NOTES OF THE WEEK.

An attempt by the Turks to recapture Jerusalem was generally expected, and it caused no surprise when General Allenby announced that such an attempt had actually been made. It failed completely to win any ground—on the contrary, the British advance has continued unchecked. Bethel has now been occupied, twelve miles north of Jerusalem, and other villages on either side of the main road leading north to Shechem. The Turks have lost rather heavily in their unsuccessful attacks; between December 27 and 29 we captured 750 prisoners, including 39 officers, and over a thousand enemy dead were counted.

One interesting feature of the week's fighting in Palestine has been the reported presence of Germans in the Turkish attacks. The Germans do not seem to have done much for their Allies these last few months, except to give them good advice, of which commodity Berlin is, no doubt, prodigal. Perhaps the Turks asked for something more valuable in these difficult days, and they have evidently received some support, rather late in the day. Since the operation in which the Germans were engaged was one for the recapture of Jerusalem, and the Pope had condemned any such movement in advance, the German explanation to the Vatican should be a valuable diplomatic document. The Pope's attitude, indeed, has been roundly condemned by many of the German papers as unneutral—neutrality in Teutonic eyes being that which conduces to the interest of Germany.

That Germany will not be restrained by any such scruples is evident; the only factors she will consider in weighing the advisability of reconquering Jerusalem are whether it is advisable in her own interest, and whether she can do it without unduly reducing her strength elsewhere. As to the first, there can be no doubt of the answer; the year 1917 was a disastrous one for German prestige in Asia, and unless Germany can do better there this year her "world-mighty" plans had better be put in the waste-paper basket with the Kaiser's speeches and the broken treaties. But whether Germany can do it without weakening her position in Europe remains to be seen. She is quite ready to let her allies suffer so long as she can safeguard herself, and the Berlin theory that the war will be won or lost in Europe is merely another way of saying that Germany intends to look after herself first, last, and all the time.

That both the German High Command and the German people are greatly relieved to be rid of the war on two fronts—that bugbear of Bismarck's, in regard to which Von Moltke, early in the present war, remarked that "by God, this is no child's play"—can be well believed. The terms on which they can do it yet remain to be settled, but it is highly improbable that Lenin and Trotsky, at Petrograd, will throw any obstacle in their way. These heads of the Bolsheviks have already welcomed German ambassadors and bagmen, and turned out British and French residents from the hotels to make their new friends comfortable. When the Irish tenant was asked how he murdered the landlord, he replied that this was a pettifogging detail; when Lenin is asked how he dismembered Russia, he will presumably give much the same answer.

The alleged German peace terms had evidently been carefully considered before they were formulated. They are not quite what the Bolsheviks asked for, but no difficulty need be expected on that score. They are furthermore intended to make the West think that Germany believes in no annexations, while she quietly puts the East of Europe into her pocket: they were intended to be used, and they are, in fact, being used, by the professional pacifists here to spread the idea of a converted Germany. That move will fail of its effect. The British public is not very familiar with the names of Eastern European provinces, and not every schoolmaster knows, to misquote Macaulay, the difference between Bessarabia and Bukowina; but everybody instinctively recognises the thimble-rigging trick in diplomacy, although we do not know precisely under which particular thimble the Germans have concealed their pea. And we will not join in that competition, however much we may be bidden to come and examine the terms at Brest-Litovsk.

On the whole the Bulgarians are more to be respected than their masters in this matter. All the world knows what they want, for they cease not crying day or night that the Dobruja is their war aim, or at least the one that can be immediately realised. They have even gone to the length of mimicking democracy in order to get it. A National Assembly has been called into being in the Dobruja—names, dates, and other minor details are not given—and it has unanimously voted that the desire of that province is to belong to Bulgaria. Seeing that there was no question of a Bulgarian majority in the Dobruja before the war, the unanimity of this decision would be somewhat startling, were the whole thing not

Digitized by Google

so obviously a means of throwing dust into the eyes of the innocent West. But the device is so transparent that it would hardly deceive the most confirmed hands-upper. But the Germans are contemplating the same trick in Lithuania and Courland, a *referendum ad absurdum*.

The position in Roumania remains obscure, but the public will do well not to lose sight of these plucky Allies of ours. It will not be a matter for surprise if the event proves that the Russian troops in Roumania have been the least affected by Bolshevik doctrines of the whole of the Russian Army. As far as is known they have held their ground, although compelled, together with the Roumanians, to conclude an armistice. If the report be true that the enemy are moving down troops to this front, the precaution is a tribute to the Russian and Roumanian troops. There is reason to suppose that the French, Roumanian, and Russian triumvirate in the persons of General de Berthelot, General Presan, and General Tcherbatcheff has proved an exceedingly able combination. Sufficient justice has not yet been done to the work accomplished by General de Berthelot's mission. The Roumanians themselves would be the first to admit that he has achieved wonderful results in an incredibly short time. Not only has he reorganised the Roumanian Army as a fighting force, but he has also inspired it with self-respect and confidence. It is this factor that has enabled the Roumanians to come through their terrible ordeal, and, unless we are mistaken, it has not been without its influence upon their Russian comrades-in-arms.

If under the command of General Tcherbatcheff the Russian troops in Roumania can stand firm, they may yet play an important rôle in the march of events in Russia. They protect the flank of the Ukraine, and any determined action on their part would in all probability completely dispose of the Bolshevik army, which so far has shown little inclination for serious fighting. For the moment, therefore, everything depends on the movement in Southern Russia against the tyranny and excesses of the Bolsheviks being placed under organised leadership. The policy of the Ukraine Government is far from clear; but it is possible that the powers that be in Petrograd are deliberately misrepresenting its attitude for their own ends. Sooner or later, however, the uncertainty of the position will be cleared up; for it is difficult to believe that the rest of the South will acquiesce in a Bolshevist régime, even if the Ukraine Rada does. In the interval there should be no room for doubt in the minds of the Roumanian Government and General de Berthelot that the Allies are keeping close watch upon the situation and are accumulating support for them, to be hurried to their relief at the earliest opportunity.

The denunciation of Roumania by M. Trotsky seems to show that the position there and in the South generally is more hopeful than is convenient for the "défaitists" of Petrograd to admit. The "facts" cited by M. Trotsky have probably as much existence in reality as many other of his charges—after his attack on the American Ambassador and the way in which he falsified or, more probably, manufactured charges in order to throw dirt at an Ally, nobody will believe a word he says without independent evidence—but his anger with Roumania is significant. He does not find any occasion for anger with the Germans; for them everything is made smooth, and they are in effect occupying Petrograd before any terms of peace have been notified. But the fact that not everybody in the South will take their ideas of morality or statecraft from the traitor at Petrograd naturally leads to an outburst. Trotsky's threats will be treated by Roumania with the contempt they merit; he has no power to carry them out, his troops will not fight, and his own tenure of power will probably only last so long as his masters in Berlin please.

The agreement with Turkey as to the exchange of prisoners seems satisfactory: we can only hope that it will be honourably carried out, and that the Turks will not in this matter imitate the methods of their German Allies, who have been extremely difficult to deal with after the agreement has been arranged. There remains the question of an exchange with the Bulgars, which we hope may be attended to this year. The numbers involved on either side are small in comparison with those affected by the Turkish and still more, of course, by the German campaigns, but that is no reason why they should be overlooked.

There is, of course, a very considerable disproportion between the number of British prisoners in Turkish hands and of Turkish prisoners in British hands. There are about fifty thousand Turks altogether imprisoned in Egypt, India, and Burma; the British prisoners, who are nearly all in Asia Minor, are understood to be about ten thousand, although the exact number is unknown to the Turks themselves. A large number of our men have unfortunately died, owing to insanitary conditions and other defects in the prison camps; some of the remainder are certainly in very weak health.

An immediate preliminary exchange of 1,000 invalid British and Indian soldiers is to be effected, against 1,500 Turkish prisoners in the same category; subsequent exchanges are to be carried out on the basis of a low schedule of disability. In addition to this, all civilians not of military age are to be repatriated should they so desire: these are probably not a large class, and not all Ottoman subjects, or nominal Ottoman subjects, will desire to return; while civilians of military age are to be exchanged man for man. It is feared that there will be some difficulty in selecting ports for the arrival of ships conveying the prisoners, but the Turks seem to have obtained from Berlin an assurance that the ships engaged in this traffic will not be sunk. It is to be hoped that this assurance is worth more than many other pledges from the same quarter.

The vigour with which Bulgaria is putting forward its claims to annexations may, perhaps, lead British Labour to another modification of its programme. It will be recollected that in that document, which was at least good in parts, it was suggested that the Balkan States should become a federation, with a Customs union. This is a less ambitious and more practical idea than that put forward by Professor Sonnenschein of a European federation—which would include Germany by implication; but it cannot be denied that such a federation of local States would be ideally the best for the Balkans, and a Customs union would be a necessity of that federation, as it has always proved of any federation that is not a rope of sand. Unfortunately a federation implies a certain amount of give and take, and that is precisely what Bulgaria will not have. She wants to be the dominant State in the Balkans, and in order to gain that position, she is quite willing to be subservient to Germany.

The Balkan League is an illustration of the difficulty. Its formation was hailed as a miracle, and miracles seldom repeat themselves. It was thoroughly successful, but Bulgaria destroyed it by overweening ambition and treachery. Moreover, once it was destroyed, the Central Powers were determined not to permit its reconstruction. Had they done so, and had the League held together, the present war might have been avoided, and Germany's aims have been thwarted in the Near East. There can be no stable Balkan League while the King of Bulgaria is on his throne, and while Germany is intriguing to get King Constantine back to Athens; nor can any such League have the least prospect of success so long as one of its members is determined to ally himself with those without at the expense of those within.

On another point the Labour programme seems to show a certain amount of confusion of thought. It advocates the dismemberment of the Turkish Empire, but also the partial dismemberment of the British Empire, since it proposes to put Mesopotamia, Armenia,

Digitized by Google

and the Central African colonies under the administration of a League of Nations. The suggestion that Britain shall give up Northern Rhodesia and British East Africa is, of course, impracticable, and it is no more representative of the British working-man than Dr. Lyttelton's proposal to give up Gibraltar represented the Church of England. But that is not our point at the moment; it is that the proposed League of Nations, so far as we understand it, by no means implies a body charged with the administration of non-European territories.

The regular work of administration is something entirely different from the kind of functions sketched out for the League of Nations. The idea underlying the League of Nations is not that the lion should lie down with the jackal, but that lion and jackal should agree to become non-predatory animals (donkeys, for instance), and that they should agree with each other and only coerce that particular member of the League which showed signs of reverting to predatory instincts. It is not quite clear how it is going to be done, or how the League will be prevented from becoming a merely conservative Holy Alliance; but one thing does seem to be clear. If each member of the League of Nations substitutes, as is hoped rather than expected, the golden rule for the rougher methods that have hitherto prevailed, there will be nothing for the League to do. We are told that the League is to be the political policeman of the world, but it is obvious that, if the world is on its good behaviour, the League will have nothing to do, since policemen will not coerce the just State made perfect.

On the other hand, the authority that administers, say, Armenia, will have a great deal to do in the ordinary course of the day's work. If the League of Nations is to prevent any one of its members from coercing Armenia that will be a relatively simple matter; but if it is to prevent one of its members from intriguing in Armenia for a position of undue favouritism, that will be an excessively difficult matter. Armenia might conceivably be entirely independent and prosperous. But if it is to be governed by the League of Nations, then the League must appoint a governor, and the governor must presumably be of a known nationality. Would Germany acquiesce in an English governor of Armenia, or vice versa? And if the governor were appointed by a small neutral State, then there would be a struggle among the greater States to control that small neutral State. It seems to us that the best way to wreck the League of Nations idea is to give it territories to administer.

A statement of great interest has been issued by M. Chéradame, the authority on the Baghdad Railway, as to the manner in which Germany is profiting by the war. He points out that the value of the territories she has seized is approximately £6,400,000,000—a sum which could be largely increased by their more thorough cultivation. Apart from this she has also secured human material for labour; war material in the shape of rolling stock and transport; horses, cattle, and foodstuffs generally; masses of raw material, such as coal, mineral oils, iron, copper, wool, and cotton. All these have been used, no doubt, to prosecute the war; but in addition there is the looting of works of art, stolen from churches, museums, and private collections; minted money, jewels, and securities; the materials of industry—motors, machine tools, dynamos, and plant of all kinds; and the materials of social and family life—furniture, clothing, and such private loot. The pacifists who advocate that every country involved in this war should contribute to a fund to repair the destruction should be made to read this catalogue; if they had any sense of justice they would abandon their programme for letting the robber get away with the spoils.

Besides these spoils, M. Chéradame notes certain legitimate profits—advances made by Berlin to her allies, which are, in effect, "an immense German mortgage upon them, placing them in absolute financial dependence on Berlin." Austria, having parted with her gold to Berlin, is in an absolutely helpless position; Bulgaria is not less so. Turkey seems to be showing some signs of restiveness, but she is apparently dazed between the desire to get out of the war on any terms and the desire to risk one last bid at Germany's expense. That is probably the true explanation of the announcement that Djavid Bey, the Turkish Finance Minister, is proceeding to Berlin for a conference with the German Government and the leading bankers. If Germany will put up the money, in short, Turkey will have another fling; that, perhaps, is also the motive behind her laboured explanation that she is really rather fond of the Jews, in Palestine and elsewhere. These seems to be nothing else for Germany to do but to finance her remittance man a little longer, although she may possibly try to pay part of the bill with a few Pan-Turanian promissory notes.

The demonstrations in India in favour of Home Rule continue, but Mr. Montagu remains true to his pledge to be seen and not heard. A long memorandum has been drawn up and circulated in favour of reform; it cannot be said that, long as it is, it covers the ground adequately or shows sufficient signs of constructive statecraft. The document in question is attributed to Mrs. Besant, surely the most bizarre figure that ever headed a peaceful revolution. The Western world was not much impressed either by her theosophical or her sociological teaching, and it is not very likely to be impressed by her political teaching. Spiritualists may accept her as a good politician, and politicians take her on trust as a theologian; but in the practical rôle of reformer she is scarcely successful. And it is a serious weakness, as *The Times* has pointed out, that those who advocate Home Rule for India should not have chosen an Indian to lead them, but a European lady. The very essence of a demand for Home Rule rests on the assumption that a country is able to govern itself; if it has to import its spokesman it leads to the assumption that it has nobody of its own able to fill the post. In the present case we believe that assumption, however natural it may be, to be profoundly mistaken; despite a certain negation and imitative tendency in Indian political thought the country is capable, and in the past has often shown itself capable, of producing political leaders. Mrs. Besant may be more Hindu than the Hindus, but for all that she is a European.

TO OUR READERS.

THE NEAR EAST is published on Friday, and copies are obtainable at any London bookstall early in the morning, and in the Provinces in the afternoon, of that day. To prevent disappointment, readers would assist us very much if they would place a standing order with their newsagent or railway bookstall for the supply of the paper every week. Any newsagent or railway bookstall clerk can, however, obtain copies at a few hours' notice if they have temporarily run out of stock; or we will post THE NEAR EAST for delivery on Friday morning, to any address, on the following terms, post free:—

12 MONTHS, £1; 6 MONTHS, 11s.; 3 MONTHS, 6s.

Abroad THE NEAR EAST is obtainable at any of the following agencies:—

PARIS. Librairie Hachette, 79, Boulevard Saint-Germain; Librairie Galignani, 224, Rue de Rivoli, and at Railway Bookstalls.

CAIRO. Cairo Express Agency, near Shepheard's Hotel; The British Library, Sharia Kasr-el-Nil; and at Railway Bookstalls.

ALEXANDRIA. Librairie Schuler, Rue Cherif Pasha; Naeamulli and Company, 12, Rue Sesostris; Librairie Calebotta, Rue Cherif Pasha; Librairie Cauro, Rue Cherif Pasha; J. Eugenides and Co., 12, Rue Cherif Pasha; Main Station Bookstall.

PORT SAID. Charles Evans, and on board vessels in the harbour.

KHARTOUM. Sudan Stationery and Book Store.

CYPRUS. Cababe and Wilson, Nicosia.

SALONIKA. Librairie Française, Rue Sabri Pasha.

ATHENS. Librairie Th. Vafiades.

CALCUTTA. 1, Royal Exchange Place.

NEW YORK. Office of "The New Armenia," Flat Iron Building.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, December 1.

The Financial Advisership.

As the result of the illness of Lord Edward Cecil and his inability to continue to carry out his duties as Financial Adviser, it has been decided to appoint Sir William Brunyate to act for him during his absence, and this decision was approved of by the Council of Ministers at its last sitting. At the same time Mr. Sheldon Amos, who was recently selected by Sir William to assist him with the administrative work connected with the Judicial Adviserships, has been chosen to act for him at the Ministry of Justice. Similarly Mr. E. M. Dowson, Director-General of Surveys, who was transferred to the Ministry of Finance when Lord Edward Cecil went to England last spring to act as Under-Secretary while the Hon. Ronald Lindsay acted for the Financial Adviser, is to continue in that position during the absence of Mr. Lindsay in England. The latter left this week for Europe, and will, it is understood, be away for a short time only. Meanwhile, as it is recognised that the Under-Secretary for Finance has too much work on his hands, it has been decided to transfer Mr. W. B. Trelawny, the Controller of the Government Printing Works, to the Ministry of Finance to assist Mr. Dowson. All these appointments have given great satisfaction, especially that of Sir William Brunyate, who is generally recognised as being one of the ablest and strongest officials the Egyptian Government has had in its service for many years past.

Thanksgiving Day.

Thanksgiving Day was celebrated by the American colony by a special service at the American Mission Church, at which Mr. Paul Knabenshue, the American Chargé d'Affaires, and the High Commissioner were present. In the afternoon a reception was held at the American Agency. It was attended by the Grand Chamberlain, Said Zulfikar Pasha, representing the Sultan, and by Sir Reginald and Lady Wingate and a crowd of British and foreign residents.

The British Troops in Palestine.

Tidings from Palestine show that the entry of our troops into that region is being hailed with delight by the inhabitants, and that the population of places like Jaffa, where they were driven out by the Turks on Jemal Pasha's orders, are fast returning. General Allenby issued very strict orders to the troops entering Palestine as to the manner in which they were to behave. They were exhorted to remember the high reputation for justice, tolerance, and fair treatment which the British nation enjoys in the East, and in accordance with which the inhabitants of the country would expect them to conduct themselves. He expressed confidence that the Expeditionary Force would maintain the high standard of conduct which it had hitherto shown, and called upon all commanding officers to take care that all known historical and sacred sites and buildings were guarded and preserved, and that the same respect was shown for them as for the persons and property of the inhabitants. The publication of these orders appears to have much impressed the local population, and everything tends to show that our troops are behaving in an exemplary manner. Officers and men who have been invalided up here from the front are all loud in their praises of the Commander-in-Chief, General Allenby. They state that he was extraordinarily ubiquitous during the recent fighting, and evinced incessant concern for the welfare of the wounded. He appears completely to have gained the confidence of the troops, who much appreciate the solicitude which he displays for their comfort, especially when they are resting behind the lines.

The Return of Mr. Storrs.

Amongst the more recent arrivals in Cairo has been Mr. Ronald Storrs, Oriental Secretary at the Residency, who has just returned from England. Mr. Storrs has been absent from his post for about nine months. He was sent on a special mission to Mesopotamia last spring, and on his return thence he proceeded to England for some well-earned leave. During his stay in London Mr. Storrs was engaged for a short time on very important and confidential war work. Much pleasure has been expressed in native circles at his return to Cairo, for he has acquired for an Englishman a unique place in the confidence and esteem of the Egyptians.

The Cairo Racing Season.

On Saturday afternoon last the first race meeting of the season took place at Gezira. It proved to be a great success, and, as is usual with Gezira, was attended by a crowd of racegoers, who, however, do not frequent the other courses. There is not the slightest doubt that the Gezira course is the most attractive in the country, added to which we have the fact that, thanks to its energetic secretary, Mr. Greenwood, the organisation of the meetings leaves nothing to be desired and nothing that can conduce to comfort and good racing is left undone.

"THE INDIAMAN" INDEX.

INDICES for VOLUME VI.

(November 10, 1916—May 4, 1917),

And for VOLUME VII.

(May 11, 1917—August 2, 1917),

ARE NOW READY, and may be obtained, post free, by readers on application to The MANAGER.

COUNTERACTING GERMAN PROPAGANDA.

We have made arrangements for forwarding free of charge to our readers pamphlets and other publications dealing with the British and Allied cause. This literature is in many European languages, and certain pamphlets and illustrated publications are also available in a number of Oriental languages. All applications should be addressed to the Editor, The Near East, Devonshire Square, London, E.C.2. Among the most recent publications available for distribution free of charge are the following:—

"Welfare of Egypt," by J. S. Willmore. A short summary of English administration in Egypt; alluding also to Germany's undermining influence, and the Mussulman's preference for the English rule. 36 pp. London: Hodder and Stoughton.

"Mesopotamia; the Key to the Future," by Canon Parfit. A short account of the past history, present development, and future prospects of Mesopotamia, showing that the settlement of its problems is of vast importance to the progress and prosperity of the world. 41 pp. with map. London: Hodder and Stoughton.

"Turkey, a Past and a Future," by A. J. Toynbee. Development of the new Turkish Nationalism and of German intrigue in Western Asia. Moslem ideas must prevail. Mesopotamia will develop its resources mainly by colonisation. 77 pp. London: Hodder and Stoughton.

"Armenian Atrocities: The Murder of a Nation," by A. J. Toynbee, with speech by Lord Bryce. An account of the atrocities committed by the Turks on the Armenians, with documents 117 pp. London: Hodder and Stoughton.

"The Verdict of India," by Sir M. M. Bhownaggree, K.C.I.E. The writer describes what England has done and is doing for India, and explains the German delusion as to its internal condition. 57 pp. London: Hodder and Stoughton.

"Voice from India," address by Maharajah of Bikanir. Speech delivered to Indian delegates at House of Commons. 24 pp. Empire Parliamentary Association, London.

"The Murderous Tyranny of the Turks," by Arnold J. Toynbee, with a preface by Viscount Bryce. A brief sketch of Turkish history to show that the expulsion of the Turks from Europe and their confinement to a portion of Asia Minor will be the only adequate requital for their atrocious treatment of subject races during this war and previously. 35 pp. London: Hodder and Stoughton.

"The Justice of Rumania's Cause," by A. W. A. Leeper. An explanation of the international position of Roumania in Europe and of her rights in the war. The author shows that her cause is legitimate, and that she has taken great risks and endured much to deliver her people from Hungary's oppression. 24 pp. London: Hodder and Stoughton.

ROUMANIAN NOTES.

(From a Correspondent.)

The Bolshevik Rising.

Of all Allied countries Roumania is the most seriously affected by the action of the Russian Maximalists. The immediate geographical contact, the unity of front, the fate of the Roumanians in Bessarabia are so many reasons for the Roumanians to follow with anxiety the development of events in Russia; but, above all, there is the fact that, for good or for evil, with or against her will, Roumania will be necessarily involved in any action taken by the new masters of Petrograd. She may well remember that she has other Allies besides Russia, but she cannot communicate with them except through Russia; she may well feel inclined to carry on on her own account, but how can she do that when a large part of her frontier might at any moment be laid bare by the defection of the Russian troops entrusted with its defence?

At first public opinion was but little moved. Hopes and fears alike made the Roumanians hold to the belief that the Bolsheviks were powerless outside Petrograd, and that even there their action was doomed to failure. This expectation was encouraged by the authorities, who imposed silence upon their own organs and heavily censored the papers which they could not control, the main reason being very probably an attempt to reduce in so far as possible the disruptive effect of Bolshevism upon the spirit of the Russian troops in Roumania. The attitude of these troops was very satisfactory in the early part of the rising, and it is interesting to find the explanation in the concerted action of the various organisations and delegates, Maximalists included, with a view to maintaining order and efficiency in the Russian contingent. When news was received of the Bolshevik revolt, the Russian Commissary on the Roumanian front, the delegate of General Headquarters, and the delegates of the two Soviets of Jassy formed themselves at once into a military-revolutionary committee, which, acting in full agreement, decided to arrogate to itself all political power, the supreme decision concerning changes of command on the Roumanian front, as well as with regard to movements of troops other than those required by strategical needs. Secondary military-revolutionary committees were to be created by the various army corps and divisions. Moreover, in order to enforce discipline and oppose any attempt at a counter-revolution, a special division was to be formed, composed of the comrades most devoted to the revolution in the three services. It is not known as yet to what extent the various proposals were carried out, but this energetic action obviously had a salutary effect upon the attitude of the Russian troops in Roumania, who might still be called upon to play an important part in the development of events in Southern Russia.

After the first few days hopes as to Maximalist failure diminished, and anxiety as to their policy concerning peace grew. The Press began to be more outspoken, calling upon the Russians to respect their engagements or hinting to them that a separate peace with Germany would not end their struggle, since it would probably bring them into armed conflict with their former Allies, China, Japan, and America included. Evidently not much was expected from the effect of such hints, as the Press at once adopted the more philosophical attitude of pinning their faith to the final justice which will be procured to them by their Western Allies. "Though some of us may have to face serfdom to the German-Bulgarian master, others the Austro-Hungarian gallows, and all of us Bolshevik abuse, none has the right to doubt of our great future, of the triumph of our cause, as long as a Frenchman, an Englishman, and an American tread upon God's earth."

THE TURKISH ATTACK ON JERUSALEM.

The news this week from Palestine is magnificent, how much so can be realised partially by a close study of the map, but more completely by a personal knowledge of this extraordinarily intricate ground and the lessons of history. On the night of December 26-27 the Turks—assisted by Germans—made a most determined effort, lasting 26 hours, to drive in our northern line. Had this been successful it is difficult to see how the city could have been held, or if held, how it could have escaped serious damage.

The battle opened with a fierce attack at midnight on Tell el-Ful (Gibeah of Saul) and on the village of Beit Hannina, to the north-west. The attacks were frequently renewed, and gradually the battle extended to the whole front. Four attacks were made that night upon our pickets stationed upon the lofty hill Ras et Tawil, 3½ miles north-east of Jerusalem, on the northern edge of the deep and historic pass of Michmash—now known as Wady es Suweinit, and a similar attack was made east of Bir Nabala, a twin village to el Jib (the two villages lie on neighbouring hillocks), north of Nebi Samuel. Pickets were in places temporarily driven in, but the next morning a great counter-attack was begun, by which the enemy was forced back 2½ miles on a wide front. On the 28th the enemy was dislodged from a commanding point one mile north of the Jericho road—and four miles from Jerusalem—and Anata—the ancient Anathoth—the home of the Prophet Jeremiah (Jer. i. 1; ii. 21-23), less than three miles north-east of the city, was taken. From here a much-used, but very rough, mountain road crosses numerous deep valleys, and runs a course parallel with the Nablus road.

On the high road itself—after the repulse of the enemy at Tell el-Ful—the commanding hill of er Râm, the site of the once powerful frontier fortress of Rameh of Benjamin (1 Kings, 15, 17), was taken. This hill entirely dominates the high road from the east at this part. A little north-west of this Kulundia and Beit Unia, to the west side of the road, were seized. The total advance was two miles upon a front of 13 miles. The Turks seem to have taken the defeat badly. The following day (29th) an advance was made along the rough eastern road referred to above from Anata, and Hezmeh, Jeba, and Burkah were successively captured. Unless the roads have been much altered since the war, progress here must have been most difficult. It is so rough in places that a rider must dismount and lead his horse. Both Hezmeh and Jeba lie upon lofty hill tops. The latter is the site of the frontier fortress of Geba (Is. x., 29); it commands the Pass of Michmash (see 1 Sam., ch. xiv.), and is a place of extraordinary natural strength. Across the Wady es Suweinit lies the little village of Mukhmas, amid a fine grove of ancient olive trees. Though not mentioned, our Army must have passed through this the once famous Michmash to reach the village of Burkah, some two miles to the north-west. This is a very historic district. The Prophet Isaiah pictured the Assyrian host as approaching the city of Jerusalem by this route.

"He is come to Aiath (Khurbet Haiyeh), he is passed through Migron; at Michmash (Mukhmas) he layeth up his baggage; they have gone over the pass (Wady es Suweinit); they have taken up their lodgings at Geba (Jeba); Ramah (er Râm) trembleth; Gibeah of Saul (now Tell el-Ful) is fled. . . . O thou poor Anathoth (Anata)!"

While this advance occurred on our eastern flank, along the carriage road the troops took the large Christian village of Ram Allah—probably the "Hill of God" of 1 Sam. x. 5—the neighbouring Khurbet et Tireh and the Wady el Kelb (the valley of the dog) to the west, while still further west the general alignment of the advance was maintained by the capture of Khurbetha ibn Hareth and Deir el Kuddis.

The advance the same day along the central plateau gave us the very important point of el Bireh. This large Moslem village stands on the site of Beeroth. Its name, meaning "the cistern," refers to its splendid

Digitized by Google

supply of water from an abundant spring. Two large reservoirs occupy the lower ground, and it is possible that once water was brought from here by aqueduct to Jerusalem. There are Crusading remains in the village, including the ruins of a church, erected by the Knights Templar in 1146. By a late ecclesiastical tradition this was the spot where the parents of Jesus missed him when leaving Jerusalem for Nazareth (Luke ii. 43). Beeroth was a town of Benjamin (Josh. ix. 17; 2 Sam. iv. 2, 3).

From Bireh the road branches. The old road runs to Beitin, the ancient and famous sanctuary of Bethel, while the new carriage road runs a little west of this, passing a marshy pool, dry in summer, known as el Balua.

On the 30th these points were occupied, and the left of our extended line advanced through very broken mountain country, and occupied the villages of Janiah and Ras Kerker. Beitin is now but a little village, standing on a hill nearly 2,900 ft. above sea level. It was the site of Jacob's dream (Gen. xxviii., 11-22), and later became one of the chosen sanctuaries of the northern kingdom; it is mentioned many times in the Old Testament (*e.g.*, Amos iv., 4, 7, 13; 1 Kings, xii., 27-33). It was an important frontier city first of Israel against Judah and later of Samaria against Judæa. There is a fine ruined reservoir, and in the present mosque are remains of a Crusading church. Apart from the interest of this historic ground, the scene of scores of battles in the past, this advance is very important, because from this lofty district both these roads now rapidly descend; the carriage road runs along the side of a wide valley to Jifna and Ain Sinia, and the older track to Ain Yebrud, while between the two, crowning a lofty hill, are the extensive remains of a fortress palace of King Baldwin, known to-day as Burj Burdawil.

E. W. G. M.

THE FRENCH MILITARY MISSION IN GREECE.

On the subject of the French Military Mission in Greece, the Athens correspondent of *Le Petit Marseillais* writes:—"Our military mission, installed at Athens about two months ago, has entered into a full period of activity. Its principal object is to give material and practical help to Greece, in order that she may put forth her maximum effort on the strength of a scientific and practical reorganisation of the Hellenic Army which will place it in a position to collaborate usefully with its Allies when the time comes for it to participate in the great fight with the whole of its forces. The incontestable value of the Greek Army was proved in 1912 and 1913; but it is none the less true that it still requires to be initiated in the new methods of warfare which a rude experience has taught our troops. With a view to obtaining this result rapidly, two elements of action were necessary: one of a purely military character, and the other of an administrative order. The military mission comprises, under General Braquet, a large number of officers of every rank, several of whom are of the highest grade, doctors, veterinary surgeons, etc., together with all the material necessary for instruction and its application. Without entering into details relative to all the activities of our mission, reference may be made to the special courses embracing the various branches of military science—viz., intelligence, staff work, infantry, machine gun, artillery engineering etc.

All the officers of the Greek Army, including the Generals, follow the teaching with the greatest assiduity. The instruction is given by French officers who have had experience on the various fronts."

TANGIER TO TEHERAN.

A correspondent had something to say a fortnight ago on the subject of the appointment of Colonel Borton Pasha as Military Governor of Jerusalem. All that I have heard since confirms the wisdom of the choice. The former Postmaster-General of Egypt is in many ways a striking personality. A born sportsman, he is still ready, in spite of advancing years, to "take on" many a younger man at half-a-dozen pursuits, and his walk combines the spring of youth with soldierly erectness. His linguistic attainments, as well as his tact, his organizing capacity, and his popularity, mark him as an ideal Military Governor if such a town as Jerusalem. But to many people in Egypt it comes as a matter for surprise that he can be spared indefinitely for this new post.

***

The Palestine advance will be productive of many good stories. I have already heard one which will bear repetition as being true, *verbatim et literatim*. A parson in an East London parish, who believes in keeping the young idea *au fait* with contemporary history, was telling a class of young boys about General Allenby's progress and of the British Government's promise to see that the Jews got Palestine after the war. The prompt comment of one member of the class was: "Well, sir, if the Jews do get Palestine, I hope they'll give us back Whitechapel."

***

The delicacy of feeling that prompts the Oriental to avoid an unpleasant subject or a dogmatic assertion is well illustrated by the answer of an Egyptian, who, on his return from leave of absence to visit a sick father, could only be induced to reply, in answer to inquiries regarding the latter's health, "My father is as your honour wishes him to be." As a matter of fact, the father had been dead some days, but it was not a statement to be made in his "honour's" hearing. A certain Maltese firm, it appears, is not troubled with the same scruples. From a contemporary I learn that a merchant there, who held various important agencies, was in a bad state of health. A rival firm promptly wrote to this merchant's principals to the effect that Mr. —— "is seriously sick, and, as we hope, will very probably die in a short time." Accordingly they offered to take over the agency in question, promising early information as to Mr. ——'s death, "that as aforesaid, if this case shall occur."

SERBIANS AND MILITARY SERVICE.

The following notice is issued to the Press at the request of the Serbian Military Attaché:—

In pursuance of Article 3 of the new law respecting persons evading military service, published in the Serbian *Official Gazette*, and according to the order of the War Minister, No. 38319, all Serbian subjects must be examined by the Medical Commission, as well as all others under Serbian protectorate, aged between eighteen and fifty-four, who are abroad, irrespective of any previous examination and exemptions. Any who fail to comply with this notice will have the most stringent legal steps taken against them.

Office of the Serbian Military Attaché, 115, Gloucester Road, S.W.7.

NEAR EAST BOOKSHELF.

ABDUL HAMID.*

The favourite Oriental description of a man that he is *methel esh Shaitan* (lit., "like the Devil") usually conveys a sense of lurking admiration for his clever cunning, despite his wickedness. Sir Edwin Pears will not even give this doubtful compliment to the "Great Assassin." In his opinion Abdul Hamid was so utterly worthless that neither in moral nor mental characteristics was he anything—"an essentially commonplace man, mean, sordid, and cunning." Yet the evil possible to such a man, placed in almost despotic power by a combination of political and religious privilege, is immeasurable. The writer narrates the events of his disastrous reign with such a detached and dispassionate spirit that one would suppose that most of it was penned before the crop of tares which this man sowed had come to full harvest. The intimate knowledge which a lifetime's residence in Constantinople gives the author has engendered in him a broader and kindlier spirit towards the unfortunate people who suffered such misgovernment than many have who can only judge of Turkey from outside. The warm and rapturous reception of the Reform movement throughout Turkey, so glowingly described here—"a wild cry of relief and delight burst from tens of thousands"—shows how many elements of good still survive. That England and France consistently, and eventually to their own loss, strove to maintain the integrity of the Turkish Empire and to support her rulers, is clearly shown. "They desired a strong Turkey." That this policy failed was due on repeated occasions to utter want of statesmanship on the part of the Sultan. That is notably the case with regard to Egypt, when the Sultan's policy practically forced England, against her will, into a permanent occupation. It was, however, Armenia which finally made British support impossible, as it is now Armenia—and the even more heinous crimes of Enver Pasha with regard to it—which makes a continuance of even Turkey's diminished Empire impossible. Apart from morality and political expediency, the destruction of the Armenians has been "sheer folly" from the economic point of view. They were an essential element among a race quite incapable itself of business developments.

It is impossible to read this life and not feel some pity for this most miserable being. Brought up almost uneducated—"he knew nothing but Turkish"—practically ignorant of the world outside the palace, with no experience of statesmanship or even of military matters, secluded within the double walls of his palace grounds—a self-made prisoner—what chance had he of making a worthy ruler? His chief employment seems to have been reading the contradictory reports of his innumerable spies; he had no recreations or "hobbies"; he was a martyr to dyspepsia and lived in continual fear of assassination—with a revolver ever in his pocket ready to be levelled with unerring aim at any suspected person. The picture of his life is a nightmare. After more than 300 pages we read: "It would be pleasant, but is difficult, to find anything to say in favour of Abdul Hamid. His most agreeable trait was his liking for his cat."

This life, beyond the personal history, is a distinct contribution to Modern History, and tells of many details regarding modern Turkish administration which are of wide interest to-day. The author speaks well of the Ulema, who, he says, have "generally during the last century proved themselves the most enlightened class among the Moslems."

The great work of the Public Debt Department shows how much might be done to save Turkey, had her rulers been willing to accept disinterested foreign assistance. All recent history shows their utter incapacity to carry out unassisted any form of civilised government alone. The Germans know this very well.

On the question of railways in Turkey during the reign of Abdul Hamid Sir Edwin Pears is not quite as fully informed as usual. He makes no mention of the unfortunate fiasco of the British attempt to construct the Haifa-Damascus Railway, an enterprise whose failure certainly did much to destroy British prestige in Turkey. The Beirût-Damascus branch railway does *not* run on "an old French coach road"—nor, on most of its course, even very near it. There is no mention of the prolongation of this line from Damascus to Mezerib, and from Rayak northwards towards Homs. The notable share which Germany took in the construction of the Hejaz Railway is hardly touched upon. First, it was always reported in Syria that it was the bogey of British supposed aggressive intentions against Arabia which induced the Turks to undertake the line's construction. Secondly, German engineers directly—or, in the actual Hejaz, by their Moslem pupils—designed and constructed it, while Germany supplied the rails and rolling stock and controlled the working. The cheapness of construction of this line was due to the employment of soldiers, who were paid the usual mere pittance of military pay, and who would, whether used here or not, have to have been kept embodied in the usual standing army. Their grievances were stifled by the plea that in making this line for the Mecca pilgrimage they were doing an act of piety. Whether this line will really be for the eventual good of Islam is very doubtful.

Abdul Hamid still lives, and perhaps, if he learns anything of current events, finds subject for grim and cynical reflection as he views the logical outcome of his disastrous reign in the present disruption of the once great Empire of his ancestors by those "reformers" who dethroned him.

ROYAL SCHOOL
FOR
Daughters of Officers of the Army.
Patrons:
Their MAJESTIES THE KING AND QUEEN
and HER MAJESTY QUEEN ALEXANDRA.
Chairman: LT.-COL. A. GRUBB, J.P.
Vice-Chairman: SURGEON-GEN. SIR WILLIAM TAYLOR, K.C.B.
Daughters of Officers of the Army are admitted to the above Schools according to the circumstances of their parents, at rates of £20, £15, £65, and £80 a year. Granddaughters of Officers are admitted at £15, £65, and £80 a year according to circumstances, and a limited number of daughters of civilians are admitted at £120 a year when there are vacancies. There are 15 Scholarships, open to competition, in the School, of amounts varying from £10 to £20 up to one of £50.
As half of the School consists of pupils on the £15 foundation, which includes both board and education, a deficiency of about £2,500 a year has to be met by contributions, which are earnestly solicited. Donations of £5 5s., giving one vote for life, or subscriptions of 10s. 6d., giving one vote for the year, may be sent to
F. W. T. ATTREE, COLONEL (late R.E.), Secretary.
Office: Panton House, 25, Haymarket, S.W.1.

8	26	Tuesday	25	24
9	27	Wednesday	26	25
10	28	Thursday	27	26

The Earl of Bessborough left London on January 2 for Birmingham.

M. Leon Melas, Secretary to the Greek Legation, has left London for Paris.

M. Boerescu, Secretary to the Roumanian Legation, has recovered from his illness and resumed his duties.

Mr. Jean l'Hullier, of the Quarantine Board, Alexandria, now in the French Flying Corps, has been mentioned in despatches.

M. Vikelas has been appointed Secretary to the Greek Consulate in Cairo vice M. Colovos, transferred to Sfax as Acting-Consul.

M. Venizelos, the Greek Prime Minister, was received by Signor Orlando, the Italian Prime Minister, in Rome on December 31.

The Egyptian Government has appointed January 6 as a day for the purpose of prayer for victory. The day will be observed as a general holiday.

Sir Montagu Turner has been appointed Chairman of the Chelmsford Diocesan Board of Finance, in succession to Sir Richard Pennefather.

Dr. Constantin Angelescu, the Roumanian Minister to the United States, has arrived there at the head of the Roumanian Special War Mission.

Ahmed Ziwar Pasha, Governor of Alexandria, has been appointed Minister of Wakfs (Pious Foundations) in succession to Ibrahim Fathi Pasha.

Kaimakam Stigand Bey, Governor of the Upper Nile Province, who has been on leave in this country, returned to the Sudan at the beginning of last month.

Sir Murdoch Macdonald, Adviser to the Ministry of Public Works, who has been in England since the beginning of June, has returned to Cairo and resumed his duties.

Goldstein Bey, Secretary of the Postal Department, has been appointed to act for Borton Pasha during his absence on his mission in Palestine, says the *Egyptian Mail*.

Sir William James Herschel, author of the finger-print identity system, formerly Secretary to the Board of Revenue, Calcutta, and Commissioner of Cooch Behar, left estate of the gross value of £1,132.

Another will just proved is that of the late Mr. Patrick Russel, of Collingham Gardens, a member of the firm of McLeod, Russel, and Co., Indian merchants, Lime Street, E.C., who left £79,394.

A Christmas party for the children of Czech volunteers in the British Army was arranged by the Czech Committee at their premises in Gloucester Road on December 26, when fifty children were entertained.

General the Hon. Sir Julian Byng has become a patron of the Veterans' Association, which is raising a fund to establish the Veterans' Club as a permanent Imperial Memorial to sailors and soldiers who have fallen in the war.

According to a message from Washington, Dr. Mileno Vesnitch, the Serbian Minister in Paris, will address the American Congress to-day, on the demands which Serbia and her Balkan Allies will put forward at the peace table.

The Armenian Church Council in Alexandria has asked the Egyptian Government to approve of the renewal of the election of its members for a new period. The Governor has submitted the demand to the Ministry of the Interior.

Sentences of fifteen years' penal servitude have been passed upon a captain of infantry and a sergeant, and of fifteen years' imprisonment in the case of a corporal, for the murders committed during the disturbances in Athens in December last year.

One room in the present exhibition of the New English Art Club is given up to works, principally water-colours, by Captain Gerard Chowne, who died of wounds in Macedonia.

To-morrow will be the anniversary of the birthday of Princess Ileana of Roumania. She was born at Bucharest in 1909. Another daughter of the King and Queen of Roumania, Princess Marie, will be eighteen years of age next Wednesday.

Among the recipients of New Year Honours are Sir Archdale Earle, Chief Commissioner, Assam, and Mr. F. G. Sly, Commissioner, Central Provinces, who receive the K.C.S.I.; while Mr E. L. Lutyens, the architect of new Delhi, receives a knighthood.

From a cablegram just received at the London office of the Syria and Palestine Relief Fund from Bishop McInnes, it is learnt that there is a great scarcity of wheat in Jerusalem and Bethlehem, while other relief besides that in the nature of food is urgently needed.

Under the patronage of Lord and Lady Ronaldshay, it was proposed to hold a Food Products Exhibition in Calcutta during the past week. Its purpose is to help to solve the problem of making the country self-sufficient in regard to food for Indians and Europeans alike.

In a review of the military situation at the beginning of the new year, Mr. Baker, United States Secretary of War, says that "the infantry tactics which led up to the capture of Jerusalem will be held to be examples of the most brilliant operations of their kind in military annals."

The King has given authority to Mr. A. G. M. Dickson, Manager of the British Trade Corporation, to wear the Insignia of the Second Class of the Order of the Nile, conferred upon him by the late Sultan of Egypt on his retirement from the post of Sub-Governor of the National Bank of Egypt.

A Sofia telegram states that a so-called National Congress at Babadagh (Dobruja) has unanimously passed a resolution demanding the union with Bulgaria of the whole of the Dobruja as far as the Danube delta, and declaring that the population of the Dobruja will forcibly oppose any attack on its rights and liberties.

Sir Edward Allenby, replying to a congratulatory message from the Central Committee of Unredeemed Greeks on the occasion of the liberation of Jerusalem from Turkish rule, telegraphed that he and his forces in the Holy Land sent their best wishes for the future welfare of the Unredeemed Greeks, and fully and confidently look forward to their liberation.

General Marshall, commanding the British Army in Mesopotamia, has sent the following message to the Hon. Sir Arthur Stanley, M.P., Chairman of the Joint War Committee of the British Red Cross Society and the Order of St. John:—"Please accept heartiest Christmas greetings from Army in Mesopotamia. The excellent work that the Royal Red Cross is doing here is immensely appreciated by all ranks.

News dated September 25 has been received from Smyrna through the Prisoners of War Department of the Foreign Office that the marriage was to take place (D.V.), on October 24, 1917, of Ethel Madeleine, elder daughter of the late Alfred Charles Martin, Esq., of Calcutta, and of Mrs. Martin, 17, The Steyne, Worthing, to Mr. Augustus C. Routh, of the British Consular Service, now temporarily attached to the Consulate-General of the Netherlands.

On their arrival here this morning, says Reuter's Bombay correspondent in a message dated December 24, the Viceroy and Mr. Montagu were received at the military station by Lord Willingdon, Governor of Bombay, and the leading officials. The public were not admitted. During the day a number of deputations from public bodies and political institutions were received, and interviews were granted to representatives of the Home Rule League and the Anjumani-Islam.

The Serbians have a proverb and prayer, "God protect us from the Sultan's affection and the Kaiser's protection," said the Rev. Dr. Nicholas Velimirovitch, writer and preacher, of Belgrade, speaking at the Grafton Gallery recently on "Serbian Ideals." Serbia's three great ideals, he said, were spirituality, constructiveness, and pan-humanity. This was a war of ideals, and the Serbs felt that they were sure to be victorious because their ideals were lofty and right, and the German ideals of materialism and might were wrong.

The attention of officers proceeding to India or Mesopotamia is directed to an Army Order which suspends from January 1 for the duration of the war the existing practice of transferring officers into the payment of the Indian authorities from the date of their embarkation. Officers on receiving orders to prepare for embarkation for India or Mesopotamia should at once communicate with their Army agents in order that the necessary arrangements may be made for the provision of funds during the voyage and at intermediate ports. Failure to do so, it is pointed out, may involve them in serious inconvenience on the voyage, as advances of pay will no longer be obtainable from command paymasters at intermediate ports.

Several new works by Ivan Mestrovitch have just arrived in London and been added to the sculptures and paintings at the exhibition of Serbo-Croat art at the Grafton Galleries. The exhibition will remain open until the 9th inst. inclusive.

According to the *Frankfurter Zeitung*, an import syndicate is being organised in Berlin for the purpose of bringing breadstuffs from Russia to Germany. The Government will have a half interest in the undertaking. Similar syndicates, it is said, will be organised in Austria-Hungary, Bulgaria, and Turkey.

The National Congress met here to-day, says Reuter's Calcutta correspondent in a message dated December 26, 4,000 delegates from all provinces attending. Cheers greeted the arrival of the principal Indian leaders, Mrs. Besant, Sir Rabindranath Tagore, Mr. Surendranath Bannerjee, and Mr. Tilak. Mrs. Besant delivered the presidential address. Mrs. Besant demanded immediate legislation by the British Parliament guaranteeing complete self-government for India on Australian lines, with a preliminary stage not lasting more than ten years, during which the Government would hold a veto and the electorate would have the power of the purse, as well as a substantial majority in the Supreme Council and the Provincial Legislative Councils, and also half all the Executive Councillorships.

APPOINTMENTS, PROMOTIONS, ETC.

El Miralai W. D. Kenny Bey, on vacating his appointment as Aide-de-Camp to his Highness the Sultan, has been seconded for Special Service.

Captain H. K. Brooke, South Lancashire Regiment, and Captain A. J. Patron, Bedfordshire Regiment, have been attached to the Egyptian Army, as Special Service Officers with the temporary rank of Bimbashis and attached to the Sudanese for duty.

The following British officers have been attached to the Egyptian Army with the temporary rank of Bimbashi:—Major T. Wilson-Lynch, Cavalry; Captain A. M. McKee, Royal Sussex Regiment; Captain H. Genge-Andrews, Gloucestershire Regiment; Lieutenant N. W. Eastwood, Hussars; and Lieutenant B. Grew, Northumberland Fusiliers.

The Order of the Nile has been conferred on the following officers by H.H. the Sultan of Egypt:—Commander.—Cdr. (Act. Cap.), Arthur G. Warren, R.N.; Lieut.-Cdr. (Act. Cdr.) Thomas J. Linberry, R.N. Officer.—Cdr. Walter P. Koe, R.N.; Lieut.-Cdr. Bolton M. Eyres-Monsell, M.P., R.N.

OBITUARY.

The death has occurred at Evian of the Princess Bassaraba de Brancovan. She was Mademoiselle Eugenie Antoniadis, and she married, in 1909, the Prince de Brancovan, a Roumanian nobleman.

Lieutenant E. J. Woodhouse, I.A.R.O., who died on December 18 from wounds received on December 1, was Principal of Sabour Agricultural College and Economic Botanist to the Government of Bihar and Orissa.

The death is reported from Florence of Mr. William Neville Sturt, formerly of the India Office, aged 74 years. Mr. Sturt was Private Secretary to the Parliamentary Under Secretary of State in 1863-4, and from 1868 till 1877, when he was promoted to be senior clerk in the Revenue Department. In 1896 he was appointed Assistant Secretary in the Judicial and Public Department.

Mr. George Clifford Whitworth, I.C.S., retired, has died at Grasse, Alpes Maritimes, France, aged 71 years. He was appointed in 1893-4 Acting-Secretary in the Political Department, and was confirmed in that appointment in 1898. Subsequently he was Judge and Legal Remembrancer, an additional member of the Viceroy's Legislative Council, and finally Judge and Sessions Judge.

The Dowager Lady Lawrence, C.I., widow of the first Lord Lawrence, Viceroy of India from 1864 to 1869, died on Friday, at the Hayes, Kenley, in her 98th year. She was Miss Harriette Catherine Hamilton, and was married in 1841. Her first experience of the vicissitudes of an Indian career was during her wedding tour, when news reached the Lawrences at Naples of the destruction of the British Army in Afghanistan. When the Mutiny broke out the Lawrences were on their way to Murree, and Sir John Lawrence, then Lieutenant-Governor of the Punjab, proceeded to Lahore, while his wife went into the hills, where her house became a refuge for families seeking a safe place during the dangers of that time. In 1858 Lady Lawrence returned to England; her husband followed in 1859, and for the next few years was occupied with the work of the India Council, to which he had been appointed. Then, on the death of Lord Elgin, Sir John Lawrence was appointed Viceroy, and sailed for India in 1863, and was joined by Lady Lawrence the following year. On their return to England Lawrence was created a peer, and was appointed Chairman of the newly created School Board, an appointment which failing health eventually compelled him to relinquish. He died in 1879, and with his death Lady Lawrence's active life ended. Lady Lawrence, who retained all her faculties to the last, is survived by five daughters and two sons, the Hon. Charles Lawrence, deputy-chairman of the London and North-Western Railway, and Major-General the Hon. Sir H. A. Lawrence, K.C.B., who is on active service abroad.

FRIDAY, JANUARY 4, 1918.

THE NEAR EAST IN 1917.

It must needs be with mixed feelings that the course of events in the Near East and Middle East during the twelve months now ended is passed in review. The year has been one of light and shade, and at the close of it the incubus of uncertainty weighing upon this part of the world from the North forbids any immediate accession of optimism. If it were possible to dissociate the Asiatic battlefields from the other theatres of war, there would indeed be good reason for satisfaction. But the Allies' effort is one and indivisible; their aims in the East are based on the same principles as those for which they are fighting in the West, and an examination of the progress made in the one is of little worth unless it be brought into its true perspective with reference to the other.

With this *caveat*, however, it may not be unprofitable to try to strike a balance-sheet for the East. By no means the least valuable asset is the marked growth in the interest now displayed by the British public in the affairs of South-Eastern Europe and the regions beyond, and its recognition of the close association existing between these countries and the fortunes of the British Empire—elements in the cause which it has been the province of THE NEAR EAST to promote during the last seven years. Quite apart from the glib assurance with which a Labour Conference is prepared to settle in a few paragraphs the affairs of the nations concerned, there is more substantial evidence that the paramount importance of all that is involved in the Near Eastern Question is at last being more generally appreciated in Great Britain. Since the earliest stages of the struggle regret has been expressed in these pages that the Allies seemed unable to bring the Balkan Peninsula into the war picture, and always insisted upon treating it as a minor excrescence on the business in hand. France was the first of the Allies to press its military significance, and to her belongs the credit for the move that prevented Salonika from becoming the Zeebrugge of the Ægean. But the Balkans remained politically, as well as from a military point of view, a secondary theatre, and at the beginning of 1917 we had occasion to point out the mischief that was being caused in the ranks of the Allies by their failure to come to a clear understanding in regard to their war aims in Near Eastern Europe. Towards the end of July this reproach was removed by the summoning of an Allied Conference to deal primarily with Balkan affairs. The concrete results of that exchange of views have not been officially published, but enough is known from subsequent developments to confirm the belief that a notable advance was made in the direction of removing misunderstandings and of creating the proper atmosphere in the Grand Alliance for a just and permanent settlement of the Balkans. In this connection, moreover, can be cited the definite pledges given by Allied statesmen to the various countries whose future had previously been the subject of somewhat vague assurances. The Eastern problem as a whole is now discussed with knowledge and some measure of conviction. It is no longer necessary to talk with bated breath of the future of Mesopotamia. What will happen to this region, said the British Prime Minister in Glasgow at the end of June, must be left to the Peace Congress when it meets; but, he added, "there is one thing that will never happen to it—it will never be restored to the blasting tyranny of the Turk."

The future historian will, no doubt, be exercised to discover the extent to which this hardening of the Allies' resolve and their fuller appreciation of the issues of the war are to be attributed to the confidence inspired by the entry into the conflict of the United States. Certain it is that the vision of the Grand Alliance has been clarified, its purpose rendered more complete since that event. The one matter for regret is that the change did not take effect in time to bear fruit in Petrograd during the first success of the Russian revolution. If the Allies had been more urgent with their advice when the sober sense of the revolution was trying to find itself amid its strange surroundings, there might have been less opportunity for Germany's dupes or hirelings to take control of the situation. By the time America and the Allies found occasion to speak the mischief was too far gone. Lenin and Trotsky, mouthing the word democracy, with the spirit of which every act of theirs has been in conflict, have thrown the Pact of London among the scraps of paper already accumulated by German militarism, and have started to make a separate peace with the Central Powers. It is too soon to gauge the full effect of this desertion of the Allied cause, for the relief that it has brought to Germany has not yet found its maximum expression in military operations in other theatres. Italy has been attacked, and for some time was sorely pressed, but her own valour and the timely assistance of France and Great Britain checked the invasion. Russia's defection has set free more German troops than have been sent against Italy, and it remains to be seen whether these suffice for an offensive in the Balkans, for the benefit of the unfortunate Turks, or whether they will be used in the West. Ultimately the support of the United States will be found to have provided compensation for Russia's withdrawal; but for the moment their resources in material and man-power are unable to make themselves felt to any great extent in Europe, least of all in the south-east. It may be noted in passing that President Wilson has refused to declare war against Bulgaria and Turkey: and he has not hesitated to allow the reason to be made known. Conditions in these countries, it is held, are ripening for a rupture in the Central Alliance, and if such an event should take place the United States Government may be in a position to render useful services to its Allies by avoiding the formal status of an enemy country. It says something for President Wilson's diagnosis of the situation in Bulgaria and Turkey that neither so far has taken up the unmistakable challenge by declaring war on the United States.

In order to deal with all the shade of the last year before turning to the light, we may note that the year opened with Wallachia over-run by the Austro-German forces, and the Roumanians preparing to make a stand on the Sereth. That line has since been held against all that von Mackensen could do with a view to breaking it. Behind that splendid defence the Roumanians have set their house in order in a way for which all concerned have not yet received their full meed of praise. The army has been reorganised, thanks to the inherent mettle of the troops and to the brilliant work of General de Berthelot and the other officers of the French mission; the nation has been unified as it has never been before as a result of the removal of various political anomalies. When the real test came with the collapse of Russia, both army and nation, nobly led by the Royal House, proved equal to the occasion; although an armistice became inevitable, they have stood their ground, and their example promises to provide a rallying point for the regeneration of Russia, if that consummation is to be achieved.

With Roumania driven back to Moldavia, any feasible goal for the Salonika army was removed, apart from the military difficulties attending an advance in Macedonia, and the uncertainty regarding the attitude of King Constantine in General Sarrail's rear. Subsequent developments showed that the misgivings entertained in regard to the Greek Court were wholly justified. Both King and Queen greedily availed themselves of all the rope that was given them: but it was not until they had been expelled from Greece on June 11, and M. Venizelos's Government was able to disclose their methods and those of the clique whom German gold had bound to them, that the full extent of their villainies was revealed. Whatever may have been the contributory causes, the heterogeneous army of the Allies based on Salonika has registered only slight modifications in the front it holds

Digitized by Google

during the past year. The enemy on his part has been no less quiescent.

More cause for satisfaction in a review of 1917 is to be found in the military operations in Mesopotamia and Palestine. The two expeditions moved forward at about the same time, but, whereas March 11 found Sir Stanley Maude in Baghdad, his colleague, Sir Archibald Murray, a fortnight later experienced a definite check at Gaza. The attack was renewed on April 17; it was again unsuccessful, and the Palestine Expeditionary Force was compelled to abandon any further attempt to advance until it had been adequately reinforced. General Allenby succeeded Sir Archibald Murray as Commander-in-Chief, and at the end of October opened a fresh campaign, which has rapidly taken him to Jerusalem and beyond. In the meantime General Maude had strengthened his position at Baghdad, and the summer was allowed to pass without any further operations on a large scale. In due course, however, the British struck again. A Turkish force at Ramadieh, on the Euphrates, was defeated and compelled to surrender; on November 5 another section of the Turkish army was driven out of Tekrit. Immediately after this success Sir Stanley Maude fell a victim to cholera. He had made a great reputation in a short space of time, and his loss was deeply felt by the Army which he had led to victory and by the whole Empire.

The effect of the British successes in Mesopotamia and Palestine can, perhaps, best be gauged from the fact that six months after the event Turkish soldiers have been taken prisoners who were ignorant of the capture of Baghdad. If the Ottoman authorities were at such pains to prevent their troops in Palestine from learning of what had happened in Mesopotamia, it is evident that they realised that the news was calculated to make a deep impression upon them. The fall of Jerusalem, we may suppose, would be regarded as an even clearer indication of the waning power of Turkey. In these circumstances it is not difficult to imagine that the situation in Turkey has caused even the most ardent supporters of the German alliance to regret the decision of 1914. The Committee of Union and Progress, however, are probably too far involved to draw back now. If they are allowed to have their own way, they will prefer to keep the country fighting up to the last ditch; such a course will at least insure a longer period for German payments. Whether Germany will decide that she cannot allow the Turks to accept their defeats with Oriental fatalism remains to be seen. She has the opportunity of strengthening the Ottoman forces by drafts from the Russian front, provided arrangements can be made in time for their transport. It would be even more in keeping with her methods if she sought to inaugurate a "peace drive" among the Arabs by offering them elaborate concessions.

Little space remains for reference to the other countries that fall within the scope of this Review. Egypt, having thrown the tide of war back from her frontiers, has been able to devote herself undisturbed to economic development, and although she has been drawn within the vortex of the world-shortage of certain commodities, her general prosperity has been most marked. The country experienced a severe loss in the death of Sultan Hussein, who has been succeeded by his younger brother, Sultan Fuad. Persian history during the past year has been written only in faint characters. German intrigue had been to a large extent eliminated, when events in Russia again opened the door in North Persia to it under a fresh disguise. In the first flush of the revolution the Persians—or at least the Nationalist party—imagined that the words Russian and British could be henceforth banished from their political vocabulary. Financial considerations showed that independence in practice presented unexpected difficulties, and in the meantime the situation in Azerbaijan has been complicated by cross-currents which would tend to draw the province now towards Turkey and now towards Russia. In the South, in the absence of reports to the contrary, we may imagine that order has been satisfactorily maintained by means of General Sykes' new constabulary.

For India the year 1917 may well be regarded as having inaugurated a new epoch. The movement for the organic unity of the Empire could not leave her excluded, and a notable advance in India's partnership in the Empire was recorded when her delegates were invited to attend the Imperial Conference in the spring, and in association with the Secretary of State were present at meetings of the Imperial War Cabinet. In August Mr. Montagu, who had succeeded Mr. Austen Chamberlain at the India Office when the latter felt compelled to resign on the publication of the Report of the Mesopotamia Commission, made the formal announcement of the Government's intention that India should eventually govern herself, and that her progress towards the ultimate goal is to be gradual, the time and measure of each advance being determined by the responsible Governments. Before the end of the year Mr. Montagu had arrived in India to acquaint himself at first hand with Indian conditions in consultation with the Viceroy; and as a result of his investigations a detailed scheme for the first steps in the country's political advancement will be submitted to the Government within a few months' time.

PRISON PROBLEMS IN EGYPT.

By COLES PASHA.

I do not know whether questions relating to prison administration are of sufficient importance to warrant my asking for space in THE NEAR EAST, but, judging from the applications I had annually from tourists in Egypt to visit one or other of the establishments under my control, there must be a considerable number of persons in England who interest themselves in prison problems. Perhaps, therefore, the Editor will be indulgent and grant me a few columns to discuss my experiences during the sixteen years (1897 to 1914) I held the post of Inspector-General of Prisons in Egypt.

Prior to my appointment to the Prisons Department I had served for many years in the police both in India and Egypt, so my association with what I may term the seamy side of life was varied. I trust that this experience enabled me to deal successfully with the many prison questions which arose. I hope, too, that the precedents created in Egypt may in the future be of use to other administrators in the new countries it will assuredly fall to England's lot to develop after the war, even if the prison expert in England finds little to interest him, the conditions in the East being so different from those of the West.

It was with no small misgiving that I accepted the post offered to me by the late Lord Cromer, as for years I had watched my predecessor in office struggling with what appeared an impossible task. In the early days in Egypt there was no money to spare for such luxuries as prisons or the maintenance of prisoners. The financial authorities steadily refused all demands for building, and only granted a subsistence allowance to such prisoners as were starving and unable to provide for themselves. The state of the prisons can, therefore, be better imagined than described, as, of course, without funds very little could be accomplished in the way of prison reform. My predecessor had simply carried on as best he could.

I vividly remember my first interview with the late Sir E. Palmer, who was then Financial Adviser, and his

By Appointment to

KING GEORGE.

KING OF SPAIN.
Digitized by Google

face when he was told that half a million for building would be required and £150,000 a year over and above the meagre allotment that had hitherto been considered the Prison Department's share of the grants which could be spared for administration generally.

For the first years of my administration I fear that I got myself thoroughly disliked by the authorities as an insatiable beggar, and latterly by my brother heads of departments as the *enfant gâté* of the service, who was getting more than his share of the spoils. As a matter of fact, during my sixteen years' administration, by some means or other, I persuaded the Treasury to grant funds for building amounting to half a million, and my last Budget for maintenance was within a few hundreds of the sum I originally estimated I should require.

The design of a standard prison was the first and possibly the most important problem I had to solve, and I can assure my readers it cost me many sleepless nights to think out a type of building suitable for a rainless country where heat and ventilation play a much more important part than in England. I might have taken the old-fashioned single-storey buildings of India, with which I was acquainted, as my model; but I was prejudiced against the large association wards for many reasons. On the other hand, to construct prisons entirely cellular was out of the question on account of the cost, so eventually I decided on the English type as a standard; but the ground and first floors only were cellular, the upper floors consisting of small association wards capable of being made cellular later, should the prison population drop, or the accommodation be increased by adding extra "blocks." The ordinary English roof over the central hall was replaced by a heavy gridiron, thus providing for plenty of ventilation, but assuring security. The lavatories, too, were not on the English pattern, being cut off from the block with cross ventilation. The offices were in a separate block with hospital above; similarly kitchens, baths, and stores were separate buildings. The central workshop was of a special pattern with such complete ventilation that the prisoners who worked there in association were practically in the open air. This standard type has been followed in all the prisons throughout the country, and I am sure "Locandaat Coles" (Cole's Hotels!) will be associated with my name long after I have been forgotten. The only fault I have ever heard found with these new prisons is that they are too luxurious, as the name some wag has given them implies. In this connection I may repeat a story told me by an Egyptian Governor, who, like some others, confounded extreme cleanliness with luxury, and argued that the old insanitary buildings full of vermin and subject to periodical epidemics of typhus amongst the half-starved prisoners were more deterrent and therefore more suitable as prisons! It is useless to argue with people who hold such views. But to return to the Governor's story, he stated that he overheard a conversation between two peasants, one of whom said to the other, "Come, let us quarrel together in order that we may go and live in this palace" (a new prison). The irony of the story comes now. When next I saw my friend the Governor he was himself a prisoner, undergoing a sentence of a year's imprisonment for fraud as a public servant. It was reported to me by the prison officials that the ex-Governor found the conditions *so severe* that he had not slept for a week, and did nothing but cry! I did not remind him of our conversation, and merely asked if he had any complaints. I must admit that the Governor prisoner had every reason to complain, as a mat and an asphalt floor were all the bedding he enjoyed. This was one of the difficulties in connection with prison administration in Egypt. The well-to-do Egyptian is a European in many ways, whereas the peasants sleep on mats in their mud hovels. One could not provide the ordinary prisoner with bedding, yet sleeping without bedding enhanced the punishment very much to the well-to-do. The difficulty was met to a certain extent by providing bedding (on payment) to those sentenced to simple imprisonment, much the same as allowed to a first-class misdemeanant in England. But when the sentence was "with labour," or as in the case of the ex-Governor, no difference could be made. What troubled me, too, was that I honestly believed my friend to be innocent, but I could do nothing, as the sentence had been duly confirmed on appeal. If the Governor was innocent, and I still hope he was, it was a terribly severe sentence, as in addition to imprisonment he lost a pension which many years' service entitled him to. When he jokingly told me the story of the peasants—how little he imagined the sequel!

I cannot refrain from telling another very exceptional experience of a somewhat similar kind. A well-known society man, who had been in trouble in England, obtained an order to visit an Egyptian prison, being interested as "an expert," as he described himself. The visit was allowed, and resulted in a very complimentary record, "the administration in some respects being an improvement on the English system," or words to that effect. A year or so after I recognised the same gentleman in the shoemakers' shop at Wormwood Scrubbs, where he was again doing time. The recognition was mutual, and of the two I fancy I felt the position the most, although, unlike my friend the Egyptian Governor, on this occasion there was no question of the punishment of an innocent man. I think the story teaches us that imprisonment, whether it be in an English jail or so-called Palace in Egypt, is often of little use as a deterrent.

Prisons are, however, not built in a few weeks or months, and for the first half-dozen years of my administration I was kept fully employed endeavouring to relieve the overcrowded pest houses (epidemics of gaol fever and typhus were constantly occurring), and finding employment for the ever-increasing number of prisoners.

The Indian Standing Prison Camp for extra mural labour on public works was a useful precedent to follow, but the difficulty was that most of the public works in Egypt were in connection with cutting and cleaning canals, which necessitated a frequent change of camp. Security was, therefore, a much more difficult problem than in India.

To erect many badly designed prisons may mean a more lasting record of incompetence, but the escape of all the prisoners from a labour camp would probably be followed by the immediate removal of the head of the department, so personally I was, if anything, more interested in the camps than in the buildings! But I decided to take the risk rather than die of typhus, which sooner or later I felt would be my fate, if I continued to inspect the so-called prisons in their insanitary overcrowded condition.

The handcuffs used in removing batches of prisoners in England helped me to solve the security problem. I had thousands of anklets made of the same pattern, and at night all the prisoners slept in tents linked by one leg in batches of fifty, with two very stout padlocks at either end of the chain, and, of course, sentries.

Labour camps were very soon established in each province, and the system continued for years; in fact, till the new accommodation was provided. I do not pretend that the discipline was ideal; in fact, transfer to a camp for labour was too popular; but the labour paid for by contractors sufficed not only for the prisoners' subsistence, but also to pay for the extra warders especially enlisted to guard them! What would trade unionists say to this in England?

The experience I thus gained helped me considerably later when the late Lord Kitchener returned to Egypt as his Majesty's representative. His lordship was not at all impressed with my new buildings and up-to-date administration (from a scientific prison reformer's point of view) which I had developed before his arrival; in fact, he evidently agreed with the Egyptian Governor mentioned above. One day I was sent for, and after being talked to on the necessity of getting hard labour (not industrial labour) out of prisoners, I was told that a macadamised road for motor traffic, including bridges, from Cairo to Helwan must be completed within six months, the distance being about eighteen miles. I think Lord Kitchener chuckled at what he thought an impossible task, but the road was finished before the time prescribed. I am afraid, however, to mention the number

Digitized by Google

of prisoners I collected from all over the country to complete the task.

I then thought it was my turn to talk to his lordship about the unnecessary trouble and expense the department had been caused for a work of very doubtful utility. Lord Kitchener only laughed, and said that, having shown what could be done, I had better start on another road from Cairo to Alexandria forthwith!

I tell the story as it is very characteristic, and I think accounts for thousands being subscribed for a memorial to Lord Kitchener, whilst hundreds are with difficulty collected for a tablet to Lord Cromer in Westminster Abbey. But if Lord Kitchener's dominant character appealed more to the public, Lord Cromer's greater administrative ability cannot, I think, be denied by anyone who has served under these two very exceptional men.

THE PRESS ON THE NEAR EAST

The Pan-Turanian Movement.

In his analysis of the Pan-Turanian movement the writer of the article in the *Round Table* on "Turkey, Russia, and Islam"—extracts from which have appeared in previous issues of THE NEAR EAST—discusses in turn the rise of Turkish nationalism, the policy of the Committee of Union and Progress, Turkish policy in Persia and Afghanistan, and the Mohammedans and Turks in Russia. The prospects of Turkish Irredentism hinge largely on the political attitude of the Russian Mohammedans, and it is in this respect that the future of Russia is of such special importance, quite apart from its military bearing on the war:—

In the days before the war Russia could scarcely be regarded as a very promising field for Pan-Islamic or Pan-Turanian propaganda. In general, the Russian Mohammedans had been loyal, conservative, and somewhat narrow in their political outlook. The "Russian Mohammedan Party" only dates from 1905, and had no more than nine representatives in the last Duma. Nevertheless, the Pan-Islamic propaganda, started by Abdul Hamid and carried on by the Committee of Union and Progress, was not wholly unsuccessful among the Russian Mohammedans, mainly owing to the fact that pilgrims to the Hejaz passed through the Straits, and their visits to Constantinople were exploited by the Ottoman Government. But the war showed how little headway the Pan-Islamic movement had made, inasmuch as only an insignificant Mohammedan tribe of Georgian nationality, the Adshars, joined the Turks when they invaded the Batum district for a moment in the winter of 1914-15.

The whole situation has been transformed by the Russian revolution, and from the eventual outcome the cause of Turkish aggrandisement stands to gain or to lose far more than it could have gained or lost from the war alone. In Russia in 1917, as in Turkey in 1908, the merging of old divisions in a universal sentiment of brotherhood was a transient phase. The various groupings began to think more of their own national or sectional freedom than of the freedom of all Russia, and the Russian Mohammedans, like other bodies, recognised the need of looking after themselves. To that end the first essential was organisation, and a series of conferences were arranged without delay. The Pan-Caucasian Mohammedan Congress met at Baku on April 28, the Mohammedan Women's Conference at Orenburg during the same month, the All-Russian Mohammedan Congress at Moscow on May 14, and the Mohammedan Military Congress at Kazan at the beginning of August. To consolidate and carry on the work of organisation the Moscow Congress appointed an All-Russian Mohammedan Council. It is too early yet to prophesy the failure or success of these efforts; but political organisation is a more difficult task for a group so widespread and so diverse as the Mohammedans than for any other group in Russia.*

A second and no less important tendency has shown itself among the Russian Mohammedans since the Revolution. Together with a quickened sense of internal unity has developed a warmer sympathy with Mohammedans abroad.

The fact that the Mohammedans throughout the world have been falling into political subjection more and more rapidly during the last hundred years was always the chief weapon in the armoury of the Pan-Islamic propagandists. The French protectorate over Morocco and the Anglo-Russian agreement in Persia left Turkey the one really independent Mohammedan State; and, as the fortunes of the war developed, Turkey itself seemed to be threatened with dismemberment. But the Russian Revolution seemed in two respects to mean the turning of the tide. In the first place it gave to the Mohammedans in Russia a potential political equality with their fellow-citizens such as they had never before and nowhere else enjoyed except in a Mohammedan State. And, secondly, the Revolution was regarded as a challenge to "imperialism" all the world over. By contrast with the ideals of the new Russia the precepts and practices of other States containing dependent and particularly Mohammedan peoples were conceived as more or less despotic and corrupt. Thus the Provisional Government's renunciation of the old Russian ambition to annex Constantinople and of the old Russian policy of interference in the internal affairs of Persia was greeted by the Russian Mohammedans as the inauguration of a new era of political freedom for Islam.

The development of these ideas may be illustrated by a few significant examples.

The Moscow Conference in May, 1917, defined the formula of "the self-determination of nationalities" as applying to Europe, Asia, and Africa, and demanded that "all treaties founded on the partition or occupation of any territory in Europe, Asia, or Africa should be cancelled at once."

In the second week of July the Executive Committee of the All-Russian Mohammedan Council published in the Russian Press an open letter to Mr. Tereschenko, protesting against the proclamation by Italy of her protectorate over Albania:

> The fate of Albania is a new illustration of European robbery in the history of imperialism, and again the victim is a mainly Mohammedan people. . . .
>
> Your dubious and indecisive attitude towards the Albanian problem rouses suspicion and doubt among the Mohammedans of Russia, particularly in consequence of those bitter experiences of centuries past during which the Mohammedans all the world over have learnt the meaning of what is called European justice. . . .

Declarations of this nature may have little practical weight, but they reveal the opinions and aspirations of a large body of Russian Mohammedans.

These developments in Russia have doubtless raised the expectations of the exponents of Ottoman aggrandisement. The "liberation" of the Turkish-speaking peoples of Russia has been the frankly confessed ambition of the Pan-Turanian school. The "break-up" of Russia is the pre-supposition of Tekin Alp's irredentist programme; but, writing before the Russian Revolution, he only contemplates its achievement as the result of action from without by the armies of Turkey and the Central Powers. It would seem now to depend mainly on the internal development of Russia whether or not the political reunion of the scattered branches of the Turkish race shall emerge from the realm of dreams and become—what it is not at present—a practical possibility.

The potentialities of the future are different in the different groups; but the determining factor may possibly be the attitude of the Tatars of Kazan. The other Turkish-speaking groups in Russia incline at present to follow their lead. The Kazan Tatars are almost certain to declare for the programme of national autonomy within a federal Russian Republic; for if Russia is successfully reorganised on this basis, they have a brilliant future before them as the possible leaders of the Turkish-speaking element in a democratic State containing a considerable majority of the Turkish-speaking populations of the world.

In this event Ottoman Irredentism will collapse. The rallying point of Pan-Turanianism will be not Constantinople but Kazan, and so far from the Anatolian Turks attracting the Tatars into the Ottoman Empire, the Tatars of Russia will attract the Anatolian Turks.

This very desirable solution is chiefly endangered by the possibility of a Russian reaction. A movement now in Russia for centralised military government and the repression of nationalities, leading in all probability to civil war, might produce among the nationalities a *sauve qui peut*, in which the Tatars would be carried away. They would then turn for support to the Ottoman Empire, and Ottoman Irredentism might gain the day, with disastrous results to the civilised world.

The Tatars of the Crimea and Western Siberia will follow the lead of Kazan. The Tatars of the Caucasus are also under the influence of Kazan, but, on the other hand, they have been under Russian government less than a century; they live close to the Ottoman frontier; they have adopted Ottoman-Turkish as their literary (*i.e.*, newspaper) language; and they have a strong interest in common with the Anatolian Turks in their fear and hatred of the Armenians. In 1905 there was a racial war between the Tatars and Armenians in the Caucasus, and on the whole the Armenians had the best of it.

* E.g., the delegates to the Congress at Moscow were obliged to conduct their proceedings in the Russian language for want of any common medium of their own.

Since the Russian Revolution the idea of national autonomy for the Caucasus and the occupied districts of Ottoman Armenia has been revived, but this time on the basis of federalism under Russia instead of Turkey. The Tatars of the Caucasus are backward and paralysed by their sectarian division into Shias and Sunnis. If there is a Government in Russia liberal enough to grant national autonomy, and strong enough to do justice between the various national claims, they will remain loyal to Russia; and in that case it may be predicted that Baku will in the end supersede Kazan as a political centre for the Turkish-speaking populations of Russia, and perhaps ultimately for all the Turks in the world. Kazan leads at present in virtue of its old culture, but Baku, with its oilfields, has a greater industrial future; and while Kazan is on the periphery of the Turkish world, Baku lies at its middle point. Round it in a circle and in easy communication with it are Kazan and the Crimea, Anatolia and Azerbaijan, and, linked by the Trans-Caspian railway, the Central Asiatic *bloc*. At the moment, too, the Baku Tatars seem to have produced stronger personalities among their leaders than the Tatars of Kazan. But the prospects of Baku depend upon the achievement of Russian federalism. If there is chaos or repression in Russia, the Tatars of the Caucasus will certainly turn to the Ottoman Empire. They could easily be incorporated in it; for they are almost in touch geographically with the Anatolian Turks, have accepted their literary language, and have not yet out-distanced them in culture. In this event they would vegetate as an outlying province of the Ottoman Empire, and the brilliant prospects of economic and cultural development at Baku would be abruptly overshadowed and fade steadily away.

What, lastly, are the prospects in Central Asia? The news from that south-eastern corner of the Russian Empire since the Revolution is scanty but bad. If Russia were to fall to pieces Central Asia would be the first fragment to break away. It is part of the Orient, far more aloof in spirit from Western civilisation than the Mohammedan and Turkish-speaking districts of European Russia. Cut the Orenburg-Tashkend and Trans-Caspian railways, and it is isolated from Russia by a difficult belt of steppe and desert. In the nineteenth century it took the Tsardom twenty years to traverse this belt and conquer the provinces beyond it. If in a moment of chaos they were lost, Russia would need to regain all her strength and solidity before she could attempt to recover them.

It is in Central Asia, then, that the uncertainties of Russia's fate open up the widest opportunities for Ottoman Irredentism. The district fits in geographically with those Ottoman designs in Persia and Afghanistan to which reference was made in an earlier part of this article. And Pan-Turanianism and Pan-Islamism do not there conflict with each other as in Persia and Afghanistan. The whole population of Russian Central Asia is Turkish: the whole population is Sunni. If the authority of the Russian Government were to disappear in Central Asia, there can be little doubt that Ottoman diplomacy would strive to create there a powerful Turkish-Islamic State, to be added as a fourth member to the projected alliance of Turkey, Persia and Afghanistan. If, on the other hand, Russia surmounts her present difficulties, preserves her unity, and retains those distant provinces within the Russian Commonwealth, then their religious and national sentiment will gravitate towards Baku and Kazan and away from Constantinople.

Summing up his points, the writer concludes:—

The issue depends chiefly on Russia, for the great experiment she is making is bound to affect the destinies of the world. If she transforms herself from an autocratic empire into a commonwealth of nations, if she secures both liberty and unity for all who live within her borders, she will have solved a problem that confronts us all. And just as in that western fringe of Russia which absorbs so much of our attention a solution in this sense would have a beneficent influence on the Balkans and Central Europe, so, in the Russian hinterland towards the east, the reconciliation of the Turkish-speaking and other Mohammedan populations would inaugurate a better future for Turkey, Persia, Afghanistan, and the whole of the Middle East. The British Commonwealth, as a society with a vast Mohammedan membership, would welcome this improvement in the condition of so important a part of the Islamic world, and we should also gain by it as regards our political interests as a State. What better neighbour could we wish for India than a democratic Russian Federation? Or what happier substitute could be found for the ancient rivalry of Russia and Britain in Asia than that we should advance together along the same liberal road?

But if Russia were to break down the outlook would be grave. Unity and reconciliation would break down with her; vast regions between the Indian frontier and Europe would return to chaos; and the initiative there would pass into Ottoman hands. Wielding the weapons of Pan-Turanianism and Pan-Islamism, according to expediency, the Committee of Union and Progress would set religion against religion and race against race. We know their work, for we have seen it during the war in the economic ruin of the Ottoman Empire and the campaign of extermination waged against its Armenian, Greek and Arab inhabitants. With Germany to back them, they would extend their operations into the Russian hinterland and the Middle East, and the British Commonwealth would be left single-handed to stem the devastating tide of their aggression.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

An indication of the variety of openings that will present themselves in Morocco for British exporters after the war is provided by some further notes on trade in the French zone by Mr. Rabino, Acting British Consul at Casablanca. Among the articles for which an opening exists he instances chemists' supplies and aniline dyes, trade in which was formerly almost a German monopoly. Then the establishment of a tannery at Rabat has created a marked demand for tanning materials, which he thinks is likely to increase, owing to the prospect of the erection of further factories. A line in which there is probably even greater scope is electrical plant, the use of electricity having only lately been introduced in Morocco.

***

Then there is an opening for such articles as bedsteads, and in this case Mr. Rabino's remark must be noted that Moroccan requirements are for bedsteads four feet wide and of an ornamental character, with heavy brass mountings. In this connection his suggestion that there is an admirable opportunity for opening a furniture emporium at Casablanca is worth the attention of British merchants. As regards glassware, for which there is a good demand, and the trade in which was formerly in Austrian and German hands, he gives some interesting details as to the nature of wares required, and says that the prospects are such that a special endeavour should be made to cultivate this market.

***

I am not surprised to learn that the new issue of the Anglo-Persian Oil Company's preference shares was three or four times over-subscribed. It is true that there is nothing of the speculative element about the shares, but they promise a yield of 7½ per cent. on the price of issue, and this factor, combined with the position of the company, which doubtless appealed to many investors who, while desiring a satisfactory return, also like to feel that their money is to some extent rendering national service, sufficiently explains the eagerness to secure the shares.

***

I see that the Committee on Banking of the British Empire Producers' Organisation has made the interesting recommendation that a State-guaranteed bank should be established for the financing of industry. The idea is to afford readier financial support on sound principles throughout the Empire for producers and manufacturers, and precautions would be taken to allow no opening for Germany to obtain the control of any group of industry. Undoubtedly some departure of this kind is needed if Imperial trade is to develop along lines which will ultimately make the Empire self-sufficient, and I trust that this suggestion will lead to some practical step in this direction.

***

There is much to be said for the view expressed by M. Papanicola in a letter in last week's issue of THE NEAR EAST that a change is desirable in the nomenclature of Turkish cigarettes. The tobacco that is used to make these cigarettes is principally grown outside Turkish territory, and it seems absurd to continue the use of a description which is only misleading. The change might well have been made after the first Balkan war, and no doubt would have been made but for the fact that Turkey had not then succeeded in setting the greater part of the world against her, and it was probably feared that such a step would have an adverse effect on the sale of the cigarettes. This prospect no longer holds good, and the conditions seem highly propitious for a change to Greek cigarettes. That description would be accurate, euphonious, and a graceful tribute to one of the Allies, and what more could be desired?

***

Despite the difficulties of obtaining new plant from abroad, I see from the recent report of the Director of the Department of Industries at Cawnpore that some very useful progress has been made in the establishment of new industries in the United Provinces in 1916-17. A tannin extract factory is now working, and two more extract factories have been started, while two factories are making leather buttons. A bone mill is now being operated in Agra with, it is stated, very satisfactory results, while a starch factory is being started at Farrukhabad. Among other ventures, the manufacture of carboys for acids has been taken up at Allahabad, and has proved highly satisfactory; while a process for refining tallow has been worked out in the laboratory, and a plant for doing this commercially is being erected privately.

***

Industrial conditions in general in the United Provinces appear from the report to be eminently satisfactory. The oil pressing industry, which is well established, is regarded as holding forth excellent prospects of development, and as soon as possible works are to be extended and new mills established. It is believed that the market for oil-cake in India will absorb almost all the output of the United Provinces for years to come. As regards the research side of the department it is pointed out that widespread attention has been attracted by notes issued from time to time on the employment of indigenous dyestuffs, and inquiries have been received from all parts of India. Carpet makers in particular have reaped advantage from the indigenous dyes placed at their disposal, and certain colours for cotton have also been brought into commercial use. Progress has been made in the manufacture of glassware and bangles. As regards the former commodity proposals are being considered for the introduction of bottle-blowing machines, while the bangle-making industry is, it is stated, turning out bangles of greatly improved quality to replace those which formerly came from Austria.

***

The Sudan trade returns for the ten months ending October 31 amply justify the optimistic views held as to the prospects of the year's trade. For that period the exports amounted to £E2,939,995, as against £E1,958,932 for the corresponding months in 1916; while the imports in these periods were £E2,295,120 and £E1,994,961. It will be noted that, while there is an increase in both exports and imports, the increase is most marked as regards exports, which are almost 50 per cent. higher than in 1916. This characteristic is maintained in October, when the imports were £E184,180, compared with £E215,564 in October, 1916, while the exports at £E205,606 show an increase of £E84,889 over the corresponding figures in 1916. Evidently, whatever the results in the remaining months, the Sudan is certain to have a highly favourable trade balance for the year.

***

The remarkable developments in the price of silver in the past year give an added interest to Messrs. Sharp and Wilkins' annual report, which will be found elsewhere in this issue. Silver being the only metallic currency in use during the war, a rise in price was bound to come sooner or later, and it would probably have occurred much earlier but for the fact that China was able to export large quantities of the metal to India in 1916. The curtailment of this source, coupled with the cessation of the output of Mexico, marked the commencement of a rapid advance in the price of the metal, and in September last silver reached the record figure of 55d. per ounce.

***

Since September, however, silver has reacted in price, and at the close of the year it stood at 43½d. per ounce, or exactly 7d. above its price at the commencement of the year. The reasons for this decline are the prohibition by the United States Government of the export of silver to China except under licence, and the restriction by our own Government of imports to Scandinavia, while at the same time asking dealers to discourage speculation.

***

The Russian silk industry affords an interesting example of the way in which the war has given Japan an opportunity of increasing her trade. Much of the raw material required for this industry was obtained from Turkey and Western Europe. The war put an end to imports from Turkey, while there have been obvious difficulties in the way of satisfactory supplies from Western Europe. The Japanese Silk Producing Association, therefore, came to the rescue with the offer to supply raw materials.

INDIA AND GERMAN TRADE.

Fallacies Regarding Effect of an Economic War.

India is invariably cited in discussions on the practicability of an economic boycott of Germany as an instance of the way in which the adoption of this course would result in injury to ourselves. This view is based on the fact that India's exports to Germany far more than counterbalanced her imports from that country, and the argument is that, if India could not find adequate markets for her produce elsewhere before the war, she will certainly not be able to dispense with this outlet for her trade when peace brings a return of normal competition. *Prima facie* there is much to be said for this idea: it happens, however, that the trade returns are very misleading in this case, and, as will be shown, the real position, far from being so favourable to India as it appears, was actually most disadvantageous for our great dependency.

Trade in 1913-1914.

It will be convenient to base our examination of the question on the trade figures for the year preceding the war. In that year the value of India's exports amounted to £163 millions, and her imports to £127 millions, and of these totals the British Empire's share came to £61,308,972 and £85,376,954 respectively. This adverse balance of, roughly, £24 millions was much greater in the case of trade with the United Kingdom alone, the figures for exports and imports being £38,236,780 and £78,388,149. The position was essentially different as regards direct trade with Germany, for, while India's imports from that country were worth no more than £8,443,862, her exports were £17,570,514. That the latter figure was in no sense abnormal is evident from the fact that the totals for the two previous years were respectively £16,575,543 and £15,058,119. In the year in question there was a balance in favour of India as regards the German trade of some £9 millions. Germany's imports from India were largely composed of four items: cotton, £4,001,628; hides and skins, £2,121,405; jute, £4,499,111; and rice, £2,096,054. Her other imports, worth more than a quarter of a million sterling, were copra, £657,628; linseed, £537,009; mowra, £309,791; rape, £650,734; and til, £270,887. These imports give a total of £15,144,247, leaving a balance of just under two and a half millions to cover all other imports. With few exceptions the figures for the year in question may be accepted as more or less stable. Comparing them with those of the two previous years, only two commodities show a serious decline—barley and gram—and in both cases the 1913-14 totals have a parallel in the figures for 1910-11 and 1909-10. Making allowance, therefore, for the probability that the imports of one or two articles besides hides were swollen in preparation for the coming conflict, we may reasonably assume that the figures for 1913-14 fairly represented the range of Germany's requirements.

Misleading Figures.

Briefly stated, the reason why these figures are misleading is because they include very considerable imports of articles which were not needed by Germany for internal consumption, and were merely imported by her so that she might obtain a middleman's profit, and also large quantities of raw materials which could have been utilised within the Empire. On the latter count we are justified in deducting £2,121,405, the value of the imports of hides, on the supposition that the British control of the export trade in this commodity which has been established since the war will lead to developments in this country, which will result in keeping the trade in raw hides within the Empire. The next point is to determine what deductions must be made for Germany's rôle as middleman between India and Russia. This question, like that of the hides, has already been ventilated in these columns, and it will be unnecessary on that account to do more than summarise the facts. India's direct trade with Russia in 1913-14 amounted to £1,656,000, of which £1,110,000 was accounted for by imports of tea, while the latter country's imports of tropical produce amounted to something like £13½ millions sterling, of which Germany supplied a little under half. For the same period (*i.e.*, 1913-14) the Russian returns show that the value of goods from India was £3,656,000, imports of tea representing £1,138,000, so that India's trade with Russia during this period was certainly £2,000,000 more than was supposed.

How the process worked may be seen from the figures for one of Russia's principal imports, jute. In 1912-13 Russia received from India 175,000 cwt. of jute, but Russia's total imports of jute in 1912 were 944,000. Of this amount India was credited with a little over 650,000 cwt. and Germany with 132,000 cwt. Germany, however, returned her jute exports to Russia for this period at 524,000 cwts. It seems clear that in this case then Germany was the vehicle for the bulk of Russia's imports. There are valid reasons, as a matter of fact, for thinking that India's actual exports to Russia were much greater than they would appear after the addition of the £2,000,000 already mentioned, as the figures given only take into account consignments in regard to which there was direct evidence of origin, and while the allowance to be made for imports over and above those that we know came from India must remain to some extent doubtful the best informed opinion is inclined to place the figure at another £2,000,000. If we accept that figure as sufficiently accurate for our purpose, it means that we have already reduced Germany's imports by £6,121,405.

Increased Imperial Trade.

That result, substantial as it is, does not represent the end of the process, as the hides trade is not a unique instance of Germany's astute commercial methods. A not very dissimilar story can be told with regard to rice. India produces 40 per cent. of the world's rice, and of this amount Germany imported in 1913-14 almost double the share of the United Kingdom, the explanation being that German competition had inflicted a mortal injury on the rice-milling industry in this country, so that the rice consumed here was largely supplied from abroad. The industry has raised its head again during the war, and it is probable that in the future the demand for rice here will more than compensate India for the loss of her German trade. It is probable also that India will find a much larger market in the Empire after the war for cotton, a principal export to Germany, and for many other articles of her produce. That she would not lack markets outside Germany even in the event of this contingency not being realised is clear from Mr. Chadwick's able survey of the prospects for Indian trade in Russia, France and Italy.

Results of Economic War.

It seems then that India has nothing to lose and everything to gain by the application of a trade boycott to Germany, while the cause of Imperial unity would be greatly furthered by the process. India would be the gainer by obtaining the added profits derived from direct trade which were previously taken by Germany, and this direct trade in turn would mean an increased knowledge of the trade requirements of the countries with which she dealt, while the Empire as a whole would be afforded an excellent opportunity of establishing trade relations which would remove for ever the danger of some Power like Germany obtaining the control of our supplies of some vital raw material.

THE WORLD'S CROPS IN 1917

Estimated Decrease in Yield of Wheat.

The Board of Agriculture and Fisheries have received the following information from the International Agricultural Institute:—In Denmark, Spain, France, Great Britain, Ireland, Italy, Luxemburg, Norway, Holland, Sweden, Switzerland, Canada, United States, India, Japan, Algeria, Egypt, and Tunis the total yield of wheat in 1917 is estimated at 995,638,000 cwts., or 8.9 per cent. below last year's production. The total production of rye in the following countries is estimated at 80,103,000 cwts., or 3.8 per cent. below last year's production:—Denmark, Spain, France, Ireland, Italy, Luxemburg, Norway, Holland, Sweden, Switzerland, Canada, and United States. The production of barley in the following countries is estimated at 261,728,000 cwts., or 0.1 per cent. above last year's production:—Denmark, Spain, France, Ireland, Italy, Luxemburg, Norway, Holland, Sweden, Switzerland, Canada, United States, Great Britain, Japan, Algeria, Egypt, and Tunis.

The production of oats in the following countries is estimated at 780,463,000 cwts., or 12.1 per cent. above last year's production:—Denmark, Spain, France, Ireland, Italy, Luxemburg, Norway, Holland, Sweden, Switzerland, Canada, United States, Great Britain, Algeria, and Tunis. The production of maize in Spain, Italy, Switzerland, Canada, United States, and Japan is estimated at 1,641,900,000 cwts., or 21.4 per cent. above last year's production. The production of rice in Spain, Italy, United States, Japan, and Egypt is estimated at 190,345,000 cwts., or 19.7 per cent. below last year's production. The production of linseed in Italy, Holland, Canada, United States, and India is estimated at 18,332,000 cwts., or 13.4 per cent. below last year's production. The production of potatoes in England, Wales, Ireland, Italy, Luxemburg, Norway, Holland, Sweden, Switzerland, Canada, United States, and Japan is estimated at 599,287,000 cwts., or 36.4 per cent. above last year's production.

MOROCCAN TRADE.

Openings for British Exporters.

Some further notes by the Acting British Consul at Casablanca, Mr. H. W. Rabino, relative to openings for trade in the French zone in Morocco, were published in the *Board of Trade Journal* of December 27:—

Drugs and Dyes.

There is an opening in Casablanca for chemists' supplies. Climatic and other special conditions naturally exercise a considerable influence in determining the kind of drugs for which there is a demand. Native vegetable dyes are being rapidly replaced by European aniline dyes, the growing market for which deserves careful attention. Aniline dyes are extensively employed in French Morocco for dyeing woollen and cotton yarns for carpets, rugs, etc. Prior to the war, trade in aniline dyes was almost entirely in German hands. The customary terms in this trade are cash on delivery.

A demand for tanning materials has been created in Casablanca by the establishment of a tannery at Rabat, and as the opening of further factories may be expected the demand for these materials is likely to increase. In a country like Morocco, where goats, sheep, bullocks, horses, etc., are abundant, and reared on a considerable scale annually, the tanning industry should become one of importance.

Few farmers have as yet experimented with fertilisers, business in which requires gradual development.

There is a moderate business done in the cheaper kind of disinfectants, such as chloride of lime, etc., these being used in Casablanca and in other towns for the cleansing of streets, etc. The military hospitals also use large quantities of disinfectants. Chemists and druggists deal to a limited extent in other disinfectants for household purposes.

With the advent of railways and the laying down of engineering plant for the purposes of port works and of various industrial concerns, the demand for coal is bound to increase in the course of time. It is proposed to make Casablanca a coaling station for the West African and South American liners, in competition with Teneriffe.

Electrical Plant and Accessories.

The use of electricity is quite a new departure in Morocco. In Casablanca many of the streets and the shops are now lighted by electricity, and there is abundant scope for the development of the electrical industry, both in the coast towns and in the interior of the country.

The import of bedsteads into Casablanca is a rather important trade, and should increase. The native demand is for bedsteads four feet in width, and more or less ornate. As a general rule the requirement is for a good type of bedstead, with fairly heavy brass mounting. The European demand for bedsteads, though of more recent growth, is increasing, the preference in this case being for a cheaper and smaller type. There is a first-class opening in Casablanca for the establishment of a furniture emporium, either directly by a United Kingdom firm or through an agent able to provide a satisfactory showroom. It should be remembered that there is no demand for expensive furniture.

Glass and Chinaware.

There is an excellent opening as regards glassware, especially amongst the natives, who prefer cheap conventional patterns. Small glasses, brilliantly figured and occasionally fitted with nickel holders, are used for tea drinking. Prior to the war, the trade in glassware and china ware was almost entirely in the hands of German and Austrian manufacturers. British manufacturers then seemed unable to compete for this business. There is a decidedly good market for chinaware also, both in common and first-class qualities, and of special patterns and colourings. Business in both lines of goods is largely controlled by native agents. General prospects are such that a special endeavour should be made to retain and develop any hold that United Kingdom firms may be able to establish upon the Moroccan market for these goods.

Window glass is usually imported into Casablanca for own account by British firms, but Mr. Rabino states that no doubt they would act as representatives for home firms desirous of developing their business in that country. For dealing in window glass it is essential to carry stock.

The native demand for cutlery is for the cheapest makes, and up to the present the European demand has been for qualities but little better. A good opening for cheap cutlery certainly exists. Both wire fencing and fencing designed so as to be easily erected, are in good and increasing demand. The general turnover in hardware and ironmongery on the Moroccan market is a large one, hardware being in particular a very extensive trade, but the bulk of imports is already derived from the United Kingdom. All kinds of galvanised goods, such as buckets, kettles, etc., are in great demand, and there is also a good sale for metal-plated goods. The cheaper articles, such as enamelled ware, for which there is an extensive market, were before the war either of Austrian or German origin, since prices for such goods from these countries were lower than any others quoted.

ALGERIAN DATES AND FIGS

Restrictions on Export.

The authorities in Algeria have found it necessary to introduce fresh legislation regarding the export of dates and figs from that colony. Owing to the increased requisition of dates for distillery purposes—purchases which affect, almost exclusively, dates for native consumption—the Governor-General of Algeria (according to a French contemporary) has decided that the export of this fruit will depend on the grant by the Military Commanders of the Biskra, Laghouat, and Ain-Sefra districts of special transport authorisations. This measure, however, does not apply to luxury dates specially produced with a view to export, and shipped in cases or postal packages.

The decree of September 27 regarding the export of dried figs from Algeria did not interfere with consignments by parcels post. Considerable quantities having been despatched in this form, however, it was felt that the measure was insufficient. It has, therefore been revoked as from the 1st ult., and henceforward only packages addressed to private individuals can be sent out of the country.

A limit of £40 is now placed on the amount which may be sent by money order to Aden or India by any one remitter in a week.

TUNIS WAR PROFITS TAX.

To Remain in Force for Twelve Months after the War.

His Majesty's Consul-General at Tunis, says the *Board of Trade Journal*, reports that a Beylical Decree, published in the Tunisian *Journal Officiel*, establishes a tax on war profits in the Regency. The effect of this Decree is to impose an extraordinary tax of 50 per cent. on (a) new or exceptional profits ("bénéfices exceptionnels") realised in consequence of the war, and (b) profits in excess of the mean net profits realised during the two years preceding the war ("bénéfices supplémentaires"). The first 5,000f. of such profits are exempt in both cases, while, for profits realised after June 1, 1916, 60 per cent. will be levied on the amount above 500,000f. liable to taxation. In the case of mining enterprises whose profits are already taxed, by virtue of a Decree dated December 29, 1913, the old tax will be taken into account as valid payment towards the new one.

Firms and persons affected by the tax are required to furnish, before December 1 next, a declaration giving all necessary particulars from the period August 1, 1914, to December 31, 1916. Similar declarations will have to be furnished during the first quarter of every year, giving the necessary particulars for the preceding year. Should a declaration not be filed by the prescribed date a further month will be allowed, after which the competent authorities will apply the tax upon such figures as they consider adequate.

The task of verifying these declarations and of fixing the figure upon which the tax is to be applied in the case of defaulting persons will be entrusted to a special commission.

Taxpayers are to have the right to appeal from the decision of this commission to a higher commission, whose assessments will be final. The tax is to be collected by instalments, and is to extend over a period terminating twelve months after the cessation of hostilities. A list of occupations exempted from the tax is annexed to the Decree.

According to a telegram from Vienna, says Reuter's Amsterdam correspondent, the *Wiener Zeitung* publishes an Imperial rescript to Dr. Seidler, the Premier, in which, as an agreement could not be reached between the Parliaments of Austria and Hungary, the Emperor orders that for covering expenditure on joint affairs for the period from January 1 to December 31, 1918, Austria shall contribute 63.6 per cent. and Hungary 36.4 per cent.

ENGINEERING NOTES.

Cultivation of Flax in Morocco.

The production of flax in Europe has suffered considerably from the war, with the result that at the present time there is a serious scarcity of the fibre as well as of the seed of this plant. In European countries the flax plant is cultivated chiefly for fibre, but in Russia both the seed and the fibre are produced on a large scale. European Russia is one of the largest, if not the largest, flax producer in the world, having under cultivation for that purpose an area of between 3,250,000 and 3,500,000 acres, almost as much as India, but with her Asiatic provinces, in which over 350,000 acres are under flax, she surpasses India, the United States and Argentina, which are the other largest flax-producing countries. Austria-Hungary comes second to Russia in Europe with an area under flax of over 200,000 acres, the United Kingdom (Ireland) has about 60,000 acres, France 70,000, Belgium 56,000, Roumania 45,000, Serbia 6,500, Bulgaria 400, Netherlands 42,000, and Sweden 5,000. Figures for Italy are not available; but in view of the announcement that whereas in 1913 the amount of flax produced in France was 25,000 tons, it is now less than one-third this quantity, and as Italy is not a larger producer than France, it may be assumed that the production in Italy in existing circumstances has been very small. The present serious scarcity of flax, therefore, is easily explained, since, with the exception of the small British, French, and Italian supplies, no other supplies from Europe are available, and imports from distant friendly countries are difficult to obtain, if they are not actually prohibited. A suggestion has been made that flax should be cultivated in nearer and more accessible lands. Morocco, where experiments have shown that flax can be grown under excellent conditions, has been cited as a suitable locality. The objection that the treatment of flax necessitates considerable quantities of water, which do not exist in that region, is met by the introduction of the Peufaillit process, which only needs relatively small quantities of water; and it is hoped that, with the aid of this process and the employment of the most modern flax-working machinery — various British types, which have from time to time been described in these columns—Morocco will become one of the important producers of flax.

Climatic Conditions and Soils.

From a general point of view the flax plant succeeds best when grown in the colder parts of the temperate region, where there are no great extremes of heat and drought. Belts of coast land, subject to cloudy skies and a moisture-laden atmosphere, and possessing soil that is moist and well-drained, are the localities in which the flax-plant attains its greatest perfection. As the flax-plant occupies the land for but a short period, and has a delicate and relatively small root-system, it demands a soil that is moist and rich in organic matter. Such climatic conditions and soils exist in Morocco. In the adjacent country of Algeria the cultivation of flax has proved successful, and so in Tunis, and more so in Upper and Lower Egypt. Expert opinion is that Morocco is more suitable for the production of both linseed and flax than the above-named countries.

Coke as Motor Fuel.

The efforts of inventors for finding an efficient and practical substitute for petrol are followed with great interest by all motor-car owners and users abroad, especially in the East, where petrol cannot easily be obtained, even at a very high price, and the use of coal (or town) gas, according to recent suggestions and devices, cannot be adopted except in towns where such gas is produced; such towns, of course, are not numerous. The latest suggestion, therefore, of utilising coke as motor fuel will appeal to all for coke can easily be obtained, transported, and stored at very cheap rates even in remote districts. It should appeal particularly to commercial motor users and omnibus companies, some of whose vehicles have had to be laid up owing to the scarcity of the necessary fuel. Experiments have recently been taking place in Chelmsford with a patent coke apparatus for superseding oil for generating steam on the National Car Company's vehicles. The experiments, it is said, proved highly satisfactory from every point of view. A single-decked 'bus has been used, and it has been proved that the quantity of coke required for a 12 hours working day is only 3½ cwt. (140 okes). The cost is about 5s. (6.25 frs.) compared with 24s. (30 frs.) for oil. The chief trouble to be overcome is the fumes from the coke, which in the case of a single-decked 'bus would present no difficulty, but in a two-decker would soon clear the top deck of passengers. To meet this difficulty a special method has been devised to take the exhaust from the engine and convey it under the chassis, so that it is discharged at the rear. With coke it takes about 25 minutes to get sufficient steam, but once this is secured a run of fully 40 miles can be made at an average speed of 12 miles an hour without a stop. The boilers needed cost about £70, and the system generally has proved so successful and economical that it may ultimately be introduced on all the London 'buses in the Company's service.

Woollen manufacturing circles are greatly interested by the announcement that Messrs. Martin Sons and Company, of Huddersfield, the biggest producers in the trade, have decided to sell direct to retailers in future.

Mr. G. Newell, manager and secretary of the Imperial Bank of Persia in London for the past 28 years, has retired, and is succeeded by Mr. S. Rogers, late sub-manager in London.

SILVER IN 1917.

Period of Abnormal Conditions.

Messrs. Sharps and Wilkins, in their annual report, say :—In reviewing the silver market for the past year, the most striking feature is the very great rise in value which has taken place, the quotation reaching a figure without a parallel since 1878. The average price for 1917 is 40½d. per ounce standard. The primary influence during the whole year has been the continued requirement of silver for Government currencies. The home mint alone has coined even more than last year, and our Allies have also issued very large amounts; the necessity for this in face of the enormous war expenditure is so manifest that further explanation is needless. The entry of America into the struggle has also brought in a further need of the same sort, and large purchases of silver have been made in that quarter, too; in addition to all which the mintage of rupees in India has run into prodigious figures, for not only have they had to provide for the increased cost of Indian produce, but the war expenditure financed from India for the campaigns in Asia has been very great. Some idea of the extent of this may be gathered from the statement of the financial authority that the war expenditure there for the current year may be estimated at 38½ millions sterling.

As a result of all this coinage, the metallic reserve against the note issue in India gained ground, and a smaller denomination of notes may to a certain extent relieve the pressure, but, with a total of 110 crores of rupee notes in circulation, the metallic reserve of 21 crores in silver and 25½ crores in gold cannot be said to be a sufficient percentage for perfect safety.

China's Influence on Prices.

The second most potent influence in the movement of prices has been the action of China. It will be remembered that during 1916 an immense quantity of silver was parted with by China to India, leaving the former country very much denuded of stock, and towards the end of last year trading requirements made it necessary for it to enter the market as a buyer. This movement was not constant, and from time to time in the earlier part of 1917 some further sales were made on China account, the high price of silver making it a tempting proposition to withdraw from China at the higher rate of exchange funds formerly invested there. This did not attain any large proportions, and about the beginning of September the Shanghai exchange rose to a very high figure, and 4s. 10½d. per tael was reached about this time. The exact reason for this high exchange is not clear, and it was doubtless partly due to speculative dealings. A new departure was now made by a regulation in America forbidding the export to China except under licence, which could not be very easily obtained, and this action soon produced a striking effect.

America's Output.

The conditions throughout the year have been abnormal and to some extent artificial. Formerly the silver from the United States, which is the ordinary source of supply, and includes what is produced in Mexico, was offered freely in the market day by day to meet the wants of India, China and the European Continent, but in the early part of this year some arrangement was made by which a large proportion of these supplies was put at the disposal of the Government on terms which are not generally known, but the effect was that the large public needs previously alluded to were more easily bought and power was attained to supply the remaining reduced buying at prices which were more convenient to the authorities, and by this means lower rates have from time to time been brought about than might otherwise have been the case. The public newspapers of December 5 contained the following statement :—"It is announced by the United States Treasury Department that the Government will take over the country's silver output and will fix the price," but no definite information has been available since that date, and it is not at all clear whether this announcement refers really to the total output of the United States or whether it applies to the endeavour which was known to be in progress to secure for the United States and the English Governments a very large amount, described by some as 100,000,000 ounces, by others as 150,000,000 ounces, deliverable during the year 1918, partly for coining into rupees in India, and partly into French currency for the use of American soldiers in France, but in either case it is evident that action of this sort must have a very great influence upon the price of silver next year.

THE STATE AND SHIPPING.

French Approval of Lord Inchcape's Speech.

Commenting on yesterday's debate in the Chamber of Deputies regarding the French merchant marine and the chartering by the French Government of German vessels interned in Brazil (says Reuter's Paris correspondent in a message dated December 30), the *Journal des Debats* says :—"There is reason to fear that the Socialists will take advantage of the present situation to carry out after the war their doctrines of State Socialism as far as concerns the industry of maritime transport. This question—namely, the future of the maritime industry after the war—also interests our friends and Allies beyond the Channel. In Great Britain the merchant fleet was partly requisitioned by means of chartering vessels on the basis of the average freights before the war. Later, as needs increased and the losses of ships became greater, the vessels remaining free were subjected to the same system. Finally, the State carried its intervention still further. At the general meeting of the Peninsular and Oriental Steam Navigation Company, held on December 12, Lord Inchcape made a very remarkable speech, in which he explained in every detail the present situation of the British mercantile marine and the conditions under which the Government had been led to interfere more and more with this industry—an interference so extensive that it now causes legitimate anxiety. The speech of Lord Inchcape deserves attention not only in London, but in Paris."

TREBIZOND-PLATANA TOBACCO CROP.

Considerable Supplies Available

The 1916 crop of tobacco in the Trebizond-Platana district was very small, but on account of the stock left over from previous years there is on hand at present 340,370 lbs. at Trebizond and Platana, 98,700 lbs. at different villages of the district, and 1,438,200 lbs. deposited with the Tobacco Regie, a total of 1,877,270 lbs. of tobacco, says the United States Vice-Consul at Trebizond, Mr. I. Montesanto, in a report dated September 28. Because of the continuance of the war it was generally believed that the crops of 1917 would not be very important, but the latest estimate gives 169,200 lbs. for Trebizond and 4,906,800 lbs. for the Platana district. Although these figures are only estimates, the season is so far advanced that the total given should be a fairly close approximation of the final outturn. The quality of this year's crop is reported to be very good. While the estimate is a great deal below the average crops of years before the war, nevertheless, considering the state of war, the lack of labour, and the high wages demanded, the returns of the Platana district are remarkable. The high prices of tobacco and the liberty to cultivate tobacco whenever the farmers wish, and in any quantity they desire, without being restricted, as formerly, by the Regie, are contributing to this very satisfactory result. Before the war prices of tobacco varied from $0.04 to $0.20 a lb., according to quality. Now prices are 40 to 70 cubles per batman, which equals $0.47 to $0.83 gold per lb.

LANCASHIRE COTTON.

Outlook Uncertain.

(From Our Own Correspondent.)

Manchester, Wednesday.

Buyers and sellers in the market have been rather slow in getting to work again after the holidays. Prices have tended to harden, and for anything wanted our customers have had to pay more money than a week or two ago. The outlook is rather uncertain, but spinners and manufacturers derive considerable strength from the extensive contracts on the books. The Egyptian cotton crop continues to do well. The receipts at Alexandria so far this season are 3,584,068 cantars against 3,783,102 cantars this time last year. The stock in Alexandria is 2,495,000 cantars as compared with 1,690,000 cantars twelve months ago. A steady demand continues to be experienced in Egyptian yarns, and late rates are very firmly held. In both carded and combed qualities producers have plenty of work to go on with. The inquiry in piece goods for Egypt continues rather quieter. Goods are badly wanted on the other side, but shipments are irregular. Only miscellaneous sales have occurred in cloth for India, offers for lots of bulk being comparatively scarce. No freer movement for China can be recorded. Buyers for South America are not giving quite so much support as a little time ago. Most manufacturers are indifferent as to booking fresh contracts at the moment. In American yarns for home use a healthy demand continues for quick delivery, and spinners are being pressed by users to send supplies in on a freer scale.

AGRICULTURE IN CYPRUS.

Conditions Generally Satisfactory.

Despite the obstacles in the way of agricultural progress, such as lack of water, the conservatism of the peasantry, their distrust of modern methods of cultivation, and their reluctance to co-operate, says the White Paper on Cyprus in 1916-17, the Agricultural Department was able to maintain the extension of its influence. Among the activities of the Department may be mentioned the encouragement of fruit tree cultivation, and the introduction of three new varieties of cotton, while new fodder plants were tried, and vineyards were laid out for farmers.

The year's olive crop was a good one, but the production still falls short of local consumption, 198,640 jokes, of the value of £16,035, being imported. It is stated, however, that the area available for the purpose is sufficient, if planted, to enable a large export trade to be built up, and as many thousands of olive plants are being raised in the nursery gardens, the next few years, it is thought, should see a great increase in the olive plantations.

A great extension of potato growing has taken place in Cyprus through the war, and Egypt has become a large buyer of the island's surplus produce. Conditions are generally favourable to this crop, which may develop into a permanent and profitable agricultural industry. Cultivation, it is stated, has been greatly favoured by the application for the first time of chemical manures, and the introduction of new seed potatoes. Before the war the consumption of potatoes was confined to the well-to-do classes in the town, but it has since become general.

The silk industry suffered a temporary setback during the year, a number of mulberry plantations being uprooted to make room for orange and other fruit trees. Five departmental sericultural stations were in operation, and the cocoons produced were satisfactory both as regards quality and quantity. It is interesting to note that the colour has been improved, and is becoming more uniform.

STOCKS AND SHARES IN 1917.

Steady Rise in Egyptian Securities.

Despite the fact that the past year was one of considerable vicissitudes, as far as the war was concerned, it cannot be said that Egyptian securities, as a whole, have been adversely affected by the uncertainty of the situation. On the contrary, most of the leading shares have registered a substantial advance in the past twelve months in striking contrast to what has happened in other markets. This happy position is undoubtedly due to the recognition by investors of the prosperity that has come to Egypt through the war. The subjoined table of a number of the principal Egyptian shares will serve to illustrate the upward trend of prices :—

	1916. Dec. 30.	1917. Dec. 31.	Rise or Fall.
Egyptian Unified	78½	84	+5½
National Bank of Egypt	13⅜	17⅞	+3 1/16
Egyptian Delta Land	9/0	15/0	+6 0
New Egyptian	9/3	16/6	+7/3
Union Fonciere d'Egypte	1¼	2⅛	+1 1/16
Khedivial Mail	28/6	34	+5/6

Oil Shares.

With the exception of Russian and Roumanian oil shares the year was a satisfactory one for this market, substantial rises having to be recorded in various holdings, as will be seen from the annexed table :—

	1916. Dec. 30.	1917. Dec. 31.	Rise or Fall.
Anglo-Egyptian "B"	11/0	27/6	+16/6
Anglo-Persian Pref.	20/6	2?/0	+ 4 6
Baku	3/0	1/9	− 1/3
British Burmah	6/7½	11/3	+ 4/7½

North Caucasian	25/6	17/0	− 8/6
Roumanian Consuls	9/0	9/0	—
Ural Caspian	1½	1⅜	− 1/16

"THE BOARD OF TRADE JOURNAL."

This week the *Board of Trade Journal* appears in its new form under the editorship of Mr. Kitchin. The new issue is a vast improvement on its predecessor as regards arrangement and subject matter, and the standard of the first issue suggests that the *Journal* will be able to perform a very useful service for British trade and commerce. Among the contents are a number of valuable special articles, notably one on "Commercial Information," trade notes, notices affecting trade, Customs regulations, and tariff changes, and shipping intelligence and commercial returns. The objects of the *Journal* are set out in a foreword by Sir Albert Stanley, in which he says: "While I hope we shall make the *Journal* in its new form of greater interest and value to business men, I do not propose that it should be run on the ordinary commercial lines. After March 31 next all trade advertisements will be excluded from its pages, and its columns will be solely devoted to the object of assisting commercial and industrial interests by giving information as promptly and completely as possible. . . . I hope that this publication, placed at the disposal of our traders and of the whole of the Press, will stimulate interest in our post-war problems, and, more especially, in the stupendous national effort which will be necessary to revive and increase our overseas commerce, now completely distracted or suspended in consequence of the war; to re-establish and expand our industries; and to place upon a sound and permanent basis those particular key industries essential to our national welfare."

ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Avenue, Wednesday.

The Christmas and New Year holidays have interfered very much with business; but to-day the markets have re-opened in a buoyant condition, and there have been active transactions at, generally speaking, higher prices. Egypt continues to send buying orders, and the news from over there is of a very satisfactory nature in every direction. In Government stocks, Egyptian Unifieds have risen ½ to 84½, at which price some business was done to-day; but there were unsatisfied buyers left over. The 3½ per cent. preferences were also ½ up at 72¼, with a certain amount of business doing; but here also there were buyers who have not been able to get the shares they want. City of Alexandrias are about 77 x.d.

In Bank shares, Nationals have been a feature and are half a point up at 17½, on buying from Egypt accompanied by some demand on this side. The note issue is said to have reached well over £E30,000,000. Anglo-Egyptians have also come into demand and are ¼ better at 14¼. Agriculturals are slightly firmer at 6⅛, and Agricultural prefs. are quoted 7 x.d. Land banks are by exception dull, and have receded ⅛ to 6½.

In Railways, Delta Light are 1/16 firmer at 6 3/16.

In Land shares there has been a persistent local demand for Aboukirs, which have improved 1s. 3d. to 22s. 3d. Allotments are 1/16 firmer at 4, but without business, because sellers are lacking. Beheras are ⅜ up at 15 on a renewal of demand from Egypt. Behéra prefs. have come to business at about 4 15-32. Delta Lands have changed hands more freely round 15s. In New Egyptians there have been some fairly big transactions, and the price is a trifle firmer at 16s. 7½d. It is understood that a large block of these shares held by two of the South African companies has now been entirely liquidated, so that any persistent demand should produce a much greater effect on the market than hitherto. In United Egyptian Lands some transactions have taken place round 1s. 6d. There has been a renewal of demand for Union Foncières, but without useful alteration of price.

In miscellaneous shares, Alexandria Waters are somewhat materially lower round 12 x.d., after dealings in a small way at 11⅜. Markets continue dull and are 6d. easier at 27s. Salt and Sodas have been a feature of strength, and on persistent purchases for Egypt have improved to about 36s. x.d., a rise of 2s. 9d. Khedivial Mails are closing slightly firmer at 33s. x.d.

In Greek securities Fundings are quoted about ⅝ lower at 53 x.d., while Greek '81 and '84 are about 60½ x.d., and Monopolies almost unchanged at 51 x.d. The 1914 loan stands nominally at 53½, a fall of half a point, while the 1902 loan is rather firmer at 62 x.d.

COMPANY REPORTS.

East India Tramways.

The accounts for the year ended July 31 show net receipts of £2.751, against £7,696, there being an available sum, including £355 brought forward, of £3.106, which compares with £7,400. The directors announce a further dividend of 2½ per cent., making 5 per cent. for the year on the ordinary shares, together with a distribution of 2½ per cent. on the deferred shares (paid in May last).

NOTES OF THE WEEK.

There has been little military activity during the week; no report has been received from Mesopotamia, and in Palestine the Turks have made no further attempt to recapture Jerusalem after their recent defeat. The fact that General Allenby is reported to be in Egypt may be read as an indication that he considers the position in Palestine to be secure, and also, perhaps, that no further advance is to be made for the present. But probably it would be as well for the enemy not to make too sure of that.

If there has been little military activity, there has been a vast deal of political and diplomatic activity, Turkey has placed her peace terms before Russia; they are those of a conqueror pure and simple. Russia is to demobilise her troops, to evacuate Armenia and Persia, and to resign all claims to those territories, while Turkey is to retain her army and regain her lost provinces. No pretence is made of liberating the people under her control, but Constantinople protests that it is only too ready to be nice to the Jews, and also makes the point that the Pope would really rather see Jerusalem in the hands of the infidels than the heretics—a matter on which Rome may be excused for knowing its own mind. The Russian reply to the Turkish proposals is that they will withdraw their troops as soon as Turkey withdraws hers, which is obviously not what the Turks want; but we are at least grateful to the enemy for a passable joke in this grave hour. The Philosophical Faculty at Constantinople (is there any philosophy at Constantinople?) has recommended Lenin for the Nobel Peace Prize, by way of reminding the Kaiser that his allies do not take his protest that he is the real pacificator of Europe very seriously.

What the Turks will reply to Russia has yet to be seen. What Russia has said to Germany has amazed the world, but not half so much as the fact that, after accusing the Germans of hypocrisy and a few other of the commoner Teutonic virtues, they have gone on negotiating with the hypocrites as though it was nothing but a lovers' quarrel after all. Whether the protest was made in order to draw the Western Allies into the peace negotiations or to bluff the Germans into a revolution does not appear; in either event the attempt has failed. The German agent in Petrograd has explained that Germany has no use for revolutions at home, and the Allies have proclaimed that they will no more go to Brest-Litovsk than to Canossa. The result has been that the Trotsky organ has turned from its spasmodic abuse of Germany to its regular abuse of England. Mr. Lloyd George is said by the official Leninite organ to be contemplating making peace on the basis that Germany takes what she likes of Russia, while Britain and France take the rest of the world. This obvious lie appears in *Pravda*, the Russian *Truth*. Nobody has less desire to see Russia under Germany, directly or indirectly, than England; but we realise, what Russia apparently does not, that the only way of saving Russia is for Russia to save herself, and that the only way of doing that is to fight the enemy and not to fraternise with him one moment, insult him the next, and then fraternise again. The whole thing has an unpleasant appearance of humbug.

How far the robuster minds of the Entente are from the Russian accusations may be judged from Mr. Lloyd George's speech on war aims, and the admirable general endorsement of them by President Wilson. These are not terms of peace, but war aims, and there is not a man in this country, or France, or America, who does not perceive that they commit us to a continuation of the war for some considerable time. If Germany chose to acknowledge defeat and accept these terms peace could come to-morrow; but Berlin seems as far now from restoration and reparation in East and West as she was a year ago.

As to Turkey, the speech takes up a new attitude. Palestine, Mesopotamia, Armenia, and Syria are to be freed, and Turkey must make up her mind to lose these provinces as completely as she has lost Egypt and Morocco. But she is still to retain Anatolia, the heart of the Ottoman Empire, and Constantinople, its head. The latter announcement has been received with surprise in some quarters, in view of the Allied declaration a year ago; but our policy here has obviously been influenced by the collapse of Russia, an event which, it is now seen, will influence the future history of the world for, perhaps, as long a time, and probably in as profound a manner as the capture of Constantinople by the Turks four centuries ago. But the withdrawal of all claim to Constantinople carries with it also the assertion of a demand for the freeing and internationalisation of the Straits. How far this is from meeting with the present views of Turkey is shown by her demand to Russia that the latter's Black Sea fleet should be disbanded—a policy which would leave Turkey absolute master of the Euxine.

Digitized by Google

President Wilson's "fourteen points in world-policy," for which the United States are fighting, goes in some details beyond Mr. Lloyd George's statement, and in others falls behind; but on the main lines of settlement the two are almost identical. He stands for the creation of a separate Polish State, with access to the sea—in other words, he supports the Dantzig school—but, as regards the Jugoslavs, he is less definite, merely demanding that "the peoples of Austria-Hungary, whose place among the nations we wish to see safeguarded and assured, should be accorded the first opportunity of autonomous development." Autonomy, of course, is not the same thing as independent sovereignty safeguarded by international covenant (which is promised to Poland), and the fact is likely to be commented on with some fulness by the journals of Vienna and the Jugoslav Press.

On the other hand, as regards the Balkans, President Wilson insists that Roumania, Serbia, and Montenegro should be evacuated, occupied territories restored, and Serbia secured free access to the sea. That is on the score of restoration; in constructive statesmanship he insists that "the relations of the several Balkan States to one another should be determined by friendly counsel along historically established lines of allegiance and nationality"—a declaration which is so vague that it is susceptible of several interpretations, but which quite conceivably indicates that President Wilson is turning over in his mind the possibility of a Balkans Federation which, with a Customs union, has also been suggested by the British Labour Party. That has, indeed, been recognised as an ideal by many constructive statesmen for some years past, but the main, if not the only obstacle, remains the constant enmity of the Balkan States themselves towards the idea, and until that enmity diminishes a federation recommended or imposed from outside may seem remote. A mediæval English historian once suggested that the Irish question would be settled shortly before the day of Judgment. Some people fear that, unless the Allies use their opportunity aright, the Balkans question will not be settled until shortly afterwards.

On the question of the Ottoman Empire President Wilson is broadly in agreement with Mr. Lloyd George, and it seems clear that on the whole this will be a less difficult matter to settle than the Balkans. Germany has not the least intention of abandoning the Balkans so long as she can by any possibility make herself the master there, but there are small but significant signs that in Turkey she has less and less faith as the weeks pass. Of the Baghdad Railway she speaks less, of the Bokhara and Siberia Railway more, than a year ago; and while the prospect of reconquering Mesopotamia is now seldom alluded to, a significant admission has been made by Herr Naumann, the putative begetter of the "Central Europe" idea, that Germany and Turkey have little chance of retaking Jerusalem.

He covers the admission, of course, by the remark that to leave the Holy City in British hands will be to spoil it, and to barbarise it—he foresees main drainage and sanitation schemes, and all the things which the Germans boast they have done in Poland and elsewhere. The sacred atmosphere of the place, according to Herr Naumann, will be dissipated by the practical English; it will become as commonplace and ordinary as any other city of the Western world, to which it will henceforth belong. We will appeal to Herr Naumann, who is by no means a fervent fire-eater, to dry these tears; he has forgotten that the Jews, as well as the British, will have something to say as to the future in Jerusalem, and a good deal more than the British probably in determining in what way the Holy Land shall be developed. Now the Jew is a hard-headed and practical man in every respect but one, and that is his own country. After all, his ancestors made Jerusalem, and the modern Jew is not more likely to spoil it than the modern Englishman is to run Westminster Abbey as a picture palace.

The statement by Javid Bey that the Turkish national debt has risen during the war from £150 millions sterling to nearly £400 millions sterling does not throw much light on the financial position of Turkey, although, taken in conjunction with Talaat's visit to Berlin, and with the Emperor Carl's visit to Constantinople, it does suggest that Turkey requires encouragement from the Ally, who has no money, and money from the Ally who does not give her, as it seems to us, much encouragement. But Turkey's war debt has not increased at the same rate as that of Austria and Germany—although it is poor consolation to a bankrupt to tell him that his wealthy friend is also living beyond his income—and we are not told whether these figures include the full German advances, which reached nearly a hundred and fifty millions more than six months ago, and are known to have increased considerably since then. The war cannot have cost Turkey less in 1917 than in previous years, but she has obviously had less territory from which to raise her revenue, which, according to official figures published some weeks ago, scarcely makes a pretence any longer of doing more than covering the debt services.

In these circumstances it is easily explicable that German special correspondents at Constantinople should report to their newspapers that the cry heard on all sides is, "Germany must restore us our lost provinces." The cry in itself seems not only a confession of Turkish weakness, but also of diminishing trust in those whom Lord Haldane once called "the very big men in Berlin." Presumably, if Turkey could have foreseen her fate, to lose her provinces to an enemy and her financial and commercial freedom to a friend, she would have remained neutral.

A curious rumour has appeared to the effect that the Dobruja claims of Bulgaria are looked upon with suspicion in Pan-German circles, and that some friction has arisen over this matter between the two schools, if not actually between the two Governments. It is conceivable, of course, that the Pan-Germans are so fully occupied in advocating annexations for themselves that they have no time to help the Bulgars, but it is hardly likely that there is much more in it than that. The Pan-Germans could not annex the Dobruja for themselves, and on that ground there is no particular reason why, according to their ideas, Bulgaria should not have it, nor is it likely that the Russians will put up any particular obstacles, since the retrocession of the Dobruja would weaken Roumania, and that is one of the leading objects of Petrograd policy at the present moment.

