications are falsified by future developments, all the fine talk about the rights of small nations and international duties is going to amount to nothing more than was expected by so many people—hot air.

The Nationalists.

After distinguishing themselves at Marash against the French, the Nationalists achieved another brilliant *coup* in the neighbourhood of the Dardanelles, where an ammunition depot under a French guard was attacked and plundered. Some hundreds of thousands of rounds of ammunition and a considerable number of rifles were captured. No doubt the affair will be attributed to irresponsible brigands, but if the Allies are stern enough they will find that the Nationalists will soon be able to produce the missing material.

As time goes on, there is a distinct revival of Turkish hopes of an easy peace. So far as the Arab and Syrian provinces are concerned, it is fully recognised that there can be no possible question of their return to Ottoman rule, but lately there seems to have arisen a strong conviction that the Turkish point of view will prevail with regard to Anatolia. Whether the intentions of the Allies have been modified or not, it is clear that the Turks will get off much more easily than they expected. Doubtless the ultimate solution will be the best that can be devised under the circumstances, but the unfortunate effect of even an apparent and by no means actual modification of the intentions of the Entente will be that all the credit for the result will be claimed by the irresponsible adventurers who, by holding up the economic restoration of Anatolia, have done so much harm during the last twelve months or so. It seems absurd that anyone could be persuaded to believe that the Entente Powers have been cowed into granting concessions by the bandolero forces organised by Mustafa Kemal, yet that is precisely what the Turks will believe, and once the Turk thinks you are afraid of him he can be no end of a nuisance.

The *Alemdar*, one of the only two opposition papers still in existence, recently published an interesting article with regard to the intrigues of the Unionists who fled from Turkey just after the armistice. A central committee is said to have been formed in Switzerland, under the auspices of the old gang, Talaat, Jemal, Javid, Ismail Hakki, etc., and this committee is said to have been negotiating with the Bolshevists. Talaat, who met Trotzky at Brest-Litovsk, was assisted by the Germans to proceed to Moscow, where,

Digitized by Google

apparently, he tried to come to some arrangement with Lenin.

Whether this story be true or not, the fact remains that if the Bolshevists get through to Eastern Anatolia the Turks who talked lightly of an alliance with the Bolshevists, in order to oppose the Entente, will find that their prospective allies are not likely to be so easy with them as the Entente has been. It remains to be seen whether the Turkish pashas who own large estates will be willing to give the land to the Anatolian peasants. The Turks may yet find that the Russian menace, which they fondly thought had been destroyed, is still very potent. In the opinion of many thoughtful people, the Bolshevist campaign in the East is in minor details only different from the traditional Russian policy of pressure southward towards warm waters. At all events, it certainly is evident that the Bolshevist policy is working along the same lines, and that is why it seems doubtful whether we are right in abandoning the Caucasus. The near future will soon enlighten us.

The Parliament.

To all intents and purposes, the Chamber may be considered as the reflection of the Central Nationalist Committee, and the following statement made by Sherif Bey, the Adrianople representative, is therefore not uninteresting: "The complete independence of the Ottoman Empire, within its limits at the date of the signature of the armistice; the rejection of all assistance having the character of an intervention in our internal affairs; the acceptance of all decisions freely taken by the Arab peoples; complete independence in those territories inhabited by Moslem peoples, such as Turks and Kurds. Such are the principles upon which reposes the pact of the deputies."

By "complete independence" is meant the abolition of the Capitulations; the term "intervention" means an effective control which would guarantee the execution of reforms; and *Kurds* are grouped together with Turks as Moslems in order to provide a basis for a refusal to agree to any territorial concessions to Armenia.

This may be taken as a very fair summary of the terms for which the Nationalists are supposed to be prepared to hold out. It remains to be seen how far they are really prepared to go. It is commonly rumoured that the Nationalists have prepared a plan of campaign for Constantinople, and that in the event of the peace terms being unsatisfactory there will be a violent outbreak in the capital. While it is quite possible that a certain proportion of the numerous hooligan element would require little excuse for indulging its taste for plunder, there can be no question of anything whatever in the way of a menace to the military security of the Allies, and even if disorders break out they will very soon be repressed.

The Armenians.

Further reports are arriving of massacres of Armenians in the Zeitun district, and there seems very little doubt of these reports being well-founded. At the same time, it must be admitted that the French do not seem to have handled the situation in a brilliant manner. The recruiting of Armenians, whether for gendarmerie purposes or otherwise, was a dangerous experiment, and no doubt was a contributory cause of the unhappy events that have recently occurred in South-Eastern Anatolia.

SYRIA.

Beyrout, February 23.

The Snowstorm.

The prediction made in my last letter about the damage which it was feared that the unusually heavy snowfall would cause to fruit trees was, unfortunately, too well realised. By far the heaviest loss fell on the proprietors of olive plantations, especially the famous ones of Sahret-el-Schweifat, south of Beyrout. In certain parts the loss is estimated at about 50 per cent. Even some of the pine trees cracked and were broken beneath the heavy load of snow. According to some surviving members of the old generation, the inhabitants of Beyrout 60 years ago woke up one morning to see the waves washing over the snow-covered beach, but it is believed that there is no known record of a snowfall having ever approached the recent one in duration and intensity. At the highest point of the railway track the snow fell so thickly that one of the trains caught by the storm lay entirely buried underneath the snow. Thanks to prompt measures of conveyance and provisioning the 50 or more passengers were rescued. The vegetable crop was almost entirely destroyed. Oranges from broken branches, especially in Sidon, were lately selling by the thousands at prices that seemed ridiculously cheap in comparison with the outrageously high prices of almost every other eatable.

The French Administration.

It is expected that the new broom of General Gouraud will start clearing away the rubbish in the various administrations by the beginning of next month. Already it is said that cases of theft in the Customs House are becoming less frequent. But the task of cleaning and reconstructing such an important and rather specialised administration, where many officials cannot be easily replaced, is a laborious one, and requires time. The service that admits of immediate reform is that of supplies. Badly administered as it is now, it vitiates all the economic fabric, and indirectly breeds political ills. Even while foodstuffs from the interior, particularly wheat and flour, continue to come only spasmodically and in driblets owing to political troubles, it should not be at all difficult for the authorities here to import articles of prime necessity and sell them direct to the public at a little over the cost price. The pound of wheaten flour is selling now at a little over 1s., and rice at 2s., and sugar at as much. There is superfluous tonnage between Egypt and Syria, and steamers are frequently arriving from the States.

MALTA.

Valetta, February 24.

The Carnival.

The Carnival has been but a very tame affair—only a shadow of its former self. There was a time when the feast was an hilarious occasion, one in which gorgeous costumes were worn and political movements and politicians were publicly satirised. Then it was of great moment to the rich, who entered into the various events with great zest and vim. Now it is little more than a procession of the rabble. Various reasons are given to account for this great falling off, but undoubtedly one great cause has been the many balls and masked dances which are held at the Theatre Royal and the various clubs. People dance the night away, to sleep the day through.

The Atlantic Squadron.

The presence of this imposing branch of the British Navy has had an effect for the good on the island all round. The trade has been brisk, and there has been the usual round of enjoyments which the visit of a Fleet brings in its train. One drawback has been the weather, which has been unusually cold and boisterous.

The leaving of a portion of the British Fleet, comprising H.M. ships Revenge, Resolution, Royal Sovereign, Royal Oak, Vesper, Venetian, Vidette, and Wescott, created quite a stir, and an enthusiastic send-off was accorded them on their departure.

February 29.

The Profiteering Law.

People called upon to pay up from excess profits are never very enthusiastic to do so, and Malta is no exception. The time limit to send in returns expired yesterday, but practically nothing seems to have been done, and this in face of the heavy penalties which may be put upon defaulters. There seems to be some doubt on the part of the public as to how the machinery is to be set in motion, but one is afraid that in the majority of cases the evasion is not based altogether on ignorance. However, the suggestion of publishing an explanatory pamphlet is a good one, and the marvel is that it has not been done before. Laxity seems to be a chronic disease in Government circles here, and this has accounted for many gross mistakes in the past.

No Maltese for Canada.

The announcement from the Canadian Immigration Committee of further restrictions against Maltese emigrants has caused considerable indignation. In physique and morals the Maltese would be hard to beat as emigrants. The main cause is that their labour is mostly unskilled, and their knowledge of English, if not nil, is of the most rudimentary and useless nature. It is true that attempts are now being made to improve this, but the horse has left the stable. The whole past policy in educational matters has been a bungle, and the poor would-be emigrants are now paying

Digitized by Google

dearly for the blunders of past legislators. The Press has taken the matter up, as has been done scores of times in the past, with no result. It is strongly advocated that technical schools be built to equip properly those who desire to emigrate. But here, again, the coffers are empty, and, what is worse still, there is a party even now clamouring against compulsory education!

CYPRUS.

February 15.

Extraordinary Weather.

A heavy snow-fall which began on Sunday, February 8, continued on the 9th and 10th, covering the whole island with a robe of white. Snow very rarely, and only at long intervals, reaches the plains. The spectacle has been thoroughly enjoyed. The youth of Cyprus has everywhere indulged in snowballing and the novel experience of making snow men, and so on. The cold became intense during the week. All communication between Nicosia and the north coast, and in some other directions, was cut off. A motor carrying mails from Nicosia to Kyrenia stuck in the deep snow, and could neither advance nor retreat. The chauffeur and a single passenger made their way back with great difficulty on foot. The snowfalls and cold have been quite phenomenal, beating all records, and it will be long before they are forgotten. The papers describe the various experiences and the beauty of the scenery in glowing terms, and regard the weather as of very good augury for the year's agriculture.

The Deputation.

A meeting recently held to consider whether the members of the Greek deputation should be requested to return to London to resume their advocacy of "union with Greece," decided the question in the affirmative, with the proviso that full instructions as to the aims and course to be pursued should be given. A further meeting, under the chairmanship of the Archbishop, has decided that contributions should be forthwith collected, in order to provide the sinews of war, as the amount to the credit of the fund does not now exceed £1,000. There will probably be another Pan-Cypriot meeting to decide definitely as to the speedy date of departure. M. Theodotou, the member who remains in London, writes that there is much shifting from day to day in the world of politics, and that much is taking place behind the scenes; but that he does not lose heart. Italian policy, he says, is working energetically to persuade England not to abandon Cyprus, in order that Italy may hold Rhodes. Every effort must therefore be made to counteract these efforts. He will continue to do all he can both in London and Paris.

A letter received from America by the Archbishop again invites the Greek Church of Cyprus to elect one or more representatives to attend the Pan-Christian Congress which is to meet at Geneva on August 12 next.

Nineteen years after his death, final bankruptcy proceedings are being taken in liquidation of the estates of King Milan of Serbia, who died in Vienna in 1901. The King had large properties in Switzerland, and the action is taken by the Cantonal Government of Valais, which has summoned Milan's creditors to meet on March 13.

"BRITISH REFUGEES FROM TURKEY FUND."

Supplementary Report.

The work of this fund is now coming to a close, and I feel that some account of our trust is due to the subscribers who very kindly responded to the appeals I had occasion to make at various times during the period of the war.

Before all, I wish, on behalf of the committee of the "British Refugees from Turkey Fund," and on my own behalf, to offer our sincere thanks to those who by their continued sympathy and help have enabled us to bring relief to those British subjects in Turkey who, through the trials of war, were placed in difficult and even desperate straits.

Relief was provided in the shape of loans, advances of money, monthly allowances, school fees, and doctors' bills, finally travelling expenses to those anxious to return to their homes in Turkey after the Armistice.

Nearly all whom we assisted over this trying period were persons of a class where privation and want are peculiarly hard to grapple with.

Under Lady Neave's inspiration the fund was started in the autumn of 1914, and the same committee then formed, with but few changes occasioned by death or absence, has worked until now.

It may be of interest to record that approximately 200 to 250 persons have been helped. Over £16,000 sterling has been collected, and we have sent assistance not only to British refugees from Turkey in Great Britain, but to those stranded in France, Spain, Italy, Egypt, Greece, and Cyprus, and have also aided British subjects living in Turkey through the war whose condition was in every case very sad.

In Constantinople our fund was administered by Miss Eveline Whitaker, now Lady Paul, who, with the help of friends, distributed the funds until Mr. Waugh, the present British Consul-General, was able to undertake it. In Athens, Mr. Wace, of the British Legation, spared neither time nor trouble to help those who had taken refuge in Greece from Turkey. In Alexandria the British Consul was good enough to be our intermediary, as was H.M.'s Consul in Cyprus. We cannot fully express our appreciation of the work of these devoted helpers, undertaken at times under great difficulties.

In London, Mr. Arthur Baker, of Constantinople, acted with admirable energy as hon. treasurer, with Mr. Ch. Charnaud as hon. secretary in the beginning; on his being called away on official work, later on, his brother, Mr. Geo. R. Baker, took his place. Mr. David Forbes and Mr. Ronald Baker acted as hon. secretaries at different times, and at one time Mr. Middleton Edwardes, now British Vice-Consul in Berne, undertook the secretarial work. Mr. Baker and Mr. Edwardes carried us through a difficult period when appeals were many and funds were low. Mr. Tower, of the London Chamber of Commerce, gave generously of his time and opportunity. To the continued hospitality of the columns of the NEAR EAST we tender our heartfelt thanks.

The fund was under Government control, and the statements of account were regularly sent in to the proper authorities for audit and record. Lady Neave was ever anxious to collaborate. Lady Barker's interest and help never flagged, and the fund owes her a deep debt of gratitude.

In reviewing the past, I cannot but feel that the work accomplished was a very needful work, and one that no other organisation could have attempted to give—the help and sympathy of friends. I add the statement of accounts to September 30, 1919 Since that date £220 2s. 2d. has been expended in passage-money, and after providing for similar anticipated sums our treasurer reckons that the fund will come automatically to a close. Any balance remaining after April 30, 1920, will be sent to H.M.'s British Consul-General in Constantinople to be added to the "British Relief Fund" (a Government fund), which he still administers in Turkey.

For the last time, may I offer an expression of true gratitude to those who have trusted us to carry out this work, which I feel certain has not been in vain. I beg to add my own thanks to those who have been the mainstay of our effort and whose unselfish help and faithful interest have contributed so greatly to the success of the "British Refugees from Turkey Fund."

ALICE LOWTHER.

BRITISH SCHOOL OF ARCHÆOLOGY IN JERUSALEM.

We are authorised to announce that H.R.H. the Prince of Wales has been graciously pleased to become Patron of the British School of Archæology in Jerusalem. The Director (Professor J. Garstang, of the University of Liverpool) is shortly proceeding to Palestine to complete the organisation of the school. As soon as the political destiny of Palestine has been fixed and a mandate formally assigned, it is hoped that a Department of Antiquities will be formed, under which the school looks forward to collaborating with the Palestine Exploration Fund in the excavation of an important site which has already been provisionally selected. Anyone who is interested in the school is invited to communicate with the Secretary at 2, Hinde Street, Manchester Square, London, W.1.

CORRESPONDENCE.

THE TURKISH EMPIRE.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—General Smuts has likened the Peace Conference to "a seething cauldron of human greed and passion." This was before the peace with Turkey came up for consideration. Some still stronger expression would have to be found if the General was now assisting the Christian Powers in their scramble for what remains of the Turkish Empire. Yet the writer of an article in the *Manchester Guardian* (February 18), quoted by THE NEAR EAST, unctuously insinuates that Turkey is being treated with a consideration they (the Powers) have failed to show to any of their Christian opponents. Could hypocrisy go further? But, unfortunately, there are, I am sure, thousands of good church-going Britons who honestly have persuaded themselves that such is the case, and, what is more, will continue to do so, no matter what proof may be adduced to the contrary!

In a recent letter to *The Times*, Mr. Ameer Ali suggested that if we really wished to follow the "peace and goodwill" of our Saviour's teaching, the precepts of the Sermon on the Mount had better be studied at Jerusalem, which might be selected as the seat of the League of Nations rather than Constantinople. The retort was fair and very pertinent, but we had better try and keep religion out of the controversy and see if there is not some other "acid test" which can be applied to ascertain if the Powers are as disinterested as they would have us believe, and actuated solely by unselfish motives!

Let us reconsider the Eastern problem as a whole and not as the Egyptian, Syrian, Armenian, etc., questions. Of the Great Powers, who are the most interested—France and England? Let these two great Mahommedan Powers agree to pool their interests, buying out Italy from Tripoli with liberal compensation elsewhere in Africa. Let the Turkish Empire be then reconstructed as a Federal State, much on the lines of the United States, with a Senate at Constantinople, with or without a House of Representatives. Let this Federal State look to France and England for advice and financial assistance, but in other respects let the sovereignty of the Turkish Government be interfered with as little as possible. Let the Greeks and Armenians at present scattered throughout Asia Minor be transplanted so as to form homogeneous communities or States, with liberal self-government, but with representatives in the Senate. Those who refused to be moved to be allowed to remain, but to be made clearly to understand that they have no rights other than their Moslem neighbours. Similarly, Moslems might remain in the Christian communities, should they desire to do so, on the same terms. The federation as a whole to be under the ægis of the League of Nations, who would grant France and England a joint mandate for a *fixed* period of years, at the expiration of which Turkey's entire emancipation would be reconsidered.

In the space of a letter all the details of the scheme cannot be gone into, but the rough sketch I have given will, I trust, be sufficient to judge of the merits of such a proposal, which I contend would: (a) ensure peace and good government in what was formerly the Turkish Empire; (b) provide for the protection of the small Armenian and Caucasian States without making too heavy demands on France and England; (c) utilize Turkey's man-power also in Mesopotamia and elsewhere, though each State would have its own police or other armed force; (d) create municipalities at certain centres, such as Constantinople and Smyrna, on the model of the Egyptian mixed institutions; (e) pacify the Moslems in India and Egypt, and assist in solving the question of the Khalifate in Arabia; (f) produce a strong and friendly Moslem Power, to be eventually incorporated in the League of Nations.

If after such a trial Turkey still failed to reach or maintain a standard of civilized government as enjoyed by her European neighbours, a further period of tutelage would be prescribed, but the decision would rest with the League of Nations and not with the Powers holding the mandates.—I am, etc.,

Taunton. COLES PASHA.
March 1, 1920.

ALBANIA.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—On January 30, in spite of difficulties thrown in their way by interested Powers, the Albanians held a National Assembly at Lusnia, and passed resolutions which ought to be more widely known, and have not received from the Press the attention they merit. They are as follow:—"The National Assembly, gathered this day at Lusnia, has decided unanimously to protest against the decision of England, France, and Italy to partition Albania among the Yugoslavs, Greeks, and Italians, thus putting in force the Pact of London of 1915. The same Assembly has to-day voted without opposition the following orders of the day:—(1) A protest against the decision, which condemns Albania (a neutral State, and one of the most ancient of Europe), in order to satisfy the imperialistic aspirations of the neighbour States. The National Assembly appeals to the whole civilised world against this total ignoring of the principles proclaimed by the President of the United States and the representatives of the Entente after a war which has freed a number of nations from a foreign yoke. The Assembly demands complete independence within the ethnographical and natural frontiers of Albania. (2) The Assembly has decided not to accept any foreign mandate or protectorate. (3) Albania desires only to take her place in the Balkan peninsula, thus putting an end to her miseries, in order to enjoy a life of peace and harmony with her neighbours. The Albanians are ready to make all sacrifices, to the last drop of their blood, against any decision which may imperil their territorial integrity and their complete independence."

It is obvious that no partition or occupation of the country can be made without bloodshed, and in the interests of peace it is most earnestly to be hoped that no second Poland may be made of Albania. The numerous Albanians who fought as volunteers in the ranks of the French and the Italians, and the Albanian refugees in America who joined the United States Army and fought along with it in France, believed that they were at the same time fighting for their own freedom. They believed in the honour of England, whose Prime Minister was proclaiming the rights of self-determination; they knew that the Treaty of London of 1913, which gave them independence, was signed by Sir Edward Grey.

Is England now to show to Albania and to the world that her pledged word is valueless?—I am, etc.,

M. E. DURHAM,
Hon. Sec., Anglo-Albanian Society.
71, Belsize Park Gardens, N.W.3.

THE SECURITY OF THE BULGARIANS.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—The Bulgarian nation arose, only two generations ago, from the obscurity in which the concentrated Ottoman power in Europe had held it for centuries, and rapidly reached an enviable position to the eyes of its neighbours. Bulgaria acted, was talked of, served, destined for great political combinations as no other country during forty years. Serious men even came to entertain the belief that the problem of the Turkish power in Europe might be solved by Bulgaria, and their belief was all but realised only a few years ago. Events, however, beyond the capacity of the Bulgarian leaders, guided by an unhappy succession of circumstances, have destroyed, as far as can be judged from the present condition of things, the basis of such belief.

"Is the Bulgarian failure for the good of the world's peace?" is a question which some will answer in the affirmative, others in the negative. We will not discuss it here. The Bulgarian, however, is still for his neighbours an object of preoccupation, even of fear. How otherwise are we to explain their daily endeavours to damage him further by deliberately spreading false information regarding what is happening in his country?

The enemies of Bulgaria, aided by happy circumstances, can destroy many things possessed by the Bulgarian, but they cannot destroy his capacity for labour, and they fear it. The Bulgarian has failed in some things: he has never failed in labour. It has ever been the characteristic quality of the Bulgarian. Nobody can deprive him of it. Work has preserved him through centuries; work raised him above his neighbours to lead them to victory over the common enemy; and work will preserve him from the slough of despond in which his enemies would keep him. It is this labour of the Bulgarian that his evil wishers—and they are all around him—fear. The Bulgarian himself does not think much of this, his special characteristic; it is part of him. He does not, will not labour to spite his enemies; he labours because he cannot help it.

This quality of the Bulgarian is centuries old; it is traditional, a gift, as he believes, of God. The following ancient Bulgarian parable will illustrate my assertion: "When God was allotting the destiny to men, the first who came were the Turks, to beg for a present. God settled it Himself, and gave them sovereignty. When the Bulgarians heard that God was making presents they hurried up to get something for themselves. 'Why have you come, you Bulgarians?' said God. 'You are welcome. Thank you for coming.' 'God, we heard you were making presents to people, and we beg you to give us one.' 'What would you like me to give you?' said God. 'We want sovereignty for a present,' answered the Bulgarians. 'I have already given that to the Turks,' He said; 'you must think of something else.' 'O God!' they said, 'what is this *work* of yours; why did you let others have sovereignty? Give it to us if possible.' 'That's settled,' said God; 'take my blessing, you Bulgarians, but I will not take back my word. A present

Digitized by Google

I will give you: Work. Now go with God,' said God to them.

"The Jews heard of this and hurried up to God: 'Why have you come, you Jews?' said God. 'We heard that you were making presents to people, and we have come for one.' 'Well, well! what would you like?' said God. 'We want sovereignty,' replied the Jews. 'I have given that away; ask for something else.' 'O God!' they cried, 'what is this *calculation* of yours? We want sovereignty,' said the Jews. 'That's disposed of; take my blessing, you Jews, but I won't take back my word. A present I will give you: Calculation.' The Francs (Europeans) obtained artifice, the gipsies poverty, etc. At last the Greeks came before God. 'Why have you come, you Greeks?' said God. 'We come that you might give us a present—the biggest of all,' said the Greeks. 'What sort of a present would you like me to give you?' said God. 'Sovereignty,' said the Greeks. 'Well, you come too late; I have divided all the presents; there is hardly anything left that I can give you. Sovereignty has gone to the Turks, work to the Bulgarians, calculation to the Jews, artifice to the Francs, poverty to the gipsies. So you see there is nothing I can give you.' 'Whose was this *intrigue*,' they shouted, 'that we heard nothing, and have come so late for a present?' 'Ha! ha!' laughed God; 'don't be angry, you too shall have a present. I won't let you go back with empty hands. You shall have *Intrigue*,' said God." And the Greeks have intrigued, and will intrigue; the Bulgarians have laboured, and will labour. The struggle between these forces has not finished. Sudden soaring heights may yet turn out to have been accomplished on Icarus wings.—I am, etc.,

P. M. MATTHEEFF.

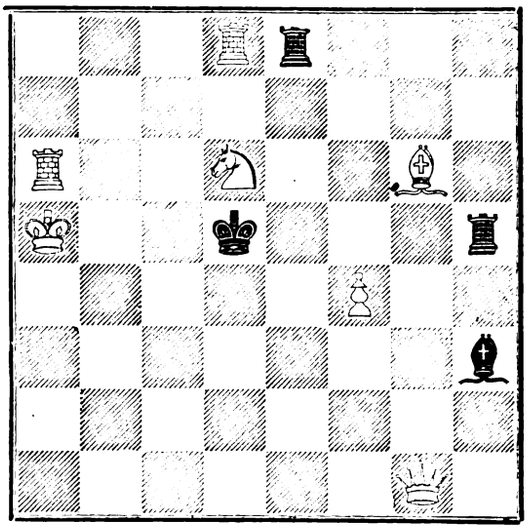
PROBLEM No. 17.

Black.



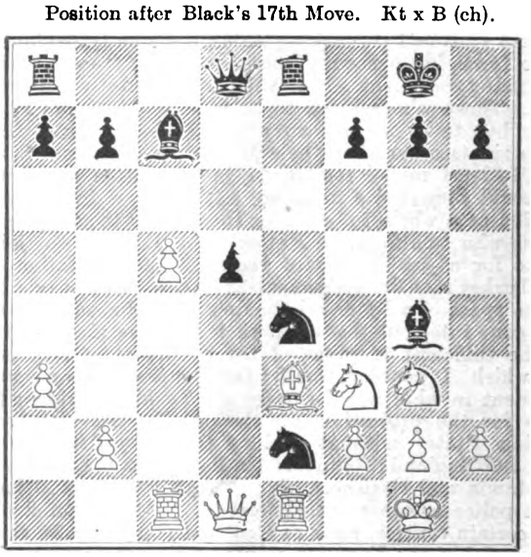
White.

White to mate in two.

The above problem, by H. V. Tuxen, was awarded the first prize in one of the competitions of the Good Companion Chess Problem Club.

Mr. E. E. Colman finished his games in the Metropolitan Championship with the following fine win over Mr. R. H. V. Scott, giving him the excellent score of nine out of eleven, made up of seven wins and four draws:—Opening, Queen's Pawn; White, Mr. Scott; Black, Mr. Colman: 1, P—Q4, P—Q4; 2, Kt—KB3, Kt—KB3; 3, P—QB4, P—K3; 4, P—K3, QKt—Q2; 5, QKt—Q2 (1), P—B4; 6, P—QR3 (2), P x QP; 7, P x P, B—Q3; 8, P—B5 (3), B—B2; 9, B—QKt5, 0—0; 10, 0—0, P—K4 (4); 11, P x P, Kt x P; 12, R—K, Kt—Kt3; 13, Kt—B, Kt—K5; 14, B—K3, B—Kt5 (5); 15, B—K2, Kt—B5; 16, R—B (6), R—K; 17, Kt—Kt3, Kt x B (ch) (7); 18, Kt x Kt, B x Kt;

Position after Black's 17th Move. Kt x B (ch).



19, P x B, Q—R5 (8); 20, Kt—Kt3, Kt x Kt; 21, BP x Kt, B x P (9); 22, P x B, Q x P (ch.); 23, K—B, Q—R6 (ch.); 24, K—K7, P—Q5; 25, Q x P, Q—Kt7 (ch.); 26, K—Q3, QR—Q; 27, K—B4, R x Q (ch); 28, B x R, R x R; 29, R x R, P—B3; 30, R—K3, P—KR4; 31, R—Kt3, Q—B7 (ch); 32, R—B3, Q x P; 33, R—K3, Q—R7 (ch); 34, R—Kt3, P—R5; 35, K—B3, Q—K7; 36, P—B4, P—R6; 37, K—Kt4, P—R7; 38, R—R6, Q—Kt7; 39, resigns (10).

(1) Not nearly so strong as Kt—B3. The text move signifies the adoption of a waiting policy.

(2) Clearly a wasted move.

(3) This move is much favoured by some players, but has little to commend it, almost invariably leading to pronounced weakness in the centre. In the present case Black resolves the position greatly to his advantage.

(4) The logical sequence to White's 8th move. Now Black obtains a passed pawn.

(5) A strong move, placing White completely on the defensive.

(6) B x Kt might have been played here, followed by Kt—Q4, which would have resulted in an exchange of pieces. R—B and Kt—Kt3, which follows, simply enable Black to perfect a neat sacrificial combination.

(7) With which Mr. Colman begins his successful attack.

(8) Obviously the Kt cannot be taken.

(9) A perfectly sound sacrifice.

(10) A well-played game by Mr. Colman.

PRESS ON THE NEAR EAST.

Arabia.

In the *Fortnightly Review* of February, Mr. Robert Machray takes into review the whole Arab question. Of Arabia, in particular, he says:—

Such of its States as were virtually independent of the Turks before the war will doubtless become independent in fact, but this does not mean that they will draw together to form a Confederation. There is no great driving force in that direction from within, and events tend the other way. The unification of the Arabs which was achieved during the war has not endured. Since the conflict between the King of the Hedjaz and the Emir of Nejd-Hasa, a conflict in which the latter stands with his fanatical followers for the extreme Mahommedanism of the Wahabis, and the former appears as the representative of orthodox Islam, there has been no approach to a settlement of their quarrel, which is concerned with the delimitation of their respective frontiers, and has already led to severe fighting, with a victory for Nejd-Hasa. Perhaps the British, who have been appealed to in the matter, may succeed in composing the dispute as to boundaries, but they can scarcely be expected to succeed in composing the religious differences, for they go very deep. There is no Arab unity in Arabia proper—this is the truth. And it would seem to be unlikely in the last degree that the two leading native States—much the most considerable in Arabia—will ever come into any sort of real political association. Nearly all the tribes are divided by conflicting interests and century-old feuds, and this division still persists throughout Arabia. It will be seen from all that has been set forth in this article that to all intents and purposes the Arab Empire, instead of consisting of Palestine, Syria, and Mesopotamia as a minimum, has been whittled down to the narrow strip of Eastern Syria which contains Damascus, Hama, Homs, and Aleppo. This is the same thing as saying that there is no Arab Empire. And from what leaks out—there is little direct information available—it is to be feared that the erection of the East Syrian territory, under the Emir Feisal, into a State is a rather artificial business, and that the Arab administration leaves much to be desired—which is precisely what was to be expected in the circumstances. What, then, of the official statement of the British and French Governments of November, 1918, to the effect that they aimed at establishing indigenous governments and administrations in the lands freed from the Turks? That was a definite statement of a definite policy, and it must be implemented sooner or later, but the facts suggest that it is advisable to do so later rather than sooner. Long tutelage will be necessary for success in these efforts in setting up Arab States. The Arabs are a congeries of tribes, some settled, and some nomadic; and the desert is in the blood of every one of them. Government in the modern sense is unknown to them. There are those who maintain that the Arab is incapable of governing a modern civilised State as it should be governed. This is a hard saying, but with enough truth in it to indicate what is the real difficulty of the Arab question. At least it may be safely said that the establishment at present of Arab States, without firm and strong guidance from outside, is undesirable, and might be disastrous both to the Arabs themselves and to the general interest.

Algiers.

In the *Evening Standard* recently, Mr. A. MacCallum Scott, M.P., described Algiers. This is how it appears to him:—

Algiers is almost wholly Oriental. The town is like a veiled woman from the harem wearing a pair of high-heeled Parisian shoes. The quarter round the harbour is French, with spacious boulevards, gay Parisian shops, open-air cafés, and electric cars. But the old town, which climbs up the steep hillside, terrace by terrace, to the kasbah, or fortress, is as Oriental as Bagdad. It is a secret land. The women are veiled, and the soul of this people is veiled also. The two races, of Europe and of the Orient, mingle in the street and in the market-place. In fez and turban, in Moorish or Arab dress with curious European adaptations, the native toils contemplatively and traffics philosophically, undisturbed by all the mechanical ingenuity of Western and Northern civilisation. The two streams flow placidly in the same channel, touching each other, but never mingling. The Moorish or Arab soul looks out upon an alien world through narrow loophole windows like the eyes of the woman peering out through the slit between the veil and the haik.

The Arab town is almost incredible to a European. Streets there are none. It is difficult to find a word sufficiently diminutive to express these precipitous passages of communication which burrow between and beneath the houses. "Alley" and "lane" are words of far too spacious an import. These burrows seem hardly human to our Northern eyes. A rabbit warren and the subterranean galleries of an ants' nest are the closest similes that suggest themselves. No wheeled vehicle can penetrate this labyrinth—no horse or even mule. Tiny donkeys with panniers are the beasts of burden, and when one meets them climbing nimbly up the cobbled steps one must stand aside flat to the wall to let them pass in Indian file. A narrow streak of sky is sometimes visible far overhead through a crack in the shell of the human hive. The Moorish house is typical of the secret life of the people. The blank walls which it turns to the street reveal nothing. There is no attempt at decoration. The plain, plastered, whitewashed walls are unrelieved by windows, save perhaps by a narrow slit like a loophole. The doorway is severely simple, save, perhaps, for a narrow band of tiles or a moulded plaster pattern round it. There is no "front," no "facade," no portico, no loggia—none of that ostentation and public display in which Europe delights. But these Moorish houses are like a coat of sackcloth with a rainbow-coloured silken lining. They expose their back to the world, but their real front is turned within. Each house is built round a central courtyard open to the air and to the sun. A fountain trickles dreamily in the midst. Each of the four sides consists of a double row of arcades arched in the Moorish fashion, the upper arcade forming a balcony with a parapet of intricate arabesque pattern. The walls are gay with coloured tiles. Here with the world shut out is decoration, here is colour, here is the domestic life which no outsider may see. Our civilisation beats around these walls like surf upon the barrier reef of a coral island.

Serbian and Italian.

In the February issue of the *Contemporary Review* Mr. Anthony Dell makes some interesting comments in an article entitled "Italian and Serb: A contrast." Of Serbian character he says:—

The compound of physical energy and Oriental mysticism and lethargy is very marked among the Serbians, and it is very difficult to say how far the Orientalism is a legacy of the Turk and how far it is innate in the Serbian character. One must realise, in the first place, that the typical Serbian, although of sharp intelligence and with an aptitude for acquiring new ideas, is at the bottom moved by sentiment and feeling more than by reason. One may argue successfully with a man inclined to gaming or deeds of violence that such courses are unsound in practice and evil in consequence. He will admit your reason, but add: "What you say is undoubtedly just. You are a wise people. But we Serbians are of no value to anyone. If they hang me the world will be no poorer, and I shall have lived my life as it pleased me to live it." In the face of this, logic is powerless. Such a frame of mind governs a very large part of the daily life of the average Serbian—not, of course, necessarily in the direction of wrong-doing. Whereas the Italian would, if he had time to think, survey a problem of conduct from the point of view of reason, the Serbian would be inclined to act upon impulse, however long a time for reflection he had. Fortunately, his impulses are on the whole hearty, generous, and innocuous.

And his view of the present difficulties existing between Italy and Serbia he summarises as follows:—

Latest indications are to the effect that armed struggle between Latin and Slav will be averted, and that each will realise the sovereign necessity of common friendship. There are only a small minority of Italians who seriously wish to filch Dalmatia from the Slavs; just are there only a small minority of Jugo-Slavs who harbour a grievance that Trieste ought to be theirs. The average Italian is a reasonable being, and the average Serbian is, if not exactly reasonable, a person who does not exaggerate his claim upon his life. Reasonable compromise and the discomfiture of the "Nationalists" would be welcomed by the people as a whole in both camps. But it must be remembered that if the Italians react to the suggestion of under-esteem, the Serbians as quickly react to the suggestion that Europe is no place for the Slavs. The determination that there shall be no successor to Austria on the neck of Serbia is one which is shared by every Southern Slav, and no one who knows the Serbs can fail to be convinced that a solution which leaves them under the impression that they are being throttled will provoke a conflict as bloody and determined as that which expelled Austria from Italy. There is no sensitive repugnance to war in Serbia. It is a land where the din of battle has never yet been hushed.

MUSICAL NOTES.

There is little doubt, I think, that modern methods of teaching technique in music are far superior to those of former days. This fact applies especially to the piano, and it was exemplified by the recital which pupils of M. J. du Mont gave at the Æolian Hall on March 1. It is not so much improvement in actual playing as the conservation of energy (which is gained from the principle that "that is best done which is done with the least possible effort") that is noticeable in modern methods. Even in very long (and very, very dull) concertos by Beethoven, M. du Mont's pupils showed most marked powers of endurance. In modern more than in classical pieces his pupils also displayed some interpretative skill; in a few of Scriabin's preludes, for instance, Miss Barbara Hawke made more than a guess at what the composer meant, and Miss Violette David knew quite well what Debussy and Albeniz were talking about when they wrote their "Voiles" and "Seguidillas." It is also possible that a name will be made by Mr. Claude de Ville, who showed a sense of colour in Chopin and Arnold Bax.

The other pianoforte recital which I attended during the week was that of Miss Katherine Doubleday, at the Æolian Hall on March 3. Miss Doubleday is a very capable pianist, but she has a style the worst parts of which are all her own. In spite of affectation, however, she achieves some remarkably beautiful playing. Her technique and touch are both good, but it appears that she has not decided yet in which direction her abilities most surely lie. Her field is certainly a wide one, and it seems that she should learn rather what to avoid than what to play. For instance, for the Zarembsky and Rachmaninoff (one study and two preludes) she would have had to go but a very short distance to find better substitutes. However, in César Franck's "Prélude, Choral et Fugue," and in Schumann's "Etudes Symphoniques," she showed that she is a really fine musician. She played Franck's "Prélude" extremely well, though in the "Choral" her affectations let her down. Equally well she commenced her Schumann, but owing to her methods her endurance was exhausted long before the end. It will be very interesting to watch the future of this young musician, for in it lies the perfecting or the marring of a fine artist. Miss Doubleday was assisted by Capt. Herbert Heyner, who sang very well songs by Hamilton Harty and Easthope Martin, and one was grateful to him for including a beautiful little song by Delius, "Have you seen but a white lillie grow?" In other songs by Schubert and Schumann one's gratitude (especially to the accompanist, Mr. Berkely Mason, who in other songs was excellent) did not express itself.

Vocal recitals may be heard almost any day at one or other of the halls in London, but unless you are a hardened frequenter of such you do not know that the majority of them can be unregretfully missed. This being so, I was all the more sorry not to be present at the first half of Miss Anne Thursfield's recital at the Wigmore Hall on March 2. What I did hear, however (some negro spirituals, and French songs by Hahn, Fauré, and Fourdrain), was sufficient to show that here is a very fine artist, whose skill in singing, however, seems greater than her judgment of song. Her inclusion of J. A. Carpenter's setting of some words of Tagore may or may not have been due merely to the indefensible desire to be in fashion, but surely the negro spirituals, which I heard her sing, could have been kept in reserve as encores? Still, for her French songs alone one is profoundly indebted to Miss Thursfield, because she sings them in French, and not in that sorry counterfeit with which most English singers attempt to swindle their audiences.

At the Æolian Hall on March 4, Miss Ursula Greville gave her first song recital. Her programme was unusually interesting: it included operatic excerpts from Mozart and Puccini, and some part-songs for three voices, in which she and two other ladies took part. The first thing noticeable in Miss Greville's singing is the fact that she is always delightfully in tune. Her voice is beautifully clear, although her enunciation is not. Her obvious aspiration to operatic singing I do not think will be fulfilled, but in songs of more natural beauty she should do very well. In a song of movement like Stanford's "Windy Nights," or in a liquid picture like Rutland Boughton's "Immanence" (words by John Rodker), she and her accompanist, Mr. Percival Garratt, gave us the thing complete. Miss Greville is obviously truly musical, with both skill and judgment, but I hope she will not try unduly to develop the operatic side of her singing, for she has not the virtues (except a very keen ear) and certainly not the vices necessary to success in that sphere.

M. Mirsky, who gave a vocal recital at the Æolian Hall on March 4, sang songs in five languages, English, French, Italian, Russian and Hebrew. Fortunately, he did not indulge in that very expensive economy, yet common custom, of having printed only the titles of his songs (this custom is one which only our John Coates' and Gervase Elwes' can afford to observe). Without a programme of words, indeed, one would have been rather lost. As it happened most of the songs were well-known, but as it also happened M. Mirsky did little to prompt one's recollection of the words when one's memory failed. M. Mirsky has developed the emotional side of singing rather at the expense of the other aspects of his art. However, within this narrow sphere of Love, Sleep, the Soul, and so on, he worked with convincing fervour. He was best (or, perhaps, one could not so easily notice faults) in Hebrew and Russian: he sang especially well Borodin's fine song, "The Enchanted Forest." M. Mirsky was assisted by Mlle. Valerie Valenson, who unfortunately chose pieces which demanded nothing more than (but which showed she was the possessor of) an extraordinarily neat technique.

The fifth concert of the London Chamber Concert Society at the Wigmore Hall on March 2 maintained the high standard which this Society has set. With Miss Rhoda Backhouse as violinist, Mr. Harold Samuel as pianist, and Mr. Felix Salmond as 'cellist, Saint-Saëns' Trio in F major (Op. 18) and Mozart's Trio in E major (Op. 15, No. 2) were played. Of the charming yet thin substance of the first they made a very pleasing thing: Miss Backhouse infused a good deal of necessary individuality into her playing, and with Mr. Samuel and Mr. Salmond putting in some superb phrasing, the whole trio was performed with rare verve and finish. In the third movement (*Scherzo Presto*) they excelled themselves. Unfortunately the Mozart was not so well done, for Miss Backhouse was unable entirely to rid herself of faulty intonation. As a pianoforte solo, Mr. Samuel played Bach's Partita in A minor. His hard, precise, and finished style suits Bach as well as anybody, and his performance of the seven pieces was instinct with both colour and clarity. The *Sarabande* and *Scherzo* were particularly charming. If Mr. Samuel were to stick to Bach he would, I think, have a much higher reputation than he has. In a Brahms Sonata for Piano and Violoncello (Op. 38) which he played with Mr. Salmond, many passages were of exquisite beauty, but it was the difficulty of fusing the fanaticism of Mr. Salmond with his own fervour that made all except the first movement imperfect. In the last movement, it may be added, his fervour reached the unhappy pitch of snapping a piano string.

Almost all that can be said of the Kennedy-Frasers, whose recital of the Songs of the Hebrides I attended at the Æolian Hall on March 6, has been said. Every critic of repute has warmly recognised their genius, and the genius of the things which they have discovered and are still discovering. Mrs. Marjory Kennedy-Fraser and her daughter, Miss Patuffa Kennedy-Fraser, bring us, in these songs from Barra, the Lewes, Eigg, and the other islands of the Hebrides, face to face with the elemental things of life. There is something in these priceless songs which staggers the mind. Just as we are passionately shocked by the discovery of Truth, so something is let loose inside us when we listen to the fundamental truths of these island songs. Whether they be (like "Kishmul's Galley") of the sea, or (like "The Sea Tangle") of the island life, they stir both the mind and the blood, for they tell with direct and unescapable simplicity of the primary things in civilisation. There is, of course, artifice in the way in which the Kennedy-Frasers give them to us, but their genius transforms it into the most consummate art. I know of no songs in which beauty is more sheer or melody more deep.

The concert which the Russian Musical Dramatic Art Society gave at the Æolian Hall on March 6 was a very fine one. First Miss Ethel Hobday and Mr. Felix Salmond played Rachmaninoff's Sonata for Piano and Violoncello in G minor (Op. 19). It was a masterly performance, and the playing at times reached great heights. The third movement (*Andante*) was marvellously beautiful, and a better performance of it is scarcely conceivable. Then Miss Olga Haley, who is one of our finest artistes, sang some songs (in English that left everything to be desired) by Medtner, Rachmaninoff, Gretschaninoff, and Rimsky-Korsakoff. To praise her would be superfluous, and to prefer criticism would be almost impudent. Finally, Miss Lilias Mackinnon played some Scriabin. It is a curious fact about Scriabin that the more you know about him the more are you inclined to disagree with other people's interpretations of him, but Miss Mackinnon is never in doubt of his meaning, and plays him most authoritatively. Still, in the Preludes particularly, it was possible for one's enjoyment to be lost in admiration of her interpretations.

ANDANTE.

NEAR EAST BOOKSHELF.

I.—"TALES RETAILED OF CELEBRITIES AND OTHERS." By Sir Hastings D'Oyly, Bart. (London: The Bodley Head. 7s. 6d. net.)
II.—"A KUT PRISONER." By H. C. W. Bishop. (London: John Lane. 6s. 6d. net.)

I.—YARNS OF THE I.C.S.

It is perhaps a pity that Sir Hastings D'Oyly did not "retail his tales of celebrities and others" a year or two sooner, for his book is just of the kind our officers were wont to appreciate most in those intervals of rest from service in the front line which allowed them to indulge in the luxury of reading. During the war years the average Englishman's distaste for literature, either improving or informing, was even more marked than it is under normal conditions, and a happy collection of good sporting yarns such as Sir Hastings D'Oyly has given us would have found a very appreciative audience in the great fighting public of those days. But even in these strenuous days of reconstruction, when, under the pressure of circumstances, we have most of us been sent back to the dreary life of competitive money-hunting, such books are not without their uses. A glance through their cheery pages is the best of available antidotes for the mental poison engendered by the study of our depressing newspapers.

This book is not an autobiography—the author does not even mention the date of his birth, and the times of his goings and comings to and from India after he had joined the Indian Civil Service in 1858 are not always easy to trace. His Indian experiences seem to have been confined to the Bengal Presidency, and his silence on all things political is very noticeable. He limits himself to the telling of tales about the many people he came across in India and at home during the indeterminate period covered by the Consulate of Plancus, when personality was more in evidence both in private and public life than it is in these latter days. Very good tales they are for the most part, and embrace subjects sufficiently varied to leave the determination of their respective merits a matter for the individual taste of the reader to decide, but we confess to an unholy liking for the one about the red-haired man who was described by an American as looking as if he had "run through hell with his hat off." The old Indian Civil Service produced some men versatile as well as great, and of these the late Sir Richard Temple was of all the most versatile. Whether he was the greatest is a matter of opinion, but few will dispute that he ranked high among his brilliant contemporaries as a statesman and administrator. He was an artist among other things, and so sometimes discovered beauty in things positively repulsive to the average practical man, as may be learnt from our author, who tells us the following characteristic story about him:—

While Sir Richard was at Beauleah I used to attend him and his party on their early morning rides. The town was for a Bengali town fairly clean and free from jungle. But when riding one morning we turned suddenly on to a road leading out to the country, I was disgusted to find that the conservancy overseer had neglected this part of the municipality. The jungle had been allowed to grow unchecked, and had spread right up to and behind several native huts. Close to the side of the house was a hollow full of the most disgusting putrid and stinking water of a dark brown colour caused by decomposing leaves falling into it from the surrounding jungle and also by the filth and sweepings from the adjacent huts; a pestiferous spot, a veritable nursery for the germs of cholera, diphtheria and malarious fever. "Now I'm in for it," I thought as Sir Richard pulled up and surveyed the scene. After a good long look he turned to me and said, "How lovely! How exquisite!" Then he turned again to have another look at the spot.

India's backwardness in sanitation is generally ascribed to the manners and customs of her people. Can it be that the artistic bias of some of her great rulers in the past may have had the effect of retarding the march of progress in the department of the most prosaic of sciences? Sir Hastings D'Oyly was a sportsman before he went to India, and he appears to have made the most of his opportunities for getting sport of every kind wherever he was stationed during his sojourn in the "land of regrets." Many of his successors in the Indian Civil Service will envy him these opportunities, and when they read his stories of shikar will regret that they were fated to serve in India in days when administration and office drudgery came to be regarded as synonymous terms by those in high places, when for the District Officer "all work and no play" was the official prescription, with the result that in only too many cases he was denied the chance of getting the best out of life in India, and so in his retirement could only remember it as a dull workshop. Those of us who know the Southals and their country will appreciate the author's all-too-brief description of an interesting tour he made in the Khuruckpore Hills in the Monghyr district, and will endorse his description of the people as "a very simple, straightforward, truthful, and happy race of men." A brightly written chapter dealing with society life in Dorsetshire in the author's youth will be found to have more than local interest, for we are introduced in it to several celebrities and are told some good stories about them. C. S. Calverley was one of them, and although the stories we are told about him are familiar to most of us, the author's suggestion that his translations of Horace were rather an improvement on the original has a refreshing element of novelty about it. We would not be surprised to learn that Horace was regarded as a "back number" by some of our later Georgians, but to hear from a prose writer who owns to a lifetime of over fourscore years that he thinks one of the Odes "rather cumbrous and lacking in rhythm," frankly leaves us in a condition bordering on mental stupor.

There is a good deal about Indian racing in this book which will be of interest to many sportsmen whose experiences of it have been more recent than the author's, and the horse generally looms large in its pages; but the range of subjects touched on is so wide that it is far from being a book of "sporting reminiscences" of the familiar type so plentiful in recent years, of which the public has perhaps had more than enough.

There are some interesting notes on the family history of the D'Oylys at the end of the book, one of which tells an extraordinary story of the adventures of a child of three, one of the children of Capt. D'Oyly, of the Bengal Artillery, who, with a cabin boy named Ireland, were the sole survivors of the passengers and crew of the "Charles Eaton," wrecked in Torres Straits in 1835 on a voyage from Sydney to India; the rest were murdered and devoured by cannibals. The child was eventually rescued and brought back to England, and we are told that a descendant of Captain D'Oyly, the ill-fated father, is now serving in Mesopotamia in command of a regiment.

E. H. B.

II.—KUT, KASTAMUNI, AND FREEDOM.

This book suffers through the date of its publication. For it is impossible not to compare it with other books already written by prisoners of war in Asia Minor—with such fine books, for example, as "450 Miles to Freedom," or "The Road to En-Dor." Mr. Bishop's narrative is exceedingly interesting, but it is neither so arresting nor so well-written as these two other books. Indeed, the book is almost wholly without literary skill, and its vitality derives solely from the facts which it plainly describes or almost as plainly withholds. It briefly relates the experiences, the hopes, and the fate of the Kut garrison, the journey of the captured officers through Baghdad, Mosul (whence news of their fate was first sent to England), Ras-el-Ain, Aleppo, Adana, Bozanti, Konieh, Eski Shehr, Yozgad, and Kastamuni. A few pages are devoted to "Life in Kastamuni," and the second and larger part of the book is taken up with an undecorated but quite vivid account of the escape from Kastamuni to the Black Sea Coast; of the recapture of Mr. Bishop and his comrades, of their subsequent rescue by outlaws, and finally of their three days' uncharted sailing across the sea to Alupka, in the Crimea. As is natural in a book like this, a good deal of space is used in describing the difficulties of (or facilities for) getting food, and there is an instructive appendix giving the details of the rations upon which the Kut garrison subsisted. There are also some excellent photographs of persons and places, and the original maps which were used to effect the escape are reproduced. In short, it may be said that this book pretends to be nothing more than it is—a plain subaltern-like account of sufferings and adventures which are more (we imagine the author would probably say) for experience than for literature. But merely for the sake of its contents the book is very well worth reading.

BOOKS RECEIVED.

The Aga Khan has left London for India.

M. Sperenza, Greek Minister in Brussels, has arrived in London.

Lord Inchcape has arrived at Delhi, and will sail for England on March 20 from Bombay.

It is proposed to hold the annual dinner of the Sind Dinner Club at the Café Monico on June 1.

Lord Oranmore and Browne has arrived at the Viceregal Lodge, Dublin, on a visit to the Lord Lieutenant.

The Crown Prince of Roumania, who is now in Egypt, has conferred the Order of Michael the Brave of the First Class on Lord Allenby.

Monsieur Venizelos (President of the Council of Greek Ministers) had the honour of being invited to luncheon with Their Majesties on March 2.

M. Athos Romanos, Greek Minister to Paris, who has been visiting London in connection with the Peace Conference, left on March 4 for France.

Lord and Lady Sydenham are holding an "At Home" at the Savoy Hotel to-morrow, at 3 p.m., to meet M. Yovan S. Plamenatz, Prime Minister of Montenegro.

Monsieur Pashitch, President of the Peace Delegation of the Serb, Croat, and Slovene Kingdom, had the honour of being invited on March 5 to luncheon with the King and Queen.

It is stated that Lord Milner arrived at the Ramleh aerodrome on March 6, and left by motor on the same day for Jerusalem, where he will stay with Major-General Sir L. T. Bols.

Sir Thomas Allen, deputy-chairman, Consumers' Council, Ministry of Food, who returned from India last week, is in a private hospital suffering from malaria, and is in a somewhat serious condition.

Brigadier-General Sir Owen Thomas and Mr. C. J. B. Hurst, members of the Milner Commission, and Mr. A. T. Loyd (secretary) left Cairo on March 5, and expect to arrive in London to-morrow.

The King of the Hellenes, who is visiting Salonika, has conferred the Cross of Commander of the Order of the Saviour on Colonel Olive, British Base Commandant, and Colonel Grey, officer in charge of supplies at Salonika.

A division of the British Atlantic Fleet arrived at Algiers on Wednesday, and General Abel, Governor-General of Algeria, and Mme. Abel gave a dinner in the Winter Palace to Admiral Sir Charles Madden and officers of his staff.

While visiting the tombs at Sakkara, near Cairo, on March 4, Mr. J. A. Spender, a member of the Milner Mission, had a fall which, it is believed, resulted in a broken rib. Mr. Spender's return home will therefore probably be delayed.

Dr. Vaida-Voevod, Prime Minister of Roumania, with M. Boeresco, Roumanian Chargé d'Affaires, entertained at luncheon at the Ritz Hotel on March 7 a number of representatives of the British and foreign Press, and officials of the Publicity Department of the League of Nations.

The Greek Premier, M. Venizelos, entertained at dinner at the Ritz Hotel on March 8, M. Caclamanos, the Greek Minister to the Court of St. James; M. Michalacopulos, Minister without portfolio; M. Sperenza, Minister to Brussels; Sir John and Lady Stavridi, the members of the Greek Peace Delegation, the personnel of the Legation, and several members of the Greek colony.

Mr. Herman Cameron Norman, the newly appointed British Minister to Teheran, was entertained at dinner on March 2 by the Persian Chargé d'Affaires, Mirza Abdol Ghaffar Khan. Among the guests were Nasr el-Mulk, ex-Regent of Persia; Prince Firouz Nosrat ed Dowleh, Persian Minister for Foreign Affairs; Sir Charles Greenway, Colonel Arthur Erskine, and Mr. Lancelot Oliphant.

A correspondent calls attention to the erroneous designation, in a recent issue of THE NEAR EAST, of M. Andre Radovitch as a delegate to the Peace Conference. M. Radovitch, a former Prime Minister of Montenegro, sided against his Government in the Montenegro controversy, and his name was proposed to the Paris Conference by the Serbian Government. It is understood, however, that his selection as a delegate was not acceptable to the Powers.

In honour of M. Venizelos, the Greek Premier, who is in London in connection with the Peace Conference, Mme. Gennadius, wife of the Honorary Greek Minister, held a reception on March 5 at 14, De Vere Gardens. There was a large number of guests, those present including Nubar Pasha, Hoohaness Khan, the Greek Minister, the Greek Minister in Brussels, M. Boeresco, the Roumanian Chargé d'Affaires; the Countess of Limerick, Viscount and Viscountess Bryce, Lord Robert Cecil, the Bishop of London, Lord and Lady Swaythling, Lord Southwark, Lord and Lady Askwith, Amy Lady Coleridge, Dr. Pagonis, the Great Archimandrite, Mme. Zarifi, Mme. Vlasto, Mr. and Mrs. Sevastopoulo, Mme. Schilizzi, Mr. and Mrs. Scaramanga, Miss Rodocanachi, Mr. Pandeli Ralli, Mr. A. P. Ralli, Mr. N. Petrides, Mr. P. N. Paspati, Mme. Metaxas, Mr. A. Mavrogordato, Mr. G. Marchetti, Mr. I. L. Mango, Mr. A. C. Ionides, Mr. and Mrs. Pretyman Newman, and M. and Mme. Argenti.

Our Tangier Correspondent writes:—

The Marquis and Marchioness of Titchfield arrived here in January, and have left for a visit to the French Protectorate. Lord Gleichen, C.B., C.M.G., D.S.O., and Lady Gleichen have left for Casablanca after passing a couple of weeks as the guests of H.B.M.'s Agent and Lady White. Among the visitors to Tangier are:—Mr. and Mrs. Cunard Gordon and Mr. Victor Cunard; Mr. and Mrs. A. E. Leonard, Colonel P. E. Taylor, O.B.E., and Mrs. Taylor, the Rev. and Mrs. E. D. Lear, Lady Boyle and Sir Edward Boyle, Col. E. V. Newland, Army Pay Corps, and Mrs. Newland, Mr. and Mrs. Wish, and Col. Sir Eric J. E. Swayne, C.B., K.C.M.G. Lady Swayne and Lady Carden have left for Casablanca and Fez. Miss Prendergast has arrived from England, and is staying with her sister, Lady Maclean, Brig.-General Arthur Melland Asquith, D.S.O., and the Hon. Mrs. Asquith made a short visit to Tangier, and have left for Gibraltar. Col. and Mrs. G. F. Cox, Major J. S. Robson, Mr., Mrs., and Miss Linzee are also now at Tangier.

APPOINTMENTS, ETC.

Shafik Pasha will succeed Sirri Pasha as Egyptian Minister of Public Works, War and Marine, and will also temporarily retain the portfolio of Agriculture.

The King has approved the appointment of Mr. Kadamangudi Srinivasa Kadamangudi to be Advocate-General for the Presidency of Madras, in succession to Mr. Srinivasa Ayyangar, who has resigned the post.

Farid-es-Saltaneh, Imperial Commissioner and Attaché to the Persian Legation in London, has been appointed Chamberlain to the Shah of Persia.

Mr. Charles Frederick Napier, barrister-at-law, and Diwan Bahadur Calamur Kumaraswami Sastri, Vakil, have been appointed Judges of the High Court of Judicature at Madras.

The King has been pleased to approve of the appointment of Field-Marshal Viscount Allenby, High Commissioner for Egypt, Colonel of the 5th (Royal Irish) Lancers, to be Colonel of the 1st Life Guards, in succession to Field-Marshal Lord Grenfell, Colonel Commandant, King's Royal Rifle Corps, Honorary Colonel, 1st and 2nd Battalions the King's Own Malta Regiment of Militia, who has resigned the appointment.

OBITUARY.

The death has occurred of Lady Thomas, the widow of Sir G. S. M. Thomas, with whom for many years she resided at Constantinople. Her son, Sir G. A. Thomas, is the famous athlete and chess player.

Major-General Turner van Straubenzee, C.B., late Royal Artillery, has died at Leyburn, Yorkshire, in his eighty-second year. He entered the Royal Artillery in 1855, and became A.D.C. to Major-General Sir C. T. van Straubenzee, commanding a division in India in 1862, and was A.D.C. to the Governor of Bombay, 1869 to 1872. He commanded the Royal Artillery Indian Contingent in the Egyptian Campaign, being present at the battle of Tel-el-Kebir. He served in the Royal Horse Artillery in India until 1887, was colonel on the Staff, Royal Artillery, 1888, and commanded the Madras District as Brigadier-General from 1891 to 1895.

Mr. Charles Godolphin William Hastings, C.I.E., late Inspector-General of Police in the Punjab, has died at Half Yoke House, East Farleigh, Kent, in his sixty-sixth year. He entered the Punjab Police in 1873, after leaving Haileybury. He was Political Officer at Kurram, and saw active service on the North-West Frontier, and took part in the Jowaki Expedition, the Afghan War, the Chitral Relief Force Expedition, and the Tirah Campaign, for which in each case he received a medal with clasp. He was appointed Inspector-General of Police in the North-West Province in 1901, and in the Punjab in 1904, and he was also Under Secretary to the Government from 1904 to 1907.

Our Port Said correspondent writes:—

We regret to have to announce the death on February 25 of Dr. Edward Cuffey, M.B., who for the last twenty-two years has been the medical officer in charge of the English hospital in Port Said. Dr. Cuffey had not been feeling well for some time, but was still continuing his duties. However, in his home he was seized with a heart attack, and died half an hour later without recovering consciousness. Dr. Cuffey was surgeon of H.M.S. Halcyon when that vessel was guard-ship in Port Said. On the death of Dr. Foster, who was then in charge of the Lady Strangford Hospital, Dr. Cuffey took his place, a position which he has held ever since. He was fifty-three years old, and leaves a widow and son and daughter, for whom the greatest sympathy is felt.

Rechid Hikmet, the President of the Turkish Chamber, has died from cancer, states an Exchange Telegraph message from Constantinople.

NEWS IN BRIEF.

It is stated that in Cairo that the preventive Press Censorship was re-established there on March 6 under martial law.

General Kuropatkin is stated to be at the head of the new Bolshevist Administration in Turkestan, with headquarters at Merv.

It is stated that an anti-Zionist demonstration, in which from 7,000 to 8,000 persons took part, was organised at Jerusalem on February 29.

It is announced that the French cruiser Dessaix arrived at Jeddah on March 2. The commander was officially received by the Hejaz authorities, the local notables attending in large numbers.

When the Yugoslav Parliament assembled on March 3, 147 members were present. Only four, a Democrat and three Montenegrins, belonged to the Opposition, the bulk of which did not appear, in order to embarrass the Government, which has to obtain a quorum of 145. With the support of these four the quorum was obtained.

According to a Delhi message dated February 24, Mr. McPherson, the Home Secretary, stated in the Imperial Legislative Council that 1,235 persons had been released in India since the amnesty. He gave remarkable instances of the Viceroy's clemency in releasing large numbers of offenders in the Punjab and Bengal, who were really outside the scope of the King's Proclamation.

The Government of India have decided that all war gratuities and Service gratuities issued by the Indian pay authorities shall be exempt from Indian income-tax, and that any tax already deducted shall be refunded. Applications for refund of tax already deducted should be forwarded to the Collector of Income-tax in India concerned through the Divisional Disbursing Officer, who disbursed the gratuity and deducted the tax.

APPOINTMENTS WANTED.

THE Ladies' League (under Royal Patronage), 118, New Bond Street, successfully recommends Lady Secretaries, Chaperons, Housekeepers, Companions, Secretaries, Governesses, Nursery Governesses, Nurse Companions, Lady Nurses, etc.

GOVERNESS Companion, desires post abroad. All English subjects, fluent French, El. Italian & German, Music, Drill. £100. M. M. The Ladies' League, 118. New Bond Street, London, W.

MINING ENGINEER, M.I.M.M., open to any proposal. Can interest capital. Knowledge interests in Near East. Box No. 156, "Near East." 1, Devonshire Square, E.C.2.

WHERE TO STAY.

For the convenience of visitors from overseas "THE NEAR EAST" offers its services in booking rooms at hotels in the United Kingdom, on receipt of instructions preferably a week before the date of arrival. When instructions are telegraphed the message can be abbreviated as follows:—

"EASTAPROX, LONDON. TWENTIETH MATLOCK TWO

(The visitor's name and place of residence abroad to be added),"

which would indicate that two rooms were required at Matlock on the 20th of the month.

BRISTOL
GRAND SPA HOTEL.

EXETER
ROYAL CLARENCE HOTEL
(*facing beautiful Cathedral*).

LONDON
HOTEL CRANBOURN
67a, Shaftesbury Avenue, W.C.2.
Self Contained Suites.

THURSDAY, MARCH 11, 1920.

THE INDIAN BUDGET.

In one respect, at least, the Indian Budget presented last week is likely to mark a definite turning-point in the financial history of the country. The Estimates for 1920-21 are comparable with those of previous years in that they provide for the expenditure not merely of the Central Government, but also of the various provinces; unless unforeseen difficulties should arise, the next Budget will be confined to central expenditure, and provincial finance will be represented only by the contributions to be levied in accordance with the decisions reached by Lord Maston's Committee. The charge is much more than a matter of account. Ever since the British possessions in India were unified under an effective central Government, that Government has maintained an iron grip upon expenditure: the provinces have been little more than disbursing agents, and the cautious and tentative efforts to decentralise authority have been to a great extent nullified by the centralising tendencies inherent in the system. In finance as in other branches of activity, the new constitution involves a definite breach with the past, and a breach in tradition as well as regulation. The provinces will in future have clearly defined financial resources of their own, and it is significant that the Finance Member holds out the prospect that their contributions to the Central Government will be entirely extinguished within a measurable time, an arrangement rendered obviously desirable by the new constitutional position. The fact that the Budget is intended to be the last of its kind may be taken to justify the retention of the conventional ratio of exchange, though we must admit that the ordinary man is likely to be confused when he finds a sterling pound equated to fifteen rupees at a time when it can be purchased in the market for little more than half that sum. Whatever ratio were adopted, there would still remain uncertainty as to the actual burden of future sterling expenditure, and the official warning as to the difficulty of forecasting the gain by exchange serves to remind us that we are back in the old days, when Finance Members could speak of their duties as a gamble in rainfall and a gamble in rupees. Let us hope that the rehabilitation of the sterling pound may progress so quickly that the latter element of uncertainty may soon be eliminated, and that we may shortly be justified in thinking in terms of that ten-rupee pound which was familiar to our ancestors, and which appeals so strongly to the decimalists of to-day.

The other factor of uncertainty, the amount and distribution of the rainfall, must still be reckoned with, but the outstanding fact in the figures now published is that its importance to the financier is rapidly diminishing. The year 1918 was marked by one of the most widespread droughts in recent experience, and according to all precedent its effects should have been apparent in almost every head of the accounts of the year now closing, but as a matter of fact we find very little about it. The large deficit of £14,000,000 is fully accounted for by the unforeseen cost of military operations against Afghanistan and on the Frontier, and there seem to be good grounds for the conclusion that while the direct cost of famine is much less than it was, the ulterior effects are likely to be negligible in the near future. In other words, India has of late years attained to a degree of economic strength which was scarcely dreamed of at the beginning of the present century: the national income is still low, but it is rising above the danger-point; and there is now a reasonable prospect that the spectre of famine may be driven from the Treasury as it has already been driven from the homes of the people. A witness before the recent Currency Committee brought out this last point so clearly that his words may be quoted: conditions, he said, which formerly threw millions on relief, are now affecting only the merest fringe of the population; the improved condition of the people renders it unnecessary to declare the existence of famine, and where formerly work had to be provided for the able-bodied, it now suffices to provide relief for the aged and infirm. The time, in fact, may be near at hand when a Poor Law shall replace the Famine Code, and seasonal fluctuations shall cease to be the nightmare of the administration. However that may be, the immediate prospect is hopeful. The rains of 1919 were favourable; the Budget for next year anticipates a period of prosperity: military complications apart, the growing revenues should suffice to provide for necessary expenditure; and the only changes in taxation, other than the remission of the duty on imported silver, are the removal of the unfortunate excess profits duty, and an adjustment in the levy on companies' profits, a measure on which we must suspend judgment till its details are published in this country.

Thus the figures for current revenue and expenditure show us an India still poor, as she has been poor for so many centuries, but now advancing definitely towards the goal of economic prosperity. It remains to inquire whether adequate provision is being made to facilitate this advance, or, in other words, to examine the proposals for capital expenditure. The result is on the whole satisfactory. We have not found any immediate promise of expenditure on developing the forests, but men must be trained before money can be spent, and the recent announcement of the constitution of a service of forest engineers shows that sight is not being lost of this important subject. The grant for irrigation is small, but it represents the total which the engineers are prepared to spend, and we may reasonably look for an increase when the effects of the depletion of staff have been obliterated. For railways the provision of £18,000,000 in England and 4½ crores in India is far above the standard which prevailed before the war. It will not, of course, suffice by itself to bring the communications of the country abreast of existing requirements, but it is probably as much as can be spent within the year, and as an instalment it may fairly be described as liberal. The financial strength of India is clearly seen in the fact that this expenditure will involve no increase in the burden of debt. A loan of ten millions is indeed to be raised in the country, an operation which would have appalled the financiers of the last decade, but which is now regarded as a matter of routine; against it must be set a reduction of nearly £13,000,000 in the temporary debt, and the result is therefore a small but definite fall in the total of indebtedness, a result which may justly excite the admiration of the greater part of Europe. In truth the new India is heir to a great estate. Future historians will doubtless lay their fingers on defects in our past administration; they will probably insist that development might have been pushed further in the last fifty years, and that the Government might with advantage have led on occasions when it was content to follow; but we think their final verdict will be that the work has been well done. In the eighteenth century the old India was bankrupt; in the twentieth the new India is not merely solvent but prosperous, and the progressive increase in the national income justifies the most sanguine hopes for the future, provided that the management of the national finances shall combine the efficiency of the past with the increased enterprise justified by the conditions of the present.

CENTRAL ASIA AFTER THE PEACE.

By COLONEL A. C. YATE.

When the trend of thought tempts us, as it occasionally does, to reflection on the issues of the Great War, the very sense of our mental limitations causes us ere long to abandon a vain search for insight into an impenetrable mystery. The practical philosopher has, not inaptly and yet inadequately, sought in the rippling ring created by a stone thrown into water an illustration of the far-reaching effect of any act or incident in life. It is only in the eternity of time that the Central European war cyclone, which burst early in August, 1914, can appear even to lose itself; for æons will not absorb or exhaust its effect upon the world. The Aeolus of that cyclone was the Emperor William II. of Germany, who, as the Dutch Government shields him from molestation on this side of the grave, will presumably suffer on the far side of it. We may leave him to the tender mercies of the Dante of the twentieth century.

In the vast social and political convulsion which has sprung from the colossal and unscrupulous machinations of Berlin and Vienna, the individual writer can but select some one item with which experience may justify him in claiming familiarity or even expert knowledge. Each mind knows its own compass-bearing, its own line of gravitation. The line that I took up forty years ago gravitated towards Central Asia, and for ten years, from 1880 to 1890, when I was not in India I was elsewhere in the Middle East. I saw much in those ten years, and now, after the lapse of another thirty, I see much that I criticised then annulled or reversed. I have read with conflicting thoughts such headlines as "The Afghans at Merv"[1] and "The Fate of the Turcomans." In 1884-5 I saw the Russians occupying Merv; and in 1890 I found Sir Colin Scott-Moncrieff teaching the same people how to restore the Murghab irrigation, I saw Turcomans turned into Yeomanry, and I met a Kirghiz Colonel of the Russian Army. In 1880 the Teke was still lord of Merv, known in the Middle Ages as "Shah-i-Jahān" ("Queen of the World"), with its population of 250,000 and a Nestorian Archbishop. Population and Archbishop disappeared long before 1880, but as yet the names of Skobeleff and Komaroff were unknown there, and the Turcoman still raided far and wide alike into Persia and Afghanistan. And the hand of Destiny which cast down a Tsarist autocracy and set up a Bolshevist tyranny drew its magnetic current from Berlin? Not altogether! From Petrograd also and from Moscow. Russia was ripe. It is thirty or forty years since Seton Merriman foretold in "The Sowers" that the young men of that day would in their dotage see "a great upheaval beside which the Terror of France will be tame and uneventful." When the Russian Revolution heralded the doctrine of "No indemnity and no annexation," and pitilessly exposed to the world the "Willy" and "Nicky" correspondence, we, maybe, chuckled inwardly; but long since "Nicky" has won his way into our more solemn and sympathetic thoughts, together with the erring Tsaritsa and the innocent Tsarevitch and Grand Duchesses. There is no such halo round "Willy." If the memory of the death of Nicholas clouds our thoughts, the immunity of William stands out as a satire upon the very name of Justice. We look away to the far-off scene in Siberia, where seven were done shamefully, brutally, to death, and then we glance at the solitary Hohenzollern, sheltering himself amid the dykes of those Dutchmen whom since the days of our Queen Elizabeth England has so often and so warmly befriended, and whose Stadtholder two and a-quarter centuries ago England invited to occupy her throne.

This example of the inequality with which vaunted Justice holds the scales does not come within the scope of this article; but with the future of Constantinople and the Khalifate, which is threatened with a like subversion of all that is right and just, much that will guide the course of events in the Middle East is intimately concerned. India, forsooth—India, with its seventy millions of Mahommedans, who have never till recently had any concern with or experience of Ottoman rule and pretensions—stands forth at this belated hour as the champion of a Government which the Supreme Allied Council pronounced unfit to rule over any Christian race or hold a foot of territory in Europe. What those seventy millions of Moslems in India deserve is to be placed for a year and a day under Ottoman rule. After that their plebiscite on the Khalifate should be taken. The present state of affairs in India and in Egypt appears to me to be a powerful indictment on the principles of enlightened democracy. There appears to be more contentment in the territory of the Turk at this moment than in those historic lands watered by the Indus, the Ganges, the Cauvery, and the Nile, and long administered by the nation which prides itself upon being the Mother of Parliaments and the pioneer of constitutional government. The *pax Britannica* has a screw loose somewhere, and that loose screw perhaps is that of the false sentiment closely associated with Exeter Hall and recently levelled at the head of General Dyer and such-like men of action. That loose screw is the underhand weapon of the politician or bureaucrat to save his own face.

The legendary cradle of the human race is laid now in Mesopotamia, now in Central Asia. Legend seems to weave itself strangely and mysteriously into the woof and warp of life. There is on the title-page of one of Mr. Geoffrey Drage's books, entitled "Russian Affairs," published in 1904, the following quotation from the outpourings of a certain Count Mouravieff:—"I believe that Russia has a civilising mission such as no other people in the world, not only in Asia but also in Europe. . . . We Russians bear upon our shoulders the New Age; we come to relieve the 'tired men.'" When as yet Bolshevism was unforeseen, I characterised this prophecy as the *ne plus ultra* of fatuity and arrogance. Now, if Bolshevism, which is avowedly international, may be regarded as "Russian," then possibly Russia may flatter herself that she has a "civilising mission" both in Asia and in Europe. After all, "civilisation" is a mere conventionalism, and what Western Europe and the Western world have been pleased to call "civilisation" is "civilisation" for them only. Bolshevism has other views of it, and the cradle of Bolshevist propaganda in the East is to be, we understand, in Russian Turkistan. Of the efficacy of this "propaganda" we have the testimony of eye-witnesses returned from Russia, where, as we now realise, even butchery and brutality culminate in method, system, and discipline. That system, without taking into account Eastern Siberia, has pushed back Denikin to the Sea of Azov, the Don, and the Caspian, spread along the railway from Orenburg to Tashkent, and back along the Trans-Caspian Railway to the vicinity of Krasnovodsk; while from Omsk on the Siberian Railway it has spread southward to Semipalatinsk, and ere long will have joined hands with Trans-Caspian Russia and so completed the arc of the circle from Omsk to Orenburg.

The next step is to bolshevise Afghanistan, Persia, and the Caucasus, and, reaching out a hand, which can for the nonce simulate fellowship, to "the unspeakable," seek to undermine that principle of administration by mandate which the original Allied Council proposed to apply to all countries emancipated from Turkish misrule—viz., Armenia, Syria, Palestine, Arabia, and Mesopotamia. If success attends this ambition of Bolshevism,[2] then the whole edifice of the League of Nations crumbles to the ground, and that within eighteen months of the Armistice; and visions of a prolonged peace, which are ever growing fainter and fainter, will make for a renewal of war and a further growth of the intolerable burden of debt. If it is in this sense that Count Mouravieff credits his fellow-countrymen with a "civilising mission," then we must at least admit that he was endowed with unwonted foresight, while the British Empire will not fail to strain every nerve to keep Bolshevism north of a buffer-State barrier extending from "Where Three Empires Meet," near the sources of the Oxus to the Straits, which for centuries have been recognised as severing Europe from Asia.

Information now reaches the outer world which proves that forces not hitherto fully reckoned with have thrown in their lot with the Bolshevist leaders. When we read that the distinguished General Brusiloff, whose record in the field prior to the Tsar's abdication was of the finest, is in command of a portion of the Red Army (his son having been shot as a Bolshevist by Denikin); when we learn that the very soldiers who shot their officers down in 1917 now, under pain of severe penalties, treat their officers with deference and obedience; when we see Bolshevism alone in Siberia preserving a united front and sweeping Koltchak, Seminoff, and Czech before it; and, finally, when we read of the perfect equipment and management of Trotsky's special train, we see that, if not a "New Age," at least the era of a new régime has set in in Russia, and that one which portends no future of ease and peace either for the Allies or for the countries which Bolshevist propaganda and Bolshevist armies can reach. The part played by the United States of America in this war has been adroitly summed up in the words:—"They entered late into the war; they have

[1] I find no record of previous rule at Merv by any Afghan dynasty. It has had a great history upon which there is no need to dwell here. In 1787 Murad Beg, Amir or Khan of Bokhara, took it from the Persians. Of his two sons, Amir Haidar ruled at Bokhara, while Nasir Beg governed Merv, and that with such kudos that Amir Haidar became jealous. He moved the 25,000 inhabitants of Merv *en bloc* into the interior of his dominions, and drove his brother into exile in Persia. This, Baron Georges de Meyandorff, a Russian envoy to Bokhara in 1870-21, tells us. Merv since then has passed through many vicissitudes but is still full of life. If the Afghans are wise, they will keep it.

[2] The Sheikh-ul-Islam of Constantinople and the chief Moslem Prelate of Cairo have both denounced Bolshevism and adjured all Islam to renounce it.

Digitized by Google

gone early out of the peace."[3] Even from Eastern Siberia almost all American troops have been or are being withdrawn; and Japan is left alone to make headway against the Bolshevists, who are now swarming into Trans-Baikalia. Had China a static Government and policy, one might see the northern and western frontiers of that vast empire extending from Manchuria through Mongolia and Kuldja into Chinese Turkistan, setting a check upon Bolshevist encroachment. Of the Chinese in the inner life of the revolutionary Russia of the last two years, what we know best is that in them the Bolshevist officials have found the readiest instruments of their atrocities. Japan is strong enough to take care of herself; and China's vast area will probably be its safeguard; but when we come to the Central Asian Khanates, to Afghanistan, Persia, the Turcoman Steppes, and the Caucasus, we are dealing with States which still preserve their familiar status of "buffers," and which the British Empire is intimately concerned to maintain as such.

Since Sir George Macartney, in the latter part of 1918, passed through Tashkent on his way to England, in which journey he was either accompanied or followed at no great interval by Mr. R. C. Tredwell, the United States Consul at Tashkent, personal information regarding events in Russian Turkistan has been beyond our reach. In June, 1919, Sir George Macartney told the Central Asian Society what he had seen and experienced at Tashkent in the autumn of 1918. It was known in certain official quarters and amid a small circle of friends that the accomplished and intrepid explorer, Col. F. M. Bailey, was "in hiding" somewhere round about Tashkent, and great anxiety was felt for him. In the *Morning Post* of October 31, 1919, appeared a telegram from Stockholm announcing that at Tashkent a Swedish engineer named Kleberg, eighteen schoolgirls, and a brother of Kerensky had been brutally done to death, and that hundreds of prisoners had been murdered. Such intelligence might well give rise to the gravest misgiving regarding Colonel Bailey. That misgiving was dispelled on January 20, 1920, when the India Office informed his nearest relative that some ten days previously he had reached the Persian frontier, and that on January 14 he had safely reached the British Consulate-General at Meshed. It is known that General Malleson is in N.E. Khorasan in command of a body of troops which is styled a "brigade," but of the strength of which we have very imperfect knowledge. When Colonel Dudley Carleton was sent from the Caspian to Samarcand by General Milne[4] he found that British troops had been withdrawn from Merv and the Trans-Caspian Railway, and he gave it as his opinion that such withdrawal had had the worst results. We know that in 1918 a nucleus of British (Indian) troops, associated with Anti-Bolshevist Russians and Turcomans, were holding the Bolshevist forces in check at a point on the Trans-Caspian Railway between Merv and Amu-Darya.[5] When the powers that be, presumably Simla, ordered that British nucleus to withdraw, the Anti-Bolshevist Russians and Turcomans went to pieces, and of late we have heard that nearly the whole of the Trans-Caspian Railway has fallen into Bolshevist hands. Krasnovodsk, it is thought, may be still occupied by forces which are friendly to the Allies. Reports of the end of January state that the Bolshevists then held Kora Tengir station, 31 miles east of Krasnovodsk. It is, at least, a satisfaction to feel that, as far as is known, there is now no Englishman in Central Asia whose life is in imminent danger. Our representatives at Kashgar are presumably safe, and such British forces as are maintained at and near Meshed are securely based on India through the Nushki-Seistan Railway. Information has reached me of officers of our Royal Engineers being employed at Káin, about 200 miles south of Meshed, but whether employed on road or railway I have no knowledge. For one thing let us be thankful, and that is that that railway was constructed in 1915-17. For the story of it I must refer to Sir Hugh Barnes' contributions to *The Indiaman*[6] in 1915 or 1916; to Colonel Webb Ware's lecture before the Central Asian Society on February 12, 1919; and to an article in the *Spectator* (by a member of the Council of the Central Asian Society) of March 22, 1919. The absorption of those three papers from the pens of experts is an education in itself, and may enable the man in the street to realise how, if we have to meet Bolshevism in Central Asia, that railway will strengthen our hands.

No one who went up to Herat with the Afghan Boundary Commission in September, 1884—and I was one of the thirty British officers who so went up—could have imagined that the vagaries of the wheel of Fortune would bring about the issue which we see before us to-day, viz., our Empire in India and the Middle East threatened, not by the armies of a despotic Tsar, but by those of a Karl Marxian tyranny. For well nigh a century now British India has been expectant of a Russian attack, until in 1917 the complete collapse of Russia seemed to promise that dependency of our Empire immunity from invasion for half a century to come! Delusive promise! In less than three years Tsarist Russia was completely bolshevised, and it is Bolshevist Russia that is now steadily pushing forward, seeking in its onward course to roll up with it the Uzbeg, Sart and Turcoman, the Afghan and the Persian, the Kurd, and the Turk, the Georgian, Arménian, and Tartar, and the multifarious tribes of the Caucasus; and as Italy, absorbed in the Adriatic, would or could do nothing at Batoum and Tiflis; and as the United States, in their callous selfishness, have also backed out of their President's doctrine of "mandate"; and as France has grave responsibilities on the Rhine and in Syria, and Japan in Manchuria, Korea, and Eastern Siberia, Great Britain is left alone to champion the Allied cause from the sources of the Oxus to the Aegeo-Euxine Straits. What interests us here is to pass in review the resources which the British Empire has at its disposal for checking and repulsing this wave of Bolshevism which is expected to roll on southward from Omsk through Semipalatinsk, from Orenburg through Tashkent, and from the Don and Volga through Petrovik and Derbent or Vladikarkas and Tiflis. There is no doubt that, as soon as the ice breaks up in the Northern Caspian and the Volga that a Bolshevist squadron will come from Astrakhan, and, unless opposed, dominate the Caspian. This would be fatal to lateral communication along the anti-Bolshevist front, and therefore our Black Sea Fleet must once more place gunboats on the Caspian and sweep that sea clear of Bolshevist naval craft.

(To be continued.)

[3] *Musings Without Method*. Blackwood, Jan., 1920. p. 144. It has occurred to me, when I see how the United States, day-by-day, more and more, holds the financial world in the hollow of its hand, that Europe should form a Commercial League of her own Nations in self-defence. Possibly this may commend itself to the Finance Conference. The United States, the one great allied profiteer in this war, having coolly told Europe to work out her own salvation.

[4] *Vide* "The Fate of the Turcomans." *Blackwood*, Jan., 1920.

[5] The articles appeared at intervals in *The Times*, graphic and at times, humorous. That Anglo-Menshevo-Turcoman camp must have been a quaint experience—not to be forgotten.

[6] The Nushki Trade Route, a much needed Railway.

ARMENIA.

Presiding at a meeting held in Caxton Hall, Westminster, on March 4, Lord Bryce said that when the Turks were hopelessly defeated they were treated with extravagant indulgence by the Allies, and their country had not been occupied as it should have been in order to secure the disarmament of the Turkish troops and to protect the native Christians. As a result, the soldiers left with arms in their hands began to wander over the country robbing and murdering. The Committee of Union and Progress was continuing the work begun by Abdul Hamid of entirely destroying the Christian population so as to have a Turkish Empire peopled exclusively by Mohammedans. It was alleged on behalf of the Turks that massacres of Armenians were only in the nature of reprisals, the Armenians having previously attacked the Turks; but a British Blue-book published in 1916 conclusively proved that in every case it was the Turks who first attacked the Armenians, and that these only fought in self-defence. There was also the fact that the Turks had attacked the Chaldeans and Nestorians, and it had never been suggested in this case that the Turks were attacked first. The Chaldeans and Nestorians were attacked simply because they were Christians and it was desired to blot out the Christian religion in all those countries. So far as he knew, there had never been any single word of condemnation of the massacres of 1915 from any Mohammedan source. There had been no word of repentance from the Turkish Government or any leading Turks, and no word of protest from Indian Moslems—he could only hope these did not know what was happening. It was our immediate duty to see that the present massacres in Cilicia were stopped; if we could not send Allied troops to protect the Armenians, we should send arms so that the Armenians might protect themselves.

Mr. Harold Buxton, who followed, said that he had been in Cilicia until the second week in February. As agent for the Lord Mayor's Fund for the Relief of Refugees, he had been in that country since September last. At the present time in Asia Minor it was not only the native Christians who were being attacked; the life of no single European or American was safe there. It had seemed to him, from the first days of his arrival in Adana, that the attitude of the Allied authorities towards the Turks was too timid, perhaps because there were not enough Allied troops in the country to preserve order and give the people adequate protection. Overt acts of hostility had been begun by the Turks within a week of his arrival, and at present war was being carried on in Cilicia between the French and the Turks on a large scale. With regard to the allegations of Armenian violence as provoking massacre, it was said by the Nationalist agents that when the Armenian troops entered the town of Marash they took vengeance upon the people and committed outrages. He had made inquiries and had found that a few such acts had been committed, but they were all in the nature of settling old personal quarrels.

Mr. Buxton told some horrible stories of massacre, and said he had himself seen at the Adana railway station some of the victims—old men with their eyes burned out and mothers without their children. There were now at least 8,000 or 10,000 refugees encamped around that city, and there were 30,000 more scattered in the villages within a radius of twenty miles.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

It is with extreme satisfaction that I am able to record the fact that the British Industries Fair—or Fairs, if terminological exactitude is desired—has been a wonderful success. The orders booked exceeded expectations, and would have been very much greater if only firms had felt themselves in a position to guarantee delivery. A particularly pleasing feature has been the extent of the business done with buyers from the Near Eastern countries, despite the hindrance of adverse exchanges. Thus I understand that a considerable business was done for Roumania and Syria and other regions. Buyers from Greece were prominent, and substantial orders were booked; while it is also reported that the sales for Egypt and Burma were most encouraging.

***

Some of my readers may have noted the remarkable rise that has recently taken place in the shares of a prominent concern in a leading industrial centre of the United Provinces. These movements are usually not without significance, and I should infer that some interesting developments are pending in the nature of an amalgamation. I hope my readers will bear in mind what I say, for if my conjecture should prove correct I shall not hesitate to say, "I told you so."

***

The neglect of the Indian market by British manufacturers is very apparent in the case of motor cars. During January 1,264 cars were imported into India, of which 1,140 were American and only 100 British. But this proportion, small though it is, represents a considerable improvement compared with the figures for the past ten months, during which the imports of cars totalled 6,081, of which only 302 came from this country, no fewer than 5,704 being of American origin. This position is extremely deplorable, because the Indian market for cars is becoming very important, and the demand is likely to increase very considerably in the near future. As things are, America alone stands to benefit, unless our manufacturers speedily change their attitude and take pains to cultivate the market.

***

Elsewhere in these columns will be found the particulars of an important banking development in connection with British trade and the Near East. It is announced that, in view of the increasing trade between the United Kingdom and the countries in which the Bank of Athens is established, the directors of that bank have decided to form a London Committee for the purpose of developing this trade. Mr. O. V. G. Hoare, who is a director of Barclays Bank and the Colonial Bank, a partner of Cox and Co., the Army bankers, and chairman of Cox and Co. (France), and Mr. W. R. Hillis, general manager of the British Bank of South America, and a director of Cox and Co. (France), have consented to become members of the Committee, and will act in conjunction with Mr. E. M. Rodocanachi, a director of the Bank of Athens and of the London Joint City and Midland Bank, and senior partner in the firm of Rodocanachi, Sons and Co., and Mr. P. N. Caridia, London manager of the Bank of Athens, and a director of Cox and Co. (France). The Committee is thus a thoroughly representative one, and well calculated to achieve the results aimed at by the directors of the Bank of Athens.

***

Cable and postal services between this country and the East seem alternately to undergo a slight improvement and then rapidly to deteriorate again. Just now the reverse process is in operation, particularly with regard to the cable services, which seem to go from bad to worse. I understand that it sometimes takes about twelve days for a cable to reach Egypt, and the position with regard to other countries is, I believe, even more deplorable. Needless to say, under these conditions the cable is practically useless as an accessory to business; indeed, it is sometimes not merely a negative, but even a positive, hindrance. Thus at a recent meeting of the Council of the Northamptonshire Chamber of Commerce, reference was made by the chairman to the loss of a contract for £280,000, owing to cable delays making an adverse difference of about £14,000 in the quotation as a result of a difference in the value of the rupee.

But complaints are not confined to the score of delay. Serious inaccuracies in transmission are also alleged. "Unhappily, the letters which are reaching me," says the President of the Manchester Chamber of Commerce, in a further letter to the Postmaster-General, "show that there exists not only delay, but also a general inefficiency, which results in inexcusable inaccuracies in delivered telegrams. As an instance of this, I have before me two telegrams despatched from Manchester on January 28 and 29 to Athens, and paid for at the urgent rate. The senders later received a notification from the Eastern Telegraph Company stating that the telegrams had not been delivered on account of the telegraphic address being insufficient. This statement was entirely incorrect, as the addressees received the telegrams the following day, but when received the telegrams were mutilated to a degree which rendered them quite incomprehensible."

***

The feature of chief interest to the commercial community in the Indian financial statement is the modification of the excess profits duty. Companies are henceforth to pay a flat rate of one anna in the rupee of total income in excess of Rs. 50,000. Thus is superseded a measure which it cannot be said was anything but very unpopular, though how far there will be greater approval of its successor remains to be seen. At the moment there is a tendency in business circles to suspend judgment, as the wording of the reference to the tax is more than a little ambiguous. Naturally it is to be assumed that for the word income "profits" should be read, but it might apply equally to turnover, which, of course, would be an iniquitous and impossible imposition.

***

It will have been noticed that the Greek exchange after remaining firm at or above the parity of 25 drachmæ for the £ sterling until about a fortnight ago, has since fallen considerably, and now stands at about 32.20 drachmæ. This results from the notification of the Greek Ministry of Finance that in future Government funds abroad will only be used for Government purchases, and for private purchases of petroleum, coal, sugar, flour, cereals, rice, vegetables, frozen meat, and cattle for which official sanction has been received, and that all other imports may be financed by the banks at any rate of exchange. Purchasers of goods other than those mentioned must now remit through the Greek banks at whatever rate the banks can give. It seems possible that the instability in the exchange which has thus developed may lead to a further decline, and in the circumstances it behoves British exporters to exercise due caution in regard to terms of settlement.

***

The report of the Darjeeling Himalayan Railway for the half-year ended September last shows an increase in gross earnings of Rs. 7,500 at Rs. 7,33.200, this being due to an increase in receipts from goods traffic of Rs. 24.200, which more than counterbalanced the decline in coaching receipts. Working expenses were slightly less at 61.20 per cent., and there was an increase in net earnings of Rs. 14,900, the total being Rs. 2.04.500. The available total was Rs. 5.04,500, and out of this Rs. 2,14,400 was absorbed by the dividends of Rs. 6 on the ordinary shares and Rs. 2 annas 8 on the preference, Rs. 2,87.200 being carried forward, as against Rs. 15,500.

COMMENTATOR.

BANK OF ROUMANIA LIMITED

(FOUNDED 1866.)

Head Office: 27, THROGMORTON ST., LONDON, E.C. 2.

Branch: 11, CALEA VICTORIEI, BUCAREST.

Directors

THE EARL OF BESSBOROUGH, K.P., C.V.O., C.B.
E. W. H. BARRY, Esq.
THE VISCOUNT GOSCHEN.
GENERAL THE HON. SIR H. A. LAWRENCE, K.C.B.
P. NAVILLE, Esq.

Bankers: BANK OF ENGLAND. MESSRS. GLYN, MILLS, CURRIE & CO

A general Banking business with Roumania is conducted, and correspondence from those having interests in that country is invited.

GENERAL BANK OF GREECE.

Paid-up Capital, Drs. 3,000,000.

Head Office - ATHENS.

BANKING OPERATIONS:
Every description of Banking business transacted.

FINANCIAL OPERATIONS:
Investigations in connection with, and the promotion, organisation and financing of, Limited Joint Stock Companies, with a view to exploiting agricultural, industrial and mineral resources, executing technical works, etc.

COMMERCIAL AND SHIPPING DEPARTMENT:
Purchase and sale of goods on account of clients. Warehousing, Advertising and placing foreign products on the market. Agents for foreign companies and large commercial and industrial firms abroad. General Shipping Agents.

POPULAR BANK OF GREECE.

Head Office, ATHENS. Branch, PIRÆUS.

Correspondents throughout Greece.

Established June, 1905, by the National Bank of Greece and a group of Capitalists.

CAPITAL - Drs. 1,500,000.
RESERVE FUND - Drs. 2,500,000.
Deposits and Credit Accounts, Drs. 100,000,000.

The Bank specialises in the collection of Bills payable in Greece; it accepts goods on consignment, and undertakes their sale, and transacts every kind of Banking business.

General Manager: D. LOVERDO.

TRADE WITH THE NEAR EAST.

The Bank of Athens extends special facilities for business with the Near **East** to manufacturers, exporters and importers.

The Bank has offices in all the principal towns in **Greece,** also in **Egypt,** Cairo and Alexandria, in **Cyprus,** Limassol, in **Constantinople,** in **Smyrna,** and in **France,** Marseilles.

Inquiries from interested parties are invited.

BANK OF ATHENS.

PAID-UP CAPITAL : £1,920,000. HEAD OFFICE IN ATHENS.

London Office: 22, Fenchurch Street, E.C. 3.

COMMERCIAL BANK OF GREECE, LIMITED.

CAPITAL PAID-UP - Drs. 15,000,000.
RESERVE FUNDS - Drs. 2,845,010.45.

Head Office: ATHENS.

Branches:—**Piræus, Salonika, Patras, Volo, Syra, Calamata, Corfu, Cephalonia, Candia, Chios, Argos, Pyrgos, Vostizza (Ægion), Nauplia. Larissa.**

AGENTS IN ALL PARTS OF GREECE, THE LEVANT, AND ABROAD.

The Bank conducts every kind of Banking, Commercial and Stock Exchange business and extends special facilities to traders interested in business with Greece. It acts as Agent for many Foreign Banks. It is specially organised for Exchange, the execution of mail and cable transfers throughout Greece, and for the collection of clean and documentary Drafts.

MERCHANDISE DEPARTMENT:
The Bank undertakes the warehousing and sale of goods consigned.

GREECE.

Area 43,522 square miles. The cultivated area amounted to 5,745,300 acres, of which about 2,253,400 were under cereals, 518,900 under grapes and currants, 370,600 under oak trees, 296,500 under olives, and 2,223,900 were forests. Population (1914), 5,000,000 approximately.

Chief Products (with average annual production):—Currants, 142,000 tons; wines, 3,000,000 casks; tobacco, 9,000,000 lb.; cereals, 8,000,000 bushels; olive oil, 200,000 casks.

The **MINERALS** of Greece include:—Iron, Marble, Magnesite, Emery, Lead, Lignite.

IMPORTS (1914), Old Greece only:—Total value £7,000,000, of which £2,000,000 from the United Kingdom; £1,800,000 from Germany and Austria Hungary; £1,000,000 from Russia.

EXPORTS (1914), Old Greece only:—Total value £4,000,000, of which £3,000,000 came to the United Kingdom.

COINAGE.—The unit is the Drachmæ, equivalent to a Franc (10d.). The current rate of exchange is about 32·20 Drachmæ to £1.

FREIGHT.—From England, 160/- + 10% primage.

WEIGHTS AND MEASURES.—It was decided in 1898 to introduce the metric system. The change is to be gradual from the old system, which is:—Oke = 2·82 lb., stater = 123·20 lb., livre (Venetian) = 1·05 lb., baril (wine) = 16·33 imperial gallons, kilo = 0·114 imperial quarter, pike = ⅓ of a yard, stremma = ·242 of an acre.

BANK OF NATIONAL ECONOMY (of Greece)

Head Office: ATHENS.

Branches:

PIRÆUS, SYRA. PATRAS.

Capital Paid Up - Drs. 10,000,000.

Fully represented in all parts of the world for all kinds of commercial, financial, and shipping business.

President. L. EMBIRICOS. *Manager.* D. MIAOULIS.

BANK OF PIRÆUS.

For COMMERCE, INDUSTRY and SHIPPING.

Capital Paid-up - Drs. 5,000,000. Reserve Fund - Drs. 3,095,000.

OFFICES at PIRÆUS and ATHENS.

Every kind of Banking business transacted.
The Bank's connections throughout Greece enable it to offer foreign clients special facilities for the collection of Bills, etc.
Correspondence invited.

BANK OF INDUSTRY OF GREECE.

Head Office: 14, Stadium Street, Athens.

Capital Fully Paid-up - Drs. 15,000,000

The Bank has been established for the encouragement and development of Industry and Commerce, and undertakes every description of banking business.

BANK OF ORIENT.

Capital Paid up - Drs. 25,000,000

Head Office: ATHENS.

Branches: SALONIKA, SMYRNA, ALEXANDRIA, CAIRO, MITYLENE, SERRES, ZAGAZIG, MAGNESIA, PERGAMA, SOMA.

Every kind of Banking Business transacted.

Commerce and Industry.

(REPORTS FROM OUR OWN CORRESPONDENTS.)

EGYPT.

CAIRO, February 23.

Further Improvement in Finances.

The State accounts for October, just published, show an improvement in the financial position. Revenue during October amounted to £E4,367,726, and expenditure to £E3,328,542. There is, as a result of this, an excess of receipts over expenditure for the seven months of £E1,898,896, as compared with a surplus of £E859,712 at the end of September.

The principal items of receipts during the month were:—Land tax, £E1,624,292; customs, £E501,594; tobacco dues, £E320,460; railways, £E726,369; domains receipts, £E212,187; whilst the chief items of expenditure were: irrigation, £E128,113; railways, £E856,384; Public Debt, £E689,457; and war gratuities, £E286,117.

The Economic Situation.

Reference to the economic problems before the country leads me to mention that whilst the Government is studying the measures which must be taken to relieve the food supply situation, it has just promulgated a decree limiting rents. Some such measure has been rendered necessary by the fact that it has been quite impossible to erect the houses necessary to meet the normal expansion of population in the towns, and that unscrupulous landlords have taken advantage of the situation in order to raise rents in an exorbitant manner. Indeed, whilst some landlords have increased rents by amounts varying up to 60 per cent., a great many have raised them by more than 100 per cent. above what they were in 1914. The decree fixes the legal maximum of rents in the urban districts at 50 per cent. above what they were on August 1, 1914. In addition, house proprietors will not be able to eject tenants except for reasons approved of by the Courts. An Order from Lord Allenby as Commander-in-Chief notifies that this decree is to have the same effect as a military order, and therefore applies to foreigners as well as local subjects.

The food supply question is indeed becoming a very serious one. Beans are now at P.T. 800 per ardeb (as compared with a maximum of P.T. 110 before the war; maize, the staple food of the people, is at P.T. 500 per ardeb, as against P.T. 90; lentils are at P.T. 900, as against P.T. 150; while wheat is at P.T. 650 per ardeb, as against P.T. 180. It is becoming a material impossibility for the lower classes to meet the cost of their daily bread, and already in certain districts the women have paraded clamouring for bread. To aggravate the situation, the price of cotton has proved so attractive that cultivators have pulled up their wheat crop in order to sow cotton. The Government is understood to be importing maize from South Africa and wheat from Australia, which it will sell at below cost price, but it looks very much as if legislation will have to be introduced to force cultivators not only to keep to the ordinary cereal rotation, but to alter it so as to increase the cereal area as opposed to that under cotton.

MALTA.

MALTA, February 24.

Food Shortage and Finances.

With a view to economising the bread supply of the Island the Control Board have issued regulations fixing two qualities of bread, known as "Maltese" bread and "Fancy" bread. The former is manufactured from flour milled locally, and the latter from flour imported from abroad. As the Government pays a subsidy on the Maltese bread it is hoped that the cheaper price will reduce the strain which is being felt keenly by the poorer classes of the population.

The gross amount required to meet the increase of pay recently granted to Government employees from October 1, 1919, to March 31, 1920, amounts to £35,300, which sum, with the estimate for war bonuses and the bread rebate, amounting to £14,300, deducted, leaves £21,000 to be provided for.

Motor Transport.

An interesting development is the forthcoming establishment by the Coffonera Motor Car Company, Ltd., of a regular motor car service in the Island. Current opinion is that the scheme will be a success, although it must not be overlooked that our small island boasts of a multitude of cabs and boats, to say nothing of a tramway and railway, whilst there are many privately-owned cars.

YUGOSLAVIA.

BELGRADE, February 26.

Communications.

As the railway strike in Greece is at an end goods traffic is resumed on the line to Ghevgeli and through to Greece.

Owing to the great congestion of traffic on the Zagreb and Belgrade line, where it takes nearly three months for a truckload of goods to reach its destination, arrangements have been made for the transfer of heavy merchandise from rail to barges at Tsaprug, near Sisak, whence they will be conveyed more expeditiously by water to Belgrade.

GREEK LOAN OF 1832.

A White Paper has just been issued giving an account of moneys paid out of the Consolidated Fund for interest and sinking fund on that part of the Greek Loan of 1832 which was guaranteed by this country, and of the amount repaid by the Greek Government on account of the same up to December 31, 1919.

The account of the loan until it was discharged in 1871 is as follows:—Advanced by British Government in 1843 to 1871, £1,351,071 8s. (1) Received from Greek Government to December 31, 1871, £98,397 4s.; (2) amount relinquished in favour of the late King George I. of the Hellenes under Act 27 of 28 Vict. c. 40 (£4,000 per annum) from 1864 to 1871 (both inclusive), £32,000—£130,397 4s. Amount outstanding on December 31, 1871, £1,220,674 4s.—£1,351,071 8s.

The account of the subsequent receipts from the Greek Government is as follows:—Outstanding on December 31, 1871 (as above), £1,220,674 4s. (1) Received from Greek Government, January 1, 1872, to December 31, 1918 (200,000 francs per annum, up to March 18, 1913, and 300,000 francs per annum thereafter) £399,762 11s. 9d.; (2) amount received from Greek Government in 1919, £11,857 14s. 2d.; (3) amount relinquished in favour of the late King George I. of the Hellenes (£4,000 per annum) from January 1, 1872, to March 18, 1913 (both inclusive), £164,866 13s. 4d.—£576,486 19s. 3d.; amount due from Greek Government on December 31, 1919, £644,187 4s. 9d.—£1,220,674 4s.

CANADIAN TRADE COMMISSIONER FOR THE BALKANS.

Mr. L. D. Wilgress, the Canadian Trade Commissioner at Vladivostok, has been assigned to duty as Canadian Commissioner in Southern Russia, Roumania, Poland, Yugoslavia and Czecho-Slovakia. While for the present Mr. Wilgress has been assigned to a somewhat large territory, it is not intended that he shall continue permanently as the Canadian Trade Representative in such an extended area. He will travel in the above countries in order that he may study general trade conditions with a view to establishing permanent headquarters later on with a more limited jurisdiction.

Letters of allotment and regret were posted on February 28 in respect of British Cotton-seed Products, Ltd. Applicants for 200 shares and less received allotment in full.

OTTOMAN PUBLIC DEBT.

Special Report of Sir Adam Block.

The report on the Ottoman Public Debt issued last year by Sir Adam Block, for the period 1914-17, is now supplemented by a report (dated November, 1919) for the year ended February 28, 1918, together with a translation of the report of the Council of the Ottoman Public Debt Administration for that period. Sir Adam points out that when he returned to Constantinople in November, 1918, he found that the reports for 1915-16 and 1916-17 were still in abeyance, and that it is only recently that the Council has had access to all the information required for a complete account of the year 1917-18.

The gross receipts for 1917-18 amounted to £T6,087,495 as against £T3,632,691 for 1916-17, but this increase, it is remarked, as explained in the introduction to the Council's report, is mainly to be attributed to the increase in the price and value of the article on which the taxes are levied. Further, the taxes are now paid in a depreciated paper currency. "Instead of a pre-war circulation of about forty-eight millions of metallic currency," the report continues, "with about three millions of paper notes of the Ottoman Bank, Turkey now possesses a paper currency guaranteed solely by the credit of a foreign Government. To-day, in a reduced area, there are in circulation about £T160,000,000 of paper currency only. The issue is evidently excessive. The guarantee is defective, since it consists solely in external resources not within the control of the Turkish Government. There is a constant fluctuation in its ratio to gold, and the exchange value is at a very low figure."

Many proposals have been made for the stabilisation of the value of the paper currency, but Sir Adam states that there does not appear to be any prospect of an early settlement of this most complicated question. The difficulty now is that Unified Debt coupons have to be paid in sterling or francs in London or Paris, while the collections are made in a depreciated paper currency. Hence, of course, the amount of revenue required is enormously greater than before the war. Sir Adam's view is that the sums set aside during the last five years for Ordinary and Extra-Ordinary Sinking Fund should be applied, if necessary, for the payment of the coupons in arrear, the Sinking Fund being suspended until the Bondholders receive their coupons in full up to date.

The Reserve Fund, it is emphasised, cannot be of much assistance in view of the depreciation in the value of the investments, and the bondholders are therefore more than ever interested in the increase of the revenues. As long as the requirements for the coupon, including loss on exchange, are not met, the bondholders are entitled to the whole of the revenues assigned to the service of the Debt, and there can, it is pointed out, be no question of a "surplus" over and above the fixed annuity of £T2,157,375, which no longer represents the gold equivalent of the sum required.

The coupons unpaid of the Unified Converted Debt to September, 1919, amount to £6,320,361, and at current rates of exchange the funds at the disposal of the Council in Constantinople, Berlin, Vienna, Paris and London would produce £1,968,944. Against the deficit of £4,351,417 the sums earmarked for Sinking Fund would produce £633,431, reducing the insufficiency to £3,717,986. Sir Adam has not taken into account the possibility of drawing on the Reserve Fund, or various sums collected by the British and French armies of occupation in Mesopotamia, Syria and elsewhere. "The calculation made above," it is continued, "is, however, purely hypothetical, since all will depend on the ruling rates of exchange at the moment the coupons have to be paid and the funds remitted to London. No payment can, at any rate, be made until Peace is signed and ratified, and the Council, after consultation with the bondholders, will then decide on the line of action to be followed." It is very satisfactory to learn that the revenues ceded to the bondholders are still coming in with regularity. The provisional receipts for 1918-19 are £T5,906,664 as against £T6,087,495, and according to the telegraphic receipts the first six months of the current year have provided £T3,195,704.

Reviewing the general position, Sir Adam expresses the view that in the circumstances it is remarkable that the Debt Administration is able to show such comparatively favourable results. "The general, political, and economic situation," he adds, "is, however, by no means improving. Political agitation is rife, the uncertainty as to the decisions of the Peace Congress and the prolongation of the Armistice render the task of the Government exceedingly difficult. The most efficient Government would have been hard put to it to maintain order under the conditions prevailing in Turkey, and it will not be surprising if things get worse before they get better. There must be widespread suffering throughout the length and breadth of the land during the coming winter. Owing to party strife, and to a state of despair and depression engendered by the war, by insufficient pay and by the high cost of living, the local authorities are without initiative and careless of orders received from their superiors. In fact, the Government are in danger of losing control, the more so as the revenues are insufficient for the administrative requirements of the country. It cannot be a matter of surprise if under such conditions the political and economic situation becomes worse. Fortunately, the majority of the people are submissive and docile, sober and industrious, and, unless led astray by political agitators, ask for nothing more than to be allowed to carry on their normal occupations. In two words, the country requires peace at home and peace abroad."

NATIONAL BANK OF YUGOSLAVIA.

A translation of an agreement under which the National Bank of Serbia is transformed into the National Bank of the Kingdom of the Serbs, Croats, and Slovenes, has been received by the Department of Overseas Trade from H.M. Minister at Belgrade.

One of the principal objects of the National Bank is to regulate and strengthen the currency system of the country. The capital of the bank is to be fifty million dinars in gold, divided into a hundred thousand shares of five hundred dinars each. The existing twenty thousand fully-paid bearer shares of the National Bank of Serbia, amounting to ten million dinars in gold, will be considered as fully paid-up shares of the new bank. Forty thousand shares of the nominal amount of twenty million dinars in gold are to be issued in instalments as soon as the law creating the bank comes into force. The new shares will be inscribed shares, and they may not be held by foreign subjects. The hitherto existing shares to bearer of the old bank will be transformed into inscribed shares, irrespective of the nationality of the holders. Apparently no foreign subject will have the right to vote at the meetings of the bank.

The National Bank will have the sole right of issuing bank notes, which are declared legal tender for the whole country, and may put into circulation notes up to the value of three times the metal stock of the bank. Their convertibility is suspended by one of the provisional regulations. The National Bank will also put into circulation the new bank notes which are to replace the kronen notes of the Austro-Hungarian Bank, as well as those replacing the silver notes of the old National Bank. It will take over from the Ministry of Finance the temporary bank notes which are now being issued by the State for the purpose of replacing the kronen notes, and will exchange them within a period of three years for their own permanent bank notes.

Amongst the facilities given by the bank to the State are: (a) The discounting of State Treasury Bonds up to the amount of one hundred and fifty million dinars at the rate of interest of 2 per cent. per annum; (b) the State may borrow from the bank a sum in bank notes not exceeding six hundred million dinars without paying any remuneration to the bank, but against certain securities; (c) for the purpose of reconstruction of the new Kingdom the National Bank will open an extraordinary credit in favour of the Ministry of Finance to the extent of five hundred million dinars against Treasury Bonds. No interest is to be paid to the bank for this credit.

Bank notes issued in the execution of these facilities will not be counted amongst the notes which the bank is entitled to issue on its own account. The same exception applies to the notes issued in exchange for the kronen notes. Of the net profits of the bank, half is to belong to the State and the other half is to be utilised for the payment of dividends These dividends may not be more than 10 per cent. of the value of the net assets of the bank, but if they fail to pay 6 per cent. on the paid-up capital the deficit up to 6 per cent. is to be completed from the half of the profits reverting to the State.

The dividends of the bank are to be paid in gold, but during the period of suspension of specie payment the dividends will be paid in bank notes of the National Bank with a premium calculated on the rate of exchange of American dollars, limited to twenty dinars equal one dollar (present exchange is thirty-three dinars to the dollar). It may be noted that the bearer shares of the old National Bank must be presented for amortisation (*sic*) within five years and one month. Paragraph 1 of the agreement specifies that it is to come into force on February 1, 1920. Whether practical effect will be given to it before the law has been laid before Parliament as provided for in paragraph 3 is not clear, especially as a new Ministry has just come into office.

ENGINEERING.

EASTERN MARKETS FOR MOTORS.

III.—Requirements of Car Design.*

(From a Correspondent.)

In the last article we endeavoured to bring out the essential point that the chief desideratum in cars for the colonies and protectorates, apart from the big towns, is great flexibility, such as will enable them to cross country anywhere in places where roads do not exist. The case of the Sudan was discussed, also the operations against the Senussi, in the western desert of Egypt, in which a light car performed extraordinary and invaluable services.

These two cases do not stand alone. Palestine, Mesopotamia, British East Africa, Cape Colony, all are in just the same need of flexible cars. Indeed, the same may be said of all the undeveloped parts of the world, all the wide expanses where roads do not exist or are scarce, where man needs to go.

As regards British East Africa I may perhaps quote the remark made to me recently by a man who may be regarded as one of the greatest authorities on that country, and who has more interests there than any other man. We had just left the club after lunch, and he was about to step into his light car, when, on the subject of simplicity of life in B.E.A., he said: Only three articles of foreign manufacture are necessary for one's personal use there. One of the three was a British-made helmet, and another was a light car.

In Egypt the conditions are not the same, nevertheless the light car is in great demand. The alluvial tracts of the Nile Delta are entirely covered with cultivation and irrigation channels and drains, and so far as the Delta is concerned there is no question of going across country; one is forced to stick to the roads. But the roads are mere unmetalled roads—strips of land marked off for the passage of vehicles, and supplied with bridges or culverts over the canals and drains. Outside the big cities there are no metalled roads. Even the main road between Alexandria and Cairo is unmetalled except for a mile or two at each end. The policy of Government is greatly to extend the road mileage, but they will not be metalled roads. At the present time the traffic of the Delta is carried by railways and beasts of burden—the main trunk lines and a large network of light lines on narrow gauges. Many of these latter run actually on the agricultural roads. Inasmuch as the average distance a consignment is carried by these light lines is only some ten or eleven miles, it is easy to see that with the extension of the road system much of the transport will probably be transferred to the roads, and be dealt with by motor traffic. But the cars employed will have to be flexible and cheap, both those for passengers and those for goods; these will be available not only for the Delta but for the desert beyond. They will be a sort of general utility car, and the demand for them will be considerable, both for riding cars and goods cars—the latter a sort of light lorry. The light railways will then be merely a system of tramways for the fellaheen. There can, therefore, be no possible doubt as to the demand for cars of the right sort in large numbers in the near future.

Design of Car.

I will now turn to the question of the design of the car so far as this can be suitably discussed in a non-technical journal. In the first place, and it cannot be too often repeated, we need extraordinary flexibility to enable the vehicle to go across country anywhere. We have heard a good deal about the "three point suspension" principle as applied to the mounting of the engine and the transmission in the frame of the car. The principle is well understood, as it should be, but its application to the vehicle as a whole resting on the ground is not equally well grasped by any means.

For the benefit of the uninitiated it may appropriately be expanded a little. We all know that a three-legged chair will stand firmly on any floor however uneven. Add a fourth leg and the chair will rock annoyingly unless the floor is level and the legs the same length, and when it does rock any one of the legs may at any moment be carrying nearly all the load or none at all, and stresses of unknown magnitude and changing rapidly will be set up throughout the structure of the chair. The fourth leg is redundant. This is what we mean when we talk (oblivious of science) about the *fifth* wheel of a coach.

Now were it not for the fact that the three-legged chair is rather too prone to capsize owing to the restriction of the size of its base, we should always use three-legged chairs. As it is, and as our floors are laid reasonably true, we add a fourth leg and experience no practical difficulty, and forget the science of the thing if we ever knew it.

The position with regard to a wheeled vehicle resting on the ground is exactly the same, but complicated by the fact that the ground is almost always uneven. Exactly as in the case of the chair, a three-wheeled vehicle will rest perfectly steadily on any road however uneven, but will be prone to capsize if tilted over, owing to the construction of the base. We are thus forced to add a fourth wheel and to trust to the springs compensating for the unevenness of the road. But again, just as in the case of the chair, experiencing no difficulty with the arrangement, we are apt to forget the science of the same. This is evident by the provision of four separate springs to transmit the load to the four wheels from four separate points of the chassis instead of from three points only.

What is wanted is that the rear of the car should rest firmly on the two rear wheels through the two rear springs, but the forward end of the car should be carried only at one point instead of two, as at present in cars of European manufacture. That one point should be in the centre over the middle of the front axle, and from this point the load should be transmitted by a transverse spring to points to the left and right on that axle towards the two wheels.

With this arrangement we have a three-point suspension, the load on the third point being carried over the centre of the front axle and divided between the two wheels. The front axle may be tilted over either way, when a wheel passes over an obstruction, by nearly 45 degrees without damage and without straining the car.

I invite anyone in London who doubts the superiority of one well-known make of light car in this respect to go to the Albert Hall to one of Mr. Lowell Thomas's lectures, and to see the cinema record of a light car in Palestine negotiating a washout on a road which is being filled up by labourers with large blocks of stone. It is instructive to watch the extraordinary tilting up of the front axle in that case. This is possible only because of the suspension of the front end of the car from a single point over the centre of the axle. It would be impossible with the usual four-spring arrangement, and what is more important, the latter would induce terrible stresses in the frame of the chassis which the former arrangement eliminates.

I consider that this one point in the design of the car in question is more than any other single thing (bar the price) responsible for its success in out-of-the-way parts.

There is nothing special about the springs themselves; it is their application. It was just the same in the case of railway carriages. For twenty years the Americans had adopted the flexible bogey scheme, whilst British engineers were still clinging to the old stiff four-wheel and six-wheel design. Still, the bogey did come into standard railway practice in England, and I hope the transverse front spring will similarly come into the English motor world. Certainly until it does the colonial market, the market of the remoter and less developed tracts, will remain closed to us. I saw little at Olympia to lead me to think that British engineers have begun to follow the American lead yet.

For the rest, the epicyclic gear of the car is an excellent and almost fool-proof arrangement, but it is not at all a decisive factor, and could be improved upon. The two speeds may be enough, but three would not be objectionable. The holding down of a foot pedal all the time the low-speed gear is in action is fatiguing, and though it avoids the present change speed difficulties, it could well be improved upon. The engine is by no means special or exceptional; indeed, when the air-cooled engine has established more universal confidence, as it will within a year or two, there is no doubt that for colonial service it will commend itself—it avoids the complication of the water jacket, pumps, and connections, and will dispense with the necessity of procuring water.

The differential gear is by no means an unmixed blessing, and some quite simple arrangement to allow the outer wheel to overrun the inner on turning corners will be more appropriate for such a car as we contemplate. This problem is being tackled by some of the British manufacturers, and will no doubt result in some acceptable device. The carburettor and petrol pipes must be simple and accessible, and some sound device must be applied to keep grit and dirt from getting into the same, via the petrol tank or otherwise.

Ignition must be by magneto—there are no garages out in the wilds for recharging a run-down battery, and for the same reasons spares for petty fittings which are apt to wear or get lost must be carried, as also must a reasonable supply of tools and a spare tyre and tube, in addition to the complete fifth wheel, when the car is really going out into the wilds. As an extra a small wireless installation may be required on a small number of such cars hereafter, though not, perhaps, at once.

There is no need for a self-starter, and speed need not be great, but the lowest speed should have a greater speed ratio than usual, to enable the car to take short stretches of steep hills and rough track. Lastly, the car must always be a five-seater, and all possible space under the seat and elsewhere should be made available for the necessities of the road. If British manufacturers can build a car on these lines and can turn it out at the same price as the Ford, there are markets enough and to spare. Similarly, if a weight-carrying lorry on the same general principles as to flexibility, etc., be produced, it will never lack a market.

MISCELLANEOUS TOPICS.

Shipbuilding in Yugoslavia.

The reports that Yugoslavia, in spite of the present unsettled position, has made considerable progress in shipbuilding, on the Danube as well as the Adriatic, reminds the writer of an address delivered by M. Marcel Duboi, the well-known professor of Colonial Geography at the Sorbonne. It was after the Balkan war when Serbia's claims for an outlet to the Adriatic were strongly opposed by Austria and other Powers under the absurd pretext, among others, that Serbians, like the other Balkan peoples, were by nature unsuitable for a seafaring life. M. Duboi said that those times when a nation required centuries of fishing and seafaring experience in order to be nautical, had gone. Given courage, capital, studies, a wide outlet to the sea and the miracle of transformation from landsmen into able seamen and a midland country into a nautical nation could be completed in ten years. Yugoslavia is evidently losing no time; for according to authentic shipping reports the country is rapidly making a name for itself as a naval shipbuilding country. The River Navigation Syndicate at Belgrade is building a yard for the construction of river boats; and vessels destined for long routes are being built at the naval construction yards recently established at Kraljevitch, on the Gulf of Fiume.

Agricultural and General Engineers, Ltd.

The firms now or about to be associated under the title Agricultural and General Engineers, Ltd., continue to increase in number. According to the latest news, the following firms are concerned:—Aveling and Porter, Ltd., Barford and Perkins, Ltd., E. H. Bentall and Co., Ltd., Blackstone and Co., Ltd., Chas. Barrell and Sons, Ltd., Clarke's Crank and Forge Company, Ltd., Richard Garrett and Sons, Ltd., J. and F. Howard, Ltd., and E. R. and F. Turner, Ltd. Important negotiations are now pending in regard to three other firms well known in the agricultural engineering world joining the combine. The scope of the association may be summarised from the speech of the chairman at its statutory meeting early last month. Many of the most prominent British agricultural engineers, being exercised in their minds about the competition they would have to face in the future, decided to come to some equitable arrangement which would enable them not only to meet the competition abroad, but also the competition at home, and to put themselves in such a position that the farmer, both at home and abroad, would not have to pay whatever price foreign manufacturers liked to charge. They felt that if they went in for the most modern methods of standardisation and mass production they need not fear any competition from any quarter. The directors' idea is within the next year or two to increase the output of each of the works not twofold or fourfold but about sevenfold. It is a sound and solid attempt to place the British agricultural engineering industry on a plane which would make it unassailable. The capital of the Agricultural and General Engineers, Ltd., is £3,500,000. The formation of the association will be of great interest to landowners, farmers, and engineers throughout the East, especially the Near East, where the names of the above-mentioned firms are well known and their machinery and implements thoroughly trusted, although in recent years, owing to the systematic competition on the part of German, Austrian, and American firms, the sales of British agricultural machinery have been much curtailed.

Marine Oil Engines for Greece.

The fact, pointed out previously in these columns, that there is a considerable demand for marine oil-engines and motors in Greece to be fitted in new ships, and in old sailing vessels for coasting service, is corroborated by the recent report of the United States Trade Commissioner, who states that there is a large demand in Greece for marine engines of from 50-h.p. to 200-h.p. In the past much of the inter-island trade was carried on by small trading vessels which were not equipped with auxiliary motors. The demand for new ships in Greece, as elsewhere, is very great, and the few that can be built in Greek shipping centres, if not exclusively steam-propelled, are being equipped with engines of some kind. The object is principally to take advantage of the high shipping rates now prevailing, and in order to do this, not only the new ships but also the old sailing vessels are being supplied with auxiliary motors, in order to decrease the delay due to light winds or calms, and the time required for coming into port. In this way they can carry more cargoes and secure to their owners the maximum immediate profit from the abnormal shipping rates. The kind of engines most in demand are oil motors of the Diesel or semi-Diesel type. It is advisable that British manufacturers on receiving inquiries should take a little extra, but necessary, trouble to ask, before quoting, for particulars as to available space for engines, dimensions and construction of vessel, etc., as it often happens that orders are given vaguely and are based on horse-power.

Agricultural Machinery for Armenia.

At a meeting of the Council of the British-Armenian Chamber of Commerce last week Nubar Pasha said that as soon as the Armenian State was set up, one of their first cares and duties would be to establish commercial relations with the European countries. They could not but view with lively gratitude the fact that Great Britain was taking the lead in that direction. Their first efforts, he added, would be directed towards the restoration of their agriculture in order to assure immediately the subsistence of the people on the product of the country itself. As soon as that was done they would be able to export their produce. But to attain that double object they would need, above all, agricultural machinery and implements, which they could only get from abroad. And it was in that vast field open to activity that an institution such as the British-Armenian Chamber of Commerce would be of the greatest value. Next to agriculture, and perhaps concurrently, they would have to develop their subsoil, which possessed immense unexploited riches.

Car Locking Device.

It has been noticeable in recent motor-car exhibitions that accessories and new ideas in car equipment have been receiving considerable attention. It would be difficult to describe all, but amongst a variety of practical devices some are very interesting indeed. One particularly will interest every car owner—viz., a locking device, a recent invention. It is well known that valuable motor-cars are often used by chauffeurs or other persons without the knowledge of the owner, and sometimes cars are stolen when standing alone on busy thoroughfares. The new locking device prevents such incidents, for once it is connected to the battery or magneto it enables the owner effectively to "lock" the spark. Anyone who then attempts to tamper with the starting mechanism is not only unable to start the motor, but causes the ringing of a bell signal, which, once started, cannot be stopped except by the rightful owner, who has set the combination.

TRADE OPPORTUNITIES.

Contractor having several large contracts in the NEAR AND FAR EAST which involve excavating canals, river improvement work, excavation for docks and harbour improvements, etc., wishes communicate those having excavating equipment, new or secondhand to offer. For convenience prefer communicate Eastern representative. Write Box 154, "The Near East," 1, Devonshire Square, London, E.C. 2.

NEGLECTED TRADE OPENINGS.

Apathy of British Merchants.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—I have been greatly interested in the numerous articles and notes published in your valuable paper drawing attention to the excellent opportunities for trade in the Near East, which are being wasted by English manufacturers and merchants. I have travelled all over Palestine and Syria and have received ample proof of the exceptional opportunities offered to British traders. I have interviewed numerous merchants in Cairo, Alexandria, Jaffa, Jerusalem, Haifa, Beyrout, etc., and, without exception, they have shown the greatest anxiety to deal in British goods in preference to German and Austrian goods.

My personal experience is that English manufacturers and merchants show the greatest reluctance—in fact, in many cases therein a downright refusal—to look at any market outside the home market. I am in possession of orders from Palestine for English goods; the money for the payment of these goods is lying at a bank in London. I have expressed my willingness to proceed to the Near East to develop English trade (I am well known to a large number of merchants in the Near East), but I have failed to gain the support of English firms, who all reply, they are so full up with orders for the home market that they have no desire to supply or develop the Near East trade. Thus excellent opportunities are going begging, opportunities which, as you correctly forecast, will be eagerly sought after in the future, when the development of the Near Eastern markets will be a matter of considerable difficulty owing to the fact that other countries are availing themselves of the opportunity which the Briton, in his shortsightedness, is neglecting.

I sincerely hope that your efforts to arouse the Briton to a realisation of his shortsighted and fatal policy will be successful. Your excellent campaign should receive the entire support of all true Englishmen who have the advancement of our country at heart.—I am, Sir, your obedient servant.

London, March 8. EX-CAPTAIN.

LANCASHIRE COTTON.

(FROM OUR OWN CORRESPONDENT.)

Manchester, March 8.

The market during the past week has presented a more nervous tone than for some time back, and business has been of reduced dimensions. There is increased uneasiness as to what may happen in the near future. Producers have not wanted to sell, and buyers have been of opinion that a waiting policy is the best course to adopt at the moment. Important events have occurred in connection with Egyptian cotton. There has been a panic in Alexandria, and the authorities have found it necessary to impose special trading rules upon operators, the daily downward fluctuations in prices being limited. Some failures have been mentioned, the liabilities in two cases being fairly heavy. The latest news, however, is more satisfactory, and the worst seems to be over. There appears to be no probability of a crop of 6,000,000 kantars. Most people are now expecting only about 5,700,000 kantars. The demand in Liverpool has fallen off, and prices are distinctly lower on the week. In Egyptian yarns, business has been thoroughly disorganised by the uncertain outlook. It is now possible to purchase certain counts and qualities at distinctly lower prices than a fortnight ago. Users have acted with considerable caution. Speaking generally, however, there is not much fear of any further slump in values just at present. A moderate business has been done in cloth for Egypt, but buying recently has not been very extensive. Constantinople remains over-stocked, and some Manchester merchants have resold goods bought for that outlet. Only sorting up lines have been mentioned for India, the general demand being disappointing. Steady buying has taken place for China in greys and whites. There has been less activity for South America. Cloth prices continue very firmly held. American yarns have moved off slowly at rather irregular rates, and twists remain much firmer than wefts. Export bundles have moved off fairly well for India, and some producers are sold into next year.

Fund for Cotton Projects.

It is reported that the surplus funds of the Lancashire Cotton Control Board amount to about £1,500,000. The members of the Reconstruction Board, which is the successor to the Control Board, have recently had under consideration how this large sum of money should be disposed of. Certain proposals have been made to the Board of Trade, and it is understood the funds will be handed over to an organisation under the style of the "Cotton Trade War Memorial Fund." It is proposed to appoint five trustees—two representing employers' organisations, two representing trade unions, and one representative of the Board of Trade. The money will be invested, and the income devoted to expenditure in the way of benefactions to the operatives in the cotton trade and to the general welfare of the cotton trade as a whole. Grants will be made to men permanently disabled in the war, to the families and dependents of those who have fallen in the war, for educational schemes, and pensions for long service records, or for those permanently disabled by accidents. It is also proposed to make grants for the purpose of carrying out scientific and educational research in connection with the cotton trade, the development of Empire grown cotton, and towards the investigation of labour or trade conditions in the textile trade in foreign countries. It is understood that one of the first grants of the Board will be towards the expenses of the proposed trade mission to the Far East. For this object the Government has offered to contribute £3,000, and it is understood that about £9,000 will be found out of the Cotton Control Board funds. It is expected that the members of the mission will be appointed during the next month or two, and the party will leave for China about October. It is intended to visit Japan and India, with the possibility of a return journey through the United States.

NEAR EAST MARKETS.

LONDON PRODUCE REPORT.

Currants and Sultanas.—There is little of interest to report, the position being practically unchanged. Indications point to a shortage of stocks in certain directions, and the development of a brisk demand is not improbable in the near future.

Sugar.—The market in raw has been rather quiet, manufacturers holding aloof for the time being. The supplies of free sugar are now very limited, and the position is not likely to improve. There is no fresh news from producing centres as regards crops. It is to be noted, however, that a harder tone is now in evidence in the American markets, and that quotations for Cuban have advanced.

Coffee.—The firm tone of the market is maintained, although the amount of business passing has not been great. East Indian extra bold greenish has been done at 179s., medium at 174s., and small at 170s. Mocha bold greenish has come to business at 191s., while Uganda Peaberry has been done at 147s. 6d. The futures market has been steady. Quotations are:—March, 127s.; May, 126s.; July, 125s. 9d.; September, 123s. 3d.; December, 120s. 6d.

Messrs. Reynolds and Gibson, in their weekly report, state that the New York market on balance shows an advance of 18 to 24 points as the result of the week's trading. The agitation in America to lessen the cost of living still continues to be prominently carried on, and no doubt the difficulty of shippers in exporting commodities tends to help the movement forward by throwing more foodstuffs on to their own market for consumption. This has a natural reaction on coffee, although it can only be purely sentimental, as America must import the raw article. The coffee market has gone through such a period of depression, from liquidation and "Bear" pressure, that it has lost sight of the strength of the statistical position temporarily. A recovery from this exhaustion may reasonably be expected, and anything of a favourable nature, politically or financially, would quickly bring about a complete change.

SUDAN PRODUCE.

The following further extracts are taken from the C.E.B. report for December:—

Wheat.

Berber Province.—A November and December report states: The only considerable area of wheat on pump lands is at Bouga, where about 500 feddans have been sown. Forty-five tons of wheat seed have been distributed to sakia owners, mostly in Abu Hamad.

Maize.

Berber Province.—November and December. On the Gendetto pumping scheme there is a lot of promising maize. At Kitab, a large area has been planted with maize. The price of maize remained at P.T.360 per ardeb of 380 rottles (171 kilos) in November, but fell to P.T.300 in December.

Sesame.

Kordofan Province.—December.—360 ardebs of 330 rottles (148 kilos) of sesame were sold in El Obeid market at an average price of £E5.500 m/ms. per ardeb.

Kassala Province.—November.—The market price at Gedaref was £E3.937 m/ms. per ardeb of 300 rottles (135 kilos).

Dates.

Halfa Province.—A December report states: The date market has been most active, a number of merchants who are unusually late arrived to purchase dates during the month. Prices have risen as follows: Barakawi (from Mahas and Sukkot Dis.), P.T.430 to P.T.445 per 300 rottles (135 kilos); Barakawi (from Dongola), P.T.400 to P.T.430; Gondeila, P.T.520 to P.T.540; Gorgoda, P.T.340 to P.T.360.

Tobacco.

Darfur Province.—October.—81 kantars of tobacco were exported. November.—Trade in tobacco practically ceased. There was no export.

Livestock, Hides and Skins.

Darfur Province.—Average price of bulls was £E6 a head. November.—1,098 head of cattle passed through El Fasher quarantine during the month. 770 head of imported cattle were sold in El Fasher market in November. The average price of sheep was 620 mills., and of goats 500 mills. per head. Trade in hides practically ceased. There were no exports.

Red Sea Province.—December.—107 cattle and 660 sheep were exported via Port Sudan during the month. Grazing in the littoral is rapidly improving.

Berber Province.—November and December.—The figures of animals sold in Damer market are 11,394 sheep and goats and 388 cattle in November, and 10,607 sheep and goats and 563 cattle in December, the total of sheep and goats for the last three months of 1919 being over 33,000, which must be a record Average prices were P.T.682 for cattle in both months, and P.T.177 for sheep in November, P.T.152 in December. Grazing is on the whole better than might be expected—certainly better than last year. 5,601 camels have been exported from Berber and Damer in the last three months.

SHIPPING INTELLIGENCE.

Forthcoming Sailings.

The Ellerman s.s. Austrian, for Patras, Bari, Venice, and Trieste, will leave Liverpool on March 27.

The Ellerman s.s. Falernian, for Gibraltar, Malta, and Alexandria, taking cargo for Beyrout, Alexandretta, Mersina, Cyprus, etc., will close for cargo at Liverpool on March 20.

The Ellerman s.s. Asturian, for Syra, Smyrna, and Constantinople, will leave Liverpool on April 23.

The Cunard steamer Corby, for Gibraltar, Malta, Patras, Piræus, Smyrna, and Constantinople, closes for cargo at Manchester on March 13 and Liverpool on March 20.

The Moss Line s.s. Karnak, for Gibraltar, Algiers, Malta, Alexandria, and Syrian coast ports, will leave Liverpool on March 13.

The Moss Line s.s. Siptah, for Algiers, Syra, Smyrna, Constantinople, and Beyrout direct, will leave Liverpool on March 25.

KRONEN STAMPED IN NEW ROUMANIA.

H.M. Commercial Secretary at Bucharest has reported to the Department of Overseas Trade that the total value of kronen currency stamped by the Roumanian-Transylvanian authorities in Ardeal is:—1,930,038.500 krönen, in the following proportions: 10-krönen notes, 9.047.649: 20-krönen notes, 13.172.078; 50-krönen notes, 3.037,785; 100-krönen notes, 5,180.232; 1,000-krönen notes, 871,448; 10.000-krönen notes, 3.476.

In addition to the amount stated, a further sum of 130 million krönen was stamped by a special commission instituted for the purpose of stamping notes, which for some good reason could not be presented to the stamping commission between June 12 and July 28, 1919. According to the arrangements made, it is proposed to exchange the stamped bank notes against Roumanian lei, in the proportion of two to one—*i.e.*, 1 krone is worth 50 bani, or half a lei. This sum of about two thousand million krönen does not include the krönen currency of the Banat and the Bukovina, which would probably almost double it.

COMPANY NOTES AND REPORTS.

Darjeeling Himalayan Railway Extensions.

The report for the half-year to September 30 last states that the net earnings of the Extensions, supplemented by the rebate from Government, yield a balance of Rs.1,25,656. The directors recommend a dividend of Rs.2 8a. per share, amounting to Rs.1,09,375, carrying forward Rs.16,281

Uvakellie Tea of Ceylon.

The report of Uvakellie Tea of Ceylon for 1919 states that the crop harvested amounted to 312,447 lb. of tea, against an estimate of 310,000 lb. The cost of production amounted to 41.03 cents per lb., including a charge of 3.66 cents per lb. for loss on rice, which, it is feared, will be still further enhanced during the current season owing to the increase in the cost of rice. The price obtained for the tea was 59.63 cents per lb., as compared with 46.40 cents per lb. for the previous season, which may be considered a very satisfactory result, and is the highest average that has been obtained since the inception of the company. The profit on the year's working is Rs.53,764, and Rs.10,834 was brought in, making Rs.64,598. The directors recommend a dividend of 15 per cent., absorbing Rs.36,000; transfer to depreciation account, Rs.5,000; to reserve, Rs.18,000; carrying forward, Rs.5,598. The estimates for 1920 provide for a crop of 320,000 lb. of tea at a cost of 40.22 cents per lb.

Imperial Bank of Persia.

The report of the Imperial Bank of Persia for the year ended September 20, 1919, states that the profits for the period mentioned, after making provision for expenses of management and general charges in London and at chief office and branches, income-tax, excess profits duty, and bad and doubtful debts, amount to £80,235 3s. 8d., to which has to be added £27,388 3s. 10d. brought forward from last account, making a total of £107,623 7s. 6d. From this sum, £4,814 2s. 3d., the amount due to the Persian Government in terms of the concession, has to be deducted, leaving £102,809 5s. 3d., which the directors have dealt with in the following manner:—First interim dividend for the year, at the rate of 3s. per share, paid June 18, free of income-tax, £15,000; transfer to reserve account, £30,000; transfer to bank premises account, £5,000; second interim, being final dividend, at the rate of 5s. per share, paid on December 30, 1919, free of income-tax, £25,000; carry forward to new account, £27,809 5s. 3d.—£102,809 5s. 3d. The retiring directors are Mr. H. E. R. Hunter and Colonel Sir A. Henry McMahon, who, being eligible, offer themselves for re-election. The accounts have been audited by Messrs. Kemp, Sons, Sendell and Co., chartered accountants, who offer themselves for re-appointment. Meeting, Cannon Street Hotel, E.C., March 15, 12.30 p.m.

COMPANY NEWS IN BRIEF.

Assam Railways and Trading.—Interim dividend of 2 per cent., less tax, on the "B" stock, payable April 1.

Resolutions for the voluntary liquidation of the Woodend (Kelani Valley, Ceylon) Rubber and Tea Company have been passed and confirmed.

The traffic receipts of the Suez Canal for the week ended February 14 amounted to 3,400,000 francs, as against 3,150,000 francs.

The capital of Sudan Plantations, Ltd., is, it is announced, to be increased to £750,000, 150,000 new shares being offered to shareholders at £2 premium.

Ionian Bank.—Final dividend of 3s. per share, with a bonus of 1s. per share, both free of tax, for the half-year ended December 31, making 7 per cent. per annum for the past year.

The directors of the Sephinjuri Bheel Tea Company have declared the third quarterly dividend of 10 per cent., less tax, on account of 1919, payable March 20 to shareholders registered March 2.

An ordinary general meeting of the National Bank of Egypt will be held on March 29 at the head office in Cairo for the purpose of receiving the report and declaring a dividend, etc. An extraordinary general meeting will immediately follow to consider alteration of the statutes.

The directors of the Mahawale Rubber and Tea Company announce that the profits allow a total dividend for the year 1919 of 32½ per cent., less tax. Apart from the shares in the new company, nothing more will be distributed to the shareholders of the present company.

BANK OF ATHENS.

London Committee Formed.

In view of the increasing importance of the trade passing between the United Kingdom and those countries in which the Bank of Athens is established, the directors of that bank recently decided to form a London Committee for the purpose of fostering and developing such trade. In order that the best results might be obtained it was felt that the committee should be a strong and thoroughly representative one, and to this end Mr. O. V. G. Hoare and Mr. W. H. Hollis were invited to become members and to act in conjunction with Mr. E. M. Rodocanachi and Mr. P. N. Caridia.

The directors of the Bank of Athens announce that Mr. Hoare and Mr. Hollis, having agreed to serve on their London Committee, the same will be established forthwith. Mr. O. V. G. Hoare is a director of Barclays Bank, Limited, and the Colonial Bank, chairman of Cox and Co. (France), Limited, and a partner in Cox and Co. (Army Bankers), Charing Cross. Mr. W. H. Hollis is general manager and director of the British Bank of South America, Limited, and a director of Cox and Co. (France), Limited. Mr. E. M. Rodocanachi is a director of the London Joint City and Midland Bank, Limited, and of the Bank of Athens, and senior partner in the firm of Rodocanachi Sons and Co. Mr. P. N. Caridia is the London manager of the Bank of Athens and a director of Cox and Co. (France), Limited. The Bank of Athens is established in Greece, Cyprus, Turkey and Egypt.

TRADE OPENINGS IN PERSIA.

H.M. Consul at Kermanshah reports that the following manufactured articles would command a ready sale in Persia:—Boots, saddlery, and leather goods. These should be cheap but of strong quality. They have to compete with leather goods of Hamadan, the chief leather town of Persia, only 130 miles from Kermanshah, the leather and stitching of which is inferior. Ammunition boots would command a good sale to mule drivers and pilgrims, many thousands of whom pass through Kermanshah during the year to Baghdad, where they acquire local boots of inferior make and durability. There is also a small demand for better quality boots and shoes for local gentry, and also ladies' shoes for zenana ladies.

Other openings mentioned are for cardigan jackets, socks, stockings, stout tweeds for hard wear, and shirting cloth, bright blue and pink, for female use, for Kassi silk for suits and shirtings for summer use, while it is pointed out that cotton piece-goods of all sorts are in demand. There are also openings for the sale of tea and sugar—preferably in cones of 6½ lb. weight each; and finally for glass work—beads, bottles, tumblers.

The routes by which merchandise can best reach Kermanshah is by ship to Busreh. Thence by rail to Baghdad West, where it must be transferred by camel, cart, or mule to Baghdad East Station and forwarded by rail to Quraitu Station, on the Persian frontier near Qasr-i-Shirin. An alternative and probably cheaper method from Busreh is by river craft as far as Kut, thence by rail to Quraitu; from Quraitu to Kermanshah road transport by camel, mule, or donkey.

Lord Allenby has issued orders in Egypt under martial law that cultivators rooting up cereals to plant cotton shall be fined £100 per acre.

A Bill has been introduced by the Greek Minister of Finance, authorising a lottery loan of 300 million drachmæ in shares of 200 drachmæ each. The interest will be at the rate of 5 per cent., and the term will be 60 years.

It is announced that the Government of India has decided to discontinue the experimental aerial mail service which has been maintained between Bombay and Karachi for six weeks, in connection with the arrival and departure of the English mail boat. It is estimated that the cost has been over £1,000 weekly and the revenue sometimes only about £10.

TOBACCO PRODUCTION IN YUGOSLAVIA.

The most productive tobacco-growing region in Yugoslavia, says the American Chargé d'Affaires at Belgrade in a recent report, is Serbia, which, within its frontiers of 1912, produced annually about 2,000,000 kilos (4,409,200 lb.) of which it consumed only 900,000 kilos, the remainder being exported in leaf. The total production of Serbia and Macedonia, according to *Trgovinski Glasnik*, has increased to more than 4,000,000 kilos. Tobacco is extensively cultivated in the following regions: In the Department of Skoplje, 500,000 kilos; in that of Bregalnitza (exclusive of the district of Strumnitza), about 600,000 kilos; in the Department of Prilep, about 500,000 kilos; in Koumasovo, 600,000 kilos; in Vragais, 250,000 kilos; in Nish, 600,000 kilos; in Kruchevats, 300,000 kilos; and in Oujitse, 100,000 kilos.

Before the war, Herzegovina produced 3,500,000 kilos of tobacco, and there have been occasional harvests when the crop totalled 4,600,000 kilos. The next crop, however, because of the post-war conditions, will not exceed 500,000 kilos.

Bosnia and Dalmatia.

In Bosnia, the eastern sections are the most productive, especially the districts of Srbrnitsa, Vlasenitsa, and Svornik. In the north-east, the production is extensive in the districts of Belina, Brtchko, Gradatchatch, Bihatch, and Sazin; in the south, in the districts of Prozor, Totcha, and Tchainitche. Bosnia yields about 500,000 kilos of tobacco annually. In Dalmatia the cultivation of tobacco has increased steadily since 1884; in 1913 it reached about 3,500,000 kilos, but since the war the production has decreased.

The exact amount of the crop in the Banat, the Batchka, the Baranya, and in Croatia and Slavonia is not known; but according to Hungarian statistics Hungary yielded 6,000,000 kilos, of which approximately 4,000,000 were produced in these Provinces.

The annual tobacco crop of Yugoslavia therefore approximates 15,000,000 kilos. Of this, some 6,000,000 kilos are required for domestic consumption, leaving 9,000,000 kilos for export, either in the leaf, or prepared for immediate use.

(Over 80 Branches in the Near East.)

The Bank has been established for over 55 years, and has its own Branches or Agents in every important commercial town in the Near East.

The Offices of the Bank at 26, Throgmorton Street, London, and 25, Pall Mall, Manchester, can now enter into transactions with all the above-mentioned places, subject to British Government regulations and local restrictions where in force.

Manufacturers, Traders and others are invited to correspond with the Bank, where all possible facilities will be afforded for the re-opening of business.

The Bank makes advances upon Bills of Lading and other export documents.

Drafts and telegraphic transfers issued.

Letters of credit granted.

TRADE OPPORTUNITIES AT ADEN.

In a report on trade conditions and opportunities in the Aden market, the American Consul at Aden, Mr. Addison E. Southard, says that the market is pre-eminently one for cotton piece goods, general hardware, kerosene, tinned or otherwise preserved foodstuffs, and a few other articles of more or less similar manufacture, which are required to meet the demand of the natives (principally Arabs, Somalis, and Christian and Mohammedan Abyssinians), who live in a comparatively primitive manner. Standards of living have not yet been developed to the point where there is an appreciable demand for merchandise of the more highly-manufactured sorts.

NEW COMPANIES.

Palestine Co. "Hiram."

The Palestine Co. "Hiram" has been registered with a capital of £25,000, in £1 shares. Objects: To carry on in, with, and from Palestine or elsewhere the business of general merchants, importers, exporters, shipping agents, shipowners, shipbuilders, ship and insurance brokers, carriers, builders, builders' merchants, mine, quarry, and factory owners, brick and cement makers, timber merchants, furniture manufacturers, ironmongers, engineers, farmers, clothiers, provision packers, and preservers of provisions, meat extract manufacturers, wool washers, tallow melters, manure manufacturers, etc.

Europe and Asia Trading.

The Europe and Asia Trading Company, Limited, was registered as a private company on February 24, with a capital of £50,000, in £25 shares. Objects: To carry on in Eastern Europe and Asia the business of general merchants, manufacturers, importers and exporters, shipowners and builders, etc. First directors: I. Naiditch, Hans Crescent Hotel, Belgravia, S.W.1; S. Landman, 71, Staverton Road, Willesden Junction, N.W.

Kershaw, Leese and Co.

Kershaw, Leese, and Co. (Egypt), Ltd., has been registered with a capital of £40,000 in £1 shares. Objects: To carry on the business of (*a*) manufacturers' merchants and importers into Egypt and other parts of Africa and Asia of cotton and woollen piece goods and yarns, (*b*) exporters from Egypt and other parts of Africa and Asia of hides, skins, animal and vegetable produce, and other products of those places, (*c*) shipping merchants, commission agents, etc.

Yugoslavia Express Agency.

The Yugoslavia Express Agency, Ltd., has been registered with a capital of £50,000 in £1 shares. Objects: To carry on the business of transport and tourist agents, organisers of transport and travel, shippers, forwarders of goods, hotel, restaurant, and sleeping-car proprietors and agents, bankers, merchants, insurance agents and brokers, shipowners, etc., to assist and promote trading between Yugoslavia and Great Britain. First directors: Major G. H. Sim, A. C. Sim, and Dr. J. Jeftanovitch Qualification, 1,000 shares. 1, Broad Street Place, E.C.

London and Levant Transport.

The London and Levant Transport Company, Limited, was registered as a private company on February 27, with a capital of £42,500, in 10s. shares. Objects: To carry on the business of shipowners, ship and insurance brokers, managers of shipping property, to establish and maintain lines of steam and other ships between ports in the United Kingdom and the Mediterranean and Black Sea and elsewhere. The subscribers (each with one share) are:—W. H. Fox, 52, Shardeloes Road, New Cross, S.E.; A. Frampton, 3, King's Bench Walk, Temple, E.C. The subscribers are to appoint the first directors. Solicitor: J. B. Pittman, 17-18, Basinghall Street, E.C.

London and Black Sea Building.

The London and Black Sea Building Co., Limited, has been registered, with a capital of £50,000 in £1 shares. Objects: To carry on the business of builders, architects, surveyors, Government and building contractors, merchants, bankers, etc. First directors: Capt. J. A. Leighton, R.N.R., 180, Piccadilly, W.; M. V. Brackevitch, 15, Seymour Road, Hampton Hill (Engineer of Ways of Communication Harbour and Railways Contractor); J. G. Crookston, C.B.E., Cotham House, Ellesmere Road, Weybridge (engineer and naval architect; managing director Salamander Steel Works, Riga, Russia; vice-president Russian Shipbuilding Co., Petrograd; vice-president Chartiers Navals de Nicholdieff-Nicolaieff, South Russia).

ON CHANGE.

(From Our Own Correspondent.)

Throgmorton Street, Wednesday.

Business has been on a restricted scale this week, but to-day there has been a reawakening of interest, and at the close the market looks decidedly better and with a tendency to go ahead on a renewal of demand from Egypt.

Government bonds on balance are closing better, the big demand to-day sending Unifieds up to 74⅜, a rise of ⅜, and Egypt 3½ per cent. prefs. up to 61¾, a rise of ½. Turkish 1891 have also appreciated half a point to 69½, and the 3½ per cent. 1894 have improved 1 point to 59. Turkish Unifieds are also half a point up at 32. City of Alexandria bonds have been exceptionally dull, and are closing 1½ points down at 65½.

In Bank shares National Banks have been a great feature during the last few days. There has been persistent buying from Egypt, and the price has advanced 1⅜ to 23½ on rumours of a very satisfactory final dividend, which is expected any day now. Agriculturals have improved 1-16 to 5 9-16. On the other hand, Anglo-Egyptian Banks have continued a dull spot, and are closing ⅜ lower at 19¾. Bank of Abyssinias have also dropped ¼ to 1¾, whilst Ottoman Banks are 5-16ths higher at 11.

In railways, Delta Light prefs. are 1-16th lower at 6 9-16.

Amongst land shares the market, after being weak, closes distinctly better. Aboukirs, after receding to about 41s. 3d., close a good market to-night at 45s., a rise of 2s. Allotments on a late demand to-night are ¼ up at 4. Some business has taken place in Béhéra round the current level of 21. Consolidated Lands are 3d. lower at 3s. 1½d. Delta Lands have dropped 2s. to 17s. 6d., and Foreign Trusts are 1s. down at 17s. Gharbieh Lands have been done in a small way at 3¼, and are closing ¼ lower at 3½. New Egyptians, after being down to 33s., finish unchanged at 35s. Sudan Plantations are again 1-16th easier at 8 1-16, and Union Foncières ¼ lower at 5½; but in nearly every case sellers are very scarce, and buying orders are exceedingly difficult to execute.

Amongst Miscellaneous descriptions Salts and Sodas are 1-16th firmer at 57s. 6d., and Morums Stores close unchanged at 19s. 6d., after being down to 19s.

In Greek securities the market continues dull, with a drop of half a point in the 1881, 1884, and 1890 loans to 54. Monopolies, Rentes, and the 5 per cent. 1914 London issue are all a point down at 46, 45, and 60 respectively. The 1902 Loan has been comparatively firm, and is only half a point down at 52½, whilst the 1910 Loan has been in quiet demand all the week, and closes unchanged at 43. Bank of Athens shares have again recovered 5s. to 65s., and there is some inquiry for these shares in view of the recent arrangements and the expectation of a resumption of dividend.

In Oil shares Anglo-Egyptians B, after being a flat market at 4 1-16, close ⅛ down only at 4⅜. Roumanians are fractionally lower at 21s. 9d.

INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following cabled news received from the Director-General of Commercial Intelligence, Calcutta, dated February 25:—Weather generally dry, with light showers in North-West Frontier, Assam, South Burma, and Mysore. Final crop forecasts:—Groundnut, 1,570,000 acres; yield, 884,000 tons (last year, 1,312,000 acres; yield, 490,000 tons). Sugar-cane, 2,667,000 acres; yield, 3,001,000 tons (last year, 2,820,000 acres; yield, 2,337,000 tons). Cotton, 23,063,000 acres; yield, 5,845,000 bales (last year, 20,497,000 acres; yield 3,671,000 bales). Rice, 81,548,000 acres; yield, 35,716,000 tons (last year, 75,864,000 acres; yield, 23,822,000 tons). Bombay cotton market weak. Fully good Broach, April-May, Rs.508. Piecegoods market unsettled. Calcutta jute market firm, but little doing. Hessians quiet, with prices tending downwards. Heavy goods very quiet. No change in Bank rates.

Considerable injury to commercial relations between France and Algeria is being caused by the interruption of cable communication. Of the four cables which existed before the war only one remains.

According to information which has been received from H.M. Minister at Belgrade, there is a possibility that the Government of Yugoslavia may take steps in the near future to restrict the importation of "articles of luxury," comprising such goods as silks, scents, expensive soaps, and other toilet articles.

BRITISH TRADE CORPORATION.

(Incorporated by Royal Charter),

13, AUSTIN FRIARS, LONDON, E.C.2.

Telegrams: "Trabanque, London."

CAPITAL: Authorised - £10,000,000 Subscribed and Paid Up - £2,000,000

Governor - THE LORD FARINGDON.

Manager, A. G. M. DICKSON. London Manager, P. C. WEST. Secretary, G. De B. BROUNLIE.

The Corporation has been established with the object of developing the Trade of the British Empire in every part of the world, and brings to the notice of all interested that it is prepared to grant financial facilities to British Manufacturers and Merchants for the increase of their Import and Export Trade.

It will be prepared to assist in opening up new channels for enterprise, and will afford financial facilities for the enlargement of works and the extension of plant.

The Corporation is appointing representatives in the chief cities of the world, and will open credits at home and abroad. It invites inquiries, and will endeavour where necessary to put expert advice at the disposal of correspondents regarding the financing of their foreign and overseas business. Moneys received on fixed deposit. Terms on application.

NOTES OF THE WEEK.

Turkey has continued to loom large on the political horizon throughout the week. Further confirmation of the massacres in Marash and the surrounding territory has been received, and the Allied Governments have felt compelled to take more drastic steps than the mere threat to stiffen the peace terms, if the Turkish authorities did not mend their ways. The nature of the steps to be taken has not been officially divulged, but they are reported to include the military occupation of Stamboul, the strengthening of the French troops in Asia Minor and the direct employment of a Greek army against Mustapha Kemal's Nationalist forces. Lord Curzon, speaking in the House of Lords on behalf of the Government, referred to the situation in Turkey in grave tones: "At Constantinople there has been growing up a spirit of arrogance and defiance which bodes ill for the future. There have been flagrant breaches of the Armistice by the Turkish Government and Turkish forces. There have been repeated acts of hostility. There has been a constant interchange of communications, of arms, and of armed men, between the capital and the Nationalist forces in Asi . Minor. . . . All these incidents are evidence of a revival of a national spirit among the Turks and of an intention on their part, if they are left to do so, to intimidate the Peace Conference, and of their preparations for resisting the Peace Treaty should it assume at all a drastic form."

This indication that the Allied Governments at last "mean business" will be generally welcomed, and we can but regret that it follows instead of preceding the Marash tragedy. The present situation in Turkey, inconceivable even to the Turks for some months after the Armistice, is due entirely to the remissness of the Allies. But with firm handling now there is no reason why things should not be restored to the satisfactory position that existed when the Turks acknowledged defeat. Lord Curzon, it will have been noticed, was not optimistic. "Do not let anybody believe that any peace which we are going to conclude is suddenly going to spread peace over Asia. Far from it. I cannot guarantee that even six months hence the situation will not be worse than it is now." This, we fear, is a fresh instance of the fatal lack of conviction that has hampered every step taken by the Allied Governments. Peace can be established and maintained, if only the Allied Governments adopt a sane line of action.

It will be worse than useless to administer punishment upon Mustapha Kemal's Nationalist forces and then to leave Turkey to fend for herself. The campaign for the restoration of order in Turkey must be accompanied by a sound settlement, the machinery for the application of which must at once be made ready. It is evident that the Turks, in their own interests, as well as in the interests of their neighbours and Europe in general, cannot be left to themselves. Such a course merely provides the opportunity needed by the Committee of Union and Progress and its henchmen. A scheme for the better government of Turkey must be put into action without delay. The Turkish officials to work under it can easily be found, but they must have the support of foreign, preferably British, advisers, and these must be distributed throughout the country. Whatever objections can be urged against the proposals, there is little doubt that it is the only one which will enable the Allies to guarantee that the situation six months hence shall not be worse than it is now.

Some hope that this important point will not be lost sight of was afforded by Lord Curzon's speech. The whole principle upon which the Allied Governments are proceeding in Asia Minor, he said, is "the reconstruction, as far as possible on an ethnic basis, of such States or communities or groups as are able, on the principle of self-determination, to justify autonomous life in the future. We desire to afford protection and assistance to them, and, further, to create a state of affairs in which, instead of living in perpetual warfare with their neighbours, they will settle down with them in the future . . . you want to produce conditions in which not only will you protect Christians, but in which you may secure decent government for the Turk himself. . . . Therefore do not lose sight of the fact that in helping the Christians to a future independent life we also have, if we can do so, to produce good relations between them and their neighbours and secure something like a peaceful existence for the latter as well." It is certain that words alone will not achieve this praiseworthy end. Decent government can only be secured by decent administrators. The Turks, by common consent, have not produced any yet. Therefore they must be provided with them, until such time as a decent Turkish officialdom can be evolved.

This need for the loan of administrators requires to be emphasised, because there will be a temptation in certain circles, in view of the Turkish retention of

Digitized by Google

Constantinople being announced subsequent to the agitation on the subject, to suggest that Moslem *amour propre* will be hurt if there is any interference with the Turkish administration. The reply, if such a claim were made, should be immediate and decisive; that while Moslem views on the subject of the Khalifate and its connection with Constantinople will be listened to with all respect—although those views were not the determining factor in the Allies' decision—the question of the decent administration of Turkey is a purely secular affair into which religious beliefs do not enter.

The cables from India show that the genuine, if unhistorical, sentiment in favour of Turkey is being worked up to boiling point. Some of the resolutions which have reached us are imbued with that spirit of contingent sedition for which precedents may be found in other parts of the Empire, but which is, to put it mildly, dangerous doctrine to preach to excitable Eastern populations; and when we read of a body of Indian Moslems threatening to "sever its connection with the British Government," we are tempted to point out that India, large as it is, has not room for such dissidents, who would doubtless find more congenial surroundings in Constantinople than Calcutta. The Moslem leaders are on firmer ground when they protest against fanatical and ill-informed anti-Turkish agitation in this country; we cannot indeed assert that their own proceedings are entirely devoid of fanaticism, or are characterised by judicial appreciation of the facts of the position, but Englishmen, and English women, should set an example to the rest of the Empire, and some of the protagonists in this country have fully earned the epithets employed.

Whatever result may be attained by such tactics in India, we question whether the cause of Indian Moslems is likely to benefit by activities on the lines being followed by the Khalifate Mission now in this country. The value of threats varies with the longitude, and already we notice a distinct tendency to question the credentials of those who appear to be inclined to use them. People are asking whether this mission is working solely in the interests of its Indian constituents, or whether some of its members are not influenced by inspiration from a different quarter. The "record" of Mr. Mohamed Ali was the subject of a recent question in Parliament, but his name is less familiar here than in India, and he has in the past displayed so much interest in the affairs of other nations that the professions of a body of which he is a member are not likely to pass current at their face-value. The English public would welcome a plain presentation of the point of view of Indian Moslems, but they want to be quite sure that the dish answers its description on the menu: is it sentiment *à l'Indienne*, or sentiment *à la Bosphore?*

There is good reason for believing that Mustapha Kemal's strength has been over-estimated, and that his policy has been based largely upon bluff and the presumed weakness of the Allies. The Nationalists, we learn from Constantinople, are failing badly in their efforts to arouse the Islamic world, in spite of the alacrity shown by Indian and Egyptian agitators to seize upon the Khalifate question for their own ends. Most of the support obtained by the Nationalists from the Turkish population is the result of terrorism, and while there may be a certain amount of anti-British feeling, it is chiefly of a negative and artificial character. If this diagnosis of the situation in Turkey be correct, there is little doubt that a marked improvement will quickly follow decisive action and the introduction of a definite policy for the good government of the new Turkey.

The report that, in the absence of Dr. Vaida-Voivod, the Acting Prime Minister of Roumania has handed in the resignation of the Government, and that this has been accepted by the King, requires to be confirmed before it will be believed. Both the President of the Chamber and the President of the Senate had protested publicly against such a step on the part of M. Stephen Pop, and a new Minister of War had been appointed to the Cabinet. But it is evident that the Ministry was in a precarious condition. Much sympathy will be felt for Dr. Vaida-Voivod in his difficulties; he has successfully upheld Roumania's interests with the Supreme Council, and has secured formal recognition by the Allies of the reunion of Bessarabia with Roumania. Domestic problems, however, seem now to be of more immediate concern to the Roumanians than foreign affairs.

On the day that he dealt at length with the subject of Turkish rule in Armenia, Lord Curzon was also interrogated in the House of Lords on the condition of Montenegro. His reply showed that he was not so sure of his ground in regard to the latter question. Indeed, his speech was entirely stultified by a confusion of thought between Yugoslavia and Serbia. There has never been the least suggestion that any section of the Montenegrin people desired to be outside the Yugoslav Federation. It was, therefore, superfluous to labour the point. The whole question turns on whether the Montenegrins shall be allowed to decide their own future—either as a separate unit like Serbia or Croatia, in the Federation, or as a province of Serbia—by a free and unhampered vote. The British Government profess to desire such a solution of the problem; but for a year they have weighted the scales against the little country by giving their ear to the opponents of the duly constituted Government. With equal propriety they might have refused during the war to recognise Serbia's Regent, Prince Alexander, and his Prime Minister, M. Pasitch, because a certain section of the Parliamentary Opposition bitterly denounced the latter. Lord Curzon gave away his case when he stated that the publication of the names of witnesses in the Count de Salis's report might cause these witnesses to "suffer seriously from divulgations." It follows (1) that their evidence would be against the Serbian occupation, and (2) that the Serbian authorities would make them "suffer seriously"—an admission that would seem to endorse everything that has been reported regarding the actual condition of the country. Incidentally, of course, nothing would be simpler than to omit the names of the witnesses.

A letter from General Sherif Pasha to *The Times* puts the Armeno-Kurdish agreement of November 20, 1919, in an interesting light. The Pasha states that, immediately after the signing of the Armistice, he saw that the Kurd lands forming part of the Ottoman Empire "were the object of covetousness, as much of the Armenian organisation as of certain of the Allied Powers." Probably very few people outside Armenian circles would seriously challenge that view; and when the Pasha refers to "the ignorance of the majority of the European circles concerning the Kurd countries," which led to the belief that Kurdistan "was merely a fanciful geographical expression," he is only setting forth a regrettable fact. But in the absence of any propagandist machinery, how was that ignorance to be enlightened? Sherif Pasha hit upon the ingenious idea of making known the existence of a Kurdistan "by our competitors themselves, in an Act signed by the representatives of the Armenians to the Peace Conference," and the result was the agreement made with Boghos Nubar Pasha and the Delegate of the Armenian Republic of the Caucasus. In the past we have been accustomed to look upon the Kurd as, politically, dull and slow-witted, and the Armenian as preternaturally sharp; but if Kurdistan can produce many diplomatists as skilful as General Sherif Pasha, its neighbours will have to keep very wide awake.

Winter weather has been helping the Kurds in the Urumiah region in their fight against the Persians by putting a stop to co-operation by the British flying men. At the end of February there was fighting at Salmas, but how it went we are not informed. The fact that the Kurds are reported to be showing a disposition to come to terms would seem to indicate that they have not been getting the best of the exchange of incivilities, and the Persian Government troops may congratulate themselves on a creditable piece of work for their first service.

Digitized by Google

The attitude of America, or of that section of American opinion that takes any interest at all in the subject, towards the Armenian question is decidedly strange. It urges—nay, demands—that something be done immediately; it shows a very marked inclination to blame Great Britain or, sometimes, France, for not doing it; and it seems to be satisfied that America need do nothing towards bringing about the desired end, except, perhaps, provide financial and moral support. All this may do credit to the hearts of the Americans concerned; but we may be pardoned for remarking that to allow the heart to rule the head is not always wise, and that sentimentalism is apt to lead to Pharisaism.

In this connection the publication of telegrams exchanged between Mr. Gerard, formerly American Ambassador in Berlin, and Mr. Balfour is of extreme interest. According to the summary of Mr. Gerard's first message he "expresses distress over the news that the Allies might cut up Armenia"; reminds us that America has given £6,000,000 for Armenian relief; states that the President has been asked that America should aid Armenia; mentions that "we are earnestly anxious that Britain should seriously consider American opinion on the Armenian case"; and concludes: "Can you not postpone consideration of the Turkish question until after ratification of the Treaty by the Senate, which is likely to take place before March 1?" That is, if we may say so, very typically American, and we would ask in the most friendly way that America would "seriously consider" the British point of view, as put forward by Mr. Balfour. The latter, in his reply, expresses a very natural failure to understand why Great Britain should be held responsible if a Greater Armenia is not forthwith created; and points out that "Great Britain has no interests in Armenia except those based on humanitarian grounds. In this respect her position is precisely that of the United States."

If Americans, or some of them, are distressed by the sufferings of Armenia, so are Englishmen; and they show to the full the disappointment hinted at by Mr. Balfour that the United States have not seen their way to become mandatory for Armenia. But they realise also "that even the most lavish charity, unsupported by political and military assistance, will prove quite insufficient to deal with the unhappy consequences of Turkish cruelty and misrule"; and the trouble is that our American friends have not apparently realised that fact. Moreover, it is not without interest to note that the "ratification of the Treaty by the Senate" has not yet taken place, although March 1 has come and gone, and the latest indications are that ratification will still be just as "likely" in March, 1921.

THE WEEK AT HOME.

Direct Action Rejected.

The most momentous event of the week has been the decisive rejection by an overwhelming majority of the policy of "direct action"—that is, a general strike—at a special Trade Union Congress convened to discuss the question. The constitutional Labour leaders have all along been opposed to revolutionary methods, and they spoke emphatically against it at the public session of the Congress: the hotheads were hopelessly outclassed in argument. But he would be a bold man who prophesied that we have heard the last of "direct action" as opposed to political action. The man who most strongly depreciates Parliamentary methods is gene-ra"-- he who has failed to get into the House of Commons—the temptation to cry "sour grapes" seems irresistible. Accordingly, one finds that many of those Labour leaders, who, like Mr. Smillie, have again and again been in a minority at the polls are always ready to denounce political action as slow and ineffective, and to advocate "direct action." It is not to be supposed that even an adverse vote of their own colleagues will deter them from trying again.

The sequel to the rejection came within twenty-four hours. The miners were practically the only industry in favour of "direct action," and they immediately demanded an advance of wages. Not a week before it had been announced that they did not want an increase of wages, but a reduction of the cost of living: consistency does not seem to count for much in the politico-economic strategy of the day. As home-used coal is already being produced at a loss, and the industry is only kept solvent by the high price of exported coal, it is not quite clear where this increase of wages is to come from, unless out of the pockets of the general public once more; and it is noticeable that the demand has been received with a certain lack of sympathy even in quarters usually friendly to Labour.

The Vicious Circle Again.

Whatever may be the case with the miners' demand, the Government's decision to modify the bread subsidy has once more started other demands for increased wages from all classes of the community. As this sequence of cause and effect was as clear as daylight in advance to the man-in-the-street, it was probably foreseen by the Cabinet, and it must therefore be deduced that in their opinion it was better to start the vicious circle spinning afresh than to continue an uneconomic price for bread. The trouble is that while increasing the price of bread, they have not put it on an economic basis, and the subsidy, now reduced, will probably mount again in a few months' time.

As to the general increase of prices this past month, there is no doubt about it whatever. It works out, I am told, at about a shilling a week a head, and taking the ordinary household at four to five people, that means that the average husband, *quâ* bread-winner, has to find another pound a month, or twelve pounds a year, if his harassed wife's temper is to preserve any of its pre-war quality.

Income Tax.

There is, however, one silver lining to the financial cloud. The Income-Tax Committee's recommendations have broadly been accepted by the Chancellor of the Exchequer, and so far as is known, they will appreciably lighten "the burden of the ass" who turns the scale at less than a thousand a year. In effect the Income-Tax will start at £250 a year, and the allowances for children where the income is limited will be increased; so that if a man with, say, £750 a year chooses to have ten children, he would still be practically exempt—as he deserves to be for his heroism. It is good news that the double income-tax on Colonial investments, which has long been an anomaly and always operated as a grave injustice, is to be abolished. The Budget this year will be awaited with very considerable curiosity, as it is believed that most of these changes will be incorporated in its provisions.

Meanwhile, the proposed tax on war profits, which is being examined by a Committee of the Commons, seems to be hanging fire. Everybody wants to hit the profiteers, but unfortunately these modest people wear no label, and business men have been by no means impressed by the suggestions of the Treasury officials for the war profits tax, while the Stock Exchange—which certainly has no war profits to conceal—shivers at the very prospect. It would cause an immediate slump in national and industrial securities, already low enough, and would thus hit the innocent with the guilty—indeed, they have depreciated further quite recently; but although we are told that is in consequence of the inquiry being held, I incline to think that it is mainly because so many people are selling out stock in order to buy their houses.

The Industrial Boom.

Industrial activity has again perceptibly increased, and the issue of new industrial companies has beaten all previous records; about twenty new enterprises are appealing to the public for funds before Easter. The banks are finding it a little difficult to cope with this sudden rush of business, and the inevitable result is that they are endeavouring to scrutinise some of the projects brought them more closely, while the rate of

Digitized by Google

interest goes up. As the issue of new prospectuses is likely to continue for many months, it is evident that we are in for a long period of dear money.

British Sugar.

The most interesting of these new enterprises is the flotation of a company for establishing the sugar-beet industry at home. It is virtually a new industry. Several attempts were made to found it in Victorian days, but these all failed, mainly because it was worked on too small a scale; although the disappointed promoters also blamed the farmers as being too conservative to grow the beet, which has its own particular value nevertheless as a cleaning crop.

Another attempt in 1913 at Cantley, in Norfolk, yielded rather better results, and there is really no reason whatever, on the ground of soil and climate, why Britain should not enter the ranks of sugar-producers. The present is obviously a good time to start, since the shortage of sugar is acute. A great deal of experimental work has been done by a society of investigation, and the new industry will be founded on an estate near the River Trent. The authorised capital of the company is a million pounds, of which half will be issued; if successful, it will either have to enlarge its operations very considerably or allow others to imitate it. The Government is sufficiently interested in the scheme to subscribe towards the shares.

Home Politics.

The political interest of the week has been in none of the speeches in Parliament—which, as a matter of fact, have been desperately dull—but in the movements behind the scenes. All talk of the speedy collapse of the Coalition has now been tacitly dropped by the Opposition, who are resigning themselves gloomily to the prospect of remaining in the wilderness at least another couple of years. Their difficulty is not so much that they cannot beat the Government candidate in odd by-elections, but that the two sections of the Opposition are hopelessly divided from each other, and neither will give way. Labour does not see why it should not put up candidates in every constituency, even if the prospect of a majority is hopeless—as in Horncastle a week ago—but it merely deprives the Independent Liberal of his last feeble chance of success. Liberalism, on the other hand, cannot forget those happy days when a small and obedient Labour Party fed out of Mr. Asquith's hand, nor can it resign the hope that those days will return.

The fact that this attitude of mind is still cherished in Independent Liberal circles alone indicates the hopelessness of their position; nor has Mr. Asquith's return to the Commons really improved matters. It led his little party to form higher hopes for a few days, but the ex-Premier's own attitude has shattered most of the illusions. He still clings entirely to the old party lines, of which the country is emphatically tired. He intends, for instance, to move the rejection of the Home Rule Bill, and the very words of his reasoned amendment against it indicate, like his speeches, that his mind is still in the pre-1914 period.

Further than that, he, as the official leader of the Liberal Party, makes it a condition of any *rapprochement* with Mr. Lloyd George and the Coalition Liberals that the Prime Minister should wear a white sheet, eat humble pie, and be prepared to take subordinate office under his old chief. It is, of course, absurd to expect that Mr. Lloyd George will do anything of the kind; nor will the Coalition Liberals, occasionally restive though they may be, desert him for Mr. Asquith. A few old-fashioned Liberals, rather out of touch with the present day, seemed to expect that the moment the Paisley election result was known the Coalition Liberals would leave the Government *en bloc;* as a matter of fact, not one has gone over, or shows any desire to go over.

Consequently the ground is being cleared for the fusion of Unionists and Liberals into one Coalition Government Party. It is understood that Mr. Bonar Law, who seems to have been specially designed by Providence to play the part of second in command, has no objection to being deposed from his nominal position as Unionist leader, and that the Unionist Party as a whole accept the situation. Who would have supposed ten years ago that the Carlton Club, the home of Toryism, would ever consider the acceptance of Mr. Lloyd George as its leader? But it appears likely not merely to consider, but to invite him to act as leader, and to admit the Coalition Liberals as the left wing of the reconstructed party, occupying much the same relative position as the old Liberal-Unionists towards the Conservatives in the years 1886-1905.

The basis of this fused party would be opposition to Labour—in its official sense—and objection to nationalisation and socialisation schemes; much of its strength would lie in the utter refusal of the insignificant Independent Liberal and the larger Labour Parties to unite against it, each preferring to play for its own hand; but perhaps in the end its real strength in the country will be the fact that a majority of people do not particularly want a change, more especially since the only practical alternative at the moment is Labour.

The constructive policy of the Government remains a little vague, but it must not be forgotten that the mere fact that it allows people to get on with their own businesses and does not want to embark on vast schemes of reform like Labour, counts for righteousness with many; and another solid point in its favour is the general feeling of conservatism induced by the renewal of disturbances and uncertainty on the Continent.

The Week's Publishing.

The appetite for war books seems to grow by what it feeds upon. The first volume of Sir Julian Corbett's official account of "Naval Operations" (Longmans) is now out, and brings the history of the war at sea from the mobilisation of the Grand Fleet to the Battle of the Falklands.

From the German side Admiral von Scheer's memoirs are promised; the extracts from these already published in the *Daily News* show that he takes the German naval official view, which was often strongly at variance, as von Tirpitz has shown, with that of the statesmen of Berlin and German military headquarters. He recalls his last interview with the Kaiser at the Armistice, when the latter remarked "I have no longer a Navy"; but there appears to be no indication of any feeling that the German Fleet disgraced itself by the submarine war, and one would imagine from this narrative that the sinking of the ships in Scapa Flow was almost a victory for the enemy. Perhaps one should not begrudge a defeated foe any consolation he may secure from such acts, but one cannot help a feeling of surprise that he looks on the Scapa scuttling as being in the nature of a consolation at all.

Mr. Harold Spender has published a life of "The Prime Minister" (Hodder and Stoughton), which has a certain piquancy in view of the fact that its eulogistic and almost ecstatic tone contrasts very comically with the rather acrid criticisms which Mr. Spender's better-known brother, the editor of the *Westminster Gazette*, has made daily upon Mr. Lloyd George ever since the deposition of Mr. Asquith three years ago. The fashion for writing the lives of eminent men while they are still alive seems to be growing; one often wonders how they appreciate the compliment.

In a purely literary sense, the most interesting book I have read for some time is "Shakespeare Identified" (Cecil Palmer), by J. Thomas Looney. Like most people who have read the Shakespeare-Bacon controversy, I am obstinately unconvinced by the Baconians; but Mr. Looney only goes so far along their road as to be certain that Shakespeare did not write the plays. Thereafter he seeks the real author, and finds him in the Earl of Oxford of Elizabeth's day. He presents his evidence very persuasively, and does not ignore the undoubted difficulties; I must admit that some of his points dovetail into each other in what seems to be on the surface an extremely convincing fashion. Fortunately he does not go cypher-hunting, that trap of the Baconians, but confines himself to dates, facts, and quotations from the plays and Oxford's acknowledged works. The book will probably give rise to a controversy among the experts.

THE NEAR AND MIDDLE EAST.

(From Our Own Correspondents.)

EGYPT.

CAIRO, March 1.

A Royal Visitor.

During the past week there have been several banquets at Abdin Palace. Amongst them has been a farewell banquet to Lord Milner and his colleagues, one in honour of the members of the Nile Projects Commission, to which the European and Egyptian notables were invited, and another in honour of the Crown Prince of Roumania, who is visiting this country *en route* to the Far East, and who since Thursday last has been the guest of the High Commissioner and Lady Allenby at the Residency. This morning the Crown Prince inspected the aerodrome at Heliopolis, where a very fine display of mimic warfare in the air was given by the Air Force. Subsequently a review of the entire British garrison was held at Abbassia, at which the Crown Prince, who was accompanied by Lord and Lady Allenby, took the salute, and at the conclusion of which he decorated His Excellency with the Order of St. Michael the Brave.

The Cabinet.

The question of the reconstruction of the Cabinet as a result of the resignation of Sirry Pasha has not yet been settled. It is understood that Shefik Pasha, the Minister for Agriculture, to whom the vacant portfolio of Public Works has been offered, declines to accept it unless certain conditions, amongst them the cessation of work on the Sudan projects until the new Commission has reported, are agreed to.

In connection with the note on the Nile Control Works issued by the Ministry of Public Works, it may be pointed out that it is prefaced by a statement signed by Sir Ismail Sirry Pasha, in which he states that the projects have many times been discussed by him with Sir Murdoch MacDonald, that he agrees with the latter to the projects in the form now presented, and that he hopes that they will in due time be approved by the Government and be carried out. This statement was signed by him four days after his second resignation, and thus entirely disposes of the statements in circulation, first, that he had never been consulted in connection with, and did not approve of, the projects; and, secondly, that whatever documents he had signed in their connection had been signed by him under pressure. Since the publication of the note with his preface Sirry Pasha has been violently attacked by the Extremists, who are evidently very much annoyed that even after quitting office he should have the courage to persist in his views.

The members of the Nile Commission are all here now, the American member, Mr. Cory, having arrived last week. They are leaving to-morrow for the Sudan, where they will make an extended trip up the Blue and White Niles. It is, however, not certain whether the native member, Hussein Pasha Wassef, will accompany them, as up to the time of writing he has not yet attended any of their meetings.

The Milner Mission.

The labours of the Milner Mission are fast drawing to an end, at any rate as far as this country is to be the scene of their activities, and to-morrow they give a farewell reception at the Semiramis. On and after Thursday, the 4th, all official business will cease, and the members, who, however, will not travel together, will begin to wend their way home. Sir Owen Thomas and Mr. Spender will be the first to leave, followed by Lord Milner, who will proceed on Saturday for a short visit to Palestine prior to returning to London. Sir Rennell Rodd and Sir John Maxwell will follow shortly afterwards. Mr. Hurst, who is at the present moment in Alexandria, where, with the Judicial Adviser, Mr. Sheldon Amos, he is submitting his scheme for the judicial reorganisation to the general assembly of the Mixed Court of Appeal, will, on the conclusion of the discussion, return to London via the Balkans.

Meanwhile no further change has taken place in the political situation, and neither the Moderates nor the Extremists have made any further move. The *impasse* to which Zaghlul Pasha and his party have brought matters therefore continues, but I believe that when the Mission has left there may be some movement for the formation of a coalition committee which will follow it to London, where it will probably be joined by Zaghlul Pasha, and where it will discuss the future status with the British Government. It is indeed highly probable that the Mission will not present its report to the Cabinet until the end of April.

The Bomb Outrages.

The inquiry into the attempt on Shefik Pasha is progressing, and so far has given very good results. It has been discovered that the bomb thrower and his accomplice belonged to a society which interested itself in Arab drama, but which is believed to have a political object. Several of the members have been arrested, and there is reason to believe that the inquiry will throw light on the circumstances surrounding the previous attempts on Ministers and the organisation which is responsible for them. The bombs in this case have been found to be similar to those used against Sirry Pasha and those with which two students blew themselves up about a month ago. In fact, there is a very close relationship between all the bombs used or discovered during the past year. They are of purely local manufacture, and are not, as was at first stated, military bombs. Meanwhile, the men accused of the outrage on Said Pasha last September have been brought to trial, and have been sentenced, the thrower of the bomb to ten years' penal servitude, and one of his accomplices to fifteen years' penal servitude by default. This is generally regarded as a very light sentence, but in view of the unfortunate precedent set up by the Military Court in the Wahba outrage case a heavier sentence by the Native Courts could not very well be expected. As pointed out on more than one occasion in this correspondence, lenient handling of cases such as these fails to have any deterrent effect, and can, in fact, only aggravate the situation.

YUGOSLAVIA.

BELGRADE, March 1.

The New Ministry.

The New Government is settling down to its work, amid a howl of execration from the Opposition Press. Dr. Laginja, leader of the Narodny Club, was at once appointed Ban of Croatia, and it is interesting to note that he would not take his appointment from the Minister of the Interior, but insisted upon receiving it from the President of Council. As is the custom in Balkan countries, there has been a wholesale resignation of officials, who are being replaced by supporters of the Government. The new Ban at once released from prison several offenders accused of working against the Union, and this action has given occasion to his opponents to accuse him of separatism. The programme of the Narodny Club is, however, not yet absolutely defined, and they deny any desire for separation; they say that they insist on a wide autonomy for Croatia within the Kingdom of the S.H.S., which programme the Radicals have adopted, while the Democrats are all in favour of an entirely unified and centralised State. As every province of the kingdom has a different history and a marked individuality, a system of federation seems the most desirable, at least for the present generation. Needless to say, the Slovene Clericals have a similar programme, but there appears to be a rift in the lute already, for the Slovenes and Croats are having some differences about their representation on the Provincial Councils.

Meanwhile, the re-assembling of the Skupshtina is awaited with interest. The Government maintain that

Digitized by Google

they will have a quorum; for this they require the presence of 128 members, which they may have difficulty in arranging, as the Democrats and Socialists have notified their intention of abstaining. Apparently the indeterminate and independent members, such as the ten Montenegrins and the Bunjivtsi will hold the balance, as every vote counts. The point is an important one, for M. Protitch holds the mandate from the Regent to "govern with Parliament." If he fails to secure a quorum, the Opposition maintains that he must return his mandate, as M. Vesnitch, Minister in Paris, did, when he failed to form a coalition Cabinet, for which he received what is called a "half-mandate." But most Radicals say that, as the Democrats governed for several months without Parliament, so can they, if necessary, and in any case they will carry out the elections for the Constituent Assembly, which it is hoped will meet in May.

It is amusing to note that both sides roundly accuse the other of reactionary views. The Radicals are admittedly the Conservative party of Serbia, and the Democrats and Socialists abuse them for being enemies of a thoroughly popular scheme of agrarian reform and of encouraging the big landowning Begs of Bosnia and the separatists. The Radicals, on the other hand, call the Democrats tyrants for governing without Parliament and administering the country by decree, introducing very far-reaching reforms, such as the division of large estates among the peasants. This question of agrarian reform is particularly acute in Bosnia and Herzegovina, for while the vast estates in Prem, Bachka, and the Banat generally belonged to Magyars, that is, men of enemy race, so that they could be divided up with a clear conscience, the Begs of Bosnia and Herzegovina are themselves good Serbs, although they are Mohammedans. The Radicals will certainly be tender to them, but we may be sure that they will feel bound to introduce some form of division of property, for that has been a fundamental principle in Serbia since the Liberation, and the possession by every man of a piece of freehold land has undoubtedly been the strength of the country, and is the key to their marvellous resilience during the disasters of the war.