The formation of a Moslem League in India to resist Home Rule was not unexpected, and no doubt Mr. Montagu, who still holds to the sphinx-like silence to which he bound himself, will take due note of the fact and of the forces behind it—which are by no means necessarily, as some English papers are too ready to assume, those of "reaction." Moreover, even among the Hindu parties, everything does not seem quite plain sailing; divergences of opinion are becoming manifest, and cross-currents showing themselves. The strength of these various movements will need to be carefully weighed before any irrevocable step is taken.

A statement in the House of Lords clears up any doubt as to British policy infringing on the rights of Afghanistan, which may have been caused by the publication of certain correspondence in the Russian archives by Comrade Trotsky. Russia under the old régime apparently wished to encroach a little in Afghanistan, but Britain neither assented to nor even went into the proposition. Presumably the Petrograd politician published this document to embarrass Britain in Central Asia. It may succeed in discrediting a little further the old régime, but it will have no effect in discrediting Britain, who did nothing to forward the Russian plan. This will be clearly perceived by the shrewd judges at the Court of Afghanistan, where, on various grounds, the present position in Russia may not be unduly mourned.

PERSIA AND THE WAR.

(From Our Own Correspondent.)

Tabriz, October.

German Intrigue.

There is a common Persian saying, "*Eshaki sakhlar palan ordooni sakhlar yalan.*" ("As the saddle protects a donkey, so lies protect an army.") Germany would seem to have relied upon this principle in order to maintain the prestige of her army, or rather of her name. The lies have been in the form of false promises—promises which she cannot possibly honour—and they have been scattered broadcast with a view to winning support in this part of the world. The promises have been made separately, and, of course, secretly, Now that the time has come for revelations, some of the recipients are beginning to see how they have been duped. Here are some of the promises made (to be fulfilled presumably when Germany dictates peace terms in London):—1. To Turkey: The possession of that part of Persia lying to the west of a line connecting Busreh with the Caspian Sea, together with the Caucasus, inclusive of Baku. 2. To Persia: Expulsion of the Russians and the British from her territory, the complete independence of the country, the possession of that part of the Caucasus which was at one time incorporated within the Persian Empire (Baku falls within this section). 3. To the Caucasian Moslems: The whole of the Caucasus as an independent State, with a view to a revival of Saladin's Empire, if such be the wish of the Moslems themselves. 4. To the Georgians: An independent Georgia, under a Georgian king.

Now as Georgia is part of the Caucasus, it will be noted that this latter province has been promised to four different people. How Germany proposed to meet these separate promises when the time came to honour them is not known. It can only be surmised that there would be fresh contributions to the heap already formed of "scraps of paper." Incidentally, it may be mentioned that the Persian Kurds received from a German colonel a special promise for themselves of an independent Kurdistan, which would lop off parts of both Turkey and Persia.

It is largely to these comprehensive promises, backed by the activities of German agents, that the marked increase in anti-Russian and anti-British feeling is to be attributed. One of the forms that the movement against foreigners has taken is the assassination of Persians who have been conspicuous in the past for their Anglophil tendencies. Things reached such a pass that a strong protest had to be lodged by the British Minister. In the meantime, however, some prominent officials in the Foreign Office itself, who were known to have British sympathies, were dismissed, and two murders of Anglophil officials were reported at Ispahan and four at Hamadan. It is understood that a "Committee of Terror" was at work, and had drawn up a black list. Some of its would-be victims, however, prepared to meet violence by violence, and a state of affairs bordering upon anarchy threatened. The climax came when Sipahdar Azaam, a former Prime Minister, found himself a marked man. Not satisfied with taking measures to protect himself, he made representations to the Shah. These and the protest of the British Minister compelled the authorities to take action. Numerous arrests followed—a fairly clear indication that the personnel and doings of the so-called "Committee of Terror" were not entirely unknown in official quarters. Among those arrested were Secretaries of the Austrian and German Legations. Little doubt is entertained as to the source from which the whole agitation and the murder campaign were instigated.

Questions of Finance.

Popular indignation also contributed to stir the Government into action in regard to the murders. A further compelling factor was the state of the Persian Treasury. Revenue has barely sufficed for official salaries, leaving the current expenses of the State wholly unprovided for. In the past these have been met out of the advances made by the Russian and British Governments, but this source of supply ceased shortly after the outbreak of the Russian revolution. The present Russian Government believes in no annexations and in no money grants. Persia cannot have it both ways. She stands to benefit from one theory, and must put up with the effect of the other. The Persian Government has been obliged to appeal to Great Britain; but found that the latter naturally insisted upon the suppression of anarchy and anti-British propaganda before there could be any question of a renewal of the monthly grant of £30,000.

The Lot of the Russophil.

Perhaps the most pathetic figure in Persia as a result of the Russian revolution is the Russophil, as distinct from the Persian who became a Russian subject. The latter is able to look after himself. But the Russophil, to whom Russia's "protection" was everything, now finds himself between two stools. The new Russian Government will have nothing to do with him; at best he is a creature of the old hated régime; in any case Russia is now pledged to a policy of non-interference with Persian affairs, and consequently knows nothing about "protection." Among the Persians, both official and non-official, the man enjoying Russian protection was a privileged person, well accustomed to make the most of his position. Now, however, he is a marked man in another sense; for it is possible to pay off old scores, and he finds himself exposed to dismissal, disgrace, imprisonment, and heavy fines.

Persia and Great Britain.

As Persia settles down to the new order created by the course of events in Russia there can be no doubt that, in spite of the regrettable episodes to which I have referred, which were attributable to Austro-German instigation, there is a growing body of public opinion in favour of a good understanding with Great Britain. Of course, it is not a case on the Persian side of all give and no take. The line of thought is for the most part as follows:—British policy towards Persia in the past has been exclusively conditioned by Russia's attitude. The Agreement of 1907 was primarily intended to interpose a bulwark against a Russian advance on India and the Persian Gulf. If new Russia means to adhere to her policy of no annexation, leaving Persia entirely independent, the first country that stands to benefit will be Great Britain. She can introduce a new orientation in her Persian policy, obliterate all spheres of influence, and rely upon making the *whole* of Persia, instead of only a part, a natural buffer against Russia or any other Power. Among the best-informed Persians no doubt is entertained that Great Britain will act on these lines. Their one fear is lest some of their own people make it impossible for her to do so. Any excesses on the part of "Patriots" or "Democrats," or by whatever name they wish to be called, must inevitably have the effect of delaying British action in the desired direction; and not only excesses against British subjects or Anglophil Persians, but any kind of anti-foreign propaganda.

THE MILITARY OUTLOOK IN THE EAST.

(By a Twenty Years' Resident.)

In its issue of December 28 the military correspondent of *The Times* estimates that the Russian entanglement will release some 750,000 German-Austrian troops for service elsewhere, and suggests the following opportunities for their employment:—"An over-sea attack upon England; a renewal of the German Flanders offensive; an attack on the British front in France; an attack upon the French or Belgians, or upon the Americans when they come into the line; an operation through Switzerland; a decisive campaign in Italy; a thrust at Salonika; or, finally, the recovery of the Turkish losses farther east." The balance of Colonel Repington's able survey reverts to his constant theme that victory can be had only in the West.

The writer, a civilian, presumes to challenge this military premonition on many grounds. In the first place, the Russo-Rumanian front of 1,200 miles, held up, under Tsardom, at least one and a-half divisions, each of 15,000 men, to the ten miles, or a total of Austro-Germans of 2,700,000 men. On the Western front, since mid-1916, a division to the mile has been the accepted standard, for offence or defence, by both belligerents; gradually reduced by Hindenburg as he accepted the defensive and left to the Allies the offensive; the defensive requiring less men.

From the moment that Kerensky was overthrown by the Kühlmann-Lenin-Trotsky combination the Austro-German eastern front began to be depleted. To-day, after the signing of the armistice, and the commencement of the so-called peace negotiations. Germany and Austria, on their 1,200 miles of Russo-Rumanian front, need hardly more than sixty divisions, one to every twenty miles, or 900,000 men—releasing thus at least another 900,000 men. To these we may add, most conservatively, 300,000 German and Austrian prisoners of war, and we reach a total of released enemy troops considerably in excess of Colonel Repington's 750,000.

The question posed by *The Times's* military critic, "What will Hindenburg do with it?" comes back, as the writer has said, to the fetish of the Western front, or, worse still, an invasion of England by sea.

It is curious that so qualified a critic has not digested the fact that for the past eighteen months the German High Command has plumped for the *defensive* on the Western front—that is to say, that it will not sacrifice any more men to effect the impossible, namely, to "break through" Haig's and Petain's lines. The enemy knows he cannot do it; on the contrary, he is chasing time in order to shorten his huge right-angle front by building an impregnable short base—the sea to the Meuse—and any troops he bluffingly proclaims to bring from Russia are immediately engaged in building that impregnable base—20, 30 or 50 miles behind his present rectangular salient, which now extends from the sea to St. Quentin, from St. Quentin to Verdun. He rightly considers that the mechanics of modern infantry attack, even supported next spring by a million American bayonets, are futile against the mechanics of modern machine-gun defence. In a word, he has before him three months of winter on the Western front, and the writer is of opinion that he will elect not to attack, but to dig—and suddenly retire to his Euclidian fortified base, against which the heroism of France, Britain, and America is expected to dash itself in vain. As regards the "invasion of England," that also he cannot manage until the German Admiralty gives him invulnerable floating forts which can beach and continue their inland barrage while they are landing men and all the paraphernalia of modern war, and destroying the forts on shore. After all, it is perhaps not odd that a military critic should suggest a German invasion of England, and not a British invasion of Germany. The German coast is there, however; forty miles of it is only forty miles from Kent.

The present writer, therefore, assumes that the enemy cannot attempt in 1918 any serious invasion of the British Isles; that he cannot break through on the Western front; and that he has at his disposal 1,200,000 "new" men. If it should suit his purpose he can, with an hour's ultimatum, supported by 500 airplanes, "eat Holland for breakfast." Switzerland, on the other hand, is a buttress for him as well as a buttress for France, and does not present the defenceless character of Holland. But the strategic prize of Venice, Milan, Genoa, all Northern Italy, would seem to tempt the most satiated of hogs or Huns, diverting at the same time, in its defence, British, French, and American man-power. To Italy the writer allots 500,000 of Hindenburg's "new" men. She is the strategic front in Europe.

The strategic front in Asia is now pivoted on Baghdad, and the following questions will not be hard to answer. With at least 300,000 men able to be spared for the Near East, will the German High Command sit down under the loss of Palestine and Mesopotamia? Will it lose the excellent opportunity, given by Russian disintegration, to drive into Persia, into the Caucasus, and into Turkestan? Is the dream of Berlin-Byzantium-Baghdad-Busreh-Bombay, to which may now be added the loop-line Byzantium-Bokhara, likely to influence German strategy less in 1918 than in 1913? Why not, then, for Germany the defensive in the West, and the offensive, military *and* political, in the South-East?

The writer estimates that the Turkish Army is distributed as follows:—To oppose Allenby, 90,000, or six divisions; to oppose Marshall, 90,000; Erzerum-Van, 90,000; Europe and Anatolia, 180,000. If Germany should elect to throw now only five German divisions against each of the first two British fronts, and deploy another five to round up Russian Armenia and Northern Persia, she would be sparing only 225,000 of her 1,200,000 "new" men, and be mightily stiffening and tightening her grip on Turkey. The reconquest of Baghdad and Jerusalem is so obvious a desire of the Hunnish heart, the Russian débâcle so absolute, that there is only one answer to it. It is this. This war was always an Anglo-German war; it is still so in 1918; its strategic land-frontier has shifted to, or still is, the Near and Middle East; and if we do not advance west and north from our positions there we must at least stand unshakable as a rock.

A great effort is necessary for Germany, owing to limited railroad facilities in Asiatic Turkey, if she wishes to utilise the next few months of favourable winter weather; but of her present activity at Aleppo there can be no manner of doubt. On the other hand, although it is a long way from San Francisco and Melbourne to Busreh and Suez, no submarines as yet infect the Indian Ocean.

There is, finally, that other great bastion of our far-flung cordon, the Vallona, Monastir, Doiran, Salonika grip, to tempt the enemy. The recapture, for that is what it would spell, of Albania and Epirus, Thessaly and Salonika would do more than redeem a puffed-up War-Lord's pledge to a dethroned sister. It would shake the enemy free of an ever-present menace against Constantinople and his plans for the conquest of the Black Sea; and, thanks to his submarine arm, would practically close up the Eastern Mediterranean, driving us ever more to seek victory in the West alone. More than ever, it seems to the writer, is the capture of Constantinople, with all it entails, a necessity for an Allied victory.

There is, however, one over-ruling element of war to-day discounting the Russian betrayal, and calling caution to the enemy. We see now, even as when Russia was our sworn Ally, five mechanical nations in battle against two: Japan, the British Empire, Italy, France, and the United States arrayed against Germany and Austria. As, after man-power, this war is nothing but a mechanics' war, and as the typical embodiment of modern mechanical genius is man's mastery of the air, so the Central Powers may lay many plans of imperial aggrandisement, but the Nemesis from the air overshadows all. Stand we but firm and prescient!

CYPRUS NOTES.

(From a Correspondent.)

The Past Year.

The year 1917 has been one of contentment and tranquillity, for which Cyprus should be profoundly thankful. Large numbers of the people have continued to enjoy the benefits which the war has brought, as stated in the High Commissioner's report for the past financial year. Cypriots have seen and heard many strange things undreamed of in their philosophy. The news respecting the campaign in Palestine causes intense excitement throughout the island. There is hardly a village that does not send its pilgrims to the Holy Places in normal times. The Greek papers are looked for with avidity in every locality, Greek or Turkish.

The Carob Tree.

The letters of G. L. H. in The Near East regarding the carob tree have aroused considerable discussion in urban centres. There are but few district tree owners who give serious attention to the formidable disease which is attacking so many trees. In other "colonies," e.g., in South Africa, as in Egypt, on the first appearance of any disease or trouble, for instance, in cotton, or any important field of agriculture, experts are at once sent to investigate, and the evil is dealt with by a trained staff. This cannot, of course, be expected in Cyprus, where the Agricultural Department is by no means adequately equipped. But it is felt that some valuable time has been lost. The Government reports state that the treatment prescribed by law has been in the main carried out with good results in the Kyrenia district, which is the area declared to be affected. G. L. H. holds that a remedy "can only be obtained if the Government take the matter in hand themselves, instead of vainly trying to induce peasants to do what they are disinclined to do." It would not at any rate be fair to blame the Agricultural Department, which is probably not provided with funds to carry out this and many other useful things which it would like to undertake. Examples could be easily given to show that various modest proposals of successive Directors have met with a prompt veto from those who hold the purse strings. A very substantial sum could undoubtedly now be applied from the available surplus to check any serious pest, especially now that the plague of locusts has been so successfully reduced. G. L. H. has, at all events, suggested one practical step, viz., the creation of an experimental carob orchard, which could easily be carried out at moderate cost, and should lead to good results. If the situation is rightly understood, the carob disease is already a very serious menace to one of the principal industries of Cyprus. The Agricultural Department deserves full credit for doing what it could so far, on the data hitherto available, and in fighting its own battles. Meanwhile there is a strong difference of opinion as to what course should be followed. G. L. H. considers it "doubtful whether all is yet known about the disease and its proper treatment." It will be interesting to see at what conclusions the collective wisdom of the Legislative Council arrives. It is to be hoped that whatever method of procedure is ultimately settled will be made compulsory in all carob areas; otherwise there is little chance of its becoming general, in view of the prevailing ignorance and apathy on which annual reports still comment. That, at least, is the experience of those who have dealt much with Cypriot agriculturists. The peasants think that the Government should destroy all pests, or pay for the work, as in the case of locusts. The Director of Agriculture, by the way, reports that a new insect has made its appearance, which causes the same kind of damage as the one under discussion.

Public Education.

One of the signs of renewed prosperity mentioned in the report, is that more pupils attend the schools. The praiseworthy efforts of the Government to include elementary lessons in agriculture in the schooling are continued, and it would be wise policy to do even more in this direction. Village boys take naturally to all kinds of farm work; they are very keen to learn useful things, and would be proud to know more of agriculture. Many boys should be able to proceed to serve an apprenticeship to higher agricultural training. It would be a great pity if there were any increased tendency to take boys to town shops and offices. In late annual reports a picture was drawn of many youths who became too fine gentlemen to take up practical farm industry and the like, and who idled about in cafés, etc., while their parents worked. One was reminded of Greece, where much education flooded the market with hosts of candidates for clerkships, etc., very many of whom could not find such employment as they desired. There is, perhaps, no fear at present of this in Cyprus; but it is to be hoped that the growing prosperity of villagers will not tend to interfere with the employment of all the boys that will be required on farm work, in which their future should lie.

TANGIER TO TEHERAN.

Perhaps because he must so often have his tongue in it, Talaat Pasha's cheek is indeed remarkable. His recent remarks about the "favour" always shown by the Turkish Government to the Jews are, I admit, not nearly so wide of the mark as many of the statements he has seen fit to make since Turkey joined in the war; for, as a matter of fact, Turkey has usually treated the Jews rather well. Readers of the The Near East are familiar with the history of the *Dounmehs;* and we all know what a large part the Salonika Jews played in the Turkish Revolution in its early days. But to suggest gravely that just as we entered Jerusalem the Turkish Parliament had been about to consider a Bill granting a kind of Home Rule to Palestine required magnificent impudence at the present moment. To me the most amazing part of the business is that Talaat should have thought for one moment—as he presumably did!—that such a statement would carry any weight at all with a clever people like the Jews. Such a move might succeed with the simple Anatolian, but with the Jew—!

***

But Talaat is not alone in his strange belief that the Jew can be caught in a snare that is set in his sight, so to say. Baron von dem Bussche, the German Under-Secretary of State for Foreign Affairs, has been working—or endeavouring to work—the same idea for all it is worth. He has been telling some distinguished callers how he and his friends welcome the statements of the Grand Vizier, and how Jewish aspirations meet with the "full sympathy" of Germany, under certain conditions. Germany, indeed, is ready to give her "benevolent support" to efforts in this direction, under the afore-mentioned conditions. The conditions, of course, are typical of Berlin. Upon the whole, I am inclined to think, the Baron's support of the Grand Vizier might well have been more effective. And, from the Turco-German point of view, that is deplorable. A good wine may need no bush, but Talaat's very thin stuff required all the help that Bussche could give it, if it was to have any chance of intoxicating those for whose benefit it was uncorked.

***

But the twaddle of Talaat and the bosh of Bussche is quite eclipsed by the brazen effrontery of Javid Bey, who is credited with saying: "It will be one of the first peace tasks of the Turkish Government to find ways and means of making the Armenians forget the sufferings of the war." In the past the Turk has done wonders in making some nations forget—or seem to forget—many things, but not Abdul Hamid himself could work the miracle of which Javid talks so glibly. The only way of making the Armenians "forget" what they have suffered at the hands of the Turco-Germans would be to complete the ghastly work of which the Young Turks seemed so proud a little while ago. Just as the Jews will take Talaat's fair promises at their real worth, so will the Armenians take Javid's.

***

Against the fine talk of the two Turks and the Prussian we may set certain facts regarding Turkish conduct in Palestine that are set out by the National War Aims Committee. The arrest of the Latin Patriarch, the deportation of the Armenian and Greek Patriarchs, and the wholesale execution of Arab notables, all bear witness to the "benevolence" of the Turco-German allies. No wonder that the Sheikh in charge of the beautiful Dome of the Rock should have praised God when the British entered the city. Let us hope that his satisfied expression, "All our sufferings are now at an end," will prove truly prophetic. At least, we have made an excellent beginning. I hope the fanatics will not receive too much attention from the authorities.

***

Although happily belated, I must be allowed to add my voice to the chorus of protest against the proposal to "take over" the British Museum for any purpose whatever except that for which it is now used? I am not a bloodthirsty individual, but it seems to me that whoever is responsible for the proposal really does merit some ultra-horrible fate. "Something with boiling oil in it" would be far too mild; and I suggest that inquiries should be set on foot in the internment camps to ascertain whether any Hunnish Professor of Frightfulness can be found to deal adequately with the criminal. Seriously, it seems to me that the difficulties of carrying out the proposal can never have been properly estimated. I happen to have packed and unpacked a very fair number of Egyptian and Babylonian

Digitized by Google

antiquities in my time—one of the statues in the B.M. itself travelled to England wrapped in old suits of mine!—and I have, therefore, some idea of the labour involved in the process. Of the care that is necessary in handling—let alone in moving—antiques of the more delicate kind, it would be impossible to convey any correct idea to those who have not done the work or seen it done. But I am tolerably safe in saying that the Museum could not be cleared, as it should be cleared, in less than a year, under the most favourable conditions. With things as they are, I am sure it could not be done before the coming of peace—and I am not exactly optimistic about that event either! No; the proposal to use the B.M. for the Air Service is just about as ill-considered as it could be; and it seems to show that someone has lost his (or her) head pretty badly.

***

In describing Colonel Borton Pasha's appointment to the post of Military Governor of Jerusalem as a particularly happy one, I expressed surprise that it should have been possible to spare him from the Egyptian Administration for any length of time. Some such consideration, it must be supposed, has helped to curtail his tenure of the office, as well as the plea of health, officially given. His place at the head of the Post Office devolved upon his "No. 2," who is, from all accounts, an admirable official. His name, however, was held to be against him, and no small commotion arose in certain circles when Borton Pasha refused to allow him to be penalised in the Egyptian Government's service on account of his Austrian origin. Certainly, there will be considerable satisfaction in Egypt, if only on personal grounds, that Borton Pasha should return to take up his work again as Postmaster-General. The new Military Governor of Jerusalem, Mr. Ronald Storrs, is also a well-known figure in Egyptian public life. He became Oriental Secretary to the British Agency in 1909, and his attainments have long since marked him out for a brilliant career.

***

The question has been raised as to the interpretation to be placed on Mr. Lloyd George's use of the expression "homelands of the Turks." Some people have sought to see in the word a strictly historical application; but I fear we must just put it down to the Prime Minister's desire, not unknown to "journalese," to introduce the picturesque touch. The real homeland of the Turks is presumably Central Asia, the country of their origin. The territory where they form at this moment the majority of the population is Anatolia, or that part of Asia Minor lying between the coast region of the Mediterranean and the six Armenian vilayets. They have certainly not been normally in a majority in Constantinople, nor in any of the part of Europe they now occupy, with the exception of the Chatalja district. I cannot help thinking that any Government in the Turkey that is to be, having the interests of its people at heart and being of a progressive turn of mind, will find it an embarrassing anomaly to have its capital, as it were, on an island in a remote corner of its wide dominions. For that will be the position of Constantinople *vis-à-vis* Anatolia. Of course, "face," or prestige, must be taken into consideration. But it would be of splendid augury for the future of the country if a man were to arise far-sighted and bold enough to say that, if the Turks are to be limited to such a narrow strip of Europe as the land east of Chatalja, they will withdraw altogether, set up a new capital at Brussa or elsewhere, and have a compact stretch of territory, unbroken by an internationalised or neutralised portion.

CORSAIR.

On January 14 Dr. E. W. G. Masterman, the well-known authority on the geography of Palestine, will lecture before the Royal Geographical Society, at 8.30 p.m., on "The Jordan Valley and its Lakes." Dr. Masterman is also giving University Extension lectures for the University of London. Beginning on January 9, he will give ten lectures on succeeding Wednesdays, at 5.15 p.m., on "The Historical Geography and Archæology of Palestine" at the Tottenham Polytechnic. He is also giving a course of six lectures on Tuesday afternoons, at 3 p.m., at the Jehangier Hall, London University. This course begins on February 5 and lasts until March 12.

The following letter, dated Buckingham Palace, December 17, has been sent by Lord Cromer to Mr. Evelyn Cecil, M.P., Secretary-General of the Order of the Hospital of Saint John of Jerusalem in England:—"I am commanded by the King, Sovereign Head of the Order of the Hospital of Saint John of Jerusalem in England, to request you to convey to the Chapter-General of the Order an expression of his Majesty's thanks and appreciation of the resolution passed on December 14, 1917, expressing the loyal felicitations of the Order upon the capture by his Majesty's armed forces of the city of Jerusalem, without injury to any of the Holy Places. The King joins with his people throughout the British Empire in welcoming the joyous tidings of this memorable feat of British arms."

NEAR EAST IN PARLIAMENT.

HOUSE OF LORDS.

Russia and Persia.

Viscount BRYCE asked the Under-Secretary for India whether the Imperial Russian Government made proposals to his Majesty's Government in 1915 to include within the Russian zone in Persia a wedge of territory lying between the Russian and Afghan frontiers; whether the Russian Government raised at the same time the question of solving certain problems in the districts of Northern Afghanistan adjoining Russian territory; what was the nature of those problems; and whether the integrity of the Amir's territories was in any way affected.

Lord ISLINGTON: I am glad of the opportunity afforded me to make a brief statement, which will enable me to allay and to remove any misunderstanding that may have arisen from the publication of the papers alluded to in the question. I may explain that a memorandum addressed to his Majesty's Government by the Russian Ambassador on March 22, 1915, in connection with the ultimate terms of peace, suggested, among other matters, that the Russian zone in Persia—that is, the sphere defined in Article 1 of the Anglo-Russian Agreement of 1907, in which, as noble lords will remember, the predominance of Russian interests was recognised—should be slightly readjusted so as to transfer from the neutral to the Russian zone a small area in the neighbourhood of the Russian and Afghan frontiers. This proposal, had it been carried out, would not have affected Afghan territorial interests. But, in fact, his Majesty's Government never found occasion to reply to the Russian memorandum, nor were the proposals contained in it discussed between the two Governments. An opportunity was subsequently taken in the course of correspondence with the Amir of Afghanistan to give him a formal assurance that no proposal affecting the interests of his country would be made or agreed to at the Peace Conference. To that undertaking his Majesty's Government have always adhered, and intend to adhere. This memorandum of the Russian Government also suggested a settlement of certain proposals for improving the irrigation of Russian territory adjoining Afghanistan, which had been made by the Russian Government before the war. These proposals never came to a head, and could not have been carried into effect without the Amir's consent. No proposal affecting the territorial integrity of Afghanistan has been made either in the memorandum or elsewhere.

THE ARCHITECTURE OF PALESTINE.

Speaking on January 8 at the London County School of Building, Clapham, Professor Beresford Pite said that the ancient Hebrews had no native architecture. Egyptian traces could be found, and the architect of Solomon's Temple was Hiram of Tyre—a Phœnician. The builders of the New Testament era were wholly Roman. Herod the Great was a great builder, but the cities he built through Palestine were Roman cities. With the advent of Christianity the Roman character of the architecture became modified to some extent, and from the time of the founding of Constantinople the architecture of Palestine must be considered Christian. It was then that great churches began to be erected upon Scriptural sites, such as the Church of the Holy Sepulchre and the building known as the Dome of the Rock. The rule of the Eastern Empire ceased in the sixth century, and from that period onward there was a magnificent era of Arab art. This art was erratic and predatory. It would take buildings, pull them down, and rebuild them. It had a few particular forms, such as the dome and pointed arch, but these arches were most commonly built of stones taken from other buildings and adapted This period had continued through the Middle Ages down to our own day, but there was a great break in it due to the Crusades. Wherever the Crusader went he built a stone castle and church, and it was one of the surprises of Palestine to-day to find on top of the Arab art the most glorious exposition of English and French Gothic. The 125 years of Christian rule had produced churches charming beyond words to architects trained in the traditions of the West. The upper part and the embattlements of the walls of Jerusalem represented English art of the fourteenth and fifteenth centuries.

Of modern Jerusalem, the lecturer said that twenty-five years ago the city was beginning to grow outside its walls, and suburbs of modern buildings were springing up; while within the city European Governments and churches were building hospices—i.e., monastic establishments—in which pilgrims were received. Consequently, in Jerusalem to-day we got a conspectus of English, French, Russian, and German buildings, the architect in every case being imported.

The lecture was illustrated by lantern slides. One of these showed the lower part of the city wall This dated back to the time of Solomon, and it could be seen that the huge stones of which it was composed were from 11 to 15 ft. in length. Another slide showed the so-called tomb of Absalom—really the remnant of a fine Crusading church, over which a Moslem dome had been put, and in the courtyard a minaret. The Mosque of Omar (or Dome of the Rock) was also shown. The lecturer said it probably occupied the site of the High Altar in front of the Temple of Solomon. It was an octagon building, supporting a drum built round the rock, the whole building being crowned by a modern dome of iron covered with lead

NEAR EAST BOOKSHELF.

THE ARMY OF ALL THE TALENTS.*

With the Censor looking over his shoulder, and the Chiefs of Staff of the German, Austrian, Bulgarian and Turkish armies looking over th Censor's, Mr. Ward Price manages to give us here a fascinating bird's-eye view of the doings of the Army of All the Talents, and leaves us still, peering wistfully into the Balkan mist, greedily anxious to hang somebody, but certainly not Mr. Ward Price or his hero, General Sarrail. Nor is the outstanding villain of this tragi-comedy Tino, though he is black enough; the Allied Councils that tolerated him so long, and the submarine that we will not tolerate, appear as the real criminals. As the author is the official correspondent of the Salonika campaign, and throughout the volume preaches patience, we note his remark that a single torpedo sinking a ship that carries a cargo of "spare parts" can hold up the operations of an army when it is separated by long sea distances from the home workshops of the Allies. Such is the position at Salonika, and in a less degree, thanks to immunity from the submarine in the Indian Ocean, the Red Sea, and the Persian Gulf, the position of our Palestine and Mesopotamia armies, by whom everything mechanical must be imported. The M.T. and the A.S.C., the railroad chief and the road-builder, stand out in this graphic story as the master scene-shifters, without whose tireless and often thankless labours the play could not proceed.

Mr. Ward Price takes the reader so surely by the hand over the whole ground from Lake Prespa in the West to the Struma River and Seres in the East, that through his skilful pen you feel yourself an eye-witness of each struggle, victory, failure, or impasse; he shows you the British, French, Italian, Russian and Serbian forces advancing, retiring, fighting or entrenching, but ever cursing the almost invincible mud and the nearly invincible fly. Intentionally, we may suppose, he leaves the impression that grander troops were never collected, and that none ever had so good a right to profanity of language. Self-sacrifice of this and that unit comes to all in turn for tactical or strategic purposes of the day or moment, and if it is an army of all the talents, it is certainly one of all the valours. In this kaleidoscopic medley of uniform and race, the 100,000 Serbians ("all that was left of them") recapturing their beloved Monastir from the jaws of the Hun and the Bulgar are rightly given pride of place.

What is to be the end of it all? What is the next move? One of these questions the author partly answers in his narrative of the last two years—"nothing doing" on either side in a Balkan winter! In fact, salaaming to the high gods who sit at Versailles, he ventures on no other message to this great expeditionary force than might be summed up in the words: Sit tight, hang on, and hope—the enemy hates to see you there. Incidentally he pays a tribute to Bulgarian chivalry towards our stretcher-bearers.

There is one fault in the book, and a bad one: the illustrations are meagre and the maps irritatingly inadequate; but even so the author has made a valuable contribution to current war-news reading, and has let out some facts that have hitherto been veiled. What the Censor has not allowed him to say we now very much want to know.

THE CHURCH IN THE FURNACE.†

This book is a collection of seventeen essays written by a number of the most able of the present-day Anglican clergy, from actual experience gained more especially under the strain and in the danger of war. It is full of the deepest interest for all thoughtful minds, is relieved by touches of humour, and never loses its great object of awakening activity in all who have the welfare of mankind at heart. It goes further to answer the vexed question "What's wrong with the Church?" than any book yet published on present-day religious needs. It is refreshing, sincere, and thoughtful. The writers' chief merits lie in an honest endeavour to get away from stereotyped formalities and respectable antiquity. The book is full of startling suggestions for more modern methods and more thorough adaptation to the needs of the present day. It states that, unless the Church at home is preparing for drastic changes in the light of the great weight of opinion gathered together from all ranks of the armies abroad, she will lose her hold on the nation perhaps for ever. The authors show that this is the hour of trial in the furnace of reality, but also the hour of opportunity. It is a sign of great hopefulness for the future to note with what boldness they would face the issue. The underlying note of anxiety is clearly shown by the undoubted call to the Church at home to be alive to what has come, and to be preparing at once for the changes that must be wrought, if the Church is to come forth purified from the furnace. The book is an excellent collection of valuable and most readable essays for both laity and clergy alike.

EGYPTIAN COLLOQUIAL ARABIC,*

There should be considerable demand for a book of this sort just now. The author has had so much experience in teaching the subject that he has quite unusual claims to publish such a work. As he points out, the final form here put forward is the result of considerable experience in actual teaching and continually revised methods. The orthography is, in the main, based on the international phonetic alphabet, but with some curious and original modifications. It is not intended for, and could be of little or no use for, self-instruction, but in the hands of a trained native Arabic teacher it should form the basis of a most useful course. As in the Berlitz and other modern systems, the grammar is learnt here by use in conversation. The book is quite the best thing of its kind.

A NEW MAP OF PALESTINE.

Those wishing to follow the military operations in Palestine cannot do better than purchase a copy of the new Map of Palestine just issued to the public—by permission of the War Office—by the Palestine Exploration Fund. It contains the whole of Western Palestine on the scale of three-eighths of an inch to the mile; all the names are in their modern Arabic form, historic and Biblical names being omitted for the sake of clearness. The whole advance from Wady el Ghuzzeh northwards can be followed on this map, scarcely any name figuring in the official despatches being absent. Unmounted the map costs 7s. 6d. It may be had mounted on linen with rollers for hanging up or made to fold up in book form with a stiff cloth cover—either style 15s. Applications for copies may be made to the Secretary, Palestine Exploration Fund, 2, Hinde Street, Manchester Square, W., where samples of the various styles may be seen.

ANNUALS.

The British Engineers' Association (32, Victoria Street, London, S.W.1) has issued its *Official Directory* of members for 1917. Its wide membership makes a publication of this nature a valuable book of reference. In addition to an alphabetical list of firms there is a classified list of manufactures, with the names of the firms supplying the different articles. The book is written in three languages, English, French, and Russian. Applications for copies (5s. each) are invited from consulting and managing engineers, municipal engineers, and all important users of engineering plant and materials.

The International Mercantile Diary and Year Book for 1918, issued by "Syren and Shipping," is a volume full of useful information of all sorts, financial, statistical, and commercial. The money tables and ready-reckoner are wonderfully complete, and at the end of the Diary there is in a small compass an encyclopædia of information of the chief countries of the world.

The Persian Minister called at the Foreign Office on January 4.

M. Pashitch, the Serbian Premier, has left Corfu for Salonika.

The Y.M.C.A. now occupies what was formerly the German Consulate in Jaffa.

The Roumanian Minister was among the diplomatic callers at the Foreign Office on January 3.

The French Ambassador was visited by the Serbian Minister at the Embassy on January 9.

The collections in Bombay in connection with the "Our Day" celebrations amounted to Rs.7½ lakhs.

Dr. Stijkovitch, Secretary to the Serbian Board of Agriculture, left London on January 4 for Paris.

The Earl and Countess of Yarborough have returned to Brocklesby Park, their residence in Lincolnshire.

The Serbian Minister and Mme. Yovanovitch entertained the personnel of the Legation at luncheon on January 7.

The announcement is made of the birth of a son to Sir Alfred Hamilton Grant, Foreign Secretary to the Government of India.

Mr. Albert Porral, C.M.G., I.S.O., Russian Consul at Gibraltar, died on January 7, aged seventy-one.

Talaat Pasha, the Turkish Grand Vizier, arrived on January 4 in Berlin, where he had an interview with the Imperial Chancellor.

More than 400 officers have been dismissed from the Greek Army and removed from Athens as opposed to the present régime.

Javid Bey, Turkish Finance Minister, is reported to have said in Vienna that he was going to Berlin to get a new loan from the German Government.

Captain Wedgwood Benn, M.P., has been awarded the Croix de Guerre by the French authorities for his work as a seaplane observer while attached to the Division de Syrie.

A thanksgiving service has been held in the Anglican Church in Athens to celebrate the liberation of Jerusalem. The congregation included the King of the Hellenes and Cabinet Ministers.

M. Venizelos, who returned to Athens on January 2, had a long audience of the King of the Hellenes on January 4, and gave an account to his Majesty of the result of his visit to the Allied countries.

An agitation has been set on foot throughout South Africa by Asiatic subjects against the new railway regulations, which allow them to travel only by certain routes except with special permission.

The King of Roumania has conferred the Order of Commander of the Crown of Roumania with Swords on Major Ernest Goldschmidt, who was assistant Military Attaché to the Roumanian Legation in London.

All priests and members of religious orders who had returned from the Holy Land have been ordered by the Holy See to return thither immediately, as it is now perfectly safe there under British occupation.

In celebration of the taking of Jerusalem the ladies of the Allied colonies in Seville are giving dinners to 100 women and children in the soup kitchens of the Sisters of St. Vincent de Paul in the poor quarter.

The engagement is announced of Lieutenant Basil Drewe, M.C., R.G.A., second son of Mr. and Mrs. J. C. Drewe, Wadhurst Hall, Sussex, and Drewsteignton, Devon, and Ruth, only daughter of the late Frank Haselden and Mrs. Haselden, Alexandria, Egypt, and Ticehurst, Sussex.

Mr. Montagu, accompanied by Lord and Lady Willingdon, left Bombay on January 2 for Gwalior, while the Viceroy left for Delhi, says Reuter's Bombay correspondent.

Lieut.-General H.H. Maharaja Sir Pertab Singh had the honour of being received by His Majesty at Buckingham Palace on January 9, when the King invested him with the Insignia of the G.C.B.

In connection with the Y.M.C.A.'s appeals to the trades and industries, the Kent millers have undertaken to raise £1,000 for a Y.M.C.A. hut in Jerusalem. Most of the money has already been subscribed.

Captain Rodocanachi, Miss Rodocanachi, and Miss Helen Rodocanachi have left 58, Westbourne Terrace, Hyde Park, and have taken The Hill, Broadway, Worcestershire, to which address all communications should be sent.

According to the *Vossische Zeitung*, news has been received from Vienna that the Emperor Charles will visit the Turkish capital, on the invitation of the Sultan, very shortly. The visit is said to have exceptional political importance.

A Constantinople telegram states that the philosophical faculty there has proposed Lenin for a Nobel peace prize as the representative of the Russian people, "which announces to the world the ideal of peace, harmony, justice, and fraternity so dear to the Turkish people."

The Times Athens correspondent states that Lukas Roufos, who was Governor-General of Crete after the first Balkan war and formerly a prominent partisan of M. Venizelos, but who went over to the Royalist faction in 1915, was arrested by order of a Court-martial on December 31.

In an interview with the *Vossische Zeitung* the Turkish Heir to the Throne said:—"We demand territorial integrity and the religious freedom of our Khalifate. We also demand complete liberty for our economic development and a guarantee for the safety of our national religions and *Kultur*."

The Indian National Congress ended with a unanimous resolution urging the necessity of a Parliamentary statute to introduce full responsible government within a certain time limit, the National Congress and Moslem League's scheme meanwhile to operate as an instalment.

Sunday, January 6, was observed throughout Egypt as a day of prayer and thanksgiving, services being held in all the Western and Eastern churches. At the service in the morning at All Saints' Church, Cairo, the Bishop of Jerusalem officiated, and the High Commissioner and his staff were present.

January 7 was Christmas Day according to the Greek and Russian calendars, and special services were held in London at the Greek Church in Moscow Road, where the service was conducted by the Great Archimandrite, the Very Rev. Dr. Pagonis, and also at the Russian Church in Welbeck Street, where the Rev. Eugene Smirnoff, Priest to the Russian Embassy, officiated.

Mails for the Egyptian Expeditionary Force containing letters and newspapers, which reached the Army Post Office, London, for despatch between midnight on November 30 (newspapers 3.30 p.m., November 28) and 7.30 p.m. on December 5, have been lost at sea through enemy action. There were no parcels in the lost mails.

M. Venizelos has informed the Rome correspondent of *Hestia* that he has obtained from the Allies everything he asked for on behalf of Greece, both foodstuffs and financial aid. "We shall lack nothing in the future," he said, "and prices will be forced down to a reasonable level by the sternest measures against profiteers, whose shameful conduct is tantamount to high treason, and against whom I am inclined not to exclude the death penalty."

Borton Pasha, Postmaster-General of Egypt, who was appointed Governor of Jerusalem on the surrender of the city to General Allenby on December 9, has been prevented by ill-health from retaining the post of Governor. Mr. Ronald Storrs, C.M.G., has been appointed Governor of Jerusalem, with the rank of Temporary Lieutenant-Colonel, in succession to Borton Pasha. Mr. Ronald Storrs entered the Egyptian Civil Service in 1904, and five years later was appointed acting Oriental Secretary to the British Agency, Cairo.

A Requiem Mass for M. Bora Nicolaievitch, artillery sergeant-major in the Serbian Army, son of Colonel J. Nicolaievitch, Military Attaché to the Serbian Legation in London, who died in France on December 27, was celebrated at the Russian Chapel, Welbeck Street, on Saturday morning, in the presence of a large congregation. The principal mourners were Colonel J. Nicolaievitch, Mlle. Vouka Nicolaievitch, Mlle. Zora Nicolaievitch, Mlle. Olga Nicolaievitch, and M. Alexander Nicolaievitch; while others present included the Serbian Minister and Mme. Yovanovitch, the Roumanian Minister, Mme. Misu and Mlle. Misu, and General Vicomte de la Panouse, Military Attaché to the French Embassy.

APPOINTMENTS, PROMOTIONS, ETC.

The list of appointments to the Order of the British Empire, issued this week, contained a number of names of Near Eastern and Indian interest. General Sir Francis Wingate, High Commissioned for Egypt, is appointed a G.B.E., while Major-General Stack, Acting Sirdar and Governor-General of the Sudan, receives the honour of K.B.E.

The Indian honours include as Commanders Jeanie Lady Meston, head of the branch of the Red Cross in Allahabad; Lieutenant-Colonel Frank Popham Young, C.I.E., Indian Army, Commissioner, Rawalpindi Division, Punjab; Sir Robert Swan Highet, Agent, East Indian Railway, Calcutta; Nawab Sir Faridoon Daula Bahadur, K.C.I.E., C.S.I., Assistant Political Minister to his Highness the Nizam's Government; Montague de Pomeroy Webb, C.I.E., Manager, Forbes, Forbes, Campbell and Co., Karachi, Bombay Presidency; the Egyptian and Sudan honours, Mr. Ernest Macleod Dowson, Director-General of Survey Department; Mr. Cecil Gordon Crawley, Mr. Wasey Sterry, Chief Justice in the Sudan; and Mr. George Eustace Burnett-Stuart.

Egypt and the Sudan between them have twelve appointments to the Fourth Class of the Order, the recipients being:—Mr. Arthur Thomas Lloyd, War Trade Department; Mr. James Francis Gordon Hopkins, Chief Inspector, Ministry of Finance; Mr. Arthur Ferguson MacAllan, F.R.C.S., Director of Ophthalmic Hospitals; Mr. Albert William Hazel, Inspector of Interior; Mr. Edward Harry Grogan, Chief Inspector of Marine, Ports, and Lights Administration; Mr. Lindsay Edward Bury, Inspector of Irrigation; Mr. Frank Pears Watson, Inspector of State Buildings, Department of Public Works; Mr. Harold Preece Hewins, Secretary of Sudan Economic Board; Mr. George Ehret Iles, Governor of Blue Nile Province; Mr. Clement Gaukroger Hodgson, Chief Mechanical Engineer, Sudan Railways; Mr. William Crothers Hornblower, Organiser of the Refugee Camps at Alexandria and Port Said; and Mr. Norman Macnaghten, Inspector, Ministry of Interior.

Finally, among the Members of the Order are the following:—Mr. Edward Oliver Heywood Fulford, Works Manager, Blue Nile Irrigation; Mr. John Ball, D.Sc., Chief Inspector of Geological Survey; Mr. John McIntosh, Works Manager, Locomotive Shops, Egyptian State Railways; Mr. George Douglas, Superintendent, Photographic Office, Survey Department; Mr. Burton Pearson, Divisional Traffic Superintendent, Egyptian State Railways; Mr. George Burnett Middleton, Mechanical Service, Public Works Department; Mr. Henry Wilfrid Skelly, Works Manager, Government Press; Mr. Percy Weaver, Assistant Divisional Traffic Superintendent; Mr. Herbert Mason, Inspector in Vet. Service of Minister of Agriculture; Miss Pye Moore, Nursing Sister, Khartoum Civilian Hospital; Mr. George Boxall, Dockyard Engineer, Port Sudan; Mr. Allen Calder, Potts, Works Manager, Sudan Steamers Department; and Mr. Sydney Dennett, Superintending Engineer, Sudan Posts and Telegraphs Department.

OBITUARY.

THE LATE LIEUTENANT BAKER.

Lieutenant Cyril Percival Baker, Oxford and Bucks Light Infantry, who is now reported to have died of wounds on the Doiran front on May 8-9, 1917, in his twenty-ninth year, was the second son of Mr. and Mrs. G. P. Baker, of Ivydene, Bexley, Kent, and was educated at Mr. Kilby's, Blackheath, and Wellington College, where he was a scholar and sergeant in the O.T.C. Destined for commerce, he entered the London branch of a large corporation of Oriental carpet manufacturers, and in due course resided for a time at the company's agencies in Turkey, India, Kashmir, and Persia. At the outbreak of the war he was in charge of the agency at Meshed, and, coming home, was gazetted to the Oxford and Bucks Light Infantry in November, 1914, and left for the front in September, 1915. He was slightly wounded in August, 1916, but remained with his battalion, serving with them continuously during the whole period they were at the front.

In the action on the night of May 8-9, 1917, on the Doiran front, Macedonia, his company having successfully gained their objective on the second line of enemy trenches, he was returning for reinforcements, when a trench mortar bomb exploding wounded him in the body. He called to his men to tell a fellow-officer to carry on, as he was "knocked out." Taken to a shell-hole, he refused to allow his men to dress his wounds, saying that every man was wanted in the firing line, and ordering them back again. It would appear that the counter-attacks of the enemy compelled a withdrawal of our troops, and with it the impossibility to recover many of the wounded, and, although inquiries have been instituted through friendly Bulgarians, no trace of Lieutenant Baker has been forthcoming.

A fellow-officer, in writing of the action, says:—"He was perfectly splendid on the top before he was hit, and whenever I saw him he was quite cool and calm, and seemed quite pleased with life, though it was absolutely hell up there. He set a most splendid example to everyone. The thing I remember most vividly is this: there was a wretched old Bulgar, who lay in front of the trench and sniped us; Cyril shouted to me, 'Come on. I'll race you for him!' I believe I got there first, but missed him and fell into the trench, and Cyril must have done for him just behind me." Cyril Baker's death has removed a young life full of promise and usefulness. He had acquired a unique position in the industry with which he was associated, for no single person has hitherto been granted the opportunity of studying the technical features and peculiarities of so many districts in the Orient. Lieutenant Douglas Baker, R.E., a younger brother, died of wounds July, 1916, whilst three other brothers are serving in the Army and Navy.

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO,
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

THE ONLY ENGLISH HOTELS IN ALEXANDRIA.
Proprietor: AUGUSTUS VAN MILLINGEN.

WINDSOR HOTEL
(Facing the Sea, opposite Y.M.C.A.), ALEXANDRIA.
Full Pension, P.T.50; Room, P.T.20;
Lunch, P.T.15; Dinner, P.T.20.
For long stay, apply to the Manager.

SUMMER PALACE HOTEL,
GLYMENOPOULO, RAMLEH.
This Hotel is situated near the Beach. Open all the Year. Bathing Cabins.
Terms from: Pension, P.T.60; Lunch, P.T.20; Dinner, P.T.25.

NAJEM HOURY'S CYPRUS HOTELS COMPANY.
OPEN ALL THE YEAR ROUND—
NIKOSIA—Cyprus Palace Hotel.
LIMASSOL—Olympus Hotel.
FAMAGUSTA—Savoy Hotel.
FOR SUMMER SEASON—
PLATRES—Platres Hotel. 4,000 feet above sea level. Open from May till October.
TROODOS—Olympus Hotel. 6,000 feet above sea level. Open from May till October.
Perfect situation. French and English Cuisine. Moderate Terms.
Excursions to Mount Troödos.
For Tickets and further Particulars, apply to
NAJEM HOURY & SONS, Limassol, Cyprus.
Proprietors of "The Army and Navy Stores."
Branches—Polymedia, Troödos, Nikosia, Famagusta, Larnaca and Platres
Head Offices and Central Stores: LIMASSOL.
All arrangements for Transport, &c., are made by the above Firm.

"NAVAL & MILITARY" HOTEL
HARRINGTON ROAD, SOUTH KENSINGTON, LONDON.
Only 200 yards from District Station and "Piccadilly Tube" (S. Ken. Station). For all Services and the General Public. Two Lifts. Excellent Cuisine. Exceptional Reception Rooms. 100 Bedrooms.
Cables: "Navamilot London." Telephones: Kensington 5425 (4 lines.)

HOTEL SOMERSET,
ORCHARD STREET (by Selfridge's) OXFORD STREET, W.
Most comfortable and home-like Establishment. English cooking a special feature. Eggs, Butter Poultry direct from the farm.
200 well-appointed bedrooms with fitted basins (h. & c.). 30 bath-rooms
15 private Suites. Passenger lift. Own Artesian Well.
Magnificent Georgian Dining Hall (100 tables,)
Inclusive terms from 10/- to 15/- daily; 3 to 4½ guineas weekly.
Double room 16/- to 21/- daily; 5 to 7 guineas weekly.
Bedroom, bath, breakfast (3 courses) 7/6 daily.

FRIDAY, JANUARY 11, 1918.

WAR AIMS AND PEACE TERMS.

War aims and peace conditions are not necessarily synonymous terms. There exists, however, a common tendency to confuse the two, and although the British Prime Minister and the Cabinet for which he spoke on January 5 may be credited with keeping the distinction clear in their own minds, it is by no means as certain that all those who heard or have read the speech have done so as well. At one point, indeed Mr. Lloyd George's words may have contributed to some confusion of thought; for, after enumerating the discussions which had preceded his declaration, he stated that "although the Government are alone responsible for the actual language I propose using, there is national agreement as to the character and purpose of our war aims and peace conditions." From the unbroken chorus of approval which has greeted the utterance, which has even pacified the pacifist, it is evident that some people have jumped to the conclusion that an enunciation of war aims constitutes the formal text of terms of peace. There should be no room for misunderstanding on this point. By placing the two expressions in juxtaposition the Prime Minister can only have intended to suggest a distinction between them. His purpose was to state British or Allied war aims. "When men by the million are being called upon to suffer and die . . . . they are entitled to know for what cause or causes they are making the sacrifice." Clearly, in a war in which the interests involved are of so complex a character, it would be almost impossible, as well as rash, to attempt to memorize for the purposes of a public speech the terms that will embody the final and comprehensive settlement at the end of the war. (In a written message to Congress President Wilson has felt justified in giving a more definite form to America's war aims.) It was, we believe, far from Mr. Lloyd George's intention to attempt such a task, and the important statement that he made to the Trades Union delegates, and through them to the world, must be regarded as an unequivocal declaration of war aims. In some particulars, no doubt, the two will overlap. The crucial distinction, however, between them is well brought out, if we imagine for one moment the Prime Minister's speech as being the document on which alone it is open to Germany to declare the war at an end. The thing is, of course, unthinkable. No reference is made to the German Fleet; Prussian militarism would remain as aggressive as ever, and peace would be precisely that patched-up affair which the pacifist has been so anxious to bring about and which has been so roundly repudiated by the Allied Governments and the good sense of all the Allied nations.

As a statement of war aims the speech certainly carries the Allies beyond any point they had reached before. For this reason it is to be welcomed, for we have never wavered in the belief that the Allies have nothing to lose and probably much to gain by a clear avowal of the ends for which they are fighting. Indeed, we would go further, and would contemplate the publication of the actual conditions of peace that the Allies are resolved to enforce, in so far as those who still remain loyal to the Alliance are concerned. The situation, unfortunately, is complicated by the action of Russia, and part of the settlement in the Near and Middle East would have to be left undetermined. Thus there may be valid objections to a public recital of peace terms at this stage; but it has to be borne in mind that sooner or later those terms will have to stand the world's scrutiny, and will be judged on their merits, in the light of the principles for which the conflict has been waged. No small part of the strength of the Allies' position lies in the fact that they have been able at any time to lay their cards upon the table. Circumstances have combined hitherto to deter them from an enunciation of war aims other than in general terms; but now that a more definite exposition has been wrung from them as a result of events in Russia, it is at least open to argument—and the point was made a month ago by President Wilson—whether an earlier avowal would not have saved the powers that be in Petrograd from the fatal step which they would like to cancel on finding that their estimate of the honesty of their Allies and of that of the Central Powers has been sadly at fault. Much of the ground traversed by the British Prime Minister is familiar to all who have kept in touch with the utterances of the Allied statesmen. The paramount war aim remains the complete restoration, political, territorial, and economic, of the independence of Belgium, and such reparation as can be made for the devastation of its towns and provinces. "Next comes the restoration of Serbia, Montenegro, and the occupied parts of France, Italy, and Roumania. The complete withdrawal of the alien armies, and the reparation for injustice done, is a fundamental condition of permanent peace. . . . We regard as vital the satisfaction of the legitimate claims of the Italians for union with those of their own race and tongue. We also mean to press that justice be done to men of Roumanian blood and speech in their legitimate aspirations." Only in one particular did Mr. Lloyd George make any marked deviation from former official statements. He declared that the British are not fighting "to deprive Turkey of its capital or of the rich and renowned lands of Asia Minor and Thrace, which are predominantly Turkish in race." Further on he added: "While we do not challenge the maintenance of the Turkish Empire in the homelands of the Turkish race, with its capital at Constantinople—the passage between the Mediterranean and the Black Sea being internationalised and neutralised—Arabia, Armenia, Mesopotamia, Syria, and Palestine, are, in our judgment, entitled to a recognition of their separate national conditions. What the exact form of that recognition in each particular case should be need not here be discussed, beyond stating that it would be impossible to restore to their former sovereignty the territories to which I have already referred."

A year ago the Allies pledged themselves to "the setting free of the populations subject to the bloody tyranny of the Turks, and the turning out of Europe of the Ottoman Empire as decidedly foreign to Western civilization." It is obvious from Mr. Lloyd George's statement that they have now receded from the position they took up in the reply to President Wilson's Note as far as the future of Constantinople is concerned. The reason was given by the Prime Minister in the following words: "I can only say that, as new circumstances, like the Russian collapse and the separate Russian negotiations, have changed the conditions under which these arrangements were made, we are, and always have been, perfectly ready to discuss them with our Allies." Even before the Bolsheviks carried the doctrine of "no annexations" to unrecognisable lengths, the first Provisional Government of Russia had abandoned the claim to Constantinople. There was still a chance that when the country settled down to more normal conditions other views would prevail; but the difficulties of finding a suitable substitute for a Russian occupation, and the professed determination of new Russia to discountenance the ejection of the Turks, would seem to have been held to leave the Allies no alternative to the abandonment of this item in their original war aims. Judgment on the wisdom of the step must be withheld until the arrangements to be made for the internationalisation of the Dardanelles and the Bosphorus and for an effective wedge in the Central European *bloc* are known. We are inclined to believe that the interests of the Turks will be far better served if their future can be confined entirely to Asia Minor. A Turkish Government in Constantinople will always be under the temptation to cultivate a European policy instead of devoting itself exclusively to the well-being of its people in the sphere

Digitized by Google

of material progress. But the statement has been made, and for the moment stands as an offer to Turkey. Here, again, it may be necessary to differentiate between war aims and peace terms. It is only when victory has been achieved that the war aims now enunciated will be able to be carried into application. Victory entails the defeat of Prussian militarism and of the militarist régime of the Committee of Union and Progress. Whether the autocratic constitution of Germany will survive that defeat remains to be seen. It is a question for the German people to decide; but they are likely to have a clearer appreciation of the position if they understand that, before war aims can be translated into peace terms, the military and commercial autocracy which now, in President Wilson's phrase, exercises its "impudent dominion" must give place to properly accredited representatives of the German nation. The same principle, we imagine, applies to Turkey.

PRISON PROBLEMS IN EGYPT.*

(Concluded.)

By COLES PASHA.

But to return to prison problems, I found that although by these prison labour camp expedients I had succeeded in relieving the overcrowding to a certain extent, still something more was required to stop the over-increasing number of committals to prison. Of course, as a Prison Official I was not really called on to initiate legislation in this respect, but it was clear that, if I did not, no one else would. The Ministry of Justice after some demur agreed to my proposals, and eventually Acts relating to "First Offenders," "Release on conditional liberty," and "Labour in lieu of imprisonment" were in turn passed.

I had hoped for great results from the First Offenders' Act, but the Ministry of Justice was very nervous that the power would be abused by the Egyptian Courts, and, I imagine, must have issued special instructions to the judges not to make any great use of the Act. At all events, it was practically a dead-letter, as not more than fifty persons were treated as first offenders in any one year whilst I remained in Egypt. Yet how many thousands are annually thus dealt with in England!

The police, too, strongly opposed release on conditional liberty as a danger to public security. It was, therefore, deemed advisable to make a provision that the Governors should be consulted before allowing any release, and also to allow the Administrative Authority the right to reincarcerate without a second conviction any released prisoners who broke the police supervision regulations. These qualifications of the English law made it very difficult for the Prisons Department, and constant appeals had to be made to the Minister of Interior to modify the Governors' decisions. Nevertheless, the Act was the means of releasing hundreds of prisoners annually, and helped considerably with the mark system to maintain discipline in the prisons. I find that in my last annual report I show that some 2,000 had been released in that particular year, and only nineteen of all who were on conditional liberty reincarcerated.

Labour in lieu of imprisonment is, I think, an experiment which has not been tried in any country other than Egypt, and I may, therefore, be allowed to explain more fully the working of the scheme. Anyone who has studied penology will tell you that a short term of imprisonment is the least satisfactory of any form of legal punishment that can be inflicted. Apart from the impossibility of finding any lucrative employment within prison walls for a prisoner sentenced to a short period of imprisonment and consequent greater expense to the State, the moral effect on the prisoners themselves is very bad. Even if association with more hardened offenders can be avoided, familiarity with prison surroundings tends to lessen the deterrent effect, and the "Black Maria" and prison cells are no longer dreaded as before. In fact, a short term of imprisonment in England is amongst certain classes now spoken of as a "wash and brush up."

In Egypt the population had for generations been accustomed to be called up for forced unpaid labour at certain seasons, and it struck me that this would be a much more satisfactory punishment for the minor offences than either fine or imprisonment. There were difficulties to adding "forced labour" as a punishment to those already provided by the penal code, but to allow an offender sentenced to fine, and unable to pay, to work off his debt to the State by labour in lieu of imprisonment was said to be less objectionable. A short Act was accordingly passed allowing a person sentenced to fine the option of labour in lieu, labour of six hours being equivalent to one day's imprisonment. The idea was that for the remaining eighteen hours the offender might still be able to earn a livelihood, if he felt so inclined. In practice the scheme has worked out quite as well as I expected, as in 1911 (my last report), out of the 15,166 who elected to work 13,985 completed their tasks, 629 failed to complete, and 552 failed to report themselves. The two latter classes were subsequently imprisoned, but 7 per cent. failure is not a large number, and 14,000 persons were kept out of prison.

In the cities the men are employed breaking stones, and in the country mending roads and filling up stagnant pools. I doubt if English offenders would be as amenable as Egyptians, but possibly the experiment might be tried, making use of the union workhouses as labour centres!

I have so far described the endeavours I made to keep the petty offenders out of prison, as the more I saw of prison life the more convinced I became that for at least 50 per cent. of the prison population some punishment other than imprisonment should be found. On the other hand, I quite recognised that there were a very considerable number of old offenders who could never be trusted outside prison walls, irresponsible beings and degenerates like our old friend the Dartmoor shepherd, who are quite incapable of keeping out of trouble, and many of whom are more fit for an asylum than a prison. An endeavour was made to meet such cases by the creation of an adult reformatory, to which persons could be committed on an indeterminate sentence dependent on reform when confined, and, the Ministry of Justice agreeing, a provision for such sentences was made in the Code.

In the space permitted me I cannot deal with all the details of the working of this reformatory, but possibly, if allowed, I may do so in the future. It was my pet hobby; also the reformatory for juveniles which was attached to the Prisons Department. I will only say here that juveniles of late years were never found in an Egyptian prison; they were either whipped or sent to the reformatory.

Such, briefly, were the reforms I endeavoured to carry out during my fifteen years' term of office. Prison experts will tell you, as many have told me, that the progress made has been very remarkable, and that the Egyptian Government has every reason to be satisfied with the results attained for the money expended. On the other hand, Lord Kitchener records in the last annual report he submitted (1913): "All who have hitherto studied criminality in Egypt concur in the opinion confirmed by the increasing percentage of crime committed by old offenders that the prison system as hitherto constituted has been found inadequate as a deterrent to crime." His lordship goes on to say that in virtue of his powers the Minister of the Interior has transferred 1,000 convicts to the Sudan, and implies that some good result may now be expected. This report, which I saw for the first time a few weeks ago, was written after I left Egypt, and although latterly my influence with Lord Kitchener was considerably less than in former years when he was head of the Police, I am, nevertheless, confident that, had I still been Inspector-General of Prisons, this paragraph in his Report would never have been written, and the 1,000 convicts would not have been sent to the Sudan in virtue of any power the Minister of Interior possessed or fancied he possessed.

In the first place, Lord Kitchener was misinformed

* The first part of this article appeared in last week's issue.

Digitized by Google

when he stated that crime committed by old offenders was on the increase. "Crime," I use the word in its French sense, is not, as a rule, committed by old offenders in Egypt, that is to say by offenders who have already undergone a sentence of penal servitude. I find that in the last Prison Report I submitted (1911) the returns show that out of 4,604 convicts undergoing penal servitude only ninety-four had previously undergone a sentence of that description. It would appear, therefore, that one dose of penal servitude was a sufficient deterrent to prevent a repetition of the offence; the fact being that crimes such as brigandage, arson, murders, rape, and robberies with violence, for which penal servitude is usually awarded in Egypt, are not offences as a rule committed by professional criminals. The more serious *délits* (housebreaking, theft, forgery, cheating), what would be termed indictable offences in England, are undoubtedly committed by old offenders and are increasing, and it was probably these offences that the officer who compiled the Report for Lord Kitchener had in his mind. But, unfortunately, it is not these offenders Lord Kitchener transported to the Sudan.

It was for these old offenders that the Adult Reformatory was created. It was with considerable difficulty that I persuaded Lord Kitchener to visit this reformatory, as the system in no way appealed to him. I had carefully rehearsed the programme, hoping to impress him, and aniously watched his countenance as we proceeded! But it left him quite cold, and the only acknowledgment I got was "very interesting, but a waste of money to attempt to reform, you had much better get them out on one of my roads"! I endeavoured to prove to Lord Kitchener that by establishing this reformatory I not only made a serious attempt to reform those who could be reformed, but I, at the same time, relieved the community of the incorrigibles for a long period. I pointed out that no Court of Justice would sentence offenders repeatedly convicted of these serious *délits* for a long indeterminable sentence to *work on roads*, but the Courts did so to an establishment which was called a reformatory, and where prisoners are taught a means of livelihood on their release. But it was quite useless to argue the point with his lordship, who, from the early days when he was Sirdar and Governor-General of the Sudan, only looked on prisoners in the light of so much free labour for public works!

When I took charge of the Department in 1897 I found that some 1,000 convicts had been transported to the Sudan "administratively" by my predecessor. I pointed out to Lord Cromer that such action really amounted to a sentence of transportation by an administrative authority being tacked on to the sentence of the Court, the Sudan being practically a foreign country with separate laws an an Executive of its own. Further, that transportation was not a sentence prescribed by the Egyptian Code; but if thought necesary, the law might be amended and transportation added and inflicted by the Courts as a punishment in a legal way. Lord Cromer was at first annoyed at my raising the question, but finally agreed to bring the convicts back. I do not think that Lord Kitchener ever quite forgave me for my share in the removal of the convicts from the Sudan. He has now succeeded in getting them sent back there, hoisting me as it were on my own petard, as it is in virtue of certain powers I suggested should be inserted in the Prison Decrees that the transportation bears even a semblance of legality.

In the early paragraphs of this article I have shown that in the Prison Act provision was made for the establishment of "prison camps" with *the authority of the Minister*. It was certainly never contemplated that this clause would be made use of to add transportation to an ordinary sentence of penal servitude! But this is apparently what has been done, presumably with approval of the Ministry of Justice, and I am curious to hear what the present Judicial Adviser in Egypt has to say on the subject, as he was the legal mind who drafted the Prison Decree in consultation with the Procureur-General and myself. I wonder, too, what the High Court in Bombay would say, if the Governor notified in the "Gazette" that Aden or the Andamans were a "prison camp" and forthwith sent prisoners there who had not been sentenced to *transportation!* Yet in this connection the Egyptian law is a copy of the Indian Act. I do not see how this administrative action can in any way be defended on legal grounds, whatever may be said of the necessity of adding transportation as a punishment to be inflicted by the Courts in a regular way.

To find punishments to fit crimes is the trouble all the world over, and is by no means confined to Egypt. But I do not see that in Egypt we have any exceptional right to complain till we have exhausted all legal punishments. For instance, the infliction of corporal punishment as a sentence of the Courts is the best way of dealing with many offenders, but the Egyptian Ministry of Justice has steadily refused to sanction anything in the shape of a Whipping Act, notwithstanding that soldiers and police are regularly flogged for court martial offences.

Again, if we further examine this report of Lord Kitchener's, we find twenty-seven capital sentences spoken of as something exceptional, yet in the same year (see report) there were upwards of 800 murders! Until all such legal punishments have been tried and found of no use, it seems strange to single out the prison system as faulty and attribute the want of public security* to these prisons not being sufficiently deterrent. Neither are we told how the prisons can be made more deterrent on *civilised lines*. I have repeatedly discussed this question with the late Lord Kitchener, and road-making has always been his idea. As a matter of fact, extra-mural labour is the most popular form of imprisonment, and is eagerly sought after by prisoners. Cellular confinement with nothing to do is the most deterrent, but to provide cellular confinement for the thousands committed annually to prison would have meant a cost in building which it was quite hopeless to except the financial authorities to agree to.

I trust that in defending my administration I have not said anything that could be regarded as an attack on Lord Kitchener, who, alas! is no longer with us. I quite recognise that the observations I have taken exception to were not directed against me personally, but against the system of up-to-date prison administration generally which I had endeavoured to introduce into Egypt. Lord Kitchener would not accept my views, but I venture to think that, had Lord Kitchener been as intimately acquainted with prison life in Egypt as I was, he would no longer have looked on extra-mural public works as in any way more deterrent than cellular confinement. Let us leave it at that.

THE PRESS ON THE NEAR EAST

The Future of Austria-Hungary.

In the *Contemporary Review* for January Mr. Noel Buxton, M.P., discusses the position in Austria-Hungary, and urges that Allied diplomacy should take the fullest advantage of the desire for peace in the Dual Monarchy to detach it from Germany. He wants to see Federalism substituted for the dismemberment of Austria in the Allies' policy; apart from any advantages such a solution might have *per se*, there is the additional point in its favour, according to the writer's statement of his case, that it would queer the pitch of those whom he calls "Serbophils."

The encouragement of Austria's desire for peace is one of the most conspicuous problems confronting our diplomacy. The result of a successful solution would be that Austria would bring pressure to bear on Germany in the direction of moderate war aims, and the German Junkers would be forced to modify their objective. The conciliatory policy is opposed by some on the ground that the conditions underlying it are incompatible with the conditions of a decisive settlement. This is a vital consideration. But in reality it is not impossible to find a solution which reconciles the apparently conflicting aims of each side, namely—(1) the defeat of militarism and the safeguarding of the rights of our Allies; and (2) the satisfaction of Austria's claims in such a way that she will be encouraged in her efforts for peace.

The following proposal would seem to offer a solution on these lines:—

The recognition of the Austro-Hungarian frontier, the claims of the nationalities in the Empire being met by internal reforms; the restoration of Serbia, and the incorporation by her of Montenegro, the port of Antivari being made a genuine economic outlet by the purchase of Spizza from Austria; the recognition of Bulgaria's claims to her national frontiers, and, in addition, (1) to the so-called "uncontested zone," (2) to the Bulgarian parts of the recent Greek acquisitions in Macedonia, and (3) to the part of the Dobrudja held by her in 1912; Bulgaria to abandon her present occupation of the contested zone, and of every part of the Kingdom of Serbia; Salonika to be internationalised; Roumania to be restored, and the rights of the Roumanians in Hungary to be met by autonomy for Transylvania.

[In passing, it may be mentioned that, in spite of his hostility to the "Serbophils," Mr. Buxton shows no hesitation in supporting their proposal to "incorporate" Montenegro in Serbia without reference to the wishes of the Montenegrins.]

Mr. Buxton is satisfied that recent events in Austria show clearly how that country is gradually verging away from German control and the sway of German militarism. "A new spirit of liberalism seems to be in the ascendant," and he cites various speeches and newspaper remarks in support of his contention. In Hungary, he considers, the same movement towards liberalism is also evident, though it is in a less advanced stage than in Austria. His estimate of the peace terms so far offered by Count Czernin does not altogether tally with Mr. Lloyd George's. The latter has denounced the pronouncement as deplorably vague. What Mr. Buxton calls a "pro-Austrian policy" would have the further advantage, he points out, of being in harmony with a just and stable settlement of the Balkan problems. Bulgaria, "another ally of Germany who is obviously eager for peace, would be affected immediately by Austrian response to the conciliatory attitude of the Entente. This would lead to corresponding action on her part, which would have an important effect in decreasing Germany's military strength." Here, too, Mr. Buxton holds that the war or annexationist party is manifestly losing ground rapidly. Signs are not wanting that in Bulgaria the public attitude towards Germany is becoming increasingly hostile. Mr. Buxton continues:—

The Russian revolution and the adoption by the Russian Government of the formula "no annexation" has been the main element in the change of the Bulgarian attitude. Bulgarians no longer need to fear an Imperialist Russia entrenched on the Turkish Straits. The ruling out of Russia as a military force, which was the inevitable result of the revolution, completely changes the situation. One of the main considerations in the peace settlement is that Germany's Berlin-Baghdad line should be severed. The anti-Austrians maintain that the only way to effect this is to create a strong Serbia and a strong Roumania to act as a barrier to German ambitions. Before the elimination of Russia this was a practical scheme, for the two States would have been supported effectively by Russia's vast man-power, but now that this support can no longer be counted upon the whole scheme falls to pieces, unless another factor is introduced, *i.e.*, a friendly Bulgaria. This is the *sine quâ non* of an effective severance of the Berlin-Baghdad line. The Balkan States will be a real barrier only when they can dispose of the military power of Bulgaria.

To the argument of the anti-Austrians that the neutrality of her neighbours would be an advantage to Germany from the economic point of view, it may be replied that it would surely be possible to take effective measures to prevent supplies from reaching her. It is also urged that the conciliation policy would influence our smaller Allies in an adverse sense, and that to compensate them adequately for their losses we must continue to fight until we have so thoroughly beaten Austria that we are able to dismember her. In reply to this contention, it may be pointed out that the Central Powers cannot offer the Balkan States even as much as restoration; that Russia, the natural protector of the Slavs, is unwilling to go on fighting for their ambitious aims; that our great partner, America, has expressly repudiated the dismemberment policy; that the continuation of the war until Austria is at her last gasp involves incalculable loss of life and treasure; and, finally, that we have no conclusive proof that the national units really want independence. This last point is very important. The speeches of the Slav representatives at the first meeting of the Reichsrat were obviously not those of men responsible to an electorate desirous of independence. Their appeal for Habsburg continuity was unnecessarily eloquent if, as it is argued, they forbore to advocate independence only to save their lives, and, moreover, it would have been extremely dangerous for their personal safety had they dared so flagrantly to oppose the aspirations of their followers.

There are the further arguments that an undismembered Austria might remain pro-German, and that the German corridor would be inadequately severed by the mere restoration of Serbia and Roumania. This is the crux of the whole matter. The question of security must be the main consideration. But a dismembered Austria cannot be proved to be compatible with a peaceful Europe. The small States which would be formed from her would not be strong enough to stand alone; difficult problems would arise in regard to safeguarding the rights of minorities and in readjusting the economic system; and there is the further important consideration that partition would involve vast gains to Germany through the incorporation by her of all the German-speaking districts.

Serbians in Corsica.

Not much has been reported in this country about the Serbian refugees who found a temporary home in Corsica at the invitation of the French Government. Miss Royds, in the *Contemporary Review*, tells the story of the interesting experiment in relief work. After a brief stay at Salonika the first group of exiles were conveyed to Ajaccio during the months of December, 1915, and January, 1916. Such housing accommodation as was available in the town was secured for them in hotels, rooms, and Prefecture houses. One of the most pressing needs, especially at the beginning, was the opening of a clinic for out-patients and a small hospital These were supplied by the Scottish Women's Hospital Unit. As the numbers of the refugees grew with the arrival of those who had survived the rigours of the retreat through Albania, the difficulties of the position at Ajaccio increased, and it became necessary to make more permanent provision for those of the Serbians who were not in need of medical treatment. Miss Royds continues:—

Excellent as the Hostels have proved in Ajaccio, the most important and interesting part of the housing scheme has been the development of Serbian colonies a little way inland. In two villages, under hills snowcapped most of the year, amid scenery not unlike the most beautiful parts of Serbia, rooms have been taken in numerous cottages. In these chiefly families, small groups of single women, and occasionally single men, have been established. Two or three S.R.F. workers stay in each centre, supplying necessities in the way of furniture and a certain definite amount of relief, and looking after the general welfare of the colony. The homely life of a village community is thus open to the refugees, and the centres have acquired quite a Serbian atmosphere. In the village street Serbian weavers may often be seen at work setting up their looms; the children go to the school, where they have their own master for lessons in Serbian in the mornings and French in the afternoons. Besides this a Kindergarten has been started for the babies in each village, and Serbian girls who have been given a short

training are in charge under the S.R.F. helper. The Serbian children are particularly charming; they have the most natural and taking manners, and are delightfully spontaneous; it is a real pleasure to go into the Kindergartens and hear them sing and recite, or see them at their games. Other features in the villages are reading-rooms open for general use and seldom empty, and churches with Serbian priests.

. . . . . .

In the village colonies as in the town of Ajaccio, the workrooms are a most important feature of refugee life. They have been started primarily for weavers, and—as a further development—for work of various kinds, particularly that of a specifically national character. They serve two main purposes. They give employment and a regular wage to women who would otherwise be idle, and if not actually in want, at least living with the smallest of margins; and they produce typically Serbian work, which is sent for exhibition and sale to the S.R.F. headquarters in London. Another aim which is now being included is the making of plain garments to serve as the nucleus of a store against the day of return.

. . . . . .

Besides the workrooms for women, there is a workshop for carpenters, and from time to time a number of men have been employed making the picturesque peasant shoe, the "opanka." A market garden also has been most successfully developed in one of the colonies, and has been able for some months of the year to keep the Hostels supplied with vegetables. An interesting experiment is being made on co-operative lines, with a little supervision by an English worker. The S.R.F. guarantees the labourers a certain wage, and profits beyond that are to be shared amongst them. The ground is all lent by Corsicans, and more has recently been offered to give in allotments to any Serbs who care to take advantage of it. Some men and women are already at work, buying their own seeds, and no doubt more will follow.

In Ajaccio a few *réformés* soldiers are at work on handicrafts —hat and basket-making. The hats are made of a local rush, easily obtained, and the makers are now busy making them for the refugees in the colonies.

The centre of what is more definitely relief work is in Ajaccio, though both villages have a *Magasin* for clothes distribution, and a bureau. On the quay at Ajaccio a large warehouse has been lent by the French naval authorities, and here bales are unpacked, sorted, done up again, and labelled ready for immediate distribution as required. There is a small *Magasin* near by, open on certain days for the giving out of clothes; the ensuring of a fair and, as far as resources allow, an adequate distribution has involved a great deal of systematic organisation. It means no mere handing-out of garments. At the central S.R.F. Bureau in the town there is a case-paper for every refugee who makes any sort of application. On this certain facts which might help in the giving of aid or advice are recorded, and perhaps the most important feature of the whole work is getting to know the individual cases.

MOSLEM REJOICING OVER THE TAKING OF JERUSALEM.

The following is an extract from a letter written by a Moslem belonging to one of the chief Moslem families at Jerusalem; the writer was educated at Bishop Blyth's boys' school at Jerusalem, St. George's. The feeling he expresses is by no means unique:—

"Many things have happened during these two years. Many things have also changed. One thing never did and will never change in me—my sympathy and feeling for the British nation and her Allies. In order to prove it to you, I must confess that at the news of the delivery of Jerusalem by the British troops I was so glad I could not help myself from shedding tears.

"It is not necessary to tell you here (for you know, and you are sure of it, because you lived amongst us) that most of the educated Arabs consider the British and French nations their best friends. On the contrary, the Turks and Germans their greatest enemies. The British and the French nations are loved and honoured by the Arabs; the Turks and the Germans are hated. The victories of the British troops in the East have naturally increased the feelings of the Arabs for the two generous and noble nations. The occupation by British troops of the two ancient towns, Baghdad (the city of the Khalifs) and the Holy City, far from afflicting us, rejoices us over all measure. The British troops who are fighting there against the Turks and Germans are fighting for us. They are, therefore, considered as our liberators and not our oppressors; the defenders of our liberty and our legal claims. We are sure that Great Britain will help us in every way to constitute an Arabian Kingdom. She has already and is helping us in supporting the right claims of the King of the Hejaz, who on his part is helping the British troops in the East with all his might and all his resources. My best wishes and hopes are the victory of the Allies who are fighting for Right, Justice, and Liberty."

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

The latest reports of the condition of the Egyptian crops are favourable in the extreme, and afford every justification for the belief that the present prosperity of the country will be more than maintained in the coming season. Rice, it is estimated, will give a yield of 21 per cent. above the normal, while the yield of wheat and barley will be above the average, and as a greater area is now under cultivation, excellent crops are anticipated. The only jarring note in the picture is the knowledge that this abundance of foodstuffs will not solve the shortage of commodities from which Egypt in common with the rest of the world is suffering. Only the end of the war is certain to solve that problem, and when that happens the improved position of the fellaheen will be reflected by Egypt's increased purchasing power in the world's markets. I sincerely trust that our exporters are fully alive to this prospect, and that they will be prepared to take advantage of the great opening for trade that Egypt is bound to present in the future.

***

The bullion market during the year has been of interest, not only for the record price of silver, but because gold appeared to have depreciated in value owing to the extension of paper currencies. The position as regards the latter metal is dealt with by Messrs. Samuel Montagu and Company in their annual bullion report, in which they point out that some of the statistics relating to gold have ceased to be available during the past three years. At the same time, such details have lost temporarily, to some extent, their importance with regard to currency, owing to the larger place occupied in the world's money by paper issues. In other words, they add, credit has taken the place of metallic reserves now that the expansion of the value of commodities has far exceeded the capacity of the precious metals to adjust the balance of trade. As showing that the value of gold, when normal conditions again obtain, is fully appreciated, it is interesting to note that the employment of gold for jewellery has increased, and that in India some twenty million sovereigns have been melted down during the war.

***

As soon as the war ends, the question of gold production will assume immense importance, for the credit of the belligerent countries will depend on the extent to which their note issues are supported by metallic reserves. In this respect the British Empire is in a highly satisfactory position. The figures quoted by Messrs. Montagu show that while the world's production in 1916 was £96,847,000, the British percentage of it was 61.24, as against percentages of 60.21 and 61.28 in 1915 and 1914 respectively. The Transvaal is, of course, the Empire's main source of supply, its output in 1916 being no less than £39,485,000.

***

Considerable interest attaches to the declaration of a 20 per cent. dividend by the Ceylon Cocoa and Rubber Company for the two years ended June 30, 1916, for its 10 per cent. preference shares, since it marks a satisfactory step towards clearing up the arrears of dividend. The company now only produces rubber, and until the present time the returns had been far from good. There has never been a dividend on the ordinary shares, but evidently there is now a very fair prospect of one this year.

***

There is little question that the chief reason why Germany's economic hardships have so far failed to produce results corresponding to the hopes of the Allies is because of the extraordinary ingenuity of the enemy in devising substitutes for the more important articles of common use. Comment in the hostile Press makes it clear that the value of many of these substitutes is extremely doubtful, but, on the other hand, there seems little doubt that some useful discoveries may have been made whose utility may be sufficient to enable them to survive the war. If so, another important factor will have to be taken into account in the general reconstruction of the world's economic life, and one which might, in certain circumstances, have incalculable results. It is conceivable, for instance, that a country whose economic welfare largely rested on the production of some particular article of commerce might find itself, owing to the production of a substitute, in the unfortunate position of having a greatly diminished market, or even, perhaps, of having no market at all for its produce.

***

While any such striking result from the discovery of substitutes is naturally unlikely, it would be unwise on that account to ignore what the Germans have done, and are doing, in this way. In this connection last week's issue of the *Board of Trade Journal* contained a most interesting account of German experiments with stinging-nettle fibre as raw material for the textile industry. The Germans, hoping to make Germany independent of foreign cotton, have adopted it as a war necessity after extensive experiments, and it seems that "they also claim to have discovered a new process for its utilisation, which opens up a great future for the industry even after the war." According to the *Journal*, the German company manufacturing this substitute claimed that the fibre provided a tissue which compared favourably with that manufactured from American cotton. "Mixed with wool, a cloth of soft texture, hardly distinguishable from expensive wool material, much cheaper and easily dyed, is said to be produceable, the cloth being suitable for use in the manufacture of furniture covers, plush, and suitings." Our contemporary adds, however, that there is no confirmation of this claim, though the fibre has certainly been used to make linings for caps, coats, etc.

***

Were it possible to make practical use of this substitute cotton-producing countries would, without doubt, be adversely affected; there are, however, grounds for thinking that this is one of the substitutes which will not be used after the war to any great extent, for the *Journal* quotes an adverse report of a German agricultural expert to the effect that "the cost of production rules it (nettle fibre) out for purposes of cultivation, and will stand in the way of its general adoption, notwithstanding the fact that its cultivation is now a national necessity." This authority made various unsatisfactory experiments in the use of fibre instead of cotton, and his conclusion as regards the supply of the raw material was that it was out of the question to look to farmers in this respect, but that something might be done to promote the growth of nettles in lands suitable for them.

***

The mission sent by the Egyptian Government to examine the oilfields on the coast of the Red Sea has, I hear, returned with the encouraging news of the discovery of several new springs which promise a good and easily obtainable supply, and I understand that the view is now held that these oilfields will more than meet Egypt's requirements. If that is so, and it is possible to operate the new springs within a reasonable space of time, one of the most pressing of Egypt's problems—the shortage of fuel—will be met. This is, however, very doubtful in my opinion, owing to the difficulties in the way of obtaining machinery at the present time.

***

A timely reference to the cry for conscription of capital which has been raised in some quarters is made in the latest monthly circular of the National City Bank of New York. The writer points out that capital does not exist in forms that permit of it being seized, and that on the contrary it exists for the most part in productive property. "The greatest service to the country from these properties," he adds, "is obtained by having them operated with the highest possible efficiency. The Government does not want property in these forms, but the products that come from them. It would be a great boon to have production increased and a disaster to have it generally decreased." This is, of course, obvious, and it is to be hoped that those fundamental facts will penetrate the minds of those who still believe the conscription of capital to be possible.

MOROCCAN DEVELOPMENT.

Commercial and Industrial Prospects.

To say that from a commercial and industrial point of view Morocco has no past but a future is to state in general but not altogether inaccurate terms the present position with regard to the French Protectorate. The development of the country has been the task of our Ally, and her handling of this responsibility can have no higher praise than to say that under her guidance there is every indication that the country will eventually be as prosperous and contented as are Egypt and the Sudan under the British system. That prospect is still somewhat remote, for the development of a country entailing as it has in this case the building of communications and ports, and in general the application of modern methods to a system ill-adapted to bear it, is not the work of a moment; but in the short period which France has already had for this work progress has been made of a remarkable character—progress which seems to show beyond the possibility of error that the country will develop rapidly when the world once more enjoys settled conditions. The interest that France has shown in this work can be the better understood in the light of a valuable work on the Protectorate by M. Victor Piquet*, well-known for his works on North Africa, and, in particular, the colonisation of Tunis and Algeria. The work in question is divided into three parts, dealing respectively with Morocco's geography, under which head the writer reviews agriculture, forests, cattle breeding, and the industrial possibilities of the country, which will be discussed in the present article; history, with which we are not directly concerned; and administration, covering, *inter alia*, public works, railways, and commerce, which will be dealt with in a subsequent article.

Agriculture.

It need hardly be said that, as is the case with other countries which come within the purview of THE NEAR EAST, the staple industry of Morocco is agriculture, and there is very little doubt that this will always be the case. In M. Piquet's opinion the country has a great agricultural future, and he adds that "the coast zone, influenced by the moist climate of the sea, possesses very rich soils which give rise to the highest expectations." These characteristics are not universal, and he points out that there are regions where the soils are unproductive. As regards cereal cultivation, wheat occupies an important place, though barley is the principal crop, sown, he tells us, "in the less rich lands." Maize, which requires abundant irrigation, is grown successfully in Morocco without it, while sorghum is also cultivated to advantage, and it is the writer's view that these two cereals can be very greatly developed. Indeed, he suggests that the production of sorghum could easily be increased tenfold. In the light of what he says as to agricultural prospects in general, it is interesting to recall the figures for Morocco's export trade in cereals in 1916, which show an extraordinary increase, in regard to some of those he mentions, as compared with the totals for 1914. Barley, for instance, advanced from 168,300 kilos to 121,080,900 kilos, wheat from 400 kilos to 31,043,300 kilos, and maize from 409,400 kilos to 17,124,400; statistics which surely justify even the most optimistic outlook.

Forests.

A word is called for on the forests of Morocco. "All North Africa," says M. Piquet, "is a richly afforested country. We have long neglected this natural source of wealth in Algeria, and we are far from making the fullest use of it. Morocco seems to be still better divided than other parts by reason of the importance of its mountain ranges. But it is not only in the mountains that there are vast forests, in the Atlantic plain itself, near the coast, we find the remains of very important forests which, according to the historians, once covered the whole of Morocco." In the mountain regions the cedar is principally encountered, and M. Piquet tells us that it is not exceptional to find cedars 300 to 400 years old, 110 to 130 feet high, and 16 to 20 feet round. The oak is the most widely spread tree in Morocco, and many varieties of it exist there. Other trees to be found in abundance are the thuja, the carob tree, the gum tree, and the laudanum cactus. Morocco has, however, one tree special to itself, the arga tree, which yields arga oil, and is to be found in the region of Sus.

Among fruit trees, the olive takes first place, and olive oil is a fairly valuable product, there being thirty-eight factories at Fez, while Mogador is another important centre. In certain regions of the south the almond tree is very plentiful, while every garden has its fig tree, and the walnut tree is also very common. Date trees, however, are only satisfactory in Tafilelt. M. Piquet adds that oranges, mandarines, and citrons are cultivated with care in gardens.

Cattle-Breeding.

Stress is laid by M. Piquet on the fact that Morocco possesses all the conditions necessary to form an incomparable breeding ground for cattle. It has vast prairies containing good and nourishing herbage, and watered by streams which are not dried up at any season. According to Van Loo, a Belgian writer on economics, these lands could support forty million sheep, ten million goats, and six million cattle, an estimate which our author regards as exaggerated, though travellers and economists are agreed that the race of cattle that could be produced in the country would be one of the finest in the world. He thinks that there is a very great future for sheep breeding in Morocco. Three strains are reared, and at Berguent, the chief market, 100,000 sheep are sold every year. He adds that it is probable that cross-breeding with strains from Spain and elsewhere would improve the native sheep. This also applies to the strong Moroccan horses, regarding which it is of interest to note that a stud book is already in existence. M. Piquet divides Moroccan mules into two categories, the better type being worth 1,200 to 1,500 francs, while the common mule fetches from 500 to 600 francs. These animals, as well as goats and pigs, could, he points out, be reared with profit. In his view, it is desirable to cross the native breed of pigs with French and English strains, and he instances two experiments already made: one with pigs from Marseilles, and the other with animals imported from Yorkshire, which yielded excellent results.

Industrial Possibilities.

The Moroccan towns, the writer remarks, have each acquired a reputation in special lines. At Fez beautiful embroideries are made, also the finest gold work, and pottery. The markets for leather and arms are Marrakesh and Tetuan. Rabat and Safi, on the other hand, are centres for the manufacture of carpets and coarse stuffs. Silk and cotton manufactures are carried on at Fez, where, though not a leading leather market, there are no less than 3,000 tanners. M. Piquet adds to these principal industries the building trade, which, he says, is well developed. As regards the future, he divides the industries into two kinds—those which will fall before foreign competition, and those which will be able to resist it successfully. In the first class he places the weaving industry, pointing out that cotton goods from Great Britain have long competed with the home product. Local metal industries he also considers are doomed to disappear, but work in precious metals will always survive if the mining possibilities of the country are realised. The leather industry shows much promise, and he is as hopeful on this score as he is with regard to cattle breeding. Other industries that it is though will hold their own are embroidery and pottery.

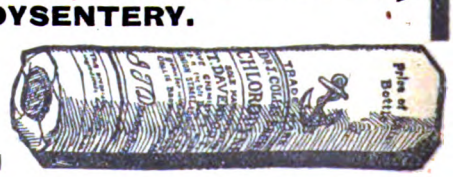
Mineral Wealth.

At present there is little to be said on this subject, as so far little is known of the minerals of the country. "However," says M. Piquet, "the impression is that it ought to be a country with a future in this respect, and geologists think that the valleys of the Atlas are full of promise," and he goes on to enumerate some of the known mineral resources of Morocco, notably the iron mines near Tarhilest, the copper deposits at Ait Semmeg and in the Sus, and the gold and silver mines of Tazeroualt, and expresses the view that among other mineral products gypsum and oil ought also to be found. "It can be said," he remarks in conclusion, "that so far Morocco has not justified the great hopes which have been placed in its mineral wealth; but it is necessary not to forget that for the most part the mines of Algeria have been discovered very slowly."

* *Le Maroc.* By M. Victor Piquet. (Armand Colin Fr. 6.)

TURKEY'S NATIONAL DEBT.

A telegram from Berlin (says *Reuter's* Amsterdam correspondent) states that Djavid Bey, the Turkish Minister of Finance, informed the Vienna correspondent of the *Berliner Tageblatt* that Turkey's National Debt had risen during the war from about £150,000,000 to nearly £400,000,000. In the light ofq recent events the following remark of the Turkish Minister reads strangely:—"It will be one of the first peace tasks of the Turkish Government to find ways and means of making the Armenians to forget the sufferings of the war."



Dr J. Collis Browne's Chlorodyne

Safeguard your Health with this Reliable Medicine.

Cuts short attacks of HYSTERIA, SPASMS, PALPITATION.
A true palliative in NEURALGIA, GOUT, TOOTHACHE, RHEUMATISM.
Checks and arrests FEVER, CROUP, AGUE.

THE GREEK TOBACCO CROP.

Increased Yield in 1917.

For the following particulars of the condition of the tobacco crop in Greek Macedonia we are indebted to a report of the United States Consul-General at Salonika, Mr. George Horton, dated October 18 :—

The Greek Government has never published any data concerning crop conditions in Macedonia. The following information, relating to the tobacco crop, the principal product in this Consular district, is obtained solely from private sources. Filler leaf tobacco, unstemmed, is the chief article of export from Greek Macedonia, the value purchased in a normal year by American firms alone amounting to about 6,000,000 dollars. Since the more important producing centres—Kavaila, Drama, Seres, etc.—are in the war zone, the export of a large part of the Greek Macedonian tobacco crop is impossible, and no information is available as to its condition and quantity. Ordinarily the quantity of tobacco raised in the districts near Salonika is relatively small. According to general reports of purchasing agents from various points in this district, this condition has been greatly changed. It is estimated that in this region, as far south as the old Greek frontier, there are this year about 2,000,000 okes, which consist of all types of what is known as Turkish tobacco. This is an increase of fully 75 per cent. over the amount of the 1916 crop. Moreover, if there had been more rain, the crop would have been 100 to 150 per cent. larger than that of last year.

A Good Quality Crop.

According to the same reports, the quality of tobacco is, on the whole, fully as good as, if not better than, in 1916. As mentioned above, the crop will consist of all types of Turkish tobacco. This is caused by the fact that many refugees from Samsun, Smyrna, and Thrace, bringing with them small quantities of tobacco seed, have planted in small fields, and, furthermore, on soil which has never before been used for tobacco, thus producing a type concerning which even the oldest and most experienced experts are unable to say whether or not it will improve with age. Prices will probably be at least 100 per cent. over those of last year. This is attributed to the increased competition, caused no doubt by the fact that the various merchants are unable to get their usual stocks from the Kavalla, Samsun, and Smyrna districts. Moreover, shipping facilities are now such that it is almost impossible for the foreign, including American, factories to be supplied with raw material, and local factories have received large orders to supply the Allied forces stationed in this district. It is also learned on good authority that the Egyptian factories have received large orders from the Allies for cigarettes, and that the merchants from that country are strong buyers.

INDIAN BANK DIVIDENDS.

The Bank of Bengal has declared a half-yearly dividend of 12 per cent. and a bonus of 4 per cent., with a special bonus of 1 per cent. per annum. The amount transferred to the reserve is Rs.4,00,000, and that carried forward Rs.4,41,890.

The Bank of Bombay shows a profit for the half-year of Rs.16,77,470 and has declared a dividend at the rate of 15 per cent. per annum, with a bonus at the rate of 3 per cent. per annum. Four lakhs are transferred to the reserve and half a lakh is transferred to the pension fund. A sum of Rs.3,27,470 is carried forward.

The Bank of Madras has declared a dividend of 10 per cent. and a bonus of 2 per cent. The amount carried forward is Rs.4,02,306.

EMPIRE RESOURCES.

Development to Meet War Debt.

Proposals that it is claimed would give the people new opportunities for the investment of their savings were made by Mr. H. Wilson Fox, M.P., at a meeting held on January 9 at Caxton Hall, under the auspices of the Royal Colonial Institute. The payment of the war debt by the development of the Empire's resources was the speaker's theme, in the exposition of which he outlined the programme of the Empire Resources Development Committee. At least ten million pounds per annum for a period of ten years should be set aside for the development of selected resources of the Empire on such conditions as would give to the State a share of the profits. "If the Statutory Authorities which it is proposed to create to conduct the various enterprises in which the State participates," he added, "are organised upon a share and debenture basis, it will be possible to offer such debentures, guaranteed if necessary by the State, for subscription by the poorer classes. By this and other means the valuable work of the War Savings Committee might be continued and extended after the war, and the growth of thrift which has been practised for the first time by many persons during the war, largely because facilities have been supplied which previously were lacking, will be encouraged and promoted."

Discussing the criticism that intervention or participation by the State in industry would kill individual enterprise, Mr. Wilson-Fox contended that, if the development of the Empire's resources was entrusted to a board of business men, selected for their competency, an immense number of new openings would be created for capitalists and workers. Could it be doubted that, if by State action practically unlimited supplies of cheap power were made available throughout the length and breadth of the land, an almost indefinite expansion of the industry would take place? It would be safe to assume that, on the average, every additional 1,000 kw. installed in a Government generating station of large dimensions would result in the manufacture of at least 500 motors; and that, beyond this, the extensions and ramifications of the new business created would be immense. Nor would the advantage be confined to the electrical trade. It was calculated that in Germany 50,000 men employed in full work at large factories of electric machinery presupposed the full-time employment of at least 500,000 workers in allied and subsidiary industries. It was idle, therefore, to suggest that action by the State upon the lines proposed must necessarily discourage and cripple individual enterprise. The impracticable dreams of one generation, he said, in conclusion, were wont to become the practical commonplaces of the next. Looking into the future, they could visualise the State as the owner of vast herds of cattle overseas raised on lands which were to-day unutilised; as a proprietor of forests and valuable plantations of tropical shrubs and trees grown on areas still virgin; as the harnesser of mighty waterfalls fed by the eternal snows of India and of Africa; as an organiser of great commercial air services; and as the reaper on an immense scale of the manifold harvest of the seas.

TRADING WITH THE ENEMY.

The Controller of the Foreign Trade Department issues a new list of additions to the Statutory List of firms of enemy nationality, or enemy association with whom persons in the United Kingdom are forbidden to trade. Copies of this list can be obtained at a trifling cost from the Superintendent of Publications, H.M. Stationery Office, Imperial House, Kingsway, W.C.

LANCASHIRE COTTON.

An Easier Market.

(From Our Own Correspondent.)

Manchester, Wednesday.

Compared with a week ago the market is distinctly dearer, but it is scarcely possible to record any increase in the amount of business passing. Buyers have refused to follow the higher rates, and only miscellaneous lots have been put through. Bullish sentiment in American cotton circles has been very pronounced. A very strong feeling has prevailed in the New York market. The outlook for supplies is no worse, but there continues a heavy demand from the trade. Egyptian cotton prices have been easier and supplies are coming forward rather more freely. Quotations in Egyptian yarns have been well held, but users have purchased from hand to mouth. Some special sales have been mentioned in fine counts for France. Less activity continues to show itself in piece goods for Egypt. Merchants are now centering their attention upon deliveries and shipments. No improvement has taken place in the demand for cloth for India, and very few wires have again been received. A few more attempts have been made at transactions for China, and certain shippers are finding it necessary to keep up assortments in well-known "chops." Although manufacturers of goods are now only meeting with a small amount of fresh business the higher prices have been very firmly held. American yarns have moved off in odd lots, but quotations have been raised quite equal to the advance in the raw material, and spinners remain in a strong position. Export bundles for India remain quiet.

BIG COTTON SPINNING PROFITS.

Since the beginning of the year numerous cotton-spinning companies in Lancashire have taken stock for the three and six months ending December 31, and the figures announced have shown large profits. Mr. Frederick W. Tattersall, of Manchester, has prepared an analysis of the returns published by twenty leading companies. The share capital of these concerns amounts to £728,235 and loan capital to £259,796. All the companies have made a profit, and on share capital the average profit works out at nearly 18 per cent. per annum, whilst on share and loan capital combined the profit is over 13 per cent. per annum after allowing interest on loans. It may be said that a similar analysis of the figures reported at the end of last June showed a profit of over 9 per cent. per annum on share capital and a profit of nearly 7 per cent. per annum on share and loan capital combined after allowing interest on loans. The machinery in these mills totals to nearly 2,000,000 spindles. Spinners have long order lists at a healthy margin of profit, and future stock-taking results are expected to be encouraging.

BRITISH INDUSTRIES FAIR.

As it is possible that the new accommodation for the British Industries Fair (Glasgow) may not be entirely completed by February 25, and as it is of great importance that the British Industries Fairs in London and Glasgow should be held simultaneously, the Board of Trade have decided to postpone the opening of both fairs for two weeks. Accordingly the period for which the British Industries Fairs in London and Glasgow will be open will be March 11 to March 22.

The directors of the Chartered Bank of India, Australia and China have appointed Mr. W. E. Preston to be manager in London in conjunction with Mr. T. H. Whitehead and Mr. Thomas Fraser, and Mr. James Semple Bruce has been appointed sub-manager in London.

ENGINEERING NOTES.

Electricity in Agriculture.

The utilisation of electricity for agricultural purposes has been steadily increasing in recent years on the Continent, especially in France and Italy. It was partly the result of emigration which created an embarrassing scarcity of labour in the rural districts, and partly of the modern methods of producing electric power by the utilisation of the natural force of water in rivers, waterfalls, etc. The scarcity of labour necessitated the use of machinery, and in the use of machinery it was soon found that very satisfactory economic results could be obtained with the assistance of electricity, especially when this was produced by the utilisation of water power. A variety of methods have been adopted for this purpose on the Continent, where farmers, with the help of electricity, can now do their farming on a large scale, quicker, much cheaper, and with the minimum of human labour or animal power. In several Continental agricultural districts it has proved that great advantages are secured and greater economy obtained by the use of electric power in ploughing or threshing. The cost on a small farm of threshing 100 kgs. of grain with an electric drive is about 1s. 2d., with a steam drive, double that amount and with a horse gear threshing machine four times. With regard to electric ploughing, considerable economy has been effected, and it is asserted that for ploughs cutting a furrow 10 inches deep the cost of tillage by the electric plough is approximately 4s. to 5s., against 6s. to 7s. by oxen, and 6s. 1d. to 8s. 1d. by a steam plough. And where electricity is produced by the utilisation of the natural force of water there is a greater economy in the cost of work done than the above figures show. Such a natural force of water can be obtained in many agricultural districts in Serbia, Macedonia and Montenegro, the utilisation of which would largely contribute to a speedy restoration and development of the rich agricultural resources of these unhappy lands.

Indian Rice Milled in England.

The report that a scheme is now under consideration for milling all the rice we buy from India in this country instead of the milling being effected before it is shipped, will undoubtedly please British manufacturers of rice-milling machinery and many firms engaged in the rice trade at home. The suggestion is made that the cleaning and finishing processes might be carried on in this country, and thus save money, and also encourage a much larger importation of Indian rice than hitherto. Efforts to this end have already been initiated. It is estimated that in the three years preceding the war German purchases of Indian rice trebled, and if England can possess herself of this trade it will be all to the good, whilst the prospects of British rice-milling machinery engineers, operators, and labour will be greatly benefited.

A Gas Improvement Device.

It is evident that the use of coal-gas for motor vehicles is increasing in the Near East, for we hear that several purchases of the necessary gas equipments have recently been made for that part of the world. As such equipments are, apparently, constantly improved, it may be of interest to users, or would-be users, of such equipments to hear occasionally of any new devices that are being brought out for the purpose. A device which undoubtedly improves the efficiency of gas equipment is a new attachment which is fitted to the existing carburetter of the vehicle and is operated by the accelerator pedal by the driver in the ordinary way. It enables the engine to be run dead slow or full speed at will without affecting the running of the engine on petrol; neither is the engine affected by pressure in the gas-bag. When starting, gas is turned full on and the engine started without any tap twiddling or regulating of valves, and if the journey is too long for the gas container to cover before reaching another gas supply the gas cock is shut off and petrol turned on without any further adjustment.

Flying Ambulances.

According to recent reports, it is proposed to use a fleet of Red Cross aeroplanes in the war zone. There are many types of wounds which are likely to prove fatal unless they can be attended to at once, and the congestion of communications during, and for some time after, an action often makes speedy medical relief impossible. If aerial transport could be provided, therefore, many hundreds of lives might be saved and much suffering avoided. In the air there are no obstacles, and it is suggested by a competent correspondent that machines thus employed could fly low and have the Red Cross painted on their sides. The idea of so employing aeroplanes is not new. The late Col. Cody established the possibility of carrying over long distances operators, an operating table, and all the necessary medical equipment. It was also reported some months ago that during the Serbian retreat aeroplanes were used as ambulances for the first time. A number of gravely wounded men needed to be removed at once in order to afford them the bare chance of recovery. The journey over the mountainous roads to the coast hospital was beyond their strength, so it was decided to take them by aeroplane to the port of Valona in Northern Epirus. One of the worst cases travelled over 200 miles in this manner, the pilot making one landing to make sure that the passenger was still alive.

Shipping Enterprise in America.

As technical experts anticipated, the American wooden ship plan has soon been found impracticable. Giving evidence before the Senate at an investigation, Rear-Admiral Bowles admitted that the plan to build a thousand wooden steamers was impracticable, and that there was not enough timber to construct half that number. This news, however, need give the Germans no pleasure, for, according to very reliable information, the American shipyards are working at the fullest pressure to replace lost tonnage; and it is anticipated that about this time next year there will be 1,600 vessels, totalling an aggregate tonnage of 9,200,000 tons. It is officially confirmed in America that the American Merchant Marine consists of 458 ships of more or less 1,500 dead-weight tons, with an aggregate of 2,871,359 tons, engaged in or capable of participating in foreign trade. Of these 117, or 700,285 tons, were German and Austrian. In addition, the Shipping Board has commandeered nearly 400 steel ships of more than 2,500,000 tons, which are being completed or are under contract for construction in American yards. In the meantime remarkable progress has been made by the Atlas Construction Company of Montreal in building a concrete ship. The dimensions of the vessel in question are :—Length 125 feet, beam 22 feet, moulded depth 13 feet, whilst the hull is of varying thickness, from 3 to 5 inches. In three weeks' time this vessel was laid down and almost ready for launching, and by this time is probably in commission. Another proof of Canadian energy and technical capability.

POST-WAR TRADE.

Mr. J. M. Robertson, M.P., lecturing on Wednesday at the Bishopsgate Institute on "Trade and Commerce after the War," said that, whatever views on free trade we might have held hitherto, it was obvious that we could not trade as we used to do with enemy nations. He was in sympathy with the feeling of reluctance to resume trade relationships with the enemy, and if anyone could indicate how we could commercially penalise Germany without penalising ourselves, the plan would have his support, but he could conceive of no trade method by which we could secure the object desired without injuring ourselves. The adoption of a tariff scale with graded terms of priority to the Colonies, Allies and neutrals, and the highest duties of all to the enemy, would have the effect of promoting the trade of Germany. Our Allies, if given less favourable terms than the Colonies, would naturally study their own interests.

NATURAL DYES.

Prospects of Cultivation in the Sudan.

An interesting feature of the current issue of the *Agricultural Journal of Egypt* is an article on "Dyes ,Natural and Artificial," by Mr. W. E. Kingsford, member of the Commission of Agricultural Commerce. Egypt's normal requirements are, he points out, 71 metric tons of natural indigo, 503 metric tons of artificial indigo, and 292 metric tons of aniline dyes, and these extensive requirements naturally make the question of the supply available a matter of considerable importance.

The planting of indigo was encouraged in Egypt by Mohammed Ali, but the industry's life was short "owing to the absence of expert supervision and the indispensable care necessary for the extraction process." It is Mr. Kingsford's opinion that indigo cultivation could not be profitable in Egypt, but the hope is expressed that when the seed is available serious and careful experiments will be carried out in the Sudan, where the adverse conditions that obtain in Egypt are not present.

The success of cultivation in the Sudan, he adds, must largely depend on the continued extensive cultivation, or otherwise in India when the synthetic indigo again becomes available, and on the freight rates ruling Wet and rainy seasons in India have considerable influence on the crop and in the deterioration of colouring matter, and in this respect the Sudan would hold an advantageous position.

Natural v. Synthetic Indigo.

There is a considerable diversity of expert opinion, the writer remarks, as to the possibility of the natural indigo holding its own against the artificial at the termination of the war. Whether this can be effected by a larger yield of plant and colouring matter per acre, improvement in preparation, or protective tariffs, it is evident from the efforts now being made in India that there are many who are hopeful of resuscitating this important industry, which has suffered so severely since 1897, when the Badische Anilin and Soda Fabrik introduced artificial indigo into the market under the name of "indigo pure."

Prior to the introduction of the artificial product over one and a-half million acres were under indigo cultivation in India, principally in the Bengal and Madras Provinces; but before the outbreak of war the total area under cultivation was reduced to one-tenth of what it was.

NEWS FROM ALL SOURCES.

The bank of Bengal has increased its rate of discount from 5 to 6 per cent.

America's latest advances to the Allies include the loan of a million dollars to Serbia.

Sir John Godfrey Rogers has resigned his seat on the Board of the Egyptian Salt and Soda Company.

A Bill has been introduced by the Turkish Government for the taxation of war profits made by companies.

In Egypt the rice crop is estimated to be 21 per cent. above the normal. Wheat and barley prospects are better than the average. No crops are below the normal.

As a result of arrangements made in December, 1916, when Reuter's, Ltd., took over the business of Reuter's Telegram Company, Ltd., the Hon. E. W. Parker, Mr. G. Grinnell-Milne, and Mr. Gerald W. Williams retired from the board of Reuter's, Ltd., on December 31.

In view of the increasing output of first-class Indian coal, severe restrictions are notified in regard to the railway wagon supply for the collieries working inferior coal, says Reuter's Calcutta correspondent. This action is causing an outcry, but it is defended on the ground that the diverting of labour to the short-handed first-class collieries had the effect also of enabling the railways to convey greater quantities of Admiralty supplies.

THE BOMBAY MINT.

Reasons for its Establishment.

An interesting article appeared in last week's issue of the *Board of Trade Journal* on the decision to establish a branch of the Mint at Bombay. In explanation of the departure the *Journal* says:—"The heavy and continuous demand by the United Kingdom and the Allies for Indian products which are of importance for the prosecution of the war, together with military expenditure in the East debitable to the War Office and involving the indirect remittance of very large sums, has caused an unprecedented expansion in the normally favourable trade balance of India. During the past six months, remittances in liquidation of this trade balance have been partly made by the shipment from debtor countries of gold coin and bullion. The gold held in the Paper Currency Reserve in India rose from £6,623,000 on May 31 to £17,069,000 on December 15. In order that all the gold so imported may be available to maintain the metallic portion of the Government of India's Paper Currency Reserve held for the encashment of currency notes, it was notified on June 29 that all gold imported into India on private account would be subject to license and would be acquired by the Government of India at the rate of Rs.15 equal to £1 or 1 rupee equal to 7.53344 grains troy of fine gold. One September 26, pursuant to the raising of the rate for the sale by the Secretary of State of telegraphic transfers on India from 1s. 4d. to 1s. 5d. the rupee. these rates were altered to Rs.14⅓ equal to £1 or 1 rupee equal to 7.79321 grs. troy of fine gold. The British sovereign is legal tender in India, and sovereigns imported and sold to the Government are therefore immediately available for the purpose mentioned above. But the active trade demand for coin to finance heavy movements of exports and the requirements of Government to make disbursements to troops impose a considerable strain on the Government of India's metallic resources and make it desirable to hold the gold, no less than the silver, in the metallic portion of the Paper Currency Reserve as far as possible in the form of legal tender coin. Since the beginning of the war the Government of India's currency note circulation has expanded from Rs.75,44,00.000 to Rs. 110,83 00,000. It has therefore, been decided to provide facilities for coining into sovereigns the gold bullion and foreign coin coming into the Paper Currency Reserve under the provision mentioned above. The establishment of a branch of the Royal Mint at Bombay was accordingly authorised by Royal Proclamation dated December 21, to take effect from the date of promulgation in India."

ROUMANIA'S OIL WELLS.

News comes from Bucharest, says a correspondent of the *Morning Post*, to the effect that the damage done to the oil wells in Roumania has almost been repaired and the output of oil increases steadily. The daily output of oil is between 250 and 300 10-ton tanks. Of this, 800 tanks are sent to Hungary per month, but the supply of oil from Galacia has been correspondingly reduced. This is disadvantageous to the paraffin manufacturer and the manufacturer of candles, as the Galician oil is much richer than the Roumanian in paraffin.

COLOURED GLASSES FOR MALTA.

The houses, streets, and roads in Malta are built of nearly white stone, and during the summer months these reflect the sun's rays so strongly that coloured glasses are largely worn by both the native population and foreigners, says the United States Consul at Valetta, Mr. Wilbur Keblinger, in a recent report. Many sizes and forms of frames and many different colours of glass are used. Heretofore goggles have been imported from England and Italy, but there is no reason why American manufacturers should not meet this competition in both quality and price. It is almost impossible to secure freight transportation from the United States to Malta at the present time, but it would be possible to send such goods through the mails, at least in sufficient quantities to build up a demand which could be well supplied when conditions become normal.

INDO-CHINA STEAM NAVIGATION.

Amalgamation Rumour Denied.

The attorneys in London of the Indo-China Steam Navigation Company have received the following telegram from the general managers in Hong Kong, dated January 3:—"Board of Directors authorise us instruct you publicly deny rumours regarding contemplated amalgamation interests Indo-China Steam Navigation Company, Ltd., and the Peninsular and Oriental Steam Navigation Company, Ltd. Please take necessary steps."

The Press Bureau states there is no foundation for the statement that has appeared in certain newspapers that the Government are at present considering, or intending to consider, the formation of an all-British oil company.

BRITISH OVERSEAS BANKS ASSOCIATION.

Resolutions were passed at a meeting held on December 17, constituting an association called "The British Overseas Banks Association," having as its object the promotion of the general interests of the banks comprising the association. The following were elected to form the general committee:—C. Cambie, Canadian Bank of Commerce; L. Couper, Bank of British West Africa; Chas. H. Hewett, Colonial Bank; R. J. Hose, Anglo-South American Bank; S. Rogers, Imperial Bank of Persia; F. Shipton, Standard Bank of South Africa; G. H. Soul, Anglo-Egyptian Bank; T. H. Whitehead, Chartered Bank of India, Australia and China; A. Willis, National Bank of New Zealand; A. C. Willis, Union Bank of Australia. Mr. T. H. Whitehead was appointed chairman and Mr. Francis Shipton hon. secretary and treasurer.

COMPANY REPORTS.

Great Indian Peninsula Railway.

The report of the Great Indian Peninsula Railway Company for the half-year ended September 30, 1917, states that there was a net increase of 3.54 miles in the open mileage worked, which was:—Quadruple, 29.62; double, including State lines, 719.37; single, 2,363.59; total, 3,112.58, to which must be added foreign lines over which running powers are exercised, 61.99. Gross receipts were Rs.5,30,56,689; increase on 1916, Rs.41,64,645; per cent., 8.52. Expenditure, Rs.2,80,77,502; increase, Rs.2,20.961; per cent, 0.79. Net revenue, Rs.2,49,79,186; increase, Rs.39,43,683; per cent., 18.75. After deducting from net revenue Rs.16,68,604 due to State lines, and on account of unpaid interest Rs.545, there remains Rs.2,33.10.036, against which has to be set Rs.1,46,86,457 for fixed charges under the contract, leaving a surplus of Rs.86,23,560 to be carried forward to next half-year's account, when the complete statement for the year will be made. up. Coaching receipts increased Rs.23,29.371 or 13.84 per cent., and goods Rs.17,57,194, or 5.59 per cent. Ordinary passenger traffic, excluding season tickets and troops, increased Rs.4,54.099, passengers carried being less by 1,689,657. The increase in amount was under all classes except third class by ordinary trains due to enhancement of fares with effect from June 1, 1917. The decrease in number is partly attributable to the same cause and partly to higher cost of living, which restricted travelling, mainly under third-class ordinary. The decrease under third-class ordinary is also due to mail fares being charged for the Delhi express and to the prohibition of Pandharpur Ashadi Fair. Goods traffic movements include a decrease of Rs.1,88,159 in coal and coke; increases in raw cotton of Rs.31,171, due to larger quantity railed owing to favourable prices, notwithstanding the smaller exports, demand from Japan and China being poor; stocks in Bombay are unusually large; hay, straw and grass of Rs.1,16,330; grain and pulse of Rs.3.94.475 rice of Rs.4,11,446, due to large imports by rail owing to crop in Bombay Presidency and Central Provinces having been damaged by heavy rain and floods in 1916; wheat of Rs.19,49,516, due to greater demand for export on Government account; and oils, other than kerosene, of Rs.1,71,393. Metallic ores decreased Rs.8,33,222, there being a poor demand for manganese ore for export owing to scarcity of tonnage and high freights ruling, and jawar and bajra Rs.9,84,963. Oilseeds fell off by Rs.14,35,725, but railway plant and rolling stock advanced Rs.2.85,494, and timber unwrought Rs.2,64,538. There was a decrease of 1,003,220 or 8.02 per cent. in the train mileage. The ratio of expenditure to gross earnings was 52.92 per cent., compared with 56.98 per cent. Meeting, 15th inst, 48, Copthall Avenue, E.C., 12.30 p.m.

South Behar Railway.

The report of the South Behar Railway Company for the half-year ended December 31, states that after paying the dividend at the rate of 5 per cent. per annum for the half-year ended December 31, 1916, a balance remained in hand of £7,397 4s. 3d., which with the rental received from the Secretary of State for India for the half-year to June 30, 1917, and other receipts, less interest on debenture stock and sundry outgoings, left a sum of £17,021 2s. 3d. to the credit of revenue account at that date. An interim dividend at the rate of 5 per cent. per annum was paid on July 15, leaving £7.531 12s. 3d. to carry forward. Adding to this £15.000, the half-yearly rental to December 31, 1917, and other receipts, less interest on debenture stock and sundry outgoings, there remains a balance of £17,180 8s. 8d. to be dealt with. The directors recommend that a dividend at the rate of 5 per cent. per annum for the half-year be paid to the stockholders on the register on December 31. This will absorb the sum of £9.489 10s., and leave £7,690 18s. 8d. to be carried forward to the current half-year. The ordinary general meeting will be held on January 14, at 25, Buckingham Palace Road, S.W.1, at 2.30 p.m.

ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Street, Wednesday.

The market in Egyptian securities has continued its favourable tendency, and a fair amount of business has been doing in spite of the Greek Christmas holidays in Egypt. In Government stocks Unifieds have risen 1 to 85½, after business round 85, and Egypt 3½ per cent. Preferences are ¼ up at 73.

The rise in National Banks, which began about a fortnight ago, has continued, and the shares are a further ½ up at 18; whilst Agriculturals, after a long period of quietness, have again come into demand and are 3-16 better at 6 5-16. Delta Light Railway Preferences have been dealt in to a slight extent, with the result that the shares have lost ⅛ at 6 1-16.

In land shares, Aboukirs have further improved 6d. to 22s. 9d. Some business has been done in Behéras round current quotations, and also in Delta Lands.

Foreign Trusts have been dealt in to-day to a very fair extent, but the price is unaltered round 9s. New Egyptians have continued to be quietly picked up, and have risen a further 6d. to 17s. 1½d. Sidi Salems have lost 1-32 at 26s. on some trifling transactions. United Egyptian Lands have been in demand for Egypt, and also locally, consequently the price is slightly better at 1s. 7½d., at which there are some good buying orders in the market.

In miscellaneous shares there has been a recovery of ¼ in Alexandria Waters to 12¼. Egyptian markets have continued to sag, and are a further 1s. down at 26s. This weakness is no doubt due to the decline in the published receipts, in consequence of the closing of many of the markets through cattle plague. On the other hand, it is understood that the company's receipts from other sources of revenue which are not published, are of quite a satisfactory character, so that the reduction in revenue is probably not so serious as it appears to be; and, further, there is every probability that, as in the past, the cattle plague will be got under and the shut markets opened again. In Salt and Sodas shares the market has continued a very strong one, and some rather large business has been concluded. The shares close a further 1s. 6d. up at 37s. 6d. Khedivial Mails have again come into favour and have jumped up 2s. 6d. to 35s. 6d.

In Greek securities there is no change in prices to be recorded, but some business has been done in 1914's round 73, at which price there are still unsatisfied buyers.

Paris Bourse.

Closing quotations were:—Egyptian Unified, 95.60 (96.50); Turkish Unified, 64.95 (66); Credit Foncier Egyptien, 782 (782); Suez Canal Shares, 4.615 (4,620).

Oil Shares.

Anglo-Egyptians (B) were unchanged at 26s. 6d.-27s. 6d., and Roumanian Consols at 9s. 3d.-10s. 3d.

SUEZ CANAL RECEIPTS.

The traffic receipts of the Suez Canal were as follows on the undermentioned dates:—

	1917. Francs.	1918. Francs.

COMPANY NOTES.

Dividends, Payments, etc.

The Preference stock transfer books of the Delhi-Umballa-Kalka Railway Company, Limited, will be closed from the 14th to the 26th inst., inclusive, for the purpose of preparing the interest warrants payable to those shareholders whose names are on the register at the time of closing the books.

Coupon No. 12 of the Four per Cent. bonds of the Piræus, Athens and Peloponnesus Railway, due on the 14th inst., will be paid on and after that date at the London office of the Bank of Athens, 22, Fenchurch Street, E.C.3.

Letters of allotment and regret have been posted in connection with the recent issue of 1,000.000 Preference shares of the Anglo-Persian Oil Company.

Oil Outputs.

Maikop Orient.—Plot 435a, well 3.—Week ended December 29, 14,150 poods.

European Oilfields.—Week ended December 23, 63.200 poods.

Anglo-Egyptian Oilfields.—Gemsah, production for week 664 tons (last week 21 tons); Hurgada production for the week 3,549 tons (last week 5,391 tons).

Bibi Eibat Oil.—Production for week ended December 2, 41,000 poods (or 662 tons).

A SERBIAN MISSION.

A party of thirteen Serbian gentlemen, consisting of industrialists and merchants, with several university professors and lawyers, is to visit Manchester from January 27 to 30 under the auspices of the Board of Trade, for the purpose of inspecting the Ship Canal and various works. The President of the Chamber of Commerce, Mr. Spoker, will receive them and make the arrangements for the visit. They will probably be accompanied by Sir Arthur Steel-Maitland, M.P., and Sir William Clark.

NOTES OF THE WEEK.

Neither from Palestine nor from Mesopotamia has there been news of any importance this week. Quite obviously the Palestine campaign, in particular, could not be maintained at the rapid pace of last November and December; but the world still awaits the expected offensive by the Turks, assisted or not by their German masters, on either or both of these fronts. Falkenhayn has been the mystery man of the war for some months; and it is always possible that the loudly advertised German plans for an offensive on the Western front conceal a contemplated attack, perhaps on a smaller scale, in Asia Minor.

President Wilson's message to Congress has been unanimously approved by the Press in Bulgaria, alone among the enemy countries. Sternly denounced in Berlin, tearfully lamented in Vienna, sarcastically rebuked in Budapesth, it is praised in Sofia with curious unanimity. At first sight this would seem to be due to gratitude for America not having declared war upon Bulgaria—the little country may yet aspire to play the honest broker between the two sides in a negotiated peace that looks more possible in Sofia than in London—but the favourable attitude would seem to be more directly due to the fact that President Wilson's "fourteen points" do not directly hit Bulgaria in any respect.

Had he elaborated his studiously vague and moderate language as to the future settlement of the Balkans it is possible that the chorus would have been less congratulatory, for there was no hint whatever in the Presidential message that he would approve the cession of the Dobruja, part of Serbia, and the whole of Macedonia to the Bulgarians. Yet their annexationists demand nothing less than this. At the same time, one Sofia newspaper, the Democratic *Preporetz*, agrees that Serbia should have an outlet on the Adriatic—a doctrine that will not be very cordially received in Vienna.

It is very natural that the Jugoslavs should issue a protest against the Lloyd George-Wilson speeches, both of which suggested that Austria need not be dismembered, and that internal autonomy for the various nationalities under the Hapsburgs would adequately fulfil their aspirations. As both speeches were made with obviously carefully chosen phrasing in every word, and were in no sense mere platform rhetoric, this cannot be attributed to any looseness due to the momentary hesitation for the right word that sometimes occurs in an impromptu speech; and, moreover, the expression "autonomy" for the Jugoslavs and other Austrian nationalities was limited still further by the contrasting "independence" put forward as the legitimate destiny of Poland.

These protests have found an echo in Italy, where it is complained that Italian aspirations also are not fully recognised. It is the fact that neither Mr. Lloyd George nor President Wilson defined his attitude towards the Adriatic problem, but it must always be remembered that this particular problem is one of the most complicated in Europe, that the setting forth of a satisfactory solution would in itself take a great deal of space, and that long convention prescribes certain limits to a speech. None of those who advocate or denounce the League of Nations, for instance—a matter of vital interest to the British Empire—would denounce either of the two statesmen because his general approval of the scheme has not resulted in a fully drafted constitution for this promised new world.

But there seems to have been also some disappointment in Italy because Italian claims in the Levant were not more specifically recognised. (The same objection has not yet been heard from Greece, although it may very probably have been made.) Again the defence holds good that the declarations must not be judged altogether by what they omitted. If they were, Britain has the most reason of all to object, for neither our Prime Minister nor the American President thought it necessary to say a single word about the German Fleet—an ignoring of the life-work of Admiral Tirpitz which may partly account for the unusual irritability of that personage's language during the last few days.

It is noteworthy in this connection that some considerable irritation has been expressed in the Austrian newspapers at the fact that Slav units from Austria are fighting with the Entente armies on the Western front. The presence of Czechs and Poles in France will not make any real military difference, according to these pundits, but the moral effect is admitted to be a little difficult to explain to intelligent neutrals. It is.

Despite every temptation and threat, Roumania remains nobly faithful to the Allies. As *The Times* correspondent pertinently remarks, Roumania has been let down three times by Russia—first by the Tsar's Government, then by the Provisional Government, and, lastly, by the Bolsheviks. The latter have indeed done a good deal more, since they have called a Roumanian Socialist to Petrograd to discuss with him the methods of compassing an anti-bourgeois revolution—a project which is not likely to be very successful, the Roumanians

Digitized by Google

being an intelligent people who do not see the dawn of the millennium in the Smolny Institute. The Address from the Throne, which was read by the King in person at the opening of the Parliament at Jassy, once again affirms the fidelity of the Roumanian Government to their engagements with their Allies. The cheers with which this statement was received will echo rather strangely in Petrograd.

The Bolshevik Government, whether incited thereto by the Germans or not, have addressed an ultimatum to Roumania. They lodge a formal complaint that the Roumanian authorities have caused a Russian regiment to be disarmed and have arrested a Russian regimental committee, and threaten war, if satisfaction is not given within twenty-four hours. Most people were under the impression that the Russian regiments had either disarmed themselves or been disarmed by Lenin already as a part of his set policy; in any event, his late dealings with Roumania have shown his steadfast determination to pick a quarrel with his allies while he is discussing peace with his enemies.

Exactly what force the threat of Bolshevik war against Roumania may have is very doubtful; Lenin may do something by means of anarchist excesses, but of disciplinary war he has not a notion, and his many recent threats of war have had about as much effect as a mouse's threat to eat a cat. Presumably his real grievance against the Roumanians is that they have not laid down their arms, disorganised their armies, and walked into the German trap. He has even gone so far as to arrest the Roumanian Minister at Petrograd and the members of the Roumanian staff—the "new diplomacy"—with a vengeance. But this latest development of Bolshevik methods was brought to an abrupt end by the intervention of the American Ambassador.

When most of a man's words tend in one direction and all of his acts in another, it may be a harsh, but it is not necessarily a false, estimate to assume that his words are a kind of camouflage for his acts. M. Trotsky is full of indignant protests against the Germans whom he asked to negotiate with him, he threatens war against them if they do not do what he orders them, and he talks of raising a revolution in Germany against the bourgeois annexationists. But as he continues to discuss the terms of peace with them, his anger is not taken very seriously by anybody. He proposed that the negotiations, for no very evident reason, should be transferred from Brest-Litovsk to Stockholm, which has apparently become a kind of Socialist paradise in these days, not altogether to the content of the Swedish Government; but the Germans refused, and M. Trotsky sat down again at the same table with them. He has now raised numerous other points, which the Germans have treated, sometimes with brutal candour, sometimes with skilful evasion; but on every matter where the Germans make a stand M. Trotsky gives way. It is not altogether to be wondered at that there are those who suspect that the whole of the negotiations are an elaborate farce.

Meanwhile, however, the position of Roumania has been strengthened and that of Russia weakened by the fact that the Ukraine has proclaimed its independence, and that this has been recognised both by Petrograd and Berlin, possibly for different reasons. The possibilities of the Ukraine State to influence the Balkan position and thence indirectly the whole European situation are very considerable, particularly if the new republic is to be flanked by an impotent Russia. A strong Ukraine, based on what the Bolsheviks call bourgeois principles, and controlling the production of one of the richest grain and oil countries in Europe, would become a great factor in the future development of the Near East.

That Russia has, for the moment, given up the attempt to reduce the Ukraine and the south to obedience is clear. Not less clear is the fact that Germany wishes to stand well with the new State, having recognised its independence and invited it to the peace negotiations at the earliest possible moment. But it is being suggested, in quarters that are not usually ill-informed, that the new Ukraine authorities are not so friendly disposed to Berlin and Vienna as was expected. Nothing has been divulged as to the relations between the British Government and the new State, but no doubt communications have already taken place; between the French Government and the Ukraine it is known that there have been dealings. Fortunately there is nothing to show that Kieff entertains the anti-British or anti-French ideas current at Petrograd. It must be remembered that the commercial relations between Odessa and Britain before the war were close and intimate.