The Government's Policy.

The Government have stated that their foreign policy is unaltered, and they will present as stiff a back to the Adriatic question as their predecessors, for in this the triune people are entirely united. As has always been the case with the Southern Slavs, hostility has united warring factions. While Italian propaganda has spared no effort to sow dissension between Croats and Serbs, so much so that their agents in Zagreb have been crying in the streets, "Down with Serbia," it has, in fact, defeated its own object by uniting Serbs, Croats, and Slovenes more compactly than ever in their opposition to aggression on their national territory on the Adriatic. It is reported in the papers that d'Annunzio has realised this, and is expelling Yugoslavs from Fiume.

The Exchange Question.

The Ministry of Finance has allayed a good deal of anxiety by issuing a statement that the replacing of the krone by the new dinar-krone note at four to one will proceed, but this has provoked a reply in the form of a resolution from the Narodny Club to the effect that "the extremely difficult economic question of the currency cannot be solved by the annihilation of the greater part of the property of our people, both Serbs, Croats and Slovenes, and all provisional measures undertaken can only be preliminary to the legal solution on the basis of mutual understanding." This sounds fair enough, but it is difficult to see how any change can be effected once the kronen are definitely recalled at four to one. Still, the users of kronen are about three-quarters of the population of the kingdom, for the dinar coinage was in circulation only within the frontiers of the old Kingdom of Serbia.

Meanwhile, so many bad 1,000-kronen notes are in circulation that the banks have stopped accepting them, and they can only be exchanged at the National Bank. The falsification is effected by tampering with the official stamps which, it will be remembered, were recently affixed to avoid this very difficulty.

ROUMANIA.

BUCHAREST, February 26, 1920.

A New Cabinet.

The ministerial crisis which has been threatening for so long has arrived. Resignations are offered, withdrawn, accepted, and refused with such frequency that it is almost impossible to say at a given moment who is and who is not in the Cabinet. The Minister of Finance has resigned definitely as a result of "the lack of unanimity in the Cabinet," and has gone off to Transylvania to await the return of the Prime Minister. Dr. Vlad gives the impression of being a sincere and honest man, frankly *un peu vif* for a parliamentary career. His opponents can always count on giving the Chamber an interesting quarter of an hour by rousing the doctor, and he has been frank in the extreme in specifying the grievances of the Government against the General Headquarters Staff.

The chief of the Staff has also sent in his resignation on the grounds that he disapproves of the order to withdraw the Roumanian troops behind the "Clemenceau" line in Hungary. It is to be hoped that a *modus vivendi* can be arranged between the new Cabinet and the new Chief of Staff.

Roumania's interests are so intimately connected with the treaty of peace with Hungary that it will hardly be possible for Dr. Vaida-Voevod to return from London and Paris before that treaty is signed. One must feel a certain sympathy with him at this moment, for while the present crisis was imminent before his departure, his hand cannot have been strengthened by having his Cabinet dissolved behind his back.

It is regrettable that Roumania has not yet been able to form a stable Government. Since the armistice the country has lived through a continuous series of political crises. The energy and inventiveness which have been used up in the creation of difficulties for succeeding Governments would have gone a long way towards solving more pressing problems. However, it is always difficult for an outsider to understand why getting the "Greens" out of office and the "Blues" in is so much more important than getting the railroads running and the broken bridges mended.

General Averescu will probably be called upon by the King to form the new Cabinet, and it is presumed that he will draw his material from amongst the leaders of the "bloc," which has, so far, resisted all the efforts of its opponents to split it up.

M. Take Jonescu has been "proclaimed" deputy for the capital of the Maramuresh, no opponent having presented himself at the by-election.

National Dances.

Almost any visitor to a Bucharest hotel has heard the fiery music of a "Hora," as the Gipsy orchestras often interpolate one of these between "Madame Butterfly" and "Me and My Gal," and some few of the enlightened know that a "Hora" is a national dance in which a circle of people holding hands whirl to the enlivening music of two or three "lautari." But few foreigners have any idea of the number and variety of folk-dances that exist in Roumania. Each district has its specialty, most of them being round dances but with a bewildering number of tricky steps, which the onlooker judges to be simple, until, roused by the ever-quickening rhythm of the Gipsy music, he breaks into the circle and endeavours to follow the movements of his neighbours.

Local colour fades quickly under the bright lights of the cinematograph and the international café, so a few years ago a group of Roumanians who saw the peasant casting off his native costume in favour of a Manchester pink shirt and an Italian felt hat formed a society to preserve a knowledge of the old dances with which the peasant enlivened feast-days in the good old times.

Once a fortnight eighty to a hundred young people, gaily attired in the charming costumes of various districts, meet together and carry on the tradition. The sight is undoubtedly one of the prettiest in the city when the ever-growing circle flashes quicker and quicker to the wild music. It would be a revelation to many a visitor who fancies he knows the country, and one

Digitized by Google

cannot help wishing more foreigners could see the bright-eyed girls in their gay red kerchiefs.

Prince Carol.

It is reported that Prince Carol is about to undertake a long voyage. He left Constantza last week on the Princess Elizabeth, and it is suggested that he may visit Egypt, India, Japan, and America, so that he is likely to be away for a good many months. The Prince has apparently consented to have his morganatic marriage annulled, and is now regarded as the heir to the throne. He was accompanied by Col. Joe Bayle, the famous Alaskan "Gold King," who is one of the most remarkable figures in the present history of Roumania. One of the debts of gratitude she owes him is for liberating some of her most prominent politicians, when they were kept as hostages by the Bolshevists at Odessa, where they had been taken prisoners. No other route being available, he flew over in an aeroplane, and concluded an arrangement with the Bolshevists for an exchange of prisoners.

Symphony Concerts.

The musical community of Bucharest has enjoyed a weekly treat for the last eight weeks in the Symphony Concerts conducted by M. Georgescu at the Athenée Palace. The hall is crowded every Sunday afternoon, most of the seats being booked before the tickets are issued. The programmes have included the favourite symphonies and concertos of Beethoven, Mozart, Schubert, Brahms, and Tchaikowsky, and several of the symphonic poems of Strauss, which were given with extremely fine effect. M. Georgescu is a pupil of Nikisch, and he certainly does honour even to so great a master in his art. He has little, if any, of the modern tendency to seek for dramatic effects by undue emphasis of light and shade, and his broad and unaffected renderings of the C minor symphonies of Beethoven and Brahms would alone entitle him to a high rank among modern conductors. The orchestra consists of about sixty players of both sexes, and it has improved almost beyond recognition under the magnetic and inspiring influence of its new conductor. Unfortunately, M. Georgescu is not to be here much longer; one cannot help hoping that he may one day give London audiences an opportunity of enjoying his fine interpretation of the classics.

The Queen and Princess Elizabeth are very regular attendants at these concerts, and very often the King is also present. On two occasions the Queen has brought with her two little orphan village boys who were found among the ruins of their homes after an air-raid, their parents having been killed. The Queen has taken them under her charge, and is having them educated and brought up at the Palace. The little fellows, aged about six or seven, sat quietly throughout the concerts, but applauded rapturously at every opportunity. On the first day of their appearance they, too, were greeted with applause by the audience, which, however, was, of course, intended for the Queen.

Y.W.C.A. in Bucharest.

The York of the Y.W.C.A. is progressing in a most gratifying way. Classes have been opened at an almost nominal fee for tuition in English and French, and these are attended by approximately 80 girl clerks, students, and schoolgirls, who are only too glad to avail themselves of cheap courses in these days of high prices. A *table d'hôte* has also been opened this week, at which a three-course dinner is served to these girls for 7 lei, i.e., 3 lei less than the cheapest they can get in town. Thus two much-felt wants have been supplied by the Y.W.C.A., and it is a matter of regret that they have not yet succeeded in finding accommodation for a hostel for girl students and workers, which is, perhaps, the greatest want of all. But they are still untiring in their efforts to find a suitable house. Between 70 and 80 girls have joined the association as members.

Effects of Newspaper Lockout.

A few of the newspapers have re-appeared, but the two French papers have not been printed since the lockout stopped them last week, and several of the oldest-established Roumanian papers are still combining to issue the *Press of the Capital*, which has been created to meet the present emergency.

BULGARIA

Sofia, February 14.

The General Strike and the Chamber.

Last week there was a debate in the Chamber upon the interpellations of the Communists and the Moderate Socialists concerning the general strike of the State functionaries. Prior to this the Prime Minister, M. Stambolisky, had summoned together all the party leaders in the Chamber, and had declared to them the firm resolution of the Government to maintain its present attitude towards the strike, and also its decision to leave the Chamber to decide freely by a vote of confidence whether it approved of such measures for the preservation of internal order and for safeguarding the prestige of the authority of the kingdom. In case of disapproval the Cabinet is quite prepared to tender its resignation, leaving to the King and to the Chamber the decision of the course then to be adopted.

Next day, therefore, the interpellations constituted the chief business of the Chamber. All the party leaders put forward their views at length, and were unanimous in their condemnation of the strike as anti-constitutional, and entirely justified the Government in their action. The debate concluded with a well-argued speech of the Premier, who described vividly the misfortunes and devastations which had befallen those countries like Hungary which adopted the principles of Bolshevism. M. Stambolisky's speech was listened to with great attention and in unusual silence by the Socialists. The result of the voting was that the Government obtained ninety-six votes against eighty-three.

The Government, being convinced that the strikers had at last realized that they had been cheated by unscrupulous Socialists greedy for power, and had agreed to resume work, decided to put an end to the strike. Several high functionaries of the Bulgarian State Railways, including the director, M. Morphoff, have been charged by the Minister of Railways and Communications, M. Marvo Tourlakoff, to draw up a list of the strikers guilty of sabotage. These will be sent to courts-martial for trial and exemplary punishment, while the other workers, after signing a declaration of future obedience to their chiefs and of loyal fulfilment of their duties, will be admitted as State functionaries again.

It therefore appears that this burning question, which has been exploited by both the internal and external foes of Bulgaria to prejudice her position in the world, will soon receive a satisfactory settlement.

Russian Refugees in Bulgaria.

Owing to the recent Bolshevist advances upon Odessa a great number of Russians are emigrating. There have already arrived at Varna 4,000 refugees, and 4,000 more are expected shortly. After this their admission on economic grounds will be stopped. Some of these refugees will go to Yugoslavia and thence to the Banat, where they are to be installed in the farms abandoned by the Hungarians. Those remaining in Bulgaria are being despatched chiefly to the districts of Shoumla, Plevna, Provadia, Preslav and Osman Pazar. Many have been lodged in the monasteries in the district of Gornya Orehovitza. Information has been received that 400 students from the Odessa Girls' Institute are *en route* for Bulgaria. They will be lodged at the Russian Shipka monastery, where at present there is an orphanage of 157 children. At the military school are lodged 200 refugees. The Ministry of the Interior, or rather that section of it which is specially responsible for such cases, has been charged with the duty of providing lodging and food for the Russian refugees. A hospital of 700 beds has been prepared for the sick at Tsaribrod.

Food Supplies for Thrace.

On the request of the French authorities in Thrace the Bulgarian Government has authorised the Food Departments in the kingdom to allow, free of all duty and tax, the necessary grain foods to pass through the co-operative societies to the Thracian population. The influx of refugees from Thrace continues in the districts of Nova Zagora and Haskovo.

Digitized by Google

The Agrarian Victory in the Last County Elections.

The final results of the last district elections for the county councils, held on January 25, show a great increase of votes for the Agrarians. Next to these come the Communists. The Agrarians obtained about 3/5ths of all the votes; the remaining votes were divided equally between the Communist and the Bourgeois parties. In connection with the elections it may be added that M. Michel Takeff, the Democratic leader, was murdered by a Communist, who has been arrested and detained by the military authorities.

The Recall of General Claudel.

General Claudel, who was Commander of the Allied armies in Bulgaria, has, after being received at a farewell audience by H.M. the King, the Premier and War Minister, and the Foreign Minister (M. Madjaroff), left Sofia en route for Constantinople. The same day his successor, General Gondrecourt, arrived; he will act in Bulgaria as the delegate of the Commander-in-Chief of the Army of the Orient.

An Anglo-Bulgarian Engagement.

The most notable event of the day at Sofia is the projected marriage of Captain Collins, who is on the staff of the British Military Mission, with Mlle. Yanka Zagorska, who is the daughter of General Zagorsky, and who was educated in England. For the celebration of this betrothal the residence of the British Military Mission became on February 12 the rendezvous of all the social lights of Sofia. Special invitations were issued; tea was served, and entertainment provided in the way of a military band and dances. All the chief officers of the Allied Military Missions were present at the ceremony, including the Diplomatic Corps. Among the many Bulgarian families represented at this gathering were M. Madjaroff, with his wife and daughter, M. Liaptcheff, former War Minister; M. Sarafoff (one of the Peace delegates at Paris), with his wife and daughter; and M. Yoblansky, a prominent banker and former Minister, with Mme. and Mlle. Yoblanska. The entertainment and dances lasted till eight o'clock in the evening.

Admission of Bulgarian Students into France.

The Bulgarian Legation at Paris has been notified of the decision taken by the French Universities to admit all Bulgarians who were students before the war to all facilities accorded to French and neutral students.

TURKEY.

CONSTANTINOPLE, February 23.

Constantinople.

In the early part of last week "official" announcements were made to the effect that the Peace Conference had decided to leave Constantinople under Turkish sovereignty, and the Turkish Press manifested its joy in ecstatic leading articles, illustrated by silhouettes of Stamboul and portraits of Mehmed II., the "Conqueror," printed in red ink. At the same time it must not be for one moment supposed that the Turks are by any means satisfied, nor that they attribute the decision to any other motive than that of fear on the part of the Entente Powers, who are confidently supposed to have yielded before the Nationalist menace. Mustapha Kemal Pasha has seized upon the occasion to announce to the Anatolians that such is actually the case, and that they have only to continue to support him in order to make the Entente yield upon every other point also. That the Turks should take this point of view is a surprise to no one who knows their ways. It is unfortunate, but it was inevitable.

It was pointed out in a previous letter that the proposal to preserve Constantinople as the seat of the Khalifate, while banishing the Turkish Government to Asia Minor, was hardly practicable, and it is a great pity that the announcement was allowed to be made before anything had been definitely decided. Now the Turks think we have climbed down. No doubt the Nationalist leaders who make the announcement know well enough in their hearts that there has been no climb-down at all, but it suits them admirably to describe the decision as such, and the mass of the people will believe them. The *Vakit*, for instance says:—"We must not let the good news make us lose sight of what *we have yet to accomplish*." Thus "we" have saved Constantinople, and the other things that "we" have yet to accomplish include the expulsion of the Greeks from Smyrna, the preservation under Turkish rule of Armenian territories, the prevention of foreign control, and so forth.

Adrianople.

It would be easy to be unjust to the Turks, but real injustice would undoubtedly cause considerable trouble. There are various uneasy rumours with regard to the fate of Adrianople, which, if there be any truth in them, certainly foreshadow an injustice which will inevitably provoke chronic trouble. The Turks themselves have been guilty of terrible injustices, but two wrongs do not make a right. If in the whole of Turkey there is a city that is inhabited by an undeniable majority of Turks, it is Adrianople, and the Turks would have just cause to complain if that city were taken away from them. From the military point of view also, Adrianople is the key to Constantinople, for there is no other line of defence between that city and Chatalja, which is at the very gates of the capital. Such, at all events, is the opinion of a competent authority who could never be accused of undue partiality towards the Turks.

The Nationalists.

Reliable information is at last available with regard to recent events in the zone of French occupation, and, unhappily, the terrible rumours which were current a little previously appear to have been mixed with far less than the usual degree of exaggeration. Marash was evacuated on February 10, but the Christian population were informed beforehand. At the same time, however, it was impossible to make transport arrangements, and several hundreds of the refugees perished of exhaustion in the snow and the cold. Once the French had withdrawn, the Nationalists wreaked a terrible vengeance upon the Armenians who had remained behind, and some twenty thousand were butchered with all the unspeakably horrible accompaniments of rape and torture. Of Marash itself nothing is left save a heap of rubbish, and the French have intimated their intention of returning. In the meantime they have armed the Armenians in the Adana region, but it is to be hoped that there will be no necessity for further withdrawals. It is also to be hoped that the experience will serve to show the danger of half-measures.

Bolshevism and Islam.

The Islamic Society, of which the Sheikh-ul-Islam is the president, recently issued a manifesto strongly condemning Bolshevism, and stating that so far from there being anything in common between Bolshevism and Islam, the former is the negation of the fundamental principles of the Moslem religion. A few days later, however, it was announced that this manifesto had been published by a few members of the Association only, and without the knowledge of the other members, a number of whom, consequently, resigned. It would be interesting to know who were the members who resigned and whether their action was inspired by mere pique, or whether they share the views of the Nationalists, who regard Bolshevism as a useful possible ally. Not that it is probable that there can ever be a serious alliance between the Turks and the Bolshevists, but the Nationalists think the Red Bogey might be useful for the purpose of frightening the Entente. In reality, the very persons who would suffer most under Bolshevist rule would be the Osmanli bureaucracy, which is responsible for the idea of the alliance. In the next place, Russian foreign policy, whether directed by a Tsarist, or by a Soviet Government, follows the same general lines. Lenin's oriental schemes are a Soviet translation of the old aggressive policy of Tsarist Russia, and that policy was hardly friendly to Turkey.

On the other hand, it is through Soviet Russia that the Unionists hope to receive help from their old ally, Germany, the foster-nurse of Bolshevism, and it is through Soviet Russia that Germany is still doing all that can possibly be done to encourage the Turks to

Digitized by Google

resist the Allies. Hence, the Turkish chauvinists see in Bolshevism merely a clever disguise adopted by their old friends the Huns.

Azerbaijan.

A few days ago I was introduced to a Turk from the Azerbaijan Republic, and I have no reason to regard the information that he gave me upon that occasion as inaccurate. He stated that the whole family of Enver Pasha is extremely popular in the Moslem Republic, and that he himself had witnessed an enthusiastic reception accorded to Halil Pasha, Enver's uncle, upon the arrival of the latter at Baku after a tour in Daghestan. In the evening of the same day, at the theatre, Halil Pasha received a tremendous ovation from the audience, which numbered about two thousand persons. He also stated that the Bolshevists have an officially recognised organisation in Baku, and that the Ittihad (Union) party, which is not very strongly opposed to Bolshevism, is likely to come into power very shortly; and he added that in that case Halil Pasha would certainly exercise a very great influence upon the policy of the country. But the most curious item of information was to the effect that the proprietors of the principal petrol wells are all in favour of Bolshevism. This sounds incredible, and I hesitate to repeat it, but such is the criss-cross of intrigue in the Near East that there may be something in the statement.

The Atlantic Squadron.

On Saturday the Atlantic Squadron under the command of Admiral Freemantle arrived here, and afforded the Turks ocular proof that part at least, and a very formidable part, of the British Navy escaped intact from the Jutland battle. To-day some 2,500 bluejackets and marines, with fixed bayonets, and accompanied by bands, marched through the European quarters of the city. Stamboul and the Turkish quarters are to be visited in a similar manner later on, and on Friday the whole fleet will sail up the Bosphorus to the Black Sea and back.

The effect of the visit of the Fleet is likely to be most salutary at the present moment, but I happened to overhear two Turks, who apparently were unaware of the fact that I understand their language, commenting upon the super-Dreadnoughts, and one of them remarked, "Yes, those 15-inch guns are very powerful, *but they could not reach Angora.*" It reminds one of Oliver Twist.

CONSTANTINOPLE, January 25.
(*Delayed in transmission.*)

The Caucasian Republics.

The announcement of the Allied recognition of the new Caucasian Republics was received by the Turkish Press with the greatest enthusiasm—but only as regards the Azerbaijan, which one journal declared to be the prize Republic of the Caucasus. This, of course, is simply because the Azerbaijanis are the nearest relations of the Ottoman Turks, who, however, seem to forget that the majority of the Azerbaijanis are Moslems of the Shiah sect, and that their sympathy for the Ottoman Turks was largely based upon their desperate desire for support from anywhere in order not to come again under Russian domination. This, by the way, is characteristic also of the attitude of the other Caucasian peoples—even the Turk rather than the Russian. And from what is related by people who have recently returned from South Russia, this is not surprising. In the words of one friend of mine, who has seen pretty well all that there is to be seen in South Russia, "Denikinites or Leninites, they are all perishers." It is generally recognised out here that the Allied recognition of the Caucasian Republics will probably prove to be a wise move, for it is to the interest of none of the new States to allow the Bolshevists to make any progress in their territories. They have everything to lose by such an event, and may be trusted to put up a pretty stiff fight in the mountains. Incidentally, they do not want Denikin either, and this is the factor that may complicate the situation.

It remains to be seen how Azerbaijan will behave, for there are strong pan-Islamic tendencies among the Turkish part of the population. Moreover, it is stated in certain circles that are well-informed on the subject that Enver has received considerable support in the country, and that he and his brother Nuri have made Baku their headquarters for a wide-flung net of pan-Islamic intrigue in the Middle East. There are two important political parties in the Azerbaijan Republic—the *Mussavat*, or "Equality" party, which is actually in power, and the *Ittihad*, or "Union" party, whose policy is frankly pan-Islamic, and in many respects similar to that of the sinister Turkish Committee, whose name it recalls. The Mussavat party is professedly democratic and liberal, but is said to be at heart even more closely related to the Turkish Unionists than the Ittihad party. The War Minister, Mihmandaroff, enjoys considerable influence, and the Unionist Press of Constantinople is certainly very sympathetic towards him. In any case, the hospitality accorded to Enver and Nuri needs some explanation, but perhaps the Azerbaijanis will realise more clearly where their true interests lie, now that they have been accorded the much-coveted official recognition.

The formation of a strong and solid block between Asia Minor and the Caspian Sea would be an obvious advantage in many respects, and above all to the British Empire. Politically, as well as topographically, the Caucasus Mountains are part of the Himalaya system.

Restitution?

The sincerity of the Government schemes and promises of reforms may be accurately estimated by noting the history of the reparation which the Sublime Porte, under pressure of public opinion and for the purpose of impressing Europe, offered to make to the Armenians. The Government invited the Armenian Patriarch to appoint delegates for a Commission which was to settle the question of "abandoned" property. As some million Armenians were murdered during the war, there was a good deal of "abandoned" property—even after much of it had been "adopted" by pious Unionists. According to the scheme elaborated by the Commission, ownerless Armenian property was to be handed over to the Armenian community for the benefit of the immense number of widows and orphans created by the massacres. In view of the fact that a considerable proportion of ownerless Armenian property can never be traced, for the simple reason that when it became "ownerless," the person who made it so in most cases promptly took measures to ensure his own full enjoyment of it, the measure elaborated by the Commission and adopted, after months of incubation, by the Sublime Porte, was not such a very great concession after all. Now, however, it has been finally decided to revoke the original acceptance of the Commission's scheme and that all "abandoned" Armenian property shall be considered simply as intestate property to which there are no legal heirs. In other words, it becomes the property of the State, which thus seeks to profit by the wholesale murders which it pretends to regret.

The Retort Direct.

For some time past the Sublime Porte has been seriously embarrassed by the agitation of the Kurdish Association for the establishment of an independent Kurdistan, and the arrest and trial by Court Martial of Mustafa Pasha are of more than ordinary interest in that the Pasha is the President of the Kurdish Association in Constantinople. He was arrested upon a trumped-up charge of having acted in a manner subversive to order by making certain statements to an Armenian paper. The statements in question were of a very mild nature, but in defending himself before the Court Martial, Mustafa Pasha repaired any errors of omission, and pointed out that it was ridiculous to bring such an accusation against him when hundreds of thousands of persons had been murdered, women and young girls outraged before their parents and husbands, babies soaked in petrol and burnt alive before their mothers' eyes, while those who had committed these and innumerable other unspeakable atrocities had never been molested, much less punished. This time these charges are not brought by some

Digitized by Google

"lying" Greek or Armenian, nor by some European unacquainted with the essential virtues of the Turk—as the Turks are fond of maintaining—but by a sincere Mussulman who has a good deal to gain by keeping his mouth shut.

Secret Diplomacy.

The revelations of the German Minister Kautsky have forced the hand of the Turkish Government, and the Press has recently been publishing the details of the enquiry held into the causes of the entry of Turkey into the war. Javid Bey's evidence established one or two very interesting points, and among other matters the ex-Minister of Finance stated that in 1917 Talaat Pasha received two letters from a "well-known" Englishman in Switzerland, offering Turkey very advantageous terms for a separate peace. Javid Bey remarked that he did not know whether the offer was really serious, but in any case he admitted that the Turkish Government would not have considered any such offer.

Another interesting point that has been confirmed is that the wireless order to Admiral Suchon to make for the Dardanelles was sent from the Turkish wireless station at Osmanieh, near Constantinople, which had been seized by force for the purpose by the crew of the German Embassy yacht Lorelei.

ASIA MINOR.

Smyrna, February 24.

International Amenities.

The Turks have celebrated the news that they are to retain Constantinople by blowing up two more bridges on the Ottoman (Aidin) Railway, this time between Azizieh and Balajik—the section which forms the boundary of the Italian zone. This British railway is between the devil and the deep blue sea, and for nearly a year the company have had continually to repair bridges and the permanent way, besides occasionally having a train blown up by the Turks. So remarkably easy is it for the Turks to damage the railway in the Italian zone that the Greeks maintain that they receive technical assistance for their enterprise. The Italians retort by declaring that the Greeks allow the bridges to be blown up to show their annoyance at the way the British Government favour the Turkish programme. Several of the British railway officials who worked in France throughout the war state that it is a much more hopeless task to keep part of the Aidin line open than it was to work the railways behind the French front. The Aidin line is reduced to less than half-a-dozen locomotives, and there is scarcely a bridge between Smyrna and Aidin that is not mended with a wooden trestle to "carry on" until it can be properly repaired.

The Bolshevist Touch.

It must be admitted that there are some signs of pronounced Bolshevism among the Turks now fighting the Greek occupation of the Aidin vilayet. Frequently, to pass away the time, they attack their own nationals whom they suspect of possessing riches, and after they have tortured the rich Turk and obtained possession of everything he has they shoot their victim.

Smyrna, March 2.

The trains on the French line ("Smyrne, Cassaba et Prolongement") cannot run now beyond Magnesia. The last train through to Smyrna was held up for thirty-six hours near Magnesia by the Turkish insurgents; and the officials of the trains now refuse to go further than Magnesia.

Commodore Maurice Fitz-Maurice attended a reception on the "old depot ship," H.M.S. Europa, which leaves Smyrna to-morrow for Malta, where she will be sold to be broken up. After the reception a photo was taken of the officers and crew, few of whom, however, served under the Commodore during the four years the Europa was his flagship at Mudros. Commodore Fitz-Maurice recently transferred his flag to H.M.S. Byrony, which remains in Smyrna until peace with Turkey is signed. H.M.S. Danube has also arrived in Smyrna, to take the place of the Europa.

SYRIA.

Beyrout, February 27.

Lawlessness in Asia Minor.

The wave of unrest which has lately swept over Cilicia and Syria has not yet quite subsided, and it will require a determined effort on the part of the occupying Power to re-establish order and tranquillity. The recent blizzard which covered the plains with over half a yard of snow and altered the salient features of rugged hills and ravines, has rendered the task of pacification harder.

Alexandretta has been the scene lately of great military activity, as through it passed all the reinforcements, supplies, and munitions destined for the defences of Killis, Osmaniyeh, Marash, Aintab, and the neighbouring region, and for guarding the railway between Adana and Aleppo, the bridge between these two towns having been destroyed by the rebel bands of Mustapha Kemal. The damage caused by the blizzard extended to telephone and telegraph wires, and to military vehicles, which were snowbound on their way to Antioch.

A European, recently arrived from Latakia, reports the occurrence of cases of robbery and murder outside that town, followed by a regular fight between the Moslem inhabitants of a village in Latakia district and the Ainsariyeh of the hills, in which the intervention of French troops is said to have led to a few additional casualties.

In Merj Eyoun (Jedeida) there has been a recrudescence of disorder. The armed bands, after indulging with impunity in another fanatical raid, became so emboldened as to open fire from an ambush in the village of Khaalsa, in the Hulé district, on the French Military Governor and the detachment of troops that escorted him on his tour of inspection. But reinforcements having been quickly brought up from Jedeida the French inflicted a severe punishment on these rebels, whose losses are estimated at over 200 killed and many wounded. The artillery razed many of the isolated houses and small villages which had been used as temporary defences.

Large forces of these lawless bands are said to have been massing on the frontier of Merj Eyoun with sinister designs, but the energetic measures which the French military authorities are taking this time are calculated to discourage the bands' activities. Indeed, the visit of General Gouraud to Jedeida may be taken as an earnest of French vigorous action. The General arrived at Sidon on the 24th instant, then resumed his journey to Nabatieh, and, after lunching at the famous castle of Qal'at el Shequeef, reminiscent of Crusader glories, he proceeded straight to Jedeida.

Weights and Measures.

The multiplicity of systems of weights and measures has been leading to much confusion, and giving occasion to much abuse on the part of profiteers, who would sell, for example in the case of textiles, a drah (Syrian measure equal to about two-thirds of a yard) at the same price as a yard; and, in the case of foodstuffs, would sell a kilo at the same price as an oke (which is equal to one and a-fifth kilos). The recent decision, therefore, of the authorities to unify the systems of measures and weights by adopting the metric system has been welcomed.

Jerusalem, February 28.

Protests against Zionism.

The recent declaration of General Bols, the Governor of Palestine, that it was the intention of the Government to adhere to Mr. Balfour's declaration regarding the establishment of a national home in Palestine for the Jews has given rise to considerable apprehension, which has found expression in general protests. The Moslem-Christian Society met and decided to protest against the Government's decision and against Zionist aims and aspirations. Permission was asked for, and obtained, to hold a public demonstration, a guarantee being given that there would be no breach of the peace.

The demonstration, which took place yesterday, began with a procession, after the Friday prayers at 1 p.m., from the Mosque of Omar. Several thousands were present, both from the city and from the surrounding villages. The procession moved at first to the American Consulate, then to the Italian, French, and Spanish Consulates, presenting at each place a protest to be forwarded to the respective Governments. In each of these spots, as well as in different corners, speeches were delivered by eminent persons in three and four languages.

The day passed very smoothly, and the absence of any disturbance may be attributed to the precautions which the Government had taken to insure peace and order.

The protest, which was sent to all the Allied Governments, as well as to America and to Spain, and to the Press in Europe and America, was couched in severe terms. It declared that if the Allies do not prevent Jewish immigration the Arabs would not be held responsible for any trouble that might ensue.

THE SEASON IN EGYPT.

(From Our Special Correspondent.)

Cairo, February 23.

Lord and Lady Allenby.

Events have been crowding one on the top of the other, and an additional fillip has been given to the season by the return of Lord and Lady Allenby from the Sudan, where they appear to have had a most interesting tour. Their Excellencies, who went via the Red Sea, came back via Halfa, travelling by Nile as far as Luxor, where Lord Allenby had a long talk with M. Clemenceau, who took dinner with him in his saloon before the Residency party left for Cairo. M. Clemenceau has now arrived in Khartoum, and is displaying an insatiable thirst for sight-seeing and travelling, which is not a little disconcerting to those who are entrusted with the task of looking after him.

Shrove Tuesday.

It has been Cairo's wont since time immemorial—broken only during the war period—to celebrate Shrove Tuesday by a monster fancy dress ball. In pre-war days the venue used to be the picturesque Casino attached to Ghezireh Palace, but, the property having now been sold, the scene was transferred on this occasion to the Continental Hotel, where Lent was ushered in with all the verve formerly attaching to similar events on the other side of the river. The restaurant and grill-room were filled to overflowing; there were over 700 diners, and the scene was most animated and picturesque—in fact, a fitting prelude to the revelry which followed and lasted well into the early hours of Ash Wednesday. Amongst those noticed in the grill-room were Sir R. and Lady Rodd, General Hunter Pasha, Mrs. and Miss Wawell, the Earl and Countess of Carnarvon, Capt. French and party, Sir Murdoch Macdonald, Mr. and Mrs. Selby, M. Pontalis Lefevre and Madame Lefevre, Miss Jackson, Col. Corder and party, Lieut. Karney and party, and Major Morris and party. The scene in the ballroom presented a most picturesque appearance, and great originality was shown by the mummers. There were, as usual, Arab Sheikhs, Bedouins, "Sittat" pierrots and pierrettes, etc. Once again "Alice in Wonderland" provided characters, which were most admirably carried out by an amusing party, comprising, amongst other people, the well-known pianist Mr. Frederick Kitchener, as a superb Duchess. There was a party of wonderful Bolshevist sailors, headed by a still more gorgeous Admiral (Major Morris), who, after a riotous time on their barque in the dining-room, "abandoned ship" and forced their way into the dance-room, where they terrorised and captivated the many beauteous maidens who had given them the "glad" eye during dinner! There was also a dashing quartette of cowboys. One of the most amusing and original was undoubtedly a scarecrow, who not only effectively disguised himself by his "costume," but has since kept his identity a secret. Had there been any prizes on this occasion he would certainly have taken the first one for originality.

Racing.

Racing is still going strong, and as if the cravings for sport and excitement of the community have not been sufficiently catered for by the weekly meetings at Ghezireh and Heliopolis, the enterprising committee at the latter have now arranged for fortnightly meetings on Sundays—quite a novelty for Egypt, though the idea has been mooted on several occasions in the past. The first one was held yesterday, and proved a tremendous success.

Miscellaneous.

The cold snap reported in my last letter continues, and has even extended as far south as Luxor. Last night a heavy downpour of rain took place, and to-day—a typically English "murky morn"—we are hoping that, better late than never, we shall have the interval of delightful weather that usually precedes the spring winds.

Upper Egypt continues to attract visitors. Amongst those who have been staying at the Cataract Hotel have been Sir Valentine Chirol and the Hon. John and Mrs. Collier, whilst Earl and Countess of Carnarvon have been at the Winter Palace Hotel at Luxor, where Lord Carnarvon is interested in some excavations that are being carried out under his auspices.

The literary element amongst our visitors has been added to this week by the arrival of Mr. Algernon Blackwood and Mrs. Clayton Glyn (better known as Elinor Glyn), the latter of whom is the guest of Lady Congreve at the C.-in-C.'s house at Ghezireh.

Aviation in Egypt has certainly received a great impetus, thanks to the Cairo to Cape flight, and the arrival from London and departure of the various machines seems to be arousing much interest. Lord Milner paid a visit on Saturday afternoon to the Heliopolis aerodrome, where he inspected the Handley-Page and Vickers machine, which have now left for the Cape, and the D.H.9, which is on its way to Australia.

CORRESPONDENCE.

GRECO-BULGARIAN UNDERSTANDING.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—Allow me to congratulate you for the logical remarks on the question of Thrace published in your to-day's issue.

Greece and Bulgaria certainly ought to bury the past and come to a cordial mutual understanding. An armed peace sounds bad in the Balkans, but I am afraid that the Bulgarians will not easily recognise the rights of Hellenism in Thrace, though in the past they were ready to acquiesce in the Bulgarian minority both in Western and the Eastern Thrace. (See Professor Dr. J. Cvijic's Map, material supplied by M. Karajonov, Bulgarian Consul at Adrianople, published in "Peterman's Mitteilungen," 1913.) The Bulgarian Premier took the first steps to make overtures to M. Venizelos, in view of a sincere entente and the projected Balkan League. It is to M. Stamboliski's honour that he took this step soon after the Neuilly Treaty.

A correspondent from Sofia writes in your correspondence column that the neighbours of Bulgaria are afraid of their beaten foe. This is not true, because Roumanians, Yugoslavs and Greeks desire no further humiliation from their enemy of yesterday. They only desire peace by every means with their neighbour who, unfortunately, has not shown any sign of sincere contrition. They acknowledge the fact that the Bulgarian peasant is a hard working labour man who is equal perhaps in intellect with their own peasants, who are by no means drones.

The Macedonian question has been resolved since 1913. As for the Dobruja, there is no doubt that a great injustice is done to Bulgaria by not allowing the right of self-determination to a province which has been a vital part of the Bulgarian kingdom since its liberation from the Turks.

I have nothing to say against the idea of the revival of the Balkan League. M. Venizelos, the father of the ill-fated first Balkan League, undoubtedly must contemplate the reconstruction of his grandiose work. In order to perform this miracle the Balkan statesmen require the sincere co-operation of the Press in their respective countries. I think it is time that fiery articles cease, so that the thorny work of reconstruction and the mutual understanding between the Balkan peoples might be easily brought to a happy end.—I am, etc.,

Theodore D. Mosconas.

March 11, 1920.

THE FUTURE OF TURKEY.

TO THE EDITOR OF "THE NEAR EAST."

Sir—In a multitude of counsellors there is wisdom.

We all desire reform of Turkey, and some genuine guarantee that the atrocities perpetrated within her boundaries shall cease. Some advocate banishing her to Asia; but they have not made it clear how this would help Armenia, and its boundaries, Cilicia and North Syria.

As Mr. Lloyd George says, Turkey with her centre of Government at Konia would be more difficult to control or punish than Turkey with her headquarters at Constantinople. With the Dardanelles open for French and English Fleets, the iron hand might effect some result at the seat of Turkish Empire. But the iron hand needs clothing in a velvet glove; and this is where the policy advocated by The Near East wins my approbation. Judging from a fairly intimate knowledge of parts of the Turkish Empire, I have not the slightest doubt that a large majority of the Turkish people would welcome a strong control of Turkey from outside. What has happened in Turkey took place before in Russia, and, at the Revolution, in France. A small clique of scoundrels seized the reins of power, put into their hands by the disorganisation of the country. The Bolshevists do not represent—they coerce the Russian people. Robespierre, Marat, and Danton were autocratic tyrants, not democratic leaders; so Enver, and many of his gang, were, some of them non-Turkish, self-appointed rulers over a miserably disorganised country. We want the iron hand of a nation with a mandate to crush and break the evil-ruling element in Turkey; and we want the velvet glove which will aid the best elements to assert their superiority and authority. The two things must go together. A native State in India is largely controlled by the English Resident. But this quiet Englishman attains his object because he has England behind him. Turkey would obey if she knew that she could be compelled to do so; and all the best elements in Turkey would welcome the compulsion.

Under the Cyprus Convention, England practically promised to reform Turkey. Let the Powers now give her, or some other country, if a better can be found, a mandate to do so, and hold the country who holds the mandate responsible, and we shall hear less of the odious atrocities and savage barbarities which have recently disgraced this "civilised" age.—I am, etc.,

A Friend of the Near East.

PRESS ON THE NEAR EAST.

The Future of Egypt.

Mr. Cyril Goodman, late Assistant Director-General of the Public Health Department in Egypt, makes a practical contribution to the Egyptian problem in the March issue of the *Contemporary Review*. That problem, he considers, narrows itself into two subsidiary questions: What shall be the limits of self-government, when granted, and when and how shall it be made? In regard to the first question he summarizes the limits as follows:—

(1) The temporary retention of the control of the Suez Canal with the towns of Port Said and Port Suez, and probably of Alexandria, without separating them from Egyptian territory.

(2) The maintenance of the Capitulations in a modified form with the protecting Power as the guardian of the rights of Europeans.

(3) The right to withdraw or modify the grant of self-government in case of abuse.

(4) The maintenance of the present political situation in the Sudan.

(5) The proper safeguarding of the rights of Anglo-Egyptian civil servants.

The second question is the one which the Milner Commission has set itself to solve. In regard to it Mr. Goodman draws attention to the two opposed schools of thought: those who by laying stress on increased efficiency and commercial stability practically stand for an increase of British influence and the indefinite postponement of responsible self-government; and on the other hand, those who think that liberal measures of reform can go hand in hand with the piecemeal introduction of self-government. Against the latter doctrine it is pointed out that supreme authority, and with it responsibility, must rest somewhere and cannot be held in suspense.

The idea must be definitely abandoned that the administrative machine can be composed of Egyptians and British, with a different policy and different aims, while the Foreign Office or its agent acts as arbiter between them. If British influence in the present dual system is to be gradually diminished without the concurrent establishment of a strong constitutional government, a point will rapidly be reached in which the two influences will neutralise each other and supreme authority and responsibility will rest nowhere. Under such conditions the administration will be gradually weakened and will fall into contempt; general disorganisation and administrative confusion will follow, culminating possibly in disorder similar to the recent outbreaks. The inevitable results will be further British intervention and a definite setback to Egyptian hopes of self-government, and, what is even more serious, a feeling amongst Egyptians that they have not been fairly dealt with and that reforms have been granted in a way deliberately intended to be unsuccessful.

Mr. Goodman would get over the difficulty by—

A frank agreement between the protecting Power and the Egyptian people, whereby the former makes a solemn and public declaration of its intention to grant responsible self-government within a fixed period (say of fifteen years), dependent on the loyal acceptance by the latter of an interim constitution providing for the establishment of a unified Anglo-Egyptian government, whose duty it shall be to prepare Egypt for Home Rule within that period. Such an *interim* constitution would need to provide for:—

(1) A clear definition of the position and powers of the protecting Power.

(2) The exercise of all such powers openly and in the channels provided by the constitution.

(3) The abolition of the present dual system of government, whereby the British and the Egyptian elements of the government act independently, and its substitution by a constitutional Anglo-Egyptian government acting with full responsibility through official channels.

(4) The preservation of a certain limited number of posts for British officials and a definite promise that no permanent appointment shall be made to any other posts until suitable Egyptians can be found to fill them.

The article proceeds to examine the proposed solution, calling attention to the existing régime, which, lacking uniformity, tends to divide the two chief influences of the Government into two separate and potentially hostile camps. The change would materially affect the position of the High Commissioner, who would become the chief responsible official of a constitutional State, while the Sultan would become a constitutional monarch. Mr. Goodman elaborates his thesis in an interesting manner, and the article should be read by all who are concerned with the future of Egypt.

Cyprus and Great Britain.

In the *Fortnightly Review* for March Mr. H. Charles Woods discusses the general problem, "British Interests in the Mediterranean." He says that Britain must necessarily have a safeguard to her interests in the Ægean, and he states that this cannot be secured without the possession of a base in that sea. He finds that Lemnos would be an ideal island for Britain's purposes, and suggests the exchange of it for Cyprus. On this point he says:—

Should its acceptance by us be considered advisable, there is a possible diplomatic solution of the question—a solution dependent upon the exchange of Cyprus for Lemnos. Such an arrangement would certainly entail a sacrifice on our part, but it could now hardly fail to be acceptable to Greece. It would be a sacrifice to us because the former island is well placed as a halting-place on the air route towards the East, because it constitutes a good base for aerial observation or operations in this locality, and because it forms an offset to the valuable advantages promised to France, in Syria and Armenia, under the Sykes-Picot agreement. But whereas from the opening of the Suez Canal in 1869, and particularly from the moment when we acquired a controlling interest in that undertaking in 1876, it was vital that we should have an outpost in this part of the world, the strategic value of Cyprus greatly decreased from the time of our arrival in Egypt in 1882. That this has been recognised in high quarters is proved by the fact that the suggested exchange of Cyprus for Corfu was under consideration before the war and by the offer of Cyprus to Greece on October 17, 1915—an offer not then entertained because its acceptance would have necessitated the entrance of that country into the war—an entrance strongly opposed by the anti-Venizelist Government which had been in Power for about ten days. The repetition of the same offer, even in the form of an exchange instead of a free cession, would now, however, come under entirely different circumstances, for, instead of being made dependent upon the immediate fulfilment of her treaty obligations towards Serbia, it would carry with it advantages altogether outside and beyond those in any case now to be secured by Greece. For these reasons, the facts that Cyprus is the third largest island in the Mediterranean, that it is very fertile, and that for years there has been an almost continual agitation for union with Greece would seem to mean that such a proposal would be likely to secure a favourable reception in that country where the influence of M. Venizelos is at present stronger than was the case directly after our arrival at Salonica in October, 1915. In short, if Great Britain would stand to gain strategically and militarily by the acquisition of Lemnos, Greece would realise, by the annexation of Cyprus, political, sentimental, and commercial advantages vastly surpassing those bound up with the possession of any other insular territory the future of which is at present under discussion.

THE UNIVERSITY OF CLUJ (KOLOZSVAR).

We have received an appeal of the Royal Hungarian Francis Joseph University, which is addressed to "the Universities of the civilised world." It was written before the inaugural ceremony on February 1, upon which occasion the Roumanians formally opened as a Roumanian institution the University of Cluj (Kolozsvar). In protesting against this act of the Roumanians, the appeal states that this University was founded by the Hungarian State and supported by the Magyar population of Transylvania. Its professors, it says, are almost without exception Magyars, and of its students 83 per cent. are Magyars, and only 9.8 per cent. Roumanian. To set against this there is, of course, a Roumanian side of the question. It is that the University was built largely with Roumanian money, and set down in purely Roumanian territory for the deliberate political purpose of Magyarising the Roumanians. If the Roumanians of Transylvania are culturally inferior to the Magyars, the latter must be held largely to blame. As far as is known, the majority of the officials of the University were given the opportunity of taking the oath of allegiance to the new Government.

MUSICAL NOTES.

During the past week there have been violin recitals in thoughtless abundance, but none of particular brilliance. That which Mr. Horace Ayckbourn gave at the Wigmore Hall, on March 8, was, generally speaking, on the level of mediocrity. He has normal competence in technique, and does possess a kind of studied interpretative power. But his playing is more careful and correct than free and inspired. He introduced a new Sonata by F. J. Morgan, and it was a very dull introduction to his recital. For the composer seems to lose his breath after uttering about six words, and is so anxious to deliver his original message that his repetitions of it give us plenty of time both to learn it by heart and forget it. In works of Pugnani-Kreisler and Bach-Kreisler, Mr. Ayckbourn did not get enough breadth into his playing. He was most successful in slighter (and some of his own) pieces—Humoreskes, Romances, Caprices, and so on; in these, the qualities he lacks were scarcely needed. But it should be observed that Mr. Ayckbourn was not helped overmuch by his accompanist, Mr. S. J. Ffoulkes. This misfortune was removed when he played Mr. York Bowen's Suite in D, for he was accompanied by the composer, whose incisive clarity improved the violinist's playing enormously. This Suite indeed was played extremely well.

At the Queen's Hall, on March 10, Miss Bessie Rawlins (violinist) gave, with the London Symphony Orchestra, under Mr. William Sachse, an orchestral concert. Miss Rawlins is a player whose technical abilities and tone are not inconsiderable, but in this concert her ambition overleaped her resources. For what she strove to play were Beethoven's Concerto (Op. 61) and Dvorak's Concerto in A minor (Op. 53)—music which only the highest and most matured violinists should essay. In simple parts Miss Rawlins expressed a certain beauty, and maintained at times a fine dignity of tone, but in difficult phrases, particularly in cadenzas, she showed her limitations. It is true that the orchestra gave her little help, for it was badly conducted; people joined in the attack more or less when they liked, and seemed quite pleased to get out of it. This being so, it was a pity that a new work by Mr. Edric Cundell, called "Serbia," a symphonic poem for orchestra, should have this night received its first public performance in England. (It was performed at Salonika in 1918.) The poem is based on the folk songs which the Serbian soldiers used to sing after their retreat over the Albanian mountains. It is a work well knit together, and extremely well scored.

On March 11 there were two violin recitals. Miss Winifred Small was playing works by living British composers at the Wigmore Hall, and Miss Katharine Kendall gave a recital at the Æolian Hall. I enjoyed Miss Small's playing very much. She plays with a grace and charm which, though still developing, are quite unaffected. She was assisted by Miss Myra Hess, who belongs to the school which puts clarity and neatness above all things, so that the exposition of native composers was made very worthily. Miss Small has both enterprise and taste.

Miss Kendall's programme consisted chiefly of classical music and of pieces of Spanish inspiration. She was far better in the classical stuff, which she played with great refinement. Her playing was not without blemish, but it was the amateur's lack of finish rather than the professional's wrong interpretation that was noticeable. Miss Anne Mukle accompanied her with a reserve that was too modest. In most charming things by F. Couperin and Veracini the violinist was accompanied on the harpsichord by Miss Nellie Chaplin, and though a little of this combination is quite enough, it was really very pleasant to hear. There is no doubt at all that the distinctness and succinctness of these old pieces, which were written for the harpsichord, are not really attainable on modern instruments. In the atmosphere of the old pieces which appear to speak (but do not actually) for themselves, Miss Kendall has steeped herself successfully, and if she could refrain from playing any composers after the eighteenth century, she might make a name for herself

M. Bronislaw Huberman, the Polish violinist, who gave a recital at the Wigmore Hall on March 13, has a reputation which, though very wide, is not wholly deserved. That he is a master his playing of Bach's Sonata in C major (for violin only) proved without any doubt; but there was nothing else in his programme that stamped him as a genius. With M. Paul Frenkel, who assisted him at the piano with a very wooden style of playing, he commenced with a Sonata (Op. 18) by Richard Strauss. This work has all the vices and a few of the virtues of the composer; its sweetness and strength make one rather comatose, despite all its gusty climaxes. M. Huberman worked at it very hard, and maintained a splendid tone; but it is really a sonata for lesser men than he. The same criticism applies even more strongly to the thin if pretty tawdriness of the Saint-Saëns Concerto in B minor. In two Romances by Beethoven (Op. 40 and Op. 50) the violinist suffered through the lack of all poetry in the pianist, whose playing in these two things was a matter for contrast and not for comparison. But one remembers, and will not soon forget, M. Huberman's performance of Bach; its magnificence quite compensated for its solitariness.

On March 12 Mr. Bryden Monteith (pianist) played with the New Queen's Hall Orchestra, under Sir Henry Wood. Now, whatever may be said of Sir Henry's conducting, there is one thing that he does not lack, and that in sympathy. Time after time, when Mr. Monteith was losing his grip on the rhythm of the Schumann Concerto in A minor, the conductor pulled him back into the straight path. This young pianist is far from complete development, and I think he has started on big things too soon. Both in the Schumann and in Cesar Franck's Symphonic Variations he showed little depth, and a bad use of the pedal made matters worse. In a Chopin prelude which he gave as an encore it was unlucky that it happened to be the important notes which were played wrongly. However, there is something to be said for Mr. Monteith; if it is permissible to praise from afar in a phrase which is commonly used to damn from afar, I should add that he shows promise. The road will wind uphill for him all the way, but he has no insuperable obstacles. The New Queen's Hall Orchestra played Beethoven's overture "Coriolan" with that distinction which Sir Henry always achieves. But in some ballet music by Schubert his little habits of anticipating or delaying accent, of sudden increase or decrease of tone, and so on, became a little mechanical. There is often a possibility in Schubert of freshness being lost; its preservation depends, of course, on whether or not his devices are allowed to degenerate into tricks.

A REVIEW.

It is the common and ignorant view of academies that they persist in stereotyped methods, and teach nothing but those methods. If accomplishing nothing else, Sir Hubert Parry's "College Addresses: Delivered to Pupils of the Royal College of Music" (London. MacMillan and Co. 7s. 6d. net), will serve to dispel that view. For it is the central theme of this book that Music must ever be only a part of man, must be not an end but a means; that it must, moreover, be extended as mankind extends. Sir Hubert Parry, in these lectures, lays it down forcibly that other interests than Music must be pursued by man if he is really to enjoy life. Mr. H. C. Colles, who has edited and written an introduction to these addresses, has here performed a labour of love, which, though probably more of personal than of public value, will not be lost. He has collected addresses delivered from 1894, the date of the death of Sir George Grove (who, readers of this journal may be reminded, was once Secretary of the Palestine Exploration Fund), to April, 1918—a few months before Sir Hubert Parry himself died. During that long period, Sir Hubert Parry continuously strove to show how important personal character is in Music, and though this effort would appear to have resulted more in piety than in the creation of Music, his influence is not yet dead, and some great work due to his methods may now be in the making.

II.—"FORTY-FOUR MONTHS IN GERMANY AND TURKEY." By Har Dayal. (London: P. S. King and Co. 3s. 6d. net.)
III.—"GIPPO," or "THE JESTER IN EGYPT." By C. E. Newham. (Cambridge: W. P. Spalding. 3s. net.)
IV.—"MARLBOROUGH'S ENGLISH SELF-TAUGHT FOR JEWS." (London: E. Marlborough and Co. 3s. net.)

I.—EVANGELIST AND ADMINISTRATOR.

Bishop Lefroy's life deserved a record, and it is here presented with considerable skill. The book is quite short, a great virtue in these days; it consists mainly of extracts from the late Metropolitan's letters, chosen to illustrate rather than to exhaust, and the best testimony to the compiler's work is that we are tempted to ask for more. He has given us an adequate portrait of a big man, but it might well be supplemented by a collection of his spiritual letters designed to serve the needs of churchmen in India; the examples given of letters of this class show that Lefroy could handle the most difficult problems with a rare combination of tact and courage, and we should like to see his treatment of cases of conscience made available for study by the men by whom similar problems have to be faced.

We have spoken of Lefroy as a big man, and we think the epithet will be accepted by everyone who reads this Life. He was not endowed with outstanding intellectual power, but his character was at once strong and beautiful, and his practical ability was of a very high order; as Lord Curzon put it, "he had the zeal of a Crusader, the heart of a woman, and the spirits of a boy," and his life was passed in surroundings where these qualities had full play. The story of his career is short. From Cambridge he went to Delhi, where he worked for twenty years as a missionary; then came twelve years as Bishop of Lahore, and then six years as Metropolitan, a time marked by increasing pain and sickness, until he died, worn out, on New Year's Day, 1919. Throughout, he was an evangelist first and foremost, but his administrative gifts soon became apparent, and the interaction of these two forms of activity dominated his life; at Delhi we see him engaged in municipal work, or checking mission accounts, when he wanted to be preaching, while, later on, diocesan duties, heavy as they were, could not satisfy him, and the organisation of the Church for evangelisation was the note of his time as Metropolitan. It is an old question whether evangelists, or, for that matter, specialists of any kind, should be called away "to serve tables"; the tables have to be served, and men of Lefroy's temperament will go on wearing themselves out in the process, without paying the slightest attention to theories of administrative economy. His administrative work was exceptionally good; is it not on record that Lord Morley would have liked him as a Lieutenant-Governor? but as time goes on, we expect to see larger results becoming manifest from his years of effort at Delhi, and it is with Delhi that his name will remain most closely associated.

II.—A STUDY IN DISILLUSIONMENT.

Mr. Har Dayal was well known to the Indian public in the days before the war as one of the most active members of the revolutionary party, and in particular as the editor of a notorious journal issued in San Francisco. He has now changed his views, and in the course of 100 pages he tells us why. He was in Berlin most of the time from 1914 to 1918; he mixed freely with the motley band of Asiatic and African revolutionaries who gathered, or were gathered, in Germany; and he learned by rather bitter experience that they were no earthly use. He visited Constantinople, and found the Turkish politicians equally hopeless. He learned, too, that Germany was not in the least likely to be a liberator, and his conclusion is that England and France must for some time to come take a large share in the administration of those countries which are not yet able to stand alone. He has thus cast off the errors of his youth, and we hope this book will serve to counteract in some measure the harm done by his earlier teaching. We cannot yet accept him as a serious political thinker, but he shows that at any rate he is open to the logic of facts; his scathing picture of German society is in substantial accord with what we have learned from other sources, and we see no reason to doubt the faithfulness of his description of "Asia Minor" in Berlin, where ardent Nationalists spent most of their time and energy "in quarrelling among themselves and telling lies against one another." It is all a sorry, sordid story, but we are glad that it has been printed.

III.—THE "GIPPO."

A number of short sketches of the lighter side of life with the E.E.F., in which cheerful spirit rises undaunted above the monotony of "sun, sand, flies and mosquitoes." Most have already appeared in the *Passing Show* and *Blighty*, and they lose a little in effect by being collected in one volume. The two which seem the most successful, "Coals to Newcastle" and "The Purple Patch," are also two of the shortest, their very shortness helping towards leaving us with that pleasant sense of surprise—of having been rather neatly "had"—on which Mr. Newham often depends for our smiles. The description of a wonderful game, "a sort of football-cum-polo-cum-hockey," played four a side on donkeys, is very good fun. Mr. Newham is not impressive when he aims at the gruesome or pathetic, and his three attempts at verse are so poor compared to his prose that it seems a pity he was not persuaded to omit them. His young officers are, however, human beings—and likable ones—and not the wearisomely smart mouthpieces for war-time slang whom one was expected to regard as humorous by so many writers of this kind of thing during the last few years.

IV.—A YIDDISH-ENGLISH PRIMER.

Mr. Philip Blackman has prepared a well-arranged pronouncing vocabulary for the use of Yiddish-speaking immigrants anxious to learn English. The primer will be of interest also to those desirous of reversing the process, and of becoming acquainted with the dialect used by probably the majority of the Jews of the world, though ability to read Hebrew characters is a pre-requisite. The Zionists have revived Hebrew as a living language, and the tendency is for it to replace Yiddish, at any rate in Palestine. But the process will be a slow one, and until it is completed, this little primer will retain its many uses.

22	9	Monday	2	3
23	10	Tuesday.....	3	4
24	11	Wednesday	4	5

M. Clemenceau, after he leaves Egypt, will go to Athens.

Sir Davison Dalziel left London for the Continent on March 11.

M. Colas, Secretary to the Greek Legation, left London on March 11 for Paris.

Mgr. Kenealy, Archbishop of Simla, was received on March 13 by Cardinal Gasparri, Papal Secretary of State.

Mr. A. O. Lamplough, the painter of Egyptian scenery, is leaving London for Egypt this week.

Unless much greater support is forthcoming during the next few months the Church Zenana Missionary Society will be compelled to withdraw from ten stations in India.

The Sultan of Egypt has conferred the Grand Cordon of the Order of Mohamed Ali upon the Crown Prince of Roumania.

Mr. Rudyard Kipling will preside at the festival dinner of the Royal Society of St. George at the Connaught Rooms on April 23 (St. George's Day).

The Governor of Ceylon has sailed for England, where it is understood he will confer with the Secretary of State regarding constitutional reforms in the island.

The Great Northern Central Hospital, Holloway, has received £80 from Major E. T. Kingscote, St. James's Palace (proceeds of concert), and £52 10s. from the Anglo-Egyptian Bank.

The Archbishop of Canterbury had an audience of the King at Buckingham Palace on March 9, and presented to his Majesty the Armenian Patriarch of Constantinople, who was accompanied by the Armenian Bishop of Manchester.

M. Venizelos, the Greek Premier, was entertained at luncheon by representatives of the Royal Horticultural Society on March 9, and on the following day he dined with Nubar Pasha at the Carlton.

It is stated that the Sultan of Muscat left Muscat on March 3 for India on board H.M.S. Lawrence. He is to be received by the Viceroy at Delhi, and will visit Bhopal as the guest of the Begum.

Nubar Pasha, President of the Armenian Relief Commission, and the Armenian Patriarch in Constantinople were entertained at luncheon by the Lord Mayor and the Lady Mayoress at the Mansion House on March 11.

Mr. Montagu, Secretary of State for India, has been allowed by his doctors to leave London for Scotland for the final stage of his treatment. He hopes to be able to return to his Parliamentary duties within two or three weeks.

Crown Prince Carol of Roumania has been entrusted with a mission to take an autograph letter from King Ferdinand to Japan, and for the purpose of opening up new relations with that country.

Sir Arthur Peel was received in audience by the King on March 13, and kissed hands upon his appointment as his Majesty's Envoy Extraordinary and Minister Plenipotentiary at Bucharest.

Mr. and Mrs. Noel Buxton gave a reception at 12, Rutland Gate, yesterday, to enable a large company of their friends to meet Mr. Harold Buxton and Miss Mabel Buxton on their return from Armenia.

Under the auspices of the Central Asian Society, Lieut.-Colonel the Hon. Dudley Carleton read a paper entitled "From the Adriatic to the Oxus." The lecture took place yesterday at 74, Grosvenor Street, W.1, and was presided over by the Right Hon Lord Carnock, P.C., G.C.B.

A lecture arranged by the Egypt Exploration Society will be given to-morrow at 8.30 p.m. in the rooms of the Royal Society, Burlington House (by kind permission of the President and Council). The lecturer will be M. Jean Capart, Curator of the Musées Royaux du Cinquantenaire, Brussels, and the subject "The Study of Egyptian Art."

Mr. Herman C. Norman was received in audience by the King on March 13, and kissed hands upon his appointment as his Majesty's Envoy Extraordinary, Minister Plenipotentiary, and Consul-General at Tehran, when the King invested him with the Insignia of a Companion of the Most Exalted Order of the Star of India.

It has been resolved by the Church Missionary Society to retire altogether from Mesopotamia. This is due to the disastrous effects of the war, lack of recruits for the society's work, and the necessity of strengthening the operations of the society elsewhere. Provision for the spiritual needs of the Protestant Christians will be made by the London Jews' Society, who have decided to extend their work in Mesopotamia.

The Vienna correspondent of *The Times* writes (March 12):—Admiral Troubridge has given up the command of the British Danube flotilla, and his place has been taken by Captain Wharton, who will eventually hoist his flag in the monitor Glow Worm. This step has rendered it possible for Admiral Troubridge, as President of the Inter-Allied Danube Commission, to make an extended tour of inspection of the Danube. The Admiral, who leaves Budapest on March 15, and who will be accompanied by other members of the Commission, will travel in the yacht Szofia, and will visit the Danube ports as far apart as Regensburg and Turnu Severin before finally returning to Budapest on April 11.

The following honours appear in the *Gazette* of March 10:—

CONFERRED BY THE KING OF ROUMANIA.

ORDER OF CAROL I.

Commander: Col. (temp. Brig.-Gen.) C. R. Ballard, C.B., C.M.G.

ORDER OF THE CROWN OF ROUMANIA.

Commander: Col. H. Le Roy-Lewis, C.B., C.M.G., D.S.O., T.D. Officer: Capt. R. V. C. Bodley, M.C., K.R.R.C.

CONFERRED BY THE SHAH OF PERSIA.

SAMARITAN CROSS.

Sister M. H. Gammie, A.R.R.C. (T.F.) Nursing Service.

CONFERRED BY THE SULTAN OF EGYPT.

ORDER OF THE NILE.

Second Class: Capt. Sir G. A. Loyd, G.C.I.E., D.S.O., War. Yeo.

CONFERRED BY THE SHAH OF PERSIA.

ORDER OF THE LION AND SUN.

Second Class: Maj. Sir R. Williams, Bt., D.S.O., Welsh Guards.

Our Belgrade Correspondent writes (March 1):—On February 28, the officers of the 2nd Infantry Regiment gave a farewell dinner to 2nd-Lieut. Flora Sandes, who has recently been demobilised. This intrepid British woman is regarded by Serbs as a kind of Joan of Arc, for she has shared all their dangers and privations since 1915. During the awful days of the retreat, she was nursing in the field dressing-station of the unit, and declined to leave the front. The commanding officer, to encourage the desperately strained moral of his men, persuaded her to stay, and she was enrolled as a private, as the only means of maintaining her under the circumstances. Miss Sandes became a combatant, joined heartily in the fighting, and was rapidly promoted lance-corporal and corporal. In the fierce fighting on the steep Hill 1212, which led to the recapture of Monastir, in repelling a fierce Bulgar counter-attack early in November, 1916, her company commander, Lieut. Doditch, fell wounded. Sergeant Sandes sprang up and led the men on herself in the thick of the fray, into hand to hand fighting, when a bomb burst quite near, and she fell with no fewer than 20 wounds. Lt. Doditch succeeded in dragging her to safety, and as she lay in hospital at Salonika, the Crown Prince visited her and pinned on her breast the Star of Karageorge with Swords, the highest Serbian military decoration. Completely recovering, she was promoted 2nd-Lieut., and took part in the final victorious rush of the Serbian armies in the autumn of 1918. Small wonder that the Serbian troops venerate this courageous British woman.

APPOINTMENTS, ETC.

M. Yovanovitch, formerly Serbian Minister in this country, has been appointed Yugoslav Minister at Washington, in succession to M. Grouitch, who has been offered the post of Marshal of Ceremonies to the Court of Belgrade.

OBITUARY.

The death has occurred of Professor A. Ferguson, the Egyptian Government pathologist. He was well known for his scientific research work, and to him is largely due the fact that an outbreak of cholera did not occur in Egypt during the war.

STAMPS OF THE NEAR EAST.

The Times states:—Since the restoration of the autonomous Government at Koritsa by the French at the end of 1916 a number of more or less ephemeral stamps have been issued in Albania. Now a definite series of national stamps is in preparation by the French Government Printing Establishment, comprising six values bearing the likeness of the Albanian national hero, Skandenberg, and four postage due stamps with a vignette of the fortress of Scutari.

Soon there will be three separate and distinct sets of postage stamps current in Syria. Already we have the stamps of the French sphere of administration overprinted "T.E.O." (Territoires Ennemis Occupées), and those of the British Army Post Offices inscribed "E.E.F." in the British area. Latest advices from Paris state that for use in Damascus, Homs, Aleppo, and Hama in the Arab zone, contemporary Turkish postage stamps are to be introduced, with the addition of a native imprint at the top setting forth the name and titles of the Sultan Hussein.

NEWS IN BRIEF.

Isak Pasha, Turkish Commander-in-Chief, has arrived in Rome from Naples.

Damage estimated at £1,000,000 has been caused by a fire in the docks at Oran (Algeria).

In consequence of the re-establishment of the Press censorship in Egypt, a demonstration of about 600 students took place.

Two hundred looters, led by an Arab Sheikh, attacked Pelhoi, a small Jewish co-operative and workmen's colony west of Metuoloh, in the north of Galilee. Four men and two girls were killed and five persons wounded.

At a secret Consistory held in Rome on March 8 the Pope announced the appointment of Mgr. Luigi Barlassina as Patriarch of Jerusalem.

A memorial has been placed before the Supreme Council asking that the Assyrian nation dwelling in Asia Minor may become independent under a Mandatory of the League of Nations. These people, who prefer to be called Assyrian-Chaldean, say that under the present arrangement between the French and British they will be divided—part under French rule in Diarbekir and Mardin, and part under British rule in Mesopotamia—a division which would be injurious to their nationality.

APPOINTMENTS WANTED.

THE Ladies' League (under Royal Patronage), 118, New Bond Street, successfully recommends Lady Secretaries, Chaperons, Housekeepers, Companions, Secretaries, Governesses, Nursery Governesses, Nurse Companions, Lady Nurses, etc.

GOVERNESS Companion, desires post abroad. All English subjects, fluent French, El. Italian & German, Music, Drill. £100. M. M. The Ladies' League, 118, New Bond Street, London, W.

MINING ENGINEER, M.I.M.M., open to any proposal. Can interest capital. Knowledge interests in Near East, Box No. 156. "Near East." 1, Devonshire Square, E.C.2.

WILL any lady travelling to Egypt early in April by long sea route take charge of two children, aged 9 and 8, on voyage. Reply:—Mrs. A. van Millingen, "The Warren," Purley, Surrey.

AVIATION.—Demobilised Captain (31) who is a really expert pilot and mechanic, requires flying appointment, seaside joy-riding or flying expedition in any part of the world, advertiser has had five years experience in the R.F.C. and R.A.F. and done over 1,500 hours flying. Box No. 157, THE NEAR EAST, 1, Devonshire Square, E.C.2.

MOTOR ENGINEER. 30, married, desires appointment in motor or other industry, six years pre-war experience in both rubber and mechanical branches of motor industry; 4½ years with Armoured Car Force in France, Belgium, Russia, Caucasia, Rumania, Mesopotamia and Persia. energetic and of good appearance and education, would go abroad.—J.F.C., 15, Manchester Road, London, N.15.

WHERE TO STAY.

For the convenience of visitors from overseas "THE NEAR EAST" offers its services in booking rooms at hotels in the United Kingdom, on receipt of instructions preferably a week before the date of arrival. When instructions are telegraphed the message can be abbreviated as follows:—

"EASTAPROX. LONDON. TWENTIETH MATLOCK TWO

(The visitor's name and place of residence abroad to be added)."

which would indicate that two rooms were required at Matlock on the 20th of the month.

BRISTOL
GRAND SPA HOTEL.

EXETER
ROYAL CLARENCE HOTEL
(facing beautiful Cathedral).

LONDON
HOTEL CRANBOURN
67a, Shaftesbury Avenue, W.C.2.

THURSDAY, MARCH 18, 1920.

THE DRAGOONING OF MONTENEGRO.

In the multiplicity of complicated subjects, all more or less in a critical stage, with which the Allied Governments and peoples are concerned at the present time, it is inevitable that the affairs of Montenegro should appear relatively unimportant, if not actually insignificant. Sooner or later, however, when other questions are happily relegated into the background, the inwardness of the Montenegrin controversy will be brought home to the world, or at least to the Anglo-Saxon peoples, and we are confident that public opinion will then be capable of being roused to a pitch of indignation that will bode ill for all those, whether individuals or nations, who share in any degree responsibility for a grave injustice. There is a further reason why so little attention has been paid in this country to the fate of Montenegro; it is that the position is so unprecedented, and the events that are said to have taken place are so incredible, that the public and, we believe, to some extent the British Government, feel compelled to take refuge in the supposition that the allegations, although made in good faith, are the result of some misunderstanding or misrepresentation, perhaps inseparable from any discussion of Balkan affairs. It may clear the ground for fuller knowledge if we explain the peculiar circumstances which enable immediate responsibility for events in Montenegro to be relegated through a number of channels to parties virtually inaccessible to, let us say, the Paris Conference. In the first place, the issue is between Montenegro and Serbia, and not between Montenegro and Yugoslavia; but it is Yugoslavia which is represented at the Conference, and it is only necessary to recall the abuse heaped upon M. Pasitch, then Prime Minister of Serbia, by the Yugoslav (as distinct from Serbian) organ in the British Press, to understand that Yugoslavia does not accept responsibility for everything done in Serbia. It so happens that M. Pasitch, who, as head of the Serbian Government during the war, was denounced on behalf of the Yugoslavia-to-be as the personification of "Oriental" despotism, is the nominal head of the Yugoslav delegation to the Peace Conference; but that delegation is so identified with the personality and statesmanship of M. Trumbitch that the Supreme Council, in its complete ignorance of Near Eastern affairs and peoples, could not bring itself to associate Yugoslavia, directly or indirectly, with any conduct incompatible with the highest Western standards. Again, the Serbian element in the Belgrade Cabinet interposes another "non-conductor" in the chain of responsibility, because it can plead that the question of Montenegro is a purely military matter. It is thus evident that it is only necessary for a single Serbian military officer in command in Montenegro to give his account of the condition of things in that country to the Belgrade War Office to have that version impressed in the most perfect good faith upon the Supreme Council by Yugoslav statesmen, whose assurances naturally carry full weight with the representatives of Great Britain and France. This, there can be little doubt, is the explanation why the existing situation in Montenegro has been tolerated so long by the British and American Governments, and, let it be added, by M. Trumbitch.

What has happened in Montenegro is in the main outline identical with events in Fiume, with this difference, that the Serbian D'Annunzios, who, unlike their Italian counterpart, have acted *incognito*, have established themselves where their presence was resented. All that has followed, or is said to have followed—packed assemblies, compulsory petitions, insurrections, massacres—is merely the Balkan touch, which would naturally be lacking in Fiume. The mistake made by the Supreme Council is to suppose that a reference to events in Montenegro is calculated to hurt Yugoslav susceptibilities any more than an inquiry addressed to the Italian Government as to what it proposed to do with D'Annunzio can cause offence to Italy. Serbia has set its heart on annexing Montenegro just as strongly as Italy wants Fiume, and the Serbian Government, being far shrewder than the Italian Government, which forgot to claim Fiume in 1915, was careful to inaugurate a campaign to serve its purposes. To avoid all misunderstanding, it must be pointed out that the Serbian Government which adopted this course was not the present Yugoslav Government, but that of M. Pasitch, so vigorously attacked by those who stood for what may be termed the Trumbitch-Yugoslav principles of government. There was nothing strange in M. Pasitch's action; what does give rise to amazement is that the British and French Governments should have lent themselves to these "Oriental" methods. Montenegro entered the war as an independent ally. After a fine exhibition of chivalry, which saved the Serbian army from annihilation, the Montenegrins had their own country overrun by the enemy; their King and Government were offered, and accepted, hospitality in France. Almost at once the campaign for undermining their prestige and for the union of Montenegro with Serbia was begun, and, as far as can be gathered, the British and French Governments allowed themselves to be influenced by these intrigues, until they were guilty of the double-faced action of outwardly acknowledging Montenegro, with its Sovereign, as an Ally, while accepting its opponents' estimate of it, denying it the status of an Ally and treating it as a province of Serbia. Such conduct, aggravated in various ways, which need not be enumerated here, is so un-British that it has only to be fully appreciated by the nation at large to bring retribution on the politicians who sanctioned it.

The occasion, however, is one not for avenging, but for righting, a wrong. Anyone acquainted with the Balkans will feel that the moral responsibility of the Supreme Council for tolerating an anomalous state of things in Montenegro is greater than the offence of the perpetrators. The latter are the victims of tradition; but it is a tradition to which the Allied Governments claim to have put an end as a result of the Great War. As a matter of fact, they have made no attempt to interfere with it. The world for the moment has other preoccupations, but our belief in the future of Yugoslavia as a leading factor in the progress and prosperity of a united Balkan Peninsula prompts the warning that a palpable injustice to Montenegro will as surely retard the consolidation of the Kingdom of the Serbs, Croats, and Slovenes as it will alienate the sympathy of the Anglo-Saxon peoples when the facts are known. All that is required is that the officials of the Serbian régime in Montenegro, whether military or civilian, should be withdrawn, just as the Yugoslavs and the Allies have urged that D'Annunzio ought to be withdrawn from Fiume. With them must also retire the handful of subsidised Montenegrins associated with Serbian anti-Montenegrin propaganda from 1917 onwards. There is no doubt as to Montenegro remaining within the Yugoslav Federation, but she ought to be allowed to determine of her own free will whether she shall join as a separate unit or as a province of Serbia. We appeal confidently to the Yugoslav Government to see that an era of great promise now opening out before the united Southern Slav nation is not marred at the outset by a grave wrong to one section.

CENTRAL ASIA AFTER THE PEACE—II.*

By Colonel A. C. Yate.

While the Amir Habibullah Khan sat on the throne of Kabul it was always on the cards that he would have placed himself at the head of a Central Asian Confederacy, embracing Bokhara, Khiva, and Kokand, in addition to his own territories, and curbed Bolshevism from the Sea of Aral to the Pamirs. That hope is gone. We have to reckon with a young Amir, of whose standing in the eyes of his own subjects we have no certain information, and upon whom, as an ally, we can place no confidence. The nominally independent Khanates of Khiva and Bokhara have, it is understood, been forced to submit to the dictation of the Tashkent Revolutionary Governments, and ever since Lenin and Trotsky came into power, renegade subjects of the British Crown in India have figured at Moscow and Petrograd, and Bolshevist envoys have been intriguing at Kabul. It should further not be forgotten that Persian deputies were at Brest-Litovsk in 1917. The point not yet decided is whether the Amir of Kabul will ally himself with Bolshevism for the invasion of India or take his stand against Bolshevism with the determination of freeing the Turkistan Khanates from its tyranny and creating an Afghan Kingdom, which will reabsorb all that Russia in the last century has filched from the descendants of the mediæval monarchies which flourished at Samarcand, Bokhara, Herat, Balkh, and Ghazni. When we recall the events of 1884-6, as the result of which Russia annexed Badghis and the Turcoman Steppes from Zulfikar on the Hari-Rud, through Kushk to Khamiab on the Oxus, it creates almost a revulsion of feeling to take up one's daily paper and read: "The Afghans at Merv." I, for one, although I deplore the assassination of Habibullah and resent the dallying of Amanullah with Bolshevism, am delighted to see Afghans back on the territory which Russia "grabbed" in 1885; and not only would I have the Afghans stay there, but I would carry their frontier northward, certainly to the Zarafshan and perhaps to the Syr-Darya. This would place in their hands the section of the Trans-Caspian Railway east of Merv on the Tejend River, while Persia should be encouraged to extend her frontier northward to annex the Krasnovodsk-Tejend section. This allotment of that railway to two different powers would be a salutary fetter on both. I believe the Afghan Government has all the grit needed to play its part in this programme, but such is the effeteness, coupled with inordinate conceit, exhibited by the Persians during the years of, and since, the war, that I view with some misgiving the idea of their annexing a railway and extending their will over the Turcomans, who for decades have been a thorn in the Persian side, as "Hajji Baba" has so humorously pictured to us. I most certainly sympathise with Col. Dudley Carleton's vindication of Turcoman and Sart claims to be saved from Bolshevist domination, but I think it will take some time before the Yamud and the Goklan nomads will adapt themselves to Persian rule. I still retain a vivid memory of how, as I rode from Herat to the Caspian in June-July, 1885, I, thanks to my muleteer's refusal to take a short cut, escaped a Turcoman raid, with which all Astrabad was ringing when I arrived there on July 29.

I am satisfied of the military power of the Afghan to withstand the Bolshevists, and, although Kabul is now admittedly independent, I think India should send envoys to Kabul and arrange the terms upon which Great Britain should support Afghanistan in extending its Empire northward over territory which never was Russian until the seventies of the nineteenth century. We have all been watching the expedition this month against the Waziris, and we note, despite our advantage in aeroplanes, the stubbornness of the fighting between our highly trained troops and the tribesmen. The War Office at Kabul can place one or two or three hundred thousand such fighting men on its northern frontier, provided the transport and supply departments are up to their work. That is the point. The art of keeping an army together for months in the field is one in which the Afghan as yet lacks experience. Still, I am under the impression that Afghan divisions at Merv and along the Oxus would stand as firm against the Russian as the Waziri stand against Maj.-Gen. Climo. We have yet to reflect on the policy of doubling the power of our warlike neighbour on the N.W. Frontier. The fact is that that increase of power must come. We have recognised Afghan independence, as we were bound to do. We never held in our hands the power to make the Afghan dependent, as Dost Mohammed showed in 1837 and Sher Ali in 1878. In the future, face to face with a strong Afghanistan, which will develop railways and all up-to-date contrivances of transit and transport, we have to maintain a strong and loyal India. *Diride et impera* was a power in that country till recently, and doubtless is so still in a measure. Moslem and Hindu seemed unlikely to combine, and yet, during the strong sentiment aroused in regard to Constantinople and the Khalifate, the hint was thrown out that Moslem and Hindu might unite against their British suzerain. In the event of such a union we must remember that behind the British Army in India stand all the resources of the Commonwealth of Australia, of New Zealand, of the Union of South Africa, and of East Africa—an ever-growing power.

Let us pass westward to the next section of the Anti-Bolshevist front. It is full time that Persia bestirred herself. Her lethargy and helplessness during the war is a byword. It is only paralleled by the pretentiousness and conceit with which the Persian delegates approached the Peace Conference at Paris. We have had a visit from His Majesty the Shah and from H.H. Firuz Mirza, the Minister of Foreign Affairs. From a very able Afghan friend of mine in Edinburgh, who was during the Shah's stay there attached to his suite, it was a pleasure to receive appreciative reports of his youthful Majesty's interest and intelligence. The restoration to Persia of some of her pristine splendour and prosperity is a task of which any properly constituted Shah may be proud. His Majesty Sultan Ahmed Shah Kajar has a glorious opportunity before him of going down to history with the *éclat* that attaches to the names of some of his illustrious predecessors. One of the first things that he has to do is to organise his finances and an army, and to improve his communications—no light task. Yet Bolshevism admits of no delay. I cannot suggest the return of Mr. Morgan Shuster as Finance Minister, for Britain has now by right assumed the mandate for Persia. That country wants a second Sir Henry Lindsay-Bethune* to organise its army, and, furthermore, competent advice and control in all matters affecting finance and ways and communications. For the work of army reform I think Lieut.-General Sir G. F. McMunn would have been an excellent selection, but as he has just taken up the post of Quartermaster-General in India, someone else must be selected. What we want is prompt action. We hear of nothing being done in Persia. Not only has that country to protect itself, but it must also become a base for the support of Denikin and the prevention of Bolshevist invasion. Here, again, India will undoubtedly have to step in, and, utilising the Nushki Railway and the Persian Gulf and Tigris bases, put backbone into the efforts which we hope Persia will make for herself.

We have heard a good deal lately from lecturers, one or two of whom have been brought out under the auspices of the Persia Society, about roads and railways and motor transport in Persia. We want to see it put into practice. Of petrol there is a superabundance, thanks to the Anglo-Persian Oil Company. Last May that company had a function at Swansea, from which a friend wrote to me:—"Yesterday I suggested to Sir Charles Greenway the idea of a paper telling the story—'the romance,' as Pretyman called it in his speech at the lunch—of oil development in Persia. He liked the idea, and I think I shall be able to carry it further." It never has been carried further, though the *Persia Society* might very well have taken it up. We are indebted to a Mr. C. A. Walpole for much valuable information about the possibilities, wants and resources of Persia, but the "romance"—and what a relief a little "romance" is to the average dull statistical address—of the oil industry is still a desideratum. What is more a desideratum, however, is that the Government of Persia should without delay pull itself together and prepare, prior to reform, for self-defence.

If the United States decline to accept a mandate for Armenia and to place there such a military force as will overawe alike Turk, Kurd, and Arab, and safeguard the

* The first part of this article appeared in THE NEAR EAST of March 11.

* Note.—Those who do not know General Sir Henry Lindsay-Bethune, Bart., *de jure* 9th Earl of Lindsay, should consult Connolly's *Eminent Men of Fife* or Burke's Peerage, S.V. Lindsay. He died at Teheran, the capital of Persia, on February 19, 1851, and lies buried in the Armenian Cemetery there. *Vide* also Binning's *Persia*, vol. II., p. 217.

Armenian and Nestorian Christians, then the Allies must look elsewhere. I see it suggested that Holland should accept a mandate for Armenia. We might certainly, with very good reason, look either to Holland or to the Scandinavian Powers for some effort in the good cause of the general welfare, or to Switzerland, all of whom have been selfishly profiteering, except perhaps Norway, during and since the War, were it not that the Swedish gendarmerie had already brought such disgrace upon itself. The four small Powers grouped round the entrance to the Baltic must, as neutrals, have amassed during the war much wealth, wealth extracted from the depleted Allied pocket. Let them place some of that wealth at the disposal of the League of Nations, if that League ever materialises. It is but just that Western Europe should support Britain in enforcing quiet in Asia Minor, and responsibility for this should partly rest upon the Italians and the Greeks. The Black Sea must remain an Allied lake until Bolshevism has been brought to its bearings. That Bolshevism, as we see it, holds the inner lines of military operation from the Pacific to the Polish frontier is obvious at a glance. We are not here concerned with the Baltic Republics, Poland, Galicia, the Ukraine, and Roumania. Their only chance is to coalesce and present a united front to Bolshevism from the Baltic to the Black Sea, and that, with Germany and Hungary behind them, is indeed anxious and onerous work.

(To be concluded.)

TOPICS IN PARLIAMENT

House of Commons.

The subjoined headings are those given in the official report:—

PEACE TREATIES: St. Sophia, Constantinople. ARMENIANS IN TURKEY: Statement by Prime Minister. CONSTANTINOPLE. (March 8.)

SUDAN. TURKEY: British Officers in Constantinople. DEMOBILISATION: Troops in Egypt. NATIONAL RELIEF FUND: Turkey (Massacres). (March 9)

INDIA: Chaplains (Service Gratuity).—Mesopotamia (Army of Occupation).—Military Affairs (Commission of Inquiry).—Industrial Workers (Wages).—Deceased Soldiers (Pensions to Widows).—Burma Rice Trade.—Government of India (Secretary of State's Communication).—Films (Censorship).—Child Labour.—Indentured Labour (Fiji).—Strikes.—Islamic Delegation.—Passenger Accommodation.—British Army (Married Officers' Pay). CONSTANTINOPLE. PALESTINE: Anti-Jewish Excesses (Alleged). KURDESTAN: Turkish Massacres. INDIA: Officers' Leave.—Officers' Pensions.—South Africa (Indian Interests). (March 10.)

TANGIER. PEACE TREATIES: Austria and Bulgaria. PALESTINE. CONSTANTINOPLE. PERSIA (DEFENCE FORCE). INDIA. Mahomedans (Shias). (March 11.)

The total population of Mesopotamia, according to a census recently taken, is returned at 2,849,282, the number of inhabitants in the different vilayets being:—Baghdad, 1,360,304; Busreh, 785,600; Mosul, 703,378. As most of the individual returns, as reported in *The Times*, are given in round figures, the population may be set down at two and three-quarter millions. Of the total, 1,146,685 are adherents of the Sunni division of Islam, 1,494,000 are Shiahs, 87,500 are Jews, and 78,792 Christians.

MONTENEGRO'S RIGHTS.

Lord and Lady Sydenham held a reception at the Savoy Hotel on March 12, when a number of guests were invited to meet M. Yovan Plamenatz, Prime Minister of Montenegro, and to hear a statement from him on his country's case. Among those present were Lord Gladstone, Lord and Lady Treowen, Sir Clement Kinloch-Cooke, M.P., Sir Roper Parkington, Mr. Ronald McNeill, M.P., Mr. J. A. Seddon, M.P., and Mr. Victor Fisher. Lord Sydenham, who had delivered a powerful appeal on behalf of Montenegro in the House of Lords the previous day, recalled the recent history of the country, and pointed out that it could not have been treated worse if it had gone over to the enemy. He declared that Montenegro's independence as a sovereign Power must be recognised, and that the Parliament must be allowed to decide the future of the State.

M. Plamenatz, in the course of a long speech, recapitulated the part that Montenegro had played in South-Eastern Europe; he recalled the services that she had rendered to the Allies in the war, and described the ordeal through which she had had to pass since the Armistice—an ordeal of which he had had personal experience, as he had taken part in the fight against the Serbian forces before he could make good his escape abroad.

After Lord Gladstone had spoken, a resolute note was struck by Mr. Ronald McNeill, who emphasised the unjustifiable character of the British Government's attitude towards Montenegro. Mr. Seddon stated that the Labour Party was strongly opposed to the coercion being exercised upon the Montenegrins, and he was prepared to support any steps taken to secure justice for the country.

Mr. Victor Fisher urged the appointment of a Montenegro committee.

CHESS.

Solution to Problem No. 17:—1, R x R, etc.

The City Championship has now reached a most interesting stage. Sir G. A. Thomas leads with 7½ out of 8, but he is closely followed by Mr. R. P. Michell with 7 out of 9 and Mr. R. C. J. Walker with 6 out of 7. Mr. Walker, the present holder of the championship, only reached the final after tieing for the fourth place in his section. Probably his game with Sir G. A. Thomas will decide the contest.

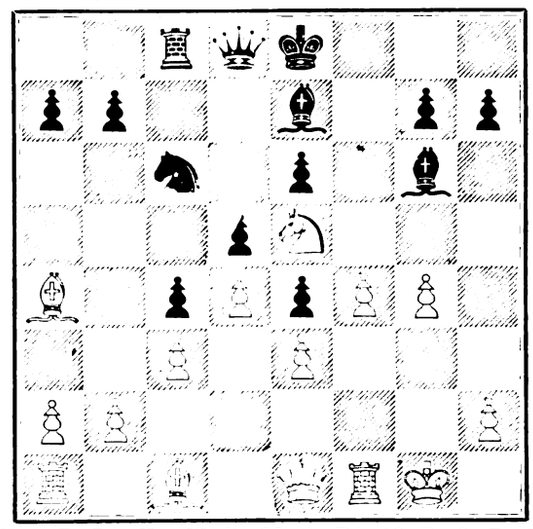
To-morrow the annual match takes place between the two universities at the City of London Chess Club. In view of Cambridge's victory last year by 7—0 it is not surprising that the Light Blues should be strong favourites. I shall expect to see them win, but shall be surprised if it is by anything like such a commanding margin.

These matches rarely produce much that can be called good chess. On the other hand, for those who like the unexpected they are an unfailing attraction. With chess, as with all other inter-University contests, the knowledge of the occasion plays no small part in the result, and the history of these matches is largely a record of the unexpected.

Before and after the University match the combined teams, strengthened by past members, will play matches with the leading London clubs. But the arrangements this time differ materially from the pre-war custom. Then there was a week of matches against the London clubs, followed by the University match. This time only two matches take place before it, and quite a number after it. Most of these matches were twenty boards before the war, but this is only maintained in the case of the City of London Chess Club. From the point of view of past members, this is a grave disadvantage, since it means that few of them will be able to take part in the week.

The following game was played recently in the Metropolitan Club's championship:—Opening, Queen's Pawn. 1, P—Q4, P—Q4; 2, P—K3, Kt—KB3; 3, B—Q3 P—QB4; 4, P—QB3, Kt—B3; 5, P—B4 (1), P—B5; 6, B—B2, B—Kt5; 7, Kt—B3, Kt—K5; 8, QKt—Q2, P—B4; 9, 0—0, P—K3; 10, Q—K (2), B—K2; 11, Kt x Kt, BP x Kt; 12, Kt—K5, B—B4 (3); 13, B—R4 R—B; 14, P—KKt4, B—Kt3; 15, Q—Kt3 (4), 0—0:

Position after Black's 14th Move. B-Kt 3.



16, Kt x B, P x Kt; 17, B—Q2, Q—R4; 18, B—Q, P—QKt4; 19, P—Kt5 (5), K—B2; 20, B—Kt4, KR—R; 21, R—B2, B—Q3; 22, P—KR4 (6), Kt—K2; 23, Q—R3, Kt—B4; 24, P—R5, K—K2; 25, R—R2, QR—B; 26, Q—Kt2, P x P; 27, B x P, P—Kt3; 28, B—Kt4, Q—Q; 29, K—B2, R x R; 30, Q x R, R—R; 31, Q—Kt2, R—R5; 32, R—R, Q—KR; 33, R x R (7), Q x R (ch); 34, K—Kt (8), Kt x P and wins.

1. The Stonewall variation, which has considerable points, but also certain limitations.

2. There was nothing in this early pressure by Black, and, as will be seen, White freed his game without difficulty.

3. Kt x Kt was impossible because BP x Kt would have created a serious problem with regard to castling.

4. By this dilatory move White missed his chance. P—B5 would have given good prospects, a likely continuation being P x P; 16, P x P, B—R4; 17, Q—Kt3, 0—0; 18, B x Kt, P x B; 19, Q—R3, B—K; 20, B—Q2, followed by K—R, enabling the rooks to come into action.

5. P—B5 was still indicated.

6. White could have obtained a draw by P—R3, as it would have been impossible to break through.

7. B x Kt should have been played, when a draw should have ensued. The text move was a mistake.

8. A surprising blunder, which loses two pawns. K—B would have been safe enough, for if Kt—Kt5 (ch), 35, K—B2!; and if Kt—R8 (dis ch), 36, K—Kt, and if 35 . . . Q x B, then 36, Q x Kt and White has rather the better of the position.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

I referred recently to the reported neglect of Egypt by British manufacturers. At the recent annual meeting of the British Chamber of Commerce of Egypt, held at Alexandria, the chairman commented on the decline in the United Kingdom's share of Egypt's trade in 1919, and said that while the falling-off was due to many reasons the most important was the continued strife between capital and labour. He went on to point out that the reputation of British goods was as high as ever, and that at anything like even money they would always find their market, and home manufacturers had, therefore, only *to produce to sell*. They have also, he might have added, to realise that at all costs markets abroad must be catered for. That is a lesson which I have constantly striven to impress upon them, and it applies, needless to say, with special force to the Egyptian market, where a unique opportunity awaits the British trader of regaining the position which he lost before the war.

***

The report of the Bank of Athens for 1919, which has just been issued, shows that there was a satisfactory development in business during that period, the profits amounting to 14,000,000 drachmæ, while the dividend proposed is 7 drachmæ per share, which is equivalent to 7 per cent. From 1913 to 1918 no dividend was declared, and the profits were accumulated, the balance on the profit and loss account at the end of December, 1918, being 7,077,300 drachmæ. A dividend of 3½ per cent. was paid for 1912, and one of 7½ per cent. for the previous year, while for several years before that the rate was 9 per cent. This year's results suggest that, given a period of peaceful development in the Near East, it will not be long before the dividend basis prior to 1911 is surpassed, especially in view of the development to which I referred last week.

***

Further complaints continue to be made regarding the inefficiency of the cable service. I quoted last week an instance given by the Northamptonshire Chamber of Commerce of how a contract was lost through cable delays. From the same chamber has since come an even more striking instance of the damage to trade caused by these delays. An order for 540,000 goat skins was despatched to a firm in India, but by the time the cable was delivered there had been an advance in the exchange of 17 per cent., and as a result a loss was sustained on the transaction of about £55,000. Once more I repeat that it is impossible to carry on business if traders are to be handicapped in this manner, and I trust the authorities will lose no further time in taking steps to improve the services.

***

The latest news which reaches me regarding the Constantinople market is far from reassuring. The position is regarded as being decidedly critical, and it is difficult to see how a serious commercial crisis is to be avoided. It is to be feared that the result of the unprecedented congestion at the port, with the delays in discharging cargo and other difficulties, such as the swiftly alternating rate of exchange, will be that some British manufacturers will suffer severe losses. It will be more than unfortunate should that prove to be the case, and it is small consolation to think that it was impossible to foresee the upshot of the events in South Russia, which have been the culminating factor in bringing about a difficult situation. I only trust that those who may sustain losses will not hastily decide to abandon the Turkish market. That would be the height of folly, for as soon as normal times return they will find it an easy matter to regain their losses several times over. And the commencement of normal times will date from the signing of peace, which will be followed by the rapid development of business.

***

In the current issue of the monthly journal of the British Chamber of Commerce of Turkey and the Balkan States, a very interesting survey is given of the position of insurance business in Turkey. Before the war there were approximately 65 fire insurance companies operating in Turkey, the majority of them British. Most of these companies are now recommencing operations, and it is stated that at the present moment the general prospects in Constantinople for fire insurance are good. One aspect of the policy of the British companies comes in for criticism. "There have been many changes in the representation of British offices," it is pointed out, "and it is to be regretted that, in the great majority of cases, members of the British community have been put to one side, and the agencies entrusted to natives. Our companies do not seem to be able to understand that a British agent can do a far better and cleaner business than most natives, and, as a rule, devotes personal attention to it."

***

The net profits of the Imperial Bank of Persia for the year ended September 20 last were slightly lower than for the preceding period at £80,200, as against £83,100, but apart from that the figures in the balance-sheet are extremely satisfactory. Deposits have risen from £1,789,368 to £2,830,064; loans and discounts stand at £3,241,933, as against £1,996,274; while the note circulation has almost doubled at £1,109,201, as against £667,153—figures which throw a satisfactory reflection on general conditions in the country. The balance brought forward was larger than before, and the available total is about £300 greater at £107,600. The dividend is maintained at 8s. per share, or a trifle over 6 per cent., £30,000 is transferred to the reserve, making that fund £250,000, as compared with the paid-up capital of £650,000, and £5,000 is placed to premises account, leaving £27,388 to be carried forward, as compared with £27,400.

***

The holders of the £200,000 Six per Cent. Obligation Bonds of the Constantinople Telephone Company have so far had a most unfortunate experience. The bonds were issued in 1914, and the war has prevented them from obtaining more than one dividend. A circular was issued in September informing the bondholders that the company had regained possession of their property, and that steps were being taken to obtain an indemnity from the Government. In a further circular it is announced that no progress can yet be reported as regards the settlement of the company's claims, and in the circumstances the proposal is put forward to fund the arrears of dividend to July 1, less tax, into Six per Cent. Certificates repayable in 1934. £21 is due on each bond, and the certificates are to be of £20 each, the odd amount being paid in cash. It is further proposed that the date on which the bonds mature should be advanced by five years—covering the war period—a similar extension being made in regard to the date on which the right to convert the bonds into shares would have normally elapsed.

***

Considerable dissatisfaction is being expressed, I understand, with conditions at the port of Casablanca. It appears that there is very serious congestion at the port, and that steamers are delayed there for long periods owing to the lack of adequate facilities. The lack of quays is one of the most serious problems, it is stated, while there are also too few lighters and an insufficiency of cranes to unload goods from the lighters. French steamers have preferential treatment, and only one-quarter of the lighters are normally at the disposal of the ships of other countries. The only hope of improving the position at Casablanca lies in the development of the quays and in an increase in the number of lighters and cranes, to say nothing of the storehouses, which are at present quite insufficient to meet requirements. Until steps are taken in this direction the congestion will continue.

(REPORTS FROM OUR OWN CORRESPONDENTS.)

EGYPT.

CAIRO, March 1.

Egypt's Trade during 1919.

The December returns of the Egyptian Customs' Administration, which contain the figures for the whole year, make very interesting reading. The total imports of the year amount to £E47,409,717, and the exports to £E75,888,321. Whilst the imports are slightly less than the previous year, exports are substantially more, but both totals are far and away in excess of any figures previously recorded.

The following comparative table, comparing the trade figures for the last two years with 1913, the last normal pre-war year, and 1912, the year giving the highest exports recorded since 1884 up to the war, shows how phenomenally the foreign trade of Egypt has expanded in every branch:—

	1912.	1913.	1918.	1919.
	£E.	£E.	£E.	£E.
Imports...	25,907,759	27,865,195	51,155,306	47,409,717
Exports...	34,574,321	31,652,065	45,370,020	75,888,321
Re-exports	448,665	578,251	1,378,732	4,307,401
Transit...	1,789,198	2,072,574	14,419,125	8,911,846

From this table it will be seen that since 1912 imports have increased by 90 per cent. and exports by 120 per cent., and that, whereas allowing for the specie movement of which in 1912 there was a net import of £E4,000,000, the balance of trade has increased from £E5,000,000 to £E33,000,000. It will be noted that this latter figure is very little short of the highest total for exports alone in any one year before the war.

Another interesting feature of the Customs returns is the expansion in re-exports and in transit trade, both of which increase the commercial importance of Egypt, which, by becoming a distributing centre for the Levant, at the same time guarantees its own supply of the commodities in question.

Under imports the principal items are: Preserved meat, £E1,016,411; hides and skins, £E762,178; wheat flour, £E779,485; sugar, £E494,819; coffee, £E811,020; coco-nut oil, £E227,273; kerosene, £E1,710,897; benzine, £E536,463; mineral oils, £E297,161; stationery, £E1,270,839; timber, £E490,921; coal, £E3,000,973; natural indigo, £E230,995; nitrate of soda, £E1,311,870; medicinal preparations, £E353,125; soap, £E524,029; matches, £E221,866; cotton yarn, £E969,993; sewing cotton, £E425,442; cotton-piece goods, £E11,086,788; mixed textiles, £E483,192; woollen and worsted clothes, £E861,388; silk cloths, £E781,446; silk yarn and thread, £E324,047; sacks, £E585,986; ready-made underclothing, £E390,410; ready-made clothing, £E405,666; hosiery, £E756,429; tin-plate, £E362,606; tobacco, £E3,070,744.

The main decreases were under: Preserved meat, £E884,192; sugar, £E265,357; benzine, £E1,266,433; stationery, £E387,827; coal, £E2,153,152; matches, £E249,739; cotton piece-goods, £E2,226,139 (mainly cotton piece-goods bleached and printed); whilst increases were registered in hides and skins, £E260,747; wheat flour, £E177,740; coffee, £E213,352; kerosene, £E893,285; and nitrate of soda, £E1,233,905.

Under exports cotton accounted for the major portion, the total being £E65,441,901, as against £E38,034,467. Other important items were: Eggs, £E282,188; hides and skins, £E1,301,859; rice, £E550,590; sesame, £E133,958; cotton seed, £E3,013,993; cottonseed cake, £E412,477; onions, £E424,634; ground-nuts, £E111,116; sugar £E654,656; cigarette-paper, £E240,251; gum, £E359,199; phosphate, £E156,750; wool, £E131,499, and cigarettes, £E1,032,076. With the exception of sugar and gum each one of these items shows a considerable increase on the previous year in value, and with the exception of cottonseed in quantity.

Coming to the share in the foreign trade, we find that under imports Great Britain heads the list again with £E21,840,957, against £E27,077,635 the previous year—a slight falling off in percentage. On the other hand France has increased her share by about 30 per cent. to £E2,390,541, and Italy hers slightly to £E2,512,028, whilst the United States, owing especially to kerosene, increased from £E491,326 to £E2,889,749.

Under exports the United Kingdom did better, taking one-third of the year's increase and raising her share from £E30,542,834 to £E40,222,821. As usual, the United Kingdom took all the eggs, cottonseed, and cake, and over 50 per cent. of the cotton: France increased her share by nearly 200 per cent. to £E5,871,556; the United States quadrupled theirs at £E16,714,079, whilst Switzerland and Japan, for all practical purposes, doubled theirs at £E1,763,730 and £E1,864,292 respectively, all due to cotton.

Trade between Egypt and the Sudan was fairly good. Imports from the Sudan totalled £E1,778,646, as against £E2,718,981, and exports to that country £E2,847,607, as against £E2,492,208. The principal items of imports from the Sudan were:—Livestock, £E715,834; hides and skins, £E126,883; cereals and agricultural produce, £E474,260, of which sesame £E216,332; whilst the chief exports from Egypt were cereals £E305,332, sugar £E661,709, textiles £E998,152, and tobacco £E224,328.

The Economic Situation.

We had another tram strike this week, but it was of short duration. The workers had an extremely bad case, and undoubtedly were the tools of the Extremists, who are straining every nerve to make political capital out of the present economic situation. The strike was settled by the intervention of the authorities, who detailed Egyptian troops to convoy the trams which the company found itself able to work with its loyal personnel. The day after this show of determination the whole of the strikers returned to work. There is no doubt that if the Government will only adopt a firm attitude in industrial questions, and, whilst giving all due consideration to the workers, at the same time afford proper protection to employers when they are in the right and to the personnel which remains loyal, we shall not hear much of industrial disputes, and the Extremists will not find it so easy to excite the workers.

At the same time, it must be admitted that it is urgently necessary for something to be done to alleviate the economic stress, which despite, and really because of, the great prosperity of the country is very great at present. The high price of cotton has undoubtedly had a great deal to do with the creation of this economic crisis, since it has tempted cultivators to extend the cultivation of cotton to the detriment of the normal cereal rotation, and it is indeed very unfortunate that the recent big drop in cotton prices should have come too late for cereal sowings to be resubstituted for cotton.

TURKEY.

CONSTANTINOPLE, February 2.

A Serious Outlook.

I have already upon more than one occasion called attention in these columns to the very difficult situation that exists in Constantinople as a result of the congestion in the Customs, scarcity of labour, and expenses of discharging cargoes. So long as it was possible to keep up a certain circulation of commerce with Russia a crisis was avoided, although it was always realised that we were skating over thin ice. Now, however, that Russia is closed, the outlook is decidedly serious. Goods ordered for the Russian market cannot be delivered, and are held up here, while large quantities of merchandise are being returned, to complicate the situation still further. The rate of exchange had been gradually rising, when, a fortnight ago, the news that the Turkish capital would probably be removed to Asia Minor caused a panic on the Bourse, and the pound sterling suddenly jumped from 360 to 440 piastres. There was a reaction, of course, but the rate is still in the neighbourhood of 400. Consider now the case of a merchant who, three months ago, ordered goods to the value of £1,000. At that time the rate of exchange was about 350 piastres to the £ sterling, and the cost of discharging, etc., was about £T10 per ton. For argument's sake, let it be supposed that the goods cost £50 per ton. The merchant's estimate of his gross cost would be as follows: Invoice, £1,000 at 350 piastres to £, £T3,500; discharging at £T10 per ton, £T200; total, £T 3,700. When the goods arrive, however, the actual bill works out somewhat as follows: Invoice, £1,000 at 400 piastres to £, £T4,000; discharging at £T50 per ton, £T1,000; total, £T5,000.

The merchant thus stands to lose £T1,300. True, prices have gone up in the meanwhile, but how can he be sure that the rate of exchange will not drop before he can unload his goods, or even before he actually gets his goods? For very often weeks and even months pass between the time he gets his bill of lading from the bank and the day when the goods are in his warehouse. Is it to be wondered at that it is practically impossible to get orders for goods to be delivered at some future date? Further, is it surprising that importers are not taking up their bills of lading? Even supposing they have paid a 10 per cent. advance, it would pay them to forfeit it rather than to take the goods under the present circumstances. In the above-mentioned hypothetical instance, a 10 per cent. advance would have meant £T350 against a loss of £T1,300.

In short, unless something unforeseen occurs to prevent it,

Digitized by Google

there seems to be every probability of a repetition in Constantinople of the crisis that occurred in Greece last spring, when millions of pounds' worth of goods choked the Customs because the importers could not take them up. In that case, large quantities of goods had been ordered on the speculation that the war would be prolonged. In the present instance, in Constantinople there has been considerable speculation, at the risk of the manufacturer, in exports to Russia. Until Russia is open again to commerce, British manufacturers will be well advised to exercise great caution for some little time to come.

Undoubtedly the situation is considerably aggravated by the difficulties and expense of discharging cargoes. If it were possible for merchants to take delivery of their consignments *sous palan*, that is, into their own lighters alongside the ship, they would probably avoid a considerable proportion of the outrageous charges made for unloading, Customs, etc. But, unfortunately, there is a great scarcity of lighters, and one is forced to the conclusion that nothing can be done unless some enterprising company sets to work with its own lighters, which, however, would have to be very numerous, or there would be a strike of lightermen, and the new enterprise would be unable to carry on.

Another cause contributory to the general uneasiness is the falling off in exports. This is partly due to the cessation of arrivals of Anatolian produce, for the situation in the provinces is such that transport is a most risky affair. But even when there are deliveries from Anatolia, it is found that better prices can be obtained by selling the goods on the Constantinople market, where they change hands several times. Naturally, this helps to maintain the high rate of exchange, which is further aggravated by the uncertain political outlook, and the popular distrust of Turkish paper.

BULGARIA.

SOFIA, February 14.

Mining Commission.

A Commission, consisting of several directors of the Bulgarian State Coalfields at Pernik, will shortly leave for abroad. It proposes to visit Italy, France, and England, with the intention of purchasing all mining implements necessary for the full exploitation of the Pernik coalfields.

Export of Grain Foods.

The consortium authorised by the Bulgarian Government for the monopoly of export of grain foods has organised an information bureau at Constantinople, Piræus, Salonika, Trieste, and London.

SMYRNA.

SMYRNA, February 24.

National Bank of Turkey.

Major Blake, who has acted as adjutant here since General Milne established the British Advanced Headquarters in Smyrna, has recently been demobilised, and remains in Smyrna as the local manager of the National Bank of Turkey. At present he is assisted by Mr. Michaelides, who has considerable experience in Turkish banking business, and was nine years in the Imperial Ottoman Bank in Constantinople. Suitable premises have been secured on the quay adjoining the imposing building occupied by the Oriental Carpet Corporation. This bank is expected to afford financial help to British traders in Smyrna to enable them to develop their businesses which, with very few exceptions, have been considerably crippled during the war, and the advent of Major Blake is hailed with delight by the British colony.

THE NILE CONTROL WORKS.

I.—The Future Water Requirements of Egypt and the Sudan.

(FROM OUR CAIRO CORRESPONDENT.)

The Ministry of Public Works has just issued a note on the control works which have been proposed for the regulation of the irrigation water supply of the Nile Valley and in connection with which a Commission was recently formed to study and report on the data on which these works are based.

It is pointed out that whilst the summer supply of water in the Nile is insufficient nearly every year for the adequate irrigation of the cultivated lands at present dependent on it, there is at the same time an insistent demand for expansion of the cultivated area, due to the pressure of a rapidly increasing population. The present increase is estimated at about 200,000 souls per annum, and as expansion must proceed at an equivalent rate until the limit is reached further control of the river is urgently required both to prevent the heavy loss due to the present unavoidable restriction of crop, and to provide additional water for development.

The total area of Egypt which can be cultivated is about 7,300,000 feddans. Of these, about 5,200,000 feddans are actually under cultivation, and of this total 1,200,000 feddans are still under the basin system of irrigation which produces but one crop annually. The maximum increase of area of cultivation in Egypt will be about 1,900,000 feddans, while about 1,200,000 feddans remain still to be converted from basin to perennial irrigation.

Requirements of Egypt.

As regards the water requirements of Egypt, it is to be noted that the intensity of cultivation is not uniform throughout the country, and that the cultivated area does not everywhere need the same amount of water per feddan. The causes are mainly variations of climate, and the fact that certain areas, as already mentioned, are almost entirely confined to basin irrigation.

It is computed that at present the country requires annually about 33,000 million cubic metres of water for the adequate fertilisation of its crops. In 1913-1914, a year of exceedingly low flood, about 41,000 million cubic metres passed Aswan between July, 1913, and June, 1914. This volume, which was the lowest ever recorded, would have been more than ample to meet all actual requirements if it had been distributed throughout the year to suit the demands of agriculture. The distribution, however, was so unequal that water passed uncontrolled to the sea at one period, whereas at another there was an actual shortage. This condition of excess at one period may be largely modified in a bad year, but cannot, owing to the impetuous advent of the Blue Nile silty flood, ever be entirely avoided.

Storage and regulating works will meet the deficiency as well as the requirements of the inevitable expansion of the present area both as regards quantity and time of supply, and it is estimated that a reasonable average rate will be the reclamation of waste land at the rate of 60,000 feddans per annum, and at the same time the changing from basin to perennial irrigation at the rate of 40,000 feddans per annum. If this is done, Egypt will have completed her

development to the utmost limit in about thirty-five years from now.

The Sudan.

As regards the Sudan, it was only in the early years of this century that development of the cultivated area was decided upon, and that to any extent summer water was used. In 1903 it was proposed to undertake experiments to test the feasibility of producing by irrigation exportable crops such as wheat, cotton, sugar, etc., and as it was foreseen that to obtain a favourable result it might be necessary to use summer water, and the available supply thereof was strictly limited, the Sudan and Egyptian Governments agreed provisionally to fix at 10.000 feddans the area in the Sudan which could draw summer water. This arrangement was made in view of the fact that the Aswan Reservoir rendered Egypt's position more secure in low years.

When in 1912 the Aswan Dam was heightened, and thus an increased supply of summer water was made available, the Sudan area was increased to 20,000 feddans, and up to date that figure has not been exercised in full. The Sudan now has a scheme in hand whereby an area of 300,000 feddans will be developed within the next few years, of which area about one-third will require water in the spring. This area forms only one unit of a total of about three million feddans which it may be possible to develop under perennial irrigation by about the end of the present century. It is pointed out, however, that Egypt will have reached her full development long before then—*i.e.*, in about thirty-five years—and that by that time the Sudan will only have been able to develop about one million feddans. Until this limit is being approached in the Sudan, it is therefore unnecessary to consider any further development.

Present and Future Water Requirements.

From careful investigations it has been computed that 50,000 million cubic metres of water per annum will meet the ultimate future demands for the perennial cultivation of 7,100,000 feddans, which is the maximum cultivable area in Egypt. The water required by the Sudan for the one million feddans which will have been developed by then will be about 6.000 million cubic metres per annum, and it is considered that with the works contemplated the Nile can well meet the demands of further expansion in the Sudan.

To meet these demands for water supply the volumes available in low years are naturally those which must be taken into account. Taking the 1913 flood, which was the lowest for over fifty years, as a minimum, provision must be made—if the present-day area is to be provided for—for the storage of about 2,000 million cubic metres of water to prevent a restriction in cultivation as took place in that year. The works contemplated are intended to meet the demands for water made by Egypt and the Sudan in the circumstances sketched above, but at the same time they are intended to meet the imperative need of saving Egypt from the effects of a high flood.

Control Works Necessary.

The following are given in the note as the works which must be ultimately constructed to assure adequate control of the river:—

1. A reservoir on the White Nile, with a masonry dam at Gebel Aulia, to increase Egypt's summer supply and afford a valuable measure of protection against high floods.
2. A small reservoir on the Blue Nile, with its dam at Sennar, to irrigate the Gezira plain.
3. A barrage at Nag' Hammadi to protect flood cultivation in the part of Upper Egypt as yet unconverted to perennial irrigation, and to supply it with summer water when conversion does take place.
4. A reservoir on the Upper Blue Nile to increase the Sudan's supply and aid in flood control.
5. A reservoir at Lake Albert to complete the storage necessary to meet the ultimate demands of Egypt.
6. A channel in the Sudd region to assure the Lake Albert reservoir water reaching the main Nile.

It is pointed out that the effect of carrying out these works in the order named will be to ensure that step by step as cultivation increases water can be made available to meet its needs even in the worst of years, and the series is so arranged that each work is an essential link in the chain that secures the prosperity of the Nile Valley. "Each link is needed not only when it is made, but when the chain is finished."

The following table shows the cost of each of these works and the dates on, or before, which they should be completed:—

White Nile Dam, 1925	£E2,500,000
Sennar Dam, 1924	2,350,000
Nag' Hammadi Barrage, 1925	1,500,000
Upper Blue Nile Dam, 1930	1,500,000
Lake Albert Dam, 1940	2,000,000
Sudd Channel, 1940.....	15,000,000

The directors of the National Bank of Egypt propose to pay a final dividend of 10 per cent. (£1 per share), making 14 per cent. in respect of 1919.

ENGINEERING.

Attaching Power to Ordinary Cycles.

To convert an ordinary bicycle into a motor-cycle has often been the aim of inventors and manufacturers, with the result that there are now several small petrol-engine attachments which can easily be fixed on a cycle frame. One of the latest, which has recently been shown at an exhibition, and which, of course, is of British design and construction, presents some very interesting improvements, for it has the important advantage of allowing the cycle to be propelled either by pedalling or by the motor at the will of the rider. The power unit can be attached to any make of cycle, either ladies' or gentlemen's, being fixed by means of a hinged slip on to the seat pillar tube, with two supporting stays. The engine is of the two-stroke type, and of 1 h.p., with magneto and clutch, giving free engine. The driving chain wheel is not attached to the spokes of the wheel but to the rim by means of five tubular spokes, and the controls are attached to the handle bar. The engine supplies the motive power when the rider requires it. It is sufficient to carry him up all but the very steepest hills without any pedalling, and, being placed over the rear wheel of the cycle, there is no inconvenience from heat or smoke. The weight of the cycle with the attachment is approximately 55 lb. as against 1½ cwt. to 2 cwt. which is the weight of the ordinary motor-cycle.

Danube-Salonika Canal.

It is reported that considerable progress is being made in Yugoslavia in the construction of railway lines in the interior, but the transit of goods through Fiume and other ports on the coast has become very difficult owing to the delay in settling the Adriatic question. The line Paris—Agram—Belgrade soon becomes congested, and, though railway communications from Salonika to Belgrade are in running order again, the journey still takes a considerable time. The Government is taking the question of transit seriously in hand, and by degrees the import and export trade of the new State should be freed from difficulties. In dealing with this subject, a correspondent in a contemporary discusses the project for a canal linking the Danube with Salonika. The utilisation of the great waterway to Serbia will undoubtedly prove a most important factor in the life of the new State, and the River Morava, which is the backbone of the country, will be utilised in conjunction with the River Vardar. This project has extensively been dealt with in notes that appeared in several issues of THE NEAR EAST soon after the Balkan War and during the recent war, and in which were pointed out the great benefits that Serbia would derive by the union of the two rivers, Vardar and Morava, forming an excellent waterway all along Serbia, with one outlet in the Ægean Sea, at a point south of Salonika, and another in the Danube. By carrying out this scheme, apart from the benefits of navigation in transporting products, etc., considerable water power could be secured at various points of the rivers, which would be utilised for industrial and agricultural purposes. It appears that the Yugoslavian Government is going to carry out the scheme proposed some years ago by a Serbian engineer—viz., the canal will start from the large village of Kevevara, which is situated at the junction of the Danube and the Morava, and, following the course of the latter river, it will join up with the Vardar near Koprulu, finally breaking off to connect with the port of Salonika. The total length of this waterway will be 600 kilometres, and ships, it is said, of 10,000 tons will be able to pass down all the way. The scheme differs very slightly from the one that was mentioned in THE NEAR EAST, but in the tonnage of the ships there must be some mistake.

A New Sweeping Machine.

How often have tourists in Near Eastern towns been driven away by the thick clouds of dust which only a moderate summer breeze suffices to raise to great heights! The remedy of sweeping the roads either by ordinary means or sweeping machines is often worse than leaving the dust alone at the mercy of the wind. There are modern methods by which such a scourge can be prevented, but for some reason or other they are very slowly introduced. Possibly the municipal authorities are not properly informed by their responsible engineers as to the merits of the newest mechanical appliances for the purpose. There are towns, however, in which modern sweeping machines are being used, and for preventing the raising of dust a sprinkling water-cart precedes it with more or less effective results. A new combined sprinkling and sweeping machine, which was noticed at a recent show, would undoubtedly be of interest to many municipal authorities in the East now that preparations for the approaching summer are under consideration. The machine is automobile, with a strong and compact frame. The tank is mounted upon bearers bolted to the frame. The distributing pipe is of cast iron, built up in sections, with machined joints, so that if any part is damaged it can be replaced without the expense of a complete new pipe. The down pipes are connected to the tank, and to the distributor by flexible compression joints. The distributor is fitted with a double row of jets placed one above the other, and capable of being used separately or together at the will of the driver. The jets are brought into operation by means of a lever placed in an accessible position on the left side of the driver. A special feature of the machine is that the water issues from two holes, which approach each other at an angle, causing the two streams to impinge one against the other and break into a flat fan-shaped spray of varying degrees of fineness. The sweeping arrangement underneath is very efficient, and is easily controlled by the driver from his seat.

GENERAL BANK OF GREECE.

Paid-up Capital, Drs. 3,000,000.

Head Office - ATHENS.

BANKING OPERATIONS:
Every description of Banking business transacted.

FINANCIAL OPERATIONS:
Investigations in connection with, and the promotion, organisation and financing of, Limited Joint Stock Companies, with a view to exploiting agricultural, industrial and mineral resources, executing technical works, etc.

COMMERCIAL AND SHIPPING DEPARTMENT:
Purchase and sale of goods on account of clients. Warehousing, Advertising and placing foreign products on the market. Agents for foreign companies and large commercial and industrial firms abroad. General Shipping Agents.

POPULAR BANK OF GREECE.

Head Office, ATHENS. Branch, PIRÆUS.

Correspondents throughout Greece.

Established June, 1905, by the National Bank of Greece and a group of Capitalists.

CAPITAL - Drs. 1,500,000.
RESERVE FUND - Drs. 2,500,000.
Deposits and Credit Accounts, Drs. 100,000,000.

The Bank specialises in the collection of Bills payable in Greece; it accepts goods on consignment, and undertakes their sale, and transacts every kind of Banking business.

General Manager: D. LOVERDO.

TRADE WITH THE NEAR EAST.

The Bank of Athens extends special facilities for business with the Near **East** to manufacturers, exporters and importers.

The Bank has offices in all the principal towns in **Greece,** also in **Egypt,** Cairo and Alexandria, in **Cyprus,** Limassol, in **Constantinople,** in **Smyrna,** and in **France,** Marseilles.

Inquiries from interested parties are invited.

BANK OF ATHENS.

PAID-UP CAPITAL : £1,920,000. **HEAD OFFICE IN ATHENS.**

London Office: 22, Fenchurch Street, E.C. 3.

COMMERCIAL BANK OF GREECE, LIMITED.

CAPITAL PAID-UP - Drs. 15,000,000.
RESERVE FUNDS - Drs. 2,845,010.45.

Head Office: ATHENS.

Branches:—**Piræus, Salonika, Patras, Volo, Syra, Calamata, Corfu, Cephalonia, Candia, Chios, Argos, Pyrgos, Vostizza (Ægion), Nauplia. Larissa.**

AGENTS IN ALL PARTS OF GREECE, THE LEVANT, AND ABROAD.

The Bank conducts every kind of Banking, Commercial and Stock Exchange business and extends special facilities to traders interested in business with Greece. It acts as Agent for many Foreign Banks. It is specially organised for Exchange, the execution of mail and cable transfers throughout Greece, and for the collection of clean and documentary Drafts.

MERCHANDISE DEPARTMENT:
The Bank undertakes the warehousing and sale of goods consigned.

GREECE.

Area 43,522 square miles. The cultivated area amounted to 5,745,300 acres, of which about 2,253,400 were under cereals, 518,900 under grapes and currants, 370,600 under oak trees, 295,500 under olives, and 2,223,900 were forests.

Population (1914), 5,000,000 approximately.

Chief Products (with average annual production):—Currants, 142,000 tons; wines, 3,000,000 casks; tobacco, 9,000,000 lb.; cereals, 8,000,000 bushels; olive oil, 200,000 casks.

The **MINERALS** of Greece include:—Iron, Marble, Magnesite, Emery, Lead, Lignite.

IMPORTS (1914), Old Greece only:—Total value £7,000,000, of which £2,000,000 from the United Kingdom; £1,800,000 from Germany and Austria Hungary; £1,000,000 from Russia.

EXPORTS (1914), Old Greece only:—Total value £4,000,000, of which £3,000,000 came to the United Kingdom.

COINAGE.—The unit is the Drachmæ, equivalent to a Franc (10d.). The current rate of exchange is about 32·20 Drachmæ to £1.

FREIGHT.—From England, 160/- + 10 % primage.

WEIGHTS AND MEASURES.—It was decided in 1898 to introduce the metric system. The change is to be gradual from the old system, which is:—Oke = 2·82 lb., stater = 123·20 lb., livre (Venetian) = 1·05 lb., baril (wine) = 16·33 imperial gallons, kilo = 0·114 imperial quarter, pike = ⅔ of a yard, stremma = ·242 of an acre.

BANK OF NATIONAL ECONOMY (of Greece)

Head Office: ATHENS.

Branches:

PIRÆUS, SYRA. PATRAS.

Capital Paid Up - Drs. 10,000,000.

Fully represented in all parts of the world for all kinds of commercial, financial, and shipping business.

President. L. EMBIRICOS. *Manager.* D. MIAOULIS.

BANK OF PIRÆUS.

For COMMERCE, INDUSTRY and SHIPPING.

Capital Paid-up - Drs. 5,000,000. Reserve Fund - Drs. 3,095,000.

OFFICES at PIRÆUS and ATHENS.

Every kind of Banking business transacted.
The Bank's connections throughout Greece enable it to offer foreign clients special facilities for the collection of Bills, etc.
Correspondence invited.

BANK OF INDUSTRY OF GREECE.

Head Office: 14, Stadium Street, Athens.

Capital Fully Paid-up - Drs. 15,000,000

The Bank has been established for the encouragement and development of Industry and Commerce, and undertakes every description of banking business.

BANK OF ORIENT.

Capital Paid up - Drs. 25,000,000

Head Office: ATHENS.

Branches: SALONIKA, SMYRNA, ALEXANDRIA, CAIRO, MITYLENE, SERRES, ZAGAZIG, MAGNESIA, PERGAMA, SOMA.

Every kind of Banking Business transacted

NEAR EAST COAL RESOURCES.

V.—ROUMANIA*

By John Kirsopp, M.I.M.E., F.G.S

According to the authorities, M. L. Mrazec and I. Tanasescu, the coals of this country may be grouped, according to geological age and quality, in four divisions: carboniferous, mesozoic, miocene, and pliocene coal and lignite. Carboniferous rocks containing tenticular seams of anthracite occur in the northern part of the Middle Carpathians, and this is mined on a small scale at Schela, in the Gorj district, analysis of which gives: Moisture, 6.54 per cent.; carbon, 90.04 per cent.; hydrogen, 1.31 per cent.; O. and N., 0.58 per cent.; sulphur, 0.33 per cent.; ash, 1.20 per cent. The output from this district has increased from 837 tons in 1900-01 to 2,500 tons in 1911-12, the statistical year being taken from April to March.

Bituminous coals occur in the upper valley of the Jalomitza River in both Liassic and upper Cretaceous rocks, and, although the coal is of superior quality, it is much crushed and the seams are very irregular. Analysis of the Brandus coal (district of Dambovitza) gives carbon, 72.49 per cent.; hydrogen, 4.80 per cent.; O. and N., 16.25 per cent.; sundry volatiles, 0.98 per cent.; ash, 5.48 per cent.; calorific value, 6,926 calories. Small miocene areas containing seams of black lustrous coal are found in the Bahna and Cerna valleys, having a calorific value of 4,500 to 5,000 calories. The most important fuels commercially in Roumania are the pliocene lignites, which can be divided into two classes, the black lustrous lower pliocene lignites of the Comanesti basin, and the upper pliocene brown lignites.

The Comanesti basin has an area of 100 sq. kilometres, in which a number of coal outcrops occur at various points. In the Supan valley at Galleon two seams occur, 1.05 m. and 0.80 m. respectively in thickness. The lignite is compact, black, and lustrous, does not disintegrate on exposure to the atmosphere, and does not coke. Analyses of coal from the Comanesti Asau-Vermasti localities of the Bacau district give: Moisture, 12.46 per cent.; volatile matter, 39.46 per cent.; fixed carbon, 40.04 per cent.; ash, 8.04 per cent., its calorific value varying from 5,000 to 6,200 calories. The output from this field increased from 10,155 tons in 1900-01 to 33,298 tons in 1911-12. The proved area of the Asau-Comanesti Lalcaia-Galleon and the Vermasti localities, in the district of Bacau, covers 15 hectares (37 acres), and contains a probable reserve of 2¼ million tons.

The upper pliocene lignites are found in several localities. In the district between the Danube and Oltul rivers, lignite seams with an average thickness of 2.5 m. outcrop at numerous points over an area of 140 by 30 km. (87½ miles by 13¾ miles), containing a probable reserve of ten million tons, and have been exploited at Valea Copcei, Cucesti, Isvorul, Anestilor, Strehaia, and Balta, in the district of Mehadinti.

Analyses of the Valea Copcei coal give: moisture, 32.07 per cent; volatile matter, 37.84 per cent.; fixed carbon, 17.61 per cent.; ash, 2.48 per cent.; sulphur, 1.59 per cent.; calorific value, 3,607 calories. The production of the Mehadinti district increased from 2,456 tons in 1902-3 to 17,359 tons in 1907-8, but decreased to only 1,786 tons in 1909-10, since which year no returns are available. Lignite-bearing beds underlie an area of about 80 sq. km. (30 sq. miles) in the district between Boteni and Curtea-de-Arger; two seams are known, the upper 0.50 to 0.70 m. thick, and the lower one 2.50 to 3.20 m. thick.

The lower one contains lignite of good quality, which is mined at several places, viz., Jidava, Poenari, Jugur, and Berevoesti, all in the district of Muscel. An average analysis of these coals gives: moisture, 22.22 per cent.; volatile matter, 42.48 per cent.; fixed carbon, 27.60 per cent.; ash, 7.70 per cent.; sulphur, 0.67 per cent.; calorific value, 4,348 calories. The production from this district increased from 3,316 tons in 1902 3 to 77,941 tons in 1911-12, the proved area of this field covering an area of 45 hectares (111 acres), and containing an estimated probable reserve of 13 million tons.

In the Jalomitza valley, an area of 45 km. (23 1-3 miles) is underlaid by upper pliocene strata containing two coal seams; the upper seam is from 3.90 m. to 5.10 m. in thickness, including partings, and the lower seam varies in thickness from 5 m. to 6.50 m., including several partings. The principal mining localities in this region are Margineanca-Fagetal, Sotanga-Aninoasa, and Vulcana-Pandele, in the district of Dambovitza, these coals analysing: moisture, 25.72 per cent.—22.34 per cent.; volatile matter, 45.73 per cent.—35.57 per cent.; fixed carbon, 15.55 per cent.—30.20 per cent; ash, 13.00 per cent.—11.89 per cent.; sulphur, 0.95 per cent.—1.91 per cent.; calorific value, 3,872—4,213 calories. The production from these fields increased from 16,528 tons in 1899-1900 to 126,196 tons in 1911-12. The mines at Margineanca are worked in concession by the State. The proved area of these localities covers 25 hectares, and is estimated to contain a probable reserve of ten million tons. In the Filipesti-de-Padure locality, in the district of Prahova, the coal analysed: moisture, 15.77 per cent.; volatile matter, 33.13 per cent.; fixed carbon, 39.86 per cent.; ash, 11.24 per cent.; calories, 3,802; the proved area covering 5 hectares (12 acres). The production here fell from 6,800 tons in 1899-1900 to 2,090 tons in 1911-12. Other areas where lignite beds are known to occur are the Subcarpathes of the Moldavie Meridionale, Filarel (Roumania Plain, and at Marculesti (Plain of Baragan). Petroleum also occurs in the localities of Gura-Oenitei, Moreni, Baicoi, and Tintea, and asphalt associated with the lignite-bearing formation at Matila, Pacureti, and elsewhere.

In 1909-10, 65 per cent. of the total consumption of lignite on the Roumanian railways was from the mines of Margineanca, Sotanga, and Aninoasa (Jalomitza basin), 29 per cent. from the mines of Jidava Poenari, and Schitu-Golesti (Muscel district), and 6 per cent. from the mines in the Comanesti basin (Bacau district), Valea Copcei, and Strehaia Mehedintzi district, and Filipesti-de-Padure (Prahova district), their total consumption of fuel being lignite 109,021 tons, 32,637 tons of coal, and 138,664 tons of petroleum residue, an excellent fuel being produced by the utilisation of lignite into briquettes with petroleum residues, the fuel so produced being of excellent quality and cheaper than Welsh coal.

There is an important maritime trade from the port of Braila, on the Danube, coal from the mines of the Muscel district being sent by water from Schilu-Golesti to Braila, a distance of 364 km. (227½ miles), prior to the European war, the price per ton on barge being 9.50 frs. (7s. 6d.) and at Braila 20.55 frs. (15s. 10d.). The output of the Dimbovitza mines was barged at Doicesti, 309 km. (193⅛ miles) from Braila, the price being 9.50 frs. (7s. 6d.) on barge, and 18.77 frs. (14s. 10d.) at Braila, and that of the Baian district, at Asau, 228 km. (142½ miles) from Braila, the price being 16.00 frs. (12s. 8d.) on barge, 22.85 frs. (18s. 2d.) delivered at Braila. The total production of coal for the whole country increased from 63,328 tons of the value of 478,960 frs. (£18,991=5s. 11d. per ton) in 1900-01, to 242,020 tons of the value of 2,703,260 frs. (£107,188=8s. 10d. per ton) in 1911-1912. The probable reserve is estimated to amount to 36 million tons.

Egypt.

The discovery of workable coal would be of immense importance to this country, and several efforts have been made to test some of the more promising areas without any tangible result. Lignite and minute coal seams are not however, entirely absent. In the deposits of Oligocene and Eocene age in the petrified forest east of Cairo a boring was made at Bir el Fatim, but no records were retained. In the Gasr el Saga series of the Middle Eocene, fifty miles south-west of Cairo to the north of Birket (in the hills adjoining the great lake occupying the deepest part of the Fayum depression) highly lignitic beds are found, and certain beds of the series further to the west contain very thin seams of true coal, but not known to exceed one or two millimetres (1-3 to ½ of an inch) in thickness.

In the Nubian sandstone in Upper Egypt and the Oases, a boring was put down at Redesia, a village to the south of Edfu, which passed through thin beds of bituminous matter at different depths, but entered water-bearing stratum at 99 metres (330 feet), which hindered operations, but it was finally continued to 258 metres (860 feet) without further evidence of carbonaceous material. Probably the cause of this boring operation was the attention drawn to old letters written by a Mr. Neutinger between 1844 and 1854, asserting that between 47 and 92 metres depth five coal seams were met with, the lowest one 2.25 m., of good coal, in a locality suggested as Gebel Zabara, about five miles east of Edfu station.

* The previous articles of this series appeared in THE NEAR EAST on October 10, November 7, November 28 and January 9.

TRADE OPPORTUNITIES.

Contractor having several large contracts in the NEAR AND FAR EAST which involve excavating canals, river improvement work, excavation for docks and harbour improvements, etc., wishes communicate those having excavating equipment, new or secondhand to offer. For convenience prefer communicate Eastern representative. Write Box 154, "The Near East," 1, Devonshire Square, London, E.C. 2.

ARMENIA'S ECONOMIC DEVELOPMENT.

RELATIONS WITH GREAT BRITAIN.

Mr. E. A. Brayley-Hodgetts presided at a meeting of the Council of the British-Armenian Chamber of Commerce, which was held at the London Chamber of Commerce on March 3, when those present included Boghos Nubar Pasha, the Armenian Patriarch of Constantinople, Professor Thoumaian, deputy chairman, Sir J. Roper Parkington, Mr. E. R. Bartley Dennis, M.P., Mr. James A. Malcolm, and Mr. S. P. Stephens (hon. treasurer).

Mr. E. A. Brayley-Hodgetts, in introducing Boghos Nubar Pasha, said that that name was historical and revered by every student of the history of the British Empire. It was unnecessary for him to refer to the services which Boghos Nubar's father had rendered to this country and to Egypt, but it was pleasant to reflect that that father's son was so nobly following in his parent's footsteps. He was devoting himself with rare ability and assiduity to the service of his own country, and in doing so he was promoting the best interests of the British Empire, which was identified with the advancement of civilisation and culture, and more particularly in bringing about a union of East and West. He need not refer to his arduous labours on behalf of his ancient and noble country at the Peace Conference in Paris and now in London. He felt that he had achieved a great work in the face of many difficulties, and he was grateful that he had been able to find time to attend this meeting. The British-Armenian Chamber of Commerce had no political objects. It was a purely commercial body, but he thought it would perform a very useful function in assisting the energetic and industrious Armenian people to develop the undoubted wealth of their country and in promoting trade relations with Great Britain.

Boghos Nubar Pasha said he was particularly touched by the chairman's reference to his father. It was a surprise—indeed, a very agreeable surprise—for him to learn that, with the co-operation of their friends in England, a British-Armenian Chamber of Commerce was already founded. As soon as the Armenian State was set up by the Peace Conference—an event which they all hoped might not be deferred—one of their first cares and duties would be to establish commercial relations with the European countries, and they could not but view with lively gratitude the fact that Great Britain was taking the lead in that direction. Armenia, which until now had not been able to undergo any economic development under the barbarous Turk, would not fail, under the invincible industry of Armenians, to progress by leaps and bounds. Their first efforts would be directed towards the restoration of their agriculture in order to assure immediately the subsistence of the people on the produce of the country itself. As soon as that was done they would be able to export their produce. But to attain that double object they would need, above all, agricultural machinery and implements, which they could only get from abroad. And it was in that vast field open to activity that an institution such as the British-Armenian Chamber of Commerce would be of the greatest value. Next to agriculture, and perhaps concurrently, they would have to develop their subsoil, which possessed immense unexploited riches. Experts who had explored the country attested to the existence of great mineral deposits. Copper, silver, lead, iron, coal, oil, and other minerals were to be found in Armenia. But the co-operation of their friends was necessary for them to accomplish such a task. He was confident that Great Britain, who had so powerfully contributed by the triumph of its arms to the liberation of Armenia, would not be lacking in enterprise and sympathy to help Armenia in peace to their mutual advantage.

The Patriarch of Constantinople, after being welcomed by the chairman, addressed the meeting in Armenian, Professor Thoumaian interpreting. Although commerce, he said, did not come within his ecclesiastical sphere, yet as the representative of a prominently commercial people, when he was invited to be present, he at once consented. He took that opportunity of expressing his hearty appreciation of their efforts and interests in the commercial aspects of Armenia. In order that Armenian commercial activities might attain their full development Armenian independence must be an accomplished fact. Mere independence, however, was not sufficient. His people had been so terribly and cruelly treated that without outside help it would be difficult, and would take a long time, to develop their full activities. For that reason they wanted British help above all. The soil was fertile, but the subsoil was still richer in mineral wealth. He himself had resided for many years in Armenia, and knew personally that in many places the ores were almost exposed at the surface. He heartily welcomed that beginning which was certainly in the right direction, and he hoped that the Chamber would be an intermediary between the two nations of Great Britain and Armenia. When British enterprise and Armenian perseverance and endurance were coupled together the prosperity of New Armenia would be assured.

It is understood that Mr. F. W. Shannon, of Shannon, Ltd., will shortly be visiting Egypt.

Mr. D. Zebitch, of the Anglo-Serbian Commercial Trust, Ltd., left for Yugoslavia this week.

The Dunlop Rubber Company has completed the purchase of the cotton manufacturing business of James Hoyle and Sons, Ltd., Acre Mills, Hebden Bridge, with which the Dunlop Company has had business connections for some time.

LANCASHIRE COTTON.

(From Our Own Correspondent.)

Manchester, Monday.

It is not possible to record any increase of business in the market during the past week, and the tone has continued quiet. The opinion is held in many quarters that the correct policy to adopt at the moment is to hold aloof, as there is a possibility of lower values. The political situation in Germany has had an unsettling influence upon trade. Although fluctuations continue to take place in Egyptian cotton prices, the tone may be described as firmer. It is anticipated that the Egyptian market will be controlled in some form or other until the end of this season, and this should mean stability of values. It is now realised that the crop will be smaller than the early estimates. There has been a slight improvement in the inquiry in Egyptian yarns, but sales of weight have been few and far between. Producers remain deeply sold, but since the beginning of the year there has been a tendency for order lists to run down in some quarters. Limited operations have occurred in piece goods for Egypt, and no better news is coming through from Constantinople. Demand for India has been very poor, business being confined to sorting up lots chiefly in finishing and printing styles. A fair amount of activity has shown itself for China in a variety of goods, and more producers are selling their production into next year. Rather less activity has been reported for South America. The home trade has given steady support in fancies. A limited trade has transpired in American yarns for home use, but moderate contracts have been put through in bundles for India.

NEAR EAST MARKETS.

LONDON PRODUCE REPORT.

Currants.—The market has been more animated during the past week, but buying still remains very restricted.

Sultanas.—There is a fairly firm demand for this commodity, and the market could absorb very considerable supplies.

Sugar.—There has been a pronounced lack of business in raw, but prices have been fully maintained, which clearly emphasises the general position with regard to stocks. A steady tone has characterised the refined market. Prices in America have declined slightly. There is no fresh news from Cuba.

Coffee.—Sales have been brisk, and the tone of the market has been strong, particularly as regards qualities of Costa Rica and East Indian, supplies of which are not nearly sufficient to meet requirements. Prices here have ruled above the level obtaining in America, which should attract consignments of Costa Rica. Prices for various qualities here ruled as follows:—Costa Rica has been done at from 170s. to 180s., Mocha at from 170s. to 186s., Indian at from 158s. to 167s., and Brazil from 128s. to 131s. The futures market has been steady. Quotations are for May 125s. 6d., for July 125s. 3d., for September 121s. 9d., and for December 119s. 6d.

In their weekly report Messrs. Reynolds and Gibson state that with the steady rise in the dollar exchange a gradual increase in values might have been expected to be seen in the New York market. Possibly merchants are confining themselves to very conservative commitments until confidence can be felt that rates are really stabilising themselves at, or about, to-day's level. Brazil does not offer freely meantime, and if she can continue to hold firm, any sustained inquiry from the United States should gradually improve prices, especially should Europe be able to increase her demands. Some nibbling has been heard of from Finland, no doubt a channel through which a reopening of trade with Russia would come. It's a far cry yet before anything in force, we fear, could materialise in trade from that quarter. We mention it merely as a passing rumour and for what it is worth. There are, however, possibilities before this season has run its course, and this period of quietude might well prelude a return to activity and completely changed conditions. Coffee could have been bought March 17 to 21 last year, December position, at 13.75 to 14.00, and sold in June at 24.00. There are many things that might move the market mercurially before this season is over.

Oilseeds.—Linseed has been closing rather quieter, La Plata being done at 53s. Rapeseed has been steady, with Toria to Hull, March-May, coming to business at 51s. 6d. Cottonseed has been very dull, Egyptian being done round about 27s. There have been offers for season of 60s., but 5s. more can be obtained on the Continent, so little business is likely here pending a further advance in quotations.

Oilcakes, etc.—Linseed oil has been steady at 125s. spot and 123s. March-April. Rape oil closed firm at 137s. for refined and 128s. for crude. Cotton oil has been rather quiet, with Egyptian deodorised quoted 130s. and crude 115s. Turpentine has firmed to 246s. 6d. spot, while the quotation for May-August is 184s., and for July-December 143s. 6d. The position as regards oilcakes is unchanged.

OPIUM MARKET.

Messrs. Barker Brothers, Smyrna, report for the week ended February 20:—We have to report a fairly active market this week, with sales amounting to 42 cases of our usual druggist manufacturing qualities at 15s. 6d. to 20s. per lb. c.i.f. port of destination. The weather has been exceedingly cold, with 10 to 20 degrees centigrade of frost in Karahissar, Konia, and other high plateaux opium districts; this protracted cold weather stops all field work, and, naturally, will be conducive to a shorter crop this year. The exchange dropped a bit at the beginning of the week, but recovered again yesterday. We quote cheque on London ps. 414 per pound sterling, and 0.82 dollars per Turkish paper pound. The arrivals are 1,490 cases, against 165 at same date last year. We reckon our opium year from June to May; therefore above arrivals are from June 1, 1919.

For the week ended February 28 Messrs. Barker Brothers state:—"We have to report a very firm market, with sales amounting to eighteen cases Karahissar at 18s. 6d. per pound c.i.f. Two large buyers were on the market, but sellers refused their bid of 18s. for Karahissar owing to our stock of this quality being almost depleted

Greek Five per Cent. Funding Loan of 1893.—Coupons due April 1 should be presented for payment between 11 and 2 at Messrs. C. J. Hambro and Son, 70, Old Broad Street.

Greek Four per Cent. Rentes, 1889.—Coupons due April 1 should be presented for payment between 11 and 2 at Messrs. C. J. Hambro and Son, 70, Old Broad Street.

SHIPPING INTELLIGENCE.

Forthcoming Sailings.

The Bibby Line s.s. Gloucestershire, for Marseilles, Port Said, Colombo, and Rangoon, will close for cargo at Birkenhead on March 24.

The Henderson Line s.s. Mandalay, for Port Said and Rangoon, will close for cargo at Glasgow on March 24.

The Papayanni (Ellerman Lines) steamer Polo, for Malta and Alexandria (taking cargo for Beyrout, Alexandretta, Mersina, Jaffa, Cyprus, etc.), will leave Liverpool on March 27.

The Papayanni (Ellerman Lines) steamer Belgravian, for Algiers, Smyrna, and Constantinople, will leave Liverpool on March 24.

The Moss Line s.s. Siptah, for Algiers, Syra, Smyrna, Constantinople, and Beyrout direct, will leave Liverpool on March 25.

The Anchor Line s.s Freinfels, for Bombay, will close for cargo at Liverpool on March 23.

The Cunard s.s. Corby, for Gibraltar, Malta, Patras, Syra, Piræus, Smyrna, and Constantinople, will close for cargo at Liverpool on March 20.

The Bibby Line s.s. Gloucestershire, for Marseilles, Port Said, Colombo, and Rangoon, will close for cargo at Birkenhead on March 24.

The Clan Line s.s. Clan Robertson, for Bombay and Persian Gulf, will close for cargo at Birkenhead on April 1.

New Ellerman Liner.

There was launched recently by Messrs. Swan, Hunter, and Wigham Richardson, Ltd., at Wallsend-on-Tyne, the single-screw steamer City of Brisbane, built to the order of the Ellerman Lines, Ltd., of Liverpool. The christening ceremony was performed by Mrs. Stevenson, wife of Captain W. M. Stevenson, Marine Superintendent of the Hall Line, Liverpool. The City of Brisbane has a cruiser-shaped stern, and her leading dimensions are 462 ft. 9 ins. in length between perpendiculars, 58 ft. 5 ins. in width, with a moulded depth of 33 ft. 5 ins. The ship is being built to Lloyd's highest class, and is designed to carry nearly 12,000 tons d.w. on a draught of 27 ft. 10 ins. The engines, which consist of double reduction geared turbines of the Brown-Curtis type, and also the boilers, are being built by the Wallsend Slipway and Engineering Co., Ltd., Wallsend-on-Tyne.

OIL NOTES AND NEWS.

Position at Baku.

The directors of the Baku Consolidated Oilfields have issued a circular in which they state that telegraphic advices from Baku, dated March 2, show that industrial life follows its usual course, though the exploitation of the oilfields is retarded at present by the scarcity of drilling material and the lack of transport facilities. Steady progress is being made in consolidating the working of the four amalgamated companies, and the monthly production of petroleum from old wells is maintained at about 435,000 poods, or 7,000 tons It is desirable, however, that provision should now be made for development work on a scale commensurate with the magnitude and importance of the company. With this object in view large orders must be placed for drilling machinery, casing, etc., and substantial cash deposits paid in respect of such orders. Not only have the prices of all oilfields material risen enormously owing to the war, but the pressure on the resources of manufacturers entails considerable delay in obtaining deliveries. It would, therefore, be unwise to await the re-establishment of normal conditions before placing orders for the necessary machinery and plant. It is added that the financial position of the undertaking is thoroughly sound, and that its properties have been uninjured by military measures or civil commotion.

U.S. Fuel Oil Stations.

An announcement has been made by the United States Shipping Board regarding the establishment of fuel oil stations to supply the bunkering for vessels of the United States Shipping Board outside the United States. The stations for which tentative arrangements have been made include, it is understood, Constantinople, Bizerta in Algeria, and Colombo, each having three tanks with a capacity of 165,000 barrels. It is expected that these stations will be ready for operation shortly.

Since the inauguration of civilian aviation in Great Britain on May 1, 1919, until March 6, 1920, the records of the Handley Page commercial aeroplanes are as follows:—Total number of passengers carried, 4,217; total amount of freight carried, 50,653 lb.; total mileage covered, 82,428. The above figures include passenger flights at Cricklewood, London, in the United Kingdom and foreign countries, and passengers and freight carried on the London, Paris, and Brussels air services. On the Handley Page continental air service between September 2, 1919, and March 6, 1920, 764 passengers and 23,344 lb. of freight have been carried over a distance of 47,545 miles.

COMPANY MEETING.

IMPERIAL BANK OF PERSIA.

The thirtieth ordinary general meeting of the Imperial Bank of Persia was held on March 15 at the Cannon Street Hotel, Sir Hugh S. Barnes, K.C.S.I., K.C.V.O., the chairman, presiding.

The manager and secretary (Mr. Sydney Rogers) having read the notice convening the meeting and the auditors' certificate,

The Chairman said: Gentlemen,—Our financial year ends, as you know, on September 20 Therefore, as you will remember, the first half of the year with which we are now dealing was an unquiet period, owing to the disturbances I alluded to last April —namely, the Jungalee rebellion at Resht, and the unsettled conditions in the South, following the investment of Shiraz by the Kashgais. But since April, apart from some symptoms of unrest here and there, and the anxieties connected with the disturbed conditions beyond the northern frontiers, Persia has been at peace. Under the wise administration of his Highness Vossough ed Dowleh, the present Prime Minister, and of his colleagues, the country is gradually settling down. Business is reviving; all our branches have been actively at work, with the exception of Sultanabad, which shortage of staff has prevented our reopening, and if, as we shall all devoutly hope, Persia is not exposed to any fresh attack from without, either in the form of military operations or of aggressive Bolshevist propaganda, there is reason to believe that the country will speedily recover from the effects of the war and regain its former prosperity.

The period since last spring has been distinguished by three notable events. First, the conclusion of the important Anglo-Persian Agreement, which was signed in Teheran in August last. Secondly, the memorable visit to this country of H.I.M. the Shah, accompanied by his distinguished Foreign Minister, Prince Firouz Nosrat ed Dowleh; and, lastly, the grant to the Persian Railway Syndicate of permission to carry out the survey of a railway from the Mesopotamia border through Hamadan to Teheran, with a branch to Enzeli on the Caspian. No events could show more clearly the progressive character of the present Government and their determination not to be left behind in carrying out their share of the work of reconstruction which must everywhere follow the war. His Majesty's visit can hardly fail to strengthen and confirm the friendly relations which have so long existed between our two countries.

The Anglo-Persian Agreement.

You will remember that under the Agreement the British Government undertakes to supply the Persian Government with expert advisers in some of the departments of administration. For the most important of these posts—the Financial Adviserships —Mr. Sydney Armitage-Smith, C.B., a very able and distinguished Treasury official, has been selected, and he sailed for Persia ten days ago. I need hardly say that it will be not only the business, but the privilege and pleasure, of the officials of the bank as the State Bank of Persia, to do all in their power to assist and co-operate with the Persian Government and their official adviser in the important work of financial reform, on which the progress of the country will so largely depend. Another matter provided for by the Agreement is the revision of the Customs tariff, which is now, I believe, under discussion in Teheran.

You will also have seen from the statement which appeared in the newspapers that the bank is one of the members of the Railway Syndicate. I venture to think that the Persian Government have shown much wisdom in deciding that the first railway to be made should be one connecting their capital with Baghdad. When the gaps in the Baghdad railway are completed the construction of the Persian line will place Teheran in direct railway communication with Europe. The effect on the trade and general business of the country cannot fail to be considerable, and the project is one more likely than any other to be rapidly remunerative. It is also hoped that the line from Mohammerah *via* Dizful to Hamadan, which was partially surveyed by the Railway Syndicate before the war, will at a later date be taken in hand. This is an important line, as it will provide the fertile districts of North-Western Persia with access to the Persian Gulf by the shortest route. Of course, the ability of the Persian Government to finance these and other great projects will depend entirely on sound financial administration and the increase of revenue which may confidently be expected to follow.

I may add that in May last we decided to open an agency in Bombay. We expect the agency to be of great value in financing the increasing trade of India with Persia. In saying that trade with India is increasing, I may explain that this is an inference drawn from the active demand for exchange on India during the past year, and also from the returns of the receipts of the Southern Customs, which have been very satisfactory.

I will now draw your attention to the balance-sheet. Although the past year has not been free from difficulty and anxiety, I think you will agree that the figures we are able to present to you show increased strength and progress and a satisfactory extension of business, the total on each side of the account amounting to no less than £10,076,808, as against £7,716,747 a year ago.

The reserve account, you will see, now stands at £250,000. Notes in circulation have increased from £667,153 to £1,169,201. Deposits have risen from £1,789,368 to £2,830,064. Bills payable are £5,184,733, against £4,337,837. On the other side of the account, cash in hand, at bankers, and money at call in London are £2,103,003, while last year they stood at £1,392,389. A satisfactory feature is that Treasury Bills have decreased from £2,350,000 to £1,000,000, showing a greater utilisation of our resources in the business of the bank, whilst investments, now standing at £2,731,079, and consisting largely of National War Bonds, mostly redeemable at a short date, will give you an idea of the support the directors have thought it their duty to give to the Government towards financing the large commitments of the nation for the cost of the war. The increase in bills discounted, loans, and advances from £1,996,274 to £3,241,933 is another indication of the extension of the bank's business in Persia arising from the causes I explained to you last year.

Appropriation of the Profits.

Of the profit and loss account I need say very little, as the figures are much the same as last year. The net profit, after providing for all charges, including income-tax, excess profits, depreciation of investments, and an ample provision for all bad and doubtful debts, amounts to £80,235 3s. 8d.—only £2,901 less than that of last year. The sum brought in is £27,388 3s. 10d., making a total of £107,623 7s. 6d. Of this total the amount due to the Persian Government absorbs £4,814 2s. 3d. We have allotted £5,000 to writing down our bank premises account You will, I am sure, be glad to see that we have again added £30,000 to reserve; £40,000 represents the two dividends paid of 3s. and 5s. per share, and we carry forward £27,809 5s. 3d. In all the circumstances I think that you may regard these results as satisfactory. I would ask you to bear in mind that Persia is not yet out of the wood. There are obvious risks and dangers to the peace of the country arising out of the state of affairs in the North, on the Turkish and Russian borders, which it would be foolish to ignore. It is essential for the present that we should be more than usually cautious and conservative in our finance.

The report and accounts were unanimously adopted. The retiring directors, Mr. H. E. R. Hunter and Colonel Sir A. Henry McMahon, G.C.M.G., G.C.V.O., K.C.I.E., were re-elected, and Messrs. Kemp, Sons, Sendell, and Co., chartered accountants, were reappointed auditors to the bank.

On the motion of Sir J. Rees, seconded by Colonel Westropp, a vote of thanks to the chairman was passed, and the proceedings then terminated.

COMPANY NOTES AND REPORTS.

Bengal Dooars Railway.

The report of the Bengal Dooars Railway Company for the year ended September 30 states that the capital expenditure during that period amounted to £8,166. The results for the year were as follows:—Gross earnings, Rs.16,62,419; decrease, Rs.77,247; working expenses, Rs.8,59,620; increase, Rs.1,24,132; net earnings, Rs.8,02,799; decrease, Rs.2,01,379; net earnings in sterling (less Indian income-tax), £50,175; decrease, £12,586; gain by exchange, £6,492; increase, £2,024. The amount at credit of net revenue account is £50,623 Out of this sum the directors have placed £4,000 to credit of reserve fund, bringing it, with interest, up to £163,107, and the directors recommend a final dividend of 3½ per cent. on the ordinary stock and a bonus of 2 per cent. (both subject to tax), carrying forward £24,623. Meeting, Gresham House, E.C., March 25, 3.15 p.m.

Constantinople Telephone.

The United Kingdom representative of the Constantinople Telephone Co., in a circular to holders of obligations, announcing that a meeting will be held at Winchester House on March 24, states that the unpaid interest for the war period and the amounts owing to the contractors at the outbreak of war has engaged the serious attention of the directors. The company claims from the Turkish Government indemnities which include arrears of interest, but no progress can yet be reported. The directors propose the immediate discharge of these arrears by the issue of certificates bearing interest. The interest, including the coupon due July 1, 1919, amounts to £30 on each obligation. The total tax per obligation is £9, which makes the amount due on each obligation £21. It is proposed to issue a certificate for an even £20, and pay the balance of £1 in cash. The certificates will fall due for payment in 1934, and will carry 6 per cent. per annum, having half yearly coupons for 12s. each. It is proposed at the same time to defer the payment of the principal sum of the obligations for five years to June 30, 1934, and to extend the right of conversion into shares from June 30, 1917, to June 30, 1923. The total overdue interest on obligations, including the July, 1919, coupon, is £60,000, and the amount due to contractors and others is £40,000. It is intended to issue similar certificates to the contractors. It is proposed that the coupon due January 1, 1920, shall be paid in cash. The working since taking over the undertaking on April 1, 1919, justifies the expectation that in the absence of any further adverse exchange conditions or other untoward circumstances arising, the interest on the obligations and certificates will be duly met. At an informal meeting of a number of large holders of obligations recently held, it was unanimously agreed to accept the above proposal. At a meeting of the largest creditors it was also agreed to accept the proposal. The directors are advised that there is no provision in the statutes of the company or in Turkish law whereby a majority can bind a minority of holders in such matters. The acceptance of the scheme is therefore a matter of individual judgment, but the directors are not prepared to proceed with it unless it be generally approved. Attendance at the meeting, when the whole position will be considered, is particularly invited.

A branch of the Imperial Ottoman Bank will be opened at Tunis on April 1 next.

The directors of the Eastern Bank recommend a final dividend on shares numbered 1 to 150,000 of 4s. per share, less tax (making 8¾ per cent. for the year), placing £40,000 to the reserve fund, and carrying forward £29,951.

SUPPLIES AND PRICES IN TURKEY.

STAMBOUL, February 21.

Imports.

In manufactured goods the market has been quieter than during the preceding weeks. Transactions are further reduced owing to the lack of demand for Russia and Anatolia. This circumstance, together with the enormous present stocks, has caused prices to fluctuate notwithstanding the decrease in arrivals from England and the constant rise of prices at the centres of production. Owing to the stagnation the restriction in the circulation of money has made itself more and more keenly felt.

This movement comes to add its weight to other difficulties, such as the exorbitant increase in the rents of shops and warehouses, which, in general, have increased more than tenfold in the interval of one year.

Produce.

Sugar.—The rise in prices continue, aggravated by the firmness of prices ruling at centres of production, the lack of arrivals, and the rise of the dollar. Present quotations: £107-108 (against £102 last week) per ton for sugar in transit, and £T.56-57 per 100 kilos in Customs. The stock here is still further reduced. It is estimated at about 100 wagons.

Coffee.—This commodity has risen by several piastres per oke. Rio in transit quoted at Ps.62-75, according to quality. Santos in transit quoted at Ps. 75-85, according to quality. For coffee in Customs prices are increased by Ps.16 per oke.

Oil.—Prices stationary at £T.7.40-7.50 per case. No arrivals this week.

Exports.

The market is generally calmer owing to the slackening in the demand and the progressive exhaustion of stocks.

Opium.—Fifty cases have been sold at the same prices as those realised last week—namely, £T.9½-£T.9¾ per oke for druggist and £T.11 for fine.

Cereals.—The heavy arrivals from the interior have again brought about a fluctuation in the prices of a piastre per oke. Wheat (tender) I., Ps.15; (tender) II., Ps.14½; (hard), Ps.13¾; barley, Ps.6¾-7. The arrivals for the week have risen to 240 wagons of wheat, 50 of barley, and 31 of flour. Flour has fallen by £T.½ per sack. Native at £T.13-13½ per sack, American at £T.14.

AYAHS' HOME,

26, King Edward Rd., South Hackney, London.

ESTABLISHED 1825.

IN CONNECTION WITH THE LONDON CITY MISSION.

Hindustani spoken. Ayahs boarded and lodged at 18s. per week each until their Return Passage is paid or a Situation secured for them to return. Ayahs met at any Dock or Railway Station in London. Experienced, well-recommended Ayahs taken entirely off Ladies' hands for a certain payment, which differs according to time of year. Ladies proceeding to India or China requiring an Ayah can generally obtain one by applying to Mrs. FLETCHER, Matron.

(Over 80 Branches in the Near East.)

The Bank has been established for over 55 years, and has its own Branches or Agents in every important commercial town in the Near East.

The Offices of the Bank at 26, Throgmorton Street, London, and 25, Pall Mall, Manchester, can now enter into transactions with all the above-mentioned places, subject to British Government regulations and local restrictions where in force.

Manufacturers, Traders and others are invited to correspond with the Bank, where all possible facilities will be afforded for the re-opening of business.

The Bank makes advances upon Bills of Lading and other export documents.

Drafts and telegraphic transfers issued.

Letters of credit granted.

PROPOSED YUGOSLAV INDUSTRIAL BANK.

The Department of Overseas Trade are informed that the Minister of Mines and Forests of the Kingdom of the Serbs, Croats, and Slovenes recently convoked a meeting of all the heads of the provincial Governments, at which it was proposed to establish a big "Privileged Industrial Bank." The object of this bank would be to assist in financing all industrial enterprises in the country, apparently with a view to establishing a form of nationalisation.

The project has emanated from the idea of safeguarding the exploitation of the national resources of the kingdom. The function of this bank will be to contribute to the national organisation of industry, which, in the opinion of the promoters of this scheme, should be established and exploited under native control as far as possible, until it becomes completely independent of foreign capital.

A capital of one hundred million dinars is at present promised as a preliminary effort. It is proposed to issue shares, 50 per cent. of which will go to private individuals, the remainder being taken up by the State. The State would not, however, acquire its shares by payment from Treasury funds. Its participation would consist in investing 50 per cent. of the shares which revert to it in virtue of the nationalisation of industrial enterprises operating by the aid of foreign capital. In this way it is considered the Government would establish sound relations with all the industrial undertakings of the country. The bank would seek to develop industry and improve economic conditions generally, and its duty would be to watch over and co-ordinate all effort in this direction. There is not yet, however, any very clear definition of the scheme, which is apparently still in a preliminary state.

NEW COMPANIES.

British Sinai Petroleum.

The British Sinai Petroleum Co., Ltd., has been registered, with a capital of £500,000 in £1 shares. Objects: To acquire and turn to account any oil, petroleum, and mineral-bearing lands, and claims, options, and concessions over such properties, and to enter into an agreement with the British Burmah Petroleum Co., Ltd. Minimum cash subscription, seven shares. The subscribers are to appoint the first directors. Registered office, 6, Queen Street Place, E.C.

Levant Iron and Machinery.

The Levant Iron and Machinery Co., Ltd., has been registered with a capital of £25,000 18s. in 5,000 6 per cent. cumulative preference shares of 1s. each. Objects: To carry on at Constantinople and elsewhere the business of importers of and dealers in metals, agricultural implements, electrical, and other machinery and implements, etc. The first directors are: W. J. Whittall, Impasse Whittall, Grande Rue de Moda, Constantinople; G. A. Chisnell, 146, Grande Rue Mahmondich, Galata, Constantinople. The Board of Trade authorises the company to acquire parts of the undertakings of J. W. Whittall and Co., Ltd., and George Chisnell and Co., Ltd., the books and documents of which undertakings are liable to inspection under the Trading with the Enemy Act. Registered office: 8, Serjeants Inn, E.C.

Assam Oil.—The directors of the Assam Oil Company have declared a final dividend for the year 1919 of 3½ per cent. on the preference shares, payable March 31 to holders registered March 24.

Mysore Gold.—The transfer books in respect of the new shares Nos. 610,001/1,220,000 were closed on March 15 for the purpose of preparing notices of the instalment of 2s. 6d. per share payable on April 1.

Sir William S. Meyer, late Finance Member of the Government of India, will read a paper before the Indian section of the Royal Society of Arts on March 19 on "The Indian Currency System and Its Developments." The chair will be taken by Lord Chalmers.

ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Street, Monday.

There has been rather more activity this week in Egyptian securities with a certain amount of irregularity in prices. On the whole, the tendency has been a favourable one.

In Government stocks Egyptian Unifieds are closing a point higher at 75⅜, and the 3½ per cent. prefs. are ¾ up at 62½; but, whilst there has been a fairly large turnover in the former, business in the latter has been very limited owing to the great scarcity of sellers. City of Alexandria bonds have improved half a point to 66.

In bank shares Nationals, after rising to 23¾ on the excellent final dividend of £1 per share, making 28s. for the whole year, relapsed on profit-taking to 23, but are closing only 3-16ths lower at 23 5-16; Agriculturals, after losing ¼, close only ⅛ down at 5 7-16, and the prefs. are 1-16th off at 6 7-16. Anglo Egyptian Banks have recovered ¼ to 20. Ottoman banks are half a point down at 10¾.

In land shares the market has been very firm. Aboukirs have improved 6d. to 45s. 6d. Béhéras are half a point up at 21½: Delta Lands had a sudden move to 20s., a rise of 2s. 6d., and New Egyptians close 1s. 3d. higher at 36s. 3d. Sidi Salems are ¼ up at 3, and to-day Gharbieh Lands and Union Foncières have both jumped half a point to 4 and 6 respectively. This improvement has been due to buying orders from Egypt, and sellers on this side have recently been exceedingly scarce. There has been a set-back in Allotments to 3¾, a fall of ¼, and Sudan Plantations close 5-16ths lower at 7¾.

Amongst miscellaneous shares Markets are 6d. lower at 22s. 6d., while Salts have improved 1s. 6d. to 59s.

In oil shares Anglo-Egyptian B have dropped ⅛ to 4⅛, but Roumanians are 9d. higher at 22s. 6d.

In Greek securities there has been a general advance on the exceedingly satisfactory interest payments on the old loans, which, for the first time since 1893, are to receive their interest in full. As a result, the 1881, 1884, 1890, and 1893 loans are all two points higher at 56. The 1887 Loan has also risen 2 points to 48, whilst the 1889 Loan is 5 points up at 50.

"THE FINANCIER" RUBBER SHARE HANDBOOK.

The 16th edition of "The Financier" Rubber Share Handbook," which has just been issued, gives in a precise and readily accessible form just the information required by those interested in rubber companies. It can without reservation be recommended to the investor; indeed, it would not be going too far to say that now that the outlook for the industry is more interesting than it has been for a very long period his armoury would be complete without it.

GREEK DEBT SERVICE.

The Council of Foreign Bondholders has received information that the surplus of the revenues assigned to the service of the Greek Debt in respect of last year will permit of the payment this year of the full original interest on the loans of each of the three groups. As regards sinking fund, the additions this year will be 30 per cent. of the original interest in the case of groups I. and II. and 32 per cent. in the case of group III. The whole of the additional interest is payable on the April coupon in the case of the Funding loan and rentes, on the June coupon in the case of the five per cent. loan of 1890, and on the July coupon in the case of the Monopoly loan and the five per cent. loans of 1881 and 1884.

INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following cabled news received from the Director-General of Commercial Intelligence, Calcutta, dated March 3:—Rain nearly general in Assam and local in North-West Frontier Province, Bengal, and South Burma. Dry elsewhere. General crop conditions good. Fazilka-Abohar railway survey (Ferozepore District, Punjab) by North-Western State Railway, 24 miles sanctioned. Bombay Cotton Market irregular. Fully good Broach April-May Rs.491 8 annas. Piecegoods market quiet, very little demand. Calcutta jute market very quiet. Quotations nominal. Hessians quiet with slight decline in prices. Heavy goods very quiet and easier. No change in Bank Rates.

BRITISH TRADE CORPORATION.

(Incorporated by Royal Charter),

13, AUSTIN FRIARS, LONDON, E.C.2.

Telegrams: "Trabanque, London."

CAPITAL: Authorised - £10,000,000 Subscribed and Paid Up - £2,000,000

Governor - THE LORD FARINGDON.

Manager, A. G. M. DICKSON. London Manager, P. C. WEST. Secretary, G. De B. BROUNLIE.

The Corporation has been established with the object of developing the Trade of the British Empire in every part of the world, and brings to the notice of all interested that it is prepared to grant financial facilities to British Manufacturers and Merchants for the increase of their Import and Export Trade.

It will be prepared to assist in opening up new channels for enterprise, and will afford financial facilities for the enlargement of works and the extension of plant.

The Corporation is appointing representatives in the chief cities of the world, and will open credits at home and abroad. It invites inquiries, and will endeavour where necessary to put expert advice at the disposal of correspondents regarding the financing of their foreign and overseas business. Moneys received on fixed deposit. Terms on application.

NOTES OF THE WEEK.

The course of events in the Near and Middle East continues to serve as a reminder to the Allied Governments that they cannot count upon peace following a settlement which merely indicates boundaries and makes no definite arrangement for some form of benevolent supervision over the Turkey that is to be and its neighbours. Even if the Turks were to accept their fate in a proper spirit, it would still be necessary to prevent Armenians, Georgians and Azerbaijanis from attempts to introduce such alterations in the general settlement as might be prompted by local chauvinism; the Kurdish problem must almost inevitably defy final solution until the effect of the creation of an independent Armenia can be gauged: the Syrian question, too, is likely to be in a state of flux for some time to come. It would seem better, therefore, to admit at the outset the tentative nature of all arrangements regarding the new States——the new Turkey excepted—in order that the different peoples should realise that the presentation of a good case, and not a *coup de théâtre*, is all that is required to secure the modifications which they may consider essential. The great desideratum is that the various States should have something definite to go upon as soon as possible: it may be worse or it may be better than what they fear at present, but it will offer a definite meeting-ground for discussion, and should remove many of the existing difficulties that arise from misapprehension.

The appearance in Adrianople of an understudy to Mustapha Kemal need not at present be taken too seriously. He suffers from a disadvantage which the Nationalist leader in Asia Minor is spared—his headquarters are accessible to the Allies, and he could be surrounded without much difficulty. Provided that he has not taken extreme action against any British subjects in his power, it would be more satisfactory to have him dealt with by the Turkish Government, against whom, quite as much as against the Allies, his insubordination appears to be directed. In Constantinople itself the firm line taken by the Allied Governments is stated to have had satisfactory results. The Porte has made a formal protest, but there is little doubt that the Moderates find their hands strengthened, and that the Turkish peasantry will be encouraged to resist Nationalist exactions in which they have felt obliged to acquiesce hitherto for lack of support in the attitude which they would otherwise have adopted.

It is too early at present to gauge the full significance of the movement which has completed one stage with the declaration of the independence of Syria and the "coronation" of the Emir Feisal as King of Syria. When the Grand Shereef of Mecca threw off his allegiance to Turkey he proclaimed himself King of Arabia, and it was only a logical mind and a proper sense of proportion that made him content with the more accurate title of King of the Hejaz. The Emir Feisal is reported to be contemplating an Arab State that would comprise Lebanon, Mesopotamia, and Palestine as well as an undivided Syria, but he has hastened to announce that his acceptance of the Throne will not in any way affect the cordial relations between himself and the Allies. The latter will certainly not interfere with Syrian self-determination. They will, however, be within their rights in commending to the Pan-Syrians a sense of proportion and due recognition of facts. There are already signs that Lebanon may prove a rift within the lute, and it certainly remains to be seen whether the Arabs of Mesopotamia take more kindly to the idea of a ruler in Aleppo than they did to that ruler's father in Mecca. As far as her responsibility for Mesopotamia is concerned Great Britain would welcome a single authority that would overcome the centrifugal tendencies of the various Arab tribes and factions, but a *sine qua non* is that it should be accepted voluntarily by the dwellers in Mesopotamia and not have to be enforced by propaganda or more forcible methods.

The Indian Khalifate Delegation has made a very rash experiment. It has sought to justify by argument an agitation that had only fanaticism or misrepresentation behind it. The British public has a profound respect for religious beliefs and an equally profound contempt for lack of intelligence. When it is told that Indian Moslems are perturbed by their own fears lest interference with the Khalifate may be contemplated, it is prepared to lend a sympathetic ear, and it would certainly resent the intrusion of religious fanaticism (however much it may itself be victimised by this very evil) into a purely political settlement. Consequently, although it had been led to think that on general grounds the Turks would be better off if their Government quitted Constantinople, when the Moslem aspect of the question was raised it readily accepted the decision not to disturb the *status quo*. Such an attitude, however, is very different from an endorsement of the childish contentions which the Khalifate Delegation has advanced. As THE NEAR EAST has strongly urged the retention of the Turkish administration in Constantinople, we can speak on this

Digitized by Google

subject without fear of misunderstanding. The four delegates have clearly failed to realise that, while every allowance is made for extravagance of speech at some large gathering swayed by fears or misunderstanding, the same latitude cannot be given to men claiming the ordinary degree of intelligence who pretend to base the same statements on reason and logic.

A petition of grievances, beginning, "We, the people of England . . .," was once presented to the House of Commons by three tailors of Tooley Street, Southwark. Mr. Lloyd George may possibly have recalled the fact when the spokesman of the delegation, in presenting its case to him last week, claimed to be speaking on behalf of the Moslem world. Unfortunately for the delegates, the claim was immediately stultified by the reckless assertion that "after the Balkan War the empire of the Khalif was reduced to such low limits that Moslems considered the irreducible minimum of temporal power adequate for the defence of the Faith to be the restoration of the territorial *status quo ante bellum*." Taxed by the Prime Minister with the Arab secession, Mr. Mohamed Ali sought refuge in the assertion: "We have come here in the interests of peace and reconciliation, and propose going to the Arabs and Turks for the same purpose." It was the beginning of a very complete discomfiture, which, unless we misjudge the Mohammedan intellect in India, will not be lost upon those for whom the delegation speaks, in spite of the bluster that followed Mr. Lloyd George's very emphatic reply, and the subsequent threats with which the spokesman of the delegates still further prejudices his case.

It is, indeed, fortunate for the Turks that their future is not in the hands of this particular Indian champion. He declared that if an International Commission of Inquiry established "that the Turks really had been guilty of atrocities and horrible crimes, then they would wash their hands of the Turks." Great Britain, on the other hand, we trust, will not wash her hands of the Turks. Fully conscious of all that has been perpetrated in the past, she will, it is to be hoped, take up, *mutatis mutandis*, the work which she has done in, among other places, India, where she saved the Moslems from the fate that has overtaken so many millions in the Turkish Empire. Mr. Mohamed Ali was reminded that the Turkish representatives at Paris had admitted that their Government had been guilty of atrocities and crimes not only against 800,000 Christians, but also against 3,000,000 Moslems; but we have not yet heard that he has washed his hands of the Turks.

Mr. Lloyd George was able to remind the Delegation that neither the British Government nor the Supreme Council had had to wait for its arrival to hear the opinion of Moslem India on the subject of the Turkish settlement. He then proceeded to state certain incontrovertible facts. The war with Turkey was no crusade against Islam, but was brought on by Turkey suddenly slamming the gates in the face of an old ally who had always stood by her, and who had no quarrel with her of any sort or kind at that time. The absence of any prejudice to Islam was shown by the fate of Austria-Hungary, a Christian country, which had suffered a worse fate than Turkey. The same principles had been applied to both with more disastrous results to Austria. They were the principles of self-determination applied to empires which have forfeited their title to rule. As for temporal power the Turk will exercise it in Turkish lands, and he will not exercise it over lands which are not Turkish, because the same principles must be applied to the Turk and to the Christian communities of Europe. It was a question not of race nor of religion, but of the world's concern in large tracts of territory being laid waste by misgovernment. The question for Islam to answer was whether it was really proud of Turkish dominion. It is the one question which has been burked in India, because the answer would prove that the agitation is not based upon any genuine solicitude for Turkey, but is intended to serve a wholly different end.

A definite stage in the programme of measures for the material development of India is marked by the constitution of the Board of Industries under the chairmanship of Sir Thomas Holland, who, as already announced, will work directly under the Viceroy pending the reorganisation of the Executive Council. The most interesting feature of the new Board is the presence on it of Mr. A. C. Chatterjee, C.I.E., the most distinguished Indian now in the ranks of the Civil Service, whose appointment we regard as a guarantee that Labour questions will from the outset receive the attention which undoubtedly they deserve. Mr. Chatterjee has special qualifications for handling these questions. An economist of recognised position, his long experience as Registrar of Co-operative Societies has given him first-hand knowledge of the mentality of the working-classes, knowledge which has already been utilised by his deputation to the International Conference at Washington; and his past record justifies the anticipation that Indian workers will find in him a wise and sympathetic friend.

The work before the new Board was clearly defined in the statement made last week in Parliament by Mr. Fisher, who is still representing the Secretary of State. Mr. Fisher declared that it is settled policy to improve the condition of Indian workers as rapidly as possible, and scarcely a day passes without fresh indications of the urgency of action in this direction. According to recent cables many of the Bombay mill hands have been "out" again, not on account of new grievances, but in connection with the big strike of January, and we are surely justified in saying that, when strike breeds strike, the conditions call for drastic change. Before this latest development the *Times of India* had urged the establishment of a permanent board of arbitration, but our contemporary had to recognise that the want of organisation among the workers would greatly increase the difficulties of such an institution, and that is the real crux of the position: there is no prospect of progressive improvement until the workers can formulate their demands and press them in an orderly and constitutional manner.

This aspect of the question received some attention last month in a debate in the Indian Legislative Council on a proposal to appoint a Labour Commission. Sir Thomas Holland had no difficulty in showing that this particular proposal was inopportune, and that a general inquiry would serve only to delay remedial measures which are already on the anvil, but he had to admit that India has a long way to go before effective methods of collective bargaining can be brought into operation. The mover of the resolution attributed the delay in settling the Bombay strikes to the lack of any organised body to present the workers' case, and other speakers laid stress on the uncertainty attending the efforts of external leagues or committees, which can propound reasonable terms of settlement, but cannot guarantee that the workers will be reasonable. In the course of the last set of strikes some prominent employers in various parts of India declared explicitly that they would welcome the formation of genuine workers' organisations, and we take it that opinion is moving steadily in this direction, though unfortunately Western India seems to be lagging behind the other centres of industry.

Perhaps at this juncture a word of counsel to the Board of Industries may not be out of place. It is a new institution, and it should start at least abreast of the times, but in India old traditions are apt to persist, and already we seem to detect a tendency to rely too much on direct State action as the panacea for all sorts of evils. That is the doctrine of the India which is passing away, the India where for more than a century Englishmen have been wearing themselves out in the attempt to do things for the people. In the new India the people will do things for themselves, and in the time of transition the Englishman's main business is to train them in this habit. The Board of Industries will be entirely right in pushing forward their construc-

Digitized by Google

tive programme of education, housing, and welfare, but at the same time it is their obvious duty to study this question of organising the workers in all its ramifications, to find out what forms of guilds, or unions, or associations are suited to the environment, and to facilitate organisation on the most efficient lines. Failing such action, it is now clear that the workers will organise themselves, and there is, unfortunately, no doubt that the lines on which they have started are about the worst that are possible—the choice does not lie between organisation and individualism, but rather between good organisation and bad.

THE WEEK AT HOME.

Political Scene-Shifting.

The new alignment of parties has caused a great moving of political "property" behind the scenes, the noise of whose hasty shifting on the other side of the safety curtain has not been altogether drowned by the loud newspaper chorus during the *entr'acte*. The title of the new comedy is not yet settled, but Mr. Lloyd George, as stage manager, is cast for the principal part; Mr. Bonar Law may be either patient Griselda or unfortunate Desdemona (smothered by a Coalition pillow as a reward of too great trust in the hero); Mr. Asquith is shaping well as the honest, ineffective Cassio: and Labour is the villainous Iago. (The old-fashioned Liberals and Unionists are merely "noises without," and they do not appear to care for it.)

Labour is very angry at the rôle assigned to it, and indignantly repudiates the label of Bolshevism which the Prime Minister has attached to its coat-tails. The description notoriously only applies to a sprinkling of extremists, but the Prime Minister appears to think it will serve his purpose. Apparently it will, for Labour has permitted itself to be outmanœuvred; it cuts no figure in the House of Commons at the moment, in spite of its numbers, and none of its speakers have issued a really convincing answer to Mr. Lloyd George's account of its activities. It has furnished us with a curious study in political ineptitude, and the shadow of Mr. Henderson's ponderous activities is over all its doings.

The real opposition to the anticipated fusion of the Coalition came from the Liberal members of the Cabinet, whose objection to play the part of dumb-driven cattle caused some little surprise. As they have not resigned, however, and show no signs of doing so, their reluctance need not be taken more seriously than that of "ville qui parle et femme qui écoute." Events are driving them and the Unionists steadily into the same fold, and one of the facts which meets them at every turn is the country's hatred of party politics, and its desire to make up the leeway of five years' lost work. For that reason, and because it can see no alternative either in the handful of Independent Liberals or the Labour battalions (and also because these two will not coalesce), it wants the present Government to carry on.

The fact that the Coalition feels itself stronger than for some time past is shown by the series of Cabinet changes, which involve seven by-elections in various parts of the country. These would have afforded a good index of opinion, but for the fact that in several of the constituencies the issue will be hopelessly confused by the presence of half a dozen or more candidates. In these circumstances each party will claim that had it not been for the intervention of the independent it would have won.

The Coalition, dissatisfied with its name, is still hunting for a more satisfactory title, and is considering the alternatives of "National Democrat" and "National Reform." These things amuse the quidnuncs of Westminster, but they do not disturb the rest of the country; of more importance is the evidence that Mr. Lloyd George is preparing for a repetition of the "People's Budget" of 1909, which restored the falling fortunes of the then Liberal Government. Apparently the proposals for the revision of the income tax are to be accepted practically in their entirety, and since those proposals substantially lessen the burden of the millions who live on anything from £200 to £800 a year, this will undoubtedly secure a good number of votes all over the country. On the whole, and in spite of the hitch in the programme of fusion, the Government must be considered safe for a long time to come.

The Coming Budget.

It seems to be accepted on all hands that the coming Budget will not only relieve the small taxpayer but wipe out the Excess Profits Tax, and so assist the business community. On the other hand, the evidence given before the Committee that is inquiring into the levy on war profits continues to be so heavily adverse to that project that the City is becoming reassured as to the prospect of the tax being imposed.

It is scarcely necessary to add that it is hardly less opposed in principle to a tax on earned profits above a certain rate in proportion to the capital, and, in fact, the more the idea is examined, the less likely does it seem to give any promise of working satisfactorily. It has always been accepted as a fact that the return on capital must bear a considerable ratio to the risk of the enterprise, and it would be extremely difficult for the State to apportion the relative risks of starting, say, a draper's shop, a newspaper, a shipbuilding yard, and a new stockbreeding enterprise. On these grounds alone, it seems that the proposed tax must be either totally rejected, or else made so small as to be nugatory.

The German Revolution.

England has taken the German revolution very quietly. So far as it has had any effect, it appears to have strengthened the conservative tendencies at home: the country wants neither militarism nor Spartacism, and it has read the news from Berlin with the detached air of a physician watching a patient in the crises of a recurrent fever rather than with sympathy or a desire to start a crusade. There was no desire to intervene, but a very perceptible demand to "keep out of the mess"; and those few who hoped to use the revolution as a means of establishing co-operation between the two countries must have been surprised at the entire lack of response. It becomes more and more clear that there is no question of reconciliation, or of anything but formal relations, between England and Germany for many years to come.

Savings Bank Returns.

A return issued by the Government demonstrates the rather surprising fact that the deposits in the Post Office Savings Bank have gone up during the last six years by a very considerable number of millions. In some ways it indicates the conservatism of the depositors, for the 15s. 6d. War Savings Certificate is very much better value than the 2½ per cent. interest of the Savings Bank: but a good many of the deposits, I believe, are traceable to soldiers who have banked their gratuities and allow-

ances, and some, of course, reflect the increased earnings of the working-classes.

As to this, we live in days when old and new ideas jostle one another incongruously. A country doctor told me that an old village patient, when paying his fee recently, drew out a stocking from under the bed filled with golden sovereigns. The medico advised Methusaleh to put it in a bank. "Nay—don't trust banks," was the laconic answer. "Then deposit it with the Government," suggested the doctor—the war was then on. "Government's worse than banks," muttered the sick man, as he pushed his hundred and fifty pounds back into the darkness. The whole scene might have come out of Barkis' room in "David Copperfield"—as a matter of fact, it took place in East Anglia.

On the other hand, a financier who has floated some of the recent companies tells me of an entirely new feature in the applications for shares. A few years ago, he said, one recognised two species only of investor—the big man or corporation that applied for a block of some thousands of stock and the ordinary small middle-class investor who wanted a hundred or so. The former, of course, flourishes; the latter, hard hit by prices, is becoming a rare and shy bird; but his place is being taken by the superior working-man, who applies for anything from twenty-five to ten shares, and often for a single one pound share. I should not have thought a single share much good to anybody as an investment, but I suppose the new class of investor is feeling his way. These small blocks of shares add to the book-keeping, and consequently to the overhead establishment costs of a company, but on the whole they are welcomed as adding to its stability.

The Football International.

Football is getting rather hot work these warm spring days, but an enormous crowd assembled on Saturday to see the last of the big internationals, between England and Scotland, which resulted in a victory for England by 13 points to 4. The upshot of the season is that Ireland has been definitely beaten all round, but between England, Scotland and Wales there has been little to choose. The presence of the King at several of these great functions has been much appreciated, and there are many who hope that he will be able to spare time from his State and social duties during the summer to attend some of the great county cricket matches as well.

The American Invasion.

The present year is the tercentenary of the Mayflower, which sailed from Plymouth, Devon, for Plymouth, New England, with the Pilgrim Fathers in 1620. The event, which followed the foundation of the Cavalier colony of Virginia and preceded the greater flow of Puritan emigration which founded Massachusetts and Connecticut, was of no great importance in itself, but it has stamped itself on the memory of people on both sides of the Atlantic, and the anniversary will be celebrated with enthusiasm both in the United States and in England this summer. Many thousands of Americans, most of whom no doubt claim more or less legitimate descent from the Mayflower, are coming to England this summer to visit the tombs of their ancestors; they will probably find less difficulty in discovering their forefathers than in obtaining hotel room, for most of them will probably make their headquarters in London, where the hotels are already overcrowded. However, it is hoped that one or two more of the great caravanserais will be evacuated by Government departments by then; several are already being hastily cleaned and refurnished in readiness.