No franker admission of the essentially German origin of the war could be desired than the following statement of Prince Lichnowsky: "The dominant position for which we strove on the Bosporus, supported by military missions which were intended to strengthen the power of resistance of the Turks, aroused the displeasure of the Russian Government. Our navy policy and our Morocco policy, on the one hand, and our Serbian and Turkish policy on the other hand, *created the state of feeling out of which the Entente grew.*" In a subsequent passage of this article the late German Ambassador in London admits that Germany helped to create an independent Albania in order to shut Serbia off from the sea, and that Count Berchtold, the Austro-Hungarian Foreign Minister, never really recognised the peace of Bucharest. This illuminating article, which appears to be historically correct, appeared in the *Berliner Tageblatt*, from which it has been translated by *The Times*. One may gather from it a tacit admission that Prince Lichnowsky recognises that his diplomatic career is finally closed.

One of the most curious manifestoes of the war is that in which Lenin recognises the conditional independence of Armenia. He advises the organisation of a temporary government of the people of Turkish Armenia in the form of a Council of Deputies of the Armenian people elected according to democratic principles, and suggests that the "geographical frontiers of Turkish Armenia *must* be fixed by democratic representatives elected by the Armenian people, with the consent of democratic representatives elected in neighbouring countries and of the Commissioner for Caucasian affairs." The word *must* is significant of the impotent autocrat of Petrograd: but has Lenin never heard of the Armenian massacres?

Behind the bald statement that General Veshovitch, formerly Minister for War in Montenegro, has surrendered to the Austrian authorities lies, we may be sure, a tragedy of heroism and patriotism. For more than a year General Veshovitch and a devoted band of followers, continually diminishing in numbers, have held out in an unequal struggle against the conquerors of their land. Much of the story is still obscure. It is said that the general shot the officer who was sent to arrest him, and then fled. A price was put upon his head; but all attempts to run him to earth failed, and the Austrians, to cover their failure, circulated the report that he had fled the country. Before they were driven to this, however, they perpetrated the barbarous outrage that proved them apt colleagues of the murderers of Edith Cavell. General Veshovitch's family were seized as hostages, and a proclamation was issued to the effect that his brother and father would be put to death, unless he surrendered himself within a stated period. The threat was carried out on the brother; but the father was "reprieved as an act of grace on account of his age." The responsibility for this crime rests with the Austrian Governor, General Weber, whose name, it is to be supposed, has been noted by the Allies in accordance with the British Government's pledge that penalties would be enacted for specific crimes where actual responsibility could be attached.

On the merits of General Veshovitch's case it is, of course, impossible to pass judgment. If he was guilty of the murder of an Austrian officer, the Austrian

Digitized by Google

authorities will be within their rights in exacting the extreme penalty. Modern conceptions of justice, however, do not countenance the infliction of vicarious punishment, although the execution of General Veshovitch's brother was not likely to evoke comment in the country with so many judicial murders to its charge. The surrender of General Veshovitch probably marks the final collapse of all attempts on the part of the Montenegrins to hold out against their conquerors, for it may be taken for granted that the general's action was a protest against the excesses of Austrian rule, and served as a rallying point for all who were still continuing the struggle.

In these circumstances it is lamentable to find those of the Montenegrins who were able to escape from the country engaged in a political controversy among themselves. From the pages of a publication entitled "The Montenegrin Bulletin" we gather that a party of six refugees has styled itself the Montenegrin Committee for National Union, and is engaged in propaganda work with a view to bringing about the absorption of Montenegro in Serbia. This aim may be all that is claimed for it—a perfectly legitimate one, and offering the very best policy for Montenegro to adopt. But the question can only be decided by the Montenegrins themselves, and it calls for no propaganda work in Allied countries. The "Bulletin," as far as can be gathered, is inspired primarily by a personal feud, into the rights and wrongs of which there is no need to enter here; but it is one that in its essence is necessarily distasteful to the vast majority of Britons. The Allies have resolved that nations are to have the right of "self-determination" in regard to their future status. They are hardly likely, therefore, to withhold this right from one of their own number—the Montenegrin. But, as we understand the authors of the "Bulletin," the future of Montenegro is to be decided by anybody or everybody rather than by the unfortunate people of Montenegro now suffering under Austrian tyranny. It is to be hoped that this further indignity will not be added to the sufferings of that unhappy country.

On another page a correspondent utters a timely warning in regard to the country and inhabitants of Georgia, in the Caucasus. In recent issues attention has been drawn to Turkish and German propaganda, having for its object the consolidation of a great belt of Moslem peoples stretching from Constantinople across Central Asia. The bulk of the Georgians are Christians; but their incorporation in an aggrandised Ottoman Empire is desired for geographical reasons. As our Tabriz correspondent pointed out last week, the Georgians have been receiving special attention in this connection, and the Germans have been lavish in the most contradictory promises to the different races in this part of the world, with a view to detaching their sympathies from the Allies. The uncertainty of the Russian situation has made the Pan-Turanian movement a dangerous one for the peace of Asia, and it should not be allowed to gain strength for lack of being challenged. It is to be hoped, therefore, that the British Government will appreciate in time the necessity for giving the Georgians the moral and, perhaps, material support required to keep them from being drawn within the Turco-German net. There would seem to be room for an organisation which, without asking anything for Georgia, will undertake to kindle among Britons interest in this near neighbour of Mesopotamia.

POSTAGE OF NEWSPAPERS TO NEUTRAL COUNTRIES.

By an order of the War Office all papers posted to neutral countries are stopped, except those sent by the publishers or newsagents who have obtained special permission. No information is given as to the disposal of such stopped papers. Readers are therefore asked to bear in mind that if they desire to post a copy of THE NEAR EAST to a friend in a neutral country they should order its despatch by th publishers, at 1, Devonshire Square, London, E.C.2,

ATHENS LETTER.

(From Our Own Correspondent.)

Athens, December 16 (Delayed).

Fuel and Food Questions.

Athens, together with the surrounding country, was visited last week with an exceptionally severe snowstorm, which caused considerable dislocation in the life of the city. One of the principal effects has been the difficulty of bringing in wood from the Tatoi forest, and the electric supply has consequently been on the verge of stopping altogether. Practically the whole of the tramway service has had to be suspended, and the train service between Athens and the Piræus has been reduced from the usual departures of a quarter of an hour to one hour intervals, resulting in great struggles to secure places. The lighting of the city has been further reduced and almost all places of amusement, being without light, have had to close their doors. The public, of course, experience great difficulty in securing fuel, and in addition to a scanty diet they have had the discomfort of being without the means of warming themselves, with the thermometer considerably below the freezing point. The fuel problem appears to be a difficult one to solve. Foodstuffs from abroad such as wheat, rice, etc., are beginning to arrive more regularly, and it is hoped that in a short time the measures which the Allies have taken to provision Greece will bear fruit and that the situation will be considerably alleviated; but local produce is mysteriously scarce, and meat has now disappeared from the market.

General News.

There is a period of calm in politics, but there are rumours of changes in the Ministry when M. Venizelos arrives.

His doings are naturally reported at length by the Venizelist Press, and there appears to be a feeling that his visit to England and France will be productive of much benefit.

The taking of Jerusalem by the British and Allied forces has provoked great enthusiasm and satisfaction. The event was celebrated to-day by a Thanksgiving Service in the Cathedral, which was attended by the King, the high officials, and the Diplomatic Body, amidst the ringing of all the church bells.

Another anniversary was celebrated the other day—the taking of the Acropolis by Fabvier in 1826. The ceremony was organised by the Franco-Hellenique League, and was attended by the King and by a number of Greek and French military. It attracted a large gathering of the public at the Acropolis. Speeches were made, and amid much acclamation an event organised to emphasise the ties between France and Greece was successfully commemorated.

The appearance of the King and his aide-de-camp in the uniform of ex-King Constantine's regiment, with

a large K on the shoulder-straps, has been much commented upon, and the Press advocate measures being taken to extinguish these smouldering embers.

December 30.

St. Paul's Church at Athens.

A pleasing little function took place to-day after morning service in St. Paul's Church. Lord Granville received on behalf of the Church a safe which had been purchased out of subscriptions given by some of the British refugees from Turkey, as a token of esteem for the Rev. Alan Gardner. The idea originated with Mr. Newman Mumford, and thanks are due to him for the trouble he took in collecting the subscriptions and obtaining the safe. In making the presentation, Mr. Mumford spoke as follows:—

My Lord,—It is my pleasant duty this morning to ask your lordship to accept, on behalf of St. Paul's Church, this safe, which has been subscribed for by a few of the British refugees from Constantinople and other parts of Turkey.

It is, perhaps, unnecessary to say but little about the donors. You, sir, know the facts of our ups and downs and our jumping from pillar to post, scattered far and wide from our homes. Yes, and some have even lost their homes, and others have been separated from their dear ones; but we are here, some of us, thank God! and stronger in our faith in victory over the enemy than ever.

We have had the privilege of worshipping in this church now for over three years, and for two years of that time the Rev. Alan Gardner was the parson. But it is the origin of the safe about which I wish to say a word first.

A story is told of how Mr. Gardner was met by a friend one Sunday morning staggering home from church with the weight of the collection in his pockets that the dutiful and generous worshippers had offered that morning. "Why did you not leave the money in the safe?" the friend inquired. "Well," he replied, "because we do not possess one." And the friend said that he would see to it that one was supplied, and this is the result to-day. The safe is intended also to store the church plate, or, at any rate, a part of it. It was practically ready to be presented more than a year ago, but the troubles of December came and upset the arrangements, and I regret that Mr. Gardner is not with us to-day to see the consummation of that little Sunday morning meeting after church.

Of the reverend gentleman many friends here will have pleasant recollections. He was not only the pastor of the church—he was also the schoolmaster of the young British children of this city. He was a great friend to the children. He had a special and kindly way in handling them, I have been told by some of the parents, and was much liked by the children.

You, my lord, have now under your roof at the Legation pupils of Mr. Gardner who are working for the State. He was pastor for a number of years in this church, and it is thus fitting that we should associate his name with the presentation to-day on the brass plate on the front of the safe. It will remind generations yet unborn who will worship in this church that the Rev. Alan Gardner was pastor during the first two years of the great war, and that there were refugees from Turkey staying in Athens and worshipping in St. Paul's Church who appreciated his work.

This is the last Sunday we shall meet in the old year—a day for silent thought and examination of the past eventful days. Let us spare a few thoughts to our late pastor, who, I venture to say, will think of us.

I trust that all who have met here this morning will be spared, if it so please God, to meet again in this beautiful and sacred edifice on the great morning of victory, when we shall hear the joy bells ringing from the tower above us, and thank and glorify God for our deliverance from the curse of militarism.

And now, my lord, I have to thank you, on behalf of the donors, for your kindness in meeting us so gladly, and undertaking this function. I trust that it is only the first of many you will carry out, and that you will be blessed with health in this city to do it.

On receiving the keys, Lord Granville said that he had great pleasure in accepting the safe on behalf of the Church, and although he had not had the privilege of knowing Mr. Gardner, he felt sure that he would greatly value this appreciation of the refugees from Turkey.

The Sunday morning services have been maintained regularly by Mr. Waller, Mr. Rowe and Mr. Satow, who have taken it in turns to read the service; but it is hoped that a clergyman will soon be found to replace Mr. Gardner.

A SERBIAN PRAYER BOOK.

Father Nicholai Velimorovitch has compiled a soldier's prayer book for the Serbian Army from the authorised manuals of the Eastern Church. The S.P.C.K. has undertaken the publication of it, and has also made itself responsible for the cost of the book, which, beautifully printed, contains reproductions of some well-known icons and pictures. It is stated that the first edition of 10,000 copies will cost about £500. The books will be sent as a free gift to the Serbs at Salonika, Corfu, and other parts of the Mediterranean area. The Serbian Relief Fund has promised to help in the task of redistribution. All who subscribe to the cost of its production will receive a specimen copy of the book.

THE PALESTINE FRONT.

The most interesting news from Palestine is that issued on the 15th inst. regarding the eastern flank of our main advance. This has always seemed very much "in the air." The wilderness of Judæa, which lies between the central plateau—on which Jerusalem, Bethlehem, and Hebron stand—and the actual Jordan Valley, should, in the summer months, be a very good protection, as it is a stony, waterless desert. In mid-winter, however, this is by no means the case, and the Turks are no doubt holding their own without much difficulty not far from our lines. These last seem from the report to run from Mar Saba north to Jeba Mukhmas and the N.W. towards Bireh.

Mar Saba is the famous monastry which has been built up in the steep and rugged southern side of Wady en Nar, some eight or nine miles S.E. of Jerusalem. It was founded in the fifth century, and is called after Saba (born in 439), who was a monk here noted for his holiness. In recent years the place has been used as a place of correction for troublesome Greek-Church monks. The irregular mass of buildings, surrounded by high and powerful walls in the midst of a sun-baked wilderness, make an extraordinary picture. If, as it seems, British troops have occupied the place, they should here have comfortable quarters as regards water, etc., but nearly the whole place could be riddled with fire from any hostile force on the opposite side of the valley.

Mukhmas is the ancient Michmas, and was, like Jeba, referred to in a previous article; here our troops made a successful raid, cleared out the village, and brought back prisoners.

It is clear that the eastern flank is still an insecure one, and will remain so until we can extend at least into the Jericho plain itself and secure the fords and bridges of the Jordan.

On the western flank—near the coast—parties of Turks have been shelled near Mezeireh. This is a village close to el Kuleh—mentioned recently; it lies on a low hill, guarding as it were the way inland, some 1½ miles to the east of the railway at Rantieh, which last place is in our possession. Our most northerly point is on the sea coast at Arsuf, a place famous for a great victory of Richard Cœur de Lion over Saladin (1191).

Two important and historic sites have been successfully bombed, viz., Jenin, the ancient Engannim, where the road and railway pass from the mountains into the Plain of Esdraelon—here an aerodrome has been bombed—and Amman, the site of the ancient Rabbath-Ammon, named in the days of the Greeks Philadelphia. This is a most important station on the Hejaz Railway, and from here a recently made military road runs to Jerusalem. The modern town—built among the ruins of the ancient city—is inhabited by Circassians, and it must now be a scene of activity as the railhead for the eastern attack on our advanced line. It lies forty-seven miles E. (and slightly north) of Jerusalem.

ROUMANIAN NOTES.

German Propaganda.

An extraordinary document was captured not long ago on the Roumanian Front. Putting to profit the Russian desire for "fraternisation," the German Command applied it to the disorganisation of the Allied forces and to securing information about them. Like everything German, it was thoroughly organised, and the document in question is nothing less than a text-book of the art of fraternisation. It emanates from the headquarters of the 218th Infantry Division, is signed by General Kreynberg, and is headed by the warning: "Secret.—Not to be taken in the first line." The document instructs that greater development should be given to propaganda on the Roumanian Front, for the purpose of "disorganising the Roumanian Army and obtaining information about the enemy, especially such as refers to the new 1st Roumanian Army on the Moldavian Front." The propaganda is to be carried out by means of literature and of verbal contact with the Roumanian troops, and the officers to whom the direction of this work will be entrusted are to find out those points of the line where such contact could be established. But they are to do nothing else than prepare the ground; alone the officer in charge of the Divisional Intelligence Bureau is entitled to negotiate with the enemy, and to him all letters and printed matters which the Roumanian soldiers may bring must be sent "without being opened or touched." The German Command was obviously disturbed lest free contact with the enemy should weaken the patriotic endurance of its soldiers, who are therefore "strictly prohibited from entering into relations with the enemy except at the points mentioned above [each of which was to be in charge of a company commander], in order not to increase the possibilities of spying. The enemy will try in any case to put to profit the kindness of our soldiers."

The officers in question are enjoined to proceed with care and method, and are provided with advice as to the psychology of the work. "The success of such attempts to establish contact with the enemy depends on the ability with which they have been initiated. Loud shouting could only frighten so cowardly an adversary as the Roumanian and would alarm the whole line. Good results will be obtained by quiet appeals, made in a very friendly manner, by the frequent repetition of the attempts at the same point, the promise not to fire, the offer of tobacco, etc. Tobacco is to be demanded from the company commander." The progress of these altruistic activities is to be reported daily to the Divisional Intelligence Bureau, and measures should be taken to preserve the points where propaganda is carried on from artillery fire. The German command were obviously doing their best to make "fraternisation" a success, but were sensible enough not to indulge in too great illusions about the results of their efforts. "The Roumanians," the document concluded, "are distrustful and perfidious, and therefore one will have to count with the fact that they will lay traps to capture or kill our propaganda agents. One should be careful, therefore . . . . For the defence of our soldiers protective units should always, discreetly and unobserved, be organised in our trenches. They are only to fire upon orders from the company commander in charge of the respective post."

Any comment would only impair the charm of that delightful document. One fact may be mentioned, for the sake of the reputation of its author: that it was written on June 17, 1917—that is, before the great German offensive of last autumn. The German general has since had good reasons for modifying his valuation of the Roumanian soldier.

Life in Moldavia.

All the efforts of the authorities and of the population to prevent a recurrence of last winter's calamity have been frustrated by the chaos prevailing on the Russian railways. The American Mission have done splendid work in the short space of time since they have arrived. They are continually conferring with and assisting the authorities concerned for the purpose of mitigating distress, and they were able to secure transport for a certain quantity of goods. Early in November they received from Russia four trucks of flour and oil; shortly afterwards five ships left Odessa carrying goods destined to the American Mission, while a train of fifty-nine trucks, conducted by American engineers, brought 500 barrels with sardines and a quantity of sanitary material from Odessa. All these provisions are destined for the free and sole use of the poor population. But, notwithstanding this welcome help, and the creation in Jassy of a "Directorate of Public Alimentation" to look after the provisioning of the civil population, the situation has grown so bad that a decree had to be issued suppressing altogether the distribution of meat behind the firing line; bread, moreover, is henceforward only to be distributed on five days a week, on the remaining two days the population receiving instead a small quantity of maize flour. Deficiency is not confined to food. There is much complaint about the lack of books, since few are printed and none imported. They are especially missed in hospitals and prisoners' camps—and in schools. Text-books are unobtainable. This difficulty finds to a degree a somewhat sad solution. There is such insufficiency of accommodation in overcrowded Jassy that many secondary schools may find themselves unable to commence work. The authorities are being urged to take over some of the less necessary shops and put them at the disposal of the educational authorities.

Miscellanea.

A decree has been issued calling to arms class 1919.

General Marin Ionescu has been made chief of the General Staff, Sedentary Part.

A new Rumanian publication, *Vestitorul*, is now appearing in Odessa.

CYPRUS NOTES.

(From a Correspondent.)

The Health of the Island.

Every year that passes tends to dispel more surely the idea so generally current for some time after the British occupation that the climate of Cyprus was unhealthy and dangerous. The medical section of the High Commissioner's recent report shows that the public health continues steadily to improve. This is unquestionably due to the medical officers, the excellent hospitals and dispensaries maintained in all districts, the anti-malarial campaign (including drainage works), which is being systematically carried out in compliance with the advice of Sir Ronald Ross, and the increasing enlightenment of the people.

Amongst other signs of improvement, it would seem that leprosy is decreasing. The number of known lepers is now only ninety, the lowest return on record. At Nicosia there is an establishment for the segregation and treatment of these unfortunate sufferers, which is generally called the Leper Farm. It is a peaceful retreat, about one and a half miles south-east of the city, at a secluded spot, in which shady trees have grown up, and which contains several blocks of buildings. In Turkish times the rules regarding lepers were lax here, as elsewhere. At Damascus, for example, visitors to the *Beit Naamán* (House of Naaman), which is the Government leper asylum, found the administration quite *à la Turque*. Often not a single inmate could be found. The patients wandered at will in the streets and bazaars, returning when they thought fit. At most places in Syria lepers sit by the roadside begging, and exposing their terrible deformities and signs of disease. Travellers by road from Jaffa to Jerusalem will not forget the sight.

The Leper Farm.

Needless to say, the British Government promptly adopted suitable rules and regulations. A leper law was passed under which it is the duty of any person who knows of the existence of a supposed leper to report to the village headman, who informs the District Commissioner. If the district medical officer pronounces the case to be one of leprosy, the patient is sent to Nicosia, and if the chief medical officer confirms the view, the High Commissioner orders his or her removal to the farm, on the certificate of two medical officers, of whom the chief medical officer is one. Cypriots have a great dread of contagious diseases (many regard leprosy as of this category), and yet they frequently conceal cases, chiefly owing to certain superstitious ideas which they have respecting them. In this matter, however, a beneficial change is coming over the people. The asylum is under the direction of the chief medical officer, who is responsible for the maintenance of good order, and must visit the farm at least once a week. A secretary keeps books and records, and must pay bi-weekly visits. There is a superintendent, who resides at the farm and answers for its cleanliness, controls the attendants, and pays the lepers the allowances which are granted by the Government. There are several resident guards, who can go off duty in turn, but must not be absent more than four hours without permission from the chief medical officer. Finally, there are several servants who assist lepers that are unable to look after themselves. No inmate can absent himself from the farm, and no one can visit it, without the written permission of the chief medical officer.

There is a chapel, and a priest of the Orthodox Church holds services on Sundays and Saints' days, and performs all religious offices, except marriages, which can only take place by special permission of the High Commissioner. The

Digitized by Google

priest is strictly forbidden to attempt to proselytize. Any leper who absents himself without permission, which sometimes happens, is liable to imprisonment not exceeding three months. The chief medical officer has magisterial powers, and deals with all offences committed by the patients, who have the right to appeal to a higher Court. The prison consists of two rooms in a block facing the chapel, and the superintendent acts as warder. No leper is allowed to keep or use any firearm or dagger-knife. All are required "to conduct themselves in a quiet and orderly manner." They are required to carry out work for the benefit of the farm, according to their various abilities. There are several married couples. The Government maintains at Nicosia a home for children born in the farm of leper parents. At present there are eleven, of ages from six to seventeen. All are without sign of the disease. Four have been taught a trade, and have been discharged with a grant of £5 to start them in life.

Great attention has been given by the medical authorities to the disease, the cause of which still remains so obscure; but I believe I am right in saying that no contribution to the stock of scientific knowledge respecting the disease has yet been made in Cyprus.

THE LIBERATION OF SYRIA.

(From a Syrian Correspondent.)

Turkish Damage.

Now that the Turks have been driven out of Southern Palestine, practically out of the whole Mutessarifiet of Jerusalem, with its four Cazas (districts)—Gaza, Jaffa, Hebron, and Jerusalem—it is most gratifying to learn from a semi-official statement that previous reports as to the loss of life and property have been somewhat exaggerated. It is also satisfactory to learn from official *communiqués* that the Turks, in their hurried retreat, had no time to drive before them the inhabitants, or remove any of the supplies. Gaza, however, seems to have been a sad and solitary exception, for the writer was told by an eye-witness and a well-known inhabitant of that town that it is now a heap of ruins. Not a soul was left there. The houses have been robbed of all furniture, and even the wooden frames of windows and doors have been torn off to supply fuel for the railway. While young orange and other fruit trees have not suffered to any appreciable extent, being not quite fit for fuel purposes, the estimated proportion of old olive-trees cut down is, according to the same eye-witness, about four-fifths of the olive plantations in the vicinity of Gaza. What makes this wanton destruction all the more deplorable is that many of the trees there are centuries old.

The Egyptian Post Office does not yet accept any correspondence to Palestine, but occasional private letters from the newly-occupied territories, and especially Jaffa, have been allowed into Egypt, presumably with the military mail. Reuter's correspondent states in one of his messages that the town of Jaffa and the orchards around it are intact. Jerusalem, also, according to official reports, has been evacuated without any damage. A private letter received a few days ago from Jaffa states that the inhabitants in general are in a distressful state. Many Christian families of the better class have been deported.

The soldiers, especially the Australians, seem to be delighted with the well-cultivated vineyards and orchards of the Jewish colonies, which are said to be intact. The loss that the people have sustained most is in cattle, and, in considering the problem of supply for the newly-occupied territories, the British authorities' first care will be the replenishing of the exhausted stock of cattle there. Such a step is necessary to save the forthcoming crops, which will have to meet not only the needs of the inhabitants, but also of the Army, especially the cavalry and camel corps.

The Syrians and Great Britain.

There has always existed an undercurrent of feeling amongst Syrians in general that England, by her conservative policy, based on the principle of Turkey's territorial integrity, has, indirectly and unwittingly, been the cause of all their misfortunes at the hands of the Turks. The admirable campaign, however, conducted with such generous sacrifice of men and money, which resulted in the brilliant conquest of Southern Palestine, on the one hand, and the munificent spirit lately displayed in England in connection with the Palestine Relief Fund, on the other hand, have left nothing but an unmixed feeling of gratitude and admiration in the heart of every Syrian for the great nation that is using the greatest military and naval power in the world for affirming the highest principles of justice and the sacred rights of humanity.

Syrian Relief.

It is appropriate to refer in this connection to the Cairo Committee of the Syrian Relief Fund. Save for about a thousand pounds, which were sent to Syria through an exceptional and indirect channel, it was not found possible to transmit any of the balance of subscriptions, amounting in all to over £12.000, to the victims of famine in Syria, and as this considerable amount has been lying all that long time as a fruitless and impotent effort of charity, it was suggested by some of the members that part of this money should be paid to the families of destitute Syrian refugees in Egypt, and especially those whose heads are away at the front. Opinions were divided, and at one time there was fear of a deadlock, when the liberation of Southern Palestine came to afford a happy solution. As the way was now partially opened for the transmission of relief to at least a section of the Syrian population, the Cairo Committee very rightly joined hands with the Cairo branch of the London Committee of the Palestine Relief Fund, and devoted a part of the subscriptions collected to the sufferers of Palestine. The spiritual heads at Jerusalem of the different creeds and denominations represented in the Cairo Committee are to take charge, in collaboration with the Bishop of Jerusalem, of the distribution of relief. The aim of both organisations is one, in that distribution is meant for all deserving cases, irrespective of creed or denomination The Cairo Committee, having thus found a new incentive, revived its activities, and is launching fresh appeals. The first has already brought in about £60. It is devoutly hoped that the Syrians in Egypt, realising the magnitude of the catastrophe that has befallen their countrymen at home, and, seeing at last the way of relief opening before them, will not prove behindhand in the race of charity wherein the different nations of the world have been vying with each other in such noble and generous spirit.

COUNTERACTING GERMAN PROPAGANDA.

We have made arrangements for forwarding free of charge to our readers pamphlets and other publications dealing with the British and Allied cause. This literature is in many European languages, and certain pamphlets and illustrated publications are also available in a number of Oriental languages. All applications should be addressed to the Editor, The Near East, Devonshire Square, London, E.C.2. Among the most recent publications available for distribution free of charge are the following:—

"Welfare of Egypt," by J. S. Willmore. A short summary of English administration in Egypt; alluding also to Germany's undermining influence, and the Mussulman's preference for the English rule. 36 pp. London: Hodder and Stoughton.

"Mesopotamia; the Key to the Future," by Canon Parfit. A short account of the past history, present development, and future prospects of Mesopotamia, showing that the settlement of its problems is of vast importance to the progress and prosperity of the world. 41 pp., with map. London: Hodder and Stoughton.

"Turkey, a Past and a Future," by A. J. Toynbee. Development of the new Turkish Nationalism and of German intrigue in Western Asia. Moslem ideas must prevail. Mesopotamia will develop its resources mainly by colonisation. 77 pp. London: Hodder and Stoughton.

"Armenian Atrocities: The Murder of a Nation," by A. J. Toynbee, with speech by Lord Bryce. An account of the atrocities committed by the Turks on the Armenians, with documents. 117 pp. London: Hodder and Stoughton.

"The Verdict of India," by Sir M. M. Bhownaggree, K.C.I.E. The writer describes what England has done and is doing for India, and explains the German delusion as to its internal condition. 57 pp. London: Hodder and Stoughton.

"Voice from India," address by Maharajah of Bikanir. Speech delivered to Indian delegates at House of Commons. 24 pp. Empire Parliamentary Association, London.

"The Murderous Tyranny of the Turks," by Arnold J. Toynbee, with a preface by Viscount Bryce. A brief sketch of Turkish history to show that the expulsion of the Turks from Europe and their confinement to a portion of Asia Minor will be the only adequate requital for their atrocious treatment of subject races during this war and previously. 35 pp. London: Hodder and Stoughton.

"The Justice of Roumania's Cause," by A. W. A. Leeper. An explanation of the international position of Roumania in Europe and of her rights in the war. The author shows that her cause is legitimate, and that she has taken great risks and endured much to deliver her people from Hungary's oppression. 24 pp. London: Hodder and Stoughton.

THE GEORGIAN QUESTION.

(From a Correspondent.)

Two forces in conjunction—the events in Russia since the Revolution and the recent developments in Palestine—have brought into their proper perspective the country of Georgia, in the Caucasus, and its noble and chivalrous people. Submerged in the Russian Empire since 1801, although preserving their own language, literature, and intellectual development, the Georgians have been obscured by the shadow of that Colossus, and from the nature of things in these circumstances justice has not been done either to their prowess in arms or to their brilliant intellectual attainments. It is the duty of patriotic Englishmen and Englishwomen to make themselves acquainted with the history, economic resources, and aspirations of this little Christian nation, whose troops are within 100 miles of our forces in Mesopotamia, and to strive to extricate the buried treasure of achievement. Since the Russian Revolution decentralisation has brought into existence a spirit of unity in the composite nationalities of which Russia was composed. True, the necessity of establishing local order has, perhaps, been the first impelling force, but under this spur of necessity the self-consciousness of national spirit has gathered itself together. As a country of peasant proprietors, there are practically no Bolsheviks in Georgia. Their leaders have proclaimed their country's autonomy, and—without prejudice to the Georgians joining any practical scheme of federation which economic or other considerations may later dictate—their interests are closely linked with British interests in Asia Minor. It behoves us, therefore, to study this question closely from the political, economic, and military point of view.

The enemy countries have recognised the military and economic importance of Georgia, and have carried on an active propaganda during the war. To appreciate the danger of its effectiveness, it is necessary to indicate some of its features. Germany, first of all, recognises the Georgians as an independent nationality, as the predominant or key race in Transcaucasia, and of the highest military value (*vide* German General Staff publications). She offers to assist them in the development of their resources and to preserve their independence. She further asks from them no military assistance, only neutrality. The subtlety and insidiousness of this propaganda have a great bearing on the future, and need examination at greater length on some future occasion, but in effect it means leaving a free hand to the Turks and Germans in Asia Minor.

The political situation would be made clearer by opening close commercial connection between Great Britain and Georgia, when a mutual need of protecting and safeguarding Georgian and British interests would arise, and, as a natural sequence, bring the military forces of both countries into close contact. It should not be difficult to arouse the interest of British capitalists in developing the vast mineral resources of the country and in establishing key industries in the vicinity of the raw material. The inviolability of Georgian territory and resources is a matter of vital concern to the Allies, and the mutual self-interest of all concerned points to the desirability of an international agreement being arrived at.

The population of Georgia is approximately four millions, consisting of three millions of Greek Orthodox faith, 200,000 Roman Catholics, and the remainder Mohammedans. They have military effectives amounting to about 150,000 men, including 5,000 highly trained officers, and the efforts of the German Headquarters Staff have been directed to detach them. Enemy propaganda must be grappled with without delay, as, if it be allowed to continue without any evidence of interest on the Allied side, we may pay a heavy price for our apathy. The Balkans provide an object lesson of the disasters arising from the lack of appreciation of foreign mentalities and local national aspirations. Each unit in a sphere of interest requires separate individual study and recognition. It is a fatal policy to try to unite them all in accordance with some preconceived idea of an outside party. Racial pride and historical associations demand special treatment, although friendly guidance may be offered after some governing principle has been established in the nature of guarantees. An irreparable mistake may easily be made in the treatment of Asia Minor nationalities, and it is to be hoped that a strong public opinion will be formed in this country without delay that will demand a prompt and enlightened treatment of the Georgian question.

THE JORDAN VALLEY AND ITS LAKES.

Lecturing last Monday before the Royal Geographical Society, Dr. E. W. G. Masterman said that the Jordan Valley was a unique feature of the earth's surface. No other part of the earth uncovered by water sank three hundred feet below the level of the ocean, but here was a rift more than a hundred and sixty miles long and from two to fifteen miles broad which fell 1,293 feet below ocean level at the surface of the Dead Sea, and at the bottom of the latter was 1,300 feet deeper still. The whole history of the country had been profoundly affected by this vast barrier, and that history was by no means finished yet; for through the Jordan Valley ran the slender iron track which was to-day the main source of supply of the Turkish Army from Palestine. In the early glacial period the Jordan Valley was filled by a lake 105 feet above the Mediterranean. This lake had now dried up and become the Valley of the Jordan, but three collections of water remained. In the north was El Huli, nine miles south of this the Lake of Galilee, and again 60 miles further south the Dead Sea. Between El Huli and the Lake of Galilee the river fell 689 feet, a greater fall than took place between the Lake of Galilee and the Dead Sea. The course of the river throughout was filled with rapids. The Dead Sea was the most interesting of all the geographical features of the valley. It was about forty-seven miles long, divided into a northern two-thirds, where the water was deep, and a shallow southern bay by a peninsula known in Arabic as El Lisan, or the tongue. One interesting object beside the Dead Sea was the great rock at Masada, now called Es Sebbe. This stood out with almost precipitous sides 2,000 feet above the sea, and from it a magnificent view of the sea, and especially El Lisan, was visible. It was in this natural fortress, converted nearly 100 years previously by Herod the Great into a walled and munitioned stronghold, that the last wretched remnants of the escaped Jews from Jerusalem held out for many months against the might of Rome, finally preferring to seek self-destruction rather than fall into the enemy's pitiless hands. From the summit of the hill the outline of a Roman camp could be clearly seen, and the wall could be traced which the Romans had built entirely to surround their victims. At the south-west corner of the lake was a mountain of salt, called Jebel Usdum, or the Mountain of Sodom. It was a high hill rising 500 feet above the level of the Dead Sea and running for seven miles along its shores. The great mass of the hill was of a marly substance; but, under this, rising from about the Dead Sea level for about 100 to 150 feet, was a mass of crystallised rock salt. In some places the salt was hidden, but in others furrows and caves had been made by water action; and there were cave grottoes where one found beautiful stalactites and stalagmites of greenish, semi-translucent salt. The waters of the Dead Sea were impregnated with salt to an extraordinary degree. Asphalte was also found floating in its waters. This also was claimed by the Government. It was quite possible that petroleum might be found in the region. Previous to the war the only permanent boat allowed by the Turkish Government to be upon the Dead Sea was a small sailing ship which used to run from the south-east to the north shore with grain from the Kerak district. Now there were a number of boats, including at least one motor boat, brought from Jaffa, engaged in the transport of guns and munitions of war for the use of the Turkish Army. The Dead Sea region was not so entirely desolate as had been imagined. At many spots along its shores there were oases in which acres of reeds and many trees flourished. At such spots animal life was abundant. The most characteristic animal was the coney.

In an interesting discussion that followed, Mr. Israel Zangwill said the siege of Masada was not actually the last effort that the Jewish nation had made against the Romans. Two centuries afterwards another revolt had taken place.

Professor King (of the Palestine Exploration Fund) said that there was great potential water power in the Jordan Valley. This water power might be conveyed by electricity to all parts of Palestine, enormously increasing the number of people that the country could support.

TANGIER TO TEHERAN.

I was glad to see the Labour Party taken to task by the British Workers' League over that wonderfully crude suggestion that some international authority should be set up after the war to manage the African colonies of the European Powers. Until the spell was broken, I could hardly trust myself to refer to the subject; but now that the proposal has been challenged in Labour circles one may make some reference to it. But what aspect is to be tackled first? Here is a body of Englishmen who are solemnly prepared to scrap all the good their country has done in Africa, as well as the unique experience Great Britain has gained as a colonising Power, in order to place all her colonial administration on that continent under the control of an International Board on which she will be represented by one out of six or more members. As if such a Board could run the African Continent, or even a single colony, without an infinity of friction. Internationalisation, I fear, bids fair to run riot these days; and yet experience is dead against it, with the one possible exception of the Danube Commission, in the case of which the work is almost entirely technical and involves no jurisdiction over aggregates of population. The Labour Party's proposal, however, is the most fatuous so far, and could only have emanated from the warped brain of a very ignorant pacifist or by direct inspiration from Germany. It would be of interest to discover who originated it in Labour counsels. Both Egypt and Morocco have gone ahead with the elimination of international control, but some worthy or unworthy *quidnunc* who contrives to lead British Labour out of its depth proposes to revert to that pernicious system.

***

A most interesting document has reached me, through the kindness of a reader, in the report of the President and Faculty of that great American institution, Robert College, at Constantinople, for the fifty-fourth year, 1916-17. It will be remembered that Turkey severed her relations with the United States on April 20, 1917. Just before that date the American Ambassador, Mr. Elkus, had been taken ill with typhus fever, and it was not until May 29 that he was able to leave Constantinople. This report was written last July, so that it brings the story of the College down to a date two or three months after the severance of diplomatic relations and six or seven weeks after Mr. Elkus left. Apart from the record of work done in trying circumstances, the main interest of the report lies in what is said regarding the attitude of the Turkish authorities. In the first place, there is the outstanding fact that the college was allowed to "carry on"; but the Turks, it will be seen, went further than that. This is what President Gates has to say on the subject, and I shall quote him at some length, because the matter may not be altogether devoid of bearing on future developments.

***

"When Turkey actually severed relations with the United States it was universally conceded that now our College would certainly be closed and its buildings devoted to military purposes. The American College at Beirut was closed at that time for two weeks, after which it was allowed to reopen. But in Constantinople we continued our work. Three separate attempts were made by different departments to get possession of our buildings, which by their size and their prominent location constitute a great temptation. Officers and soldiers were sent to the college and placed on guard around the buildings designated, and in one case certain rooms and buildings were placed under the official seal, closing them to our use; but in every case, when representations were made to the Council of Ministers, orders were issued to withdraw the soldiers and to leave us undisturbed. On the day following the severance of relations between our country and Turkey the Turkish Minister of the Interior sent orders to all the provinces that American citizens and American institutions were to be treated just as they had been treated before the severance of relations, only no official relations were to be held with American Consuls."

***

The machinery in the Engineering Department of the college was particularly coveted, but the Grand Vizier insisted that the military should not confiscate any of the plant. If any machine were required, it had to be bought or borrowed. Later on the Government found itself in great need of one of these machines. The President was sent for, and told that, although the authorities must have the machine in question, they would pay for it. Subsequently there was consternation in the college when an official appeared to take an inventory of all the machinery, but again the Grand Vizier intervened, and President Gates at the time of writing was able to say that they had suffered no further interference.

***

The most picturesque illustration of the relations between Turks and Americans is given in the following anecdote:—

Recently one of our ladies was buying fruit in a little shop kept by an aged Turk, who asked her: "Where do you live?" "At Bebek," she replied. "Are you German?" "No." "What are you, then?" "I am an American." "Oh!" said he, and he reopened the bag of fruit which he was handing to her and added another plum.

"The people generally," adds President Gates, "have been giving us many plums of praise and friendliness, and have openly expressed their joy that our college has not been closed. This is a case where adversity has revealed friends instead of alienating them."

***

In the circumstances, I suppose, we must overlook the other side of the picture, which is that the Turks have been benefiting by the education given by Robert College, especially in the Engineering Department, in so far as they have secured well-trained engineers—a class in which they were extremely deficient—and have made full use of them for military purposes! But what of the motives which have prompted the Turks in this attitude? I am quite prepared to give them full credit for a certain amount of disinterested gratitude. Here is Robert College, in the fifty-fourth year of its existence, and for the greater part of that time the only institution in Turkey where university education could be had. Naturally, those who have passed through it, as well as those who are able to appreciate the advantages of education, have reason to be grateful to the Americans for the splendid disinterested work that they have carried out all these years. This view is confirmed by the attitude of Bulgaria, who during the earlier part of the college's existence made more use of it than did the Turks, who were slower in recognising their opportunities. President Gates writes:—"We cannot speak too highly of the consideration shown to us by the Bulgarian Government. In spite of the fact that they have need of all the food which they can produce they have said: 'Yes, we will give food for Robert College.'"

***

But, without doubt, considerations of "reinsurance" have not been entirely absent from the Turkish mind, and this is where the testimony of Robert College is of special interest at this stage. Will the present rulers of Turkey go a step further and, realising the mistake they made in 1914, decide to cut their losses and take what the Allies now offer them? By now they know the worst. A speedy decision would apparently stand them a good chance of saving Constantinople. For the rest, now that President Wilson has underlined Mr. Lloyd George's declaration, the Turkish Government, in spite of Robert College and its own scrupulously correct attitude towards Americans, cannot hope for better terms.

NEAR EAST BOOKSHELF.

THE FRENCH COLONIES.*

It is an old jibe against France that her colonies are unsuccessful, but, whatever truth there may have once been in the taunt, it has ceased to be applicable these last thirty years, since her new colonial empire has been built up. It is one of the most astonishing proofs of the perennial vitality of France that within a generation after the war of 1870 she should have built up a colonial dominion second only to the British. Its material success has been amazing; the figures which M. de Lanessan cites for Tunisian commerce and agriculture could not be surpassed in the rapidity of their growth by Nigeria or a favoured rubber plantation in Malaya. He states, indeed, that Tunis is the most flourishing and successful of the French colonies, but, without making an exhaustive comparative research, we are not altogether convinced that he is right. Indo-China admittedly cannot compete with it, nor probably some of the newer West African districts—which have hardly had sufficient time yet to show their capabilities—but one has an idea that the partisans of Madagascar could put up a good case if they were asked.

The record of Tunis as it stands, however, is sufficient to justify French colonial poplicy. To English colonial students who are familiar enough with the story of advancing exports, order brought out of chaos, and a settled rule superseding a barbaric and, in places, nomadic administration, the political and administrative section, showing how the thing has been done, is the most interesting. One strong point M. de Lanessan makes is that there have been few changes of Governors; the men who have been appointed have usually stayed some years, and thus a continuity of policy has been secured. Long tenure is an excellent thing on the condition that the right man is appointed, and Tunis has clearly been fortunate in this respect. Certainly the fact that on the list of administrators the name of M. Paul Cambon is to be found is, for Englishmen at any rate, a sufficient proof that the best that France can produce is given to her colonies, as well as to her neighbours.

In the sphere of legal administration, which presented considerable difficulties in a country whose law was founded on the Koran, the French followed much the same rule that we ourselves found expedient in India. They respected the ideas of the inhabitants, recognising that the methods of the Courts at Paris would undesignedly lead to injustice in alien soil; but they found it necessary to codify the existing law (which was done with the aid of Mohammedan doctors), and justice was therefore secularised. As it is, however, in order to ensure justice being done, decisions of the Court are referred to a cadi for confirmation.

The general question that arises after studying this exhaustive account of a flourishing French colony is this—Does France, whose material success is undoubted, sufficiently populate her possessions? The figures given are instructive, but not perhaps too reassuring. In 1881, when the Protectorate was formed, there were altogether about 19,000 Europeans in Tunis, nearly all Italians or Maltese; only 708 were French. In 1912 the number of French had risen to 46,000, but the Italians and Maltese were 100,000. The latter are in an inferior position, since, largely owing to lack of capital, they have not become landowners, and have, therefore, not the same grip on the country as the French; but mere weight of numbers tells for something. Certainly we should not ourselves feel that the position was satisfactory if in any of our colonies there were two Frenchmen to every Englishman. The problem comes back, of course, to the population question in France. It is far too large to be discussed here, but it has a very direct bearing on the future of the French colonies, and we may be quite certain that the Germans, who three years ago admitted that they coveted French Africa, have studied the figures carefully. France has carved out a large portion of the outer world for herself, and it is to the interest of the rest of the world (except, perhaps, of her only enemy) that she should be able to develop it; certainly we can learn something from her methods, as well as she from us. But to develop her colonies she must emigrate more, and to emigrate more she must grow more men at home.

A. W. T.

THE IRISH AT GALLIPOLI.†

The most forcible of the many impressions conveyed to the reader of this book is that of the almost superhuman difficulties that confronted our men in Gallipoli. That the Irish Division had their full share of these is amply evident throughout the volume, though it may be summed up in Sir Ian Hamilton's remark that they, and others with them, "completely falsified the old German notion that no unit would stand a loss of more than 25 per cent." As a matter of fact, Major Cooper tells us that "the 10th Division lost nearly 75 per cent. of its original strength, and then was hastily filled up with drafts and sent, under-officered and barely rested, to fight a new and arduous campaign single-handed, which it did with credit." Only lately we have heard of notable Irish bravery in Palestine.

But their difficulties are brought more closely home in the descriptions of the actual fighting—the attacks on the Kiretch Tepe Girt, on Hill 60, at Kaba Kuya; the losses in that last engagement among the Connaught Rangers were more severe than anything they ever incurred even in the Peninsular War! And the conditions must have been appalling; they had practically no cover, but at the same time the scrub was so thick and prickly as to break up the lines into little groups and even prevent proper communication between one group and another; and, finally, they were facing an enemy undemoralized and fully prepared with all the devilry of rifle and machine-gun fire, shrapnel and high explosive, so deadly in the case of Hill 60 as to annihilate their attack. And yet, we read, they went on as long as they could stand, and fell still facing the foe.

Major Cooper enhances the value of his story—and incidentally the tragedy (we can see it between the lines) of the whole campaign—by his quiet, matter-of-fact style, his avoidance of exaggeration and "colour," and his adherence to fact. We recommend his book strongly to all who wish to realize, first of all, what Irish fighters can do (if they choose), and, secondly, what tragic loss of lives—and such fine lives!—can be caused by "legitimate gambles" and expert advice withheld.

1918. January	1918. January.		1336. Rabia II.	5678. Shebat.
18	5	Friday	5	5
19	6	Saturday.....	6	6
20	7	Sunday	7	7
21	8	Monday	8	8
22	9	Tuesday	9	9
23	10	Wednesday	10	10
24	11	Thursday	11	11

The Roumanian Minister called at the Foreign Office on January 10.

It is stated that a life of Dr. Elsie Inglis is to be written by Lady Frances Balfour.

Colonel George Ostvitch has been appointed Military Attaché to the Serbian Legation in London.

Eight classes of officers belonging to the reserve of Greek cavalry have been called to the colours.

Among the latest wills is that of Lieutenant-Colonel James Levett Kaye, Indian Staff Corps, who left £17,156.

A Constantinople telegram to the *Kreuz Zeitung* records the death of Halil Pasha, Turkish ex-Minister of Marine.

The birth is announced at Gezira, Cairo, on January 8, of a son to Brigadier-General G. F. Clayton, C.B., C.M.G.

Mrs. Lloyd George has received from H.H. the Maharaja Scindia of Gwalior a gift of £1,000 for the British and Foreign Sailors' Society.

It is announced that the anniversaries of the birthday and accession of the Sultan of Egypt will be kept on March 26 and October 9 respectively each year.

The Lord Mayor is giving a luncheon to-day at the Mansion House to meet members of the Serbian Industrial Mission now visiting this country.

Next Tuesday will be the anniversary of the birthday of Prince Nicholas of Greece. He is the second eldest brother of the ex-King Constantine, and was born at Athens in 1872.

It is believed that the result of the "Our Day" collections organised in India by Lady Chelmsford and the Provisional Committee in aid of the Red Cross will be over £500,000.

More than half the Czechs resident in France enlisted in the French Army at the outbreak of war, and many have been decorated with French and Russian Orders for bravery.

Mr. G. A. W. Booth, of the English Bar in Egypt, has been appointed to the vacant Judgeship of the Mixed Courts of First Instance.

A request by the Greek Government that a deputation from the Red Cross of Geneva should be permitted to visit Greek prisoners in Bulgaria has been refused by the Bulgarian Government.

The Villa delle Pianore, near Pietrasanta, which was the birthplace of the Empress of Austria and the scene of Ferdinand of Bulgaria's first marriage, has been taken over by the Italian Government as a sanatorium for sick and wounded soldiers.

It is reported that on the occasion of the opening of the Black Sea some days ago Turkish sailing vessels went to Heraclea for coal. A German boat named Stambul accompanied them, and on returning laden with coal sank from some unknown cause.

The Budapest newspapers state that a telegram in French, congratulating the King of England, in the name of a Zionist meeting, on the capture of Jerusalem was handed in there addressed to Switzerland for re-dispatch to England. Attempts to discover the sender have failed.

The Times Athens correspondent states that M. Repoulis, Greek Minister of the Interior, having tendered his resignation owing to ill-health, has been appointed Minister without Portfolio. He is succeeded at the Ministry of the Interior by M. Raktivan, who was Minister of Justice in the Venizelos Cabinet of 1915.

The Lord Mayor of London, as President of the Armenian Refugee Fund, suggests that intercession might be made in the churches on behalf of the Armenian and Assyrian peoples in their dire extremity, and appeals for help either through collection in the churches or by direct gift to Lieutenant-Colonel Gregory, hon. treasurer of the fund, 96, Victoria Street, S.W.1.

Colonel Arion, Military Attaché to the Roumanian Legation, was among those present at a Requiem Mass for Count Benckendorff, Russian Ambassador to the Court of St. James's, which was sung at the Russian Church at Welbeck Street on January 11.

The Council of the British Academy has awarded the first Cromer Greek Prize, founded in the British Academy by the late Earl of Cromer, Honorary Fellow of the Academy, to the Rev. Aubrey Gwynn, M.A. (National University of Ireland), of Clongowes Wood College, Salins, for an essay on "The Character of Greek Colonisation."

Among the first batch of gifts contributed as a result of Sir James Barrie's appeal entitled the "Hundred Best Gaps" for the Books, Manuscripts, and Autograph Letters Section of the Red Cross sale at Christie's is a copy of the very rare Madras edition of Fitzgerald's "Omar Khayyam," 1862, which comes from Mrs. Daniel.

General Danglis has been appointed Greek Commander-in-Chief, says Reuter's Athens correspondent, in a message dated January 14. M. Venizelos has assumed the portfolio of War in succession to M. Michalakopoulos, and Colonel Grivas Gardinkiotis has been appointed Under Secretary for War. M. Embirikos, Minister of Food Supplies, has resigned.

A semi-official *communiqué* issued by the Serbian Press Bureau at Corfu declares that the movement of protest against the crimes of the Austrians and Germans is increasing in Socialist circles in neutral countries, especially in Holland, and gives rise to the hope that the Socialists of all countries, including Russia, will soon be united in a movement of general reprobation.

The Lord Mayor has received the following reply to his New Year message on behalf of the City from General Sir Edmund Allenby:—"I and the troops under my command thank the Lord Mayor and the citizens of London for their New Year's greetings, which we cordially reciprocate. We trust that this year may see the final victory of the Allied cause."

The funeral of M. Albert Porral, Russian Consul at Gibraltar, whose death we announced last week, took place at St. Mary Magdalene's Roman Catholic Church, Mortlake, the Bishop of Southwark, Dr. P. E. Amigo, and the Rev. Canon Hogan officiating. The coffin was deposited in the crypt of the church to await removal to Gibraltar on the termination of the war.

General Allenby has issued the following proclamation with regard to the sale of Egyptian vessels:—"Whereas we have reason to believe that Egyptian vessels are being sold for use in foreign waters, no Egyptian vessel in war time shall be sold or transferred to any other country or transferred to a foreign register or leave Egyptian waters without the consent of the Naval Examination Officer at Alexandria."

A special service was held at the Russian Church, in Welbeck Street, on January 14, in celebration of the Russian New Year's Day. The Very Rev. Eugene Smirnoff, assisted by the Rev. Vladimir Theokritoff, the Deacon, officiated. A similar service was held at the Greek Church, Moscow Road. The Great Archimandrite, the Very Rev. Dr. Pagonis, and the Archimandrite, the Rev. Agathangelos Moschovakis, officiated.

According to Reuter's Amsterdam correspondent, a telegram from the Austrian War Press Quarters says that the Montenegrin Minister of War, General Radomir Veshovitch, and his followers, including the former Montenegrin Minister of Justice, Miloslav Rajsevitch, have reported themselves at the Andrijevitza District Headquarters and surrendered their arms. Having surrendered within the period fixed in the Emperor's birthday amnesty decree, they will receive the benefit of that measure.

Reuter's Jassy correspondent states that the Roumanian Parliament reassembled on December 28, when only some members of the Opposition were present. The Address from the Throne, which was read by the King, affirmed the fidelity of the King and the Government to their engagements with the Allies, which had always been observed, a statement which was received with cheers. Another passage, however, asking for a continuance of confidence in the Government, was received with marked dissent. The sitting was adjourned in the absence of a quorum.

Professor Flinders Petrie, lecturing at the Royal Institution on January 15 on Palestine and Mesopotamia, said that one of our first duties in embarking on the management of such a country as Palestine should be the establishment of an organisation to act quickly in preserving everything of historical interest. With regard to Jerusalem, organised research was necessary, and no scope should be afforded the mere treasure hunter. If Jerusalem was to be kept for the future as a jewel of the past, it must never be allowed to develop into a modern commercial town.

On the occasion of the New Year (o.s.) M. Pashitch, the Serbian Premier, sent telegrams to the Premiers of Great Britain, France, and Italy, and the President of the United States, expressing his belief that the New Year would bring to the Allies "the well-deserved reward of their efforts and their sacrifices for the victory of justice, equality, and the liberty of all nations, great and small."

Digitized by Google

On his arrival in Athens M. Venizelos addressed to Mr. Lloyd George a message in reply to the New Year's greetings of the British War Cabinet. In it M. Venizelos says that he fully sympathizes with the sentiments of the War Cabinet on the subject of those who are suffering and laying down their lives in order that future generations may prosper in peace, and adds that he hopes that the present year, in bringing about the victory of the Allies, will put an end to their sacrifices.

The subject of the Royal Geographical Society lecture for young people given by Miss M. Broderick at the Kensington Town Hall on January 11 was "The Old Life in Egypt," The lecturer said that school was compulsory and Egyptian children were rationed, three cakes of bread and two jugs of barley wine being allotted them daily. Everyone was compelled by law to take a dose of medicine once a month, and whilst some of the medical prescriptions were very good, others were not to be commended, especially the beetle boiled in oil. Death was only regarded as an episode in the old Egyptian's life, but he had a strong idea of man's responsibility to God.

The Serbian Press Bureau at Corfu announces that an official reception of the Serbian Mission now at Washington took place in the American Senate on January 6. The President of the Senate welcomed the Mission in a warm speech, and Dr. Vesnitch, head of the Mission, replied, praising America for her efforts to realise the ideal of liberty and justice in humanity. On Christmas Day the Mission, accompanied by the Secretary of State, placed a wreath on Washington's tomb. Mr. Lansing, speaking on this occasion in honour of the memory of the founder of American liberties, compared his work to the work of Karageorge, the Serbian patriot, who delivered Belgrade from the Turks in 1806.

APPOINTMENTS, PROMOTIONS, ETC.

His Highness the Sultan has made the following appointments to the Fourth Class of the Order of the Nile for valuable services rendered in connection with military operations in the field:—El Kaimakam W. McConaghy, M.B., Special Service; El Kaimakam J. H. Pattison Bey, Deputy-Assistant Adjutant-General; El Kaimakam (temporary Miralai) Abd El Megid Bey Ferid, Special Service; El Bimbashi R. N. Dobson.

The following appointments are announced in the *Sudan Times*:—Mr. A. W. Skrine, 2nd Inspector, Dongola Province, has been transferred to Kassala Province. Mr. E. R. J. Hussey, 2nd Inspector, Sennar Province, has been transferred to Red Sea Province. El Bimbashi T. Wilson-Lynch, transferred to the Sudan Government, has been appointed 2nd Inspector, Mongalla Province. Mr. P. Ball, 3rd Inspector, White Nile Province, has been transferred to Dongola Province. Mr. E. G. Coryton, 3rd Inspector, Kordofan Province, has been transferred to Sennar Province. El Bimbashi A. Capel, 2nd Inspector, Nuba Mountains Province, has been appointed Magistrate of the First Class under the Code of Criminal Procedure, temporarily. El Bimbashi A. G. Hewitt, Acting Inspector, Tembura, Bahr El Ghazal Province, has been appointed Magistrate of the First Class under the Code of Criminal Procedure.

OBITUARY.

Colonel Sidney Keyworth Ray, late of the R.A.M.S., who has died in the eighty-second year of his age, served with the Egyptian Expedition in 1882, when he was present at Tel-el-Kebir, receiving the medal with clasp and the bronze star.

Major-General George Rennie Manderson, C.B., Royal Bengal Artillery, died on January 8 at Fullands, Taunton, Somerset, in his eighty-fourth year. He served in Burma, 1852-3, the Mutiny campaign, the Jowaki campaign, and in the Afghan War, 1878-9, for which he received the C.B.

Mr. Arthur Hedding Hildebrand, C.I.E., late Political Officer of the Southern Shan States, died at Puddletown, Dorset, on the 1st inst., aged seventy-four years. Appointed a Deputy Commissioner, Burma, in 1885, he became Superintendent and Political Officer of the Southern Shan States in 1891.

SAFETY OF THE HOLY PLACES.

Reuter's Cairo correspondent states that General Allenby has sent the following message to the King of the Hejac:—"The enemy having been expelled from Jerusalem, the city is now secure. It gives me great pleasure to inform your Majesty that the Holy Shrines are intact, Moslem guards protecting them. The regular custodians have been retained, and are carrying on their duties as in normal times."

The King replied:—"Your honourable and kindly feelings are responsible for the great care and solicitude shown to the Holy Places of history and for the record of great victories by which you have enhanced the glory of Great Britain. Those who uphold truth and justice at all times and in all places have been truly rewarded with success."

THE SCHOOL OF ORIENTAL STUDIES.

It is just a year since the School of Oriental Studies at Finsbury Circus was opened, and it is gratifying to learn from the report now issued by the governing body that the institution, in spite of the exceptional circumstances prevailing, is completely justifying its existence. The number of students increased from seventy-one to ninety-four in the second term, and special classes have been started for Army officers in various languages. The school at present provides teaching in thirty languages. In a considerable proportion of the spoken languages instruction is given by teachers belonging to the countries where the languages in question are spoken. It is hoped that it may shortly be possible to add instruction in Armenian, Melanesian languages, Panjabi, Pashto, Polynesian languages, Siamese, Somali, and Yoruba. Unfortunately the financial position of the school is not as satisfactory as the scholastic side of the undertaking. Of the annual income of £14,000, the minimum sum which is necessary to ensure for the school the standard of efficiency and influence originally contemplated, only £11,500 is at present assured for the next three years, at the end of which time a number of the annual contributions will abate unless they are renewed. Towards the endowment fund of £150,000 less than £20,000 has so far been collected, and the governing body naturally appeal for further donations.

The Viceroy of India has replied as follows to the New Year message of the War Cabinet:—"On behalf of India I thank you for the inspiring message you have conveyed. It is the firm belief, confidently held by the people of India in spite of all passing difficulties, that the triumph of British ideals is vital to India's future. It is that belief which won us India's prompt and eager support in the dark days of 1914, which has ever since bound her to us a loyal partner in our varying fortunes, and which will carry her with us to the end."

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO,
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

THE ONLY ENGLISH HOTELS IN ALEXANDRIA.
Proprietor: AUGUSTUS VAN MILLINGEN.

WINDSOR HOTEL
(Facing the Sea, opposite Y.M.C.A.), ALEXANDRIA.
Full Pension, P.T.50; Room, P.T.20;
Lunch, P.T.15; Dinner, P.T.20.
For long stay, apply to the Manager.

SUMMER PALACE HOTEL,
GLYMENOPOULO, RAMLEH.
This Hotel is situated near the Beach. Open all the Year.
Bathing Cabins.
Terms from: Pension, P.T.60; Lunch, P.T.20;
Dinner, P.T.25.

THE STREAM OF INDIAN POLITICS.

The external aspect of Indian politics resembles that of the great rivers of the country in the magnitude of the seasonal variations. For months together the volume of the languid stream is so reduced that it seems destined to be finally dissipated in the arid sands through which it wanders; then the scene suddenly changes, the sands are submerged, and the river comes down in full spate, only to subside almost as quickly as it rose. Christmas is the flood-season in Indian politics, not from any historical or sentimental associations, but for the prosaic reason that the courts and public offices are closed for the vacation, and lawyers, like actors, choose to spend their holiday in hearing each other talk. The extent of a flood is, however, determined by causes operating at a distance from the scene of the results, and in the same way the manifestations of what counts as public opinion are conditioned by circumstances of which the public is allowed to know as little as possible. The Indian political world, in itself a minute fraction of the country, consists of a small number of very active men, and a much larger number of passive adherents; the former fashion the programme, which the latter endorse with enthusiasm, and the harvest reaped at Christmas is the result of much patient work carried out during the other part of the year. The busy and astute groups who do this work are not altogether irresponsible; they do not attempt to interpret the popular will, a difficult task in the circumstances of the day, but they decide on their own policy, and then offer it for public endorsement, not all at once, but in such instalments as they think their public will stand. The measure of their success is the absence of formal opposition, and when we read that a particular resolution has been passed unanimously by this league or that congress we should interpret the statement merely as showing that the proposition has been put in a form which does not provoke the active hostility of any section sufficiently powerful to raise its voice.

The pronouncements made last month by the political gatherings at Calcutta can be easily comprehended in the light of these preliminary remarks. The most important body is the National Congress, which claims to represent the entire population, but which consists, in fact, almost entirely of members of the upper strata of Hindu society, whose acceptance of Western political theories has not as yet sufficed to modify to any substantial extent their adherence to the principle of religious ascendancy on which that society is constituted. In 1916 this Congress produced a scheme of political reforms, ill-conceived and unworkable from the practical point of view, but possessing the supreme merit of conciliating all important sections; it pressed this scheme for early adoption, but was careful to abstain from indicating any limit of time within which its demands should be met. The promulgation of this scheme indicated that the more advanced politicians had triumphed over the moderate members in committee, but the absence of a time-limit showed with equal clearness that moderate opinion had been taken into account, since many worthy people would agree to a comprehensive change occurring in the indefinite future who would shrink from contemplating its advent on a given day. The Congress of 1917 has gone further than its predecessor, having demanded that a definite date shall be fixed for the complete introduction of responsible self-government, and we must conclude from this advance that the moderate party has lost ground during the year, a result which is certainly to be regretted, but which has been foreshadowed by the occurrences of the autumn. The true significance of this resolution lies, however, in the fact that, whether through accident or design, it commits the Congress to a definite breach with the policy recently declared on the authority of the British Government. In the memorable announcement of last August the Secretary of State made it clear that that Government, along with the Government of India, must be the judge of the time and measure of each forward step, and that it must be guided by the extent to which it is found that confidence can be reposed in the sense of responsibility of the aspirants for power. The most prominent body of aspirants have now countered this declaration with a demand that the period of the advance shall be settled beforehand, so that no scope shall be left for adjustment in the light of experience, and the only conclusion which can be drawn from their action is that the sense of responsibility is still somewhat rudimentary and that the cautious phrases of Mr. Montagu were even more necessary than was apparent at the time when they were used.

The Congress programme has been endorsed in substance by the Moslem League, a body which, as its name implies, claims to represent Indian Moslems, but which has of late years adopted the nationalist standpoint with a fervour by no means welcomed by all the adherents of Islam. In 1916 the endorsement was made practically without reservations; this year it has been accompanied with some provisoes, marking a distinct reversion towards that exclusive or sectarian ideal which was the common ground of the Moslems of the last generation. The use of the Persian, or, strictly speaking, the Arabic, alphabet is to be safeguarded, and guarantees are to be given for the continued freedom of Moslem worship, though the Persian alphabet is nearly as distasteful to enthusiasts for Hindu culture as is the sacrifice of cows to the overwhelming mass of orthodox Hindu opinion. The significance of these reservations is simply that the deplorable disturbances which occurred last autumn, and the popular manifestations to which they gave rise, convinced the managers of the Moslem League that they had gone too far in the direction of nationalism, and that a bid had to be made to secure the support of the community they claimed to represent. While, therefore, the Hindu leaders found it possible to make a substantial advance, the Moslems were forced to draw back, and to insist on some of those obstacles to national unity which they would have preferred to keep out of sight. Whether the object of the Moslem leaders has been attained is still doubtful; as we recorded last week, a rival organisation has now been formed under distinguished auspices, with the definite object of opposing the nationalist policy of Home Rule, and while it is too early to forecast the result of this development we must recognise the possibility that a period of further controversy is at hand, and that the existing cleavage of Moslem opinion may be made manifest to the public by the activities of the competing organisations. In any case, we may assume with some confidence that the lessons of these events will be realised by Mr. Montagu, who has been busily engaged in hearing the views of all parties in India, and is discussing them with some of the ablest men now in the service of the country. The surface-unity of Indian politicians might have deceived a statesman trammelled by the traditions and the outlook of Whitehall; it could in any case scarcely have survived critical examination on the spot. But the politicians themselves have given an apt demonstration of its weakness and its limitations, while from all parts of India we hear of expressions of opinion from prominent men and important classes, who have hitherto taken no part in politics, but who now realise that the exigencies of the situation require them to make their voices heard. With these materials at his disposal, Mr. Montagu can hardly fail to arrive at a correct diagnosis of the case before him, and that is at least the first step towards the accomplishment of the momentous task which he has been called upon to undertake.

POLAND AND THE NEAR EAST.

The problem of Poland, important though it is in the reconstruction of Europe, may seem at first sight to have but a very slight bearing on the tangled maze of Balkan politics. It is true that in the days of Poland's greatness she had a definite Balkan policy and direct connections with the Near East; but history does not necessarily repeat itself. And since the natural outlet of Polish commerce has been fixed for all time by the course of the Vistula, it follows that her main interests must be directed north and not south, to the Baltic rather than the Balkans. Policy in this matter follows economic interest, and Dantzig is more important to Poland than Constantinople.

The direct connection between the future of Poland and the settlement of the Eastern question is, therefore, slight; its indirect connection, however, has become clear and definite since the Russian Revolution. So long as Russia was a Great Power it was almost impossible that German-Austrian policy should completely dominate the Balkans. Even when the doctrine of "no annexations and no indemnities" was formulated, and Petrograd solemnly renounced the ambition for Constantinople, it was still certain that Russia could not become entirely indifferent to Balkan affairs. Even if one put aside racial, religious, and political sympathies or antipathies, it was clear that so long as Russia exported grain and timber from her southern provinces she must concern herself with the politics of the Black Sea, and since the only outlet from the Black Sea is through the Dardanelles, she must in the long run again concern herself with the question of Constantinople. The reasoning was theoretically sound, but practically fallacious, since it presumed that Russia, whatever her internal changes, would still remain a Great Power, as France did during her revolution and England after her civil wars.

The presumption was wrong; Russia has destroyed herself. Siberia has proclaimed its independence, and cut Russia off from the Pacific. Finland has followed suit, and one of the main windows into the Baltic is shut—the other at Riga is lost. The Ukraine has revolted, and Russia has lost her chief outlet into the Black Sea. It has taken centuries to gain access to the sea; a few weeks has destroyed the careful work of generations, and Russia is now almost as remote from the sea as Ecuador or Switzerland. There is no instance in history of a Great Power existing without access to the sea, and Russia will find out that she has gained political freedom (which she is already in a fair way to lose) at the cost of economic slavery. The exchange was hardly worth while, but she will discover her blunder too late.

The loss of the Ukraine cuts Russia off from the Black Sea and from Balkan politics, and consequently strengthens the already strong position of Germany and Austria in the south-east of Europe. If the Ukraine adopted a pro-German policy, their position would seem almost impregnable; but, although the leaders of the Kieff school seem to have accepted aid from Vienna, and perhaps Berlin, in pre-war days, to spite the centralising policy of Petrograd, they seem less inclined to do so now that Petrograd has abandoned government for words and drink. It is quite on the cards that the Ukraine may establish itself as one of the secondary States of Europe.

By itself it would hardly be able to resist German influence; it would be in much the same position as Roumania before the war, which was mainly developed by German capital at the price of a large amount of German control. That is on the assumption, now freely accepted in Berlin, of Germany making a "generous peace" with the Allies in the west (*e.g.*, resigning the occupied districts and the German colonies), and winning the war outright in the East. On that assumption Germany might even be ready to abandon Turkey, to recognise that the British occupation of Palestine foiled her aim in Egypt, and that the British success in Mesopotamia had cut her off from India and rendered the Baghdad Railway of little value. These things Germany could resign—for the present—if she obtained absolute control of the Balkans, and full freedom to exploit Russia and the Siberian Railway. That Russia only needs organisation to develop her wealth is a commonplace of every German traveller; that Siberia is an undeveloped Canada has long been recognised in Berlin. To exchange control of the Turkish Empire for control of what was once the Russian Empire would not be by any means a bad bargain. The Turkish Empire means the Baghdad Railway, and that means the road to India. But the Russian Empire means the Siberian Railway, and that means the road to China, as well as another way into India.

What stands between Germany and this ambitious prospect? In the first place, the determination of the Allies to win. But Berlin knows as well as London and Paris that the most signal victory of the Allies might be unable to restore unity or power to Russia. It would need a miracle to restore Russia, and we cannot work miracles. It needs no miracle, nothing but a little gold and a little intrigue, for Germany to keep Russia impotent. That is precisely the difference between us, and Germany is fully cognisant of her advantage.

There remains Poland. The national revival of Europe, which restored Italy, Greece, and Germany to the map in the middle of last century, also gave back independence to some—not all—of the Balkan peoples. But there it stopped short, it left Poland out, and we are suffering for that omission to-day. The restoration of Poland is not only a necessity of constructive liberalism—it has been that for more than a century—but it is a necessity of European equilibrium. Germany on her side recognises the existence of a Polish problem; she knows that things cannot stay as they were after the war. But she wants a "good" Poland—that is to say, a Poland that will take its orders from Berlin. She is willing, apparently, to concede a good deal of the apparatus of freedom, a constitution, a king, a ministry, and all the non-essentials, so long as she can keep the one essential, the final control. Poland, in a word, can have as many lights in the drawing-room as she wishes—they do not cost much, and they look well—so long as Germany has the control of the meter in the basement, and can turn the current off when it suits her purpose.

That kind of sham will neither solve the Polish problem nor restore equilibrium to Europe. It would leave Germany in control not only of Russia and the Balkans, but also of Poland itself; and the Poles, who might be driven to accept it, would know in their hearts that they had been fooled by fate. But the free Poland to whose establishment the Allies are committed would not only restore one of the greatest and most gifted of European peoples to its proper position, which in itself would be an invaluable asset to the new world; it would restore the equilibrium of the continent, and in time become the guardian of freedom and civilisation in the East, as France is in the West. And in that respect its influence in the Near East and in Russia itself would be incalculable.

THE PRESS ON THE NEAR EAST

The Serbian Soldier.

Miss Flora Sandes, who holds non-commissioned rank in the Serbian Army, in appealing in the *Morning Post* for the Hon. Mrs. Haverfield's fund for providing comforts for Serbian soldiers and prisoners (22, Old Burlington Street, W.), draws a pathetic picture of life at the Macedonian front for the Serbian soldier:—

On these bare peaks the cold is now intense, and in our shallow, rocky, wind-swept trenches the men are standing knee-deep in snow, and even when they come out of them for a short rest after fifteen days and nights of it they are not much better off, for there is no wood in the country, and sleeping in their stone dug-outs, huddled together for heat—no Serbian soldier carries a blanket—they have no means of warming themselves and no camp fires to sit round.

One naturally pictures such an army, consisting of men who have fought through two wars before the present one was even thought of, men who, almost without exception, bear the scars of three or four wounds, sometimes more, and who have managed, somehow, more or less to outlive the effects of the retreat through Albania, as being at least warmly clothed and fed, and being in receipt of everything that can possibly be given them to alleviate their unavoidable sufferings, in order that a few at least may be saved to go back into Serbia. But no; on the contrary, these men are fighting for the Allies with less shelter than any other army, less rations—such things as sugar, milk, butter, rum are unheard of luxuries—and *no warm clothes*. There is not a single man who has a pair of socks, and hardly any who have more than one shirt—and that a cotton one. I do not know, and do not care, whose fault it is; the facts are there, and it is for us to remedy them.

These men in the trenches would give me anything they had. Our most prized ration—our one and only "luxury"—is a small mug of much-watered wine twice a week! More than once, having drunk mine at midday, I have been handed another mugful at supper by my orderly, and all objections waved aside with "Never mind where it came from; just drink it—you need it more than I do." It was his own ration.

To rescue me when I was wounded and unable to move some of my men risked their lives, and more than their lives (for no one knows better than they do what it means for a Serbian soldier to fall into the hands of the Bulgarians alive); yet they refused pointblank to save themselves unless they could carry me with them.

The Value of the Near East.

It is well not to lose sight of the value of the British successes in the East. From the very beginning of the war there has been a tendency in "high quarters" to suppose that, because the West must be the final battlefield, practically nothing of military importance was to be accomplished in the Near East. Perhaps, if the victories of the late Sir Stanley Maude and General Allenby could be seen in the light in which they strike our enemies, particularly the Turks and Bulgarians, Allied diplomacy might set to work in that part of the world with more confidence and with more chance of success. In an article in the *New Age*, Mr. J. M. Kennedy lays stress on the value of what has been achieved in the Near East.

In every scheme of "world-power or downfall" drafted by German statesmen, politicians, journalists, and political propagandists generally, he writes, the Baghdad Railway became necessarily a paramount factor. Whatever divergences on points of details existed among the Pan-German factions, it is evident that the North Sea Persian Gulf proposal was common to them all.

. . . . Only a few far-sighted and long-headed statesmen saw in it the solution of several more recondite problems—the splitting asunder of the British Empire and the eventual acquirement of Egypt; the assurance (by the exploitation of Asia Minor) of supplies of food and of raw material transportable to Germany by land; and, above all, free access to the open sea unfettered by rival navies. . . . The Persian Gulf scheme cut in two not only Europe and Asia, but also the sea.

For this reason the possession of Baghdad was essential to the German scheme, not as a valuable industrial centre, but as a useful military base. The possibilities of industrial development were not, indeed, forgotten—far from it. . . . But Baghdad, though an essential objective, was not the only objective aimed at. The concessions obtained by the German Government through the Deutsche Bank included not only the nucleus of the Anatolian Railway Company (the short line from Haidar Pasha to Ismidt) and the extension of the railway from Konia to the Gulf (the Baghdad Railway properly so called starts from Konia), but various branches forming a complete network—those, for instance, to Aleppo and Urfa; from the city of Baghdad to the Persian frontier town of Khanikin; the short line to Aintab (with possibilities of industrial exploitation in view); from El Bagj to Hit. Other lines—work on some of which was begun at early stages of the war—were to connect Adana with Mersina (this line is now working), and with Sivas through Ulukishla; and further sections were to join this branch to Angora, and Diarbekr to Ras-el-Ain. But the trump card was to be a railway from some useful strategic base on the coast (probably Haifa, which is already linked to the Hejaz Railways) to a point near the Egyptian frontier.

After discussing the reasons of Germany's failure to give adequate help to the Turks, the writer continues:—

The British victories in Mesopotamia and in Asia Minor are thus, for two reasons, of much greater importance than has yet been attached to them, except by Mr. Lloyd George in his address to the House of Commons just before the recess. In the first place, the grandiose North Sea to Baghdad scheme, with its ulterior design on Egypt, is shattered; and, in the second place, a large proportion of the territories which the Germans looked upon as exploitable is now lost to them.

It is customary to urge, as only too many of our less-informed organs do, that the German conquests in Western Europe (apart from their conquests in Western Russia) are of infinitely greater value, economically and sentimentally, than the Allied conquests of the German Colonies. This is true only up to a point. The economic and sentimental value attached by the Germans to their Colonies may be witnessed from their obvious anxiety, displayed over the last two years, to get them back. But there is no denying that in Palestine and Mesopotamia we occupy territories of greater political value than the enemy do (while their economic value is considerable); for our possession of them frustrates for ever the execution of the plan for the sake of which the German Government went to war.

India and Great Britain.

The social evolution of India is the subject of an article by Mr. T. Davis in the *Asiatic Review*. After pointing out that India needs the British Empire, no less than the latter needs India, and citing instances of what the British have done for the country, the writer turns to the bonds of empire:—

It has been said that the bond which unites England and India is political.

As this idea is so very prevalent in India, and consequently the cause of much unrest, it would be well to state that the relationship between the two countries is something stronger than mere politics. There is a stronger link that binds the destiny of the two together: perhaps indefinable, certainly non-political.

It is evidenced by the mutual goodwill and co-operation existing between us in working out the salvation of millions of our fellow-subjects. If the political power of Great Britain were withdrawn from India to-morrow there would still remain a unity of ideals, a common commercial life, great industrial partnerships, many unrealised as yet, philanthropic projects, and a progressive civilisation to be handed on enriched and ennobled to the next generation. Owing to British rule, India has ceased to be an isolated Empire: it is an integral part of the greatest Empire the world has ever known. It would be a retrograde movement for India to be divorced from or deprived of the fuller Imperial life of which she is so glorious a partner.

India is in a period of transition. Behind there is a very old civilisation, which had taken hold of the social life of the people; and now it is being influenced by a new civilisation of such magnitude that it has sapped the very foundation of its national life.

There is unrest; but there is also a strong patriotism, which, if guided aright, will find its ideal in assimilating the best characteristics of the old and the new.

Patriotism is not solely concerned with politics, for, after all, the political life of a nation is but a reflex of its moral life.

If the heart of a people is elevated and enlarged it is certain to lead to noble deeds in the realm of politics.

India has had a succession of great men who have endeavoured to elevate the tone of their age by working out moral and social ideals. They were patriots; they were also politicians. If East and West co-operate on the right lines in producing the highest form of civilisation we shall find its growth and development dependent upon political efficiency, social reform, and moral integrity.

CORRESPONDENCE.

A LEAGUE OF NATIONS.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—In your issue of January 4, p. 2, you speak of me as having put forward a scheme for a "European federation." That was not exactly what I suggested, though, writing as I did in 1914, when America was not thought of as likely to enter the war, I naturally had a European combination in mind. But my idea would have been more fitly described as that of a "League of Nations" than that of a federation of Europe. "The great hope of the future," I wrote in my war pamphlet entitled "Through German Eyes" (1914), "lies in the recognition of the great truth that the relations which subsist between the individual citizen and his state ought to be reproduced in the family of nations. Each nation must learn to regard itself as a member of a great community, *and be prepared to strike, if necessary, in defence of the common good.*" This sentiment I embodied in some verses which I wrote for the occasion. I think you will agree with me that this idea does not involve any millenial conception of the immediate perfectibility of the human species, nor the establishment of an "international police"—an idea which I have always regarded as impracticable for various reasons. But it does involve the conception that international relations may be moralized in the same sort of way and by essentially the same sanctions as the relations of individuals within a state are moralized. Not that I regard the international problem as an easy one to solve; I have explicitly said the contrary on p. 18 of my pamphlet. There is therefore no danger, in my humble opinion, that a League of Nations will have nothing to do. The less it has to do, the better I should be pleased. But I fear its hands will be full of work. It can never guarantee the abolition of war; but it may, by wise use of its strength, reduce the scope of war in the future. The federation of the British Commonwealth alone would have gone far to produce that result.

On the other hand, I agree with you in thinking that the more responsibilities a League of Nations undertakes (as, for example, the administration of non-European territories), the more difficult will its task become. And I am earnestly desirous of seeing it a great fact and a great success.—I am, etc.,

E. A. SONNENSCHEIN.

EGYPTIAN PRISONS.

TO THE EDITOR OF "THE NEAR EAST."

SIR,—The articles you have recently published in THE NEAR EAST written by Coles Pasha on the Prisons of Egypt recall to my memory an incident which may be worthy of notice in your next issue.

During my wanderings there are two occasions which stand out in my memory above all others when I have been proud of the work of my countrymen.

The first was in India, where, in touring the country, I realised the wonderful work of the Indian Civil Service, where practically a handful of Englishmen control millions of inhabitants. It strikes the traveller with amazement and pride.

The other occasion was at Damascus in 1912. I had been in Cairo, and whilst there visited an exhibition then being held. The native industries of Egypt and the Sudan were well represented at that exhibition; so also various Government departments, such as agriculture, education, and the prisons. This latter was represented by a very varied display of iron castings and workings, also by cabinet and chairmaking, saddlery and leather work. The goods produced by the prisoners were on sale, and I remember a cane chair to which was attached a label, indicating the purchaser to be the late Lord Kitchener.

From Egypt I journeyed to Syria, and in due course found myself in Damascus. Visiting the Military Governor, who was known to my brother—who accompanied me—we asked to be allowed to visit the city prisons. An orderly being provided, we were escorted to the citadel, and from an open prison square faced a low mud building, perhaps 30 ft. high. We viewed the prisoners, who were behind iron-barred window openings. The building all round was two-storied, and through the window openings we were able to see the prisoners in the rooms on the ground floor, quite a large number crowded together, squatting on their bedding, smoking. A woman visitor was interviewing one of the prisoners, and handed in through the window certain bedding and pillows. We were given to understand that these prisoners had nothing to do to occupy their time; those condemned to death and others in solitary confinement occupy other sections of the same building, all communications being from the open square, and through very narrow openings in the outer walls, the convicts were to be seen eking out their miserable existence. Later, when we saw the Governor, we were able to give him an account of all we had seen at the Cairo Exhibition, and I recall how impressed he was when we told him how, under British administration, the inmates of prisons were taught trades as a means of livelihood when released, in contrast to the primitive methods meted out to a similar class in a neighbouring State under Turkish rule.

I am, etc.,

G. P. BAKER.

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

Exchange of Prisoners with Turkey. January 14.

Mr. J. F. HOPE stated, in reply to Mr. HUME WILLIAMS, that the agreement recently arrived at at Berne between the British and Turkish representatives with reference to the exchange of prisoners of war had not yet been ratified, and it was, therefore, not advisable to give complete details at present. Generally the terms were more satisfactory than was expected. Arrangements had been arrived at for exchange on a substantial scale, inspection of camps, and improvement in the general treatment of prisoners. It was hoped that the agreement would be carried out without delay as soon as it was ratified.

Holy Places in Palestine. January 15.

Mr. KING asked the Secretary of State for Foreign Affairs whether, in consideration for the sentiments of Moslem subjects of the British Empire, it would be provided, under the new régime established or to be established in Palestine, that unrestricted Moslem control was secured of such holy places as the Haram esh-Sherif at Jerusalem and the sanctuary over the cave of Machpelah at Hebron, being places regarded as part of the birthright of the Mohammedan world.

Mr. BALFOUR said:—In reply to the hon. member's question, I will read out three extracts from the telegram of General Sir E. Allenby, which was read in this House on December 12 by the Prime Minister in answer to a question. Extract 1:—"The Mosque of Omar and the area round it have been placed under Moslem control, and a military cordon, composed of Indian Mahommedan officers and soldiers, has been established round the Mosque. Orders have been issued that no non-Moslem is to pass the cordon without permission of the Military Governor and the Moslem in charge of the Mosque." Extract 2:—"The Tomb at Hebron has been placed under exclusive Moslem control." Extract 3:—"The hereditary custodians of the Wakf at the gates of the Holy Sepulchre have been requested to take up their accustomed duties in remembrance of the magnanimous act of the Khalif Omar, who protected that Church." Further, I would remind the hon. member that the following passage occurs in the proclamation which General Sir E. Allenby caused to be published in Jerusalem, and which was also read out in the House by the Prime Minister:—"I make known to you that every sacred building, monument, holy spot, shrine, traditional site, endowment, pious bequest, or customary place of prayer, of whatsoever form of the three religions, will be maintained and protected according to the existing customs and beliefs of those to whose faiths they are sacred."

Sir J. D. REES: Is there any reason to suppose that Mahommedans attribute to the British Government any disregard of their feelings, such as is suggested in this question?

Mr. BLISS: Have they expressed gratitude for the respect we have shown for their sacred monuments?

Mr. BALFOUR: Many Mahommedans have expressed gratitude.

The Dardanelles Report.

The CHANCELLOR of the EXCHEQUER, in reply to a question by Mr. PRINGLE as to the publication of the final report of the Dardanelles Commission, said:—The War Cabinet, after the most careful consideration, and acting on the advice of the General Staffs, military and naval, have decided that it is not in the public interest that this report should be published for the present.

Mr. PRINGLE: Is the right hon. gentleman not aware that this report must be published in accordance with the express terms of the Act of Parliament? Is it proposed to amend the Act of Parliament?

The CHANCELLOR of the EXCHEQUER: No, we do not propose to amend the Act of Parliament. The Act says the report shall be published as soon as may be, but the Government must have the responsibility of deciding whether or not such publication would give information to the enemy. We have decided that it would.

Sir TUDOR WALTERS: Is it the case that while the motto of the late Government was "Wait and see," the motto of the present Government is "Wait and not see"?

Mr. PRINGLE: Was this decision arrived at solely on strategic considerations and in the public interest, or was it in deference to the possible effect of publication on the fortunes of certain members of the War Cabinet and certain members of the Naval Staff?

The CHANCELLOR of the EXCHEQUER: That is a perfectly legitimate question if the hon. member thinks that any consideration of the kind influenced us. It has not influenced us in the least. We have taken our decision in consequence of written statements by the Naval and Military Staffs that in their opinion the publication of this report now would give invaluable information to the enemy.

SERBIA'S MARTYRDOM.

On January 7 (the Serbian Christmas Day) the Vila Serbo-Croat-Slovene Society of Students, Geneva, issued an appeal to the universities of the world, from which the following are some short extracts:—

We, a mere handful of Serbian students, compelled to witness the annihilation of our race, make our appeal to the sense of justice of the civilised world, for it is unthinkable that in the face of all humanity this terrible work should be allowed to be completed until not even the *débris* of the Serbian nation is left to greet the day of peace and the triumph of justice.

Deportations by the Austrians began with the first moment of retreat. Immediately the Serbian boys were deported in groups and set to forced labour in Germany and Galicia. These deportations were carried out without distinction of sex, age, or social position. Those who were incapable of forced labour were interned in the concentration camps of Heinrichgrün (15,000), Aschach, and other places. And more than 2,500 children of tender age were carried away from Serbia and distributed in different centres of concentration. Thousands of Serbian boys were sent to Asia Minor, and thousands of young girls were despatched to Constantinople for the Turkish harems.

The Bulgarians, worthy pupils of the methods of *Realpolitik*, at once began a systematic deportation of the Serbian population in the Southern and Eastern districts. In Southern Serbia and in the Macedonian districts the deportations were absolute and complete. A large part of the Serbian population in these districts was deported into Bulgaria in order that all traces of Serbian nationality might be blotted out from the towns and villages of Macedonia. The property of the deported was made over to the Mussulmans. The Bulgarians carried away not merely individuals, but entire families. Eastern Serbia suffered no less than Southern; from the Morava region the Bulgarians deported all educated persons—doctors, teachers, priests, and deputies—all those who might offer any obstacle to the Bulgarisation of their localities. It is a fact that in Serbia there is no longer a single Serbian priest, schoolmaster, or doctor.

The Austrians have pursued a persistent policy of denationalisation. Under any pretext priests are deported so that Divine services, according to Orthodox rights, can no longer be celebrated, although they may be authorised in principle. The Julian Calendar, which our people consider is part and parcel of their religion, is annulled; the use of the Cyrillic alphabet is rigorously forbidden. The Serbian popular songs celebrating the age-long struggle of the Serbians against the Turks, as well as the works of all our principal poets, have been equally interdicted.

All the Serbian schools were closed. Those reopened included only an elementary school, with one secondary school, for the whole of Serbia. In these schools the Serbian children were allowed not one single Serbian teacher. *In this unhappy country instruction is given to the Serbian children by reserve Austro-Hungarian officers.* The Ethnographical and National Museums have been plundered and sent to Vienna. All the treasures of Belgrade University, as well as the National Museum in Belgrade, have been destroyed, and there remains only the *débris*.

The Bulgarians have completely suppressed the Serbian Church. All Serbian judicial archives, books, and MS. have been either burnt or removed to Sofia for the manufacture of paper. From Bulgarian newspapers we learn that more than 140,000 volumes have been transferred from Serbia to Sofia.

Like the Austrians, the Bulgarians have also closed all our schools in the territory occupied by them and replaced them by Bulgarian schools, in which the Serbian language is prohibited. The Bulgarians have furiously attacked all the Serbian historical monuments, especially those relating to the glorious past, to the Middle Ages, such as Serbian monastries of Manassya and Ravanitsa, which had been respected even by the Turks. The Bulgarians have destroyed all inscriptions and paintings, works of art from the Middle Ages, in order to efface every trace of Serbian nationality. With small-minded jealousy and malice, the Bulgarians would proclaim everything of national superiority to be Bulgarian. And the characteristic surname termination "itch" has been everywhere changed into "off." The Bulgarians have also abolished all postal communication between the Serbians in their régime and their kindred abroad. Even postal orders addressed to Serbian sufferers, however piteous their need, are not delivered to the addressees.

We come now to the most odious cruelty of all, before which Attila himself might stop in surprise—viz., the forced recruiting by the Bulgarians in the invaded districts of Serbia. Austria-Hungary has spared us the horror of seeing on the Salonika front son fighting against father and father against son, but the Bulgarians have not hesitated in their endeavours to bring this about. With a barbarity unheard of in history, they have invented methods of recruiting most likely to set father against son and brother against brother, and are shooting as rebels all those who refused to go into the ranks of the Bulgarian army.

Bulgaria has trodden under foot Article 23 of the Hague Convention.

But all these iniquities relate only to matter; the Serbian soul our enemies will never destroy!

JUGOSLAV DECLARATION.

The following declaration has been issued by the Jugoslav Committee in London with reference to Mr. Lloyd George's and President Wilson's speech on war aims. It is signed by Dr. Ante Trumbitch, President of the Committee:—

"We feel bound to express our appreciation of the speeches of the British Prime Minister and the President of the United States, as revealing a sincere desire for a just and lasting peace in accordance with the principle that territorial rearrangements must be based upon government with the consent of the governed. Yet we must declare that the Jugoslav people (Serbs, Croats, and Slovenes) cannot be satisfied with those parts of the speeches which refer to them. The causes of the discontent of the subject peoples of Austria-Hungary, whose plight (as the British Prime Minister rightly points out) has long been a danger to the general peace, cannot be removed by the hope of an altogether problematical democratisation of Austria-Hungary on the basis of autonomy alone. There is but one way to remove this danger to peace—completely to liberate the subject nationalities by giving them the right (which Mr. Lloyd George accords even to the native tribes of the German colonies) to have a voice in determining their own future. The principle of government by the consent of the governed in regard to the Jugoslav people was irrevocably sanctioned in the declaration of Corfu of July 20, 1917, signed by the Government of the Kingdom of Serbia, and by the Jugoslav Committee as the authorised representative of the 8,000,000 Southern Slavs of Austria-Hungary and of the Southern Slav Colonies in both Americas and in the British Dominions. This declaration, which constitutes a national programme approved of by our whole people, demands complete separation from Austria-Hungary and union with Serbia and Montenegro in one State on the basis of democratic freedom and equal rights for all citizens. For this idea our whole people is fighting. For it Serbia and Montenegro have suffered terrible disaster. For it the Southern Slav divisions, formed of volunteers from Austria-Hungary, shed their blood on the side of the Allies in the Dobruja. For it, with equal self-sacrifice, our volunteers of the Southern Slav division on the Salonika front are dying. For this idea tens of thousands of our men and women, subjects of Austria-Hungary, have perished on Austrian gallows and in Austrian prisons, mostly without any form of trial. None but a people fighting for complete freedom and unity can endure such wrong. Persuaded that the very force of things and the inexorable requirements of lasting peace will carry their idea to triumph, our people will never forsake it."

MESOPOTAMIA COMFORTS FUND.

(For British Troops.)

PATRON.
MAJOR H.R.H. PRINCE ARTHUR OF CONNAUGHT, K.G.

PRESIDENT
COLONEL the VISCOUNT GOSCHEN.

CHAIRMAN.
COLONEL the LORD LAMINGTON.

VICE-CHAIRMAN.
The MARQUIS of SLIGO.

COMMITTEE.

Countess of Donoughmore, Viscountess Midleton, Lady Evelyn Farquhar, Hon. Lady Monro, Hon. Mrs. Frederick Guest, Lady Maude, Lady Marshall, Mrs. Austen Chamberlain, Mrs. Holdsworth, Miss Stella Maude, Earl of Desart, P.C., K.C.B., Rt. Hon. Lord Mayor of London, Sir Hugh Barnes, K.C.S.I., Sir Edward Hope, K.C.B. (Hon. Treas.), Sir Leslie Porter, K.C.S.I., Sir Charles C. McLeod, Mr. M. P. Grace, Mr. Percy C. Simmons, L.C.C.

HON. SECRETARIES.
Mrs. HAMILTON GRACE. Miss MEIGGS.

BANKERS.
Messrs. COUTTS and CO.

HON. AUDITORS.
Messrs. PRICE, WATERHOUSE and CO.

OBJECTS OF THE FUND.—"To provide urgently needed comforts and other benefits for British Soldiers and Sailors who are fighting, or who have fought, in Mesopotamia."

Donations up to October 20, 1917, are included in the Committee's Report issued December 8, 1917.

SUBSEQUENT DONATIONS up to JANUARY 10, 1918.

Major H.R.H. Prince Arthur of Connaught, K.G., etc., £25.
£500 each.—M. P. Grace, Mrs. Holdsworth, Lady Strathcona.
£250.—P. and O. and British India Cos.
£100 each.—Associated Telegraph Cos. of Electra House; Cuthbert Heath, Hull, Blyth, and Co., Mercers' Co., W. Morrison.
£75.—Jhanzie Tea Association, Ltd.
£52 10s. each.—Chartered Bank of India, Australia, and China, Imperial Bank of Persia, Imperial Ottoman Bank, Union Castle Mail Steamship Co., Ltd.
£50 each.—Sir A. H. Brown, Bart., J. F. Campbell, Miss E. C. Druce, Earl of Durham, K.G., Col. R. W. W. Follett, Frank Fremlin, Jokai (Assam) Tea Co., Ltd., Alex. Laurie, Robert T. Morris, Overseas Club, Shanghai, Lt.-Col. G. I. F. Smyth, South Indian Railway Co., Ltd., Mrs. Harrington Taylor.
£45.—Mrs. Young.
£25 each.—Bank of Australasia, Sir Robert Buchanan-Jardine, Bart., Mrs. Cunliffe-Smith, Delta Metal Co., Ltd., Glasgow Corporation Tramways War Comforts Tickets, Lloyds Bank, Ltd., Singapore St. Andrew Society, F. C. Stoop, Wolseley Motors, Ltd.
£21 each.—Coutts and Co., Lord Glenconner, H. J. S., Sir Robert Usher, Bart.

Digitized by Google

£20 each.—Albert Brassey, F. V. Evans, Fairfield Shipbuilding and Engineering Co., Ltd., Sir Heath Harrison, Bart., Harrow War Help Movement, Mrs. V. Milward, Mrs. Eyres Monsell, E. Vaughan Morgan, Pandeli Ralli, Miss Reckitt, C. J. Sharpe, William C. Teacher.

£15 15s.—Mrs. Anderson.

£12.—Mrs. S. E. Simmons, Miss Nuttall and G. H. H. Simmons.

£10 10s. each.—R. W. Anderson, Capt. R. C. Bacon, Bonnybridge Silica and Fireclay Co., Ltd., William Campbell, Dick, Kerr, and Co., Ltd., George B. Dodwell, Mrs. Edward Douty, English, Scottish, and Australian Bank, Ltd., H. Gardner, J. B. Gray, Ernest Gripper, Sir Edward S. Hope, K.C.B., Andrew Jameson, Sir Charles and Lady Jessel, Marconi's Wireless Telegraph Co., Ltd., Wilfrid A. Matthews, Ofenheim and Co., Price and Pierce, Ltd., Lady Shelley, Joseph Travers and Sons, Ltd., Volkart Bros., J. Cathcart White, Kenneth Wilson.

£10 each.—Finlay B. Anderson, Bukit Rajah Rubber Co., Ltd., Viscount Churchill, G.C.V.O., Mrs. Clemson, Mr. and Mrs. R. Corry, Cox, McEuen, and Co., Mrs. A. Douglas-Hamilton, Miss M. E. Druce, E. M. N., Surg.-Major T. B. Farncombe, Earl Fortescue, Lt. R. A. C. Harding, Richard Haworth and Co., Ltd., War Collections Committee, Inspection Depart., Woolwich, Office Staff War Relief Fund, Jetinga Valley Tea Co., Ltd., Mrs. Johnson, Major-Gen. Sir Ronald and Lady Lane, Charles Lethbridge, Mrs. A. C. Lewin, John W. McConnell, J. McGowan, Col. R. C. Maclagan, Marshall, Sons, and Co., Ltd., George Mathieson, Sir Walter and Lady Phillimore, Capt. S. C. Plant, Col. G. Pleydell-Bouverie, Sir Marshall Reid, Mrs. C. A. Reiss, G. W. Ricketts, Mrs. Roper, W. H. St. Quintin, Miss E. G. R. Scott, J. C. Shorrock, Marquess of Sligo, Lt.-Gen. Hon. Sir Frederick Stopford, K.C.M.G., etc., R. A. Turnbull, J. K. Waddilove, Joseph Ward, E. H. Warner, John Wilkie, Sir William Wilson-Todd, Bart., Adam Brown.

£6 8s. 2d.—Mrs. Astley Rotherham (proceeds of concert).

£5 5s. each.—A. C. Allen, Anon., L. T. Boustead, Mrs. Bowden, Ceylon Tea Plantation Co., Ltd., George Croll, Mr. and Mrs. C. I. de Rougemont, J. C. Geiselbrecht, R. Levett, Rt. Hon. Lord Mayor of London, Walter McDermott, William P. Metcalfe, Sir Leslie Porter, K.C.S.I., Mrs. Arthur Scratton, Strathmann and Joachim, Travancore Tea Estates Co., Ltd., Mrs. W. Marshall Webb.

£5 each.—Allan, Whyte and Co., G. H. Alston, Godfrey E. P. Arkwright, Miss M. Arkwright, Lt.-Col. E. A. Ball, H. W. Beauford, P. V. M. Benecke, Miss M. E. Bethune, George Blezard, Arthur Boosey, Major Thomas Bott, J. R. Bristow, George F. Brown, Rev. Canon and Mrs. Burrows, Abel Chapman, Mrs. Crossley, Dejoo Tea Co., Ltd., Delbanco and Co., Ltd., Major T. H. Denman, Earl of Desart, P.C., K.C.B., Lord Digby, Mrs. Dobson, Robert A. Druce, Lady Fleetwood Edwards, Lt.-Col. J. C. Fullerton, P. Gaisford, Mrs. H. Graystone, the Misses Greg, Mrs. Seymour Grenfell, Alexander Guthrie, Mrs. Harvey, Mr. and Mrs. Hugh Hoare, H. J. Hoare, "In Memoriam, E. S. M.," Albert Jones, Col. Hon. C. Lambton, Miss Ellinor Lethbridge, Mrs. MacAlister, McCrum, Watson, and Mercer, Ltd., Miss Maitland, Mrs. Stewart Margetson, George A. Mitchell, Mrs. Mordan, William Morgan, Major H. Musgrave, Miss A. Newbury, Mrs. Niblett, Mrs. Oakley, Mrs. Henry Oppenheimer, G. S. Pinchin, Mrs. R. K. Price, J. Richmond, Admiral and Mrs. Riddel, Robert Robinson, Mrs. Sandham, Mrs. Stafford, Mrs. Stedall, Mrs. Stephens, Mrs. Stevenson, W. Summers, Frederick Tankard, R. H. Taylor, C. Tweedale, Mrs. Tweedy, "Two Friends," Mrs. J. B. Walker, Sir Charles G. E. Welby, Bart., C.B., Major A. T. Weller, Miss Sinclair Wemyss, Miss A. M. Whidborne, F. A. White, Williamson, Morton and Co., Miss A. Winham, S. R. A. Wood.

£4 4s.—Mrs. A. A. Mercer.

£3 3s. each.—Frank Atkin, G. F. Barbour, Miss F. Collingridge, Lady Edith Cotes, Mr. and Mrs. C. E. Freeling, C. S. Grace, Keymer, Son, and Co., Ltd., Mrs. Macpherson, Theodore Meyer, Miss M. H. Morton, George F. North, Julia, Lady Petre, Miss D. G. Walker, J. W. Walker.

£3 each.—Lady Chitty, Miss Julia Crossley, Mrs. Empsall, Mrs. Horn, Mrs. Jones, A. G. C. Liddell, C.B., J. Miller, Mitcham Lane L.C.C. School, Teachers and Girls at, Lady Henry Nevill, Mrs. Phillips, Miss Weir, Miss Westhead, Mrs. F. A. White, Robert H. Wilkie.

£2 12s. 7d.—Francis E. Balleine.

£2 10s. each.—Anon, Rev. F. W. Haines.

£2 2s. each.—The Misses Archer, Hon. Mrs. Bevan, the Misses Bevan, Mrs. A. Saneler Brown, Mrs. G. C. Brown, Mrs. Burnet, Mrs. Bushell, Mrs. R. H. Campbell, R. S. Campbell, Lt.-Commander R. C. Carew, R.N., Alfred Davenport, Miss E. L. Dewing, A. G. Dinn, Miss S. M. Eastwood, John V. Evans, Capt. R. B. Feilden, Rev. C. F. Fison, Lewis G. Fry, Mrs. Gibson, Mrs. L. A. Guthrie, Gen. COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

The absence of a representative of the Indian banks on the committee appointed to consider the various problems which will arise in currency and foreign exchanges during the period of reconstruction and to report on the steps required to bring about the restoration of normal conditions in due course seems a serious defect in a body otherwise admirably constituted. With the Indian exchange question a matter of such outstanding importance, it is difficult to understand how the direct representation of Indian banking interests can be dispensed with, and if the results of the committee's work are to be as valuable as they should be it would be well for this omission to be rectified.

***

Optimism was the dominant note of Sir Charles Armstrong's speech at the half-yearly general meeting of the Great Indian Peninsula Railway, and not unnaturally so, seeing that the company's surplus earnings for that period amounted to over 86 lacs of rupees. This sum is being carried forward to the next half-year, when, in his view, unless the coal shortage should unduly hamper the operations of the company, there should be a satisfactory final distribution. He warned his hearers, however, that increased taxation was an item to be taken into account in this connection. "Until the position in this respect," he added, "was more clearly defined, it would not be wise or prudent to hazard a guess as to the final result of the year's working."

***

As to the post-war prospects of the company Sir Charles was very hopeful, and his remarks on this head are of special interest, as they apply very generally to the Indian industrial outlook. He pointed out that they had had a succession of favourable monsoons, and that if their good fortune in this respect continued Indian exports would increase, and there would be the probability of high prices. "The position at present," he went on, "so far as prices were concerned, was very satisfactory, and for the cotton crop, which was a very important item of traffic for their line, prices were now being realised which before the war were never dreamt of. All this was good for the future of India, and if, as would happen, increased wealth stimulated industry and enterprise, it would be good also for the future welfare of their line."

***

The important problem of the reconstruction of the Roumanian oilfields was briefly dealt with by Captain T. S. Masterson, D.S.O., in a lecture before the Institution of Petroleum Technologists, a report of which will be found elsewhere in this issue. He pointed out that it had been stated in Roumania that the Allied Governments had promised compensation for the damage that had been done, and that the reconstruction would in that case be based on the amount received in compensation, and he laid stress on the necessity for taking every precaution that money expended by the Allies in this way should not find its way to Germany. That this warning is not untimely will be recognised when it is borne in mind that Germany supplied nearly all the requirements of the oilfields before the war. She will, no doubt, attempt to do so again if the Allies are not prepared to supply the materials when they are required.

***

Of special interest, in view of the prospects for the expansion of British trade in Morocco, is the action of the Bank of British West Africa in opening new branches there at Fez and Saffi. The bank has throughout taken a leading part in encouraging British trade with the Protectorate, and this latest development provides one more proof of its readiness to do everything possible to enable our traders to compete for the Moroccan market on at least equal conditions with their rivals.

***

The visit to this country of a Serbian Commercial Delegation marks a definite stage in the movement towards closer commercial relations between the two countries after the war. The present delegation is to spend a month in visiting the principal industrial and commercial centres in this country, and the impressions the members receive will, no doubt, play a considerable part in the shaping of the new Serbia. From every point of view the tour must be considered an excellent departure, for it will give our business men a unique opportunity of learning at first hand what Serbia's requirements are likely to be in the future. They will then be unable to advance the excuse for any lack of enterprise in the Balkans that they are unacquainted with the conditions there.

***

I see that the Washington Chamber of Commerce is taking a referendum of prominent business men in the United States on the question of bringing economic pressure to bear on Germany. Over half a million business men are being asked whether they favour the announcement that commercial relations with Germany will not be re-established after the war unless a Government really responsible to the people is established in Germany. This step has been prompted by the view that it is essential to safeguard America from supplying materials to a nation which might be considering a war of revenge. In the event of the referendum of the Chamber of Commerce meeting with a satisfactory response, as will almost certainly be the case, measures will be taken to communicate the decision to the desired quarter, as it is felt that the realisation of what the verdict means would give a powerful impetus to influences likely to hasten the ends for which the Allies are striving.

***

The value of the threat of economic penalties in persuading Germany to mend her ways has been the subject of frequent reference in these columns, and I mention this American departure solely because I am of the opinion that in this case our Allies are giving us a very useful lead, which might with the greatest advantage be followed by our own business men. All British merchants who have suffered by the encroachments of German traders, and by the underhand methods by which they have managed to obtain a commercial footing in various countries, are naturally strongly in favour of our using, if necessary, what is certainly one of the strongest weapons in our armoury. But it is necessary for them to do more than support such a policy: they must make their views heard, and that in no uncertain way.

***

I cannot say that Sir Arthur Steel Maitland's reference to the reform of the Consular Service, in his speech on Tuesday at the luncheon given to him by the British Imperial Council of Commerce, is calculated to inspire undue optimism as to the prospects of any great changes being effected in that body by the new Department of Overseas Trade Possibly I may be too critical, but I read into his remarks that he did not believe the Archangel Gabriel was going to reorganise the Consular Service, and that he did not "think that any Government could contribute more than a small percentage towards success in that direction"—an inclination to accept the view that what has been done in the past has been on the right lines. If that reading is correct, I fear we shall have to look in vain for the long-expected improvement in the Service.

***

There is very little information to be obtained regarding crop conditions in Greek Macedonia at the present time, and what there is comes mainly through the American Consular reports. Some interesting details were given from this source last week regarding the "Turkish" tobacco crop in that region, from which it appears that the past season has been satisfactory for this crop, and that in more favourable circumstances there would have been an excellent yield. As it is, in the part of Macedonia in Greek occupation the production has been greater than was expected, and the tobacco is of good quality. I am indebted to the same source for particulars regarding the opium crop in the regions of Langaza, north of Salonika, and of the peninsula of Chalcidice. These are, it appears, the only regions that raised the poppy crop in 1917, and their production amounted to 1,000 okes of opium, or about twenty cases. But for the war, this yield would doubtless have been much larger, as the conditions for the sowing of poppy were unusually favourable in the autumn of 1916.

"Premier"
The Whisky de Luxe
Is held in high esteem by those who know it because of its delicacy of flavour, its creamy smoothness and beauty of bouquet.

MOROCCAN NOTES.

(From Our Own Correspondent.)

TANGIER, December 24.

Such interest as any British subjects in Morocco can spare for anything but war news has recently been centred on two questions—the weather and the steamer service with England. No old resident in Morocco is ever likely to forget the importance of agriculture to every interest in the country nor its dependence on weather conditions. New-comers, however, engrossed in business, in building development, in speculation not obviously connected with agriculture, are apt to forget that all the progress, the growth of towns, the expansion of revenue, depend for their soundness on agriculture, and that agriculture depends on rain.

Agricultural Expansion.

The products of Morocco have increased greatly in the last few years owing, to a very small extent to European farmers, but chiefly to the conditions, in the fully-controlled provinces, of security. The native farmers are now free to plough to the extent of their ability without fear of the sight of numerous teams exciting the cupidity of their governors, and to look forward to keeping the results of their labours, diminished only by agricultural taxes, which, though heavy, are slight indeed compared with the old endless, pretextless exactions. It should be remembered, for it already almost forgotten, that the surprising agricultural output of Morocco, which has added very appreciably during these war years to the resources of France, is due directly to the work of pacific penetration initiated some fifty years ago and carried on mainly by a few British firms. These firms obtained, by the method of their dealings, the confidence of the natives, supplied an outlet for native products, and then, through an elaborate organisation, carried on through native agents, stimulated agriculture throughout their districts, introduced new crops, and greatly intensified the agricultural industry, which, relieved of the oppression of the kaids. has proved a base for great developments.

Satisfactory Rainfall.

A few days ago the prospects for Morocco's staple industry were very gloomy. The chief agricultural districts had received but an inch of rain since last spring, cattle were dying for want of grass, and ploughing had been scarcely commenced. Reports have now arrived that fair rain has fallen on both the coast and the interior, and there seems at present every reason to hope that ploughing will at last commence in earnest all over the country.

Morocco, though it is rare that a year passes without any rain, has often a very small rainfall. Fortunately very little suffices, and there are instances of crops grown with five inches of rain. Native methods are very wasteful of moisture, and enormous improvement could be made by modest changes in the direction of "dry farming," which was practised with success by an Englishman years ago in the south of Morocco, and is now being used by some European colonists.

Steamship Services.

All trade in Morocco is dependent on rainfall; but British trade, apart from equality of commercial opportunities, is also dependent on the steamer service with Great Britain, and a very short time ago it seemed that this would almost cease. The direct service is maintained by the R.M.S.P. and the Power Line, and for some time has consisted of calls every month or six weeks by R.M.S.P. steamers, which, however, do not, as a rule, accept return freight, and a larger steamer of the Power Line, which generally carries cargo both ways, and is the mainstay of British trade, especially in the southern ports.

A startling rumour arrived a short time ago that the Power steamer, the last one of the line not requisitioned, had also been taken into Government service, a step which would have made the carrying on of a great part of British trade, for the time at least, almost impossible. Fortunately, in this, as in the case of steps which would have severely hit the important trade between Great Britain and Morocco in green tea, the Government departments concerned showed a realisation of the importance of trade matters which before the war would have been surprising. Merchant bodies, and foremost, it seems, amongst them, the newly-formed British Merchants' Association, made representations to the authorities, who have now allowed the steamer to continue in the Moroccan service.

The concession has been rightly viewed as a very hopeful augury of the handling by Government of trade questions after the war. British merchants here, as elsewhere, are at all times ready to sacrifice business for national interests, but it is right that they should be assured that before being called on to make such a sacrifice every care has been taken to make sure that it is necessary, and that the ends to be gained are worth the loss to be inflicted. Many things in Morocco remain to be settled after the war before British trade can set fully to work to make the most of the opportunities the country offers; if the Government, in handling them, takes into full account what British subjects have already, unaided, done for British trade in Morocco, and what a valuable outlet they can, if supported, in the future maintain for that trade, the part which Great Britain will take in the commercial development of Morocco will be a large one.

LONDON CHAMBER OF COMMERCE.

At the last meeting of the Council of the London Chamber of Commerce, at which Mr. Lionel A. Martin presided, it was reported that arrangements had been made for an address to be delivered to the members of the Chamber and others in the Pillar Hall of the Cannon Street Hotel on January 30, by Mr. Alfred Bigland, M.P., on the aims and objects of the Empire Resources Development Committee. A communication from the Prime Minister promising to receive the Chamber's deputation on Government control of trade as early as possible was reported.

OVERSEAS TRADE DEPARTMENT.

Sir Arthur Steel-Maitland, the head of the Department of Overseas Trade (Development and Intelligence), has appointed Mr. Guy Locock, C.M.G., of the Foreign Office, and Miss Anne B. Page to be his private secretaries. Mr. Locock is for the time being acting as head of the Foreign Section of the Overseas Division of the Department. Sir William Clark, the Comptroller-General of the Department, has appointed Mr. H. W. Wiswould to be his private secretary.

PERFUMERY TRADE OF ADEN

Strong Scents and Low Prices.

A very interesting account of the trade in scents in the Aden district is given by the United States Consul at Aden, Mr. Addison E. Southard, in a recent report. The value of the various classes of perfumery used, he says, is estimated at £5,000 a year. The bulk of the perfumery sold here is of local origin or preparation, and it makes up probably three-fourths of the total amount used. The remaining one-fourth consists of cheap qualities imported mainly from England, France, and Switzerland. The Arab in this district is very fond of perfumery, but as his purchasing power is generally limited he must have low-priced goods. He and his women are particularly fond of musk and of three flower scents—jasmine, narcissus, and rose. Musk is the most widely used of these four, and is usually the artificial scent imported from Switzerland in the form of liquid, crystals, or powder. The Aden consulate is informed by local native perfumers that they now pay fifty shillings ($12.15) a pound in Switzerland for artificial musk.

Local Preparations.

Next to these artificial scents in favour is the scent of an Indian wood known as aloes wood and by the native name of "ood," although it is generally used in quite a different form. The wood is said to be the inner bark of a tree which grows in the Straits Settlements, Burma, and British India. According to local information these trees are botanically known as *Aquilaria ovata* and *Aquilaria agallocha*. The "ood" used in Aden is imported from Calcutta. Next in favour with the Arabs come the various mixtures made from the locally prepared civet and ambergris. The civet comes from Abyssinia. Ambergris is marketed by fishermen, who get it along the coasts of the Red Sea and Gulf of Aden, the best quality being considered that which comes from Shukra, an Arabian port east of Aden.

Most of the perfumery imported is in the form of chemical musk and artificial narcissus, jasmine, and rose. All of that found in local perfumery shops was of Swiss manufacture, but import returns indicate that some of it is probably bought through English and French sources. These scents are in concentrated form and are very powerful. The Aden perfumers, who are usually Indians, use these concentrated scents in the preparation of toilet waters, ordinary spirit perfumes,

and hair oils. An article is prepared which can be sold very cheaply, and which, having a powerful odour, is very satisfactory for the local trade. A two-ounce bottle of perfume can be sold for eight annas, and a two-ounce bottle of hair oil, which is often made by adding only a little scent to coconut oil, sells for the same price. Rose water and other toilet waters locally prepared can be purchased at twelve annas per pint bottle. There are even some cheaper grades, but these prices are the average.

German Perfumes' Ill Success.

The Germans once tried to compete with this locally prepared perfumery, but with little success. In one shop there was found a considerable stock of German perfumes, put up in fancy bottles which appeared to contain about three ounces. These perfumes were in the popular scents of musk, narcissus, and jasmine. The retail price was four rupees, but the shopkeeper said that they were too expensive for the native trade, and that he made only an occasional sale because of the attractive bottle. It is a very evident fact that the native must have a cheap perfume, and that it is not possible under present conditions to develop a demand for imported perfumes unless they are very strong and can be sold at very near the low prices for which the locally prepared article sells.

There is a liquid perfume prepared from the "ood" above mentioned, and it is quite popular on account of its lasting odour. This perfume is called "oodi," and one application will last for some days. It is said that a garment or a handkerchief which has "oodi" on it will retain the scent even after being laundered. "Oodi" is sold in three different grades, the price per tola being 7, 4½, and 2 rupees respectively. The second and third grades have much the largest sale, and although the price would appear to be a little high, this perfume is fairly cheap, considering its lasting qualities.

"Ood" for Incense.

There are two uses for "ood" (the wood itself). In one the pieces of wood are burned in incense pots. The smoke is used to impregnate various garments with the scent. On festive occasions, when many guests are present, the native host will charge his incense pot with "ood" and pass the vessel around to the guests, that they may scent their handkerchiefs, turbans, or tarbushes. The other use for the wood is in the preparation of an incense paste. This paste is made in various ways, but its principal ingredients are sugar and perfumes. Sometimes small pieces of "ood" only are added to the sugar, and sometimes there will be a combination of the sugar, "ood," civet, ambergris, or musk. The paste is dried, cut into cakes, and burned in incense pots to produce smoke with which to impregnate garments held over it with a strong and lasting scent. This method is much used by the Arab, Indian, and Somali women for perfuming the garments which they are about to don. "Ood" is of two qualities—black and brown. The black sells for about thirty rupees per pound, and the brown for about ten rupees. The wood is quite light in weight.

Ambergris.

Ambergris is used both as a medicine and as a perfume. It is employed mainly by local perfumers for mixing with other cheaper scents and as an ingredient in the incense cakes above described. As a medicine it is often taken in coffee or tea. Two of its principal medicinal virtues, according to local belief, are the curing of colds and the strengthening of convalescents.

There is a considerable quantity of ambergris brought into the Aden market, a great deal of which is exported to Europe, though no figures are available as to the amount of this commodity handled here. The Arab fishermen bring it in. They find it along the coast of the Red Sea and Gulf of Aden from Hodeidah to Shukra. The Arabs have an interesting way of testing ambergris. A piece will be placed on a sheet of paper and a lighted candle held under the paper. If the ambergris breaks it is considered of inferior quality; if it slips from the paper without sticking it is considered as of first quality. They believe that inferior ambergris is that which has been swallowed by fish and then thrown up. Local experts sort ambergris into five grades, for which the prices per ounce are 75, 50, 20, 12, and 5 rupees respectively.

Another perfume having a small sale in this market is known as barmoomi. It is said to be made from various flowers which grow in East Africa. The local price is from one to three rupees per tola. Very little is known about this perfume by local dealers. It is very powerful in odour.

Attar of Roses.

At times an inconsiderable quantity of attar of roses is said to be obtained from the Turkish Yemen by local perfumers, for use in the various classes of perfumery which they prepare. Usually, however, the chemical rose scent from Switzerland seems to give a stronger and more appreciated odour than the natural product.

The only conclusion to be obtained from a study of the local perfume market is that there is not a favourable chance for prepared imported perfumery to compete. The native perfumers, who control the trade, are skilled in mixing powerful scents, which they can sell very cheaply. The only possible sale for imported prepared perfumes would be to the small European population and to a few wealthy natives. This limited trade is at present supplied with excellent French perfumes, which can be sold at very reasonable prices.

Die Bank, a German financial journal, says that the Roumanian petroleum wells have been so thoroughly destroyed by the Allies that there is not chance of the company owning them paying any dividend for many years to come.

ENGINEERING NOTES.

Electrification of Crops.

In last week's notes we referred to the progress that has been made in the utilisation of electricity in agriculture, and mentioned the economic and technical advantages that are obtained by its employment as a motive power for driving agricultural machinery, for ploughing, threaning, etc. The most remarkable results, however, of the utilisation of electricity in agriculture are those obtained by its application to crops. Electricity has a very beneficial effect on all plants, and it has been proved that by its use an increased yield of from 30 to 50 per cent. in wheat-growing and other cereals can be obtained on land of average fertility. How this electrical influence operates has not yet been defined exactly, but as it has been proved that plants to which electricity has been applied grow far heavier and far more productive than has otherwise been the case, we can safely surmise that under the electric treatment the circulation of the plant juice is hastened, and plants are, therefore, able to "feed" more easily. A similar effect is observed in the human subject when under electrical stimulus. In Italy and France, and especially in Switzerland, the electrification of crops or "electroculture," as it is termed, has been practised for some five or six years now. In this country experiments carried out under the supervision of the Board of Agriculture show that in oats electrification has resulted in an increase of 49 per cent. in grain and 88 per cent. in straw. In other cereals, such as wheat, the increased yield has been 30 to 60 per cent., and even higher. The importance of this may be better realised when it is borne in mind that of the 35 million quarters of wheat which are annually consumed in this country about 20 millions have to be imported.

Electroculture Installations.

The installation system for the electrification of crops adopted in this country, mostly in the Midlands, is undoubtedly superior to those used on the Continent. This British installation is of a most simple and yet most reliable design. The method employed is to stretch a network of extremely fine wires over the field to be treated, barely visible, twelve yards apart, and suspended eighteen feet above the ground from larch poles. A positive continuous current of electricity is supplied to the wires at the extremely high pressure of 60,000 to 100,000 volts, but the quantity of current used is as small as 10 to 30 watts per acre, so that the cost is rather trifling. The necessary dynamo can be driven by a farm oil engine of 2 h.p. Thus, the electrification of crops can be applied anywhere, even in remote districts, and the electrical apparatus is so very simple to control that it is claimed that it can be operated by unskilled labour without difficulty. It is asserted that by the use of this system of electrification the average yield per acre in this country can be increased from the present figure of 32 bushels to 50 or 60 bushels; so that the country's dependence upon imported supplies could be reduced by 30 per cent.

Effect in Gardens.

Better results seem to be obtained when electricity is used in gardening, and for those who would like to try electrification of plants in that direction, and either cannot obtain locally an electric supply, or do not wish to go to the expense of purchasing an electrical plant (of oil engine, dynamo, etc.), as described above, before being assured of the success by experiments, an economic method of experimenting may be mentioned. It is, of course, for experiments conducted on quite a small scale in a garden frame, or in the open garden. A small electric accumulator, such as is used for ignition in motor engines, will supply the battery power; an induction coil intended for more or less continuous running can be bought from almost any scientific instrument maker. When the coil is working one end of its secondary winding, giving chiefly a positive electrical discharge, is applied to a piece of galvanised wire net supported a few feet above the ground; the other end of the winding is attached to a zinc plate buried in the ground. Short thin wires are suspended at frequent spots in the netting, pointing towards the ground, and act as conductors from which the electricity can creep through the air to the tiny hairs or conductors on the leaves of the plants. Of course, some technical skill is required. The serious gardener must, however, have the right type of apparatus, and must take special precautions as to the hours during which the current is applied, and the weather. Electricity is of no use during very hot, dry, sunny weather, nor in heavy rain. It is usually applied early in the morning and in the evening, and certain plants—for example, cabbage—require more watering. The plants themselves must never touch the overhead wires, otherwise the current will be conducted by them directly to the earth. The wires must be isolated by porcelain insulators.

LANCASHIRE COTTON.

Buyers Cautious.

(FROM OUR OWN CORRESPONDENT.)

MANCHESTER, Wednesday.

The market has continued generally slow, and no particular development in demand can be reported. There is still that lack of confidence in current rates which results in buyers being very cautious. Raw cotton advices continue strong and prices in the American staple remain firm. Rather easier rates have prevailed in Egyptian cotton owing to the outlook for supplies being somewhat better. Spinners of Egyptian yarns have not sold freely, but engagements remain healthy, and pretty full rates have had to be paid for anything wanted. Producers of doubling wefts are doing particularly well. Most Bolton mills have made large profits during the past half-year. Less activity continues to show itself in piece goods for Egypt. Shipments are improving, and cables and letters from Cairo report a healthy state of affairs there. Standard cloths for India and China have been neglected. A few more sales have been mentioned for Java. The home trade has given steady support. In American yarns resales rather tend to spoil prices in some quarters. According to the Board of Trade returns, last year was a record period, so far as values are concerned, in our foreign trade in yarn and cloth, the amount of business done totalling to nearly £130,000,000.

GREEK TOBACCO CROP.

Quality and Yield Satisfactory.

The excellent prices brought by last year's tobacco crop in Greece caused many experts to predict a vastly increased acreage this year, and this was in part the case, says the United States Vice-Consul at Athens, Mr. C. M. Corafa, in a report dated October 29. The crop, however, is only about 30 per cent. in excess of that of 1916, on account of rather unfavourable climatic conditions during the greater part of 1917. The total production for 1917 is estimated at 102,275,710 lbs., grown in the following districts:—

Districts.	Lbs.
Islands of new Greece—	
Samos	26,804,225
Mitylene	3,833,800
Chios	1,975,050
Lemnos	564,300
Islands of old Greece—	
Amorgos	225,720
Pasos	56,430
Naxos	84,645
Miconos	28,215
Tenos	84,645
Nios	56,430
Argolis	11,286,000
Other Peloponnesus Districts	564,300
Etolo-Carnania (local sale)	8,464,500
Etolo-Acarnania (for exportation)	5,643,000
Attica-Boeotia	282,150
Thessaly-Phthiotis	33,853,800
Epirus Jannina	1,410,750
Salonika	7,053,730
	102,275,710

The quality of the crop is said to be excellent. Owing to a great demand, particularly from Egypt, the prices brought by the various brands of tobacco are about double those obtaining last year. The demand exceeds the supply, and the price is not expected to decline during the season. About 8,500,000 lbs. will be consumed in Greece and an equal amount by Italy. Egypt will require nearly 20,000,000 lbs., while an estimate of the needs of other countries is as follows:—United States, about 28,215,000 lbs.; Brazil, Tunis, Spain, France, Holland, Switzerland, 14,107,500 lbs.

CANADIAN PACIFIC OCEAN SERVICES.

The Canadian Pacific Ocean Services, Ltd., of Liverpool, announce that Mr. W. J. Sergent, who for eighteen years has been associated with the Allan and Canadian Pacific Ocean Services, is retiring from active duties as chief superintendent engineer, but continues his connection as an official of the company in a consultative capacity. Mr. Kenneth Mackenzie, who has been his chief assistant, has now been appointed chief superintendent engineer of all the company's fleets, with headquarters in Liverpool.

A SERBIAN MISSION.

Trade with Great Britain.

Representatives of the Serbian Industrial, Commercial, and Trading Guild arrived in London on January 14. They were met at the station by the Serbian Minister in London, M. Jovan Jovanovitch, as well as by representatives of the Board of Trade. The Mission (states Reuter's Agency) is to spend a month in Great Britain visiting the principal commercial and industrial centres. The members of the Mission are M. Costa Riznitch, President of the Chamber of Commerce and President of the Executive Committee of the National Bank of Serbia; M. Milorad Pavlovitch, member of the Chamber of Commerce; M. Malisha Athanaskovitch, member of the Chamber of Commerce; Dr. Kosta Yovanovitch, secretary of the Chamber of Commerce, Belgrade, and member of the Municipal Council of Belgrade; M. Peter Markovitch, President of Trade Guilds of Belgrade; M. Bogolyub Stokitch, member of the Trade Guilds of Belgrade; Dr. Douritch, Professor in the University of Belgrade.

On January 15 the Mission was introduced by the Serbian Minister to Sir Arthur Steel Maitland at the Foreign Office. Sir Arthur, in welcoming the Mission, expressed the hope that political and commercial relations between Serbia and Great Britain would be greatly strengthened as the result of the war. M. V. Jovanovitch, a member of the Serbian Chamber of Commerce, in reply, said that the whole Serbian nation saw in Great Britain the best friend of their race, and he was sure that Sir Arthur Steel Maitland's hopes would be abundantly fulfilled.

The members of the Mission were entertained at luncheon on January 16 in the Connaught Rooms by the Association of Chambers of Commerce of the United Kingdom, Sir Algernon F. Firth presiding.

The Chairman, in welcoming the representatives, said their visit was intended to help the development of commercial relations between the two countries. Economically and commercially Serbia was isolated, and had before the war been under the commercial domination of Austria, who insisted on preferential treatment, and had vetoed arrangements for a treaty with this country. In 1912, of imports to Serbia 74 per cent. were from Austria and Germany and 64 per cent. of her exports went to those countries. The development of Serbia required release from the servitude under which she had suffered. Serbia needed railways, roads, and ports, and expenditure in these directions would open splendid prospects. Among her industries agriculture stood first; the tobacco growth was of the best in the world; timber and fruit were plentiful. Mineral wealth included gold, copper, silver, antimony, and zinc. One of the great difficulties after the war would be shortage of man-power. The loss of Serbia in men was in proportion greater than that of any of the Allies; only a quarter of the men of military age in her population were left alive. Many Serbian boys were being educated here and in France, and every opportunity should be given for making them acquainted with British trading conditions. The interchange of knowledge should lead to close commercial relations.

Dr. Douritch said Serbia was primarily an agricultural country. They produced more food than they required for their own people, they could produce raw material in abundance, and in her present state of development Serbia imported manufactures. There was therefore reason for close commercial relations with Great Britain, a large importer of food stuffs. So long as Serbia had her present frontiers she would be absolutely under the domination of Austria. After the war he had reason to believe that Serbia would have direct maritime communication with Great Britain. In considering the prospects of greater trade it was evident there must be methods of credit. It was for the commercial delegation to explain how the Serbian markets were organised and how British manufacturers could best find an outin Serbia.