Most of the visitors will probably explore East Anglia, the original home of the Independents and Nonconformists who furnished the bulk of the Puritan emigrants; Essex, Cambridge, and Huntingdon in particular were the centres of Puritanism, and most of the sleepy little towns of Essex, such as Braintree and Maldon, have records of old Puritan families which will appeal to the visitors. Even now, Nonconformity remains strong in that part of the world, and preserves something of the old rugged independence which it has lost in less conservative districts.

The City Churches.

The difficulties of Church finance, which have been mentioned in this column from time to time, are not likely to be much lightened by the forthcoming report on the City churches. Most of these churches are very comfortably beneficed, but owing to the movement of population their congregation usually consists of a couple of charwomen, a sexton, and a verger. Probably all but half-a-dozen of these places of worship could be closed at once without any spiritual loss whatever to the City—the idea that business men attend the luncheon-hour services on weekdays has little foundation—and the transfer of their endowments to the poorer suburbs would do a great deal of good.

The further suggestion is often made that many of the City churches could be pulled down, the ground de-consecrated, and the valuable sites sold to build churches where they are really required. This project is always denounced as vandalism, but, as a matter of fact, while a few of the City churches are really beautiful specimens of architecture, several of them are little more than barns, which have no pretensions to rank as masterpieces, whether by Wren or others.

Rebuilding the City.

It is evident that the whole subject will have to be taken in hand afresh now that the rebuilding of the City has become a matter of urgent practical importance. The shortage of offices is even worse than the shortage of houses, and rents are now absurd. A few weeks ago a firm which had occupied two rooms on the top floor of a house in a poor thoroughfare for many years past at a hundred a year vacated those premises; within twenty-four hours several offers had been received for the same two rooms—at a rent of a thousand a year. Business men are helpless, for the character of their work seems to tie them to certain thoroughfares, and they have to pay the penalty. A few of the daring spirits have moved to the West End, but the character of their *clientèle* entirely changes with the move, and most dare not risk emigrating from one particular street.

The remedy is obvious and painful—a modified sky-scraper. Many great businesses are carried on in intolerably inconvenient houses, originally family mansions of old City families. I remember once talking to a great man in the iron trade in his private office in Thames Street; it had once been a spare bedroom, but the only spacious rooms, those on the ground floor, were required for his innumerable clerks. This particular millionaire became so impatient with his spare-bedroom office than in the end he built huge premises further along the street, but that was in pre-war days. Half the offices in the City are not much better, although great blocks of offices were erected in Finsbury Pavement and elsewhere between 1900 and 1914, but the process will have to be continued much more vigorously in the future, unless business is to suffocate itself.

There is no difficulty about the architecture, as the office-blocks in Kingsway are dignified, convenient, and spacious, and the new buildings, even at the present high cost of construction, would probably pay for themselves in a few years. A few quaint old nooks might be swept away, but the gain would be enormously greater than the loss.

Sir Robert Mcrant.

The death of Sir Robert Morant deprives the Civil Service of one of its most forcible and brilliant heads, and the Ministry of Health, in particular, of one who was licking that young Department into shape with assiduous care—for Dr. Addison, excellent little man as he is, was only a Parliamentary figure-head, and the real work was done by the unseen autocrat behind the scenes. The smooth working of the Education Act of 1902 was largely due to Morant, and the Insurance Act, forerunner of the Ministry of Health, was almost entirely controlled by his administrative efficiency. His official life had still another eight years to run—he was only fifty-seven—and that would have been time enough to influence permanently the new Ministry. One can only hope that his work there was more forward than appears on the surface.

A Puritan Revival.

Something of a storm has been caused by a long denunciation from the Rev. F. B. Meyer, a prominent

Digitized by Google

Nonconformist, of the materialism, luxury, and immorality of the day. Every age, of course, has heard these things, for even Savonarola was not the first of the castigators. I doubt whether the public take them very seriously, for the vast mass of people lead decent and orderly lives, and idealism lurks in many unsuspected places. The real gist of Dr. Meyer's crusade, which follows a recent objection by the Bishop of Chelmsford to such innocent things as whist-drives, and a number of protests against dancing, appears to be that he, and several others, desire to revive the old Puritanism. But the day for that seems to have gone by for good. It is a pity that these excellent pastors do not always distinguish between the ordinary amusements of young folk and the real evils of the day, which they might attack with rather more effect.

The Week's Books.

Far and away the most interesting book of the week, and one is almost tempted to say of the season, is "Wisden's Cricketers' Almanac," which now re-appears at half-a-crown instead of the familiar shilling of one's youth. It is as good as ever, although last year's county cricket was not; and if one does not quite believe the story of the sporting theological student who ranked it at a divinity examination between the Bible and the Apochrypha in the inspired literature of the world, one sees his point of view. For sheer accuracy it beats every historian from Thucydides downwards; for terseness it leaves Tacitus far behind; and I am not sure that the records of "a pair of spectacles" in a first-class match do not equal in poignancy the most tragic lines of Æschylus. Wisden is unique.

A solid but excellent biography of "Silvanus Phillips Thompson" (T. Fisher Unwin), by the relatives of that distinguished man, has reached me. It is one of the books that require slow reading, because they provoke thought on many different subjects. Lighter in tone, and, I am afraid I must add, less original, is Mrs. Courtney's "Freethinkers of the Eighteenth Century" (Chapman and Hall). a series of sympathetic sketches of men like Leslie Stephen, F. D. Maurice, Bradlaugh, and half-a-dozen others. It is rather curious that she should not have included John Stuart Mill, but it is certainly rather difficult to get up any enthusiasm over that particular luminary.

It is only necessary to mention the titles of new books by popular favourites like Eden Philpotts and H. A. Vachell. The former's "Miser's Money" (Heinemann) deals with Dartmoor once again, the latter's curiously named "Whitewash (Cassell) touches another part of rural Southern England. These, with Mr. W. J. Locke's "The House of Baltazar," may be considered the most important novels of the spring season.

The Poet Laureate publishes so little that one is inclined sometimes to forget his existence, but in "October and Other Poems" (Heinemann) Mr. Robert Bridges adds one more slim volume to his small record. Most of the contents of the present book consist of war lyrics. Dr. Bridges is too scholarly a poet to be widely read, and "distinguished" is the fatal adjective that is perhaps most easily applied to his work, but he has a small and devoted band of admirers, although he has frankly little in common with the contemporary tendencies of Georgian verse.

One of these days somebody will write an essay explaining why the good plays always go to the publishers, and the bad ones to the theatres. There appears to be a sort of class-war between the literary drama and what is, on the *lucus a non lucendo* principle, called the "legitimate." One of the best of the former that has come my way is "The Leper's Flute," by Ian D. Colvin (A. F. Bird), whose political verses are still remembered as the most incisive since the "Anti-Jacobin." "The Leper's Flute," however, knows no politics; it is pure poetry, and the drama is founded on a touching romance of old Cape Town. Much of the blank verse is in the grand manner which, after too long a sentimental diet of Tennyson-and-water, at last shows signs of coming back to us. Actors would probably shirk it, but the increasing public which loves the new school of English poetry will do well to add it to their bookshelf.

OCELLUS.

ARMENIANS STILL PERISHING

Two letters have just been received from Dr. W. A. Kennedy, our Agent at Adana. The following are extracts:—

February 25, 1920.

"As far as can be estimated at present at least 13,000 or 14,000 of the Armenians of Marash have perished. Out of 23,000 about 8,500 now remain in the city and quiet has been restored under Turkish authority; all French troops having been evacuated. They have fallen back on Islahieh and are holding for the present the line of the railway which is not yet open to Aleppo. About 3,600 Armenians accompanied them from Marash, but on the third day of the march they were caught in a blizzard which lasted all day, during which time over 1,300 perished in the cold and storm. These were mostly women and children, so that the majority of the present arrivals are men or grown lads who managed to stick it out. Most of these have now arrived in Adana and are being supplied as we can best do it in co-operation. The Armenian authorities have turned over to us another section of the Apkarian School and I have accepted the responsibility for the present for as many boys as can be accommodated there. This will cost about three hundred pounds sterling a month and I must ask the Committee to accept only as a part of the extra work we must do during the next month or so. I have already asked Garabed to increase the number of workers so that all funds available will be put to immediate use. I shall trust you to do all you can to augment the funds to be sent to Adana at once, and whatever may be necessary later. Unfortunately, the weather has been unusually cold, and this has increased the distress, but it seems better to have funds than to send for clothing now. (In regard to the above figures it is to be understood that they do not include 5,000 or 6,000 people who have Perished in the villages surrounding Marash.)"

February 28, 1920.

"The situation here continues to be very nervous and disturbing. There has been an influx during the past week of over 2,000 refugees. Several hundreds have gone on to Tarsus and others have found shelter in the city. . . . I have been allowed to take six rooms in the Apkarian School, in which we are preparing to keep about 100 boys, and am asking the Armenian authorities to give accommodation for a group of girls who remain of those who escaped from an orphanage at Marash."

That bald statement of heartrending facts speaks for itself. Pray pause a moment, read between the lines, consider all the circumstances, and send your gift to-day for immediate relief to the Hon. Treasurer,

ARMENIAN REFUGEES (LORD MAYOR'S) FUND,
96, VICTORIA STREET, LONDON, S.W.1.

THE NEAR AND MIDDLE EAST.

(From Our Own Correspondents.)

YUGOSLAVIA.

BELGRADE, March 12.

The Political Situation.

The advent to power of M. Protitch and the Narodny Club was greeted by the Democrats and Socialists as "the first step towards separation," and as indicating "the consent of the Radicals to the break-up of the State." The leader of the Narodny Club (Dr. Matko Laginja) is Ban of Croatia. His nomination raised an interesting constitutional point. The Ban, since the union, has been an administrative official, appointed by the Regent on the advice of the Minister of the Interior. But Dr. Laginja made it one of the conditions of his support that he should be appointed on the advice of the President of the Council. The effect is, of course, very greatly to increase the powers and prestige of the Ban, and Dr. Laginja's address to the people certainly has an authoritative ring that must sound strange in Serbian ears, for they have regarded the Ban simply as the equivalent of the prefect of a province, and an anachronism that will be swept away by the Constituent Assembly when it reduces the organisation of the Triune Kingdom to a common form. The actual policy of Dr. Laginja is unknown: he would probably deny energetically any desire for actual separation, and his supporters state that they are only out for decentralisation, in which demand they certainly have the sympathy of outside observers. Time and the Constituent Assembly will show what their real intentions are.

As the days pass the Government appears to be strengthening its position. The Hrasnitsa incident certainly created a very unfavourable impression, and it was very widely believed during the first few days of the existence of the new Cabinet that it was not strong enough to hold power for very long, especially as the alliance between the Radicals and the Narodny Club is so unnatural, many of the ideals of the two parties being diametrically opposed. The *Pravda*, which is exceedingly bitter in its attacks upon the Government, has now altered its main heading from "The Situation" to "The 24th Day of M. Protitch's Cabinet."

There is a strong feeling, however, among non-political circles that it would be very advantageous if a Coalition Cabinet could be formed, with the sole purpose of carrying out the elections to the Constituent Assembly. The only other matter of urgent importance is the Adriatic Question, and on this there is no division of opinion among Serbs, Croats, and Slovenes; the attitude of the Radicals is identical with that of the Democrats—namely, absolute firmness, and if Italy took heart at the thought that the new Government would show any flexibility on this point, she must have been disillusioned.

Efforts at Reconciliation.

Several prominent men have been endeavouring to bring about, if not a reconciliation, at least a meeting between the opposing leaders; this is difficult, as feeling has been running very high and many bitter things have been said. But it is hoped that, with tact and diplomacy, they may be persuaded to bury the past, at least for a time, and form a coalition which will carry out the elections. Dr. Smodlaka, the well-known Dalmatian, who was one of the delegates at Paris, has arrived in Belgrade. About a dozen members have associated themselves with him in a new non-party party; they have issued a declaration stating that they desire the present Cabinet to give way to a coalition which shall include representatives of every shade of political opinion. As parties are so evenly balanced in the House, these ten or eleven votes are very important, and may well hold the balance of power. Dr. Smodlaka made an impressive speech in the Skupshtina the other day, appealing for a compromise, and for the sinking of party struggles in the common interest. As he has been living abroad so long, he is perhaps a better judge than politicians in Belgrade of the harm which the country has suffered in reputation and prestige by the long bickerings. Friends of Serbs, Croats, and Slovenes will earnestly wish that his call for unity will meet with response. Meanwhile, negotiations are in progress.

The Government's Policy.

In his declaration of policy which M. Protitch made in the Chamber on March 5, he announced his intention of endeavouring to attain a compromise upon the question of the new constitution; he stated that they would submit an electoral Bill for the Constituent Assembly, for the Budget, in order to put the finances upon a more regular footing, and a Bill for the ratification of the Peace Treaties. He foreshadowed a recess in two months, when it was hoped that the new elections would be carried out. He spoke firmly on the Adriatic question, stating that while many mistakes had been committed, there had been none on the side of the Yugoslavs, whose patient and correct attitude was in sharp contrast to the actual irregular state of affairs at Fiume. Referring to Albania, he expressed the hope that the country would be left to the Albanians, who would be allowed to arrange their own relations with their neighbours under the guidance of the League of Nations. Finally, he looked forward to the foundation of a democratic constitution in the spirit of national unity, with wide rights of autonomy, guarantees of the widest political freedom and rights of citizenship.

Russian Refugees.

Events in Russia have sent another flood of refugees into Serbia. This falls hardly upon the exhausted country, especially in the devastated south, which can scarcely support its own population, reduced as it is. The trains, crowded to suffocation already, so that travelling had become almost unendurable even to the stoutest heart, have brought large numbers of refugees from Salonika. For the Serb cannot deny help to the "brother Russian" in his hour of need. When the first flood of emigrants arrived last summer a "*Russky Dom*" was formed at Belgrade, which provided financial and other assistance and organised the disposal of the often destitute refugees. Between May 26, 1919, and January 31, 1920, the committee settled no less than 1,600 Russian refugees in different parts of Yugoslavia. Nine hundred have returned to Russia; 1,350 were nourished free of cost by the Russky Dom; and the entire expense was provided by subscription in Serbia. Both the American and the Serbian Red Cross did splendid work in providing clothing. It is estimated that there were no less than six thousand Russian refugees in Yugoslavia before the recent wave, which is adding another burden to the country. This the generous and hospitable Serbian people is meeting willingly, gratefully remembering the past services of its Russian brothers when the circumstances were reversed.

Afforestation.

The Government has embarked upon the re-afforestation of the woodlands which were so ruthlessly cut down by the enemy during the occupation. It is chiefly pines that are being planted, partly from young trees and seed from Government plantations, partly from material obtained from abroad.

Yugoslavia and Armenia.

The *Politika* announces the arrest of Mitad Bey, a Turk, who took a prominent part at the recent congress of Mahommedans at Skoplje; he was arrested at the request of the War Criminals Committee of Armenia, by whom he is accused of the murder of sixty-seven Armenians. The Armenian Republic has in Belgrade a delegate who has issued a notice that all Armenians in Yugoslavia, whether prisoners of war, volunteers or civilians, who wish to return

Digitized by Google

to their homes, may apply to him for the necessary information. This connection with Armenia sounds strange and novel in Siberia, which naturally feels a sympathy for a people that has suffered so much from their common enemy the Turk. There is not a large colony of Armenians in Serbia, but there are a few prosperous merchants. One, who fled from Constantinople at the time of the massacres there some twenty years ago, arrived virtually destitute; the Government of the day, in order to assist him, granted him a monopoly of the right of grinding coffee, and now he is a wealthy man with a very prosperous business.

ROUMANIA.

BUCHAREST, March 5.

Political Situation.

The French railway strike prevented the Simplon express from leaving Paris, so the Roumanian Prime Minister has again been delayed, and the threatened reconstruction of the Cabinet can hardly take place before Dr. Vaida's return.

At least both the President of the Chamber and the President of the Senate have protested publicly against any new Government being formed during the absence of the head of the present one. This seems only elementary decency to an impartial observer, but elementary decency has not always been a characteristic of party politics in this country.

In the meantime a new Minister of War (General Moshoin) has been installed, and he was quite well received in the Senate yesterday. True, one of the Senators mildly suggested that the Government should keep up with the times, and instead of entertaining the Senate with a procession of marionettes who flitted across the Ministerial stage, it would be more in keeping with present-day conditions to maintain a cinematograph and show portraits of successive Ministers on the screen!

The Liberals are making our flesh creep with tales of Bolshevist armies on the Dniester when they seek a little variety from their attacks upon the Minister of the Interior, who is accused of undermining the foundations of society by his radical laws. One of these, which has not as yet been presented to the Chamber, is a Restriction of Rents Act. Bucharest is as hopelessly underhoused as all European capitals, and as the centre of a greatly increased territory, both its permanent and floating populations have more than doubled. Rents are soaring, and the value—at least, the prices—of house property as well. A law was passed some time ago allowing landlords to increase rents 30 per cent. on pre-war leases, but while this protected those fortunate beings who already had roofs over their heads, it did nothing for the homeless ones.

Dr. Lupu's new law contains clauses limiting the number of rooms which a family may occupy to five for two people (exclusive of servants), and allows one extra room for each child. The state of mind of the possessors of large mansions may be imagined when they read that they will be invited to receive paying tenants in the unoccupied suites of their houses. It is not yet certain whether an option to pay a cash indemnity will be given or not. To provide for the floating population several plans have been suggested. Limiting the occupancy of hotel rooms to a month is one of these, and lodging the staff of Government departments in temporary buildings and turning the Government offices into hotels is another. It is safe to predict stormy weather in the Chamber when this law is presented.

Bucharest Streets.

Bucharest will take a long time, under present conditions, to restore her good looks, which have been sadly damaged by air-raids and the long neglect of ordinary repairs. Owing to the soft and yielding nature of the subsoil it has always been difficult to keep the streets level and in good order, and with the rapidly increasing motor traffic this difficulty has increased.

At last, however, the Calea Victoriei, one of the main arteries of the city, is receiving much-needed attention. Since the war holes had been mended with patches of cobbles, and for the last few weeks large sections of the road presented the appearance of neglected miniature rock gardens stripped of their vegetation. Ragged paths of asphalt wound their way among rocky summits and steep escarpments and around deep holes often filled with water. It was amazing to see with what apparent indifference the horses picked their way along, though at walking pace, the carriages bumping and swaying behind them in a most uncomfortable way. Now the street is being systematically paved with stone, asphalt having been unprocurable, or untransportable. It is a pity that this important thoroughfare of nearly two miles long is so narrow that the traffic along it is usually more or less congested, and the tramways running from the centre of the town to the North Railway Station instead of taking the most direct route (by the Calea Victoriei) have had to be deflected down narrower side streets, where they leave so little room for other traffic that carriages and motor-cars frequently are obliged to take refuge on the pavements, to the great inconvenience of pedestrians. It even became a danger when recently the Municipal Gas Company ran short of fuel and the town was in darkness for several nights. In some of the streets in the old part of the town the tram-lines run within a few inches of the pavement, and a fatal accident occurred the other day to an unwary shop-window gazer, who was caught at a corner by the projecting mass of humanity clinging to the steps of a passing tram and swung off his feet and under the wheels. At that point there is barely a space of 5 feet between the side of the tram and the shop window, and it is one of the chief shopping centres. But doubtless as other conditions become more normal some means will be found of rendering the business part of the city more adequate to the needs of a growing commercial town.

Another Tram Strike.

The newspaper lock-out continues, and another tram strike has just taken place. Public service is indeed afforded us in such a capricious way that taking up a telephone receiver, or turning an electric switch, or even waiting for a tram, is really an adventure to-day. One can never tell what the result will be. It is hard to blame the workmen when one looks at the prices they must pay for food and clothing. Last June a man with 20 lei a day was better off than he is to-day with 60. As nothing has been done since the war to increase taxation, the Government is faced with huge expenditures—the Army alone on its present footing costs two hundred millions a month—and insignificant revenues. The alternative of obtaining paper money from the Banca Nationala "upon payment of the cost of the paper and printing," as the balance-sheet of that institution naïvely puts it, has put the State finances in a most unenviable position, and the reaction upon the industrial life of the country is naturally lamentable. No matter how much paper money a man is given for his day's work, if that money will not buy him food and clothing the man will be discontented, and will not put much enthusiasm into his work.

Post-War Values.

The following item appeared in a Bucharest paper: "A collision took place yesterday between two goods trains. Both locomotives were so seriously damaged that they will need extensive repairs, and four goods waggons were almost entirely destroyed. This unhappy accident again reduces our meagre resources in rolling-stock.

"There were also two dead and four injured."

Human life is the only thing of which the price is falling!

Projected Tax on Visitors.

The Bucharest Municipality is proposing to introduce a tax of one leu per day on every foreign visitor occupying a room in a hotel in Bucharest. They also propose to tax members of clubs.

Union of Bessarabia.

The news that the Supreme Council had recognised the union of Bessarabia with Greater Roumania was the occasion of great rejoicing in Bucharest. Flags flew on all

Digitized by Google

the public buildings, and parades were hastily organised. A torch-light procession finished off the day's celebrations. The Bill for the expropriation of big estates in Bessarabia was before the Chamber when the telegram arrived, and while the Transylvanians were quite frank in expressing themselves as to the radical character of this Bill, which fixes a maximum of one hundred hectares for individual estates, the Bill was passed unanimously.

Various News Items.

The delegates of the Cluj Chamber of Commerce, who visited America for the purpose of placing some orders for imports, have just returned, and have had an audience with the interim President of the Council of Ministers and the interim Minister for Industry and Commerce, M. Bontescu having resigned.

The Archbishop of Rouen, S. Em. Dubois, is expected to arrive at Bucharest on Saturday next, March 6, on his way home from Syria, where he has been on an official mission.

TURKEY.

CONSTANTINOPLE, February 2.

Turkey and Azerbaijan.

On the top of the celebration at the University of the birthday of Pierre Loti came another similar gathering this week to salute the official recognition of the independence of Azerbaijan. For the benefit of those who still cherish the illusion that the Turk is in danger of being unjustly treated, and that official Turkey is friendly to England, the following extracts from the speeches of the principal speakers may be useful. Yusuf Akchura, an exponent of the Turanian theory, which is based upon the intimate relationship between the Salonika renegade Jews and the Yakuts of Siberia, spoke after the president, Halide Edib Hanum, herself of the former class, had opened the meeting. "Last week, in this same place and almost at the same hour, Suleiman Nazif Bey stated that the Turks did not enter the war as a result of the deceptions of a small number of rascals, but joyously and of their own free will. This is perfectly true . . . they entered the war . . . to release the millions of their Turkish and Moslem brethren who suffered under a foreign yoke. We have succeeded, and to-day we celebrate that success. . . . The independence of Azerbaijan is only the first step. . . . Western Persia is part of Azerbaijan, and the feeble barrier erected by the Powers will soon be annihilated . . . and then there will be no obstacle to the realisation of our great ideal . . . Europe is a seven-headed dragon. During the war these heads made war upon each other, and were broken. The Moslem world will now declare war upon the heads. The world war is not finished, only the actors have changed their places, and in this war of reds, whites, and blacks . . . the sword of Mahomet will decide to whom victory shall belong . . . the Crusaders found the sword of the Turk confronting them, and once again the sword of the Turk shall be raised . . . ." Wild applause attended this speech. Another speaker was acclaimed in frenzied style when he referred to "that cowardly nation" which could not force the Dardanelles with all its Dreadnoughts and soldiers, and which now flaunted its flag before the Khalif's palace.

The spirit of the meeting was dominated by the most fanatical anti-British feelings—but there was not a word raised against any of the other Allies. Why? Who knows?

Armenia.

The official recognition of Armenia, although saluted with considerable enthusiasm here, is regarded by the Turkish Armenians as a mere official confirmation of an accomplished fact, and as something which has no bearing upon the main problem—the extent of the Armenian State. Lord Curzon's reply to the Archbishop of Canterbury to the effect that Armenia would not be accorded an opening on the Black Sea *as well as* on the Mediterranean, caused a certain amount of uneasiness, for in some quarters it was interpreted as a declaration that Armenia would have no port at all. It is to be hoped that Armenia will receive the most generous treatment possible, for in view of the somewhat doubtful attitude of Azerbaijan, and the past dealings of Georgia with Germany, Armenia will be the healthiest element in the Caucasus. Certainly there is no people on earth with a more sincere and deep attachment to Great Britain than the Armenians. They are worth supporting in every way, and for many reasons.

Turkey and the Yemen.

For some days it has been rumoured that a number of deputies have been elected as representatives in the Turkish Parliament of the Yemen. Interrogated on the subject, the Minister of Justice (Mustafa Bey) declared that he had no official information, but added that it was quite possible since the Yemen was not only not occupied by the British, *but a Turkish Vali, or Governor, was at his post there.* If this is true, it may account for certain events that have recently occurred in the Yemen.

The Russian Situation.

Although it was stated that no more Russian refugees would be brought to Constantinople, a number have already arrived and more are expected. Those whom I have seen have very little to say. Most fled before the arrival of the Red Army, but those who stayed state that they were robbed of everything, and ordered to leave within twenty-four hours under pain of death. There was a good deal of shooting and miscellaneous murdering, but I heard no stories of torture, or of anything more than the outrages inseparable from the entry of a Russian army. All agreed that the Volunteer army, in many respects, was worse than the Bolshevists, and I have heard the same thing in other quarters.

SYRIA.

BEYROUT, March 5.

The Approaching Coronation.

Syria to-day is all agog with the imminent coronation of Emir Faisal as King of Syria. The crown is said to have been already made, and preparations for the ceremony of its presentation are in progress. According to a correspondent from Damascus, the Emir has issued an order convening the Syrian Conference, of which forty-three members have arrived, and the remainder are expected shortly.

The Evils of Partition.

Quite apart from political considerations, it may be stated that never has the argument in favour of a united Syria appeared more insistent and justified by the facts than now, when the high cost of living is in some measure due to the existence of politico-economic barriers between different parts of the country. It is enough to cite the following glaring instances. At Haifa meat is selling at 5½ to 6½ piastres the oukie (about 1¾ oukie to the pound), while in Beyrout it is selling at about double this price. Lentils at Haifa seem to be so plentiful that 200 tons were offering lately for shipment to Smyrna. At Lattakia fowls are selling at about 10 piastres each, while the price in Beyrout is 30 to 35 piastres; and, while wheat is lying in thousands of bags at Mersine, it is selling here at as much as 12 piastres the rotle, equal to about 6¾ pounds. Of course, the Hauran—the granary of Syria—is full of stocks, from which, however, Beyrout and the Lebanon are not profiting. The reason, in so far as the coast ports are concerned, is that the various districts where stocks are plentiful are not allowed to export any foodstuffs to the neighbouring territories. If the protection of local interests be the aim, this measure is defeating its end. Free economic intercourse between the different parts of a single country should never be interfered with; and, if the present abnormal condition of things be invoked to justify any interference at all, this should be exercised only in the shape of a judicious control to help in balancing the economic interests and needs of the neighbouring districts, and certainly not to create plethora in one and dearth in another. The outrageous cost of living is creating discontent of the bitterest kind among all classes of the population. It is reported that orders have lately been issued in Damascus to prevent any cattle from being sent outside the Arab zone. This is only one instance among many of the evils of the policy that led to the cutting up of Syria into so many

Digitized by Google

zones, each a sort of a watertight compartment. It can hardly be credited, yet it is only too true, that in Damascus itself, the city of agricultural wealth and plenty, the general cost of living is as high as in the other parts of Syria. The prices of certain commodities are five, and in certain cases nine, times higher than pre-war prices.

The Visit of Cardinal Dubois.

Cardinal Dubois is a prominent figure not only in the Church of Rome but also in the world of science, being a member of the Rouen Academy. His interest in education is indeed so wide that, during his sojourn in Beyrout, he made a point of visiting the schools of different denominations. The devotion and zeal his Eminence displayed during the war in the cause of suffering humanity fully justify the hope that his mission in Syria and the Lebanon, involving the great task of setting up again the numerous educational and religious establishments that suffered so much at the hands of the Turks during the war, will be fruitful of good results. Both the prestige and the energy of such a personality are required for the performance of a task of this magnitude. His Eminence also enjoyed the collaboration of the following distinguished members of his mission, viz., Monseigneur de Liobet, the well-known chaplain of the French Army, whose nickname of "Evêque Poilu" is the highest tribute of affection and popularity; the Reverend Father Berré, who consecrated a whole life to apostolic work in Armenia; and Father Oudin, who has done yeoman service for France in the East.

CYPRUS.

Undated.

Festival of the Trees.

The Director of Agriculture, Mr. Bevan, in co-operation with the Inspector of Schools, Canon Newham, has adopted an excellent scheme for the encouragement of tree planting. In compliance with a circular, on February 14, the Festival of St. Tryphon, in all villages which maintain school gardens, the priest, schoolmaster, agriculturists, and pupils assemble in the schoolhouse. After a short customary service, conducted by the priest, the schoolmaster will distribute gratis a number of seedlings from the Government Nurseries to the pupils. They then march in procession to a suitable place, where the schoolmaster gives practical demonstration as to the proper mode of planting. The boys then disperse and plant the young trees in their home gardens. It may be hoped that this good custom may be extended to other villages, as nothing is more needed than tree planting. The great difficulty is to get villagers to protect young trees from goats, which are still allowed to do incalculable damage, and often render the care of seedlings almost hopeless even in private enclosures.

Irregular Marriages.

The Holy Synod of the Greek Church at an early meeting will consider *inter alia* the subject of marriages which in the eye of the Church are illegal, but which nevertheless are not infrequent. Marriages of cousins, *e.g.*, are not countenanced by the Church; but such unions are easily arranged, the parties contriving that the wedding service shall be quietly performed by some priest who is complaisant and will stretch a point. There are consequently a good many cases, over 800, it is said, in Cyprus, and it is generally considered desirable that this rather anomalous state of things should be ended and the status of such couples regularised. The Holy Synod will probably find it expedient, and consistent with modernism, to yield some points and adopt conceptions which will bring the independent Church of Cyprus into line with the Churches of Greece and Alexandria. Should the Archbishop be absent (on "Deputation" duty), the Bishop of Papho will preside; and in that case questions may arise as to the validity of decisions arrived at without the direct sanction of the Prelate. But there should be no obstacle to a satisfactory settlement respecting the Church's attitude, which is certainly called for.

March 14.

Public Health.

There is some improvement as regards the wave of influenza. Owing to cases of smallpox, Larnaca has been gazetted as a place affected by infectious and contagious disease. Anthrax is, too, prevalent. There is no doubt that the habit of villagers of leaving unburied the carcases of animals of all kinds, from camels to goats, notwithstanding the preventive laws, is one of the chief causes of this serious disease. The germs are not infrequently carried by winged insects, especially the dreaded *sphalangi*. Egypt is gazetted as suffering from no less than twelve diseases, including fowl plague, sheep-pox, and mange.

The Deputation.

There is still much difference of opinion as to whether the deputation should return to London. Accounts are published of an interview between Mr. Nicolaïdes, a member, and M. Venizelos, in which that statesman attributed the delay in settling the Cyprus question partly to the Ministerial changes in Paris. The papers in general advise a return of all the members, including the Archbishop, to London as soon as possible.

Personal.

Law No. 1 of 1920, which establishes a Clearing House in Cyprus, has been approved. Mr. K. W. Stead has been appointed to manage the local office which is being created under the provisions of this law.

Mr. B. Dickinson has been appointed President of the Additional District Court of Nicosia. He also acts as P.D.C. at Larnaca.

Dr. H. Cleveland, Chief Medical Officer, who is retiring from the service, has been granted three months' vacation leave from February 7. The Senior District Medical Officer, who has acted for Dr. Cleveland on several occasions, is Dr. E. Corsellis, D.M.O., at Limassol.

Mr. J. D. Montagu has been appointed a Local Commandant of Police on probation.

Mr. H. R. Price has been appointed Assistant Engineer in the Public Works Department.

PORT SAID.

Port Said, February. (*Delayed.*)

The Weather.

The exceptional weather in Egypt has formed a topic of conversation which people in this country are seldom blessed with. The cold has been such that the natives, and especially the children, have suffered severely; English children have also suffered from chilblains. The thermometer has been down below 40 degrees Fahrenheit, and several people report having seen snowflakes. Squalls of wind, rain, and hail have been quite frequent. Traffic has several times been stopped in the Canal, and the rough weather in the Mediterranean has been a danger to several ships while making Port Said.

The famous aeroplane ship, the H.M.S. Ark Royal, which passed through the Canal southwards several weeks ago, has now returned, and is at present lying in port. It is said that H.M.S. Cæsar, which has been acting as port guardship for some time, has been ordered to return to England, and she will be leaving before the end of the month.

The new Padre, the Rev. F. Johnstone, has now taken up his duties in Port Said, having been demobilised recently. The post entails much more work than formerly, as the number of English people, and especially of young Englishmen, in commercial houses is far greater than before the war.

The Municipality having realised that house-owners have been making the proverbial hay, whether the sun shone or not (mostly the latter during the last fortnight), have revised in an upward direction the Municipal house tax. This has formed a splendid excuse for landlords again to raise rents, by about five times the amount of the increased tax. So the game goes merrily on, and everyone is pleased except the tenant, whose only share in the fun is payment.

"BRITISH REFUGEES FROM TURKEY FUNDS."

In connection with the supplementary report of the above Fund, which was published in The Near East of March 11, we have been asked to append a summary of the cash statement of the London office for the year ending September 30, 1919. According to this audited statement the Fund balanced at £2,963 18s., showing a balance at the bank or in hand of £580 7s. 9d. The balance at September 30, 1918, was £1,757 3s. 8d.; subscriptions and donations during the year amounted to £1,074 1s. 8d.; loans repaid to £88 10s., and interest on deposits to £44 2s. 8d. On the outgoing side, remittances for relief in the Near East accounted for £314; grants and loans to refugees to £2,049 12s. 5d.; printing, postage, and miscellaneous expenses to £19 17s. 10d. Since last September the balance in hand has been augmented by £20, the amount of a repaid loan, and accordingly stood at £600 7s. 9d. Of this sum all but £66 14s. 10d. had been paid away by February 28, 1920. Allowances paid in Great Britain amounted to £146 1s.; passages to Turkey, £230 2s. 8d.; and monies sent to Constantinople, £142 9s. 3d. being the other chief items.

SCHOOL OF ORIENTAL STUDIES.

SERBIAN SKETCHES.

I.—The Voivodas

That picturesque and romantic group of men the Serbian voivodas is dying out; times have changed; their task accomplished, those who have survived the struggle are turning to peaceful pursuits.

The word *voivoda* is an ancient Serbian title, and means "Leader in War"; officially it is adopted in the Army as the equivalent of our rank of Field-Marshal. All the world has heard of the late Voivoda Putnik, of Voivoda Stepanovich, who hammered the Austro-Magyar forces on the Tser in 1914, and, above all, of gallant Voivoda Sir Zhivoyin Mishitch, K.C.M.G., a very Serbian counterpart of our "Bobs," who twice cleared his country of the invader in a lightning-like manner. But in the months of the people it means a leader of irregulars, a man who has raised a band of devoted followers and led them in the precarious and dangerous game of *comité*-fighting or guerilla warfare, where no prisoners are taken. Their activities in Macedonia were for years directed against the Turks, but when Bulgarian propaganda became intensive, and the "Macedonian Committee" began its militant operations about twenty-five years ago, these Serbian voivodas arose and fought two enemies at once, of whom the Bulgar was more formidable than the Turk. These leaders were men of great enthusiasm for their cause, fiery patriots, men of iron resolution, indomitable will, and dauntless courage. Their one object in life was the liberation of their countrymen from enemy oppression, and in the mediæval conditions obtaining in Macedonia they had full scope for their military energies.

Voivoda Kosta Pavlovitch is still alive and well; he fought as a volunteer in 1878, and remained under arms till the recent Armistice; he now knows practically for the first time in his life the blessings of peace. In spite of his forty years of fighting, his hair is as black as a raven's wing.

Two other names are familiar to most Britons who served at Salonika, for they had become legendary during their lifetime. Voivoda Voyin Popovitch, known as *Vuk*, the Wolf, perished gallantly in 1916; a shell-fragment lacerated his arm, which remained hanging by a shred of flesh. His men implored him to allow them to take him down to the dressing-station, but he refused: "Give me a knife," he said, and himself hacked off a useless "member," declining to leave his men; a moment later another shell killed him outright. Vuk's name was famous before the war, and it was he who largely developed the use of hand-grenades and bombs before the Germans brought Hell to earth.

And now Babunski is gone. Yovan Stoykovitch was born at Veles in 1878, and so was only in his forty-third year. At the time when he reached man's estate terror in Macedonia was at its height. The only way a man could serve his fatherland's cause was as a schoolmaster or as a priest, and either meant that he was condemned to death in advance by Boris Sarafoff and his colleagues. Stoykovitch became a schoolmaster in the little village of Martovats, not far from his native Veles, just below the Babuna, from which he earned the nickname that he made famous. For some years he instilled the idea of patriotism into the children of the harassed Macedonian Serbs, until the Bulgarians, with knife, bomb, and rifle made life unendurable. In 1903 he took the decision and went to the mountains. He came almost at once into collision with a powerful Bulgarian band, under Stevan, "The King," an all-powerful *komitoji*, with whom he was connected by marriage. Yovan defeated Stevan's band and shot their leader himself; he sprang at once into fame, and became a marked man.

For years he carried on the struggle, defending his district, now against Bulgars, now against Turks, or Albanians. By 1908 he had fairly well cleared the district of enemy operations, in collaboration with other Serbian leaders, like Sokolovitch, Rajkovitch, Pop Bogdan, Dovezenski, George Skoplianche, Vuk Popovitch, and Tankositch.

In 1912 Babunski sprang to arms again in the war against the Turks; with his comrade, Vuk Popovitch, he was in the advance guard of the fighting down to Vitol (Monastir) and Elbassan. In those days of hard fighting, when every man was a hero, he was one of the first to receive the gold medal for valour. At the time of the first Austrian invasion he was in Belgrade. His old followers hastened to gather round their beloved leader, and it was largely due to his efforts and those of Tankositch, who was with him, that the enemy did not succeed in effecting a landing that night.

As the Bulgarians were already showing signs of restlessness, he was then sent south, where he remained on the watch till the disaster of the autumn of 1915. His services in assisting the French detachment near the Greek frontier won him the admiration of our gallant Allies, who gave him the Legion of Honour and the Military Cross with palms, and from his own Prince he received the Karageorgevitch Star with swords, the Serbian highest military decoration, and the rank of lieutenant.

Those who met him at Salonika, expecting to see a fire-eater of the theatrical type found a big, very modest man, whose quiet demeanour gave little evidence of the energy, determination and inflexible courage within: he showed little signs of twenty years almost incessantly spent under arms, nor did he look the least perturbed at the fact that the Bulgarians offered a reward of 20,000 levas for his body, dead or alive. This hardened warrior, whom the Serb papers describe as "Chevalier sans peur et sans réproche," lived to see his life's work crowned with success, his country liberated and united, and the Bulgarians punished for torturing his wife and murdering one of his children. And now, at the early age of 43, he has succumbed to an inglorious end by influenza.

II.—The Tsintsars.

There is a strong infusion of Roumanian blood in Serbia, especially in the north-eastern corner, where there is a strong colony. The less heavy physique and more vivacious manner, in fact, more Latin type, are quite noticeable. The women are noted for their good looks, and it is a local saying that one Vach girl will "vlachify" a village; they are called Vlachs by the Serbs, that is, Wallachs. The Roumanian Government has from time to time tried to attract them back to their own country, but they have been settled too long in Serbia, and been too much absorbed by the free life to wish to leave. Many are men of property and substance; the Government has never made any distinction of race, and they have always enjoyed the full advantages of free Serbian citizenship, which is extremely democratic, and so never had any inducement to return to aristocratic Roumania. They are not organised in any way, and call themselves Serbs, but are usually bi-lingual; there is, as a rule, nothing in their surnames to show a different origin. They are, in fact, in the process of complete absorption. The Serbs apply to them as a term of contempt, when annoyed with them, the name *Tsintsar*, owing to the common occurrence of the sound *ts* in the Roumanian language, and the Socialistic and Chauvinistic *Beogradski Dnevnik* comes out with the sarcastic comment that, while fully aware that there is a big colony of Tsintsars in Serbia, they are hardly numerous enough to deserve no fewer than six members of the Cabinet, and that they are, therefore, playing here a rôle similar to that of the Jews in Hungary. The six Ministers in question are Mr. Protitch himself, and MM. Trifkovitch, Yovanovitch, Ninehitch, Yankovitch, and Spalaykovitch. If this is accepted, there are only five true Serbs in the Cabinet. The best answer is that this is a striking proof of the process of absorption of the Tsintsars by the true Serbs. Their relatives of Macedonia, the true Tsintsars or so-called Kutzo-Vlachs, have not yet reached a sufficient stage of education to assert themselves. This attractive and interesting people have not yet made their début as a distinct entity on the political stage; their purely nomadic habits are the chief obstacle, though in long years of anarchy and fighting in Macedonia they have remained inarticulate, devoting themselves to their flocks, migrating bodily to the plains in the winter, returning to their villages in the hills for the summer. A large proportion of them are now Greek subjects, but still a substantial number owe their allegiance to-day to King Peter. Their language is a dialect of Roumanian, with heavy borrowings from Turkish and Greek. They have largely fallen under the influence of Greek culture, but latterly the Roumanian Government has carried on a certain intellectual propaganda, and established schools for them. When asked their nationality they usually say "Armun," or sometimes "Roman"; for this reason, and owing to their swarthy complexion and nomadic habits, they were frequently mistaken by the British in Macedonia for gypsies, with whom they have nothing else in common. Gypsies are very numerous in Siberia, where they play the same rôle as with us; they are chiefly musicians, horse-copers, tinkers and thieves, very dirty, very picturesque; they retain their own language, and make quite good soldiers. Honest and energetic gypsies make very good batmen.

TOPICS IN PARLIAMENT

House of Commons.

The subjoined headings are those given in the official report:—

TURKEY: British Forces near Constantinople. SMYRNA (MASSACRES). MASSACRES IN CILICIA. INDIA: Army Officers (Continued Service).—Medical Service (Officers).—Mahomedan Population (Classification).—Muslims (Khalifate Deputation).—Income Tax (Officers' Pay). (March 15.)

TURKEY. KHALIFATE DELEGATION. PALESTINE (MONUMENTS). CEYLON (CONSTITUTONAL REFORM). March 16.

INDIA: Hunter Commission Report.—Mohammed Ali.—Najpat Rai.—India Office (Cost).—Joint Standing Committee. Hodeidah (Garrison).—Afghanistan. ARMENIANS IN CILICIA. CEYLON (RUPEE CURRENCY). OCCUPATION OF CONSTANTINOPLE. PEACE TREATIES: Western Thrace. INDIAN ARMY OFFICERS (PENSIONS). (March 17.)

PEACE TREATIES: Arab Kingdom (Palestine).—Syria.—Turkey (Khalifate Conference).—EGYPT: Lord Milner's Mission. ANGLO-PERSIAN OIL COMPANY. TURKEY (MASSACRES). ROUMANIA, POLAND, AND CZECHO-SLOVAKIA. SYRIA. (March 18.)

CORRESPONDENCE.

GENERAL KURAPATKIN.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—Bolshevism hangs like a storm-cloud over civilisation, and in no part of the world is its menace greater than on the Asiatic continent. Its military strength has been immeasurably increased by the adhesion of Brusiloff, Kurapatkin, and the host of subordinate officers who will certainly follow their banner. The former proved his capacity for leadership under Tsarism; the latter gained renown as a civil administrator in Turkestan. If, as Colonel A. C. Yate has told your readers, Brusiloff's son was executed as a Bolshevist by Denikin, it was probably vengeance rather than patriotism that led the father to place his sword at the disposal of Lenin and Trotsky. The same may, I fear, be said of Kurapatkin. I had much intercourse with him during a tour through Turkestan in 1898, and a sketch of his career, with portrait, appeared in "The Heart of Asia," which I wrote in collaboration with Sir E. Denison-Ross. In those days Kurapatkin cherished a deep grudge against the Tsar, because, for some reason or other, his wife was not received at Court. He spoke bitterly of the intrigues of his enemies in Nicholas the Second's *entourage*, and of the ingratitude experienced by Skobelev, his master in the art of war. Even then he had no love for Great Britain, and his hostility was doubtless increased by the Anglo-Japanese Alliance, which proved an indirect cause of his professional eclipse. But brains will tell, even in Holy Russia; Kurapatkin's great administrative skill and his renown gained under Skobelev forced the Tsar to appoint him Minister of War, and subsequently to give him command of his forces in the field against Japan. His defeat on the Yalu River was a crushing blow for himself and Russia; but he never had fair play. Napoleon would have left no lasting mark on history if he had been bombarded with contradictory instructions from superiors and severely limited in his choice of subordinates. After the Peace of Portsmouth, Kurapatkin retired into private life and nursed his vengeance. He has now emerged, and will help to restore the discipline which was destroyed by Kerensky's fatuous Government.

It is tolerably certain that Russia will pass through the same cycle as Rome did in the first century B.C., and France between 1792 and 1804—a reign of terror, chaos, a Military Dictatorship, and possibly an imperial régime. Whatever form her evolution may take, it will, sooner or later, be a menace to our Indian Empire. The north-western frontier is too remote from the Bolshevist base to render invasion a pressing danger. But India, Persia, and Afghanistan will be saturated with subversive literature, an appeal will be made to the greed of warlike races, and every possible means will be taken to sap the loyalty of the Indian Army. Unfortunately, our Government has never fully realised the tremendous effects of suggestion. Propaganda converted the dreamy, peaceable Teutons of sixty years ago into beasts of prey; it has produced all the unrest in Ireland, Egypt, and India. Yet no systematic attempt has been made to neutralise the virus of anarchy by counter-propaganda. It has been said with perfect truth that the statesman differs from the politician in that the first knows what is going to happen, while the second knows only what is actually happening. Events since November, 1918, convict the Entente's councils of optimism—a legacy of our obsolescent party system, which grapples with contingencies as they occur without giving one thought to future developments. If there ever was a time calling for the highest statesmanship, it is the present year of grace.—I am, etc.,

ALBANIA.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—Will you kindly allow me space to announce the arrival in London of three special Albanian delegates:—Mgr. Bumci, Roman Catholic Bishop of Kalmeti, in North Albania; Father George Fishta, of the Scutari Franciscans, Albania's chief poet and writer, famed through all the land; and Dr. Tourtoulis, doctor of medicine, who comes from Koritza and represents the South Albanians? All three gentlemen are charged with the duty of asking the British Government to grant the complete independence of Albania according to the Treaty of 1913, and to afford it the protection of the League of Nations during the time needed for the organisation of the land; to protest most strongly against any partition of Albania, any reduction of the frontiers of 1913, and any foreign mandate or protectorate; to beg also that no other Power may be given any rights over railroads, mines, or forests of Albania, or any other economic rights. Albania wishes to live in harmony with her neighbours and to be allowed to develop as freely on her national lines as they have done on theirs.—I am, etc.,

M. E. DURHAM,
Hon. Sec., the Anglo-Albanian Society.

PRESS ON THE NEAR EAST.

Turkey.

In a leading article in its issue for March 19, the *Morning Post* denies the wisdom of a "bag and baggage" policy for Turkey. It pleads for a consideration of the Turkish point of view, and concludes:—

We are frankly sceptical of this policy of the big stick. The Turkish settlement is not to be achieved by reviving Gladstonian phrases; it demands, particularly on the part of Englishmen, cool detachment and a recognition of facts, which, if disregarded, may gravely imperil the Empire. We repeat again, what we have frequently advocated, that the Turk should not be left to himself in the future, and that this country is specially qualified from long experience to take in hand the Ottoman administration. We fully recognise the special interests of France in Turkey, and we think that these interests would be safeguarded if our Ally were given control of Turkish finance. It must be remembered that from a geographical point of view the Turk occupies a position which Great Britain cannot afford to disregard, and that in the event of a recrudescence of aggression on the part of any European power he may become a powerful barrier in protection of British interests. And we are emboldened to press for a policy of circumspection when we remember Lord Curzon's recent statement in the House of Lords concerning the building up of the devastated territories of the Turkish Empire: "Whether we shall succeed in that task I do not know"; it is by far the most difficult and hazardous adventure to which in my political life I have ever set my hand."

Syria.

For the March 18 issue of *Land and Water*, General Haddad Pasha has written an article entitled "A Syrian on Syria." After generally describing Syria, he states his beliefs and hopes for the future of his country.

It is extraordinary how old customs and modes of life persist. In Damascus and Baghdad the wealthy families still live in houses which have remained unchanged in form since Roman days. The central fountained court, with the living rooms opening on it, the modest entrances and the bare exteriors; this is the type of house the modern Damascene lives in At Pompeii one sees just such houses, only rather smaller. We owe, of course, a very great deal to the Romans, and particularly the Byzantine Empire. We have never lost the culture which we imbibed at those sources. That, I often think, is the reason why the Syrians, Semitic though they are by race, are yet intellectually akin to the European. Many Syrian writers to-day occupy a prominent place in European literature. It would be invidious to mention names, but there are both English and French men-of-letters whom many would doubtless be surprised to hear were of Syrian origin. We have thus all the elements necessary to form a great and progressive nation. We have "intellectuals," we have first-rate men of business and affairs, we have laborious peasants, and last, but not least, sturdy soldiers. All are good fighters, but especially the hillmen, to whom the Turks owe not a little of their military prestige as the best infantry in Europe. And though our stock is divided into many races, and professes different religions, yet to-day we are all at one. All Moslems, Christians, and Druses, though in the past, thanks to the Turkish policy, of a *divide et impera*, they have often

Digitized by Google

been at loggerheads, are now united under the leadership of the Emir Feisul. Though the Emir comes of the leading family of Mecca, and his father is the ruler of that holy city of Islam, yet he is absolutely impartial in religious matters, and I have myself observed that he is even ignorant of what religion members of his own suite may profess. No Englishman or American could be more impartial.

My belief to-day about the Middle East is this: The Ottoman Empire, as a great power in Asia, has ceased to exist, and in future will have no influence south of Asia Minor, or to be more precise, the Taurus Mountains. Another state should fill the void in the Middle East an Arab state, and the majority of its population will naturally be Moslems. And the Moslem world will then realise that you treat all, whether Moslems or not, with fairness. The past history of the Arabs supports the idea of the possibility of their forming a stable and sound government, and Europe need have no fear, either of its interests suffering, or of any outbreak of religious fanaticism. We must surely be treated on as favourable a basis as our (and your) enemies, the Turks. There is no question—it seems—of their not being independent in their own Turkish-speaking provinces. In our Arabic-speaking provinces we must be equally free. Palestine should have special treatment on account of her international and conflicting religious interests. For the rest, if Europe allows us to work out our own destiny, it will be found in the end to have been the best possible thing for Europe.

If unrest becomes chronic in the Middle East, the statesmen of Europe will find they have created a second, and far larger and more formidable, Balkan problem.

Armenia.

In a leading article the *Manchester Guardian* of March 6 discusses "The Case of the Armenians." After briefly recapitulating the recent history of Armenia and of Europe's attitude towards that unhappy country, it says: "Armenia was the mirror in which all the cynicism of Europe was reflected." It proceeds to state that even up to the present moment on utter lack of principle has characterised the Powers' dealing with Turkey, and condemns their treatment of this question as if it were of secondary importance. Hesitation and neglect, it says, have proved a fatal mistake:—

That is the outline of the story up till to-day. As to the morrow no man knows. Questioned closely on Thursday, Mr. Lloyd George would make no clear statement. Of the triumph of the Turks at Constantinople the House of Commons first heard through India. What audience will be selected for the announcement of the extermination of the last Armenian is not yet known. But as to the French, not only their duty as protectors of the Armenians under their care, but their whole position in Cilicia, and even their military prestige in the East are in question. The whole problem of preserving elementary order in Asia Minor has now become as complicated as it was simple sixteen months ago. But matters have reached a point at which even the cynical Powers and futile statesmen of the Entente can no longer afford to sit still with folded hands. They must try to forget their jealousies for a few weeks, and strike again one stroke in a concert worthy of those great days of whole-hearted alliance which saved Amiens and Ypres and broke the Hindenburg Line.

The Middle East.

In the *Daily News*, of March 12, Major-General Sir F. Maurice deals with the general policy of the Allies in Western Asia. He commences by pleading for light on these matters:—

Since the Armistice we have been kept in quite unnecessary ignorance of what has been going on in the countries of the nations with whom we have been at war. In no part of the world has the veil been greater than in Asia Minor, Trans-Caucasia, and Kurdistan. We have had no authoritative statement as to the areas we have been occupying from time to time, and not the smallest indication of the policy which has taken us into those areas. We have been dosed with soothing syrup, and are therefore quite unprepared for the crisis which is now developing. Rumour is again busy. Great concentrations of troops about Constantinople are reported. We are said to be on the verge of a renewal of war with Turkey. I was assured yesterday that the French were on the point of being driven from Syria, and that we were in difficulties in Kurdistan and on the Euphrates. The public mind is agitated with the problem of whether the Turk is to be turned out of Europe or not, but the real problem is how he is to be made to behave in Asia. We have 70,000 troops in Mesopotamia, because we have added there more than 1,500 miles to our land frontiers, and those frontiers are bordered by unsettled and unruly tribes. We have thrown our mantle over peoples who are looking to us for protection, and the difficulty is, with the means at our disposal, to afford them the protection which they seek.

He proceeds to state some of the difficulties which await any foreigners in this region:—

The Turk collapsed so completely in the last months of the war that it was assumed somewhat light-heartedly that we could do what we liked with him. We sent troops into the Caucasus, to the shores of the Caspian, we advanced beyond Mosul into Kurdistan, through Syria to the borders of Anatolia, and attempted to control the greater part of the valley of the Euphrates. The Greeks and Italians occupied portions of the Levant. It was hoped vaguely that the greater part of Turkey in Asia would settle down under the rule of mandatory powers acting under the authority of the League of Nations, and that the Turk would accept what no one else wanted. This policy, such as it was, came to grief when the United States fell out. It was at one time confidently expected that America would accept a mandate for Armenia, but she refused. This left France and ourselves faced with greater responsibilities than we could possibly accept. The French insisted on having Syria, despite the fact that not all the influence and tact of the Emir Feisul could induce the Syrian Arabs to welcome them. Within the area occupied by ourselves, in Mesopotamia, in Kurdistan, and along the valley of the middle Euphrates, there are tribesmen who have for generations been masterless, who have the strongest objections to European ideas of law, order, and sanitation, have no intention of paying taxes, and are always ready for a row which holds out any promise of loot. There are, therefore, troubled waters in plenty, in which the unscrupulous adventurer can fish to his own advantage.

After commenting upon the activities of Mustapha Kemal, he concludes:—

We have already in Mesopotamia alone a far larger territory within our occupation than we can administer effectively except at ruinous cost. We have to accept the fact that our policy in Asia Minor has been mistaken: it has left us with more to manage than suits our pocket. Having made the mistake, it will be long before we can retrieve it, for it is out of the question that we should at once abandon people to be slaughtered whom we are now protecting. We require to build up autonomous States from the Christian and Arab peoples who were formerly under Turkish rule, and to reduce the territory directly under our administration to manageable proportions. The temptation to extend our bounds for the sake of oil and railway concessions must be sternly resisted. We cannot afford to mortgage any more of our capital for the sake of posterity. We must have an Eastern policy to suit our means. At present we are drifting into unknown seas.

MUSICAL NOTES.

At the Queen's Hall on March 16, M. Dushkin gave, with the London Symphony Orchestra, under Mr. Adrian Boult, a very sound orchestral concert. M. Dushkin is a young violinist who plays with much taste and refinement, and all his work is rather governed by imagination than subjected to fancy. Thus, in the Bach Concerto for violin and orchestra (No. 5 in E major), he preferred, in both the structural and in the ornamental parts, a quiet dignity to a sparkling brilliance. In some Russian folk-songs and dances of Rimsky-Korsakoff, the orchestra's difference with him as regards *tempo* quite spoiled the effect; but a new work by Blair Fairchild—an Etude Symphonique for violin and orchestra, though written by an American composer under the influence of the modern French school—was made very interesting. Although this study purported to apply modern technique to the violin, it did not appear to be very original, and it is probably an example of how difficult it is even in music not to be orthodox. (Orthodoxy is made of imperishable elastic, which stretches but more freely as it ages.) The chief item in this concert was Elgar's second symphony (Op. 63). It is a tremendous work, and it was conducted in masterly fashion by Mr. Boult, who for certain modern composers is in a class by himself. It is doubtful whether since Beethoven there has been a composer who excels Elgar in solidity of structure and in architectural beauty. In this second symphony all his most notable virtues—the strength of his basses, the transformation of his rhythms, the simple and sheer beauty of his melodies, and so on—are abundantly present. By the side of it, Richard Strauss' "Tod und Verklärung" paled almost to unimportance, and the accurate realism of its programme music seemed a little thing.

A REVIEW.

Any person with a correct sense of values can read Mr. Ernest Newman, and all who are neither stodgy nor sensitive do read him. If not the soundest of English musical critics, he is easily the most brilliant. In his latest volume, "A Musical Motley" (London: John Lane. 7s. 6d. net), he maintains all the qualities that have brought him to his present position, independence and honesty, knowledge and intuition, and an excellent command of English. He can write little essays that are as fresh and fragrant as green grass; he can send off whistling on their way little epigrams which, whether you like them or not, you must admit are uncommonly good shooting; and he can deliver himself of opinions with the air of the man with the wooden hammer who is certain he can make the bell ring. (As a matter of fact, I accepted all his arrowed epigrams, and heard the bell ring every time.) If there are faults in this book, they are these two: Mr. Newman's honesty is so compelling as to flood in everywhere and submerge a kind of idolised rock which is inadequately called good taste, and that which, in his bonnet, should always be (it almost always is) a bee, is sometimes only an insignificant fly. That is, Mr. Newman does sometimes offend with his sayings, and he does sometimes pad them. But his remaining virtues will (though he neither desires nor needs it) gain him forgiveness.

For those who hold, and do not merely keep, opinions on music, this book is the very thing. To such we commend such sayings of Mr. Newman as these:—"An amateur like Borodin is worth fifty professionals like Saint-Saëns."—"For some modern musicians who, as artists, have seen their best days, a worse fate is reserved; they linger on till they are knighted" (a comment upon Emperor Nero, the artist who sang while Rome burned).—"Bach was sometimes perilously near touching decadence."—"Tchaikovski was simply a man with intervals of neurasthenia, not a man with a philosophy of the cosmos. He cries out as he does, not because he is sitting in judgment on the original plan of the universe, but simply because he is afraid to go home in the dark."—"Professional criticism should be an affair not of politeness, but of ideal justice" (in an essay upon "Putting the Classics in their Place").—All these are admirable truths admirably put, and the book abounds in such sentences. It is true that in this volume one sees, or, rather, peeps at, the fallibility of Mr. Newman as of all men; but even where one differs from him, one usually discovers that he has some hold on what one deems the truth, and that on going round to the reverse side of that truth, one finds him there, sardonically smiling. In fact, this book is at once most stimulating and annoyingly accurate.

ANDANTE.

CHESS.

The University Match.

If I had had the results of the matches played by the combined universities against Hampstead and the City of London Club before me when I ventured to forecast the result last week I should have named Oxford as the winners of the university match, as the Oxonians unquestionably displayed the more promising form—and even then I should have been wrong, for the forty-fourth match of the series ended in a draw, after a struggle in which almost from the commencement to the adjudication it was impossible to tell what was going to happen, so many were the vicissitudes of the play. I have had a fairly long experience of these matches both as a participant and as a spectator, and I must confess that I cannot recall an encounter in which the result hung so continually in the balance. Speaking generally the quality of the chess was considerably below the pre-war standard, which was, of course, to be expected in view of the long break in the continuity of the matches. There were no outstanding games this time; and, on the other hand, there were more blunders than usual, for which, no doubt, an explanation is to be found in the unfamiliarity of the players with their surroundings, which may have added to the nervousness which is an inevitable factor on these occasions. On the run of the play Cambridge must be accounted rather unfortunate not to have won. Cambridge fared worst on the lowest boards, in which connection it is interesting to note that one of the best performances in the matches against the London clubs last week was that of the Cambridge reserve, Mr. K. F. Mills, St. John's, who played against Oxford last year, and whose inclusion this time might have made a considerable difference.

The following were the players and the openings adopted:—

Oxford.	Opening.	Cambridge.
1. T. H. Tyler (Balliol) 0	Ponziani	L. S. Penrose (St. John's) 1
2. H. G. Rhodes (New) ½	Queen's Pawn	H. V. Mellison (Trinity) ½
3. H. R. Bigelow (Balliol) ½	Irregular	J. H. Barnes (St. John's) ½
4. D. M. Morrah (New) 0	Caro-Kann	C. M. Precious (St. John's) 1
5. T. A. Staynes (Brasenose) ½	Queen's Pawn	N. H. Smith (Caius) ½
6. H. T. Burt (Balliol) 1	Ruy Lopez	M. H. A. Newman (St. John's) 0
7. E. S. Woodley (St. Edmund's Hall) 1	Scotch	W. J. Chalk (Queen's) 0
3½		3½

It was expected that a close match would result from the meeting of the respective first strings, Mr. Tyler and Mr. Penrose, but their game, which is given below, came to an untimely end through a blunder by which Mr. Tyler lost a piece. On board No. 2 Mr. Rhodes and Mr. Mellison had a long and somewhat uneventful game, which ended in a draw. Very different in character was the contest on board No. 3 between Mr Bigelow and Mr. Barnes. The result was a draw, but the match could have gone one way or the other half a dozen times. Mr. Bigelow began well by winning the exchange, but later, when it appeared that he must lose a minor piece, he offered up his queen as a sacrifice instead, but his opponent neglected to take it, no doubt disconcerted by such unexpectedly generous tactics. Mr. Bigelow subsequently gave up a piece for two pawns, and was left with seven pawns against a bishop and five pawns. Then just before the close he offered a draw, which his opponent accepted, though the position was one which the adjudicator would have dismissed almost without thought as a win. Mr. Morrah, on board No. 4, obtained an excellent development against Mr. Precious, who played the Caro-Kann Defence very indifferently, but lost a rook by an oversight, and resigned. The game on board No. 5 between Mr. Staynes and Mr. Smith, which was adjudicated a draw by Sir G. A. Thomas, was one of the best of the match, but it was not free from mistakes. A few moves before the end the Oxford player neglected an opportunity of winning two pieces for a rook. Admittedly the position was complicated, and required some working out, and he may have been under the impression that he would have laid himself open to serious consequences by so doing. But it was, as it happened, perfectly safe. On board No. 6 Mr. Burt defeated Mr. Newman rather easily. Mr. Burt, so far as I could judge, played the soundest chess of the match, showing excellent form. The game on board No. 7 between Mr. Woodley and Mr. Chalk also ended in a win for Oxford, the Cambridge player losing his queen.

The following was the game on board No. 1:—Ponziani opening. White, Mr. L. S. Penrose; black, Mr. C. H. Tyler. 1, P—K4, P—K4; 2, Kt—KB3, Kt—QB3; 3, P—B3, Kt—B3; 4, P—Q4, Kt x KP; 5, P—Q5, Kt—K2 (1); 6, Kt x P, Kt—Kt3; 7, Q—Q4, Kt—B3; 8, B—K3, B—K2; 9, Kt x Kt, RP x Kt; 10, Kt—Q2, P—Q3; 11, O—O—O, B—B4; 12, B—Q3, B x B; 13, Q—B, Q—Q2; 14, P—KR3, Q—R5; 15, KR—K1, R—R4 (2); 16, B—Q4, R x QP (3); 17, R x B (ch), K x R; 18, B x Kt (ch), P x Kt; 19, Q x R, resigns.

1. Kt—Kt1 should have been played.
2. Now, if ever, was the time to castle on the queen's side.
3. A mistake which loses a piece.

CARO-KANN.

The *Prager Tagblatt* states that the fact that the present Clerical Magyar Government is stirring up enmity against Czecho-Slovakia and Roumania is plainly shown by the first words of the oath which recruits must take:—"I swear, in the name of the Holy Virgin Mary, that I will fight against Czecho-Slovakia and Roumania for the liberation and reunion of the occupied territories with the mother country, and I will fight for the suppression of every Socialistic movement."

NEAR EAST BOOKSHELF.

I.—"THE BLACK SHEEP OF THE BALKANS." By Leland Buxton. With an Introduction by Lt.-Col. the Hon. Aubrey Herbert, M.P. (London: Nisbet and Co., Ltd. 4s. 6d. net.)

II.—"THE NAVY EVERYWHERE." By Conrad Cato. (London: Constable and Co., 10s. 6d.)

III.—"MOSES, THE FOUNDER OF PREVENTIVE MEDICINE." By Percival Wood, M.R.C.S., L.R.C.P., Capt. R.A.M.C. (Society for Promoting Christian Knowledge. 4s. net.)

IV.—"THE SUPERHUMAN ANTAGONISTS." By Sir William Watson. (London: Hodder and Stoughton. 6s. net.)

I.—ALL OF ONE FOLD.

It is an axiom that in dealing with Balkan affairs no writer can hope to satisfy all the peoples of the Peninsula. He will equally fail to please their ardent champions in this country, and his book will be judged for the most part from the point of view whether it is favourable or unfavourable to the protégés of the reader. Although he has not avoided the charge of weighting the scales, Mr. Leland Buxton can claim credit for a wider outlook than the mere desire to "write up" one nation at the expense of another. His goal is clearly a Peninsula at peace and amity with itself, although his cynicism prompts him to regard the Balkan millenium as still remote. But he believes that no sound edifice can be raised on false theories and misrepresentation, and he has set himself the task of holding up the mirror of truth to the Balkan peoples and incidentally to add to the knowledge of many British readers of this book. If he has allowed his truth to be blunt to the degree of unkindness in regard to the Greeks, and in this part of the picture has laid his colours on with too thick a brush, his contention would probably be that there is in the case of Greece a larger measure of self-deception to be cleared away. But his pungent analysis would fail of its purpose if it left its Greek readers too exasperated to benefit from the opportunity of seeing themselves as at least some others see them. It is to be feared that there is some danger of this, although recent observers have noticed a tendency on the part of the Greeks of the kingdom to be less intolerant of criticism than formerly—a sure sign of the growth of political self-confidence and national maturity.

If Mr. Buxton has a bee in his bonnet, it is a legitimate one: to him the British partisan inciting the Balkan "hatemongers" to more hate is anathema. A clear appreciation of the damage done by such partisans must make the unbiassed onlooker a little more kindly disposed towards Balkan shortcomings, for it is easy to understand how the self-complacency thus engendered among peoples of arrested development has reacted on their disposition to indulge their more primitive passions.

The optimism of those who hoped that the war would introduce a new era into the Balkans has been roughly undermined by the action of the Supreme Council. For our own part, however, we refuse to give way to the fears of the worst pessimists. Propaganda has been overdone; fresh light is being shed on the Balkans, not for the purpose of creating a shuffle among the partisans of the different peoples, but having the effect of making the world tired of the propagandists and hatemongers, who have helped to perpetuate the feuds of the small nations. If once it can be understood that no nation, whether in the Balkans or outside them, has qualified in the past for a glass-case in the Palace of Rectitude, the Peninsula will have taken a step towards federation, which must be its ultimate goal.

"A Bulgarian understanding with the Yugoslavs and the Roumanians," says Mr. Buxton, "is possible, but such is the antipathy between Bulgarians and Greeks, that friendly relations between these peoples will be out of the question for many years to come." This must needs be the case, if the two peoples were left entirely to their own devices. But extraneous forces, it is to be hoped, will be at work to bring them together. Mr. Buxton's solution would be to have both Bulgaria and an autonomous Macedonia units of a Yugoslav Federation. Certain it is that the settlement devised by the Allied Conference cannot be the final solution of the Balkan question. But we like to believe that the four nations immediately concerned will be capable of better statesmanship when the passions of the war and of Paris have had time to die down.

Everyone interested in the Near East should read "The Black Sheep of the Balkans." More people will resent its plain speaking than will be able to challenge the facts that it marshals. Greeks who share with Mr. Buxton the belief that they are destined to be the rulers of Constantinople will be grateful to the critic to whom they can refer for the comparison between the Greeks of the unregenerate days before the Great War and those of subsequent years in the twentieth century.

II.—THE BRITISH NAVY.

In this book, the author of "The Navy in Mesopotamia" does not deal with the main work of the British Navy upon the high seas, but he tells of the work accomplished in the side shows—such as the Cameroons, Serbia, Roumania, the Persian Gulf, and the Red Sea. Everyone has heard a little of these shows, but nobody knows much of them. This ignorance is removed by a reading of this book, which, for all its delightfully unofficial style, is in the nature of being an official account of these minor episodes of the war. Mr. Cato writes with true naval raciness, and with a good humour that pervades everything. In one respect, indeed (though not in any other!), he resembles the native of the Cameroons, of whom he says: "It may be said that the chief virtue of the native pilot is his unfailing cheerfulness. When he has run the ship aground with a big bump, he turns smilingly to the commanding officer, and says, 'Small water lib 'ere, sah,' and he says it, too, with the air of one imparting useful information." This book is full of similar instances which show that the British naval men encountered experiences, however inconvenient or unexpected, in just the same spirit of amused fatalism.

Much of the matter in this book is quite new. Thus we have not seen before the full story of the R.N.A.S. (which the author says it is wrong to translate by "Really Not A Sailor") in Roumania, nor so complete a description of the taking of Salip, a village on the Red Sea. A certain amount has been written on the Aden patrol, but no one has given a more vivid narrative of it than Mr. Cato. In one of his chapters dealing with this area, "An Outpost of Empire in Somaliland," the author, besides telling a very good story of that troubled region, has some most amusing incidental matter. For instance, after showing how the Navy helped the Warsangli tribe against the Dervishes, he quotes a letter written by the Sultan of the Warsangli and a learned member of the same tribe living at Aden. The letter found its way to the Anti-Slavery Society in London.

Surely we have found in Commander Turton a saviour of our place and people. God may give him long life and prosperity to enhance such heroic works. . . . Praise and gratification have been in the mouths of us all since the success achieved by the genius and talents of Commander Turton, R.N., of H.M.S. Northbrook. The results of his success are truly colossal for us. . . .

The book is full of excellent things, and both to those who know nothing of what the Navy accomplished in out of the way places during the war, and to those who know of them only through the lifeless official documents, we commend it very heartily. It is one of the most readable books of information that we have reviewed for a long time.

III.—MOSES AND PREVENTIVE MEDICINE.

The doctor's meditations upon the plague of flies around him on the Macedonian front led him, he tells us, to the Egyptian plagues in the book of Exodus and thus on to the consideration of hygiene generally in the Old Testament. He came to see how on many points modern health precautions were parallel with those of the ancient Hebrews. In the volume before us he develops his subject with enthusiasm and carries his reader with him whether he agrees or not. The difficulty besetting any medical man in taking

such a subject is that his up-to-date modern science is not balanced by an up-to-date view of the Bible. The claim that the ritual laws of the Pentateuch were laws of "preventive medicine" is an old one, and has been consistently supported by a very conservative interpretation of the Bible. Such a view in the past has been frequently maintained by Christian and even more by Jewish commentators. Now almost all recent writers who recognize the origin of these ritual laws in very remote pre-Hebrew customs, in folklore and in the practice of taboo (which the writer mentions only to reject) take a very different view of the "laws of Moses." Dr. Wood is not, it seems to us, consistent with either school. While admitting "that the Mosaic code was not brought to its final form until the Pentateuch was edited some centuries later than the time of Moses," that the number of the Hebrews quoted as in the wilderness was "probably far too high," and criticizing the utility of many of these laws, he takes as a whole a view which is only consistent to one holding an ultra-conservative view of Biblical interpretation. It would, however, be beyond the scope of THE NEAR EAST to enter in detail into these questions, but it may be said that the views here expressed are in many respects the opposite to those in "Hygiene and Disease in Palestine in Modern and Biblical Times," which was reviewed in THE NEAR EAST (vol. xvi. p. 197). The writer further labours under the disadvantage that he has apparently very little first-hand knowledge of the conditions of life of nomadic tribes in the wilderness and also of the ritual laws of Talmudic Judaism.

Throughout the book Moses is the hero, the author of all the ritual, the far-seeing administrator and the food controller. "His fundamental principles were so sound, his attention to detail so marked and his spirit so undaunted to the end, that when there was failure the blame should rather be laid at the door of 'the congregation.'"

IV.—ORMUZD AND AHRIMAN.

In this his latest volume of verse, Sir William Watson has taken from Zoroastrianism the fundamental idea of the chief poem in the book, "The Superhuman Antagonists." This poem recounts the history of an offer by Ahriman to Ormuzd that the Universe should be definitely bisected into two spheres, over which Evil and Good respectively should reign supreme. After consulting with three of the divinities mentioned in the Zend-Aresta, Rashnu, Vayu, and Mithra, Ormuzd decides against the proposal, and the poem ends with the Evil spirit, enraged by the refusal of his specious offer,

Betaking him in fancy and in shame
Back to those holds of midnight whence he came.

It is not a very notable poem that Sir William has written. This is partly due to his determined use of a Miltonic and Wordsworthian style of writing, which, however natural to him, sounds rather artificial and is often dull to the modern ear. It is true that he is always refined, and that even in wrapping commonplace ideas in outworn language he never resembles the hack; but his preservation of dignity when there is little (except his past) to be proud about does not avail much. The case is the same with the other poems in this book, which are topical and general: similar evidence of talent and similar absence of genius. If only Sir William could revoke that spirit which created his early odes and such priceless lyrics as "April, April!" Of that spirit there is not much manifestation in this volume; but it is well to remember, when gloomily pondering on the loss of Sir William's early raptures, that Wordsworth, for long after it was said that he should have stopped writing, wrote among much cumbersome verbiage some immortal lines. The parallel between the two men is too close not to arouse fears and excite hopes.

BOOKS RECEIVED.

"Albania: The Master Key to the Near East." By Christo A Dako. (Boston: E. L. Grimes Co. $3.50.)

"Mrs. Warren's Daughter." By Sir Harry Johnston. (London: Chatto and Windus. 7s. 6d. net.)

Sir George Buchanan has returned to London from India.

M. Vaida Voevod left London for Paris on March 16 on his way to Bucharest.

General Sir Ian Hamilton and Sir Davison Dalziel, M.P., both left London on March 19 for the Continent.

Admiral Troubridge, the chief of the Inter-Allied Danube Commission, arrived at Vienna on March 17 from Budapest.

The Greek Premier, M. Venizelos, was, on March 18, the guest at luncheon of Admiral of the Fleet Earl Beatty.

Mr. Francis Wells has left for India, and expects to be away for about a year. Letters should be sent to him care of Alliance Bank of Simla, Limited, Simla.

Dr. Nemanja Vukicevitch, Chargé d'Affaires of the Legation of the Kingdom of Serbs, Croats, and Slovenes at The Hague, arrived in London on March 17 from Paris.

M. Michel B. Boeresco, Roumanian Chargé d'Affaires, has left London for the Continent. During the absence of M. Boeresco, Prince Bibesco, Counsellor, will act as Chargé d'Affaires.

The Shah of Persia has conferred upon Emad el-Molk, the Persian Chargé d'Affaires, the insignia of the Order of Temsal set in diamonds, in appreciation of the services rendered by him during his Majesty's visit to England.

The engagement is announced between Francis William Baldock Gore, of Assam, son of the late Mr. Francis Arthur Gore, and Mary Isabel Kirsteen, daughter of Mr. and Mrs. F. E. Corbet-Singleton, of Finchampstead, Berkshire.

Prince Nosrat ed-Dowleh, the Persian Foreign Minister and President of the Persian Delegation to the Peace Conference, left on March 21 for Mentone to pay his homage in person on the occasion of the Persian New Year's Day to the Shah, and will return to London in a few days' time to resume his work in connection with the Peace Conference.

On the opening of the Royal Asiatic Society's new premises at 74, Grosvenor Street, W.1, the President and Council are holding a reception on March 30 at 4 p.m. Short addresses will be delivered by the Right Hon. the Lord Reay (President) and by His Excellency Sao-ke Alfred Sze (Minister of the Republic of China at the Court of St. James's).

Under the auspices of the Royal Geographical Society, two lectures on Arabia will be delivered in the Æolian Hall at 8.30 p.m. The first is on March 29, when Commander D. G. Hogarth, C.M.G., will lecture upon "War and Discovery in Arabia," and the second on May 3, when Mr. H. St. J. Philpby will lecture upon "Across Arabia: From the Persian Gulf to the Red Sea."

A marriage has been arranged, and will take place in June, between Major Ernest Kynaston Fowler, M.C., 57th Wilde's Rifles, F.F., Indian Army, youngest son of the late Major W. M. Fowler, Gloucester Regiment, and Mrs. Fowler, of Friary Cottage, Bourne End, Bucks, and Dorothy Somerset Graves, only daughter of Colonel S. H. P. Graves, late 40th Pathans, Indian Army, and Mrs. Graves, of 21, Royal Avenue West, Isle of Man.

We understand that Lieut.-Colonel F. Forbes Mackay, who was recently Director of Civil Stores at Baghdad, attached to the Civil Commission, was married on the 22nd inst., to Ivy, only daughter of Henry A. Gray, of Wimborne. Mr. Mackay, who is now the managing director of the Scottish Mesopotamia Corporation, which is shortly

Digitized by Google

opening at Baghdad and Busreh, will be sailing for the East towards the end of next month.

The marriage was celebrated on March 16, at St. Luke's, Redcliffe Square, S. Kensington, by the Rev. F. Marshall, M.A., Rector of Ockley, brother-in-law of the bridegroom, assisted by the Rev. H. R. W. Anderson, M.A., vicar of the parish, between Major Thomas Simpson Young, retired, Indian Army, and late 10th Suffolk Regiment, of Broughton Hall, Cartmel, N. Lancashire, son of the late Mr. J. S. Young, and Edith Julia, eldest daughter of the late Major-General E. D. Newbolt.

The anniversary of the Persian New Year's Day occurred on Sunday, March 21. On the following day the Persian Chargé d'Affaires and Mme. Ghaffar Khan held a reception of the members of the colony and friends. Among those present were the ex-Regent of Persia, Nubar Pasha, the Greek Minister, the Minister of the Kingdom of Serbs, Croats, and Slovenes, the American Chargé d'Affaires and Mrs. Wright Butler, the Czecho-Slovak Chargé d'Affaires, Lady Boyd, Admiral Sir Edmond Slade, Sir Walter and Lady Susan Townley, Lady Ameer Ali, Sir Hugh and Lady Barnes, Sir Francis Barker, Sir Charles Greenway, Sir Vincent Caillard, Sir John D. Rees, M.P., and the Hon. Lady Rees, the members of the Indian Khalifate Delegation, the personnel of the Legation, the Persian Consul-General, and the members of the colony. A congratulatory message was sent to the Shah by the Persian Chargé d'Affaires on behalf of the colony.

APPOINTMENTS, ETC.

Mohamed Ali Khan Ehteshan Homayoun, First Secretary to the Persian Legation in London, has been promoted to the position of Persian Consul-General at Constantinople.

OBITUARY.

The death occurred on March 17 of Mr. Sidney Nowill, a Sheffield merchant, who was well-known in the Near East. At an early age he went to Constantinople, where afterwards, with his brother, he represented the Sheffield firm of John Nowill and Sons. The two brothers opened a further branch of the business at Athens, and in the interests of his firm Mr Nowill was a constant visitor to Egypt. At the time of his death he was sixty-eight years of age.

NEWS IN BRIEF.

According to official information from Belgrade, which has reached the Yugoslav Peace Delegation in Paris, conditions in Montenegro are constantly improving.

The Zionist Commission has decided to reopen the Shulanist School of Music in Jerusalem.

So far as present conditions permit, the medical, educational, and evangelistic work of the C.M.S. in Palestine has now been resumed. Hospitals and school buildings have been restored, but a good deal of work remains to be done.

Roumania has proposed that the peace negotiations with Soviet Russia should take place at Warsaw, whither Roumanian delegates have been dispatched. M. Tchitcherin is also asked to open direct negotiations with the Government at Bucharest.

An appeal is issued in the name of 12,000 Greeks, refugees from the region of Ortaköi, in Thrace, demanding the shifting of the Greco-Bulgarian frontier in that neighbourhood some six miles to the west, so as to restore "eleven pure Greek villages" to Greece.

A meeting was held at Bombay on March 5 to ask for the repeal of the Press Act and the extension of the amnesty to all Press publications.

According to a telegram received by the Zionist Organization in London, the Military Governor of Jerusalem has issued a proclamation prohibiting further demonstrations and processions.

It is announced by the Admiralty that, owing to the absence of a parcel post service to Yugoslavia, no parcels can be sent at present to the members of the Royal Naval Brigade and to the crews of his Majesty's ships serving on the Danube.

A Delhi message states that Mr. W. E. Crum and Mr. Paton, representing the Bombay and Bengal Chambers of Commerce respectively in the Imperial Legislative Council, in the course of a letter to the Viceroy, urge that he should continue vigorously to press the representations of their Moslem fellow-subjects regarding Constantinople and the Holy Places.

APPOINTMENTS WANTED.

THE Ladies' League (under Royal Patronage), 118, New Bond Street, successfully recommends Lady Secretaries, Chaperons, Housekeepers, Companions, Secretaries, Governesses, Nursery Governesses, Nurse Companions, Lady Nurses, etc.

MINING ENGINEER, M.I.M.M., open to any proposal. Can interest capital. Knowledge interests in Near East, Box No. 156, "Near East." 1, Devonshire Square, E.C.2.

WHERE TO STAY.

For the convenience of visitors from overseas "THE NEAR EAST" offers its services in booking rooms at hotels in the United Kingdom, on receipt of instructions preferably a week before the date of arrival. When instructions are telegraphed the message can be abbreviated as follows:—

"EASTAPROX, LONDON. TWENTIETH MATLOCK TWO

(The visitor's name and place of residence abroad to be added)."

which would indicate that two rooms were required at Matlock on the 20th of the month.

TRANSCAUCASIA.

If the Allies hoped to relieve themselves of responsibility by according recognition to the Transcaucasian Republics, they seem likely to be disappointed. A variety of circumstances is bringing the territory between the Black Sea and the Caspian into special prominence at this moment, and it is evident that the Allied Governments cannot afford to ignore the signs of the time in that part of the world. The key to the position lies in the fact that the peoples of Transcaucasia have been under Russian domination, and have made up their minds that they would rather face any ills they know not of than become a part of Russia again. When, in the early days of their emancipation, the Georgians turned to Germany for support they were by no means free agents, and there is no need to suppose that the step was taken as the result of any profound study of the European situation or in response to a matured conviction that Germany was the right horse to back. The Germans in those days were the only accessible Power for the Georgians, who owed their declaration of independence in great measure to German prompting; and probably the chief consideration was the necessity of seizing the first opportunity of protection against Russia. In the same way we may have to make some allowance for the Tartars of Azerbaijan, if, as is reported in *The Times*, they have concluded (in October last) a treaty of alliance with the Turkish Government. The suggestion does not dispose of the whole matter; but the Allies will do well to realise that the Russian bogey is a formidable factor in Transcaucasian politics. Recent events, moreover, are not calculated to have allayed misgivings on this point. When the Reds are seen to be carrying all before them, and pressing southwards through the Caucasus, it is certain that a considerable section of the Transcaucasian peoples finds ground for alarm, and will be tempted to embrace any proposal which offers the prospect of help in warding off the Russian peril. Underlying the satisfaction with which the recognition of the Republics by the Allied Governments was received would be the hope that adequate supplies of munitions would now be forthcoming, and possibly still more valuable help in maintaining the integrity of the new States. Any other explanation than the overriding fear of Russia, coupled with hostility towards Armenia, seems to make the contradictory policies of the Republics too crude even for peoples taking their first lessons in statecraft.

But when every allowance is made for the Republics the Allies cannot overlook the very definite links that are being forged between the Tartars of Azerbaijan and the Turkish Government. The treaty of alliance which is said to have been signed last October in Constantinople provided for reciprocal assistance in case of foreign aggression against the territorial integrity of either State, or in case any foreign Power should attempt to establish a political, administrative, or economic protectorate over either. According to a further clause, the Azerbaijan Republic, in order that mutual co-operation might be more effectively secured, bound itself to allow the Turkish Government to organise its army and supply the officers and soldiers required for the proper training of the Tartar troops. Now, whether this treaty was signed or not, or whatever validity attaches to it, there can be no doubt that the reported terms correspond to a definite tendency that has to be reckoned with both in Turkey and in Azerbaijan. In the latter, where the bulk of the population is Moslem, it is not to be wondered at that there should be some movement in favour of an understanding with Turkey. The course of events in the Caucasus since the collapse of Russia was summarised in THE NEAR EAST of February 12 and 16, and last week our well-informed Constantinople correspondent gave an interesting account of later happenings in the Moslem Republic. The collapse of Germany and Turkey left the new States at the mercy of conflicting interests within and of rivalries and undetermined frontiers without. If the Allies had been able to take at once the place vacated by Germany, the recent history of Transcaucasia might have assumed a different character. The British representative has done good work within the limits imposed upon him; but it is evident that his influence has not carried far in Azerbaijan. The ground has been left more or less free to the Turkish Committee of Union and Progress, which has been working through Enver Pasha and members of his family. The party in power is professedly democratic and liberal, but there would seem to have been little so far to distinguish it, in regard to its foreign policy, from the Union party, which supports the pan-Turanian movement of the Committee of Union and Progress, and is closely related to that body. Five or six months ago, when the treaty with Turkey was being negotiated, the Allies' intentions were either unknown to the Transcaucasian republics or were supposed to foreshadow a complete severance of interest in their fate. In these circumstances there could have been no incentive to the democratic party in Azerbaijan to withstand the natural tendency to lean upon their co-religionists in Turkey. It remains to be seen whether recognition of the Republics by the Allies has been sufficient to bring about a fresh orientation of foreign policy, which might well find encouragement in the adoption by Great Britain and France of a more vigorous attitude towards violation of the Armistice, whether at Constantinople or in Asia Minor.

The moral of what has happened in Turkey and in Transcaucasia is that the Allies cannot divest themselves of responsibility for the good government of the whole of this wide area against Bolshevism and Turkish intrigues; the new Republics stand no chance if left to their own resources. On the other hand, any prospect of the co-operation of Daghestan and Azerbaijan—both occupying strategical positions for the eastward movement—must serve as a strong inducement to the Turkish Nationalists to continue their policy of resistance to the spirit of the Armistice and to the efforts of the Allies to introduce better government in Turkey. At the moment something in the nature of a naval and military expedition has been prepared to deal more effectively with the Turks. It is established that Mustapha Kemal's forces are unlikely to prove formidable in the face of any organised attempt to come to grips with them, and in the interests of the future peace of this part of the world there can be no alternative for the Allies to seeing the thing through to its logical conclusion. Certain it is that steps to this end taken now will prove far less expensive in the long run than a policy of *laissez-faire*. Mustapha Kemal, we may be confident, enjoys considerable prestige in Azerbaijan. If he is allowed to trade upon this and the Azerbaijanis are left to suppose that the star of Enver and his family is in the ascendant in Turkey, Baku will become the centre of intrigues, which will keep a large part of Central Asia in a state of chronic unrest. On the other hand, with those who cannot be accused of connivance with the Committee of Union and Progress in power in Turkey and Turkish territory cut off by Armenia from direct contact with Azerbaijan, it should be comparatively simple to persuade the Azerbaijanis that a brighter future awaits them from the promotion of peace and good government within their borders than from lending themselves and their resources to serve as a catspaw for certain Turks in enterprises which are more concerned with schemes of self-aggrandisement than with solicitude for the welfare of Islam.

CENTRAL ASIA AFTER THE PEACE—III.*

By Colonel A. C. Yate.

Britain has a very grave task before her as the champion of the Entente against Bolshevism (which has recently debated whether to turn its arms first against East or West) in the Middle East, but I venture to think that the entire British Empire is confident that England will do her duty, and that England's daughters will stand by her in this struggle, as they have stood by her from 1914 onward. France, we are confident, will stand by Britain, and selfish as I think the policy of Italy or Greece has been, both throughout and since the war, their own self-interest should prompt them to stand by Britain against Bolshevism. The pretensions of Greece have been quite abnormal, and we have all heard that these pretensions were admirably advocated by the personal charm and impressiveness of M. Venizelos. Still, we certainly draw the line at Cyprus. On January 21, before the Central Asian Society, Mr. Roland Michell, for thirty years Commissioner for Limassol, stated why Britain *must* retain Cyprus, and Sir Wm. Haynes Smith, Sir Charles King Harman, Sir W. M. Ramsay, and Colonel C. E. Yate, M.P., strongly supported him. Cyprus is a most valuable base and protection, and it was as such, I have been assured, that Disraeli took it in 1878. We realise that our hands are not strengthened at this crisis either by the state of affairs in Egypt or by the attitude of Moslems and Extremists in India, and the assassination of the Amir Habibullah Khan has certainly added to our difficulties. Bearing this in mind, our Government has done well to decline to send troops to any part of Russia or to the Baltic. Our interest and our duty bid us to hold the line from the passes north of Kashmir to the Dardanelles, and if we do that we shall have done our duty by ourselves and by our Allies. Bolshevism must be brought to its bearings and taught its limits. It is deeply to be regretted that at this juncture Kabul has once more, again under Muscovite temptation, and this time with a graver menace than ever, thrown down the gauntlet to India. We have had this theme amply thrashed out in our own journals by our own fellow-countrymen. Let us hear how the Afghan, not the fanatic, but the statesman, views it: "The fact of not having drawn up the treaty with Turkey has in a large degree helped the discontent in the Moslem world, and, where the people are more sensitive about their religious conceptions, the anxiety is most marked. For instance, in Kabul one sees it more in evidence than in the Punjab, and in Persia one might discover that people give no two thoughts to the subject. What has really happened is that the Bolshevists and others have propagated the idea that Turkey, the seat of Islam, is going to be dismantled, and what is more, that Great Britain is the chief mover in this process. It may be furthest from the English mind to destroy the Islamic seat, if Constantinople is to be regarded as the seat of Islam, and not Mecca. The formation of various societies in Russia—'for the protection of Islam,' as they are called—is really an amalgamated phase of the Pan-Islamic and Pan-Turanian movement. The one has been merged into the other; and I can, with confidence of facts, say that no small measure of diplomacy and delicate handling will be necessary to cope with these movements, which, as you will remember, started with 'The Society of Union and Progress' in Turkey at the downfall of the Sultan Abdul Hamid. At that time they were little more than social movements. Now they have become political in the extreme.

"It is a mistake to suppose that the Bolshevist canons appeal to the Khivan, the Bokharian, and the Afghan. The popularity, or, rather, the hold which the Reds have established over these Central Asian areas is very cleverly formulated. They do not say, 'These are our political aims, these our ways of dealing with our enemies; adopt them, or—we will fight you.' No; the thing is managed otherwise. The Reds have not fought with Khiva, Bokhara, or Afghanistan. They said to the former: 'You were under Imperialist Russia; you were oppressed; you were a mere nominal Khan of your country. We have destroyed your Imperialist oppressors, and we wish to see you happy. Here is some gold to be going on with. Now, are you with us?' The Uzbeks became adherents of the Bolshevists. To the Afghans the Reds said: 'The English have long been your enemies. Help us now to clear out these Russians who have for years been watching to pounce upon you from the Kushk-post,† and you can have your land up to Merv. Never mind if you are isolated from India. Open up your communications with the Caspian, and here is some gold which you may find useful.' Here also their purpose was achieved. It is not superior strength that has won the Bolshevist battles, but the downfall of Imperialist Russia in Central Asia, and inactivity on the part of Britain and India which has favoured their cause.