ROUMANIA'S OILFIELDS.

Story of their Development.

An interesting paper was read by Captain T. S. Masterson, D.S.O., on "The Petroleum Industry of Roumania" at the meeting of the Institution of Petroleum Technologists on January 15, in the course of which he passed under survey the methods by which the oilfields were developed.

In the early days, he said, the first drilling was done at Draganeasa, on the Cantacuzene property, and in Moldavia at Harsa, on the Negropontes property. Both fields were drilled on the Pennsylvanian system, and the sites of the borings could be seen to-day. At Harsa small 4-in. and 5-in. pipes were sticking out of the ground indicating the old positions, and the same might be seen at Draganeasa. With one notable exception these borings were technical failures. It was found that the Pennsylvanian system, as adopted for the rocks of Pennsylvania, would not work, as the beds would not stand up in the drilling unless the casing followed closely. Next to be used was the Canadian system. At first very slow progress was made on account of the constant need of using the under-reamer, but later, in 1898, with the more general introduction of the eccentric bit, better progress was made, and the Canadian system had lived down to 1916.

Rotary System Introduced.

In 1904 or 1905 the first rotary system was introduced at Apostolache, but, partly because the plant brought out was of too light a pattern, and partly because the rock in that particular region was not of the most suitable, these first efforts were failures. In 1912 the rotary was again introduced, but there was again no success. The following year, however, the rotary was given a fair trial, and in suitable rock it proved a success, and the rotary would very likely be more widely employed in the future. The rotary in Roumania had been a great success in the soft, loose, sandy marls of the Pontic beds between Gura Ocnitei and Tzintea. The use of thick mud-flush had made it possible to drill 1,600 feet of uncased hole, and at Bana-Moreni wells had been drilled to 2,400 ft. at an average progress of 65 ft. per day, including the time needed for the setting of two strings of casing and the exclusion of the water in the upper sands.

Labour and Materials.

The Roumanian peasant, who was superseding the foreign driller, was an intelligent and conscientious worker, but lacked education, which made it difficult for him to grasp mechanics. This was easily understood when it is remembered that Roumania is essentially an agricultural country. The timber for derricks and all buildings was supplied from the large forests in the Carpathians. Cement and refractory materials were also made locally, but all metals and textile manufactures were imported. Germany supplied the entire requirements of casing, tank plates, electric plant and refinery commodities. With a very few exceptions Germany also supplied the pumping and workshop plant. In addition to this Germany supplied the raw materials used by the local workshops for manufacturing rig irons and drilling tools. England's share in these supplies was altogether insignificant, and what English material was used was due to the patriotic impulse of a few Britishers.

After the War.

On reoccupation of her territory, concluded the lecturer, Roumania would be faced with one of two problems:—Either the industry would be more completely destroyed than it was when left in December, 1916, or it would be found with such improvements as might have been effected under the German occupation. In both cases the Roumanian Government would be faced with the problem of reconstruction, and undoubtedly it would avail itself of that opportunity for the purposes of removing many inequities which hampered the industry in the past. It was stated in Roumania that the Allied Governments had promised to compensate Roumania for the damage done. In that case the reconstruction would be based on the amount received as compensation, and it was to be hoped that the necessary safeguards would be taken to ensure that no Allied money found its way into Germany as purchase price for materials needed for the reconstruction. As mentioned above, Germany in the past supplied practically all the materials. Let them be prepared to do so this time.

COMPANY REPORT.

London County and Westminster.

The report of the London County and Westminster Bank, Ltd., for the year ended December 31 last states that after paying interest to customers and all charges, making provision for bad debts and contingencies, and allowing £193,215 for rebate on bills not due, the net profit amounts to £1,271,067, which with £182,291 brought forward leaves an available sum of £1,453,358. This the directors have appropriated as follows:—Interim dividend of 9 per cent. (paid in August last), £316,000; a further dividend of 10 per cent. (making 19 per cent. for the year), £350,000; a dividend of two-thirds of 10 per cent. on 127,601 new shares, £42,534; a dividend of two-thirds of 10 per cent. on 2,177 shares issuable in respect of outstanding fractions, £726; contingency fund investments and foreign accounts), £460,500; bank premises account, £100,000; balance carried forward, £184,599. The arrangements for the purchase of the shares of the Ulster Bank have now been carried through. Up to December 31 last a total of 194,666 shares have been received for exchange. The cost of these at the agreed sum of £12 3s. 4d. per share is £2,368,436. Off these has been written the sum of £506,943, reducing the cost in the bank's books to £9 11s. 3d. per share, £1,861,494. Against this have been issued shares and fractions amounting together to 129,778 shares of £20 each, £5 paid. £648,890, which has been passed to capital account. The premium on the shares issued after deduction of the sums written off leaves a balance of £725,949, which has been added to the reserve. Branches have been opened in Spain at Madrid and Barcelona. The dividend (less tax) will be payable on or after 1st proximo. The balance-sheet shows current and deposit accounts, £142,267,949; circular notes, letters of credit and other accounts, including provision for contingencies, £4,394,675; acceptances, £5,375,652; endorsements on bills negotiated, £72,956; cash in hand and at Bank of Eng £25,197,730; money at call and short notice, £26,983,535; bills discounted, £24,288,394; advances to customers and other accounts (including pre-moratorium Stock Exchange loans), £40,800,159. Meeting, 41, Lothbury, E.C., 24th instant, 1 p.m.

SMALL GREEK OLIVE CROP.

Unfortunate climatic conditions in Greece early in the year, combined with an unusually severe drought in the olive-producing districts, seriously cut down the olive crop in 1917, says the United States Vice-Consul at Athens, Mr. C. M. Corafa, in a report dated October 30. The presence of disease in the groves has also affected the situation, so much so that the Ministries of National Economy and Agriculture have made appropriations to combat the dreaded "dakus" and other olive-tree diseases. For these reasons it is estimated that the total crop will not exceed 20 per cent. of that of a normal year.

In the Amphisso district the production is estimated at about one-tenth the normal, not more than 373,000 gallons being anticipated. This strikes a hard blow at consumers of fruit from this, perhaps the best in quality grown in Greece. In a good olive year the production in Old Greece is about 65,000,000 okes (25,000,000 gallons), of which 7,000,000 to 9,250,000 gallons are generally exported. In the provinces of New Greece conditions are brighter, reports from Crete and Mitylene being very encouraging. From Mitylene come estimates of a possible crop of 7,450,000 gallons.

SUEZ CANAL RECEIPTS.

The traffic receipts of the Suez Canal were as follows on the undermentioned dates:—

	1917. Francs.	1918. Francs.
January 7	340,000	250,000
January 8	310,000	230,000

COMPANY MEETING.

GREAT INDIAN PENINSULA RAILWAY.

The Surplus Profit.

The 136th half-yearly general meeting of the stockholders of this company was held on January 15 at 48, Copthall Avenue, Sir Charles H. Armstrong (the chairman) presiding.

The secretary (Mr. R. H. Walpole) read the notice convening the meeting.

The chairman, after expressing regret at the death of Colonel Firebrace, the chairman of the board, said that the company had done well during the six months now under review, but the excess earnings were largely due to the movement of troops and military stores. The surplus profit, which was being carried forward to next half-year, exceeded 86 lacs of rupees, which was a record figure for the September half-year. The excess over the corresponding period of 1916 in coaching and goods was 41 lacs of rupees, but the increase in the coaching was partly accounted for by enhanced fares which took effect from June 1, for the total number of ordinary passengers carried was less by nearly 1¾ millions. This falling off in numbers, which was almost entirely in third-class ordinary, was accounted for by the higher fares, by the increased cost of living, and by the prohibition of the annual Pandharpur Fair, but to a small extent this decline was offset by an increase in the numbers carried by mail trains, which added considerably to the receipts under this head. The total goods traffic exceeded in weight the quantity carried in the corresponding half-year, but the excess tonnage was not in general merchandise, although under this head a higher revenue was earned.

Gross Receipts.

The gross receipts in the half-year were 531 lacs, against 489 lacs, an increase of 42 lacs, or 8½ per cent., and as the expenditure only increased by 2¼ lacs, or about ¾ per cent., as compared with the corresponding half-year, the net revenue showed an increase of 39½ lacs, or 18¾ per cent., which was very satisfactory. Although working expenses, fuel, stores, and wages were higher, the excess under these and other heads was largely counterbalanced by a reduced train mileage of a little over 1,000,000 miles, a war measure (so far as passenger traffic was concerned) which they, in common with other railways, found to be absolutely necessary from the point of view of the upkeep and renewal of their stock. As in recent half-years, it had not been possible to spend freely on renewals, but the line had remained in a state of efficiency and their engines in working order and repair. To have been able to maintain efficiency under the difficult conditions now prevailing was very satisfactory, but when the war was over they would have to spend freely on both renewals and repairs, and the low working percentage now shown of 52.92 per cent. might therefore later on be increased. The percentage this half-year compared with 56.98 per cent. in the corresponding period of 1916, and with an average of about 59½ per cent. in the two corresponding half-years just before the war. Looking back five years, however, he found that in the half-year gross receipts had increased by nearly 1½ crores of rupees, and as their line was now capable of carrying a much larger traffic, a further increase might confidently be looked for in the near future, and more particularly after the war, when India would be drawn upon heavily for raw materials of all descriptions. Recent monsoons had been very favourable, and if after the war their good fortune in this respect continued, India would be able to export freely, and high prices would probably be realised. The position at present, so far as prices were concerned, was very satisfactory, and for the cotton crop, which was a very important item of traffic for their line, prices were now being realised which before the war were never dreamt of. All this was good for the future of India, and if, as would happen, increased wealth stimulated industry and enterprise, it would be good also for the future welfare of their line.

Surplus Earnings.

The surplus earnings, as he had already said, were over 86 lacs of rupees, and if they were not unduly hampered by coal shortage this half-year—and the trouble, he was sorry to say, had already begun, bookings towards Bombay, excepting coal, having had to be stopped in the middle of last month, and the traffic not yet having been resumed—the final distribution ought to be satisfactory, but in this connection increased taxation was an item which might have to be taken into account, and until their position in this respect was more clearly defined it would not be wise or prudent to hazard a guess as to the final result of the year's working.

The chief decreases in the revenue from goods traffic during the half-year fell under a few heads. Coal and coke were less by nearly two lacs of rupees, due to a smaller quantity having been carried, as large supplies were railed to Bombay in the previous half-year in anticipation of an advance in the freight rate of 14 ans. per ton. In jawar and bajra, staple food grains in certain parts of India, there was a heavy falling off of nearly 10 lacs, and the receipts from manganese ore were also down by over eight lacs, due to a large extent to scarcity of tonnage and high freights, also to the fact that supplies nowadays were going more freely to Calcutta. The largest decrease of all was, however, in oilseeds, amounting to over 14 lacs, due to a poor demand for export. On the other hand, grain and pulse showed an increase of nearly four lacs. Wheat was 19½ lacs in excess, due to a greater demand for export on Government account, and rice contributed also over four lacs.

The amount disbursed on capital expenditure during the six months has been small, only 27 lacs, and this was due to scarcity of funds and to the difficulty of obtaining necessary supplies in this country, but, nevertheless, some useful work has been done. Over eight lacs had been spent on remodelling station yards, three lacs in providing house accommodation for officers stationed in Bombay—a very necessary measure for their own protection, as rents had advanced rapidly since the war commenced—over 2½ lacs on the Kargali Colliery, which was money very well spent, and smaller sums on the Itarsi-Nagpur Railway and on doubling the line between Shegaon and Nagpur.

Fuel Supply.

The first consignment of coal from the new colliery at Kargali was despatched on June 18, and by the end of the September quarter over 35,000 tons had been raised, the monthly production being then about 8,000 tons. The estimate for this half-year was from 60,000 to 80,000 tons, and thereafter it was hoped that the monthly output would be about 20,000 tons, which would be a very valuable addition to their stock in these days of uncertain supply. The question of their future fuel supply was constantly before the directors, and, as he had shown, the position at present was far from satisfactory. The bulk of their coal was drawn from the Bengal coalfields, which were 600 miles distant from the nearest point of their line, and the cost of haulage was therefore an item of considerable importance. A large number of wagons had to be employed, which could be much more profitably used in other directions, and it was with the object of releasing some of these wagons that other methods were now being devised to deal with their increasing needs. Oil fuel was now being used to a small extent on some sections near Bombay, and negotiations through the Railway Board were now proceeding for a larger supply of oil, which would be a valuable addition to their fuel supply, but the change would necessitate a considerable expenditure in the conversion of engines, and storage accommodation would also be needed. The question of electrifying certain parts of the line was also under consideration, and if this was found to be feasible it would enable them, he hoped, to utilise some of the inferior coal found on and near their line, and if this could be done they would not only benefit by the electrification, but would save considerably in the haulage of coal from Bengal and a large number of wagons would be released for other purposes. But this scheme was only yet in the stage of inquiry, and even if proceeded with eventually it would be many years before the change could come into full working operation. Some step of a drastic nature was, however, necessary, for the coal supply was too uncertain, and the position so far as could be seen at present was not likely to improve, and would most probably get worse.

Feeder Lines.

Many projects for light feeder lines had been submitted during the half-year, and some were well worth consideration, but nothing in this direction could be done until the war was over. There would then be a great opportunity for the investment of rupee capital in these very necessary extensions, and as India at the present time was rapidly accumulating wealth, she would be able and willing, he hoped, to devote some part of her large profits to the development of railway extension, and light feeder railways were useful in bringing increased traffic to the main lines. The Great Indian Peninsula Railway was in a much better position than it was a few years ago to handle a large traffic, and they could well do with a few more feeders. In this direction there were great opportunities for development, and their directors would be glad to encourage schemes which were likely to show satisfactory results.

As regards extensions, a detailed survey had been sanctioned for a broad-gauge line from Warora to Pisgaon, a distance of about 14 miles, the object being to bring them into touch with an important district for coal. The Harbour Branch extension was held up by the non-receipt of girder-work on account of the war, and work generally on this important addition had been more or less closed down. The Pulgaon-Arvi branch line had, however, been opened for traffic. Two divisions on the Itarsi-Nagpur Railway were open to traffic, but on the remainder of this line work was only proceeding slowly, and it would be some time yet before through connection was complete. Good progress had however, been made on the Pachora-Jamner Railway.

Favourable Prospects.

Prospects, he was glad to say, were encouraging, for the last monsoon was a good one, and, although excessive rains at the end damaged the cotton crop in several districts, and to some extent food grains and oil seeds also, there was every prospect, nevertheless, of a heavy traffic, which, on account of the shortage of coal and for other reasons, he rather feared they might have some difficulty in handling. If, however, the coal supply was assured, they would do their best, but the resources of the railway were sure to be greatly taxed, and it was possible, therefore, that further restrictions of public traffic might be necessary. Progress on works already started had been continued so as to bring them from the unproductive to the productive stage, but the large volume of traffic which the railway had been called upon to deal with had made the need of additional facilities rather badly felt. Financial stringency and a difficulty in obtaining materials had necessitated many works, excepting those of very urgent importance, being held back, and this position must continue to the end of the war. Meanwhile Indian produce was in great demand for this and other markets, and orders were difficult to execute. When the war was over however, this demand would almost certainly revive and increase, for India was a large and important producer of necessary raw materials.

ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Street, Wednesday.

The market in Egyptian securities has again been a fairly active one, and in certain directions a large business has been doing. The general trend of prices has again been upwards, and Egypt has been a persistent buyer of certain shares. In Government stocks City of Alexandria Fours are wanted round the current price of 77, but there are no sellers at the moment. Egyptian Unifieds are unchanged at 85½ after some transactions at a slightly higher level. The 3½ per cent. preferences are again ¼ firmer at 73¼, but here also the lack of sellers stops business.

In Bank shares, Nationals close firmer but unchanged at 18, with some small business at slightly under this price. Land Banks on some small transactions dropped at one time to 6½, but are closing ⅛ up on last week at 6⅝. Agriculturals have been a feature of strength during the last few days, and the price to-night closes 3-16 higher at 6½ on strong local buying. In Agricultural Preferences some business took place round 6 3-16, but there are further buyers about at this price and no sellers under 7 1-16. In Anglo-Egyptians some fairly large transactions have taken place round 14¼.

In land shares, Aboukirs have been quiet this week, but a fairly large business has again been done in New Egyptians, which are fractionally firmer at 17s. 3d. after some transactions up to about 17s. 6d. Allotments are ⅛ firmer at 4⅛ on buying from Egypt, but no business has been done, as the few remaining sellers here are holding for higher prices. Behéras have been exceptionally dull, and, with some small sellers about, the price has receded ¼ to 12¾. Behéra Preferences are also slightly weaker at 4⅜ x.d. In Delta Lands there has been some support from Egypt at 15s., and the supply of shares here round this level appears to be becoming exhausted. Egyptian and Foreign Trusts remain round 9s., but in view of the appreciation in many of their holdings an improvement in their price is overdue. Gharbieh Lands, after being neglected for some time, have come into demand and are ⅛ up at £2, at which price there is a very fair local demand with few sellers about. Sidi Salems have been quite a feature, and on buying orders from Egypt are closing 3s. up at 29s. In Union Foncieres the market has been rather dull, with some small sellers round current prices. In United Egyptian Lands some business has been done round the current price of 1s. 7½d.

In miscellaneous shares, Salts and Sodas have again been largely dealt in, and on both local and Egyptian buying have improved a further 2s. 6d. to 40s. There has also been a further improvement of 1s. in Khedivial Mails to 36s. 6d.

In Greek securities, both 1881's and 1884's are ½ lower at 60, after some fairly large transactions. Some big dealings have taken place in Monopolies round 51. Otherwise there is nothing of interest to report.

Paris Bourse.

Closing quotations:—Turkish Unified, 64 (64.50); Credit Foncier Egyptien, 778 (772); Ottoman Bank, 475 (470); Suez Canal Shares, 4,600 (4,600).

Oil Shares.

Anglo-Persian Preferences declined 3d. to 24s.—25s., while Roumanian Consols were also weaker at 9s.—10s.

GREEK DEBT SERVICE.

The Council of Foreign Bondholders issues the following information compiled from figures (for two months, viz., September and October, 1917) published by the International Financial Commission at Athens with regard to the revenues assigned under the Law of Control for the service of the Greek Debt from January 1 to October 31, 1917 (New Style: January 14 to November 13, 1917):—

—	Monopolies, Tobacco, Stamps, Stamped Paper, Naxos Emery.	Piræus Customs.
	Drachmæ.	Drachmæ.
Gross Receipts, Sep. 1917	3,142,015	1,108,000
Do. do. do 1916	3,505,545	2 971,000
Do. do. Oct., 1917	3,648,269	1,060 000
Do. do. do. 1916	3,394,264	2,019,000
Estimated Receipts for 10 months (Law of Control)	24.083,333	8.916,663
Actual do. do., 1917..	28,009,521	10,559,0 0
Do. do. do., 1916	30,015,870	23,175,000
Difference between estimated and actual receipts for 10 months 1917	+ 3,926,188	+ 1,642,333
Difference between estimated and actual receipts for 10 months 1916	+ 5,932,537	+ 14,258,333

Note.—Of the surplus over the estimated receipts from monopolies, tobacco, stamps, stamped paper, and Naxos emery, 49 1-5 per cent. is applied towards increasing the minimum rates of interest and sinking fund of the External Gold Loans of 1881 to 1893. The receipts in gold from both Naxos emery and the Piræus Customs are converted into drachmæ at par when the average rate of exchange for the month is par or below par, but when the average rate for the month is above par the conversion is made at that average rate.

NOTES OF THE WEEK.

The one naval incident of the week was utterly unexpected. The Goeben and the Breslau ventured outside the Dardanelles for the first time, so far as is known, since their entry in 1914. Their record as fighting ships had not been particularly brilliant hitherto; they may have thought that the British forces in the Levant had now been sufficiently reduced to render an attack on Imbros reasonably safe. Or they may have hoped to catch us napping. However that may be, it was their first and last offensive cruise in the Mediterranean as nominally Turkish vessels. They sank a British monitor, but, being engaged by destroyers, they turned again home, but failed to cross the bar. The Breslau—one of the last survivors of the "City" class of cruisers that was built to stimulate local interest in the German Navy—struck a mine and sank; the Goeben also struck a mine, listed, and was run ashore in the Narrows. As her stationary mass is now being bombed regularly by British airmen, she is unlikely to appear again.

The survivors of the Breslau were rescued by the British, the Goeben being too much occupied in showing a clean pair of heels to pick up any of the crew of her smaller consort. It is noteworthy that the rescued German crew gave vent to their hatred of the Turks; we imagine that the Turks were not sorry to be rid of such uncomfortable guests—in fact, a dark suspicion may have crossed the German mind that they had been persuaded outside the Dardanelles by their weary hosts precisely in the hope that such an accident as befell them should occur. If that were so, the Turks can hardly have expected that both the parting guests should have been so effectually speeded. It is certain that, however much the German hates the Turk, the Turk hates the German still more.

It was the menacing presence of these vessels before Constantinople in the autumn of 1914 that largely determined Turkey's entry into the war. It is very natural, therefore, that it should be suggested that the removal of the menace should affect Turkey's attitude, and make it less dangerous for her to approach the Allies with proposals for a separate peace. What may be the truth of that supposition we cannot say. Turkey knows the terms of the Allies, and she is anxious to get out of the war. On the other hand, she has borrowed money from Germany, given Germany post-war rights in her territories, and we may be quite sure that the number of Germans in Constantinople will not diminish at this critical moment of the Alliance. Nor will the German Embassy be lacking in arguments, or, if need be, threats, to persuade or bully her weary ally to carry on.

What arguments can Germany employ that will prove effectual? She can threaten revenge on the deserter when she has won the war, but their execution is dependent on her winning, and the Turks may have two opinions about that. In any event Germany could not carry out the threat until she has settled with France, Britain, and America, and the Turks may have a less roseate view of the prospects of German victory than the official assurances of Berlin. In the second place, Germany can promise Turkey relief from Russian pressure in Constantinople—but Turkey will have that relief in any case. In the third, she can dazzle Turkish eyes with the Pan-Turanian dream, with the prospect of expanding her power over the Caucasus and other districts where Russia has resigned her ambitions. It is conceivable that this bribe may have some weight, although it would probably have had more in 1914. But Turkey may reasonably ask her master why he does not give her back her lost provinces instead of offering her new possessions? That question Germany cannot very well answer, except by the despatch of a large expeditionary force to Asia Minor. It remains to be seen whether Falkenhayn, who seems to be still lying *perdu* at Aleppo, can persuade the Kaiser that the war can best be settled in the East.

In the meantime, a slight British advance has been registered in Palestine. The Germans are still talking loudly of the recapture of Jerusalem, possibly to keep the Turks in good heart, and some of the German newspapers have taken to abusing the Pope for condemning such talk in advance. They inform him that Jerusalem is a city like any other city—one wonders they did not point the moral by adding that Berlin is really a greater centre of the arts than Rome—and that if they choose to take it back, they will. It would appear from the denunciations lavished on the Pope and the Jews for their pleasure at the reconquest of Palestine that the German Foreign Office is more rattled than it cares to admit. It is only a few weeks ago that it was explaining that Jerusalem was evacuated because it was of great religious and no military importance.

The position on the Eastern front grows more and more confused. The Trotsky-Kühlmann cross-talk duel continues and is discontinued from time to time, but

Digitized by Google

nothing happens except that the Russian army continues to melt away to the mutual satisfaction of both parties. In Petrograd they murder an ex-Minister or two before breakfast, forcibly dissolve a parliament before lunch, sack a few banks and repudiate their foreign debt before tea, and order a revolution or two in other countries after supper. In the odd moments of ennui between these extensive and exciting programmes they order the trial of the ex-Tsar and the arrest of King Ferdinand of Roumania, while it now appears that the Roumanian Ambassador was arrested in order to force the other Ambassadors to make a personal protest. By so doing, Lenin boasts that they have "recognised" his Government.

How much of this amazing tragi-comedy is sincerely played it is impossible to determine. The robberies may be a subtle jest, too recondite for the grosser taste of Western Europe; the murders are presumably intended as a practical demonstration of universal brotherhood, but they appear in some contradiction to the right of "self-determination." The threatened arrest of the King of Roumania is so nearly like a piece of German bullying that we may be excused for thinking that it was first suggested at Brest-Litovsk. The recalcitrance of Roumania is no doubt extremely inconvenient to both Berlin and Petrograd, but the spirit of the Court of Jassy, surrounded by open and concealed enemies on all sides, is evoking the admiration of the rest of the world.

Roumania's crime in the eyes of Russia is nominally that she has disarmed Russian troops and objected to Russian agitators who are trying to stir up a revolution. With the example of Russia before their eyes, the last thing Roumania is likely to do is to organise a revolution—or any other country either. The past year's events in Petrograd have probably done more to buttress conservatism in every part of the world than anything that has happened since the French Revolution, and a country that is so near to the seat of the disorders, like Roumania, is naturally most profoundly affected by disgust at these excesses.

The Ukraine appears to have concluded peace with the Central Powers, although there is a vagueness about the published terms of the agreement that makes for suspicion. No statement of the boundaries of the new State has been announced, and no details of the pact with Germany except that commerce is to be resumed; but under what restrictions, if any, we are left in ignorance. Until more is known of this matter, it is clear that it is impossible to judge of its effect either on German supplies or its relation to the future of the Balkans, which must in any case be considerable.

Practical steps are already being taken to prepare a way for Jewish colonisation. A conference of Leeds and Bradford Jews has been held under the auspices of the Zionist Committee, and it is announced that the British Government intends shortly to allow a Jewish Commission to go to Palestine to prepare for the establishment there of the Jewish nation. The Commission is to be followed by a staff of technical experts, engineers, architects, agriculturists, and town-planners. The general intention is to place on the land, by purchase, a Jewish proletariat, who, it is hoped, will work in harmony with the Arabs.

Nothing is said—probably it is too early—as to the source from which these immigrants into Palestine are to be drawn. Some, no doubt, will come from the North of England—the most rabid anti-Semite could not quarrel with anybody who preferred Palestine to Bradford—more, perhaps, will go from the East End of London, which has been excessively popular with foreign Jews of late years. But presumably the great bulk of the colonists will be Polish and Russian Jews, and their return can hardly take place until some time after the war. At the same time, there has been a significant indication this last week that the desire to return is by no means universal. A number of Russian-Polish Jews are reported to have agitated for rights which would make them practically a State within a State in Russia and Poland—a proof not merely that the Jewish question in Poland cannot be settled, as some persons think it can, by mere democratic gush, but that the Jewish community there is determined to remain separate from the Christians.

That they would assimilate with their Christian neighbours at the call of some reforming impulse can never have been credited for a moment by anybody who has been in these countries. But it has often been suggested, and this with somewhat more probability, that every Jew would leave Poland for Palestine at the first available opportunity. It is hardly necessary to say that, if that theory were correct, the Jews in the East of Europe would recognise that the question of their future position in Poland and Russia was merely an academic one. It is of very considerable importance, both from the standpoint of Palestine and of Poland, to know what proportion of that people intends to emigrate. The more who return to the Holy Land the better it will be for both Palestine and Jerusalem.

The omissions from the speeches of Mr. Lloyd George and President Wilson on war aims on which we commented shortly last week have provoked, as was anticipated, a considerable reaction. The Italian Press makes the point that Mesopotamia must have been of more importance than it had realised, and the Jugoslav ideals of less; to which the answer might conceivably be that the support of the Jugoslav movement in Italy had not, until recently, been remarkably fervent. Fortunately that attitude has disappeared, both in Rome and Milan, and a better understanding is now the *mot d'ordre*. Nothing could be more satisfactory, for it is clear that both in the local sense of a fulfilment of Italian and Jugoslav aspirations and in the wider sense of the future stability of European peace the independence of the Jugoslavs is a necessary preliminary. It is to be regretted that the language both of London and Washington, was in this matter somewhat vague and equivocal. Not unnaturally the Austrian Government has taken advantage of this unfortunate obscurity, and the Austrian Premier has denied again in the Reichsrath the "right of self-determination."

The full text of the treaty concluded by Great Britain, France, and Russia with Italy in April, 1915, has been published by the Bolshevik administration, and is reproduced in the *New Europe* of January 17. It confirms what had previously been divulged in regard to the general trend of the document, and in some particulars is far more unsatisfactory than the contracting parties have been given credit for, at least in this country. The claims of Italy on the eastern shores of the Adriatic were well known, and it was understood that she had, in common parlance, "opened her mouth" very wide, and that the Entente Powers had been persuaded to undertake the task of filling it. But if the text as now published has to be considered as authentic, she went even further, and obtained promises covering Asia Minor, Libya, and the north-eastern coast of Africa. The British public will note in regard to this treaty that it was negotiated early in 1915. In other words, it was the product of a régime that knew nothing of the Near East and was convinced that it was the one part of the world in which British interests were "nil." The war was still comparatively young, and it was very necessary to bring Italy into the conflict on the side of the Allies.

In April, 1915, the principle of nationality had not been so carefully elaborated as one of the war aims of the Allies as it has been since. It is conceivable that eminent jurists would hold that, in view of all that has happened in the interval, the convention with Italy is no longer a binding agreement. Neither Great Britain nor France, however, is likely to repudiate an undertaking, unless it can be shown—and the fact is recognised by all concerned—that its fulfilment has become a physical impossibility. There is hardly room for two opinions on this point. Italy, too, has lived through the last two years, and does not require to be reminded that the world's outlook on many things has undergone radical changes. Three years ago it seemed a natural

Digitized by Google

course to adopt to pitch imperialistic aims as high as possible. It is realised now how fatal their gratification is apt to be even for the country that stands to profit by them, and the foundations of a new order of statesmanship have been laid. An Italian Government that still insisted upon full possession of all the islands of the Dodecannese at present occupied by Italy would find it difficult to frame an indictment against Pan-Germanism. In these circumstances it is to be expected that the Italians of their own accord will have asked for the cancellation of the treaty of 1915. But we confess that M. Trotsky's amiable action would have been more effectively deprived of its sting, if it had been officially announced that the Allies no longer considered themselves bound by this agreement.

The main part of the treaty concerned the delimitation of Italy's frontier east of the Adriatic, and the line conceded to her will not stand investigation to-day. We have reached a period of evolution when only "legitimate" claims have to be taken into consideration, and territorial settlements have to be based "on the right of self-determination or the consent of the governed." In any case, therefore, the details of the agreement concluded in April, 1915, have been over-ruled by subsequent provisions, to which Italy, in common with her Allies, must be supposed to have subscribed. The complete incongruity between the terms of the Italian treaty and the later declarations of the Allies has made us unwilling to believe the various versions of the convention that have been current. The different conferences that have been held, and in particular the friendly negotiations between the Serbian and Italian Governments, have confirmed the opinion that the treaty of 1915 had become by common consent a dead letter. It would, however, have been a wiser course to pursue to have published an official statement to this effect. Quite apart from the fact that the Southern Slavs would have been spared many misgivings, the cancellation of the treaty would have prevented the Bolsheviks and the Germans from using its terms for their own ends.

Lord Curzon's statement as to British policy in Persia was full and satisfactory, and should do much to dispose of rumours which have been circulated of late. The British Government has no designs on Persia such as have been attributed to it by German agents in Teheran, and repeated by pro-Germans at Westminster. The Anglo-Russian agreement of 1907 was made in order to safeguard Persian independence; now that Russia has abandoned her interest in Persia the agreement, of course, lapses, and the Persian Government have been so informed by the British Government. "We desire," said Lord Curzon, "Persia to remain neutral during the war and to retain its complete independence after the war." That is not, of course, Germany's desire at all, as some of her less cautious publicists have admitted; it has been, and will be, necessary to take steps to counteract her intrigues in that direction, which she regards as an annexe of the Baghdad Railway and a half-way house to India.

The Swedish gendarmerie in Persia was notoriously largely under German influence, and this force had to be dissolved in 1915. But when they left disorders broke out and it became necessary to create a new police. The Persian Government admitted this, but were unable to undertake the task themselves, whereupon the British Government lent a number of officers to organise the new force. The South Persian Rifles were raised under the command of Sir Percy Sykes. Their main duty is to preserve order and to guard the trade routes; the force is "Persian in character, composition, and allegiance, and the first to suffer from its disappearance would be Persia itself."

For all that, Germany is likely to continue to misrepresent the position at Teheran. She is in the position that she has nothing to lose and everything to gain from any intrigue she may indulge in. And people in that position are apt to gamble recklessly. Any disturbance she may contrive to create in Persia might conceivably tend to her advantage, and must in any case militate against the security of the country, and therefore against British trade.

The news of Sir Beauchamp Duff's death inevitably recalls the early failures and disappointments of the campaign in Mesopotamia, but at the moment we prefer to lay stress on the undoubted achievements of his long service with the Indian Army. A master of that drudgery of administrative detail which is as essential to the maintenance of an army as the more spectacular branches of the organisation, he was chosen by Lord Kitchener to work out the scheme of reforms which increased so largely the efficiency of the Indian forces. The weak point of that scheme lay undoubtedly in the design of the headquarters machine, which required for its successful working a Kitchener at its head, and which broke down in the hands of its chief constructor—the closing tragedy of a long and hitherto successful career.

The last stage of Mr. Montagu's momentous visit to India is, we take it, marked by the conference announced for the current week, during which the whole question of political reform is to be discussed with the Viceroy and the heads of the various provincial administrations. A week seems a ridiculously short time for the consideration of such a vast subject, but the members of the conference are nearly all experts, and since all of them are also exceedingly busy men, it is probable that they may succeed in covering the ground. In any case Mr. Montagu can scarcely fail to derive assistance in his task from hearing the clear-cut opinions of responsible administrators on the mass of schemes, suggestions, protests, warnings, and petitions which it has been his duty to assimilate in the few weeks he has spent in India.

In point of fact Mr. Montagu has run a serious risk of mental indigestion, as anyone can see who cares to glance at the political columns of any recent Indian newspaper. He has met nearly all the men who count in India, but he has also met all the busybodies, and the flow of rhetoric has been appalling. Want of time and ignorance of the languages have unfortunately combined to hinder him from learning at first hand the views of the man who ought to count for most of all, the peasant with his plough on his shoulder; and the next best thing is that he should hear about them from experts like Sir Michael O'Dwyer or Sir Benjamin Robertson, whose comments should serve to clear the mental vision and restore a just sense of political perspective.

Taking a general view of the mass of representations on this question of political reform, the outstanding feature is intense distrust of the majority. Each section in turn asks for responsible government, but each section simultaneously presses for adequate safeguards of its own particular interests, and a constitution framed to comply with all these urgent requests would be distinctly Gilbertian in character, seeing that the majority, while supreme on paper, would in practice be unable to do anything whatever without infringing on this reservation or on that. The lawyers would doubtless reap a rich harvest from constitutional litigation, and the Judicial Committee on this side would be kept busy; but the result would be to retard still further the unification of the Indian nationality.

The true lesson to be drawn from all these manifestations is the simple fact that India is not yet a homogeneous nation. Under British rule she has taken a long step in that direction, and while there are powerful forces making for disruption, we believe that the goal of unity is not unattainable, and that a time will come when sectional interests will be subordinated to the general aims of the community. When that time comes the problem of Indian government will be comparatively simple, but for the present it is one to tax the best abilities of British statesmen, and we hope that the results of Mr. Montagu's mission will be such as to justify his claim to inclusion in that not too numerous band.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, December 23.

(Delayed in transmission.)

The Resignation of the Minister of Wakfs.

A slight change has taken place this week in the constitution of the Cabinet. Ibrahim Fathy Pasha, Minister of Wakfs, has resigned, and has been succeeded by Ahmed Ziwar Pasha. For some time now there have been persistent rumours of a Ministerial crisis; but, although in well-informed circles it was not thought likely that any far-reaching reconstruction would be made, it was known that there was every possibility of the portfolios of the Wakfs and of at least one other administration changing hands. As things have turned out, only one Ministry—the Wakfs—has undergone a change, the difficulties, whatever they were, in the case of the other administrations having been overcome successfully. From Fathy Pasha's letter of resignation it appears that certain accusations were levelled at him in connection with his administration of his Ministry, and that an inquiry was opened by the Prime Minister, but that the investigation proved that those charges were unfounded. The letter by which Rushdi Pasha advised his colleague of the Sultan's acceptance of his resignation confirmed the satisfactory result of the inquiry, and expressed regret that, notwithstanding the assurances he had received from the Prime Minister, Fathy Pasha should have insisted on tendering his resignation.

The retiring Minister of Wakfs had been only a short time in the civil administration, having been appointed Mudir of Assuit some six years ago. He is a soldier by profession, and had a brilliant career in the Egyptian Army, from which he retired with the rank of Ferik (General), to which few Egyptians ever attain. He distinguished himself very much during the Sudan campaigns, gaining the D.S.O.—being, if I am not mistaken, the first Egyptian to receive that honour—and he was one of Lord Kitchener's most trusted native officers. Indeed, Lord Kitchener had a very high opinion of his ability, and soon after his return to Egypt in 1911 he promoted Fathy Pasha Mudir of Gharbia, the most important province in Egypt, and two years later appointed him to the Ministerial position which he has now resigned. Fathy Pasha has throughout been one of our staunchest supporters, and his retirement is very much to be regretted. His successor, Ziwar Pasha, is much esteemed in Egyptian and European circles. He has done very good work as Governor of Alexandria, where he has taken a prominent part in the deliberations of the municipality, and he is well fitted to fill the high and difficult post to which he has now been called.

The Mails.

The question of the European mails is seriously occupying public attention out here. Up to quite recently we had had little to complain about in connection with the mail service from Europe, and with but one exception we had received our letters and papers with what in the circumstances was certainly remarkable regularity. This satisfactory state of affairs has, however, now ceased, and for nearly a month we have had no mail from Europe. Our last letters are dated November 17, and our latest papers November 14, and so far there is no indication as to when we may expect to receive any more. On the other hand, the military mails up to quite a fortnight later have been in the country for a week now. At a time like the present everyone is prepared to put up with the inconveniences inseparable from the waging of a great war, and it is freely recognised that irregularity in the delivery of mails figures necessarily amongst these inconveniences; but if the military mails can be got through, it should surely be possible to deliver the civilian ones more promptly. The commercial community is suffering very much through the non-arrival of the mails, and its annoyance is in the circumstances quite justifiable. It would seem as if something had gone wrong with the postal organisation at home, and it is sincerely to be hoped that steps will at once be taken to rectify the matter and avoid any recurrence of the present delay in the future.

The Passing of a Noted Anglo-Egyptian.

Anglo-Egypt has just lost one of its oldest members in the person of Lady Anne Blunt, who passed away last week in the Anglo-American Hospital at the ripe old age of eighty. Lady Anne, who recently succeeded to the title of Baroness Wentworth, but continued to be known and affectionately referred to under her old name, had been connected with Egypt for over forty years. Accompanied by her husband, Mr. Wilfred Scawen Blunt, she first landed in the country in 1876, when she came up to Cairo from Suez by the old caravan route. She did not, however, stay long on that occasion, being attracted towards Mesopotamia and Arabia, where during the following years she made extended travellings. In 1882 her husband purchased the celebrated garden of Sheikh Obeyd, which had been founded by the illustrious Ibrahim Pasha. From that date she made this country her home, and out at Ain El Shams, where the garden was situated, all her life interests were centred. Her passionate affection for horses soon made itself manifest in the Arabian stud which she founded with her husband, and which quickly became world famous. Of late years the size of the stud was reduced by shipments to their country seat in England and by local sales, but Lady Anne still retained her more famous and favourite horses, and visitors could wish for no more delightful experience than to accompany her on her rounds of the stables, and watch and listen to her as she handled her pets. Lady Anne always astounded everyone by the agility of both her mind and body, an agility which she retained right up to the very last. She was in every respect a most remarkable woman, and with her passes away not only one of the few remaining links with pre-Occupation days, but also one of the most attractive personalities Anglo-Egypt has ever known.

The Administration of Palestine.

I understand that the administration of Palestine is to be entrusted as much as possible to Anglo-Egyptians. As already announced, Borton Pasha has been appointed Governor of Jerusalem. Lieut. Sir Francis Curtis, of the Intelligence Department, has now been promoted lieutenant-colonel, and nominated Governor of Hebron, whilst Major G. H. Malcolm, of the same service, has been appointed Governor of El Arish. Other appointments to the local administration will shortly be made from the Egyptian Civil Service. Mr. Ronald Storrs, Oriental Secretary to the Residency, is at present in Jerusalem on a special mission.

[Since the date of our correspondent's letter Mr. Storrs has succeeded Borton Pasha as Governor of Jerusalem.—Ed.]

The Fuel Question.

The fuel question threatens to become extremely acute. Practically no coal is coming into the country, wood imports are nil, and everyone has now to depend on petroleum for cooking and heating. Unfortunately, it is becoming more and more difficult to obtain one's requirements of the latter combustible, and daily fights take place outside the various retail shops between would-be consumers and those entrusted with the sale. It is difficult to ascertain the real cause of the present crisis, which at any rate would appear to call for firmer handling than is evident to-day. It is stated that the petroleum requirements of Egypt have increased by about 40 per cent., owing to the lack of coal and wood, and that the Shipping Controller will only allow the country shipping to bring in 90 per cent. of its normal requirements. If that statement be correct, then it is high time that the responsible authorities took steps to convince the Controller of the need for a more liberal allowance, and that they arrange for a more equitable system of distribution of the available quantity than is carried out at present, when the obtaining of one's requirements depends more on one's relations with the retailers or one's powers of persuasion than on the merits of one's case. The present situation has become aggravated by the fact that we are in the throes of a spell of abnormally cold weather, such as has never before been experienced by the oldest residents.

ATHENS LETTER.

(From Our Own Correspondent.)

Athens, December 30.

The Capture of Jerusalem.

The celebration of Christmas by the British colony in Athens was one of those events in life which take a lasting place in one's memory. It was a happy inspiration to commemorate the taking of Jerusalem on this day, and the arrangements for the ceremony, well conceived, were equally effectively carried out. The time fixed for the service was 10 a.m., and, admittance being by ticket, there was no confusion or overcrowding, but the pretty little Anglican Church was filled to its utmost capacity.

A detachment of about 200 British bluejackets and marines was landed from the men-of-war, and at 9.30 a.m., with rifles and fixed bayonets, they marched up Stadium Street and across Constitution Square to the strains of their band, evoking general admiration by their magnificent appearance. They lined up outside St. Paul's Church, and whilst those invited were arriving selections of music were given. On the arrival of King Alexander the Greek National Anthem was played, and his Majesty was conducted inside the church by the British Minister, Lord Granville. The heads of the Allied Diplomatic Missions, the Cabinet Ministers, military and naval officers of the Allies, together with a large number of British naval and military officers in uniform, made quite a picturesque scene under a blue sky. The members of the colony were present in full force. The hymns and the Te Deum were sung to the music of the band, which played in the porch of the church, and the service was conducted by Chaplain Major Pilly, who had been lent by the military authorities at Salonika for the occasion. The Greek Church was represented by three of their clergy, and a Russian priest also attended.

The usual Christmas matins followed the thanksgiving service.

On the conclusion of the latter, the detachment of bluejackets and marines marched with their band to the Panhellenion Restaurant, where a dinner had been prepared for them, and at 2 p.m. they formed up outside the British Legation and marched off to the Theseum station, preceded by a marine carrying a beautiful wreath of flowers presented to them by a group of Greek admirers.

The band then returned to Constitution Square, and for a couple of hours played selections of music. Before returning to the Piræus they were given tea in the Annexe of the British Legation.

General News.

On Boxing Day Countess Granville was "at home" to the British colony. Needless to say, the reception, which was largely attended, was marked with all the cordiality that characterises the British Minister and Lady Granville.

The following evening the Battle of Arras and other war pictures from the British Front were shown at the Atticon Cinema. King Alexander honoured the performance with his presence, and there were also present the British Minister and Lady Granville, with a large number of the Legation staff and naval and military officers. Every seat in the large Atticon Hall was occupied. On the King's arrival the band played the Greek National Anthem, and then played "God Save the King" and the "Marseillaise," and throughout the performance there was considerable applause for the British troops and the wonderful exploits of the Tanks.

Athens to-day is indulging in a novel experience. All the servants of every description, even chambermaids in the hotels and restaurants, have gone on strike. Hotel proprietors have had to smuggle someone in to do the cooking, but visitors have to make their own beds, fetch their own water, and help themselves in the dining-room! The novelty of the proceeding has not been without its amusing side, but it is hardly a condition of things one would care to see prolonged, especially as several restaurants have been obliged to close altogether.

WHOLESALE, RETAIL AND FOR EXPORT.
42 GOLD MEDALS and Highest Awards for COLDNESS, DRYNESS, and ECONOMY in
REFRIGERATORS.
Every conceivable Size and Design, from 30s. upwards to £500.
'Phone: 57 Birkenhead. Cable and Telegrams: "Love."
HALL, CRABTREE & HEAP, Birkenhead.
THE SOLE PATENTEES AND MANUFACTURERS.

ROUMANIAN NOTES.

Bessarabian Affairs.

A gleam of light has been thrown, in the gloomy hour through which Roumania is now passing, by the national renascence of Bessarabia; the more welcome, since Roumania's intervention on the side of the Allies implied on her part a renunciation of all activity in that direction. Moreover, that the national spirit should have persisted in Bessarabia through five centuries of oppression, and notwithstanding the withering policy of the old Russian *régime*, obviously strengthens the case of the Transylvanians and points to their final success, with or without outside help.

Early in November a congress of all Bessarabian soldiers took place in the reception rooms of the Chishinan Cathedral. The enthusiasm was great, and reached its zenith when a group of Transylvanian soldiers, on their way to the Roumanian front, entered the room. The congress proclaimed the territorial and political autonomy of Bessarabia. The country is to be governed by an Assembly of 120 members, ten places being reserved to the "Moldavians" (as the Bessarabian Roumanians call themselves) beyond the Dniester. It was declared that all the land and its riches belonged to the inhabitants, and that it must pass into the hands of those who work it. Colonization with foreigners was forbidden. All Bessarabian schools, institutions and authorities are to be nationalized, and henceforward Bessarabian soldiers shall serve in special military units, under their own flag and officers. The Assembly is to take steps for the collection of a national fund.

The educational foundation of the movement was laid on November 14, when 400 new Roumanian schools were opened in Bessarabia, in which the children learnt for the first time to read and write in Latin characters. Special courses for the training of teachers have been started at Chishinan, Balta and Soroca. The Zemtsvo of Chishinan opened a Roumanian library, and the late Provisional Government recognised the new situation existing in fact by nominating a Moldavian, Vladimir Gr. Criste, to be Commissary for Bessarabia, and another Moldavian, M. Nigulets, to be his deputy.

As organ of the new movement, a new publication, *Cuvântul Moldovenesc*, has begun to appear in Chishinan.

German Rule in Roumania.

The Secretary of the Greek Legation in Roumania, who remained for a few months in Bucharest after the occupation of the town by the Germans, has now arrived in Jassy and brought with him a number of interesting documents. Among them is a collection of the ordinances issued by the German authorities in the occupied territory, which regulate minutely the life and activities of the native population. It is significant that the first deals with the requisition of supplies. Only absolute necessities are to be kept; the remainder is to "exported, *as in times of peace*, to the Allied countries." Cultivation of the soil is made compulsory and placed under the supervision of a large staff of agricultural experts "made in Germany." Any private deals in corn were prohibited.

Heavy penalties are provided for dealing with the enemy, keeping arms or explosives, giving refuge to enemy soldiers, tampering with the telephone and telegraph lines, and for attempting to intimidate or harm those inclined to adopt a friendly attitude towards the Central Powers. No correspondence was allowed, within and beyond the frontiers, except through the medium of the German Postal Service. Most of the railway lines are closed to civilian traffic; on the rest the Roumanians may not use first and second class carriages nor express trains. All offences were to be dealt with by German courts-martial. One wonders why so many precautions and restrictions with a population which is alleged to have received the Germans with flowers and cheers.

SCHOOL OF ORIENTAL STUDIES.
London Institution, Finsbury Circus, E.C.2.
ORIENTAL LANGUAGES AND RELIGIONS.
Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.
For particulars, apply to E. DENISON ROSS, Director.

CORRESPONDENCE.

GENERAL VESHOVITCH.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—Your paragraph on Veshovitch brings back to me vividly the month I spent with him in August, 1912, when he was in command of the Andriyevitza frontier of Montenegro and was hard at work arming the Serb populations across the border and trying to force the Turks to declare war. He had already burnt several Turkish blockhouses, and had outposts and guns across the frontier. When he was discussing his plans with me, I adjured him not to precipitate war before the other Balkan peoples were ready, lest Austria should at once enter the Sanjak and occupy Montenegro.

"I ako? (and if so?)," said Veshovitch, jeering, "let her. Nothing can be worse than our present Government!" He and all Andriyevitza were then strongly opposed to King Nikola. Andriyevitza was still mourning the execution of two of her most cherished sons, and their graves were the first thing I was shown. They were shot for supposed complicity in the plot against the King.

Later I heard that Veshovitch aspired to a high post, perhaps head, in a republic. His opposition to Austria was no doubt caused by the fact that the Austrians had entered by invitation of the Petrovitches, and were only likely to confirm them on the throne instead of making the desired change.

As a soldier he had good points, and was the only Balkan commander of whom I heard the conquered speak well.—I am, etc.,

M. EDITH DURHAM.

A HISTORY OF SERBIA.

TO THE EDITOR OF "THE NEAR EAST."

SIR,—In your issue of December 28 a reviewer criticises my book "Serbia." He mentions that I call Macedonian Slavs South Slavs, whereas Dr. Cvijic in 1909 vaguely called them Macedonian Slavs, distinguishing them thus from Serbo-Croats. Dr. Cvijic probably considered it expedient in 1909 to be vague about Macedonian Slavs, since Macedonia at the time belonged to Turkey, and the question raised international difficulties. I should like to ask your reviewer *what* kind of Slavs the Macedonians are, if they are not South Slavs?

Further, your critic says it is not fair to talk of the "pretended tolerance" of the Turk in the fifteenth century. He talks of Hus and Latimer. This is obscuring the issue. They have nothing to do with the point. I was not making comparisons. I explained at some length that the Turks refrained from proselytising, not out of respect for Christianity, but out of contempt for Christians. The word "pretended" was the summing up of these explanations.

It is hard, says your critic, to lay the full blame of Milan's declaration of war against Bulgaria upon Austria. I said that Austria instigated it, which does not seem to me to mean quite the same thing. If someone instigated me to commit a crime, would the judge and jury lay the whole blame on the instigator? Why try to condemn a book by wrenching words out of their natural meanings?

Several *pag s* are condemned wholesale. Why not *facts*? It would give me a chance of answering criticisms. I cannot defend whole pages without going beyond the limits of a letter and beyond the limit of your space. May I state, however, that my authority for the main points in those pages was Dr Seton-Watson? To say that is to say that they are true to the best of human knowledge.

I shall be grateful if, in the interests of justice, you will publish this letter in your paper.

I am, yours, etc.,

S. F. WARING.

To this letter our reviewer replies as follows:—

Sir,—My main point was that, while praising some aspects of Miss Waring's book, I wished to point out that the influence of politics was dangerous to history, and that she had not escaped the danger.

Two details I can mention in passing—(1) if Miss Waring had been explicit on Milan's non-Austrian motives, there could have been no ambiguity; (2) if she meant "real" or "contemptuous" tolerance, and not "pretended," would it not have been better to say so?

As to Macedonia, she admits that Cvijic may have been influenced by "international difficulties"—*i.e.*, history may have been influenced by politics. In Mr. Seton-Watson's book on the Southern Slav Question (1911) he distinguished between Serbo-Croats and Macedonian Slavs, and declared the population estimates of Macedonia "almost avowedly based on the wishes of their compilers, *Greek*, Serb, or Bulgar" (p. 11). Also, in his map of 1917 ("Nationality in the Balkans"), he shows numbers of Vlachs and Albanians in Macedonia. Miss Waring prints a map, which does not show them, nor does she use Mr. Seton-Watson's term "Macedonian Slavs," or admit that much of Macedonia is "debatable territory between Serbs and Bulgars." Also, has she reflected on this passage?—"It is by no means easy to form any definite judgment even upon *seemingly first-hand evidence as to the true nationality* of many districts of Macedonia" (Seton-Watson, *Southern Slav Question*, p. 12). The question, indeed, is too unsettled for any *single* authority to resolve it. But, in any case or in any subject, historians who pin their faith to a single authority are likely to err. Politicians can always have a definite view on everything; historians are not so happy.—I am, etc.,

YOUR REVIEWER.

THE JORDAN VALLEY AND ITS LAKES.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—My attention has been drawn to the report which appeared in your issue of January 18 of Dr. Masterman's interesting paper read before the Royal Geographical Society. In the summary of the discussion which followed the paper you refer to some remarks of mine on potential water-power in the Jordan Valley, the utilization of which, the report goes on, might have the effect of "enormously increasing the number of people that the country could support." Perhaps the adverb "enormously" is too optimistic, though it may have been suggested by the striking examples I cited of perennial water-power at present allowed to run to waste. "Considerably" would have better conveyed my meaning. With regard to the Jordan Valley, the attitude I urged was one of caution in accepting the estimate, still published in some standard works of reference, of the amount of water daily received by the Dead Sea. Dr. Masterman's observations, undertaken at the suggestion of the Palestine Exploration Fund to ascertain the annual variations in the Dead Sea level, had, I ventured to suggest, a direct bearing on this subject. The important data he obtained, extending over a period of years, have, as he pointed out in his lecture, considerably reduced the average amount of variation which used to be accepted as definitely ascertained.—I am, etc.,

L. W. KING.

Palestine Exploration Fund.

"TURKISH CIGARETTES."

TO THE EDITOR OF "THE NEAR EAST."

Sir,—I have read the interesting and patriotic letter written by Mr. Nicholas Papanicoly on the subject of "Turkish Cigarettes," etc., in your journal of this month's issue. It would appear that this description is quite illegal, as these cigarettes are not manufactured in Turkey, and only contain a very small proportion of leaf tobacco grown in Turkey. It is, moreover, doubtful whether any tobacco which can correctly be described as Turkish is obtainable just now. Tobacco of this class, which is called "String Suluk," "Suluk Basma," or "Dubek Suluk," is grown in the important islands of the Grecian Archipelago—viz., Mitylene, Chios, Samos, Crete, etc. I may mention that by continuing this false trade description we are injuring our Ally in two ways: first, by not giving them the credit of producing this favourite and world-wide known tobacco, and, secondly, deterring a good many people from buying what they consider to be enemy product. Is it not possible, under the existing law, to prohibit the sale of cigarettes by this undesirable name, and to compel the vendors to describe them under their real name—viz., Greek cigarettes—and so do justice to the producer.

Yours, etc.,

F. W. WALKER.

JUGOSLAV AIMS.

A great meeting of the Jugoslav emigrants was held at Geneva yesterday (says Reuter's Corfu correspondent in a message dated January 18), and a resolution was passed demanding the union of the Serbs, Croats, and Slovenes with Serbia and Montenegro, forming together an independent democratic State, based on the right of the self-determination of peoples. A manifesto was issued which declared that a durable peace in Europe depended upon the equitable solution of the Jugoslav question. The manifesto stated:—"The Serbian, Croatian, and Slovenian emigrants from Austria-Hungary hailed the Russian Revolution with enthusiasm, because it proclaimed the principle of the liberty of all nations. They could not admit even a partial abandonment of this principle by Russian democracy and could not believe that democratic Russia would allow Austria at home to trample on the principles which Russia agrees to respect. In that event the disappointed Slavs would again become the slaves of German militarism, and would soon be employed by the mixed soldiery of Germany to stifle the liberty of the Russian people."

NEAR EAST BOOKSHELF.

WAR FINANCE.*

It is a very great pity that Mr. Nicholson, who is a hardened author, should not have recognised the elementary fact that a series of good newspaper articles do not necessarily make a good book. A book is like a wife—one settles down with it; but a newspaper article is like the passing flame of one's youth—to be admired for a moment and then forgotten. One does not want to settle down with the ghosts of the old flames; but the Professor has no mercy. He resurrects them all—even the one which declared that the war would be over early in 1915.

Yet it might have been such a good book, had Professor Nicholson forgotten his indiscretions in the *Scotsman* and really set out to justify his title. There are glimpses of what might have been here and there, in the very careful argument as to the amount of inflation caused by the issue, or over-issue, of Treasury notes, and the consequent general depreciation; and again, in an essay on the coinage, with reference mainly to silver. But here there should have been a discussion of the rise in the price of silver, which has been one of the most curious features of recent finance. Again, in the various references to war bonuses and extravagance, we think that Professor Nicholson, while lamenting these bonuses and castigating those who demand them, does not make sufficient allowance for two essential factors—(a) the very narrow margin between wages and prices of a large section of the community, by which any rise in the price of food had to be reflected in the weekly wage; and (b) the rise in the standard of comfort of the working-classes before the war, and their reluctance to abandon that standard after 1914. It is easy to condemn, but have we not all sinned in the direction of unnecessary extravagance? The present reviewer, for instance, is guiltily conscious of a post-war purchase of a volume of Italian romance. That particular purchase would have been rightly condemned by Professor Nicholson; but the romance in question happens to have been written by one J. Shield Nicholson, although it finds no place in the list of publications accredited to the author on the title-page of "War Finance." Is he not an accessory before the fact?

Two other points might be made. It is said that the argument that war necessarily operates in the direction of raising prices is unsound, since wars have occurred which have not raised prices. The argument seems incompletely stated. War must always take men from productive to destructive work; it must therefore tend to diminish production and to increase consumption, and consequently to force up prices; the longer the war the more pronounced the effect, as the present war has shown, when prices rose very slightly during the first few months, and more rapidly as the war spread and more States called men from productive to destructive work. In some few wars, it is true, prices have not risen. Is not the apparent exception to the rule due to the fact that those wars have occurred in a period of generally falling prices, and that the universal tendency of prices to fall has been stronger than the local tendency of prices to rise? This point merits careful examination.

Again, the author makes a brief reference to post-war prices—a subject of incalculable importance, to the discussion of which a whole book might easily be devoted. It would be read with very great interest by statesmen, business men, and Labour leaders, all of whom are directly concerned, not only with the trend of prices after the war, but with the present very definite movement to turn war bonuses into regular increases of permanent wages. This latter, which is the direct opposite of the dilution of trade unionism, since the one strengthens and the other weakens the general position of Labour, will have considerable social consequences, and it ought therefore to be impartially examined by an authority. May we hope that the author will now write a real book, on Post-War Finance? There is room for it.

FIGHTING IN MACEDONIA.†

The battles of the Tcherna and the retreat from the Vardar in the autumn of 1915 are among the least known of the operations of the war. They did not strike the imagination like the national retreat of the Serbians in the same months; they led to nothing save to Salonika, which in itself has not inspired many writers. Yet this minor operation, as it now seems, deserved its historian, and this lively narrative is the first we have seen of the French campaign in Macedonia. It is a pity in some ways that these chapters should be cast in the form of fiction; they seem to lose a little of their verisimilitude, and they are essentially a narration of fact. Indeed, towards the end of the book, so thin is the disguise, that the censor has knocked out a couple of pages which might presumably have conveyed military information to the Bulgarians.

THE BREAK-UP OF RUSSIA.*

This well-informed and closely-knit essay, although anonymous, is the work of one who is thoroughly acquainted with Russia, both in its internal economy and its curious psychology, so remote from the spirit of France and England. The author divides his inquiry into three chief parts—the agrarian position, the political situation, and the religious crisis. As to the first, most of the facts will be new to Englishmen; as to the second, we are better informed superficially, but the exposition of the fundamentals of the situation helps towards an understanding of the confused telegrams we are receiving every day from Petrograd. The religious crisis has been rather overlooked or ignored, but in some way it is not less important than the political question, and here also the essay is full and satisfactory. It may be added that the book, which has already been published some weeks, comes on the whole to a pessimistic conclusion as to the future of Russia; and nothing which has happened since it was written has refuted its main arguments.

"Our Day" collections in India amounted to about £540,000.

General Korakas has been appointed Head of the Military Household at the Greek Court.

General Bordeaux, chief of the French Mission at Athens, has been appointed Inspector-General of the Forces.

A unique and priceless copy of the Koran has been stolen from the Petrograd Public Library by a party of soldiers.

M. Leon Melas, Secretary to the Greek Legation in London, has left for Athens on two months' leave of absence.

M. Embirikos, the Greek Minister of Food Supplies, will remain at his post, as his resignation has not been accepted.

The French Academy of Fine Arts has unanimously elected the Queen of Roumania a corresponding member of the Institute.

Advanced stores depôts of the British Red Cross Society and the Order of St. John have been opened at Jerusalem and Jaffa.

The Greek Minister of War has received special powers for reinstating on active service, when advisable, the officers who were recently retired.

Roumania has made a formal protest to all the Allies against the arrest of the Roumanian Minister and his staff at Petrograd, which is "comparable only with what might have been expected in the Middle Ages."

The Greek Minister, who was confined to his room with a severe cold at the commencement of the week, is now stated to be much better.

It is announced from Stockholm that Serbia has created the new post of Serbian Minister in Sweden. M. Rakitch, Chargé d'Affaires, has been appointed.

The King of Greece has conferred the Grand Cross of the Redeemer on Admiral Condouriotis, and has given a signed portrait of himself to M. Venizelos.

The Egyptian Government has appointed Mr. R. E. Monteith Smith, Assistant Director-General of Public Security, as controller of the distribution of petroleum for the duration of the war.

Prince Antonie Bibescu, First Secretary to the Roumanian Legation in London, has contributed an old Wedgwood tea service to the British Red Cross Society's sale, to be held at Messrs. Christie's, in April.

Colonel (temporary Brigadier-General) L. C. Dunsterville, C.B., Indian Army, Aide-de-Camp to the King, has been gazetted temporary Major-General whilst specially employed, to date from January 1.

Colonel N. T. Borton, C.M.G., who was obliged to resign his appointment as Military Governor of Jerusalem owing to illness, is now at Alexandria, slightly better, but it will be many weeks before he is convalescent.

Speaking at Rotterdam on January 21, M. Van Vriesland, Secretary of the Dutch Zionist League, said that the favour shown by the British Government to Zionist aspirations in Palestine was a fine victory for the Jewish movement.

Sergeant-Major Flora Sandes, of the Serbian Army, will give a brief description of her experiences in the Serbian trenches with the Serbian Army at a concert which is being organised to be held at the Alhambra on the afternoon of Sunday next.

In our issue last week the Lord Mayor was styled in error President of the Armenian Refugee Fund, instead of the Armenian Relief Fund. The address of the Armenian Red Cross and Refugee Fund is 35a, Elsham Road, Kensington, and all contributions should be sent to the hon. secretary, Miss Emily J. Robinson, at that address.

Mr. Alexander Vidacovitch, of St. John's College, Oxford, and the Belgrade Gymnasium, has been elected to a scholarship on the Casberd Foundation. Mr. Vidacovitch is one of the students maintained by the Serbian Relief Fund, and was elected in June, 1917, to an open exhibition in English at St. John's.

The *Egyptian Mail* states that Dr. G. A. Reisner, Director of the Harvard-Boston Egyptological Expedition, left Cairo last month for the Sudan, accompanied by Mrs. and Miss Reisner and Mr. W. G. Kemp. Dr. Reisner will continue the excavations upon which he has been engaged for several winters in Dongola.

The Postmaster-General wishes it to be known that the words "Ottoman Red Crescent Society, Constantinople, Turkey," should not in future be included in the address of correspondence, other than parcels, for prisoners of war in Turkey, unless the sender is unable to state the name of the place of internment.

A decree published in Italy provides that subjects of States at war with Italy must reside only in localities determined by the police authorities. Exceptions will be made in the case of Austro-Hungarian subjects of Italian nationality and non-Turkish subjects of the Ottoman Empire if there are no serious grounds for suspicion.

A deputation representing the Poale Zionists of Columbia, Missouri, met Sir Frederick Smith on his arrival there on January 16, and delivered through him the following message to Great Britain:—"We express our deep gratitude to Great Britain for the promise of a Jewish State in Palestine. English conquests have always been for the sake of civilisation, and after two thousand years of wanderings our race welcomes this promise in the cause of humanity."

Among the collections of arms, antiquities, and works of art to be sold by Messrs. Sotheby, Wilkinson, and Hodge, at their galleries in New Bond Street, on February 5, will be some Eastern arms and armour, Babylonian tablets, Græco-Phœnician glass, the property of Mr. Edwyn Barclay; and Egyptian antiquities, the properties of Field-Marshal Lord Grenfell, G.C.B., G.C.M.G., Dr. A. W. Orford, and the late Rev. O. A. W. O'Neill, Chaplain of H.M. Forces in Egypt.

The first lecture of a course of five on "The Feudal State of Ancient Egypt" was delivered by Mr. A. M. Blackman on January 8, at the Rooms of the Royal Society to the members of the Egypt Exploration Fund. The lecturer dealt with "Life on a Feudal Lord's Estate," and the lecture was illustrated on the screen with scenes from the wall paintings in the tombs of great Egyptian noblemen.

Sir Murdoch Macdonald, Adviser to the Ministry of Public Works, has returned to Egypt from England, where he arrived last summer on urgent business connected with the execution of public works in Egypt and the Sudan. It is understood that his negotiations with the Home Government in which he has been assisted by Colonel Bernard Pasha, Financial Secretary to the Sudan Government, have been most successful.

Gratifying reports are to hand, says the *Jewish Chronicle*, regarding the conditions of the Jewish colonies in liberated Palestine. The British authorities have supplied seed for new crops, and are helping in every way. A committee of Jews in Palestine has been organised to administer to the needs and the requirements of the Colonies. Local repatriation committees have been formed in Cairo, Alexandria, and Port Said under the name of "Shivat Zion" ("Return to Zion") for the purpose of organising the repatriation of Jews as soon as circumstances will permit.

At a meeting of the Anglo-Jewish Association held on the 12th inst. at the Great Western Hotel, Paddington, the following educational grants to its schools were voted on the recommendation of the Executive Committee:—(1) £100 to the Bombay School for the first half-year of 1918; (2) the grant of £30 to the school at Ispahan was renewed; (3) the sum of £51 was voted to the Palestine Refugees' School at Larnaka; (4) a special grant of 1,000 francs was voted to the Mogador Girl's School. The sum of £20 was voted for the purchase of materials required at the Palestine Refugees' School in Alexandria, at present managed by Miss Landau (of Jerusalem).

The Lord Mayor presided at the Mansion House on January 18 at a meeting of the Council of the Lord Kitchener Memorial Fund, when the Council received a report from the Committee appointed to deal with the proposal for a Kitchener Memorial Chapel in St. Paul's. The Committee stated that the Dean and Chapter had offered a fine site on the ground level of the Cathedral, and the Council accepted the offer with thanks. With regard to the scheme of Overseas Scholarships, Sir Hedley Le Bas, the hon. secretary, stated that twenty scholarships were being provided out of the Memorial Fund, the holders to be men who suspended their University careers in order to join the Colours on the outbreak of war. He added that two scholars had been sent to Cambridge, one each to Oxford and Edinburgh, and two to the Imperial College of Science.

We regret to learn that Archdeacon Potter, who left Cyprus last year with Mrs. Potter, on their return to this country by way of the Far East, has been detained by illness for many months in the United States. They hope to be back in England this spring.

APPOINTMENTS, PROMOTIONS, ETC.

Bimbashi Blunt, of the Military Works Department, has been promoted to the rank of Kaimakam.

Kaimakam A. Craufurd Bey, Western Arab Corps, has relinquished the temporary rank of Miralai.

Kaimakam J. J. B. Tapley Bey, D.S.O., Sudan Government, has been appointed to be Principal Veterinary Officer.

El Kaimakam C. H. Stigand Bey, Governor Upper Nile Province, has been granted the temporary rank of Miralai.

Kaimakams Russell Bey and Jarvice Bey have been promoted to the local rank of Miralai, which carries with it the title of Pasha.

The Order of the Nile, 3rd Class, has been conferred on Miralai H. Castle Smith Bey, Aide-de-Camp to his Highness the Sultan.

Captain Frederick A. L. Lawrence, Middlesex Regiment, has been taken on the strength of the Egyptian Army, with the rank of Bimbashi, and posted to the Sudanese.

His Highness the Sultan has been most graciously pleased to approve of the following appointments to the Order of the Nile, 4th Class, for valuable services rendered in connection with military operations in the field :—Kaimakam W. McConaghy Bey, M.B., Special Service; Kaimakam J. H. Pattisson Bey, Deputy Assistant Adjutant-General; Bimbashi R. N. Dobson.

OBITUARY.

SIR BEAUCHAMP DUFF.

General Sir Beauchamp Duff, whose death has just taken place, was in his sixty-third year, and was the son of the late Garden William Duff, of Hatton Castle, Turriff, Aberdeenshire. He entered the Royal Artillery at the age of nineteen, and saw service in the Afghan War of 1878-80. Following the conclusion of that war, he transferred to the Indian Army and passed through the Bengal Staff College. His subsequent experience of Indian campaigning was seen in the Isazai Expedition of 1892 and in the Waziristan Expedition of 1894. He greatly distinguished himself in these campaigns, and his services in the South African War marked him out as a coming man. Returning to India, he became Deputy Adjutant-General to General Sir Power Palmer, then Commander-in-Chief, and, after holding the Allahabad command, he was appointed Adjutant-General on Lord Kitchener's staff, a position he subsequently exchanged for that of Chief of Staff. After Lord Kitchener left India, Sir Beauchamp Duff went to the India Office as Military Adviser of the Secretary of State, and he retained that appointment until 1914, when he became Commander-in-Chief in India in succession to General Sir O'Moore Creagh. Sir Beauchamp Duff was created C.I.E. in 1897, C.B. (Military) in 1900, K.C.V.O. in 1906, K.C.B. (Military) in 1907, K.C.S.I. in 1910, G.C.B. (Military) in 1911, and G.C.S.I. in 1916. He married in 1877 Grace, daughter of Oswald Wood.

The death has taken place at Calcutta of Dr. William Cardiff Hossack, Port Health Officer.

Mr. Thomas Anderson, A.M.I.C.E., late of the Royal Indian Marine, who has died at Glasgow, was formerly Chief Inspector of Machinery at the Government Dockyards at Bombay and Calcutta.

Mr. Lawrence Graham Cloëte Graham, late of the Consular Service, who has died at Westfield, Sussex, in his fortieth year, was appointed Vice-Consul at Teheran in 1905, and two years later was transferred to Algiers.

Colonel George Fletcher Ottley Boughey, C.S.I., late Royal Engineers, who died on January 17, aged 74, served in the Bhutan Expedition of 1865-6, and in 1869 joined the Public Works Department. He subsequently served continuously in the Railway Branch until his retirement, except for service in the Afghan War of 1878-80. He was manager of the Eastern Bengal Railway for seven years, and afterwards of the North-Western Railway for five years.

The death occurred recently of Mrs. Beynon, widow of Major-General William Howell Beynon, for many years Political Resident of Jeypore, Rajputana. Mrs. Beynon was the third daughter of General Sir George St. Patrick Lawrence, and niece of Lord Lawrence, first Viceroy of India, and of Sir Henry Lawrence, who was killed in the siege of Lucknow. Her three sons, General Sir William Beynon, Brigadier-General Norman Beynon, and Major Patrick Beynon, are all serving.

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

FRIDAY, JANUARY 25, 1918.

THE ALLIES AND THE SOUTHERN SLAVS.

In the compass of a single article it was not possible at the time to deal at length with all the points that gave rise to discussion in Mr. Lloyd George's speech of January 5 on British war aims. To meet certain criticisms which were to be expected, emphasis was laid on the fact that war aims are not synonymous with peace terms, and we contented ourselves with adverting to the most notable departure from previous official statements of the objects for which the Allies are fighting, namely, in regard to the future of Constantinople. Elsewhere in the same issue, however, attention was called to the references to Austria-Hungary, both in Mr. Lloyd George's speech and in President Wilson's Message to Congress, which followed it three days later, and the suggestion was hazarded that they would not be likely to escape comment in the Jugoslav Press. As the event proved, the Jugoslav Committee in London lost no time in issuing a memorandum on the subject. While expressing appreciation of the speech of the British Prime Minister and of President Wilson's Message "as revealing a sincere desire for a just and lasting peace in accordance with the principle that territorial rearrangements must be based upon government with the consent of the governed," this document declares that Jugoslav people (Serbs, Croats, and Slovenes) cannot be satisfied with those parts of the speeches which refer to them. The causes of the discontent of the subject peoples of Austria-Hungary, it is pointed out, cannot be removed by the hope of an altogether problematical democratisation of Austria-Hungary on the basis of autonomy alone. The Declaration of Corfu, the Committee claims, constitutes a national programme for all Southern Slavs, who demand, and are fighting for, complete separation from the Dual Monarchy, and union with Serbia and Montenegro in one State on the basis of democratic freedom and equal rights for all citizens.

It is of interest at this stage to examine the actual words used by Mr. Lloyd George. He said:—

> Though we agree with President Wilson that the break-up of Austria-Hungary is no part of our war aims, we feel that, unless genuine self-government on true democratic principles is granted to those Austro-Hungarian nationalities who have long desired it, it is impossible to hope for the removal of those causes of unrest in that part of Europe which have so long threatened its general peace.

Now these words, taken in conjunction with the second of the three conditions subsequently laid down by Mr. Lloyd George as indispensable to permanent peace—"a territorial settlement must be secured based on the right of self-determination or the consent of the governed"—would, of themselves, not have aroused misgivings among the Jugoslavs. They happened, however, to be placed in juxtaposition to some very definite statements in regard to Italy and Roumania, and they were followed, as we have seen, three days later by President Wilson's more formal attempt to elaborate "a programme of the world's peace." To the Italians Mr. Lloyd George promised satisfaction of their legitimate claims for union with those of their own race and tongue. Similarly, in regard to the Roumanians, "We also mean," he said, "to press that justice be done to men of Roumanian blood and speech in their legitimate aspirations." The contrast between these promises and the references to the Southern Slavs would not have been regarded as intentional, if President Wilson's carefully-chosen phraseology had not seemed to justify the worst forebodings. The tenth item in his peace programme read:—

> The peoples of Austria-Hungary, whose place among the nations we wish to see safeguarded and assured, should be accorded the first opportunity of autonomous development.

Inasmuch as President Wilson has found it necessary to correct the only interpretation that could be placed upon his remarks regarding trade policy after the war, it may be that too much stress ought not to be laid upon the actual wording of this paragraph. As it stands, the expression "autonomous development" points to some form of autonomy within the Austro-Hungarian Empire, which would clearly not be the same thing for the Southern Slavs as the creation of a federal State of their own in conjunction with their kinsfolk of Serbia and Montenegro.

We feel the liveliest sympathy with the Jugoslavs that they alone of the smaller nationalities should be left in the least doubt regarding the resolve of the Allies to see the war through as much on their behalf as on the behalf of others. There is, however, we are confident, no need to despair at this stage, even if it should be found that the statements made by Mr. Lloyd George and President Wilson reflect a somewhat detached attitude on the part of the Allies towards the Southern Slav aspirations. In the first place, the wishes of the governed have to be ascertained, and a stickler for correct procedure may well insist that a self-appointed committee, however representative, can hardly be accepted as the equivalent of a plebiscite of eight million people. Secondly, the whole question of the future Southern Slav State seems still to bristle with so many difficulties that a harassed statesman may be exonerated, if he feels tempted to avoid any chance of getting out of his depth by treading carefully round the edge of it. For our own part, we believe that all such fears are wide of the mark. The Austrian problem cannot, any more than the Italian or the Roumanian problem, fail to respond to the touchstone of the principle of nationality. Anything short of a full understanding of the problem might well argue, in the circumstances, that with an entirely regenerate Austria, from which all Prussianism has been exorcised, life will prove more agreeable to the Southern Slavs, with all the opportunities attaching to partnership in a Great Power, than if it be circumscribed within a Balkan State. To those who have knowledge the idea is foolishness, and in the end, we feel sure, will be demonstrated to be so. Austria-Hungary will not accept of herself to be so bolstered up; further, it is most undesirable in the interests of the peace of Europe that she should be. If the Central Powers remain after the war as strong territorially as they were before the war, they will hold that victory has been theirs. Moreover, they will form as powerful a nucleus as ever for the further hatching of plots against the peace of the world. It is conceivable that Germany and Austria-Hungary should agree to sacrifice the Trentino in order to maintain the Central Europe *bloc* intact, with its lien on the East. But the defeat that is going to crush Prussian militarism and to enforce the assent of the Central Powers to the abandonment of their dreams of Eastern conquest is going to be potent enough to secure a separate existence for the Southern Slavs. Let the latter therefore take heart even when Allied statesmen seem lukewarm towards them, and, avoiding the details of their own complex programme, let them hold firm to "the right of self-determination or the consent of the governed," on which their case rests securely enough. Too ardent propaganda is to be deprecated, nor must an unreasonble attitude be maintained towards a problem which is admittedly of many sides. They have difficulties within that require to be smoothed over; let these receive as much attention as the difficulties without, and in the end the cause of justice and right will triumph.

"JERUSALEM, THE BLESSED."

"*Our feet shall stand within thy gates, O Jerusalem!*"

"Jerusalem has surrendered!"

The news that was flashed across the sea to England on December 10 filled every heart with happiness and gratitude, of which the ringing of the bells and the special thanksgivings in each church were but the outward sign. All the civilized world rejoiced with us—I use the word "civilized" advisedly, as being directly opposed to "*Kultur*." Jerusalem has ever had a special place in the heart of the West, but there is this special quality in the love of England for Jerusalem: we have loved her as individuals, not politically at all. Many a time, during the years of Turkish rule, English residents have longed that their country should speak as a country, and show the people what British power is. Where every other European Power struck an attitude more or less impressive and made itself felt as a Power, the greatest Empire that the world has seen was content to show herself in Palestine very literally as one that serveth. British work in Palestine has been purely philanthropic; not one building, not one institution, has ever received a farthing of Government aid; on the contrary, each (pursuing its way often in some uncertainty as to where the day after to-morrow's daily bread would come from) is the result of individual beneficence, of individual affection for the Holy Land. Queen Victoria, King Edward VII., Queen Alexandra, gave their gifts to the English Collegiate Church of St. George at Jerusalem in the same quiet, personal way.

This personal, or individual, note appeared very plainly in the manner of our thanksgiving. Every church rang its bells and offered up its thanks and praise for this great mercy, but no public thanksgiving was ordered by our rulers, whether of Church or State. The solemn Te Deum sung at St. Paul's after evensong on December 11 was the expression of the deep feeling stirred in every individual heart by the occasion; the Cathedral was packed from end to end and from side to side with worshippers, many of whom can never have seen Jerusalem, but who were there for love of her. The whole Empire was stirred, the whole Empire was one in thanksgiving. Though Jerusalem must ever mean more to the Christian than to members of any other creed, our Moslem and our Jewish fellow-subjects rejoice with us over her freedom who has borne so long the shackles of a cruel bondage. "*Sursum corda!*"

But now that the first flush of our joy has calmed down a little, we can get a truer idea of the great event as a whole. The campaign itself, up to the present moment, has been unique in interest, compelling our attention and standing out in our minds as a series of clear-cut events, despite the overwhelming magnitude of doings on the Western Front. The long, silent months of preparation, during which a contemptible little English army conquered a very stubborn desert and made it its ally, were followed by sharp, hammer-like blows, each one of which has been a fresh nail in the coffin of Turkish supremacy. I do not forget the checks we have met, but it is, I think, a fact that these very checks have been more to our advantage in the long run than to our discredit. The Eastern mind will be the more impressed by the untiring determination of England, who, checked here and apparently defeated there, simply returns to the same point, achieves where she had failed, and passes on to greater things. This calm intensity of purpose is more terrible to the impulsive Eastern temperament than anything else; and the East has had two stern examples of it lately—after Kut, Baghdad; and after Gaza, Jerusalem.

We need not dwell on the dignified entry into Jerusalem, great as is the temptation to do so, for we have the tale by heart. Jerusalem surrendered willingly, gladly, to the English, for whose help she had yearned so long. General Allenby walked in at the Jaffa Gate, ignoring the unhonoured breach made in the wall for the Kaiser; he entered quietly, as a son might claim his heritage in the mother city of the nations, while the reminders of conquest and of far-off England's might were visible in the guard of soldiers drawn from every part of the Empire for the service of Jerusalem. There was no dissembling of the people's joy; their deliverance had come, and with heart and voice they thanked the God whose arm had wrought it. With the English general walked the representatives of France, America, and Italy, in solemn manifestation of our unity both as Christians and as Allies. Truly, Jerusalem is the mother of us all, here as well as hereafter! And yet, with this fine example of unity, came the one little cloud upon that perfect day. Russia was absent—distracted Russia, suffering as few nations have to suffer in the pangs of her new birth; Russia alone had no part in the freeing of the city that is so dear to every Russian heart. It is sad that there was no son of the Orthodox Church, which is the Church of the land, to enter Jerusalem side by side with the sons of the sister Churches of the West. I think it will be a lasting grief to Russia, when she is able to realise anything outside her own condition, that she had no share in the freeing of Jerusalem.

General Allenby's proclamation strikes us as a real inspiration. Every word breathes the reverence for things sacred, the mercy, the justice, and the vision, that are typical of England's dealing with the conquered. As India and Africa have proved these qualities, and now attest them, even so, please God, is Palestine also to learn the meaning of English rule. All who know their East will appreciate the proclamation. It is perfect, from the opening words of its address—"To the inhabitants of Jerusalem the Blessed"—to the solemn promise that "every building, monument, holy spot, shrine, traditional site, endowment, pious bequest, or customary place of prayer, of whatsoever form of the three religions, will be maintained and protected according to the existing customs and beliefs of those to whose faith they are sacred." We all rejoice that the Mosque of Omar has been preserved to the Moslems, who have always tended it with such reverence and care.

"*Kilmat Ingliziyé*—the word of an Englishman!" The people of Palestine will learn now by glad experience how sacred is the word which they have trusted and quoted for years with an extraordinary faith. It may be that many of them think it all too wonderful and too good to last. It is true that there is still war in the land. English soldiers are fighting and dying day by day "for the peace of Jerusalem." But in Jerusalem there is rest. The people are working contentedly under a just overseer; roads are being repaired and paid for, and to be paid for roadmaking is surely a unique experience for the Palestinian fellah. Behind the British lines the people are out ploughing and sowing. December is the right month for this, and if only we can get a good harvest in May, half the fears of the country will be allayed. In former days 20 per cent. of the grain raised in Palestine sufficed for its needs, the rest being exported. Knowing this, and knowing that starvation has been abroad in the land, we are shocked by this fresh proof of Germany's guilt in seizing the grain of Palestine for her own use.

We rejoice that there should be peace for the people of the land under the Union Jack; but what of the large and prosperous German colonies planted here and there? These have not failed and starved, though Palestine has, and by their smug prosperity they stand most shamefully convicted. Why should they enjoy the peace and benefit of English rule? The thought is objectionable, and becomes increasingly so when we contrast their quietness with the tragedies of Serbia and Belgium. One longs for these German colonists and settlers in Palestine to be expelled (the natives, as a whole, greatly dislike the Germans, and would not raise a finger in protest), and for their trim colonies to be given over to the Jews. It may be urged that these Germans are merely harmless shopkeepers and agriculturists. No German is harmless; if he is not a fighter, he is a propagandist. During the Boer War the German residents in Palestine manifested such an intense hatred of the English that it was practically impossible for us to go into German shops. Again, at the very time that the first Indian contingent was landing in France, the Germans stuck placards on the walls of Jerusalem saying that India was in open revolt against Great Britain. A high German official at Jerusalem stood at the Jaffa Gate to distribute leaflets printed in German, Arabic and Turkish, describing British "atrocities" in Belgium. That, after three years' active anti-English propaganda by the Germans, the people of Palestine are still whole-heartedly for us, believe in us, and welcome us, is the most convincing proof there could be of the depth and sincerity of their feeling for England. But it does not lessen the German peril. Their hatred of the English has grown in them with time, and will be sharpened by each English success in Palestine. A lying hatred such as Germans have manifested everywhere during the war *is* a force to be reckoned with. "We have one hate—England!"

We turn with relief from a subject so distasteful to the thought of the liberated city. It is hardly a month since the surrender of Jerusalem, but already some of the darkness has lifted—and, we hope, for ever. The people will rise to work in confidence, and lie down to rest with quiet hearts, so long as they feel the protection of England about them. No doubt some stubborn fighting lies ahead of the army in Palestine, but we can face the future without dread. In all the three dark years of war there has been no such *visible* manifestations of the Hand of God as when Jerusalem surrendered herself to the army of liberation. If, as we truly believe, England is destined to guard the city she has been permitted to free, as a trust

Digitized by Google

for the rest of the world, we know very well that it will be no easy task. Jerusalem is served in suffering always; the shadow of the Cross lies upon her still, for judgment and for healing; no crown is worn in her save the crown of thorns. We cannot read the story of Jerusalem in any period without this tremendous fact being brought home to us. We must realise the full significance of the burden that may be laid upon us as a nation; and if the welfare of Jerusalem be entrusted to us, we must accept the burden soberly and willingly. Our English dead of many generations lie scattered throughout the Holy Land; there will be other British graves before the Holy Land is really freed. We have not shrunk from the sharp pains of sacrifice, neither will we shrink from the continuous pain of service.

O City, sorrowful, yet full of grace!
The sinking sun adorns
With a celestial smile thine altered face
Beneath its crown of thorns.

The heavy storms of rage and sorrow beat
Around thy sacred heart:
Thou hast a deadly wound; yet strangely sweet
And beautiful thou art.

And thou hast drawn from all the colder lands
Beyond the northern sea,
Hearts burning for thy wrongs, and eager hands
To fight for God and thee.

("Death at the Goal."—B.M.)

ESTELLE BLYTH.

EARLY MESOPOTAMIAN ART AND CIVILISATION.

Lecturing at the Royal Institution on January 22, Professor Flinders Petrie said that Mesopotamia, like other fertile valleys, had always been the prey of the more hardy peoples around it. The Turk had been the last holder; before him there had been the Arab, the Roman, the Parthian, the Greek, the Persian, the Assyrian, the Kassite, the Semite, and, remotely, the Sumerian. These had descended in turn on the Babylonian plain, but with a kind of Chinese persistency, the civilisation of that plain had dominated each in turn. The art and literature of the Sumerian had been adopted by all his early successors, and the science and business which grew up there was the science and business of the whole world now. Before the domination of Islam there was a long struggle of centuries between Persia and Rome for the great plain that parted them. Our view of the greatness of Persia and its splendid civilisation had unfortunately been clouded by our dependence on its enemies, Rome and Greece, for our accounts; but if we could have as full a record from the Persian side, we should feel that Mesopotamia was the natural appanage of the mountains that towered on its eastern border. When Shapur entered Antioch and appointed a Roman, Cyriades, to rule the border as his satrap, he did the best thing for the country. The attack by the Emperor Valerian, who capitulated at Edessa, and lived a captive ever after, did not mend matters from the Roman point of view. A huge, rock-cut monument showed Valerian kneeling before Shapur. It was excellent work, equal to good Hellenistic carving, and above what Rome could do in that age. We ought to know much more of this age in order to trace the effect of Persian art on the West.

Of the ancient Persian Empire, Professor Flinders Petrie said that it was the first great Aryan dominion, and extended from the heart of Macedonia to beyond the Indus. Through all this extensive region there was the peace of the great king from end to end. In the fields of thought, justice, and religion it gave a higher ideal than that of any previous rule. There was the least possible interference with the various countries included, the twenty satrapies each administering its own affairs very often by the old hereditary ruling family. The result was a general welfare of the world which had, perhaps, only been equalled under the Antonines. The civilisation fostered was worthy of the Persian Empire's position. The care for health was far advanced. At the time when the Greek had reached the improvement of a ledge in his drinking cup to keep back the grit, the Persian was boiling all the water supplies of the court in silver cauldrons when on campaigns. In art, also, Persia led the way. It was the fact that 200,000 of Xerxes' warriors were left behind in Greece to become slaves, and were drafted into the mechanical arts which were despised by the free-born, which explained the sudden burst of advance which Greece made in the fifty years from the Persian to the Peloponnesian wars. This event was to Greece what the sack of Corinth was to Rome.

Subsequently the lecturer traced the development of Mesopotamian civilisation, going back step by step to the most remote ages. The most permanent achievement of the Sumerian, he said, was the establishment of the commercial system and of sexagesimal division. The accounts, partnerships, loans, pledges, partition of profits, credit for goods, and other formulas of modern commerce were all descended from the Sumerian.

Some extremely interesting lantern slides illustrated the lecture. One of these showed the carved ivory handle of a flint knife found in Egypt. This was dated about 6500 B.C. and was of entirely non-Egyptian work. Apparently it came from Elam, whose capital was Susa, on the Tigris. It was an exquisite piece of carving, far in advance of anything produced in Egypt at that age.

THE PRESS ON THE NEAR EAST

Palestine Problems.

Writing in the *Nineteenth Century*, Mr. Walter Sichel utters a timely warning that the problem of Jerusalem delivered has not been settled for all time by General Allenby's tactful proclamation. Some very rude awakenings are likely to be in store for the world, if the more intricate questions of foreign policy are to be decided by the *obiter dicta* of a Labour Conference. Mr. Sichel writes:—

But the British entry raises more mundane problems than the literalisation of prophecy so dear to the parish-heart, and amid just and general rejoicing it may be well to indicate two of them. Great Britain rules over a vast Mussulman population, and in that sense she is a great Moslem Power. How will the Moslems, long jealous of the shrines, accept the change? General Allenby acted like a statesman in appointing Mahommedans to guard these sacred places which by prescription they protect, and he also showed wise insight when he entered on foot the city that he had won. It is said that a soothsayer so predicted, but in any case, if the East loves splendour, nothing more constrains it than modest strength. But it will not always be General Allenby. Downing Street is notoriously imperceptive, and constantly its outlook is coloured by the politics of the hour. It will never do to see Palestine through the spectacles of extreme democracy or of any one Church or Conventicle. If the Turks have been our enemies, it is not all of them that desire to be so, still fewer that relish their present league with Germany, and millions of Moslems look up to us that are not Turks but Indians or Arabs. The way in which Jerusalem is to be the centre of government will require considered and considerate handling. It must not be forgotten that our triumph coincides with prevailing tentatives towards Indian home-rule (misliked by many a loyalist) and forecasts of some eventual Arab administration in Mesopotamia. Mahommedan susceptibilities will thus become doubly sensitive and in divergent directions. The one group will dread sedition, the other interference. What is this but to afford a playing-ground for any foe of the future whose motto is to divide and conquer? Unmitigated, absolute, "democracy" is no ruler of Empire. A sensitive touch, a firm grasp, an intuitive world-mind are requisite. Ask any really impartial and well-versed Anglo-Indian, any of our tried Eastern pro-consuls, and he will confirm this outlook. Let us beware of a House-of-Commons Downing Street in Jerusalem, nor forget that the due apportionment by treaty of the wardship of its shrines afforded the pretext—the apple of discord—for the Crimean War. Let not Jerusalem, the peace-altar, endanger, through "pacifist" doctrinaires, the peace of mankind. The British Empire, if it will only emerge strong, resolute, united, is the safeguard of the world.

Again, how will the "Zionist' hope take shape? Can it prove compatible with conditions immune from political intrigue, quite apart from any and many other considerations? Such, as we have seen, is not the lesson of the past. Will Jerusalem cease to be "the theatre of nations," will, too, the tribes of the Lebanon cease to profit by ferment? To many it will seem that a Jewish State—even were that inherently a likelihood—would be impracticable, if it is to be formed out of a polyglot crowd. the exiles of persecution—as impracticable as it was in the days of the "Dispersion," when the citizens of the world thronged Jerusalem only once a year. It would prove a Babel of tongues and discords, an assemblage of Russian and Polish and Armenian internationalists that, in perhaps forwarding the creed of Lenin and the politics of Geneva, might afford a new centre for those Teutonic machinations which even now are busied in setting the Crescent against the Cross. In such a medley, presided over by mediocrity, the dregs of German Jewry, always industrious, often vital, might prevail.

Mission Work in the Near East.

The *International Review of Missions* publishes some interesting details in a review of the past year, from which the following extract is taken:—

Notwithstanding the severance of diplomatic relations with Turkey through the entry of America into the war, local Turkish officials have been friendly, and American missionaries are held to be in no danger of violence at their hands. Up to September forty-nine missionaries and ten children were in Asiatic Turkey occupying thirteen stations; at five of these there was only a single brave woman carrying on relief work among thousands of refugees, mostly women and children, in the face of privation and surrounded by dread disease. The fatality among the native pastors, teachers and workers has been terrible; only a small number remain alive. Some have fled to Russia and Persia and others to America. All the district work in central and eastern Turkey has been suspended throughout the year, and very little has been carried on in the large centres. Many of the larger churches and all the hospitals have been taken over for medical purposes by the Government and filled for the most part by the military, among whom disease is rife. The American Board is shaping its

plans for a reoccupation of Turkey as soon as opportunity is given. There have been manifest conversions of Moslems to Christianity during the year, and in Smyrna and Constantinople the schools have had an unprecedented number of Moslem pupils, in many cases representing the high official clases. There seems to be little persecution of Moslem parents who send their children to Christian schools.

TANGIER TO TEHERAN.

The announcement issued by the War Office about the damage done to the Hejaz Railway by our Arab allies affords me particular satisfaction. For purely sentimental reasons I have always regretted the passing of the Caravan and the substitution of the smoky, rattling Engine for the gurgling Camel and the Mule with its melodious bell; and the idea of a railway in the Arabian Desert has jarred badly on my nerves. So, although the Engine is bound to triumph in the long run, I welcome this check to its advance—especially as it will annoy the Turco-Germs quite a lot! According to the report, the work seems to have been efficiently done. Perhaps the Arabs, who are an imaginative people, as we know, have a corps of Railway Wreckers recruited from muleteers and camel-men who have been robbed of their means of livelihood by Progress?

***

The statements made by Talaat Pasha and Baron von dem Bussche, regarding Turco-German "sympathy" with Jewish aspirations in Palestine, have fallen distinctly flat, as I felt sure they would. The leader of the Jewish Socialist World Alliance, M. Kaplansky, has spoken in no uncertain manner on the subject. He refers to "Turkish unfriendliness" and of the "restrictions applied to Jewish colonization in Palestine" during the war as "having assumed the character of a campaign against Zionist intellectuals." He is unkind enough to remind Talaat and his Prussian Brilliant Second that the Hebrew Press and language have been persecuted; that the Zionist intellectuals have been banished to Asia Minor and elsewhere; that they have been forbidden to purchase land; and that "the Jewish population have been evacuated without the slightest reason." In short, the Jews in Palestine have been made to feel that they were strangers in a strange land; and M. Kaplansky points out caustically that, "after these bitter experiences, a great deal more than platonic declarations by a Turkish Minister is needed to reassure the Jewish people." I now await a similar declaration on behalf of the Armenians regarding Javid Bey's announcement!

***

Any plain man must surely find it very difficult to understand the working of the Bolshevist mind. Indeed, it is questionable whether the achievement is not entirely beyond mortal man, though it may be within the powers of the German "supermen." But it appears to be tolerably certain that one of the guiding principles of the Bolshevist is to attack your allies and to eat dirt out of your enemy's hand. As to the dirt-eating process, I do not propose to say anything; if Messieurs Lenin and Trotsky have a taste for such a diet, I suppose they will gratify it as long as they have the power to do so. But when it comes to arresting the Roumanian Minister and talking about arresting the King of Roumania, that is another story. If the Bolshevists wish to convince the world that they really are the paid tools of Germany, they have gone the right way to do it. On no other ground can the insult to King Ferdinand and his country be explained. Trotsky and Lenin may seem to be as inconsequent and as irresponsible as a pair of music-hall "knockabouts"; but, like the "knockabouts," they know quite well what they are after.

HOUSE OF LORDS.

Great Britain and Persia. Jan. 21.

Earl CURZON, replying to a question by Lord LAMINGTON as to whether any information could be given as to the present position and future prospects of the South Persian Rifles, and whether the Government could inform the House as to the present position of the Anglo-Russian Convention of 1907, said: I think that there has been some misconception about the character and service of the South Persian Rifles, which are under the command of Sir Percy Sykes. For several years there has existed in the southern portions of Persia a police or gendarmerie force, whose main duty was to preserve order and to guard the principal trade routes. Up to, and even after, the beginning of the war this gendarmerie was commanded by Swedish officers. With their disappearance in 1915 the force itself was dissolved, and disorder once again raised its head. The Persian Government recognised the necessity of creating a new force to take the place of the disbanded gendarmerie, but at the time were unable themselves to undertake the task. They therefore formally accepted the offer of his Majesty's Government to place at their disposal a number of British officers for the purpose. A great number of the old gendarmerie were re-enlisted; the force was strengthened, its headquarters were established at Shiraz, and the effect was speedily visible in the return of local security and the revival of trade. But the force continued to be what it was in its inception, what it will, I hope, always remain—namely, a Persian Force. The most assiduous attempts have been made by pro-German elements, with whose devices we are now so familiar, to represent this force as a part of the British or Indian Army, and as engaged on a military occupation of that country. Of course, it is nothing of the sort. It is Persian in character, composition, and allegiance, and the first to suffer from its disappearance would be Persia itself.

This point has been continually placed before the Persian Government by the British Minister at Teheran, and, in spite of much interested misrepresentation, is generally recognised by Persian statesmen. Guarantee of the sincerity of British intentions has been furnished by our willingness to discuss with a friendly Persian Cabinet the future of the South Persian Rifles when the war is over. We desire Persia to remain neutral during the war and to retain its complete independence after the war. There should be no difficulty in finding a solution of the question that will fulfil the triple criterion of satisfying Persian national sentiment, providing for the safety of the roads, and protecting the legitimate interests of trade. Without the existence of such a force the authority of the Persian Government would itself be imperilled. The sole aim of the British Government is to render it an effective unit in the military resources of the country. The matter is one to which, in consultation with our able British Minister at Teheran, Sir Charles Marling, his Majesty's Government have devoted, and are devoting, very earnest and sympathetic considerations.

The Anglo-Russian Agreement of 1907 was intended not to impair the integrity or independence of Persia, but to put an end to the long-standing rivalry between the two great outside Powers in Persia. Whether it was a good or bad agreement, it certainly did not fail in its principal object. Nevertheless, there were many who lost no opportunity of representing to the Persian Government that what was in its essence a self-denying instrument was secretly inspired by a hostile purpose, and was aimed at the territorial integrity or political independence of the Persian Kingdom. There was no foundation for these beliefs at the time. I desire most categorically to repudiate and deny them now. Further, the great change in the situation produced by recent events in Russia has given to his Majesty's Government a welcome opportunity of testifying their sincerity in this respect. In the absence of a stable Government in Russia it has not so far been found possible to discuss the matter with that country. But we have informed the Persian Government that we regard the agreement as being henceforward in suspense, and as soon as the conditions to which I have referred are satisfied we shall be ready to reconsider the whole question.

HOUSE OF COMMONS.

Ex-King Constantine. Jan. 17.

Mr. LYNCH asked whether ex-King Constantine was the centre in Switzerland of a group of pro-German propagandists, which included noted enemies of the Allies, such as the ex-Khedive of Egypt, M. Theotokis, who, while the representative of Greece at Berlin, plotted to bring his country under German domination, and Dr. Streit; whether this group was in constant communication with the ex-Chancellor von Bülow and Prince von Hohenlohe, the chief of the German propaganda in Switzerland, and that to its activities were in part due the reverses of Italy and the defections of Russia, and whether any steps were being taken to counteract these forces?

Mr. BALFOUR: My information is in general agreement with the hon. member's question. All steps are being taken to deal with the matters referred to.

ROMAN REMAINS IN THE NEAR EAST

On January 15, at the London County Council School of Building, Clapham, Professor Beresford Pite delivered his second lecture dealing with architecture, building, and town-planning in Near Eastern countries, speaking chiefly of the Roman remains of Damascus, Palmyrus, Baalbek, Gerasa (the ancient Jabesh Gilead), and other cities. He said that the Roman style of architecture was the same from Britain to the Parthian frontier; there were the Corinthian column and Roman cornice; there was no change in the carving or moulding. So also with the town-planning—the same principles were universally applied. When the Romans founded an entirely new city the ground plan was the same as that of a camp. When they took possession of a city already standing, if well built, they let it alone; but Damascus and most of the cities of the East were not of this type. Damascus was one of the most ancient of cities; Abraham had a steward there. There was no other city in the West or Middle East of which we had cognisance that had for so long had a continuous active life. In Damascus, as in other ancient cities, the centre was a great temple site. The Kaaba at Mecca and the Capitol at Rome were other examples of the same sort of thing. The temple of ancient Damascus was dedicated to Rimmon. The Romans, by their religious system, made a place in their Pantheon for the gods of conquered nations, and Rimmon was without difficulty turned into a phase of Jupiter. A similar thing happened at Baalbek, where the Romans built a great temple to Jupiter Heliopolis to replace the temple of Baal. Of that early temple nothing remained, but a good deal had survived of the temple of Jupiter. Taking, then, a spot near the temple, but not the temple itself, as the centre of the town, the Roman custom was to drive two great streets at right angles through the city. At Palmyra, where the town itself had disappeared, these Roman streets in great part remained. The remains showed that anciently there was a raised central causeway for chariots. This was thirty-seven feet wide, and was flanked by rows of columns fifty feet high. Beside the causeway were the sidewalks, each sixteen feet wide; these were also colonnaded and, moreover, covered in. At each entrance to the town there was a triumphal arch, and at the intersection of the streets in the centre were other triumphal arches. Sometimes, though not at Palmyra, this central area was entirely vaulted in. Passing through a town thus treated, one saw nothing but these magnificent streets. Mud and turf built houses and shops, every kind of architectural irregularity, was concealed behind the colonnades.

Interesting lantern slides illustrated the lecture. One showed a part of the Roman wall of Damascus still standing, and the gate through which Saint Paul was taken into the city. The great gateway had been built in, but one of the smaller gateways through which one of the sidewalks of the ancient street had passed remained, and now served for every kind of traffic. The Roman colonnades had gone; and another slide showed how in quite modern times the main streets of Damascus, and some of the minor ones also, had been entirely covered in. Other slides showed the beautiful Roman church with which the Emperor Theodosius replaced the temple of Jupiter, that had succeeded to the temple of Rimmon. This church had itself, in its turn, been taken by the Moslems, who converted half of it into a mosque.

Of Damascus as it is to-day, the lecturer said that the present architecture of the city was clean internally. The most unpleasant exteriors would present charming courts inside. There was abundance of water; consequently there was always a fountain or well in the court. There was cleanliness and a great deal of up-to-date convenience and charm about the interior life of Damascus, and house rent was exceedingly cheap. It was a highly prosperous commercial city, and a most desirable place of residence from many points of view.

Speaking at the London County Council School of Building, Clapham, on January 22, Professor Beresford Pite said that few subjects had been so important in the history of cities as the shifting of the foundation of the mother city of the Roman Empire in 328 A.D. The site had very many advantages, including that of being a place of extraordinary military strength; and when Constantine selected it there was already existing the nucleus of the city—public offices, an imperial residence, temples, theatres, and baths. The nature of the site, roughly a triangle between the Sea of Marmora and the Golden Horn, made it impossible to carry out the conventional Roman plan of driving two fine streets across the centre of the city at right angles to each other. A great forum was built outside the existing wall. From this a road led to another forum, from which three other roads diverged to the gates in the new wall which defended the city on the landward side.

The lecture was illustrated by lantern slides, some of the most beautiful showing the church of Santa Sofia. The architecture of this church, said Professor Beresford Pite, contained nothing Saracenic except the minarets which were no part of the original plan. When rebuilt by Justinian on the site of an earlier church, founded by Constantine, it was an entirely new type of Christian church. An earlier church was that of Saints Sergius and Bacchus, and from this some of the ideas developed in Santa Sofia had been borrowed. In these circular-domed churches the architect was free from any tradition not a Christian one.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

I have already referred to the recent outbreak of commercial activity in Turkey, which is designed according to those responsible for this unusual show of enterprise in a country hitherto noted for its lethargy and industrial inefficiency to promote the country's trade activities after the war. It is interesting to learn in this connection that the textile industry is one of those singled out for special attention, and that at least three companies have already been formed for the purpose of starting cotton and woollen mills. The principal company, which has a capital of £T100,000, proposes to erect a cotton-weaving mill at Konia, while another company, with a capital of £T60,000, is to establish a cotton and wool-spinning mill at Angora. These enterprises, it seems, are to be regarded merely as the commencement of a serious attempt to establish this industry, and if that is the case our manufacturers of spinning and weaving machinery may find a fairly profitable market in Turkey after the war. Apart from this aspect there is nothing in this development that need concern us, for it is in the highest degree improbable that Turkey could ever manufacture cotton and woollen goods of a quality that would enable her to compete with British manufactures.

***

This week saw the issue of the first report of the British Trade Corporation, whose *raison d'être* is to provide financial facilities for trade after the war. The report, which covers the eight months down to December 31, briefly refers to the initial operations of the institution, which have naturally been very circumscribed. The period has been one of preparation for the future, among the steps taken being the establishment of an information bureau, while arrangements have been made for representation abroad. So far the work of the Corporation has been to render assistance in connection with overseas commerce. There is a net profit on the eight months of £9,700, and it is proposed to devote this sum to writing off most of the preliminary expenses, leaving £400 in suspense, apart from £20,000 stamp duty on unissued capital. The time has not yet come when comment is called for on the work of this institution, and it must suffice to say at this juncture that it may and should be one of the most potent influences on British trade development.

***

More satisfactory progress has been made in the House of Commons with the Non-Ferrous Metals Bill than might have been expected, and the measure, which was given its third reading on January 23, is well on its way to passing into law, and if it suffers no more serious alterations in its journey than it has up to the present it should be a fairly satisfactory medium for the purpose for which it is intended. It is my opinion, by the way, that this Bill will be by no means the last of its type, for there are many other equally important industries whose post-war career needs to be safeguarded, notably, the Calcutta hides trade, which, as my readers are aware, proved a particularly fruitful sphere for German operations.

***

The improvement that has taken place in the trade of the Sudan during the past year is well brought out by the figures for exports and imports for the eleven months ended November 30. For that period the exports were £E3,271,756, or £E1,198,840 in excess of the corresponding figures for 1916, while the imports at £E2.610,422 show an increase of £E331,819. Exports and imports during the period amounted to £E5,882,178, an increase of £E1,530,659, or, roughly, about 35 per cent. These improved figures are due principally to the great increase that has taken place in the Sudan's trade with Egypt. The extent of the increase will be gathered from the fact that, while the Sudan's exports to Egypt for the eleven months of 1916 amounted to £E908,078, they have now risen to £E2,411,853. Imports from Egypt also show an increase, though not to the same extent, the figures being £E1,668,537, as against £E1,213.307 in 1916.

***

My criticisms of Sir Arthur Steel Maitland's speech at the luncheon of the British Imperial Council of Commerce were, I am glad to learn, unnecessary, for Sir Arthur did not make use of the exact expression attributed to him. What he said was that "even if the Archangel Gabriel did reorganise the Consular Service, neither the best service in the world, nor any Government action, could contribute more than a small percentage towards national success in foreign trade." No one can question the soundness of that view, for it is obvious that with the best intentions in the world official action can only make the way plain for traders. That being accomplished, it is up to our merchants and manufacturers and their representatives to take advantage of the facilities afforded them. If they fail to avail themselves of their opportunities the fault obviously lies with them, and not with the Government.

***

The idea of arranging for a Serbian Mission to visit the principal commercial centres in this country, with a view to facilitating the desired trade relations between the two countries after the war, is in every way to be commended. The delegates, who, it may be pointed out, are thoroughly representative of Serbian commerce and industry, will be given a unique opportunity of making their needs known to our merchants and manufacturers, which would certainly not have been open to them but for the war. Had this tour been arranged before August, 1914, they would have found British business men more than a little disinclined to enter the Balkans; but that, of course, is a thing of the past, and instead of that attitude they will find a keen desire to ascertain the possibilities of trade in Serbia. That is one aspect of the tour; the other is the necessity for finding out what openings exist for the importation of Serbian produce into this country, and it is hoped that at least as much attention will be paid to this question as to the other, for, unless we are prepared to find a market here for Serbian goods, we can hardly expect to be very successful in increasing our trade with that country.

***

The provincial tour of the delegates commenced on January 23, and before that they had been engaged in meeting representative industrial and commercial bodies in London. Of these meetings by far the most important was the luncheon given to them by the British Engineers' Association—important because it touched the first problem with which Serbia will be confronted when the war ends, namely, the question of reconstruction. That is first and foremost the task of engineers, and it is highly satisfactory that those who spoke for the association on that occasion emphasised the determination of British engineers to place their resources at Serbia's disposal for the work of reconstruction. The attitude of this influential gathering is an excellent augury for British trade with Serbia and, indeed, with the Balkans in general in the future.

***

The Tata Iron and Steel Company was the subject of an interesting paper read before the Royal Society of Arts last week by Mr. Surtees Tuckwell, M.I.M.E., in the course of which he showed how many unsuccessful attempts had been made to establish the iron and steel industry in India on Western lines before the foundation of this company. The main reason, of course, why it was left to Mr. Jamsetji Nusservanji Tata to demonstrate India's industrial possibilities was that his predecessors in the field lacked adequate resources for the undertaking. True, the Government showed some interest in the question from time to time, but it failed to give adequate support when it was required, otherwise India would probably be far more advanced industrially to-day than is the case.

EGYPT'S TRADE.

Increased Imports in November.

(From Our Own Correspondent.)

Cairo, December 29.

The Customs returns for November show an increase in imports during the month, but a decrease in exports. The former amounted to £E3,272,514, and the latter to £E4,720,099, as against £E2,405,621 and £E6,048,584 respectively during November, 1916. For the eleven months imports total £E27,700,028, and exports £E34,518,255, giving a balance of trade in favour of the country of £E6,818,227. The corresponding figures for 1916 were £E27,199,569 and £E30,064,331, with a balance in favour of the country of £E2,964,762.

Imports and Exports.

The principal imports during the month were: Preserved meat, £E151,421; flour, £E36,484; coffee, £E56,461; liqueurs, £E44,607; stationery, £E49,857; coal, £E275,334 (22,000 tons less, but £E41,653 more than in November, 1916); cotton threads, £E86,543; cotton tissues, £E869,247; wool tissues, £E77,523; sacks, £E97,943; ready-made millinery, £E85,320; worked iron and steel, £E254,335, and tobacco, £E257,566. No sugar, alcohol, petroleum, fuel-wood or chemical manures were imported during the month.

The chief items of export were: Eggs, £E48,270; skins and tanned goods, £E55,486; cotton seed, £E155,997; sugar, £E25,013; wool, £E45,975, and cotton, £E1,208,531. Of cotton seed 44,000 ardebs more were exported during the month than in November, 1916; there was a decrease of 6,700 tons in cotton cake and one of 243,550 cantars in cotton, the falling off in which, for all practical purposes, accounted for the total decrease in exports. Cigarettes valued at £E31,684 and weighing 20,800 kilos were exported.

Larger Imports from Great Britain.

Amongst the countries trading with Egypt Great Britain had a most remarkable increase in imports, her share rising from under 40 per cent. to just 50 per cent. Her chief exports to Egypt were all the mineral oils, coal and wool tissues, 80 per cent. of the cotton tissues, and 96 per cent. of the worked iron and steel. The only other countries which increased in any noticeable manner their sales to this country were Greece, which just doubled her share to £E187,530, Japan which rose to £E109,386 from about a third that amount, and China which increased from £E19,000 to £E87,000. The chief imports from Greece were all the olive oil and 70 per cent. of the tobacco. Japan sent 50 per cent. of the ready-made millinery and linen and 8 per cent. of the tobacco. Under exports Great Britain's share rose from 48 per cent. to 70 per cent., all the eggs, cotton seed and cake, rags, wool and gold bullion, as well as 75 per cent. of the cotton, being taken by her. Every other country except Italy, whose share increased from £E201,636 to £E286,058, showed a drop, the decrease in the case of America being as much as 50 per cent. on the figure for November, 1916, when that country took £E1,516,561.

The Sudan.

Trade with the Sudan flourished during the month, imports from Egypt amounting to £E151,171, and exports from the Sudan to £E157,724, against £E115,847 and £E82,624 respectively a year ago. The principal imports into Egypt were: Livestock, £E84,272; gum, £E31,939, and cereals, £E19,281. Chief exports from Egypt were: Sugar, £E26,689; cotton tissues, £E34,149, and sacks, £E16,196. The other items were small ones.

EGYPTIAN CUSTOMS REGULATIONS.

The Director-General of Egyptian Customs has issued the following notice, dated Alexandria, December 17:—"In the interests of the trade of Egypt this department has decided to require a declaration of the gross weight and value for all goods arriving in Egyptian ports for transit or transhipment; it would probably be found most convenient for this information to be entered in the manifests, and for each lot separately. This information will be required as from July 1, 1918, and is not, of course, called for in respect of goods passing through Egyptian ports or waters without change of ship."

ANGLO-SERBIAN RELATIONS.

(From a Correspondent.)

Commercial relations between England and Serbia date back to the year 1836, when Lord Palmerston sent his British Consul to Belgrade—Colonel Hodges. Prince Milosh, the then ruler of Serbia (which was not at that time independent), in association with Colonel Hodges, projected the construction of a harbour at Drahovo, with the Danube to facilitate the import of British commodities from England via the Black Sea and the Danube. The first Serbian commercial treaty granted preferential treatment to Great Britain in 1880. These two facts show very clearly that the statesmen of the then small principality did everything possible to get to a closer commercial and political understanding with Great Britain.

Meanwhile Austro-Hungary used every means to prevent the commercial and agricultural emancipation of the Serbian people, forcing upon Serbia commercial treaties which preserved to the dual monarchy exclusively the right of importation into Serbia, and crippled, on the other hand, Serbian exports to foreign countries. This state of things continued until the outbreak of the famous tariff war in 1906, when Serbia strove to end this insupportable economic pressure.

The result of this economic struggle was seen in a marked and immediate increase of the imports from Great Britain, which went up with a bound to nearly four times what they had been in the years before the struggle. The amount of imported commodities from Great Britain into Serbia for the period 1884 to 1910 stood at 137 million francs—that is to say, a little short of 10 per cent. of Serbia's total imports. Meanwhile Serbian exports to the British Isles for this same period amounted to only 7,500,000 frs., *i.e.*, 0.38 per cent. of the total exports. There is no doubt that at the close of the present struggle the relations between Great Britain and Serbia—social, commercial, and political—will become much stronger and more intimate. The united kingdom of Serbs, Croats, and Slovenes which would have an area of over 268,000 square kilometres, with a population of 12½ millions, would become a great market for British commodities and represent also an important field for the production of raw material for British industries.

SERBIAN INDUSTRIAL MISSION.

Great Britain's Opportunity.

The Serbian Minister and the members of the Serbian Industrial Mission were entertained by the Lord Mayor to luncheon at the Mansion House on January 18, when those present included Lord Desborough, president of the London Chamber of Commerce; Mr. Stanley Machin, chairman of the Associated Chambers of Commerce; Colonel Sir Charles Owens, M. Chedko Miyatovitch, the former Serbian Minister in London; Dr. Trumbitsh, president of the Jugoslav Committee; and Sir William Clark, Comptroller-General of the Department of Commercial Intelligence of the Board of Trade.

The toast of "Success to the Serbian Mission" was proposed by the Lord Mayor, and was replied to by Dr. Douritch, who said that his country was a land peculiarly suited for both agricultural and industrial development. At one time owing to its easy access to the sea Serbia's economic freedom was not less than that of Great Britain. Then followed a period of economic restriction under Austrian and German domination, from which it was Serbia's ambition to escape, and in the realisation of that ambition Serbia looked to Great Britain for help and encouragement. Serbia's fields, forests, and mines had not been sufficiently exploited because of the lack of roads, railways, and capital; but with Great Britain's co-operation these resources could be developed to the mutual advantage of both countries. The Serbian Mission was visiting the various industrial and commercial centres of Great Britain in order to enlist this economic co-operation, and if they were successful he thought the result would be the building up of a Serbian nation which would not only be a source of supply of raw materials to Great Britain and a market for Great Britain's wares, but a nation strong enough to throw off the Austrian and German economic domination of the past.

On January 21 another important function was held in honour of the Mission, this being a luncheon given at the Cannon Street Hotel by the Council of the British Engineers' Association, at which Sir Wilfrid Stokes, of Ransomes and Rapier Ltd., president of the association, presided. Besides the members of the Mission those present included the Serbian Minister, the former Serbian Minister, Sir Adam Block, Foreign Trade Department; Mr. H. H. Lamb, Foreign Office; Mr. E. Donaldson Rawlins, Consular Service; Mr. H. Kershaw and Mr. E. H. Bliss, Department of Overseas Trade, Mr. J. Young, Albion Motor Car Co., Ltd.; Mr. R. S. Rowell, Associated British Manufacturers (Near East), Ltd.; Mr. J. N. Athill, W. and T. Avery, Ltd.; Mr. Cyrus Braby, F. Braby and Co.; Mr. Arthur Jacob, British Aluminium Co., Ltd.; Mr. J. R. Nesbitt, Bruntons; Mr. E. H. F. Reeves, Crompton and Co., Ltd.; Mr. E. M. Malek, Dick, Kerr and Co.; Mr. A. Swingler and Mr. F. Atkinson, Eastwood, Swingler and Co., Ltd.; Mr. George Ellison and Mr. F. B. Nathan; Mr. F. Lange, Farringdon Propeller and Engineering Co., Ltd.; Mr. Walter McDermott, Fraser and Chalmers, Ltd.; Colonel Armstrong, D.S.O., Greenwood and Batley, Ltd.; Mr. E. H. Gray, India Rubber, Gutta Percha and Telegraph Works Co., Ltd.; Mr. R. Colsell, Irwell and Eastern Rubber Co., Ltd.; Mr. E. H. Lake, Lake and Elliott, Ltd.; Mr. A. L. Pailthorpe, A. Leonard and Co.; Mr. R. R. Stammers, Marshall, Sons and Co., Ltd.; Mr. W. S. Guild, Mather and Platt, Ltd.; Mr. H. Merrin, Matthews and Yates, Ltd.; Mr. James Morton, Morton (Wishawa), Ltd.; Mr. G. Watson, New Destructor Co., Ltd.; Mr. E. A. Brayley-Hodgetts, Nobels Explosives Co., Ltd.; Mr. W. A. Walker, Park Gate Iron and Steel Co., Ltd.; Mr. S. H. Hodgkin, Pulsometer Engineering Co., Ltd.; Mr. G. Moore, Rees Roturbo Manufacturing Co., Ltd.; Mr. J. A. Ross, Ross, Courtney and Co., Ltd.; Mr. A. Shanks, A. Shanks and Son, Ltd.; Mr. F. C. Ratcliff, George Swift and Sons, Ltd.; Mr. Shaw Hopkins, Tilling-Stevens, Ltd.; and Mr. William Brow, Edward Wood and Co., Ltd.

Following the toast of "The King," the Chairman, in proposing "The King of Serbia," commented on the fact that the war was an engineer's war, and pointed out that the reconstruction which would follow the destruction would also be the work of engineers, and they would not be backward in helping Serbia in her task of reconstruction. Mr. E. A. Brayley-Hodgetts, chairman of the Russian Section of the London Chamber of Commerce, proposing the toast of "The Serbian Mission," said that if the delegates would tell the engineers what they wanted the engineers would do their best to supply it.

The Serbian Minister said that Serbia was faced by an immense amount of reconstructive work, and looked to England to help her, and now that his country had been brought into contact with England he hoped that the delegation would utilise that contact to the fullest possible extent. Dr. Douritch said that after the war Serbia must be reorganised in many ways, especially in regard to railway and river communications, and her industrial and agricultural resources must be developed. If Great Britain became interested in the development of Serbia he was sure that his country would benefit immensely. If Great Britain did not realise the necessity of improving the economic relations with Serbia, he feared that Germany would do so. M. Costa Riznitch, president of the executive committee of the National Bank of Serbia, who spoke in Serbian, said that the aim of the Mission was to visit the industrial works in England to see what was being done there, and to ascertain what prospects there were for a closer connection between the two countries. M. D. Tomich, secretary of the Serbian Industrial Chambers, said that Serbia was rich in raw materials, which had hitherto been exploited by the Central Powers. To develop these raw materials Serbia required machinery, tools, locomotives, electrical apparatus, and other things, and she looked to Great Britain for her supplies after the war. He thought that Englishmen should visit Serbia in order to keep in touch with her requirements and her resources. Some 300 young Serbians had been placed in English professional schools, but he suggested that more ought to be sent over to finish their technical instruction as engineers.

Replying to the toast of his health, proposed by M. Chedko Miyatovitch, the chairman said that after the war Serbia would want railways, and we must be prepared to equip and finance them. Whatever Serbia required in the way of engineering the British Engineers' Association would be proud and pleased to help her to obtain.

EXCESS PROFITS DUTY.

The *London Gazette*, of January 15, contained decisions of the Board of Referees on a number of applications to raise the statutory percentage for the purpose of fixing excess profits duty. Among the decisions were the following:—

Oil Production in the Maikop Oil Field.—Application of the Maikop Combine. Percentage raised to 14 per cent. in the case of a company or private firm, but latter receives additional 1 per cent. for accounting periods prior to January 1, 1917, and additional 2 per cent. for periods ended after December 31, 1916.

Oil Production in the Terek District, North Caucasus.—Application of North Caucasian Oil Fields. Percentage raised to 10½ per cent., with 1 and 2 per cent. additional for accounting periods mentioned above in the case of private firms.

Engineering in Bengal.—Application of Jessop and Co., Ltd., 156, Leadenhall Street, E.C. Percentage fixed at 8 per cent., with 1 and 2 per cent. additional for accounting periods mentioned in the case of private firms.

COMPANY MEETINGS.

ASSOCIATED COTTON GINNERS OF EGYPT.

The following is the report of the directors, with statement of accounts as at August 31, 1917, submitted to the shareholders at the eleventh ordinary general meeting held at Alexandria on December 27, 1917:—

We herewith beg to submit to the shareholders for their consideration and approval our twelfth annual report, together with audited accounts, to August 31 last. The yield of the cotton crop for 1916-17 was very slightly superior to that of the preceding year, having been 51,110,80 kantars, as against 48,063,31 in 1915-16, and on account of the abnormal conditions prevailing during the campaign, the turnover of your customers in your different ginning mills did not attain that development which otherwise you might reasonably have expected. As during last year some of our factories were employed in work for the British Army. The quantity of cotton ginned in our factories during the year 1916-17 was 787,981,11 kantars, against 768,776,74 kantars in 1915-16, and steam-pressed kantars 19,608,89, against 36,923,41 kantars in 1915-16. The following are the results to August 31 last:—

	£E	£E
Profit on the factories		37,406
Less—Sundry alterations		1,418
		35,988
Less—Expenses of management at head office at Alexandria	2,920	
Interest on debentures £E6,312		
Less—Interest earned..... 884		
	5,428	
Sundry expenses	1,137	
Insurance	2,813	
		12,298
		23,690
Less—Depreciation on new buildings and machinery	8,800	
Debentures redeemed	3,900	
Expenses on debentures	300	
		13,000
Profit		10,690
Amount brought forward last year		15,896
		26,586
of which we propose to distribute 1s. per share—viz.		17,550
and to carry forward		£E9,036

At the moment of publishing this report the outlook for the crop 1917-18 is better than that of the year that has just closed. We are, therefore, justified in anticipating a better result for 1917-18, and it is in consideration of this that we have thought fit to recommend that part of the amount of the profits carried forward last year should be utilised to complete the amount necessary to pay the above-mentioned dividend. Mr. T. A. F. Critchley retires by rotation, and is eligible for re-election. The retiring auditors are Messrs. Russell, Harris, and Co., and are eligible for re-election.

LAND BANK OF EGYPT.

The following is a translation of the report of the directors presented at the ordinary general meeting held at Alexandria on December 4:—

During the year ended September 30, 1917, the favourable conditions continued which set in at the close of 1915. While belligerent or neutral countries have suffered in varying degrees from the war which has gone on for more than three years, Egypt, under the government of a Prince whose recent death is the subject of universal regret, and the protectorate of Great Britain, has enjoyed almost her normal economic life. Cotton, the principal export, has reached a record price. The Land Bank of Egypt, in accordance with its functions as a mortgage bank, has carried on during the past year with the prudent foresight demanded by the circumstances, the consideration of new and advantageous business, without neglecting its operations of transferring capital in Europe, which have been the source of satisfactory profits. The transactions (loans on mortgages and sales, with a guarantee of vendor's privilege) amounted to £E3,466,057.132. Thanks to the good economic situation, the amount of annuities in arrears had decreased from £E448,314,438 to £E378,501,032 by September 30 last. The account of "Real property expropriated" has also appreciably decreased, notwithstanding a marked tendency in the direction of expropriation, though the amount was temporarily increased by the acquisition of an important estate which we have disposed of at a profit since the closing of the year's accounts. In the course of the current year we hope to reduce considerably the items under this heading. The total of the year's working is £E323,062.283. Various charges, general expenses, taxation, etc., give a surplus of receipts over expenses of £E144,036.290. Your Board submits for your approval the following provisions and amortizations intended to strengthen the bank's position: (1) Provision for amortization of debentures, premiums and charges, £E13,026.781; (2) amortization of the building of the head office, furniture, and brokerage on mortgages, £E834.820; (3) provision for risks on loans, £E7,500; (4) provision for unforeseen contingencies, £E34,000. The net profit of £E89,274.689, to which is added the balance from the previous year, will allow of the distribution of a dividend of 7s. 6d. per ordinary share, and of £2 1s. on the founders' shares. The wise measures taken by the Government to safeguard home-grown supplies of food will, without doubt, result in the curtailment of cotton production, and we ought to foresee a possible decrease in the financial resources of rural landlords. We have, therefore, increased the provision for unforeseen contingencies to a considerable extent.

COMPANY REPORTS.

Rohilkund and Kumaon Railway.

The report of the Rohilkund and Kumaon Railway Company for the year ended September 30 last states that the net earnings of the whole system amounted to Rs25,60,939, against Rs23,49,311. The company's share is Rs11,21,639, brought to account at the rate of 1s. 4d., against Rs10,91,584 at the same rate in 1916. After bringing forward the balance, £27,138, providing for interest on Debenture and Preference stocks, interim dividend, contribution to provident fund, appropriating £15,000 to the investment depreciation fund, and making other adjustments, including £4,449 on account of the Secretary of State's share of surplus profits, the amount available for dividend is £35,799. The Board recommend a final dividend of £3 per cent., plus a bonus of 1 per cent., on the ordinary capital for the half-year, subject to tax at 3s. 9d. in the £1, leaving £22,799 to be carried forward. The receipts of the joint undertaking were Rs4,19,744 and the working expenses Rs2,08,116 more than those of the previous year, the net earnings showing a gain of Rs2,11,628. Of the total increase in receipts coaching contributed Rs1,12,473 and goods traffic Rs2,55,633. The number of passengers carried increased by 33,301, and occurred chiefly under third class traffic, which rose by 173,791 in the first half of the year, but fell off by 144,441 in the second half. The latter decrease was probably due to a reduction in train services effected in July with a view to saving rolling stock, for which materials are now difficult to obtain. General merchandise increased by 62,040 tons, and arose principally under traffic in wheat, pulses, sleepers and timber, while the chief decreases were under fodder, rape and mustard seed, sugar and salt. In sundries there was an increase of Rs41,519, owing to increased share of receipts due from foreign railways. The cart and tonga service realised net Rs11,038, against Rs23,367. The working expenses of the joint undertaking amounted to Rs19,28,345, or 42.95 per cent. of the gross earnings, against Rs17,20,229, or 42.27 per cent. The principal items of increase were under maintenance of way and works (Rs62,722), locomotive expenses (Rs87,155) and carriage and wagon expenses (Rs52,720). The total capital expenditure on both the original line and extensions was £1,160,431 to September 30 last, which has been reduced temporarily to £1,155,943. On the Lucknow-Bareilly State Railway the expenditure, exclusive of suspense account, resulted in a credit of Rs47,530; Rs57,322 were credited to State funds, and Rs9,791 were provided from funds raised under the agreement for that purpose. The total capital expenditure on the Lucknow-Bareilly State Railway, exclusive of suspense, has been Rs1,91,59,145, or at Rs15 per £. £1,277,270. To meet the depreciation caused by wear and tear of the rolling stock, which cannot be renewed for lack of material, Rs1,50,000 have been charged off to working expenses. The company's share of this charge, amounting to £4,438, has been written temporarily off capital. The position of the provident fund is approximately as follows:—Original cost of securities held, Rs8,11,000; market value on March 31, 1917, Rs6,14,000; depreciation, Rs1,97,000. Of this depreciation about Rs36,000 will be recouped on securities which must be redeemed on fixed dates, and the real depreciation may therefore be taken as Rs1,62,000. The directors have, with the consent of the Secretary of State, authorised the write back of Rs1,50,000, so that the amount drawn from the fund by depositors retiring may not be materially decreased. This will be repaid by a charge of Rs10,000 annually against working expenses of the joint undertaking for the next fifteen years, that is, up to December 31, 1932, when the Government can exercise their right to purchase the line. The sum payable by the company will be approximately Rs5,000 annually. Meeting, 237, Gresham House, Old Board Street, E.C., 29th instant, noon.

Orient Steam Navigation.

The report of the Orient Steam Navigation Company for the year ended June 30 last states that the revenue account, after providing for depreciation, shows a credit balance of £253,021, out of which the dividend on Preferred shares has to be paid. The managers recommend a dividend at the rate of 15 per cent. per annum, free of tax, on the Deferred shares, that £100,000 be transferred to general reserve account, and that the balance of £112,359 be carried forward. During the year there has been redeemed £83,650 Debentures in anticipation of the requirements of the trust deed. Meeting, 13, Fenchurch Avenue, E.C., 28th instant, noon.

British Trade Corporation.

The first report of the British Trade Corporation covers rather more than eight months and shows that during that period a small profit was realised. At December 31 last, the date of the balance-sheet, the amount of capital issued was £2,000,000, the last instalment of which was payable on the final day of 1917. Since the issue of the prospectus in June the management has been principally engaged in making the necessary arrangements for representation in foreign countries and other business details. It has, however, already been able to render some assistance in connection with overseas trade. Evidence given before various Parliamentary Committees pointed to the desirability of making arrangements for the insurance of commercial credits, and the corporation has in hand a scheme for giving effect to this object. An information bureau has been established. The directors recommend that, after making provision for income-tax, the balance standing to the credit of the profit and loss account be applied towards writing off the preliminary expenses. The gross profits amounted to £17,614, of which current expenses, including salaries, rent, rates, office and other charges, absorbed £7,943, leaving a net profit, before providing for income-tax, of £9,671. The meeting will be held at the Institute of Chartered Accountants, Moorgate Place, Moorgate Street, E.C., on 31st instant, at 3 p.m.

COMPANY NOTES.

Dividends, Payments, etc.

The ordinary transfer books of the Rohilkund and Kumaon Railway Company, Ltd., are closed until February 2, inclusive, for the purpose of preparing dividend warrants for those stockholders whose names are on the register at the time of closing the books.

Anglo-Persian Oil.—The transfer books of the 1,000,000 cumulative 6 per cent. participating preference shares (issue 1909-1911) are closed until January 30 for the purpose of preparing interim dividend warrants for the half-year ended September 30, 1917, and for the participating dividend of 2 per cent. for the financial year ended March 31, 1917, payable 31st instant.

East Indian Railway Company.—Holders of annuity class "D" are notified that the seventieth half-yearly general meeting will be held at the Cannon Street Hotel, E.C., on 30th instant, at 12.30 p.m.

The transfer books of the ordinary stock of the Bengal and North-Western Railway Company, Limited, will be closed from the 30th inst. to February 13, inclusive, for the purpose of preparing the dividend warrants for the half-year to September 30, payable to those shareholders whose names are on the register at the time of closing the books.

Oil Outputs.

Anglo-Egyptian Oilfields.—Gemsah: Production for week, 446 tons (previous week 21 tons). Hurgada: Production for week, 3,371 tons, against 3,639 tons.

Bibi Eibat Oil.—Production for the week ending December 9, 39,553 poods (or 638 tons).

Black Sea Amalgamated.—Week ended January 5, 19,848 poods (320 tons).

European.—Week ended January 6, 61,200 poods. Return to December 30 not yet to hand.

Maikop Combine.—Week ended January 5, 24,751 poods (398 tons).

Maikop Orient Oil.—Plot 435a, Well 3.—Production for week ending January 10, 14,000 poods.

Russian Petroleum—Week ended December 1, 41,600 poods; December 8, 44,800 poods; December 15, 45,770 poods; December 22, 46,252 poods; December 29, 47,820 poods.

Ural Caspian.—Week ended January 3, 132,798 poods (2,142 tons); January 10, 133,355 poods (2,151 tons).

ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Street, Wednesday.

The upward movement in Egyptian securities has continued; the market has been active, and many advances in prices have again to be recorded. No change has occurred in Government stocks, but, in banks, Nationals have jumped ½, to 18½, on a strong local demand. Agriculturals are also ⅛ up at 6⅝ after a fairly large business, and Anglo-Egyptians are 1-16 firmer at 14 5-16.

In land shares Behéras are ¼ up at 13, the few hundred shares offering at lower prices having now been absorbed by Egypt; Delta Lands are unchanged, but are beginning to look ripe for an advance. Egyptian and Foreign Trusts have jumped 6d., to 9s. 6d., but very few shares are obtainable round the current level, which is decidedly below the intrinsic value as represented by the company's holdings. Gharbieh Lands are wanted at 2, but sellers are scarce. New Egyptians have been a feature, changing hands daily in large numbers at gradually advancing prices, and closing 1s. 9d., up 19s. Sidi Salems have continued in strong demand, and close 3s. up, at 32s., while Union Foncières are 1s. higher to-night, at 54s. 9d., on buying orders from Egypt; but United Lands are exceptionally 1½d. lower, at 1s. 6d.

Among the Miscellaneous group Salt and Sodas changed hands at one time over 41s., but are closing at 40s. 6d., a rise of 6d. since last week.

In Greek securities there has been hardly any business doing, but prices remain firm; Ionian Banks are ⅛ up, at 4¾.

Paris Bourse.

Closing prices included:—Egyptian Unified, 95.50 (95.95); Turkish Unified, 63.05 (62.50); Credit Foncier Egyptien, 770 (770); Suez Canal Shares, 4.595 (4.605).

Oil Shares.

Anglo-Egyptians (B) rose 9d., to 28s. 3d.—29s. 3d. Otherwise the market was featureless.

LANCASHIRE COTTON.

Uncertain Outlook.

(From Our Own Correspondent.)

Manchester, Wednesday.

A slack state of affairs continues to show itself throughout the market. The production of the machinery has not nearly been sold during the past week. Buyers seem very determined to act with caution, and as spinners and manufacturers are well sold there is no running after fresh orders. The tone is probably more uncertain than at any time since the beginning of the war, as the feeling is growing that important events are about to take place in European politics. Supplies of Egyptian cotton continue to come forward rather more freely, and prices have rather favoured buyers. There has been no life in Egyptian yarns, but spinners derive considerable strength from the contracts on the books. In piece-goods for Egypt, only a sorting-up business has been done. Rather less satisfactory advices are now being received from Cairo. Buyers are resisting the high prices required by manufacturers. Standard goods for India have been neglected, and only occasional sales have been reported in fancies and specialities. No improvement can be recorded in the offtake for China. Occasional transactions have been healthy. American yarns have moved off slowly, and here and there a little more irregularity in prices has been noticeable. Medium counts are not so strongly situated as a month ago. Most of the offers in export yarns have been impracticable.

In the process of the extension of His Majesty's Trade Commissioner Service within the British Empire, Mr. T. M. Ainscough, O.B.E., has been appointed as senior Trade Commissioner in India, and will shortly proceed to Calcutta.

NOTES OF THE WEEK.

The week has been lacking in military activity in both the Eastern and Western theatres of war, and the politicians and diplomatists have had their innings instead. Count Hertling has replied for Germany and Count Czernin for Austria-Hungary to the statements of Mr. Lloyd George and President Wilson; and, as was anticipated, Berlin has rattled the sabre while Vienna cooed for peace. Whether the difference in tone was a carefully arranged comedy, or whether it represents a real difference of attitude too pronounced to be concealed is a question which has puzzled the commentators. The question, however, is largely academic, because each declares that the Central Powers and their satellites stand for the full integrity of their dominions.

That means, if it means anything, that Germany will not make peace without Alsace-Lorraine and her colonies—although she would agree to a general redistribution of colonial territories, a phrase which very probably means that Belgium, on which Count Hertling's language was obscure, would be used as a pawn in order to bargain for a German Congo. It means that Austria will not give up the Trentino to Italy, to say nothing of any consideration of the Jugoslav question. It means, further, that neither will cut their losses in Turkey, or allow Turkey to cut her losses either. If that is the attitude of the Central Powers, the war must go on.

There is even evidence, in the German Chancellor's speech, that he wants the war to go on, since he has the kindly thought of suggesting that England should give up Gibraltar, Hongkong, the Falkland Islands, and a few other places—he probably omitted Dover by inadvertence. This is an entirely new suggestion, and we frankly admit that it may be a German joke that has lost its bouquet in the translation. If it is seriously meant, one can only answer that the German Fleet had better come and take these places. It has had one experience of the Falkland Isles which it is not likely to forget.

But while these suggestions are made, either from effrontery or ignorance or a mere wanton determination to continue the war, the negotiations at Brest-Litovsk continue. When Herr Trotsky broke them off with a great flourish of trumpets the world did not greatly believe in his sincerity, and he has now obediently come to heel again. Indeed, it looks as if he had only left Brest-Litovsk for Petrograd in order to arrange to declare war on Roumania, an act which could not fail to ease the position of Germany, and may have been suggested by Baron von Kühlmann. It was the final and logical outcome of several weeks of agitation against Roumania, including the arrest of the Roumanian Minister at Petrograd. The world is told that it is necessary for Bolshevism to be spread in Roumania and in every other country—a doctrine which conflicts strangely with the right of self-determination, on which the Leninite faction are so eloquent, but the policy fits in so completely with Germany's aims that we cannot take all the Trotsky protests literally.

Roumania has accepted the insult with equal fortitude and dignity. It creates a very difficult situation for her, since the Bolsheviks, if they will not fight, have a faculty for creating disorder and annoying their neighbours—so long as these are not Germans—which amounts almost to genius. But Roumania is not entirely alone, although she is cut off from her more faithful Allies. Not very much information has come through from Bessarabia of late, but it appears that that country has been sufficiently impressed by the Bolshevik methods to see the need of declaring its independence, if it is to preserve any trace of civilised order at all, and the Besarabian Republic is now associated with Roumania against Petrograd. In view of the long and intimate ties between the two countries, the alliance is natural, and it will certainly strengthen the position of both against the flood of anarchy with which they have to contend.

Heavy fighting is already reported between the Roumanians and the Bolsheviks in the south, but the details are confused and lacking in detail; and events are becoming almost as difficult to follow as the revolutionary and counter-revolutionary movement in the Ukraine. It must be remembered, of course, that the Bolsheviks are unable to put their full force—whatever that may be, in the absence of discipline in the ranks—in the field against Roumania, since they are at the same time engaged in aiding the social revolutionary movement in Finland, which has evidently assumed rather serious dimensions, and is causing grave anxiety in Sweden. In these circumstances, the threat to Roumania may be less formidable than Lenin imagined, and it is to be noticed that a new tone of pessimism is apparent in Trotsky's latest speech. He has at last discovered what was patent earlier to everybody else—that Germany will not conclude a peace without annexations.

Digitized by Google

The position of the new Ukraine State, which is also a neighbour of Roumania, remains undefined for the present. The report that peace had already been concluded with the Central Powers was clearly premature—one of those indiscreet anticipations for which the Wolff Bureau is famous. The Ukraine is not merely represented, but doubly represented, at Brest-Litovsk, and its representatives do not agree with each other, to the no small embarrassment of Baron von Kühlmann. Over his difficulties we need waste no tears; all the reports must be accepted with reserve, but it is plain that Count Czernin is trying to barter peace against corn, and it is possible that the Ukraine are trying to obtain Eastern Galicia, with its integral Ruthenian population, as part of the bargain. A suspicious fact is that more details have been received of the negotiations with Turkey than with Austria, although the relations of Kieff with Vienna are much more vital than with Constantinople.

It is stated—and once again the report must be accepted with all reserve—that in discussing its relations with Turkey the Ukraine had declared itself indifferent to the Dardanelles question. If that is so, it is a statement of policy of first-class importance; but it may mean one of two things. It may imply that the local politicians at Kieff take an entirely localised view of their position and future, and that they propose to attempt political existence as a self-contained unit—an attempt which must break down within a very short time, since the Ukraine cannot isolate itself from the Balkans, any more than it can from Poland, with which it has been intimately connected in the remote past, or from Russia, with which it has been intimately connected in the historic present. The second interpretation is that the Ukraine has deliberately considered its economic future, and rejected the idea of using the Dardanelles as an outlet for its grain in favour of selling its entire product to Germany and Austria. It must be admitted that this sounds almost as improbable an hypothesis as the Manichean theory that man was created by Satan instead of God—but then a good number of people were once Manicheans.

In any event, the policy of renunciation is bound to break down in the end. So long as the Ukraine, like Roumania, is one of the great exporting countries of Europe the question of the Dardanelles, the sole exit from the Black Sea, must be of practical importance for its people. It may be, of course, that for the next year or so Germany and Austria will be so hard pressed for food that they will be glad to buy everything the Ukraine produces. But that position will not last; and, in any event, it is bad policy to tie oneself entirely to one customer. The moment the Ukraine finds that out it will curse the day when it forgot the Dardanelles.

If Germany insists on Courland and Lithuania, it is more than probable that Austria will also demand territorial compensation, despite Count Czernin's profession of disinterestedness. It is quite true, of course, that Austria has no direct claim on any purely Russian territory, although she aspires to control Poland and the Ukraine—the latter at least with a steadily diminishing prospect of success—but she has undoubtedly not lost her desire for Albania and Montenegro, with a part of Serbia. These matters, of course, are indifferent to the present authorities at Petrograd.

The escape of the "Goeben" is regrettable. The ship has as many lives as a cat and as great a faculty for eluding pursuit. The capacity to run away is not perhaps the highest test of naval efficiency; if it were, this particular vessel would almost have won the war by itself. Probably, if the truth were known, nobody is more sorry than the Turks that the German crew have refloated the nominally Turkish battleship and brought it back to Constantinople. It makes the chance of a separate peace for Turkey, already difficult enough, still more difficult.

The statements which have appeared in the German Press explaining the visit of Talaat Pasha and other Turkish State officials to Berlin are evidently intended to mislead. Talaat has remarked that various internal political questions in the Ottoman Empire have become of pressing importance, which can readily be believed; but the announcement that he is to visit various German cities "in order to settle certain matters" is rather a *non sequitur*. The first city he will visit is Hamburg, which hitherto has not been particularly interested in Ottoman affairs. It may, however, be well believed that, as the *Lokalanzeiger* remarks, Turkish affairs are now being largely managed from Berlin.

A key to the real nature of the negotiations may probably be found in the presence at the German capital of Javid Bey, the Finance Minister, and Jambolaat Bey, the new Turkish Food Controller. Count Hertling has professed again to stand by his unfortunate ally, but meanwhile Turkey wants money and food to carry on. Germany will hardly be able to spare hungry Constantinople any food, but she may have to grant another loan. Turkish revenue now barely covers debt charges, and the probability of raising more by increased taxation becomes steadily more remote just at the time when Turkey requires more money in order to equip her armies against the double British offensive in Palestine and Mesopotamia. The prospect of seeing Germany win back these two provinces for Turkey by breaking the British line on the western front may seem a little remote to the Turkish vision.

Apart from the political developments in Persia, on which we commented in this column last week, mention may also be made of certain economic developments. The *Birmingham Post* reports an increasing demand from Southern Persia for British goods, particularly for goods made in the Midlands. The demand arises from the fact that conditions in the south are practically normal, and that, while the native demand is increasing, the supplies from Germany have ceased. It is, of course, only within recent years that Germany has had any interest in Persia or the Persian Gulf at all, and her trade there, although increasing year by year, had not acquired much stability when the war broke out, despite the sudden interest taken in the Gulf by one of the great German steamship companies. The war has at least not improved Germany's chances of success, either economic or political, in that region.

The death of Sir William Wedderburn may be regarded as marking the close of an epoch in the development of Indian politics. The committee which he founded in this country nearly thirty years ago, and of which he remained president until his death, did much to keep the National Congress alive during the early years when its Indian supporters were few, and when it often seemed doubtful whether the movement had sufficient energy to survive. In those days the driving-power and the financial support furnished by the British Committee counted for much; but as the movement in India gathered strength the tendency developed to resent anything that could be called interference from this side, and the advanced section of the Congress, which has now apparently secured complete control of its policy, was less and less inclined to take its orders from England. The British Committee will doubtless continue to exist, but it is not likely to regain the influence which at one time it wielded.

Perhaps the opening of a new epoch must be dated from the attempts which are now being made to show that the Congress and similar bodies are acting in the best interests of the Indian masses. Until quite recently few of the leading politicians had anything to say about these masses, but we notice that the Congress deputation to Mr. Montagu was at pains to insist on the democratic side of its policy, and its address stated that "the constitutional, financial, and administrative amelioration of the material condition of the masses, as well as the satisfaction of the political aspirations of the

Digitized by Google

classes, has throughout been the anxious concern of these organisations." Polysyllables are not yet rationed in India, and this statement of the position is nearly as effective as the more familiar phrase that Codlin's the friend, not Short.

Congress has, however, still a long way to go before it produces a programme which shall really appeal to the democracy. It presses for such measures as temperance reform and compulsory education, and it hopes to "ameliorate" the condition of the peasants by these means, thereby manifesting once again its inherent tendency to oligarchical domination. To close the liquor shops and drive the children into school might not perhaps lead to a series of agrarian revolts of the type familiar to students of Indian history, but could scarcely fail to ensure the lasting unpopularity of the authorities responsible for the measures in question. No party dependent on popular support could venture on such a programme, which is, in fact, the lineal successor of those "boons" with which the Moghul Emperors were wont to signalise their accession to the throne.

If Indian peasants had votes, we should hear of very different measures from these. Low rents and low interest, a stringent labour law, any quantity of State aid, but no inspectors to worry busy people in their daily life—it is such prosaic matters that interest the masses, and a programme framed on these lines would sweep the country from the Himalayas to Cape Comorin. All things considered, it is perhaps fortunate that no party is as yet under any inducement to start a campaign of this particular type; but to recognise its unsuitability to existing conditions is to admit that India is still very far removed from the stage where "government of the people by the people" could yield even such a modest increase in the welfare of the public as now satisfies the disillusioned democrats of the West.

Meanwhile there is one boon that would be eagerly welcomed, if any party were in a position to offer it, and that is an easy and effective safeguard against the ravages of plague. The sanitary authorities are indeed well on the track of this disease, and they have now reached the point where prediction is possible; they have told us, for instance, that India is probably in for a bad season, and that if the last month has been damp in the northern provinces, we must be prepared for heavy mortality in the early spring. It is something to be forewarned, but there is still a long way to go before the disease is brought under effective control, and the people must learn to help themselves, if the lessons of science are to be turned to good account. Here indeed there is a great opportunity for leadership open to the men who aspire to control the destinies of India, if only they could spare the time from their arduous discussions of the proper constitution of Councils and Departments.

A curious pamphlet has been published in the United States, being the alleged criticisms of Herr Thyssen, a relative of the German industrial magnate, on the Kaiser's war ambitions. According to this document, the German business men were urged to support the war two or three years before it broke out by the promise of plunder. That is probable enough; what is less probable is that Herr Thyssen himself was induced to lend money against the promised gift of a large estate in Australia. That antipodean estate now looks extremely remote; but the Kaiser's real aim was the conquest of India. He is said to have declared that India was an extraordinarily rich country, and that the native princes there could be forced to contribute large sums to the conqueror; indeed, it is evident that he thought rather poorly of the British for not having plundered the Nizam and Maharajas already—another proof, no doubt, of our decadence. The Kaiser has done so many extraordinary things that we hesitate to disbelieve this revelation; possibly his ideas of sacking India were derived from the Crown Prince's tour there. The heir to the Hohenzollerns has proved himself an authority on looting.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, December 30.

Christmas in Egypt.

Christmas has been kept up in fine style in both camp and hospital here. The Red Cross and all those who work amongst the troops had spent an enormous amount of time and energy in preparing for the festive season, and their efforts were certainly rewarded by the pleasure which the men showed in the entertainment and good cheer provided for them. Not a single camp, hospital, convalescent home, or depot was overlooked; all had their share of the good things, and the various concert parties that have been doing such good work were kept hard at it all through the week, so that no centre should be without its full quota of "shows." The series of entertainments started on Christmas Eve, and will continue without interruption right into the New Year. In spite of the fact that the mails are late and that there are no Christmas puddings from home this year, the men did not have to go without this traditional fare, and through the generosity of the Red Cross arrangements were made so that every hospital and depot should have its plum pudding and mince pies, without which Christmas is no Christmas to the Briton. The men in the front lines were by no means overlooked, and the ingenuity of those responsible for the organisation of the Sinai and Palestine Railway must have been sorely taxed to get all the good things provided by friends and comrades, as well as those ordered by the various messes, out to the units concerned in time for the festive season.

The Muled En Nabi.

Whilst Christendom was celebrating one of the greatest festivals in its calendar, Islam was also preparing for one of its important fixtures—the Muled En Nabi, which fell on the 27th. It is indeed not often that Christmas and the Birthday of the Prophet come so close to one another, and the recent capture of Jerusalem has rendered the coincidence all the more noticeable. The usual festivities took place out at Abbassia, where tents were erected for the upper classes and a sort of fair was held for the masses. His Highness the Sultan, accompanied by his Staff, drove out in the course of the afternoon, in order to be present at the procession of Tarikas (sects) with their banners and to attend the customary reading of the life of the Prophet, which is always carried out. The guests who received the Sultan included the Ministers, the Under-Secretaries, the high religious functionaries, and the leading judges and officials.

General Allenby's Popularity.

Some little while ago I referred to General Allenby's great popularity with his men, and also to the fact that the Egyptians call him Allen Bey. The success which has attended his efforts in Palestine has given him tremendous prestige with the people, a prestige which has been considerably enhanced by the discovery that his name lends itself to some of those playings-on-words so dear to the Oriental, and especially the Arab, heart. Thus it has been found that the word Allenby is really

Al Nabi (the Prophet), and that written backwards the name reads "Ybn Ella"—Ibn Allah (Oh! Son of Allah). In the popular mind how could a man with such a name fail to be successful in his endeavours to save the City, sacred alike to Moslems, Christians, and Jews, from the devastating and sacrilegious hand of the Neo-Turanians and Germans; and to the superstitious the Arab saying that when the waters of the Nile flow into Palestine then will Jerusalem be rescued by a son of the Prophet appears to have attained realisation!

The Financial Adviser.

I understand that Lord Edward Cecil has made sufficient progress for his doctors to permit him to leave for Switzerland very shortly. He will be accompanied by Mr. J. F. G. Hopkins, senior Inspector of Finance, who has been employed during the past two years on the E.E.F. Local Resources Board. Mr. Hopkins has had no leave for some considerable time, and the Army have agreed to spare his services, in order to enable him to accompany the Financial Adviser to Europe and obtain a much needed change of air. Lord Edward Cecil takes with him the good wishes for a speedy recovery and for his return to Egypt from every element of this country's population.

Relief of Palestine.

The liberation of Palestine from the Turkish sway and the possibility of being at last able to send succour to the population, are infusing the local Syrian community with added energy in the direction of raising funds and sending relief there. Considerable amounts have been subscribed for the Syrian Relief Committee, which will work in Palestine itself, and for a new committee which has been formed for the express purpose of assisting needy Syrian refugees in Egypt. A grand gala show on the lines of the one organised last winter is to be held at the Opera House early next month, under the patronage of the Sultan and of the High Commissioner and Lady Wingate. Local Syrians look with equanimity on the near financial future of Syria, for they consider that the presence of the British troops is bound to bring enormous sums of money into the country. Certainly, if the Expeditionary Force spend but a tenth of what they have done in Egypt, Palestine and Syria will quickly be relieved of the poverty which those provinces have endured since the outbreak of war with Turkey, and with which they are faced at the present moment.

Government Appointments.

H.E. Aly Zoulfikar Pasha, Governor of Cairo, having attained the age limit, has retired from his post, and H.E. Abdel Rehim Sabri Pasha, Mudir of Menufia, has been appointed to succeed him. Zoulfikar Pasha retires from the Governorship of Cairo amid general regret, for he has held that post during a most trying period, whilst Sabri Pasha in coming to Cairo receives well-merited recognition of good administrative work done in one of the most difficult and at the same time most prosperous provinces. The appointment of Ziwer Pasha to the Ministry of Wakfs reported last week, and now of Sabri Pasha to Cairo, will lead to promotions amongst the provincial Mudirs; but it is understood that the Governorship of Alexandria may possibly go to a notable outside the Government Service.

"Our Day" in Egypt.

The final total of the "Our Day" subscription is now made public. The figure is £150,181 sterling, of which £45,000 represents donations, £8,000 was contributed by the Sudan, and £4,000 and £5,000 respectively by Cairo and Alexandria, and the balance of £88,000 came from the provinces. This subscription constitutes a record for this country, and is indeed a most creditable contribution, enabling Egypt, as one of the youngest members of the Empire, to take a high place amongst the contributing British dependencies.

The Paper Shortage.

Once again the question of paper supplies, especially news paper, is assuming serious proportions. The price has risen enormously; in addition, the stock is becoming very restricted, and shipments from abroad are by no means adequate for the local demand. Several local newspapers have doubled their prices with a view to curtailing the demand, and have reduced the size of their issue. It appears highly probable that some of them will have to stop publication altogether, if the position in regard to supplies does not improve. It will perhaps not matter much if certain papers disappear for a time, at any rate, for, as I have remarked before now in this correspondence, there is little doubt that this country has too many papers, considering the small percentage of literates in the population; but it would be a real calamity, if the more serious organs were forced to cease publication, for on them depends the dissemination of correct news and of the propaganda which is so necessary in a country like Egypt. It is surprising that in the course of the past three years no means should have been found for producing news paper locally. One would have thought that with the prospect of an eventual shortage the various proprietors would have combined together to carry out experiments, but as far as can be ascertained none of them have taken any action in this respect. It may be that there is some serious reason why news paper cannot be produced locally, and it would be interesting to hear what the Commission of Commerce and Industry, which presumably has studied this, together with other similar questions, has to say on the matter. In the meantime the position is exceedingly precarious, and drastic measures will have to be taken to avoid a complete cessation of newspaper publication.

ATHENS LETTER.

(From Our Own Correspondent.)

Athens, January 6.

The New Year.

The Countess Granville issued invitations to the members of the Legation Staff and to all British naval and military officers in Athens and the Piræus to see the New Year in, and some four score responded to the invitation. The British Minister and Lady Granville have already endeared themselves to all those who have had the privilege of making their acquaintance, and it was a foregone conclusion that a pleasant evening was in prospect for those invited, and they were not disappointed. Dancing commenced about ten o'clock. On the stroke of midnight greetings for the New Year were exchanged and Auld Lang Syne was sung. The New Year could not have been ushered in under more pleasant conditions, and there was a universal expression of gratitude and appreciation for the kind thoughtfulness of Lord and Lady Granville in entertaining those who are serving their country in one capacity or another, practically all away from their homes and separated from their families.

M. Venizelos's Return.

M. Venizelos had an enthusiastic reception on his return on Wednesday afternoon. As soon as the arrival of the man-of-war conveying the Prime Minister was announced the Cabinet Ministers and Earl Granville proceeded on board to welcome him. Large crowds awaited him on shore, and when he landed there was a great ovation, the church bells were rung and steamers in harbour blew their whistles. M. Venizelos's reception in Athens was equally warm, and not long after his arrival he began to receive his friends. On Friday

Digitized by Google

afternoon he addressed a large crowd of several thousands from the balcony of his house, and explained the motives of his journey and the success he had obtained towards an alleviation of the economic situation of the country. He announced the hope that it would soon be possible to make a regular distribution of foodstuffs instead of spasmodically as at present, and the recent regular arrivals of various commodities will probably render this possible. Before dispersing, the crowd proceeded to the British Legation and made a demonstration of sympathy towards Great Britain.

There is already some improvement, thanks to recent arrivals of several ships, and imports from abroad are arriving more or less regularly; but the internal control of local produce and its distribution are problems which have not yet been grappled satisfactorily. Much remains to be done to make the best use of the country's resources. Meat has become exceedingly scarce, and is about to be rationed, the want of sufficient land and water transport rendering it impossible to bring in the necessary requirements from the provinces and the islands. Scarcity of fuel is the root of much of the present trouble here. Electricity has still to be economised, several of the tram services are still suspended, and the electric current is turned off soon after midnight.

ABYSSINIA.

(From a Correspondent.)

The Political Situation.

Since the report of the establishment of the Empress Zaudito on the throne, with her heir, Ras Taffari, to assist her, there has been very little information from Abyssinia. If the difficulties in front of the new Government are considered, it will be no surprise that there has been no immediate movement. Even when Menelik was at his strongest, the Imperial writ did not run in the remoter parts of the empire, and the period of Lij Yassu did not improve the strength of the Central Government. The removal of Lij Yassu, though a first and necessary step to an amelioration of the situation, had inherent in it the principle that the ruler could be removed, if there was anyone strong enough to do it. It is true that the great rulers of the provinces have all given their allegiance to the new régime with more or less grace; but there is a spirit of unrest abroad. The army that defeated Mikhail had first to be dealt with. There is no system of supplies in Abyssinia, and the retention of a large force in the neighbourhood of Adis Abeba was extremely uncomfortable, as the soldiers were rapidly reduced to stealing their food. The Council of Ministers, which had been to a great degree instrumental in removing Lij Yassu, was inclined to get out of hand and to use its position to extort all that it could out of the people, and to resent any interference on behalf of those whom they oppressed. Moreover, there were not lacking persons to advise them how best to embarrass and hamper the new Government. Further, the officers of the Abyssinian Government have never been paid more than a nominal sum, and they made their profit by receiving a number of villagers of Galla whom they could use as cultivators or soldiers or in any other way to their own profit. There were also endless other means of getting money than the Abyssinians used. Any alteration of this régime would inevitably be a loss to the individuals concerned, which they were not prepared to accept without a struggle. The Abyssinians are more than conservative, and are always ready to resent any interference with what they believe to be their custom. Another source of trouble was the Praetorian Guard, which is the only permanent body of troops in the country. It guards the palace at Adis Abeba, and is rather inclined to imitate its Roman prototype and to take the selection of a ruler into its own hands. In any case the troops have to be placated. A similar state of affairs existed with regard to the rulers of the great provinces, who are more likely to take the opportunity to strengthen their position as semi-independent of the Central Government than to assist in the establishment of a strong administration that would deprive them of much of their power.

The Problem of the Currency.

A noticeable feature of the moment is the considerable advance in the value of the dollar. This is not only due to the rise in the price of silver, but also to the fact that the Maria Theresa dollar is getting scarcer, and that the local unrest has prompted many persons to bury their wealth in the ground. There never has been any small coinage in the country, and lumps of salt are used as a substitute in certain parts, though their appearance after some use amongst the greasy-handed proletariat inspires a hope that the salt is never returned to its normal domestic use. In any case, money is becoming more and more scarce.

Administrative Reform.

There are many difficulties already present, and added to those that have always beset the Abyssinian Government, it is likely that a solution will not be found without some considerable lapse of time. It must not be forgotten that the Shoan aristocracy is only a part of the population. The bulk of the work, as stated above, is done by the Galla, and, as in the later Empire with the freedmen, the Galla are beginning to be a power in the land. Whether there is any personality likely to arise amongst them strong enough to throw off the Shoan yoke is doubtful, but the possibility is always there, and the numbers of the Galla are very great. It is true that some parts of their country have been much depopulated by the marauding bands of slavers or the tyrannical demands of rulers; but this is also a loss to the whole wealth of the country.

What the precise political situation in Abyssinia may be at the moment it is impossible to say, still more how it may develop in the future: but it is reasonable to suppose that the different problems are being dealt with, and of necessity those nearest have to be dealt with first. These would be the Army and the Council of Ministers. The former will have been disbanded, and the latter reduced to submission—that is to say, to the performance of the several functions of the Ministers and no more. The successful performance of this will probably lay the foundations of an administration in the future in which the officers will be paid adequately and the indiscriminate collection of "backshish" will be discountenanced. It is probably at this point that the situation is now held, as the introduction of such a system will be most distasteful to the former officeholders. The internal development of such a policy is not necessarily of public interest, and this may account for the lack of information that has marked the last few weeks.

EDUCATIONAL.

SCHOOL OF ORIENTAL STUDIES.
London Institution, Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.

For particulars, apply to E. DENISON ROSS, Director.

ROYAL SCHOOL
FOR
Daughters of Officers of the Army.

Patrons:
Their MAJESTIES THE KING AND QUEEN
and HER MAJESTY QUEEN ALEXANDRA.
Chairman: Lt.-Col. A. GRUBB. J.P.
Vice-Chairman: Surgeon-Gen. SIR WILLIAM TAYLOR, K.C.B.

Daughters of Officers of the Army are admitted to the above Schools according to the circumstances of their parents, at rates of £20, £45, £55, and £80 a year. Granddaughters of Officers are admitted at £45, £55, and £80 a year according to circumstances, and a limited number of daughters of civilians are admitted at £120 a year when there are vacancies. There are 15 Scholarships, open to competition, in the School, of amounts varying from £10 to £20 up to one of £50.

As half of the School consists of pupils on the £15 foundation, which includes both board and education, a deficiency of about £2,500 a year has to be met by contributions, which are earnestly solicited. Donations of £5 5s., giving one vote for life, or subscriptions of 10s 6d., giving one vote for the year, may be sent to

F. W. T. ATTREE, Colonel (late R.E.), Secretary.
Office: Panton House, 25, Haymarket, S.W.1.

CORRESPONDENCE.

THE ENTENTE AND ALBANIA.

TO THE EDITOR OF "THE NEAR EAST."

SIR,—Since the beginning of the war there has been one point at least upon which English people are unanimous, and that is that we are fighting for the cause of freedom, for the rights and liberties of small nations. The Prime Minister, in his latest war-aim speech, expressly recognised the importance of basing the peace settlement on the principles of self-determination and the consent of the governed.

The secret treaty with Italy has now been published by Russia, and so far has received no official contradiction. It is signed by the Foreign Secretaries of France, Great Britain, Italy, and Russia, and dated April, 1915. (For full text see the *Manchester Guardian* of January 18.) From it we learn that the four Powers have promised the Adriatic coast as far as the River Drin to Croatia, Serbia, and Montenegro, thus cutting off Albania's large capital, Scutari (population 35,000), from the sea. Further, that "Italy shall not resist the possible desire of France, Great Britain, and Russia, to distribute the Northern and Southern districts of Albania among Montenegro, Serbia, and Greece." These districts are inhabited by solid Albanian populations, both Christian and Moslem. They are to be handed over, it would appear, like cattle, in spite of all our promises about self-determination. They have, moreover, more than once been assured by our Foreign Office that they, too, are included among the small nations whose rights are to be recognised. Yet our Foreign Office, it would appear, has already been party to signing away both them and their lands.—I am, etc.,

M. EDITH DURHAM.

THE FUTURE OF MONTENEGRO.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—As a Montenegrin I regret very much that the Notes of the Week in your issue of January 18 contain a very unfavourable comment upon the *Montenegrin Bulletin*. It seems to me that the very serious and just cause advocated in the *Montenegrin Bulletin* is being judged very harshly and without the necessary preliminary knowledge.

It is not correct to describe the Montenegrin Committee for National Union merely as a party of six refugees who "style themselves" as they please. The committee consists of Montenegrin ex-Ministers, deputies, judges and publicists; its president is Mr. A. Radovic, ex-Prime Minister and Minister for Foreign Affairs, late member of the Montenegrin Council of State. The committee acts in the name of almost all Montenegrins abroad as well as of those who remained in Montenegro under the enemy, and therefore it does represent the rights and aspirations of all Montenegrins in Montenegro, Europe and America.

It is not correct to say that the *Montenegrin Bulletin* is inspired by a personal feud. The *Bulletin* is inspired by a national programme, the same which is embodied in the Declaration of Corfu. We Montenegrins who are abroad consider it our most sacred duty to make it known to the British public that thousands of Montenegro's best sons have sacrificed their lives in the struggle for National Union; that the sole aspiration of all our brothers under the heel of the enemy is to realise the lofty ideal of the Union of all Serbs, Croats, and Slovenes; that the realisation of this ideal is not only our right, but is demanded by our political and economic welfare.

It is not correct to represent the Montenegrins as a distinct nation, which is the impression given in your columns. The Montenegrins are not a separate nation. They are simply Serbs. You may ask any Montenegrin you like what nation he belongs to, and he will tell you that he is a Serb.

Nor is it correct to say that, according to the *Montenegrin Bulletin*, "the future of Montenegro is to be decided by anybody and everybody rather than by the unfortunate people of Montenegro now suffering under Austrian tyranny." On the contrary, it is precisely in the name of that people that the *Montenegrin Bulletin* is speaking, and there is no other political factor abroad which is better entitled to speak in their name than the Montenegrin Committee for National Union.—I am, etc.,

London. V. BURIC.

[The remarks to which our correspondent takes exception were prompted by a sincere friendship for the Montenegrin people. If the committee has been elected by or appointed at the expressed wish of that people, there is no need to doubt that its aspirations will be realized in due course, and still less need for propaganda in England, which has no desire to intervene in a purely Montenegrin concern.—ED.]

"THE ENTENTE AND THE ALLIES OF GERMANY."

TO THE EDITOR OF "THE NEAR EAST."

Sir,—I shall be greatly obliged if you can spare space for the following:—

In the *Contemporary Review* for January, Mr. Noel Buxton, M.P., in a rather contradictory article, urges the Allies to use their diplomatic weapons to detach Austria-Hungary from Germany, and he anticipates that "the result of a successful solution would be that Austria would bring pressure to bear on Germany in the direction of moderate war aims." (Mr. Buxton does not state what compensation he is willing to grant to Germany.)

He also says that Austria desires peace, and that "it is obvious that she recognises that, unless she gets peace quickly, she is doomed."

Will Mr. Buxton be pleased to explain why, if the doom of Austria is approaching, the Allies should save her from it, and save her at the expense of our Allies the heroic Serbians, the oppressed Jugoslavs, and the Roumanians?

If Austria were separated she could rejoin, but if she is doomed, Germany is doomed also. The motto of the Central Powers is "Mit gefangen, mit gehangen" (Caught together, hanged together), and if the Allies have not adopted all the cruel and barbarous methods of warfare from the Central Powers, they ought at least to adopt their motto, which is fair and just. Austria-Hungary—or, as Mr. Lloyd George has in some of his famous speeches called it, "the ramshackle Empire"—is as much the enemy of the Allies as her partners are. She is not the tool of Germany, nor is Bulgaria. They are three in body, but one in soul, and their principal aim is "Conquest."

Can Mr. Buxton imagine with what feelings the homeless, suffering Serbians will read his plea for their deadly enemies, who by wholesale murder are trying to exterminate their race? Can he imagine the feelings of the Serbian Army, that fought so heroically to defend the cause of the Allies? Can he imagine the feelings of hundreds of thousands of Jugoslavs who sacrificed their all by refusing to fight against the Allies and deserted from the Austrian Army to join the Allies and fight for the just cause?

Burning sympathy for Bulgaria must be deeply rooted in the heart of Mr. Buxton, in spite of her treachery toward the Allies by entering the war against them, thereby prolonging the war for a considerable period, during which Great Britain must pay with tens of thousands of the lives of her noblest sons and with milliards of pounds.

Serbia and the Jugoslavs are as much inclined to bargain with Austria and Bulgaria for their rights as England would be to bargain with Germany about Kent. The ardent wish of Serbians and their brother Jugoslavs is to be united and free from all oppression, and for this they are determined to fight with the last drop of their blood. Their motto is "Unity, and Liberty for All," and if they are enslaved, there will be at least one and a-half million more excellent soldiers on the side of Austria and Germany in the next war and an open gate to the East; but if they are united, they will form a blockading gate, a gate of hardest steel, a gate which will be able to resist any force and for ever blockade the Austro-German *Drang nach Osten*, and protect British interests in the East. Do not place a cat to protect a mouse. Still less must you entrust your interest to be guarded by your enemies and traitors. Do not seek friends amongst your enemies, but be sincere to those who *are* your friends.—I am, etc.,

D. JANITSCH.

NEAR EAST BOOKSHELF.

*COMRADES TO THE DEATH.

Dedicated by permission to his Majesty the King-Emperor, and published under the authority of his Majesty's Secretary of State for India in Council, this monumental record of Anglo-Indian blood-fraternity at the gates of Calais amid the sickled lilies of unoffending France and Flanders resounds like some high organ roll of victory, death and glory. No mean intellects, literary or political, have produced this labour of love and State, as every reader will admit, and the statesmanlike clear-thinking which has hastened its publication, at a time when ever-increasing drafts are required from the vast millions of our loyal Indian fellow-subjects, renders its wonderful story very opportune. An idle or unseeing Government would have told Col. Merewether and Sir Frederick Smith to "take their time."

Now, whole passages of European adventure and battle, dangers by sea and land, translated into the languages of Hind, may be recited to students in their colleges, to wondering audiences in the bazaars, while Pathan and Sikh, Jat and Gurkha, Hindoo and Mohammedan, confirm here and there the heroic deeds and sufferings of which the volume tells, and of which they were sharers and eye-witnesses.

The authors have been frank; they put down failure as well as triumph. Throughout the story the reader is not allowed to lose sight of the bold, prompt and wise decision to call a first Indian division to the aid of hard-pressed France and England, nor the high state of efficiency which allowed the British-Indian Government to land the first expeditionary corps at Marseilles on September 26, 1914, in the very nick of time, to be thrown into one of Lord French's many hideous "gaps" around Ypres on October 21. A long year's tale of heroism is the body of the book, during which the first gallant 24,000 were replaced or reinforced by a further 30,000; and when it was finally decided in November, 1915, that India and the Empire had battlefields more urgent and climatically more congenial for Indian troops, the following roll of casualties had to be called:—Killed, British 1,930, Indian 2,602;; wounded, British 8,751, Indian 14,885; missing, British 2,126 Indian 3,247, which, with other deaths, gives a total of 34,252. British officers killed, wounded, and missing numbered 524, and Indian 493. Such was British-India's contribution to the saving of Western Europe, and the British officer's part therein is nobly emphasized, culminating in the subaltern poet's apostrophe to the fathers of his fallen men, "You were only their fathers; I was their officer." Mr. Murray must also be congratulated on this fine volume.

FIGHTING AND FICTION IN THE EAST

Soldier Men. By Yeo. (London: John Lane. 3s. 6d. net.)

These sketches of Oriental campaigning (Egypt is indicated throughout) are distinctly amusing and show an adequate perception of psychology, though there is a certain sameness in the description of the various and recurring sensations. "Second Lieutenant Vereker" is the most interesting and is more developed than the others, which bear the evident mark of the higher journalism, notably "Grumbles" and "The Way of Thomas," which two bear a fraternal resemblance to one another. "Corporal Hardman"—a second cousin, almost, to Thackeray's "Archer"—and "Defaulters" are the most original of these lesser sketches, but we should have preferred more of the Lieutenant Vereker type, where the author does fuller justice to himself.

The Man from Egypt. By Headon Hill. (London: Ward, Lock and Co. 5s. net.)

Mr. Headon Hill's "keen-eyed detective" does not suggest the Egyptian Police Chief either in temperament and methods (that individual merits a better chronicler) or in speech; his Arabic phraseology (and, for that matter, that of his native servant) is of the stage rather than the Nile Valley. The plot, however, is fair of its kind, bristling with the usual complexities and reasonably tardy in suggested solution; and if the hero had been more true to actualities, or, preferably, of the Dr. Nikola type (dabbling in Sphinx mysteries, transmogrifications, Oriental jewels, animals, etc., etc.), Mr. Hill might have made a more convincing, or at least a more impressive, story. As it is, he achieves little more than mediocre sensationalism.

Hawk of the Desert. By G. E. Mitton. (London: John Murray. 5s. net.)

Miss Mitton is known for a conscientious author who studies her ground and her plan carefully; and her present book is quite worthy of its publisher's imprint. Her story of an English expedition, captured by a German intrigue-emissary, and a long-lost sister, half-English, half-Arab (the latter half is rather of the Hesiod order—greater than the whole!), is rather far-fetched; but the general atmosphere is good, the incidents are stirring and well put together, and the scenic descriptions are excellent and show more than a cursory knowledge of the Nubian desert. After all, she has set herself a difficult task, as Egypt is a most unsatisfactory country for the novelist. Indeed, no one has yet succeeded in writing a really good Egyptian novel. Egypt is at best fitted for short stories (unless a writer chooses to follow Rider Haggard into the Pharaonic mists, which certainly provide ample copy) or else for description pure and simple; and that has been very nearly done to death. Miss Mitton has made the best—and a very good best—of a difficult task.

*A TYRANT IN LOVE.

In refurbishing the historical and traditional records of the love of Nur-ed-Din Jahângir, Emperor of All the Indies, for Nurjahân the Beautiful, Mrs. Steel gives us with skilful pen an historical romance of the Indian Court of the xvi.-xvii. century—that is, a period embracing half the reign of Elizabeth and the reigns of James I. and Charles I. To let the Western reader know that he is not in an unreal world smothered in priceless gems and cashmere shawls, the English Embassy of Sir Thomas Roe, in 1617, with all its conquistadorial shabbiness, is introduced, Portuguese Jesuits looking on and informing the wine-opiated, imperial lover that England is a little principality of no importance in Europe—which is hard but true of James I. But the tale is first and last that of the passionless pearl of beauty, Meru, Mihr-un-nissa, Nurmâhal, Nurjahân, whom the besotted tyrant loved as a boy, who refused him as a prince, and accepted him as her second husband after the first had been murdered at his drunken whim. There is a portly volume in which the Pope, Alexander VI., and his relatives of the House of Borgia are industriously whitewashed by a good English Catholic, and not nearly so convincingly as Mrs. Steel whitewashes The Shadow of God and The Light of the World. Given the proper frame of mind, it should be possible, two hundred and fifty years from now, for a good German to sit down and whitewash the present German Emperor. How hard that would be is a fitting testimony to the skill and charm of this romance.

Sympathy and a wide tolerance give us some sharply drawn characterisations: Dilarâm, the Queen of Women's old nurse, Phusla the Strangler; Ghiyâss-ud-din, father and Grand Vizier; Ali Kul, first husband; and, overshadowing all, Jahânjir and Mihr-un-nissa. Unfortunately, as the most liberal-minded Westerns must admit, there are very few Western Mihr-un-nissas, supremely beautiful, the intellectual equals of all the men of their day. But we are making progress; and Mistress of Men is an eloquent sermon to those fools of parents who think their daughters are fit only to knit and sew, read the *Daily Mirror*, and look around for a husband.

BOOKS RECEIVED.

For the Better Hour. By Princess Alexis Kara-Georgevitch. (London: Constable and Co., Limited.)

My Round of the War: A Personal Narrative of War, Travel, and Adventure. By Basil Clarke. (London: William Heinemann. 6s. net.)

Sheikh Haroûn Abdullah: A Turkish Poet and His Poetry. By Henri M. Léon, M.A. (London: Société Internationale de Philologie, Sciences et Beaux-Arts. 2s. 6d.)

The Guardians of the Gate: Historical Lectures on the Serbs. By R. G. D. Laffan, C.F. (Oxford: Clarendon Press. 5s. net.)

A little less than a year ago a meeting held at Khartoum, with General Stack in the chair, passed a resolution in favour of the publication of a scientific journal "dealing with Sudan anthropology, antiquities, languages, geography, natural history, and other sciences." The scheme has materialized, and the first number of "Sudan Notes and Records" may be expected shortly. It will be issued quarterly.

The *Daily Telegraph* publishes an attractive and valuable map of the Races of Eastern Europe, by Alexander Gross, F.R.G.S. It is well coloured, and conveys a very clear and accurate idea of the problem involved by the multiplicity of nationalities in this part of Europe. The map, which is some 5 ft. by 3 ft., is sold at 4s. 6d. net (on cloth, 8s. 6d. net).

* "The Indian Corps in France." By Lt.-Col. J. W. B. Merewether, C.I.E. and the Rt. Hon. Sir Frederick Smith. (Murray. 10s. 6d.).

* "Mistress of Men." By Flora Annie Steel. (Heinemann. 6s.).

PERSONAL AND GENERAL.

CALENDAR OF THE WEEK

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian (New Style).	Julian (Old Style).	—	Moslem.	Jewish.
1918. February.	1918. January.		1336. Rabia II.	5678. Shebat.
1	19	Friday	19	19
2	20	Saturday.....	20	20
3	21	Sunday	21	21
4	22	Monday	22	22
5	23	Tuesday	23	23
6	24	Wednesday	24	24
7	25	Thursday	25	25

Abdul-Aziz, the ex-Sultan of Morocco, is now at Nice.

The Serbian Minister arrived in London on January 30 from Manchester.

Mr. Garry, the new American Diplomatic Agent for Egypt, has arrived in Cairo.

Greek notables in Bulgaria are being compelled to work as labourers at road-making.

M. Joan Caradja has been appointed First Secretary to the Greek Legation in London.

A telegram from Corfu dated January 25 states that the Serbian Skupshtina has been summoned to meet.

M. Pavlovitch and M. Atanackovitch, members of the Serbian Parliament, left London on January 30 for Paris.

A Greek naval airman named Hambas has been killed while engaged with the British in bombing the Goeben.

The Rev. Dr. Giffin arrived in Khartoum at the beginning of last month, returning from a visit to Atbara and Halfa.

The Greek Minister, who has recovered from his recent illness, was among the diplomatic visitors to the Foreign Office on January 30.

Field-Marshal the Duke of Connaught, attended by Lieutenant-Colonel Sir Malcolm Murray and Captain P. H. Ashworth, has arrived in Egypt.

The King has confirmed the appointment of Mr. Francesco Azzopardi as an unofficial member of the Executive Council of the Island of Malta.

M. Haidoukovitch, the Montenegrin Minister for War and the Interior, who has been in London during the past week, will be returning shortly to Paris.

Mr. Alfred Oetzmann's gift to the book section of Messrs. Christie's Red Cross sale is a portion of King Theebaw's Buddhist Bible, from the royal palace, Mandalay.

The Times states that Major (temporary Lieutenant-Colonel) W. D. Kenny, Royal Inniskilling Fusiliers, attached Egyptian Army, has been appointed Military Governor of Gaza.

Lieutenant-General H.H. Maharaja Sir Pratap Singh and Colonel H.H. the Raja of Rutlam were received by Her Majesty Queen Alexandra at Marlborough House on January 25.

Under the recent arrangement made with Turkey at Berne, two Dutch delegates, MM. E. C. Menten and Groeninx van Zoelen, are going to Turkey to inspect the prisoners' camps.

The christening of the infant son of the Hon. Kenneth Mackay, only son of Lord Inchcape, took place at the Brompton Oratory on January 23. Only a few friends and near relatives were present.

General Corsi, the military critic of the *Tribuna*, believes that there are indications that the Austro-Germans will profit by their security on the Russian front by attempting a big push against Salonika.

Major-General Charles E. Cumberland, C.B., of Manor House, Maidstone, who served with the Royal Engineers in the Crimean and Mutiny campaigns, celebrated his 88th birthday on January 30.

It is estimated by the representative of the Palestine Relief Fund that there are in Jerusalem 20,000 destitute people, for whom there is no work and who have no money. The military authorities have taken over the rationing, but these rations, says the Fund's representative, must be supplemented if many of the aged and children are to survive the winter.

Miss Estelle Blyth will read a paper on "Palestine: Its Past, Present, and Future," at a meeting of the Central Asian Society on February 13.

To-morrow will be the anniversary of the birthday of Prince Andrew of Greece, brother of ex-King Constantine. He was born at Athens in 1882.

Recent wills include that of Sir Thomas Gordon Walker, of Worthing, at one time Commissioner of Delhi, Financial Commissioner of the Punjab, and afterwards Lieutenant-Governor of the Punjab, who left £6,506.

In commemoration of the death of General Gordon at Khartoum in 1885, the council of the Shaftesbury Society, on January 26, placed a wreath of laurel leaves, arum lilies, and cycas leaves on the statue in Trafalgar Square.

M. Venizelos, on his return from Salonika, said: "The Hellenic Army has been rebaptised, and I am more than enthusiastic about it." Greek newspapers state that M. Venizelos will probably go to the United States next April.

H.H. the Maharaja Scindia of Gwalior has presented to the King and Queen a New Year's gift of £6,000 for the benefit of naval officers and men whose families require help, and he has also given £1,200 to the Queen of the Belgians in aid of Belgian charities.

At a meeting of the Indian section of the Royal Society of Arts to be held on February 14 a paper will be read by Sir Henry Ledgard on the Indian Hide and Leather Trade. The chair will be taken by Lord Islington.

The Royal Astronomical Society's Gold Medal has been awarded by the Council to Mr. John Evershed, Director of the Solar Physics Observatory at Kodaikanal, India, for his investigations of radial motion in sun-spots and other contributions to astrophysics.

According to a telegram from Sofia, says Reuter's Amsterdam correspondent, Dr. Radoslavoff, the Bulgarian Premier, addressing a deputation from the Serbian town and Department of Pirot on January 24, declared that the Morava land in its entirety would remain united to Bulgaria.

In expressing to the Académie des Beaux-Arts her pleasure at her election as corresponding member of the Institut, the Queen of Roumania adds that she likes to see in this act of courtesy the homage which the representatives of art have desired to pay to Roumania and to sufferings so valiantly borne.

The King has granted to Hon. Sec. Lieut. T. H. Balding, Instructor to the Cavalry Squadron of the Shereefian Guard at Rabat, Morocco, licence to wear the Cross of Officer of the Shereefian Order of the Ouissam Alaouite, conferred upon him by the Sultan of Morocco in recognition of valuable services rendered by him.

The Government of India have decided that Indian income-tax shall not be chargeable on (a) gratuities granted to officers and others in respect of wounds or injuries received in the performance of military duty; (b) gratuities granted to the widows and children of officers and others who are killed in action or die of wounds received in action. Any sums deducted by way of income-tax from such gratuities since August 4, 1914, will be refunded.

Writing early in December in a letter which was much delayed in the post, our Cairo correspondent stated that the general committee of the Anglo-American Hospital had recently held a meeting at the Residency, when the report for the past financial year was read, and members to replace those retiring from the Executive Committee were elected. The High Commissioner, Sir Reginald Wingate, was in the chair. At the close of the meeting His Excellency made a speech, in the course of which he paid a warm tribute to the assistance rendered by the Ladies' Committee in collecting subscriptions, and in generally bringing the work done by the hospital and its situation before the public. The Anglo-American Hospital, our correspondent adds, is the only institution of its kind in Cairo where the community can go in case of illness. There is, of course, the Deaconesses Hospital; but that is an entirely different kind of hospital, and is certainly not a nursing home such as the "Anglo" is intended to be. It is for this reason that every support should be accorded to it by resident Britons and Americans, and now that it has been placed on a fresh basis, it is to be hoped that its financial position will gradually improve, so that it will be enabled to keep pace with the growing requirements of the local community.

UNIVERSITY EXTENSION LECTURES. PALESTINE.

E. W. G. MASTERMAN, M.D., will deliver a COURSE of SIX LECTURES on Palestine at the University of London, South Kensington, S.W.7, on Tuesdays, at 3 p.m. Opening Lecture, Tuesday, February 5. Admission 2s. 6d.; course ticket, 10s. Tickets and full Syllabus to be obtained from Hon. Sec., U.E.C., care of the Registrar, Extension Board, University of London, S.W.7. Cheques payable to Alfred P. Griffiths.

Speaking at the Royal Institution on January 29, Professor Flinders Petrie urged the necessity for rebuilding Jerusalem on lines entirely different from those that were followed at Athens and Rome. There must, he said, be no building on top of the ancient city. Suburbs should be laid out on either side about two miles from the centre of the city, with which they would be connected by electric trams. People should be prohibited from building in the old city, and the whole population would move to the suburbs in a generation or two.

APPOINTMENTS, PROMOTIONS, ETC.

Bimbashi L. A. Deane, Sudanese, has been transferred to the Sudan Government, and Bimbashi E. R. V. Panton, Sudanese, has been transferred to the Egyptian Camel Corps and replaced by Bimbashi G. E. S. Woodyatt.

Captain Frederick A. L. Lawrence, the Duke of Cambridge's Own (Middlesex Regiment), has been taken on the strength of the Egyptian Army, with the rank of Bimbashi, and posted to the Sudanese.

El Kaimakam C. H. Stigand Bey, Governor Upper Nile province, has been granted the temporary rank of Miralai.

OBITUARY.

Major Robert George Anthony Trail, Indian Cavalry, who died at a casualty clearing station on December 1 of wounds received the same day, joined the Indian Cavalry in 1901, the year after he received his commission, and served in the operations in the Mohmand Country in 1908, and subsequently, from 1909 to the beginning of 1914, he was attached to the Khyber Rifles, frequently acting as commandant.

Major Robert Poore, late 8th Hussars, whose death has taken place at Bournemouth in his eighty-fourth year, served in the Mutiny campaign, and was wounded in the charge of the 8th Hussars at Gwalior. He married, in 1863, Julia Benita, daughter of Admiral A. L. Corry. One of his daughters is the Duchess of Hamilton. His eldest son is Brigadier-General Robert Montagu Poore, D.S.O., while his third son, Lieutenant-Colonel Roger Alvin Poore, D.S.O., Yeomanry, was killed in action last September.

General Sir Stanley De Burgh Edwardes, K.C.B., who died on January 24 at Spunden, Sandhurst, Kent, was the son of Captain George Edwardes, of the Bengal Army, and was born in 1840, and entered the Bombay Army in 1857. He served in the Mutiny, the Abyssinian campaign, the Afghan campaign, 1879-80, and commanded the Northern Division of the Bombay Army in 1887-89. He married Adelaide Jane, daughter of General George Alexander Leckie, and had three sons and three daughters.

The burial of Sir Beauchamp Duff took place at Kensal Green Cemetery on January 24 with full military honours. The King was represented by General Sir Ian Hamilton, the Army Council by General Birch, Sir William Robertson by Sir George Arthur, General Sir Edmund Barrow by Lord Islington, and the India Office by Lieutenant-General Sir Herbert Cox. The coffin, which was draped with the Union Jack, was borne on a gun-carriage drawn by six horses furnished by the R.H.A. An escort and guard of honour at the cemetery was provided by a detachment of the Scots Guards, with the bands and pipers of the regiment. The Rev. Garden L. Duff, Rector of Turriff, Aberdeenshire, and the Rev. B. C. H. Andrews, chaplain to the cemetery, conducted the service. The music included the "Dead March" from *Saul* and funeral marches by Chopin and Beethoven, and the Lament, played by the pipers. Following the three volleys by a firing party of the Scots Guards, the "Last Post" was sounded by buglers of the regiment.

Sir Alexander Meadows Rendel, K.C.I.E., the distinguished engineer, died on January 23 at the age of 89. He was the eldest son of the late Mr. James Meadows Rendel, civil engineer, and was educated at King's School, Canterbury, and Trinity College, Cambridge, where he took his degree as Wrangler. After studying as an engineer under his father, he became engineer to the London Dock Board, the Leith Harbour and Dock Commissioners, and other undertakings. In 1857-8 he began his series of visits to India. Among his principal works were the Shadwell New Basin, the Royal Albert Dock, the Albert and Edinburgh Docks at Leith, the Workington Dock and Harbour, and the Sukker Bridge over the Indus. He was a member of the Commission appointed in 1870 to determine what should be the narrow gauge for India, and four years later became consulting engineer to the India Office and the East Indian and other railways. He married in 1853 Eliza, eldest daughter of the late Captain Hobson, R.N., Governor of New Zealand. Lady Rendel died in 1916.

THE "NEAR EAST" INDEX.

The Index to Volume XIII. of THE NEAR EAST *(May 4—December 28, 1917) is now ready, and may be had by subscribers on application to the Manager, 1, Devonshire Square, E.C.*

The funeral of Sir Alexander M. Rendel, K.C.I.E., took place at the Golders Green Crematorium on January 26. The mourners included Mr. and Mrs. J. M. Rendel, Major R. M. Rendel, Dr. and Mrs. A. B. Rendel, Mr. W. V. Rendel, Mr. A. W. Rendel, and Miss H. Rendel. Among others present were Sir Stephen Finney, Colonel Gardiner, Mr. F. Palmer, Mr. Seymour B. Tritton, Mr. H. Kelway-Bamber, Mr. C. Kelway-Bamber, Mr. John Mitchell, and Mr. W. A. Lelean.

BYZANTINE ARCHITECTURE IN THE WAR ZONE.

Lecturing at Carpenters' Hall, London, on Wednesday evening, Sir Thos. G. Jackson, Bart., said that nearly all the principal monuments of Byzantine architecture were now within the war zone. When the Roman style of architecture began to melt into new forms in the Eastern Empire, Constantine's buildings were at first built as those in Rome; but the basilicon type soon yielded to another in which the dome was the principal feature. This involved an entire change of construction. In St. Sophia, when rebuilt by Justinian, a problem was set and solved which had never afterwards been attempted—namely, that of erecting on a square base a dome with a diameter exceeding 100 feet. The exterior decoration was little considered in the Byzantine style of architecture, but the interiors had a loveliness all their own. In the case of St. Sophia, the enormous unbroken floor space and the vast height of the dome gave an effect unlike that of any other interior in the world. In the case of the Serbian churches, more attention had been given to exterior design. Following an example set by some churches in Salonika, the churches had been decorated outside with patterns in brickwork. This was only one sign of originality in Serbian architecture at a time when Byzantine art generally was decadent.

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO,
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

THE ONLY ENGLISH HOTELS IN ALEXANDRIA.
Proprietor: AUGUSTUS VAN MILLINGEN.

WINDSOR HOTEL
(Facing the Sea, opposite Y.M.C.A.), ALEXANDRIA.
Full Pension, P.T.50; Room, P.T.20;
Lunch, P.T.15; Dinner, P.T.20.
For long stay, apply to the Manager.

SUMMER PALACE HOTEL,
GLYMENOPOULO, RAMLEH.
This Hotel is situated near the Beach. Open all the Year.
Bathing Cabins.
Terms from: Pension, P.T.60; Lunch, P.T.20;

A NEW ORIENTATION IN THE NEAR EAST.

Not the least interesting feature of the visit of the Italian Prime Minister to England last week was the official *communiqué* that marked its termination. This document was a distant echo of the speech delivered on January 5 by Mr. Lloyd George on Great Britain's war aims; but it has also a wider significance. It is satisfactory to know that a most complete understanding prevails between Great Britain, Italy, and their Allies on all matters political, military, naval, and economic connected with the prosecution of the war. Incidentally it may be mentioned that, as the countries have been associated together for two or three years in a life-and-death struggle against a common foe, it would be monstrous if it were not so. But as the admission is made that there was room for "uncertainty" on some points, it will be well to take more careful stock of the whole position in the Near East with regard to the views and interests of the Allies. The *communiqué* is at pains to assure public opinion in Great Britain that the uncertainties which existed were not concerned with any serious question, but were only the result of the different points of view from which one and the same question may be regarded. Many people will incline to the belief that this deft phraseology might serve equally well as a definition of the war between the Central Powers and the Entente; but the official statement fortunately does not end there, for it proceeds to add that "it was at the same time recognised that the perfect solidarity and the mutual confidence which exist among the Allies extend also to the different lines of thought by which a just and durable peace may be reached." Finally, "it goes without saying that the British Government recognized to the full their conventional obligations to Italy, and made clear once again that the historic British sympathy for the idea of the complete unification of the kingdom of Italy remained unimpaired." The reference in the last sentence is to the Italian Convention of April, 1915, some of the clauses of which are in direct conflict with every statement of the Allied war aims made since the entry into the war of the United States. As it is impossible to suppose that either Italy on the one hand or Great Britain and France on the other would now wish to see that treaty carried out *au pied de la lettre* at the end of the war, we must infer that the Italian and the Allied Governments have agreed amongst themselves in regard to the clauses that have to be modified in the light of recent developments.

So far as this analysis of the very elaborate *communiqué* holds good, it is clear that only an Italian version of it was called for, and that it was almost a work of supererogation to publish it in English. The British public does not credit its Government with the intention of repudiating treaties, but it is anxious to know that certain dubious clauses in the Italian Convention, obviously based on profound ignorance of Balkan ethnography and on a false conception of Italy's own interests and those of Europe generally, have been eliminated or modified by agreement in conformity with fuller knowledge of the subject. On this point unfortunately the official statement is silent. The fact that it was issued, however, suggests that there was no lack of goodwill on either side, but that considerations of "saving face" prevented a frank acknowledgment of previous mistakes. From this line of thought we are led to wonder whether the same considerations are paralysing Allied, and particularly British, diplomacy as a whole in regard to the Near East. It is notorious that the British Government has been consistently ill-informed on Near Eastern affairs, or has failed to attach sufficient importance to those affairs or to the information it has received, to influence Allied diplomacy in the right direction. So long as the solidarity of the Grand Alliance was unimpaired it was reasonable to suppose that the Allies would win through more or less comfortably, and a military solution was to be preferred to any other in the Balkans. But the defection of Russia promises to prolong the war beyond the fourth year, and has materially altered the Allied position. Quite apart from the additional burden imposed on the Western front, it must not be overlooked that the situation of our Roumanian Ally is perilous in the extreme, and that there is no hope of her receiving military succour in the immediate future. The Allies owe it to Roumania to leave no stone unturned in order to bring her relief. Every day that passes without a definite attempt to hold out to her a helping hand is a grave reflection upon the Allied Governments. But if here, too, "face" has had to be saved, it is hardly a matter for wonder that two years should have passed with the Allied force in Macedonia inactive and without any practical steps being taken to solve a difficult situation by other means.

There would seem to be an urgent need for a new orientation for British policy in the Near East, and the question arises whether, in order that action may be taken without delay, it may not be better for those who consider themselves particularly identified with previous conventions or policies which stand discredited to-day to divest themselves of responsibility and to hand over the conduct of affairs to others who will feel at liberty to break entirely new ground. Time presses. The Allied cause cannot be subordinated to personal considerations. As far as the Near Eastern situation is concerned the outstanding facts are that a position of stalemate has been acquiesced in for two whole years, that a possible solution has presented itself and has been accorded some recognition, but without leading to action, that further inaction in the face of the dire straits to which Roumania has been brought is a crime or worse, and that the general military situation to-day justifies the Allies, while adhering to the broad principle of nationality, in making some concessions which could not have been contemplated at an earlier stage of the war. Their object should be to detach Bulgaria from the Central Alliance. For a long time we have held that the process would be materially assisted by, and might even require, a military victory; but it may be that the prolongation of the war will have proved an adequate substitute. President Wilson has not hesitated to say publicly that he believes the Bulgarians to be ripe for a break with the Central Powers. From this statement and from other indications it may be inferred that no actual treaty of alliance binds Bulgaria to Germany. Self-interest, as her rulers interpreted it, prompted her to take up arms and throw in her lot with the Central Powers and Turkey, and the same guiding principle will probably prompt her to withdraw from the war. Her first demands will undoubtedly be pitched high. Those that the Sofia Government now publishes to the world are naturally higher still, as Germany is looking on, and the Allies have not yet to be considered. But with tactful handling a point may be reached at which "business" can be done. Certainly Bulgarian psychology must receive attention, and it may be necessary to revise our opinions of the relations subsisting between the people and their ruler. One essential preliminary will be to explain the situation to the Serbian and Greek Governments. There should be no occasion for the expression of misgivings or protests such as have followed Mr. Lloyd George's statement of British war aims. Serbians and Greeks should be confronted with the realities of the situation, and their cordial approval secured for the steps contemplated. A *sine qua non* is that the Allies, one and all, should appreciate the gravity of the position and the need for action. No legitimate interests need suffer, and the advantages to be gained are incalculable. Sir Edward Carson has already severed his connection with Govern-

Digitized by Google

ment as a protest against Great Britain's Balkan policy. Is it too much to hope that Irish affairs will now shortly leave him free to carry his championship of British interests in the Near East to its logical conclusion?

THE ANTIQUITY OF ALBANIA.

By MISS M. E. DURHAM.

Nations come and nations go. Race after race has swept Europe. Some that were mighty have disappeared completely. Others, pouring in from unknown and uncharted regions, have supplanted them. And among all the ebb and flow few have shown themselves more tenacious of their ancestral lands than the Albanians. If ancient tenure gives right, few have better claims. Strabo gives us a curiously detailed account of Albania, made the more interesting by the fact that he himself was of mixed Greek and Asiatic blood, and wrote in Greek. For he states emphatically that the early inhabitants of the land were non-Greek. Writing at the very beginning of the Christian era, he tells us that the Adriatic coast was inhabited by the Illyrians in the north and the Epirotes in the south. Illyria begins, he says, in the recesses of the Adriatic. It approaches the Alps which lie between Italy and Germany. Tergestum, now Trieste, was a city of the Illyrians. Its name may tell of them, for the modern Albanian word for commerce is "*tregtim*"; "*tregtue*" is to trade. The Illyrians then, as their descendants now, were divided into tribes, some of whom have given their names to the lands of to-day—the Carni and the Istri. "The present Government," says Strabo, "has advanced the limits of Italy to Pola, a city of Istria." The Iapodes, who dwelt on a termination of the Alps, were a warlike people, poor—for the land was barren—and living largely on millet. Maize, now one of the staple foods of the Balkans, was then still undiscovered on the plains of America, along with potatoes and tobacco, now considered necessaries of existence. Nevertheless, though tobacco-less, the Iapodes were a warlike people "wearing armour after the Keltic fashion and puncturing their bodies after the fashion of the other Illyrian and Thracian peoples." A passage, this, of the highest interest. For the tattooed people of Bosnia, the Herzegovina, and Albania are, doubtless, direct descendants of these tribes. No Slav people are recorded as tattooing; but here we find whole districts of Roman Catholic peasants marked with the sun and the crescent moon, signs, it may be, of some early form of nature-worship. Catholic too they are, and not Orthodox. The Illyrians received Christianity from the Romans, and the coincidence is of interest.

From Istria all down the coast Strabo enumerates the various tribes, and their lands, he states, extend inland to Pannonia. Then, as now among the Albanians, the land was common to the tribe. "The Dalmatae," says our historian, "redivided their land every eighth year." Those who have witnessed such a scene will call to mind the tribal meetings of the headmen in the Albanian mountains, and the heated debates over the periodical redistribution of grazing and wood-cutting rights. Seafaring folk, too, were the Illyrians, and famed for piracy. The many islands and harbours were, in fact, greatly apt for the purpose, and the rich vessels of Roman merchandise were robbed and harassed especially by the Ardaei, who dwelt in and around the Bocche di Cattaro. This brought down upon them Roman vengeance, and, says Strabo, they were driven inland "and compelled to cultivate the land. But so rugged and barren was it that the nation was completely ruined and nearly extinguished. Other once powerful tribes were similarly reduced, and are now in the lowest condition." What remains of the pirate tribes now? Probably the Morlachs, or Sea Vlachs, are their direct descendants, Slav-speaking now, it is true. But it is only of recent years that an old Roman dialect died out on the coast. The Morlachs have throughout their history been Roman Catholic, faithful to the Church which first converted their Illyrian ancestors. And it is possibly to the fact that these were pirates that the Austrian navy owes its best seamen.

From the Rhizonic Gulf (Bocche di Cattaro) Strabo takes us on to the mouth of the Drin, near which is Lissus (Alessio). The river is navigable inland as far as the district of the Dardanii, he tells us, "which country is close to the Macedonia and the land of the Pœonians." The name may mean the land of pear-trees; "*Dardhe*" is Albanian for a pear, and in this region we find Slav names denoting pear-tree land—Krushevo and Krushevatz.

Off the coast he tells of the many islands, especially Black Corcyra (now Curzola), "on which is a town founded by the Cnidians." Further south he comes to Dyrrachium (Durazzo), and describes minutely the Egnatian Way passing by Scampis (? Elbassan) to the lake of Lychnidus (Ochrida). "*Licheni*" is modern Albanian for "a lake," be it noted. Of Macedonia Strabo tells us that "it was formerly called Emathia," another interesting name, for "*e madhe*" is Albania for "the great."

But we must pass on to South Albania, the land of the Epirotae. These also, he tells us, are divided into numerous tribes which extend as far south as the Gulf of Arta (Ambracia). "On sailing in on the right hand are the Acarnanians, who are Greeks . . . on the left are the Cassiopoei, a tribe of Epirotae extending as far as the recesses of the gulf." "The greatest part of Greece is, however, at present uninhabited, and the cities especially have been destroyed. Thracians, Illyrians, and Epirotae are settled even at present on the sides of Greece." . . . "The country above Aetolia and Acarnania is occupied by Thesproti, Molotti, etc., Epirote tribes. . . . Theopompus says that there are fourteen Epirotic nations, the most celebrated of which are the Chaones and the Molotti (or Molossi), because the whole of Epirus was once subject to them." "Mol" may indeed be the same word as "*mal*," a mountain, and Molossi a form of the modern "Maltsori," meaning mountain men. Of Epirote coast towns he mentions Onchesmus—on the site of the modern Santa Quaranta—Posidium, Buthrotum, and Panormus. In the Gulf of Valone is the port of Oricum; and inland in the territory of Apollonia he describes "what is called a nymphaeum, a rock which emits fire; below it are springs flowing with hot water and asphalte. Asphaltum is dug out of the neighbouring hill." This is evidently the Selenitza mine, worked until the war broke out by a French company. The long strings of donkeys, each with a couple of cakes of asphalte slung on its packsaddle, were a familiar sight to all visitors to Valona.

Finally, Strabo tells us of the famous oracle of Dodona, founded, he says, by the Pelasgi. "Homer clearly intimates that the people who lived about the mountain were barbarians . . . persons who do not wash their feet and who sleep on the ground. . . . Dodona was formerly subject to the Thesproti and in later times, it is said, to the Molossi. The first prophets were men. Afterwards three old women were appointed. . . . The oracular answers were conveyed not by words, but by certain signs. Probably the doves made a peculiar flight which suggested the answer to the priestesses. *Some say that in the language of the Molotti and Thesproti old women are called 'pellaei' and old men 'pelii,' so that the celebrated doves were not birds, but old women who passed an idle time in the temple.*" He adds, "Persons who hold office are called *peligones* as among the Macedonians." "old" is "*pelak*" or "*plak*," and the members of the council of headmen are the "*peleknit*" or "*pleknit*." To the aged wisdom is attributed, and many an old man to this day is a famed reader of the future in the breastbones of birds. Grimly truthful, too, are some of these prophecies. The writer vividly remembers a hot day on the quay at Durazzo in the early summer of 1914, when a ragged Maltsor held a fowl's breastbone against the sun's glare and said gravely that he saw nothing but blood. His comrade jeered at him, and said he did not understand the bones; but the seer stared hard again, and said, sadly and earnestly, "It is true, I tell you; blood, blood, and blood everywhere, and nothing but blood." Did the oracle of Dodona ever foresee so truly?

Thus we see in Strabo's day the Albanians' ancestors occupying the whole of the western side of the Balkan peninsula. For these tribes of Illyrians and Epirotae in "the mode of cutting the hair, their language, and their use of the chlamys resembled also the Macedonians." The mountain men of to-day—and women, too—all shave their heads in patches, each locality having its own head-shave. And the big sheeps' wool cloak, or *talagan*, is a characteristic dress of the land. The Slavs had not in Strabo's time been even heard of. The Greeks, though they had made trading colonies along the coast in earlier days, had long ago retired. Nor did they ever again firmly establish themselves, though they have tried peaceful, and other, penetration since. In the heyday of Byzantium Greek influence probably spread northwards, but only to ebb again. Brerewood in 1625 tells us that "at this day the Greeke language is very much decayed, not only as touching the largnesse and vulgarity of it, but also in purenesses and elegance. *For the naturall languages of the Countries* have usurped upon it so that the parts in which the Greeke language is spoken at this daye are but these. . . . Greece itself, *excepting Epirus and West Macedon*." Turk, Greek, and Slav alike have striven to kill that language spoken of the Macedonians, Illyrians, and Epirotes, but so far striven in vain. In recent years it in fact extended and re-took a large part of Macedonia. And its speakers to day are printing newspapers in it in far away America—a land unknown in Strabo's time. And as in Strabo's time, they still regard, and with considerable justice, the Gulf of Arta as their southern frontier. Northwards, where recently much of their land has fallen into the hands of the Slavs, their true frontier needs redrawing. But not all the efforts of King Nikola, who forbade the teaching, printing, and selling of Albanian in Montenegro, could prevent a large number of his land's inhabitants speaking it.

One thing seems certain, and that is that a people that has shown in the past such endurance and such a capacity for surviving all foreign influence must have a future, although Mr. Lloyd George has omitted them from his last war-aim speech. Somewhat unkindly, too, for he is a man of a little mountain land himself. And it is even yet possible that in the future an Albanian Lloyd George may sway the Balkans.

TANGIER TO TEHERAN.

In a letter recently received in England, a surgeon serving with our forces at Salonika refers to an entertainment given in the camp, apparently by a "travelling company" recruited from our fighting men. As soon as the first visit was announced, there was a rush for seats; and the younger officers made a point of inviting the nurses. But, alas! the "jokes" proved to be so strong-flavoured and the fun in general was so *very* fast and furious that the luckless hosts were horribly embarrassed. According to the letter, they sat in solemn silence, with set faces, not daring to smile; and they were, presumably, very thankful when the ordeal came to an end. But, says the writer, the next entertainment given by the same party was a great success. The officers attended, but they took care not to invite the ladies.

***

This reminds me somehow of the experience of two travellers who found themselves stranded in Alexandretta several years ago, waiting for a boat that came not. Two residents invited them to a cinematograph exhibition, to be given in a café, and they accepted. The show was a travelling one, of course, and was, I think, the first to find its way to Alexandretta. It was owned by an Italian, and, all things considered, was quite as good as could be expected. During the entertainment the two hosts informed their guests that on the previous evening (the first night of the show) certain films that were decidedly "risky" had been shown; that they had protested, as they had ladies with them; and that the showman had been very surprised. He was, however, to be still more surprised that evening, for at the end of the programme one of the two residents calmly asked him to show the films to which objection had been raised overnight. He was perplexed, and showed it; and when he was told that it would be all right to show them then, as the ladies were not present, his perplexity only increased. But he scored off his puzzling patrons—he declined resolutely to show the "objectionable" films at all.

***

A few days ago I was reading some Serbian proverbs—copied, I think, from M. Miyatovitch's "Serbia and the Serbians"—when I came across some which seemed extraordinarily adapted to the present state of affairs. The Germans, for instance, with their admiration of "shining armour" and "bright swords," should be interested in the proverb, "The victory is won not by the shining arms, but by the brave hearts"; and their victims in Belgium and elsewhere may find some explanation of their sufferings in the saying, "Where there is no fear of God there is no shame of men." I suspect that Belgians, Serbians, and Roumanians alike would find it hard to agree with another of the proverbs, which says: "It is better to suffer injustice than to commit it"; but they and their Allies alike are none the less determined to act up to the proverb: "It is better not to commence than not to finish." The Bolshevists might do worse than remember that "Who does not take care of the goods of other people will never have his own." Austrians as well as Germans should bear in mind that "What is taken by force is cursed." And finally, to come nearer home, ardent supporters of a certain measure recently before Parliament may find food for reflection in: "When the devil cannot cause a mischief, there he sends an old woman, and she does it." But this cavalier saying belongs, I suspect, to the days when Turkish influence was strongest in Serbia!

***

It is not often that I am tempted to break into verse, but the heroic (?) wish expressed by the new Maid of Athen's that M. Venizelos's head may be cut off and that she and her friends may dance round it, has stirred me so deeply that mere prose will not express my feelings. So, let me place the epoch-making event on record thus:

A young party in Athens said: "Oh my,
'Twould make things so comfy and homey,
If the Cretan were dead,
And I danced round his head
In the style of a modern Salomé."

The moral grandeur of the poem seems to me to place it on a level with the beauty of the thought expressed by 'Tino's enthusiastic admirer.

***

Perhaps, as a result of their alliance with the Turks, the Germans appear to be developing an unconscious humour which may yet render their official utterances and diplomatic despatches quite amusing. The idea of our old friend Count Bernstorff recommending that M. Caillaux should (in the event of his capture) "be treated with courtesy and consideration," was truly German; but the advice that this should be done in "an unobtrusive way" was surely worthy of an Old Turk at his best! "Courtesy"

Digitized by Google

and "consideration" of the German brand have thus far been so utterly unobtrusive that the world has never suspected their existence.

***

According to an Amsterdam message, Dr. Solf, the German Colonial Minister, has been telling his countrymen that "whoever supports missions in the German Protectorates confers a double blessing, for he not only serves his faith but also advances Germany's overseas position." I should imagine that the outlook both for the German Protectorates and for Germany's overseas position is far from bright at the present moment, thanks to the unsympathetic attitude of the British Navy. But that is by the way. My sole object in referring to Dr. Solf's statement is to point out how entirely it bears out what THE NEAR EAST has declared time after time regarding Germans abroad. In this connection this paper has been concerned chiefly with the political activities of German archæologists; but German missionaries are usually just as keen "carpet-baggers" as the antiquarian enthusiasts. Dr. Solf certainly has not overstated the case!

CORSAIR.

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

Leave for the Indian Army. January 23.

Colonel YATE asked the Secretary of State for India whether it would now be possible to give Indian soldiers who had served for three years in East Africa leave to return to their homes in India.

The President of the Board of Education (Mr. HERBERT FISHER): It is hoped that under present military arrangements effect will be given to the suggestion made by the hon. and gallant member.

Colonel YATE asked the Under Secretary of State for War whether, considering that many officers of the Royal Army Medical Corps had been detained on garrison duty in India beyond the regulation term of five years, he could now state by what date arrangements will be made to relieve those officers and give them a chance of service in France or elsewhere.

Mr. MACPHERSON: I would refer my hon. and gallant friend to the answer given on December 3 last to my hon. and learned friend the member for York. Steps are being taken to relieve as many as possible of the medical officers who have been a long time in India, but in view of the transport and other difficulties, such as the loss of time and services involved in carrying out reliefs, I regret it is quite impossible to give a date in connection with this or even to promise that all such officers will be relieved.

The Dardanelles Action. January 30.

Mr. GEORGE LAMBERT asked the First Lord of the Admiralty whether he would state what were the British casualties in the recent action near the Dardanelles; and why slow-moving monitors were left in positions that enabled them to be sunk by fast warships like the Goeben and Breslau?

Dr. MACNAMARA, in reply, said: Six officers and 127 men were killed, and twenty-seven men were wounded. The monitors were stationed in their positions as being the most suitable vessels to support patrols and to prevent enemy mine-sweeping. The probability of an attack by submarine prevented the heavy ships being kept in close proximity to the Dardanelles, as there were no suitable protective harbours. The minefields, though they did not prevent the exit of Turkish vessels, had fulfilled their functions in that one ship was sunk and the other damaged.

Invalided Indian Army Officers.

Answering Mr. JOYNSON HICKS, Mr. FISHER (on behalf of the India Office) said that it was possible there were certain cases where senior officers of the Indian Army invalided from the front or otherwise unemployed were drawing less pay than the pensions to which they were already entitled. The officers concerned had in ordinary times the option of retiring on pension due to their service or of remaining on the unemployed list and counting their service on it for increased pension. In almost every case they preferred to remain unemployed and earn the higher pension. During the war the officer was obliged by regulation to remain on the active list, but the maximum pension was issued in lieu of unemployed pay as soon as it had been earned. He did not think, therefore, the refusal to allow them to retire during the war involved any hardship.

THE PRESS ON THE NEAR EAST

Great Britain and Persia.

Discussing Lord Curzon's recent statement in the House of Lords on Persia, Professor Edward G. Browne, in the *Manchester Guardian*, points out that, as the Anglo-Russian Agreement, always hateful to the Persians, has now been repudiated alike by the present rulers of Russia and by their immediate predecessors, the field is clear for a new and more sympathetic British policy in Persia. The requirements of such a policy, he adds, would seem to be as follow:—

1. The complete abolition of the "zones of influence" created by the Anglo-Russian Agreement, which will always be fraught with painful memories if not with potential dangers.
2. Generous financial help on reasonable terms, unaccompanied by humiliating or alarming political or commercial conditions.
3. Abolition of the dual control of the British and Indian Governments in Persian affairs, which not only in recent years but for a century past has led to much confusion and inconsistency in our policy, which should be directed entirely from England.
4. In choosing such European advisers, financial or other, as it may require, the Persian Government should be allowed the utmost possible freedom. The one foreign financial adviser who succeeded in entirely winning their confidence was Mr. Morgan Shuster, and it would be a graceful concession to Persian sentiment, an eloquent announcement of a new and wholly friendly policy, and a compliment to our American Allies if he or one like him could be induced to take up the work of financial reform where he left it more than six years ago.
5. Last, and most important, every effort should be made to ensure that Great Britain shall be represented in Persia by diplomatic and consular officers who are known to be friendly and sympathetic to the Persian people—a people so singularly responsive to sympathy and appreciation. The names of several of these who have been moved to other countries will occur to all students of Persian affairs, and their return to Persia, where possible, would create an excellent impression, and would more than anything else convince the Persians that the new policy outlined by Lord Curzon is seriously meant and commands the warm approval of the great majority of the people of Great Britain.

The Geography of the Balkans.

The Foreign Office is taken severely to task by Professor L. W. Lyde in the *Morning Post* for having acquiesced in any pretended settlement of the Balkan question which ignored the geography of the Peninsula. It is to be feared that the trouble went deeper than a knowledge of geography. But the theme supplies the writer with an occasion for some interesting remarks on this old Roman province. He writes:—

A glance at even a political map shows that this Dinaric area lies in three sections, the northern and southern sections running N.W.—S.E., while the central section runs N.—S., between two great rivers which work out to sea above ground—in spite of the karst limestone—thus creating the Albanian and Epirot "Gaps." The change of direction on the coast attracted the attention of the Romans, and investigation proved that it was associated with a change in the direction of the feature-lines inland, and the Romans proceeded to drive two main roads up the valleys of the Drin and the Skumbi. They also drove one up the Narenta valley, roughly along the line of the Austrian (rack and pinion!) railway, but they considered it much the least important of the three, and no great traffic ever went by it, while its neighbour to the south—in the Drin valley—was used for centuries by ox-wagons carrying hides and iron-ore. What is the class of intelligence that believes that modern engineers cannot build a railway where the Romans built a road for ox-wagons?

But, of course, for Serbia to have secured economic access to the Adriatic here would not only have freed her from the

Digitized by Google

economic tyranny of both Austria and Greece, but also have removed the great economic causes of trouble between Serbia and Bulgaria. At the same time it did not suit German plans for Bulgaria to be too strong, for the Bulgars, as well as the Serbs, once held empire over the whole area, and traditions of that empire are as strong in Bulgaria as in Serbia. Besides, Greece was ruled by a Prussian queen. Therefore, Kavalla—the Roman Philippi—was given to Greece, not to Bulgaria, though it is the natural port of the *only* direct route from the Sofia basin to the sea, *i.e.*, the Struma valley, and though the position of the article (*after* its noun) in the peasants' speech shows that the fundamental strain here and as far west as the Vardar is Bulgar.

The obvious causes of unrest in this area, therefore, could have been largely removed by a settlement based on quite a moderate knowledge of the physical and economic geography, even if for the present we ignore the more intricate historical (mediæval) and political geography. Serbia would have had direct access to the Adriatic at S. Giovanni di Medua, and Bulgaria to the Ægean at Kavalla. The trading Greek would have received the coastland as far east as the west bank of the Struma, and far enough north to control the railway route between the Lower Struma and the Lower Vardar; and the Bulgars would have had the rest of "Macedonia" east of the Vardar. The Serb and the Bulgar are contemptible as traders, but admirable as farmers, and exactly the contrary is true of the Greek. And the most stable guarantee of peace will be to give each type the geographic environment to which it is naturally suited. But this must not be interpreted as justifying the coastal type of people in blocking the continental type from free access to the outside world.

The Ordeal in Russia.

The close bearing that events in Russia have on the Near East will perhaps justify the inclusion in this column of extracts from a private letter from a Russian lady well known in the Near East, who now finds herself a virtual prisoner, with her husband, on their estate:—

The summer is over—a cold, rainy summer that ruined nearly all our crops. Few of us got back our seed potatoes. Vegetables failed, and our neighbours relieved us of the most of the little we had. Worst of all, the rye is a failure, and famine stares us in the face at very close quarters. We, personally, have not enough to carry us through, and of the little there was we were made to give up a considerable portion at far less than cost price, and 1-3rd of market value. We are being steadily squeezed in the cold, relentless coils of a well-organised agrarian campaign that in many places is ending in bloody excesses and fires, and I think the same will soon be here.

We are practically ruined now. We have only ten cows and seven horses left, and I doubt if we can keep them. Pasture land and hay land have been taken, and our poor beasts driven from pillar to post for food. Our next year's rye fields, now tender young, green, are being ploughed up by the feet of large herds of cattle, sheep, and pigs—turned in not so much to eat as to ruin—for the ground is wet. We tried to sell timber for Government use, but, though the contract was made out in June, local conditions have made work impossible, so we cannot sell anything.

All our neighbours, and our friends and relatives in Petrograd and in this part of the country, have gone south in hope of finding safety and bread.

But what we bear, and even what may be before us, is nothing to what our boys and their class are enduring! German money and fiendish cleverness have cultivated such class hatred—making the soldiers believe their officers to be their worst enemies, and that to end the war and have peace, and bread, can only be realised by wiping out the intelligent class.

There was a fine leading article in one of the papers this week paying such a tribute to our officers. It began by saying that some had compared the state of the officers to that of a man waiting his death sentence. But the writer went on to say that the lot of the latter was easier, as he knew for what, and when and how he was to be punished; whereas the officer in the front, sharing the danger, privations, fatigues, and food equally with the privates, had, in addition to the natural danger and risk of battle, the knowledge that death in the most humiliating and often most torturing form was hanging over him every moment.

Bread forms such a large part of our diet now that I have to eat a good deal of it. Our winter supply of vegetables is very small. Half a sack each of carrots and beets, a small keg of sour cabbage, and by giving out potatoes by weight, we hope to make them last until Christmas. We have no groceries—no rice, maccaroni, white flour, anything. We get on our card one pound of sugar per month each, and ¼ lb. of tea for the family. This month 5 lb of lentil flour was added, and I am making experiments as to how to cook it, for I never saw lentils in the form of flour before. Meat, also, we do not have now, but we can get fish at a very high price. But we are well off as to bread; yet we fully expect bread riots, and the peasants have told me frankly that as soon as their supply gives out they will take ours. We are making cereals of oats and buckwheat, and if we are not looted we can get on.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

The accounts of the Associated Cotton Ginners of Egypt for the year 1916-17 show that the improvement recorded in 1915-16 has not been altogether maintained. The cotton crop yield was very slightly superior to that of the earlier period, and the quantity ginned also showed an increase, but there was a marked decrease in the total of steam-pressed cantars. The profit on the factories amounted to £E37,400, against £E50,000, and the net profit to £E10,700, against £E18,600. The dividend is again 1s. per share, but there is a substantial reduction in the carry-forward at £E9,000, against £E15,900. It is stated that on account of the abnormal conditions the turnover in the various ginning mills did not attain the development which otherwise might reasonably have been expected, but that the outlook for the current season is better than that of the year just closed.

***

Colonel Gardener, presiding at the half-yearly general meeting of the East Indian Railway Company, was able to give a very satisfactory account of the company's progress. The gross and net earnings for the half-year, he pointed out, established another record, the gross earnings being £3,958,826, an increase of 5.68 per cent., and the net earnings £2,613,029, an increase of 7.52 per cent. This increase was mainly due to coaching earnings, which increased by 12.15 per cent., owing to the higher fares which took effect from May, 1917. On the other hand, the working expenditure showed an increase of 2.19 per cent., though there was a reduced ratio of expenses to gross earnings, this being due to the impossibility of carrying out the renewal programme.

***

As to the outlook in general, Colonel Gardener's remark is worth noting that one effect of the war, and one which would no doubt be lasting, was the impetus it had given to Indian industries and their development in new directions. "The great success which the Indian iron and steel industry has obtained in the Tata Iron and Steel Works," he said, "is pretty certain to have wide effects, and possibly lead our capitalists and manufacturers to direct their attention to utilising India's great reserves, to which they were slow to turn their attention in the past. There are doubtless also many other directions in which the working up of India's indigenous productions can and will be developed." Regarding the current half-year's working, Colonel Gardener indicated that the position was satisfactory. The monsoon had been good, but prolonged to a rather late date, while the coal outlook was believed to be better. He added, however, that expenses would be increased by an important war bonus that was being given to the whole of the staff in India.

***

The annual report of the Association to Protest against the duplication of Income-Tax Within the Empire is a most satisfactory record of progress, and one on which the Association is to be heartily congratulated. There are, as yet, no signs, it is true, that the authorities have yet been made to realise the full force of the injustice of paying income-tax twice on the same income, particularly in a time like the present, when the tax is at an unprecedented figure, but there are indications of a definite nature which suggest the growth of influences before which Whitehall may feel itself compelled, sooner or later, to adopt a new orientation of thought in dealing with the subject. In 1916, for instance, only thirty-four votes were given in support of amendments to the Finance Bill designed to remedy this grievance, but in 1917 this number had increased to eighty-eight, and on this occasion the Government majority was only fifty-five. Then, in 1917, also, Mr. Bonar Law was responsible for the insertion of a clause intended to avoid the incidence of double taxation on excess profits, thus following in the steps of his predecessor, Mr. McKenna, who in 1916 made an allowance of 1s. 6d. to payers of double income-tax. These are straws which show the trend of events.

***

At the annual general meeting of the London County and Westminster Bank, Mr. Walter Leaf referred to the conscription of wealth rumours, and said that fears had been expressed in some quarters that the great increase in bank resources might form a strong temptation to the Chancellor of the Exchequer to help himself in some emergency by commandeering bank balances. That was not a risk which deserved any attention. The Chancellor could gain nothing by such an operation, because he had got the whole increase already by a voluntary process. Mr. Leaf also touched on the Government control of trade, and criticised the policy which aimed at the extinction of the merchant. It looked to him, he said, rather like a return to primitive conditions of trade unsuited to modern requirements, and he added the warning that to strike at the merchant was to aim a blow at the world-wide pre-eminence of London.

***

The death of Sir Alexander Rendel removes from the ranks of "Indiamen" one of the small band of men who had most to do with the development of the Indian railway system, and it is in that connection that his name will always be remembered. From 1857 onwards he was a constant visitor to India, and was responsible for the designs of many important works, among them sixty bridges which crossed waterways from 1,000 to 10,000 feet wide. Among these may be mentioned the Lansdowne Bridge over the Indus at Sukker, which was opened in 1889, and the Hardinge Bridge over the Ganges at Sara, which was completed in 1915. It was in his capacity as adviser to most of the Indian railways, and as adviser in this country to the India Office, that he was able to play so great a rôle in Indian railway history, and his influence made itself felt not only in his special province of engineering, but also as regards the administration of the lines.

***

A circular letter was recently sent by the Government of India to Chambers of Commerce there regarding the question of adulteration. It is the Government's view that, while improvement has been effected in some respects, the reverse is more often the case. Cotton and jute, it is stated, are still watered, and ground nuts, indigo, hides, and oils continue to be adulterated. This state of things is greatly to be deplored, and renders the adequate expansion of India's trade out of the question until it is remedied. India may, and no doubt will, secure wider outlets for her produce in the period of reconstruction following the war, but in present circumstances the only effect of that will be to give a wider advertisement to her shortcomings, and to make it certain that some markets will be subsequently closed to her goods. To avoid this fatal outcome, the problem of adulteration needs to be firmly handled at once, and it is to be hoped that no considerations of any kind will deter the Government from taking steps to put an end to the practice.

***

India is beginning to feel the effects of the war very acutely as regards the prices of commodities. This factor has become specially marked in Bombay, where foodstuffs and clothing, in particular, have greatly increased in price, and there the situation has been made worse, I believe, by rack-renting. It is satisfactory to learn that the authorities have been prompt to realise the necessity of taking measures to alleviate the position, such as the appointment of a controller, the fixing of prices, the opening of cheap grain shops, and the supervision of rents.

***

There must naturally be a certain amount of anxiety in view of the conditions that have obtained in Russia during the past few months as to the safety of the securities and other valuables that were removed to that country from Roumania for safe keeping when the Germans and Austrians began to invade the territory of our Ally. The announcement that certain moneys deposited in Moscow are to be "held in trust" for the Roumanian people will deceive no one. There would seem to be nothing for the Roumanians to do but to wait until they can appeal from Philip drunk to Philip sober.

CALCUTTA HIDES TRADE.

Elimination of Foreign Control.

Attention was called to the crucial situation with regard to the Calcutta hides trade in an article in these columns on November 30, in which it was pointed out that the hopes that the trade would never again be allowed to drift into hostile hands depended on the retention of the Buying Committee as at present constituted as an instrument for tiding over the transition period required for the proper organisation of the trade under British control. It would scarcely be possible to lay too much stress on the necessity for the adoption of this course, for the hides trade is one of the key industries of the Empire, and its control is a matter of considerable importance. In the present war the Empire has paid, and is paying, a heavy price for neglecting to safeguard its resources of raw hides, and if the same process is not to be repeated at some future date, non-British control of the trade must be rendered impossible from now onwards. It is not enough merely to assure British control during the war, for it is quite certain that the firms who were members of the old German "ring" would soon make their presence known again on the return of normal conditions, if no hindrance was placed in their way. From their reappearance to their renewed predominance in the trade would not be a long stride, thanks to the influence of the external support that would again be theirs, and once more tanners here would try in vain to obtain their supplies of raw materials from India, while in due course Germany would be in a position to place on British markets leather manufactured with British hides and priced, no doubt, so as to cripple home manufactures. That prospect ought to be sufficient to impress even the most reluctant individual with the necessity for preventive measures. Really what is required is action of the most drastic character—legislation, perhaps, on the lines of the Non-Ferrous Metals Bill—but whatever step be taken it must be calculated to prevent German firms in any way and under any guise from obtaining any share of the trade. Action of this kind is not remotely concerned with an economic war, nor does it come under the category of penalising Germany. It entails purely and solely the application of the right of a country to dispose of its own produce in its own way.

Equipping the Enemy Armies.

Nothing has done so much to bring this question to the fore as the knowledge that the position of German firms in the trade made it an easy matter for Germany and her Ally to obtain the hides they needed to equip their armies for the coming war. Even now, outside the trade it is but faintly realised to what an extent these countries drew on India's supplies for this purpose. The individual who at election times is referred to as "the man in the street" knows how thoroughly prepared Germany's army was for the struggle, but the Empire's share in this preparedness has still to be brought home to him, and he must be impressed with it in this and similar cases, if the Government is to feel that measures like the Non-Ferrous Metals Bill are not only in accord with, but are demanded by, public opinion. As regards the share taken by the enemy Powers of India's hides in the years just preceding the struggle, the facts are singularly clear, and place the matter beyond dispute. The normal export of cow hides to Bremen and Hamburg in 1911, 1912, and 1913 was about three and a half millions annually, but in the first six months of 1914 these ports took over two and a third million hides. Besides these exports, India sent almost a million and a half annually to Trieste, and Austria received through this port in the first six months of 1914 no fewer than 1,178,466 hides. In the three and a half years the three enemy ports received 19,365,905 hides from India. Each hide, it may be mentioned, yields five pairs of army boot uppers, and if Germany and her Ally only retained half their imports during that period, it would have been sufficient to give them 48½ million pairs of army boot uppers, or well over thirteen million pairs a year. Separate statistics are not available for the exports of buffalo hides from India to these ports, but it is known that during the three and a half years almost three and a half million hides were exported to the Continent, and it is to be presumed that they went the same way as the cow hides. Each buffalo hide is good for about fifteen pairs of soles, etc., so that in the three and a half years Germany and Austria had leather at their disposal for 49½ million pairs of boot soles, or over fourteen million pairs a year.

Growth of German Influence.

That the German control of the trade was so complete before the war that it was possible for the enemy Powers to use our resources in this way makes it almost unbelievable that the trade was ever a British monopoly. Yet this was the case as late as the 'seventies. In 1872, for instance, the United Kingdom imported seven million hides from India, none going to the Continent or to America. Ten years later the effect of German competition began to be felt, and in that year, while the United Kingdom took five million hides, one million went to the Continent. From that time onwards there was an almost steady decrease in the exports of hides to the United Kingdom and a corresponding increase in the exports to the Continent. Thus in 1890, the last year in which the United Kingdom's total was larger than that of the Continent's the figures were 2,694,554 and 2,440,315 respectively. In the following year the United Kingdom's imports dropped to 2,444,148 hides, while the Continent's figures were 4,301,734. From 1896 onwards the gap between the totals became much more marked, the figures for that year being 681,164 hides for the United Kingdom and 5,315,952 for the Continent, and in 1902 the United Kingdom's imports sank to 90,070, and from that year to 1915 on only two occasions were more than 200,000 hides imported into this country from India.

We have already dealt with the strength of the German firms in Calcutta, which contributed to the result disclosed by these figures, showing how they formed a "ring," and by various means gradually drew the bulk of the export trade into their own hands. That was, however, only one factor, albeit the all-important one, in directing the trade into German channels, for these firms, without definite support in Germany, could not possibly have diverted the trade from Great Britain to the Continent to the extent they did. They were, as a matter of fact, aided in every way—by steamer facilities, by a system of Customs dues arranged so as to attract the hides to German ports, and by a variety of other means common to German penetration in other parts of the world. So it happened that British tanners had to look elsewhere for their hides, while Germany was able to place leather made with Indian hides on the British market to compete with the leather from native tanneries. It may possibly be argued that the leather industry here was wanting in initiative in not fighting Germany on her own ground, and continuing to compete at all costs for Indian hides. In actual fact it was out of the question for the industry to do so with any real chance of success. Germany has always been an adept at the art of killing competition, and her methods under our fiscal system were almost unassailable. Having obtained a market for her manufactures, it was her practice gradually to raise prices, and if, when they reached a point which suggested the possibility of competition, any steps were taken in the direction of building new factories or otherwise preparing for an increased output, she would forthwith dump large quantities of goods at prices which would put competition out of the question. Then, when the field was once more clear, Germany would raise her prices again to a level which admitted of satisfactory profits.

No measure short of an economic war can prevent Germany from acting in this way in future, but, without recourse to that measure, we can make it certain that her imports of leather to this country are not made of hides produced within the Empire; and the first step to ensure that result is, as we have shown, to place the control of the export trade at Calcutta in British hands. In this respect the war has given us a great opportunity, and it will be our fault if we fail to make proper use of it. Henceforward we must make it impossible for non-British firms to participate in the trade; and the sooner definite action is taken the better, for the war will not last for ever, and if it should, unfortunately, end before arrangements had been made for the control of the trade, there might be a reversion to the old state of things. And that in any circumstances would be unthinkable.

MARKET FOR SCALES IN GREECE.

Pointing out that a large amount of daily household marketing in Greece is done in the streets of the cities, and that donkeys laden with fruit, vegetables, and other commodities in huge baskets are driven from house to house and goods are weighed out in small quantities with antiquated steelyards, Mr. A. W. Weddell, American Consul-General at Athens, says that it is thought that there exists an excellent potential market for cheap scales, operated by a spring and showing on a graduated scale the weight suspended below. It would not be necessary, it is thought, to have a pan or other receptacle attached, as a hook at the end of the spring could engage the chains or cords fastened to the receptacles now in use. It is essential that the scales be graduated in okes and drams, inasmuch as the oke is the unit of weight in the country. Such scales to be popular must not be expensive.

COTTON AND SCIENCE.

New Strains of Cotton.

Mr. John W. McConnel, of McConnel and Co., Limited, of Ancoats, Manchester, makes some interesting criticisms, from which we give the following extracts, in a letter in the "Textile Mercury" on the report of the Botanist to the Egyptian Ministry of Agriculture, published in the current issue of the "Agricultural Journal of Egypt," on his work on cotton during the year 1915, and on the editorial notes on the subject.

"The Botanist speaks," he says, "of work previous to 1915 being conducted 'solely on Mendelian principles,' with unsatisfactory results. It is difficult to know what this means. Again, the Botanist raises a curious kind of issue between the introduction of new strains and the improvement of existing ones. He does not explain what is meant by a new strain of cotton, nor yet how an old strain can be improved. Is the Mendelian theory to be taken as the basis, or is it to be ignored? It seems hardly possible at this time of day to ignore it. Surely in an attempt to develop plants for the practical service of man, some system of scientific law must be followed. It would be interesting to know at what point the Botanist thinks Mendel's law to be incapable of application to cotton. There are two other matters, or, perhaps, other aspects of the matter, on which I desire to say something, because of their importance to the proper understanding of the need for research in raw cotton.

1. What do spinners really want?

2. Are the reports on samples made by spinners of any value to the grower?

"As regards the first question, it must be remembered that there are many different branches of cotton spinning. Not only are there wide differences in counts, but there are other differences, such as those between twists and wefts. Sometimes colour is important; sometimes everything else may be sacrificed to strength; sometimes cleanliness is the main requisite. Therefore, that the editor should speak as he does, of Sakellaridis as meeting all requirements in Egypt is itself a grave danger to the industry. It is true, of course, that Sakellaridis has many features which are attractive to the grower, but what follows from this is that any cotton which is also wanted by the trade must also be attractive to the grower. Cottons which will only command a lower price than that of Sakellaridis will have to be better in yield, better in lint percentage, as good or better in earliness. Is it not the proper function of the Agricultural Department to find out how to produce these results? On the other hand, it is obvious to any student of the economics of cotton that there is just now an urgent need for some new supply of really fine stapled cotton to take the place of the American Sea Island when the boll weevil has destroyed them. For this purpose Balls' 310 was at any rate so promising as to deserve further investigation and perhaps further development.

Sakellaridis not sufficient.

"In this connection it will be remembered that when the Sakellaridis cotton first came into general cultivation on a large scale strong recommendations were made by spinners and other authorities that it should not be grown so extensively as to crowd out all other cottons. It is a cotton with many and great merits, but it is undoubtedly not the cotton that the Bolton mills want as the sole product of Egypt. If, then, it is desirable that Egypt should grow some other cottons as well as Sakellaridis, is it necessary that these should be new strains? This cannot be answered without defining what is meant by a new strain. It is clear that when a different kind of cotton is introduced as an exotic into any country this may be spoken of as a new strain. Thus the American Uplands and some Egyptian types have been introduced experimentally into India and into different places in Africa. Also the Egyptian Mitafifi has been introduced into Arizona, and there developed into a cotton equal to or better than Sakellaridis. These are all obviously called new strains. But this is not the kind of thing that has been done in Egypt. The history of cotton in Egypt during the last half century is broadly that one kind or several closely kindred kinds have been for a time satisfactory, that each in turn has gradually or rapidly become poor, and that the general good quality of Egyptian cotton has been maintained or raised only by the more or less accidental discovery of a special plant which has bred true and has yielded an improved stock for general use. Thus spinners of mature years will remember the great attractions presented when they first appeared by Gallini, Mitafifi, Joannovich, Nubari, and finally by Sakellaridis, not to mention Abassi and Voltos. Now if these are what the present Botanist calls new strains, it is quite clear that Egypt in the past has absolutely depended on the finding of a new strain just in time to replace the deteriorated cotton of the moment. If, on the other hand, these are what he speaks of as improvements of existing strains, then it seems that he and the editor might well have refrained from speaking of Dr. Balls' varieties as if they had been something strange and therefore an abhorrence to spinners. Dr. Balls' varieties are all four true-born children of the Egyptian family; 310 is so much finer that it may claim a more secluded walk in life, but the other three—77, 95, 111—do not differ from the usual type in any other way than did the various new or improved types named above. The claim made for Dr. Balls' varieties was that they were pure, and therefore if kept pure would supply for all time cottons of a regular and trustworthy character.

Examination of Samples.

"It is true that in examining small samples of cotton we have many difficulties. First there is inaccuracy. Samples are sometimes labelled badly even by the scientific people. . . . Again, much judgment is required. Machinery has to be set to suit the cotton in use. It is a delicate matter to set correctly for a small sample, and incorrect setting may falsify the result. Such a cotton as 310, for example, requires to be worked among its equals, the Sea Islands; and if put through machines set for Mitafifi or other robust but short cottons would be condemned, as in fact it has been sometimes.

"What is wanted in the future is to elaborate the organisation for testing small samples. It is at present impossible to make these tests anywhere else than in ordinary mills. But the control of the sampling must be in scientific hands. It must, of course, be absolutely impartial, but besides this it must be accompanied by accurate examination of single fibre characteristics. Of Dr. Balls' three cottons 95 is generally judged to be shorter than 77 or 111, yet it has invariably made the strongest yarn. The reason for this is not known; it will be one of the duties of the Cotton Research Association to ascertain why some cottons make stronger yarn than do others, of greater length. It is proper to add here that many tests have been made of these three cottons grown in different places and under different conditions. The results have not been, as the editor thinks, contradictory, but quite extraordinarily uniform."

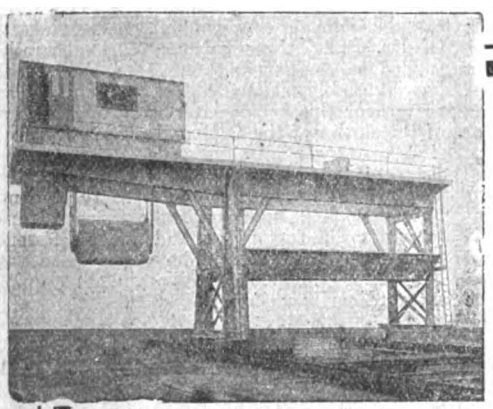
ENGINEERING NOTES.

Industrialism in Serbia.



The fact that in spite of the present sorry plight of Serbia, a Serbian industrial mission arrived in England to visit the principal industrial and commercial centres for the purpose of promoting the development of better economic and commercial relations between the two countries, is a proof of the initiative which has characterised the Serbians among the Balkan peoples. If the country has not as yet had the opportunity of being fully developed, the reason is the stifling policy of Serbia's north-western neighbours, who had a traditional interest in stifling any efforts of Serbia which might be conducive to her economic independence. And now that the restoration, and with it a perfect independence, is approaching, the Serbians are assuming a timely and well-directed energy which, with their instinctive industrialism, will undoubtedly enable them to secure the regeneration of their country. At a luncheon given to the members of the Serbian Industrial Mission by the Association of Chambers of Commerce of the United Kingdom, it was mentioned that one of the great difficulties after the war would be the shortage of men, only a quarter of the men of military age in her population being left alive! This fact requires the greatest consideration before any other subject is touched. An agricultural country ravaged by the enemy, and with a largely depleted manhood, cannot make much progress. The problem is how to cope with the great scarcity of labour, and the immediate need of draught animals and agricultural implements, which, undoubtedly, the Bulgarians will not leave behind. The only solution is the employment of modern machinery on a large scale, and on satisfactory economic conditions, which can become possible only with the assistance of electricity when this is produced by the utilisation of the natural force of water in rivers and waterfalls. Such force is available in Serbia. From the Danube, the Morava, the Vardar, the Drin, and other smaller rivers, Serbia can obtain electricity of many thousand horse-power, which can be carried to any of her agricultural districts by the electric wires. Heavy or light ploughs, sowing, harvesting, and threshing machines, and all kinds of indoor or outdoor agricultural machinery can be driven by this electric power at a very low cost. By this means a speedy reconstruction of Serbia's agriculture can be effected; whilst with the same electric power other industries may be developed.

Serbian Rivers.

Apart from the utilization of water power for electric power, Serbia can obtain greater benefits by the use of the same rivers for transport. Water, as a means of transport, is fully admitted to be the cheapest means yet suggested, and, being so, has the power of adding to the value of all the products of a country which have to find a distant market. Railways are of incalculable importance where speed is requisite for the movement of troops and other passengers and valuable goods, or for anything where time is a consideration, and that is wherever there is affluence and prosperity. But railways are not, and cannot, be a cheap means of carriage. Speed is expensive, and there cannot be cheapness and high speed by any means of carriage. None of the Balkan States can say that the results of its railways, from an economic or commercial point of view, have been as satisfactory as anticipated. For that reason we have given our opinion that in the present circumstances of Serbia the construction of new railways is of no immediate importance. Whatever sea ports are allotted to Serbia, the dredging of her rivers and the construction of certain canals will be found more beneficial to her economic progress than the construction of new railways. We believe that a scheme for the construction of a navigable canal from the Danube to the Ægean Sea was suggested by a prominent Serbian engineer. According to this scheme the Morava river would be dredged from its junction with the Danube to the Leskovatz. A canal would have to be built from there, viâ Kumanovo, to Uskub, and the Morava thus connected with the Vardar river, which, in its turn, would have to be made navigable to the sea. It was stated at the time that funds for the above purpose would be easily forthcoming, as, if realised, the canal would make Serbia independent of Austria. Of this scheme, as well as of another for diverting the Drin River to its original bed, and the dredging of the Boyana river we will write on a subsequent occasion.

The Cultivation of Sorghum.

In previous Engineering Notes we alluded to the value of sorghum, or Indian millet, as a sugar producing plant. Its cultivation is now seriously advocated by eminent botanists and scientists, who claim that this plant is capable of producing a very large part of the country's needs in sugar and paper pulp, and even colouring ingredients; while its flour can compare very favourably with wheat flour. The sorghum plant contains from 10 to 15 per cent. of sugar, compared with 16 to 18 per cent. in beet, but as a crop it is much more economical and requires far less attention. In addition to sugar, sorghum will produce paper pulp representing something like two tons per acre.

LANCASHIRE COTTON.

A Dull Market.

(From Our Own Correspondent.)

MANCHESTER, Wednesday.

On the whole no increased activity in the market can be recorded, and the tone has continued dull. Buyers have been in no mood to place orders freely. There are fears of developments, both political and military, during the next few months, which have some effect upon the level of values. The weight of Egyptian cotton now coming forward is having some influence upon prices, and rates are distinctly lower on the week. It is announced that importers must provide the committee in Alexandria with the names of spinners, and unless these particulars are given shipments will be stopped. Ordinary qualities in Egyptian yarns have been slow of sale, and prices when tested have favoured buyers. Some special transactions have been put through in the superior markets for the manufacture of cloth for aircraft purposes, substantial contracts having been arranged by the Government. Exporters of cloth in Egypt continue to adopt a more cautious policy, and only a sorting-up business has been done. Rather earlier delivery is now possible in certain kinds of printing cloths. Piece goods for India have attracted very little attention, and only isolated sales have occurred for China. American yarns have moved off quietly at rather more irregular rates. There is still a good deal of pressure for deliveries of certain kinds and qualities. It is reported that the firm of Messrs. Richard Harwood and Son, Limited, cotton spinners, Bolton, has been absorbed by the Fine Spinners' Association.

COMPANY MEETING.

EAST INDIAN RAILWAY.

Record Gross and Net Earnings.

The seventieth half-yearly general meeting of this company was held on Wednesday at the Cannon Street Hotel, London, under the presidency of Lieutenant-Colonel Richard Gardiner, R.E.

The Chairman, before proceeding with the business, spoke of the heavy loss which the company sustained last week in the death of the eminent engineer Sir Alexander Rendel, the senior member of the firm who were their consulting engineers. Proceeding to deal with the working of the railway, the Chairman stated that the gross and net earnings for the half-year established another record, the gross earnings being, say, £3,958,826, an increase of 5.68 per cent. over the corresponding period, and the net earnings, say, £2,613,029, an increase of 7.53 per cent. The working expenses, though somewhat above those of the first half of 1916-17, showed a less percentage to gross earnings, 33.52 against 34.67, omitting in both cases the contribution to the provident fund. The increase in gross receipts was mainly due to coaching earnings, which improved by 12.35 per cent., and this despite the efforts being made to discourage all unnecessary travelling. Of the total earnings from coaching traffic, say, £1,258,317, Government traffic only accounted for £72,756, relatively a small proportion of the total business transacted. In goods traffic there was an improvement of 1.80 per cent. in the gross earnings. In general merchandise there was a reduction of 68,817 tons in weight, with an increase of earnings of, say, £50,000, the improvements in the receipts being due to certain adjustments in rates carried out in April 1917. The general merchandise traffic had been very much upset by war conditions and by the reduction in shipping facilities; it represented in earnings on the half-year, say, 43 per cent. of the total goods earnings, the coal traffic being about 55 per cent.

With regard to the surplus earnings results, he said it would be seen from the report that, after making the necessary provision for excess profits tax liabilities, not yet finally determined, and for the £1,000 of charitable contributions to which their assent was requested, the board were able to recommend a record distribution of £1 9s. per cent., which, with the guaranteed interest, brought up the payment to the deferred annuitants to £3 9s. for the half-year (less income-tax, which for the half-year in respect of the dividend was deductable at 3s. 9d. in the pound).

The chairman, continuing, said:—In respect to the very important question of the possibility of the Secretary of State deciding to enter into a new contract with the East Indian Railway Company to replace that of which formal notice of determination at the end of next year, 1919, has been received and is recorded in the correspondence printed with the report, I have nothing to add to the information there given. The position of the deferred annuitants in the event of the present contract being finally determined next year is that which was most carefully set forth for you by the late Mr. Colvin and Sir David Barbour when the revision of the then current contract was accepted by you at the meeting held in this place on June 28, 1899. If and when the deferred annuitants' contract for the working of the East Indian Railway is determined, the deferred annuitants will revert to their position of "A" annuitants, which has for the time being been in abeyance, receiving a 4½ per cent. annuity which terminates finally in 1953. The deferred class "D" enter into a similar position, but their annuity is subject to the sinking fund deduction of 2s. 6d. in the pound to which they assented when the sinking fund was established in 1892, and which was then calculated to reproduce, as near as may be, their capital in 1953. The whole annuity in all classes is subject to a small management charge of 1d. in the pound of annuity, and is, of course, liable to income-tax. You will please understand that the facts which I have set forth imply there is no change whatever in the position of the deferred annuitants, who have always been liable to have to resume their position as ordinary annui-

tants should the contract for the working of the East India Railway, in which they were interested, be at any time determined under the conditions laid down therein, and this position may be presumed to have been well known to all parties concerned.

It was usual, he remarked in conclusion, to give some forecast of the probable results of the current half-year's working. The approximate gross receipts from all traffic up to the 19th inst., the latest date for which returns were to hand, showed an increase of Rs.16.61 lakhs, say £110,000, as compared with those of the corresponding period of last year, which was quite satisfactory. The monsoon was good, but prolonged to a rather late date. The coal outlook was believed to be on the whole satisfactory. Expenses would, however, be increased by an important war bonus that was being given with the concurrence of the Government to the whole of the staff in India, in the subordinate grade and below. He added that the Secretary of State had now authorised a war bonus for such of the home permanent staff as drew salaries not exceeding £500 per annum. He afterwards moved the adoption of the report and accounts.

The Deputy-Chairman (Sir David M. Barbour) seconded the motion, which was carried unanimously; and on the motion of the Chairman, seconded by Lord Kilbracken, the proposed dividend out of the surplus profits was also agreed to.

ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Street, Wednesday.

There has been a very active and interesting market this week in Egyptian securities, and prices have gone ahead practically all along the line. Investors both in Egypt and this country have been buying, and the market looks in a very healthy condition, as a great deal of profit-taking has been going on, and new buyers are constantly coming forward.

In Government stocks some rather large transactions took place in Egyptian Unifieds between 85 and 85½, and to-day there were buyers about near the latter price, but sellers were scarce. Egypt Three and a Half per Cents. are fractionally harder at 73; but the lack of sellers renders business practically impossible. City of Alexandrias are a point higher, at 78.

In the bank section Nationals have improved 3-16 to 18 11-16, on a moderate demand in a market bare of shares, and a good many transactions have been taking place in Agriculturals round last week's figure of 6⅝. Some Agricultural Preferences were done slightly under 7, but only for a small amount. Anglo-Egyptian Banks have further improved ¼, to 14 7-16. In railways, Delta Light are ⅛ up, at 6¼, and in view of the satisfactory traffic receipts and the very favourable prospects for this concern when normal times return, a smart rise would appear to be probable at any time.

In land shares, Aboukirs are 1s. 3d. up, at 24s., on good local buying, and Beheras have advanced ½, to 13½, also on buying from Egypt. Delta Lands have returned to favour, and on a persistent local demand rose at one time to 17s. 3d., and finish 1s. 9d. up, at 16s. 9d. Egyptian and Foreign Trusts have gained 1s., at 10s. 6d., on a tardy recognition of the improvement in their holdings. Gharbieh Lands began to move, and are closing 5-16 higher, at 2 5-16. New Egyptians have been subjected to a great deal of profit-taking, which caused them to recede at one time to 18s. 4½d., but the shares on offer have now been absorbed, and the price has recovered to-night to 18s. 9d. Sidi Salems have been the feature, and, on well-informed buying, have jumped 8s., to 40s. In Union Foncières there has been some fairly large buying for Egyptian account, with the result that the shares are 3s. 9d. up, at 58s. 6d. United Lands are again exceptionally 1½d. easier, at 1s. 4½d.

In miscellaneous shares, Alexandria Waters have risen ⅛, to 12⅜; Egyptian Markets are fractionally harder at 26s. 3d., while Salts and Sodas remain firm but unchanged, at 40s. 6d., after a very fair amount of business. Khedivial Mails are slightly quieter at 36s. 3d.

In Greek securities, business has been again on a very small scale, and, with the exception of Fundings and 1902's, which are ½ higher, at 53½ and 62½ respectively, there is no change in prices to record.

NOTES OF THE WEEK.

There has been little military activity on either of the main fronts, East or West, during the week, and only a few isolated events of outstanding importance elsewhere. In the attempts to destroy the *Goeben*, which must now be adjudged definitely to have failed, a British submarine has unfortunately been lost in the Dardanelles. The Turkish claim to have disposed of a second is unfounded. The German vessel will presumably now return to anchor and repair at Constantinople.

The suggestion has been made from German sources that the *Goeben* and the *Breslau* had seized the first opportunity that presented itself of emerging from the Dardanelles to attack the Entente in the Mediterranean; hitherto they have been too busily engaged in defending the Bosphorus against the Russian Black Sea Fleet, but the latter being now *hors de combat*, the ships were set free for work in the Mediterranean—where the German submarine is still a pest to be reckoned with. One is loth to accuse the enemy of telling the truth, but there may be something in this statement.

It is certain, for instance, that at this moment Turkey is supreme in the Black Sea. The Russian Fleet has murdered its officers—it is now reported in remorse to be asking its priests to pray for their souls—dissipated its discipline as completely as the Army, and sold most of its munitions. The main article of its creed is that in no circumstances will it ever fight again; and although it has seized a few Roumanian ships lately, it seems to have no serious difficulty in keeping the peace, in the new sense of the word. It is clear that Turkey is beginning to take advantage of the opportunity; indeed, she would be foolish not to do so.

She has begun by telegraphing a grim jest throughout the world, stating that "the Russian troops, having been withdrawn from Armenia, the Armenians have begun to persecute the Turk." When the infuriated hare attacks the trembling sportsman that tale will be believed, but not before. It looks very much as though this announcement is to prelude another Armenian massacre, which would be justified as "reprisals"; the wretched Armenians, or, at least, those that are left of them, are helpless now that Russia has collapsed, and Trotsky will soon see how much attention the Turks pay to his recent order convoking Soviets, self-determination, and the rest of it, in Armenia. How entirely Russia has disembarrassed herself of the position in the south may be judged by the remark of a Russian officer, reported by a correspondent in *The Times* this week, who hoped that Britain would establish a protectorate over the Caucasus.

His aspiration is, of course, impossible of achievement. England has certain commercial interests in the Caucasus, but her political influence there is nil; nor is she likely to obtain any. It lies far beyond the range of Western Europe, and, for the moment, it looks as though Turkey, or, rather, Germany through Turkey, will have it all her own way. That condition may not endure; but for the time being the abdication of Russia has turned the Black Sea into a *mare clausum* for Turkey, as it has made the Baltic the same for Germany, and nothing is gained by ignoring this unpleasant fact. If Berlin-Bagdad is doomed, Berlin-Batum has become conceivable.

News from this part of the world is sparse and often contradictory, and the announcement that another Republic has been proclaimed in the Crimea by the Tartars, coupled as it is by the not very surprising intelligence of an outbreak of plague in the same region, does not carry us far. In so far as the bald statement can be judged, it is further evidence of the break-up of Russia. The whole of the south of the Russian Empire is now in as complete a state of revolution as the north, with the result that the Central Asian question is reopened. It is conceivable that Germany will suggest to Turkey that she prepares to write off her losses in Mesopotamia and Palestine, and to recoup herself in the near future in the Caucasus and Turkestan.

While this great revolutionary movement sweeps round the Black Sea, the position of Roumania and Bulgaria tends to be overlooked. But the Roumanian troops have been welcomed in Bessarabia, a province which appears to have suffered even more than others from Bolshevik destructiveness, and they seem to have put up a successful fight against the fomenters of anarchy. Certainly the example of Russia is not likely to tempt Roumania to indulge in a class-war. Another interesting indication of Bolshevik policy is the curt announcement that the Roumanian gold reserve of twelve millions sterling, which had been sent to Moscow for safety, has been impounded by the People's Commissioners and stored in the Kremlin. It is to be hoped that it remains there intact; its good fortune in that event will be almost unique, in a country where they repudiate their foreign debt and ransack their own banks.

Digitized by Google

Incidentally, as a proof of the difficulty of distinguishing truth from falsehood in the reports that come from the Near East *viâ* Berlin, or from Berlin *viâ* the Near East, as sometimes happens, we may note that last week a circumstantial report was spread to the effect that the Roumanian Cabinet had resigned. The report may have been sent out by enemy propagandists in order to persuade the world that Roumania was weakening in face of the Bolshevik threat of war. Several similar messages have lately been received, all suggesting more or less subtly that Roumania was considering a German peace and throwing up the sponge. Nothing could be further from the fact; the Roumanian Government has not resigned, and the spirit of the country, so far from being broken, was never higher.

Bulgaria has given many signs that she does not trust Germany to stand by her annexationist aims, and her latest grievance has elicited an authoritative answer from Berlin. In his speech on war aims, Count Hertling judiciously forgot to mention Bulgaria, and Count Czernin was equally reticent. Bulgaria's protest against this silence has elicited the response that, as the German Chancellor was in effect replying to President Wilson's programme, it would not have been proper to mention Bulgaria, since the United States is not at war with Bulgaria. The official apologist should have thought again, for it so happens that in the same speech Count Hertling mentioned Turkey's war aims very definitely. Yet Turkey is no more at war with the United States than Bulgaria. What is sauce for the goose is, therefore, not sauce for the gander. In the *mariage de convenance* between Berlin and Sofia, it looks as though the latter might yet lodge a plea for restitution of conjugal rights as a prelude perhaps to further action.