"It is idle to suppose that Russia will be killed by the Bolshevists. It is my belief that Russia will regenerate stronger even than she ever was before. Rivalry between Britain and Russia will be as keen very soon as it was twenty years ago. The Afghans and the Uzbeks, being at close quarters, have foreseen this possibility, and are shaping their policy accordingly. Britain must look into Central Asian affairs if she wants quietness in Persia and India. To remain indifferent to what is happening in Turkistan at present is not at all wise. People will tell you that, if Britain interfered, she would be interfering in the private affairs of Russia. I cannot agree to this. Turkistan politics throw shadows far and wide—to Baghdad, to Kabul, to Teheran, to Peshawar, and even to Lahore. Can they, then, be called a Russian affair alone? I think not.

"Now let us look into Afghan affairs. Whatever has happened since the death of Habibullah is passed, and should be regarded as a thing of the past. The Afghans should be again treated as allies and befriended. I must speak frankly. I think that the Afghan offensive of 1919 should be overlooked. I think that the British must take the initiative in friendly overtures. Supposing the Afghans adopted a sulky attitude and showed no inclination to open up friendly relations with you—who would be the loser? Is there any doubt about the question? The Afghans have factories, and they have now a channel for imports and exports at Merv. How can you blockade and boycott them now? Would you prefer a hostile Afghanistan next door? I do not think that, for the safety of India, you can afford it. You will not be allowed to conquer the country, for the League of Nations would not let you. All this shows that Afghanistan should be befriended and not cold-shouldered too much. Again, let this be borne in mind, that if Bolshevism penetrates further into Afghanistan that country will come under the very Power which Britain has consistently warned off her, viz., Russia; for, 'Communists' as the Bolshevists may take themselves to be, they will again regenerate Imperialist Russia. For this reason it is my political faith that Afghanistan should take advantage of the present opportunity and become friendly immediately with Great Britain. So you see how the two questions are interlaced with each other. Afghans *must* become friends of the British, and the British should, with their characteristic adaptability, make overtures to befriend Afghanistan."

Having given *in extenso* this expression of the views of my Afghan correspondent, I would suggest to those of my readers who desire to arrive at a judgment of some soundness on this question to re-read Lord Curzon's speech in the House of Lords on October 28 last. That speech distinctly states that, after a lapse of six months from the date of the signature of the Peace Treaty between the British Government and the Amir (August 8, 1919), it is hoped that it will be possible to re-enter into negotiations with the Afghan Government, and to re-establish really friendly relations between India and Afghanistan. That "probationary period of six months" has now been completed. This is a very critical moment. We have the precedents of 1837 and 1878 before us, when Dost Mahommed and Shere Ali yielded to blandishments of Russian intrigue. Russian—Bolshevist, not Imperialist—intrigue is again at work at Kabul. I am disposed to think that now, if the Amir shows himself amenable, the second stage of the negotiations will take place in London, not at Peshawar. If Nasrullah Khan thirty-five years ago had been a less impossible person, St. James's might ere this have seen an Afghan Envoy. One thing seems absolutely certain, and that is that an Anti-Bolshevist alliance between Britain and Afghanistan will greatly strengthen British power in its conflict with Bolshevism in Central Asia. I have long felt that the admirable and loyal conduct of the Amir Habibullah during the war entitled him to recognition; and, as he is gone, his nation is his rightful heir. Merv, which the Afghans have occupied on their own, is an earnest of other territorial increments to follow. When I look back to scenes and memories on and near the Murghab in 1884-5, I am bound to confess that I am heart and soul with the Afghans in their revenge. I only wish that the Amir Habibullah had lived to see it. One other Afghan, too, I would had seen it—Sardar Mahommed Hashim Khan, whom in April, 1885, I visited at Meshed, and who, with tears in his eyes, said to me, referring to the unprovoked Russian attack on General Ghaus-ud-din's force at Panjdeh, "Sahib, surely you English will avenge this." An Anglo-Afghan alliance in 1920 will take this revenge, belated though it be.

THE "UNIVERSAL" CIGARETTE MACHINE.

Designed to make round, oval or Egyptian cigarettes with creased edges of any desired diameter or length with wide or narrow pasted laps, and, by an interchange of parts, also crimped cigarettes.

IN DAILY USE THROUGHOUT THE NEAR AND MIDDLE EAST.

Embodies the following advantages:—

Works satisfactorily with any kind of tobacco. Apparatu supplied for printing cigarettes in one or two colours. Manufactures and tips cigarettes at one and the same time. Automatically sorts the cigarettes. Apparatus for pasting with starch or liquid paste as required. Fitted with device for stripping waste cigarettes or cigarette rods.

UNITED CIGARETTE MACHINE CO. Inc.,
80, Coleman Street,
LONDON, ENGLAND.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

In the report of the Corporation of Foreign Bondholders, which was issued this week, the financial outlook in Greece is referred to as distinctly favourable. The total surplus revenues receivable by the Greek Government should at the present rate of increase, it is pointed out, aggregate upwards of 85,000,000 drachmæ for the year 1919, as against 37,000,000 drachmæ in 1918, thus easily surpassing all records. The gross receipts from the assigned revenues in 1919 were 100,844,949 drachmæ, an increase of 33,394,901 drachmæ, and the receipts in 1919 applicable to the plus-values amounted to 50,468,064 drachmæ, as against 36,264,901 drachmæ in 1918. This considerable increase permits the raising of the interest payable in 1920 on the loans of all the group to the original rates, and of additions, by way of increased sinking fund of 30 per cent. of the original interest to Groups I. and II. and 32 per cent. to Group III. The distribution in 1919 by way of increased interest was 26 per cent. of the original interest to each of the three groups, and, by way of increased sinking fund, 14 per cent. to the first and third and 16 per cent. to the second group.

***

The position as regards Turkey is briefly summarised in the report. The gross receipts from the revenues assigned to the service of the Unified Debt and Lots Turcs in 1916-17 amounted to £T3,633,692 (paper). There was a remarkable improvement in 1917-18 of nearly 68 per cent., the figures being £T6,087,495 (paper), while for 1918-19 the provisional receipts were £T6,057,868 (paper). For the first nine months of the year under review the receipts amounted to £T5,214,963 (paper). The arrears of interest on the Unified Debt up to September, 1919, amounted to £T6,320,000, and deducting the resources standing to the credit of the Debt Administration—exclusive of the Reserve Fund and collections effected in Turkish territories occupied by the Allies—the deficiency was then £4,351,000. Owing to further depreciation in the exchanges, it is estimated, however, that this has now been increased by nearly £1,000,000.

***

The report of the Eastern Bank for the past year shows greatly improved results, the available balance, including the carry forward, being £122,500, as against £84,800 for the previous year, an increase of £37,700. It is proposed to pay a final dividend of 4s. per share, making 7s. per share for the year, or 8¾ per cent., as against 6s. per share or 7½ per cent. for 1918, to place £40,000 to the reserve fund as against £20,000, and to carry forward £20,000. The bank's capital was increased last year to £2,000,000 by the issue of 50,000 new shares to shareholders at a premium of 10s. per share, and this premium has been placed to the reserve fund, which now stands at £225,000.

***

The effects of the war on the Indian currency and exchange system were dealt with by Sir William Meyer, late Finance Member of the Government of India, in the course of an interesting paper which he read before the Indian section of the Royal Society of Arts on March 19 on "The Indian Currency System and its Developments." When the war broke out, India was in a strong financial position; but the outbreak of war led, he pointed out, to a business and exchange panic, but the situation had been promptly dealt with. A bewildering sequence of events followed, leading to the appointment of a very strong committee, to provide, if possible, definite principles and lines of action, in place of the hand-to-mouth expedients which the ever-changing circumstances of the war and its aftermath had hitherto dictated. That committee, which had given a most able presentment of the difficulties and the policy necessary for the future, had provided the best policy possible in present conditions. Fate might yet have other and great vicissitudes in store, he remarked, but he thought that they might regard the success with which past difficulties had been met as a satisfactory omen for the future.

***

The Indian trade figures for January make very interesting reading, the values of the imports and exports passing all previous records. The imports amounted to £16,718,000, an increase of £4,759,000 on the figures for the corresponding month of 1919, while the exports show an increase of £4,178,000 at £20,715,000. As regards imports there was an increase of £3,325,000 in articles wholly or mainly manufactured, this being mainly due to much larger imports of cotton piece goods, while the increased value of the exports is mainly due to larger shipments of raw cotton, jute, hides, and lac. The respective totals for January, 1914, were £12,026,000 for imports, and £14,934,000 for exports.

***

In view of the developments in the Smyrna district it was only to be expected that there would be further delay in the completion of the accounts of the Ottoman Railway from Smyrna to Aidin. The report of the line, which has just been issued, states that they are, however, now well in hand, and will, no doubt, be ready for inclusion with the next report of the Council. Following the Armistice the company was able to regain possession of its property, but as a result of the disturbances which followed the landing of the Greek Army in May only about one-third of the line is being operated by the company's staff, the upper and remaining portion being in the possession of the Turkish insurgents. This has had two unfortunate consequences. A good season had been anticipated, but in the circumstances the receipts have naturally been very adversely affected. Secondly, there must, of course, be still further delay in proceeding with the necessary measures of reconstruction.

***

The figures for Egypt's trade in 1919 are the most satisfactory that have yet been recorded. There was a slight decrease in imports at £E47,409,717, as against £E51,155,306; but, on the other hand, there was a substantial rise in exports at £E75,888,321, as against £E45,370,020, and there is thus a balance of trade in favour of Egypt of £E33,000,000, as against £E5,000,000 for 1918, and rather less than that amount for 1913, the best normal pre-war year. This result reflects the unprecedented prosperity of the country as a whole at the present time, and indicates very plainly the growing market that may be looked for in that country as a result of the greatly increased purchasing power of large sections of the population.

***

An interesting survey of the present position in Egypt is given in the recently published report of the Credit Foncier d'Egypte. "The persistent rise in the prices of agricultural products," says the report, "has resulted in the increase of wealth surpassing expectations . . . After having always been debtor to Europe Egypt is now becoming the latter's creditor. The circulation of the National Bank of Egypt rose from £E2,200,000 on July 31, 1914, to over £40,000,000 on July 31, 1919, before the new crop; and on November 30, 1919, when the crop was partly sold, the circulation exceeded £E65,000,000. The bank deposits increase daily, and the sales of land are reaching prices never obtained before."

***

A satisfactory report is forthcoming from the Aboukir Company for 1919. The trading profit was £17,813, to which has to be added the profit on land sales, £67,429, and the carry forward of £1,615, making the available total £86,857. The interim dividend of 3 per cent. absorbed £9,000, and it is now proposed to pay a final dividend of 15 per cent. which will absorb £45,000, to place £25,000 to the reserve, and to carry forward £7,857.

(Reports from Our Own Correspondents.)

YUGOSLAVIA.

Belgrade, March 12.

The Currency Problem.

Although the Narodny Club has expressly stated that it includes in its programme a revision of the currency reform and the stoppage of the recall of kronen at the rate of four to one, the Minister of Finance, Dr. Velizar Jankovitch, a connection of M. Pashitch, and Minister of Commerce in the last Radical Government at Salonika, has issued orders for the exchange to continue. He sees perfectly clearly that as the recall of the krone has actually begun, and a substantial number of the new notes are already in circulation, it is impossible to draw back without throwing the commerce and organisation of the country into absolute confusion. The 1,000-kronen notes will be withdrawn from circulation by March 5 in Serbia and Montenegro, and by the 15th in the other parts of the kingdom. 100-kronen notes will be withdrawn by April 15, while the date for the recall of smaller unities will be announced later. Finally, the old Serbian dinar currency will be eventually withdrawn and replaced by the new dinar-cum-krone notes. On no account will any extension of date be allowed.

The 1,000-dinar or 4,000-kronen notes have already been in circulation for some weeks. They caused considerable interest at first, as there has not hitherto been a larger unit than 100 dinars in Serbia, this sufficing even for quite large transactions. The 1,000-dinar note was at once recognised as a great convenience. The 100-dinar is a French-made note, like the larger one, but the 10-dinar (= 40 kronen) betrays a totally different origin. The design is not bad, but not so artistic as the old or new French-made notes; it is overcrowded and too heavily coloured; it is deep blue in colour, so dark that the inscription can scarcely be read; on one side the edges are tinted with pink, as in Austrian notes. The notes are by no means an improvement on the pale blue, well-designed, pretty dinar currency engraved in France, which they are superseding. The sooner they are superseded themselves the better.

Since the beginning of the last phase of the political crisis there has been a heavy and continued fall in the exchange; the dinar has been down to 142, and this makes it virtually impossible for Serbs to buy in the English market, especially against rising prices. And when it is a question of goods dependent on American raw material, as in the case of cotton, with the American exchange to be taken into account as well, conditions are virtually prohibitive.

After a month of glorious spring weather, dry and sunny, the fruit-trees are beginning to blossom, the woods are showing a delicate green mantle, and the peasants have begun to prune their vines. Unhappily, this climate is nearly as treacherous as our own, and for the past three days we have been having a sleety drizzle, which is turning into snow. A mantle of snow would be unpleasant, but not disastrous; but a hard dry frost now would do immense damage to the fruit-trees and to the vines; indeed, probably most of the vineyards that have been pruned would be destroyed.

ROUMANIA.

Bucharest, March 12.

Spring-sowings.

A break in the cold weather, followed by a week of balmy spring days, put the question of spring-sowings forward. From various parts of the country news comes that little work is being done in the fields. The Ministry of Agriculture has succeeded in distributing sufficient seed-grain for the spring-sowings, but there is less wheat available than one might wish. The peasant seems, however, to be in no hurry to purchase seed-grain from the local centres of distribution, and in some parts of the country is demanding that the grain be given free, in others that wheat be supplied instead of barley.

Undoubtedly there will be a smaller surface sown than usual, and the expropriation of the big estates is partially responsible. There has not yet been time for the expropriated land to be surveyed and divided up amongst individual owners, so the land taken from the boyars has been handed over undivided to the peasants' associations to cultivate. Each peasant, however, naturally turns his attention first to the bit of land he already possesses and then, if he have time, to the common land. More often than not he hires himself and his oxen to the local boyar, who is hard put to it these days to find labour to cultivate his reduced estate, or else our peasant goes into the transport business, especially if he be within reach of a large town.

Slowly, but surely, it is being borne in upon the European that lack of transport is at the bottom of most of his troubles. Here the railroads are hopelessly inadequate to the demands upon them. The possessors of motor-lorries are overwhelmed by orders; private motor-cars piled high with bales of stuffs fill the roads from the congested ports to the capital; long trains of peasants' carts carry salt, wine and paraffin from the producer to the empty markets of the towns. Means of transport abandoned twenty years ago are being revived profitably.

The town-dweller waxes eloquent over the peasant's reluctance to plant oats, and the peasant, while not exactly verbose, may be heard to inquire now and again why he should put his horses and oxen to ploughing when he can earn two hundred lei a day per cart hauling merchandise?

INDIAN CURRENCY RESERVE.

A Reuter message from Delhi, dated March 13, states: Mr. Hailey, the Minister of Finance, is introducing a Bill in the Legislative Council on March 17 abolishing the existing limitations with regard to the nature of the securities in which investments of currency reserves are permitted. This is necessary on account of the present demand for remittances to London and the inability to meet the same from the Secretary of State's reserve. It is not practicable to give effect to the Currency Committee's proposals immediately, and the enactment will only be a temporary one, remaining in force until October, when the Government will be in a position to formulate definite proposals regarding the limits and composition of such investments.

THE NILE CONTROL WORKS.—II.

Function and Utility of Each Work.

The White Nile Dam.

The note proceeds to give a description of each of the control works in so far as their purpose is concerned. The White Nile Dam at Gebel Aulia will consist of a masonry dam built across the White Nile 45 kilometres south of Khartoum at Gebel Aulia, and will form a huge reservoir about 500 kilometres long in the White Nile Province, with an effective capacity, after allowing for losses by evaporation, of 4,000 million cubic metres.

It is pointed out that if an abnormally low flood such as that of 1913 should recur before storage provision has been made on Lake Albert, it may not be feasible to abstract from the river enough water to make full use of the Gebel Aulia reservoir. The sequence of the proposed works is, however, designed to meet this eventuality, and even in such an abnormal year enough water could be conserved in this reservoir to ensure for Egypt at least as good a supply per feddan of cultivation as she actually enjoyed in 1913-14.

The reservoir will also help in the control of high floods. Its capacity is very much greater than is required to add 4,000 million cubic metres to the river, and it will, in fact, be capable of containing about 10,000 million cubic metres. This control will be accomplished by shutting the gates of the dam as soon as the main river at Khartoum has risen to a level beyond which any further rise would be a disadvantage to Egypt, and by keeping them shut until the river has fallen again to a safe level. By these means the contribution of the White Nile will be completely stopped, and the crest of the flood may therefore be reduced.

The actual crest, however, is composed very largely, if not entirely, of silt-laden waters of the Blue Nile, which cannot be controlled absolutely, though their volume will be materially reduced by the Upper Blue Nile dam and the Gezira canals. But, as the note points out, it is not only the extreme height of the flood which constitutes the danger to Egypt, but rather the long continuance of high levels which tend to make the saturated Nile banks slip and breach. It is, indeed, the discharge of the waters impounded in the huge natural reservoir of the White Nile Valley, and so prolongs the flood in Egypt. The White Nile dam, by delaying this discharge as well as the natural flow of the White Nile itself till all danger is passed, will to a great extent remove the continuous pressure on the Nile banks, and thus the combined effect of the works on the White and Blue Nile will be to relieve Egypt very largely of her danger from inundation.

On the completion of the Upper Blue Nile dam, and more particularly when ample water can be stored in Lake Albert, the White Nile reservoir will no longer be used simply for the storage of flood waters, but also as a regulating tank to equalise the discharge in the main river. This function is essential, as it takes about six weeks for water to travel from Lake Albert to Khartoum.

The Blue Nile Dam.

The dam on the Blue Nile at Sennar is for the purpose of supplying free flow irrigation water to a tract of 300,000 feddans in the Sudan Gezira, near Wadi Medani. The work is a combined regulator and dam. As a regulator it fulfils exactly the same functions as the barrages in Egypt, while as a dam it forms a reservoir of about 500 million cubic metres capacity.

The climatic and other conditions in the Sudan Gezira are such that winter crops are alone possible, whilst land must lie fallow for at least one year in every three. Of the afore-mentioned 300,000 feddans only two-thirds can therefore be cultivated annually, and of these only 100,000 feddans can be under cotton, as by contrast with Egypt the soil will only support a cotton crop once in three years. Other crops being reaped by the middle of January will require no water after that date, but cotton which does not come to full maturity until later, and will normally cease to be irrigated by March 31, and occasionally up to April 15, will require water in February and March, when Egypt can spare none of the quantity flowing down to her in the river. It is to meet this situation that it is proposed to create a reservoir at Sennar, which will be filled towards the end of the flood season, when there is always plenty of water, and wherein the quantity stored will be sufficient to irrigate the Sudan cotton crop in the spring without abstracting any water from the river when Egypt requires it.

The Nag' Hammadi Barrage.

It is proposed to construct a barrage in the neighbourhood of Nag' Hammadi for the purpose of raising the water level in flood times, so that the Girga basins may be assured of an ample water supply even in the lowest of floods, such as 1913, when large areas had to remain uncultivated. The necessity for the barrage will be all the greater when other works are constructed to the South, either for irrigating neighbouring lands or for filling a summer supply reservoir from flood. The area of basin land protected will be about 500,000 feddans, and except for the isolated basins of Aswan Province, and a few small areas on the east bank of the river, the erection of this work will mark the completion of the scheme inaugurated many years ago for protecting Upper Egypt against the loss caused by the failure of low floods to irrigate the land; whilst it will also be possible to give free flow summer water to the area commanded when the necessary conversion works have been carried out.

The Dam on the Upper Blue Nile.

It may also be possible to erect a dam at a suitable site on the upper reaches of the Blue Nile to form a reservoir having a capacity of 7,000 million cubic metres, and thus enable some control to be exercised on the amount of water passing down the river. Of this volume 4,000 million cubic metres will be held in reserve from year to year, and the remaining 3,000 million cubic metres will be retained from all floods except low ones for use in the Sudan in the following spring. If the flood is extremely low, no water will be abstracted from it for use in the following months; but, on the contrary, the late stages of the flood will be augmented by a portion of the 4,000 million cubic metres held in reserve from previous years of abundant supply. If the flood is very high the abstraction of 3,000 million cubic metres from the river mainly when the crest is passing will much diminish the quantity of water in the river at that period, and thus help materially to reduce the height of the flood in Egypt.

The construction of this dam is essential for the future development of the Sudan, for whereas Egypt can provide for her own needs from the White Nile, it is only water flowing in the Blue Nile that can be of use to the Sudan Gezira; but as regards Egypt, the Upper Blue Nile dam is also a valuable feature of the Nile control works, since the Blue Nile forms the flood, and it will be situated where the waters are as yet free from silt, and can therefore be safely stored at the crest of the flood.

Unless a reservoir is formed at some spot in the upper reaches of the Blue Nile the possible development of the Gezira plains will be limited by the amount of water to be stored in the Sennar reservoir. The Upper Nile reservoir will meet all the Sudan demands until well after Egypt is fully developed in 1955, and before that period, and until the sudd works and the Lake Albert reservoir are completed, the excess waters will be used to augment Egypt's supply. Nevertheless, as is pointed out, this reservoir will have to be largely increased in size in the last decades of the present century to complete eventually the Sudan's development, but it is believed that this can be done when required.

The Dam on Lake Albert.

The extra volume of water required to meet the ultimate requirements of Egypt in low years is such that the only place in the basin of the Nile where economical storage of sufficient magnitude can be provided is at Lake Albert, the area of which is about 5,500,000 square kilometres. A quantity of 5,500 million cubic metres could be stored by raising the water level by a metre, and as the lake has relatively steep sides there will be no great increase in the area of water surface, and there will be no additional evaporation loss of any importance. The proposal is to erect a dam at the outfall of the Nile of such a height as will raise the water level by seven and a-half to eight cubic metres. The reservoir will serve the double purpose of a reserve storage reservoir to meet the needs of Egypt, and a regulating tank where a portion of the water now wasted annually in the sudd can be conserved in flood and released in the following summer.

The annual flood arrives in Egypt somewhat later than the most advantageous agricultural date for sowing flood grain crops, and consequently there is always an urgent demand for water at that period which can only be met by adding to the natural supply water stored from a previous flood. As the period of storage will be very long, and evaporation losses must be eliminated to the utmost extent, Lake Albert best meets this case. The reserve volume in the reservoir should be at least 12,500 million cubic metres, so as to meet a recurrence of the worst known conditions, while a further 7,500 million cubic metres must be stored from the high to the low period of the year. Both these volumes represent the net amount required below Aswan, and do not include transmission losses to that point. The 7,500 million cubic metres will be conserved from the volume now annually lost in the sudd region or flowing to the sea at the time of the Blue Nile flood. The net volume required at Aswan being about 20,000 million cubic metres, the capacity of the reservoir as proposed is believed to be ample.

Correspondents throughout Greece.

Established June, 1905, by the National Bank of Greece and a group of Capitalists.

CAPITAL - Drs. 1,500,000.
RESERVE FUND - Drs. 2,500,000.
Deposits and Credit Accounts, Drs. 100,000,000.

The Bank specialises in the collection of Bills payable in Greece; it accepts goods on consignment, and undertakes their sale, and transacts every kind of Banking business.

General Manager: D. LOVERDO.

TRADE WITH THE NEAR EAST.

The Bank of Athens extends special facilities for business with the Near **East** to manufacturers, exporters and importers.

The Bank has offices in all the principal towns in **Greece,** also in **Egypt,** Cairo and Alexandria, in **Cyprus,** Limassol and Nicosia, in **Constantinople,** and in **Smyrna.**

Inquiries from interested parties are invited.

BANK OF ATHENS.

PAID-UP CAPITAL : £1,920,000. **HEAD OFFICE IN ATHENS.**

London Office: 22, Fenchurch Street, E.C. 3.

COMMERCIAL BANK OF GREECE, LIMITED.

CAPITAL PAID-UP - Drs. 15,000,000.
RESERVE FUNDS - Drs. 2,845,010.45.

Head Office: ATHENS.

Branches:—**Piræus, Salonika, Patras, Volo, Syra, Calamata, Corfu, Cephalonia, Candia, Chios, Argos, Pyrgos, Vostizza (Ægion), Nauplia. Larissa.**

AGENTS IN ALL PARTS OF GREECE, THE LEVANT, AND ABROAD.

The Bank conducts every kind of Banking, Commercial and Stock Exchange business and extends special facilities to traders interested in business with Greece. It acts as Agent for many Foreign Banks. It is specially organised for Exchange, the execution of mail and cable transfers throughout Greece, and for the collection of clean and documentary Drafts.

MERCHANDISE DEPARTMENT:
The Bank undertakes the warehousing and sale of goods consigned.

GREECE.

Area 43,522 square miles. The cultivated area amounted to 5,745,300 acres, of which about 2,253,400 were under cereals, 518,900 under grapes and currants, 370,600 under oak trees, 295,500 under olives, and 2,223,900 were forests.

Population (1914), 5,000,000 approximately.

Chief Products (with average annual production):—Currants, 142,000 tons; wines, 3,000,000 casks; tobacco, 9,000,000 lb.; cereals, 8,000,000 bushels; olive oil, 200,000 casks.

The **MINERALS** of Greece include:—Iron, Marble, Magnesite, Emery, Lead, Lignite.

IMPORTS (1914), Old Greece only:—Total value £7,000,000, of which £2,000,000 from the United Kingdom; £1,800,000 from Germany and Austria Hungary; £1,000,000 from Russia.

EXPORTS (1914), Old Greece only:—Total value £4,000,000, of which £3,000,000 came to the United Kingdom.

COINAGE.—The unit is the Drachmæ, equivalent to a Franc (10d.). The current rate of exchange is about 32·20 Drachmæ to £1.

FREIGHT. — From England, 160/- + 10 % primage.

WEIGHTS AND MEASURES.—It was decided in 1898 to introduce the metric system. The change is to be gradual from the old system, which is:—Oke = 2·82 lb., stater = 123·20 lb., livre (Venetian) = 1·05 lb., baril (wine) = 16·33 imperial gallons, kilo = 0·114 imperial quarter, pike = ¾ of a yard, stremma = ·242 of an acre.

BANK OF NATIONAL ECONOMY (of Greece)

Head Office: ATHENS.

Branches:

PIRÆUS, SYRA. PATRAS.

Capital Paid Up - Drs. 10,000,000.

Fully represented in all parts of the world for all kinds of commercial, financial, and shipping business.

President. L. EMBIRICOS. *Manager.* D. MIAOULIS.

BANK OF PIRÆUS.

For COMMERCE, INDUSTRY and SHIPPING.

Capital Paid-up - Drs. 5,000,000. Reserve Fund - Drs. 3,095,000.

OFFICES at PIRÆUS and ATHENS.

Every kind of Banking business transacted.
The Bank's connections throughout Greece enable it to offer foreign clients special facilities for the collection of Bills, etc.
Correspondence invited.

BANK OF INDUSTRY OF GREECE.

Head Office: 14, Stadium Street, Athens.

Capital Fully Paid-up - Drs. 15,000,000

The Bank has been established for the encouragement and development of Industry and Commerce, and undertakes every description of banking business.

BANK OF ORIENT.

Capital Paid up - Drs. 25,000,000

Head Office: ATHENS.

Branches: SALONIKA, SMYRNA, ALEXANDRIA, CAIRO, MITYLENE, SERRES, ZAGAZIG, MAGNESIA, PERGAMA, SOMA.

Every kind of Banking Business transacted.

BIRMINGHAM AND THE BRITISH INDUSTRIES FAIR.

(By Our Special Representative).

The City of Birmingham.

Tarsus, we know, on good authority, was, nearly nineteen hundred years ago, "no mean city." It was one part of the life effort of a phenomenal Englishman to have the world admit that Birmingham was no mean city. The greatest Empire known to history has acclaimed the late Joseph Chamberlain as a master craftsman, not only of a city but of a mighty loving Commonwealth. The greatest war in history has proved the truth of his grim, sardonic quotation that "who sups with the devil needs a long spoon." Those who have enjoyed the opportunity of visiting Birmingham, its vast suburbs, and its first great Peace Fair, will readily admit that the Birmingham spoon was quite long enough for William the Megalomaniac.

By many of our Near and Middle East readers Birmingham and its industrial activities are known only by repute. It made guns, and perhaps abetted a bit of gun-running across the Red Sea, up the steep, arid cliffs of the eastern side of the Persian Gulf; through Valona, possibly, and Salonika, to assist the blood-lust of Macedonian Komitajis; it made cheap and even imitation jewellery; it re-invented, at the bases of the Pyramids, scarabs of great antiquity and the tear-bottles of the predecessors of Cleopatra; for two pins—for needles and pins are made in the Birmingham district—it would have sold the monks of Mount Athos genuine antiques from the private museum of the young man who "had great possessions." This perhaps it did, until it awakened to find itself utterly outpaced in such vagaries by Pforzheim and other German rivals. It resolved to amend It has marvellously amended.

The writer spent nine months in Birmingham fourteen years ago. Its Town Hall was then, as to-day, the most noble Greco-classic town hall in the British Isles. One of its two main railway stations, New Street, was a great and spacious caravanserai; the other, Snow Hill, was a grimy, dirty hutment. It is now splendidly rebuilt, is a quarter-mile in length, and the city has shorn one eyesore. Progressive embellishment marks all the centre of the town; fine streets, buildings, shops, offices, theatres, linked up with the city periphery and for mile upon mile beyond, with excellent electric tram services and motor-bus connections. From a canal and railway standpoint it is probably the best-served city in the kingdom—it has no river. Its University is an arresting pile, posed high off the western side of the Bristol Road, but the writer, perhaps no fair critic, sees in it an amalgam of the Mosque of St. Sophia and a nineteenth-century factory. Be that as it may, the city has a library of over 270,000 volumes, and can teach centuries of the metal-craftsman's inherited lore to most nations of the earth. Its areas of squalid tenements are still unfortunately wide, but an acutely proud and honourable civic activity is engaged in a continuous task of betterment. Other cities were not built in a day.

The Old and the New.

Birmingham is quite old, dating back to Saxon, if not Roman times—the Ham or Home of one Berm, or Beorm—no doubt a freebooting type of Tubal Cain. In the thirteenth century it had two guilds and an annual fair. It gave a martyr to the Papist Queen Mary, and espoused the Cromwellian cause against Charles I. From the early eighteenth century it claimed rank as a metallurgical centre, and received a charter of incorporation in 1838, and the rank of city in 1889. Its present population is over 900,000, but if we consider the term "Birmingham and District" we can find ourselves well into the second million. Its fame throughout the nineteenth century rested largely on guns, brass-foundry, hardware, jewellery, and bedsteads! *Mais nous avons changé tout celà.* It does not make battleships nor spin cotton, nor challenge the dollar with the pound sterling like the bankers of London, but it seems willing to do almost anything else. It does not advertise so much as Detroit, but "it gets there, all the same," in its indomitable Midland England manner. It is no mean city; it is Birmingham.

And, thanks no little to the gambler at Amerongen, one of the outstanding features of the city in this year of 1920 is the palatial acre-wide works that have been built or extended and improved north, south, east, and west. The Birmingham Railway Carriage and Wagon Company, Metropolitan Carriage, Wagon, and Finance Company, the Austin and Wolseley Motor Works, the Vicker's industries, the Birmingham Small Arms, Westley Richards, Archibald Kenrick's, W. and T. Avery's, and E. G. Wrigley's, to name but few, are replacing the venerable but begrimed mid-nineteenth-century factories, and presenting to the visitor not only acres of new buildings, but entrance-halls as elegant as those of the Bond Street aviation showman. The old spirit of the mediæval guild has happily tenacious roots in Birmingham; that spirit has to adapt itself to meet a new day and a wider outlook, and the impression left upon the visitor is that Birmingham is in the van.

As our readers will understand, the decision to split the British Industries Fair of 1920 between London, Birmingham, and Glasgow was an excellent arrangement for the three cities and for exhibitors. Another wise decision was the limiting of visitors to an invited list of potential buyers, whereby one was spared the crushing that we had at the 1919 Olympia Motor Show. And yet there seems to have been a fly or two in the ointment. The three Fairs were open for only twelve days, and that synchronously. A single general buyer from overseas—and there probably were many such—could not possibly have seen the three Fairs properly, and I frequently heard the suggestion in Birmingham that there ought to be a week between each fair. To "do" even the Birmingham end of the Fair, as a foreign general importer, might well have occupied a full week of six days; and thus London and Glasgow would have to share the remaining six days between them, which, as Euclid would have said, "is absurd."

Glimpses of the Fair.

There can be no attempt here to describe the Fair in detail; that would require a catalogue of the wares of over six hundred stands. A bird's-eye view may, however, indicate to our overseas readers something of what they may expect to see next year if able to get to Birmingham. On all sides one heard complaints of lack of preparation-time and lack of space, and everybody seemed to agree that the B.I.F. of 1921 will far surpass that of 1920.

The Castle Bromwich Aerodrome, where the main exhibition was set up, is seven miles north of the centre of the city; trains and motor-buses ran at intervals, and were greatly congested on the return journeys in the evening. The ten-shilling motor-car divided by four half-crowns was a pleasanter method of getting to the Fair. For foreign visitors the Birmingham Fair Executive and the Chamber of Commerce did their utmost in the matter of free cars. It may be added that the Grand Hotel proved a miniature Babel, where one could hear most European languages spoken in groups (except German) throughout the two weeks of the show—among these Greek, Spanish, Scandinavian, and Dutch wre conspicuous.

Three large pavilions, A, B, and C—stretching, with one intervening space, over a quarter-mile of ground—and light and pleasant, but unpretentious, constituted the Castle Bromwich show, or main exhibition. In the Art Gallery, in Birmingham's centre, the famous Gun Trade had its own particular staging—an apparently unnecessary division, for who in this era of unfinished battle and eager sport is not an admirer or possible purchaser of a gun? And if Birmingham cannot make guns, who can? It is probable that next year this great and scientific trade will not be side-tracked to a proud and aristocratic aloofness, but will be housed in the main buildings.

TRADE OPPORTUNITIES.

Contractor having several large contracts in the NEAR AND FAR EAST which involve excavating canals, river improvement work, excavation for docks and harbour improvements, etc., wishes communicate those having excavating equipment, new or secondhand to offer. For convenience prefer communicate Eastern representative. Write Box 154, "The Near East," 1, Devonshire Square, London, E.C. 2.

These contained a very goodly show of what might be called portable manufactures, chiefly in metal. Super-Dreadnoughts, locomotives, tractors, big agricultural machinery, heavy steel hammers, motor-cars, railway wagons—all such heavy goods were not in the picture. The three buildings staged the following extensive range of manufactures, set up in simple good taste and businesslike attractiveness:—Lighting fittings for electricity, gas, oil, etc.; cooking stoves and utensils, including aluminium, enamel ware, etc.; general hardware, including builders', marine, and household ironmongery of all descriptions; tools (hand) of all descriptions and small machine tools; metal furniture for house, shop, office, garden and camp use, including bedsteads; perambulators, mailcarts, and push-chairs; nautical instruments; fishing rods and tackle; machinery belting of all kinds; indiarubber goods for industrial and household purposes; motor-cycles and cycles; accessories for motor-cars, cycles, and aeroplanes; weighing and measuring appliances and instruments; sanitary appliances; paints, colours and varnishes, and painters' requisites; tubes in copper, lead, brass and steel, and pipe fittings, cold rolled brass and copper, ingots, strip sheets, and circles, brass, copper, and phosphor bronze wire and rod, brazed brass tubes, nickel silver and copper nickel alloys in the form of sheets, rods, wire, tubes, etc.; architectural and ornamental metal work, including gates and fencing; ropes of steel and hemp, cordage and string; saddlery and harness. This bald list, of which each separate category should be multiplied by tens, scores, or hundreds, may help to distinguish Birmingham's display from those of London and Glasgow. But to come, as Americans say, "down to brass tacks," and with the eye considering the Fair from the point of view of the huge markets of the Near and Middle East, there were numbers of stands which, if they could have been lifted bodily into Bucharest, Belgrade, Constantinople, Smyrna, Athens, Beyrout, Cairo, Khartoum, Baghdad, Teheran, or Bombay, I would undertake to sell at public auction at top-hole prices in five or ten minutes. There was one fascinating stall in particular, displaying garden and agricultural tools—without their wooden handles in most cases—which struck me as calling aloud to the Near East and saying, "Come and buy! this is the stuff to give 'em!" The same call was sounded by the hollow-ware displays, cooking utensils and apparatus, among which the multifarious owners of households and kitchens, hotel, club, and steamship chefs throughout the wide territory catered for by this journal and its subsidiary vernaculars would have been delighted to run amok. Aluminium, tin, enamel-ware—the former making a very modern display with its "light-as-a-feather" goods—abounded, as though saying to the Greek, Turkish, and Egyptian cookers, "I can handle your pilaffs better than my ancestor, the earthenware pot or casserole, and make a cleaner and healthier job of it."

Another considerable and very attractive section is the heating and lighting exhibits—all manner of stoves for coal, gas, and electric use, for heating, lighting, or cooking. These, periodically or constantly alight, that is to say, active, proved an irresistible "draw" to thousands of visitors who had come without the remotest intention of buying stoves, ovens, or illuminants. Thus also Curtiss and Harvey's incandescent mantle-making stand attracted crowds—for was not the incandescent mantle one of Germany's own pre-war preserves? Many of the firms here exhibiting in Birmingham, be it noted, were showing at the successful Athens Exhibition of last October and November, and I believe I am right in saying that the Department of Overseas Trade had considerable canvassing to do among British manufacturers before this year's Fair was staged, nearly all firms pleading that orders were already in excess of possible deliveries—so why exhibit or why advertise? *E pur si muove!* So Birmingham toed the line thus handsomely.

Moving on we came to some great steel-wire and hemp ropemakers' exhibits; firms that have made war-history with balls of twine and huge steel cables for towing submarined derelict ships to harbour. Wire fencing, with its many uses, was also in evidence, whether for the fowl-yard, the cattle paddock, or the land called "No man's."

We have covered a good deal of ground now, and we come to motor-cycles, bicycles, and their component parts and accessories, and then to a rich display of baby carriages and perambulators, doubtless needing nurses and occupants, but also probably largely sold ahead. I understand that British bicycles now are equal to any demand, and that shortly the motor-cycle and side-car will be in the same fortunate position.

Still meandering through realms of metal, we remember that Birmingham spells ironmongery. There is plenty of that here, and builders' ironmongery in the various metals, including aluminium; also metal furniture for the house in handsome designs and finish, and splendid shows of hearth furniture, safes, metal trunks and bedsteads, for which again the district is famous. Then we have machinery belting for the factory of many kinds, and delightful displays of saddlery and leather goods, for which latter there is a constant market in the Near and Middle East, since the great war has enormously enhanced the prestige of British styles and modes.

As may be judged by the small official schedule given above, the Associated Brass and Copper firms, who co-operate in the Fair as they do in outside business, staged magnificent exhibits, but it was noted by the authorities that Southern European inquiries for this wide range of manufactures were scarce. Lastly, in a very imperfect survey of a great homogeneous Fair, I would mention the exhibits of weighing machines for heavy goods and delicate spring balances in which undoubtedly Birmingham and England challenge all and any competition, and with these I may couple the name of Messrs. W. and T. Avery, Ltd., of world-wide repute. There are the names of a few other important exhibitors which it behoves me as a representative of THE NEAR EAST to mention. In the gun section: Explosives Trades, Ltd., the Birmingham Small Arms Co., Ltd., Westley, Richards, and Co., Ltd., Webley and Scott, W. W. Greener, and Cogswell and Harrison; in other trades, Vickers, Ltd., with their six fine stands of engineers' small tools, sewing machines, electric lamps and irons, wires and cables, surveying instruments, and a host of rubber goods; Archibald Kenrick and Sons, of hollow-ware and ironmongery fame; John and Edwin Wright, Ltd., of the Universe Rope Works, Birmingham, with three stands; Latch and Batchelor, Ltd., the great wire-rope makers; and George Gale and Sons, Ltd., makers of the "Dominion" wire spring mattresses.

Such is the briefest glimpse at a show in every way creditable to Birmingham and Great Britain. As its immediate President, the Executive of the Fair had Birmingham's present Lord Mayor, Alderman W. A. Cadbury—a member of the great cocoa and chocolate house of Bournville—and besides some most eminent names in British and Birmingham public life as Vice-Presidents and members of the Council, the greatest praise is due to the general manager, Mr. Charles Stanley, and an indefatigable secretary, Mr. G. Henry Wright, both of the Birmingham Chamber of Commerce. It may perhaps be permitted to close by affirming to the great manufacturers of Birmingham and Midland England, who may read these lines, the settled conviction that in the Near and Middle East this country has a long row to hoe—up hill and down dale it may be—but, if we "stick it" the harvest will prove abundant.

NOTICE to GRECIAN MERCHANTS.

Messrs. W. & T. Avery, Weighing Machine Makers, Soho Foundry, Birmingham, England, have bought this space to inform Grecian Merchants that the Avery machines, ordered at Athens Exhibition, are now at sea, or in course of delivery.

Labour strikes in their trade are composed, and production is increasing rapidly.

Merchants in the Middle East who recognise the truth that the cost of weighing rises as the grade of weighing machine is reduced (on account of the "stiff" working of cheap machines) are invited to write in for quotation for early delivery.

TURKEY'S FINANCIAL POSITION.

The general debt of Turkey on March 1, 1915, was £T165,250,967; loans and advances received during the war totalled £T289,298,623, making a total debt on August 31, 1918, of £T454,649,590, says H.M. Commercial Secretary at Constantinople in a report on Turkish finances. From this should be deducted the Egyptian Tribute Loans of £T17,485,655, leaving a balance of £T437,163,925. On the other hand, there remains to be added the war indemnity and the bill for reparations for the Allies, which have been estimated at up to £T100,000,000. The annual services of the pre-war Funded Debt, excluding the Egyptian Tribute Loan, required £T6,679,158, to which may be added the annual charge for advances which must rank as debt, viz., £T1,269,123. Estimating interest, 5 per cent., and Sinking Fund, 1 per cent., the New Debt, excluding military requisitions and supplies, would require £T20,706,293 per annum. No accurate returns are available to indicate the revenue of the State during the last four years, and a study of Turkish Budgets, as voted by the Chamber of Deputies, has merely an academic interest. The estimate of expenses is invariably increased by Supplementary Credits, and the authorised expenditure is often greater than the actual expenses, whilst the estimated revenue is, as a rule, overstated. The average receipts may be taken, however, at a round figure of £T32,000,000 per annum, and as the service of the debt would be close on £T21,000,000, there is not much margin left for the State administration. It is quite impossible as yet to state how far Turkey, even under a reformed financial administration, will be able to meet its engagements. The great part, no doubt, of the debt to Germany can never be paid, but even if this is repudiated, Turkey will still find a difficulty in establishing its finances on a sound basis.

ENGINEERING.

New Small Tractor.

At a recent show there was a new small tractor which was drawing particular attention. It was fitted with a 4½ h.p. petrol engine and measuring 17 ins. wide by 39 ins. high. These dimensions enable it to be used between fruit trees and bushes on cocoa and coffee plantations, drawing ploughs or cultivators, etc. It will also haul loads on a trolley and work as a stationary farm engine, driving grinding-mills, pumps, chaff-cutters, etc. The engine, which is well designed and substantially built, is water-cooled, with detachable head to cylinder. The controls are fixed to the handle-bars, the right-hand side having a lever governing the throttle, and the clutch being on the left. The engine will run on petrol, paraffin or benzol, and, we are informed, five hours' work in the field consumes not more than one gallon of petrol. Whatever implements are being drawn can be raised at the end of the row, and the machine can be turned round by engine-power or by hand. Such a tractor and motor should be particularly useful on small farms and holdings almost in every district of the Near and Middle East, where the cultivation of the land in orchards, various kinds of plantations and vineyards, is generally carried out by hand, for the simple reason that neither the ordinary modern plough nor the native plough, drawn by horses or oxen, can work freely under trees or in plantations owing to the width and height which either of them occupy in working; but apart from this kind of work there is abundant scope also for this tractor's services on larger farms and estates. On light market-garden soil it has been known to plough nearly 9 ins. deep and about 6 ins. wide.

Machinery and Stores for India.

Recent reports confirm what has often been pointed out in these columns that there is a great demand for all kinds of mill machinery in India, and particularly engines, boilers and textile spinning and weaving machinery. All dealers in this line say that no machinery of any kind can be had at present, though the demand is large, as new industries are being opened up all over the country. There have been various inquiries about sugar and paper machinery, but the inquirers are being told that their demands cannot be met as soon as they wish. In the meantime, American and Japanese manufacturers are availing themselves of the opportunity to secure good business in that market.

LANCASHIRE COTTON.

Business Restricted.

(From Our Own Correspondent.)

Manchester, Monday.

We have experienced a rather inactive market during the past week. There is still a lack of enterprise on the part of buyers, and business has been of retail dimensions. The output of Lancashire spinning mills and weaving sheds is being well absorbed, but producers at the moment are not nearly selling the production of the machinery. In face of the quieter state of affairs prices have been well maintained. Wide fluctuations have taken place in Egyptian cotton rates, and in both Liverpool and Alexandria an unsettled feeling continues to prevail. Some reports with regard to the prospects for the new growth are not very favourable. Business in Egyptian yarns has been within a narrow compass. Owing to the uncertain outlook many spinners have not been at all anxious to sell. On the other hand users are nervous as to what may happen in the near future, current values being distrusted. In piece goods for Egypt the turnover has been unimportant. Fewer bids have come through from the other side, and local merchants have not been in the mood to purchase speculatively. It is said that most of the outlets of the Levant are fairly well supplied for the time being, and there is plenty of stuff to be sent out. Demand for India continues very disappointing. All classes of goods have been neglected. Producers of dhooties are wanting orders. Inquiry for China has tended to fall off, but something has been done in bleaching descriptions. Fewer orders have been booked for South America. Quotations of manufacturers have been well held, but now and again it has been possible to purchase stock lots at rather easier figures than two or three weeks ago. American yarns have moved off slowly, but there is a persistent demand for quick delivery, especially in twists. Export yarns remain quieter.

Southern Punjab Railway.—Registers of the £3½ per cent. and £4 per cent. debenture stocks are closed until March 31 for the preparation of interest warrants.

Owing to ill-health, Mr. J. R. Bingham has resigned his appointment as secretary of the Bank of British West Africa, and has accepted a position in the bank's Egyptian service. Mr. G. B. Bennett has been appointed secretary.

Mr. G. T. Maclean, formerly Vice-Consul at Rotterdam, has been appointed His Majesty's Consul at Zagreb (Agram), in the Kingdom of the Serbs, Croats and Slovenes, and has already taken up his post. Zagreb, the capital of Croatia, had a pre-war population of about 90,000 inhabitants, the present population being estimated at about 130,000. It is an important industrial and commercial centre, and is served by a normal gauge railway in direct communication with the commercial centres of Europe.

The receipts of the Egyptian Markets, Limited, for the week ended March 10 were: Cattle markets, £1,302; general markets, £694; total, £1,996; total for year, £22,852. The figures for the corresponding week in 1919, ended March 13, were: Cattle markets, £1,293; general markets, £546; total, £1,839; total for year, £20,369

NEAR EAST MARKETS.

LONDON PRODUCE REPORT.

Currants and Sultanas.—The position is much the same as last week, though business has been rather more brisk, and there is evidence that an increased demand may be expected in the near future.

Sugar.—The market in raw has been quiet. Home refined has been in firm demand at the fixed rates. There has been little demand for free sugar. White Mauritius is quoted 117s. 6d. spot, Java 1s. dearer, West Indian crystallised about 109s., and American granulated 120s.

Coffee.—Business has been rather reduced in volume. Costa Rica has been done at 179s. to 190s., Nairobi round about 153s., and Brazil at 130s., while Indian has come to business as high as 191s. An irregular tone has marked the futures market. Quotations are for March 127s., for May 125s. 6d., for July 125s. 3d., for September 120s. 9d., and for December 118s. 3d.

Oilseeds.—There has in general been less demand for oilseeds. Indian linseed has been done at from 51s. to 54s., and the Argentine variety at from 45s. to 50s. Rapeseed has been weak, with Toria to Hull March-May at 50s., yellow Guzerat February-March at 53s., and brown Cawnpore February-March at 48s. Cottonseed has been rather featureless, with Indian at 20s. 6d., and Sakellarides at 24s. 9d.

Oilcakes, etc.—The market in oilcakes has been much more active. Linseed cake and soya bean cake have been done at 480s., while other varieties in demand have been cottonseed cake at 300s., palm kernel at 240s., and rapeseed at 340s. Transactions in seed oils have been fairly brisk. Linseed oil has been a firm spot at 123s., while rape oil has been in demand at 135s. for refined, and 125s. for crude. Cottonseed has been a shade easier, with Bombay crude at 95s. Turpentine has been firm round about 235s. spot, with March-April quoted 236s., May-August 174s., and July-December 139s.

Egyptian Crops.

The bulletin of the Egyptian Ministry of Agriculture gives the following particulars of crop conditions in February:—

Wheat and Barley.—In Lower Egypt, notwithstanding the exceptional cold and heavy rains, the crops, with few exceptions, have done well, especially when rains came at an opportune moment after applying artificial manure. The cold has, however, somewhat affected the growth of the late-sown fields in some provinces. The heavy rains have been more beneficial than the reverse. Water supply sufficient. The crops continue to look well and flowering is becoming profuse. Small attacks of rust and smut have been reported from various provinces, but the damage done is slight. Many rumours have been circulated that so far large areas of these crops have been uprooted or grazed to make room for cotton. Inquiries do not substantiate this to any extent, and only very small areas of inferior crops have been destroyed. The opinion is expressed that the area is small, though verification of this must be awaited.

Beans.—The crop is looking quite healthy, although it has suffered slightly from the cold windy weather. The formation of pods is making good progress, and the usual attack of broomrape, rust, and aphis has been particularly slight. In the south provinces damage has been done by birds, especially the migratory sparrow.

Onions.—The cold weather has slightly checked the growth of the plants, but the crop is nevertheless healthy and is expected to be about normal.

Bersim.—The cold weather that prevailed this month has affected the growth of the plants. Most of the area under temporary bersim has been ploughed for cotton, as also a small area of permanent bersim. Watering, grazing, and ploughing for cotton are in progress. Slight attacks of dodder were noticed in Minya, Asyût, and Girga Provinces, but the damage done was not considerable.

Egyptian Delta Light Railways.—Coupon No. 45, falling due April 1, on 5 per cent. debentures should now be lodged at Bank of England for payment.

Constantinople Telephone.—A meeting of holders of Six per Cent. Obligation Bonds was to be held at Winchester House, Old Broad Street, E.C., on March 24, 2 p.m., to consider a scheme for funding of arrears of interest.

OPIUM MARKET.

Messrs. Barker Brothers, Smyrna, report as follows for the week ended March 6:—Very little business has been done on our market this week, owing to the higher demands of holders. Buyers are offering piastres 940 per oke for extra Carahissar, and sellers are asking 10 piastres higher. The result is that only six cases changed hands of various qualities as follows:—One, current usual run quality at Ps. 925 per oke, equivalent to 17s. per lb. c.i.f.; one, usual Carahissar, at Ps. 945; two, selected Carahissar, at Ps. 950; one, rich Islamkeui, at Ps. 1,000; one, selected Yerli, at Ps. 960. Very little stuff comes down from the growing districts, as will be noticed below in our arrivals, which are increased this week by only sixteen cases. The exchange to-day stands at piastres 405 per pound sterling for cheque and 0.85 dollar for one Turkish paper pound. The arrivals are 1,506 cases against 175 at same date last year.

SHIPPING INTELLIGENCE.

Forthcoming Sailings.

The Papayanni (Ellerman Line) s.s. Falernian, for Malta and Alexandria, will close for cargo at Liverpool on March 31.

The Moss Line s.s. Siptah, for Algiers, Syra, Smyrna, Constantinople, and Beyrout direct, will leave Liverpool on April 1.

The Ellerman Line s.s. Asturian, for Syra, Smyrna, and Constantinople, will leave Liverpool on April 23.

The Anchor Line s.s. Elysia, for Bombay, will close for cargo at Liverpool on April 8.

The Harrison Line s.s. Historian, for Calcutta, will close for cargo at Liverpool on April 3.

The Bibby Line s.s. Lancashire, for Rangoon, will leave London on March 27.

The Bibby Line s.s. Oxfordshire, for Marseilles, Port Said, Colombo, and Rangoon, will close for cargo at Birkenhead on April 7.

The Clan Line s.s. Clan Robertson, for Bombay and Persian Gulf (cargo for Persian Gulf transhipped at Bombay), will close for cargo at Birkenhead on April 1.

The Power Line s.s. Pangbourne, for Rabat, Larache, Tangier, Casablanca, Mazagan, Saffi, and Mogador, will leave London early in April.

Notes.

There was launched on the Clyde, on the 11th inst., by Messrs. Lithgows, Limited, Port Glasgow, the steamer Manipur, built to the order of the Brocklebank Line. The vessel is about 9,000 tons gross, and was towed to Glasgow for engining.

H.M. Consul-General at Algiers reports that a company is being formed at Algiers for the purpose of erecting a shipbuilding plant. The amount of the capital is not yet known. According to present reports the slips will be constructed at Fort-de-L'Eau, in the centre of the Bay of Algiers, and it is hoped during the first year of the company's existence to complete the hulls of three vessels of 3,000 to 3,500 tons each. As it is proposed to build the hulls only in Algeria, there should if the project is realised, be openings for British trade in the supply of engines and other fittings and materials.

EXPORTS TO SERBIA.

Attention is drawn to a notice on the above subject, which was issued at the end of last year, which states that it is very necessary for shippers to provide, in the first instance, shipping documents correct in every detail and clearly indicating that the goods in question are being shipped to Salonika "in transit" to Serbian destinations, and it is also necessary that the cases should be addressed to the ultimate Consignee in Serbia, and marked, "Transit pour la Serbie," with a view to obviating their detention and delay at the port upon arrival.

Recently the *Trgovinski Glasnik*, the chief commercial organ in Belgrade, warned Serbian importers to the effect that if these precautions are not taken goods imported from abroad having to cross Greek territory will be considered as goods exported from Greece and will be subject to the decree of 7.9.19, which exacts a security of 20 to 40 per cent. to guarantee the importation of an equal value from Serbia to Greece.

COMPANY NOTES AND REPORTS.

Smyrna-Aidin Railway.

The report of the Ottoman Railway from Smyrna to Aidin for the half-year ended December 31, 1919, states that the council have to report that the working of the lower portion of about one-third of the Railway is still being carried on by the company's staff under the control of the Inter-Allied Military Commission, but that the upper and remaining portion of the railway is still in the possession of the Turkish insurgents. In consequence, the receipts have been very adversely affected, as a good season was confidently anticipated but for the violent occupation of the district. In consequence of the disturbed state of the country the completion of the accounts has not been possible, but they are now well in hand and will be no doubt ready for inclusion and presentation with the next report of the council. The estimated weekly traffics since August 23 last are set out, and are stated in sterling at an average exchange of 400 piastres to the £ sterling. The rate before the war was about 110 piastres per £, and the tariffs have been increased both to make up for the depreciation and to compensate for the heavier expenses. The company's claim for war damage has been brought up to date, and will be presented to the Reparation Commission as soon as its sittings commence. On the retirement of Col. Corbett in October last from the post of Special Representative, to take up an appointment in South Africa, the council secured the services of Mr. Alwyn Parker, C.B., C.M.G., in his place. This gentleman's wide experience of foreign affairs and negotiations will prove of the greatest value towards securing the protection of the company's interests. Since the date of the last report by the council, very intricate and detailed negotiations have been continuously carried on respecting the general question of the future status of the company with the Foreign Office, the representatives of the Allied Powers and other bodies both in Paris and London. These negotiations are still going on, and it is not yet possible to deal in any way definitely with the many questions at issue. The council can at this juncture only say that Debenture and shareholders can rest assured that no effort is being spared to protect their interests. The Deferred Debenture Interest Certificates which were issued under the scheme approved at a special meeting of the bondholders held on June 11, 1915, are now being converted into Debenture Stock in accordance with the scheme. The members retiring from the council on this occasion are Mr. W. H. Swaffield and Mr. J. A. Goudge, who are eligible, and offer themselves for re-election. The auditors, Mr. G. S. Oldfield and Mr. William C. Sneath, F.C.A., retire at this meeting and offer themselves for re-election.

The following extract is given from the report of the general manager upon the half-year:—Since the date of my last report, the line beyond Aidin has been in the hands of Turkish insurgents, and the part nearer Smyrna, about one-third of the whole, has been operated by the company's staff under the orders of the Inter-Allied Military Commission. Information brought from time to time by company's employees who had been in the interior, tends to show that the property there has not been damaged. Owing to the difficulty of obtaining material of all kinds, arrears of repairs to the permanent way and works, and to rolling stock have not been overtaken to the extent that could have been desired, but six additional locomotives have been furnished by the Commission, and are now being brought into use. I regret that, owing partly to the disorganisation of staff, consequent on the war, and partly to the interruption of the railway, it has not yet been possible to complete the accounts for the half-year ended June 30, 1919, but all measures have been taken that are necessary for bringing this work up to date as soon as possible. The staff, already severely tried during the war, are still working under conditions of great hardship owing to the exceptional condition of the country, and their devotion to duty has been in many cases exemplary. The unsettled state of a part of the country under Greek occupation has resulted in neglect of agriculture there, so that prospects for the immediate future are not good, but the revenue brought in by a part of our own line, and the records of neighbouring railways which are not interrupted, fully confirm the view that an ample prosperity will return when peace is really established.

Meeting, Winchester House, Old Broad Street, E.C.2, March 26, 12 noon.

Eastern Bank.

The report of the Eastern Bank, Limited, for 1919 states that the capital was increased in September last to £2,000,000 by the issue of 50,000 new shares to the shareholders at a premium of 30s. per share. The reserve fund has been enhanced by the amount of premium received. These new shares do not participate in the dividend now recommended, but will rank pari passu with previous issues from January 1 last. The net profits to December 31, after providing for contingencies and including the balance brought forward, amount to £122,451. The directors recommend a final dividend of 4s. per share, less tax, making 8¾ per cent. for the year; placing £40,000 to reserve fund, which, when the premium on the new shares is fully credited, will stand at £225,000; and carrying forward £29,951. Meeting, Cannon Street Hotel to-day, noon.

Aboukir.

The report of the Aboukir Company for the year 1919 states that an area of 2,017 feddans was sold during the year for the sum of £E235,421,819. The trading profit was £17,813, to which must be added profit on land sales £67,429 and the balance brought forward £1,614, making a total of £86,857. It is proposed to pay a final dividend of 15 per cent., less tax (coupon No. 17), placing to the reserve fund £25,000, leaving to be carried forward £7,857. Meeting, 134, Palmerston House, E.C., to-day, noon.

Mysore Gold Mining.

The report of the Mysore Gold Mining Company for the year 1919 states that 270,420 tons of quartz were crushed during the year, from which were recovered by amalgamation, 116,401 oz. of bar gold—an average of 8.6 dwt. of gold per ton, 578,584 tons of tailings and slimes were treated for a yield of 65,575 oz. of bar gold—an average of 2.3 dwt. per ton. These quantities together represent a total production of 181,976 oz. of bar gold or the equivalent of 163,719.13 oz. fine of a realised value of £694,317, subject to deduction for royalty of £35,632. Adding interest on deposit account and investments, rebates on freights, rent, etc., aggregating £5,140, there is a total at the credit of revenue account of £663,825, less expenditure of £477,382, leaving a profit of £185,443. To which must be added £1,690 brought forward, plus £1,013 dividend on shares held in the Kolar Mines Power Station, making a total of £189,147. The interim dividend of 1s. per share absorbed £30,500, additional remuneration to directors and managers £610, income tax £66,189, reserve fund £10,000, amounts written off expenditure on capital account £37,694, new issue expenses, etc., £1,453, insurance and contingency fund £5,000, leaving available £37,700; a final dividend for 1919 of 1s. per share (less tax at the rate of 6s. in the £), payable April 8, will absorb £30,500, leaving £7,200 to be carried forward subject to royalty payable to the Mysore Government on the final dividend, etc. The liquid assets, including the reserve fund, and after deducting the liabilities, amount to £197,707. The value of the materials in stores and in use, including machinery and goods in transit, is £152,914. The quartz milled was 22,761 tons less than in the previous year. The tailings and slimes treated show an increase of 9,949 tons. The gold extraction was less by 11,687 oz. and £44,874 in value, and the profit was less by £78,078.

Constantinople Telephone Scheme.

With reference to the circular recently issued by the Constantinople Telephone Company for funding the arrears of interest on the Obligation bonds, by reason of the fact that a majority of Obligation holders cannot bind a minority, it is understood that the directors are unlikely to proceed with the scheme unless it meets with general acceptance

General Ceylon.

The report of the General Ceylon Rubber and Tea Estates for 1919 states that there is a profit of £53,203. After providing for London charges there remains £52,303, to which has been added £11,069 brought forward, also £6,417 excess profits duty recovered, making a total of £69,789. The directors recommend a final dividend of 17½ per cent., making 30 per cent., less tax, for the year, leaving £14,889 to be carried forward. The board have decided to capitalise a portion of the reserve and issue equivalent shares to the shareholders; to enable them to do this, and for possible future development, it is necessary to increase the capital of the company. The tea has cost f.o.b. 9.59d. and averaged net 1s. 0.77d., against 6.94d. and 8.45d. for 1918. The crops from the estates amounted to 1,596,439 lb. tea, exclusive of bought leaf (31,296 lb.), against 1,409,387 lb. for the previous season. The estimates for 1920 amount to 1,832,000 lb. tea. The yield of tea per acre works out at 411 lb. over the estates not interplanted with rubber. The rubber crop amounted to 1,252,782 lb., against 889,881 lb. last year, the average cost f.o.b. and net price realised being 11.00d. and 1s. 9.68d. per lb. respectively, against 1s. 0.80d. and 1s. 4.46d. for 1918. The estimates for 1920 amount to 1,338,000 lb. rubber. Meeting, 4, Lloyd's Avenue, E.C., March 30, noon.

Dimbula Valley.

The report of the Dimbula Valley (Ceylon) Tea Company for the year 1919 states that the net profit was £40,038. The sum of £10,044 has been added to reserve, bringing this up to £42,044. It is now proposed to pay a final dividend of 17½ per cent. on the ordinary shares, making 30 per cent. for the year, and to carry forward £2,571. The board have decided to capitalise the reserve and issue equivalent shares to the ordinary shareholders; to enable them to do this it is necessary to increase the capital of the company. The tea crop for the year amounted to 1,508,217 lb., being 71,783 lb. below the estimate. The estimate for 1920 is 1,629,000 lb. The cost of cultivation and placing the crop on board ship was 8.24d. per lb., against 6.45d. per lb. the previous year. The total crop realised £86,608 net, an average of 1s. 1.78d. per lb., against 9.23d. The rubber crop was 343,525 lb., being 6,475 lb. below the estimate. The estimate for 1920 is 375,000 lb. The cost of cultivation and placing the rubber on board ship was 10.91d. per lb., against 9.34d. per lb. the previous year. The total crop realised £31,513 net, an average of 1s. 10.01d., against 1s. 4d. last year.

TENDERS INVITED.

Tenders are invited for the following, and must be submitted by the date stated:—

CAIRO.—Main Drainage Department, Public Works Ministry.—Supply and sinking of ejector stations Nos. 1 and 2, Suez Main Drainage. April 28. (Particulars may be seen at the Department of Overseas Trade, 35, Old Queen Street, S.W.1).

ROUMANIA.—State Railways.—Supply of 250 passenger coaches, and 400-450 locomotives. (Particulars may be seen at the Department of Overseas Trade, 35, Old Queen Street, S.W.1).

SUPPLIES AND PRICES IN TURKEY.

The following extracts are taken from recent reports received by the Imperial Ottoman Bank:—

ALEPPO, January 1.

The position in this market has been quiet during the month. Transactions have been almost entirely lacking, and the chief exporters are maintaining a waiting attitude, closely watching the markets. Several factors have contributed to the inactivity, notably the difficulty and insecurity of communications with the interior.

Very plentiful rains during the second half of December have favoured cultivation throughout this district, and have resulted in a fall in the price of wheat, barley, butter, etc.

Produce.

Wool.—Stocks have greatly decreased. Owing to the fall in French exchange, exports to France have much diminished. There is a demand for Italy, Austria, and Germany. Price here is P.E. 21½ the kilo.

Cotton.—Each bale of cotton weighs about 130-150 ks. Price, P.E. 15 the kilo.

Skins.—There is an active demand for Austria. Climatic conditions are favourable to pasturage, and are facilitating the raising of sheep.

STAMBOUL, February 28.

Manufactures.

Demand is lacking, and holders of manufactures are unable to find buyers at present prices. At Manchester there is a marked increase in prices, and some consignments are being returned from our market to places of production.

Produce.

Sugar.—Prices are higher in consequence of the strong demand here and the lack of good quality sugar. The increase has been accentuated by the fact that prices are maintained in America and Java. Quotations are:—£108 to £111 the ton for sugar in transit; £T57 to £T58 the 100 kilos for sugar in customs. Some consignments are expected from America.

Coffee.—A marked set back compared with the prices of last week. The market is quiet and merchants are holding their hands in view of the arrival here of several consignments of coffee intended for Russia.

Rice.—There has been a brisk market in rice from the Caucasus, which is in strong demand because of its price, which is much lower than that of other qualities. The price is from Ps. 27-Ps. 30 the oke.

Oil.—The considerable arrivals this week—25,000 cases American, 60,000 bidons, and 7,000 cases from Batoum—have resulted in a certain decline in prices, which are £T7.10 to £T7.30 the case, as against £T7.40 to £T7.50 last week.

Opium.—There is no change in prices, which remain weak with a tendency to all. Sales of the week, 40 cases Karahissar at £T9.50, 40 cases Druggist at £T9.

Cereals.—Prices were weak at the commencement of the week, but recovered later. Prices: Wheat Tender Extra, Ps. 15½ the oke; I., Ps. 14⅜ the oke, II., Ps. 13½ the oke. Wheat, hard, I., Ps. 14½ the oke; II., Ps. 13½ the oke. Barley Extra, Ps. 7. Arrivals of the week from Anatolia: wheat, 189 wagons; barley, 37 wagons.

Silk.—Broussa.—Market quiet, price unchanged, but firm at £T29½ to £T30 the kilo. Syrian.—Stocks are almost completely lacking. Some lots exist in poor qualities.

(Over 80 Branches in the Near East.)

The Bank has been established for over 55 years, and has its own Branches or Agents in every important commercial town in the Near East.

The Offices of the Bank at 26, Throgmorton Street, London, and 25, Pall Mall, Manchester, can now enter into transactions with all the above-mentioned places, subject to British Government regulations and local restrictions where in force.

Manufacturers, Traders and others are invited to correspond with the Bank, where all possible facilities will be afforded for the re-opening of business.

The Bank makes advances upon Bills of Lading and other export documents.

Drafts and telegraphic transfers issued.

Letters of credit granted.

TRADE PROSPECTS IN ALGERIA.

The best prospects for exporters in the United Kingdom, says H.M. Acting Consul-General at Algiers, in a report on the economic position in Algeria, lie in coal, of which there is still a great shortage, both for bunkering and for domestic consumption. Later on, if oil is produced in large quantities, the coal imports may be affected, but this is a matter for conjecture. Owing to the difficulties encountered in obtaining coal from the United Kingdom, several cargoes of American coal were imported in the autumn of 1919. They could not, however, compete in price with the British product, and American coal is only likely to be imported in the future if British coal is unobtainable.

There would also seem to be a good market for cotton goods. France in 1913 supplied Algeria with two million pounds' worth of these, and there is now an opportunity for Lancashire to compete. Considerable quantities of British cotton goods were exported to Algeria early in 1919, but the venture was not a uniform success, since it led to speculation amongst the buyers and caused a sudden slump in prices. This market requires great care in the selection of agents.

Prospects in other lines are good for machinery (agricultural, mining and general), motor-cars, sulphate of copper (for spraying vines), groceries, soap and candles, stationery, paints and oils, and, indeed, in any kind of goods for which there may be a demand in Algeria, for there is no question as to the popularity of British manufactures. In this connection it may be mentioned that it is hoped that the French Chamber will this spring pass a law authorising the extension of the harbour of Algiers, which will involve the doubling of the present port. This should present a great opportunity to British manufacturers of articles in any way connected with harbour works.

In regard to getting trade, which before the war went to Germany, there seems no reason why the trade in coal, chemical produce, machinery, and rubber goods—the four principal items should not fall into British hands. As to exports from Algeria to the United Kingdom, a need may be found for a share in the Algerian production of grain and animals which formerly went almost entirely to France. An experiment might also be made in buying potatoes, tomatoes, peas and beans, oranges, grapes and figs, and shipping them direct for the early market. Wine will probably continue to be shipped to France for mixture there with French products, and so find its way indirectly to the United Kingdom.

To sum up, largely owing to the excellent crops and vintages of the war years, Algeria is, from a commercial point of view, on a better financial footing than she has ever been before, and general confidence for the future prevails.

NEW COMPANIES.

Mahawale Rubber and Tea.

The Mahawale Rubber and Tea Company, Limited, was registered on March 16 with a capital of £160,000, in £1 shares. Objects: To carry on the business of cultivators of and dealers in rubber, coffee, tea, coconuts, gutta percha, and gums of all kinds, etc., and to adopt an agreement with the Mahawale Rubber and Tea Company, Limited (incorporated in 1897), and the liquidator thereof. The first directors are:—L. F. W. Davidson, Huntly Lodge, Huntly, Aberdeenshire; A. Fairlie, Hillhouse Lodge, Fenwick, Kilmarnock; J. McEwan, Carisbrooke, Enfield. Solicitor: J. Ballantyne, Dock House, Billiter Street, E.C.

Madras Electric Tramways.—Final dividend at the rate of 6 per cent. per annum, less income-tax at 6s. in the £, for 1919, will be paid (coupon No. 16) on March 31, 1920, at the National Provincial and Union Bank of England, Limited, 2, Princes Street, E.C.2. Transfer books will be closed until March 31.

THE NEW YUGOSLAV CURRENCY.

The withdrawal from circulation in the kingdom of the Serbs, Croats, and Slovenes of the stamped kronen notes of the Austro-Hungarian Bank and the issue of crown-dinar notes of the National Bank of the triune State is now proceeding throughout the whole kingdom. The order was put into operation early in February in Serbia and Montenegro, where notes of the denominations of 20, 50, 100, and 1,000 kronen were replaced by the new dual notes—the conversion in the other provinces now forming the S.H.S. State was to be completed by March 16, after which date kronen notes of these denominations cease to be legal tender. Ten, two, and one kronen notes will, however, continue in circulation for the present. Creditors will be legally bound to accept the new crown-dinar note of the National Bank of S.H.S. in discharge of all debts, whether originally contracted in dinars or crowns. Crown-dinar notes of the National Bank to the full value of the crown notes of the Austro-Hungarian Bank will be issued when the latter are presented for exchange without any deduction. It will be recollected that when the krone notes were recently submitted to be stamped a deduction of 20 per cent. of their face value was made, and it is now intended that the receipts then given in respect of the retention of this percentage of their value will shortly be cashed by the State when the conversion now proceeding is completed.

ON CHANGE.

(From Our Own Correspondent.)

Throgmorton Street, Monday.

There has been a good deal less doing this week, and the market closes to-night with rather a dull tendency. The fresh depreciation in the franc has caused weakness in Egyptian Government stocks, in which a very fair amount of business has been put through. Egyptian Unifieds, after being up to 76, are closing 1¼ down at 74½, while the 3½ per cent. Prefs. are half a point down at 62.

In Bank shares, Nationals have receded 5-16 to 23, and Agriculturals 1-16 to 5⅜. There is a drop of half a point in both the bonds of the Agricultural Bank, to 67¾ and 69¼ respectively. Anglo-Egyptian Banks have lost ¼ at 19¾, and Land Banks are 1-16 down at 6 1-16.

In Land shares, Aboukirs, in spite of the excellent report and dividend, making 18 per cent. for the year and showing 28 per cent. earned, are 1s. easier at 44s. 6d. Consolidateds have shed 1½d. at 3s., and Delta Land are 9d. down at 19s. 3d. New Egyptians close only fractionally easier at 36s. Sidi Salems and Union Foncieres both lost ⅛ at 2⅞ and 5⅞ respectively. Sudan Plantations, on the new issue of shares, have been a weak spot, and are closing ⅜ down at 7⅜.

In Miscellaneous descriptions, Abyssinians are 6d. lower at 11s. 6d., and Salts and Sodas have dropped 1s. 6d. to 57s. 6d.

Amongst Greek securities, the 1881, 1884, 1890, and 1893 Loans are all a point down at 55, after having been up to 57½. The 1887 Loan is also one point down at 47. The 1902 Loan has dropped 2½ points to 50. The 1910 Loan is a point down at 42, and the 1914 London issue has receded as much as 5 points to 55. Turkish 3½ per cent. 1894 Bonds are half a point down at 58½.

In Oil shares, Anglo-Egyptian B have further receded ⅛ to 4, but Roumanians are 1-32 higher at 22s. 9d.

The traffic receipts of the Smyrna-Aidin Railway for the week ended March 6 amounted to £7,452.

The directors of the National Bank of Roumania have declared a dividend of 235 lei per share for 1919.

The transfer books of the Eastern Bank are closed until April 8.

The ordinary general meeting of the Port Said Salt Association will be held at Rue Toussoun, No. 5, Alexandria, on March 26, to receive and consider the adoption of the directors' report and accounts for the year ending December 31, 1919, and to declare a dividend.

BRITISH TRADE CORPORATION.

(Incorporated by Royal Charter),

13, AUSTIN FRIARS, LONDON, E.C.2.

Telegrams: "Trabanque, London."

CAPITAL: Authorised - £10,000,000 Subscribed and Paid Up - £2,000,000

Governor - THE LORD FARINGDON.

Manager, A. G. M. DICKSON. London Manager, P. C. WEST. Secretary, G. De B. BROUNLIE.

The Corporation has been established with the object of developing the Trade of the British Empire in every part of the world, and brings to the notice of all interested that it is prepared to grant financial facilities to British Manufacturers and Merchants for the increase of their Import and Export Trade.

It will be prepared to assist in opening up new channels for enterprise, and will afford financial facilities for the enlargement of works and the extension of plant.

The Corporation is appointing representatives in the chief cities of the world, and will open credits at home and abroad. It invites inquiries, and will endeavour where necessary to put export advice at the disposal of correspondents regarding the financing of their foreign and overseas business. Moneys received on fixed deposit. Terms on application.

NOTES OF THE WEEK.

The subject of the Turkish settlement has again been given the honour of a field day in the House of Commons, but it would be difficult to say whether any interests were actually furthered by the discussion. Mr. Asquith ventured upon a number of definite suggestions in regard to the future of what was formerly the Ottoman Empire. His remarks on the Khalifate revealed an imperfect grasp of the question in all its ramifications. He advocated the "Vaticanising" of the Sultan; in other words, that the Sultan should retain his spiritual and religious attributes, but be deprived of his temporal power. This solution would satisfy Moslem opinion as little as ejection of the Sultan from Constantinople, and still offers no alternative to the Sultan's temporal power, beyond the vague statement that "responsibility for government and for policy" should be in the hands of the Great Powers, or preferably of the League of Nations. If the opponents of the retention of the Turkish Administration in Constantinople could only realise that the intrigues which they dread under an Ottoman régime would be equally rampant under any form of international control, we should hear less of these unpractical references to the government of the city by the League of Nations. President Wilson in this matter is a conspicuous offender.

In view of Mr. Asquith's position in the political world and the necessity imposed upon him of suggesting alternative policies to those adopted by the Government, it is perhaps superfluous to inquire too closely into his various proposals. One, however, was so prejudicial to British interests, as well as to the interests of the native population, that it cannot be ignored. He definitely recommended that Great Britain should withdraw from the vilayets of Mosul and Baghdad and restrict her "obligations" in Mesopotamia to the zone of Busreh. He based the need for this policy on financial grounds, and endeavoured to support it by misrepresenting the shores of the Black Sea or the Caspian as "the only natural boundary of this vaguely defined geographical unit," to which we should be driven sooner or later to advance. Mr. Asquith would probably justify this particular piece of rhetoric by an allusion to recent trouble with the Kurds; but the mistakes of individual officials do not necessarily prove the unsoundness of the policy of which they happen to be the inadequate interpreters.

The criticism of our Mesopotamian policy was taken up warmly by Mr. Lloyd George. By emphasising the "great possibilities" of the Mosul vilayet, he laid the British Government open to the charge that it is, as usual, taking good care to secure all the "plums" that may be obtainable. It may be true that the possibilities are there, but it would be a mistake to suppose that they are already in hand or in sight. An article which we publish in this issue referring to a recent report on the future of Mesopotamia serves as a corrective to extravagant hopes regarding this country. Development—and substantial development—is possible, but only if it be pursued in a painstaking and scientific manner, and will mean outlay rather than income for many years. The Prime Minister was on surer ground in insisting that to free Mesopotamia from the withering despotism of the Turk and then to hand it back to anarchy and confusion, by evading responsibility for its development, would be an act of folly quite indefensible.

Mr. Lloyd George was emphatic in stating that it would be a mistake to abandon Mosul and Baghdad, and he laid down the lines on which it was proposed to cooperate with the Arabs when the mandate was formally given to Great Britain. The Government is to be Arab, the country thus governing itself, with the British "advising, counselling, assisting." We shall, perhaps, do well not to imagine that the two things to which Mr. Lloyd George referred are quite as "clear" as he implied. As he stated them, they were that the Arab population "do not want Turkish rule again," and "want British supervision." Now present grievances are always apt to appear more formidable than those which there has been time to forget, and it is open to question whether the average Arab does not regard British ideas of sanitation, municipal hygiene, and kindred matters as as bad as the worst inflictions of the Turks. Moreover, unless extreme care is taken in the selection of officials and in instructing junior officials of the Army as to the difference in status of sheikhs and baggage-porters, there is a risk of the very elements among the Arabs who would appreciate the advantages of British supervision being alienated by avoidable mistakes.

What was established by the Prime Minister was that the delay in the Turkish settlement was deliberately incurred by the British and French Governments in order not to lose the *beaux yeux* of the United States. It may be, as Mr. Lloyd George stated, that it was better to face the delay and the consequences, rather than "create suspicion in the United States that we were quite willing to take United States' help, but

Digitized by Google

that, whenever there was any question of dividing the mandate over these undeveloped territories, we instantly took advantage of some little political difficulty in America in order to divide the whole thing among ourselves." But if so, it would be well that the facts of the case should be appreciated in the United States. A great deal of advice, ecclesiastic, telegraphic, and ecstatic, is reaching this country on the subject of the Turkish settlement; but it is inadequately realised that the intransigeance of Mustapha Kemal and the massacres in Cilicia were made possible by the failure of the United States to take their share in the settlement of the Near and Middle East. A more deliberate attempt to prejudice the situation would seem to have been made by the action of the American Asiatic Association in despatching to these territories an agent whose mission apparently is to sow as much anti-British seed as possible among the peoples for whose political development Great Britain may have to be responsible owing to the defection of the United States.

As the attitude of the organ of the American Asiatic Association is reflected in a considerable section of the United States Press, we shall not be laying undue stress on an isolated phenomenon. An attempt is made to gloss over the American defection by the following contention:—"It is not responsibilities toward backward peoples which America shuns., It is rather that we shun unreasonably complicated relations towards impenitent imperialisms," and accordingly British Imperialism is held up to opprobrium at every turn. In the spirit of this friendly conviction the Association's emissary has apparently made a tour of Transcaucasia instilling political poison wherever he goes. He purports to reproduce a conversation alleged to have taken place in the War Office last spring between the Chief of Staff and "a certain British official"—the allusion is clearly to Sir Percy Cox—which is represented as reflecting the determination of the British Government to hold "the line of the Caucasus mountain range from the Black Sea to the Caspian Sea" as "the natural defence line" of the British Empire, "as it is also the natural boundary line of Russia." All that has happened since in Transcaucasia is made to fit in with the emissary's *idée fixe*. The Armenian appeal for help, he suggests, was stage-managed for Great Britain's purposes. "The British have fostered the desire of these people (Georgians, Armenians and Azerbaijanis) to throw off Russia permanently. . . . It will have become apparent, I feel, that the British are not in the Caucasus as unselfish champions of the three Republics." Anyone who has the least acquaintance with British politics to-day will understand the fatuous nature of these insinuations. They would be comprehensible if the United States had shown the least inclination themselves to assume the rôle of mandatory in Transcaucasia and the Near East; but as things are, they are the lucubrations of a prejudiced mind, ready to perpetuate the world's unrest, if only he can contrive to throw a cloak over a policy which, in comparison with the rarified atmosphere of the Fourteen Points, plumbs the lowest depths of cynical selfishness.

It is a matter for regret that a body of the status enjoyed by the American Asiatic Association should have lent its honoured name to deliberate anti-British propaganda; and we can only infer that American financial interests have been perturbed by the ground lost in the Near East since the Armistice. The value of the assertions in the Association's organs can be gauged by the tenour of Mr. Lloyd George's remarks in the House of Commons on the subject of the Armenian Republic. Its future, he said, depended on whether the Armenians themselves were prepared to protect their independence. They were capable, if they had the will, of raising an army of forty thousand men, and Great Britain, or one of the Allies, would assist them in the matter of equipment. Then he added: "Instead of always casting themselves upon other countries and sending supplications and appeals, let them defend themselves"—a strange reproof to come from the Prime Minister of a country that is supposed to be seeking an excuse to occupy Armenian territory with its troops in the interest of "impenitent imperialism."

The President of the Delegation of the Republic of Azerbaijan, now in London, has issued a denial of the statement that a military alliance was concluded last October—or before or since—between his Government and the Turkish Government. If, therefore, any document has been signed in Constantinople purporting to bind the Republic of Azerbaijan to Turkey, it is clear that it need not be regarded as having any validity. The political situation in the new Caucasian States is sufficiently indeterminate to make it possible that one party or another should arrogate to itself authority to which it has no real claim. In this issue we publish two interesting letters from correspondents in Transcaucasia, which throw a different light on the Azerbaijan question. As was suggested in THE NEAR EAST last week, the problem is not to lay stress on past mistakes, but to help the new States to lead a well-ordered and useful life in the future. They need, therefore, all the help that can be given them; and we find it difficult to believe that the Allies, especially Great Britain, will wish to withhold their practical sympathy and support from the Transcaucasian Republics at a time when all the forces that the Allies can command in these territories need to be consolidated with a view to resisting the "Red" advance.

The Supreme Council of the Allies or its *locum tenens* will need all the tact that it can muster to find a suitable solution of the Syrian problem, and it is to be hoped that the British Government will recognise the difficulties under which the French are labouring and not leave too much of the burden on their shoulders. At the outset the French Government was assured that it had not grasped even the rudiments of the situation in Syria; but it refused to believe the statement, and proceeded to act as if it had to deal with Morocco or Indo-China. The truth has been borne in upon them by successive stages, and is still far from palatable. They are, therefore, inclined to offset against it the manifestoes of a small community which is more French than the French. This way danger lies, which will embarrass not only France, but Great Britain as well, and there is no reason why the latter should be made to suffer from French obstinacy. The difference between Egypt and Syria is that one was British territory (in all but name) before the war, but the other was not French. Both the Egyptian Nationalists and our French Allies are making mistakes by not recognising this very obvious distinction.

The administration of Roumania continues to be subject to kaleidoscopic changes, with the inevitable accompaniment of political "alarms and excursions without." Dr. Vaida-Voivod was the victim of a most unfortunate *contretemps*. His Cabinet in his absence chose to throw down a constitutional challenge to the King, not, as far as can be judged, on any vital question, but on a comparatively small point of which it wanted to make use to bolster up its position in the country. The King stood by his constitutional rights, and the Cabinet had to resign, while Dr. Vaida-Voivod, who had been no party to the strange proceedings, was still absent from the country. General Averescu, the new Prime Minister, has had to dissolve Parliament, and it is to be hoped that the interval before new elections will be used to straighten out the tangle into which the politics of Greater Roumania have worked themselves. With *lei* at 250 to the pound sterling, personalities clearly ought not to count as much as policies, and what is wanted is a Government which will help the country to set to work again, and by increasing and continually increasing production enable Roumania to rehabilitate herself.

At the present juncture it would be dangerous to say anything about Indian affairs without a frank recognition of the limitations imposed on our knowledge by the condition of the cable service. When, as happened

Digitized by Google

last week, some messages take the full fortnight and others come through within the week, it is almost impossible to get the true perspective, and one cannot help fearing that some item of great importance may be delayed on the way. The irregularities are all the more serious because we have to recognise that, while India is at all times full of combustible matter, the number of firebrands at large just now is rather greater than usual; almost every topic of the moment, from Khalifate to Currency, seems to afford scope for language which is certainly dangerous, and which old-fashioned people would regard as openly seditious; and while a country advancing towards self-government may fairly claim increased latitude of expression, the latitude needs to be co-ordinated with the advance, or the immediate result may turn out to be retrogression.

The messages regarding the organised demonstrations on behalf of the Khalifate are so far satisfactory that they tell of no actual disturbance on the appointed day, but the events of last year serve to remind us that the results of violent language are not necessarily obvious at the moment, and, for all that we can tell, the wild talk about a Jehad or a revolution may have fired some time-fuse which will produce an explosion later on. The same consideration arises in the case of the agitation conducted in Bombay against the currency policy of the Government. We read that a dangerous racial note has been sounded, and that means that people who are still suffering from economic stress are being told that their sufferings are being exploited in the interests of British merchants and producers. In both cases there is sentiment which deserves sympathetic consideration, but it is all the more necessary to distinguish carefully between the sentiment and the agitators who play upon it, and who may succeed in turning it into blind fury, not for the benefit of the people, but in pursuit of sinister and interested motives.

If these messages stood alone, we should have to regard the situation as exceedingly serious, remembering that the report of Lord Hunter's Commission is shortly to be published, and that from the present point of view its tenour is practically immaterial, because the extremists, having discredited it to their own satisfaction in advance, will in any case use it only as a peg on which a new and violent agitation can be hung. The brighter side is, however, apparent in the growing sense of responsibility displayed by the real leaders of public opinion. The statesmen gathered at Delhi have shown their resentment at the language used in Bombay, and Nationalist journals of position, while expressing sympathy with Moslem feeling, have been outspoken in their condemnation of the excesses in which some of the agitators have indulged. We expect to see this tendency increase as time goes on; the day has now passed when earnest politicians were condemned to a perpetual unanimity of opposition, and henceforward the vast bulk of sane and reasonable opinion will come to count for more and more. There are better times ahead, but India is not yet out of the wood.

To be obtained at all Bookstalls.

THE WEEK AT HOME.

Politics and Persons.

The first shots of a new war were fired this week—a political "war to the knife and fork." Mr. Asquith, at the National Liberal Club, sneered at the Coalition Government as "an organised hypocrisy"; Mr. Lloyd George retaliated at the same luncheon table a couple of days later by referring genially to "dull and pompous" speakers, and suggesting that Mr. Asquith and Mr. Runciman were ashamed of their "war babies," the Paris Resolutions.

The difference between the Prime Minister and the ex-Prime Minister is frankly personal. In principle, Mr. Asquith's speeches echo the Coalition view, but he and his band (and some add, their women-folk—a matter of importance in these days) can never forgive Mr. Lloyd George for 1916. The ex-Premier is the typical heavy father in politics, a veritable Polonius; the Premier is the unrepentant prodigal, and so far he has had much the best of the exchanges.

There is a movement afoot to drum him and the Coalition Liberals out of the National Liberal Club, but it is hardly likely to succeed. For one thing, he has a considerable following in that institution; for another, the drumming-out process would mean the loss of a large membership, which can hardly be a matter of indifference to the Committee. Several clubs have recollections of the unhappy vendetta of 1886 between Liberals and Liberal Unionists, when the former blackballed the latter, and the latter blackballed the former, with the result that no new members were elected for months: and that course is frankly recognised as suicidal, especially in these days of high establishment expenses for the great clubs. The National Liberal Club as a home of the "Wee Frees" would be a wilderness inhabited by the lost tribes of Israel, which is not a very happy prospect.

The miniature General Election appears to be shaping well on the whole for the Government, although they expect to lose one or two out of the seven seats at issue. But in the multiplicity of candidates anything may happen. There is frankly not the same enthusiasm for Mr. Runciman (who is contesting an Edinburgh division) as there was for Mr. Asquith; the former President of the Board of Trade is an able enough man, but he hardly shapes as a leader, and I believe that the Independent Liberals would still prefer Sir John Simon, who, however, will probably rest awhile after his defeat at Spen Valley.

There are some grumblings among the rank and file of the faithful at Mr. Asquith's continued ineffectiveness. People still come to listen to him, but he arouses no enthusiasm, and his speeches indicate no constructive policy. A mere negative is useless in these days; and the fact that both Mr. Lloyd George and his Labour opponents have a constructive policy means that the Independent Liberals will get no following from the young men who enter politics. One hears a good deal of the revival of Liberalism at the Universities, but I doubt whether there is very much in it.

More Votes for More Women.

When women over thirty were given the vote it required no inspired prophet to foretell that it would not be long before they were placed on the same footing as the nominally superior male, who is allowed to vote at twenty-one. Some discussion has arisen on the question in Parliament, and, with an eye to the next election, hardly a single member objected to the proposal to equalise the franchise. The change will probably be made before the next general appeal to the country, and it will not only add several millions to the electorate, but will place women in an electoral majority, so that we shall be nominally under petticoat government.

Both Labour and the Coalition, of course, hope that the young ladies will vote for them; but the real difficulty of dealing with women in politics, according to candidates on both sides, is that the sex is refreshingly impartial in its dealings, voting one way at one election and diametrically the opposite way at a by-election a

Digitized by Google

few months afterwards. The explanation is that women vote for the person, not the party—a fact which is not welcomed by the headquarters of the party organisations, who like to foist their own candidates on the constituencies.

An Exploded Rumour.

The *Westminster Gazette*, of all papers in the world, suddenly announced last week that a General Election was probably imminent. The prediction was laughed at on all sides; it seems a pity that a paper with a good reputation should go out of its way to make itself ridiculous. Fortunately, Mr. Spender is now back from Egypt, and seated once more in the editorial chair; one may, therefore, hope that wild rumours of this kind will henceforth be excluded from his columns.

The Miners Again.

The negotiations between the Government and the miners for an advance in wages continue. At the moment of writing the Government appears to have the best of it. They have flatly refused to endorse the exaggerated claims of the South Wales miners, which are not supported by men in other mining districts; with the result that the sacred solidarity of the Miners' Federations appears to be in jeopardy.