Lord Lansdowne's reply to the quaint deputation which presented him with a vote of thanks for his *Daily Telegraph* letter has received almost as frozen a welcome in Germany as in England, or even as the pacifists who were reluctantly admitted by a dubious butler into Lansdowne House. The ex Minister's speech, like his letter, ignored the difficult problems of the Near and Middle East, although it must be evident to one who has been Foreign Secretary that no peace can be permanent or satisfactory which does not provide a settlement of these matters. It was, in short, a plea for peace by negotiation combined with a regretful admission at the end that Count Hertling had made a peace by negotiation impossible. If that is what the pacifists wanted, that is what they got.

It is worth notice that, in addition to Count Hertling's rejection of the British peace terms—a rejection which has had its natural sequel in the announcement of the Versailles Conference decision—Dr. Wekerle, the Hungarian Prime Minister, has also rejected them. He states that Hungary desires to maintain her alliance with Germany, and that she is determined that the only condition on which she will make peace is "the integrity of our territory and the unimpaired liberty to regulate our internal affairs." The integrity of Hungarian territory is tantamount to a refusal to emancipate the Roumaine population; the internal liberty is, as past experience shows, tantamount to a refusal to give them ordinary civil rights.

An interesting statement has been made by Mr. Roberts, Minister for Labour, to the effect that there are "the very best reasons" for believing that a secret treaty, ratified before the war, existed between Germany and Bulgaria; and also that as a result of the German Emperor's visit to Constantinople, a further secret treaty has been agreed between the four Central Powers. The terms of this treaty are: (a) That Turkey retains all the territories which were in her hands before the war, and that she remains an absolutely free State; (b) that Germany, Austria, and Bulgaria do their best to recover the lost Ottoman provinces for Turkey; (c) that the Sultan retains the title of Khalif, and (d) that Arabia and Armenia shall be dealt with in whatever manner the Turkish Government thinks fit.

If this statement is accurate—we confess to feeling somewhat sceptical with regard to Bulgaria's adhesion to any written undertaking—it is quite clear that it commits Germany to an indefinite prolongation of the war. How and in what manner the Khalifate can be restored to the Sultan is a matter upon which the treaty may be judiciously silent; the permission to deal with Armenia as Turkey does deal with Armenia is a natural piece of German policy—although it is not explained how Arabia also is to be restored. The recapture of Palestine and Mesopotamia can only be contemplated by direct German aid; it is fairly evident that Turkey is unable to regain those territories herself, it is certain that Austria cannot and Bulgaria will not help her to that end.

Germany may plan the recapture of Jerusalem, but it is clear that the Jews in England, who are usually shrewd judges of a situation, have no belief in her power to do so; nor are the Jews in Germany, one would imagine, more confident. The plans for a Jewish settlement, on the lines suggested in the British Government's declaration, are already being formulated, and a hopeful tone pervades the details given in the *Zionist Review*. It appears that a number of British Jews who have hitherto held aloof from the Zionist movement are now ready to co-operate, although not themselves to emigrate. Stress is laid on the fact that time presses, that there is no need to await the close of hostilities to take the first steps, and that even the plans for a Hebrew University at Jerusalem, which was already thought of before the war, can be pushed forward now.

The mutiny in the Greek Army, which has now been quelled, might have been a serious matter had prompt steps not been taken. It is evident that pro-German propaganda continues among the adherents of the late King Constantine, who is now living luxuriously in Switzerland with a large body of secretaries and other followers and a fleet of motor-cars, on the largesse of the German Emperor. No doubt he still maintains subterranean relations with Greece, and perhaps he discusses the possibility of restoration with that other exile, the ex-Khedive, who has made himself useful to his employers in Berlin in his dealings with the cosmopolitan Bolo. As to the situation in Greece itself, the activities of the pro-Germans have been assisted by the general shortage of food, which was used to discredit M. Venizelos—although it was largely due to King Constantine's own policy—but that trouble has now fortunately been relieved. It seems likely that M. Venizelos will have to institute a more drastic purge than he has hitherto resorted to. A correspondent of the *Morning Post* at Athens even suggests that the recent emergence of the *Goeben* and the *Breslau* was with the object of making a dash for the Piræus to support a rising of royalists there.

The idea seems a crazy one, but the correspondent remarks that it is not more ludicrous than the prevalent rumour that King Constantine is to return by submarine—his reinstatement is predicted by Easter. After this, it is not very astonishing that the Greeks are regaled occasionally with the story of the sinking of the British Navy—a tale which must lose a little of its probability after each repetition.

Some surprise has been expressed in this country that anyone should have thought it necessary to cable the message, published last week, insisting that no new Constitution should be granted to India until the Secretary of State should have returned to England and reported on his mission to the Cabinet. On the face of it, no such assurance was needed, but the fact that it was given throws an important light on the abnormal and, as we think, unhealthy state of feeling among certain classes of Indian politicians. These gentlemen started by setting up Mr. Montagu on a pedestal of their own imagining, and exalted him to a position whence he overshadowed not merely the Viceroy, but the Cabinet and Parliament itself. Two months ago the quidnuncs, who are as numerous in

Digitized by Google

India as elsewhere, were already speculating on the probabilities of a grand Durbar at which their newly found Colossus should declare his will, and we may assume that this fantastic idea had gained such currency that a final contradiction was deemed to be advisable.

We call this state of mind unhealthy, because it means that the politicians are still very far from grasping the realities of the position. India, in fact, has lived for so many centuries under an autocratic régime that even men who may be called enlightened find it hard to realise that those days have passed away, and that the foundations of popular government must be laid in the fashion accepted by democracies—with much bickering, with many compromises which leave almost everyone dissatisfied, and with a vast outpouring of more or less unprofitable oratory. In the present case most of these processes have to be gone through twice over. India's share will probably be finished in the course of the present month, but England also has to do her part, and, as matters stand, that part is likely to take some time.

Let us assume that, as we sincerely hope, Mr. Montagu will arrive at a substantial agreement with Lord Chelmsford and his Council during the discussions which are now drawing to a close. He has then to find his way home, thresh out the subject with the Council at Whitehall, and convince the Cabinet of the soundness of his proposals. There will be the Bills to be drafted, and it is not a simple matter to fit a Constitution for India into the precise phrases of the statute-book; and when the Bills are ready, time has to be found for the detailed criticisms of the Commons, and the more dangerous discussions in the House of Lords. It is a big business from any point of view, and we fancy Mr. Montagu at least will be thoroughly tired of the subject by the time he has seen it through. Meanwhile people in India will be getting more and more impatient, and, if present conditions continue, are as likely as not to condemn their Constitution as out of date before it actually comes into operation. The position is, as we have said, unhealthy, but the obvious remedies—patience and good will—are more easily prescribed than assimilated.

Sir James Meston's often-postponed departure from the United Provinces is due to take place in the course of the next few days, when Sir Harcourt Butler will succeed him in what is undoubtedly the heaviest charge in the Indian Empire. The post of a provincial Governor requires a combination of the statesman and the administrator in proportions very rarely to be found: we have not yet met with our ideal in this respect, and we have seen several cases where the men who could best get things done were apt to make serious mistakes in deciding on the policy to be adopted. In Sir James Meston's case, the element of statesmanship undoubtedly predominates, and his most conspicuous triumphs were gained outside his jurisdiction, when he represented India so worthily at last year's gatherings of the statesmen of the Empire.

Rumour continues to designate Sir James for the charge of the finances of India, in succession to Sir William Meyer, who in the ordinary course would vacate his appointment this year. Of Sir James's financial abilities there is, of course, no question, but we confess we would rather see him in some position where there is less tedious administrative detail and a wider scope for the display of his exceptional gifts. His successor in the United Provinces is so far known to the public chiefly as a vigorous administrator, who is accustomed to getting his own way, and people are wondering whether he will show himself possessed of those higher qualities required for the solution of the complex and pressing problems of his new charge. Prophecy on such matters is futile, and we prefer merely to express a cordial hope that our ideal Governor is at last in sight.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, January 6.

The Day of Prayer and Thanksgiving.

In accordance with the proclamation of his Majesty the King, to-day has been kept as a day of prayer and thanksgiving. The proclamation was published broadcast out here, together with two eloquent appeals addressed to the British community by the High Commissioner and by Bishop MacInnes. As soon as the terms of the King's pronouncement were known, the Sultan ordered the day appointed to be regarded as an official holiday and for all Government offices to be closed, whilst all the local religious communities spontaneously decided to co-operate in the response to the call to prayer. As a result services have to-day been held by all the Eastern as well as the Western churches in Egypt. The service at All Saints' Church this morning was conducted by Bishop MacInnes, who preached the sermon. The congregation, which was an exceedingly large one, included the High Commissioner and Lady Wingate, the Residency staff, the Acting American Agent and representatives of the Archbishop of Sinai. All the services at the various churches were very well attended, and it is satisfactory to note how generally this day of prayer and thanksgiving has been observed in this country.

Further Government Appointments.

Judge W. H. Hill has been promoted from the Mixed Court of First Instance to the Native Court of Appeal, and his place in the former jurisdiction is to be taken by Mr. G. A. W. Booth. Both of these appointments have been well received, especially that of Mr. Booth. He has done excellent work out here in connection with the Prize Court and in the office of the Public Custodian, and is regarded as eminently qualified for a position on the Egyptian Bench. The post of Governor of Alexandria, left vacant by the promotion of Ziwar Pasha to the Ministry of Wakfs, has been filled by the appointment of Ahmed Midhat Yeghen Pasha. The new Governor, who is a distant relation by marriage to the Sultania family, is a newcomer in the Civil Service. He has had no previous experience of administrative work, and his appointment has come greatly as a surprise.

The New Year's Honours.

The bestowal of an honorary K.C.M.G. on H.E. Adly Yeghen Pasha and of a K.B.E. on General Stack Pasha has been very well received. Yeghen Pasha is Minister of Education, and next to the Prime Minister is certainly one of the ablest and most useful members of the present Cabinet. The other members of the Ministry who hold British honours are Rushdi Pasha, who possesses the G.C.M.G., and Sirri Pasha, who has the same grade as has now been bestowed on Yeghen Pasha. General Stack's distinction has been thoroughly well deserved. He did excellent work as Sudan Agent and, until Sir Reginald Wingate's appointment to the High Commissionership of Egypt, as Civil Secretary to the Sudan Government. When Sir Reginald came to Cairo

Colonel Stack, as he then was, was appointed Acting Sirdar and Governor-General of the Sudan, and all the reports I have received tend to show that he is filling that post most ably. Various other honours have been bestowed on Anglo-Egyptian officials, amongst them the C.B.E. on Mr. E. M. Dowson, the Acting Under-Secretary of State for Finance, and on Mr. Cecil Crawley, Director-General of the Mechanical Service.

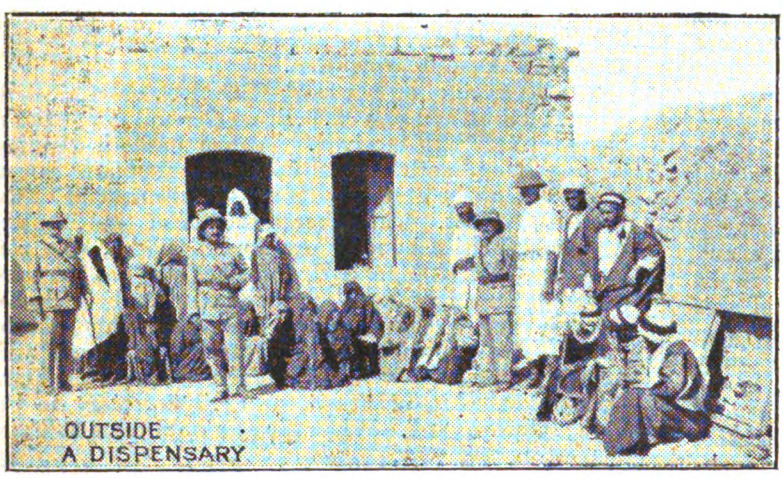
The Mails.

After a wait of over five weeks we have at last received a mail from Europe. One came in two days ago, but only brought letters and papers from December 18 to the 22nd. The last mail we had received reached here on November 29, and brought correspondence up to the 15th of that month. There is, therefore, five weeks' mail missing, and absolutely no information can be obtained as to what has happened to it or when it may be expected. The military mails have in the meantime continued to arrive regularly, and the most fantastic rumours are in circulation as to the reasons why the civilian mails have been delayed in this manner. There appears to be no doubt that something has gone wrong with the postal organisation at Home and on the Continent, and the local communities, especially the commercial one, have every reason to feel indignant at the manner in which they are being treated. It should surely have been possible, when it was found that mails could not be delivered out here within a reasonable time, to issue some advice, so that the banks and business houses could make their own arrangements and thus avoid the serious inconvenience, not to say financial loss, which many of them are incurring owing to the delay and lack of information as to the fate of these missing mails. I understand that the leading business men have made representations to the local British authorities, and it is to be hoped that their action will result in the adoption of some system which, without divulging any military or naval information, will enable the commercial community to be kept better informed of the movement of mails to and from Europe.

The Cairo Racing Season.

Yesterday was a gala day at Gezira, for the Sultan made his first appearance at a race meeting since his accession. There was a record attendance, and the Grand Stand presented a memorable appearance when his Highness drove up with the Prime Minister by his side, and preceded and followed by his picturesque bodyguard. He was received by the Ministers, the member of his household, and the stewards of the Racing Club, by whom he was conducted to the new pavilion, which had been erected for him alongside the Judge's box. The entries were above the normal, and an excellent afternoon's racing resulted, whilst, as usual, all the arrangements were a credit to the organising secretary.

Death of an Anglo-Egyptian Journalist.



Anglo-Egyptian journalism has just lost one of its best-known members in the person of Miss N. Griffiths, who died as the result of a stroke last Sunday afternoon. Miss Griffiths had acted as special correspondent to the *Egyptian Gazette* and the *Egyptian Mail*, and had been editress of the *Sphinx* for the past thirteen years. In addition, until the war broke out, she had been season correspondent of several of the best-known English social weeklies. She had a style peculiarly her own, and worked most indefatigably and conscientiously. Miss Griffiths was a familiar figure at every social gathering, and will be very much missed.

THE KING AND "OUR DAY" IN INDIA.

The King has sent the following telegram to the Viceroy of India :—

I have just learnt with pleasure and satisfaction that the appeal for funds on "Our Day" met with so hearty a response throughout India, resulting in the collection of a sum amounting to nearly a crore.

It is especially gratifying that in this effort all classes and creeds united in thus testifying to their feelings of admiration and sympathy towards those who have been stricken while fighting for the honour and security of the Empire.—GEORGE R.I.

OUTSIDE A DISPENSARY

SYRIA & PALESTINE RELIEF FUND.

110, Victoria Street, London, S.W. 1.

THREE HOSPITAL UNITS, BESIDES VERY CROWDED DISPENSARIES, ARE NOW OPERATING IN PALESTINE. IT IS SAFE TO SAY THE FUND WILL HAVE TO PROVIDE MEDICAL RELIEF FOR AT LEAST FIFTY THOUSAND PEOPLE.

GREAT SCARCITY of ALL FOOD in JERUSALEM & BETHLEHEM.

Twenty Thousand Destitute in Jerusalem alone.

"I don't know what Jerusalem will do if we can't get grain soon. The cry of hungry people is in our ears all day. You cannot go the width of a square but little famished children cling and cry for food."

"At the Pool of Bethesda we saw five children huddled round their mother, in the last stages of starvation. We stopped to speak. She did not answer. She was dead, though still warm, dead from starvation."

Hear the cry of the Lebanon mother: "God leave you your loved ones! Listen to the wail of my little one!—a mouthful—a fill of the hand—would still the pain."

£100,000 WANTED AT ONCE. PLEASE GIVE QUICKLY

THE PALESTINE FRONT.

There has been practically no official news from the West Palestine front since the last advance from the neighbourhood of Beitin (Bethel) to that of Dûrah—between Jifna in the west and Ain Yabrud in the east. Our allied irregulars, the Arab followers of the King of the Hejaz, have, however, towards the east shown considerable activity along the railway line. This latter can now be of little value to the Turks south of El Maan, where it traverses an almost waterless sandstone desert, and is quite at the mercy of the Arabs. El Maan itself is a town divided into two separate parts, Maan el Kebîr (Great Maan) and Maan esh Shamîyeh (Northern Maan), and occupying the centre of a very fruitful oasis. The Turks have established here a Kaimmakam, or under-Governor, and a garrison. The Arab forces have evidently so far been unable to capture this very important centre, from which the Turks endeavoured on January 26 to recapture El Tafileh. El Tafileh lies more than 40 miles north-west of Maan, and to the west of the railway, and has been likewise the seat of a Kaimmakam. It is the capital of the district El Jebâl, and before the war a garrison of over 500 was maintained there. Probably this has been increased, and, if so, the news that the entire garrison has been captured (January 14) is very satisfactory. Like El Maan, this is an important centre, both for its fruitfulness—amidst so much that is almost desert—and as a place of traffic with the Bedouin. The Turkish effort to recapture the place from El Kerak (the ancient Kir of Moab) led to their defeat at the half way to Wady el Hesy, the Turkish force being driven back in disorder, with the loss of many prisoners, a mountain gun and seven machine guns. The significance of these events is great. It means that our extreme right flank is being protected. Between us and our Arab allies lies the wild and deep Arabah—the continuance of the Jordan cleft south of the Dead Sea. No army of any size could cross this desolate region, but continual activity along the line of the Hejaz Railway and Pilgrim Road is most useful at this moment. Should the Arab forces be able to push their way northwards along this line east of the Dead Sea as far as Amman they might afford us most welcome assistance, as Amman (the ancient Rabbath Ammon) is at present the great centre from which the Turks can threaten our whole right flank and our security in Jerusalem itself.

El Kerak, the probable goal of the next advance of the Hejaz forces, is a place of great strength which the Turks themselves only a few years acquired from the local Arabs by means of a ruse, and shortly afterwards, through a great uprising of the Arabs, many hundreds of Turkish soldiers were massacred and the Turks were almost expelled. It is probable that the position of any Turkish garrison here at this time is by no means secure, as the Arabs of the district have a hereditary hatred of the Turk and are likely to look upon the advance of the forces of their kinsmen from Arabia as an army of deliverance. El Kerak is situated upon a lofty hill isolated on all sides by deep gorges; to the south the separation from the hills around is by means of a deep artificial fosse. The mighty ruins of the Crusading Castle which occupies the southern part of the hill are some of the most impressive Crusading remains in the land. There is no sight more convincing of the greatness of the effort made by these Crusaders to hold for Christendom the land which they had won. The town itself shows remains of the walls which once encompassed it, and at one time was approached only by rock-cut tunnels—probably Roman work. In earlier times the army which was secure in El Kerak could dominate the whole district; to-day this town is the capital of the Liwa called after it, which is the southernmost division of the vilayet of Syria.

E.W.G.M.

NOTES FROM JERUSALEM.

Great uncertainty still appears to hover round the condition of things in Jerusalem and the neighbourhood. It seems clear that the speed with which the British Army occupied the city was of great importance to the residents, as it prevented the Teuto-Turks from deporting most of them. British property, although put, apparently, in many cases, to improper use, does not appear to have been very extensively damaged. St. George's Collegiate Church, though used as a Red Crescent hospital for a time, is structurally intact. Christ Church, rumour states, was used by the Turkish garrison as a disinfecting place for the soldiers. The English Mission hospital, which during the Turkish régime was a Red Crescent hospital, is now the headquarters of one of our divisions; while the British Ophthalmic Hospital—between the railway station and the city—was used as a store for ammunition. This blew up, apparently by design, when the first British soldier entered the premises. The full extent of the damage done is not yet known.

COUNTERACTING GERMAN PROPAGANDA.

We have made arrangements for forwarding free of charge to our readers pamphlets and other publications dealing with the British and Allied cause. This literature is in many European languages, and certain pamphlets and illustrated publications are also available in a number of Oriental languages. All applications should be addressed to the Editor, THE NEAR EAST, Devonshire Square, London, E.C.2. Among the most recent publications available for distribution free of charge are the following:—

"WELFARE OF EGYPT," by J. S. Willmore. A short summary of English administration in Egypt; alluding also to Germany's undermining influence, and the Mussulman's preference for the English rule. 36 pp. London: Hodder and Stoughton.

"MESOPOTAMIA; THE KEY TO THE FUTURE," by Canon Parfit. A short account of the past history, present development, and future prospects of Mesopotamia, showing that the settlement of its problems is of vast importance to the progress and prosperity of the world. 41 pp., with map. London: Hodder and Stoughton.

"TURKEY, A PAST AND A FUTURE," by A. J. Toynbee. Development of the new Turkish Nationalism and of German intrigue in Western Asia. Moslem ideas must prevail. Mesopotamia will develop its resources mainly by colonisation. 77 pp. London: Hodder and Stoughton.

"ARMENIAN ATROCITIES: THE MURDER OF A NATION," by A. J. Toynbee, with speech by Lord Bryce. An account of the atrocities committed by the Turks on the Armenians, with documents. 117 pp. London: Hodder and Stoughton.

"THE VERDICT OF INDIA," by Sir M. M. Bhownaggree, K.C.I.E. The writer describes what England has done and is doing for India, and explains the German delusion as to its internal condition. 57 pp. London: Hodder and Stoughton.

"VOICE FROM INDIA," address by Maharajah of Bikanir. Speech delivered to Indian delegates at House of Commons. 24 pp. Empire Parliamentary Association, London.

"THE MURDEROUS TYRANNY OF THE TURKS," by Arnold J. Toynbee, with a preface by Viscount Bryce. A brief sketch of Turkish history to show that the expulsion of the Turks from Europe and their confinement to a portion of Asia Minor will be the only adequate requital for their atrocious treatment of subject races during this war and previously. 35 pp. London: Hodder and Stoughton.

"THE JUSTICE OF ROUMANIA'S CAUSE," by A. W. A. Leeper. An explanation of the international position of Roumania in Europe and of her rights in the war. The author shows that her cause is legitimate, and that she has taken great risks and endured much to deliver her people from Hungary's oppression. 24 pp. London: Hodder and Stoughton.

SCHOOL OF ORIENTAL STUDIES.
London Institution, Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.

For particulars, apply to E. DENISON ROSS, Director.

CORRESPONDENCE.

THE FUTURE OF MONTENEGRO.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—On September 18 (October 1), 1917, the Montenegrins in Paris, exiles from their land, signed a declaration against the so-called "Pact of Corfu," in which neither they, their Government, nor their Sovereign had any part, and protested strongly against the so-called "Comité Monténégrin pour l'Union Nationale," which does not represent the Montenegrin people. To quote from their protest:—. . . "*En conséquence, les soussignés condamnent avec indignation l'œuvre imposante, anti-patriotique et néfaste aux interêts nationaux les plus larges du* "Comité Monténégrin pour l'Union Nationale," *dont les Membres se sont enlevés le droit de parler au nom du peuple Monténégrin, malgré que celui-ci, par la voie de ses représentants actuels ait fait preuve de la meilleure volonté pour une entente fraternelle en vue de la solution de notre problème national.*"

The people *in* Montenegro have no voice; neither have the thousands who are interned prisoners of war in enemy hands.

When the country has been restored to her dynasty and people, and when it has had time to recover from its terrible experience, then the Montenegrin people will arrange their own destiny as a sovereign independent State on equal terms with all their neighbours.

The King of Montenegro during his long and remarkable reign of fifty-seven or fifty-eight years has never ceased to preach the unity of all the Serb people, as he is doing to this day. By his plays and poems he has sought to instil that idea into his people and the whole Serb race; but it never meant, nor does it mean now, that Montenegro should give up her hardly-won and nobly-maintained independence. The King and Queen of Montenegro are actual Montenegrins, related in and out to their people, both members of prominent clans, with an indissoluble right in their own country.

On September 25 (October 6), 1917, the King, at Paris, made a formal declaration of his policy and his sentiments to the large number of loyal Montenegrins assembled to do him honour. From it I quote these words:—

"Vous avez peut-être ouï-dire des propos intrigants tenus par des dissidents, qui essayent de troubler les saines idées de concorde, d'amour, de fraternité et de foi commune en notre droit. Ces intrigues ne leur seront pas profitables. Ils ne réussiront pas à ensemencer la mauvaise graine de la discorde et à nuire à leur patrie. *Le Monténégro n'est propriété exclusive de personne.* Il n'est pas là-dedans question seulement de Mon Droit, mais aussi de Mon Devoir de conserver ce qui m'a été confié par le peuple. *Le Monténégro appartient à un peuple de héros qui se sont battus avec honneur pour les idées les plus élevees. Ce peuple ne permettra pas que quiconque se fasse le jeu, de mettre sur le marché ce pays qui reste exclusivement propriété nationale. Serbe et Youguslave, voilà ce que fut toujours mon pays.* Voilà la seule tradition qu'il a toujours suivie, en prenant pour guide ma personne et ma maison, qui avons toujours, comme nos ancêtres, vécu en lui et pour lui, ainsi senti, pensé et agi. La Tzrna Gora s'est, avec moi, qui suis *Roi National*, toujours ainsi comportée, car là est la seule voie qui puisse nous amener à la réalisation de notre idée sacrée: l'Unité nationale. Celle-ci ne peut être ni sans, ni contre le Monténégro. Pendant tout le temps que dura mon long règne, j'ai toujours agi suivant les désirs du peuple et pour le bien de la Nation Serbe entière."

Your correspondent M. Buric says that he is a Montenegrin. Absolute loyalty to King and country is, especially under the circumstances of the war, the duty of every Montenegrin. We do not all love our Governments, but we place King and country first, else there would be no country to govern. The Montenegrins call themselves Serbs, just as the English, Irish, and Scots call themselves British; but they do not call themselves Serbians, a term applied to the people of Serbia. The Scot is a Scot, as the Montenegrin will be a Montenegrin, and as little as the Scot will subordinate himself to another nationality within the Empire, as little will the Montenegrin; and, as a Montenegrin, M. Buric has a nobler heritage than he can have as a mere Serb; and I, a foreigner, who know and love his people and his land, cannot believe that, if his be a true Montenegrin heart, he is not able to sink his personal ideas, as we all have to do, and place the restoration of his country to its dynasty and people first. In days of peace he can make his views heard. If there is one day to be a great Empire in the Balkans, does M. Buric not understand that the greater and stronger the component parts—the independent States devoting their resources to themselves—the greater and stronger the whole when, in their own time, and own way, by the freewill of their peoples, they enter on a scheme of federation? His King reigned long ere M. Buric was born, and among the Sovereigns of Europe is, perhaps, the most remarkable personality, and the ruler of widest experience. No one knows better than he does what his country needs; and it is not the carping ones of to-day, who ignore the great work he has done in gradually—and so wisely—leading his people out of a primitive past into modern conditions, with no great upheaval in their cherished customs, who can criticise him. The people after the restoration of their land will decide their own destiny. Does M. Buric forget that Montenegro is our Ally in this war, and that we are bound in honour to see her restored to her dynasty and people?

Why, then, seek to promote disunion and bitterness among those who wish to be brothers? Does M. Buric speak for the voiceless starving people in Montenegro—for the voiceless thousands of prisoners of war in enemy hands? I know he does not. Does he speak for the Volunteers who fought in the war under the Montenegrin flag? And, because they would fight under no other, many of them are deprived of their liberty. Yet these were men from the Banat in Hungary, from Croatia, Slavonia, Bosnia, Herzegovina, and the Bocche di Cattaro. Does he speak for those brave sons of Montenegro who made the great sacrifice: who are lying with the sods upon their faces under Tarabosh and Bardanjolt, dying so willingly that Montenegro might live. I know he does not, for many of these men I knew. Does he ignore the words of our King to his King:—" . . . I present to your Majesty my best and most cordial wishes for your prosperity and happiness, and I hope that the final triumph over our adversaries—a triumph which I do not doubt of—will not be delayed much longer, and will afford your Majesty's people reparation for the wrong it has suffered, and security against aggression in the future."

Before me lie letters from Montenegrins fighting in our armies, and in other armies, breathing devotion to their King and country. No one need speak for them—they speak for themselves. The soul of Montenegro, as I know it, is not as M. Buric would have it appear. Some day he himself will return into the fold—and be glad of it. *I know.*—I am, etc.

C. D. MACKELLAR.

"JUSTICE TO THE GRECIAN NATION."

TO THE EDITOR OF "THE NEAR EAST."

Sir,—It was pleasing to me, as a Grecian born and Briton bred, to read the letter in the *Westminster Gazette* of the 17th ult. from the Hon. W. R Reeves, Ph.D., Director and Chairman of the University of London, setting forth very clearly the simple justice that is due to the "Hellenic nation" and its present Government for all the good and useful work they have performed for the Allies under circumstances of peculiar delicacy and difficulty.

As Mr. Reeves says: "Loyalty, justice, and consistency are not small things, and M. Venizelos (a great friend of England) and his Government and country merit their share in British fair play, and it is up to our Government here that they get it."

Bearing in mind the sanctuary that was given to so many British and Allied subjects by Greece at the outbreak of hostilities with Turkey and Bulgaria and to the great number of Greeks who have already given their lives for the Allied cause, one cannot help thinking and wishing that a second Byron, Cochrane, or Gladstone might arise to make very plain to Europe the true position of "Hellas" amongst the modern nations, and the great debt we owe her for her ancient art, culture, and eloquence, also to their successors, the Byzantines, for our Christian religion, etc.

May I venture to suggest that you should, through your journal, be good enough to remind the people of beloved England of their old standing and connection with Greece, and point out the valuable assistance that the Grecian people, with a little encouragement, could give in all parts of the Near East, owing to their extensive connection and influence.—I am, etc.,

NICHOLAS PAPANICOLY.

NEAR EAST BOOKSHELF.

THE REAL BENGALI.*

Lord Macaulay's reputation as a historian is decidedly on the wane. He wrote with a strong Whiggish bias, and was not over-scrupulous in marshalling facts to suit his basic assumption that the Revolution of 1688 had proved an unmixed blessing for the people of these islands. So with the famous Essays which he contributed to the *Edinburgh Review* during four years spent in Calcutta as Legal Member of the Governor-General's Council. The glamour of an incomparable style and the brilliant antitheses which adorn it blinded his contemporaries to the unsoundness of many judgments which are now recognised as having been formed on insufficient evidence. Among them are the aspersions cast on the Bengali character in his essays on Clive and Warren Hastings. If, like Sir William Jones, their author had studied the noble vernacular and mingled freely with the better elements in native society, he would have dealt more sympathetically with fifty million fellow-creatures who were, after all, men of like passions with himself. But Macaulay's life in Calcutta was that of a recluse, and the Indians with whom he came into personal contact belonged to the parasite class, which battens on officials of high degree. Mr. D. Neogi has amply vindicated the reputation of his fellow-countrymen by compiling a series of thumbnail biographies which exhibit their traits of character in a truthful and engaging light. He proves that the once-despised Bengali is capable of honesty, altruism, charity and public spirit. "True Tales of Indian Life" will interest English readers, and may well be made a text-book in the schools of the province to which their author belongs.

F. H. S.

A LEAGUE OF NATIONS.†

There is a consensus of opinion throughout the civilised world that resort to force is a clumsy and barbarous method of deciding international quarrels; but all attempts to supersede it have been fraught with failure. Mr. A. J. Jacobs has made a life-study of this all-important subject, and in a little book of 128 pages he propounds a scheme which seems eminently practical. Starting from the assumption that nations must automatically follow the lines of evolution governing the human unit, he pertinently asks what would happen if every individual looked on with folded arms while his neighbour's home was being attacked by armed burglars? It is demonstrable that Society exists because men have entered into a tacit convention—on which the entire mechanism of law is founded—for *mutual* protection against assailants. Pursuing the analogy, Mr. Jacobs urges that the instinct of self-preservation should forbid a nation to preserve neutrality while another is subjected to unjust aggression. His inference is that all self-governing communities ought to join a league for the mutual protection of their territory against unprovoked invasion. He rejects the conception of a tribunal for settling international disputes on the score of its dilatory and complex procedure; he fears, with justice, that civilization is not sufficiently advanced for mutual disarmament. The system which Mr. Jacobs champions has the merit of simplicity, but it cannot materialise until predatory States such as Sparta in ancient Hellas, and Prussia in our day, shall have been deprived of the power to work evil.

LANGUAGES SELF-TAUGHT.

Although the foreigner who tries to carry on a conversation with the help of a dictionary or phrase-book is a legitimate object of cheap humour, he is often apt to find himself more fortunately placed than one who is absolutely tongue-tied in the language of the country. In any case a start must be made somehow in learning a language, and most people will hold that adults are well advised to combine as much book work as possible with conversational practice. So it comes about that every language contains much that, in schoolboy parlance, has to be "mugged up." The more clearly this information is presented the better, and in this respect the Self-taught Series of Languages published by Messrs. Marlborough and Co. is invaluable. It covers more than thirty languages, among those coming within the scope of these pages being Arabic (Syrian), Egyptian (Arabic), Modern Greek, Hindustani, Persian, Sanskrit, Tamil and Turkish. Although assistance in framing every-day sentences is the chief aim, there is just sufficient space given to grammar to extend the general usefulness of each book. The series is to be recommended.

* "True Tales of Indian Life" By Dwijendranath Neogi, B.A. (London: Macmillan and Co., Ltd., 1917. Price 2s. net.)

THE FASCINATION OF PALESTINE.

On February 5 Dr. E. W. G. Masterman commenced, at the University of London, South Kensington, a course of lectures on Palestine, the first one dealing with the general features of the country. He said that no country had such a diversity of scenery in such a small area. It was a land absolutely unique, especially wonderful when we considered the great rift which divided Eastern from Western Palestine. The country was a sort of bridge between Asia and Africa, and this had given it a peculiar and unfortunate history, for across this bridge lay the high road of the nations of antiquity, and to-day the railways connecting Asia Minor and Mesopotamia with Egypt took the same route. Thus it had always been, and was still, a land of war.

Physically the country was really part of Arabia, a little fertile fringe to the Great Desert. Consequently Palestine had always received the overflowings of the Arabian population. Whenever there was a bad rainy season the desert tribes were driven in from the East. Thus, from certainly as early as 3000 B.C., it had been a Semitic land. It had also been the land from which the Semites had gone westwards, first the Phœnicians and later the Mohammedans. It was a sacred land alike for Jew, Christian, and Moslem.

Wherein, asked Dr. Masterman, lay the fascination of Palestine? Was it a beautiful land? On this point there was great difference of opinion. Artists went there and saw beauty of colour unseen by ordinary people. On the other hand, it had been called, though very unfairly, "The land that was desolate." In the spring the land was undoubtedly beautiful everywhere. He thought the characteristic that made it so attractive from the artistic point of view was the existence of many high mountain peaks. A traveller through the country was always making for one of these points, and when he reached it he saw from it a vista of other mountains and hills. The atmosphere was pure and clear—there were no fogs. Then there were many beautiful places, such as the Lake of Galilee and the Dead Sea, and many little wayside springs were very beautiful. There was less attraction from the artistic point of view in the dry season, when the green disappeared and the colour of the country assumed a more or less uniform tint; but even then one could not help mentioning the glorious nights, when the wonderful moonlight bathed everything in beauty.

Greater than the fascination due to the beauty of the land was that which came from seeing every part of the Bible illustrated; as one went about and watched the primitive agriculture, saw the vines and the fig trees, heard the shepherd pipe, or looked on at the fishing in the Lake of Galilee. Lastly, there was the fascination due to the country's history. All the great nations of antiquity had fought there—Babylonians, Assyrians, Greeks, the Hebrews of old time, the Jews in the time of the Maccabees, Byzantines, Moslems, Crusaders. One would enjoy Palestine just in so far as he was a student of history, and it gained a new interest now in the campaign being carried on there to-day.

PERSONAL AND GENERAL.

CALENDAR OF THE WEEK

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian (New Style).	Julian (Old Style).	—	Moslem.	Jewish.
1918. February.	1918. January.		1336. Rabia II.	5678. Shebat.
8	26	Friday	26	26
9	27	Saturday.....	27	27
10	28	Sunday	28	28
11	29	Monday	29	29
12	30	Tuesday	Jomada I. 1	30 Adar
13	31	Wednesday	2	1
14	February 1	Thursday	3	2

The "Our Day" fund in India has reached £614,000.

Sir William Garstin has left London for the Continent.

M. Radoslavoff, the Bulgarian Prime Minister, is at Brest-Litovsk.

The Roumanian Minister visited the Foreign Office on February 6

All officers of the Greek Medical Service Reserve have been called to the Colours.

M. Stanazkovitch, a member of the Serbian Parliament, left London on February 4 for Corfu.

Dr. Voyislav Marinkovitch, formerly Serbian Minister of Commerce, has left London for France.

Lady Barclay had the honour of being received by their Majesties at Buckingham Palace on February 6.

Princess Irène of Greece, the fifth child of the ex-King, will celebrate her fourteenth birthday on February 13.

The award of a Gallipoli "Star" is the subject of negotiations between Great Britain, Australia, and New Zealand.

A decree has been signed by the Sultan of Egypt renewing the powers of the Mixed Tribunals for a further year from February 1.

The King of the Hellenes, according to present arrangements, is about to leave for the Macedonian front, where he will spend several days.

Colonel Nicolaievich, Military Attaché to the Serbian Legation in London, has been appointed Military Attaché to the Legation at Havre.

M. Diomedes, a former Greek Minister of Finance, has been appointed a Joint Governor of the Greek National Bank. M. Zaimis remains Governor of the bank.

Sunday will be the anniversary of the birthday of Princess Eugénie of Greece. She is a daughter of Prince George, brother of ex-King Constantine, and was born in Paris in 1910.

Professor E. G. Browne gave a lecture on the Persian Constitutional Movement at a meeting of the British Academy in the rooms of the Royal Society, Burlington House, on February 6.

Lord Chelmsford, the Viceroy, and Lady Chelmsford, Mr. Montagu, the Commander-in-Chief, and Lady Monro, attended a memorial service for Sir Beauchamp Duff in Delhi on January 28.

An address has been presented on behalf of the University of Paris to M. Antonescu, the Roumanian Minister in Paris, expressing the sympathy felt by the University for the Universities of Jassy and Bucharest.

As no Greek candidate for the post of Food Controller, vacated by M. Embirikos, has come forward, General Bonnier has consented to act in that capacity. General Bonnier has been Director of the French Commissariat in Macedonia.

In announcing, on January 29, new drainage projects of several hundred square miles in the fever-stricken districts of Bengal (says Reuter's Calcutta correspondent), Lord Ronaldshay, Governor of Bengal, said that the grim tragedy of malaria was causing annually 350,000 deaths and 200,000,000 days of sickness in that Presidency alone. The present schemes, he added, were mainly anti-malarial, but they were also expected to increase the crops. One of these schemes had already been completed, and was now yielding an annual profit of more than a hundredfold.

The King has confirmed the appointment of Mr. Attilio Critien, M.A., M.D. (Chief Government Medical Officer and Superintendent of Public Health), to be an Official Member of the Executive Council and of the Council of Government of Malta.

A Serbian communiqué reports that in the occupied territories of Serbia all Serbian books and manuscripts, whether in public or private collections, have been taken away and burnt, and the use of the Serbian language is strictly forbidden, even in private letters.

The marriage took place on January 26, in Cairo, of Brigadier-General Goland V. Clarke, D.S.O., of Chilworth Court, Hants, seventh son of the late Stephenson Clarke, of Croydon Lodge, Croydon, and Brook House, West Hoathly, to Yvonne, only child of M. Defrance, French Diplomatic Agent and Consul-General in Egypt.

Mr. W. Pember Reeves, chairman of the Anglo-Hellenic League, has received a telegram from M. Kyriakides, president of the Central Committee of Unredeemed Hellenes, which is now sitting in Athens, thanking him for his recent speech "in defence of the rights of the oppressed Greeks of Thrace and Asia Minor."

Two Greek ex-Judges and a journalist, the alleged authors of a forged letter said to have been written by M. Venizelos and circulated in Athens in December, 1916, at the time of the attack on the Allied troops by the supporters of King Constantine, have been committed for trial. The forged letter attributed to M. Venizelos anti-dynastic views.

On January 31 the Duke of Connaught, accompanied by Sir Reginald Wingate, the High Commissioner of Egypt, and General Allenby, visited the Sultan at Abdin Palace and presented the Insignia of the G.C.B., which was bestowed on his Highness at his accession. The Sultan conferred the Grand Cordon of Mohamed Ali on the Duke, and later returned the visit at the Residency. In the evening the Duke left for the Sudan.

Dr. Frank G. Clemow, C.M.G., at one time Physician to the British Embassy, Constantinople, whose experience in the Near East includes service on various International Commissions to inquire into the sanitary defences of the coasts of Asia Minor, Syria, and Arabia, has left for Salonika to take charge of the Serbian Relief Fund's hospitals and ambulances on the Macedonian front. Dr. Clemow, it will be remembered, was in charge last year of a British Red Cross Hospital in Russia.

The *Gazette* announces the mobilisation of officers and men of the 1907 to 1917 classes who are not already serving, says Reuter's Athens correspondent, in a message dated January 30. The mobilisation decree applies to specified Macedonian districts. Another decree calls to arms the officers and men of the 1911 to 1916 classes who are not already serving. This decree applies to several specified districts in Old Greece and Epirus. Ottoman Greeks and refugees from Macedonia are also mobilised. The mobilisation to-day decreed must be completed by February 18.

The Earl of Derby, who is President of the Liverpool Chamber of Commerce, in a letter apologising for inability to receive the Serbian Industrial Mission which visited Liverpool last week, wrote: "Serbia has played the most gallant rôle in the war, and has suffered perhaps more than any other nation except Belgium, and anything that we can do to show honour to representatives of that country is in itself an honour to ourselves. I sincerely hope their visit to Liverpool will prove a success, and that when, happily, peace comes we shall find them as closely allied in commerce as we are now in war."

Reuter's Salonika correspondent in a message dated February 2, says:—The ribbon of the "1914 Star" was yesterday distributed to a number of officers, N.C.O.'s, and privates. The recipients belonged to the Old Army which valiantly upheld the honour of the country in the early fighting in France and Flanders and are now serving with the Salonika force. Lieut.-General Sir G. F. Milne, the British Commander-in-Chief, after an appropriate address, pinned the ribbon on each man, and at the conclusion delivered another speech, congratulating the men and exhorting them to further efforts for King and country. Many officers and men from the Salonika base were present, and also a number of Red Cross sisters, one of whom likewise received the same distinction.

Lieut.-General H.H. Maharaja Sir Pertab Singh and Colonel H.H. the Raja of Ratlam were present at an Investiture at Buckingham Palace on February 6, when Dafadar Gobind Singh was invested by the King with the Victoria Cross. Following the Investiture Dafadar Gobind Singh and a number of Indian cavalry officers now visiting London were given a reception at 21, Cromwell Road by the National Indian Association. General Sir O'Moore Creagh, V.C., late Commander-in-Chief in India, presided, and among those present were H.H. Maharaja Sir Pertab Singh, Lady Sydenham, Lady Lamington, Lady Hardwicke, Sir James Dunlop Smith, Sir John and Lady Stanley, Lady Holderness, Lady Jenkins, Sahibzada Akab Khan, Mr. and Mrs. N. C. Sen, Mrs. Alice Perrin, and General and Mrs. Watson.

APPOINTMENTS, PROMOTIONS, ETC.

El Bimbashi A. B. James, Second Inspector, Berber Province, has been re-transferred to the Army.

El Kaimakam, H. Castle Smith Bey, Senior Inspector, Mongalla Province, has been transferred to the Army.

The Council of Ministers has approved of the appointment of Mr. William Henry Hill, Judge of the Cairo Mixed Court, as Judge of the Native Court of Appeal.

El Bimbashi L. A. Deane, transferred to the Sudan Government, has been appointed Second Inspector, Nuba Mountains Province.

It has been decided to extend the limits of the maximum age fixed for the service of Judges of the Native Court of Appeal to sixty-five years.

OBITUARY.

The death occurred at Port Said, on January 8, of Valley Bey, formerly the Director of the Cairo Post Office.

Surgeon-General Sir Adam Scott Reid, K.C.B., I.M.S., retired, died in London on February 2, at the age of sixty-nine. He became an Assistant Surgeon in 1872, and saw service in the Afghan War, 1879-80, the Chin-Lushai Expedition, 1889-90, and in the operations on the North-West Frontier, 1897-8. He was promoted Surgeon-General in 1902, and was subsequently P.M.O., Punjab Command.

The death is reported from Paris of Professor Istarti, a former Roumanian Minister, and President of the Roumanian Academy. He was one of the leading Roumanian chemists, and his text book on chemistry was in use throughout the country. Professor Istarti was one of the earliest advocates of the policy of intervention, and was a member of the mission to France in 1915 to announce Roumania's coming participation in the war.

Dr. Jechiel Tchlenow, whose death took place in London on January 31, was a prominent figure in the Zionist movement, and was regarded as virtually the head of the International Zionist Organisation. Five years ago he relinquished a large medical practice in Russia on his acceptance of the office of second President of the organisation, in order to be absolutely free to devote himself to Zionist work. He had only recently arrived in England from Russia.

Captain A. H. M. Wilson, Indian Cavalry, who was accidentally killed on service, was the eldest son of Lieutenant-General Sir Henry F. M. Wilson, K.C.B., K.C.M.G., and Lady Wilson, and was born in 1885. He entered the Indian Army in 1904, and was appointed Adjutant of the Bombay Bodyguard in 1910. He became A.D.C. to his father at the Front in November, 1914, was promoted Staff Captain in July, 1915, and Brigade Major in the following November.

The Dowager Countess of Mayo, C.I., who died on February 1 at her residence, 10, Manchester Square, aged ninety-one, was the Hon. Blanche Julia Wyndham, fourth daughter of the first Baron Leconfield, and married in 1848 the sixth Earl of Mayo, who, after being Chief Secretary for Ireland in 1852, 1858, and 1866, was appointed in 1868 Viceroy of India, and was assassinated four years later while making a tour of inspection in the Andaman Islands. From 1874 to 1901 the Dowager Countess was Extra Lady of the Bedchamber to Queen Victoria.

GREAT BRITAIN AND MONTENEGRO.

On the occasion of the "Orthodox" New Year the following telegrams were exchanged between King George and King Nicholas of Montenegro :—

At the beginning of a New Year I present to your Majesty my best and most cordial wishes for your prosperity and happiness, and I hope that the final triumph over our adversaries, a triumph which I do not doubt of, will not be delayed much longer, and will afford your Majesty's people reparation for the wrong it has suffered, and security against aggression in the future.—GEORGE *R.I.*

It is with pleasing emotion that I read the good wishes for happiness and prosperity that your Majesty has graciously sent to me, and I pray your Majesty to accept my most cordial thanks, as also for the thoughts of comforting hope that you have, Sire, addressed to my unfortunate people, which has always had confidence in its noble friends during its sufferings, and does not doubt that Great Britain and her Allies will know, at the time of the final victory, how to heal its wounds and make it forget its sufferings and ensure its future.—NICHOLAS R.

The Indian Art and Dramatic Society are giving a special performance of "Sacrifice," by Sir Rabindranath Tagore, tomorrow at 3, in King George's Hall, Y.M.C.A., Tottenham Court Road.

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO,
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

THE ONLY ENGLISH HOTELS IN ALEXANDRIA.
Proprietor: AUGUSTUS VAN MILLINGEN.

WINDSOR HOTEL
(Facing the Sea, opposite Y.M.C.A.), ALEXANDRIA.
Full Pension, P.T.50; Room, P.T.20;
Lunch, P.T.15; Dinner, P.T.20.
For long stay, apply to the Manager.

SUMMER PALACE HOTEL,
GLYMENOPOULO, RAMLEH.
This Hotel is situated near the Beach. Open all the Year. Bathing Cabins.
Terms from: Pension, P.T.60; Lunch, P.T.20; Dinner, P.T.25.

NAJEM HOURY'S CYPRUS HOTELS COMPANY.
OPEN ALL THE YEAR ROUND—
NIKOSIA—Cyprus Palace Hotel.
LIMASSOL—Olympus Hotel.
FAMAGUSTA—Savoy Hotel.
FOR SUMMER SEASON—
PLATRES—Platres Hotel. 4,000 feet above sea level. Open from May till October.
TROODOS—Olympus Hotel. 6,000 feet above sea level. Open from May till October.
Perfect situation. French and English Cuisine. Moderate Terms.
Excursions to Mount Troödos.
For Tickets and further Particulars, apply to
NAJEM HOURY & SONS, Limassol, Cyprus.
Proprietors of "The Army and Navy Stores."
Branches—Polymedia, Troödos, Nikosia, Famagusta, Larnaca and Platres
Head Offices and Central Stores: LIMASSOL.
All arrangements for Transport, &c., are made by the above Firm.

FRIDAY, FEBRUARY 8, 1918.

ITALY AND THE SOUTHERN SLAVS.

A strong belief that the aims of the Allied Powers are just, and that, therefore, by the time they have issued from the crucible of the world-war they will ring true, however much dross may have been thrown in with them from one quarter or another, has prevented us from taking too tragically the agreement drawn up between Britain, France, and Russia on the one hand, and Italy on the other, in connection with the latter's entry into the war. The letter of this document has remained, but a truer conception of the issues at stake in the conflict has been reached since April, 1915. In these circumstances, it might be thought, the Powers concerned would have been well advised to have admitted the changed conditions, and to have announced *urbi et orbi* that it was proposed to modify the terms of the original understanding. A variety of reasons, potent enough in the eyes of stereotyped diplomacy, may have militated against this course; but the result of the omission has been prejudicial to the interests of the Allies. For nearly three years the antagonism between Italians and Southern Slavs (carefully fostered for fifty years by the Austro-Hungarian Government) has been aggravated by the extremists on both sides, under the conviction on the part of the Slavs that they stood to gain by challenging an unjust convention, and on the part of the Italians that the best method of repelling these attacks was to exaggerate their claims upon the territory in dispute. As there can be no settlement which does not leave some Slavs under Italian jurisdiction, and some Italians within the the Southern Slav State, this exacerbation of peoples who should be preparing to live in amity with one another, after dispelling the misunderstandings of former days, is to be regretted; but it was bound to continue so long as the Convention of April, 1915, had to be regarded as valid. Even now, although there is good reason to suppose that the signatory Governments realise that the agreement has to be modified in important particulars, no definite statement to this effect has been issued. Only vague assurances—mostly of a negative character—have been given, and these have, in the main, encouraged the protagonists in the controversy to redouble their efforts, and to call to their aid equally violent partisans belonging to Allied countries. It is to be hoped that the more recent conferences that have been held between the various Allied Governments will have advanced the Italo-Jugoslav question to a stage at which a definite pronouncement can be made, and that the unmistakable justice of the compromise will commend itself to both parties.

The intricate character of the question has played into the hands of the extremists, as it has always been difficult to check the data on which they have based their claims. English readers, therefore, who have been convinced that, given the necessary good will, a workable solution was to be found, have the more reason to be grateful to the *Quarterly Review* for what is probably the most dispassionate study of the whole subject that has yet appeared. The author of the article is an Italian who is by no means inclined to sacrifice his country's interests: but a sense of strict fairness enables him to realise just where Italy must take a firm stand on her rights and where she can waive her claims for the sake of a broader issue. All his conclusions may not find ready acceptance, but there can be little doubt that he offers a solution of the problem as a whole that may well form the basis of the final agreement between the two States, due consideration being given to their future interests as neighbours in a Europe whose general peace is essential to their own well-being. Professor Salvemini starts from the premise that the proposed Serbo-Sloveno-Croatian State will prove a natural ally of Italy against Germany, and that together they will be needed to defend the southern routes against every new attempt at German conquest. He admits that the task of drawing a frontier line which, while respecting the legitimate claims of both nations, would create friendly relations between the neighbouring inhabitants, is not an easy one. "There does not exist in the eastern Adriatic region any clear national division between the parts inhabited by Italians and those inhabited by Slavs, for the two nations are almost everywhere mixed up together. The physical confines that might be satisfactory, from a military point of view, to both States, do not everywhere coincide with the line that, from the exclusively ethnical point of view, would be the fairest; while the local hatred between the Italians and Slavs, perfidiously fomented in the last half-century by the Austrian Government, makes all reasonable discussion well-nigh impossible."

The arguments by which Professor Salvemini reaches his conclusions are no less interesting than the details of his solution; but it is only possible to touch briefly upon the latter. He would incorporate in Italy the Julian Veneto, which is an Italo-Slav region, while stipulating for international guarantees of cultural liberty and equality before the law for the Slav population included in the new Italian frontier, and for the right to commercial transit, free from Customs duties, through the port of Trieste for all the inhabitants of the back-country. Fiume is to be an autonomous city—a Republic of San Marino for Croatia—and the legitimate interests of Trieste and Fiume are to be conciliated by a railway and Customs agreement annexed to the Peace Treaty, according to which the railway lines which connect the two ports with their respective back-countries would be put under a joint control with a view to excluding any artificial rivalry. The only fair and equitable solution of the Dalmatian problem, we are told, is that Italy should recognise the right of the enormous Slav majority in this region to join itself to the Southern Slav nation. Italy would require the new State to assure to the Italian minority its cultural liberty and legal equality with international guarantees analagous to those which would be granted by Italy to the Slav population in the Julian Veneto, and the municipality of Zara might receive an autonomous constitution analogous to that guaranteed to Fiume. But inasmuch as the Italian coast of the middle Adriatic is, in respect to Dalmatia, "in a much worse position than that of the East Coast of England in respect to the Kiel Canal," Italy must take steps to safeguard her position in the Adriatic. The claims of the Italian Nationalists are dismissed as "not only iniquitous from the point of view of national rights, but unjustifiable even from the military point of view." The occupation of the whole of Dalmatia by Italy would certainly make the Adriatic an Italian lake, but it would also create a further formidable problem—the defence of a frontier of five hundred kilometres on the other side of the water. With Pola in the north, and Valona in the south, Italy, it is held, requires at the most one or more of the outer islands as bases necessary for the security of her eastern coast, and for the movement of her navy from the lower to the upper Adriatic. Dalmatia, it will be remembered, is one of the stumbling-blocks in the terms of the Convention of April, 1915, and its transfer to Italy could never stand the test of the principle of self-determination. If the more moderate views advanced by Professor Salvemini can form the basis of a discussion between the Italian and Serbian Governments, it should not be long before the reproach of friction between the Italians and the Jugoslavs is removed from the Grand Alliance.

THE ARABS.

I.—THE ARABS OF ARABIA.

A few years ago the writer of these notes had the privilege of spending some weeks in the neighbourhood of the Kordofan-Darfur border as the guest of the Sheikh of the Kababish, the strongest and wealthiest of the nomad Arab tribes of the Sudan. One result of this visit was a series of measurements which later led to an examination of the physical characters of the Arabs generally. Before going further it is necessary to point out that anthropologists are agreed that, besides such obvious characters as stature, skin colour, and texture of hair, the form of the head constitutes one of the most important of the criteria of race. The broadest classification of head form is into long and short or round heads, a head being considered long, or dolichocephalic, when its breadth is less than three-quarters (75 per cent.) of its length, and broad or round (brachycephalic) when its breadth is 80 per cent. or more of its length. A race in which the heads are predominantly of one form is provisionally regarded as more or less pure. Conversely, the existence of a considerable number of round and long heads in the same people would be taken to indicate race mixture.

Now a brief glance at the measurements of Arabs, natives of Arabia, that have been taken in recent years shows that there are as many round heads as long heads or perhaps even more of the former, while both types occur among the skulls in the museum of the Royal College of Surgeons. Moreover, if the head measurements of skulls and of the living be tabulated, it is noticed that, while very few of the short or broad heads occur in Northern Arabia, the majority (about 60 per cent.) of the measurements from Southern Arabia are of men with short or broad skulls. There is then a very decided change as we pass from the northern to the southern Arabs, a change which is also found in another important character, viz., stature, the northern Arab being generally taller than the inhabitants of Southern Arabia. It will be asked, who, then, is the true Arab and how far is the difference between north and south due to or connected with differences in the surroundings and mode of life of the two groups, or is it to be regarded as the result of an immigration of long-heads into Northern Arabia or of round-heads into Southern Arabia? It is yet too early to give satisfactory answers to these questions, but it seems possible to indicate the direction in which they must be sought.

The greater part of the interior of Arabia consists of immense lava tracts called *harrah*, and of high dune regions of wasted sandstone (*nafud* or *dahna*). North and south, these sand regions are of great width, extending almost across the Peninsula. The northern Nafud can be crossed only with great labour and difficulty, and, as pointed out by Hogarth, has, in fact, been crossed by not more than half a score of Europeans. The southern sand desert, known as the Rub el Khali—the empty quarter—is a name of terror throughout Arabia, and has yet to be tried by a stranger. "These two fearful tracts are joined on the east by a desert belt, narrowest on the north-east, where, owing to the intrusion of granites and basalts in Jebel Shammar, the supply of sand fails for a brief space, and the caravans may pass to Koweit and Busreh over ill-watered but comparatively firm ground."

Following this description and ignoring the Teheyma, the western coastal plain, the map shows that the country falls naturally into three main divisions, a northern, a southern, and a third less well-characterised central area between the Midian coast on the west and the head of the Persian Gulf on the east. The northern division extends to the edge of the Syrian desert, and, apart from its oases, is inhabited by nomad tribes, the traditional desert Arabs. Though for a great part stony, so that it resembles the better-known desert bounding the valley of the Egyptian Nile, yet parts furnish not inadequate pasturage at certain seasons. Its southern portion is predominantly sandy, and includes the Great Nafud. The southern division contains the highlands of Yemen and Asir in the west, which, with the Hadramut, including the almost unknown Sheher district, form a habitable zone round the great southern desert, continued to the east by Oman and Jebel Akhdar, north of which lies the practically unknown country behind the coastal area of the Persian Gulf. The Yemen and Asir highlands enjoy a temperate climate, due to their considerable elevation and their proximity to the sea. Their population consists largely of agriculturists, whose terraced hills form one of the most characteristic features of the landscape. The central zone, less well characterised than the other two, may be considered to extend from the neighbourhood of Kheybar, north of Medina, to somewhat to the south of Mecca. It includes the Hejaz, Nejd, and El Hasa. For the most part it is a dry stony steppe, sparsely occupied by nomad tribes; yet it contains the holy cities, and the great wadys which intersect it hold many fertile stretches of alluvial soil, where cultivation is possible, and which support a considerable settled population.

The data already given indicate that both the northern and southern divisions have their characteristic population; in the north longheads, in the south roundheads. No statement comparable with this can be made with regard to the central area, for we are almost entirely ignorant of the physical characters of its inhabitants. Culturally and historically this area is more closely related to the Beduin north than to the settled south, and it seems probable that its ancient inhabitants were one with their northern neighbours. To what extent Islam and the events of the few centuries preceding its advent may have influenced the people we can only surmise, but we know that there was an influx of foreign elements, and that one result of the Abyssinian conquest of the Yemen was an immigration of Jews into Mecca, while it may be conjectured that the failure of irrigation in the south in the sixth century A.D., traditionally associated with the breaking of the dam at Ma'rib, led to migrations northwards from the remains of the southern kingdoms.

The geogaphical position of Southern Arabia between Africa, Syria, and India could scarcely fail to bring about connections with these countries. Moreover, South Arabia, as the great incense-producing country, has from the earliest known times played a definite part in the civilisations which have grown up round the eastern Mediterranean coast lands, and, though we know little of the monuments of Southern Arabia, there is direct evidence of Mesopotamian influence at Teyma and in the neighbourhood of Medain Saleh, on the old incense route. The Teyma stone—now in the Louvre—records the introduction of a Aramæan cult served by a priest having a name of Egyptian origin, while Euting discovered at Teyma part of a stone carving in Mesopotamian style, which he attributed to the sixth century B.C. Again, the extraordinary rock-hewn, lion-like (?) monsters from near Medain Saleh, sketches of which are given by Doughty and by Euting, can only be due to Mesopotamian influence. Moreover, there are Mesopotamian references to the Saba, the ancient kingdom of the Yemenites. A certain Ithamar, the Sabæan, no doubt identical with one of the kings of that name, mentioned in Sabæan inscriptions, is referred to in a cuneiform text (*Annals of Sargon*, 715 B.C.). It may well be that the contact began much earlier than this, and indeed the general tendency among Semitic scholars is to carry the relationship very much further back. Now the hills north of the Mesopotamian plain and the hills behind the Syrian coast are the home of a round-headed population, of which the Armenians and the sectaries of the Syrian highlands (Maronites, Tahtaji, and so forth) are the best known representatives. So that both geographical proximity and physical characters suggest that South Arabia was early subjected to Mesopotamian influence, which later spread north along the incense route.

A glance at the map shows that not only was there no efficient geographical obstacle to the early spread of Mesopotamian influence into Southern Arabia, but that it must almost certainly have occurred. In mediæval times there are two outstanding instances. About A.D. 570 the Yemen was conquered by the Persians under Khosroes I., who installed a governor, whose successors continued to rule the country until Badhan, the last

Digitized by Google

governor, accepted Islam early in the seventh century. The other instance which shows that it was easy for a considerable body of men to pass from Arabia to Mesopotamia is offered by the march of Khalid ibn Walid. At this time the frontier of the Persian Empire was in the neighbourhood of the modern Koweit, and near here the Persians were defeated in the "Battle of the Chains." Khalid was not again opposed until he reached the neighbourhood of the Tigris canal, where he gained a new victory, whence, pushing on, he fought his next battle at Walaja, near the junction of the Tigris and Euphrates.

With regard to actual knowledge of Mesopotamian influence at an early date, the evidence for the most part is inferential rather than direct. Yet within the last few months Mr. G. F. Hill, Keeper of the Numismatic Department of the British Museum, has drawn attention to a sign found on those South Arabian coins of the second and first centuries B.C., which imitate the older Attic types. There seems to be every reason to believe that this sign is derived from the Babylonian twin-dragon sceptre, or rather twin-serpent-sceptre motif, of which the earliest example is found on a steatite vase in the Louvre, dating from about the middle of the third millennium B.C. Moreover, the fact that at one time South Arabia was a country of a thriving civilisation with an agriculture so advanced that irrigation works on a considerable scale existed and were kept in repair for hundreds of years itself suggests Mesopotamian influence.

To sum up, a number of lines of argument seem to indicate that Southern Arabia with its round-headed population has affinities with Mesopotamia. There is no such evidence with regard to the far better known north, where indeed the physical evidence, which cannot be discussed here, suggests that there was a more or less homogeneous long-headed population two thousand years ago as there is at the present day.

C. G. S.

MAILS LOST AT SEA.

The Postmaster-General announces the loss at sea through enemy action of parcel mails for Malta (Civil Post Office, Fleet and hospitals) containing parcels posted during the month of December; and also of mails from the Egyptian Expeditionary Force containing letters posted between January 21 and 26 approximately.

The Postmaster-General announces the loss, through enemy action, of mails despatched on January 24 for Salonika, Egypt, the Mediterranean and British troops in Italy, containing letters, etc., for the Italian Expeditionary Force, Salonika Force, Corfu, Malta Hospitals and the Egyptian Expeditionary Force, which reached the Army Post Office, London, for despatch between midnight, January 21, and midnight, January 23; letters, etc., for the Greek Post Office, Salonika, Malta Civil Post Office, the fleet at Malta, and in the Eastern Mediterranean and the Egyptian Civil Post Office, which reached the General Post Office, London, between 10 a.m., January 22, and 10 a.m., January 24; also parcels for the Hospitals and Fleet at Malta and the fleet in the Eastern Mediterranean, which were received in London for despatch between January 21 and 24.

MONTENEGRIN RED CROSS SOCIETY.

Presiding at the meeting of the Montenegrin Red Cross and Relief Society, held at Claridge's Hotel on February 5, Colonel Sir J. Roper Parkington said that the activities of the Fund had practically been devoted to supplying the Paris, Marseilles, Rome, and Geneva Committees with the money necessary for carrying on their work. That work was of the greatest importance, and had justified every effort made. The Paris Committee dealt particularly with Montenegrins interned in the Central Empires, and the demand was for food and clothing. Through that committee alone the Fund was helping to feed 7,000 interned Montenegrins, for which purpose £100 were needed daily. Recently it had sent £2,000 to the Marseilles Committee, where there were large numbers of refugees in bad health, as a rule, and greatly in need of clothing and rest. In Rome it had thirty-two cases to deal with monthly; at Geneva there were only a few in receipt of relief. The Fund had been successful—on one occasion only—in getting a little money into Montenegro to help two families in a desperate condition.

From the above account it will be seen that the demands on the finances of the Montenegrin Relief Fund are very heavy indeed, and in order that all cases of need may instantly be helped, and further that the work entered upon may be successfully continued, a big campaign for funds has just been initiated, which it is to be hoped will prove most successful.

SERBIA'S MARTYRDOM

Read and learn what Serbia suffers:—

It is difficult for Britons to conceive the piteous plight of the stricken Serbians. Yet now and then light is thrown on their sad situation, and then we give generous play to our natural benevolence.

The following extracts from a memorandum issued by the Serbian Legation serve to show Serbia's dire straits and how vital is the call for aid that Serbia sends forth to her more fortunate ally, Britain.

¶ "The first act of the authorities in occupation consisted in interning in Austria and Hungary more than 150,000 civilians. Serbia was thus stripped of her last reserves of labour, and countless families lost their last resources. Hundreds of thousands of children, women, and old men were in this fashion condemned to die of starvation."

¶ "The fact of being interned in Austria-Hungary or in Bulgaria is in reality equivalent to being indirectly sentenced to death. About 30 per cent. of these unfortunate people have already died."

¶ "There are concentration camps where one-half of the inmates have died. And this is not a case of an epidemic which has claimed countless victims. *They die there of cold and hunger.*"

¶ "The plight of the population will be terrible this winter if they are left without assistance. The last grain of their crops is now being exported. Swift and extensive help is necessary, both in money and in food."

¶ You who read these things will not hold back what assistance you can render, whether in cash or in kind. It only remains to point out the channel. The Serbian Relief Fund is the officially recognised committee for the dispensing of private British aid to Serbia. It has been doing this work ever since the need became apparent, and all the time warm-hearted Britons have responded to the call. Serbia needs Food, Clothing and Medical Aid, needs them badly, and needs them NOW. Every day's delay in sending assistance to Serbia means that opportunities for saving life and creating happiness have been missed.

You can help to save the Serbs.

Parcels of warm clothing, new or cast-off shirts, underclothing, body-belts, cardigans, mufflers, warm slippers, stout boots and shoes, tinned foods—these are some of the things that Serbia needs and that you can supply. Remember that the bare needs of existence are called for. Contrast your own sense of security and comfort with the pitiful plight of this terrorised people and send a gift in thankfulness to the Serbian Relief Fund for Serbia's immediate use. All gifts in kind should be sent to: Mrs. Carrington Wilde, Serbian Relief Fund.

To carry on the vital work of feeding and clothing Serbian Refugees, saving the remnants of the youth of this broken nation, maintaining hospitals, dispensaries, and succouring prisoners of war and civilians in internment, money is needed in a continuous stream.

The people of Britain have responded generously to Serbia's appeal, but the needs of this little nation outrun the resources available. Help the Serbian Relief Fund to continue to repay Serbia for her colossal sacrifices by sending a donation according to your ability to:

The Hon. Treasurer,
The Right Hon.
The EARL OF PLYMOUTH,
Serbian Relief Fund.

TANGIER TO TEHERAN.

When Jerusalem fell into our hands, Talaat Pasha and Baron von dem Bussche hastened to tell a mildly amused world of their earnest desire to see Jewish aspirations realized, and the Grand Vizier even sought to suggest to his interviewers that a wonderful project for the benefit of the Jews had been on the very point of being launched, when the clumsy British prevented it. This was quite in accordance with the best Turkish tradition: in such circumstances, any Grand Vizier would seek to draw the Veil of Confusion before the Picture of Defeat. Nevertheless, I ventured at the time to hint that Talaat and his German friend would be wise not to expect too much from their manœuvres; and I have already called attention to certain facts that have justified my prophecy. Now I can offer further evidence. The Board of the Dutch Zionist Federation has, I see, published a protest against the neglect to provide for the representation of Jewish interests at the Brest-Litovsk peace negotiations (so-called). What interests me in the statement is the passage: "The hushing-up of the Jewish question by the German delegation throws a peculiar light on the value of the declarations which were made not long ago by the German Under-Secretary for Foreign Affairs, Baron von dem Bussche. . . ." This obviously refers to the Baron's twaddle when he pretended to back up Talaat. It almost looks as if the Jews had been clever enough to find out that fine words butter no parsnips. Poor Baron!

***

This reminds me that I have never referred to Talaat's impudent claim (advanced in a statement made to a representative of the *Lokalanzeiger*) that it would be found necessary for the Turks to be retained in Jerusalem in order to keep the various Christian sects from flying at one another's throats, so to say. The optimistic Pasha first declared that the Turks were perfectly certain that "the whole of Palestine, even the portions to-day occupied by the English, will remain under our sovereignty." He then went on to say: "The Pope himself will one day realize that, even from the standpoint of Christian interests, the sovereignty of a neutral Power of another faith is most desirable. Friction amongst Christian sects would otherwise lead to the greatest inconveniences."

***

Now, I am not going to deny for one moment that in the past there has been friction amongst the Christian sects in the Holy City. It is notorious that they have on many occasions come to blows, often in places which ought to have been too sacred for brawling—even on the part of a religious bigot. For these reasons it proved necessary to have guards posted in certain places; and these guards—"unspeakable Turks"—usually did their work quite well. So much for the past. What of the future? Will it be found necessary to keep up guards to prevent brawling? I should not be surprised if such proved to be the case. But, even so, I suspect that Talaat and his fezzed warriors will not be given the job. If "neutral" guards are required, India will be able to supply them. And, though I have not a word to say against the Turkish soldier, I am tolerably certain that the Pope and everybody else would infinitely prefer Indian guards, under British control, to Turkish guards under Turco-Germ. orders.

***

It would be idle to deny that the escape of the "Goeben" is a bad disappointment for most of us, but I should not be surprised if Constantinople shed more tears over it than London. For the infamous vessel, which has apparently specialized in running away from small craft, is now free once more to train her guns upon her dear allies. The prisoners from the "Breslau" are reported to have expressed their dislike for the Turks as soon as they were captured; I wonder what the Turks will say about the "Goeben" and her companion when they are free to speak out. Judging by the memorandum presented recently by Dr. Barton to Senator Lodge—and summarized in *The Times*—there are still competent judges who believe that Turkey would drop out of the war to-morrow if she were not terrorized by her "ally." That she was bluffed and tricked into it originally seems (to me) almost certain, and the two German warships played a large part in keeping her up to the mark, so to say. Therefore the escape of the bigger bully is all the more deplorable.

***

A correspondent writes: The Cairo correspondent of THE NEAR EAST gave us last week the cheerful reversal of the name of the Liberator of Jerusalem—Ybn Ella—as, "O, Son of God!" thus supplementing the misrenderings Allah Bey, Al Nebbi and Allah Nebbi. But why stop here? There are many old Mid-Victorian cronies who will like to examine the following points extracted from a careful perusal of the General's despatch:—

Allenby initiated his campaign from Gaza on 31-10-17. Add these units and the total is 13—that so unlucky number! He entered Jerusalem on foot on 11-12-17—again 13. A Turkish parlementaire came out to surrender the city formally on 9-12-17—that is, one day in October, thirty days in November, and nine in December—altogether forty days, "In the Wilderness." We will assume that the General, like Moses (for the Censor is looking at us) had 12 tribes, or divisions, at his command. Also there are 13 letters in the two names, Gaza—Jerusalem; and Allenby has 7 letters, the sacred number. The ingenuity of your readers may perhaps supply other "proofs" that the hero of the East was no Laodicean.

CORSAIR.

THE PRESS ON THE NEAR EAST

The Future of Turkey.

On the ground that it is unlikely that Great Britain will be able, or even willing, to wash her hands of Turkey permanently or completely after the war, Sir William Ramsay raises in the current issue of the *Quarterly Review* the question—What will be the condition of the Moslem peasant population after the war? Not merely must the scanty remnants of the Christian and the Jewish populations be cared for and helped to recover their position and their economic ability; an equally pressing and even a bigger matter will be to set the Moslem population of Anatolia and Syria on their feet. After drawing an interesting picture of the Anatolian peasant in his natural condition and describing the deterioration, both moral and economic, that has accompanied the reorganisation carried out by Mahmud and his successors, Sir William Ramsay points out the inherent rottenness of Turkish administration, and continues:—

My conclusion is that Turkey must be taken in tutelage by the Western Powers, and that everything will depend upon the personal character and the knowledge of the men into whose hands the task of regenerating Turkey will be put. Foremost among those who are fit to be entrusted with this duty are certain American missionaries in the country—not by any means all of them, for I have known one who said to me with fervour that he had never been inside a Turkish mosque. Such as he may be eliminated at once, but many missionaries whom I have known are well fitted to be guides, as in their life they are ensamples, of economic management and moral vigour, and of living on a high standard. It is, however, not the purpose of this paper to do more than point out the urgent need for the application of knowledge and study and preparation for this revivification of Western Asia. The knowledge is wanting, the facts have never been collected, and it is of the first importance that they should be collected and tabulated now, before the need for applying the knowledge presses upon us. To benefit a class like the Anatolian peasant it is necessary to have regard in the first place to his present condition, education, and circumstances, and in the second place to the historical process which has brought him to the situation which he now occupies. A cure which would be useful to one class of peasantry having certain racial characteristics would be useless, and perhaps even harmful, to peasants of a different type. The Anatolian peasant is obedient, contented and easily governed, in a way that is almost unique in the case of a race possessing such a courageous, and in some ways trustworthy, basis of nature.

No amount of knowledge, however, and no collecting and tabulating of facts or statistics will be of any avail without the

will and the skill to use them in practice. Our diplomatists in Turkey have usually been strenuously opposed to doing anything to aid the people except in the way of sending armies and doctors and nurses, the last two elements almost entirely through private initiative and at private expense, but cordially supported on most occasions by the Embassy. To improve the economic situation of the people lay wholly outside the interest and wish of diplomacy. In this respect all that has been done by Britain has been done by private persons and trading enterprise, in spite of the systematic neglect and sometimes the contempt and opposition of the official world.

Jewish Colonization in Palestine.

The reasons of the success achieved by Jewish colonization in Palestine within a comparatively short time are the subject of an article in the February number of the *Zionist Review*. Elsewhere in the same issue the interesting fact is recorded that a group of workers known as the "Hecholuz" have asked the Council of the English Zionist Federation to obtain permission from the British Government for their immediate departure for Palestine.

We thus see that the Jewish colonization in Palestine, unlike the colonization of other peoples, is not a movement of expansion of the nation, but a movement of reunion, not a centrifugal but a centripetal force, which entails not a dispersion, but a concentration of energy—a concentration, in fact, of all the living forces in Jewry on one single and central purpose. That explains why those who during the last thirty odd years have gone out to Palestine as pioneers are really in a certain sense an *élite* from among the Jewish people, and why they have been able in such a comparatively short time to achieve at least as great results and as notable successes in their colonizing work as any other, even the most experienced, colonizing peoples of ancient times or of to-day, have ever achieved, and that notwithstanding the special difficulties in their way. Whereas the British, French, and German settlers who have gone abroad had at their disposal the support and protection of the most powerful nations of the world, the Jews in Palestine have constantly laboured under the greatest disadvantages, the policy of the Turkish Government with regard to the Jewish colonization having consistently been one of systematic obstruction. Yet they persevered in their efforts, and by demonstrating that both the country—Palestine—and the people—the Jewish settlers—are possessed of the attributes which are essential for the successful reconstitution of our national home, they have convinced the world of the practicability of our objects, and have thus contributed more than any other agency to winning recognition and practical support for our national aspirations.

The Enemy of Islam.

Under the above heading a correspondent of the *Westminster Gazette* calls attention to the beneficial effects of British rule on the administration of the Wakfs, or religious foundations, in Egypt. When honest government comes to be introduced into Turkey it will probably be found that the similar institutions in that country are capable of exercising a much wider influence for good than the lax administration to which they are probably subjected to-day allows. The letter runs as follows:—

Sir,—As German agents in Moslem countries have, for many years past, carried on a mendacious campaign against British rule in Egypt, alleging the robbery of religious trusts by Britain "as the enemy of Islam," I have taken the opportunity, whilst here on a short visit, to ascertain, by the kindness of Ahmed Zeki Pasha, Minister of Wakfs, the figures from the records of the Ministry showing the material benefits which have accrued to religious trusts by the more efficient management of estates. For brevity I have selected twenty years as sufficient for comparison. The period is 1895 to 1915. The figures are well worthy of publication as an absolute contradiction of German lies. As in India so in Egypt, the trusts of Islam are scrupulously devoted to the uses of mosques, schools, etc., as ordered by decree of the Speri Court or designated in the wills of pious founders:—

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

The issue of one rupee notes by the Government of India, to meet the situation that had arisen through the continued decrease in the Indian Treasury holding of silver and the impossibility of increasing the supplies of silver sufficiently to meet the demand, seems to have been accorded a most gratifying reception. According to Messrs. Samuel Montagu and Company there was an immediate response on the part of the public, the stock at the Bank of Bombay being exhausted very early in the day, while there was a similar rush in Calcutta. Provided the demand finds an echo outside the large towns, the issue will solve the silver difficulty so far as India is concerned, while by reducing the demand for silver it may have the indirect result of rendering unnecessary the 5s. notes which have been printed for circulation here.

***

Some interesting deductions as to the present relations between Germany and Turkey may be drawn from the proceedings at the annual meeting of the Baghdad Railway Company which was held at Berlin on February 1. It appears that a loss of £60,000 resulted in 1916, while the report leaves unmentioned the accounts in 1917, and also says nothing of the prospects of the company. The chairman, Herr von Gwinner, made a most gloomy speech at the meeting, saying that the position of the company was bad. He also stated that the concern was in urgent need of money, as the Turkish Government (as is the way with the authorities at the Sublime Porte) had not met all its obligations. From these remarks I think the conclusion justified that our successes in Mesopotamia and Palestine have had a greater effect on the Turco-German alliance than is apparent, and that the pessimism underlying von Gwinner's speech was due to the knowledge that there was no possibility of Germany having any influence worth speaking of in Turkey after the war.

***

The action of the Government of Egypt in acquiring the Egyptian telephone service was far from unexpected, as it was known that negotiations had been in progress for a considerable period. This step was bound to be taken sooner or later, since the telephone naturally comes under the heading of those services which should be under direct Government control. The purchase price is £E755,000. The capital of the Telephone Company of Egypt is £E180,000 in fully paid preferred shares, with no priority as to capital, and £E20,000 in fully paid preferred shares. It may be added that 10 per cent. has been paid on the shares for each of the ten years to 1916. There is also £E180,500 of outstanding 4½ per cent. Egyptian stock. The Oriental Telephone and Electric Company holds nearly all the share capital, and will be entitled to practically the whole of the net proceeds of the transaction after the debentures have been repaid and other claims have been met.

***

Since my comments last week certain developments have been reported as regards Russia's attitude—or, rather, that of those people who at present claim to speak in Russia's name—towards the property of Roumania in that country. The Roumanian gold reserve of 300,000,000 francs at Moscow is stated to have been definitely impounded by the People's Commissioners, and to have been stored in the Kremlin, while the Revolutionary Committee in the Black Sea are understood to have decided to confiscate the means of transport belonging to the Roumanian Government, and in pursuance of this decision to have seized some forty steamers lying in Black Sea harbours. Much as these incidents are to be deplored, there is obviously nothing to be done at the present time, and one can only hope that in the end this new philosophy of Socialism, which regards as right and proper the seizure of property entrusted to a country for safe keeping, will lead to a reaction, when a better sense of he obligations of honour will obtain.

***

It is always a case of "Heads I win, tails you lose" with the Germans. Thus, while they have been simulating indignation at what they term a breach of international law on the part of two airmen who did nothing more serious than drop a few leaflets in the "Fatherland" in which the truth was set out rather too clearly for the delicate Teutonic digestion, their new ardour for legality has not prevented them from trying to revive their insidious propaganda in Morocco by means of incendiary literature smuggled into the country. The literature, if the leaflets deserve that name, appears to have been printed in Damascus, and in substance is exactly what the Germans have led the Allies to expect from them—it contains, among other things, an incitement to murder all Frenchmen in Morocco. Happily, the Moors know the Germans, and so far from being influenced by this propaganda, are stedfast on the side of France, whose arduous work in the development of the country they have come to realize and appreciate. The only effect the propaganda is likely to have is to make it more difficult for Germans to regain their business footing in the country after the war, for the Moors will naturally be reluctant to resume dealings with people whose methods of warfare include practices of this kind.

***

Stress has constantly been laid in these columns on the necessity for the Government of India to take definite steps to secure to British firms interested in the Calcutta hides trade a period in which they can be free to reorganize the trade and so make it certain that the export of hides will henceforth be in British hands, and that this country receives all the hides that the tanners require. Why so little should have been done in this direction up to the present time is a mystery, unless it is due to doubt on the part of the Government of India whether British firms will be equal to retaining the control of the trade once it is in their hands. On this point the British Government can give India several useful precedents, notably with regard to the margarine trade. Before the war the manufacture of margarine here was a most unprofitable undertaking owing to foreign enterprise and competition; but under the strain of war and with Government encouragement the industry is now in a strong position, and in the opinion of Sir George Watson, who is well able to judge, it is so firmly established that there will be no danger when the war ends of a return to the former state of things.

***

The report of the Bengal and North-Western Railway for the year ended September 30 last shows a satisfactory increase in the net earnings of the railway, the company's share coming to Rs. 72,15,700, as against Rs. 68,70,400 for the previous twelve months. As a result, there is an interim distribution, and the dividend and bonus is brought up to 8 per cent., the highest rate since 1913-14. £35,000 is allotted to the sinking fund for redemption of capital, and £17,000 to the investment depreciation fund, while £113,100 is carried forward, an increase of £19,900. It should be noted that it was in the first half of the year that the position showed improvement; after July, as a matter of fact, the coaching traffic showed a decline owing to a reduction of train services, and this factor will have to be reckoned with in the following report.

***

The extraordinary popularity of the inematograph in Great Britain and elsewhere throughout the Empire makes the future of the film industry here a matter considerable importance, for there is no oubt that the "pictures" have at least as much influence with the masses of the population as the Press, and were the industry to fail to maintain its ground the influx of foreign films would have quite as bad an effect as if an important group of newspapers was in foreign hands. That there is need for prevision is shown by the intimation of the British Empire Producers' Organisation that German financial groups (including the Deutsche and the Dresden banks) are making extensive preparations for controlling foreign film markets. Evidently the intention is to promote "Kultur" by the screen, a course which might prove distinctly dangerous in countries like India, if we were so foolish as to allow the Germans such a priceless opportunity of stirring up mischief.

AGRICULTURE IN CYPRUS.

Effects of the War.

The report of the Director of Agriculture, Mr. W. Bevan for 1916-17 is of no little interest, since not only does the bulk of the population live from the soil, but agriculture is a field in which, by common consent, lies the main hope of restoring the lost prosperity of the island. The war appears to have affected Cyprus in two distinct ways. On the one hand it has greatly benefited producers owing to the increased prices obtained for all agricultural produce. On the other, it has not only increased the cost of living, but has arrested the promised expansion of the Agricultural Department inaugurated by Sir Hamilton Goold-Adams, and caused a setback in several industries which are under its wing. The policy of the Department appears to have been to assist husbandry in all its branches, and not to concentrate in any particular direction.

The obstacles to progress are mentioned. The principal are lack of water, the indebtedness of the peasantry, and their habitual apathy. To these may be added the impossibility of importing various articles required by the Department, which has hampered several operations. Many plans have been, "owing to dislocation of business, impossible of fulfilment."

As regards lack of water, it may be said that nothing on a large scale can be accomplished in Cyprus until the supply is artificially increased, and this means large expenditure. Take cereals alone. In the time of Strabo it has been calculated that the island supported at least 1,100,000 inhabitants (the present population is under 300,000), and grew 10,000,000 bushels of wheat, or nearly five times the quantity grown at present. Almost every part of the report alludes to the serious trouble caused by local drought. As to indebtedness, again no great progress can be expected as long as the agricultural classes remain in the hands of the money-lenders and merchants, who advance money on ruinous terms regarding the disposal of their produce. The peasants must be enabled to obtain cheap credit. Little seems to have been effected so far by the "Co-operative Credit Society Law" of 1914, which raised hopes in some quarters.

Cereals and Vine Products.

It would seem that all the Department can do at present is to experiment with imported seeds. Native methods from seed-time to harvest are still antiquated. One imagines that more might be done if the Government were to introduce up-to-date machines and appliances for selected areas, and loans, repayable by instalments, were made to farmers.

Vine cultivation engages a large section of the people in the higher lands. For two or three years wine manufacturers have received good prices owing to the increased demand in Egypt. During a pre-war period of depression they had been so unremunerative that "growers not infrequently," says the report, "used wine as an ingredient in making mud bricks, or for repairing their houses." Perhaps we may presume that grape skins were so applied after the wine and spirit had been extracted! Vineyards were neglected, "vines became a prey to pests, and not a few were uprooted." Now, again growers are elated. But the Director warns them that, although war prices may obtain for some time after the cessation of hostilities, "it is only too likely that they will fall eventually more or less to the pre-war level." This is practically certain. After the boom in wine manufacture which followed the phylloxera ravages in France, M. Gennadius, in 1880, gave a similar warning to all vine-growers in the East; and when afterwards Director of Agriculture in Cyprus he not only discouraged any extension of vine-planting, but even advocated the imposition of a special tax on new plantations. He was fully justified in his prediction of a succeeding crisis. The fact is that unless and until wine manufacture is revolutionised in Cyprus, its wines cannot compete in European markets. Cultivators are now again advised "not to put," as they so often do, "all their eggs in one basket." As regards raisins, for which a largely extended market could be found if they were properly prepared, little advance has been made. But sultana raisins, only recently introduced, are doing well and should soon be in the market in fair quantities. Grapes for the table could be greatly improved for neighbouring markets. The English varieties introduced two years ago are so far doing well.

Olives and Olive Oil.

There are immense tracts suitable for the cultivation of the much-neglected olive tree. Cyprus, instead of largely importing both olives and oil, should be carrying on a large export trade. No industry is at present more deplorably backward. In the year under review 198,640 okes (246 tons) of olives, valued at £16,035, were imported. The cultivation of the tree is injurious in the extreme, and the process of extracting oil primitive and insanitary. The Agricultural Department raises large numbers of trees for issue to villagers, and hopes to obtain grafts of Italian and Spanish varieties. It is also endeavouring to improve the methods of oil pressing. Much remains to be done, as in the case of carobs, in the grafting of wild trees, as well as the raising of new ones.

Sericulture.

This industry again is admirably suited to Cyprus, and is one in which women and girls can largely participate. Much remains to be done for its development in spite of the risks that have to be met in rearing silkworms. Unfortunately, the report states that the industry has received a temporary setback, and many mulberry trees have been uprooted "to make way for orange and other fruit trees." Here again rearers are generally at the mercy of the merchants who, when they supply the eggs, make a cash advance to meet working expenses, on condition that the cocoons are brought to them. The prices are fixed by the merchants, and this often means a loss instead of a profit to the hapless producers.

In potato growing there has been a great extension of cultivation in the last two years, and this should, it is anticipated, become a leading industry, as there is much suitable land available at almost all altitudes. The application for the first time of chemical manures and the introduction of new seed potatoes has greatly favoured production. Before the war, says the report, consumption of potatoes was confined to the well-to-do classes, but it has now become general.

Tobacco.

It is strange that there should be no mention of tobacco cultivation, the revival of which has been recently noteworthy and hopeful. The situation is somewhat as follows. Syrian refugees in the Larnaca district having introduced a Latakia variety, a considerable number of growers made large profits last year. The consequence has been that a great many agriculturists have desired to put land under tobacco. Meantime, however, in order to promote food production, the Government has prohibited cultivation except under licence. Hence it would appear that a setback is imminent, or already imposed, in this newly developed industry, which may, however, very probably become a prosperous one when peace is restored.

Dairy work remains as it was. There are, in fact, no dairies in our sense of the word in Cyprus. Native cheese is made from the milk of goats and sheep. Cattle are raised for agricultural and draught purposes only. Cheese-making, however, on European principles is being taught to an enterprising few. In bee-keeping some progress is being made. Cyprus honey is excellent, and the output could be immensely increased in quantity and quality.

Destruction of Pests.

The combating of numerous pests which kept the Department busy is referred to at some length. The measures taken against the carob disease have lately been the subject of some discussion in THE NEAR EAST. No allusion is made to the war against locusts, presumably because it is not under the direction of the Agricultural Department. All that is said is that in the Famagusta district native locusts were attacked by parasitic red mites. Some information as to the results of the year's campaign would have been interesting. This brings one to the subject of what is still a fatal scourge alike to agriculture and the forests. The impression derived from all recent reports is that more should be done to eradicate the plague of goats; that the evil should be met with more drastic if not ruthless action. The efforts made by the Agricultural Department to encourage the growing of fruit trees, which could be made so profitable, are frustrated to a great extent by the depredations of goats, with the result that there is only "an appreciable survival." Again, the report of the Principal Forest Officer for 1914-15 estimated the annual loss to the island from goats at £125,000, or more than the value of the goats; and the annual damage to the forests by the eating down of forest growth at £25,000. These figures alone are surely a forcible argument against further compromise.

tained. Something is done annually to improve native breeds of ponies, donkeys, cattle, pigs, sheep, and poultry by cross-breeding and distribution of stock reared on the farm. Shows held in different parts of the island have no doubt furnished an incentive to peasants.

Agricultural lectures in village schools have been kept up, as well as the summer course of study for both Turkish and Greek schoolmasters. Good work has been done in the agricultural school at Nicosia. The *Cyprus Agricultural Journal* finds its way to all parts of the island.

Clearly the task in Cyprus is exceptionally difficult, greatly owing to lack of funds. No Agricultural Department can do much unless it has a strong Government backing, and in Cyprus this is needed in a peculiar degree. War conditions and perhaps the political outlook conspire to retard progress. Nothing can in any case be effected in the island by leaps and bounds, or until the circumstances already referred to are radically altered. But progress is disappointingly slow. As the Director of Agriculture says, "the work of the Department should be measured not by the immediate tangible results. It is preparing the soil which should bear fruit in the more or less distant future." Nevertheless, the Department marches manfully forward in the face of formidable impediments, and is doing excellent all-round work. It is gaining year by year the confidence of the people who, when the hopeless burden of indebtedness is relieved, should be able to pass through the disappointing mirage of the present to an increasingly prosperous future.

ADEN MARKET FOR SOAP.

Opening or Musk Soap.

There is a good market in Aden for laundry soaps, but for toilet soaps the demand is far less promising, says the American Consul at Aden, Mr. Addison E. Southard, in a recent report. Where soap is used for toilet purposes the average native finds the laundry class of soaps quite satisfactory. The small European population and a small class of natives do, however, demand a proper toilet soap. Most of the toilet soaps imported come from the United Kingdom. A minor quantity of perfumed toilet soaps comes from the United Kingdom and France. An investigation made of the toilet soap market reveals the possibility of building up a limited trade in cheap soap perfumed with musk. The local native, and more particularly the Arab, is very fond of strong perfumes, and he is more than partial to musk. One Aden dealer is enthusiastic over the possibility of musk soap, which he could sell at a price within reach of the limited purchasing power of the mass of the native population. He thinks that a 2-ounce cake, strongly scented with musk, would best suit the trade. The shape of the cake should be oval, and it should be made to retail at an average price of 3d. The price could be a little more.

The leading native perfume dealer in Aden estimates that he alone could sell from fifty to 100 gross of such soap each month. As to packing, he thinks that it should come three cakes in the usual cardboard box, as do most toilet soaps. The class of trade to be served would buy this soap by the single cake, but it is considered that packing the soap as suggested would meet the idea of the customer that all regular toilet soaps are so packed. Inasmuch as the soap would be sold by the cake, an attractive paper wrapper would be desirable, unless it added materially to the cost of the soap. A soap of this sort should find a sale among the Arab populations of other countries, and the labels or descriptions to be placed upon the box and wrappers should be at least partly in Arabic.

ENGINEERING NOTES.

Balkan Fruit Farming.

British engineer-manufacturers were interested to hear that considerable quantities of horticultural and agricultural machinery will have to be supplied from British works to Northern France, Belgium, Poland, Serbia and Roumania to replace the devastation which has been wrought by the Central Powers. Already a War Horticultural Relief Fund has been started in this country on behalf of the lands named, and it is stated that the aim is to raise at once £1,000,000 to restore the orchards, fruit farms, and nursery gardens.

Road-Making Machinery.

Road-making forms an essential element in the general advancement of a country. In the Near East all countries are anxious to extend and improve their communications by the construction of new roads. It is a question which interests all classes; a fact which is not overlooked by politicians, who in electioneering campaigns never omit to mention in their programmes "the construction of new roads" in their respective constituencies, as their foremost object in being returned to Parliament. Unfortunately, the result of such promises is, as a rule, a spasmodic outburst of road-making in all directions, satisfying local demands, but disorganising and delaying the carrying out of a proper system of roads that would benefit the whole country. At the same time this procedure is an expensive method of road-making. Estimates are based on the employment of inexperienced local labour, using, as a rule, archaic implements.

The demand for road-making in the Near East in the near future will be unprecedented, as, apparently, all the responsible authorities there recognise that the economic recovery and progress of their respective countries depend to a very great extent on the improvement of their means of communications.

In carrying out these improvements it is to be hoped that modern methods will be adopted, expert engineers and modern machinery employed, and political influence barred.

New Machines.

In view of this prospect, it may be of interest to the authorities and contractors to know that among the types of new machinery for the construction of up-to-date roads and highways there is a new road-making machine which is of remarkable efficiency. This machine is designed for the use of contractors, or country authorities desiring to build long stretches of roads at the minimum cost. It has a blade of 12 ft. in width, and if attached to an engine of sufficient power, will handle the earth to any desired depth. It is especially suitable for building long roads in places where the land is uneven, because its great capacity enables it to fill up considerable hollows with remarkable rapidity, and at slight expense.

There is also another new machine of this class, but smaller in size, which is designed to meet the requirements of those who desire a small, moderate-priced machine for road repairing, ditch cleaning, levelling, etc. This machine has a five-foot mould-board, and can be drawn by two or four horses. It is extremely useful for its size, and very strongly built and durable. For roads that are badly worn and full of holes and ruts there is another new machine, a scarifier, which is provided with a number of powerful teeth that rip up the uneven surface. The road is afterwards gone over and levelled with an ordinary road machine. This scarifier possesses the merit of being able to rip off the hard spots, even in macadam or asphalte, that otherwise would have to be done by manual labour.

For road building in districts where the grades are heavy and there are big ditches on the sides, or where it is necessary to make large cuts and fills calling for the removal of considerable quantities of earth, there is a machine which does the work very economically. This machine, or grader, loads the wagons automatically while working, and the wagons are emptied by means of a lever. Machines such as these are needed for the speedy and economic construction of good roads.

From the Elbe to the Danube.

The internal waterways of Germany and Austria-Hungary are, apparently, to be developed on a large scale. At the Congress of German and Austrian Economic Unions recently held in Hamburg, which was attended by representatives of the various Imperial, State and Municipal authorities, a resolution was adopted to the effect that after the war immediate steps should be taken to establish effective internal waterway connection between Germany and Austria-Hungary, the most important and most urgently needed connections being the Elbe-Oder-Danube and the Rhine-Main-Danube canals. The resolution also expressed the view that the canal from Pardubitz (Bohemia) to Prerau (Moravia) in connection with the Oder-Danube canal offered the best solution of the problem of a route for large ships from the Elbe to the Danube. Particulars of the schemes for the construction of the above mentioned canals were given in these columns some time ago; and the effect that such a waterway would have on British trade was also pointed out.

Morava-Vardar Waterway.

The union of the Morava River with the Vardar River, by the building of a canal from Ristowal, via Kumanovo, to Uskub, will give Serbia a most valuable waterway running through the whole country from the Danube to Gevgheli, and out to the Gulf of Salonika. The river Vardar takes its rise in the Balkan mountains, north-west of Uskub, and after draining a large extent of upland country, flows through an extensive valley, falling into the Gulf of Salonika. The entire valley is under cultivation, and not far from it are situate the important towns of Yenidje, Vardar, Niautsa, Karaferia, and Vodena. The river, especially during the spring months, brings down so large a volume of water from the uplands that its channel through the lower portions of the valley is totally insufficient to carry off these waters, with the result that a very extensive area of county is constantly submerged, causing great damage and heavy loss to the proprietors and cultivators. In addition, a very large tract of country has from this cause been converted into marshland, and no crops are grown on it. Another large tract was submerged centuries ago, and has since developed into a lake with a length of about eleven and a half miles and a breadth of about twelve miles, known as the Lake of Yenidge. According to the survey and plans of a British hydraulic engineer, the floodings can be prevented by making a cutting, about nine miles in length, at the lower portion of the Vardar, and embanking both sides of the river for about twenty-four miles. An outlet would be dredged for the draining of Lake Yenidge. Channels would be opened for the irrigation of some 50,000 acres of agricultural land, situated partly on the eastern and partly on the western side of the Vardar River, and other works for navigation for transport of agricultural and other produce from the inland to the port of Salonika. As the entire drainage and reclamation of the land, as also the irrigation, would be effected by gravitation, no pumping station whatever is needed; and, owing to this, it is estimated that the cost of all the works would not exceed the sum of £250,000. By the Morava-Vardar waterway, Serbia could export her produce either via the Danube or the Ægean Sea at very cheap rates of transport.

COMPANY MEETINGS.

BRITISH TRADE CORPORATION.

The Role of the Institution.

The first ordinary general meeting of the British Trade Corporation was held on January 31 at the Institute of Chartered Accountants, Moorgate Place, E.C., Lord Faringdon (the Governor) presiding. The secretary (Mr. G. de B. Brounlie) read the notice and the auditors' report.

The Governor said that the extremely liquid state of the assets showed that the corporation had not yet got seriously to work upon the problems it was created to deal with. Their Royal Charter was granted as the result of the report of a Departmental Committee of the Board of Trade, over which he had the honour of presiding, and the terms of their reference were "to consider the best means of meeting the needs of British firms after the war as regards financial facilities for trade." That date might yet be far off, but the Government, in calling the corporation into being, naturally realised that there were many preliminaries to be arranged in advance of actual business, and it was in connection with these preliminaries that the executive had been mainly occupied during the past few months. His attention had been drawn to the activity displayed by some concerns not dissimilar to their own, who had invested large sums in various directions, and a contrast had been drawn between what they had done and the corporation's apparent want of enterprise. It could not be too clearly understood that the business of the corporation was not so much to take up undertakings on their own account as to assist with finance those who were launching out in various directions where it was clearly demonstrated that such launching out would be for the benefit of British trade. They would, of course, have investments from time to time, but these would be of a temporary character, and would only be held until they had been built up and developed and were suitable for the general public. The directors mentioned in their report that they had set up an information bureau, but it would be more correct to call this an index department. The Government had taken steps for the development of their own Information Department, and the corporation, instead of having the actual information upon a multiplicity of subjects in their own possession, were keeping a register which would show at a glance where information was readily obtainable. This, when further developed, would enable their staff quickly to prepare memoranda upon any subject calling for special consideration. They would naturally keep in their possession statistics dealing with resources, methods of trading, and commercial statistics of overseas markets. It having been brought to their notice, from evidence given before several Departmental Committees, that there was a strongly expressed opinion that arrangements should be made for the insurance of commercial bills, the corporation had decided to create a separate company, which would be entirely under its control, for doing that class of business, and they had made an agreement with the Excess Insurance Company to transfer to the new concern that part of its business which was of this character.

Some little time since he was looking forward to the occasion that the present gathering would afford of meeting certain criticisms which were levelled against the corporation at the time of its inception, and he had made somewhat copious notes of speeches in the House of Commons and comments in the Press which, it struck him at the time they were uttered or written, called for a reply. He had, however, come to the conclusion that many of the exaggerated comments which were made had been answered by what had since been demonstrated—namely, that the corporation was not out to capture the trade or finance of any existing institution, and that, even if they had the power to do evil things, there was no intention to exercise that power. They were genuinely desirous of assisting the export trade of the country by providing financial assistance as far as their means would permit; they were anxious to provide the commercial community with information which might come into their possession and which might not be readily available from other directions, and they hoped that they might, when business revived, be made the pivot upon which important syndicates for great industrial developments at home and abroad might revolve. Their measure of usefulness must not be judged by their present issued share capital, but rather by the parties by whom that capital was held, and the conviction of those who had the management of the corporation's affairs that—given success with the moneys now entrusted to them—there would be no difficulty in getting more when the necessity arose. He trusted that the scheme of co-operation which had made the German banks so great a power in the past would be followed by our own institutions, and that this corporation might be made the medium for carrying through operations of magnitude. He thought there was reason to suppose that the British Trade Corporation would quickly justify its creation, always provided that trade was freed at the earliest moment possible from the harassing Government restrictions which now surrounded it.

The report was unanimously adopted.

LONDON COUNTY AND WESTMINSTER BANK.

Mr. Walter Leaf, who presided at the annual general meeting of the London County and Westminster Bank, held on January 24 at 41, Lothbury, E.C., said that the shareholders had probably heard fears expressed in some quarters that the great increase in bank resources might form a strong temptation to the Chancellor of the Exchequer to help himself in some emergency by commandeering bank balances. That was not, in his opinion, a risk which deserved any attention, and that for a very good reason. The Chancellor could gain nothing by such an operation, because he had got the whole increase already by a voluntary process. When they considered the figures he had given and reflected that the increase in cash at call and short notice was mainly lent to the Government through the Bank of England; that the great increase in bills discounted had gone direct into the Chancellor's hands in the form of Treasury bills, and that the increase in advances had done so indirectly through the bank's customers' investments in War Loan, the shareholders would see—and the Chancellor knew this as

The Bank, through its Branches and Correspondents in Morocco, is fully equipped for all kinds of Banking business with that country and business between Morocco and Egypt is facilitated through its Correspondents in Egypt.

Digitized by Google

well as anyone—that if he attempted to call upon the bank for anything in the way of a forced loan, it would not be possible for it to meet such a requisition except by taking from him with one hand what he was asking the bank to give with the other. Their gross profits were a record—nearly a million more than last year and over two millions more than two years ago. But against this the interest paid to customers showed an increase of considerably more than half a million. There was also a heavy increase of just £200,000 in expenses. That was not a feature which they liked to see, but it was wholly due to war bonus to their staff at home and to allowances to those on active service. The board could not but feel serious doubts about the point at which their expenses might permanently stand after the war. That was a matter which must be always taken into consideration in any discussion of the future rate of dividend. They were, however, still able, after providing for this heavy increase, to show a record net profit of £1,271,000. After remarking that while the board felt justified on the results of the year in recognising the strong claims of the shareholders to a better return, the board were making no promise for the future, but only expressing a good hope that the dividend could be maintained at 19 per cent. in the future.

GOVERNMENT CONTROL OF TRADE.

With regard to Government control of trade, he said they must all recognise that such control was in the present emergency inevitable, but they could not view without some alarm the probably permanent results of some steps which were being taken, perhaps with the idea of retracing them in the period of reconstruction. If so, he feared that the idea was short-sighted and fallacious. He would mention two instances. The whole future of the labour question was in the melting pot, and on the solution would depend the prosperity of the country and therefore of the banks after the war. It could hardly be said, he feared, that the recent action of the Government in the wages question was of good augury, or promised anything in the way of real settlement in the near future. Another direction in which Government Departments had been active caused the directors much apprehension. He alluded to what appeared to have been adopted as a deliberate policy—the extinction of the merchant, with the view of bringing directly together the producer and the customer. That was an object which might commend itself at first sight to the amateur; it looked like an economy and a simplification. To him it looked rather like a return to primitive conditions of trade unsuited to our modern requirements. To strike at the merchant was to aim a blow at the world-wide pre-eminence of London. The Government was asking at present, and wisely asking, not for a great and dramatic loan, but for what was perhaps harder, but much more wanted—a strong, sustained effort to keep up a steady supply of funds. The banks as such had done and were doing their share to the very utmost of their ability, and he appealed to them all to do the like and to put into National War Bonds every penny they could spare. Let them buy War Bonds, not only now, but to-morrow and next week and next month and every month till the war had at last reached the end which they meant to gain.

The report was adopted unanimously.

SUEZ CANAL RECEIPTS.

The traffic receipts for the Suez Canal were as follows on the undermentioned dates:—

	1917. Francs.	1918. Francs.
January 31, February 1, 2	540,000	560,000
February 3, 4	380,000	460,000

EGYPTIAN MARKETS.

	1917. Week ended Jan. 25.	1918. Week ended Jan. 24.

General markets	388	474
Receipts (£).....	1,652	1,373
Total for year.....	5,927	4,505

The export of ground nuts from the Sudan to countries other than Egypt is prohibited except by special permit.

Owing to ill-health, Mr. Arthur Hutton has resigned the chairmanship of the British Cotton-Growing Association, which he has held since the association was formed.

LANCASHIRE COTTON.

Unsatisfactory Market Conditions

(FROM OUR OWN CORRESPONDENT.)

MANCHESTER Wednesday.

Producers in the market have experienced another disappointing week, and demand in all quarters remains flat. Conditions at the moment are not at all favourable to a large turnover, and buyers seem more determined than ever to act with caution. Supplies of Egyptian cotton are rather more plentiful, especially in Alexandria, but some Lancashire spinners are complaining of the poor quality. Buying at the moment is at a low ebb, and it is understood that most users are fairly well bought. In Egyptian yarns fine combed qualities are very scare, and in certain numbers it seems quite impossible to obtain delivery in less than two to three months. The production of fine cloths for aircraft purposes is being hampered owing to the short supply of suitable yarn. The recent fall in raw material rates has had very little effect upon spinners' quotations. In cloth for Egypt stock lots have been in request, but shippers have been in no mood to purchase for forward delivery. There has been rather increased anxiety with regard to shipping facilities, and it is feared that the Government is about to put further restrictions upon our industry as regards exports. No improvement can be recorded in the inquiry in piece goods for India, and advices from the other side are discouraging. Some necessary buying has transpired for China in well-known makes, and occasional lots have been put through for Java and the Straits Settlements. The home trade remains busy. Prices in American yarns are showing rather more irregularity, especially in wefts, coarse counts being in larger supply. Operations have been of a hand-to-mouth character. Very little activity has prevailed in shipping yarns.

The death took place recently at Liverpool, in his 83rd year, of Mr. Dashper Edward Glynn, who was, until May last, a partner in the well-known firm of Messrs. John Glynn and Son, of Liverpool, whose steamers have been engaged in the Mediterranean trade since 1850.

EGYPTIAN DELTA LIGHT RAILWAYS

Traffic returns for eleven days ended December 31.

April 1-Dec. 31	159,070	202,795

EGYPTIAN FINANCES.

Improvement Maintained.

(FROM OUR OWN CORRESPONDENT.)

CAIRO, December 19.

The October accounts of the Egyptian Government, published this week, show a continued improvement in the State finances. Revenue during the month amounted to £E3,219,583, as against £E2,880,356 a year ago, and expenditure to £E1,789,986, as against £E1,702,573. The total revenue to date comes to £E12,304,911, and expenditure to £E10,371,149, as compared with £E11,197,064 and £E9,819,567 respectively at the end of October, 1916. There are thus increases of £E1,107,847 in revenue and of £E551,582 in expenditure.

During the month the principal items of revenue were land tax, £E1,505,495; customs, £E214,076; tobacco dues, £E212,991; railways, £E500,260; domains, £E178,734; ghaffir cess, £E103,842; and interest on funds, £E93,369. The chief items of expenditure were £E126,567; irrigation, £E194,254; railways, £E60,767; ghaffirs, War Office, £E83,423; public debt, £E709,567; war gratuities, £E45,049; and pensions, £E46,425.

Chief Increases.

The principals heads of revenue which show an improvement during the seven months compared with the corresponding period of 1915 are:—Land tax, £E24,386; customs £E23,790; legal fees, £E121,576; railways, £E140,543; ghaffirs, £E510,819; interest on funds, £E53,887; and extraordinary receipts, £E300,795. Tobacco dues have fallen off by £E173,344, and port dues by £E37,040. Expenditure on irrigation increased by £E143,763, on main roads by £E12,899, on agriculture by £E20,958, on War Office by £E36,353, whilst ghaffirs (£E410,945) and war gratuities (£E89,594) appear for the first time. The main item of decrease under expenditure was £E369,371 on railways.

The net result of the seven months is an improvement in the position by £E556,265, the surplus this year being £E1,933,762, as compared with one of £E1,377,497 at the end of October, 1916. Since we are in the heaviest part of the year as regards revenue collection, it would not be at all surprising if the current year were to close with a surplus approximating double that of 1916-1917.

Up to January 26 Indian Treasury bills have been sold to the following amounts:—Three months' bills, face value Rs.4,66,80,000; six months' bills, face value Rs.16,61,10,000; nine months' bills, face value Rs.4,97,50,000; twelve months' bills, face value Rs.74,00,000—total, Rs.26,99,40,000, equal at 1s. 5d. the rupee to £19,120,800.

ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Street, Wednesday.

There has been a certain amount of irregularity in our market for Egyptian securities this week. Bank shares have been subject to profit-taking; Nationals are $\frac{3}{16}$ down at 18½ and Agriculturals $\frac{3}{32}$ lower at 6$\frac{17}{32}$. On the other hand, Anglo-Egyptian Banks are again $\frac{1}{16}$ firmer at 14½, after some transactions at an even higher figure. Land Banks are unchanged, but are looking a better market, and a certain amount of business has been transacted in them. Delta Light Railway preferences are $\frac{1}{16}$ up at 6$\frac{5}{16}$, but sellers are very scarce.

In Land shares there has again been a very active market, and some pretty large transactions have taken place. Buying orders have been coming in both from Egypt and locally, with the result that prices are generally higher all along the line. Aboukirs have advanced 9d. to 24s. 9d., some business has been done in Allotments at 4$\frac{1}{8}$, and Behéras have been persistently inquired for for Egyptian account, finishing ¼ up at 13¾. There has also been a demand for Daira shares, which are 6d. up at 3s. 6d.; but in the absence of sellers no business has been possible. Delta Lands are unchanged, although a fair amount of business has been passing in them. Some fair lines of Egyptian and Foreign Trusts have changed hands round 10s. 6d., at which level the shares should prove an excellent lock-up in view of the appreciation of many of their holdings. Gharbieh Lands have been exceptionally dull, some profit-taking on the recent rise causing them to recede $\frac{3}{16}$ to 2⅛.

In New Egyptians a large business has continued to be done, and the price is 3d. firmer to-night at 19s. on buying orders from Egypt. Sidi Salems and Union Foncières have again been features of strength. The former has risen a further 6s. to 46s., with a good many unsatisfied buyers still about. Union Foncières are scarce. The demand for this share is not surprising in view of the very low valuation per acre, which the present price represents, and a further sharp upward movement appears exceedingly probable. Union Foncières are 6s. 6d. up at 65s.; the buying during the early part of the week was for Egypt, but the final support to the present level was caused by local buying. Some transactions have taken place in United Lands round the current price.

In miscellaneous shares Alexandria Waters are ⅛ down at 12¼, at which some business was done, and Salts and Sodas have been rather a dull spot, closing 1s. 6d. lower at 39s. In Egyptian Markets some business has been going on, and also in Khedivial Mails, but prices are practically unchanged. In both Egyptian and Greek Government stocks the market is firm, but there is very little business passing. Egypt 3½ per Cent. preferences are wanted in several quarters, but sellers are few and far between. Greek Currant Bonds are rather firmer at 92 xd., but there are only buyers. Piræus, Athens, etc., 4½ per Cent. Bonds have been dealt in to a small extent, and are about half a point up at 72¾.

Paris Bourse.

Closing quotations included Egyptian Unified, 96; Turkish Unified, 64.35; Credit Foncier Egyptian, 780; Ottoman Bank, 481; Suez Canal shares, 4,600.

Oil Shares.

The market was practically devoid of movement. Anglo-Egyptians (B) were unchanged at 32s. 3d.—33s. 3d., and Roumanian Consols also marked time at 13-32—15-32.

NOTES OF THE WEEK.

Apart from the Western front, where the solemn hush of preparation for the great events of the spring campaign impresses every observer, one short *communiqué* from Palestine has sufficed to summarise the not very important military happenings of the week. Rumour has, as usual, taken the place of news, and a journalistic attempt has been made to draw the veil from the Versailles Conference—a Conference which, by the way, seems to have stirred the small band of pacifists and "their German friends" to an unusual fury. It is unfortunate that those who are criticising the Prime Minister's action on patriotic grounds should find themselves associated indirectly with the pacifists. Mr. Lloyd George is far too astute a politician not to turn the unhappy conjunction to his advantage, if the attack gets too warm.

If the "side-show" is the unforgivable sin in strategy, at least the enemy have committed it as well as ourselves. Most of the fighting away from the Western front since the Marne has been, strictly speaking, in the nature of German "side-shows." As the war goes on one is apt to lose one's sense of perspective and memory. It is always worth while to remember that the Germans set out to occupy Paris in order to seize the French colonies. There could be no more extraordinary illustration of the proverb that "war does not go according to programme" than the fact that the decisive battle in the West, timed for the last week of August, 1914, has still to be fought in February, 1918, or later; while the war is already practically over—at least for the present—on the Eastern front.

For the moment the plans of the Central Powers have triumphed in the East. Peace has been made with the Ukraine; the rest of Russia—if M. Trotsky may be taken at his own estimation, as representing the rest of Russia—has declared the state of war at an end, although the Bolsheviks, after breaking the Pact of London, have some unexplained scruples against an actual treaty of peace. Germany, having her hands freed by the official demobilisation of Russia's already disappearing army, has transferred most of her available troops to the West, and has meanwhile sent an ultimatum to Roumania.

The position of Roumania is of quite extraordinary difficulty. She is deserted by the only ally who could have helped her; the Bolsheviks have, indeed, declared war on her. But that threat, like their other threats—except their confiscation of other people's money—remains inoperative, in view of their demobilisation. The idea that the Ukraine might help Roumania is, of course, out of the question, as that would mean an act of war against Germany; Roumainia is, therefore, definitely isolated. In this extremity the King has done wisely in accepting the resignation of the Government, and appointing as Prime Minister General Avarescu, who is of no party. The situation has been too delicate for any official, or even semi-official, comment from Roumania.

It is said that Germany has offered peace to Roumania on certain terms. Those terms are stated to be that Roumania resigns the Dobruja to Bulgaria and obtains in return Bessarabia as compensation. But it is well to remember that this report comes from German sources, and is suspect on that ground alone. German offers of peace usually have a trap in them. Further, although the Dobruja part of the offer is presumably correct, as Bulgaria demands this, the Bessarabia detail is not quite so convincing. Roumania certainly desired this territory, and that so recently as three years ago; moreover, her armies have quite lately been active there, assisting the people of the province to root out Bolshevism. But Bessarabia, as it happens, is intimately connected with the Ukraine, and it would have been assumed, had Roumania not been in the war, that this rich province would naturally form part of the Ukraine. There is not a word in the Peace of Brest-Litovsk on the matter: the boundaries of the Ukraine are settled west and north, but not to the south and east.

Another very doubtful point emerges from this report of peace terms to Roumania. To whom is Germany offering them? If to the few Roumanian politicians who stayed behind in Bucharest, and have since fraternised with the Teuton, they would be ineffective. They could only be effective if offered to, and ratified by, King Ferdinand's Government. But King Ferdinand has been publicly branded by the German Government as "a traitor Hohenzollern," and presumably the authorities at Berlin do not deal with "traitors." Unfortunately for them, the "traitor" has an indomitable army, and has given no sign of surrendering. Germany has princes enough and to spare to set up a pretender on a new throne at Bucharest, but he would be a pretender and nothing more, and would not be recognised.

But the more the position is examined, the more does it become clear that the Peace of Brest-Litovsk is of a

Digitized by Google

provisional character. It recognises the independence of the Ukraine, and the Germans have, therefore, presumably satisfied themselves that the administration at Kieff has in it the elements of permanence; undoubtedly the Germans will do their best to support it, since they hope to utilise the country for trade and to obtain food. But they have not given the Ukraine the Ruthenian territory of Eastern Galicia, although it was there that Ruthenian nationalist sentiment first became strong; yet it has always been understood that the offer of this territory was the inducement held out to Russia to make a separate peace in the autumn of 1916. On the other hand, the Ukraine is compensated by the inclusion of a part of Volhynia and Poland: this was probably designed to set Poland and the Ukraine by the ears—a very excellent thing from the German point of view—but the immediate result has been to infuriate the Poles with Germany. *Realpolitik* has once more overreached itself.

The failure to fix the southern and eastern boundaries of the Ukraine matters a great deal to Bulgaria and more particularly to Turkey, as well as to Roumania. On this question depends very largely the way in which Euxine politics shape. For the time being all is nebulous here, and the fog that hangs over the Caucasus and the Crimea has not been dissipated. But no calm judge of the present position can possibly believe that it holds the elements of permanence. Even less stable, if that is possible, is the situation in Russia, and it is quite impossible to understand the state of mind of a man who declares the war at an end but refuses to sign peace. The actual effect is to leave Germany in possession of everything; she could not have obtained more had Russia surrendered unconditionally. M. Litvinoff, the Bolshevik representative in this country, has denied that Lenin and Trotsky ever took German money. If that is so—and we are bound to say that he has not disposed of the suspicions—then Lenin and Trotsky have played Germany's game for nothing. But even M. Litvinoff has not ventured to defend their declaration of war against Roumania.

The lively discussion as to the Jugoslav programme and the British attitude towards it continues in Italy, and it is likely to be stimulated by Mr. Balfour's cautious reference in the House of Commons to certain negotiations which took place recently in Switzerland. Fortunately the disposition to suggest that England had abandoned the Jugoslavs—a conclusion which was drawn from Mr. Lloyd George's speech—is now less confidently advanced; there was never, of course, any suggestion that Britain would abandon Italy, nor could there be, in face of the British army's presence in Italy. The discussion has naturally turned on the 1915 treaty between Britain and Italy, and one cannot but agree with the *Secolo* that the omission of Serbia from this instrument was unfortunate, as also the admission of the same journal that Italy's attitude towards Greece three years ago, which has left its marks on the treaty, was a mistake of policy; although it must, in fairness, be remembered that at that time a different régime was in power in Athens, and that the position of Serbia itself was very different.

All this is merely to admit that a great deal has happened since 1915. At that time few Italians would consider the Jugoslav claims for a moment, and it is notorious that Downing Street for its part was not particularly enthusiastic over the question. Both sides have learnt much since then; Italy has modified, if not entirely changed, her attitude towards the proposed Jugoslav State in the Adriatic, and our own Foreign Office has unrolled the map of Europe. The contradiction, however, in the Prime Minister's statement as to the maintenance of Austria and the establishment of a new Serbia suggests that our studies of that interesting document have not yet progressed very far.

Another manifestation of Bolshevik mentality has been disclosed by the announcement that orders were given by Trotsky that M. Diamandi, late Roumanian Minister at Petrograd, was to be shot, and the other members of the Legation arrested and sent back to Petrograd. This nefarious plot miscarried, but it is understood that a large number of Roumanian Deputies, officers, and journalists have been arrested at Odessa. It is difficult to find words to express one's condemnation of this outrage; common decency, to say nothing of the age-long respect in which ambassadors, even those of enemy States, have always been held, should have dictated courteous treatment of M. Diamandi.

The report has been spread from Stockholm, a city on which many German lies have been fathered, that a Serbian Crown Council has been held at Salonika, with the view of entering into negotiations with Austria-Hungary to secure Serbia an outlet to the sea. The report scarcely required the indignant denial which it has evoked from the Serbian Press Bureau. It is known that both Bulgaria and Austria are claiming Serbian territory; and in these circumstances, and in view of the actual military situation, it is certain that the last thing in the world which Austria contemplates is to give Serbia an outlet on the Adriatic. Even before the war that idea was always denounced in Vienna as utterly impossible; it is entirely unlikely that Austria is more accommodating now, when she holds Montenegro.

To satisfy Serbia in this respect would be to defeat the whole object with which Austria went to war, for it would allow a greater Serbia to emerge. It would more or less indirectly go some way towards the fulfilment of Jugoslav desires. Nothing in the language of any Austrian statesman has given the slightest indication of any such intention; on the contrary, while fair words have been spoken about disarmament, the integrity of Austria has always been put in the forefront of Austrian peace terms. And in view of Germany's anticipated annexation of the Baltic Provinces, Austria is even more likely than before to look for "compensation."

The pro-German intrigue in Greece seems definitely to have failed—for the time. M. Venizelos has acted vigorously: the meeting at Lamia has been suppressed, and it has not been followed by any similar outbreaks. The mutineers are to be tried, and it is understood that an example will be made of them. In addition, sixteen pro-German professors from Athens University are dismissed; and a certain number of Greeks whose minds are too persistently orientated towards Berlin are to be deported to various islands.

Probably the Germans are representing these things as a tyrannical suppression of Greek democracy. The answer to that allegation was given in an enthusiastic meeting which assembled under the windows of M. Venizelos, and which gave him an ovation when he appeared. It is interesting to note that *The Times* states that no pension or allowance is paid to King Constantine by the Greek Government; he receives the rents of his own estates in Greece, as is his due, but not a penny more. Otherwise he is dependent, and presumably not unhappily dependent, on the bounty of Berlin.

Lord Curzon's reference, in the House of Lords, to the Palestine "sideshow," as every subsidiary campaign now seems to be designated, was happy. He remarked that, however much these subsidiary operations might be criticised, they achieved in fact certain results which could never be obtained by a strict adherence to the extreme Western school—Jerusalem, for instance, could never have been emancipated in Flanders. His further statement that the military operations would be much facilitated by the opening of direct railway communication between Egypt and Jerusalem during the last few days was rather unexpected. The real truth about "side-shows" seems to be that, if we win the war, they are so much more on the right side, but that we must win the war to prove it. If it had not been for the illegitimate gamble at Gallipoli, we should probably not have heard so much debate on a rather fruitless topic.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, January 13.

General Allenby's Visit to Cairo.

On Monday last General Sir Edmund Allenby came up to Cairo and was given a great reception at the station. It was not only his first appearance here since his victorious advance in Palestine, but also his first official visit to the capital since his appointment to the command of the Egyptian Expeditionary Force. There was, therefore, more than one very good reason why Cairenes should give him the rousing reception which they accorded him. When his special train arrived there was an enormous crowd assembled on the platform. It included the High Commissioner, Lady Wingate, and the Residency Staff, Lady Allenby, the representative of H.H. the Sultan, the Ministers, the Advisers, Under-Secretaries, and a large representative body of British and Egyptian officials, residents, and notables. The General was cheered as, accompanied by the Premier, he made his way down the platform, and he was again acclaimed as he drove along the unusually crowded streets to Abdin Palace, where he was received by the Sultan, who retained him and his staff to luncheon, to which the Ministers were also invited. General Allenby, who has spent all his spare time visiting the wounded in the hospitals, will not stay long in Cairo; in fact, he will most probably leave again this coming week for the front.

H.H. the Sultan.

The Sultan gave this week his first official banquet since his accession. On this occasion the guests of honour were the High Commissioner and Lady Wingate. Amongst those who also received invitations were Prince Youssef Kamal, General Sir Edmund and Lady Allenby, the Ministers, the Advisers, Sir Milne and Lady Cheetham, the Under-Secretaries of State, Bishop and Lady McInnes, Sir Alexander and Miss Baird, Sir Reginald and Lady Oakes, Sir John and Lady Rogers, Sir William and Lady Willcocks, Captain and Mrs. Westropp, Blunt Pasha and Mrs. Blunt, and the members of the Headquarters and Residency Staffs.

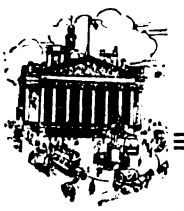
Military Administration of Egypt.

I understand that in view of the great advance which has been made in Palestine a decentralisation of authority has been decided upon, and that the Command in Egypt will be resuscitated very shortly. There is no doubt that it must in the long run become more and more difficult to carry on the administration of Egypt from General Headquarters in Palestine, and the decision to separate the military administration of Egypt from the conduct of operations 200 miles to the east of the Canal is in the circumstances a very wise one. I further understand that Major-General Watson, who did such good work on the Canal, will be given the Command of the British Forces in Egypt, and that he will depend from General Allenby, to whom he will refer in case of need.

The Palestine Expedition.

The troops in Palestine are all receiving as much leave as it is possible to give them, and Cairo is full of khaki. All are in good spirits, and delighted with the situation. From stories which I have heard there is no doubt that our troops had very stiff fighting in many parts, and that the enemy did not by any means play fair on more than one occasion. I have read somewhat carefully most of the accounts of the operations, but I have not seen any reference to the work done by the stretcher-bearers. This branch of the service performed acts of veritable heroism under fire, and often under fire which it was plainly evident was especially directed at them. No words can render adequate homage to the self-sacrificing manner in which these men stuck to their work.

The Military Governorship of Jerusalem.



It is with much regret that we have all learnt that Borton Pasha has had to resign from the post of Military Governor of Jerusalem, to which he was but recently appointed. Ill-health is the cause, and the Postmaster-General is now in Alexandria, where I understand his doctors have ordered him to take a long rest. His successor in the post is Mr. Ronald Storrs, C.M.G., who has been given the temporary rank of Lieut.-Colonel, and who happened to be in Palestine on a special political mission at the time when Borton Pasha's health broke down, and so was able at once to take up the reins of this highly intricate post. Mr. Storrs is, of course, the Oriental Secretary at the Residency, who was prominently connected with the negotiations which preceded the change in the political status of this country, and who has during the past year successfully carried out important missions to Mesopotamia and elsewhere. His appointment has come as no surprise to those who have followed his work at all closely, for his experience of Oriental affairs, his intimate knowledge of the languages and the people, and his undeniable ability have long marked him out for preferment. His new post is one that will call for the exercise of just those qualities which he possesses in such a marked degree.

The Day for Prayer and Thanksgiving.

In addition to the services in the various churches on the 6th inst., a great meeting was held in the Y.M.C.A. hut in the Ebekia Gardens in connection with the mission in Cairo of that well-known divine the Rev. John McNeill. The Bishop of Jerusalem presided, and the congregation, which was an enormous one, included not only military, for whom the meeting was primarily held, but also a large number of civilians, amongst whom were the High Commissioner and numerous high officials. The meeting was a tremendous success, and the Rev. J. McNeill held his audience from the beginning to end of his forty-five minutes' address, during which he spoke with stirring eloquence and convincing power. It was a truly remarkable episode in a memorable day, and from the effect of this address on the audience one can quite understand the success with which this extraordinary man has met during his mission to the troops at the front.

The European Mails.

The long lost mails have at last arrived. Since Monday the Post Office has been struggling with several thousand bags which contain the post of November 13 to December 14, and which it has taken more than half the week to distribute. It is a great relief to everyone to receive all their mail at last, but there is still considerable feeling at the manner in which the civilian community has been treated. The pity of the whole thing is that, seeing the difficulty which is encountered in providing shipping space for the most necessary articles of daily life, so much should have had to be taken up by postal matter which has now become useless for its recipients. A good part of the mail just

received consists of newspapers and periodicals, which few will have the time or the inclination to read. Normally, owing to the news sent ahead telegraphically by the various agencies, most of the topical contents of the European newspapers are already out of date when they reach here. This is all the more the case when, as this week, papers for a period of over a month are delivered all together. For all the use the newspaper mail now received here has been it might just as well have consisted of blank sheets; in fact, it would in that case have been more useful, for it would, at any rate, have somewhat alleviated the shortage of printing paper, which is at present making itself very acutely felt.

ATHENS LETTER.

(From Our Own Correspondent.)

Athens, January 20.

Political Changes.

There has been more activity in politics since M. Venizelos returned, and several changes have been made in the Cabinet and other departments. M. Venizelos has himself once more become Minister of War, but a new position of Under-Secretary at the War Office has been created, and M. Grivas, an officer of the Reserve, has been appointed to the post. M. Repoulis has retired from the Ministry of the Interior, and has been given a seat in the Cabinet as a Minister without portfolio; his place has been taken by M. Ractivan. General d'Anglis has been named Commander-in-Chief of the Army, and it is proposed to form a War Council, to consist of a few members of the Cabinet and others.

Court Appointments.

Important changes have also been made at the Court. M. Mercatis, Marshal of the Court; M. Ipsilantis, Master of Horse; M. Rhoides, Private Secretary; and MM. Pallis, Pappadiamantopoulo, and Callinsky, Aides-de-Camp, have all been relieved of their offices. They have been replaced by General Korakas as Chief of the King's Military Household, and MM. Manetas, Dellagrammaticos, Melas, and Gerontis have been appointed Aides-de-Camp to his Majesty.

General News.

New Year's Day (old style) was celebrated with, perhaps, even more pomp than formerly. The usual service took place in the Cathedral, and was attended by the King and his Ministers, the Diplomatic Corps, and numerous officials, naval, military, and civil. There was a good muster of troops, and the large crowds which lined the streets heartily cheered the King, and especially M. Venizelos. The usual reception was held at the Palace, and on M. Venizelos's return to his residence he received the good wishes of his many friends and admirers. The King on this occasion conferred the following decorations:—

The Grand Cross of the Order of the Saviour to Admiral Condouriotis; MM. Repoulis, Politis, Michalakopoulos, Tsirimokos, and Sophoulis were made Grand Officers of the Order; MM. Spyridis, Papastassiou, and Dingas were named Officers of the Order, and M. Diamantidis Commander of the same Order. MM. Simos, Embiricos, Benakis, and Patsis were also decorated. The King sent his portrait to M. Venizelos.

It is proposed to convoke the Chamber soon for a short session. In the meantime the Premier has gone to Salonika and for a tour in Thessaly.

Changes have been made in the Ministry of Supplies, but M. Embiricos's resignation has not been accepted. His task is a heavy one, and his organisation has outgrown the means he had at his disposal to carry on the work, as at the present time practically all foodstuffs are rationed by the Government to the trade and distributed from time to time by ticket. There is now very little meat, and it has become a rationed article. It is proposed to take another census of the population of Athens and the Piræus soon. All imports into Greece are controlled by an Allied Board, on which a Greek delegate has now been given a seat, and M. Venizelos presided at one of the meetings last week. Every effort is being made to supply Greece with all she needs from the most convenient markets, with the view to economising tonnage.

Greeks of Asia Minor are greatly perturbed at the idea of having to continue to live under Turkish rule, and an association has been formed to take up their case; but, although the Greeks in Turkey have suffered, and are still suffering, great hardships at the hands of the Turks, the scattered colonies in Asia Minor make it difficult to establish any autonomous administration such as it is hoped will be given to Armenia, Palestine, Mesopotamia, etc.

The President of the Greek Tribunals has authorised the sequestration of properties belonging to MM. Lambros and Skouloudis, to cover their responsibilities during their term of office as Prime Ministers. The sequestration on M. Skouloudis is for 6,000,000 drachmæ and on M. Lambros for 4,000,000.

A decree has also been issued sequestrating the properties of enemy subjects in Greece, and another decree prohibits trading between Greece and enemy countries.

ROUMANIAN NOTES.

(From a Correspondent.)

The Sufferings of Transylvania.

Magyar intolerance towards the Roumanians of Hungary seems to grow apace with the hopelessness of their situation. While in another part of Europe, in Bessarabia, Roumanian nationality unexpectedly gained full freedom of development, the policy of Magyarisation finds renewed and vigorous application in the land of Kossuth. Early in August Count Apponyi sent the Metropolitan Mangra an order prohibiting until further dispositions the opening of the Greek Orthodox training colleges of Sibiu, Arad, and Caransebesh. A similar order was received by the Uniate Metropolitan of Blaj as referring to the Uniate training colleges of Oradea-Mare, Blaj, and Gherla. The measure was grounded on the unpatriotic attitude of the Roumanians during the war, which must be traced to the education they receive. Hence a strict control of Roumanian educational institutions imposes itself for the future, and will be exercised either through special commissaries of the Government or by the direct nomination of professors. As the question needs careful investigation, the schools will remain closed for the time being, since it would be a danger for the State to allow them to continue their activity without "severe" control. Another order informed all the Greek-Orthodox and Uniate consistories that it had been decided, in the interests of the State and of the Magyar nation, to transform all the primary Roumanian schools into State schools, beginning with those in the frontier districts. The step had been taken because many of the priests and lay teachers displayed an unpatriotic attitude at the time of the Roumanian invasion of Transylvania. The order will first be applied in those communes where the teachers allied themselves with the enemy, for which action they are now being prosecuted. The teaching staff of the State schools are to understand the language of the population, but with the exception of religion all subjects are to be taught in Hungarian. The local authorities have been charged with finding accommodation for these schools; wherever possible the buildings of the old Roumanian schools will be acquired for the purpose.

Since the withdrawal of the Roumanian troops from Transylvania five tribunals have been dealing exclusively with offences alleged to have been committed by Transylvanians during the invasion. Hardly anyone escapes this national Inquisition. An eighty years old priest was sentenced to two and a-half years' imprisonment for having said that "only gypsies and Roumanians are made to dig trenches." The old fortress at Cluj is filled with Roumanian "traitors." A Transylvanian who escaped across the Russian lines declared that last summer the population of Sibiu revolted, demanding "bread and peace." Shops were destroyed and looted. The 21st Honved Regiment, com-

posed mainly of Roumanians, refused to fire on the crowd. The commandant of a Bosnian regiment having undertaken to restore order, the revolters appealed to the other troops in the town, with the result that the 21st Honved Regiment turned out with machine-guns and inflicted many casualties on the Bosnians. The military authorities took, nevertheless, no steps to punish the 21st Regiment.

The Occupation of Bucharest.

The return to Jassy of M. Vopicka, the American Minister, who remained for a short time in Bucharest after the occupation of that town by the Germans, but was then requested to leave, has made available for the first time authentic information concerning the way in which the town passed into the hands of the Germans. On the eve of the occupation the Mayor, M. Emil Petrescu, received notification that the town would be bombarded unless it surrendered within twenty-four hours. There was, of course, no intention to defend the capital, all the troops and material having been already withdrawn. The act of capitulation was, therefore, signed at the Town Hall on the following day, a delegation of six captains from Falkenhayn's Army, headed by Prince von Schomburg-Lippe, formerly attached to the German Legation at Bucharest, having arrived early in the afternoon for the purpose. Immediately afterwards about 300 German soldiers entered the town from the north. They marched down the Calea Victoriei, an uninteresting looking lot of men between eighteen and sixty; they were singing, but were obviously very tired. About 4 p.m. on the same day Mackensen entered the town at the head of about 4,000 German soldiers; the remainder of the corps of occupation arrived the next day, about 15,000 Germans, Bulgarians, and Turks. The alleged enthusiasm displayed by the population M. Vopicka declares to be a deliberate falsehood. Cigarettes and sweets, it is true, were offered to the German soldiers; but that was done by the three hundred foreign women who had been interned until the previous day, and then took up their abode at the Grand Hotel. An order was at once issued demanding that all houses should be kept at the disposal of the German command; but on account of the sufficiency of barracks only officers were billeted in private houses.

As "reprisals" against the measures taken by the Roumanian Government with regard to subjects of the Central Powers the German authorities lost no time in arresting a number of persons of standing, amongst others M. Duca, President of the Court of Cassation, the Presidents of the Courts of Appeal, the Mayor, M. Baicoianu, Director of the National Bank, as well as various people connected with the papers which had not sufficiently appreciated the value of the alliance with Germany.

All private telephones were removed in order to be used by the army of occupation. The house of M. Camarashescu, Prefect of the district of Durostor (in Southern Dobrudja), was devastated by Bulgarian soldiers on the pretext that the owner was a violent enemy of the Bulgarian nation. The Military Club was turned into a prison. The Bulgarians, having taken possession of Capsha (a small hotel with the finest restaurant in the town), laid hands upon all the wines contained in the cellars of that renowned establishment. The Royal Palace was destined to lodge Mackensen; the Palace of the Ministry for Foreign Affairs was offered as lodgings to Nazim Pasha, who preferred, however, a small house on the elegant Boulevard Coltsea.

The wholesale commandeering of supplies made it very difficult for the poorer classes of the population to secure the necessaries of life. The American Embassy intervened with the German authorities and obtained certain concessions, but M. Vopicka fears that the sufferings of the population much increased after his departure from Bucharest.

CORRESPONDENCE.

THE FUTURE OF MONTENEGRO.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—Mr. MacKellar says that "the Montenegrins call themselves Serbs . . . but they do not call themselves Serbians, a term applied to the people of Serbia." As they do not speak English as their mother tongue, perhaps Mr. MacKellar will give the Serb substantives formed from the root *Srb* which correspond to his distinction. So far as I know, that distinction is merely made by some English writers for the sake of convenience. To fit his argument we want two nouns from the root Srb, one of which is used for the inhabitants of the kingdom of Serbia and the other of general import.

The analogy of English and Scots breaks down, for the Scots, excepting the people of the Lothians, are predominantly of different racial stock to the English.

Mr. MacKellar says that the greater and stronger the component parts of a future Balkan Empire (apparently of the Southern Slavs), the stronger will the empire be. On analogy we must suppose that, if Hesse absorbed the Rhineland; Oldenburg, Hanover and Westphalia, Saxony, the province of Saxony, etc., the result of the increased strength of the component parts would be a strengthening of the German Empire; yet such a scheme was proposed in order to weaken it. It all depends on whether the increased strength is drawn from extraneous sources or from the leading State. Mr. MacKellar's argument seems to be: the weaker Serbia is the stronger Jugoslavia will be.

I am, etc.,

A. H. E. TAYLOR.

Canterbury, February 9.

"THE ENTENTE AND THE ALLIES OF GERMANY."

TO THE EDITOR OF "THE NEAR EAST."

Sir,—Please allow me to make a few remarks on Mr. Noel Buxton's article in the *Contemporary Review* for January, 1918.

As Mr. Janitch already pointed out, Mr. Buxton's flirtation with Vienna can produce only bitterness among the Austrian Slavs who have made and are making such tremendous sacrifices for the sake of the Allied cause. Yet I do not think that Mr. Buxton's views can be taken seriously by any clear-thinking British politician. It seems absurd that Mr. Buxton should openly preach "a pro-Austrian policy" on the ground that a policy of moderation "has had the desired effect of strengthening the pro-Entente elements in Austria."

The really pro-Entente elements in Austria are to be found among the Slavs, not among the Germans. A moderate policy towards Austria can only weaken, not strengthen, the pro-Entente elements, the Austrian Slavs.

Austria will never be willing, or indeed able, to become reorganised in accordance with the principles of justice and equality of nations. Professor Masaryk clearly demonstrated in the *Nation Supplement* for June, 1917, that the Habsburg ideas are incompatible with the realization of a just and democratic federalism. The Habsburgs, Germans and Magyars are determined to leave the Czecho-Slovaks and Jugoslavs divided between the two halves of the monarchy, and to continue their oppression and exploitation, whatever concessions they may be willing to concede

in the way of sham autonomy within the boundaries of Dualism.

The most absurd and malicious of all, however, is the suggestion that "there is no positive proof that the national units really want independence." Apart from the fact that at least half a million Austrian Slavs have voluntarily surrendered to Rússia, that thousands of them have been bravely fighting for the Allies since the outbreak of the war, and that to-day there is a Bohemian Army on the Western Front, I will only point to Dr. Seidler's speech in the Reichsrat on January 22 on a resolution which was unanimously passed by all the Czech deputies in Prague on January 6, and which has been suppressed by the Censor. Dr. Seidler declared that—

"This resolution, in which we in vain look for a distant echo of dynastic or State allegiance, adopts an international standpoint and is ready to accept international support with a view to obtaining the recognition of foreign States.

"The resolution demands the right of self-determination in order to dissolve the existing unity of the State and to assure full independence and sovereignty. The resolution gives the impression of having been conceived in a sense absolutely hostile to the State, and must be indignantly rejected by every Austrian and resisted by every Austrian Government with all the means in its power."

This, I think, is explicit enough to prove that the Czecho-Slovaks are absolutely united in their determination to obtain full independence from Berlin, Vienna and Budapest.—I am, etc.,

VLADIMIR NOSEK.

Czech Press Bureau, London.

A HISTORY OF SERBIA.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—Your reviewer of my "Serbia" has not brought home a single inaccuracy on the pages which he condemned.

As to the question of Macedonia (which did not arise out of those pages), if he looks again at my map he will see that that part of Macedonia which is predominatingly Greek is not included in the territory given as ethnologically South Slav. The part that is claimed as South Slav because it is predominatingly South Slav occupies about a square inch on my map. It would have been impossible, therefore, to indicate the variety of racial groups that are interspersed among the Slavs.* Ample justice is done to this variety in the text. I will content myself with quoting one passage of many that illustrate this point: "This province (*i.e.*, Macedonia) is inhabited by such a mixture of races that the French have given the name of *macédoine* to a dish of which it is difficult to analyse the ingredients."

As for saying that I have not admitted that much of Macedonia is "debatable territory between Serbs and Bulgars," may I refer to page 203, where I say: "There was a debatable area running along a line from Ohrid, through Bitoly and Shtip to the Bulgarian frontier near Kriva Palanka."

It is not fair to me to suggest inaccuracies and omissions that do not exist, so may I again ask for the hospitality of your columns to clear up these points?—Yours, etc.,

L. F. WARING.

February 7.

ST. GEORGE'S CHURCH, JERUSALEM.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—I notice in your issue of February 8 a paragraph stating that St. George's Church, Jerusalem, although used for a time by the Turks as a Red Crescent Hospital, "is structurally intact." I feel sure that this will give a wrong impression, and I hope that you will be able to insert the following information in your next issue.

A layman who was kindly allowed by the military authorities to proceed to Jerusalem, and who arrived three hours after General Allenby's entry, wrote to Bishop MacInnes: "An hour after reaching Jerusalem I was inside the Bishop's Palace, and was delighted to find that the Governor had been in residence until a few days before, and everything was in perfect order. He spent £9 a few months ago on painting and colour washing it. To me it looked as though the Bishop had been living there all the time. The seals on the doors of the Cathedral had only been broken the day before, and no one had been inside since the few days after the outbreak of war. I found the hole in St. George's Chapel where the Turks had dug for the canon!" (cannon).

This speaks well for the Turkish authorities, and also shows the respect in which they held the late Bishop Blyth.—Yours faithfully,

Church House, Westminster, February 11. E. M. BICKERSTETH.

KAFIR KAISER.*

TO THE EDITOR OF "THE NEAR EAST."

Sir,—We are told that the Kaiser has sent a telegram to his Court preacher, in which, after thanking him for his birthday wishes, he continues:—

"With deep thankfulness I commemorate on this day the great deeds of God for the German people. He gave historical successes to our colours. . . . My special sympathy belongs to the great tasks which will be set equally before the State and the Church in the reconstruction of family life and the education of a God-fearing and healthy young generation worthy of their fathers."

I beg to submit to the German nation that no god known to Europe or Asia can have had anything to do with these German successes so far, and that for the following cogent reasons:—

The Germans are in innocent Belgium, which is a small country, not by historical success to their colours, but by historical bad faith, dishonour to their treaty obligations, and their remaining in Belgium for three years and a-half after perpetrating therein the most hideous crimes against honour, humane feeling, and probity, and their continuing to strangle the bulk of its civilian population by the privations and hardships of a besieged and enemy-occupied country are deeds for which Satan himself and the lowest coward would blush, if they could. That is the first of the true historical German successes!

Their next success in the North of France arises simply from the one in Belgium, France not being fortified on that side. Consequently this is no historical feat of valour, but a treacherous, dark deed, intended to crush France, but which has failed, and has cost, and is costing, Germany a hundred times more in treasure and blood than the value of that temporary occupation, except perhaps German satisfaction at the misery of that portion of French population. This is how this historical success is to be written for the benefit of future generations who make treaties with the German nation!

The only other success of which the Germans boast is their sinking at sight of merchant and passenger ships without warning, option to surrender, or thought of saving life, all of which the old international law had adequately provided for among honourable and conscientious fighters. The fact that Germany has no fleet on the water to enable it to do what its enemies are able to do with their powerful and honourable fleets is no excuse for resorting to her indiscriminate use of submarines, which were expected only to be used against men-o'-war, and presumably in conjunction with floating crafts, capable of giving assistance to drowning men of both sides. A savage war of extermination was never present to the mind of European nations. This also consequently must be put down as a breach of faith and a disgraceful and brutal disregard of law for a people who claim an equal rank among their fellow-creatures.

I come now to the Kaiser's reference to the Church and to a God-fearing education for the young generation, such as would make it worthy of its fathers! Shades of Louvain, of the "Lusitania," answer!

The Church indeed! If there was a true Church in Germany its doors and book should have been shut long ago in protest against those German deeds of atrocity. But there is no Church of God there. There is a guilty and pusillanimous, lip-worshipping crowd, who fear the Kaiser and not God, and love gold, and not righteousness.

As to the education of the young generation as a God-fearing one, it is to be hoped for, but if we are to say worthy of its fathers, we tremble at the result and pity the temerity, the stupidity, the callousness, the blasphemy, the madness of the Hohenzollerns and the wooden-heads who listen to them!

"En avant" high-minded and honourable company of nations against the remnant of savages, of Germans and Turks, brutes whose prey even from among their own people is struggling and bleeding within their claws, and is appealing to Christ and Mohammed to deliver it, as were delivered and are smiling Africa, Mesopotamia, Palestine, and Arabia! These are historical, honourable, and happiness-bringing conquests, not the Germans'! These are deeds of valour by land and sea which history will record to the undying glory of British and American spirit and co-operation, of glorious and honourable France and Italy, and *their* future generations!—Yours, etc.,

ANGLO-SYRIAN.

London, January 28, 1918.

Under the auspices of the Linguistic Section of the Russian Society of King's College a lecture was delivered recently on "Armenia" by M. Arshak Raffi, lecturer in King's College University of London. Brigadier-General A. W. F. Knox, C.B., presided. The lecturer gave an interesting outline of Armenia's relations with Russia from Peter the Great up to the present time, dealing with Armenian life, culture and politics.

NEAR EAST BOOKSHELF.

THE REAL ARMENIA.*

It is the fate of small nations to suffer obloquy from neighbours who wish to absorb their territory. Until August, 1914, Belgians bore an indifferent reputation as fighting men; and the persistent aspersions cast on the people of Serbia by Austrian newspapers were not without effect on Western opinion. Far worse is the plight of the luckless natives of Armenia. Their habitat is a plateau larger than Austria-Hungary, in the upper valleys of the Tigris, Euphrates, Aras and Kur. It has a severe winter climate, but the soil in lower altitudes is very fertile and the mineral wealth practically inexhaustible. In prehistoric ages Armenia was peopled by an Iranian race, exhibiting the same characteristics as their kinsmen the Parsis. They are now excellent craftsmen and agriculturists, with a strong bent for commerce. Their military valour has never been questioned, and the worst that can be urged against them is a love of intrigue. This defect arises from the geographical position of their country, which lies in the highway of eastern invasion, and has ever been a bone of contention between mighty empires. From the end of the ninth until the middle of the thirteenth century of our era Armenia enjoyed autonomy under a native dynasty; but her golden age was ended by the great Mongol invasion. For 450 years her people have groaned under the despotism of Turkey and Russia. But persecution and organised massacre are powerless to break their national spirit. The remnant that survives has high inherited culture, with aptitude for civil life which, under good government, would give them a leading place among the nations of Hither Asia. Mr. E. A. Brayley-Hodgetts has done well to reprint his letters to the *Daily Graphic*, which sent him to Armenia as special correspondent in 1895. Although official jealousy forbade him to penetrate the Turkish territory, his journalistic acumen enabled him to learn a good deal about this interesting race, and his book is eminently readable from cover to cover. It is devoutly to be hoped that the pledges given by Great Britain at the Berlin Congress of 1878 will at length be redeemed, and that, in the approaching re-settlement of the world, Armenians will be vouchsafed a substantial measure of autonomy under the ægis of the Western Powers.

F. H. S.

THE STORY OF FREEDOM. †

It seems rather late in the twentieth century to beg the reader's attention to a little book on the war-effort of Marat, Danton, and Robespierre, champions of the guillotine; but, "better late than never," in a good cause! How Revolutionary France raised, equipped, fed, munitioned, and inspired 750,000 soldiers to hurl themselves into Holland, Germany, Switzerland, Italy, and Spain under the Kerensky trick of elected lieutenants, captains, colonels, and generals—comrade Brusiloff and citoyen Alexeieff, for instance—against the Hindenburgs and Mackensens of 1792-1795, is fully worth the telling, documented as the story is throughout from the weird, uncanny, and glorious archives of France. The little book mentions the star-shell about to burst upon an astonished world only in a foot-note. The modest author resolutely banishes "le petit caporal" from his purview. Writing in 1912 he gives us Russia in 1918—or so we hope. As man moves faster now and communicates *instanter* at greater distances than was dreamt of in the philosophy of Danton, so modern democracy may hope that the Trotski cesspool will give place to great, still, health-giving waters more rapidly than Revolutionary France recovered her equipoise. Some sane Napoleon may arise or some Jeanne d'Arc who can read and write; "some Cromwell guiltless of his country's blood." Nobody can read this sternly impartial, cold-blooded record of the "sans-culottes," of what they did and could not do, and misunderstand the magnificent outpourings of the soul, of the sense, of the valour of the France of La Revanche. No wonder France is the Drawing-room of Civilisation!—as England is the Breakfast-room and Italy the Art Gallery! And, one asks, has America read this pathetic picture of freedom and heroism not knowing exactly what they wanted? Surely, if we rightly appraise the present attitude of America's workmen, as led by the high judgment of a Gompers, we might conclude that our author's little tribute to right thinking is an everyday school primer in the United States.

* "Round About Armenia." By E. A. Brayley-Hodgetts. (Sampson, Low, Marston and Co. 2s. net.)

AROUND THE WAR.*

Perhaps as good a title as the one Mr. Basil Clarke has chosen; for we cannot but notice from the aggressive portrait of the author on the outer paper cover that he is short-sighted, and he himself tells us how he hopped out of Serbia on finding that typhus was around. We are also forced to the conclusion that that portion of his book where he describes his six-months' mission to Greece and the Balkans—"to find out the national feeling in those countries about the war and what prospects there were of any of them becoming participants—especially Roumania"—shows him as very much out of his Fleet Street element. It leaves the impression that he might just as profitably have been sent to China to report to an ignorant Anglo-Saxon world the national feelings of the Chinese. The same sense of contracted vision presses upon us, but in a less degree, in those parts of the book dealing with France and Flanders.

But, having had our snarl (entirely for the author's own good) it must be said that his final narrative, Via Dolorosa, which tells of the handling of a wounded Tommy from the front trench, back through the several R.A.M.C. stations and hospitals to England, is a first-class journalistic contribution to Great War literature, and does not allow any reader ever again to think lightly, or, worse, not at all, of Red Cross work in the British Armies.

Mr. Basil Clarke gives us many good stories and vivid sketches, and retains the reader's interest throughout.

TORTOISES. †

In a modest pamphlet, entitled "The Chelonia, or 'Shield Reptiles,' of Palestine," Dr. Henri M. Léon has contrived to embody a vast amount of information on the whole subject of tortoises, terrapins, and turtles the world over. He traces their history from early geological periods, and reminds his readers of the wide diffusion of the species. Turning to the Palestinian members of the kindred families, Dr. Léon is able to enrich his description with personal touches. The pamphlet is both interesting and instructive, its utility being enhanced by a glossary of technical terms.

PERSONAL AND GENERAL.

CALENDAR OF THE WEEK

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian (New Style).	Julian (Old Style).	—	Moslem.	Jewish.
1918. February.	1918. February.		1336. Jomada I.	5678. Adar.
15	2	Friday	4	3
16	3	Saturday.....	5	4
17	4	Sunday	6	5
18	5	Monday	7	6
19	6	Tuesday	8	7
20	7	Wednesday	9	8
21	8	Thursday	10	9

The Earl of Bessborough has returned to London from Birmingham.

M. Nincitch, Serbian Minister for Public Works, has left London for Corfu.

Earl Curzon has accepted the presidentship of the Central Asian Society.

M. Diamand, the Roumanian Minister in Petrograd, arrived in Stockholm on February 9.

Among Queen Alexandra's contributions to the Children's Jewel Fund is a gold Indian bracelet.

The King has appointed Sir Anton Bertram, K.C. (Attorney-General), to be Chief Justice of Ceylon.

The distribution of bread and other food cards has been carried out without a hitch in Athens and Piræus.

Captain E. H. Keeling, I.A.R.O., had the honour of being received by the King at Buckingham Palace on February 9.

Colonel Sir J. Roper Parkington, Consul-General for Montenegro, and Lady Roper Parkington have arrived at Claridge's Hotel, W.

King Nicholas of Montenegro has appointed Mr. Charles Cary-Elwes Montenegrin Vice-Consul in London, at 21, Mincing Lane, E.C.

M. Jonnart, the new French Governor-General of Algeria, has appointed as chief of his Cabinet M. Robert David, ex-Deputy for Perigueux.

Madame Yovanovitch, the wife of the Serbian Minister, has resumed her work at the Serbian Red Cross Headquarters, 9, Ennismore Gardens.

M. Boerescu, Secretary to the Roumanian Legation, who has been absent through illness, has now recovered, and resumed his duties at the beginning of the week.

Dr. Walter Yeld has returned to Welbeck Street from Russia, where he has been for the past eight months in charge of the Anglo-Russian Hospital in Petrograd.

The Military Attachés of the Roumanian and Serbian Legations were among those who lunched with representatives of the War Office on February 7 at the United Service Club.

Sir Elliot Colvin had the honour of being received by the King at Buckingham Palace on February 8 upon relinquishing his appointment as Agent to the Governor-General of Rajputana.

General Callaris, who was Minister of War in the Gounaris Cabinet, and General Mathaiopoulos have addressed the Greek nation through the Press, urging it to take up arms against the enemy.

Among those present at the Investiture held by the King at Buckingham Palace on February 9 was Viscount Bryce, who was among the recipients of the Grand Cross of the Royal Victorian Order in the list of New Year's Honours.

Sir Francis Younghusband, speaking at Exeter on February 9 on India and the Empire, said that he believed that Britain's best policy in relation to India was very actively to train the Indians in the responsible work of governing themselves.

The King has been pleased to approve the appointment of Sir James Meston, K.C.S.I., as Financial Member of the Executive Council of the Governor-General of India, in succession to Sir William Meyer, K.C.S.I., K.C.I.E. In order to enable Sir James Meston to take a short period of leave before assuming charge, it has been arranged that a change of office should take place at the end of August next.

General Sir George MacMunn was installed as Master of the first Masonic Lodge to be established in Mesopotamia, at Busreh, on February 2.

The health of the Countess of Ronaldshay, wife of the Earl of Ronaldshay, Governor of Bengal, is unsatisfactory, and a Reuter telegram from Calcutta states that the doctors advise an early return to England.

A military mission representative of the engineering, artillery and infantry sections of the Serbian Army, arrived in London this week. The Serbian officers have recently been the guests of the British Headquarters Staff in France.

At Buckingham Palace on February 13 Lieutenant-General George Georgescu, of the Roumanian Army, was received by the Prince of Wales, and, on behalf of the King of Roumania, handed to the Prince the Order of Michael the Brave.

A memorial tablet to Colonel Sir David Barr will be unveiled in the Brompton Parish Church to-day at three o'clock. Colonel Sir Donald Robertson will be glad to send a photograph of the tablet to any subscriber who applies for one at 3, The Grove, Boltons, S.W.10.

It is stated that M. Pichon has informed Mr. Sokolow, as representative of the Zionist organisations, that there is complete agreement between the French and British Governments in respect to the question of the establishment in Palestine of a national home for the Jews.

The marriage took place at St. Nicholas Church, Liverpool, on February 12, of Mr. Andrea Basil Malandrinos, Vice-Consul for Greece, son of Mr. Basil Andrea Malandrinos, Consul-General for Greece in Liverpool, and Miss Kathleen House, daughter of the late Mr. Frederick House.

The Viceroy of India, accompanied by General Sir Charles Monro, the Commander-in-Chief, and a full Staff, presented war decorations and medals to 238 officers and men at a full parade of the Delhi garrison in front of the Fort on January 31. The ceremony lasted over two hours, and was witnessed by an enormous crowd.

The King has sent two pictures for Messrs. Christie's art sale which is to be held in April on behalf of the British Red Cross Society and the Order of St. John. One of the pictures is a water-colour by Edmund Dulac, "Abu-el-Hasan orders that the Sheikhs of the district should be taken to be impaled on the back of a mangy camel."

An Association of Greek refugees from the Prefecture of Drama has addressed to the International Socialist Congress, at Stockholm, a telegram in the name of 50,000 refugees from Eastern Macedonia, energetically protesting against "the Imperialist demand" of Bulgarian Socialists in favour of the cession to Bulgaria of Eastern Macedonia.

A correspondent calls our attention to the note in last week's issue stating that no Greek candidate had come forward for the post of Controller of Food for Greece, and points out that, according to a Reuter message, M. Panos Burlumi, Deputy for Patras, and a member of the well-known firm of Burlumi and Co., of London and Patras, has accepted the office. The message adds that his appointment has created an excellent impression.

The *Hestia*, in its issue of February 7, confirms the report previously circulated in the Athens Press that ten officers of the Fourth Greek Army Corps, which surrendered to the Bulgarians and Germans at Kavala in 1916 and who have since been interned in Germany, have been sent to Constantinople by the German Government with the object of organising a Greek contingent to fight for Turkey. The *Hestia* adds that they were entertained at dinner at Sofia, and exchanged toasts with the Bulgars, "thus adding fresh shame to their renegade conduct of 1916."

TRAGEDY OF MONTENEGRO,

THE SMALLEST AND POOREST OF OUR ALLIES.

MONTENEGRIN RED CROSS AND RELIEF FUND,

11, VICTORIA STREET, LONDON, S.W.1.

(Registered in City of London. Section 1. War Charities 1916)

needs £700 WEEKLY for Feeding Prisoners interned in Austria-Hungary.

Donations will be much appreciated and gratefully acknowledged by the Hon. Treasurer, LADY ROPER PARKINGTON, Claridge's Hotel, Brook Street, London, W.1.

Among the latest wills is that of Lieutenant-General Sir Stanley Maude, whose death occurred from fever on November 18 while commanding the British Expeditionary Force in Mesopotamia, who left property of the value of £1,532. The testator left his father's decorations and trophies, and his own, together with his diaries, silver cups, and the gold cigarette case given to him by King George V., to his son to be treated as heirlooms, or, at his discretion, to be given to the Buffs or the Coldstream Guards.

The insecurity of the Spanish zone of Morocco, even in parts supposed to be most pacified, causes considerable anxiety with regard to communication between Tangier and the French Protectorate, says the Tangier correspondent of *The Times*. A short time ago the camp of a contractor engaged on the Tangier-Laraiche road, near Arzila, was pillaged, and the man in charge of the transport killed, and now a camp of the Tangier-Fez Railway Company between Arzila and Alcazar has suffered, the engineer being murdered and mules and horses carried off. In both cases the camps were in the country occupied by the Spaniards, and in the vicinity of Spanish military posts.

The Serbian Press Bureau at Corfu has issued the following statement:—According to news received from Stockholm, the report is again being circulated from Vienna that a Serbian Crown Council was held in Salonika at which it was decided to enter into negotiations with Austria-Hungary with a view to obtaining an outlet to the sea. We are authorised to describe this story as ridiculous. The attitude of Serbia cannot be misinterpreted. Attacked in a cowardly fashion according to a premeditated plan; ruined, depopulated and martyred, Serbia no longer fights for such and such a territorial agreement with the enemy, but to obtain justice, which she will continue to claim, weapons in hand, before the entire universe.

OBITUARY.

THE LATE ABDUL HAMID.

The ex-Sultan Abdul Hamid died at Constantinople on February 10 from inflammation of the lungs. Born in 1842, the second son of Sultan Abdul Medjid, he succeeded to the throne in 1876 on the deposition of Sultan Murad. The times were marked by grave internal trouble, as the many nationalities then united in the Turkish Empire were struggling for freedom, and as a conciliatory measure a Constitution was proclaimed. This expedient, so in keeping with the character of the Sultan, was short-lived, for the declaration of war by Russia led to the proclamation of martial law and the suspension of the Constitution. The Russians reached San Stefano, a suburb of Constantinople, and were only prevented from entering the capital by the presence of the British Fleet, and the subsequent treaty of peace imposed humiliating terms on Turkey. Not long afterwards Egypt passed under British control, following the revolt of Arabi Pasha. One of the main threads of the Sultan's policy was the recovery of Turkey's position in Europe, and this may be taken as the keynote of many of the events of the reign. He desired to find support to balance the influence of Russia, and could have obtained it from Great Britain but for the fact that he would not pay the price of internal reforms, and so he turned to Germany, and was eminently successful in his endeavours to gain the friendship of that country. Germans were given valuable concessions in the country, and German officers were appointed to reorganise the Turkish Army. The Emperor William visited the Sultan twice, the second visit being particularly welcome, coming as it did two years after the Armenian massacres had made his name an object of detestation throughout the world. His internal policy was marked by the suppression of prominent men, but his ideal of autocratic government was doomed to failure from the outset, and by the end of 1905 it became clear that the Hamidian *régime* was nearing its end, when a committee was formed at Salonika which embraced the partisans of the earlier anti-Hamidian movements, and gradually built up a strong organisation which embraced many officers and men of the army. The storm broke in 1908, and as the result of the outbreak the Sultan accepted the committee's terms, and subsequently had to act what must have been to him the extremely irksome rôle of a constitutional ruler. This phase was short-lived. In 1909 Hilmi Pasha's Ministry and the C.U.P. were overthrown by a mutiny of the Constantinople garrison. The triumph of the counter-revolution was, however, brief. The Sultan's party was again overcome, and this time he was deposed.

Lieutenant-Colonel Arthur Robert Burton, Indian Infantry, who has died on service, received his commission in 1892 in the Royal Inniskilling Fusiliers, and three years later transferred to the Indian Staff Corps. He saw service in the Tirah Campaign, 1897-8.

The Marquess of Dufferin and Ava, whose death took place on February 7 from pneumonia, was the second son of the first Marquess, some time Governor-General of Canada and Viceroy of India, whom he succeeded in the Marquisate in 1902, his elder brother having been killed in the South African war. He was nominated an Attaché in 1890, and in 1891 was appointed to Constantinople, subsequently going to Paris, where he later became a Third Secretary. After becoming Second Secretary, he exchanged into the Foreign Office, and was promoted in 1909 to a Senior Clerkship there. He is succeeded by his brother, Lord Frederick Temple Hamilton-Temple-Blackwood, D.S.O., Grenadier Guards, late 9th Lancers.

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO,
In pure Moorish style, with a permanent Restaurant Française, is situated in the immediate neighbourhood of Ghezireh Palace.

THE ONLY ENGLISH HOTELS IN ALEXANDRIA.
Proprietor: AUGUSTUS VAN MILLINGEN.

WINDSOR HOTEL
(Facing the Sea, opposite Y.M.C.A.), ALEXANDRIA.
Full Pension, P.T.50; Room, P.T.20;
Lunch, P.T.15; Dinner, P.T.20.
For long stay, apply to the Manager.

POLITICS AND POVERTY.

The flood of political disquisition in India has for the time being abated, and while the responsible authorities are engaged in estimating its immediate and direct effects, the public at large has a welcome opportunity of taking a more extended view of the situation and of considering the probable reaction of impending reforms on the various sides of the national life. Of these sides none is more important than the economic, for it should never be forgotten that, while India has untold possibilities of wealth, the present national income is deplorably and dangerously low: we welcome unreservedly the prospect of an early advance in the direction of self-government, but at the same time we are bound to ask what is likely to be the immediate result in the economic sphere. Will political progress be followed by a rise or by a fall in the supply of the necessaries and comforts of life, which is now so inadequate to meet the demands of the population? The necessity for asking this question is increased by the language recently used by the dominant group of politicians, language which, if it be taken at the foot of the letter, undoubtedly constitutes a serious menace to the future of industry and commerce, and which has been construed in this sense by an influential section of the Anglo-Indian Press. The deputation which placed before Mr. Montagu the views of the National Congress and the Moslem League spoke of "what is at best the doubtful advantage" of the "foreign enterprise" to which India has afforded "hospitality," and hinted not obscurely that foreigners, or, in other words, the citizens of the British Empire, could expect to enjoy in the new India only the status of financial Helots. There can be no doubt that, if that attitude should be maintained and translated into concrete measures, the menace to capital and industry—in other words, to the livelihood of the poorest classes—would be very real, and we have no hesitation in saying that in that case the British Government, as the trustee of the interests of the Indian masses, would be bound to reconsider the whole position, and take steps to ensure that vital economic interests should be entirely withdrawn for the time being from the cognisance of the nascent political institutions. Fortunately for the future of India, we believe that the position is not so serious as it looks, and we are inclined to attribute the attitude of this school of politicians more to the exigencies of the moment than to any permanent hostility to traders and producers. The outburst to which we have referred was, in fact, a controversial rejoinder: a short while previously the representatives of British capital and industry had, as we recorded at the time, broken a silence which had lasted too long, and in firm but temperate language had claimed a hearing for those great interests; the lawyer-politicians, disconcerted by the appearance of a new party, and unable to contest the claim upon its merits, resorted to a device familiar in the Law Courts, and abused the adversaries whose arguments they could not counter. Of the wisdom of these tactics we need say little; Mr. Montagu's antecedents and connections in this country make it reasonably certain that he will appreciate such statements at their true value, and it is perhaps as well that they were formally put before him.

We do not then consider that British capital and industry have serious grounds for apprehending a systematic display of malevolence on the part of Indian politicians, but even so the position is by no means free from anxiety. The malevolence is, we trust, a passing phase: the real danger lies in the unconscious or complacent ignorance which characterises the great majority of India's public men. This ignorance is the almost inevitable result of the conditions which prevail. The life of the people is not yet unified, but is carried on to a great extent on the system of water-tight compartments; city and country meet too rarely; merchants and manufacturers know too little of politics or of administration, while officials and politicians have but small concern with trade or industry. Even lawyers have a narrower outlook in India than elsewhere; litigation is more concerned with questions of status than of contract, with inheritance, adoption, partition and the like, and but little insight into commercial questions can be obtained in the course of even an extensive and remunerative practice. The prospects are, therefore, that for some time to come Indian legislators and administrators will remain ignorant of the facts and principles underlying the country's economic life, and while we are confident that they will learn by experience, the period of their education will undoubtedly be an anxious time, during which rash and ill-considered measures may operate to the detriment of trade and industry in a variety of directions, of which the most important is finance. Indian politicians are deeply committed to a definite programme of financial reform. They are determined on large additions to expenditure on most branches of the public service; their hopes of countervailing economies are chimerical; and they have promised their supporters large reductions of taxation, in particular the abolition of the salt-tax and the limitation of the land-revenue, now as always the backbone of the Indian Budget. They have promised, too, a "popular" administration of the railways, "concessions" in the management of the forests, and sundry other measures of which the only certain result is that more money will go out of the Treasury, and less money will come in. Large additions to taxation are, therefore, an inevitable feature of political reform, and since the villages are to pay less, it follows necessarily that the towns and cities, the merchants and the manufacturers, will have to pay more. Now it is precisely in the increase and readjustment of taxation that ignorance is likely to do most harm; people who are guided by the very best intentions may easily destroy a particular class of business merely because they have failed to grasp the conditions on which its success depends, and may with not less facility undermine the sense of security so essential to the progress of every kind of enterprise. To take the most obvious illustration, it is quite certain that a strongly protective tariff would be almost the first constructive undertaking of a really popular administration. Opinions may differ as to the wisdom of such a measure, but no one who has the slightest acquaintance with the subject will deny that to prepare and to work a tariff is a difficult and delicate operation, and even the most ardent supporters of the principle may well shrink from the prospect of schedules framed and interpreted by legislators of the type now prominent in India. Even if we assume that the tariff will at the outset be withheld from the cognisance of the new institutions, there will still remain almost infinite possibilities in connection with mercantile and philanthropic legislation, the two branches of the art in which well-meaning ignorance may produce the most dangerous results.

In face of this menace the duty of the British merchant or producer is plain. The cure for ignorance is knowledge; the fog in India is already lifting, and vigorous and combined effort can do much to quicken its final disappearance. The universities and the Press have of late done something, and can assuredly be induced to do much more, while the scope for individual initiative is almost unlimited. The younger generation of Indians is already experiencing the appetite for economic knowledge; let those who possess this knowledge see to it that the appetite is neither cloyed with sweets nor destroyed by dangerous drugs, but is satisfied with wholesome and sustaining food. By exerting themselves to supply this need, merchants and producers can at once safeguard their own interests and contribute material aid to the great enterprise of nation-building in which the credit of Britain is so deeply involved.

AFGHANISTAN AND THE WAR.

In normal times Afghanistan is apt to be a land of mystery to the outside world, and there has been little attempt to withdraw the veil during the war. A single Government statement has disclosed the fact that a German Mission had made its way into the country, and had experienced considerable difficulty in finding its way out again. For the rest, the Afghans have contrived to maintain the secrecy regarding their internal affairs which is second nature to them, and which springs from the troubled conditions that have characterised Afghanistan in the past. It would be a mistake to attribute the secretiveness of the Afghan entirely to an inherited frame of mind; rather has it to be attributed to the fact that over a long period of history the people have either been at war with one or other of their neighbours, or among themselves. In each case there was good reason for preventing news from leaking beyond the borders. Thus staunch secrecy has come to be associated in the public mind directly with national integrity; and from this habit it has gradually permeated every phase of life, until it has come to be practised and gloried in by the remotest of the Ameer's subjects.

Afghanistan is a buffer state, and consequently its position in the political development of Central Asia is a precarious one. As it is sandwiched between independent kingdoms which are not strangers to territorial expansion, its ruler has been obliged to exercise extreme care in regard to his diplomatic relations. Prior to the peaceful reign of the illustrious Ameer Abdur Rahman, Anglo-Afghan relations rested on a very slender thread, nor were the Afghans specially friendly with the Russians. The saying of Ameer Shair Ali, "Friendship with the Feringhees is written on ice," may be cited in this connection as typical of the attitude of Afghans towards foreigners. The father of the present Ameer, however, introduced friendly relationships with the British Government, and this was cemented by Ameer Habibullah Khan in the Treaty of 1905. The British Government acknowledged the Ameer as an independent ruler, addressing him as His Majesty, and giving him full facilities in the matter of the importation of arms from British India, as well as providing him with a subsidy of £120,000 annually. The Ameer agreed to have no diplomatic relations with any country other than Great Britain.

In any consideration of Afghanistan it is necessary to bear in mind that the country must not be judged purely by Western standards. Public opinion is of modern growth, and may be said to have been recognised only since the reign of Ameer Abdur Rahman; but, while considerable latitude is allowed in the discussion of matters of State, that opinion is, as a matter of fact, controlled in a great measure by the voice of the Ameer. Political questions are certainly debated in open Durbars at which the members present are allowed their free say, but limitations are recognised. Not that the opinion of individual Afghans count as nil. Perhaps the correct way to describe the situation would be to state that, while whatever the Ameer proposes is sure to be adopted, yet he has to exercise great discernment in embodying in his decisions the trend of popular opinion. In regard to the present conflict, it is certainly the case that the Ameer did not want war, and at the same time the policy of neutrality was entirely in keeping with the public mind. On the one hand, the fact that Great Britain and Russia were Allies had a moral effect on the attitude of Afghanistan. In any case, treaties between Afghanistan and Great Britain imposed neutrality. But it is only right that the determining factor from the Afghan point of view should also be recorded. The Afghans are essentially a fighting race, and they are also Moslems, and there can hardly be any doubt that, if they considered the faith of Islam threatened in some way, they would be sorely tempted to set aside all other considerations. No danger would be regarded as too great if they were given to understand that they were called upon to safeguard their faith. It could probably be shown that throughout their history the constant fighting has been connected in one way or another with their religious zeal. Even in the case of internecine feuds, where they have known that they were fighting against their own kith and kin, they have been prepared to fight to the last because each side has held that those opposed to them have either not been acceptable to the strict canon of Islam or have been liable to bring outsiders into their country. To the Afghan religion comes first and last, and regulates not only his internal affairs, but also his diplomatic relations with other countries. In these circumstances it will be understood that at the outbreak of the war it was a burning question in Afghanistan whether it was or was not a religious war. Great Britain was fighting against the Turks, who are Moslems, and there was, therefore, *a priori* evidence that a Jehad was involved. But at a general meeting of the Ulemas it was resolved that the war could not be regarded as a religious one, and that there was no obligation on Afghanistan to uphold the cause of the Central Powers. The truth is: the Afghans remained quiet because they had a very poor opinion of the religion of modern Turkey, the Turks being regarded as indifferent Moslems, degenerate followers of the Prophet, who no longer set store on the rigid essentials of their faith. This attitude towards Turkey manifested itself in the Turco-Italian war, when bands of sympathisers set out from India with the intention of succouring in one way or another their co-religionists in Turkey. The Afghans, however, showed no such solicitude. It is probable that at the beginning of the present war some anxiety prevailed in India with regard to the Afghan attitude. Therefore, it must be all the more satisfactory that the Ameer's decision should have been confirmed by the views of the whole people of Afghanistan after deliberate consideration of the position from a religious and political point of view.

Reference must also be made in any discussion of Afghanistan's attitude towards the war to the commercial relations of the country. The Afghans are dependent on imports, if not for the actual necessaries of life, at least for a number of articles of general consumption. The bulk of the foreign trade has, for some time past, been with Russia. Not only was she, so to speak, on the spot, but there has been something like a consistent attempt on the part of the Russians to foster the trade. The late Ameer reduced the tax on imports by one-half, and the Trans-Caspian Railways in the past carried goods to Merv on reduced terms, with a view to encouraging trade with Afghanistan. It was not so much a case of specially favoured terms for the Russians, which were denied to others, but the country was in need of goods, and the Ameer Abdur Rahman found that the Russians were the only people who made any attempt to meet him in this matter. To-day the chief Russian imports are cloth (cotton and silk), lace, paper, sugar, glassware and brass materials. The trade flourishes not only in the north, but Russian agents can also be seen as far south as Kandahar. In recent years India has made a more systematic attempt to push her trade in the country. Green tea has now a good sale, and other imports are cotton and silk fabrics. In return Afghanistan exports most of her dried fruits to India, as well as goat skins. The ratio of exports to imports is 5 : 7. It is the great aim of the Ameer to secure a balance on the right side. Thus it will be seen that

WHITE HORSE WHISKY.

Digitized by Google

Afghan dependence on foreign trade also has its influence on the attitude of the country. In the past Russians have been anxious, in view of their commercial relations with the country, to obtain a definite political link with Afghanistan. But there is no reason to suppose that the overtures have been reciprocated. There is, indeed, an incident recorded during the reign of the present Ameer bearing on this subject. A Russian Commissioner arrived at Kabul with a view to negotiating an agreement with the Afghan Government. The letter that he brought was read in open Durbar, and one of the members rose and said "Let this Turki dog who carries messages for infidels be beaten on the head with shoes till his hair fall off. That ought to be our answer to the Russians." The speaker was taken severely to task by the Ameer, who replied that, if there were to be any shoe-beating, if would be performed on the head of him who suggested it, and that a statement so derogatory to Afghan prestige should never have been uttered. Even if the suggestion did not represent public opinion, the episode reflects the freedom of speech that finds expression even before a monarch whose word is law. But the speaker would not have said what he did if there had been any close friendship among the Afghans for people beyond the Oxus. It may be well if India bears this fact in mind, with a view to the potentialities of the Afghan market.

IKBAL ALI SHAH.

THE FUTURE OF PALESTINE.

Speaking at the Royal Colonial Institute on "The Future of Palestine," on February 7, Mr. A. Montefiore said that the fact that General Allenby had entered on foot, bareheaded, had deeply impressed the inhabitants, who gave him and the troops under his command a great welcome. Had the victor been, by a sad fate, the Kaiser, Mr. Montefiore declared the taking possession of the city would have taken place under very different conditions. Palestine occupied a central position in the map of the world; at the junction of Europe, Asia, and Africa, it must become an important centre in the development of the East. As inheritors of a great past, the Jews should be entrusted with the task of carrying out the rehabilitation of the country and enabling the Holy Land to play a fitting and worthy part in the reconstructed future. He told how, in spite of great difficulties and hardships, the Zionists had already achieved considerable success. They had established forty-five flourishing colonies, which were engaged chiefly in agriculture and vine-growing. The Germans, with all their boasted thoroughness, had failed in their endeavour to cultivate successfully the soil of Palestine. Having failed, they endeavoured to bribe and browbeat the Zionist Colonists into adopting German as the national language. In this, too, they failed, and when war broke out the famous Zionist Mule Corps was formed, which fought for Great Britain. He referred also to the death of eminent Jews in Palestine during the war, notably Mr. Leopold de Rothschild and the Hon. Neil Primrose, son of Lord Rosebery, and whose mother was Miss de Rothschild. Palestine would not hold all the Jews now scattered far and wide in the world, but Mr. Montefiore expressed the earnest hope that those who returned to their ancient land would be determined to work with zeal and devotion for its prosperity, and that Jerusalem would become a truly international stronghold, the city of peace.

DESTITUTE MONTENEGRINS.

The following appeal is made by the Montenegrin Red Cross and Relief Fund, of which the Queen of Montenegro is president. We would warmly commend the cause to our readers:—

"It is some time since we ventured to trespass on your space and present an appeal to our fellow-countrymen on behalf of sorely distressed Montenegro and her heroic men now languishing in Austrian camps—camps which are little better than prisons. The news from all sides of the lack of food now being experienced by the civilian population of the Central Empires, a shortage which must react upon the thousands of interned prisoners, compels us again to solicit the sympathy and practical aid which in the past has been so steadily and unstintingly given.

"As the people of Montenegro are at the mercy of such a relentless foe, we have no alternative but to appeal on their behalf to that public in the United Kingdom so deeply interested in the welfare of small nations, and particularly in those whose sacrifices have been so great. Montenegro is not only the smallest, but the very poorest, of our Allies, bereft of rich connections and entirely dependent on the help which we can so well bestow.

"Donations should be addressed to the Hon. Treasurer, Lady Roper Parkington, Claridge's Hotel, Brook Street, London, W.1, who will personally and gratefully acknowledge all subscriptions, large and small.

"Yours faithfully,
"VIOLET RUTLAND.
"M. YARBOROUGH
"MARIE LOUISE PARKINGTON."

If you could follow your cheque . . . .

That cheque you are sending—or have sent—to assist Serbia, is the symbol of your sympathy for those who cannot help themselves. If you could follow your cheque and see it transformed by an efficient organisation into bread for starving Serbs, or hospitals and medical aid for those laid low by wounds and disease, or artificial limbs for dismembered fighters, or food and clothing for poor little, wan-faced Serbian children—if you could realise the gratitude of those you help, you would give thanks for your power to help them so easily.

SERBIA—A Pledge to protect and preserve

Britain has pledged herself to restore Serbia to the Serbians. Of what use will it be to wrest Serbia from the invader if the people of Serbia are wasted away through famine, disease and terrorisation? It is for you to do your part in helping to succour the homeless, helpless Serbs.

The needs of the Serbs are elemental in simplicity. They need Food, Clothing and Medical Aid. One hundred and fifty thousand Serbs are interned in Austria-Hungary—30% have already died. They die of cold and hunger.

Thousands of innocent Serbs have been executed on inadequate pretexts. The remnants of the nation are scattered abroad far from their homes and all that they hold dear. A nation in exile! Contrast your own position of comfort and security with the misery and want of these poor refugees — most of them old men and women and young, innocent children. The flower of the Serbian nation has perished. Shall she ask your aid in vain?

Serbia deserves well of us all, for she rendered invaluable service to the Allied cause in the early critical months of the war by heroically holding Austria at bay. She poured out her greatest treasure—the flower of her manhood—that she might be true to her trust. Now, what remains of the Serbian nation is looking to the protectors of little nations for the bare necessities of life. She needs help in personal service, in cash and in kind. What is *your* answer to the call?

Serbia needs your Help—needs it badly, needs it NOW!

The officially authorised channel of private British aid to Serbia is the Serbian Relief Fund. This Committee has shouldered the responsibility of being Britain's trustee to Serbia. To carry on the vital work of feeding and clothing Serbian Prisoners of War and Refugees, saving the remnant of the youth of the broken nation, maintaining hospitals, dispensaries, and founding orphanages, the Serbian Relief Fund appeals for immediate help. Parcels of warm clothing, underclothing, boots, tinned goods will also be welcome, and should be addressed to Mrs. Carrington Wilde. One address for all donations: Serbian Relief Fund, 5, Cromwell Road, S.W. 7.

Send a donation, large or small, to the Rt. Hon. the Earl of Plymouth, C.B., the Honorary Treasurer, to whom all cheques and postal orders should be made payable.

SERBIAN RELIEF FUND

Only Address: 5, CROMWELL ROAD, LONDON, S.W. 7.

TANGIER TO TEHERAN.

A correspondent in Egypt sends me an interesting item of news, and though, as he is careful to add, "official confirmation is lacking," I hasten to pass it on. According to the statement "three battalions are to be raised for garrison duty in Jerusalem. They are to be called the 'Jordan Highlanders,' their badge is to be 'three balls,' and their motto 'No advance without further security.'" These battalions, if and when raised, should prove a formidable lot to tackle, and their charges could no doubt be—excessive. But, after all, unless all the hotel proprietors and shopkeepers have been deported by the Turks, Jerusalem and the Holy Land would hardly seem to stand in need of any assistance in that respect from the new "Gay Jordans."

***

Turkish Ministers are obviously making valiant endeavours to live up to the tradition left them by their predecessors—the tradition that made it necessary for any self-respecting Grand Vizier from time to time to make the most outrageous statements with an appearance of positively owlish solemnity. The Old Turk was a pastmaster in this art, but the Young Turk only does well at it when he is not consciously making an effort, I suspect. Halil Bey, the new Foreign Minister, has not done so badly in his reply (so-called) to Mr. Wilson. The idea of his "replying" at all is in itself humorous. Presumably the valiant Halil would oppose a ha'penny squirt to the guns of a super-dreadnought! But that is by the way. In the effort referred to he is reported by Reuter's Agency as eulogising the Turkish Constitution, "which, he maintained, dealt equally with all," and as resolutely rejecting "all proposals, from whatever quarter, which would mean any interference in the internal affairs of the country."

***

For sheer effrontery it would be hard to beat these Ministerial utterances. The idea of the Turkish Constitution "dealing equally with all" is superb. How it must tickle the Armenians, the Jews, the Syrians, and even the Arabs. These "national groups," whose fate, it seems, is still to be settled by the handful of international free-thinkers who control the "Young Turk" policy, must have heard the Minister's statement with very mixed feelings. But the touch about "interference in the internal affairs" of poor old Turkey was even more impudent. In view of German management of everything and everybody in Turkey, Halil Bey must have a front of brass to stand up and make such statements. Talaat must look to his laurels!

***

Hunger-striking on the part of prisoners, whether political or otherwise, always seems to me a particularly foolish proceeding, or, rather, it seems that it would be so, if only the authorities met it the right way—i.e., by a policy of masterly inaction. But neither the prisoners nor the authorities appear to be blessed with any strong sense of humour. I see by the Indian papers that a number of prisoners at Alipore Gaol have started a hunger strike as a protest against their detention. As the charge against them is the trifling one of being revolutionary conspirators, it may seem strange—in Bolshevist circles, at any rate—that these martyrs should still be detained in these days of "liberty" (for the hot-air merchants). Be that as it may, the "strikers" are dissatisfied, not, they expressly state, with their treatment by the prison authorities, nor with their food or clothing, but with their detention! If only the authorities will rise to the occasion! We can get along quite nicely without any "revolutionary conspirators" either in India or in this country.

***

So Abdul Hamid has at last passed beyond the Veil; and there is, one hopes, an end to the Terror that apparently haunted him for years and drove him into unspeakable cruelties at times. For I take it that sheer terror was responsible for his Armenian policy, as it was responsible for his treatment of many individuals; and it was because I felt this to be the explanation of his conduct that I was never able to deny him a certain amount of sympathy. Moreover, those who met him usually admitted that he had a charm which it was very difficult to resist, and I have more than once heard him spoken of with something like affection by such people. Upon the whole, I believe, most Englishmen who gave the matter a thought had a kind of sneaking regard for Abdul, until he put himself out of court, so to say, in 1895. This was due to the fact that they recognised what a supremely difficult game he had to play against the Powers, and to their admiration for the matchless skill with which he played it.

***

The latter years of his reign certainly put a severe strain on his well-wishers in this country. But during his period of exile we have begun to think more kindly of him again. We have felt that he has supported his misfortunes not without a certain amount of dignity, and we have seen that his disappearance has undoubtedly been a bad thing for his country since it handed over power to low-born adventurers. As *The Times* well says: "Though he wrought much evil, the conspirators who have since seized power in Turkey have made his offences seem light." What, I wonder, did he think of the latest developments—the loss of Jerusalem and an occupation of Baghdad, for instance? And what of his old "friend" the Kaiser and his protestations of friendship! Truly Turkey has fallen far since the days of the famous visits. Abdul Hamid may be fortunate in having been spared the witnessing of her final degradation.

CORSAIR.

Ladies proceeding to India or China requiring an Ayah can generally obtain one by applying to Mrs. FLETCHER, Matron.

THE PRESS ON THE NEAR EAST

Great Britain and Cyprus.

In the article on the Turkish peasantry of Anatolia quoted in these columns last week from the *Quarterly Review*, Sir William Ramsay is led, by the reflection that, if Great Britain is to have a hand in the tutelage of Turkey, she must modify her official attitude towards the economic development of the country, to a consideration of the British administration of Cyprus. There follows this powerful indictment:—

The story of the British administration of Cyprus will stand out in history as a memorial of incapacity. Cyprus was occupied in 1878 in order to be a basis from which the Protectorate of Asiatic Turkey could be exercised. It lies off the south coast of Asia Minor and the west coast of northern Syria. Taken for this military purpose, and governed thirty-seven years, the island proved to be absolutely useless when war with Turkey broke out in 1915. It has not played any part, and could not serve any purpose, in the war. Why? It had never been developed industrially, or commercially, or as a naval or military station. British officialism went and stayed, and for long did practically nothing, though in recent time the Department of Public Works has been actively and usefully employing resources too limited. Now look at another picture. One of our ablest statesmen, who was at Berlin in 1878, bartered Heligoland to Germany about ten years later. That barren tiny stretch of sand and rock, which was rapidly being washed away by the sea, was transformed into a great fortress which has been the crown of German sea-defences. If Britain had spent on harbours in Cyprus and their needed defences, or on developing agriculture and trade, one-fifth of the money that Germany spent on Heligoland, it might have been of incalculable service in this war.

Moreover, Cyprus is a large island, and was once rich and fertile; but, like all the Mediterranean lands, it depends for its productivity on the energy and labour and skill of the population. Under Turkish rule it had deteriorated seriously. In 1878 it needed roads, railways, bridges, harbours, and all the many devices for conducting trade and communication, as well as improved agriculture, which depends on the supply of water to the soil. It has mineral wealth, and gave its name to the copper with which formerly it supplied the world. Its trees are valuable, and its general agricultural possibilities are great. It might be made once more a garden of the Mediterranean. The complaints which were made, about 1878, that it was too unhealthy for the troops, arose out of the action of a military authority who placed the camp low down in the most malarious part. In reality Cyprus is well fitted to serve as a sanatorium. The one purpose which, so far as I know, it has served during the war is to receive and recuperate wounded or sick soldiers; and its one small railway has been extended a few miles to facilitate the transport of the sick. If, in the future, we continue to do so little for the improvement and restoration to prosperity of an island like this, it will furnish a conclusive proof that we are unfit to be entrusted with the charge of the neglected parts of the Levant. Even in Egypt, where we have improved so greatly the economic condition, the question will be asked whether this would have been possible had it not been, in the first place, for the absolute necessity that our stay in Egypt must be justified, lest the Empire should break in twain; and in the second place, for the fortunate chance that two great men, Lord Cromer and Lord Kitchener, were put in authority there. The short interval between them was a period of disintegration and shame.

Islam in Egyptian Schools.

The current issue of the *Moslem World* reproduces the printed syllabus of the Primary Course of Studies in the Mohammedan religion published by the Ministry of Edu-

Digitized by Google

cation in Egypt. It deserves to be studied by any Moslems who may have wondered whether there was any foundation for the statements made at Germany's behest in Turkey that British rule was a menace to Islam. The following introductory remarks preface a more detailed summary of the teaching for each of the four years of the course.

ISLAM IN THE GOVERNMENT SCHOOLS OF EGYPT.

A Syllabus of the Primary Course of Study.

General Remarks.

I. The object aimed at in the reading of the Koran, and in committing parts of it to memory is twofold:—

(1) Dissemination of the spirit of religion in the hearts of the pupils by what they are able to understand when they read really easy passages, and by what remains in their memory, the result of which is that, in after times, they attain to a full knowledge of the truth.

(2) Training of the pupils in correct speech, owing to their being habituated to clear articulation and to producing the various sounds from the right parts of the vocal cavity.

The teacher should take the greatest pains to secure correct memorising and perfect reading. He should see that each word is clearly spoken, each letter receiving its due pronunciation and proceeding from the right place. Special attention should be paid to the correct pronunciation of the letters.

II. The object aimed at in the teaching of religion is likewise twofold:—

(1) The gradual implanting in the hearts of the pupils of a firm religious belief, and the inculcation of the fact that religion is a defence against evil passions, and a means of diverting the heart from wicked desires, inasmuch as it subdues evil thoughts and exercises a restraining power upon the conscience. It furthermore controls man in his hours of solitude, prevents him from falling into error, and secures harmony and mutual help between them. Lastly, religion is the spirit of righteousness in this world and the world to come, for the love of God and His prophets is thereby rooted in the hearts of men.

(2) Habituation of the pupils from their earliest years to the performance of their religious duties and the acquirement of religious virtues so that the practice of these becomes a habit with them from childhood upwards until religion becomes blended into their hearts and united with their souls.

The following points should be attended to:—

(a) The principle on which the teaching of religion should be based is the presentation of it to the pupils in such a manner that they shall be drawn towards it by a feeling of love and a yearning for it, in which case it will become firmly established in their hearts. This end can only be attained by making the teaching strictly progressive, adapted to the intellectual capacity of the pupils, and a source of pleasure to them, all severity and harshness being avoided.

(b) The ritual of the ceremonial ablutions and prayers must, in the First Year, be taught in a practical manner, without attempting to explain the essential and unessential parts of the ritual and details of a similar nature, all of which are beyond the comprehension of the pupils. The latter must always be encouraged to perform the stated prayers, and one of the teachers should lead them in the afternoon and evening prayers at the school prayer station.

(c) An abbreviated account of the life of the Prophet should be given, sufficient to implant a love of him in the hearts of the pupils, and in a form that they can understand and appreciate, *e.g.*, the story of his youth should be given and his virtuous qualities enumerated. Such an account should be cast in a simple mould and expressed in easy sentences so as to facilitate its comprehension by the pupils, who are not expected to learn the account by heart. Short stories illustrative of the Prophet's virtues should also be given to the pupils.

(d) The Koran should be the source of authority in the teaching of doctrines, ritual, and religious virtues in the classes of the Third and Fourth years. This end may be attained by the thorough committal to memory on the part of the pupils of the Koranic verses, and an explanation on the part of the teacher, in terms suited to the intellectual powers of the pupils, of the truths that are intended to be brought to light by the verses learnt.

With regard to the work prescribed for the Third and Fourth years it is sufficient to cause to be learnt by heart the verses quoted hereafter, and to refer to the authenticated sayings of the Prophet, together with suitable prose or poetical pieces and historical events bearing upon the subject.

We regret that, owing to pressure upon our space, a report of the lecture on Palestine given by Miss Estelle Blyth, daughter of the late Bishop of Jerusalem, at a meeting of the Central Asian Society on February 13, is held over.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

The Turkish Budget estimate for the year commencing March 1, which is now to hand, is of interest only in so far as it indicates the extent to which the authorities at the Sublime Porte feel justified in revealing the perilous condition of the country's finances. The receipts are estimated at £T37,016,698, and the ordinary expenditure at £T51,402,327, giving a deficit of £T14,385,629. Were these figures anything like accurate Turkey's position would be comparatively serious, for, including the war expenditure, the country would be faced with a formidable deficit. But they are worse than they appear, for the simple reason that the lands from which Turkey derived the greater part of her revenue before the war are either in the occupation of the Allies or are so ravaged as to be useless for revenue purposes. It is a justifiable assumption that the normal deficit will be at least double the estimate, and this deficit is unlikely to disappear with the coming of peace, or, indeed, for many years after it.

***

I noticed some days ago a letter in a contemporary referring to the insistence on increased production by this country to meet the financial responsibilities entailed by the war, and asking where the markets are to be found to take this increased production. The Serbian Mission, which is now bringing its tour of the industrial centres of this country to a close, ought to have suggested one answer to the writer. Let us hope, at any rate, that it has to the merchants and manufacturers of the towns that have been visited, for it is certain that one of the best trade openings after the war is to be found in the Allied countries in the Balkans. Serbia, Roumania, and Greece, as I have pointed out from time to time, are all young countries as far as development is concerned, and their needs will grow apace when settled conditions return. Their pre-war trade returns are nothing to go by, for the purchasing power of most of the Balkan countries has hitherto been strictly limited, and if matters develop after the war in accordance with expectations a very different state of things will obtain.

***

I have not referred to the immediate post-war prospects in the Balkans because it is obvious that there, as in other belligerent lands, there will be a demand for all manner of goods, and, in particular, for machinery of all kinds, to reconstruct the life of these countries. Unlike other countries, however, the demand will be permanent, and it is worth while laying stress on the fact that those firms who are first in the field in the period of reconstruction are likely to find themselves in a much better position as regards the retention of the trade than firms who wait to see what is going to happen. It is impossible to reiterate this moral too frequently, and it is to be hoped that British firms whose attention has been attracted to the opportunities afforded in the Balkans will keep it constantly before them, and will make their preparations now so that they will be ready to enter the market immediately peace is declared.

***

Possibly it may be asked what I mean when I urge British firms to make their preparations now. It will be said, perhaps, that it is difficult to see what preparations can be made at the present juncture. To me it seems obvious that there are two ways in which firms can get ready now to enter the Balkan market. They can learn all there is to learn about the probable market requirements from official sources, and they can embark now on a judicious advertising campaign. I can imagine firms disagreeing with the latter suggestion; but I am sure, all the same, that it is the only proper course to adopt. In no circumstances can advertising in the right manner be regarded as other than a paying investment, and the fact that a great war is in progress will not prevent potential purchasers from noting and remembering telling descriptions of machinery or goods they will want when it is over. Firms must, however, be careful to choose their medium for advertisements, and they must make sure that they select papers that reach the people they want to attract.

***

The incidence of Egypt's coal shortage can best be realized in the light of the extraordinary decline that has taken place in her imports of coal since the war commenced. In 1917 Egypt's total imports of coal amounted to 168,040 tons, as against 489,662 tons in 1916, and 675,210 tons in 1915. Even the 1915 figures, however, are far below the average, which works out for the seven years from 1908 to 1914 inclusive at, roughly, 1,275,000 tons. So that last year the country only received something like one-eighth of its requirements.

***

If the Indian Government require any further reasons why action of a decided character is called for with regard to the Calcutta hide trade, they will find them in Sir Henry Ledgard's exposition of the grounds that exist for the belief that proper organisation is alone needed for this country to take the hides which formerly went to Germany and her Ally in his paper before the Royal Society of Arts, which is given on page 140. He points out that the committee formed at the Imperial Institute to consider the future of the trade in Indian "kips," the most important part of the hides trade, established the fact that British firms in Calcutta were willing to take up the export trade, and that tanners in this country expressed their readiness to tan the kips on an increasing scale, but both laid down the condition that the export trade in India must be in the hands of British firms.

***

That is the policy which THE NEAR EAST has consistently set out, and, in view of the importance of the trade to the Empire, it is difficult to see why no definite action has so far been taken. On this point Sir Henry's view may be noted that it would not be unfair to say that the Government of India had so far done little. The post-war policy he advocates is simple and effective. He urges that no German firm or firms of German antecedents should remain in the trade, that no concern or individual should be permitted in the trade without a licence, granted on conditions, one of which would be that all partners, directors, or managers should be British and without German connection, and the careful consideration of the fiscal policy outlined by the Tanners' Federation.

***

Considerable interest attaches to the return issued by the Austro-Hungarian Bank showing its note circulation and gold stocks at the end of each of the four past years, because it is the first statement issued by the bank for three and a-half years. The position disclosed is unfavourable in the extreme, so much so, indeed, that I am inclined to speculate as to the motive underlying the return. The only effect of its issue is to throw into bold relief the precarious finances of the Dual Monarchy, and that can but mean a further movement against the country in the foreign exchanges. The note circulation of the bank had risen from £89,990,000 at the end of 1914 to £739,300,000 at the end of last year, while the ratio of gold to notes has decreased from 22.9 to 1.6 per cent. The decline in gold coin from £51,600,000 to £11,000,000 is specially interesting, for it proves beyond doubt the surmise that Germany's increased gold deposits were due to drafts on her ally. This great increase in notes and the decreased reserve coincides, it may be noted, with an extraordinary expansion in the loans by the bank to the Austrian and Hungarian Governments, which now represent 76.1 of the note circulation, as against 8.7 per cent. at the end of 1915.

***

An excellent position is disclosed in the report of the Sudan Plantations Syndicate for the year ended June 30. The crops handled at the ginning factories from the three stations amounted to 5,019 bales, as against 4,777 bales in 1916, and the prices realised were highly satisfactory. There was a net profit on the year of £14,837 14s. 6d., and the total credit amounted to £24,514 0s. 7d. It is proposed to pay a dividend of 10 per cent. and to carry forward the balance of £11,014 0s. 7d.

THE INDIAN HIDES TRADE.

History and Present Position.

The Indian hides trade, to which so much attention has been directed of late owing to the anxiety here and in India lest the trade should once again be lost to the Empire when peace brings with it the removal of artificial conditions of commerce, was discussed in an important paper read by Sir Henry Ledgard before the Royal Society of Arts on February 14, in which, after dealing with the history and the pre-war position of the trade, he reviewed its situation during the war, and made a number of valuable suggestions for its future development under British auspices. He pointed out that India was not only the greatest producer of light hides but that they produced the most suitable and economical leather in the world for the upper parts of Army boots and strong boots for agricultural labourers, miners, railway and postal employees, etc. The German realised this years ago, but the Home Government until recently held a different view. To-day the Government had commandeered these hides in India, were shipping them here, and were begging English tanners to use them and to build new tanneries and produce all the leather they could for Army boots. Was it too much to hope that they would, before it was too late, go further and take steps to preserve this industry to the British Empire? This Indian hide export trade was not a small one. It ranked fifth in value of the products of India. It actually came before tea, that magnificent industry, of which they heard so much; moreover, were they not all interested in tea nowadays? Why was it that so little was known of the Indian hides trade? It was because the business was to all intents and purposes a German monopoly.

Decrease in World's Cattle.

He referred to the result of a recent investigation by the American Government, which showed that the world's meat producing animals had decreased in cattle by 23,080,000, in sheep by 54,500,000, and in hogs by 32,425,000, and pointed out that before the war the world's supply of hides and skins was barely equal to the demand, and prices were steadily rising. The figures he had quoted indicated a very serious shortage after the war. What would be their position when all the nations were replenishing their depleted stocks if their Indian resources were again in alien hands?

Effect of the War.

Before the war about three millions of cow, ox, and calf hides were yearly tanned in India and exported; but since the outbreak of war the enormous and increasing demand had entailed special effort, and a splendid result had been obtained, as the present production of tanned ox and cow hides was fully double that of the pre-war outturn. The industry was of such value to India, that he trusted a further expansion might be seen, and the development maintained.

The tanning material chiefly used in Madras and Bombay was the bark of the Cassia auriculata shrub, commonly known as Tarwad. In addition to the Madras and Bombay tanning centres, there were some large and up-to-date tanneries and leather factories at Cawnpore. The first was erected over fifty years ago by the Indian Government. Later, the firm of Messrs. Cooper, Allen and Co. erected a similar factory for tanning and currying cow and buffalo hides, and the manufacture of boots for British and Indian Armies. The North-West tannery was another large and important manufacturing concern devoted to war work.

The tanning materials chiefly used by the Cawnpore tanneries were the *acacia arabica* or babul, and *terminalia chebula* (the myroba'an nut). Neither of the tanning agents were systematically cultivated. He trusted the Government of India would realise the importance of the tanning industry, and assure to it an ample supply of tannin. India could produce the bark, but its exploitation should not be left to private enterprise.

Exports.

Of goatskins, India, prior to the war, exported annually some 20 million pieces in the raw state and 7,500,000 tanned. The United Kingdom took the greater part of the tanned skins. About half the skins were re-exported to the Continent, and America took about one-third of the remainder. The handling of the raw skins was on a different footing. America imported direct about 75 per cent., England 10 per cent., France 7 per cent., Holland and Belgium 5 per cent., Germany an insignificant quantity. Since the war America's imports had risen to 88½ per cent., and theirs dropped to 8 per cent. or less. The very large quantities taken by America were turned into glacé kid, and of these England took annually from America, for her own use, a considerable proportion, valued at £1,500,000. Of sheepskins the export in the raw state, previous to the war, amounted to 2,200,000, and about nine millions tanned. Of these raw skins America took in 1913-14 87 per cent., and in 1915-16 96½ per cent. In face of these American figures he did not think it necessary to tell them what England imported. The treatment of the tanned skins was rather more favourable. The following were the figures :—

	1913-14.		1915-16.
	%		%
United Kingdom.....	58·9	..	64
The United States....	20·9	..	19·8
Japan	15	..	11·8

As with tanned goatskins, a considerable percentage was re-exported to America and to Austria, and then came back in various forms of useful and fancy manufactured articles. Of buffalo hides about 16,000 cwt., or 160,000 pieces, were exported to England in the tanned state. Unlike sheep and goat skins, they were nearly all absorbed in the country. Of the 345,000 cwt. raw hides, representing about two million pieces, the position was fairly summarised when he said that half the number went to the countries now at war with them, one-third to the United States, the remainder to the United Kingdom, Holland, and Italy.

Post-War Prospects.

Efforts were being made to increase the manufacture of glacé kid in this country, and the chrome tanners were prepared to extend their factories and deal with an additional five million goatskins per annum, provided the Government gave them some security for the capital involved. The Tanners' Federation considered this would be provided by an export duty in India on raw goatskins, with a rebate of the full amount if the skins were tanned within the Empire. The Federation estimated that the value of the increased production in this country would, within three years of the termination of the war, fully equal the cost of the Indian goatskins treated in America and imported into this country in the form of glacé kid. A similar fiscal policy was suggested in regard to sheepskins. The Federation had also considered buffalo hides, and, in view of the fact that all imported tanned hides had so far been absorbed in this country, expressed the view that a very much greater number of Indian buffaloes could be handled here if the trade were established with the certainty of supplies in the future.

Trade in Kips.

He now came to ox and cow hides, by far the most important branch of the hide and skin exports of India. Covering a period of some years before the war, the exports had been approximately 11 millions, of which about three millions of hides had been exported in the tanned state, and the remaining eight millions in the raw. Broadly speaking, the tanned hides came to this country, and the eight millions raw hides went to the Continent. At one time all the hides came here, and kip tanning was a most important industry. From the Leeds district alone the outturn was about three millions per annum. In 1872 the shipments to the United Kingdom were seven millions. To other countries none. Ten years later, in 1882, five millions came here, and one million went to the Continent. By 1892 the figures were almost reversed, for 1,038,417 came to this country and 4,423,159 went to the Continent. For about three years longer their imports held up, and they averaged about one and a quarter millions against five millions to the Continent. In 1896 they dropped to 681,000. Imports continued to dwindle, until in 1... they imported only 17,550, as against 6,981,947 to the Continent, and 261,000 to America.

German Control.

The figures showed that the trade had passed from them when war broke out. What the trade meant to the enemy might best be expressed by indicating what those hides would produce. The ox and cow hides that went to Hamburg, Bremen, and Trieste in the three and a half years before the war, after making the liberal deduction of 50 per cent. for hides unsuitable for military requirements, yielded sufficient leather to make 48 millions of Army boot uppers, while the buffalo hides exported to the Continent would supply forty-nine millions of Army boot soles. Of the remainder fully half were suitable for making civilian upper leather (of which a large quantity was returned to them in the form of finished box calf), and for making soles for light boots and shoes or the inner soles of heavier boots. How this complete capture of trade had been accomplished was of interest. In 1876-77 the German Government imposed an export duty on leather of 6s. 1d. per cwt., equivalent to about 6 per cent. ad valorem. In 1878 they increased it to 10 per cent. ad valorem, and in 1906 the tariff was revised and increased, raising the duties to from 1⅝d. to 2¾d. per lb according to the weights of the tanned hides.

Position at Calcutta.

Concurrently with these fiscal measures in Germany there arose in Calcutta German firms devoting themselves exclusively to the export hide trade. Before long they had banded themselves into an association or ring almost exclusively German. In case this description of the ring might be questioned he gave them the grounds for his assertion. In 1913 the firms composing this association contained thirty German or Austrian directors, partners or managers, and four naturalised or not German. Of assistants other than Indian clerks, hide sorters, or coolies employed, there were fifty-five German and Austrian and only twelve naturalised or not German. In addition to the association of German hide merchants in Calcutta, a Tanners' Association existed in Germany and a Dealers' Association in Hamburg. The latter worked with the Calcutta ring, and any outsider attempting to do business found himself against the Calcutta association or its counter-part in Hamburg. The Calcutta firms very naturally cultivated intimate relations with their Continental customers, and drew their assistants from Germany or Austria. The hide classifications were made to suit the German tanners, a German line of steamers carried the hides direct from India to the German or Austrian ports. It was true the ring would sell to English tanners or anybody else, but in all essentials it was Germanic in its origin, in its organisation, in its sympathies and ramifications. There was one exception in this co-operative system, and that was in finance, where the German houses apparently found the English banks sufficiently cosmopolitan and wealthy to serve their purpose.

During the War.

If he had wearied them with those details it was from a strong desire that they might understand how completely the trade was dominated by Germany, and the very poor outlook if nothing was done to free them from the German incubus. It was not, he thought, unfair to say that the Government of India had so far done little with the weapon in their hands in the shape of the "Hostile Foreign Trader's Order." Shortly after the outbreak of war they ordered the liquidation of four German firms out of those comprising the ring, but soon—and he took it with the knowledge of Government—other concerns started. How the firms affected regard the changes might, he suggested, be inferred from the following extract from a circular of one of them ordered to be wound up under a Hostile Trader's Order :—"There will be no change in the management, and we trust the new company will receive

Digitized by Google

the same measure of confidence and support hitherto enjoyed by ourselves."

The remaining firms composing the German ring had been allowed to trade, some with, some without, supervision. Possibly, in the early days of the war, to have entirely shut down the European hide merchants in Calcutta might have caused serious dislocation before new markets had been found and new organisations formed, but that reason no longer existed.

Inquiry into Trade's Future.

In February, 1916, with the concurrence of the India Office, an influential and representative committee was formed at the Imperial Institute, and at a conference at the India Office, presided over by Lord Islington, it was settled that this committee should ascertain whether British firms would be prepared to take up the raw hide trade in India, and purchase the kips for export, and whether tanners in the United Kingdom would be prepared to take up the tanning of the Indian hides on the large scale required. The results of the committee's inquiries on these two points were entirely satisfactory, and had been embodied in an important report and recommendations presented to the Secretary of State for India, which so far had not been published. British firms in Calcutta of undoubted reputation informed the committee that they would take up the export trade, and stated their views as to the best methods of securing that in future the East India hide business should be an all-British industry. At the same time they made it quite clear that their entrance and continuance in the business would be contingent upon the complete removal from the trade of German firms, or firms whose antecedents and connections and membership of the German hide ring set them apart from British firms. Tanners in this country expressed their readiness to tan these kips on an increasing scale under certain conditions, the most important of which was that the purchasing trade in India should be in the hands of entirely British firms free from previous or present German connections.

The United Tanners' Federation of Great Britain and Ireland expressed themselves able to handle increasing quantities up to four millions in the third year after the conclusion of the war, subject to (1) the imposition in India of an export duty on raw hides which should be remitted if they were tanned within the Empire; (2) confining the export of raw Indian hides to British firms free from any German or Austrian connections. (The term "British firms" includes Indian.) (3) The granting, where necessary and advisable, of financial assistance to tanners. Since the committee's recommendations were submitted, the Government of India had employed only British and Indian firms as their agents in the purchase of hides on the Government account. In the background there were, however, still the old ring firms or their successors resenting their exclusion, agitating for recognition, bringing pressure upon Government, trading with neutrals, and ready to pounce upon the trade (of which they had the monopoly) directly peace was declared and the Continental market reopened.

A Suggested Policy.

Outlining a policy which would give at least a measure of that control so long exercised by the enemy, Sir Henry Ledgard urged that no German firm, or firm of German antecedents and connections, should be permitted to remain in this trade. In defining what he meant, he said he could not do better than quote from a speech of Lord Islington on July 18, 1916, in the House of Lords, when dealing with the case of a German firm in Calcutta that had been engaged in supplying manganese ore to Krupps for the manufacture of steel. He then said: "The Government of India had long prevented hostile firms carrying on business in India for the benefit of enemy interests, but for the purpose of determining what was a hostile firm, they were taking as a criterion whether a firm's business was carried on before the war for the benefit of an alien interest and was likely to be resumed on similar lines after the war."

Secondly, he recommended that no concern or individual should be permitted to be in this trade in India without a licence, and the conditions attaching to a licence should be: (a) That the capital of the licensed company, firm, or individual, should be entirely British. (The term "British," of course, to include Indian.) (b) That all partners, directors, or managers of such licensed company or firm should be British, and without German connection. (c) That no British subject being under direct or indirect control, financial or otherwise, of foreign interests, should be allowed to have any share of the capital, or be a partner, director, or manager of such licensed company or firm. (d) That no license to trade in Indian raw hides should be granted to a company, firm, or individual who before the war carried on, or was engaged in the business for the benefit of foreign countries taking part in the war against the Allies.'

He might point out that, apart from the main object they had in confining the trade to licensed firms, other advantages were likely to accrue. There would, for instance, probably arise an association not existing for the purpose of maintaining a monopoly, but instead, devoted to the development and improvement of the industry in the interests of all concerned, as existed in the tea industry.

Thirdly, a careful consideration of the fiscal policy outlined by the Tanners' Federation as essential to the revival of the light leather tanning industry in England and its expansion in India. Finally (and in this he had in mind the trade of India as a whole), there should be closer commercial union, some preference or privilege that would render them more self-supporting and self-contained, more independent, and, let him add, more alive to enemy machinations than they had been in the past.

INDIA AND THE TRANSPORT PROBLEM.

According to a Batavia telegram to the Dutch Press (says Reuter's Amsterdam correspondent), an agreement has been concluded whereby Dutch East Indian ships engage to carry 12,000 ton of coal per month from Calcutta to Colombo, India, in return permitting the export of 12,000 tons of rice to the Dutch East Indies. The telegram adds that negotiations are in progress regarding the transport of 25,000 tons of coal from Calcutta to Bombay and Karachi, in exchange for the export of 25,000 tons of Rangoon rice.

Cairo cigarette-makers have struck work to enforce their demand for a 25 per cent. increase of wages.

MYSORE GOLD PRODUCTION.

Lower Grade Ores to be Milled.

A circular issued by the Secretary of the Mysore Gold Mining Company states:—"In the annual report issued to the shareholders under date March 14, 1917, it was stated that the amount of development work accomplished during the year 1916 compared unfavourably with that of the preceding year, owing to the necessity for economy in the use of explosives and to the shortage of skilled machine men. These conditions have not materially changed for the better, and the opening up of fresh ore ground has not been keeping pace with the ore extraction; consequently, to maintain the average milling grade of the year 1917, it would be necessary to encroach upon the richer sections of the mine to an extent which would seem undesirable.

"Until more favourable conditions again prevail, it is deemed expedient, while maintaining the tonnage of ore crushed monthly at about the present figure, that a larger proportion of lower-grade quartz shall be treated, and it will have been noticed that the return of gold for January (just published) was less by some 1,000 ounces than the average monthly output for 1917. Notwithstanding the limited scale of operations, some very promising points are being actively prosecuted in the lower levels of Ribblesdale's mine, and it is satisfactory to note that the improvements in this important and deepest section of the property are being well maintained. Further allusion to this, and to all matters relating to the position of the company, will be made in the directors' report, which it is hoped may be issued next month. The lessened profit consequent upon the reduced output of gold should be, in a large measure, offset by the reduction in capital expenditure which is now practicable and will be in evidence during the current year's operations."

INDIA'S TRADE IN OIL-SEEDS.

The current number of the *Bulletin of the Imperial Institute* contains a series of reports and articles of great interest, one of the most important being that on India's trade in oil-seeds. It appears that India's production of oil-seeds is worth annually about £50,000,000, and the exports of oil-seeds, oils and oil cakes about £10,500,000. Great Britain is India's best customer for these articles, though before the war Germany secured almost a monopoly of certain classes of oil-seeds produced in India. This was due to the fact that her specially-protected market enabled her to buy the most valuable seeds, the produce from which was in some cases eventually exported to England in the form of margarine and other edible fats. The recent great extension of margarine manufacture in England may be expected to alter that state of things permanently, and to result in a better British market for oil-seeds from India and other parts of the Empire. The article is replete with information regarding India's oil-seed resources, the world's production and demand for oil-seeds, and the important part which India plays as a source of supply.

Another article gives an account of the work of the Institute on mineral resources. There are also reports on cotton, tobacco, cereals, and spices from Cyprus, and the produce of other parts of the Empire.

ENGINEERING NOTES.

An Austrian Combine.

The Austrian Minister of Trade, in conjunction with the Minister of Agriculture, has recently made an order under which all undertakings manufacturing agricultural machines or part of them in Austria are to be combined, with the designation of the "Economic Combine of Manufacturers of Agricultural Machinery in Austria," which will have its head office in Vienna. The objects of the combine are to supervise factory arrangements and the number and employment of workmen, and to carry out all necessary inquiries as to stocks, production, and sales; to assist in the acquisition and distribution of raw materials, the settling of prices and condition of sale; to consult with the central offices on the placing of orders; to advise and co-operate in all questions relating to the control of production, import, and export, conditions of work and transition economy. The members of the combine are divided into three groups:—Manufacturers of machinery for working the land, manufacturers of harvesting machinery, and manufacturers of machines for the preparation of fodder and utilisation of milk, fruit, and wine. The combine is under State supervision, which is exercised by Government commissaries nominated by the Ministries concerned. Decisions of the combine are subject to the approval of the Minister of Trade.

In Germany, similar combines and engineering trade organisations in connection with the future production and export of machinery and implements, were established at an early stage of the war. The latest development of this policy, attributed to Krupps—the formation of two new companies, one to deal with foreign telegraphic news and the other with a view to concentrating all trade advertising in a central authority—show clearly the thoroughness with which they are preparing for the commercial campaign that will follow the present conflict.

Utilisation of Serbia's Rivers.

By the utilisation of the rivers Morava and Vardar, as stated in the previous notes, Serbia could obtain an immense and inexhaustible motive power, which would be distributed to all her eastern and central districts from north to south, for agricultural and industrial purposes. She would also possess an invaluable waterway running the length of the country, which, with its outlets on the Danube and the Ægean Sea, would afford the cheapest possible means of inland transport. Similar benefits and facilities for transport could be obtained by the utilisation of the rivers Ibar and Drin. These two rivers could be made to serve the western districts of Serbia as usefully as the Morava and Vardar the eastern and central districts. They would also conduce to the realisation of an important scheme for the construction of a route with an outlet on the Adriatic. This route, which is regarded as the only natural way from Serbia to the Adriatic, would start from Kralyevo, in the West Morava Valley, where is the line of the railway from Stalatz to Uzhitza, and proceed along the valley of the river Ibar to Rashka, and thence to Mitrovitza, the present terminus of the railway from Uskub and Salonika. From Mitrovitza the Ibar Valley line would have to be extended over a somewhat difficult watershed to the valley of the River Drin, which it could follow to Alessio and San Giovani di Medua, upon the Adriatic. The assistance which these two rivers can be made to contribute to the success of this route is obvious. By their utilisation the country will benefit by an increased production. In Germany no water power is wasted, and waterways are carefully fostered despite the cheap railway rates, as is shown by the recent efforts to connect the Rhine and the Elbe and the Elbe and the Danube.

The River Drin will play a very important part in the development of Serbia's commercial, industrial, and agricultural resources. An engineering scheme is in view which if carried out (and it must be carried out), will make the Drin Bay in time, according to the sponsors of the scheme, the Mersey of the Adriatic. The idea is to divert the Drin river to its original bed, and to dredge the Boyana river, in order to reclaim the barren marsh lands round Lake Scutari. The Drin, through negligence, has gradually forced a new course for itself from the sea into Lake Scutari, which is now twelve metres higher than the Adriatic. It is proposed to lower the level of the lake by five metres by means of a huge barrage. This would help to reclaim the low-lying and once fertile lands surrounding the lake, extending over some 75,000 acres. It is also proposed to dredge the Boyana to make it navigable for coasting vessels right up to Scutari from Palai, a small town at the mouth of the Boyana.

BRITISH COTTON GROWING ASSOCIATION.

Mr. Hutton's Retirement.

The following resolution was passed unanimously at the meeting of the council of the British Cotton Growing Association, held at Manchester on February 5:—"That the council has learned with profound regret of the resignation of Mr. J. Arthur Hutton from the chairmanship of the council, and desires to place upon record its most grateful thanks for his whole-hearted and unremitting devotion to the best interests of the Association since its inception. It recalls with gratitude the ability with which he has guided the association's policy and work through many difficulties, until it has attained its present recognised position as an Empire institution, with every promise that its work and example will ultimately result in a large increase of British Empire-grown cotton. The council earnestly hopes that Mr. Hutton will, as one of its members, continue to give its deliberations the benefit of his experience and advice."

LANCASHIRE COTTON.

A Stagnant Market.

(From Our Own Correspondent.)

Manchester, Wednesday.

There has not been any increased activity in the market during the past week, and demand in all quarters continues very disappointing. There are no indications at the moment of any change of attitude on the part of buyers, and the determination to hold aloof is still very pronounced. Order lists, therefore, in both yarn and cloth have tended to run down. Sentiment with regard to prices in Egyptian cotton continues rather bearish, there being a distinct improvement during the last few weeks in stocks both in Liverpool and in Alexandria. In Egyptian yarns the general demand has continued slow. Most of the buying has been in the better qualities of the finer numbers, chiefly in combed descriptions. Producers generally in this section are not experiencing any difficulty in clearing the output, but in coarse carded counts engagements are not quite so extensive as at the beginning of the year. Piece goods for Egypt have not attracted much attention. There have been rumours of the Government making some change in war risk insurance rates, and if the flat rate is abolished and changes based upon the different routes, then it is feared that exporters to Egypt will be handicapped severely. Very few cloth offers have come through for India, and leading buyers continue to adopt a waiting policy. News from China has not been at all encouraging. Much earlier delivery can now be obtained in narrow printing cloths, and some makers are pressing for fresh orders. Fancies and specialities have moved off fairly well for the home trade. American yarns have been slow and rather more irregular in price when tested. Producers, of course, are somewhat disturbed by the decision of the Government to fix prices for war contracts, and the system now to be adopted appears likely to result in the margin of profit being reduced by about 2d. per lb. There has been very little fresh business in export yarns.

EGYPTIAN COTTON STOCKS IN LANCASHIRE.

The Cotton Control Board has this week published statistics relating to cotton stocks in this country. It is pointed out that with reference to Egyptian and Peruvian descriptions the supplies held by spinners at the mills and warehouses at the beginning of this month amounted to 31,762 bales, against 48,457 bales at the end of last October. The stocks held by dealers at Liverpool and Manchester sold and unsold to spinners now amount to 50,419 bales, against 50,788 bales three months previously. The Egyptian and Peruvian cotton on the quay at Liverpool and other ports is now given as 26,081 bales, against only 5,864 bales at the end of last October. The large amount of 119,160 bales is at sea, against 32,000 bales when the last census was taken. It is, therefore, found that the visible supply of these kinds of raw cotton now totals to 277,422 bales, as compared with 137,109 bales three months previously. It is of interest to note, however, that the weekly consumption of Egyptian and Peruvian in Lancashire is now 7,40 bales, as compared with 6,545 bales at the end of last October.

COMPANY REPORTS.

Sudan Plantations Syndicate.

The report of the Sudan Plantations Syndicate for the year ended June 30, 1917, states that the issued share capital remains at £135,000, and the debenture capital is likewise unchanged at £57,000. The crops handled at the ginning factories from the three stations, compared with the previous year, were as follows:—Barakat, 1917, 1,956 bales; 1916, 1,637; Tayibá, 1917, 1,432 bales; 1916, 1,010 bales; Zeidab, 1917, 1,631 bales; 1916, 2,080 bales. The prices realised were highly satisfactory. The supply of irrigation to natives in the Zeidab district shows a further increase as compared with the preceding year. The Government agricultural station at Tayiba continues to be worked by the syndicate on behalf of the Sudan Government. Shareholders will be glad to learn that delegates from the Sudan Government were present in London last summer in order to resume the discussion upon the Gezireh scheme. The directors are pleased to state that the question of the development by the syndicate of the Gezireh Plain has now assumed practical shape, all preliminaries having been arranged and the main points definitely settled. Under an agreement entered into with the British Cotton Growing Association, 2,050 bales were purchased in Tokar and sold in this country at satisfactory prices. The profit and loss account for the twelve months, after deduction of all outgoings, shows a net profit of £14,837 14s. 6d.; which, added to the balance brought forward from last year, viz., £10,276 6s. 1d., less directors' fees, since paid, £600—£9,676 6s. 1d.—brings the total credit to £24,514 0s. 7d. It is proposed to deal with this sum as follows:—To recommend the declaration of a dividend of 10 per cent., equal to 2s. per share (less income tax), payable to shareholders registered on February 13, 1918, absorbing £13,500; to carry forward the balance of £11,014 0s. 7d.—£24,514 0s. 7d. The usual depreciation under the various headings has been provided for, but it is proposed in addition to write off the sum of £24,131 19s. 5d. from the Zeidab account. This figure represents amounts advanced to natives during a number of years, and which, owing to a succession of bad crops, are considered irrecoverable. The directors regret to say that Mr. H. S. Smiley has resigned from the board of the syndicate. Sir Lionel Phillips and Lord Lovat, directors of the syndicate, retire by rotation, and, being eligible, offer themselves for re-election. The adjourned ordinary general meeting will be held at 1, London Wall Buildings, E.C., 2, on February 20, at 12 o'clock.

Egyptian and Foreign Trust.

The report of the Egyptian and Foreign Trust, Limited, for the year ended December 31, 1917, states that the year's working had resulted in a net profit of £4,587 1s.; this has been placed to the credit of profit and loss account, bringing the credit balance (after making sundry adjustments amounting to £2 4s. 1d.) to £5,431 4s. 10d., which it is proposed to carry forward. Having regard to prevailing conditions, the directors have again refrained from making a valuation of the company's securities. The ordinary general meeting will be held at Dashwood House, 9, New Broad Street, E.C.2, on February 18, at 1 p.m.

INDIA'S SALT CONTROLLED.

The Government has issued a special *Gazette* taking power under the Defence of India Rules for the maintenance of the supply of commodities of general use (says a Reuter message from Delhi) and has accordingly commenced with the controlling of the salt supply.

Owing to the shortage of copper in Bulgaria all trading therewith has been forbidden by royal decree.

The Turkish Government has introduced a Bill asking for a credit for the examination of the question of the construction of a bridge and tunnel connecting Europe with Asia.

Mr. Edward Wauhope, of Goldings Manor, Loughton, Essex, chairman of the British India Tea Company and a director of other tea companies, who died on October 5, left estate of the value of £64,046.

GREEK DEBT SERVICE.

The Council of Foreign Bondholders issues the following information compiled from figures published by the International Financial Commission at Athens with regard to the revenues assigned under the Law of Control for the service of the Greek Debt from January 1 to November 30, 1917 (New Style: January 14 to December 13, 1917):—

		Monopolies, Tobacco, Stamps, Stamped Paper, Naxos Emery.	Piræus Customs.
		Drachmæ.	Drachmæ.
Gross Receipts, Nov. 1917		3,108,836	2,146,000
Do. do. do 1916		2,698,816	1,727,000
Estimated Receipts for 11 months (Law of Control)		26,491,666	9,808,333
Actual do. do., 1917		31,118,358	12,705,000
Do. do. do., 1916		32,714,686	24,902,000
Difference between estimated and actual receipts for 11 months	1917	+ 4,626,691	+ 2,896,666
	1916	+ 6,223,020	+ 15,093,666

Note.—Of the surplus over the estimated receipts from monopolies, tobacco, stamps, stamped paper, and Naxos emery, 49 1-5 per cent. is applied towards increasing the minimum rates of interest and sinking fund of the External Gold Loans of 1881 to 1893. The receipts in gold from both Naxos emery and the Piræus Customs are converted into drachmæ at par when the average rate of exchange for the month is par or below par, but when the average rate for the month is above par the conversion is made at that average rate.

EGYPTIAN DELTA LIGHT RAILWAYS.

Traffic returns for eleven days ended December 31.

	1916. £E.	1917. £E.
Dec. 21-Dec. 31	7,193	11,570
April 1-Dec. 31	159,070	202,795

SUEZ CANAL RECEIPTS.

	1917. Francs.	1918. Francs.
February 5	250,000	340,000
February 6	230,000	200,000
February 7, 8, 9, 10	630,000	1,070,000

CEYLON'S EXPORT DUTIES.

A notification has been published in the *Ceylon Government Gazette* to the effect that, as from December 1, 1917, the export duties on copra and coconut oil will be removed for a period of six months, provided that in each case the exporter can show to the satisfaction of the Principal Collector of Customs that he has not charged the seller with export duty, or, in the case of coconut oil, that the oil has been manufactured from copra, the seller of which has not been charged with the export duty.

INDIA'S WHEAT CROP.

The first official all-India wheat forecast for the current season shows that the area sown is the largest recorded, being 34,000,000 acres, or 1,000,000 acres more than last year's final area (says a Reuter message from Calcutta dated January 30). The sowing season is favourable. The present condition of the crop is good, but the Central Provinces and the Delhi district need rain.

The liquidation of the Bank of Egypt was to be completed at the end of January.

M. Evangelos Panas, a Greek merchant of Khartoum, whose death took place recently, left his fortune to the special treasury of the Greek National Fleet.

Mr. T. H. Marsden has been appointed a director of the Land and Mortgage Company of Egypt in the place of Mr. R. A. Huri, deceased.

Holders of debentures, bonds to bearer, of the Bengal-Nagpur Railway Company, Limited, amounting to £785,500, falling due on February 18, are notified that the debentures will be paid off at Lloyds Bank, 72, Lombard Street, E.C.2. The debentures should be left at the bank three clear days for examination prior to payment.

A paper on "A New British Oil Industry" is to be read to the Institution of Petroleum Technologists on February 19. Mr. E. H. Cunningham Craig, Dr. F. Mollwo Perkin, Mr. A. G. V. Berry, and Dr. A. E. Dunstan, have each written a section of the paper. Mr. Charles Greenway, president of the Institution, and chairman of the Anglo-Persian Oil Co., will preside at the meeting.

ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Street, Wednesday.

Speaking generally, our market this week for Egyptian shares has again been an active and rising one. Interest has been daily broadening, and a large business has been transacted, although here and there a certain amount of irregularity in prices has been manifest. Reports from Egypt are all of a very bullish character. The prosperity over there appears to be unprecedented, and large sales of land are constantly being made. Government stocks again show a rise of half a point to 86 for Egyptian Unifieds, whilst the 3½ per cent. prefs. continue in strong demand, but with practically no sellers. There has also been a rise of a point to 81 and 71 respectively for Turkish 4 per cent. 1891's and 3½ per cents., both of which loans are secured on the Egyptian tribute, and have really nothing to do with Turkey. The drawings at par render these bonds attractive, and there is a steady demand for them from the English public.

In Bank shares, Nationals are 1-16 firmer at 18 9-16, and Land Banks are ⅛ up at 6⅜, both being in demand for Egyptian account, whilst Agriculturals are exceptionally 1-16 down at 6 15-32. Amongst railways, Delta Lights, on a market bare of sellers, have improved 3-16 to 6½. In the Land department a fairly steady inquiry has continued for Aboukirs without altering the price. Allotments have improved ⅛ to 4¼ on buying from Egypt, whilst Delta Lands are, by exception, fractionally easier at 16s. 7½d. There has been an insistent demand for Behéras, and a very fair business has been transacted, the price closing 5-16 higher at 14 1-16. Egyptian and Foreign Trusts have improved 3d. to 10s. 9d. Gharbieh Lands have remained a dull market at 2⅛.

In New Egyptians a very large business has been doing, the buying coming both from Egypt and from local sources, and the shares are closing 3d. higher to-night at 19s. 3d., after dealings as high as 19s. 6d. There has been a great deal of profit-taking in these shares, but the market is in a very sound and healthy condition. There are rumours that the company is now getting very much higher prices than it has ever realised before for its lands—such as to justify a very considerable further advance in the price of the shares. The upward movement in Sidi Salems has again made further progress, and the shares close to-night 2s. 9d. up, at 48s. 9d. Union Foncières, which were somewhat neglected early in the week, have also picked up again, and are 1-16 higher to-night, at 3 5-16. In United Egyptian Lands there has been a fairly strong inquiry from Egypt, and the price has improved 3d. to 1s. 7½d., with a fair number of transactions.

In Miscellaneous shares, Alexandria Waters are looking a firmer market, and Egyptian Markets are fractionally firmer at 26s. 6d. Salts and Sodas have remained quiet round 39s., but there has been a spurt in Khedivial Mails, which are closing 2s. 3d. higher, at 38s. 6d., on buying orders from Egypt.

In Greek securities there has been again practically nothing doing this week. The 1881 and 1884 Loans are quoted nominally a point lower at 59. There is some inquiry for current bonds for replacing bonds recently drawn, and the price looks like hardening, as sellers are exceedingly scarce.

The Postmaster-General announces that the mails for Algiers despatched from London during the period from January 20 to 25 are reported to have been lost.

NOTES OF THE WEEK.

Two slight advances have been reported during the week in Palestine, the British line being pushed forward on a front of several miles to an average depth of two miles north-east and east of Jerusalem. The Turks made little opposition, although the move can hardly have been unexpected. A small Turkish attack, on the other hand, failed completely, and left a few prisoners in British hands. It remains to be seen whether the withdrawal of Russia from the Caucasus makes any difference to the Turkish defence either in this district or in Mesopotamia; in any event, it must have released a certain number of men. But the Turks cannot have felt much anxiety as regards their Russian front for the better part of a year, and they are already advancing through their lost territory on the southern Black Sea littoral. The reoccupation of Trebizond may be expected within a few days at the most.

A report has been received from a Dutch source, which may be accepted for what it is worth, that thirty thousand Turks and Bulgarians have arrived at Verviers, on the western front. If that should be true, it would indicate that Germany is following the policy of claiming hostages from her allies as well as from the enemy. Bulgaria could probably spare a contingent without difficulty, having nothing to fear from Russia and little at the moment from Roumania; her one military task at present is the holding of her southern front, where the mobilisation of the Greek Army will compel her attention. But Turkey is in a very different position, and her interest in the western front can hardly be great at a time when she is losing mile after mile of her own territory.

It is announced, however, by the Turks themselves that they are proceeding to reoccupy Armenia, now abandoned by the Russians, and we shall look with apprehension for more detailed accounts of their proceedings in that unhappy country. They are not likely to meet with much resistance after the massacre of two years ago, and unfortunately it is out of the power of the Allies to do anything, although it is true that the British occupation of Palestine and Mesopotamia may serve to distract the Turks from the congenial task of exterminating the Armenians. Germany, of course, will do nothing to hinder that policy, which could not have been carried out had Russia stuck to her guns. The renewed persecution of Armenia is a singular commentary on the humanitarian pretensions of the internationalists at Petrograd.

While these things are preparing Talaat Pasha, the Turkish Grand Vizier, has been airing his opinions in the *Neue Freie Presse*. He professes himself in some ways appreciative of President Wilson's speeches. But he declares that Syria, Mesopotamia, and Arabia must be restored, since "it cannot be doubted that these regions are vital component parts of Turkey." This declaration, which is nominally addressed to Downing Street, is more probably an appeal to Berlin to "come over and help us," and it reads a little as though the Central Powers had been unkind enough to suggest that Turkey, like many another bird, might be shorn of some of her component parts and still lead a tolerably comfortable life.

But it will be noticed that Talaat did not remark that, if these lost provinces are to be restored, the Pope's expressed wish regarding the destiny of Jerusalem would have to be violated. Possibly in the severely Catholic atmosphere of Vienna he felt that the reference would be a little dangerous; moreover, the large and influential body of Viennese Jews might have disagreed with his conclusion. The *Neue Freie Presse*, as is well known, is owned, edited, and staffed by Jews, who certainly have their own opinion as to the character of Turkish rule in Palestine.

The farcical tragedy of the Germano-Bolshevik negotiations seems for the moment at an end. The threat of renewed war has been too much for M. Trotsky, who appears more than ever like a character out of Aristophanes, and he now declares himself ready to sign peace. The peace terms apparently are to include the resignation of the Baltic Provinces and the payment of a large indemnity—a curious commentary on the "no annexations, no indemnities" movement in Russia and the "reasonable peace which Germany is longing for," imagined by our own pacifists. But Baron von Kühlmann is apparently not even yet quite sure of his ground, if his speech to the Reichstag is to be read as a sincere expression of opinion, and the German army is advancing, confident that it will meet with no resistance. It may yet decide to occupy Petrograd.

The position in Roumania has not yet become clear. It is again stated, from German sources, that Roumania can keep Bessarabia in exchange for the Dobruja; but another clause in the proposed agreement has now been mentioned—one to the effect that for a period of years the produce of Roumania should be at the disposal of the Central Powers. This clause, which was not altogether unexpected—opinion in Germany has been care-

Digitized by Google

fully prepared for it—is, of course, designed to relieve the immediate necessities of Germany in food and raw materials. But it is something much more than that. It is clearly intended to keep Roumania in a state of permanent economic vassalage, and is of a piece with the lately elaborated policy of the German banks which have opened branches throughout the Near East. Germany proposes to reap advantages from this policy at both ends—she will buy goods at her own terms and lend money at her own terms, and not only make a profit out of both transactions, but hold the country which is so treated in the hollow of her hand.

An application has been received from Jassy for the prolongation of the armistice for a few days pending further consideration. The request is eminently reasonable, since the Roumanian Government is in a peculiar difficulty, owing to so many of its politicians having been arrested in Odessa, where street fighting between Bolsheviks and the Ukraine has been almost continuous. The Germans have granted the request, but an intimation is said to have been received from Marshal Mackensen, who is apparently conducting the negotiations, that the Germans will not allow any member of the old Cabinet to negotiate. This is a claim that was not put forward even by Bismarck or Moltke after the Franco-German War.

If the report is true, it means that Mackensen will only negotiate with General Averescu. And it is by no means certain, if and when the latter enters into negotiations, that he will not find the real German terms are as different from those that have been sedulously circulated as the Bolsheviks did at Brest-Litovsk. It has been suggested, for example, in the German Press that King Ferdinand should be compelled to resign the throne as a preliminary to the negotiations, on the ground that he is a "traitor," that the Central Powers could not trust his word, and that the country would become a hotbed of intrigue after the peace, if he were left on the throne. Moreover, the territorial arrangements which Germany is prepared to sanction may be by no means so moderate as those which have been proclaimed unofficially.

It must frankly be recognised that Roumania is in a position of extraordinary difficulty. Her armies have fought very gallantly, and there was every prospect that they would have achieved their aim, had it not been for the treachery of the Bolsheviks, who were not content with deserting an ally, but, having done so, did their best to foment a revolution in Roumania and, when that failed, declared war on her. Attacked both from rear and front, the situation has become impossible, and the Western Allies can give no help to their hard-pressed comrade. No blame whatever will attach to Roumania, if she is forced to put her hand to a treaty of peace in these circumstances, but the fact that such a treaty would stultify her legitimate national ambitions is itself a proof that the peace in the Near East would not be permanent.

It is announced that the Black Sea Fleet is, after all, to be under the control of the Ukraine. Its fighting value is problematical, and it is more likely to be a danger to navigation than to any possible enemy. In the meanwhile the Ukraine itself has been proffered any number of German professors it cares to absorb, and that particular form of export, which was a thriving industry in Germany four years ago, will now be resumed. Everything is in train for the subjugation of the Ukraine, including a German army of protection against the Bolsheviks, whose activities, it must be admitted, have afforded the Prussians a ready pretext for invasion. The Russian stocks of wheat in the Ukraine have been largely destroyed by the Bolsheviks, and German anxiety to save the remainder is intelligible.

It is stated by one of the more incautious German papers that an unpublished clause in the Peace of Brest-Litovsk stipulates that Germany guarantees the independence of the Ukraine. There would be nothing surprising in such a clause. The Ukraine is far more valuable to Germany than Northern Russia, both immediately and ultimately. For the present she is looking to the Ukraine for supplies of food, which may or may not materialise—a clause in the treaty clearly indicates her desire to buy Ukraine produce as soon as possible; but in the future she will look further east. Through the Ukraine runs the direct railway to Odessa, the Black Sea, and beyond; and German economists and politicians are already mouthing the words Berlin-Batoum-Baku as an alternative to Berlin-Byzantium-Baghdad. The success of the latter project has become more than a little dubious since the British occupation of Mesopotamia, but the Teutonic mind is adaptable.

Germany is convinced that rail-power can be utilised against sea-power with success, and as the prospect of regaining her colonies, which can only be held by sea-power, becomes more remote, she is taking more and more seriously the idea of expanding her influence by rail-power in Central Asia. It is argued that rail-power can operate where sea-power does not—on the Caspian, for example, which is a land-locked mass of water; and that even if the Baghdad Railway fails, there is an alternative route into Persia by way of Southern Russia. It is suggested that Germany should inherit the opportunities which Russia failed to profit by. To that end she will have to guarantee the stability of the Ukraine, for it lies athwart the road to the East which she hopes to utilise. It must be borne in mind that such a guarantee, signed by only one State, is in effect an admission by the Ukraine of the disguised suzerainty of Berlin.

The answer to this grandiose project is simple. The creation of a Jugoslav State would cut the Berlin-Baghdad line at a vital point; the creation of an independent Poland would strangle the Berlin-Baku project. The Germans have been playing with the idea of a new Poland for the last two years, but they have stipulated that a Hapsburg or a Hohenzollern nominee should occupy the throne of Poland, and their idea of a Polish Government is that the Poles should nominate the Minister of Fine Art and similar offices, while Germany should nominate the Polish Foreign Secretary and Finance Minister. That was enough to show their hand, but they have taken care to put themselves finally wrong with the Poles by giving Polish territory to the Ruthenes. In these circumstances, it can hardly be doubted that the Allies will see their way to a definite Polish policy as a counterpart to their Jugoslav policy.

An interesting question affecting the working of the Indian Constitution is raised by the appointment of Sir James Meston as Financial Member of the Governor-General's Council. Nobody doubts Sir James's fitness for the post, though, as we recently mentioned, a substantial body of opinion would prefer to see his abilities displayed on an even wider stage; but the departure from precedent involved in the appointment inevitably prompts the inquiry whether the Council should consist of aspirants for further promotion, or should stand out as the final goal of an Indian official career. Nor is the question one of merely theoretical interest. The Council is the authority charged by law with the governance of India: its duties and responsibilities will be more onerous during the next few years than at any period since its original institution, and the interests of the whole Empire imperatively demand that its members should be in every way qualified to bear this burden.

Hitherto a civilian member of Council has, as a rule, hoped to succeed, almost as a matter of course, to the position of Lieutenant-Governor, while, with the rarest exceptions, a Lieutenant-Governor has known that India has nothing further to offer him. The arrangement worked well enough in the old easy-going days of bureaucracy, and its inherent defects became apparent only with the rise of new Constitutional

Digitized by Google

doctrines which occurred in the past decade. The legal position of the Council was a serious obstacle to the realisation of Lord Morley's theory that the seat of authority was in Whitehall, and that the Viceroy held the position of an agent; for if the agent should be outvoted by his Council he would be unable to carry out his orders. To avoid the danger of a deadlock a subservient, or at least complacent, Council thus became a practical necessity.

This ideal was very nearly realised a few years ago, when candid critics used to divide the members of Council into two classes, mediocrities content to run their own departments and leave high politics to the Viceroy, and ambitious men who regarded their position as a stepping-stone to higher office, and were not likely to push their objections beyond a certain point. The result was by no means satisfactory, and informed opinion in India, while realising the defects in *personnel*, inclined definitely in the direction of a change of system, so that a member of Council should have nothing further to expect, and should be free to perform the duties of his high office without being tempted to consider his own position. Sir James Meston's appointment will be welcomed by this school of thought: he has already administered the largest province of India, and he will now be able to devote the last years of his service to the great problems affecting the future of the whole country.

We have not yet been informed whether the appointment indicates a change of system, or whether it is merely an isolated departure from precedent, but we hope the former is the case. Lord Morley's theory of agency, never very fruitful, is bound to become less and less applicable to the conditions as time goes on: the centre of political gravity must be located in India, and interference from Whitehall must be progressively limited until it is confined to those fundamental matters in which Parliament must have its say. The Governor-General's Council is already much stronger than it was, partly through recent appointments and partly, we suspect, through the attitude of Lord Chelmsford, and what is wanted now is to build it up and strengthen it so that it shall be adequate to the task before it, the task of setting India's feet firmly on the road that leads to responsible self-government.

In regard to this question, and a multitude of others, the point of interest just now is the view taken by Mr. Montagu, who is maintaining admirably the uncongenial attitude of reticence imposed on him by circumstances, and who has been compared, in consequence, to such widely different characters as Brer Rabbit and the Sphinx. He has met nearly everyone who counts in India: has he arrived at a formula by which their relative importance can be estimated? What equation serves to connect, say, the Maharaja of Gwalior, the Editor of the *Bengalee*, Mr. X., of the Home Department, and Pachkauri Chamar? In the calculus of democracy Pachkauri counts for most, though his individual worth may be no greater than his name implies; but India has not yet adopted that mode of reckoning, and all that can be hoped for is that Mr. Montagu will be successful in devising a reasonably accurate first approximation.

Everybody justly respects Dr. Burrows, but his views on world politics are perhaps less instructed than on other subjects with which his proper studies have made him more familiar. He has stated in a contemporary that, whatever may be the destiny of Palestine, Mesopotamia, and the German colonies, those territories must not be incorporated in the British Empire. One can hardly believe that a man of Dr. Burrows's general intelligence would advocate the return of Palestine and Mesopotamia to Turkey, or even of the German colonies to Germany, after the evidence as to German methods. We can, therefore, only assume that, in his opinion, the British method of rule is only less disastrous than that of Turkey or Germany, a view which argues a singular lack of historical, or even of current, knowledge of the world. We doubt whether anybody in the occupied territories will be found to agree with him.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, January 20, 1918.

The New Year's Honours.

Prominent among the recipients of New Year's Honours are the High Commissioner, Sir Reginald Wingate, who receives further recognition of his invaluable services to the Empire, and Major-General Stack, his successor at Khartum, to whose good record I referred last week. Other Anglo-Egyptians figuring prominently in the list of appointments to the Order of the British Empire are Messrs. Dowson and Crawley—I also mentioned these officials last week—Messrs. Burnett Stuart, A. W. Hazel, and Norman MacNaghton, of the Interior, who have all rendered assistance to the military authorities: Messrs. A. T. Lloyd and J. F. Hopkins, of the Ministry of Finance—the former has been entrusted with the direction of the import and export section of the War Trade Department and the latter has been attached to the Local Resources Board at G.H.Q. since its creation; Dr. A. F. MacCallan, director of the Ophthalmic Hospital; Mr. F. P. Watson, who has acted as Secretary of the Arbitration Commission; and Mr. W. C. Hornblower, who has done extraordinarily good work in connection with the Syrian and Armenian refugees.

Public Works on the Upper Nile.

Sir Murdoch Macdonald, the Adviser to the Ministry of Public Works, left last week for Khartum, together with some of the staff, who are carrying out preliminary work in connection with the Egyptian and Sudan irrigation schemes. He has been followed this week by Colonel Bernard Pasha, the Financial Secretary to the Sudan Government, who has been kept in Cairo in connection with the Sudan Budget for the coming financial year. Both these officials, as reported in this correspondence, have recently returned from London, where they discussed with the powers that be the question of the undertaking in the near future of irrigation works on the upper reaches of the Nile. Sir Murdoch will spend some time in the Sudan in order to study on the spot the various phases of the works and the manner in which the further spade work can be done, with a view to the time when the more important part can be undertaken—i.e., after the war, when the requisite machinery can be obtained from home. I have reason to believe that it will be found possible to overcome locally some of the difficulties in regard to material and construction, which have hitherto stood in the way of public works in the Sudan. If the experiments which are being investigated, in particular with regard to the manufacture of cement, prove as successful as the authorities expect, then not only will a considerable economy be effected in the cost of the proposed irrigation works, but the whole situation as regards construction work will be revolutionised in the Sudan. That country will then be in a position to come to the assistance of and build up a profitable export trade with Egypt, which in pre-war times imported annually 60-70,000 tons of cement.

Egyptian Decorations.

H.H. the Sultan has conferred the Grand Cordon of the Order of the Nile on Sir William Brunyate, the Acting Financial Adviser, and also the Third Class of the same Order on Mr. Henry Ballou, Entomologist, in the service of the Colonial Office, who has been temporarily attached to the Ministry of Agriculture. Mr. Ballou came here from Barbados about eighteen months ago at the special request of the Egyptian Government to investigate the question of the pink boll worm and to report on the measures taken, or that ought to be taken, to eradicate it and prevent the damage which its ravages are doing to the cotton crop. Mr. Ballou has carried out a thorough investigation of the agricultural situation, and has visited well nigh every part of the country. He has submitted his report, which is a very extensive one, dealing not only with the actual subject on which he was asked to report, but also with other aspects which are closely connected with the question of the alleged falling off in the cotton crop of Egypt. It is not known whether his report will be published *in*

Digitized by Google

extenso, but it is to be hoped that parts of it will be made public; for I understand that he has arrived at some most interesting conclusions.

War Films in Egypt.

An excellent war film is being shown now in Cairo under the auspices of H.M. Government. It depicts the incidents of the Battle of Coucelette Morval from the arrival of troops in France right up to the capture of the enemy positions and the subsequent clearing up of the battlefield. This film, which is being taken round the world by Mr. Maurice Bandman, is preceded by a series of pictures showing the power of India and the loyalty of the Indian States. All the pictures are most realistic, and should bring home to all who see them the reality of war, the work done by the British troops in France, and the power of the Indian Empire. They are drawing very large European and Egyptian audiences, and the Government war charities, in aid of which they are being exhibited, should benefit substantially from the result of the tour in Egypt.

The Petroleum Crisis.

The Government has at last intervened in the matter of the fuel crisis, and has appointed Mr. R. E. Monteith Smith, Assistant Director-General of Public Security, to act as Controller for the distribution of refined petroleum for the duration of the war. He is at present studying the situation with a view to introducing as simple and at the same time as efficient a control as possible. The present idea is to limit the maximum daily consumption to three litres a day per household, and to use the grocers as a channel of distribution, the town being divided up into sections for that purpose, and consumers being allotted to each grocer through a committee consisting of members of each section. To induce the grocers to co-operate the price of petroleum has had to be raised, and it now stands at 17 milliemes, or 7d., per litre, as against 7 milliemes, or about 1¾d., before the war.

It appears that for the time being at any rate the supply of petroleum available and in sight is sufficient for the country's present requirements, and the problem is how to regulate the distribution so that nobody gets more than he or she should take. Of course, the high price of other fuels, such as coal, alcohol, oilcake, and wood and of gas and electric light makes the problem all the more difficult to solve, for, apart from the organisation of the distribution on the basis of size of households, account has also to be taken of the ability of the different classes of the population to use the higher-priced fuels. An effort is being made to reduce the price of oilcake, and it is hoped that some relief will be afforded thereby. At the best of times and under the most favourable conditions it is exceedingly difficult to assume the equitable distribution of any commodity in a country like this, and Mr. Monteith Smith, whose task is by no means an easy or an enviable one, will require all the goodwill and whole-hearted collaboration of the public, if his efforts are to meet with any success.

PRISONERS OF WAR IN TURKEY.

We are indebted to Lady Lowther for the following extracts from a letter written from Constantinople and dated January 19:

"It was very nice, having all the prisoners at church on Christmas Day; the officers all came to the Crimean Memorial Church and the men went to Dr. Frew's church. Frew has now been moved to Broussi, but here the writer says he trusts the British who have been sent into Asia Minor, such as Dr. McClean, Dr. Wigram, Mr. Guest, Dr. Mizzi, etc., etc., will be able to be exchanged and return) . . . ." and goes on to say: "We collected over a thousand pounds (Turkish) for the prisoners of all nationalities at Christmas, and made up 800 parcels; each parcel contained a pair of woollen socks, a piece of cheese, a piece of cake, a packet of figs, a piece of soap, two packets of tobacco, a packet of cigarette papers, a box of matches, and a present of some description, and at two of the places where there were most prisoners together we arranged for Christmas trees. Of course, this was only for those in and around Constantinople. . . . ."

"Meat is 120 piastres the oke; tea. £T34 the oke; sugar, 260 piastres the oke; common soap, 160 piastres the oke; figs, 100 piastres the oke; butter, 400 piastres the oke; petrol, £T20 a tin; eggs, 5 piastres each. Coffee is not to be had at all.

"Hoping these details may be of interest to your readers.—Yours, very truly,

ALICE LOWTHER.

A PILGRIMAGE TO NICÆA.

THE CITY OF THE CREED AND THE CRUSADERS.

(Continued.)

The situation of Nicæa, with its pretty lake harbour, reminds one of the "Concha d'Oro," the harbour of Palmero. And not in its mountain-girt harbour does this Italian likeness end. The west line of the walls runs parallel with and close to the lake. The site of the imperial palace, where Texier and other authorities say the first great Council of the Church must have been held, is now pretty definitely located on the little promontory to the north-west, just outside the walls, where the placid waves of Lake Ascanius advance and recede, bearing no longer galleys on errands of peace or war, and where now even the shadow of a white sail is rarely cast. Hardly one stone is left upon another of this historic palace. Near by a great plane tree offers shade, and the whole surroundings are of such vital historical interest that one is tempted to lose sight of the present in contemplation of the past.

On the plain of Nicæa, particularly the plain on the right of the lake, where the column of Cassius Asclepiodotus stands (a solitary monument of first century erection), there are plane trees that may not rival, but surely approach in majesty of proportion the red woods of California. Over the gnarled old growth of trunk and branch spring spreads a fresh young canopy of green, so that in May it is difficult to associate the idea of age with these ancient dwellers of the plain. And everywhere here there are springs, waters seeming to come through natural rock aqueducts to encourage the land when the cloud fountains are dry. There seems to be little inclination on the part of the natives to avail themselves of these natural means of irrigation; the water is allowed to remain in the lowlands, and consequently in summer malaria is rife in that neighbourhood. Only very recently has a "board of health," consisting of the *vali* (governor) of that region, done anything toward draining the swamps and freeing modern Nicæa from the depressing fetters of fever. It is said that under certain conditions man goes readily back to barbarism, and it is singular in this respect how closely he follows the example of the soil. From a high state of cultivation a land can in a few centuries become almost uninhabitable for man, and, when abandoned by civilisation, once rich and populous cities—as, for example, Nicæa and Ephesus—become unwholesome and impossible as places of residence.

Said our historian, on the afternoon of that first day, "To-morrow will be Whit Sunday. We must attend the service in the Greek church, and, for association's sake, hear the priest repeat the Nicene creed."

Very shortly after sunrise on that Whit Sunday morning word came to us from the village priest that the service was about to begin. It seemed that all the Christians of the town were up and abroad earlier than we, for when we had made our hasty preparations and entered the church we found it filled with worshippers, the nave occupied by the men and the women standing in the outer aisles and up in the gynaceum, or women's gallery. Our historian with the ladies of his party were given seats, no standing places in the deacons' stalls, in the main body of the church—an unusual privilege accorded to women. The service at once began; a serious, simple, yet impressive service. The church, built before the twelfth century, and on a foundation quite below the level of the present town, lent itself to historical meditation; its pavement was inlaid with old mosaics and old pictures in mosaics ornamented the dome; on the wall was a marble tablet with the inscription "Tower of Michael the Great King, Emperor in Christ." On another wall was the interesting picture of the first great Council in which was the resplendent figure of Constantine with his 318 bishops; poor Arius, the heritic, all in black, being expelled with a few followers, protesting, from the company; the Father and Son looking on from the clouds and Lake Ascanius a bright blue in the fore-

The first part of this article appeared in THE NEAR EAST of October 19.

Digitized by Google

ground—a picture crude in conception, but suggestive and of great historical value. Who knows but its original was a product of the very period it represents! Dean Stanley, in his notable book, "The Eastern Church," refers to this picture, and speaks of it as "commemorating the one event which, amidst all the vicissitudes of Nicæa, has secured for it an immortal name."

Amid such a setting the reading, the responses, and the chanting of our little service went on; then the priest withdrew behind the holy gates of the screen of the high altar and a slow, clear voice on the right began to intone the Creed. It was one of the great and privileged moments of a life-time thus to listen, in the one church left to Nicæa, to the Creed in the city of its origin and to hear the old, debated "homoousion" brought out with such thrilling and solemn emphasis. This closed the service, and we passed out of the church and into the sunshine of the churchyard in silence.

Outside another service awaited us. It was a petition for rain. For more than a month the skies had been almost cloudless, and the fields were beginning to suffer from the drought. The people gathered in the churchyard for this second service and made a picturesque company—the priest in his embroidered scarlet robes, the men and women in their native costumes warm with colour, and nearly all with the serious, earnest faces so characteristic of the Orient. Instead of using the Greek tongue the priest at this service spoke in Turkish, the language in which the peasants could most readily follow him. It was a quaint and poetic petition to Allah, telling him how the flowers were drooping, how the cattle were thirsting, and how the grain was looking up appealingly to the heavens for rain. The old women, standing bowed and reverent amid the tall grasses, sighed often "It is true! It is true!" adding a soft "Kyrie Eleison" in the language of their forefathers.

MARY A. POYNTER.

(To be concluded.)

THE SERBIAN MISSION.

Received by the King.

The King received at Buckingham Palace on February 18 the members of the Serbian Economic and Industrial Mission. The Serbian Minister, Sir A. Steel Maitland, M.P., Sir Edward Boyle, Secretary of the Serbian Relief Fund, and Mr. Guy Locock, Acting Head of the Foreign Section, Department of Overseas Trade, were present.

His Majesty, in a speech delivered in French, said:—Gentlemen, I wish to express to you the great pleasure it gives me to receive here to-day the members of the Serbian Industrial Mission. We have not forgotten, and we shall never forget, the heroic resistance of the Serbian nation, and we appreciate to the full the action of your gallant troops who are now fighting side by side with our own upon the Macedonian front. But that is not the only reason for which we welcome you here to-day. The national life of our two nations is based upon the same principles of liberty and justice, and it is this which makes us certain that after the war we can count upon the closest commercial relations between Serbia and Great Britain. These relations will certainly be to our common advantage. On our side they will be entirely free from the ulterior motives which have inspired the commercial relations of the Central Empires with their weaker neighbours. We are confident that before long Serbia will be re-established. You will then be faced with the task of making good the devastation caused by the enemy, and however formidable that task may be you may count upon the cordial co-operation of all classes of my people. The industry of your people, your agricultural resources, the natural riches of your country, make the same claim upon our admiration and our confidence as your national aspirations have made to our political sympathy. I have the fullest confidence that after the war Anglo-Serbian trade will develop greatly, and that every effort will be made to facilitate to the utmost degree possible the exchange of goods and produce between our two countries. During your visit here you have seen the activities of our principal industries, and I hope that the warm welcome that you have received in my country has proved to you that my people are fully alive to the needs of Serbia. I trust that the personal relations into which you have entered with my subjects will not fail to continue, and to become still closer after the war, and that the results of your visit will be to the permanent advantage of our two countries.