An attempt was made to jockey the miners and to mislead the public by only reading half a letter from the Prime Minister to one of the delegates, which conveyed a very different impression from the whole message; the "misunderstanding" has now been rectified, but it called forth some sharp comments as to the policy of the extremists who are out for a strike. And the bad taste which this incident left in the mouth was not diminished by a story published by the official Labour paper, the *Daily Herald*, to the effect that arrangements were being made for troops to surround the mines. The story has been denied as being utterly without foundation.

Fortunately, the miners at present seem to be in more moderate mood than their leaders, a ballot showing a decisive majority against a strike. But we are by no means at the end of our troubles in this matter; the miners and their leaders seem definitely to have become the *enfant terrible* of the Labour Party, and there is no doubt that these continuous sectional demands, coupled always with a recollection of the miners' strike in 1915 at one of the worst moments of the war, are a serious loss of potential strength to the Labour Party.

A Teachers' Strike?

The London Council school teachers are the latest body to threaten a strike. They are not particularly well paid, but I doubt whether their demands make much impression on the public, which brutally remarks that anybody who has a safe job, two months a year holiday, and a pension cannot have much to grumble at. That, however, is not the full state of the case, for their work must be very trying, and how anybody can teach a class of fifty or more children day in day out year after year passes comprehension. The nervous strain must be enormous, and there seem to be some indications that it has reached breaking-point in the rather hysterical way in which the teachers' conferences and negotiations have recently been conducted, and the fact that they howled down a meeting at which Mr. Fisher, the President of the Board of Education, was to make an important speech on Saturday. One would have thought that a teacher's strong point would have been discipline; let us hope the children do not retaliate.

University Sport.

I do not know whether the Cambridge victory in the Boat Race was popular with the crowd, for the Londoner on the towing-path seems to have some mysterious way of changing his colours to the winning side at the last moment. But Cambridge were certainly the better crew, although neither could compare with the great crews of some past years. But, then, after five years' cessation of the race, not one member of either crew had rowed in the race before, and thus each side had to start entirely without the ballast of past wisdom in the boat.

The usual hilarious scenes were enacted in Piccadilly later, both crews and their supporters going to the London Pavilion, where policemen were embraced and commissionaires were kissed as usual. (I do not quite know why it should be such fun to kiss a commissionaire. The son of a bishop told me some years ago that once in a hilarious moment he had kissed the hall-porter of the Wellington Club after dinner, but that the pleasure was exaggerated, and since then he had never kissed any man but his father.) The Boat Race is still a thing *sui generis*; if the University chess teams marched down Regent Street to a music-hall nobody would care a jot.

Many good judges had expected Oxford to win the Boat Race and Cambridge the University sports, which were held the same day; but Oxford rather unexpectedly gained the honours at the sports, just winning by 5½ events to 4½. The most notable event, the Quarter-Mile, ended in a dead-heat in the very good time of 49 3-5 sec., between Butler, of Cambridge, and Rudd, the Oxford President, who took part altogether in four events, by winning the last of which, the Half-Mile, he gained the victory for his University.

Mrs. Humphry Ward.

Somehow Mrs. Humphry Ward, who died last week, never quite repeated the success of "Robert Elsmere," that unlucky curate who lost his way thirty years ago in the eternal controversy between science and religion. But there was always a public ready for every fresh novel from her pen, and her name will not easily be forgotten. If the gods had only given her a sense of humour she might have gone very much further in literature; but that seems denied to women writers, since nobody could accuse the Brontës or George Eliot of comedy. Apart from writing, Mrs. Ward played a notable part in social work; she will be remembered as a resolute opponent of woman suffrage before the war.

The Week's Books.

The most important book of the week is Mr. J. M. Robertson's "Short History of Morals" (Watts and Co.)—and it is not so very short, either. It is practically a history of ethical thought, and both in manner and temper it is excellently done. Mr. Robertson, it need hardly be said, does not write from the point of view of a Platonist; but he is generally fair to those with whose ethical views he disagrees. Most ethical books are amazingly dull, with a sort of faint flavour of virtuous humbug exuding from them, but I cannot say that I have found a preliminary journey through Mr. Robertson's latest work at all tedious. His style, too, seems lighter and easier than it was, and I can only congratulate him on his defeat at the last general election when he devotes his leisure to such good purpose.

Mr. G. H. D. Cole, who is said to be the brains of the Labour Party, and is a great advocate of Guild Socialism, has written an account of the new world as it should be in "Social Theory" (Methuen). It is one of the books which I have an uncomfortable feeling that I ought to read, and a still more uncomfortable feeling that somehow I shall contrive to evade reading. No doubt the omission will be a capital offence one of these days, but we all have to run risks in unquiet times.

A different class of reader will be attracted by Sir Martin Conway's "Mountain Memories: A Pilgrimage of Romance" (Cassell), which tells of travels in the Alps, the Andes, the Himalayas, and Spitzbergen.

Some time ago Sir H. H. Johnston had the curious idea of writing a sequel to "Dombey and Son," and he now seems to have formed a habit of carrying on other people's ideas, for he has just published "Mrs. Warren's Daughter" (Chatto and Windus) as a continuation of Mr. Bernard Shaw's work, "Mrs. Warren's Profession." It is to be hoped this fashion will not spread; a continuation of "Kipps" by Sir J. M. Barrie might lead to confusion, and I doubt whether a third "Jungle Book" by, say, Sir Leo Chiozza Money would be very successful.

THE NEAR AND MIDDLE EAST.

(From Our Own Correspondents.)

EGYPT.

CAIRO, March 8.

The Milner Mission.

On Saturday the Milner Mission issued a notice to the effect that, having completed its investigations in Egypt it had adjourned, and would meet again in London after Easter in order to proceed with the preparation of its report. Thus has come to an end another episode in the present political situation, and the scene of activities is now being transferred from Egypt to London, where, if the Egyptians care, they still have time to open up discussions with the Mission before it presents its report to the British Government. The Mission has been in Egypt almost exactly three months, its arrival having taken place on December 7, and Lord Milner having left Heliopolis for Palestine on March 6. During all this time it has been fully occupied, very closely investigating the situation, inquiring into the administration of the country and studying the various problems, political, economic, and others, which at present confront the British and Egyptian Governments.

The Extremist clique has been pleased to decree a boycott, and in order to make it effective has resorted to all manner of devices for bringing the Moderates and its own less ardent supporters to heel, and to prevent the members of the Mission from getting into touch with the mass of the population. To attain this end it has not been above making use of students and schoolboys, and has encouraged a campaign of intimidation in the vernacular Press. The spectacle has certainly not been edifying, and the world at large may well ask whether it would have been necessary to resort to such expedients and strain every nerve to isolate the Mission from the mass of the population, intelligenzia as well as fellaheen, if it had not been feared that the Mission might otherwise hear views and gain an impression entirely opposed to that which the Extremist clique desire to convey. The Milner Mission has nevertheless managed to meet Egyptians of every class and of every shade of opinion, and there is every reason to believe that it has succeeded in obtaining a very shrewd idea of the true state of affairs and that it has gained an insight into the real *desiderata* of the situation which will enable it to give sound advice to the British Government. The Extremists are at great pains to show that the Mission has failed in its task, but it were well to wait until the Home Government pronounces on the report, which it will receive some time in May, and which will most probably be found to contain statements which do not square with the asseverations of our Extremist friends.

The Judicial Reorganisation.

Meanwhile the discussions with regard to the judicial reorganization are making steady progress, and the draft laws embodying the reorganization scheme—in securing the exclusive publication of which *L'Egypte Contemporaine* has achieved a decided "scoop"—have now been published. From the references made thereto in the European Press, and from what one can gather from conversations with those directly interested in and affected by the reforms, they are being very favourably received and are being discussed in an atmosphere of goodwill and mutual desire to meet objections half-way. This augurs well for a successful termination to the conversations, which in the near future will take place with the Powers.

The Ministerial Question.

The difficulty in connection with the resignation of Sir Ismail Sirry Pasha has now been overcome, and Mohammed Shafik Pasha has accepted the portfolio of Public Works, War and Marine, whilst retaining provisionally that of Agriculture. At the same time the Council of Ministers has issued a statement that work on the Sudan barrages will not be started until the Commission has delivered its report and the schemes have been approved of, that anyone who wishes may see the plans and detailed schemes, and that any Egyptian engineer who applies will be given permission to visit the sites where these irrigation works are to be erected.

The Nile Commission has left for the Sudan, spending a day on the way at Aswan, when it inspected the dam. It is being accompanied as far as Khartoum by Sir William Willcocks, who has gone there on its invitation. The Commission will carry out its investigations without an Egyptian member, as Hussein Wassef Pasha has declined his nomination on grounds of ill-health, whilst other Egyptian engineers have declined to sit on the Commission for political reasons. It is a great pity that after having their request for an Egyptian member granted the Extremists should have made it impossible for any of their compatriots to serve. At any rate, they have had the opportunity and so cannot complain any longer.

The Press Censorship.

Since Saturday the Press censorship has been re-established. The object, as set out in the notice to the editors, is to exclude from the Press all matter liable unduly to excite public opinion and prejudicial to the orderly government of the country. Matter discrediting the British Government, the British Army, the Egyptian Government and Allied Governments, matter liable to excite religious or racial animosities, alarmist or false reports calculated to disturb public tranquillity, and news or other matter intended to promote strikes or to encourage public servants to neglect their duties for political reasons, are indicated as features which are particularly objectionable, and the publication of which will be prevented.

The reimposition of the censorship has been forced on the authorities by the glaring manner in which a certain section of the Extremist Press has taken advantage of the freedom accorded to it since last summer, and has gone out of its way to excite the public and encourage opposition to the authorities by the publication of inflammatory articles and personal attacks on officials and on all those who have in any way shown a desire to assist in the government of the country or in the settlement of the political and economic problems that have arisen. It is extremely unfortunate that the more reasonable members of the local Press should have to suffer from the shortcomings of their colleagues; that is, however, a matter which cannot be helped. But there is every reason to believe that the censorship will be directed particularly against those whose action has necessitated this restrictive measure, and that, provided the rest of the Press continue along the lines which they have followed, it will rest very lightly on their shoulders.

The reimposition of the censorship has quite naturally aroused criticism. Many of the critics, however, publicly recognise where the blame lies, but the Extremist Press, not content with protesting, has decided not to appear for three days. Since their columns have hitherto been filled with matter which is now prohibited this rest will no doubt give their editorial staffs the opportunity of finding something more acceptable to substitute, whilst at the same time their action cannot be unwelcome to those who have to apply the censorship, as the reduction in the number of papers to be dealt with in the early days will give them time to complete their organization.

YUGOSLAVIA.

BELGRADE, March 19.

A Political Peacemaker.

Internal politics have occupied a preponderating share of attention in Belgrade since the beginning of last summer, when the Coalition Cabinet broke down owing to the incompatibility of temper between M. Stoyan Protitch, President of the Council, and M. Svetozar Pribitchevitch, leader of the Croat Union party, and

Digitized by Google

then Minister of the Interior. The crisis dragged out its weary length for months, until finally a Cabinet was formed by a fusion of the Democrats with the Socialists, who governed until recently without Parliament, thus incurring the charge of being autocratic, while they on their part maintained that there was no other remedy owing to the Parliamentary deadlock due to equally balanced parties. About a month ago M. Protitch, the veteran Radical, returned to power, with a "mandate" from the Regent to govern with Parliament. The early days of the new Cabinet, in which the Radicals combined with the Croat Nationalists, were by no means without incident, and on March 13 the Government found itself without a quorum, owing to the abstention of the Opposition. Its position was becoming untenable, and the country was getting heartily sick of the political squabbles, when there appeared a new figure upon the scene in the person of a prominent Dalmatian, Dr. Joseph Smodlaka, who formed a small group of independent followers, and issued an appeal to all parties to sink their differences and combine once more to form a Coalition Government, which should include all shades of opinion, forget party passion and advantage, devote their energies to the summoning of the Constituent Assembly, and unite for the good of the country.

This statesmanlike appeal did not fall upon deaf ears, and neither great party dared reject it. Negotiations were opened, and dragged on for a week or more. Various modifications to Dr. Smodlaka's proposals were made on both sides, and the Press of both Radicals and Democrats, though rather cautiously, accepted the principle, which the more independent Press welcomed. The Government paper *Samouprava* recently forecasted the acceptance of the scheme, and it really seems now that the peace-making efforts of Dr. Smodlaka and his supporters will bear fruit.

Towards a New Coalition.

The Radical Club invited M. Pashitch to return from Paris. It is stated that recently there has been a growing coolness between M. Pashitch and M. Protitch, both veteran Radicals, which the Democrats interpret as an artful move on the part of the former to rid himself of the odium of failure by shifting it upon his lieutenant's shoulders, and to wait to reap the fruits at a suitable opportunity, by reappearing as the heaven-sent leader of the Radical party.

Meanwhile, the chief obstacle to Dr. Smodlaka's attempt to save the country from chaos is the selection of neutral men as President of the Council and Minister of the Interior. According to one account, M. Protitch would retain the presidency, while M. Pribitchevitch would return to his old post at the Interior. This would be, to all intents and purposes, a restoration of the Coalition of last spring, and would be virtually foredoomed to failure. A second proposal is that M. Vesnitch, Minister in Paris, should be President of the Council, while the portfolio of the Interior should be given to M. Milorad Drashkovitch, recently Minister of Communications in the Democratic Government, an energetic and respected statesman. But the most probable solution will be the exclusion of all *difficile* politicians, such as M. Protitch, M. Pribitchevitch and Dr. Koroshets, in which case probably Dr. Smodlaka would accept the presidency himself, as a non-party man, a rare phenomenon in this country.

The Regent hurried back from a rest in the country, and has been receiving prominent politicians, and yesterday received M. Protitch in a lengthy audience. The Premier announced his failure to form a quorum, the attempts at mediation of Dr. Smodlaka, and the formation of a committee of three to carry out the negotiations. The three are M. Protitch, representing the Government, M. Drashkovitch, representing the Democrats, and Dr. Smodlaka himself. This committee has come to the following conclusions:—That it is necessary to form a coalition Cabinet representing all shades of opinion, that the new President of the Council, and also the Minister of the Interior, shall be non-party men, that the remaining portfolios shall be divided so that the Radical-Croat group have one more than the Democrat-Socialists, but may not have an absolute majority in the Cabinet, that the new Government shall carry out the elections for the Constituent Assembly, pass the budget and ratify the peace treaty, and otherwise deal only with vital national questions, such as the Adriatic problem. This is the most refreshing political news that we have had for a long time.

A Royal Visitor.

King Alexander of Greece has been expected on a visit to the Crown Prince, but the meeting was postponed owing to the difficulty in finding accommodation for his suite. It is now stated that King Alexander will come in May.

ROUMANIA.

BUCHAREST, March 12.

Peace with Russia.

It is reported from Warsaw that a conference was held there on March 3, under the presidency of the Minister for Foreign Affairs, with a Finnish delegation. The Roumanian envoy, M. Florescu, has received a provisory mandate to represent Roumania at the Peace Conference with Russia. A Lett delegation will shortly leave Riga for Warsaw.

The Government has accepted the proposals of the Soviet Government for an exchange of Russian and Roumanian prisoners.

Polish Mission to Southern Caucasia.

A special diplomatic mission from Poland left Bucharest on March 8 for Georgia, Armenia, and Azerbaijan. At the head of the mission is M. Titus Filipovi, formerly Under-Secretary for Foreign Affairs. The Minister Plenipotentiary from Poland to the Southern Caucasus, M. François Shapski, left Bucharest at the same time, to enter upon his duties.

Army Pensions.

At the Ministry of Finance strenuous efforts are being made to draw up the budget for war pensions. Up to the present 80,000 applications for pensions have been received from ex-soldiers of the lower ranks, besides a considerable number from other soldiers. To give some idea of the burden upon the Treasury represented by the pension scheme it is stated that, while hitherto the annual sum paid in pensions has been about 34 millions, the next budget will show an expenditure of 150 millions. In view of these figures, which are more or less representative of the whole financial position in Roumania, it is encouraging to read that the Bill proposing an increase of direct taxation will be laid on the table of the Chamber in the course of this week.

Visit of Cardinal Dubois.

Upon his arrival from Rustchuk Cardinal Dubois was met at Giurgevo by an aide-de-camp of the King, Colonel Starcea, and the Assistant French Military Attaché at Bucharest, M. Monicault, and conducted to Bucharest. During his stay here he was the guest of the King, and was given a banquet at the palace. He was also entertained to dinner by the French Legation. It will be remembered that the King of Roumania is a Roman Catholic. The Queen is of the Anglican creed, but all her children belong to the Greek Orthodox Church.

Miscellaneous Items.

The two warships purchased by Roumania in Italy in 1915 have just arrived at Galatz. These two vessels, which were purchased for the national fleet, were seized by Italy at the time of her entry into the war.

Hitherto Bucharest has possessed no State opera company, and there have been no regular opera performances. Now, however, a company has been formed under the patronage of the Queen. The season will begin with "Aida" on March 17. There are one or two good male voices at least in the cast, and the famous Viennese conductor Felix Weingartner is coming to conduct the orchestra, so the first season seems to promise well.

A delightful fortnight of spring weather ended three days ago in heavy storms, and a return of the icy winter wind, and to complete the discomfort it is to-day accompanied by heavy rain.

Digitized by Google

BUCHAREST, March 19.

The Cabinet Crisis.

For several weeks a little group of Dr. Vaida-Voivod's Cabinet have multiplied their activities in an attempt to keep the work going on in all the Government departments which were bereft of their political heads by the storm of resignations. These men undoubtedly hoped to keep the Cabinet in being until Dr. Vaida-Voivod's return from London; but their efforts were not successful, and last Saturday the King called on General Averescu to form a Cabinet. Parliament has been adjourned for ten days, and the interval is being used in a strenuous endeavour to arrange a Parliamentary majority for the new Ministry.

The present situation is altogether extraordinary. No precedent exists for a Cabinet resigning in the absence of its chief, and no doubt the return of Dr. Vaida-Voivod would have been more or less patiently awaited had it not been for two new laws, both Government measures, inasmuch as they were sponsored by Ministers. One of these was a new Expropriation Act, and the other a Restriction of Rents Act. There was by no means unanimity in the Cabinet about these measures, and there was violent opposition amongst the propertied classes, who, while they do not at the present moment possess sufficient representation in the Chamber to make their sentiments effective, can bring pressure to bear in other ways.

According to the Roumanian Constitution, legislation originating in one House must have the King's signature before being presented to the other House. As it was probable that the King might see fit to withhold his signature temporarily from any measure which appeared hastily conceived or likely to prove unpopular, these two laws were to be presented simultaneously to both Houses. It was thus anticipated that, thanks to the majority that the Cabinet commanded in both the Chamber and the Senate, the laws would pass.

General Averescu has promised to bring in bills on both these questions. As far as expropriation is concerned, the King's approval has been obtained to a measure which will abolish the *Obstii*, which are the peasant groups actually holding the expropriated land for the benefit of the peasants. Under the new law the land will be divided up amongst the peasants individually. Up to the present the peasant has shown no eagerness to cultivate the land held collectively, and the decision to split it up into small holdings was inevitable.

It still remains to be seen whether General Averescu can get together a majority in the present Chamber. The Ministers representing Bukovina and Bessarabia have joined the new Cabinet, and will bring a certain number of Bukovinian and Bessarabian deputies with them, and the Liberal Party has announced its intention to support General Averescu "in his effort to restore order to the country." Presumably any other activities would demand negotiation. Possibly enough individual deputies can be detached to form a new majority, as the parties composing the "bloc" are not well organised. The present Cabinet surrounding General Averescu is generally conceded to be temporary, and it is said that M. Take Jonescu will join the Government later. If this prove true, it is difficult to imagine the Liberal Party supporting a Cabinet of which M. Take Jonescu is a member. So we should have to have new elections.

Demobilisation.

The general demobilisation of the army has been ordered, and will begin immediately. This is the most important step towards the reconstruction of the country that has yet taken place, and thousands of peasants will return to work in the fields just at a moment when the shortage of labour was making itself most severely felt. Although spring sowings do not appeal to the Roumanian peasant, because of the relatively small yield, many will sow now who were prevented from cultivating their fields in the autumn owing to the fact that they were still under arms.

Silver Smugglers.

Silver money having disappeared from circulation in this country, it is often asked what has become of it. On Monday four thousand lei in silver were discovered hidden among the cushions of a sleeping-car which was just about to leave for Paris. Somebody has apparently been doing a roaring trade in the export of silver money. Each Roumanian silver leu was sold in Paris for two French francs, and these in turn were exchanged for eight Roumanian paper lei.

Arrest of a Prominent Socialist.

The arrest of M. G. Bujor in Bucharest has given rise to a good deal of newspaper discussion, largely directed against the ex-Minister of the Interior, Dr. Lupu. George Bujor had been condemned to death as a deserter by a Roumanian court-martial, and it is stated that he was a member of the revolutionary tribunal at Odessa before which the Roumanian refugees arrested there had to appear. It is further stated that this tribunal only liberated, or agreed to the liberation of, those who could pay the price demanded, while in the end it was only due to the courage and enterprise of Colonel J. W. Boyle that any of them escaped when they did. Bujor has been known since 1911 as an advanced Socialist, and is now accused of being an avowed Bolshevist; consequently the papers are thirsting for his trial, in the hope that it will produce incriminating evidence against the pro-Socialist party in the late Government. It is, perhaps, doubtful whether he is a man of sufficient influence for his arrest to stem the progress of labour unrest, and it may for the time have the contrary effect.

BULGARIA.

SOFIA, March 11.

The Question of Thrace.

The recent announcement made by the French Press that the London Peace Conference has decided to allot the greater part of Thrace to Greece, though not yet officially confirmed, has greatly alarmed the people here, and has excited much indignation among all classes of the community. The surprise is general, because everybody thought, after the signature of the Peace Treaty with Bulgaria, which expressly provides for an international administration of Thrace, that the fate of Thrace was already settled. Government circles are much perturbed over the matter. Should this announcement prove true, it is generally anticipated that the Government will protest more energetically than previously. And the London Conference ought to know that the Bulgarian nation will never be reconciled to a decision which cuts the country off from the Ægean Sea.

The Electoral Campaign.

All political parties are making feverish preparations for the Parliamentary elections which are fixed for March 28. The Communists and Moderate Socialists have already commenced to hold public meetings. So far no coalition between parties has been arrived at, save that between the Radoslavists, Tonchevists, and Petrovists, whose leaders (except Radoslavoff, who succeeded in making a timely flight to Germany with the withdrawing German troops in October, 1918) are at present under strict arrest, being regarded as responsible for the catastrophe that has befallen Bulgaria. Events in the provinces are much more lively than here in the capital. Last Sunday the Democratic party opened the electoral campaign at Gornya Djoumaya with great enthusiasm.

The Communist Leaders.

The Attorney-General at the Sofia Field Court-martial has suspended the prosecution of the members of the central committee of the Communist Party, D. Blagoeff, V. Kolaroff, G. Dimitroff, Chr. Kabactchieff, and A. Peneff, who on December 15, 1919, signed an appeal urging all State functionaries to revolt. 50,000 levas are demanded from each of them as a guarantee that they will appear before the law courts when summoned, otherwise they will be arrested immediately. Their party, which now disposes of large funds sent by the

Digitized by Google

Russian Bolshevists, has put down the required sums without difficulty.

M. Stambolisky in the Provinces.

Last week the Prime Minister, M. Stambolisky, was able to allow himself a brief leave of absence for two days to pay a short visit to his parents. He visited also Tatar Pazardjik, where before a crowded audience composed of people of all shades of thought he opened the electoral campaign. His speech, which lasted six hours, was full of a strong patriotism, and it created a deep impression both on the peasants of the neighbouring villages and on the citizens of this Communist stronghold. The crowd was quite satisfied, since the speaker was categoric in his statements. At the conclusion of his speech he appealed for unanimity, requesting the peasants to lend their help to the towns, which to-day are suffering from lack of articles indispensable to subsistence. He declared that the State functionaries ought to be supplied with cheap bread, and that land production must be increased. M. Stambolisky was most heartily greeted by all those assembled before him.

The Agrarians and Communists.

Since the opening of the electoral campaign, five of the seven Agrarian Ministers in the present Cabinet have been in the provinces, visiting every town and village throughout the whole kingdom, and propounding the reforms which the Agrarian League intends to introduce into the next National Assembly. M. Stambolisky, who, being at present in the capital, is responsible for the Ministries of his absent colleagues, has ordered the formation of labour brigades for the repairing of the State road Sofia-Kakarel, and of all the other main roads in the country.

The courts-martial are beginning their huge task of punishing those responsible for the catastrophe of the war. These courts are intended to disinfect the corrupted public atmosphere.

The Prime Minister is well satisfied with the results of the electoral campaign. Everywhere Agrarian speakers have been heard with great attention, and it is hoped that the Agrarian League, under the leadership of M. Stambolisky, will attain a signal victory over the anarchistic elements. The fight in reality is between the Agrarian League and the Communists; in fact, it is one for life and death, and everything points to a victory for the former party. M. Stambolisky declared in the last Chamber that the task of the Agrarian Government is to preserve the present social order, based on private property, by reforming and improving it; the new Socialistic and Communistic reforms they would endeavour to bring about through State properties. In this connection, the summoning of males to obligatory public service is a beginning, but they will not stop at this. They intend to organise according to Socialist methods all those who give evidence in the forthcoming elections that they desire Socialism as the social system. In those villages in which part of the population have declared themselves adherents to the Socialist or Communist cause, their personal property will be confiscated on behalf of the community, and these Communists will be isolated in places specially set apart by the State for the organisation of a Communistic economic life. To them thus separated a chance will be given to apply their Communistic ideas, and the whole Bulgarian nation will be able to see and judge which social order is better. In the towns, where many youths—sons of various captains of industry and wealthy people generally—have declared for Communism, a large part of their parents' estates will by a special law be confiscated.

SMYRNA.

March 10.

Yesterday news reached Smyrna of a battle fought between the Greeks and Turks near Sardes, in the Hermus Valley. The Greeks admit having been driven back by the Turks, but claim that in a counter-attack, in which they used their heavy artillery, they severely defeated the Turks, and have driven them back to Salihly. In fact, it is rumoured in Smyrna that the Turks will retreat to Alasheir (ancient Philadelphia), which was their base before their recent forward movement down the Hermus Valley. It is very clear, however, that severe fighting now takes place the full length of the Hermus Valley, and that the trains dare not run beyond Menemen, which is only one hour's ride from Smyrna. This determined fighting on the part of the Turks seems to bear out their claim that they will not under any circumstances consent to be put under the Greeks.

SYRIA.

Beyrout, March 15.

The Emir Faisal.

The recent political excitement that attended the coronation of the Emir Faisal has reflected on him the lurid light of Arab chauvinism, and made public opinion at a distance rather misjudge his Highness. Nothing is better calculated to correct such an impression than the following literal translation of the Emir's address delivered on that memorable occasion.

"Gentlemen,—Now that the Turkish question is about to be settled definitely at the Peace Conference, I find that I have to convene you once more to decide the fate of the country according to the wishes of the inhabitants, who have seen in you the fitness to represent them on so momentous an occasion. The Peace Conference has promised to consider the wishes of the peoples; nay, it has taken upon itself to decide the fate of each nation according to its own wishes, in fulfilment of the sublime principles for which the Allies went to war. President Wilson, in his speech at Mount Vernon on July 4, 1918, laid down the following clause:—'Every question, whether of territory or suzerainty, economic, political, or international, must be settled on the basis of the free choice of the people directly interested in this question, and not on that of the material interests and benefits of another people or nation for safeguarding its foreign influence or domination.' Other heads of Allied Governments made declarations as to the independence of nations no less clear than that of President Wilson. Our Allies, England and France, published a proclamation on February 7, 1918, wherein they confirm to us the independence of the Arabs.

"As this was a war of liberty and independence, which the nations waged to defend their political existence, my father, his Majesty the King, joined the Allied ranks, after covenanting with the Arabs of Arabia, Syria, and Al Irak, who put up a fight which the greatest political and military men of Europe testified to and lauded, and their valiant acts will be recorded in the history of the great war where the Hejazite, the Syrian, and the Irakite fought side by side in heroic fashion. I am confident that the Arab nation will get what the other victorious Allies got. This victory was not only military, but also a political victory, for it was the victory of right over might—a war against tyranny. The idea of independence permeates now all the nations, and so fills their hearts as to be dissipated no more. The Arabs have earned their liberty and independence by the pure blood which they shed and by the hardships which they endured. The Arab nation will not now accept servitude, and I am convinced that there is no nation that wishes to enslave it. My official visits to Europe and my interviews and the correspondence I exchanged with its statesmen have left no doubt in me as to the goodwill of their governments.

"We do not ask of Europe what we have no right to. We only ask of her to sanction our plain right which she has recognised as being due to us as a free nation, wishing to live a free and completely independent life, and on terms of the utmost loyalty and sincerity with the civilised nations. Its policy will be a policy of peace based on mutual confidence—in short, a policy compatible with the interests of the nation and universal peace. The Arabs do not shrink from the exchange of mutual interests between them and the civilised nations, and do not refuse the friendship of those who desire their friendship, provided this does not touch their honour and interfere with their complete political independence.

"Gentlemen, your mission and your function to-day are grave. Europe's eyes are set on us, and its verdict will be for or against us, according to the political plan we shall lay down and pursue, and the deeds we shall do. Our new Government, whose foundations were laid on the patriotism of its noble sons, has to-day to establish its form and frame a constitution defining the rights and functions of each of us, the rulers and the ruled, in the new life, which I trust will be full of earnest action and diligent progress. And before I close this memorable meeting I wish to remind you of our brethren of Al Irak, who finely fought with you for the freeing of the Fatherland, and of our duty to work hand in hand with them, so that we may all live a happy and strong life. I wish you the real Arab

Digitized by Google

salaam and pray for your success and prosperity in all your patriotic endeavours."

When one compares this address with the wild declarations of some members of the Conference, and the no less wild speeches of certain extremists, it appears by contrast very moderate in tone. The extremists repudiate every foreign intervention, even of a financial character, and, by clamouring for general conscription, reveal a militarism entirely out of keeping with the spirit of the new world settlement. That the Emir does not approve such an attitude is proved by the disputes that are said to have broken out between his adherents and the extremists.

TANGIER.

TANGIER, March 17.

The Future Administration of Tangier.

From articles that are appearing in Spanish and French papers, it seems probable that the future of Tangier is at last being seriously studied. Naturally Englishmen here are wondering whether the fact that the British Diplomatic Agent, Sir Herbert E. White, has left for England, apparently considerably sooner than was expected, has anything to do with these negotiations. The settlement which Britons, many non-British (not excluding some French) commercial men, and a very large number of influential natives would like to see has been often expressed and is well known. It may be that such a result is too much to hope for, but so long as British interests which are centuries old are not lost sight of and England at least retains an adequate share in the administration of the zone, it will be a great advantage to have at long last a definite settlement. There are many towns under much worse administration than Tangier, and no doubt things could go on as they are for a considerable time, but the uncertainty that has been hanging over Tangier for so many years has militated against her advancement in every way. It is very curious to note how little the two nations which have been the most strenuous in propaganda work regarding Tangier have done to propitiate the subjects of other nationalities. One would have thought their desires, so often and so strongly expressed, would have led them to do everything to make a good impression in their official dealings with others, but one might almost say that they have acted in a quite contrary manner. While with France and Spain the question of Tangier is chiefly a political one, Englishmen regard it principally from a commercial point of view, and they can hardly be accused of unreasonableness for doubting the effect which a preponderating influence of France, at least, might have on their commerce.

Without in the least questioning the *intention* of recent enactments in the French zone, it may be said that "equality of opportunity" for all appears to have been rather overlooked, and indeed it would seem that if they came into force under the conditions which have been published, they would severely handicap commercial activities in general, though some of them would only affect non-French commerce. This is not calculated to encourage hopes of an absolutely fair treatment for British trade if Tangier came under the influence of the same power, even with the limitations supposed to exist in their Moroccan protectorate. Favourable and special treatment by officials are always difficult of proof, but complaints of all these have appeared in French Protectorate papers, and if French commercial men have good grounds for these complaints it may be fairly concluded that other nationalities have suffered to at least an equal degree.

Apart from the question of Tangier, there are several matters, which have been mentioned in the columns of THE NEAR EAST and in other journals interested in Morocco, upon which the British Agent should have some useful criticisms to make. These, it is hoped, will receive full consideration. It is difficult to speak of these matters without laying oneself open to an accusation of being "anti-French," but none of the criticisms by British subjects of the administration of the French zone are dictated by any feeling against the French—any other nationalities would have been equally criticised, and if any of the actions complained of had been due to a British administration the criticisms would have been far less moderate. Recognition of all the French have done in Morocco, and well-deserved admiration for General Lyautey and his work here, have been ably expressed by many writers in British journals, and these feelings are shared by all our countrymen in Morocco, who believe that many of the actions complained of are not due to the Resident-General or his higher officials; indeed, it is believed that for at least some of them the home Government is responsible. As has been so often repeated, all that the British commercial man asks is freedom to carry on his business and equal opportunity. When these are threatened he claims his right to criticise, and when they have so often appeared in jeopardy in the French zone he quite naturally fears the same trouble would arise if Tangier were given over to the same power.

Personal.

Amongst visitors recently arrived here are the Duke and Duchess of Northumberland, Captain Sir Douglas Hall, Major A. C. F. Luttrell, Mr. and Mrs. Glynn Williams, Colonel P. B. Taylor, O.B.E., and Mrs. Taylor, Mr. and Mrs. E. F. Bruce, of Sydney, Mr. Hugh Spencer. Sir Herbert E. White, K.C.M.G., H.M.'s Agent and Consul-General, left for London on March 7 via Gibraltar.

March 18.

The London papers just arrived give at last an official statement that Tangier is *not* governed internationally. In the House of Commons on March 11 Sir H. Greenwood, in reply to a question, said: "It is not correct to say that Tangier was administered by an International Commission." How often has this been insisted upon in the columns of THE NEAR EAST? Perhaps now we shall have an end to those letters to the papers holding up Tangier as the terrible example of the failure of international government, and as a warning that, with such a failure in evidence, international government could never be a success anywhere.

Failing (from a British point of view) a better solution of the present situation, by all means let Tangier try a well devised international statute, but, to give it every chance of success, and to avoid as much as possible suspicion of undue influence, it would be a good thing if it could be found possible to persuade the Sultan to delegate, as completely as he has done in the Spanish zone, his powers in the international zone to someone to be approved by all the Powers interested.

The fact that it is definitely stated that the question is now under discussion has given rise to hopes that a settlement may be expected before many months have passed, and although the final result must necessarily bring keen disappointment to some, there seems little doubt that, when it is decided, and all uncertainty has disappeared, those who are genuinely interested in Tangier will settle down to make the best of the situation, and work together to give her the brilliant future to which her situation, her climate, and her natural beauties entitle her.

CYPRUS.

Undated.

A small detachment of Zaptiehs (military police), in charge of the Chief Inspector, Mr. S. Te'evantou, has been taken to Egypt, to learn the arts of the farrier. On their return they will carry out the work required for the mounted branch of the force. The present strength of the Cyprus police is about 730, including 240 troopers and 400 privates, and excluding about 80 prison warders.

Rumours are, as usual, abundant. The principal one is that Cyprus is to be placed under the Egyptian command, and that, as soon as the Turkish prisoners are released from the Famagusta internment camp, the British garrison is to return to its old quarters, which were, both in winter and summer, in the Limassol district.

CORRESPONDENCE.

THE TURKISH SETTLEMENT.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—May I congratulate you on your issue of March 25? The articles are full of interest, to say nothing of your extracts from the Press and "Notes of the Week." I quite agree with you that the Indian Delegation lost rather than gained from their interview with the Prime Minister, and their endeavour to dictate a policy was certainly "a rash experiment." It only wanted a little special pleading to show that the case for the Turk was in reality the case for the British Empire, a far more effective argument than mere religious fanaticism. It might, too, easily have been urged that it was Lord Salisbury's change of policy followed by our occupation of Egypt that drove the Turks into Germany's arms, and was eventually the cause of their coming into the war against us. It was no question of treachery on their part, simply the natural instinct of self-preservation. Again, it was up to the Delegation to point out to Mr. Lloyd George that the principles applied to Austria-Hungary were by no means the same as those which governed the treatment proposed for Turkey. For instance, there never was any idea of removing the Austrians from Vienna; neither can the dissolution of that Empire into its component parts be compared with the appropriation of slices of Turkey by foreign Powers which has been going on for years, and still continues. Further, it might have been argued that the small States that it was proposed to create out of the remnants of the Turkish Empire could *never stand alone* without the protection of some Central Power, and when all was said and done the Turks had been that controlling authority for 500 years and more. In the future who is to play the policeman in Asia-Minor? If we are to have half a dozen policemen, each looking to a different Government for support, will the friction and intrigue we have heard so much about be any less? Altogether the Delegation had a very strong case, but failed, I fear, to make the most of it.

The recent debate in the Commons does not enlighten us much, except that the Powers have been hoping against hope that the Americans would relieve them of this burden, and even now they are fearful of American public opinion as to their disinterested motives. A guilty conscience makes cowards of us all!

As regards our interests in Central Asia the series of articles contributed to THE NEAR EAST by Colonel A. C. Yate show us how the chaos in Turkey and the break-up of Russia is reacting on the Moslem States, and not unlikely to cause further trouble in India. Your leader "Transcaucasia" urges France and England to take a more active part in that region; yet Major-General Sir F. Maurice, in his article in the *Daily News*, quoted by you, is clearly of opinion that even with Mesopotamia on our hands we have bitten off more than we can chew! Mr. Lloyd George, too, plaintively argues in the Commons that we cannot police the whole world. Nevertheless, we must retain Mosul in our keeping on account of the oil, the Arabs being left much to themselves. I fancy this means that we have already learned that the Arabs do not mean to pay taxes for a Coalition Government! Poor Turks, they learned much the same thing, but unfortunately had no money to exploit oil wells! In plain English, we are drifting without any very definite policy; are, in fact, asking for trouble all around.

Surely a sane policy points to the reform of the existing Turkish Government rather than the dismemberment of the Empire. In my letter to you of March 1 (published on the 11th) I ventured to suggest how such a reformation could be accomplished. I still consider that this scheme offers the best solution of the problem. But will the British Government be magnanimous enough to share and share alike with France? Alas! I have my doubts.—I am, etc.,

COLES PASHA.

Ruishton, Taunton,
March 28, 1920.

THE AZERBAIJAN REPUBLIC.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—In your issue of January 2, which has just reached the Caucasus, your correspondent R. Mareau writes *inter alia* about "the inclination of the Caucasian Republic to lend itself to the intrigues of the Young Turks and German adventurers," etc., etc., etc.

May I say, first of all, that if there is one thing that surprises us out here more than another, it is the astounding ignorance that people at home have regarding the Caucasus and things Caucasian? The gist of my own personal correspondence from England is that fears are expressed for my safety, etc. One day I hear from home that we are surrounded by savage Turks; another day the fear is that Bolshevists are all around us, and that we may all be murdered in the streets. For some reason—enemy propaganda, most likely—the rumours are all anti-Georgian and anti-Azerbaijan. And this, at the present time, is very unfair and very unjust.

Your correspondent claims that he is well acquainted with the history of these regions—but his knowledge is evidently far from up-to-date. My claims are simply these: I was appointed official war correspondent with the forces in Mesopotamia. After the signing of the Armistice I proceeded from Baghdad to Baku, arriving in the latter town in the first week of December, 1918. Since then I have been continuously in the Caucasus, and I claim that I am entitled, perhaps more than anyone else, to speak of the present situation in Azerbaijan and Georgia.

The enemies of the Azerbaijan Republic—Armenians and such—have recently spread many false reports regarding the alleged pro-Young Turk tendencies of the Azerbaijan Government. They have even gone so far as to say that there has been a secret agreement between the two parties. The Azerbaijan Government has published an official statement in contradiction of these lying tales, and, quite apart from this official Government refutation, I know, and every British officer and civilian here knows, that the Azerbaijan Republic is sincerely and gratefully pro-Ally to-day, and that the Azerbaijan Government is the very first to condemn the intrigues of the Young Turks and of any other Turkish or German adventurers.

That there are Turkish and German adventurers in the Caucasus is only too true. They are everywhere in the Near East, scheming and plotting and carrying on their cunning propaganda—usually co-operating with the agents of Soviet Russia. But they are working secretly, as Azerbaijan and Georgia are not "inclined" to suffer them.

Finally, it is ignorant and unjust to accuse Azerbaijan of being pro-Turk. The people are pro-Mussulman. There is a difference. Indeed, I have consistently written that it is all in our interests to be pro-Mussulman, too. We British have been very good friends of Azerbaijan, and the Azerbaijan Mussulmans, like the millions of their brethren throughout the British Empire, will prove themselves good and faithful friends of ours. Heaven knows that the young Trans-Caucasian Republics, cut off from the outer world for nearly six years as they have been, have a difficult struggle before them. They have successfully driven out the Bolshevists, but the Bolshevist menace still remains. Let us sympathise with them—let us help them—and let us throw no stupid, false accusations at them. On the safety of the Caucasus depends the safety of the Middle East. Azerbaijan and Georgia are our Allies. We should treat them as such.—I am, etc.,

SCOTLAND LIDDELL.

Tiflis, February 28, 1920.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—In your issue of January 2, which has just reached me, there is a letter by a certain R. Mareau regarding "the new Republic that has arisen out of the ruins of the Tsarist Empire of Russia, and which now aspires to the name of Azerbaijan." This correspondent goes on to say that "the assumption of the name of Azerbaijan by the Province of Baku . . . is a manœuvre of the Young Turks," etc., etc., etc.

The other remarks of your correspondent are all equally stupid, so I will pass them by as unworthy of comment. But with your kind permission I would like to state a few facts regarding the right of the new Trans-Caucasian Republic to the name of "Azerbaijan."

In the Persian province of Azerbaijan the fundamental mass of the population at present are not Persians, but the same Azerbaijan Turks who form the fundamental population of the Baku and Gandja (Elisavetopol) districts and of the southern part of the Erivan district. There are in Persia over two and a-half millions of Azerbaijan Turks. For more than eight centuries Persian Azerbaijan has been a Turkish region, and not in the least an Iranian home.

The Azerbaijan Turks inhabit completely the whole of the territory on one side from the southern declivities of the Caucasian chain to the southern border of Lake Urmia and to the Kurdistan frontiers, and, on the other side, from Bortchalu and Ararat to the northern part of the Lenkoran district. In Bortchalu they inhabit the district up to the borders of the Akhalkalaki district separating the Armenian population of the southern part from the Georgian population of the north-western part. The southern part of the Tiflis district with Karaiazy, and of the Signakhski as well as the whole of the south of the Erivan district from Erivan to Julfa (the Nakhitchevan and Sharuro-Daralaghez districts) are also inhabited almost entirely by Azerbaijan Turks.

The separate colonies of other nationalities do not break the continuity of this territory. Amongst these are the colonies of the Iran Persians (Tats) on the Apsheron penin-

Digitized by Google

sula and in the Kubinski district: the colonies of the Kurds —in the southern part of Karabagh: of the Mountaineers (Lesghians and Udins) in the Zakataly region and Nukha district: of the Armenians in the chief town centres, in the environs of Shemakha and Nukha, in the mountainous region of Karabagh and Kazakh, and also in the different valleys of the southern part of the Erivan district. Lastly, the Russian, German, Ukraine, Greek and other colonies dispersed in the different parts of this territory like small islands.

The Turks called their country "Azerbaijan." When one part of them received independence and formed an independent republic it was quite natural that this republic should be called after the name of the country where it was formed; although, perhaps, it did not unite all the Azerbaijan Turks in a whole.

In historic as well as in ethnographical respects the new Republic has a full right to the name of Azerbaijan.

I am, etc.,

(Dr.) Alexander Schepotieff

(Formerly Professor in the University of Moscow).

Baku, Azerbaijan, March 1, 1920.

TURKISH ACTIVITIES IN SWITZERLAND.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—I have just learned that in a letter which appeared in The Near East of January 29 your Constantinople correspondent quoted a statement of *Alemdar* to the effect that I had taken part in a conference held at Lausanne under the auspices of the Turkish Committee of Union and Progress. I would call your attention to the fact that this statement had already been contradicted by me in a communication to *Alemdar* published in that journal on January 14. My words were:—

"The information regarding my participation at a conference of the Union and Progress in Switzerland is absolutely false. I have nothing to do with any conference or branch of the Union and Progress in Switzerland or elsewhere. For several years past I have ceased to belong to the Union and Progress, towards which my attitude is that of every Armenian."

I am, etc.,

B. Haladjian.

Berne, March 20.

TOPICS IN PARLIAMENT.

House of Commons.

The subjoined headings are those given in the official report —

Albania (Italian Military Forces). Syria. India: Reforms Act.—Transport Facilities (Homeward).—Germans (Repatriation).—Army Officers (Pensions). Cilicia (Threatened Massacre of Armenians). Egypt (Constitutional Reform). (March 22.)

Russia: Kuban Cossacks. Turkey: Armenian Massacres, Cilicia.—Disturbances at Marash. British Army: Afghan Frontier Campaign. Egypt (Lord Milner's Commission). (March 23.)

India: Mohammedan Population (Census).—Government of India Act (Regulations).—Committees of Inquiry (Composition).—Lord Hunter's Committee.—Deportation (B. G. Horniman).—Tribal Militias.—Indian Volunteer Force.—Lajpat Rai.—Mohammed Ali.—Revenue (India Taxation).—Indian Army Reserve. Khalifate Delegation. Asia Minor. Egypt (Lord Milner's Commission). Mesopotamia and Palestine (Army Expenditure). Anglo-Persian Oil Company. India: Army Officers (Pensions).—Constitutional Reforms (Lord Hardinge). Export Credits Scheme (Bulgaria). (March 24.)

Peace Treaties: Turkey, Montenegro. Government of India Act (Rules). (March 25.)

The Victoria and Albert Museum has lately received an important loan from Mr. George Eumorfopoulos, consisting of two specimens of English work of the 15th century. One, a panel representing St. George, and formerly in the collection of the late Mr. Lewis F. Day, belongs to the first quarter of the century. The other, a roundel of the Annunciation, and formerly at Ditton Park, Bucks, is slightly later in date, and was probably made about 1450. It is a charming piece of work, and thoroughly English in character.

It is stated in *Nature* of March 25:—A project for systematic exploration in Mediterranean oceanography was started at an international conference recently held at Madrid. The States represented were France, Italy, Spain, Greece, Monaco, Egypt, and Tunis. A commission was founded, with headquarters at Monaco, and the Prince of Monaco as president. This commission will consider the methods to be adopted. Ships for the work are under construction, or being planned by France, Italy, Spain, and Monaco. A beginning will be made this spring, France and Italy working in the Dardanelles and Monaco and Spain in the Straits of Gibraltar. The secretary of the central commission is Dr. J. Richard, Musée Océanographique, Monaco.

PRESS ON THE NEAR EAST.

Britain and the Middle East.

In the *Scotsman* of March 19 Major Glyn has put into an article called "Asia Minor and the Middle East: the Parting of the Ways," the thoughts of the average Englishman upon the Ottoman Empire and British responsibility in those regions. He says:—

It is obvious that the British public are not fully informed of the new responsibilities that must devolve upon us in accepting the mandate for Mesopotamia; and unless the Turkish settlement can be so adjusted in proportion to the limited funds that Parliament allots for defence, the task we are faced with may prove too much with the means at our disposal to properly maintain the prestige of British arms or to prevent the sacrifice of gallant lives endeavouring to carry out duties too great to be borne. Our policy should be either to accept the responsibility with its attendant financial burdens, or else to refuse to take up a position that it will be difficult to maintain. But to refuse means that we as a nation are no longer prepared to continue our traditional policy of protecting backward races and leading them forward to social and economic development. We are at the parting of the ways. India under British guidance now claims the right to exercise the power of self-government. To the British Dominions the affairs of Asia make but an indirect appeal, and their attitude and that of the United States is very similar. Why should they accept the extra financial obligations inseparable from assuming part of the load of "the white man's burden"? And, therefore, unless our own people in these islands, being made aware of all the facts, decide to have no further part or lot in promoting civilisation in the more backward parts of the world, we must accept the responsibility with all that it entails. Never were times more difficult in which to urge the continuation of the historic British foreign policy. At home each person is chiefly interested in his or her own struggle to obtain the best material results of increased financial gain and social progress. Abroad the enemies of our country, jealous of the position we have gained in the Great War, are busy sowing discord in the United States, in India, even amongst our Allies, and on account of Ireland in our own Dominions. Throughout the Middle East and Asia there is a great "anti-occidental" wave of feeling spreading amongst all Orientals and on account of the great part Great Britain has played in the past this hostility is chiefly directed against us. From a common centre this campaign is guided: and every care is taken to use each opportunity. Affairs in Ireland, in the United States, in Turkey, in Persia and India are all symptomatic: internationalism is destructive of patriotism, just as mad Imperialism is a betrayal of true patriotic sentiment. We have no desire for more territory; the map of the world is red enough and almost more than enough. This is a time for great decisions, and fearlessly should the issues be explained. I for one am confident that the innate wisdom of the British people will rise to the occasion, but let us not act without the clear consent of the people.

The Skupshtina.

The *Morning Post* of March 23 has a quite amusing description by its Belgrade correspondent of the Yugoslav Hall of Assembly:

The Assembly is declared open and the fun begins. An Opposition member stoutly maintains that there is no quorum present. Persuasion has no effect on him, and there is nothing for the Chamber but to count itself. The list of Deputies is read over, amid much noise, much ringing of the President's little electric bell—he himself, poor man, has no voice with which to master such a rowdy crew. It seems there is occasionally some difficulty in ascertaining whether a member is actually in the hall or not. One weakly imagines that such a simple physical fact would admit of no discussion. One is wrong. In the Balkans all is disputable, even the data of sense. The truth is the Opposition is in something of a quandary. It cannot rag M. Protitch without being present, but it cannot be present without swelling his quorum. So it adopts the plan of sitting still and not answering to its name when called. One member even loudly denies that he is here at all: but that is really too subtle—his name, in spite of protest, is promptly added to the growing list. At last the reading is finished. Results are checked, counter-checked, handed to the President. There are, it appears, 147 present—just two more than the minimum necessary to make proceedings valid. . . . Government stands, if on somewhat tottering legs. Then M. Protitch gets up and roundly tells the House that though he has his quorum to-day it is quite possible he will not have it to-morrow. Some little alteration in the quorum-law might be advisable. A hundred, for example, would be a good round number.

But he is not to ride off so easily. Opposition has got its bone and is going to worry it. In this astonishing country, it seems, no one exactly knows how many deputies are entitled to sit—how many, therefore, a quorum, which is one more than the half of them, really consists of. . . . Some one gets up and outs with a long calculation to prove that a quorum, properly considered, is not 145 but 149; so that 147 instead of being two too much is two too little. Apart from that he knows (*a priori*) how many members were *not* present: standing on that purely rational basis, he demonstrates very philosophically that, in defiance of appearances (notoriously deceptive), not more than 143 deputies could possibly have been in the House at the

Digitized by Google

moment of counting. And so (to summarise his complex mathematico-metaphysical argument) Government, child of Beelzebub (he does not exactly call it so, but that is the general effect of his remarks), convict of falsification, or under-estimation, or both, has no manner of quorum to bless itself with. Follows thunder and lightning, on this side and on that Speaker intervenes upon speaker, with mutual injuries. Bits of plaster come fluttering down from the ceiling—it is the ballroom where of old Milan and Alexander held revel, and somewhat out of repair. Into the midst of the uproar, M. Protitch manages to spatchcock his programme for the next sitting. And the Assembly closes.

Syria and Palestine.

Palestine, of March 27, devotes its main article to the problem of the Near Middle East. There is a temptation, it says, to concentrate on the day and leave the morrow to take care of itself, and a yielding to this temptation would be absolutely disastrous.

There may be people who will say that the Peace Conference might dispose of the whole matter by a little legal fiction. Why not allow an Arab Empire nominally embracing Palestine and Mesopotamia, but having no authority at all in Palestine and Mesopotamia? Life does not like legal fictions, and nominal authority is either something or it is nothing. If it is nothing, then let it have the name of nothing; if it is something, then it is a potential danger. There might very readily be a conflict between the Power claiming real and the Power claiming nominal authority, and every element of discord and sedition would have a flag under which to work. So far as Palestine is concerned the whole task of effecting harmonious co-operation between Jew and Arab might very well be imperilled. The proper relation between Jewish Palestine and Syria is that of equals and colleagues, friendly in all things and co-operating at all times. The subordination of Palestine to Syria is not the true relation; it is not a possible relation; it is not a fruitful relation. There is no conflict between Arab Nationalism and Jewish Nationalism, but a conflict between Arab Imperialism and Jewish Nationalism would be only too probable. In the interests of both Jew and Arab that must be avoided.

The conclusion of the whole matter is that the Allies must distinguish between Imperialism and Nationalism. Arab Nationalism is sacred; Arab Imperialism is as little sacred as British or French Imperialism, and very much less able to realise itself. To Arab Nationalism the Allies have the duty of being both just and generous. That duty remains, although Damascus has lately made its performance exceedingly difficult.

Constantinople and Mesopotamia.

The *Morning Post*, of March 27, deals with the question of the Khalif in its usual outspoken way. This is how it sees the problem of Constantinople:—

Constantinople has always been a difficult question for Europe. And mainly for this reason—that it commands the vast interior trade commanded by the Black Sea. In the old days before the Turk, Venice and Genoa, if we remember our history aright, disputed for the control of the Byzantine Government, not, indeed, in order to protect the Armenians—which is the sole motive actuating the modern mind—but because the Venetians and Genoese depended upon the Black Sea for timber, hemp, wheat, flax, and other necessities of their seafaring life and trade. Then the Turk came exactly like a robber Baron, planted himself down upon this and other roads between East and West, and for centuries drew huge revenues and vast power by taking toll of the exchange between Russia and the Mediterranean and between Europe and Asia. As to his Caliphate, it is chiefly nonsense, for the Turk was only a convert to Mohammedanism and had no more title to be head of the Mohammedan faith than Barbarossa to be head of the Christian Church. He was a very powerful convert, who fought the Christians and protected the Holy Places, and he assumed the Caliphate much in the same way as the German Kings assumed the title of Emperors of the Holy Roman Empire. When Moslems in India make a fuss about Constantinople on religious grounds they are not sincere: they are thinking of politics. And that is shown very clearly by their sympathy with the Young Turks, who were a gang of atheists and unbelievers.

Turning its attention to Mesopotamia, it says:—

As to Mesopotamia, it might be remarked that by every great war England gains a new Empire and loses an old one. In the French Wars we lost the Thirteen Colonies and gained Canada and the Cape of Good Hope, to say nothing of the Antipodes. In these recent wars we have gained Mesopotamia, but seem in a fair way to lose India. As far as we can see Mr. Montagu has so arranged matters that the destruction of the magnificent British system in India is only a matter of years. But if we are to lose India, then there is the more reason why we should take a firm hold upon Mesopotamia, which once blossomed and may again be made to bloom like the rose. We admit that the frontier is very long and cumbersome; but a large part of it is desert; and desert, as Napoleon said, is the best of frontiers. If, however, it could be shortened and readjusted without substantial loss of good territory, so much the better.

The Army in the Holy Land.

Mr. Percival Phillips, in the *Daily Express* of March 24, gives a quite vivid picture of the life of our soldiers in the Holy Land. He writes from Acre:—

White tents beside the walls of Acre. A broad bay of deepest blue, fringed with golden sand; purple mountains capped with snow; warm sunshine and a lazy offshore breeze that scarcely ruffles the placid sea. I thought of London in the grip of winter. Who wouldn't be a soldier in the Holy Land?

I said something of the sort to an officer of this British frontier force as we strolled along the beach towards Haifa. "I suppose the men like it," I added. "Like it," he repeated savagely, "they hate it. Every mother's son of them would rather go through a winter of trench warfare in France. There they had intervals of rest in warm billets, plenty of warm food, and any amount of recreation. They were never out of touch with civilisation. Here they are at the mercy of the weather; cut off from the rest of the world; preyed upon by the nimblest thieves east of Suez, and cursed with a surfeit of bully beef. And they think they're forgotten." Even as he talked the scene changed. Fat black clouds rose above the headland of Ras en Nacoura beyond Acre, and sped across the bay. The wind freshened ominously, and white caps flecked the sea. Five minutes more and a rainstorm was lashing the palm trees; waves broke viciously over the rocks in Haifa roadstead, and the Arab boatmen scurried to port. "Look at it," said my companion; "who wouldn't be a soldier in the Holy Land?"

Tommy is undisguisedly fed up. He lives a kind of hand-to-mouth, makeshift existence in tents—a drab, dull life, which does not seem to have a single redeeming feature. The antiquities of Acre and Elijah's associations with Mount Carmel are not adequate compensation for the loss of football, and cinemas, and other simple pleasures that go to make his life endurable. Twice this week the canvas-covered garrison by Acre (pronounced "Akka") awoke to find itself drenched, with a forty-mile gale howling across the sandhills. Those by the sea literally have been washed out. The grim slopes of ragged rock behind offer scant opportunity for making camp. One must use the bits of ground that are available, even at the risk of being shipwrecked. A single thread of railway, a thing which is the sport of wind and rain, feeds this force in Palestine. It runs northward from El Kantara, the great base camp on the Suez Canal, through the desert by Gaza to Ludd. Ludd is a kind of Clapham Junction. One line swerves north-west to Haifa; the other climbs the mountains to Jerusalem.

Whenever the line breaks Tommy in Palestine is left in mid-air. He gets no letters, or papers, or supplies. Jaffa and Haifa, the two British-held ports, offer little in the way of steamship facilities—Jaffa, indeed, has of late been living up to its reputation as the worst roadstead in the world, and steamers pass by shudderingly, giving its toothed rocks a wide berth. Then Ludd becomes a cursed place, where desperate officers bent on a week's leave in Cairo haunt a desperate R.T.O. and gloomily eat hard-boiled eggs in the miserable shed miscalled the "buffet." Ludd is a vile swamp when it rains, and a dust-hole when the sun shines. Yet it is a metropolis compared with up-country stations, where Tommy foils the thieving native, and re-reads tattered papers by the light of a lantern. Foiling the native is more than a pastime—it is a serious business. The Bedouins easily take first prize as skilful thieves. No article is safe from them, even when nailed down. They crawl into camp at night with incredible daring and persistence, and lift whatever property their hand touches in the darkness. They have been known to loot an inhabited tent without waking the occupants. An officer awoke the other morning to find all his clothes, even his shaving tackle, boots, and Sam Browne gone. The sentry saw nothing, heard nothing. Remained only the footprints in the soft earth to prove that the visitor had come and gone.

MUSICAL NOTES.

It is easy to decry the merits and to minimise the achievements of small countries, and I believe that few countries have been more often described as possessing no attributes of greatness than Wales. But that country has at least one distinction: its children can scarcely be surpassed for purity and natural beauty in song. This delightful clearness of voice and tone was always manifest in the vocal recital which Miss Gwladys Naish gave at the Wigmore Hall on March 18. But she has in addition high technical ability, and her *coloratura* singing is as unusual as it is unfashionable. She is at her best, however, in simple lyrics (such as those of which Hubert Parry and Stanford have written scores), and in traditional songs in her native language. For her Italian and French diction I did not greatly care, and for her singing of Brahms and Schubert in so-called English translation I cared still less. (Singing songs in German is a question where all argument lies on one side and much sentiment on the other, and to be *doctrinaire* about it is absurd. But it does seem to me that the necessity of singing them at all is not so great as the necessity, when it has been decided to give them, of singing them in German, and not in the wretched French or English translations which mar so many programmes to-day.) In Irish lyrics Miss Naish failed, owing to her English pronunciation of Irish brogue; she apparently is not made for dialect singing. But all her faults were absent in a priceless old Welsh song, "Y Gwcw Fach": in this the words fell from her lips as naturally and as effortlessly as from a bird's. It may be added that she had the advantage of the universal experience and general skill of Mr. S. Liddle as accompanist.

To count British male singers who scorn the royalty-ballad and yet retain some popularity is not much trouble; but there are happy signs that their number is being increased from artists of the younger generation. Among such new artists can be placed Mr. Douglas Marshall, who, excellently assisted by Mr. Aubyn Raymar at the piano, gave a song recital at the Æolian Hall on March 19. The artistic value of his programme can be gauged at once when it is said that only songs by Louis Aubert, Fauré, Ireland, Scott, Alec Robertson, and a cantata by Bassani were included in it. Mr. Marshall is certainly an artist, not yet finished, but one who surely knows and loves his art. He takes his song as a whole, and it is only by accident, as it were, that some of the details are not right. He understands both the musical and the literary worth of the phrase he is singing; so closely, indeed, does he interlock the utterance of his words and their content, that when you criticise his musical ability at the same time you criticise his power of literary appreciation. This, of course, is as it should be. But it would be wrong not to mention that in dramatic lines Mr. Marshall has a slight leaning towards an unnecessary nasality, and that a hint of a rasp in heavy passionate phrases does not help the ear and mind. Also it may be constated that, howeyer good Aubert's setting of "La Lettre" by Henri Barbusse may be, the words are not worth the music; that it is very doubtful whether Mr. Marshall will care, say, in ten years' time to illumine the combined decadence in which Mr. Ireland and Mr. Arthur Symons have indulged in a song called "The Rat"; and that Sir Rennel Rodd's poem on Greece (called "An Idyll") deserves a more fitting setting than that which Mr. Alec Robertson has given it. But despite minor differences with Mr. Marshall, one places large hopes on him. For in his recitals aristocratic taste and individual judgment (two different things!), and not ochlocratic desire and financial consideration, are the controlling factors.

Vocal recitals during the past week have been plentiful and of rather more than ordinary interest. At the Wigmore Hall on March 22 M. Louis Dornay, a Dutch singer, made his first appearance in this country. From an operatic point of view he has a quite notable voice, delivering almost to perfection the Italian method of declamation. His enterprise was shown by the fact that he sang in tolerable English the whole of Schumann's "Dichterliebe," but the differences in this cycle he made, not by distinct interpretations, but by distinct methods in detail—a policy that scarcely succeeded. Outside his operatic style he was best in two songs of movement by Poldowski, the first, with words by the French-Greek poet, Jean Moréas, being particularly noteworthy. The old Dutch folk-songs which he sang were poor things and bare; they seem to have derived from their country a stale flatness.

Miss Ursula Greville's second song recital at the Æolian Hall on March 25 did not prove her possession of more virtues and vices than were noticeable at her first recital. As I have said before, I do not believe that she has a future in operatic singing, but there is no doubt that she sings a lyric uncommonly well. Of Mr. Rutland Boughton's "Triumph of Civilisation" (first performance) she made a very fine thing; and in some unaccompanied songs, especially in Brahms' "Dustman," and in the old French "L'Heureux Vagabond" she sang with delightful freedom and proper reserve. At present it may be said that Miss Greville's taste is better than her voice; whether these two things will draw together or separate still further is not easy to say. The fact that she was assisted at this recital by Miss Dorothea Walwyn (violinist) it is possible to mention only if the verb be understood in its original sense.

To his deserved fame M. Mischa-Leon recently added, by his recital of German song, an unsought notoriety. It was not, I know, by way of making atonement for this that he gave a British song recital at the Æolian Hall on March 25, but, all the same, this recital was a mistake. M. Mischa-Leon is a very fine singer indeed, but English is the language in which he sings least well, and in English music his judgment plays him most unhappy tricks. The compositions of Mr. Josef Holbrooke seem to have become an obsession with him; and in a programme representative of British song the names of Willie B. Manson, Landon Ronald, and Harold Craxton are far from being essential. But in the few songs where the words were poetry and the setting was music M. Mischa-Leon showed himself really a consummate artist; such songs were "Desolation," by Granville Bantock; "So Perverse," by Frank Bridge; and "The Eve of Crecy," by Julius Harrison, the last of which he sang with perfect worthiness. Madame Donalda also sang at this recital, but she served chiefly to show that M. Mischa-Leon was an artist as opposed to (her) the singer.

The finest concert so far arranged by the London Chamber Concert Society was that given at the Wigmore Hall, on March 23, by Messrs. Murdoch (piano), Sammons (first violin), Reed (second violin), Jeremy (viola), and Salmond ('cello) in a concert devoted wholly to the music of Elgar. The Quartet, the Quintet, and the Sonata for Violin and Pianoforte were played, and they were played by masters worthy of the composer. The Quartet and Quintet are wondrously and marvellously beautiful, and the appreciation with which a very large audience listened to them is a sign of the times which other nations, who scoff at the English as being the most unmusical nation on earth, should note well. In the violin Sonata Mr. Sammons played with a richness of tone that I know no other British artist to possess; but while he was at home in every phase of it, Mr. Murdoch was rather a long, long way from it, and seemed content to let the violinist bear the brunt of the interpretation. In the Quintet, however, the pianist made the *amende honorable*; his vigour, precision, and co-operation generally were beyond reproach. Taken all round, this concert was the most enjoyable of its kind given this season.

The concert which Miss Murray Lambert gave at the Queen's Hall, on March 23, with the New Queen's Hall orchestra, under Mr. Hamilton Harty, was noteworthy for one thing only—Mr. Harty's conducting of Strauss's "Don Juan." Although this work is supposed to represent the complete conversion of Strauss to the school of programme music, it is happily only the spirit (and not the details) of Lenau's poem that is depicted in it, and the result is a symphonic poem which is far in advance of a line-for-line representation like "Tod und Verklärung." The spirit of "Don Juan" was most admirably caught by Mr. Harty, to whose whimsicalities the music strongly appealed. He introduced one of his own compositions—"Fantasy Scenes from an Eastern Romance," which, with its clever, never-lagging movements and its almost complete lack of real Eastern music, will probably be ruined by popularity. Concerning Miss Lambert's playing, I do not know whether it was a false patriotism or merely bad judgment that induced her to begin with Max Bruch's "Scottish Fantasy," but to listen to a medley of Scottish traditional airs as conceived by the brain of a German Jew was a woeful experience for an English audience. Glazounow's Concerto in A minor for Violin and Orchestra was a better choice, but even this did not give Miss Lambert, whose playing, if not distinguished, is very pleasant, sufficient scope. Before praising or writing otherwise of Miss Lambert, one must hear her again in things of more moment.

NEAR EAST BOOKSHELF.

I.—"FROM PERSIAN UPLANDS." By F. Hale. (London: Constable and Co. 10s. 6d.)
II.—"WHERE'S JOSEPH?" By Charles W. Hopper. (London: Collins. 6s. net).

I.—PERSIA DURING THE WORLD WAR.

Count Beugnot, who administered the Grand Duchy of Berg under Napoleon I., remarked that nothing was more stimulating to an inditer of despatches than the fancied presence of a great man. Mr. F. Hale has made a similar discovery. During a prolonged residence in Persia he kept an English lady at home informed of all his experiences, and drew inspiration from her sympathetic replies. His correspondence with this Egeria forms a volume which stands in refreshing contrast with the majority of records describing Eastern travel.

Mr Hale left Askábad, in Russian Transcaspia, in August, 1913, and two months of leisurely progress through North-Eastern Persia brought him to Birjand, the capital of a province conterminous with Afghanistan. In this backwater he lived for three and a-half years, and although he had no official status, his intimate knowledge of the beautiful Persian language brought him into close relations with natives belonging to every class. Absolute government favours the growth of individuality; there is a delightful variety in the human types described by our author. Amir Shaukat-ul-Mulk, who governed Birjand, stands out in high relief as a man of marked personality. The head of an ancient ruling family, he administered in patriarchal style, and was universally beloved, while his devotion to lawn tennis, bridge, and hospitality rendered him equally popular with the small European colony. Of the Persians as a race, Mr. Hale formed a favourable opinion. Ages of oppression and neglect have, indeed, left their mark on its character, but every class retains the stamp of an ancient civilisation. Stupendous is the labour involved in the system of irrigation seen at work everywhere: by means of a series of wells connected by tunnels it is capable of bringing water from a depth of 750 feet. The carpet industry is not less remarkable, providing exquisite designs from hand-looms, and revealing an innate artistic sense, which is very rare in European communities. The Birjandis are less sophisticated by foreign influence than their fellow-subjects of the western provinces. Their art and technical knowledge have been inherited from remote antiquity, and their crafts are extremely simple, but they possess a far wider knowledge of the economic side of life than denizens of the West.

Our commerce is so multifarious that only those engaged in it know anything about it; our arts and industries are founded on such an array of sciences that only those who have made them a special study can understand the processes involved. We organise exhibitions to teach people how things are made; and we stock museums with everything under the sun; but people resort to exhibitions for other reasons, and none of us will admit that he has visited a museum. Is it not so? We are boastfully and stupendously ignorant.

The quick intelligence shown by Persians of every degree, their keen sense of humour, and personal charm, make sojourn amongst them a perennial delight. In Mr. Hale's opinion, they are more highly gifted than Indians, and, given a fairly efficient Government, they would take a high place in the scale of nations.

News of the outbreak of war stirred sleepy Birjand into unwonted excitement. The dominant feeling throughout Persia was a paralysing dread of Russia, which had occupied her rich northern provinces, and threatened to divide the entire empire with Great Britain. Persian diplomacy had striven, with indifferent success, to produce friction between the two Powers; but the Anglo-Russian Alliance rendered such manœuvres nugatory. The situation was further complicated by the advent of a swarm of German emissaries, in the guise of peaceful traders, who lavished money right and left in the hope of securing adherents. Yet tenser grew the atmosphere when Turkey threw in her lot with the Central Powers. Although there is no love lost between Persian Shias and Osmanli Sunnis, the fact that both nations venerate the Prophet encouraged the self-styled Democratic Party to preach Pan-Islamism, and proclaim their bitter hostility to the Entente. Opinion at Birjand was summed up by an old Mullah's remark: "Let the Christians devour each other; the Turk is a fool!" A crisis came when the fall of Kut called a halt in British operations in Mesopotamia, and when the complete paralysis of trade with India caused acute distress—patiently borne by a population inured to suffering. Amir Shaukat-ul-Mulk had the greatest difficulty in maintaining a benevolent neutrality, and he resented the arrival of troops sent from Russia and India for the protection of foreign interests. The capture of Bagdad brought considerable relief to the British exiles, and was a signal for the retreat of the Turko-German hordes which had harried Western Persia.

In June, 1917, Mr. Hale quitted Birjand, and retraced his steps by way of Meshed, Askabad, Krasnovodsk, and Baku, which he found in the temporary occupation of a small British force. Thence he travelled by steamer to Resht, on the Caspian, dogged at every step by the chaos which Bolshevism produces. "Soldiers' and workmen's delegates," he writes,

Have sown the seeds of anarchy among the troops, and committees are busy with revolutionary and subversive propaganda. The heart of the army is gone; it is merely a thing of arms, legs, and hungry mouths, and can hardly be called a fighting force.

After a short stay at Teheran, Mr. Hale reached Kermanshah, the goal of his wanderings, in April, 1918. He found the European colony celebrating the discomfiture of its enemies by libations of home-made wine and the zealous pursuit of golf on a nine-hole course. High prices were, indeed, a fly in the Kermanshah ointment. Tea cost ten shillings, and sugar four shillings and sixpence per pound, while the bill for food in a British household was not less than £1 per diem. The natives fared infinitely worse: they died like flies from sheer hunger, and cases of cannibalism were reported from the town of Hamadan. Mr. Hale left Kermanshah in February, 1919, and reached Marseilles, viâ Resht, Baku, Batum, and Constantinople on March 11. His book gives Western readers some notion of Persia's elusive atmosphere, but the absence of illustration detracts in some measure from its value.

F. H. S.

II.—THE MASTER FROM THIBET.

Here is a novel which it is much more fitting (and much easier) to read than to review. We mean this in no cynical sense, but merely in the sense that it is impossible in a word or two to give the outline of the story, so crowded are its incidents. However, we may point out that Joseph is a little dog who has come all the way from Thibet to England to fill his unconscious mission of pairing off for life (at least we hope so) several light-hearted and amusing people, including actresses, artists, maidservants, and policemen. All the persons wait breathlessly, and all the events are delayed, until Joseph shall show them what to do or how things are to be done. In other words, human destinies depend on a canine fate, and though the motives of the various people in this book are human enough, being concerned largely with love, the illusion that the little dog (his presence or absence) is essential to their lives is successfully created. Having said this, to any reader not too seriously minded and with an hour or two to fill, we can recommend this pleasant little novel. Especially to those with a light dramatic sense will "Where's Joseph?" appeal, for its nature, both internal and external, seems to us more suited to a play than to a novel. Seeing it as a play, indeed, we can imagine suppressed mirth writ large over the stalls and upper circle, while from the back of the pit would come, especially over the best character in the book, a housewoman with the onomatopœic name of Mrs. Puddephat, the long and irresistible laugh that results from the recognition of oneself.

PERSONAL AND GENERAL.

CALENDAR OF THE WEEK

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian (New Style).	Julian (Old Style).	—	Moslem.	Jewish.
1920. April.	1920. March.		1338. Rajab.	5680. Nisan.
1	19	Thursday	12	13
2	20	Friday	13	14
3	21	Saturday.....	14	15
4	22	Sunday	15	16
5	23	Monday	16	17
6	24	Tuesday	17	18
7	25	Wednesday	18	19

The Roumanian Crown Prince left Cairo for India on March 21.

Princess Marie of Roumania arrived in London on March 28 from Ascot.

M. Venizelos, the Greek Premier, returned to London on March 29 from Brighton.

Viscount Allenby left Cairo for Palestine on March 25, and was expected to return to Cairo on March 28.

Major Sophocles Venizelos, Assistant Military Attaché to the Greek Legation, left London on March 22 for Paris.

Colonel Arion, formerly Military Attaché to the Roumanian Legation, left London on March 24 for Bucharest.

Mr. Scott, who is replacing Sir Milne Cheetham as Counsellor of the British Legation in Cairo, arrived at Cairo on March 20.

His Highness the Maharaja of Kapurthala has consented to bear all expenses incurred by him during the course of his war service.

The Maharani of Baroda, accompanied by her suite, has left London for Paris, where she proposes to remain until after Easter.

Miss Flora Sandes, who is said to be the only British woman who has served in the Serbian Army, has arrived in London on a year's leave.

The Shah of Persia has arrived at Paris from the South of France. He will remain about three weeks in the strictest incognito, and return to Persia at the end of April.

M. V. Voukicevitch, Chargé d'Affaires of the Kingdom of Serbs, Croats, and Slovenes at The Hague, has concluded his mission to London and left town on March 26 for Paris.

A telegram from Busreh says that Lieutenant-General Sir J. A. L. Haldane, the newly-appointed Commander-in-Chief of the troops in Mesopotamia, arrived there on March 20.

Yesterday Dr. Dickinson Berry described her recent visit to Serbia and the Balkans. The lecture, at which lantern views were shown, was given at the Lyceum Club, of which Dr. Berry is chairman of the Executive Committee.

A memorial service for Mr. Poska, late President of the Esthonian Peace Conference, was held on March 28 in the Greek Orthodox Church of St. Sophia. Besides the Esthonian colony, the Foreign Office, the French, Italian, and Spanish Embassies, the Polish, Ukrainian, Georgian, Greek, Czecho-Slovakian, and Azerbaijan Legations, and many others were represented.

Reuter's Constantinople correspondent states that on March 27 the Grand Duchess Olga Alexandrovna, a sister of the late Tsar, left Constantinople for Serbia, *en route* for Denmark, where she intends to reside permanently. She arrived in a British refugee ship from Novorossik with her husband and her two sons.

Miss Helena Schilizzi, a Greek lady well known in London, has secured from the Marquess of Waterford the remainder of the lease of 51, Upper Brook Street. The lease extends to seventy-five years. Miss Schilizzi has offered the house to the Greek Government as the official residence of the Greek Minister in London. The offer has been accepted. M. D. Caclamanos, the Greek Minister, will move to the new premises in June next.

The matinée organised by Lady Mainwaring, and given at the Royal Court Theatre on January 9 for the benefit of Roumanian children, realised £528. The expenses amounted to £78, leaving a balance of £450, which has been forwarded to the Queen of Roumania.

Our Bucharest Correspondent writes (March 19):—

Lieutenant Colonel Poillon has now taken up his post as Military Attaché in Bucharest, in succession to Col. Yates, who has returned to America.

It was erroneously reported that Colonel J. W. Boyle had accompanied Prince Carol on his cruise abroad. Colonel Boyle is still in Bucharest.

His Excellency, Mr. Vopicka, Minister of the United States, gave a banquet and a large reception on Monday evening, the 15th ult. The King and Queen honoured the American Minister with their presence, and they were attended by M. Henry Catargi, High Chamberlain of the Court, and Madame Catargi, General Ramniceano, General Ballif, Colonel Tenesco, Madame Mavrodi (Mistress of the Robes), and Mesdames Simone Lahovary and Irène Procopiu. There were also present the Ministers of Russia, Belgium, Holland, Poland and Czecho-Slovakia; Mr. Rattigan, the British Chargé d'Affaires, and Mrs. Rattigan; M. Cambon, French Chargé d'Affaires, and Mme. Cambon; and many other distinguished guests. After dinner a circle collected round their Majesties, and the company was entertained by an excellent dancer of Spanish dances. Later in the evening dancing began, and continued till a late hour, the dancers refreshing themselves at a buffet which was described as "des plus exquises."

A delayed Reuter telegram from Delhi, dated March 16, states:—

"The Hon. Joan Thesiger, the Viceroy's eldest daughter, was married to-day to Captain Alan Lascelles, a nephew of the Earl of Harewood. The Viceroy gave his daughter away, and the Bishop of Lahore officiated. The bride and bridegroom returned from the church to the Viceregal Lodge in a carriage drawn by six grey horses, with outriders in scarlet livery and a special escort. A reception followed at the Viceregal residence. The bride received special presents from the Army Headquarters and the civil secretariats, and the whole ceremony was a brilliant success. Captain and the Hon. Mrs. Lascelles proceeded to Kashmir for their honeymoon.

THE ORDER OF THE BRITISH EMPIRE.

The final list of appointments to the Order of the British Empire is said to contain some 6,000 names. In the three higher grades of the Order the following are among the names associated with the Near or Middle East:—

G.B.E.

Sir Alexander Baird, President, Permanent Arbitration Board, Egypt.

Sir John Denison-Pender, Managing Director of the Eastern Telegraph Company.

Sir Henry Babington Smith, C.H., K.C.B.

K.B.E.

Robert Waley Cohen, Esq., Petroleum Adviser to the War Office.

Stephen Demetriadi, Esq., Partner and Managing Director of Ralli Brothers.

C.B.E.

James Anderson, Esq., Divisional Manager, Eastern Telegraph Company, Athens.

Alexander William Keown-Boyd, Esq., O.B.E., Sudan Civil Service.

John Edwards Cresswell, Esq., M.B., Principal Medical Officer Government Hospital, Suez.

Alexander Granville, Esq., C.M.G., M.R.C.S., Commissioner for Egypt, Palestine, and Syria, British Red Cross.

Lieut.-Colonel Thomas Wolseley Haig, C.S.I., C.M.G., Consul-General, Ispahan.

Arthur Bradley Kettlewell, Esq., C.I.E., Secretary to the British Minister, Athens.

Major Æneas Ronald McDonnell, O.B.E., Vice-Consul, Baku.

James Hamish MacMurray, Esq., O.B.E., Manager, Imperial Bank of Persia, Hamadan.

Kathleen Mary, the Hon. Mrs. Wilfred Thesiger, services in connection with the influenza epidemic at Adis Abeba.

Frank Tobin, Esq., Chairman Liverpool Centre Order of St. John of Jerusalem.

Frederick Edwin Whittall, Esq., Near Eastern Adviser to the Intelligence Service H.M. Forces.

OBITUARY.

We are indebted to a Serbian correspondent for the following particulars concerning the late Hon. Mrs. Haverfield:—The news of the sudden death, through illness, sustained whilst ministering to the needs and comforts of those who have suffered through the war, of the Honourable Evelina Haverfield, is announced from Serbia. To all those many people whose great privilege it was to have known and worked for the late Mrs. Haverfield, it will come as a very painful shock to learn the sad news. Mrs. Haverfield was truly a noble woman. From the very earliest days of the war she devoted every second of her precious time, every ounce of her energy, all her fortune, and her unlimited devotion to the sacred cause of the poor and helpless Serbians. In her efforts, no sacrifice of health or personal liberty was too great. By her unselfish work and disinterested endeavours, Mrs. Haverfield became loved—nay, worshipped—by all, by her patients as well as by her fellow-workers, by those good people who have helped to further her cause, as well as by those many members of the large public gatherings who have heard her voice the claims of the weak and distressed on public platforms. To have known her is in itself a real source of pride. Through the long corridor of time one sees here and there monuments erected to the memory of great people; but to Mrs. Haverfield will be given what was given to great heroines like Joan of Arc, Florence Nightingale, Elizabeth Fry, and Edith Cavell, the crown of immortality. Her name, her personality, her good works, her martyrdom, will become known and remembered for all time. Her dying wish was that her work be carried on under Dr. Elizabeth Ingram, of Bania Bashta, in Serbia. May her life work flourish!

THE EAST: PAINTINGS AND DRAWINGS

At the Goupil Gallery, Regent Street, Messrs. William Marchant and Co. are showing an interesting series of paintings and drawings, entitled "The East," by Sydney W. and Richard Carline. The pictures consist of scenes from Egypt, Palestine, Mesopotamia, Persia, and India. These two brothers were sent out to record for the Imperial War Museum the military aspects of these countries; but in these pictures they have happily avoided set works done at dictation, and have put down their own impressions of the native life and characteristics of the East. Their work is, we think, still developing, and, for the most part, it can be called attempt rather than achievement. Although their methods are similar, their differences are obvious. In precise line, strength, and certainty of detail (such as there are in an oil painting, "Selling Wares in Aden Harbour," No. 40), Mr. Sydney Carline is better than his brother; but in the effects of light particularly and in colour generally Mr. Richard Carline's work is superior. In sunlight pictures Mr. Richard Carline shows much originality and a boldness that does not shock, and three pictures like "Sunlight in the Courtyard of an Arab House" (No. 30), "Mid-day Sunlight in the Corridor of the Great Mosque, Damascus" (No. 63), and "Mount Alvend After Sunset, Persia" (No. 118), we count as very fine efforts indeed. Both artists are more successful in water colours than in oils and drawings, but even in these it is doubtful whether they have given sufficient attention to the richness of colour and to the mysterious atmosphere of the East. However, the series of pictures is extremely interesting to those who have been to the places painted and drawn, and its apparent deficiencies are not so much a matter of art as of difference in personal impression from the artists.

Lord Meston has rejected the 'non-Brahmins' claim for a majority of seats on the Provincial Council at Madras.

A change in the form of the prayer for the Sultan offered in mosques on the occasion of his birthday has caused excitement in Cairo.

The Chotani sawmill, in Bombay, with an immense quantity of timber, has been destroyed by fire. The damage is estimated at fifteen lakhs of rupees.

Sittings of the Commission appointed by the Government to investigate questions affecting Asiatics in the Union have opened at Cape Town. The Indian Government is represented by Sir Benjamin Robertson.

It is announced by the Foreign Office that a military permit is no longer required for landing in Egypt. British subjects travelling to Egypt must be in possession of passports issued or endorsed for that country by the Passport Office.

APPOINTMENTS WANTED.

THE Ladies' League (under Royal Patronage), 118, New Bond Street, successfully recommends Lady Secretaries, Chaperons, Housekeepers, Companions, Secretaries, Governesses, Nursery Governesses, Nurse Companions, Lady Nurses, etc.

WIDOW of planter seeks post chaperon, social companion, governess, nurse, to lady going East (India or Egypt preferred).—"G," 111, Albert Road, South Norwood.

WHERE TO STAY.

For the convenience of visitors from overseas "THE NEAR EAST" offers its services in booking rooms at hotels in the United Kingdom, on receipt of instructions preferably a week before the date of arrival. When instructions are telegraphed the message can be abbreviated as follows:—

"EASTAPROX, LONDON. TWENTIETH MATLOCK TWO

(The visitor's name and place of residence abroad to be added)."

which would indicate that two rooms were required at Matlock on the 20th of the month.

THURSDAY, APRIL 1, 1920.

BRITAIN AND EGYPT.

With the return of Lord Milner's Mission the moment is opportune to take stock of the situation in Egypt as revealed by the recent course of events. The outstanding features admit of no doubt: they are, on the one hand, the agitation, to which the bulk of the *intelligenzia* is committed, for "complete independence," and on the other hand, the impossibility of Great Britain's acceding to this request. In support of the agitation we have had riots, outrages which have happily failed of their purpose, the boycott of the Mission and a more or less successful interference with the normal course of government. The British attitude in its turn is indissolubly linked up with the maintenance of the Empire, has the tacit support of all Allied countries, and finds additional justification in the excesses of the Egyptian Nationalists and their proved lack of any constructive policy. Such are the opposing forces, and it rests with the Nationalists to decide how long they will continue to challenge the integrity of the British Empire, whether with dialectical quibbles or by more forcible means. So long as their arguments are merely shouted into the air or printed in the public Press they cannot complain if they receive no serious attention from the British Government. A year or more ago it was open to them to say that they could not obtain a hearing in Egypt, and that they must, therefore, shout to enable their voice to carry to England. The justice of the contention was in large measure conceded when the decision was taken to send out a special mission. It was the equivalent in diplomacy to an answer from the British Government: "There is clearly truth in what you say; we must hear more about this subject." Such a reply would necessarily be based on the supposition that the people who were raising their voices in Egypt were men and not fractious children. But the event has proved the supposition wrong. Let us suppose for the sake of argument that wisdom and understanding are with the Nationalists alone, and that the British Government is the mouthpiece of barbarians. The former in seeking something from the latter would naturally use a medium of communication suited to the inferior intelligence. Consequently when, on the despatch of the British Government's representatives to learn what Egypt wanted, the Nationalists resorted to excesses, boycotted the Mission, and prepared an elaborate organisation to prevent the delegates from coming into touch with individual Egyptians, and in particular with the fellaheen, the British public in common with the rest of the civilised world could only interpret the action in one way, their own, that is to say, as an expression of the weakness of the Nationalists' case and of their fear of a close investigation, and above all as an acknowledgment that they spoke (or rather shouted) for a relatively small section of the people and not for the great majority of the Egyptian nation. If this is a wrong interpretation of their case, the Nationalists have only themselves to blame. We can assure them with the utmost confidence that no other interpretation will ever be placed on their present tactics, however loud or subtle the arguments which they may exchange among themselves. As for the more forcible means of endorsing their arguments, these too have a different effect from that intended, owing no doubt to the perversity of the British nature; but it is this nature that the Egyptian Nationalist is "up against."

If the present situation continues, Great Britain will have to make up her mind to deal with it as best she can on provisional lines. At its worst it means, for Egypt, much shouting and some unrest—both showing a tendency to diminish—but possibly with real suffering in the matter of food supplies as a direct result of the agitation and the Government's preoccupations; for Great Britain, a modification of the scheme for self-government in Egypt to fit the proved political immaturity of the people, and the maintenance for a longer period of the Army of Occupation. As we understand the position, the matter will remain an open question until the Mission has drafted its Report, say, a month hence. The appointment of the Mission meant that the Nationalists had virtually won their case. A reasonable attitude on their part, with an adequate marshalling of evidence, must have left not only the delegates but also the British public as a whole entirely converted to the necessity of the most liberal form of self-government, always, of course, within the Empire. To-day it would be foolishness on Britain's part to go so far as to summon, under any safeguards whatever, a Chamber that could be relied upon to abuse the Government's confidence. The Nationalists have deliberately based their challenge on the continued integrity of the British Empire, and such a narrow issue admits of no compromise on Great Britain's part. Neither bluster nor quibble will alter that fact. For a month the opportunity is offered them of transferring the issue to different ground. They need fear no loss of face in so doing; the British are acquainted with the methods of Oriental bargaining, although in certain cases they refuse to lend themselves to the practice. Certain it is that just as the Nationalists have spoilt their own case, so only they can rehabilitate it in the eyes of the world.

Unless then the unexpected happens in Egypt or in the Paris Councils of the Egyptian Nationalists, the Report of Lord Milner's Mission must content itself with the recommendation of improvements in the existing machinery of administration in Egypt, and leave for the future any elaborate charter of self-government. This limitation, however, would afford no reason why special attention should not be paid at once to the larger question of British responsibilities to Egypt and to the whole Arab world. The mistakes that have been committed in our administration of Egypt during recent years are neither denied nor forgotten because they are omitted from this analysis of the existing situation. They have arisen from lack of knowledge and from a lack of co-operation between the British Government and the Egyptian Administration. The strain and stress of war may be admitted as an excuse; but there is no indication that the position, if existing conditions are perpetuated, will be improved in the ordinary times of peace. Great Britain's relations with Egypt and the Arab world have become too important and too complicated to be treated as a "side-show" of any one Department of State. They require now to be the special concern of a separate Ministry. There is much to be said against the indiscriminate multiplication of Ministries; but the test must be the Empire's obligations. The Arab world forms a peculiar entity of its own; its relations with Great Britain fall wholly neither within the scope of the Foreign Office, nor within that of the Colonial Office. It occupies far too important a position strategically in the British Empire to be allowed to fall between two stools. A Ministry devoted to the affairs of the Near and Middle East, with a High Commissioner of the Middle East in close touch with it, would have obviated many of the mistakes from which Egypt is now suffering, and might prevent Mesopotamia from repeating Egypt's experience. Without this Department the discharge of our responsibilities in Mesopotamia, Palestine, and Arabia, as well as in Egypt, will suffer from the inevitable lack of co-ordination and consistency.

THE FUTURE OF MESOPOTAMIA.

The possibility of reviving the ancient glories of Mesopotamia appeals so strongly to the imagination that we may forgive the enthusiasts who tell us that, given adequate development on modern scientific lines, it is destined to be the "world's chief granary"—even if we harbour a suspicion that on this question there is some confusion of thought in their minds as to what they believe and what they would like to believe. This question of the development of Mesopotamia has now become a matter of enormous importance to the country charged with the responsibility for its administration by the mandate of the League of Nations, and it is a sign of the times that people are beginning to approach the subject in the spirit of the practical business man where they have hitherto been content to view it from the standpoint of the sentimental idealist. They are hungry for facts, and the questions they are asking at the moment are, first: "How much will it cost us to run Mesopotamia?" and, secondly, "How much revenue can the country be expected reasonably to produce now and in the future?" The publication of Mr. A. B. Buckley's report on "Mesopotamia as a Country for Future Development" could not therefore have been better timed; it is admirably compiled, and it is to be hoped that it will be widely circulated not only among the official classes, but also among the general public. From it much can be learnt that we have hitherto been left to guess at by an all too reticent Government, and while we are far from suggesting that knowledge will in this case produce disillusionment, we are satisfied that it will go far to dispel the legend of the lion's share in the form in which it has been so eagerly swallowed by our friends in America and on the Continent. There is no use in attempting to disguise the fact that for the moment our popularity among our Allies and associates has suffered an eclipse, and that the feeling that, as usual, Great Britain has succeeded in grabbing all the best bits is widely prevalent. Mesopotamia is held to be the best bit of all, and our Continental friends, who have not yet all learnt to disconnect the Imperial idea from the sordid business of the exploitation of subject territories, are firmly persuaded that from the wealth we are destined to extract from the revived Garden of Eden we are going to pay off most of our National Debt and re-establish our financial supremacy among the nations. Mr. Buckley's report is not calculated to support this view of our gains at the expense of the truncated Ottoman Empire, and it is for this reason, apart from any others, that we hope it will receive the widest possible publicity.