TANGIER TO TEHERAN.

It is reported that 30,000 Turks and Bulgarians have arrived at Verviers. The statement may be true as far as the Turks are concerned, but I shall await confirmation of it before I believe it to be true in regard to the Bulgarians. King Ferdinand and his people are a hard-headed lot, and I am fairly confident that the Germans have found them a tough nut to crack. They have, of course, played into Germany's hands in playing their own game; but more must have happened recently than the outside world has any inkling of, if Bulgarian troops in any number have been despatched to the Western front. Perhaps the Turks stipulated for Bulgarian co-operation, and it was, therefore, necessary to spread the report about to encourage the Turks, and, it may be, the German public as well. We shall see. But not very long ago the Bulgarians were pluming themselves on the fact that they had every Bulgarian soldier within their own borders (the enlarged ones, that is to say), and had no intention of sending any out at Germany's bidding.

***

What a contrast in personality is afforded by the ex-Tsar and ex-King Constantine. It was to be expected from what one knew of the two men. Nicholas II. of Russia had his faults; he was, no doubt, weak, and grievously has he paid for it. But there is nothing in any of the reports that have reached us since his dethronement to lead one to suppose that he has abdicated the position of "the first gentleman" in Russia. How different is his late colleague on the Greek throne! His squeals and protestations to the foreign Press nauseated me at the time; even when one had little idea of the real extent of his duplicity. Now in exile he seems up to every type of low game. Almost simultaneously with the request of the ex-Tsar's family to be allowed to leave Russia and of their repudiation of all plots for the restoration of the dynasty comes the story of the Lamia mutiny in Greece, capping ex-King Constantine's intrigues to get back to Greece regardless of the price the Greek people may have to pay for the luxury. If he had not proved himself unworthy to rule while still on the throne, he has certainly proved it since he was removed.

***

I wish to tell a little story which has nothing to do with the Near East and may conceivably be of interest to the enemy. Nevertheless, I hope the Censor will pass it; for it shows that even a U-boat may do a service to the hated English, and for that reason it will probably annoy the Germs. For its truth I vouch. A certain old sailor was fishing peacefully close to some rocks off the mouth of a small harbour, while out at sea two large steamers were making their way towards the south. It was a summer-like day, with a shimmering sea and a sky almost cloudless. But suddenly the surface of the water was slightly disturbed, and the next moment came an appalling explosion, and a mass of water was flung up close to the rocks, rising, perhaps, forty or fifty feet. A German submarine had fired a torpedo at one of the steamers, and missed her. The old fisherman took in the situation at once, and rowed, as if for dear life, straight to the spot where the explosion had occurred. There he began picking up the fish that had met their death at the hands of the Hun; and ere long he was joined by half-a-dozen other boats. That afternoon the little town sent off a record consignment of fish to the London market, where it fetched good prices, fish being scarce at the time. And I am pleased to say that the plucky old fellow who was first on the scene made a good thing out of it. For all that, I was thankful to be on the shore.

***

The compliment paid to the Prince of Wales by the King of Roumania, who has conferred on H.R.H. the Order of Michael the Brave, will certainly give pleasure to many people in this country. Before the war very few Englishmen knew anything of Roumania; but there has been a great rubbing-up of geography since August, 1914, and I have been agreeably surprised lately to find how widespread is the sympathy with King Ferdinand and his subjects; how painfully the position is realized of the little country surrounded by open foes and false friends. At the moment of writing it is impossible to see what the immediate future has in store for the sorely-tried Roumanians; but, come what may, nothing can alter the fact that they have played a gallant part, and a splendid one, so far in the war. Englishmen have watched the struggle with admiration, and, as I said before, when King Ferdinand and Queen Marie visit this country they will be sure of an enthusiastic welcome.

COUNTERACTING GERMAN PROPAGANDA.

We have made arrangements for forwarding free of charge to our readers pamphlets and other publications dealing with the British and Allied cause. This literature is in many European languages, and certain pamphlets and illustrated publications are also available in a number of Oriental languages. All applications should be addressed to the Editor, THE NEAR EAST, Devonshire Square, London, E.C.2. Among the most recent publications available for distribution free of charge are the following:—

"WELFARE OF EGYPT," by J. S. Willmore. A short summary of English administration in Egypt; alluding also to Germany's undermining influence, and the Mussulman's preference for the English rule. 36 pp. London: Hodder and Stoughton.

"MESOPOTAMIA; THE KEY TO THE FUTURE," by Canon Parfit. A short account of the past history, present development, and future prospects of Mesopotamia, showing that the settlement of its problems is of vast importance to the progress and prosperity of the world. 41 pp., with map. London: Hodder and Stoughton.

"TURKEY, A PAST AND A FUTURE," by A. J. Toynbee. Development of the new Turkish Nationalism and of German intrigue in Western Asia. Moslem ideas must prevail. Mesopotamia will develop its resources mainly by colonisation. 77 pp. London: Hodder and Stoughton.

"ARMENIAN ATROCITIES: THE MURDER OF A NATION," by A. Toynbee, with speech by Lord Bryce. An account of the atrocities committed by the Turks on the Armenians, with documents. 117 pp. London: Hodder and Stoughton.

"THE VERDICT OF INDIA," by Sir M. M. Bhownaggree, K.C.I.E. The writer describes what England has done and is doing for India, and explains the German delusion as to its internal condition. 57 pp. London: Hodder and Stoughton.

"VOICE FROM INDIA," address by Maharajah of Bikanir. Speech delivered to Indian delegates at House of Commons. 24 pp. Empire Parliamentary Association, London.

"THE MURDEROUS TYRANNY OF THE TURKS," by Arnold J. Toynbee, with a preface by Viscount Bryce. A brief sketch of Turkish history to show that the expulsion of the Turks from Europe and their confinement to a portion of Asia Minor will be the only adequate requital for their atrocious treatment of subject races during this war and previously. 35 pp. London: Hodder and Stoughton.

"THE JUSTICE OF ROUMANIA'S CAUSE," by A. W. A. Leeper. An explanation of the international position of Roumania in Europe and of her rights in the war. The author shows that her cause is legitimate, and that she has taken great risks and endured much to deliver her people from Hungary's oppression. 24 pp. London: Hodder and Stoughton.

THE FUTURE OF PALESTINE.

At the special general meeting of the Central Asian Society on February 14, Colonel Sir Henry Trotter, K.C.M.G., presiding, Miss Estelle Blyth, a daughter of the late Bishop in Jerusalem, read a paper on "Palestine, Past, Present, and Future." She described the geographical peculiarities and conditions of the country, and their effect upon its history and present political position, and spoke of the extraordinary richness and fertility of Palestine, despite the dead hand of Turkey upon her. Though everything grew out in the open, with practically no care, Palestinian vegetables would demoralize an English market, while the fruit and flowers grew with a luxuriance that could hardly be described.

Dealing with the question how best the country could be raised to its rightful place in a cleansed and liberated world, the speaker told of what the Jews had done for Palestine by their colonies, several of which had already been freed through the advance of the British forces. Before the war the only rivals to the Jews as colonising agents were the Germans, whose influence with the Turks had procured for them many fine tracts of arable land. Happily, this dangerous growth would now be checked, allowing a larger scope to the Jewish nationalists. Every signpost seemed to point, and every argument to lead, to the conclusion that Palestine should come under England's protection, and so experience those benefits of British rule which the people had so long desired, while Syria proper passed into French keeping. Latterly, even the Moslems in Palestine, under the ever-increasing burden of Turkish oppression and injustice, had cried out for English rule. England was greatly trusted in Palestine, for the people had come to understand that all her institutions out there were wholly for their benefit, and masked no political aim. English prestige had suffered a temporary eclipse in recent years, owing, perhaps, to a restrained line of policy that was misunderstood by those to whom power must be shown in concrete form, but it had never been destroyed; it was to England that the people looked for help and protection. Turkish misrule had driven abroad the youth of the country, but these exiles would certainly return to Palestine with the dawn of better days under British rule. In the Sudan and Egypt the Syrians in Government employ had shown a good capacity for work under wise and sympathetic English direction. The welcome accorded to General Allenby's forces was a remarkable proof of the feeling of the people for the English, and specially so after three years of active anti-English propaganda by the Germans in Palestine.

SERBIA'S VITAL NEEDS

FOOD

Do you know what it is to starve—to be without even a crumb of bread? *The Serb does.* Do you realise what it means to famish until typhus grips you in its dread embrace? *The Serb does.* Can you picture yourself exiled in a strange land, your children wailing piteously for sustenance? *The Serb can;* for the Serbians have endured all this and more also To-day what once was the Serbian nation, if we exclude those still gallantly fighting, is split into two categories —those in servitude and those in exile. All are vitally in need of FOOD.

COVERING

COVERING — clothing and shelter—is a prime necessity of healthy life. The Serbs are dependent upon outside aid for the provision of the clothes on their backs and the roofs above their heads. Their homes are despoiled by our enemies. They are strangers in strange lands. They have given the flower of their manhood in the crusade for liberty, and now all that is left of the Serbs—old folks, children, sick and wounded —look to our benevolence for their proper preservation.

MEDICAL AID

Medical Aid is the third prime need of Serbia. Hard on the heels of Famine and Exposure comes dread disease. The Serbs have been ravaged by Typhus. Phthisis too has claimed its countless victims. Bravely as devoted workers have fought to succour the suffering and conserve life, the medical needs are still greater than the resources available. More lives can be saved if the means to save them continue to grow—if more doctors and nurses are sent out, more hospitals and dispensaries established. The Serbs are clinging tenaciously to life, trusting in our pledge to restore to them their country; but, if they are to live in health to enjoy the return from exile which is their high hope, THEY MUST HAVE MEDICAL AID.

You can provide what Serbia lacks

The Serbs look with confidence to British benevolence to generously give the help it can render. Do your part. ***You*** can help to maintain hospitals and dispensaries, assist in succouring Serbian Prisoners of War, and feeding and clothing refugees. The way lies plain before you. The officially recognised channel of private British assistance to Serbia is the Serbian Relief Fund. That Committee is the trustee of the warm-hearted people of Britain. Help the Serbian Relief Fund to repay Serbia for her awful sacrifices by sending a donation to

The Hon. Treas.: The Rt. Hon. the EARL of PLYMOUTH, C.B.

SERBIAN RELIEF FUND

NEAR EAST BOOKSHELF.

THE AGONY.*

The diary of a French Army doctor, taking the reader, foot by foot, through the terrible, nay, pitiable, *bejania* (retreat) of the Serbian Army and populace between mid-October, 1915, and January, 1916. Here we have no style to criticise, no literary flourishing to like or dislike; merely a plain, unvarnished tale by a participant of one of those awful horrors which have littered and continue to litter the paths of the bloody Hun, Bulgar, and Turk, and, let us add, of the bloody Bolshevik. But we do not at any moment in the story see Serbia's foes trampling upon her; this calm, dispassionate, and obviously heroic doctor is running from before the tornado. There it is in the rear, coming, racing remorselessly, from crag to crag, from pass to pass, from winter torrent to winter torrent, now from the north, now from east and west, and you can hear the howl of savagery shrieking on to slaughter. A nation in retreat in a Balkan winter; as brave an army as ever lived, simply over-run, almost overwhelmed, the pity of it! One closes down this graphic, simple story cheered only by the knowledge that to-day, along a front which includes reconquered Monastir, a hundred thousand Serbians are awaiting "la revanche." Major Thomson—we note his "Entente Cordiale" origin—joined the French Medical Mission in Serbia in April, 1915, from Salonika, and was finally posted at Tchabats, on the north-western frontier, at the junction of the Drina and the Save. He and his wife were, literally, the last to leave Tchabats. This leaving, which was a "bejania," and began on October 17, endured until their arrival by a 350 miles zig-zag course, at San Giovanni di Medua on December 26. The pace is *about* six miles a day, when everybody wished to make sixty. That spells the agony. Everyone who desires to know more of Serbia, Albania, and Montenegro, physically and ethnographically, should read this little volume. There is a graphic map, though small. The reviewer will not be satisfied until he has met this French master of literary modesty. Enough, this earth is spread with heroes!

DODGING U-BOATS.†

The narrative of the voyage of a confessed hypochondriac, as "Purser," on a tramp steamer from London to Philadelphia, thence to Gibraltar and Castellamare, thence to Algiers, Montevideo and Rosario, and so home to London, during the height of the U-boat rage—written with the introspective literary skill of a practised author, and a sea-writer at that. Quite an interesting contribution to the times, if we reflect that the Censor is about. The subject is good, and the reader's interest is held; and, this admission made, we are now "going for" the author. There are a personal portrait as frontispiece and a preface, both of which almost constrained us to refuse to review the book. But we were resolute, and are now satisfied to have read it through. "There is no fool like a travelled fool," is a good adage; for, if a man has travelled widely, like most merchant skippers or real pursers, and returns a fool, he must be a fool indeed. The sea captain may have voyaged the world, but, with very few exceptions, his knowledge of the countries and peoples he has visited is limited to the docks, the quays and the ship-chandler. Having ourselves visited all the ports touched at by Mr. Patterson in this wide-flung itinerary, his reference to, or description of, each one leaves us wondering if he ever took his peevish egotism beyond the quayside. "Parley Anglais?" (*sic*) in Algiers, and "No! Inglice!" (*sic*) in Castellamare make for despair, and we never will like self-styled psychologists who can be guilty of such lapses, and at the same time bring into their prose unnecessary references to the Eumenides. Poor old Captain Dash, dodging submarines—and successfully, we are glad to say—no wonder he frequently got ratty with his know-all, superficial supercargo! Then, again, one asks when will Mr. Patterson write fluid English and cease from his ugly and perpetual bracketings? We are feeling better, thank you! and are glad to have read "A War-Time Voyage." Having made three ourselves, and carelessly without keeping a diary, we close this one, sensible that we are a crusted hero, if not exactly a psychologist.

* "La Retraite de Serbie" (Octobre-Decembre, 1915). By Louis L. Thomson, Médecin-Major (Hachette and Cie.).

† "A War Time Voyage." By J. E. Patterson. (J. M. Dent and Sons, Limited. 6s. net.)

Sold by all BOOKSELLERS. Write for Prospectus and Catalogue No. 25, of other Languages.

London: E. MARLBOROUGH & CO., 51, Old Bailey, E.C. 4.

THE RULE OF THE ROAD.†

To commend a Grammar because it is a Grammar is a most reprehensible proceeding, but common enough. We have had in the Near East and the Far West to tie our tongue into so many knots that we refuse so to proceed. But we like this one. It has its faults. Could one produce a Grammar without? And so we heartily commend it to the "boys" in Mesopotamia, who are learning their way up, not down, the Tigris and Euphrates. It gives the verbs their properly important place; better still, it is a grammar for that only too prevalent Englishman and American who will afford only two hours a day for a month to the mere grammarizing of any "foreign lingo." Who of us readers of THE NEAR EAST has not been terrified by the mere appearance of the Arabic alphabet in its triplicate form? This book avoids that terror, for it gives the exercises in English, in transliterated pronunciation, and in the classic Arabic script, thus enabling him who would profoundly learn, to learn, and him who would impetuously haste, to hasten. Here the British officer in Egypt will find that what he calls *eysh* in Kantara is *khubz* in Kut-el-Amara, as it is crug* in Christ's Hospital, where some have learned too much Greek and Latin; that *dee, ey dee*, what is this? is *shinû hâdha*; that I want—a common Mesopotamian failing—is *ana auz* in Egypt, but is classical *ureed* about those mounds where now the lion of Britain instead of the wild ass stamps o'er the head of Bahram. Without a glimmer of facetiousness we trust Mr. van Ess' timely and scholarly work will have a rapid and continuing sale.

* Crug—see Charles Lamb's "Slang Vocabulary of Christ's Hospital"—looks formidable enough, but is merely ancient English for the Staff of Life which we understand is the equivalent of Seal's Blubber among the Esquimaux.

† The Spoken Arabic of Mesopotamia. By Rev. John van Ess, M.A (Oxford University Press.)

BRITISH WOMEN IN SERBIA.

By the courtesy of Lady Llangattock a meeting of the British Women's Patriotic League was held at South Lodge, Rutland Gate, S.W., on February 17. Mrs. Aldridge and Mrs. Carrington Wilde were the speakers, and M. Yovanovitch, the Serbian Minister, presided. In opening the proceedings the latter paid a high tribute to the work of British women in Serbia. He said this work might be divided into three periods—the first was when the epidemic of typhus was raging, and they were there as doctors and nurses, establishing and controlling hospitals and dispensaries to combat the disease; the second period was when they were with the Serbian army, giving medical assistance while it was fighting, first the Austrians, and afterwards the Austrians, Germans, and Bulgarians; and the third period was during the great retreat. Throughout they had shown admirable courage and extraordinary self-abnegation.

Mrs. Aldridge described her experiences in Serbia. She said that when she and her party had first established themselves there the peasantry of the country round came, not only from illness, but also from curiosity, and never tired of examining the clothes of the English ladies, almost forgetting sometimes that there were people inside the clothes. They were equally curious as to what was inside the pots and pans in which dinner was being cooked. Speaking of the contrasts she had noticed between Serbia and Great Britain, she said that 90 per cent. of the Serbian population was agricultural. The women were great knitters, and they always commenced a stocking at the toe. Endless complications arose from the fact that the Serbs shook their heads for "Yes" and nodded for "No." The people were hospitable to a degree, always ready to give. Sometimes she and her friends did not like taking the things that were offered, but they could not refuse for fear of hurting the feelings of the donor. The Serbs had a most delightful, natural, unaffected politeness of manner. Speaking of more important matters, Mrs. Aldridge described the courage and fortitude displayed by the Serbs under conditions of almost incredible hardship. She said that she had learned to love and admire them during the time she was with them. If heroism alone could have prevailed they would not have been beaten.

PERSONAL AND GENERAL.

CALENDAR OF THE WEEK

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian (New Style).	Julian (Old Style).	—	Moslem.	Jewish.
1918. February.	1918. February.		1336. Jomada I.	5678. Adar.
22	9	Friday	11	10
23	10	Saturday.....	12	11
24	11	Sunday	13	12
25	12	Monday	14	13
26	13	Tuesday	15	14
27	14	Wednesday	16	15
28	15	Thursday	17	16

The Greek Minister called at the Foreign Office on February 19.

The French Ambassador was visited on February 19 by the Roumanian Minister.

Mrs. Noel Buxton gave birth to a son on February 18 at 9, Linton Road, Oxford.

It is stated that all Germans in Siam, men and women, have been deported to India.

Next Monday Princess Alice, wife of Prince André of Greece, will celebrate her birthday.

Lord Lamington is to preside at a meeting of the Persia Society to-day at 4.30 p.m., at 22, Albemarle Street, W.

A telegram from Sofia to the German Press states that the Bulgarian Government has resumed diplomatic relations with Russia.

Mr. J. D. Bourchier has returned to England after an absence of nearly four years. During this period he has been in Bulgaria, Roumania, and Russia.

To-morrow will be the anniversary of the birthday of Princess Vera, daughter of King Nicholas of Montenegro. She was born at Riëcka in 1887.

Speaking with M. Venizelos on his return to Athens from Salonika, King Alexander expressed his admiration of the excellent *moral* of the Allied and Greek troops on the Balkan front.

At his lecture on Palestine at London University on February 19, Dr. E. W. G. Masterman showed views illustrating General Allenby's advance, including his entry into Jerusalem.

The Liverpool Geographical Society announce that Canon J. T. Parfit, M.A., will deliver a lecture in St. George's Hall, there, on "Sunny Syria and Snow-Capped Lebanon," on March 6.

A telegram from Prague published in the *Rheinisch Westfälische Zeitung* says that the *Narodni Listy*, the organ of Dr. Kramarcz, the Czech leader, has been suspended for a fortnight.

The War Office announces the names of one officer and a number of soldiers who were prisoners of war in Turkey, who are now reported as having passed through Switzerland en route for England.

A stained glass window is to be erected in St. Edmund's Roman Catholic Church, Lower Edmonton, to the memory of the late Father Kavanagh, who died outside Jerusalem while serving as an Army chaplain.

M. Radoslavoff, the Bulgarian Prime Minister, went to Berlin after the negotiations at Brest-Litovsk to "discuss various political questions with the Imperial Chancellor and other leading political personages."

It is reported that by order of the Revolutionary Tribunal, the Chief of the Roumanian Mission in Russia, M. Pantasi, and the military agents, have been arrested. It is proposed to confiscate Roumanian property.

H. A. Schroeder, ex-secretary to the German Consulate at Honolulu, having pleaded guilty to a charge of conspiring to create a revolution in India, has been fined £200, with the alternative of three months' imprisonment.

The Press Bureau is authorised to say that a telegram has been received from Roumania that all British officers serving there are well. While postal communications are interrupted it is proposed to make a weekly announcement on the subject.

The Greek Minister and Mme. Gennadius were among the guests at a dinner party at the Mansion House on February 15, given by the Lord Mayor and Lady Mayoress, to meet Sir George Buchanan, Lady Georgina Buchanan, and Miss Buchanan.

M. Jonnart, Governor-General of Algeria, and the ex-High Commissioner of the Entente to Greece, has been elected a member of the Académie des Sciences Morales et Politiques.

At a meeting of the Senate of the London University held on February 20, the School of Oriental Studies was admitted for a period of three years as a school of the University in the Faculty of Arts for the purpose of research and the cultivation of learning in Oriental subjects.

Among the latest wills is that of Mr. William Ernest Gordon Leith, of Clarges Street, W., and the New University Club, St. James's Street, late Chief Magistrate of Calcutta and Legal Remembrancer of the High Court of Judicature, Fort William, Bengal, who left £20,131.

The King has granted unrestricted permission to Miss Grace Eleanor Soltau, L.R.C.P. and S.Ed., to wear the Insignia of the Third Class of the Order of St. Sava, conferred upon her by the King of Serbia in recognition of her services to the Serbian sick and wounded in the Scottish Women's Hospitals for Foreign Service.

The marriage arranged between Lieutenant-Commander R. W. Oldham, R.N., and Miss Ethel Marion Berry, daughter of the late F. C. Berry, C.I.E., I.C.S., and Mrs. Macdonald, Blarour, Spean Bridge, Inverness-shire, will take place at St. Mary's Cathedral, Edinburgh, to-morrow, the exigencies of the Services permitting.

The Jewish community of Manchester has raised the sum of £3,100 for the building of three Y.M.C.A. huts for soldiers in Palestine. Two are in memory of the Hon. Neil Primrose and Mr. Evelyn de Rothschild, and the third is to commemorate the services rendered by Sir Daniel McCabe during the two years of his mayoralty.

The British members of the Zionist Commission to Palestine, in addition to Dr. Chaim Weizmann, who will be chairman, are Mr. Joseph Cowen and Mr. Leon Simon. Dr. M. D. Eder will represent the Jewish Territorial Organisation. The Russian members of the Commission will be M. M. Ussyshkin, M. Isaac L. Goldberg, and M. Rosoff.

It is stated that an attempt is being made to denationalise Serbian children by sending them to Bulgarian schools. Every means is being employed to this end, and Bulgarian priests and teachers go so far as to compel Serbian children to make the sign of the Cross while reciting :—"I am a Bulgarian; my mother is a Bulgarian; my father is a Bulgarian; we are all Bulgarians."

A great demonstration in approval of the British Government's declaration concerning the Jews and Palestine marked the closing meeting on Februry 17 of the Jewish Congress in Amsterdam. The Chief Rabbi said that it was with the Jews a question of now or never. At the close of the sitting the members marched through the streets bearing Zionist flags and singing Jewish national hymns.

Among those present at the unveiling of the memorial tablet to Colonel Sir David William K. Barr at the Brompton Parish Church on February 15 were Lady Barr, Lady Wylie, Mrs. Gough, and Colonel Sir Donald Robertson. The vicar, Prebendary A. W. Gough, gave an address, and the musical portion of the service was rendered by the choir. As a further memorial to Sir David Barr, new choir stalls are to be provided.

The inscription on the memorial tablet was written by Lord Curzon, and is worded as follows :—"This tablet is erected by some of his friends and colleagues in affectionate memory of Sir David William Keith Barr, K.C.S.I., of the Indian Political Service, a Member of the Council of India; born 21st November, 1846, died November 22, 1916. Simple-minded, courageous, gentle, just, he was the example of what a British political officer should be, teaching the Indian Princes and Peoples the inspiring lesson that East and West may be one."

TRAGEDY OF MONTENEGRO,

THE SMALLEST AND POOREST OF OUR ALLIES.

MONTENEGRIN RED CROSS AND RELIEF FUND,

11, VICTORIA STREET, LONDON, S.W.1

(Registered in City of London. Section 1. War Charities 1916)

needs £700 WEEKLY for Feeding Prisoners interned in Austria-Hungary.

Donations will be much appreciated and gratefully acknowledged by the Hon. Treasurer, LADY ROPER PARKINGTON. Claridge's Hotel, Brook Street, London, W.1.

The Dowager Marchioness of Dufferin and Ava, of Clandeboye, Co. Down, has received the following messages:—"The Queen and I are grieved to hear of the fresh loss which you are called upon to bear in the death of Lord Dufferin, and we desire to assure you and your family of our true sympathy in your sorrow.—GEORGE R.I." "My heartfelt sympathy with you in your loss, in the so sudden and unexpected death of your dear son.—ALEXANDRA."

Reuter's Amsterdam correspondent reports that, according to a Constantinople telegram to the *Rheinisch-Westfälische Zeitung*, women are being admitted to the Turkish army. The Ottoman association for women's work publishes a call to all women between eighteen and thirty to join the recently created Women Workers' Battalion. The battalion will be attached to the First Army Corps, and will work eight hours daily behind the front. The officers and overseers will first be men, but will gradually be replaced by women.

A correspondent has forwarded to us the following extract from a letter recently received from Jerusalem:— "Another one has to be added to the long list of crimes perpetrated by the Young Turks. Sultan Murat's son came to Jerusalem about July of 1917. He was received by Jemal with all the honours due to a royal prince. Soon afterwards he went to the Bir Sheba front, and was never heard of again. Austrian officers assured me that he was killed by a Turkish bullet. No communiqué has ever been issued about his death."

The following officers of the Serbian Military Mission had the honour of being received by the King on February 21:—Colonel Ristitch, Lieut.-Colonel Deroc, Lieut.-Colonel Zagortchitch, Lieut.-Colonel Tersitch, Lieut.-Colonel Kossitch, Lieut.-Colonel Dounitch, Lieut.-Colonel Joakimovitch, Lieut.-Colonel Todorevitch, Captain Givanovitch, and Second Lieutenant Milstitch. Lieut.-Colonel E. M. Dunne (specially attached to the Mission) was present, and the Gentlemen of the Household in Waiting were in attendance upon his Majesty.

The King and Queen inspected, on February 18, in the garden of Buckingham Palace, the Elsie Inglis Unit of the Scottish Women's Hospitals for Home and Foreign Service attached to the Jugo-slav Division of the Serbian Army. The six executive officers presented to their Majesties were Miss E. Palliser, chairman; Mrs. Kinnell, vice-chairman; Viscountess Cowdray, honorary treasurer; and the Hon. Mrs. Spencer Graves, assistant treasurer; Mrs. Flinders Petrie, the honorary secretary, and the secretary, Mrs. Finch. The chief medical officer is Miss Annette Benson, and the assistant medical officer Miss L. M. Chesney. Dr. Annette Benson is successor in office to Dr. Elsie Inglis. The King expressed appreciation of the excellent work which was being performed by the Scottish Women's Hospitals, and wished the unit success on going out to resume duty abroad.

OBITUARY.

The death occurred at Adis Abeba on February 12 of Taitou, Dowager Empress of Abyssinia.

Mr. James Hall Rea, J.P., Gatehouse, Eskdale, Cumberland, who died on February 6, at the age of sixty-six, was the owner of one of the best collections of Egyptian antiquities in the country.

The death has occurred at Ealing of Mr. Victor Edgar de Broe, late Superintendent Engineer of the North-Western Railway, Lahore. Mr. de Broe joined the Indian Public Works Department as an assistant engineer, and was promoted to be an executive engineer in 1892, afterwards becoming deputy manager of the Oudh and Rohilkund Railways and of the North-Western Railway.

Commander Charles Rathbone Law, F.R.G.S., formerly of the Indian Navy, died at his residence at Kensington on February 7, aged 80 years. He went to sea in 1853, and served in the Indian Ocean, the Persian Gulf, the Red Sea, and other waters in the suppression of pirates and the slave trade. After retiring from the Indian Navy, Commander Law was Librarian and Assistant Secretary of the Royal United Service Institution from 1865 to 1868. He was the author of a number of works mainly on naval and military subjects, among them being a "History of the Indian Navy" and "The First Afghan War, 1879."

The death of Sir Cecil Spring Rice, British Ambassador to the United States, occurred suddenly at Ottawa on February 13. Born in 1859, he was educated at Eton and Oxford, and was appointed Assistant Private Secretary to Lord Granville in 1884, and in the following year Précis Writer to his successor, Lord Rosebery. Subsequently he was appointed Secretary of the Legation at Teheran, and spent nearly three years in Persia. From Teheran he proceeded to Cairo, where he was seconded for the post of British Commissioner for the Egyptian Debt. He went to Russia early in 1903 as Secretary, and subsequently Councillor of Embassy. He returned to Persia as Envoy Extraordinary and Minister Plenipotentiary, and was transferred in 1908 in the same capacity to Stockholm, where he remained until 1913, when he was appointed British Ambassador to the United States. Sir Cecil Spring Rice was married to Florence, only daughter of Sir Frank Lascelles, at one time British Ambassador in Berlin, where Sir Cecil (then Mr.) Spring Rice was Second Secretary.

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.

PEACE AIMS.

Mr. Lloyd George has declared that there is no half-way house between victory and defeat. At no time does the warning need to be taken more to heart than at this moment, when the defection of Russia is pressing heavily on the Allies, and the United States have not yet been able to throw their whole strength into the war. It so happens that this stage of the conflict has coincided with a more detailed declaration of war aims than the Allies have felt called upon to make before. A variety of circumstances had made such a declaration necessary—the unpractical doctrines put forward with so much unctuous rectitude by the Bolshevik Government, the misrepresentations of pacifists in the Allied countries, and the desirability of contrasting for the benefit of the public in the enemy States the reticence of their own Governments with the readiness of the Allies to submit their terms to the scrutiny of all concerned. One effect, however, of this statement of war aims is the tendency on the part of those who are feeling the strain of the long war more than they may be inclined to admit to regard these aims as identical in every respect with peace terms, and to endeavour to rearrange the clauses in order of relative importance. The next step in this well-meant attempt to simplify the issue is to subject the different items on the list to the arbitrary test as to whether they are individually worth an indefinite, or even limited, prolongation of the war. In each case the restricted knowledge of the investigator supplies the criterion. By this method of procedure it is not difficult to understand how people in Great Britain might decide that the fate of a portion of Croatia, or of a district in Macedonia, must not be allowed to stand in the way of a peace which in other respects is satisfactory; or how the French would hold that, provided they secured Alsace-Lorraine, it would matter little whether the relations between the Armenians and the Turks were regulated in a definitive manner or left to subsequent adjustment, mainly, it might be, at the dictation of the Turk. If this process were to be carried to its logical conclusion it might be possible to find that towards every item in the Allies' war aims one country or another held that, provided its own aims were satisfied, it would not wish to go on fighting indefinitely for the attainment of an object which appealed almost exclusively to an Allied nation. In the face of this *reductio ad absurdum* it is necessary to get back to first principles. The Allies are fighting for the establishment of peace in Europe on lines which offer the greatest promise of permanency, and these include the defeat and elimination of German militarism and the right of self-determination for small nations.

When from broad principles the discussion turns to details affecting distant frontiers, it is plain that the knowledge of the man in the street is unequal to the task of determining in regard to every single point what is or what is not essential to the achievement of the Allies' fundamental war aims. It may be well, therefore, to review from time to time all that the Allies have yet to attain before their purpose is fulfilled in those regions which are more remote from the everyday thoughts of the average Englishman. Only within the last few months have the first steps been taken towards a settlement of the Near Eastern question by the efforts made to bring about an understanding between Italians and Southern Slavs. Here, indeed, is a point that does not depend on the course of events in the field. As Germany's designs in the Near East and beyond have been one of the underlying causes of the war, and as her action during the struggle has been directed towards consolidating her power in these parts, it must be an axiom of the Allies' policy that some barrier has to be interposed between the Central Powers and the expansion of empire on which they rely for the attainment of world-domination. This barrier is to be formed preferably by a federated Balkan Peninsula, but an indispensable nucleus has to be provided by Roumania and the future Southern Slav State. The function of resisting German pressure from the north can only be performed by States that promote their own material development, free from the necessity of having to defend their national interests against aggression from without. But until the Southern Slav State has been carved out of Austria and its relations and boundaries with the new Italy duly regulated, South-Eastern Europe will only have changed one source of friction for another. For nearly three years this question has been allowed to prejudice the well-being of the Alliance, but there is reason at last to suppose that something in the nature of an agreement is being reached by the two parties. If there is no half-way house for the Allies between victory and defeat, what hope is there of finding a mean for the subject Slav peoples in Austria between freedom and a subjection intensified by the war and rendered the more intolerable by the recollection of hopes raised and dashed to the ground? It is impossible that Serbs, Croats, and Czecho-Slovaks should be left permanently at the mercy of the Austro-Hungarian authorities. But their fate will not be worse than that of the Roumanes in Hungary, for whom also the failure of the Allies to achieve victory means defeat with all its penalties. In other words, the very causes that fired the present conflagration will remain in the heart of Europe, biding their time when they will be able to plunge the Continent once more into a disastrous struggle for the vindication of the rights for which the Allies have declared that they are fighting.

It is the duty of everyone to reject any narrow interpretation that limited knowledge or war-weariness would tempt him to impose on the Allies' war aims. Let all realise that, while some claims may lend themselves to adjustment in the light of higher considerations, they cannot, in the interest of the peace of Europe as a whole, affect to ignore any claim because it appears at first sight to have no monetary equivalent to bring it into relation with the weekly or daily cost of the war. The removal of any cause of friction that is capable of plunging Europe once more into war is well worth the prolongation of the struggle. For this reason as much attention must be paid to Jugoslav-Italian relations, to the questions at issue between Bulgaria and Serbia, and to the attitude of the British Dominions on the subject of the German colonies, as to the restoration of Belgium or to the integrity of France. Apart from the justice of this point of view we may commend the more material consideration that a people free to work out its own salvation, and inspired by a national instinct, is going to play a far more useful part in the world's progress than one which is condemned to labour under a sense of injustice and repression. Not only will the Great Powers of the Alliance have to secure the political settlement of the Near East, but they will also have to ensure that the different States are in a position financially to carry out the work of reconstruction, with some prospect of paying their way in a short space of time. Let war aims or peace terms, then, serve their purpose in enemy countries, but the Allies must hold fast to first principles and refuse to sheathe the sword until they have secured for the world a reasonable basis for a lasting peace.

AN EGYPTIAN REFORMATORY.

BY COLES PASHA.

Prior to the war penalogists throughout the world were devoting a good deal of attention to the question of habitual offenders, endeavouring to find some more rational treatment than that afforded by the ordinary procedure of criminal courts and repeated sentences of imprisonment. The International Prison Association, which was formed in Switzerland, collected a vast amount of literature on the subject, and papers were read and discussed at every Prison Congress without apparently coming to any very definite conclusion. The American reformatory treatment, as exemplified in the Elmira establishment, near New York, found many enthusiastic admirers, but there were not a few, especially amongst the general public, who argued that since the days of the prison reformer Howard the swing of the pendulum had already carried us too far on humanitarian lines, and repression was what was required, not reformation.

As head of the Prisons Department in Egypt the problem was ever before me, and, owing to a very efficient "Bureau of Antecedents of Criminals," assisted by finger prints, the data at my disposal was very complete, and enabled me without difficulty to classify and segregate on admission any old offender. For these prisoners there was a distinctive dress, cellular confinement, harder labour, fewer visits, a longer period of imprisonment before release on conditional liberty, and, generally, prison life was made as irksome as possible. But I found that, notwithstanding all my endeavours, the number of prisoners with previous convictions steadily increased, and it became evident that some other form of treatment must be devised to cope with the evil. I may here state that I was not very sanguine as to the efficiency of reformatory treatment when dealing with hardened adult offenders, but my frequent inspections of the Black Gang (habituals were dressed in black) showed me that amongst these offenders were included the physically incapable, the mentally deficient, others who were clearly addicted to drugs, and possibly some who had lapsed into criminal ways for want of sufficient moral and material equipment to keep straight. I felt that some of these might respond to reformatory treatment. It seemed, therefore, that a further classification was required, and some means must be found for earmarking those who were professionals by choice and not of necessity. The majority of the professional class were, in my opinion, incorrigible, irrespective of whether their treatment took the form of reformation or repression. For those whom civilisation did not allow to be quietly removed from the face of the earth, "Detention during his Highness's pleasure" appeared to be the only alternative, if the community was to be protected from their depredations. But although this was the conclusion I had arrived at, it was no easy matter to persuade the Egyptian Government to make the necessary provision in the Code. The Judiciary, too, had to be convinced. as anything in the shape of an indeterminate sentence does not, as a rule, find many advocates amongst Judges, and the Egyptian Bench was no exception. Benevolent neutrality was all I could expect even from my personal friends, and I saw that, if my proposal was to be accepted, I must create a more favourable atmosphere all round.

I made up my mind, therefore, to commence operations with ordinary sentenced prisoners. If afterwards I found that the scheme was likely to prove a success, I should be in a stronger position to satisfy the Judges and get the Ministry of Justice to make the necessary change in the law. I accordingly collected in one of the prisons a number of old offenders who had been sentenced to two years and upwards, and subjected them to a reformatory treatment on the lines I had worked out for application later, should I succeed in getting the necessary modification in the Code accepted. As far as one could judge the experiment proved entirely successful, although there was no special inducement to offer the prisoners, I mean as regards early release; all I could do was to relax discipline and grant other amenities to induce them to make a special effort and benefit by the teaching offered.

After the second year of treatment on these lines I found that I was in a position to give the Judicial Bench an object-lesson, and accordingly invited some twenty of the Assize Judges to visit the establishment and see for themselves what had been accomplished. The happy thought also struck me to provide a lunch in the train on the way down! Whether it was the lunch or my powers of persuasion I cannot say, but from that visit there was no longer any opposition on the part of the Bench. The necessary modification in the law was made, and the only difficulty I afterwards experienced was to find accommodation for the steady flow of habituals each Court of Assize sent to the establishment.

I will now proceed to describe the scheme as accepted and the result attained up to the date when I left Egypt in 1913. In the first place, it was necessary to define an "habitual" who could be sent to the establishment on an indeterminate sentence. It was decided that an offender who had undergone two sentences of imprisonment of one year or upwards or three or more terms of less than a year for certain offences was an habitual, qualified for an indeterinate period of detention, should the Courts think fit, the sentence not to exceed six years or, in case of reconviction, ten years; release within that period to rest with the Minister of Justice on reports as to conduct and proficiency in any handicraft taught at the establishment, the said reports to be made by a Board of Visitors, the idea being that the average habitual by good conduct and aptitude would be in a position to claim release after four years.

It was considered that within this period, with the special treatment which the habitual would receive, the authorities would have ample opportunities of reforming certain individuals and classifying others as mentally or physically incapable or incorrigible, as the case might be. The question of the future treatment of the mentally or physically incapable was left for consideration later. The further detention for another period of ten years, if reconvicted after release, was a special provision for the incorrigibles. In their case there would be no further attempt to reform; should they be reconvicted, they would simply be detained, and as they would have acquired a handicraft during their first incarceration, they would be in a position to earn their subsistence, an undoubted consideration for the State.

For each of the "habituals" committed to the establishment, in addition to the criminal antecedent furnished by the police, a special dossier was prepared. In this dossier an endeavour was made to get a complete life-history of each individual prior to his committal. He was also thoroughly overhauled by both the medical officer of the establishment and principal medical officer of the Department, to ascertain what physical and mental ailments (if any) existed. The "habitual's" "reformatory history" then commenced by his being kept in cellular confinement for a period of probation, one year or nine months, dependent on his conduct and progress as a craftsman. The utility of this period of probation was not recognised by some of the "visitors," and may also be questioned by the readers of this article; but personally I attached great importance to this period of cellular confinement. In the first place, on account of its repressive character as a punishment, and again on account of the opportunities it gave the officials of the establishment of studying the habitual's character and aptitude. It was, too, so cordially disliked by the inmates; thus it encouraged them to make a special effort to reach the association stage.

Whilst in cellular confinement the habituals were

constantly visited by their instructors, and spent also one hour in school. There was also one hour of exercise, which consisted in working the capstans of one of the many pumps required for water or draining. Their time was, therefore, fully occupied. Each individual received a small weekly stipend, which was increased at each stage of advancement; good conduct and school proficiency also carried with it pecuniary reward. Stars on the "Libdahs" (caps) indicated the class reached in the school, and stripes on either arm, conduct and proficiency in their respective crafts. Stripes on the breast denoted the number of years spent in the establishment. There were also black, blue, and white cotton garments worn by each class. It was, therefore, easy to distinguish the progress made and to what extent each individual was working out his own salvation. But the dossiers showed the official record, and the result of the half-yearly examinations made by inspectors who were not connected with the establishment.

If desired, half of the weekly wage was paid in tokens and half was banked pending release. These tokens were accepted at the canteen, where small luxuries could be purchased by certain classes to vary the monotony of the regular prison ration.

(To be continued.)

CORRESPONDENCE.

SERBS AND SERBIANS.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—A correspondent in your issue of to-day asks for sustantives formed from the root *Srb* which differentiate between "the inhabitants of Serbia" and the Serb race in general. A man of Serb race is a *Srbin*, or *Srbljin*. A Serb who is a native of Serbia is a *Srbijanatz*. The term *Srbin* includes also anyone of the Serb Orthodox Church. Thus an Orthodox Slav peasant of the Sanjak of Novi Bazar, while it was still Turkish, would say, *Ja sam Srbin*. A Moslem peasant of the same race would say that he was a Turk. The Montenegrins call themselves habitually *Srbin*. Never *Srbjanin* or *Srbijanatz*.

That ever since I have known the two lands (and my acquaintance dates from 1900, including long terms of residence) there was increasing friction between the two Serb States is unfortunately true. The root of the whole was that while each was in favour of the union of the Serb people in one State, each intended to be "top-dog." In Montenegro there were three parties: one in favour of a Great Serbia ruled by the Petrovitches; one in favour of an alliance with Austria; and one in favour of a Great Serbia, either as a republic or ruled by the Karageorgevitch dynasty. As Montenegro is but a small State and was further weakened in 1913 by the inclusion of many alien and inimical elements, this diversity of opinion did not make for strength. From long experience I would suggest that it is useless for any outsiders to attempt to meddle with matters which are purely internal affairs of the South Slavs. Of one thing only can we be certain, and that is that the inclusion in a South Slav State of any inimical elements, whether they be Macedonian Bulgars, Albanians, Moslem Slavs, or recalcitrant Montenegrins, will not make either for peace or stability. Frontier drawers, please take note.—I am, etc.,

February 15, 1918. M. EDITH DURHAM.

"THE ENTENTE AND THE ALLIES OF GERMANY."

TO THE EDITOR OF "THE NEAR EAST."

Sir,—In a letter attacking an article of mine in last month's *Contemporary Review* your correspondent, Mr. D. Janitsch, accuses me of disloyalty to Serbia. I must once more protest that the course I advocated was exactly the opposite. The cause of Serbia, where I have made countless friends and spent happy holidays, is probably dearer to me than it is to her newest and noisiest advocates.

Bulgaria's co-operation was a matter of sheer military necessity. It would have secured what Serbia desires, and cannot otherwise get. It embodied, therefore, the true loyalty to Serbia and to all Germany's enemies through the effective barring of Germany's gangway to the East. That policy, alas! has been vindicated by events. Its adoption was prevented by the would-be friends of Serbia, who thought more of pleasing the Serbians than of ultimately benefiting them. I felt the same desire to please all the more keenly because I was with the Serbians at Kragujevatz at the moment of their glorious triumph in December, 1914. But that sentiment seemed to me shallow and disloyal. Since the great disaster of 1915 the Great Serbia became impossible of realisation. But the "Easternist" school of amateur strategists, in their excited (or cynical) desire for Serbian aid, misled the Serbs and their warmest friends. Serbia's army was then sacrificed when the possibility of realising its dreams had already been lost. It is a question not of honour *versus* disloyalty, but of true honour expressed in deeds *versus* the false honour of fruitless words.—I am, etc.,

NOEL BUXTON.

House of Commons,
February 20.

"THE NEED FOR SELF-RENUNCIATION."

TO THE EDITOR OF "THE NEAR EAST."

Sir,—Under the above heading, in the issue of the *New Europe* of February 7, Dr. Ronald M. Burrows, intentionally or unintentionally, holds British war motives and war aims up to ridicule. Through an amazing appreciation of Messrs. Chicherin and Trotski he denounces the British Government as having made itself the sneer of the Bolsheviks and of the Allied and neutral Press for having departed from the principle of a war of disinterestedness to that of a war of conquest, as shown by the secret treaties with Tsarist Russia and Italy in 1915, and, presumably, by the Salonika, Gallipoli, Palestine, and Mesopotamia offensives. "It made us a willing party to the looting of Asiatic Turkey." . . . "We entered the war with no standing grievance, with no wrong to redress," . . . and so on, to the injunction that whatever happens no territory must be added to the British Empire.

The confusion of cause and effect, the belittling of the honour of his own country in the process, seem to call for some protest.

We can overlook Dr. Burrows' anxious solicitude for a personality like Trotski, whose part seemes to be to enable Germany to force Russia to declare war on the Allies, and especially on the British Empire. But his accusation that the Anglo-Russian and Anglo-Italian secret treaties on the subject of Constantinople and Dalmatia initiated a greedy war of conquest is an untruth. At worst they were actions dictated by self-preservation, and this fact is brought out by the readiness since shown to reconsider the terms. One asks, Was the British Government, militarily unprepared, to confine its defensive to the reconquest of Belgium and North-Eastern France, and to let Serbia, Egypt, and India be trampled under the heel of the Hun? Had the British Government obligations and duties of honour to no one but a Trotski or a Lenin yet unearthed? If the whole gamut of British statesmanship at the end of 1914 was in error, can any honourable critic affirm the errors to have been born of greed and loot? What becomes of the Allies' chief war aim, the achievement of lasting peace for the world? How overjoyed will be that remnant of Armenian blood which yet flows in living veins, how delighted Jewry, the stricken Syrians, the Asiatic Greeks in their caves and cellar-holes! Further, what of Dr. Burrows' own fellow-countrymen, who doubtless know quite as much about Germany's activities in the Pacific and in Africa as he does of conditions in Dalmatia? And all this, why? Because "We ought to have known that Mr. Trotski was already an important person before the revolution."

Is this banality or worse?—I am, etc.,

A BRITON.

THE PRESS ON THE NEAR EAST

A New Orientation in the Near East.

The *Manchester Guardian* echoes the views which were put forward a fortnight ago in these pages that the time has come for a concentration of effort in the Near East. It confines its attention to Turkey on the ground that an offensive against that country may conceivably lead to the Turks making a separate peace. It would be better to have to two strings for the Allied bow, and to see that diplomacy is called in to reinforce military measures. The war would never have reached its fourth year, if the Allies at the outset had realised the importance of attacking Germany from the Balkans and with the help of the Balkan States. The *Manchester Guardian* considers that the most fruitful offensive that we can deliver this year will be in the East, and that to this end "all the troops that we can spare, over and above what are necessary for the defence of the positions we must obtain elsewhere,

Digitized by Google

should go to the East." Unfortunately, such a movement predicates a superabundance of shipping. The paper continues:—

In a sentence, we would do this year what the Germans did in 1915 when, after their double defeat on the Marne and at Ypres, they fell back on the defensive in France and turned East. These are questions of high strategy which perhaps do not lend themselves to detailed argument at this juncture, and it is sufficient for the present to register a view of the war which at least deserves consideration. But there is still amongst English people an insufficient appreciation of the greatness of the issues that are being decided in Palestine. This campaign is not being fought at the back door of European ghettos. It is the imposing façade of a new East which we build in order that Liberty may have her matins as well as her vespers.

Palestine is to Asia what Serbia is to Europe—the one the bridgehead between Europe and Asia, and the other between Asia and Africa. The main political object of Germany in this war is the projection of her influence across the Dardanelles to the Persian Gulf. She aspires to the creation of a Germanic Empire or Confederation uniting the new Germany with the ancient Byzantine Empire. At last, after long delay, our alternative policy to this grandiose scheme of conquest has been outlined. It aims at reviving two ancient civilizations, the Arab and the Jewish, and giving them a worthy territorial frame. It is not part of our policy (as it is of Germany's ambitions) to impose our culture on these regions, still less to develop them in the interest of our Imperialism. We are content, and should prefer, to act as the executors of an international will alike in Mesopotamia and in Palestine—the will to freedom, to peaceful and unaggressive development of a great and sadly neglected estate, to a manifold diversity of political progress. If these ideals fit in with our hopes for the future of India, that is not a sign of selfishness, but a testimony to the genuinely liberal and defensive character of our aims in Asia. Our new policy in Asia by reviving the political civilization of the Arab, by bringing to a close the long exile of the Jewish people from nationhood, and opening up a new vista of hope for Persia, may justly claim to be continuing our championship of liberty, law, and the rights of small nationalities in Europe. In some ways our advocacy of these causes in Asia has an even greater efficacy, so many are the echoes that it awakens down the empty corridors of history. The Jewish nation began out of a migration from Mesopotamia into Egypt, and back again by way of Sinai over the Jordan. It is returning to life by the same well-trodden roads. For the first time in history Egypt and Chaldæa are in alliance against the military tyranny of Assyria.

Germany and World Domination.

It is impossible that too much stress should be laid on the importance of the Near East and Hither Asia in the scheme of the world's affairs, and the increased attention now being paid to these regions is to be welcomed in the wake of pacifist endeavours, which, as in the case of Lord Lansdowne's letter to the *Daily Telegraph*, ignored the Near Eastern question. Unless Germany's aims in regard to the Balkans and the Ottoman Empire are kept in mind by Allied politicians, there is bound to be a tendency to emphasise the importance of the right kind of settlement in the West at the expense of the East, which plays an equally weighty part with relation to a permanent peace. The subject is treated from another point of view by a writer in the *Yorkshire Evening Post*, under the heading "Germany and World Domination":—

This war is primarily a struggle for railway systems. Asia and Africa have the beginnings of vast railway systems which want linking up with the European system. Constantinople, Baghdad, Calcutta, and Peking eastward, and Constantinople, Aleppo, Cairo, and Cape Town southward—these are on the main lines or arteries which, when the gaps are filled in, and the subsidiary branches completed, will tap the resources of the whole of the Asiatic and African continents. In Germany their vast importance has long been foreseen. Along these routes the Kaiser, in his dreams, saw his legions advancing step by step to complete world-conquest. This was to be their path of glory, their place in the sun, which they, with their Allies, were to occupy—to the exclusion of all other peoples. This gives the clue to his Balkan and Turkish policies—the formation of the Central European block, in which the German element is predominant, the gradual and irresistible movement southward and eastward through the Balkans, and the permeation of Turkey, which together have been for decades the most disturbing feature of European politics. This explains the financing of the Baghdad Railway, the Kaiser's tour in Palestine, the visit of the Crown Prince to India, and the East African Colonial adventure, which cuts the line from Cairo to the Cape, and has always been the Kaiser's favourite colony. This gives the scope and range of their vast military effort, which, obviously, to achieve success, had to be on a scale sufficient to challenge successfully any possible rival or combination of rivals. Constantinople stands at the point of junction with the European system. Geographically, strategically, and economically, it is the key position, the very corner stone of the Pan-German edifice. Given possession of Constantinople, all roads in the Eastern Hemisphere could be made to lead to Berlin.

The Anglo-Russian Agreement.

An echo of this aggressive railway policy is to be found in the *Kölnische Volkszeitung* of February 7, which devotes a leading article to the subject of the Anglo-Russian Convention of 1907:—

After noting that the Russian Bolshevists now declare that the Convention is null and void as far as Russia is concerned, the German paper asks: "But what of England?" and concludes its article as follows:—"It must also be asked what German interests are involved? When in 1910 the Tsar Nicholas stayed at Potsdam with his Hessian wife on the journey back from her country to Petersburg in order that an interview might take place between himself and the German Emperor, an understanding concerning the mutual interests of Germany and Russia in Persia was also arrived at, having reference to the above-mentioned Anglo-Russian Convention. The result was a definite agreement signed on August 19, 1911, at St. Petersburg. If now the Bolsheviks declare null and void on their part the Anglo-Russian Convention of 1907, German interests as regulated by the above agreement cannot so lightly be put aside. If peace should, after all, be signed with Bolsheviks, it would not be amiss if this point were clearly defined. The chief German interest involved is that of the Teheran-Khanikin railway which was to link up with the Baghdad Railway at Sudidfeh."

Missions in the East.

In the course of a review of the past year the *International Review of Missions* makes the following remarks on conditions in Arabia and Persia:—

The modernisation of Mecca, which is taking place under the new régime, seems to indicate that the isolation of that city from the rest of the world is passing. According to an Arabic journal, 12,000 pilgrims visited the city under greatly improved conditions, and on its return the pilgrimage was pronounced to be free of disease. Notwithstanding the war, work has been steadily carried on in the mission stations of the Reformed Church of America on the east coast, though the work in outlying districts has been hindered. Tolerance towards representatives of western nations, whether political, mercantile, or missionary, has markedly increased, and though no spiritual movement is discernible there is a gradual growth in certain quarters in the small number of sincere inquirers.

In Persia conditions are still very unsettled, and a flood of revolutionary ideas has been let loose. One of the three C.M.S. stations, Kerman, is still closed, but Yezd and Isfahan have been reopened. The native workers have been developed by the time of severe testing through which they have passed. In Persia, as in Arabia, there are encouraging tokens of greater tolerance and wider outlook among the people. In western Persia the food problem is acute. It is estimated that 40,000 persons have been driven from their homes by the war. Relief is being largely distributed by missionaries of the Presbyterian Board (U.S.A.). In eastern Persia the same mission has begun medical work in Khorasan.

Tragedy of Roumania.

To the thinking Englishman the fate of Roumania is almost too tragic to allow him to express his thoughts upon the subject. It requires a robust faith in the righteousness of the Allied cause to feel confident that all will yet be well with this unhappy country. But no purpose is served by shutting our eyes to the conditions under which the Roumanians are existing to-day. Their Allies cannot fail to be impressed with the splendid fight that they are making against the direst conspiracy of circumstances. The *Observer* recently contained a moving article from the pen of Madame Take Jonescu, from which the following extract is taken:—

Roumania's situation is so hopelessly tragic that she may envy even suffering Serbia, who, though at the cost of infinite misery and losses, did succeed in saving a certain number of divisions, to enable her to continue the defence of her cause by the side of the Entente armies. Bolshevik hostility closes the one opening through which Roumania could withdraw her troops, and will also try to involve her in a dishonourable peace. Her 500,000 splendid troops are panting for the moment when they may be free to attack the Austro-Germans. Both King and Government declare their intention to resist all efforts to force them into a separate peace. Complete annihilation may be the only alternative. All sacrifices will, nevertheless, be cheerfully accepted if they finally secure the accomplishment of Roumanian unity. Without that the nation would eventually disappear.

In the agony of their suffering, Serbia and Roumania alike turn their imploring gaze towards the west. Their ears are strained to catch words of encouragement in the speeches of Allied statesmen. With what dismay do they listen to increasingly vague pronouncements as to their ultimate fate, followed by phrases breathing tenderness towards the Austro-Hungarian State! What conclusions can be drawn from the contradictory utterances recently heard? We are assured that "the peoples of Austria-Hungary are to be accorded the first opportunity of autonomous development." Italy's frontier is to be "readjusted" along recognisable lines of nationality. Serbia is "to have access to the sea." "Roumania's national aspirations" are to be fulfilled. But—on no account is Austria-Hungary territory to be interfered with! How is this miracle to be performed? And wherefore this solicitude for the Empire which is responsible above all others for the present world war? The right of "self-determination" extended to the subject peoples of Austria-Hungary would be as empty an offer as in the case of the Russian conquered provinces under German military occupation.

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

Roumania. Feb. 14.

Lord R. CECIL, replying to Mr. KING, said that the treaty entered into by this country on August 18, 1916, whereby the entry of Roumania into the war was secured, was still operative; and subsequent events or understandings had not altered its effect.

A Zionist Commission. Feb. 18.

Mr. RICHARD LAMBERT asked the Secretary of State for Foreign Affairs whether it was intended to send a Zionist Commission to Palestine shortly; if so, what were the objects; and who were the persons appointed.

Mr. BALFOUR: His Majesty's Government have acceded to the request of the London Zionist Central Organization to permit a Zionist Commission to proceed to Palestine at an early date. The functions of the Commission are to investigate the present condition of Jewish colonies in Palestine, to organize relief work, and supervize reparation of damage done to Zionist colonies during the war in as far as circumstances will permit. The London Central Zionist Organization has already submitted the names of Dr. Weizman, Mr. J. Cowen, and Mr. Simon. It is probable that other names will be added to the list, but the matter is still under consideration.

The Future of Albania.

Mr. RICHARD LAMBERT asked the Secretary of State for Foreign Affairs whether Albania was, in 1913, recognized by the Great Powers as an independent State and declared neutral and taken under protection; whether Albania was still regarded as an independent neutral State; whether any undertaking given by, or agreement made between, any of the Allies must be construed subject to Albanian independence and integrity; and whether the doctrine of the self-determination of peoples was applicable to Albania.

Mr. BALFOUR informed Mr. R. LAMBERT that the arrangement come to in 1913, to which Albania was not a party, had ceased to have a binding force, as all the signatory powers were now engaged in war. As regarded the future, he could say no more than that his Majesty's Government would be glad to see the principle of nationality applied as far as possible to this and to other countries, which would have to be considered at the Peace Conference. The greater part of Albania was now in the occupation of the enemy.

RED CROSS FINANCE.

Two facts stand out in the annual report of the Joint Finance Committee of the British Red Cross Society and the Order of St. John for the year ended October 20, 1917, which was published this week. One is that the administration and management of the great work of the Red Cross at home and abroad, during the twelve months under review, involved no direct charge upon the funds subscribed by the public for the benefit of the sick and wounded. The other is that for the first time since the war began the income of the Red Cross during those twelve months showed a deficiency as compared with the expenditure. Thus, while in 1916 the income was £3,064,232 7s. 1d., and the expenditure £1,815,353 0s. 7d., giving a surplus of £1,248,879 6s. 6d., in 1917 the income was £3,474,564 1s. 1½d., and the expenditure £3,672,355 12s. 2½d., leaving a deficit of £197,792 11s. 1d. For the three years ended October 20 the receipts were £8,451,790 17s. 0½d., and the expenditure £7,178,939 4s. 0½d., giving a surplus of £1,272,851 13s.

Last year the management expenses of the Red Cross at Headquarters amounted to £59,190, equivalent to 3.86d., or 1.61 per cent., in the £ of expenditure; in 1916 administration cost £53,064, equivalent to 7d., or 2.92 per cent., in the £ spent.

Administrative costs have, therefore, decreased by, roughly, one-half on the percentage basis in 1917 as compared with 1916, a result largely due to the enormous growth of the societies' expenditure. In dealing with the interest earned by placing temporary surplus moneys on deposit, and their investment in Treasury Bills the Committee state that the amount received exceeds the total sum received during the two years to October 20, 1916, by £40,000. They add: "It is pleasant to be able to record that (with the addition of a special grant by the War Office towards the administration expenses of the Central Prisoners' of War Department) the whole of our management expenses at Headquarters and at our Commissions abroad have been paid out of the interest which has thus been earned, and that every penny of money which the public has subscribed during the year has been spent on the direct succour of the sick and wounded."

With regard to the present and prospective position of the Red Cross funds the Finance Committee say: "At the time of writing this report we are experiencing for the second time considerable anxiety as to the sufficiency of funds to carry on our work. . . . The estimates of expenditure to the end of the current financial year, without allowing for special grants or the inevitable development of certain branches of our work, amount to £2,600,000."

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

The report of the Imperial Bank of Persia for the year ended September 20 shows a very satisfactory position, the net surplus being £85,000, as against £54,200 for the previous twelve months. The directors propose to place £30,000 to reserve, as against £10,000 last year, and to transfer £10,000 to bank premises account, for which no provision was made out of the profits of 1915-16. The dividend, which was 6s. for 1914-15, and 7s. for 1915-16, has been raised to 8s., and the carry forward is practically the same as before at £24,239 13s. 1d., as against £24,277 6s. 10d.

***

Presiding at the general meeting of the Egyptian and Foreign Trust, Sir Alexander Roger pointed out that last year's credit balance—the first since the collapse of the Egyptian land boom—had been improved by £688. He did not, however, venture on any forecast of the future, beyond saying that the company had two or three large holdings in Egypt, one of them being in Sidi Salems. These had been rapidly increasing in value, but he said he dared not prophesy whether this increase in value would be maintained. He remarked, however, that Egypt was probably more prosperous to-day than it had ever been before, and a continuance of this prosperity will doubtless place the company in a much more satisfactory position.

***

With regard to the future of the country, his view is worth noting that the visit to Egypt of so many business men among the troops is bound to have its effect. No doubt this will be the case, since the men will come home from Egypt and elsewhere with an enlarged outlook and a first-hand knowledge of external trade requirements, and it is to this quarter as much as to any other that we must look for the energy and enterprise that will be required if our trade is to expand sufficiently to enable us to meet our post-war obligations.

***

In his notes this week, our Morocco correspondent pays a well-deserved tribute to the civilizing influence of British firms in Morocco before the establishment of the French Protectorate. In addition to doing much to develop agriculture in the country, and to make the natives acquainted with the extent of the foreign market for their produce, he points out that their methods of business "made Englishmen trusted and respected, and awakened at least a doubt whether the old, deep-rooted distrust of intercourse with Europeans as a whole was fully justified." In this respect the firms have merely kept up the traditions that have almost universally been observed since the beginnings of this country's overseas commerce, and the reason why so little reference has been made to this factor in the development of Morocco is no doubt, as our correspondent suggests to be attributed to the innate national dislike for advertisement. But there are cases when this attitude of self-abnegation is not advisable, and Morocco, I think, comes under this category.

***

Emphasis has frequently been laid in these columns on the widely different conditions that obtain in various parts of Morocco, and this aspect is fully borne out by our correspondent, who points out that while Fez, for instance, was almost untouched by civilizing influences before the Protectorate, in other parts of the country excellent order was kept, and it was quite safe for Europeans to travel alone and unarmed. Business in these regions could be conducted without inconvenience, and so settled were the conditions that it was a regular practice to send specie by unescorted caravans from Marrakesh to the coast. The explanation was to be found in the intercourse of the natives with Europeans in the persons of British traders, which led them to understand the necessity for security if commerce was to pursue its normal course, and made them determined to have it at all costs.

***

One of the objects which the British Merchants' Morocco Association has constantly had before it has been to arrange for the registration of British trade-marks in Morocco. Arrangements have now been made with the French authorities by which this can be done in future, and elsewhere in this issue will be found particulars of the procedure to be followed in registering trade-marks in that country. I need hardly say that in achieving this result the Association has secured a great advantage for British traders with Morocco, and one which will mean that they will compete with the representatives of other countries on an equal footing after the war. And that is surely all that is to be desired, for in a fair field British goods may be trusted to hold their own.

***

At the general meeting of the Sudan Plantations Syndicate Mr. Eckstein was able to give a very satisfactory outline of the company's position. Referring to the past season's cotton crop, he said that the results in the Gezireh would have been better but for a shortage of water at the end of the season. The syndicate benefited by the high prices obtainable for cotton; but, on the other hand, shipping facilities had been difficult and rates high. The strength of the cash position of the company is worth noting, the figures, after paying all outgoings since the beginning of the financial year, being approximately £120,000. In view of the uncertainty of the shipping situation, Mr. Eckstein emphasised the need for a strong cash position, owing to the doubt as to how long it would be necessary to hold the cotton in the Sudan.

***

As to the prospects of the current season, Mr. Eckstein stated that the Zeidab cotton area is 3,000 feddans, as against 3,100 feddans the previous year, but with an increased area under cultivation by irrigation from the company's pumping stations. At Tayiba the cotton area is 1,700 feddans, as against 1,800 feddans, and from this station a considerably increased yield is expected. Finally, at Barakat 2,156 feddans are being cultivated, against 2,500 feddans in the previous season, the reason for this reduction being the anticipation of water difficulties similar to those experienced last year. The situation was summarised in the statement that a general survey of the prospects of the present year point to a larger crop, notwithstanding a decreased area under cultivation.

***

Besides making strenuous efforts to establish intimate trade relations with Switzerland, I understand that the Turks are also actively engaged in preparing for increased trade with the Central Powers after the war, no doubt because they are under the impression that it may be wise to have alternative markets at hand in case the Allies are not unduly anxious to resume commercial relations with them. Among the measures under consideration is the establishment of a series of chambers of commerce. So far it is proposed to establish them at Vienna, Berlin, and Budapest, and the scheme will probably be extended to include other leading cities in Germany and Austria. The Turks also have in view a chamber of commerce in Sofia, and a club there for the use of Turkish subjects. This show of enterprise on the part of Turkey is as interesting as it is unusual. Can it be that the Turks have come to the conclusion that the only thing necessary for the revival of their trade is to copy the institutions of other countries?

***

I see that it is reported that the Turks have found coal near the left bank of the Tigris, some considerable distance north-east of Baghdad, and that the coal has been used as fuel for vessels on that river with excellent results. If the report is true, and there is no reason for doubting it, the discovery may be regarded as another instance of traditional Turkish kindness in thus providing our forces with a convenient supply of fuel if and when the time comes for a further advance.

MOROCCO NOTES.

(From Our Own Correspondent.)

TANGIER.

Morocco has of late been brought to the notice of the public in England with some frequency, and its present situation and prospects have become fairly well known. It is perhaps due to an acknowledged peculiarity of national character that in describing the work of development of the French zone by the Protectorate Government comparatively few references have been made to the part played by our countrymen in preparing the ground for such development or to the readiness of a great part of the most important regions of Morocco to welcome order and progress even though these were to be obtained only through European hands. Typical instances of this treatment of the subject have been furnished by the addresses given to various bodies in England by Mr. J. M. Macleod, His Majesty's Consul at Fez.

In this case the fact may have been partly due to the nature of the speaker's personal experience of Morocco which, though very long, has been mainly confined to Fez. Fez is the chief city of Morocco, and carries on, chiefly through native firms with native agents or partners resident in Manchester, an important trade with Great Britain. It has, however, always been a very conservative, even fanatical city, set, until the district between it and the coast was occupied by French troops, in the midst of very turbulent tribes. When that happened it had so far been very slightly affected by the civilising influence of European firms.

British Influence.

No one would wish to criticise Mr. Macleod's enthusiasm at the steps which, wherever the country has been effectually occupied, have put an end to the old form of government which existed for and by the most grinding, all-embracing oppression, or wonder at the pleasure with which he testifies to the great energy shown and the success achieved in giving medical assistance to and improving the conditions of life for the native population, but he does something less than justice to the civilising influences at work long before European intervention, to the native's own leaning, wherever it was given a chance, towards peace and order, and to the ready assistance given by the British colonies to the work of the French Protectorate.

He does indeed mention with warm approval the medical and other work done by British ladies in Fez; all who know of them and their record will more than endorse what he says. But he lays little stress on the fact that it was not only in Fez that similar work has been carried on by British hands for the last twenty years or more in Morocco. Private societies, dependent entirely on their own funds, have for all these years maintained missionary and medical efforts combined in nearly all West Morocco towns.

Mention has already been made in these notes of the part taken by British merchants in developing agriculture and in opening the natives' eyes to the fact that the fruit of the demand for their products was not Morocco's but the world's needs; their influence did much more than that. Few though the number of British merchants was, it can fairly be said that there was not a village in all those districts which to this day produce almost the whole of Morocco's grain output to which their influence did not extend; where their methods of business dealing, their reputation for straightness, kindliness, and respect for Moorish sentiments and traditions had not made Englishmen trusted and respected, and awakened at least a doubt whether the old, deep-rooted distrust of intercourse with Europeans as a whole was fully justified.

Permanent Establishments.

In a minor but still important way British merchants prepared the way for European colonisation by the standard of living and comfort which they showed to be attainable in Morocco. They settled like true colonists to make homes and show that life in Morocco need not mean the sacrifice of comfort, pleasing surroundings, or most of those things which make an English home. To this day the best houses on the coast are British, and it is the gardens and plantations, still unequalled, which the owners of these houses planted and tended, that chiefly give the relief of greenery to the outskirts of the coast towns, and furnish the only convincing proof of what the care and taste of individuals can accomplish in this direction in even the most unpromising sites in Morocco.

Before the Protectorate.

Another point on which Mr. Macleod did not dwell was the extraordinary peacefulness of many parts of Morocco, even when means of keeping order were of the slightest. Between the coast and the southern capital, some hundred miles inland it was, for very many years before European occupation and with rare exception, perfectly safe for Europeans even when alone and unarmed, to travel by day or night.

It is a fact, though it still seems incredible, that every few days a caravan of camels laden with specie left Marrakesh for the coast, and, except on one occasion (which was due to no ordinary robbery but was the accompaniment of an intrigue which led to a change of Sultan) was not interfered with. Everyone knew when the caravan was to leave, and it was perfectly easy to find out what each camel was carrying. There was no escort, the camel drivers were unarmed, there were no patrols or guards of any sort on the roads, and any two armed men could have robbed it in safety and in a few hours have had their booty where no authority could touch them. But no, apparently there was a general feeling that these caravans were necessary to business, that all were more or less, as producers or buyers, interested in maintaining safety for commerce, and no band of robbers ventured to seize the rich prize which passed so often through the country. A great part of the inhabitants of Morocco wanted peace and commerce with Europeans, whom, largely in the shape of British merchants, they knew and trusted, and when their Kaids and agitators would leave them alone they did their best to maintain tranquillity. Potential traders to a man, they knew that law and order was necessary for the pursuit of their chief interest in life, and were more than half ready to accept those blessings from Europeans if their own countrymen failed to secure them.

The Future.

With regard to the attitude of the British colonies towards the new administration Mr. Macleod was content to be frankly critical. Every step taken to improve the lot of the natives, to make the conditions of life better for Europeans and natives alike has been welcomed by all British colonies, and their assistance has been given wherever that has been acceptable and could prove useful. No colony has been readier to fall in with new regulations properly affecting them, to give most liberally money, land, or facilities, whenever appealed to for local improvements, charities, even for objects from participation in which they were excluded, in a word, to play the part of good citizens. Such behaviour is not uncommon on the part of British colonies wherever they may be found. It was perhaps for that reason that Mr. Macleod did not mention it, and instead urged on all British subjects to state their aims with more clearness, abandon their reserve and to strive, if they wished to achieve anything in Morocco, to obtain the goodwill of the French population and administrators, and educate French colonial opinion, which was formed in French colonies and was naturally coloured by that fact.

With respect to the aims of British subjects in Morocco, as these are entirely confined to the quiet continuance of their business lives under the conditions of trade equality which have been the base of all Anglo-French understandings with regard to Morocco, and are sufficiently well known, there would seem no reason for their further discussion.

TRADE MARKS IN MOROCCO.

Arrangements have now been made by which British firms may register their trade-marks in Morocco, whether domiciled there or not, provided they engage duly empowered attorneys to pay fees and sign the "proces verbal de dépôt." The application may be made either by a firm or its attorney in the form of a letter of petition addressed to "M. le Résident Général de la République Française au Maroc." The attorney may be anyone in Morocco—the consular officer, for instance, if he consents to be so—and he must be furnished with (1) the power of attorney, (2) a certificate of registration of the trade mark or marks in Great Britain (visé by the French Consulate), (4) a block of the trade-mark to be registered, and (5) two copies of the trade-mark.

The application must give the full name, business, and address of the firm, and the name and address of the attorney who will act as the representative of the firm for the purpose of registration. As regards copies of the trade-marks, while the colour and texture of the paper are immaterial, the paper must not be less than 18 cm. square, and a margin of at least 5 or 6 cm. must be left for remarks, the space on the left-hand side being for statements by the applicants regarding the goods on which the mark is to be placed, etc., and that on the opposite side for the use of the Registry Office.

The trade-mark can be placed on any number of classes of goods, but the description of the goods or articles on which it appears must be inscribed on the two copies. The fee for registering each trade-mark is five francs. A separate petition it not necessary for each trade-mark registered.

GREAT BRITAIN AND SERBIA.

Future Commercial Relations.

Presiding at a luncheon given at the Ritz Hotel on February 19, to the members of the Serbian Economic and Industrial Mission on the conclusion of their tour by the Federation of British Industries, Sir Richard Vassar Smith, the President, said that general questions of reconstruction ought to be dealt with officially by the British and Serbian Governments, but he suggested the formation of an unofficial Committee, comprising members of the Mission and the Federation, to maintain close touch between Serbian and British business communities with a view to the encouragement of trade between the two countries. They did not forget that before the war Serbia was self-supporting, and there was no doubt that, with the assistance we might be able to give in finance, shipping, and trade, and with her proved industry, intelligence, and perseverance, Serbia would acquire renewed strength and prosperity.

The Serbian Minister, M. Yovanovitch, expressed his thanks for the hospitality accorded to the Mission during its visit. They had come to make known their desires and views and to take counsel with the people of Great Britain and advantage of their experience of industry and commerce, which was the first in the world.

Dr. Djouritch said they had come into direct touch with the most important industries and manufactures of Great Britain, and had seen over fifty different factories. He believed it was known in England that their ideas as to the future of Serbian trade were sound and possible, and that it was realised that they ought to have strong commercial relations with this country. Serbia was able to produce the kind of article England required, and she wanted all the manufactured articles which England could supply better than most countries which supplied her before the war. They wanted an influential British bank to devote its activities to the East, and especially to Serbia, and also maritime communication and transport organisation to carry English goods into Serbia and Serbian goods to Great Britain. He wanted an organisation of British people who would devote their activities to propagating trade between Great Britain and Serbia, including representatives of British trades and manufactures all over the country, with headquarters in London and smaller societies in centres all over England. By this means Serbian commercial aspirations could be developed and her industries, which were ruined by the war, reorganised. The formation of such an organisation would be the best result of the visit of the Mission to Great Britain.

On the proposal of the chairman, it was decided to form a British Committee to work in touch with a similar Serbian Committee to promote active commercial relations between the two countries, and it was announced that Admiral Sir Charles Dundas had promised to be secretary of the British Committee.

EGYPTIAN FINANCES.

Improvement in November.

(From Our Own Correspondent.)

Cairo, January 26.

The State accounts for the month of November, just published, reveal a remarkable improvement in the financial position of the Egyptian Government. Revenue during the month amounted to £E2,713,866 as compared with £E2,251,669 in November 1916, and the respective figures for expenditure were £E2,215,770 and £E2,039,787. For the eight months the total revenue is £E15,018,777 and the total expenditure £E12,586,919 as against £E13,448,733 and £E11,859,354 at the end of the corresponding period last year. There is, therefore, a surplus of £E2,431,858 compared with one of £E1,589,379. To compare properly the two years, allowance must be made for the profits on the ghaffir cess and the excise on sugar, neither of which were included in the corresponding accounts of the 1916-17 financial year. Even deducting those amounts the improvement in the current year amounts to nearly £E600,000.

Revenue Increases.

The following are the main increases in revenue up to the end of November: customs, £E49,296; mixed courts fees, £E105,148; railway receipts, £E190,372; domains, £E114,567; military exemption fees, £E41,440; interest on funds, £E80,138; miscellaneous receipts, £E49,124; extraordinary receipts, £E311,558; and post office, £E23,678. The sole decreases of any note were £E170,017 in tobacco dues and £E41,877 in ports and lights dues. Excise on sugar appears for the first time in the November accounts with £E130,291 and ghaffir tax has brought in £E589,598. It is to be noted that the total amount estimated for the entire year under divers headings is already exceeded in the case of sale of land, domains receipts, assay fees and military exemption fees; the two last named items reflect the great prosperity of the fellahin.

The principal increases in expenditure during the eight months have been Mecca and Medina caravan, £E34,603; domains, £E18,693; the new frontiers administration, £E60,951; education, £E25,733; prisons, £E41,351; irrigation, £E165,285; war office, £E61,819; pensions, £E21,506; agriculture, £E22,733; mechanical service, £E28,274; Cairo Tanzim, £E27,238. Ghaffirs appear for the first time with £E471,362, whilst special war gratuities which are being granted this year stand for £E137,183. Decreases of £E468,281 are recorded in railway, and £E30,264 in provincial administrative expenditure.

It is announced that the consent of H.M. Treasury has been obtained to the issue of the new capital required for the amalgamation of the London County and Westminster Bank with Parr's Bank.

Mr. Jameson Alers Hankey, late of the I.C.S. and of the firm of Messrs. Gellatly, Hankey and Co., ship and insurance brokers, left estate of the gross value of £48,048.

LANCASHIRE COTTON.

Better Market Conditions.

(From Our Own Correspondent.)

Manchester, Wednesday.

The market during the past week has not shown any distinct change; but towards the close the tone has been a little better. After a very slack state of affairs for a couple of months there are indications of buyers being rather more prepared to place orders. The anticipated fall in values has not taken place and there now seems to be a possibility of still higher rates. Of course, much uncertainty exists as to the future course of events, and our customers are nervous as to committing themselves to deliveries a long way ahead. The prospects for supplies of Egyptian cotton do not show much alteration. Users seem to hold rather bearish views, and the spot demand in Liverpool remains poor. An increased business has recently been done in Egyptian yarns for India and certain producers have strengthened their position. A healthy demand is also being met with in fine qualities for Government cloths. The Bolton spinning trade is certainly in a strong position and full rates have to be paid for anything wanted. Shippers of piece goods to Egypt have not been inclined to place orders for distant delivery, but stock lots have been in request. Instances have been mentioned, however, of the re-sale of goods bought for Egypt. An increased inquiry has come through in light fabrics for India with occasional sales in dhooties at comparatively low figures. The China market remains in a poor way; but there are hopes of more activity now the new year is entered. Engagements of manufacturers are getting much more irregular. Quite early delivery can now be given in narrow printing cloths. Home trade continues to do very well, and substantial contracts have again been given out in strong and heavy materials for the Government. American yarns have rather tended to harden in quotation during the last day or two with some increase of business. Export buying in coarse and medium counts has been on a small scale.

EGYPTIAN SALT AND SODA.

An extraordinary general meeting of the Egyptian Salt and Soda Company will be held on February 27 at the company's office, 5, Rue Adib, Alexandria, at 4 p.m., to appoint a director to fill the vacancy caused by the resignation of Sir John Rogers, to appoint two directors to fill the vacancies caused by the deaths of Messrs. Rees and Henriques, and to pass a resolution that article 92 of the articles of association, as modified by the special resolution passed at the meeting on January 12, reads so that the remuneration of the directors shall be £E3,000 per annum, divided as they shall agree, or in default of agreement, equally. A confirmatory meeting will be held on March 15.

ENGINEERING NOTES.

Mines and Forests in Albania.

Albania is at present the only region in the Balkan peninsula with insignificant industrial potentialities. The country is mountainous, and the only sources of livelihood for its inhabitants are cattle-breeding and agriculture carried on on most primitive lines. There is a story which the Albanians humorously relate to travellers who happen to express astonishment at the craggy appearance of their country, that when the "building" of the world was accomplished a great surplus of stones remained, which had to be thrown away somewhere, and as chance would have it they were allotted to Albania. However, in spite of this bad luck, the inhabitants make the most of it, and manage to export annually a good number of horses, oxen, sheep, and goats, as well as hides and wool. Italian and Austrian ports in the Adriatic are their best markets. Poultry-farming is carried on with better success, the income from eggs sent to Trieste alone—before the short-lived reign of the German Mpret—amounting to £20,000 annually. There are however, other natural resources, which, if properly exploited, might transform Albania into a rich State. There are mines of iron, the exploitation of which has never been attempted owing to the lack of public security, and the lignite mines are most important. Some of them are situated twenty to thirty miles from the sea, and a railway could be constructed without much difficulty. But the vast forests afford a ready and easier source of wealth. With very few exceptions, all are quite unexplored, and the transport of wood in logs, etc., from the forests to the sea would be facilitated by the utilisation of the rivers and rivulets which Albania possesses. Some years ago a French and two Italian companies obtained concessions for the exploitation of certain forests in the district of Durazzo and Scutari, but owing to the disturbed political conditions none of them attempted to commence work. And later, just before the Balkan war began, an English company arranged the lease of certain forests in Northern Albania, from which great quantities of railway sleepers could be obtained and brought to Liverpool or London at much less cost than those brought from other countries. So that there is ample evidence of rich resources in Albania.

Anglo-Serbian Trade.

If Anglo-Serbian trade relations have hitherto been comparatively restricted, this may be attributed to a very great extent to the political as well as commercial intrigues and so-called treaties by which Serbia was fettered by her north-western neighbours. Her geographical position, of course, helped these designs, but it must be also admitted that the Serbians have not shown the necessary energy and desire to approach British manufacturers, and thus enable them to see and realise the value of the Serbian market. Consular reports and spasmodic efforts to promote better commercial relations could not secure the desired effect, and thus British manufacturers knew as much of the "ground for business" in Serbia as of any other remote country in the East. THE NEAR EAST from the beginning of its existence has been advocating the promotion of Anglo-Serbian commercial relations, and sent a special representative to Serbia for that purpose, but, unfortunately, the present war broke out suddenly and he had to return. Its efforts for the promotion of such relations have, if anything, increased ever since; and in these columns, in which matters of interest to enterprising engineers, manufacturers, and contractors are dealt with, every effort is being made to give to such firms correct and detailed information concerning the prospects in Serbia.

The Question of Credit.

The question of credit has often been used by Germans as a "bogie" to keep away their competitors from markets in which they were interested, and nowhere has been used so much as in the Near East, as it has often been pointed out in these columns. Unfortunately, British manufacturers have not troubled themselves to find out if the allegations regarding the risks of giving credit in the Near East were true, and how and why the Germans were giving credit in those markets as freely as the native buyers were saying. The result was that the Germans secured the Near Eastern markets to the detriment of their British competitors. It will be, therefore, advisable for the Serbian Industrial Mission to explain the methods of credit that prevail in Serbia for the guidance of British manufacturers. Agricultural machinery will be mostly needed, and if the reorganisation of the Serbian co-operative agricultural societies could be effected as soon as peace was concluded, the difficulty of supplying Serbian farmers with the needed machinery on easy terms would be overcome. It is not, perhaps, well known that Serbia is the only country in the Balkan Peninsula where agricultural co-operative societies were established; they have been, as a matter of fact, in successful operation since 1883. In 1903 there were 228 agricultural credit and savings banks, which in addition to granting loans, bought agricultural necessaries for the agriculturists and farmers. If these banks and societies were reformed, as they undoubtedly will be, British manufacturers will find the secret of the Austrian and German success in the Serbian markets, and the exceptional value of Serbia as a market for agricultural machinery.

Aeroplane Passenger Service.

Aeroplane mail and passenger services are being projected in different countries, and it is considered certain that very soon after the war ends there will be a big development in the use of aircraft for the rapid conveyance of mails. According to reports from the Near East, a scheme for an aeroplane passenger service is being discussed there by an enterprising group of enthusiasts. The idea is for a regular air traffic between the Eastern Mediterranean coast and the Ægean Islands. The scheme is very attractive, since with the liberation of the Holy Land, "a flight to Jerusalem" will be the dream of every native Christian in the Levant. But as regards the financial success of the enterprise there are doubts which its promoters should seriously consider before attempting to carry out the scheme. The island Ikaria, which is the place where Ikaros, "the first airman," came to grief on his flight from Crete, owing to "bad calculations," etc, will be on the line of the proposed air traffic.

COMPANY MEETINGS.

EGYPTIAN AND FOREIGN TRUST.

Future of Egypt.

The fourteenth ordinary general meeting of the shareholders of Egyptian and Foreign Trust, Ltd., was held on February 18, at Dashwood House, 9, New Broad Street, E.C., Sir Alexander Roger (the Chairman) presiding.

The secretary (Mr. H. O. King, F.C.I.S.) having read the notice and the auditors' report,

The chairman proposed "that the directors' report and the annual statement of accounts for the year ended December 31, 1917, be adopted." Last year, he said, they would recollect, for the first time in ten years they had a credit balance in the profit and loss account. This had been maintained and improved by £088. They were entirely dependent for their revenue in this company nowadays on interest and dividends. There were no commissions or underwriting fees in these days, so that the increase was a pure increase in interest yield. As in former years since the war commenced, the auditors' fee had been reduced, and there simply remained in the profit and loss account £4,587, which they proposed to carry forward. As regards the balance-sheet itself, among the inheritances they had from their predecessors on the Board were two or three large holdings in Egypt, one of them being the Sidi Salem land shares, which they would notice had been rapidly increasing in value recently. Whether this increase in value would be maintained he dared not prophesy, but it was perfectly clear that Egypt to-day was probably more prosperous than it had ever been before.

Another reason for its prosperity at present was the presence of British troops there, but he thought there was a feature in that connection which had escaped attention. Among those British troops was a very large number of business men. Prior to the war Egypt was simply and solely a land for tourists and a few business men. To-day it was being invaded by the largest number of business men that ever came to any country, and that was bound to have a very great effect on the country after the war. There was a great deal of talk nowadays of trade organisation, especially in connection with production. There was no use in talking of production unless they had outlets for their productions, and it seemed to him that Egypt should be encouraged and looked after by the business men of the Empire, because, with enormous resources absolutely unscratched, it represented a field second to none in the Dominions. More than ever the future of this country depended on its commercial strength, and in this connection one of the great political aims of the Empire must be to place for ever an impassable barrier between Germany and its aspirations in the East. Standing as it did on the gateway of the East a strong, prosperous British Egypt was essential to the maintenance of the integrity of the British Empire. It was vital to Australia as well as to India, and no effort should be spared by those Dominions, in conjunction with the home countries, to encourage and foster trade with Egypt in every way.

Mr. A. T. Cruickshank seconded the motion submitted by the chairman.

The motion was carried unanimously, and the retiring director and auditors were re-elected.

On the motion of Mr. Reginald Taylor, seconded by Dr. Gerald T. Moody, a cordial vote of thanks was passed to the chairman and directors, and the proceedings then terminated.

SUDAN PLANTATIONS SYNDICATE.

Current Year's Prospects.

The adjourned ordinary general meeting of the Sudan Plantations Syndicate, Limited, was held on February 20 at the registered office, 1, London Wall Buildings, Mr. F. Eckstein (the chairman) presiding.

The Acting Secretary having read the notice convening the meeting and the auditors' report,

The Chairman said:—Gentlemen,—Our annual report, balance-sheet, and profit and loss account having been circulated and sent to all shareholders, we will, with your permission, follow the usual course of taking them as read.

The directors' report gives the number of bales of cotton forwarded from our stations in the Sudan, and, on the whole, the yield was satisfactory. The result in the Gezireh would have been better if the crop had not suffered at the end of the season through a shortage of water due to lack of spares for the pumping stations. The total amount of cotton produced in the Zeidab district was 6,450 cantars, as against 8,362 cantars the previous year. The average yield at Barakat was 3.2 cantars per feddan, and at Tayiba 3.47 cantars, representing a total of cotton produced at the former of 8,008 cantars and 6,237 at the latter station, including Scarto. As you are aware, the prices of cotton have been extremely high during the past season, and your syndicate benefited thereby. On the other hand, shipping facilities have been correspondingly difficult and rates very high.

Dealing now with the balance-sheet, our share capital remains the same as last year, and our debenture capital is also unchanged at £57,000. As mentioned to you last year, our debentures had been extended for repayment to July 1, 1923, but in view of our strong cash position, your board is of opinion that we should now commence gradually to redeem them either by purchase in the open market or by regular drawings. My view is that you should allow us to set aside for this purpose a sum not exceeding £20,000 for this year. The Gezireh reserve account has been increased from £12,000 to £16,000. Creditors in London (£3,016) represents drafts drawn on the London office in June and not presented in the old year. The Sudan figure of £23,906 is represented by £18,430 due to tenants, £795 deposits of our staff, and £4,680 outstanding accounts. On the other side of the balance-sheet you will observe concession and land account has been reduced by about £3,000, being expenses incurred on a land concession we held from the Sudan Government, and which we have now released. General development.—The Zeidab figure again remains unaltered. On the other hand, the Gezireh figure is increased by £3,633, of which £3,070 has been expended at Barakat, chiefly in connection with the pumping installation, and £562 2s. 5d. at Tayiba for canalisation and irrigation. Buildings and furniture, canalisation, and pumping installation remain at the same figure as last year. Agricultural implements are less by £1,000. Ginning factories have been further enlarged at a capital cost of about £1,000. Tug, barges, and boat account is unchanged. All the cotton and seed from our two ginning factories has been sold and realised at the figure shown in the balance-sheet. As mentioned in the directors' report, your syndicate purchased, in joint account with our friends, the British Cotton-Growing Association, Manchester, 2,050 bales of Tokar cotton.

The Financial Position.

Debtors in the Sudan, you will observe, are considerably less than last year. At the end of last year the Zeidab tenants owed the syndicate about £25,000. The amount in previous years was very much higher, and was being gradually reduced every year. We adopted a new system at our three stations in the Sudan three years ago, by which all tenants' accounts debtor at June 30 are being written off annual revenue, any recovery later being placed to the following year's profit. A large proportion of the amount appearing as tenants' loans at Zeidab was incurred several years ago, but in order to put our tenants at Zeidab on a similar footing to those in the Gezireh we have decided to take drastic measures and now write off the whole amount, and by doing so anticipate that we shall get better returns from our Zeidab property. Cash is at the figure shown in the balance-sheet, but you will be pleased to hear that our cash position, after payment of all outgoings since the beginning of our financial year, stands approximately at £120,000 at to-day's date, which you will agree is highly satisfactory. It is difficult to say what shipping arrangements may be possible for this season's crop and how long we may have to hold our cotton in the Sudan, and for this reason a strong cash position is a necessity.

Profit and loss account shows receipts from all sources amounting to £77,420, or £35,400 more than last year. Expenses in London and the Sudan are £26,200, and debenture interest £3,400. Including the amount written off for Zeidab debtors, we have written off the sum of £28,934, as per details shown in the profit and loss account, and have put aside the sum of £4,000 as reserve for Barakat. The final results therefore show a profit of £14,837, which is £11,560 better than last year. From this we propose to declare a dividend of 10 per cent. for the past year, which, after payment, will enable us to bring forward a balance of about £11,000 to the new accounts.

The Outlook.

As regards our prospects for the coming year, the managing director has just cabled us that the Zeidab cotton area is 3,000 feddans, against 3,100 feddans the previous year, but with an increased area under cultivation by irrigation supplied to natives from our pumping stations. Picking at Zeidab is in full swing, and already 3,700 cantars have been received at our ginning works from our tenants, whilst 1,000 cantars have been bought by us from the native growers. At Tayiba the cotton area is 1,700 feddans, against 1,800 feddans, thus showing a slight reduction. Picking has also started, and 2,000 cantars are in hand. We expect a considerable increase of yield from this station this year, probably amounting to about 1,500 cantars. At Barakat 2,156 feddans have been cultivated this year, against 2,500 feddans in the previous season. The reason for this reduction in the area is that in the previous year we were short of irrigation water at the end of the cotton season owing chiefly to difficulties in procuring the necessary spares for the pumping station, and anticipating similar difficulties this year we reduced the area under cotton cultivation. At this station 700 cantars have been picked so far. The yield per cantar promises to be better than last year, and would have been very much better if we had not suffered from a shortage of water at the very beginning of the planting season. A general survey of the prospects of the present year thus points to a larger crop compared with the previous year, and this notwithstanding a decreased area under cultivation. Preparations for the 1918-19 crop are, I understand, well in hand.

During the past summer, as indicated in the directors' report, the Sudan Government sent to this country eminent delegates for the purpose of bringing our agreement with them up to date and also for finding the necessary means for the continuation of the irrigation works in the Gezireh district. I am happy to

say that all our negotiations—and there were a great many meetings—were conducted in a mutually satisfactory and cordial manner, and that both objects were achieved, so that the Sudan Government is in the position of continuing the irrigation works, which, as you know, were commenced some time ago. As a matter of fact, a large body of men are working now at the excavations of the dam at Sennar.

It now only remains for me to state that our valued colleague, Brigadier-General Lord Lovat, is still on active service in France, which prevents him from being present to-day. Our managing director, Mr. MacGillivray, is in the Sudan looking after our interests, which likewise explains his absence to-day. Both Mr. Hannay and Mr. Hutton have again been of the greatest assistance to me during the past year, when important decisions had to be taken. I must also put on record the board's appreciation of the loyal and faithful services rendered during difficult times by our manager and entire staff in the Sudan. I now move "That the report of the directors and statement of accounts at June 30, 1917, now laid before the meeting, be, and the same are hereby, received and adopted."

Mr. D. M. Hannay seconded the motion, which was unanimously carried.

ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Street, Wednesday.

Our market in Egyptian securities was very active during the early part of last week, but has been rather quieter during the last two days, and in a general way there is not much change in prices to report. In Government securities a biggish business has been done in Egyptian Unifieds round 86, and Egyptian 3½ per cent. Prefs have continued to be wanted.

In Bank shares some trifling transactions have taken place in Nationals, which are 1-16 easier at 18½, whilst a fair amount of business has been transacted in Agriculturals, which also record a drop of 1-32 at 6 7-16. There has been some demand for Agricultural Bank Founders round 500, but the absence of sellers has prevented any business being transacted.

Delta Light Railway Prefs have been in persistent demand, and are closing at 6⅝.

In Land shares Aboukirs are 6d. lower at 24s. 3d. Allotments have continued to be wanted round 4¼, but there have been no sellers. In Behéras there has been a good demand for Egyptian accounts up to 14¼, but the price remained unaltered at the close at 14 1-16. Behéras Prefs have improved ¼ to 4½. Delta Lands have continued a dull spot, receding further 7½d. to 16s. on profit-taking. In Egyptian and Foreign Trusts some very fair transactions have been concluded round the unchanged price of 10s. 9d. New Egyptians have again been the centre of a very large business, but are closing unchanged at 19s. 3d. after business as high as 19s. 7½d. Sidi Salems have continued a very firm spot, and are closing fractionally firmer again at 49s. Union Foncières, after some steady absorption for Egyptian accounts, have relapsed 3-16 to 3¼. In United Egyptian Lands some fairly large transactions were done chiefly at 1s. 9d.

In Miscellaneous shares Salts have again improved 1s. 3d. to 40s. 3d., whilst there was a good deal of excitement in Khedivial Mails in the early part of the week; and, after touching 43s., they close 1s. 9d. up at 40s. 3d.

In Greek securities some small transactions have taken place, but the only change in prices is a further advance of 3 points in Greek 5 per cent. "Currant" bonds to 95 at which price some transactions have taken place.

COMPANY REPORTS.

Imperial Bank of Persia.

The report of the Imperial Bank of Persia for the year ended September 20 last states that the profits, after making provision for expenses of management and general charges, income-tax, and bad and doubtful debts, amount to £85,066, which, added to £24,277 brought forward, makes a total of £109,344. From this £6,104, the amount due to the Persian Government in terms of the concession, has to be deducted, leaving £104,240 which the directors have dealt with as follows:—Interim dividend for the year at the rate of 3s. per share, paid in June, free of tax, £15,000; transfer to reserve account, £30,000; bank premises account, £10,000; final dividend at the rate of 5s. per share, paid January 2, free of tax, £25,000; carrying forward £24,240. The balance-sheet shows:—Reserve account, £190,000; notes in circulation, £552,008; deposits, £1,187,774; bills payable, endorsements and adjustments, £1,711,315: cash in hand, at bankers and in transit, £1,175,078; money lent in London at call and short notice, £31,800; Treasury bills, £1,000,000; investments in British and Colonial Government and other securities taken at or under prices ruling on September 20, 1917, £568,346; bills discounted, loans and advances, including adjustments and past due bills and loans, £1,209,787; bills receivable, £336,132. Meeting, Cannon Street Hotel, E.C., February 25, 12.30 p.m.

NOTES OF THE WEEK.

The past week has been rather unusually crowded with events in the Near East, even for these crowded days. First in military importance must be reckoned the capture of Jericho by the British troops. General Allenby's new advance, of which last week's bulletins supplied the first intimation, bids fair to be as successful as his autumn campaign; the enemy appear to have made little real resistance, and, since nobody would suggest that they are demoralised, it would seem that they have planned, or are planning, their defences further to the north. How that may be the future alone can show. But it is curious at this moment to read an extract, published this week, from Mr. Gerard's diary, kept when American Ambassador in Berlin, under date October, 1915: "There is talk now of marching to Egypt."

That particular kind of talk is probably at a discount now, as is also the idea "that Persia will come in under Germany and attack India," which Mr. Gerard notes in August, 1915. Persia still presents many problems, but the British propose that Persia shall be allowed to settle them free of German intrigues. And, incidentally, one means of effecting that has been the Mesopotamian campaign—where we are glad to notice a further advance up the Euphrates this week—which drives a solid wedge between Germany and Persia. Each successive advance by the British weakens German prestige in Asia. Count Hertling appears to show himself rather uneasily conscious of this fact in his speech this week.

Against these two British successes have to be set something gained by the Turks. Their occupation of Trebizond, anticipated last week in these columns, has been duly announced. For two years that ancient city, famous in Greek history and as the dying ember of the Byzantine Empire, had been held by Russia; but the collapse of our Ally and the withdrawal of her troops left its recapture an easy matter for the Turks to achieve. With the Black Sea again open to their ships, and Trebizond in their hands, the munitionment of their armies on the Mesopotamian front will be facilitated. Moreover, it has to be admitted that there is no chance of turning the Turk out of Trebizond at present.

Russia, or rather Petrograd, has provided an amazing spectacle during the last few days, whose ultimate consequences for Eastern Europe it would be idle to appraise. No more abject surrender has ever been made than by Messrs. Lenin and Trotsky; it has been almost too much for British Bolsheviks, although it has found a champion in the *New Europe*. But the surrender has been useless, for the German armies have marched steadily forward. The Russian troops, which were told to resist to the last proclamation, seem to have fled incontinently; there has been talk of resistance in Petrograd, but it is not more likely to materialise than any other of the Leninite promises.

Lenin has advocated unconditional surrender and has carried his point. The negotiations, if that is the right word for dictated terms, which Trotsky will not dare to dispute, even by "a magnificent gesture," are to begin again; the Berlin terms make it clear that Germany intends to annex, directly or indirectly, the Baltic Provinces, to make the Baltic a *mare clausum*—Russia keeps only Petrograd as a port—to suffocate Poland by the creation of German-controlled protectorates on her eastern frontier, and to control the Ukraine. Those persuasive agents of self-determination, the German police, are to remain in the conquered provinces to supervise the freeing of the people from the Russian yoke.

Two other items in the conditions of peace are worth more than passing attention. Russia is to agree to the abolition of the Turkish Capitulations—a matter which obviously does not interest the Bolsheviks in the least, although it has been a vital point in Russian statecraft in the past; and she is further to consent to the restoration of commercial intercourse with Germany, on the terms laid down by Berlin—a matter which may conceivably interest the heads of those Russian businesses which still survive, as well as those who advocate full freedom of trade for Germany. Russia, of course, must accept; if Germany told Petrograd that the procession of the equinox was to be abolished Petrograd would have to agree.

Constantinople will, no doubt, be duly grateful for the penultimate item in these terms, or she would be were it not that Germany is a far greater danger to the Ottoman Empire than ever Russia would have been. But Turkey is a mere satellite at the moment. Already a German paper is discussing far greater schemes, and the domination of the Baghdad Railway is now exchanged for the prospect of dominating the Siberian Railway and so constructing a "Continental League" from Hamburg to Vladivostok, with China the milch-cow of Germany. The scheme is, of course, merely a new and larger edition of Napoleon's great scheme for crushing sea-power by land-power—and the German historians seem to have forgotten their history when they lend countenance to the idea.

Digitized by Google

This scheme for the domination of Asia—for it is nothing less—is obviously far beyond the ambit of Turkey. It presupposes the control of Northern Asia through the Siberian Railway, and the control of Southern Asia through the Ukraine gate into the Middle East. But that in itself implies control of both those great countries, and that control at the present moment implies the restoration of order. It must by no means be taken for granted that this is beyond the power of Germany, even though Austria has rather ostentatiously stood aside. The Bolsheviks and the Anarchists are incapable of real resistance; and it is quite possible that the propertied classes in Russia, or what remains of them, will acquiesce in the German advance so long as it stamps out anarchy, and the murder and arson which have accompanied the anarchy of the past year. But they will not acquiesce a moment longer, and even the Russian peasant, docile as he is, will not enjoy German rule when he realises its permanent meaning.

In other words, Germany may obtain a transient immediate success and an ultimate and permanent failure. But before she realises her failure, her policy may have become definitely oriented towards the East, and it will be too late for her to withdraw. There are signs already of this new orientation. Count Hertling's speech may be read as a bid to the Entente, on the lines that Germany will make reasonable terms, or what Germany considers reasonable terms—which is not quite the same thing—in return for a free hand in the East. He is even willing to talk about Belgium, provided the Entente forget Russia and Turkey.

This conversion is extraordinarily significant, for it implies that the land-power, or Eastern school, have beaten the sea-power, or Western school. In vain does Admiral Tirpitz declare that Belgium means everything to him, and Dr. Solf give innumerable lectures on "Africa and golden joys"; the shutting-off of Germany for three years and a-half from the outer world by the slow, inexorable might of British sea-power has produced its inevitable effect on her policy. It is not for us to advise the enemy, and it would probably place Admiral Tirpitz in deeper disgrace than ever for an Englishman to suggest that he is more nearly right in his conception of world-policy than Count Hertling. But it does, as a fact, seem a rather elementary proposition that German exclusion from Africa, America, and Australasia is scarcely worth bartering against the very problematic profits of controlling Russia in the hope of conquering Asia—where, as it happens, the British and the Japanese already have some considerable possessions and influence.

More extended reference to the position of Roumania is made elsewhere in this issue. Here it is only necessary to note that, according to reports from Amsterdam and Vienna, which are not necessarily trustworthy, the Central Powers have offered Roumania the three southern districts of Bessarabia—Kahul, Bolgrad, and Ismail. Bulgaria, in return, wants her military frontier extended "at least as far" as the Czernavora-Constanza line, while Hungary requires "military securities" along her Transylvanian frontier—which, in the language of German diplomacy, presumably means that Hungary is to hold forts on Roumanian territory. To these overtures, according to the *Neues Wiener Tagblatt*, General Averescu proved himself not very amenable.

Further than this, the Bulgarian Minister of Finance, asking the Sobranje for a war credit of £40,000,000 prior to his departure for Bucharest, stated that he "hoped soon to be in a position to declare that this heavy loan would not be borne by the Bulgarians." No further indication is given as to his meaning, but it would appear that something in the nature of an indemnity from Roumania was hinted at, unless we accept the alternative, that Berlin had again been applied to for an advance.

Berlin, it is officially admitted by the Turkish Government, has also been applied to by Constantinople to relieve its pressing financial necessities; Djavid Bey having stated, in introducing the Budget, that the Ottoman deficit of fourteen millions would have to be covered by financial operations, concerning which he had recently been in negotiation with Germany, who has already financed Turkey to the extent of 200 millions, although the sums actually paid by Germany to Turkey amount only to seventy millions. The balance of 130 millions is no doubt accounted for by the purchase of munitions and other requirements of war in Germany; the terms on which the accommodation has been granted are not stated. But, seeing that Turkey has already given Germany the commercial right to exploit her after the war, she cannot give much more, and it is, of course, becoming increasingly difficult for her to meet her current debt services out of revenue.

Public opinion in Holland appears to be apprehensive as to the possibility of Germany forming an oil monopoly out of the Roumanian supply. That something of the kind is contemplated, which would have serious effects on Dutch interests in petroleum wells in Roumania, seems to be certain. Moreover, it may be remembered that a scheme of this kind was actually in contemplation before the war. Full details are given in Ambassador Gerard's recent book. At that time he managed to defeat the scheme, and somewhat surprised the Germans by his action—they having supposed that the American Government would never put up a fight for the Standard Oil Company, as they ingenuously admitted—but the Berlin monopolists are not likely to take much notice of Dutch opposition. It is suggested by the Dutch that this step makes an economic war inevitable.

England is hearing very little about India just now, and the ordinary newspaper reader is left to conjecture the march of current events from such unsatisfying materials as a report of the Bombay cotton market for the week before last. Let us admit frankly that the ordinary reader takes this deprivation quite calmly. He is much busier than usual, he has many things to think about, and if his morning paper says nothing about India he is not likely to raise the topic, or, if it occurs to him at all, he concludes that there is probably nothing to be said. We are far from blaming this apathy, but it is well that people in India, particularly politicians, should realise its existence, because it marks a change from the conditions prevailing during the last three years, and a change which may have consequences of some practical importance.

After the outbreak of the war India seemed to have come into her own. The timely arrival of Indian troops in the West, and their achievements on this unfamiliar ground, combined with the open-handed loyalty of the Princes to convince home-keeping people that India was a source of strength to the Empire, and, consequently, that India was "all right." This sound, if somewhat vague, impression was strengthened materially by the attitude of India's representatives in the War Cabinet and the Imperial Council. In June last the man in the street was confident that India was "quite all right," and, that being so, he was ready to accept without serious question any proposals which might have been put forward by the Government for constitutional or political reform.

The last few months have witnessed a change in this respect. There is not, we should say, any sign of anxiety on the part of the public; news is sought less keenly than it was, but in its absence the tone of comment is a little less confident than it was. Scarcely anyone took the trouble to study the agitation which broke out so suddenly last summer, but the suggestion of passive resistance has left a bad taste, while in business circles the threat to capital which we noticed recently has not been ignored. The result is that the man in the street is more disposed to be critical; he is not asking for detailed information, he would probably refuse to read it, if it were placed before him, but his attitude at the moment is such that opposition to particular measures of constitutional reform might count on a more patient hearing than it could have hoped for in the summer of 1917.

Digitized by Google

The blame for this change lies undoubtedly at the doors of some of the Indian political leaders. They have insisted on an immediate hearing for their demands, which after all are but mint, anise, and cummin by the side of the weightier matters in which the Empire is now concerned, and they will have only themselves to thank if demands put forward in this spirit are coldly and critically received. The best thing that can happen for India just now is that the representatives at the impending meetings of the War Cabinet should succeed in recovering the lost ground by placing the true position once more before the people of this country, and this they can easily do, provided men of the right type are chosen—the men who came last year, or others possessed of equal qualifications.

The dormant but still unsettled questions connected with the northern frontier of India are recalled by the announcement of the death of Mr. Claude White, whose twenty years of work in Sikkim and Bhutan did so much to prepare the way for an ultimate solution. Tibet and India must finally be friends, but, human nature being what it is, the possibility that they may first be enemies should not be overlooked, and in any case the establishment of cordial relations with two of the three States on the frontier was a necessary step in the right direction. It is characteristic of the country that the main credit of the achievement belongs, not to professed diplomatic or political officers, but to a Cooper's Hill engineer, who was selected for this particular duty, and performed it with consistent and conspicuous success.

The revised manifesto of the Labour Party on war aims is an altogether more satisfactory document than its predecessors; a few more editions, with accompanying revisions and appropriate excisions, will probably bring it approximately up to date as an expression of what the British workman really thinks. We are here, fortunately, only concerned with the Near Eastern aspect of the programme, which is firm on the question of a German evacuation of Serbia and Montenegro. The German Minority Socialists will approve this, but not, we think, the Majority, who have vacillated and hesitated after their usual manner. The Labour Party also desire a settlement on just national lines in the Balkans—which is irreproachable; and they are still in favour of a Customs Union. Why, exactly, the Balkans should be allowed a Customs Union when the British Empire is implicitly denied it, is an unsolved mystery; but there will probably be no serious dispute over its advantage from the Balkan standpoint. There will also be no serious dissent from the proposition that at the present moment, and apparently for some time to come, the ideal will remain the ideal in this distracted region.

As to the African settlement, the idea of an international government of the tropics—was this not Mr. Morel's scheme?—met with such universal reprobation that it is modified, but not entirely withdrawn; it seems to be suggested that a combination of national and international government should be tried. This appears to be precisely the most efficient method of creating friction between the Powers that has ever been devised; but this section is so obscure that it has evidently been the scene of verbal battle; and the unsatisfactory compromise that results, which is extremely difficult to understand, will evidently not stand the next revision of Labour terms.

It further expresses the opinion that Armenia, Mesopotamia, Arabia, and Palestine cannot be handed back to the systematically cruel domination of the Turkish Government—an excellent proposition; but the manifesto proceeds to suggest that, if these countries are unable to settle their own destinies—or rather, "feel themselves unable to do so," which is not quite the same thing—they shall be placed under a Supernational Authority. Frankly, it appears to us that the quickest road to the next war is through the troubles which would arise out of this new super-European Concert, but this is not the place to discuss the very basis of the Labour faith.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, January 27.

H.H. the Sultan.

This week the Sultan gave another State banquet, his guests on this occasion including the Ministers, the Russian, Belgian, French, Italian, Greek, and American Diplomatic Agents, a number of high Government officials, and some of the leading foreign and Egyptian notables. His Highness is taking a great deal of interest in racing, and has twice been present at race meetings since the first occasion some three weeks ago. He invariably attends in State, driving up the course with his picturesque bodyguard, accompanied by the Prime Minister, and during the meetings holds informal levées in his private tribune. On Thursday evening Sir Reginald and Lady Wingate entertained the Sultan at dinner at the Residency, their other guests including Prince Yusef Kamel, Lady Allenby, the Ministers, Sir William and Lady Brunyate, Sir Milne and Lady Cheetham, H.E. Said Zulfikar Pasha, Grand Chamberlain; Miralai Castle Smith, A.D.C. to his Highness; Lieutenant-Colonel J. K. Watson, Military Attaché to the High Commissioner, and the Residency staff. British troops accorded the Sultan military honours on his arrival at and departure from the Residency.

Cholera Precautions.

The Ministry of the Interior has issued very strict and clear instructions to all the provincial authorities with regard to the steps that should be taken to prevent any outbreak of cholera. Especially are persons returning from the east bank of the Suez Canal to be closely watched. Any symptoms of the disease are to be reported at once, and the precautionary measures to be taken are very clearly enumerated. This is an exceedingly wise move on the part of the Government, for, of course, the number of persons coming into Egypt from the east side of the Canal is to-day very considerable, and although there is at present no imminent danger of any epidemic the Public Health Authorities are quite right to leave nothing to chance. It was, indeed, entirely through disregard for the most ordinary precautions that the last serious outbreak of cholera took place in 1902. To-day there is a much larger and more efficient medical staff in the provinces than there was then, and the people generally are more sensible, so that there should be little fear of any disease spreading for the same reasons as those which caused it to spread fifteen years ago.

Palestine Trophies.

A most interesting exhibition of Palestine trophies has been held on the Abdin Palace Square. Specimens of every weapon, Turkish as well as Boche, captured during the recent offensive, were shown, including rifles galore, howitzers, machine-guns, anti-aircraft guns, and miscellaneous equipment and artillery appurtenances. The thoroughness of the Boche methods was illustrated by an Austrian field kitchen or coffee-boiler, which had riveted on its front a plate on which were engraved the most minute instructions as to the manner in which it was to be used. Three aeroplanes—an Albatross Scout and two two-seaters of the same make—two of which had been captured and reflown by the R.F.C., as the markings indicated, constituted a great attraction to the majority of the visitors to the exhibition; but the most interesting exhibits, at any rate from an historic point of view, were undoubtedly two 4.7 long-range naval guns. These guns had been made by the Elswick Ordnance Company as part of the armament of the notorious Turkish cruiser "Hamidieh." They had been taken off that ship and transported overland on Turkish gun-carriages to Gaza, where, by the irony of fate, they fell into our hands.

State Purchase of the Telephone System.

After negotiations which have lasted for over four years the Government purchase of the telephone system

Digitized by Google

is about to be carried through. The telephone system is the property of the Telephone Company of Egypt, which works under a series of concessions granted by the Egyptian Government. The price which the company will receive is £E755,000. It will be paid down in a lump sum, and the Government will take over the existing staff. The proposal has now been submitted to the Council of Ministers, who will discuss it, and, it is hoped, approve the purchase at one of its next sittings. It is not anticipated that the shareholders will raise any objections. As soon as they have passed the scheme the date of transfer will be decided upon and the control of the telephone system of Egypt will, it is understood, be entrusted to the State Telegraphs Department, which forms part of the State Railways Administration.

The Coptic Community.

The elections to the Coptic Meglis Milli were held this week. They should have taken place some three weeks ago, but had to be postponed owing to certain irregularities which occurred during the voting. The Meglis Milli is the body which deals with all the questions of personal status in the Coptic Community, directs all its educational institutions, and looks after its Wakfs in Cairo. The members are elected for a period of five years, and their election has to be confirmed by the Government. As has been mentioned on several occasions in this correspondence, the affairs of the Coptic Community have for some time been the subject of internal controversy, and a great deal of feeling has from time to time been shown by the various parties which have been formed. The main point of contention and cause of dissatisfaction have been the autocratic power exercised by the Patriarch and his supporters, and the interest in the elections centred in the possibility that representatives of what may be called the Liberal party might supplant the Patriarchal clique on the Meglis. Owing to the irregularities which occurred the first time the elections were held, and which there is reason to believe were not unintentional, the proceedings had to be annulled. In the meanwhile, great pressure was brought to bear on the Government by interested parties to persuade them to postpone indefinitely the elections which were already overdue and to renew the mandate of the present members, most of whom were partisans of the patriarch. But the Government refused to entertain this suggestion. The elections were ordered to be held this week, and the Ministry of the Interior took very extensive measures to ensure that all the legal forms should be observed. Everything passed off quietly and smoothly, but at the time of writing the result of the voting is not yet known.

A Diplomatic Wedding.

An interesting social event took place on Saturday, when Mlle. Ivonne Defrance was married to Brigadier-General G. D. Clarke, D.S.O. Mlle. Defrance is the charming daughter of M. Defrance, who for several years has ably filled the post of French Diplomatic Agent in Cairo. She has taken great interest in all war work carried out in Cairo on behalf of the Allied troops, and her popularity with all communities has been evident in the pleasure with which the news of her forthcoming marriage was everywhere received. The chapel of the Collège de la Sainte Famille, where the marriage was celebrated, was crowded with prominent European residents and Egyptians, the assembly including the High Commissioner and Lady Wingate, Mahmoud Pasha Fakhry representing the Sultan, the Ministers, and the Diplomatic Corps.

THE PALESTINE CAMPAIGN.

THE CAPTURE OF JERICHO.

The western flank of our Palestine army was secure to the extreme limits of Judæa—the River Aujeh—by the middle of last December. In the successful advance which came as a rebound from the Turks' attack immediately after Christmas General Allenby's position in Jerusalem was made secure to the north. Only on the east the enemy remained near enough to give trouble, and their line of defence appears to have been one of great strength. This has now been all altered to our good by a most successful three days' advance last week through the Wilderness of Judæa—on a front of twelve miles—down over 3,000 feet to Jericho and the Jordan. Not only has the bridgehead been secured, but also the western bank of the Jordan and the line of its tributary from the west, el Aujeh, from its source to the Jordan. This Aujeh must not be confused with the other river of the same name north of Jaffa, the successful crossing of which on December 20-21 is so graphically described by Mr. Massey in the *Daily Telegraph* this week (February 27).

This completes the conquest of what somewhat vaguely we may describe as Judæa, the two Aujeh rivers being, roughly speaking, the dividing lines between Judæa and Samaria on the coast and in the Jordan valley respectively.

It is very satisfactory to learn that, though the Turks appear to have put up desperate rearguard actions, our losses in the advance have been relatively small.

The Wilderness of Judæa.

The district known as the "Wilderness of Judæa," lying between the central mountain plateau and the Dead Sea and Jordan plain, is an extraordinary belt of country which, except along the Jerusalem-Jericho carriage road, is very seldom visited by even residents in Palestine. It is a wild and rugged land, exceedingly dry and barren most of the year, and entirely destitute of any settled villages or towns. No sooner are the cultivated fields of the line of border villages—all but a very few miles off the water-parting—passed than there is a rapid fall to this land of sterility and drought. It is dry because the moisture-laden air, which has yielded its rain as it ascended for the coast, in rolling down these slopes contracts, and so not only gives up no moisture, but actually becomes moisture-absorbing. It is true that, from time to time, when sudden heavy showers fall on the mountain plateau, great floods of water tear down the usually dry torrent beds, sweeping all before them. I have known the water, in endeavouring to pass under the narrow arches of some of the bridges on the Jericho road, to be piled up ten or twelve feet high, and to sweep over the top across the road, carrying the coping-stones with it, and yet in a very short time—less than an hour—all sign of running water had gone. Bedawin and their cattle have been carried away and drowned in these circumstances in wadies in which there is water but a very few *hours* in the whole year. But though the rain is at rare intervals a danger, and when it comes makes the hillsides greasy and slippery, this is a region where normally the want of water is the greatest trouble. The dry heat in the summer months is tremendous when riding in the sunshine; there is no kind of shelter, and the steep-rounded hills afford little or no shade. I well remember one occasion when during our ascent of the steep and rugged road from the Ain Feshkhah Oasis, at the north-west corner of the Dead Sea, our baggage mule rolled over the cliff a considerable distance, so that our water-bottles were broken and the contents spilled. We had one small orange among four, and our lunch consisted of sardines and very dry bread! Perhaps the reader can picture how enjoyable that lunch was, although we had had no food since long before daybreak! After this came hours of riding across the sun-baked plain of El Bukaa and upwards into the mountains. At length, to our joy, we caught the tinkle of bells, and we came

Digitized by Google

across a Bedawin with some goats. Freshly milked goats' milk is good, but never was there such a draught as we had. Thence onwards on all the way until we were close to Jerusalem not a drop of water did we find.

From Jerusalem to Jericho.

The scattered Bedawin pasture their flocks here in spring and early summer when there is a thin coating of herbage on the chalky hillsides. They have made life possible by constructing a few reservoirs—carefully guarded—in places either in the torrent beds or hillsides. Although this district borders all the mountain region of Judæa on the east and presents its wildest and most rugged features further south, the region through which our advance has been made lay between the Wady en Nar in the south and the Wady Kelt. It is a land avoided by the native traveller not only for its drought, but also because it is a well-known haunt of robbers. The parable of the Good Samaritan is rightly located in the district from Jerusalem to Jericho. The road itself has been the scene of frequent robberies annually, while off the road no traveller is safe. An ancient highway runs from the Wady en Nar, that wild gorge which runs from Jerusalem to the Dead Sea, near the Greek Desert convent of Mar Saba, through the plain el Bukaa and enters the Jericho plain through the Wady Kuneitrah. Upon this road lies Jebel el Muntar, 1,725 feet above sea level and 3,000 above the Dead Sea, from the near slopes of which a magnificent view of the whole "wilderness," with the Dea Sea and mountains of Moab beyond, is obtained. This is supposed to be the mountain Zuk, down which the Jewish priests annually threw the unfortunate scapegoat, when once, to their dismay, the victim returned to Jerusalem. From here the path passes an open reservoir, dry in summer but full of thick, chalky water in the spring, and known as Bir Umm el Fas, and a further descent brings us into the Bukaa. This is an open plain some five miles long and two or three wide, now a mere streteh of stony barrenness, but in places showing traces of former habitation, some walls, indeed, suggesting that under happier climatic conditions, there were vineyards there. To the south-west a lofty and very prominent hill rises some 1,000 feet above the plain, on which are ruined fortifications, known as Khubet Mird. Here stood the guardhouse of the high roads in Byzantine and in Crusading times, known then as Mons Mardis. Cisterns and aqueducts remain to testify to former occupation. Our army cleared all this region, advancing from Mar Saba; some troops, doubtless passing from here eastward, must have secured the important Nebk Feshkhah oasis by descending the steep Nebk Feshkhah. Everywhere here the last descent to the Dead Sea is very steep, in places quite precipitous for hundreds of feet. One attack along these routes, made by Australians and New Zealanders, threatened the enemy in the rear, and must have substantially contributed to his hasty retirement.

The British Advance.

The main opposition stretched each side of the Jericho roads. Two roads—one a new carriage road and one a good mountain path—run, south of the old carriage road to Jericho, to the Moslem shrine of Nebi Musa, close to the last descent into the Jericho plain. Nebi Musa is the traditional tomb of Moses. This shrine is visited by thousands of pilgrims at Eastertide, but during most of the year is more or less deserted, and its vaults and reservoirs are visited by lawless bands of Bedawin. The roads mentioned run each side of a lofty mountain known as Jebel Ekteif—nearly 1,000 ft. above sea level. This massive hill, which has an almost precipitous southern side, was defended with desperation. North of this the old Jericho road crosses an equally high ridge, called Talaat ed Dumm. At the highest point of crossing lies the "Inn of the Good Samaritan," a kind of khan, and north of this is a ruined mediæval castle with a deep rock-cut moat. This dominates the country all round; indeed, it was built as a guardhouse for the road. After a heavy preliminary bombardment, our London troops attacked at daybreak on the 19th, and after heavy fighting they captured this dominating point.

North of the Wady Kelt heavy fighting occurred the day before, both about Ain Farah, in the southern tributary of the Wady Kelt, known as Wady Farah, and to the north of the northern tributary, the Wady Suweitat (known as the Pass of Michmash. Here at the lofty Ras el Tawil (mentioned as the scene of a skirmish some weeks back) the Turks were shelled out of their positions, which were occupied by a column of our men from Mukhmas. The same day the high ridge between the Jericho road and the deep Wady Kelt about Arak Ibrahim was occupied after very stiff fighting. All this made possible the successful capture of the main defences to the south along the line Muntar-Ekteif and Talaat ed Dumm on the 19th.

Jericho.

The next day (the 20th) mounted troops entered the "City" (as some newspapers call it) of Jericho. This is not the Jericho of the Canaanites and of Joshua, which lay to the north-west, nor the site of the magnificent city of Herod the Great, which lay due west, but the present squalid village of Eriha—on the north bank of the Wady Kelt—is on the site of the Jericho of the Crusades. It consists of four second-rate hotels, a Russian hospice, a mosque, a few native shops and some hovels. Nevertheless, there is beauty in beautiful watered gardens and cornfields around, and the wide view of plain and mountain; and the whole region is one of the greatest latent fertility. The Jericho of early days occupied a "tell" or low hill near the great fountain Ain es Sultan (Elisha's fountain), near the Western Mountains. The site has recently been excavated and the foundations of its once powerful walls exposed. This city guarded the ancient high road into the mountains, up which Joshua led the Israelites, by the fertile oasis land around Ain Duk. This copious fountain is one of the sources of the little river Aujeh. The district is one of rare fertility, and the schoolboys I knew in Jerusalem used to consider it one of their greatest pleasures to be allowed to go fishing in the little stream. Doubtless many of our men will be doing the same. After the cold and rain of Jerusalem, and the misery of the wilderness, they and their fellow soldiers at Jericho and on the Jordan will be luxuriating in the warmth, sunshine and green verdure around them.

We have now a secure right flank, and there lies before us the level western side of the Ghor, up which progress should be far easier than along the rough mountain plateau in our further conquest of Samaria. In clearing out of this district the Turks have had to abandon their organisation for the supply of their army by boat by way of the Dead Sea. Their pier at Rejum el Bahr—where some years ago there was a small island which is now quite submerged—they have destroyed, also one or more of their boats, and they have had to burn a good accumulation of stores.

E. W. G. M.

CZECH POLITICAL PARTIES.

The Czech Press Bureau states that four Czech nationalist parties (the Young Czechs, Realists, Radicals, and Moravian Progressists) have joined as a single party under the name of "The Czech Independence Democracy." The President of its executive is the former Young Czech leader, Dr. Kramarz, who was sentenced to death in 1916, but released in July, 1917. The Executive Committee of the new party includes all the leaders of the former four parties, like Dr. Stransky, Sokol, Dr. Herben, V. Dyk, and others.

In their proclamation published by the *Narodni Listy* of February 10 the Executive declared that "the chief aim of the new party will be to struggle through a common national effort for the creation of an independent Bohemian State, the fundamental territory of which would be composed of the historical and indivisible Crown-lands of Bohemia and of Slovakia. The Bohemian State will be a democratic State. All its power will come from the people. And as it will come from the Czech people it will be just towards all nationalities, towards all citizens and classes." In a speech to the Young Czech party before its dissolution, Dr. Kramarz, formerly the most moderate and opportunist Czech leader, openly declared that "at the moment of the outbreak of the war it became quite clear that, despite all tactics of opportunism, our party remained true to the programme of Czech independence. It became at once clear to all of us that the chapter of the 'loyal' policy was for ever closed for us. We felt with our whole soul that the Czech nation would not go through the sufferings of the world war only to renew the pre-war tactics of a slow progress towards that position to which we have full historical rights as well as the natural rights of a living and strong nation. . . ."

ROUMANIAN NOTES.

(From a Correspondent.)

Bessarabia.

The Roumanians of Bessarabia formally proclaimed on December 19 the autonomy of the province, which is to be known as the "Moldavian Republic." The Act of Proclamation was passed by a Provisional Assembly of 150 deputies, of which 105 are Moldavians (forty-four soldiers, thirty peasants, etc.), fifteen Ukrainians, thirteen Jews, five Bulgarians, one Greek, one Armenian, one Pole, etc., etc. This Assembly is to form the supreme authority of the new Republic until the meeting of the Constituent Assembly, which is to be elected on universal, direct, equal, and secret franchise, with proportional representation.

The Proclamation lays down the fundamental points of the constitution of the Republic. All the land is to pass into the hands of the peasants without compensation to the landlords. Full freedom of the Press, of speech, of creed, of opinion, of association, of meeting, and of strike are assured. The inviolability of the person and of the home are proclaimed, as well as the complete abolition of capital punishment. All the peoples living in the territory of the Moldavian Republic are to enjoy full equality of rights, with cultural, national, and personal autonomy. Education is to be organised on a national and autonomous basis for all the peoples in the Republic. An army composed only of Moldavians is to be organised forthwith. The last paragraph enjoins upon the Assembly "to take steps for the immediate conclusion of peace without annexations or indemnities, and with the right for the peoples to self-determination. Peace should be concluded in agreement with the Allies, and with all the peoples of the Russian Federal Republic."

The Executive, which bears the name of General Directorate, was elected by the Assembly on the recommendation of its President, Professor Inculetz, from the Petrograd University. It is composed of ten members, and is directly and solely responsible to the Provisional Assembly. It is interesting to note that of its two vice-presidents one is a Roumanian and one a Ukrainian; while of the secretaries two are Roumanians, one a Jew, and the fourth a Russian.

Several regiments of Moldavians have already been formed. The Assembly has issued an order for the evacuation of Bessarabia by all the soldiers who are not of Bessarabian origin. They were to leave the country within three days, free transport being provided. An exception was made in favour of Ukrainian soldiers.

Until the creation of a Roumanian University in Chishinan, a chair of Roumanian history and one of Roumanian language and literature have been established in the University of Odessa. Dr. Iancu Nistor, Professor of History in the University of Czernovitz, and Dr. Nicolae Banescu, Director of Studies in the Military School of