Mr. Buckley accompanied Sir John Hewett in his mission to Mesopotamia in December, 1918, as engineering member of his staff, and he tells us that in that capacity it fell to his lot to visit and investigate every district in the country between Busreh and Mosul, finally making his exist from it by motor to Aleppo via the Euphrates valley. As Director of Irrigation in Egypt, he was of all living experts the one best qualified for the service, of which his admirable report is the record, and even if some of the matter contained in it is calculated to evoke the criticism of some other experts who have investigated the subjects of which it treats, we doubt whether many of them will be prepared to question his general conclusions. The report opens with some remarks regarding the ancient canals of Mesopotamia, which are calculated to shake popular faith in the legend that "there were giants in those days." Mr. Buckley points out that "rivers which are subject to heavy fluctuations in the course of the year require in modern times to be provided with weirs to maintain their levels within the limits necessary for the alimentation of the irrigation canals, while the latter require to be provided with narrow head works for the regulation of their supplies. Had such works been in existence in Babylonian times it seems probable that their remains would be found to-day." They are not, and so he concludes that the ancient canals, of which so many traces exist, were "in reality inundation canals excavated to a level suitable for drawing water from the rivers during the flood season and used for irrigation of a millet or early summer crop. The wheat crop, the principal crop in Mesopotamia in ancient times, must in all probability have been sown as a rain crop just as the bulk of it is at the present time." He thinks that the conditions in Mesopotamia are distinctly favourable for the cultivation of cotton, and suggests that if the possibilities of the country in this direction are adequately developed everything points to the probability of the crop coming up to the Egyptian average in yield and quality. This should be of interest to Lancashire faced with the prospect of a yearly shrinkage of its vital supplies of raw material unless, by the systematic development of the cotton growing possibilities of the Empire, we are able to make good the American deficiency.

The extent to which rice is cultivated in Mesopotamia, to the exclusion of other, more profitable, crops, is deplored in the report, but Mr. Buckley seems to think that with extended irrigation the expansion of the area producing dry summer crops would be possible without reducing the amount of rice-growing land. He is also of opinion that improved methods of agriculture on the part of the inhabitants would alone suffice greatly to increase the productivity of the soil, and suggests the importation of a limited number of Egyptian fellaheen, either as settlers, to show by example the advantages of growing cotton, or as "instructors, drafted into the villages and given a financial interest in the crop." It is a question, however, whether the Arabs would at first appreciate the presence of these colonist instructors in their country. Governments cannot afford to disregard the factor of human perversity in their measures of reform, and one fears that sudden death might in only too many cases overtake the industrious Egyptian imported by a benevolent administration for the agricultural uplifting of the degenerate Arab. In proportion as our rule in Mesopotamia is improving, it will most assuredly be expensive, and if imported Egyptian or Indian agriculturists find they can only till the soil in danger of their lives, inevitably will they demand protection. Hence employment for the warriors of Mr. Winston Churchill's "new model," and much expense possibly for the British taxpayer.

But there is this to be said for Mr. Buckley's suggestion for utilising the Egyptian rather than the Indian in this business of agricultural education in Mesopotamia: the former speaks Arabic, the latter does not, and we agree with him that this, apart from any other, is a weighty consideration. If we are to do anything with Mesopotamia, the study of Arabic, both in England and in India, must be taken up much more widely than it is at the present time. In this connection we may commend most earnestly the opportunity afforded to would-be students by the London School of Oriental Languages.

In the short period covered by our military occupation of Mesopotamia an efficient Irrigation Department has already been organised, and as the total strength of its establishment only amounts to 228, of whom only forty-four are British officials, the authorities appear to have done their best to keep down expenditure. The section officers are principally Indians, but among them there are already a few Arabs, and for the latter a training school has been established at Baghdad. The canal overseers are all Arabs. Mr. Buckley considers that the irrigation districts established by the military administration are rightly arranged in accordance with the canal systems as they are. Of the irrigation works existing in the country the more important were established under "the blasting tyranny of the Turk," notably the great Hindia Barrage, and the subsidiary works interrupted by the war were restarted by the military administration within a short time of the effective occupation of the country. All the works constructed and under construction in the Tigris and Euphrates areas are very fully described in the report.

It is, however, in Mr. Buckley's proposals for the improvement and development of irrigation in Mesopotamia that the chief interest in his report will be found, and it is necessarily in their financial aspects that they will be most closely studied. A total expenditure of £30,000,000 is contemplated, but since it is proposed to spread it over a period of fifty years, the adoption of the scheme does not appear likely to put any very excessive financial strain on the country in the near future. Dealing with this subject, the report tells us that the financial problem presented itself to Mr. Buckley as follows: "It is difficult to arrive at the exact amount of expenditure incurred in Egypt in converting its cultivated areas in their primitive condition to their present state of development; the work has been done

in conjunction with maintenance, the development has been gradual, and was initiated without any very definite scheme for future development other than a general intention to develop the country, irrespective of any possible final scheme. The cost per acre may, therefore, amount to considerably more than ought to be incurred in Mesopotamia, which should benefit by having at its disposal the experience gained in Egypt during forty years. . . . The conversion of 400,000 acres depending on the Asyût Barrage involving the construction of main and branch canals and irrigations works resulted in an expenditure of £12 per acre. This does not include the cost of the Asyût Barrage." For the development of Mesopotamia the writer proposes a rate of £10 an acre. "The development of an area of 3,000,000 acres would therefore involve an expenditure of £30,000,000, which it is supposed would be distributed over a period of fifty years." For the purposes of his estimates, Mr. Buckley reckoned the population of Mesopotamia as 2,000,000 A census since taken sets it down at over 2,800,000. If, therefore, the Egyptian rate of increase were attained, Mesopotamia might have her required population (1.5 per acre of the cultivated area) in less than twenty-five years.

Mr. Buckley's detailed estimates are given in the report, and he thinks that if the scheme he favours is adopted, we might reasonably expect the revenue of Mesopotamia from all sources to amount to £10,500,000 in fifty years' time; but he adds that he has been unable to get any statement or estimate of the *present* revenue of the country, although he has heard it amounts to about £3,000,000. On this basis he considers that "present resources and reasonable expectations should, therefore, provide sufficient guarantee for the programme of development outlined."

Experience in Egypt and in India has amply demonstrated that as a general rule irrigation works are self-supporting, and there is little doubt that this will prove the case in Mesopotamia. But the indirect benefits accruing to an agricultural country from an enormous increase in its cultural area must not be left out of the scale when the pros and cons of a scheme such as is presented in this report are weighed in the balance. It is desirable that the development of the resources of Mesopotamia should be speeded up as far as possible, and with this object in view it is a question whether a scheme somewhat bolder on its financial side than Mr. Buckley's might not be justified. It seems desirable that railway construction and irrigation development in Mesopotamia should be proceeded with in the spirit in which the cutting of the Isthmus of Panama was undertaken by the Americans, if only with the object of giving the maximum amount of employment to the people not only of the country itself, but of other provinces of the Ottoman Empire, where the confusion and unrest resulting from the demobilisation of the Army can best be combated by a demand for labour on great public works. A loan secured on the Mesopotamian revenue and guaranteed by the British Government, of sufficient amount to finance a great irrigation and railway construction scheme, is a practical business proposition which deserves the attention of the Government.

The title of this report was not perhaps very happily chosen, unless we are to assume that in Mesopotamia future development and irrigation are to be regarded as synonymous terms. In a section dealing with overland communication between Baghdad and the Mediterranean, we are reminded that by the Euphrates-Aleppo route Baghdad is nearer to Cairo than is Khartoum. No reference is made to the railways constructed in Mesopotamia during the war by the military authorities, but on this subject the admirable map compiled by the geographical section of the general staff, and appended to the report, gives the necessary enlightenment. How much has been extracted from the British taxpayer for the construction of these railways, for the Busreh harbour works, for road-making, and a hundred other adjuncts of the costly Mesopotamia campaign he has yet to learn; but it must be apparent to him by this time that millions have already been sunk in the country, and the British dislike for leaving a job half done will, we think, suffice to make him take broad views in this matter of Mesopotamian development. Alone among all the people involved in the great war, the Arabs of Mesopotamia have reason to bless the day it broke out. It has brought them efficient administration, improved communications, agricultural development, and much actual wealth. Their future is also provided for, since they are now in the happy position of having behind them the still considerable financial resources of the British Empire. Of all the peoples who excite the benevolent activities of the League of Nations, it behoves them most to take to heart its kindly injunction to be good. If they do, the garrison we are pledged to provide for their country could be cut down to very modest limits, and the money available for civil administration would be proportionately increased. That, we think, really sums up the Mesopotamia question of to-day.

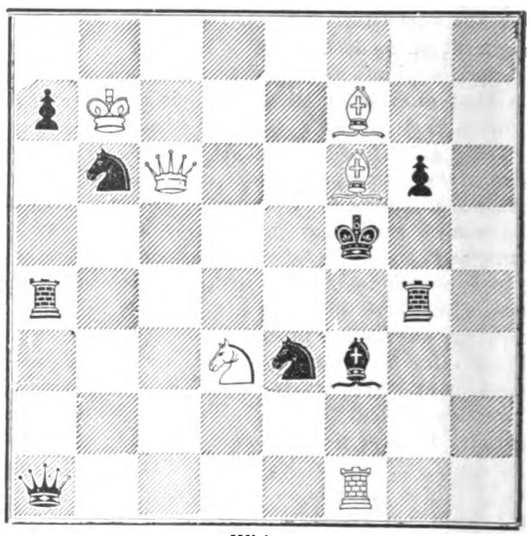
CHESS.

PROBLEM No. 18.

Black.



White.

White to mate in two.

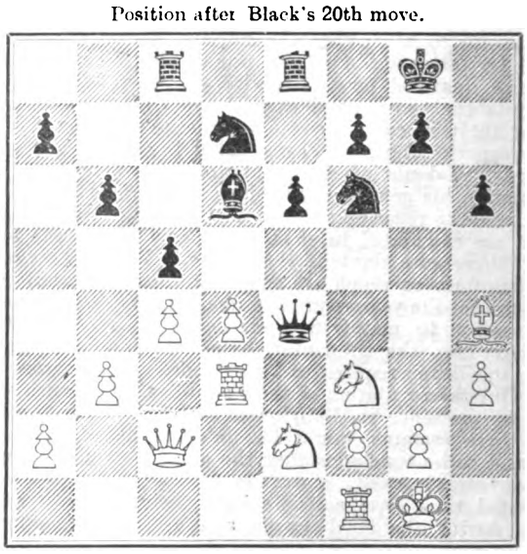
The above problem by A. Bottacchi took one of the prizes in a recent competition of the *Brisbane Courier*.

The issue in the City of London Championship has now been narrowed down to two competitors, Sir G. A. Thomas and Mr. R. C. J. Walker. Both these players are two points down, but while Sir G. A. Thomas has finished his games, Mr. Walker has an unfinished game with Mr. E. G. Sergeant.

The University teams concluded their tour last week with matches against the Insurance and the Imperial Chess Clubs. Both matches were lost, that against the latter club by a substantial margin, and thus the Universities for the first time within my recollection have failed to win a single match in their annual week in London. Undoubtedly one cause of this result is to be found in the fact that a comparatively small contingent of past members was called upon for the matches. It was also clear that the members of both teams were playing much below pre-war form. From a casual glance at the results I gather that only one undergraduate did really well in the matches, and that was the Cambridge reserve, who won all his games.

The following game was played at board No. 3 in the University match between Mr. D. M. Morrah and Mr. C. M. Precious, the former having the move: 1. P—K4, P—QB3; 2. P—Q4, P—Q4; 3. Kt—QB3, P x P; 4. Kt x P, B—B4 (1); 5. Kt—Kt3, B—Kt3; 6. Kt—B3, Kt—Q2; 7. B—K3 (2), P—K3; 8. B—Q3, B x B; 9. Q x B, K Kt—B3; 10. 0—0, B—Q3 (3); 11. Kt—K2, Q—B2; 12. P—QB4, R—Q; 13. Q—B3, P—QB4; 14. QR—Q, 0—0; 15. P—KR3 (4), P—QKt3; 16. Q—B2, Q—B3; 17. B—Kt5, P—KR3, 18. B—R4, R—B; 19. P—QKt3, KR—K; 20. R—Q3, Q—K5.

Position after Black's 20th move.



21. B—Kt3, B—B2; 22. Q—Q2, Kt—R4; 23. B x B, R x B; 24. R—K, Q—Kt3; 25. P—Q5, P x P; 26. P x P, Kt—B3; 27. Kt—B3, R x R (ch); 28. Q x R, Q x R; 29. Resigns.

(1) Much inferior to Kt—B3.

(2) The proper square for the Bishop is B4.

(3) Taking advantage of the undefended diagonal.

(4) This move simply weakens White's position. There was no danger in Kt—Kt5, which would be met adequately by P—Kt3.

CARO-KANN.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

Some particulars of the position with regard to the Serbian copper mines at Bor were given in a recent issue of the *Yougoslovenski Boursa*. At the present time the output of these famous mines is going to France and America. One smelting works is being operated, 1,500 workmen being employed, while two others, which were dismantled by the Germans, who exploited the mines during their occupation of the territory, are being reconstructed, and it is estimated that as soon as this is completed the output of copper will be increased to 100 tons a day.

***

The Roumanian Consolidated Oilfields has succeeded in its claim for damages against the Crown for the destruction of its oilfields in order to prevent their falling into the enemy's hands. The company's claim was for £1,225,513, and Mr. Justice Darling came to the conclusion that the company had proved that the envoy of the British Government, Colonel Norton-Griffiths, did promise it compensation, and that on that promise the company allowed him to destroy its property. He further thought it was a term of the contract that the valuation should be based on the audit of the company's books by Messrs. Harmood Banner and Son. As to the amount of compensation, he did not think he was in a position to deal with that.

***

The figures of the Egyptian Budget for 1919-20 showed a great advance on previous estimates, but they, in their turn, are easily surpassed by those for 1920-21. The estimates for revenue and expenditure this time both amount to £E40,271,000, an increase of £E12,971,000 as regards revenue and of £E11,421,000 as regards expenditure on the totals for the previous year. Last time provision was made for an excess of expenditure over revenue. That this time revenue and expenditure are budgetted to balance is in the prevailing circumstances not without significance, suggesting as it does the belief in the continuance of the remarkable prosperity that Egypt has enjoyed in recent years.

***

Turning to the details of the estimates, it may be noted that the principal increases anticipated are £E2,390,000 from the Customs, £E2,356,000 from the sale of land, £E2,000,000 from the new cotton tax, and £E1,650,000 from tobacco. On the expenditure side the chief increases are £E2,745,000 for increased pay to meet the cost of living, £E2,878,000 for irrigation (slightly more than half of which is for new construction), £E2,238,506 for the railways, and £E2,000,000 for the estimated loss on the distribution of wheat among the urban population. In regard to some of the items on the expenditure side of the account, it is probable that the estimates will prove to be in excess of the requirements, and on the other hand, given settled conditions, it would not be too optimistic to expect that the revenue will be much in excess of the forecast, and that at the end of the year there will be a considerable balance in Egypt's favour.

***

An excellent report is forthcoming for the past year from the Chartered Bank of India, Australia, and China. The net profit amounted to £447,300, an increase of £38,100, and this amount, with the balance brought forward of £168,483, gives a disposable surplus of £615,800, as against £576,400. It is proposed to maintain the distribution by way of dividend and bonus at last year's figure of 20¼ per cent., to place £100,000 again to the reserve fund, making it £3,000,000, to increase the officers' superannuation fund by £25,000 as before, and to write off premises account £75,000, as against £40,000, leaving £172,830 to be carried forward. The bank increased its capital by £800,000 at the commencement of last year, and this sum, with the premium of £800,000, ranked for interest from the dates of payment to December 31 at the rate of 5 per cent., free of tax.

***

It is very satisfactory to learn that the British Chamber of Commerce at Constantinople has extended the sphere of its activities to Sofia, where a branch was recently opened. There never was a time when there was greater scope in regions like the Near East for bodies representative of British traders, particularly in countries like Bulgaria, where commercial relations with Great Britain were before the war very restricted. As Captain W. B. Heard expressed it in his speech at the opening ceremony, "The opening of this Chamber marks an important stage in the commercial relations of the two countries."

***

In his address at the annual general meeting of the Eastern Bank Lord Balfour of Burleigh said that the past year, from an exchange banker's point of view, had been a very eventful one. In this connection he referred to the rise during the year of silver from 48 7-16d. per ounce to 76d., of gold from £3 17s. 9d. per ounce to just over £5, while the rupee, in which, he remarked, they were so greatly interested, rose from 1s. 6d. to 2s. 4d. This was reflected, he pointed out, in the figures of the balance-sheet, which were based upon the rate current on December 31, though, after taking this fact into due consideration, a large and satisfactory increase was shown on all counts. He explained that charges in the year under review were naturally higher in view of the larger number of branches and of the increase in salaries to meet the present exceptional conditions. "Since the date of our last report," he added, "we have opened three new branches of the bank—at Mosul, Basrah City, and Colombo. This may be taken as an indication of our intention to enlarge the sphere of our operations, and we hope in due course to extend still further afield."

***

The comparatively poor opposition which General Denikin has been able to offer to the Bolshevist advance in South Russia left little hope that he would be able to regain his lost ground in that region, and in the circumstances the news of the fall of Novorossisk, his last base on the Black Sea, will occasion little surprise. The development means among other things the occupation by the Bolshevists of the oilfields of the Caucasus—a contingency which had long ago been discounted—and that, so far as can be seen, the relief of the congestion at Constantinople by the reopening of the South Russian market can only take place if and when trade relations are established with the Bolshevists. As to this it can only be said that trade with South Russia was very precarious, and it is difficult to feel very hopeful about the prospects of transactions with the Bolshevists.

***

A feature of the Foreign Bondholders' Report, which calls for further reference, is the great improvement in Greek finances, on which I touched last week. Greece has been the only Balkan State to pass through the war comparatively unscathed, and, as my readers are aware, the position of Greece with regard to the Near Eastern theatre of operations, led to a period of considerable prosperity for the country. The improvement that has taken place is reflected in the fact that now, for the first time since 1893, full interest will be paid on all the older Greek loans. This has been made possible by the remarkable increase in the revenues, the surplus of which goes to provide the interest on the loans. Thus the receipts from monopolies last year amounted to 50,468,063 drachmæ, as compared with 36,264,961 drachmæ in 1918, while the returns from the Customs in 1919 amounted to 50,376,884 drachmæ, an increase of 19,000,000 drachmæ on the figures for the previous year.

Commerce and Industry.

(Reports from Our Own Correspondents.)

ROUMANIA.

Bucharest, March 12.

A Bear Raid.

For nearly a week the wireless service has omitted to transfer the daily exchange quotation from Paris, and local speculators have been greatly agitated in consequence. The optimistic affirm that the leu has risen to 35 centimes, while the gloomy souls whisper that it has fallen to 16. A brief raid on the street market lopped a few hundred lei per share off some of our more speculative ventures, and there was the usual accusation of a deep-laid plot to rob the honest outsider of his hard-earned gains when all was over.

YUGOSLAVIA.

Belgrade, March 19.

Currency Reform.

One hears less of the currency problem nowadays. The new notes are in circulation, and the old kronen have almost entirely disappeared. Although the Croat Nationalists pressed for parity between the krone and the dinar, there is a general feeling that the owners of kronen have not done so badly, for the Yugoslav krone, bad as it is, is better than the Hungarian, and double as good as the Austrian, or at least was until the recent slump, and probably still is considerably better in spite of it. Rather unexpected difficulties are arising. It is reported from Prizren that the Albanians will not accept the new 20 dinar-80 kronen notes, nor the 10 dinar-40 kronen at any price, because there is no reference on them to the law punishing forgery. The *Politika* rather quaintly comments that nobody would be likely to forge these low values when it is far more profitable to fake 1,000 kronen notes, which has recently been done on so large a scale that the banks have declined to accept notes of this value at all.

Belgrade is quite inundated by an influx of refugees from General Denikin's army and the Bolshevist advance. There is a large proportion of well-to-do people among them, and one hears almost as much Russian as Serbian spoken in the shops and on the trams. Some appear to have some money to spend, but these are probably divesting themselves of their jewellery in return for depreciated dinars. Anyhow, even to-day the dinar is better than the rouble.

SYRIA.

Beyrout, March 15.

Syria is now confronted with a problem which, if not readily tackled, may become fraught with grave consequences. It is the beginning of wholesale emigration which, to a country already depopulated by the war, may mean economic paralysis until these emigrants, and others who had left before the war, are induced by a nascent prosperity to return to their country. The Allies, who have liberated Syria, can save it from this danger by deciding quickly its political fate; for the two chief causes—the excessive dearness of living and conscription in the Arab zone—will be removed as soon as the present political tension is relieved.

In order to enable the reader to form an idea of the outrageous cost of living a few comparisons between pre-war and present prices of articles of prime necessity may be given, the prices in every case being per rottle (about 2½ kilos):—Mutton, which cost PT18, has risen to PE156; beef has risen from PT12 to PE102; flour from PT4½ to PE17½; fish from PT24-48 to PE120-144; sugar from PT5 to PE30; and cheese from PT18-24 to PE144-160. Taking into account the difference between the Turkish and Egyptian piastres the average increase in such articles has been more than fivefold.

MOROCCO.

Tangier, March 17.

New Coinage Rumour.

I have referred in my correspondence to the matter of the native (Hassani) money. Anxiety with regard to this revived lately on the rumour that a change was to be made, and new coinage to be introduced; rumour went so far as to state that coins had been minted, and had already arrived in Morocco. Produce exporters have been for some time trying to gather together sufficient Hassani money for their engagements with the natives during the harvest, and any sudden change might have a very serious effect.

Increased Sugar Duty.

The "Droits de Consommation" on sugar in the French zone has been increased, by a decree dated March 6, from 20 francs to 40 francs per 100 kilos. Every increase in the cost of sugar tends to reduce the quantity of tea consumed.

Port Conditions at Casablanca.

A Dahir has just been published establishing compulsory pilotage for the port of Casablanca; there are also new anchorage tariffs and charges for mooring at the quays and anchoring in the new small port. All these charges will greatly increase the port charges, and the pilotage tariff seems very high for a port so easy to enter as Casablanca. It is considered rather a drastic measure to make pilotage compulsory—there are many British and other captains, especially the former, who know the port like the palm of their hands.

The pilotage is chargeable on all vessels entering and leaving, and for all movements in the port, and one wonders what is to be done when a captain, under certain weather conditions, finds it wise to put to sea for safety. Must he wait for a pilot, keep one aboard, or seek safety without one, and still pay pilotage?

CYPRUS.

(Undated.)

The agricultural outlook, which was all that could be desired, has been altered by a too great prolongation of the severe cold. Carob trees (locust bean) are now found to have suffered considerably, the blossom being nipped, and the branches of many trees dried up. The leaves in this case turn a red or brown colour. The tree, an evergreen, though apparently very hardy, suffers acutely from extremes of climate. It is anticipated that next summer's yield will be very seriously diminished in most areas of cultivation. Barley crops have also suffered largely. In many parts potatoes have been destroyed, and pulse much damaged. The winter has been a quite exceptional one. Figures now show that in the remarkable rainfall of last December the quantity gauged in Kyrenia was 14.36 inches (the total average annual rainfall given in pre-war Consular reports), while at Nicosia it was 4.21.

The mountain ranges have been for weeks under snow. Work in the asbestos mines on Mt. Troodos is perforce suspended, and is not likely to be resumed till April.

PIRÆUS HARBOUR DEVELOPMENT.

A definite project has been approved for the improvement and extension of the Piræus harbour works. According to this scheme, the port of Piræus will be completely reorganised by the construction of moles, quays, railway lines, and large warehouses for the storing of merchandise. It will be provided with the latest mechanical devices and installations for facilitating the loading and unloading of merchandise. Depots for coal and inflammable material will be erected in Parama Bay, which offers a good anchorage for vessels, and to which access is possible for large ships, such as those serving the Far East.

The total length of the new quays and moles to be constructed will be some 8 kilometres, and will suffice for a movement of some five million tons of goods. The plans have been made in such a way that, in case of need, these port installations can be extended on either side. A free zone will be established either near the floating docks or near the quarantine station, where the ground is flat and suitable for the erection of industrial establishments. Every part of the port will be linked up by electric railways, which will have as their terminus the present Larissa railway station. The execution of the works will naturally be adjudicated to that firm which makes the most advantageous offer, and it is hoped that the work will begin during the present year.

EXPORTS TO YUGOSLAVIA.

The Department of Overseas Trade understand that the Roumanian Government have given instructions to allow the free transit of all goods destined for the Serb, Croat, and Slovene State which arrive at Danubian ports. It is, however, essential that the ship's manifests, bills of lading, etc., as well as the packages themselves, should be clearly marked "Transit pour la Serbie," as otherwise they are liable to detention by the Roumanian Customs Authorities at the port of arrival.

THE NILE CONTROL WORKS.—III.

THE PROBLEM OF THE SUDD.

(From Our Cairo Correspondent.)

The note points out that it is obviously useless to accumulate large volumes of water in Lake Albert and not to ensure their delivery in Egypt where and when they are wanted. The total waters in the Nile during the very low, but not the lowest known, year will be about 62,000 million cubic metres, and would therefore in the future—viz., in 1955—apparently just suffice for the irrigation of Egypt and the Sudan, whose requirements will then be 56,000 million cubic metres. Though the works on the Blue and White Nile accomplish all that is possible by way of distributing the available waters in accordance with the demands of agriculture, yet waste of water will still be occurring, thus reducing the amount apparently available for irrigation and making the waters of very low years inadequate to meet the calls upon them. The works in question must, therefore, be supplemented, and much more so must this be the case when an exceptionally low year like 1914 recurs with its total volume of only 41,000 million cubic metres.

Wastage takes place in two directions—viz., to the sea and by spills in the Sudd region. The wastage to the sea is almost entirely due to the waters coming from the Blue Nile. At present it is considered that these cannot economically be put under further control than is ensured by the proposed Upper Blue Nile dam, and even in the lowest of years some of this waste will continue. It therefore remains to devise some means for eliminating the wastage in the Sudd region. This region, which begins at Mongalla, continues down river for about 700 kilometres. It is mainly the water from Lake Albert that spills out of the river and produces the swamps of the sudd district, with the result that only a fraction of the water that enters the sudd at Mongalla leaves it at Malakal.

Waste in the Sudd.

The annual waste has been as low as 9,000 million cubic metres, and observations have shown that the amount varies in proportion to the size of the flood. If, as may well occur, the waste should form to less than this quantity this would mean that larger storage would be required. In ordinary low years the elimination of waste in the sudd region would augment the available summer water to the required extent, but part of the volume saved must of necessity be stored in some reservoir until needed. In very low years, however, the total waste will be insufficient to meet the shortage; therefore in such cases additional water must be supplied from a store held in reserve from previous years of good supply. In average years the waste provides more than is required, and enables a reserve to meet the demands of low years to be built up by storing the excess. In very low years all the waste and more will be required for irrigation, while in some other years the greater part will be wanted for irrigation, and the remainder used to build up the reserve against very low years. Consequently, proposals that contemplate a continuance of waste in the sudd region in all years in order that a fraction of it may be recovered by gravitation or pumping need not be considered.

The Effect of Works in the Sudd.

The necessary elimination of waste can obviously be accomplished by providing a definite channel through or round the swamps, and by controlling the quantity flowing into them by the Lake Albert dam. But as soon as such a channel is provided, the question arises as to its action in the case of a very high flood. At present the dam acts as a safety-valve, through which vast quantities of flood water escape and are lost. They must be allowed to continue to exercise this useful function in high floods, though in low ones not a drop of water must be wasted. This can easily be effected by constructing a regulator and escape in the sudd channel. When enough water has been accumulated in Lake Albert to meet the needs of the following summer, and to form a reserve in case the year after that again should be a low one, the escape will be open, and the remainder of the flood water, if any, allowed to flow into the swamps.

Thus the sudd channel and Lake Albert dam combined will have a fourfold effect—viz., waste in the sudd region will be entirely stopped in the years of low flood, and partially stopped in other years; water formerly wasted there will be retained in Lake Albert, to be passed through the sudd channel later in the same year, or held in reserve for a following year for use in Egypt; an escape will be left for excess water from high floods; and it will be possible to keep flowing down the valley a stream the volume of which can be varied according to the seasonal need of cultivation, whilst, incidentally, the swamps will probably be greatly reduced in area.

By the time the construction of Lake Albert reservoir becomes a necessity, accurate longitudinal sections of both banks, and frequent cross-sections of the Gebel El Zaraf river, should be available, and a decision can then be reached on the advisability of developing either of these rivers or adopting any other alternative route, of which there appear to be more than one. Whichever route is selected, it must be treated as a canal fed from the Lake Albert reservoir. In view of the rarety of the occurrence of a bad year like 1913-1914, it remains to be seen whether it is economical to design these works to the dimensions required to meet such a bad year if it recurs after 1955, when Egypt has completed her development, or whether it may not be better to design them to meet normal requirements, and, if such a year recurs, meet it by restriction of the rice area and retardation of Sharaki watering.

Outline of Possible Future Developments.

In conclusion, an outline is given of further developments that may well take place in the future. As already shown, in some years the sudd will be entirely deprived of the water that enables the various growths therein to flourish, and it will be only the surplus of other years which will be spilled into this swamp. The sudd region is of enormous extent, and consists of land which, owing to its position, its climate, and its rainfall, is too valuable to consecrate in perpetuity as a malarial marsh. In the future, a large proportion of it may be drained by making the Lake Albert reservoir large enough to hold the excess water from even the highest flood.

The capacity to accomplish this drainage might be increased at that date not only by heightening the Lake Albert dam, but by regulating on Lake Victoria, so that the waters of this enormous lake could be prevented from flowing into Lake Albert at the crucial period. It is pointed out that a very trifling rise in the level of Lake Victoria corresponds to the storage of many milliards of cubic metres of water, and a skilful combination of the two lakes would render it possible to absorb all the water that now has to be wasted into the sudd in years of high flood, and thus abolish it permanently. This area might then become productive, and in the future it may be a thriving pastoral, agricultural, or timber country, instead of the deadly swamp it is to-day, where nothing flourishes except papyrus or mosquitoes.

The directors of the Wanarajah Tea Company of Ceylon announce a final dividend of 20 per cent., making 40 per cent. for the year.

National Bank of India.—The transfer books of the bank are closed until April 12.

Aboukir Company.—Coupon No. 17 in respect of the dividend of 15 per cent., payable April 15 (share warrants to bearer), must be lodged at the offices of the company, 134, Palmerston House, Bishopsgate, E.C., three clear days for examination.

WEEKLY C.I.F. PRICE LIST AND MARKET REPORT ISSUED TO APPROVED CONNECTIONS.

Digitized by Google

GENERAL BANK OF GREECE.

Paid-up Capital, Drs. 3,000,000.

Head Office - ATHENS.

BANKING OPERATIONS:
Every description of Banking business transacted.

FINANCIAL OPERATIONS:
Investigations in connection with, and the promotion, organisation and financing of, Limited Joint Stock Companies, with a view to exploiting agricultural, industrial and mineral resources, executing technical works, etc.

COMMERCIAL AND SHIPPING DEPARTMENT:
Purchase and sale of goods on account of clients. Warehousing, Advertising and placing foreign products on the market. Agents for foreign companies and large commercial and industrial firms abroad. General Shipping Agents.

POPULAR BANK OF GREECE.

Head Office, ATHENS. Branch, PIRÆUS.

Correspondents throughout Greece.

Established June, 1905, by the National Bank of Greece and a group of Capitalists.

CAPITAL - Drs. 1,500,000.
RESERVE FUND - Drs. 2,500,000.
Deposits and Credit Accounts, Drs. 100,000,000.

The Bank specialises in the collection of Bills payable in Greece; it accepts goods on consignment, and undertakes their sale, and transacts every kind of Banking business.

General Manager: D. LOVERDO.

TRADE WITH THE NEAR EAST.

The Bank of Athens extends special facilities for business with the Near **East** to manufacturers, exporters and importers.

The Bank has offices in all the principal towns in **Greece,** also in **Egypt,** Cairo and Alexandria, in **Cyprus,** Limassol and Nicosia, in **Constantinople,** and in **Smyrna.**

Inquiries from interested parties are invited.

BANK OF ATHENS.

PAID-UP CAPITAL : £1,920,000. **HEAD OFFICE IN ATHENS.**

London Office: 22, Fenchurch Street, E.C. 3.

COMMERCIAL BANK OF GREECE, LIMITED.

CAPITAL PAID-UP - Drs. 15,000,000.
RESERVE FUNDS - Drs. 2,845,010.45.

Head Office: ATHENS.

Branches:—**Piræus, Salonika, Patras, Volo, Syra, Calamata, Corfu, Cephalonia, Candia, Chios, Argos, Pyrgos, Vostizza (Ægion), Nauplia. Larissa.**

AGENTS IN ALL PARTS OF GREECE, THE LEVANT, AND ABROAD.

The Bank conducts every kind of Banking, Commercial and Stock Exchange business and extends special facilities to traders interested in business with Greece. It acts as Agent for many Foreign Banks. It is specially organised for Exchange, the execution of mail and cable transfers throughout Greece, and for the collection of clean and documentary Drafts.

MERCHANDISE DEPARTMENT:
The Bank undertakes the warehousing and sale of goods consigned.

GREECE.

Area 43,522 square miles. The cultivated area amounted to 5,745,300 acres, of which about 2,253,400 were under cereals, 518,900 under grapes and currants, 370,600 under oak trees, 295,500 under olives, and 2,223,900 were forests.

Population (1914), 5,000,000 approximately.

Chief Products (with average annual production):—Currants, 142,000 tons; wines, 3,000,000 casks; tobacco, 9,000,000 lb.; cereals, 8,000,000 bushels; olive oil, 200,000 casks.

The **MINERALS** of Greece include:—Iron, Marble, Magnesite, Emery, Lead, Lignite.

IMPORTS (1914), Old Greece only:—Total value £7,000,000, of which £2,000,000 from the United Kingdom; £1,800,000 from Germany and Austria Hungary; £1,000,000 from Russia.

EXPORTS (1914), Old Greece only:—Total value £4,000,000, of which £3,000,000 came to the United Kingdom.

COINAGE.—The unit is the Drachmæ, equivalent to a Franc (10d.). The current rate of exchange is about 36·50 Drachmæ to £1.

FREIGHT. — From England, 160/- + 10 % primage.

WEIGHTS AND MEASURES.—It was decided in 1898 to introduce the metric system. The change is to be gradual from the old system, which is:—Oke = 2·82 lb., stater = 123·20 lb., livre (Venetian) = 1·05 lb., baril (wine) = 16·33 imperial gallons, kilo = 0·114 imperial quarter, pike = ¾ of a yard, stremma = ·242 of an acre.

BANK OF NATIONAL ECONOMY (of Greece)

Head Office: ATHENS.

Branches:

PIRÆUS, SYRA. PATRAS.

Capital Paid Up - Drs. 10,000,000.

Fully represented in all parts of the world for all kinds of commercial, financial, and shipping business.

President. L. EMBIRICOS. *Manager.* D. MIAOULIS.

BANK OF PIRÆUS.

For COMMERCE, INDUSTRY and SHIPPING.

Capital Paid-up - Drs. 5,000,000. Reserve Fund - Drs. 3,095,000.

OFFICES at PIRÆUS and ATHENS.

Every kind of Banking business transacted.
The Bank's connections throughout Greece enable it to offer foreign clients special facilities for the collection of Bills, etc.
Correspondence invited.

BANK OF INDUSTRY OF GREECE.

Head Office: 14, Stadium Street, Athens.

Capital Fully Paid-up - Drs. 15,000,000

The Bank has been established for the encouragement and development of Industry and Commerce, and undertakes every description of banking business.

BANK OF ORIENT.

Capital Paid up - Drs. 25,000,000

Head Office: ATHENS.

Branches: SALONIKA, SMYRNA, ALEXANDRIA, CAIRO, MITYLENE, SERRES, ZAGAZIG, MAGNESIA, PERGAMA, SOMA.

Every kind of Banking Business transacted.

ENGINEERING.

DOMESTIC APPLICATION OF ELECTRICITY

An All-Electric House.

(From Our Own Correspondent.)

Considerable advances have been made recently by British manufacturers of electric apparatus and appliances for domestic use. Designs have been improved and increased in number; new and more efficient types have been introduced; construction has become more substantial, and where possible efficiency has been improved.

Amongst the devices which are now coming into greater favour may be mentioned such appliances as electrically driven washing and wringing machines, electric knife cleaners, electrically driven polishing machines for cleaning glass, plate, cutlery, and boots and shoes, electric pumps for filling roof cisterns from wells so as to render available a supply of water at reasonable pressure in the event of fire, electrically blown domestic organs of suitable range, electrically controlled time-pieces, and last, but not least, the popular and highly economical heating and cooking stoves and radiators.

It will be remembered that recently an exhibition was held in London, under the title of the Ideal Home Exhibition, and in this practically every modern device which tends towards domestic economy or the saving of labour was on view. At the moment few of these concern this article, with one notable exception. This was the All-Electric House, designed and equipped by one of the largest firms of electrical manufacturers in existence. Worthy in itself of a special visit it was so crowded with visitors that special arrangements had to be made for controlling the crowd, and even then many hundreds were unable to inspect the appliances shown, even from a distance. For that reason it may be as well to give here a brief description of the goods that were shown, with some mention of their special uses. It must be understood that the list does not by any means exhaust the range of domestic electric appliances that are made by and obtainable from British firms. It may be possible, however, to deal with some of these in a further article.

The idea of having a seven-roomed house erected in the exhibition and fitted throughout with such household furniture as is necessary, with floors and walls finished as in a house ready for residing in, was distinctly novel, yet a moment's reflection will show that by no other means could the appliances be shown to full advantage. For example, an electric washing machine, shown side by side with a dressing-table fitting or an ormulu standard, is decidedly out of place and incongruous; the plainness of the one detracts from the richness of the other, and the appearance of each is marred by the contrast with its neighbour. But when each is shown in its proper place, surrounded with its usual adjuncts, the eye is better able to judge its appearance and effects and to form a correct impression regarding its value.

The All-Electric House, built in two storeys, contained a reception-room, morning-room, kitchen and pantry, with three bedrooms and landing above, with a bathroom. In all the rooms the electric lighting was planned on well-thought-out lines and suitable fittings for the rooms were installed. In the selection due regard for economy in first cost as well as in running had been taken into consideration, and the fittings, whilst thoroughly suitable for the class of house, were of an inexpensive nature.

Each room had its own electric radiator of suitable size and design; that in the reception room, for example, being far more elaborate than that in the main and servant's bedroom, which, again, were not quite so elegant as that in the bedroom set aside for the chance guest. These radiators were fitted with switches so that a graduated heat could be obtained, and one was provided with an electric accessory by means of which a kettle could be boiled. In every case the size of the heaters was nicely graded to the size of the rooms so that whilst a comfortable temperature could be obtained, there was no possibility of waste of electric energy by having a radiator burning at too great a power. One specially noteworthy radiator shown was the "Magnet" pedestal heater, which was placed in the morning or general room of the house. Owing to its special design it is instantly adaptable for toasting bread, boiling water, frying or grilling meats, cooking eggs, or preparing omelettes or stewing. The striking part about this heater is that appearance had in no respect been sacrificed for utility; the radiator is of distinctly handsome design, and has none of the inartistic lines which usually characterise appliances used for cooking purposes.

(To be concluded.)

MOTOR TRANSPORT IN ALGERIA.

Algeria before the war is said to have had as many automobiles as any French city of like population. The inadequate means of communication by railroad on the one hand and, on the other, the extensive system of fine roads throughout the colony combined to make Algeria an excellent market for motor vehicles, the number in use increasing rapidly in the years immediately preceding the outbreak of war, at which time there were close to 8,000 automobiles in the colony, says the American Consul at Algiers, Mr. Arthur C. Frost, in a recent report.

These vehicles were for the most part French, not only because of prevailingly French tastes but also on account of the nearness of the market, the absence of customs duties from France, and the ability of the French manufacturer to fill orders quickly and to supply all accessories necessary to such cars. During the war the restrictions on the use of gasoline and the difficulty in securing tyres and accessories reduced the circulation of motor vehicles to a minimum, but since the armistice there has been a rapid resumption of their use, limited only by the number on hand or which could be imported.

Unlike France, Algeria has had a very favourable balance of trade throughout the war, and large fortunes have been realised in wine, cereals, and other agricultural products and in commercial undertakings. The service on the Algerian railways, the mileage of which is very small for a country of its size, probably cannot be radically improved or extended for several years, and the revival of trade and industry will bring about a much wider employment and a constantly expanding market for motor vehicles.

Before the war some half-dozen American makes of popular-priced cars were being imported to a considerable extent. During the war imports were negligible, but in the past year quite a number of low-priced American automobiles have been imported, and further shipments are in progress. The inability of French manufacturers to make delivery within six or nine months is no doubt partly responsible for these purchases in the United States.

Italian Competition.

Italian competition has developed in this market in recent months, the sale of Italian cars being especially facilitated by the low exchange value of the Italian lira. On November 21, 1919, an entire cargo of Fiat automobiles, motor-trucks, and tractors, to the number of 158, was landed at Algiers from Genoa. Another carload of about 120 Fiats is expected at Algiers in a few days. Owing to the favourable exchange, the Italian Fiat 4-cylinder, 15-25 horse-power, can be sold at Algiers for 28,800 francs, and the 6-cylinder, 30-40 horse-power, is quoted at 35,500 francs. It would appear difficult, so long as American exchange remains high, to compete advantageously with such prices. The freights are, of course, much less on Italian cars.

Motor vehicles in Algeria are used principally by business men and well-to-do colonists. The high cost of operation, no less than the initial price, prohibits their widespread use by the middle classes. An important consideration to Algerian car users is the amount of gasoline consumption per kilometre. Gasoline is imported almost entirely from the United States, and is sold locally at several times the price prevailing there. Tyres and other supplies also come relatively high. Economical car operation is, therefore, the prime factor considered by the local trade.

As before indicated, the market for motor-trucks in Algeria is a very promising one, since they will have a large employment in supplementing rail transportation. A considerable number of French Army motor-trucks have been assigned to Algeria, and have been employed in moving the cereal crop and for other purposes. Among the French trucks are the Rocher-Schneider, Berliet, and the De Dion-Bouton. There is a large number of Fiat trucks here also, which have been turned over by the military authorities. The Berliet 5-ton motor-truck is being sold at present at 31,000 francs and the Fiat 4½-ton truck at 35,000 francs. There is a local demand for motor-trucks of larger capacity, which would be suitable for long trips into the interior.

There is quite an extensive use of motor-buses in Algeria to connect centres of population away from the railroads, and also in competition with the railroads. Several large De Dion-Bouton motor-buses have been imported recently for this service.

The exact number of motor-cycles in use is not ascertainable: they are frequently classified with other motor-vehicles, and they often circulate without license numbers. Those in use are chiefly of French or English manufacture, and the market is limited.

There is a total of about 9,000 motor vehicles in use in Algeria at the present time, according to information obtained from official sources. The number in the Department of Algiers is about 4,036, consisting of 3,939 passenger cars (including a few motor-cycles), fifty-five motor-trucks, and forty-two buses. In the Department of Oran there are registered 3,743 motor vehicles, consisting of 36,911 passenger-cars, thirty-eight motor-trucks, and fourteen buses. In the Department of Constantine there are 1,231 motor vehicles, consisting of 1,189 passenger-cars, twenty-eight trucks, and fourteen buses. These figures are only approximate, as there is more or less circulation of vehicles between here and France, the neighbouring protectorates of Morocco and Tunisia, and the South Territories.

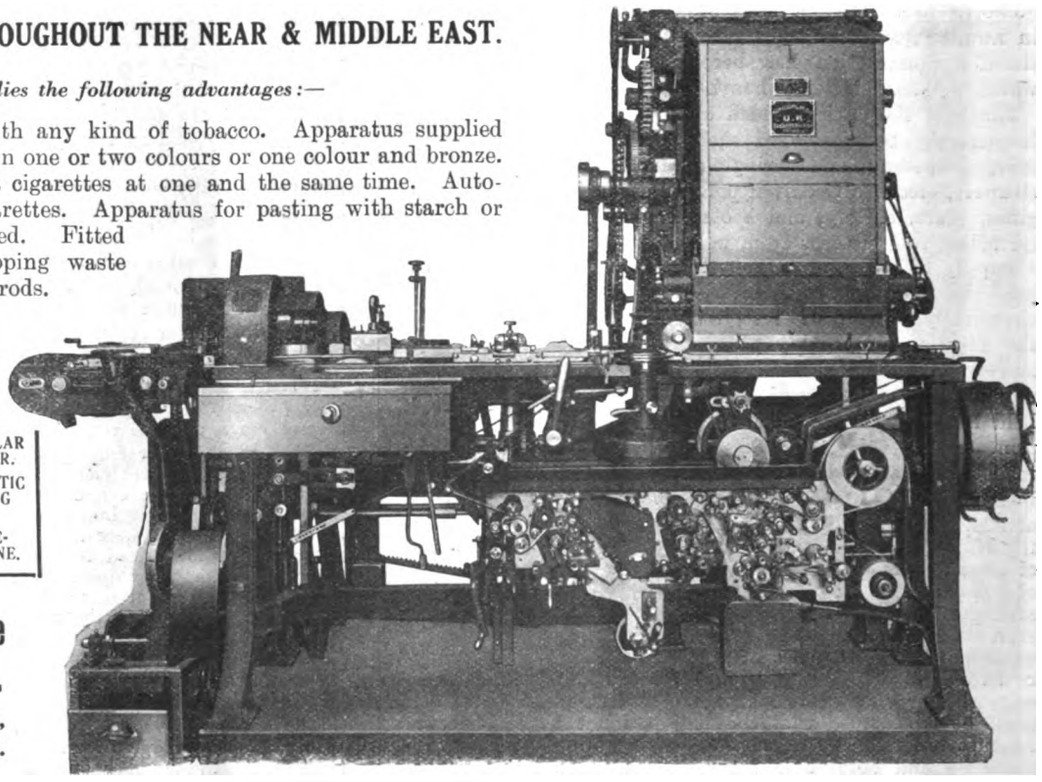
The "U.K." CIGARETTE MACHINE.

Designed to make round, oval or Egyptian cigarettes with creased edges of any desired diameter or length with wide or narrow pasted laps, and by an interchange of parts also crimped cigarettes.

IN DAILY USE THROUGHOUT THE NEAR & MIDDLE EAST.

Embodies the following advantages:—

Works satisfactorily with any kind of tobacco. Apparatus supplied for printing cigarettes in one or two colours or one colour and bronze. Manufactures and tips cigarettes at one and the same time. Automatically sorts the cigarettes. Apparatus for pasting with starch or liquid paste as required. Fitted with device for stripping waste cigarettes or cigarette rods.



Also:—
THE "UNIVERSAL" CIGARETTE MACHINE.
THE "S.A." DOUBLE CIRCULAR KNIFE AND TOOL GRINDER.
"S.M." DOUBLE AUTOMATIC CIRCULAR KNIFE GRINDING MACHINE.
AUTOMATIC CIGARETTE-WASTE STRIPPING MACHINE.

MISCELLANEOUS TOPICS.

New Source of Alcohol.

Much attention has been given in recent years to the question of manufacturing alcohol within the Empire for use as motor spirit. In the current number of the *Bulletin* of the Imperial Institute the possibility of utilising the mowra flowers of India for the purpose is discussed. These flowers possess thick, juicy petals, rich in sugar. They are used by the natives as a foodstuff, and especially for the preparation by fermentation of an alcoholic liquor called *daru* or *mohwa* spirit. A single tree will yield as much as 200-300 lb. of flowers in a year. The tree also produces a valuable oil-seed, which is exported in fairly large quantities to Europe. During the war the flowers were used in India for the production of acetone, the yield being said to be ten times as much as that obtained by distilling wood, which is the usual source of this substance. The demand for acetone in India in peace times, however, is not great, and large quantities of the flowers would be available for the manufacture of alcohol, and would appear to be an exceptionally cheap source of this material, as the yield is high compared with that from potatoes and other materials commonly used, about 90 gallons of 95 per cent. alcohol being obtainable from one ton of dried flowers. It has been estimated that in the Hyderabad State alone there are already sufficient mowra trees for the production of 700.000 gallons of proof spirit per annum, in addition to that necessary for the local liquor requirements. It is suggested that the most profitable way of utilising the flowers would probably be as a source of mixed motor spirit of the "natalite" type for use in India. That motor spirit can be produced on a manufacturing scale in India from mowra flowers has already been demonstrated, and it is stated that running trials with the spirit proved satisfactory.

A Useful Tractor.

With her quarries at Seravezza, not far from Pisa, Italy possesses the finest supply of marble in the world, and is the greatest European exporter of this stone. The Seravezza marble quarries have been in active operation since 1517, when Pope Leo X. instructed Michael Angelo to exploit these regions, and since then they have furnished material for the finest palaces and churches in Rome, Florence, and other Italian cities. From the outset transportation has been the greatest difficulty to be overcome in connection with the working of these quarries. The marble is quarried out of the mountain side, to an altitude of 4.000 feet, and roads have to be made as the work proceeds. The gradients are high, running up to 40 per cent. in many places; in addition, the turns are very sharp, and, except on the main approaches, all the roads are thickly strewn with loose stone. Until quite recently ox-teams have been made use of almost exclusively for the transportation of blocks of marble in these quarries. In an attempt to solve the transportation problem, steam locomobiles were adopted and proved fairly successful on the good roads, notwithstanding the high cost of fuel and maintenance. These locomobiles were not found suitable, however, for bringing stone from the mouth of the quarry nor for travelling over the roughest surfaces and climbing the steepest gradients. The most recent adoption, and one which has been entirely successful, is that of the Fiat 70 h.p. petrol tractor. This has been tried in competition with both locomobiles and ox-teams, and has given such good results that it is now driving out both. Its greatest advantages are speed and lower operating costs. The maximum useful load handled may be taken at thirty tons. This would entail the presence of eighteen drivers (one for each pair of oxen), and at least six men to be in attendance for applying the brakes and for assistance when on the difficult turns. With the Fiat tractor only one driver is required, and four men are quite sufficient to accompany the load over the difficult portions of the road. This means a saving of the labour of nineteen men

Weighing Machines.

Not the least important item in business equipment is the weighing machine, for the reason that the entire turnover of so many businesses passes over its weighers. It is during this passing that the trader's calculated profit is turned into actual profit wholly or in part, according to the precision of the weighing. An error of the weigher, therefore, cuts directly into the profit-end of a trader's calculations. Mistakes in weighing cannot be rectified as can mistakes in book and account keeping, because they are not recorded.

Errors in scales, as is well known, occur mainly as a result of wear, and the error, resulting from the stiffness or sluggishness of the scale, is always against the seller. On a legal 14-lb. scale a seller may give away 1-14th of his total sale, or 7 per cent. If his calculated profit were 10 per cent., his loss would be 7-10ths of his total profit, even if his assistants gave meticulous care to the weighing.

From this it will be realised that every effective precaution against wear and inaccuracy is intrinsically worth very many times the total first cost of the instrument used. The cost of weighing on an old-fashioned, ill-designed, or "sluggish" scale, is incalculably higher than is the cost of weighing on the highest possible grade of scale, because the latter, being more sensitive, "turns" before any appreciable profit is lost.

With 150 years' practical experience behind them, Messrs. W. and T. Avery have satisfied themselves that any improvement of design or precaution against wear that trained and experience designers can suggest must be built into the scale. To this fact they owe the general recognition that their name stands for reliability, and that perfection of design and finish which alone can produce consistently accurate and sensitive weighing instruments. This firm produces every kind of weigher from the ordinary scales to the Avery weighbridge built to carry a load of ten tons, as well as counting machines, which were used particularly during the war to cope with the enormous output of soldiers' equipment.

ANGLO-BULGARIAN TRADE.

Establishment of Chamber of Commerce.

At a meeting held in Sofia on March 13, at which Capt. W. B. Heard (Commercial Commissioner to Bulgaria) presided, a branch of the British Chamber of Commerce in Constantinople was formally inaugurated.

In the course of his address on that occasion, Captain Heard said:—"I recognise that Bulgaria is in a difficult position at the present time. She is handicapped by an unfavourable exchange, by the uncertain outlook, by a financial crisis the end of which cannot be foreseen, and by defective means of communication; further, it must be admitted that up to the present time Bulgaria has had a very unfavourable Press that has not failed to create a hostile atmosphere which the Bulgarian nation does not now deserve. I will refrain from referring to political matters, but I can assure you that a very deep impression has been produced in my mind by the dignity of the Bulgarian nation in the hour of adversity, and its steadfast determination to rebuild its social and economic life on the ruins of the old order. I believe sincerely that the Bulgarian nation, which is freeing itself from its disastrous past, enters upon its phase of renaissance, and will serve as the model for all the countries disturbed by the war which seek to reconstruct themselves on a more solid and more stable basis.

"But before that vision of a new Bulgaria, which has already impressed those who know you here, pierces the misty atmosphere which envelops you outside, it will take some time. People are very ill-informed regarding Bulgaria abroad, and it is that atmosphere which holds back those who would develop economic relations with you. I do what I can to enable our newspapers to be correctly informed regarding Bulgaria, its economic and commercial possibilities, and its resources, which only require financial help from a disinterested country for their development. I have referred, and not for the first time, to your high commercial morality which has gained for you a reputation in the Balkans, a reputation which I am sure you will do everything possible to maintain. You have friends abroad who will work in the same way, and if Bulgaria suffers at the moment from the disastrous legacy of a régime which has passed away for ever, I do not doubt it will triumph by virtue of solid determination, and that it will end by re-establishing its reputation.

"The opening of this Chamber marks an important stage in the commercial relations of the two countries. Thanks to the energy and foresight of the honorary secretary, Major Burt-Andrews, this project, which before the war seemed so far off and so difficult to realise, is now an accomplished fact; a second stage, the establishment of an Anglo-Bulgarian bank, I have reason to hope, will be realised before long. I am convinced that British representatives will come in great numbers as soon as the industrial and commercial resources of Bulgaria are better known. Several of your compatriots have gone to visit the great British Industries Fair, and I hope that, with the improvement of communications, these visits will become more frequent. It is unnecessary to say that it will be owing to personal relations especially that our future business will be established. The lack of personal contact was one of the chief handicaps in the past. On this happy occasion I hasten to wish the Chamber of Commerce, its honorary secretary, and its members a happy future, conscious as I am of the importance of their task, and the immense services which they can render to the development of economic and other relations between the two countries."

The traffic receipts of the Smyrna-Aidin Railway for the week ended March 13 amounted to £6.679.

The directors of Maisels Petroleum Trust, Limited, announce to the shareholders that they are at present negotiating for the sale of one of the company's shareholdings in another company to a financial group, and have every reason to believe that these negotiations will be brought to a successful issue at an early date.

LANCASHIRE COTTON.

Inactive Market.

(From Our Own Correspondent.)

Manchester, Monday.

The market continues quiet. There are no indications at the moment of a revival of demand, and increased activity cannot be expected until after the Easter holidays. Some uncertainty exists as to the outcome of the demand of the operatives in all sections of the Lancashire industry for an increase in wages. The operative weavers have applied for a rise of 60 per cent. on current rates, and the operative spinners and the cardroom workers are about to put in a claim for a substantial advance. Many joint conferences between the employers and the trade union officials will take place during the next week or two. An agreement may not be easily reached, but it is believed that both sides are anxious to arrange an amicable settlement. Fluctuations continue to take place in Egyptian cotton. For trade purposes the article is being a good deal neglected at the present time. Users seem to have no confidence in current prices. Egyptian yarns have been purchased sparingly. For several weeks spinners have not sold the production of the machinery, but order lists remain extensive. In cloth for Egypt only a retail business has been done. Merchants on the other side are said to be well supplied. The position in Turkey is far from satisfactory, and shippers are afraid to export more goods just at present. Cases are again mentioned of resales in Manchester. Some advices from India have been a little better but demand still drags. More trade could be done for China but for delivery difficulties. Fair lines have been put through for Singapore. Not much has been done for South America. The home trade houses continue busy. American yarns have been steady in quotation with a limited trade. Good twists command high prices for quick delivery. Rather less activity is now showing itself in shipping yarns.

SHIPPING INTELLIGENCE.

Forthcoming Sailings.

The Cunard s.s. Southgate, for Piræus, Constantinople, Galatz, and Batoum, will close for cargo at Swansea on April 10.

The Cunard s.s. Maindy Manor, for Piræus, Constantinople, Galatz, Braila, and Batoum, will close for cargo at Antwerp on April 8.

The Ellerman s.s. Austrian, for Gibraltar, Malta, and Alexandria, will leave Liverpool on April 17.

The Ellerman s.s. Asturian, for Syra, Smyrna, and Constantinople, will leave Liverpool on April 23.

The Moss Line s.s. Assiout, for Gibraltar, Algiers, Malta, and Alexandria, transhipping to Moroccan ports and Cyprus, will leave Liverpool on April 10.

The Anchor Line s.s. Elysia, for Bombay, will close for cargo at Liverpool on April 8.

The Bibby Line s.s. Oxfordshire, for Marseilles, Port Said, Colombo, and Rangoon, will close for cargo at Birkenhead on April 7.

The directors of the Khedivial Mail Steamship and Graving Dock Company announce a dividend at the rate of 5½ per cent. per annum on the cumulative preference shares, less tax, for past half-year, payable March 31.

NEAR EAST MARKETS.

LONDON PRODUCE REPORT.

Currants.—Rather more business has been done, and the indications point to a steady development of interest in the near future. The imports of currants in February amounted to 1,135 tons, as against 7,992¾ tons for the corresponding month last year, and 511¼ tons in 1913. The figures for home consumption for the month were 3,405¼ tons, as against 8,137¼ tons in February, 1919.

Sultanas.—There is little of interest to report. A moderate amount of business has passed, but on the whole the market has been subdued.

Sugar.—There has been an increased demand for home refined at the control rates. A steady tone has characterised the free market, rather more business taking place.

Coffee.—The better qualities have been in strong demand, and prices have been maintained, but rates for other grades have been weak, owing to the poor outlook as regards exports to the Continent. The futures market has been inactive. Quotations are: May, 124s.; July, 124s.; September, 117s. 6d.; December, 114s.

Messrs. Reynolds and Gibson, in their weekly report, state:—The question of exchange seems to dominate the situation in coffee, and it is strange to see the various ways in which it exercises its influence. In this connection, we find France making cheap cost and freight offers, and it is difficult to understand the wisdom of such a policy when her stocks stand at such a low figure. The explanation, however, appears to be that the French bought a considerable amount of Brazilian Government sales some time ago, and now their exchange having rapidly depreciated, they are able to put forward these tempting offers. When they come to replace these stocks later on they may find this a very expensive operation. With the vagaries of exchange, such as instanced above, it is difficult to forecast the immediate future of the New York market, but we still believe that purchases at present levels will show fair profits in the long run.

Oilseeds.—Linseed has been a weak spot. La Plata February-March Hull has been done at 42s., the March-April quotation being 41s., and that for April-May 40s. Both rapeseed and cottonseed have been featureless. Rapeseed has come to business at 53s. for Guzerat, and 48s. for brown Cawnpore, while Egyptian cottonseed has been done round about 23s.

Oilcakes, etc.—There has been a fair demand for linseed cake at 500s. Business has also been brisk in coconut cake at 270s. Cottonseed cake has come to business at 260s. for Indian, and 280s. for the Egyptian variety. Oils have been quiet on the whole, linseed closing 117s. spot, 113s. March-April, and 99s. 6d. May-August. Rape oil has been inactive, with refined at 135s. and crude at 120s. Cotton oil has been featureless. Turpentine has been steady round about 220s. spot.

OPIUM MARKET REPORT.

Messrs. Barker Brothers, Smyrna, report as follows for the week ended March 13:—The sales this week on our market amount to 22 cases, at prices ranging from 860 piastres to 875 piastres for low grades, and 950 for rich manufacturing qualities, equal 15s. 6d. to 19s. per lb. c.i.f. The exchange is 412 piastres per pound sterling for cheque on London, and 0.88 dollars per one Turkish paper pound. The arrivals are 1,506 cases against 200 at same date last year.

The following extracts are taken from the C.E.B. report for January:—

Gum.

The exports during January were as follows:—Via Port Sudan, 1,521,381 kilos of hashab of the value of £E71,441, 11,385 kilos of bleached of the value of £E588, and 45,601 kilos of talh of the value of £E1,135; via Halfa, 56,890 kilos of hashab of the value of £E2.645, and 31,783 kilos of talh of the value of £E931.

Kordofan Province, January.—11,837 kantars were sold in El Obeid market during January as against 13,448 kantars during the same month last year, at an average price of £E1.386 m/ms. per kantar of 100 rottles (45 kilos). Arrivals from Nahud were 13,930 kantars as against 6.905 last year. The amount of gum sold at Um Ruaba was 3,105 kantars as against 5,631 kantars last year, the average price being £E1.400 m/ms. per kantar. At Rahad 5,601 kantars were sold as against 5,395 last year, at prices varying from LE1.500 m/ms. to £E1.280 m/ms. per kantar.

Cotton.

Red Sea Province, January.—Tokar.—The cotton looked very well, but would do better with more sun instead of the cloudy weather experienced the last few weeks. There is every likelihood of the crop being over 32,000 kantars of 315 rottles (unginned).

Berber Province, January.—At Saadabia, cotton, which has interplanted with dura, is now coming on.

Dura and Dukhn.

Sennar Province.—937 tons of dura were exported by rail during December. Very little dura is being put on sale.

Berber Province.—January.—Dura crops seem to be good everywhere on the pumping schemes and sagias. Grain prices continued high, though they have fallen slightly, white dura to P.T. 360 and feterita to P.T. 306 per ardeb of 380 rottles (171 kilos). At Saadabia there was good "Butuk" dura. At Darmali there was very fine dura, with a little asal on it, but too late to do serious damage.

Halfa Province, January.—The price of grain has increased from P.T.11 to P.T. 15, and 15½ per ruba (360 rottles an ardeb).

Wheat and Barley.

Halfa Province, January.—Satisfactory reports have been received from all districts as to the barley and wheat crops.

Dongola Province, January.—The price of wheat was P.T. 600 per ardeb of 300 rottles (135 kilos). The price of barley was P.T. 312 per ardeb of 300 rottles.

Berber Province, January.—At Darmali there was some promising barley. Other experimental wheats were doing better than the Australian.

Maize.

Berber Province.—A January report states the crops of maize seem to be good everywhere on the pumping schemes and sagias. The price of maize was P.T. 300 per ardeb of 380 rottles (171 kilos). At Saadabia there was good maize; and there was a fine experimental maize interplanted with sesame.

CONDITIONS IN MESOPOTAMIA.

Favourable Crop Prospects.

The Secretary of State for India has received the following information from the Civil Commissioner, Baghdad:—Good rains have at length fallen in Mesopotamia with heavy snow in parts of Mosul Villayet and even near Abu Kemal [on the Euphrates]. It has fallen too late for spring sowings in some places, but has saved most of the crops. There is no change in the situation on the Upper Euphrates. The route from Aleppo to Baghdad is insecure and all through traffic has ceased. Elsewhere in Mesopotamia all is quiet. Tobacco cultivators in Kurdistan anticipate an unusually good crop and grain prices are lower than they have been since 1915. Municipal councils are developing into useful public bodies. The completion of the Busreh-Baghdad line threatens to deprive towns on the Tigris of their ancient profits, and a movement is on foot to induce the Government to retain the Kut-Baghdad Railway, which has brought such prosperity to Kut and to the districts on the Hai.

A later communiqué states:—Further heavy rains have fallen during the week, and the agricultural situation is greatly improved. Arab tribes have made further raids on British convoys on the Upper Euphrates, and caused casualties, but general situation is unchanged. Anxiety has been expressed in commercial circles in Mesopotamia lest sale by Ministry of Munitions of river craft in Mesopotamia through agency of Lord Inchcape at Bombay at short notice should prejudice chance of Mesopotamia firms to bid for these craft, considerable numbers of which are required in this country for commercial purposes. News that sale has been postponed, and that sealed tenders will be received by local representatives of Ministry of Munitions Disposals Board up to noon, March 10, has given widespread satisfaction, and has disposed for the time being of question which threatened to arouse much feeling. No unfavourable developments have occurred elsewhere in Mesopotamia.

Bombay Electric Supply and Tramways—Transfer books of the ordinary shares will be closed from March 25 to April 7 inclusive.

YUGOSLAV RAILWAY TARIFF.

With reference to transport regulations in the Serb, Croat, and Slovene State, the Department of Overseas Trade are informed that the reductions of 25 per cent. and 50 per cent. which were made in October, 1918, on the pre-war tariff rates of the Serbian Railways, with the object of facilitating the transport of certain articles chiefly for relief purposes, are no longer accorded. The new general transport tariff which is not on the zone system, will be ready about May. It is understood that the proposed increase in the tariff will not be great.

COMPANY NOTES AND REPORTS.

Chartered Bank.

The report of the Chartered Bank of India, Australia, and China, for the year ended December 31, states that there is a net profit, after providing for all bad and doubtful debts, of £615,830 6s. 10d., inclusive of £168,482 11s. 1d. brought forward from the previous year. The interim dividend at the rate of 14 per cent. per annum paid in September last absorbed £84,000. The amount now available is therefore £531,830 6s. 10d., and the directors propose to pay a final dividend at the rate of 14 per cent. per annum together with a bonus of 25s. per share, making 20¼ per cent. per annum for the whole year, free of income tax; to add £100,000 to the reserve fund, which will then stand at £3,000,000; to add £25,000 to the officers' superannuation fund; to write off premises account £75,000, and to carry forward the balance of £172,830 6s. 10d. Interest on instalments of new capital (£800,000) and premium (£800,000) from dates of payment to December 31, at the rate of 5 per cent. per annum free of income tax has been paid. The new shares will rank equally for dividend with the old shares as from January 1, 1920. It is proposed that Mr. J. M. G. Prophit, already a provisional member of the board, be formally elected a director. Sir Alfred Dent, K.C.M.G., and Mr. Thomas Cuthbertson, the directors who now retire by rotation, present themselves for re-election. The auditors, Mr. David Charles Wilson, F.C.A., and Mr. Henry Croughton Knight Stileman, F.C.A., again tender their services. The dividend and bonus will be payable on and after Friday, April 16. Meeting, 38, Bishopsgate, E.C., April 9, 2 p.m.

Rangoon Electric Tramway.

The report of the Rangoon Electric Tramway and Supply Company for 1919 states that the total receipts from the tramway service were Rs. 12,15,440, an increase of Rs. 1,35,866, or 12.58 per cent. In the private lighting and power department gross receipts amounted to Rs. 10,87,116, an increase of 11.87 per cent. Gross receipts of the house wiring and supply department amounted to Rs. 1,52,279, the profit realised being Rs. 26,250, as compared with Rs. 20,173 for previous year. Gross profits for the year were £89,357; add transfer fees and interest on deposits and investments in London, £2,756, making £92,113. Interest on debenture stocks absorbed £12,113, provision for redemption of Four and a-Half per Cent. debenture stock £7,664, depreciation on sundry assets in Rangoon £1,974, transfer to reserve for renewals account £15,000, transfer to special reserve for cables, etc., £10,000, provision for income-tax and excess profits duty £14,120, fees for directors, managing director and trustees and expenses in London £2,921, employees' provident fund £1,017, leaving net profit £27,303, which with £4,447 brought forward makes £31,750. The directors recommend a dividend on the ordinary shares of 7 per cent. for the year, free of tax, carrying forward £4,360.

Jibutil (Anantapur) Gold Mines.

The report of the Jibutil (Anantapur) Gold Mines for the year ended September 30 states that during October, 1918, a final clean-up at the reduction works was made, when 450 oz. of gold were produced, which realised £1,908. The receipts on revenue account for the year, including rent, interest and transfer fees, were £2,100 and the costs £7,355, leaving a deficit of £5,255, and after writing off £4,434 for depreciation, the debit to mining and general expenditure is increased to £54,441. Shareholders were advised in the directors' last report that Mr. C. H. Richards, the superintendent of the Nundydroog mine, who had inspected the Jibutil property, had expressed the opinion "that there was not sufficient hope of permanent and improved values in the ore bodies recently worked to warrant the expenditure necessary to reopen the mines," and that there was no alternative but to cease underground operations on the property. It was, however, mentioned that as the No. 1 prospect shaft centre had shown an improvement at the 400 ft. level, the directors had decided, should sufficient funds be realised by sales of machinery and plant, to further test this section of the mine by driving the 500 ft. level north of this shaft at least far enough to ascertain the length and value of the ore body at that horizon. Mr. Henry C. Taylor, one of the managers, who is now in India, is giving his personal attention to this matter, and it is expected that his recommendations will shortly be received. There is at present an experienced prospector at the mine, carefully examining the reefs at surface, along the whole length of the property, and making certain tests with a view to ascertaining whether the prospects at any other section justify further work being undertaken. The company is retaining in India sufficient funds out of the money received from local sales of machinery and plant to meet the costs of the proposed mining work at No. 1 prospect shaft and the prospecting at surface, thereby avoiding loss through adverse exchange.

INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following cabled news received from the Director-General of Commercial Intelligence, Calcutta, dated March 17:—

Widespread rain in Northern India and local rain in Central Provinces, Malabar, and Upper Burma. General crop conditions good. Second Crop Forecasts.—Rape and mustard, 3,563,000 acres; linseed, 2,323,000 acres; wheat, 27,553,000 acres. Bombay cotton market irregular. Fully good Broach April-May Rs. 502. Piecegoods market quiet. Calcutta jute market inactive. Prices nominal. Hessians dull with declining prices. Heavy goods quiet. No change in Bank Rates.

Dated March 10 (delayed).—Rain nearly general in North-Eastern India and North Punjab. Local in North-West Frontier, United Province of Agra and Oudh, Central Provinces, Mysore, Malabar, and North Madras Coast. General crop conditions good. Bombay cotton market steady. Fully good Broach April-May Rs. 499. Piecegoods market quiet but firm. Calcutta jute market dull. Hessians weak. Heavy goods dull. No change in Bank Rates. Notification issues March 13 removing prohibition of importation of dyes into India.

SUPPLIES AND PRICES IN TURKEY.

The following extracts are taken from recent reports received by the Imperial Ottoman Bank:—

STAMBOUL, March 5.

Manufactures.

Owing to the high level in places of production our market has improved a little. All the same, the recovery is purely illusory; business becomes more and more limited. It had been hoped to despatch a large part of these goods to the interior and thus to relieve our market. Unfortunately, however, Anatolia has of late almost completely ceased to import, which only accentuates the difficulty of the local market for manufactured goods.

Produce.

Sugar.—The market is strong owing to the lack of supplies, particularly of good quality. On this account prices have increased during the course of the week by £5 to £6 per ton, notwithstanding numerous favourable offers received from America, Java, Trieste, and Holland. Prices are £118 per ton for sugar in transit. £110 per ton for sugar c.i.f. Constantinople, £T59 to £T60 the 100 kilos for sugar in customs.

Coffee.—Despite the high prices in Europe and in countries of production, our market remains quiet, and prices have not undergone any change during the week owing to the large stocks existing which were destined for Russia. Rio in transit is quoted at Ps.62 to Ps.70 the oke, and Santos at Ps.70 to Ps.79.

Rice.—Arrivals from the Caucasus have been insignificant.

Oil.—The important arrivals of the previous week and also of the present week have led to a fall in the price. The case of two bidons is sold at Ps.675 to Ps.700, for merchandise in customs, large bidons of from 25 to 50 kilos (Russian consignment) at Ps.19 to Ps.20 the oke; and large bidons (Roumanian) at from Ps.13 to Ps.14 the oke.

Exports.

Opium.—The market has been quiet because of the lack of supplies and also of demand.

Mohair.—Prices are maintained, especially for extra qualities, which are in particular request for America.

Wool.—The market has been better than in the previous week, and there has been some slight activity. Arrivals from Anatolia, 480 bales. Sales, 150 bales at Ps.60 the oke.

NEW COMPANIES.

Levant Company (Roumania).

The Levant Company (Roumania), Ltd., was registered as a private company on March 18 with a capital of £40,000 in £1 shares. Objects: To take over the business and assets of the Levant Co., Ltd., in Roumania, and to carry on the business of brokers, merchants, agents and exporters from and importers into Roumania and elsewhere. The subscribers (each with one share) are:—Miss E. M. Booker, 11, Chatsworth Avenue, Wembley, Middlesex; J. F. Cooke, "Melrose," Whitworth Road, South Norwood, S.E.; S. A. Boyd, 3, Pournall Road, Fulham, S.W. The first directors are: A. G. M. Dickson, A. Henderson, G. Locock, R. G. Perry, and J. H. McGaffin. Solicitor: L. H. Grundy, 57½, Old Broad Street, E.C.

British Oil Bunkering.

The British Oil Bunkering Co., Ltd., was registered as a private company on March 22 with a capital of £1,200,000 in £1 shares. Objects: To provide oil, coal, and other fuel installations at the main ports on the principal trade routes of the world. The subscribers (who are also provisional directors) are:—Lord Inchcape, 122, Leadenhall Street, E.C.; C. Greenway, chairman, Anglo-Persian Oil Company; F. W. Black, director of Anglo-Persian Oil Company, 23, Great Winchester Street, E.C.; F. J. Leathers, 52, Mark Lane, E.C., director of Wm. Cory and Son. No share qualification required. The holders of (a) shares Nos. 1 to 400,000, and (b) shares Nos. 400,001 to 800,000 may each appoint two directors, and the holders of shares Nos. 800,001 to 1,200,000 may appoint four directors, each group being treated as a separate class of shares and entitled to hold separate meetings. Registered office: 23, Great Winchester Street, E.C.

Anglo-Danubian Association.

The Anglo-Danubian Association, Ltd., has been registered, with a nominal capital of £10,000 in £10 shares. The objects are: To investigate the economic position in Austria, Czecho-Slovakia, Hungary, Yugoslavia, and elsewhere in Central Europe, and the practicability of establishing business relations with manufacturers. The first directors are: The Right Hon. F. Huth Jackson, Sir Edmund W. Smith, C. V. Sale, H. A. Andreae, A. G. M. Dickson, and L. E. Meinertzhagen.

Mysore Rubber and Coffee.

Mysore Rubber and Coffee Plantations, Ltd., was registered on March 10 with a capital of £60,000, in 2s. shares. Objects: To carry on the business of cultivators of india-rubber, gutta-percha, balata, and other gums, coffee, tea, cocoa, sugar, etc.

TURKISH DEBT SERVICE.

The Council of Foreign Bondholders communicate the following information with regard to the gross receipts of the Council of Administration of the Ottoman Public Debt, on account of the Unified Debt and Lots Turc:—Provisional receipts, 11 months (March, 1919, to January, 1920), £T6,816,569 paper; definitive receipts, 11 months (March, 1918, to January, 1919) £T4,442,350 paper. For the same period in 1913-14 the definitive gross receipts were £T4,650,990 gold. The above receipts do not include interest on the reserve fund, Tripoli contribution, Treasury account, etc.

INDIA'S CURRENCY POLICY.

In the House of Commons on March 29 Mr. Bennett asked the Secretary for India if he had any information showing that the currency policy recently adopted by the Government of India was stifling the export trade of that country.

Mr. Fisher: "The introduction of the new policy, which owing to the low level of American exchange in February entailed a steep rise in the sterling exchange value of the rupee, was, not unnaturally, attended by considerable dislocation in Indian trade; but the Secretary of State has no information to suggest that the export trade is suffering to the extent that would be implied by the last words of the question. The situation is being carefully watched, and recent indications point to a material improvement in the position.

ON CHANGE.

Business Small, Tone Dull.

(From Our Own Correspondent.)

Throgmorton Street, Monday.

Business has been on a much reduced scale this week, and, on the whole, the tendency has been dull and prices lower.

In Government Stocks Egyptian Unifieds have dropped 1¼ to 73¼, and the 3½ per cent. Prefs. are ¼ lower at 61⅜. In the latter case, sellers have been very scarce, but a fair amount of business has been done in Unifieds.

In Bank Shares Nationals are ¼ lower at 22⅜, and Agriculturals are 1-32nd down at 5.11-32nds. Agricultural Prefs. have receded 1-16th to 6⅜, and Anglo-Egyptian Banks have been a particularly weak spot and have dropped back £1 to 18¾.

Amongst Railways, Delta Lights have receded 3-16ths to 6⅜.

In Land shares Aboukirs are 1s. down at 43s. 6d., Béhéras have dropped one point to 20½, Consolidated Lands are 5¼d. lower at 2s. 6⅜d., and Delta Lands have receded 1s. 9d. to 17s. 6d. Gharbieh Lands are nominally ¼ down at 3⅜. New Egyptians have shed 1s. at 35s., Sudan Plantations have dropped ¼ to ⅞, and Union Foncières ⅛ to 5⅜.

In Miscellaneous descriptions, Abyssinian Corporations are 1s. down at 10s. 6d. Associated Cotton Ginners have dropped 5s. to 27s. 6d., and Salts 2s. 6d. to 55s. Khedivial Mails are also easier, the Ordinary being 1-16th down at 5.9-16ths, and the Preference ⅛ lower at 3½. Morums are 6d. easier at 19s.

In Oil shares Anglo-Egyptians B, after dropping to 3½, closed only 1-16th lower at 3.15-16ths. Roumanians at 24s. are 1s. 3d. better on the favourable decision in the Courts regarding their claim against the Government.

Among Greek securities an improved tone has been in evidence. The 1881 and 1884 Loans are both one point up at 56. The 1890 and Funding Loans have risen three points to 58, and the 1902 Railway Loan one point to 51. On the other hand, Monopoly are one point down at 46, and the 1910 Loan one and a-half points down at 40½. Bank of Athens shares have dropped a quarter to 3.

RED SEA PORTS.

In the ports most of the commercial activity is concerned with the exports of local products, and the importing and distributing of piece goods, general hardware, and other goods suitable for the simple manner of living of the natives in the outlying districts, says the American Consul at Aden in a report on trade conditions in the Aden market. Aden is the centre of the exporting and importing business for a Red Sea commercial district made up of the political divisions of Makalla, Yemen, Asir, Hadjaz, Eritrea, Abyssinia, and French and British Somalilands. It is the port of call in the district for foreign shipping. Aden importing and exporting firms have agencies or other forms of representation in practically all the small Red Sea ports, principally Makalla, Hodeida, Jiddah, Massowah, Jibouti, Bercera, and outlying trade centres. It therefore follows that Aden is the place in which to begin to establish business connections for operations in this Red Sea commercial district. Aden is a free port, excepting for a small tax or duty on alcoholic liquors or preparations, intoxicating drugs, and arms and ammunition. There is an excellent harbour into which large ships come, but the handling of all cargo is by means of lighters, because of the lack of docks or wharves suitable for the use of steamers.

BRITISH TRADE CORPORATION.

(Incorporated by Royal Charter),

13, AUSTIN FRIARS, LONDON, E.C.2.

Telegrams: "Trabanque, London."

CAPITAL: Authorised - £10,000,000 Subscribed and Paid Up - £2,000,000

Governor - THE LORD FARINGDON.

Manager, A. G. M. DICKSON. London Manager, P. C. WEST. Secretary, G. De B. BROUNLIE.

The Corporation has been established with the object of developing the Trade of the British Empire in every part of the world, and brings to the notice of all interested that it is prepared to grant financial facilities to British Manufacturers and Merchants for the increase of their Import and Export Trade.

It will be prepared to assist in opening up new channels for enterprise, and will afford financial facilities for the enlargement of works and the extension of plant.

The Corporation is appointing representatives in the chief cities of the world, and will open credits at home and abroad. It invites inquiries, and will endeavour where necessary to put expert advice at the disposal of correspondents regarding the financing of their foreign and overseas business. Moneys received on fixed deposit. Terms on application.

H.M. Representative at Tangier in a recent report states that the railway rates on the narrow-gauge military lines in Morocco, which were thrown open for commercial use in 1917, were raised at the beginning of January. It is explained in the statement made to the Council that the great increase in the working expenses rendered it necessary to raise the tariff very considerably, as, although the Protectorate authorities did not desire to make a profit on the line, they could not afford to run it at a loss.

For BUILDING UP your HEALTH take

WILKINSON'S (Estd. since 1829)

ESSENCE OR FLUID EXTRACT OF RED JAMAICA

"We cannot speak too highly of it."—LANCET. **SARSAPARILLA**

(The best "Pick-Me-Up")

Pronounced by the HIGHEST MEDICAL AUTHORITIES the Safest and Most Reliable Remedy for

Torpid Liver, Debility, Eruptions, and the most WONDERFUL PURIFIER of the HUMAN BLOOD.

IMPORTANT EVIDENCE.—"We recommend your Jamaica Sarsaparilla."—MEDICAL REVIEW.

"The only preparation for removing what may be called the sequelæ of a mercurial course."—SIR R. MARTIN.

The late LORD CLYDE said:—"I am never without it, for when feeling depressed or out of sorts from anxiety or fatigue, a dose or two animates me."

"It cured me of Torpid Liver after all other remedies ailed."—EARL OF ALDBOROUGH.

N.B.—Indispensable to all who value Health.

World-wide Reputation for over Three-Quarters of a Century.

NOTES OF THE WEEK.

The announcement that the Supreme Council has offered the mandate for Armenia to the League of Nations is calculated to arouse misgivings among those who look to the League to achieve some practical good in the world. Its purpose, we imagined, was to be a final court of appeal, whose judgment, if necessary, could be enforced by the combined armed forces of the nations constituting the League. At first sight, therefore, it would seem to be abrogating its high office, if it accepts a mandate and thereby places itself on a level with an individual State, by inviting comparison with the latter's exercise of a mandate elsewhere. If, for instance, the League of Nations is the mandatory for Armenia and France the mandatory for Syria, it will be inevitable that Syrians and Armenians should ultimately compare notes; the latter, if they were to consider themselves at a disadvantage, would have no court of appeal, while the Syrians could always turn to the League of Nations.

It is difficult to see how the League of Nations can perform simultaneously the functions of an executive body and a court of appeal. The object of the Supreme Council in offering the League the mandate over Armenia may be simply to divest itself of the responsibility of selecting a mandatory in the invidious position in which the defection of the United States has left it. If this should be the case, it is unfortunate that the announcement was not made in more specific terms. In some respects the Armenian mandate may prove simpler than any other. The League might consider itself justified in accepting the mandate and instructing the Armenians to "carry on"; in course of time, a number of advisers, carefully apportioned between the various Allied countries, could be drafted out to Erivan, and in the absence of actual civil war, the League might hug to itself the belief that it was doing good work. We cannot believe that any such makeshift arrangement with an international complexion is going to prove for the permanent good of Armenia. It will encourage the inevitable international intrigues that have retarded progress in the Balkans. The League can only bring mandatory States to book if it remains superior to them. For this reason it is to be hoped that the League of Nations will not allow its position to be undermined by a misreading on the part of the Supreme Council of the functions that it is called upon to exercise in the world.

The latest news from Roumania suggests that the dissolution of the Chamber has provided the best way out of a difficult situation. Political passions had been raised to fever pitch during the Acting-Premiership of M. Pop, and were not likely to be calmed by the sudden dismissal of the Cabinet and the appointment of General Averescu as Prime Minister. As the Transylvanians form the largest party in Parliament, they would naturally be critical of a Cabinet that superseded the régime of one of their own number, Dr. Vaida-Voivod. But there can be little doubt that the late Ministry, in the absence of the Prime Minister, had moved ahead of public opinion, and that the King, confronted with the necessity of an immediate decision, could not have turned to a "safer" man than General Averescu, the head of the People's Party. With the dissolution of Parliament the incentive to daily trials of party strength will be avoided, and an opportunity will be given to see how far General Averescu can command the support of all that is best in the Old Kingdom, with which the Transylvanians are anxious to co-operate for the future good government of Greater Roumania.

It is a hopeful sign that all parties in Roumania are agreed in their recognition of the services rendered to the country by Dr. Vaida-Voivod, who completely rehabilitated the Roumanian Government in the eyes of the Peace Conference and the Supreme Council; and the desire seems to be general that he should remain in charge of the Roumanian Peace Delegation until the treaty with Hungary is signed. The situation for Dr. Vaida-Voivod is naturally a difficult one; his first instinct must be to consolidate his political position at home, and if the Transylvanian party decides that a struggle for power is ahead of it, it will be reluctant to lose such a valuable asset as the late Prime Minister. Dr. Vaida-Voivod's decision must depend in large measure on the degree of finality which the treaty with Hungary has now reached. In the meantime it is to be hoped that political parties in Roumania will be able to come together in agreement over the policy of reconstruction necessary for the country. The new Cabinet has already taken some important steps in this direction. Arbitration committees have been appointed, somewhat on the lines of the Whitley Councils; and it is said that the new Minister of Finance, M. Argetoianu, is largely actuated by British economic ideals, and will abandon the more or less fanciful expedients to which the previous Cabinet proposed to resort for the purpose of additional revenue. The demobilisation of the Army, moreover, will release a large quantity of labour of which the country is in urgent need.

Events in Cilicia offer a curious commentary upon French anxiety to include so much of the Near and Middle East within a French sphere of influence. Inability to afford the inhabitants of a country any adequate protection is not the best qualification for a mandate, and there can be little doubt that France is exposing herself to grave charges by her failure in Cilicia. Her real interests are nearer home, and clearly she has all her work cut out for her there. She has lost ground badly throughout the Near East by insisting upon Cilicia being assigned to her, and then failing to protect the Armenians. The mistake has not only encouraged the Turkish Nationalists, but will react upon the Arabs, who have been quick to realise that the present is their best opportunity for extricating themselves from French tutelage. Incidentally, the Turkish threat to Cilicia suggests the hopelessness of entrusting a mandate of any part of the East to anyone who is not prepared to support the position, if needs be, by force of arms.

Further information is needed before it will be possible to gauge the precise significance of the information received by the Allied Governments that Yugoslav forces have descended into the plains in the vicinity of the Boyana River and Scutari. When the Supreme Council offered Yugoslavia a portion of Northern Albania as compensation for any sacrifice of Yugoslav aspirations in regard to Fiume and Dalmatia, the suggestion was very rightly decried on the ground that the Yugoslav Government did not consider it a satisfactory solution to leave its own compatriots under Italian jurisdiction, and to take over in exchange unwilling Albanian subjects. It would now seem as if the Government at Belgrade had decided that, as justice is not to be enthroned in the Near East, there is no need for it to lag behind in the perpetuation of injustice. Wiser counsels, we may hope, will prevail before it is too late; but unless the Supreme Council is prepared to safeguard the integrity and independence of Albania, it will leave the Balkan Peninsula as much of a European storm-centre as it was before the war.

After a period of uncertainty by no means unusual in such cases, in Turkey as elsewhere, the Salih Pasha Cabinet has resigned, and Damad Ferid Pasha is forming a new Cabinet. It is not possible to say with any certainty whether there was any truth in the reports that an emissary was despatched to Mustapha Kemal Pasha to ascertain whether that redoubtable person would "accept" Damad Ferid as Grand Vizier, but it is at least significant that sufficient time has elapsed for inquiries of the kind to have been made and answered. In any case, it is definitely announced that a Damad Ferid Cabinet is within sight, and that it is to be supported by the Liberal Union Party. The new Grand Vizier has a very hard task before him, and if he is to have any chance of bringing Turkey through the difficulties that beset her, he will need the help not only of the best and wisest of his countrymen, but also of the Allies.

The multiplication of protests, deputations, and agitations relating to Indian affairs goes merrily on, and detached observers are beginning to ask where all the money comes from. The aggregate expenditure on these efforts is obviously increasing rapidly, but its sources are not usually disclosed, and politicians need not wonder if ignorance breeds suspicion. Already we hear hints of a "hidden hand" behind this movement or that—of Turkish gold (if the Turks have any gold left), of strikes promoted by competing capitalists, of reactionaries financing extremists in order to defeat moderate reforms; and, India being what it is, we must expect such innuendoes to become regular features of its politics, unless the antiseptic of publicity can be vigorously applied. The various political organisations could, of course, establish their reputations by the simple process of publishing full accounts, guaranteed by independent audit, and showing the names of subscribers in detail, but they are not likely to take this step without some external pressure, and we are decidedly of opinion that it is a case where the Government should take the lead.

A suitable opportunity presents itself in the Illegal Practices Act, which the Government is bound to pass this year. If that Act should provide for publicity of all campaign accounts, every candidate in the elections would be able to know the real forces against which he would have to fight, and the whole standard of politics would thereby be raised. It is a thoroughly democratic measure; it has been adopted with excellent results in the United States, it is now being clamoured for in Canada, and it is only the opposition of the old party machines which has hitherto prevented its adoption in Great Britain. That fact should serve as a warning of the dangers of delay. If India starts on her new career with a régime of secrecy, the attendant evils will flourish in a fertile soil, and purification will become more and more difficult as time goes on. She has now a chance of going into politics with clean hands, and employing from the outset the one great antiseptic which Western democracies have learned by bitter experience to be indispensable.

The return of the leave season in India is again marked by bitter complaints of the impossibility of securing passages home, but happily there are signs that things are returning, however slowly, to the normal. For one thing, the passage difficulty on this side has already become seasonal instead of chronic; the waiting list has almost disappeared, and in the coming slack season passengers should be able to get a berth about the time they want it, though there is certain to be pressure next autumn, as, indeed, was usual in the autumns before the war. Again, there is the long-delayed advent of the big "N" liners of the P. and O., two of which are advertised to sail this month, while the surviving "M's" are getting back to regular work. Size and design count in this business, and the large ship built primarily for passengers is worth more than a number of cargo-boats pressed temporarily into the service.

The Royal Asiatic Society is now definitely installed in its new house at 74, Grosvenor Street, which was opened last week with a reception given by the President and Council. Some of the older members are doubtless conscious of a feeling of sentimental regret for the familiar rooms in Albemarle Street, but there can be no question of the substantial advantages of the change. There is room now for serious work as well as for those social amenities by which serious work may be so effectively promoted; the library is accessible, the pictures can be seen, and even a cursory inspection shows that there are good grounds for the hope expressed in the last number of the society's Journal—that in its new surroundings the society, which is now approaching its hundredth anniversary, may be looked upon as the natural centre of Oriental studies and Oriental interests in London. We hear, too, that the Council is considering various practical schemes for bringing workers in particular branches of study into closer contact than has hitherto been possible, and, whatever steps may be taken in this direction, there is no doubt that the society is very much alive.

Of course, there is a skeleton in the cupboard of the new house. The society, like most of its members, depends on what facetious economists describe as a fixed income; in other words, an income whose purchasing power grows steadily less; and in spite of a long period of conservative finance, it has very little to spend on new developments, such as are urgently demanded by the rapid increase in our knowledge of the past. It lives almost wholly on subscriptions, and a large influx of new members would enable it to carry out many useful schemes which are at present impracticable. Here is an opening for the large number of men who are interested in Asia; many of them cannot hope to offer direct contributions to knowledge, but by joining the society they can help to supplement the resources on which the workers are dependent, and thus take a part in unfolding the story of that wonderful past which, apart from its intrinsic interest, has such an important bearing on the practical problems of the immediate future.

THE WEEK AT HOME.

Home Rule.

The three days' Home Rule debate was excellent in manner and style, and most of the speeches were on a consistently high level. Mr. Clynes opposed the Bill for Labour; his contribution was marked by its usual quiet power, but its effectiveness was a little hampered by the consciousness that he had no alternative scheme, or, at least, would not agree to the Sinn Fein alternative of separation. His nominal leader, Mr. Adamson, was less happy; but the real failure in Opposition was Mr. Asquith, whose long speech was not unfairly summarised by Mr. Lloyd George as "ponderous futility." The Liberal leaders are now fighting each other with the gloves off, to the vast amusement of the public.
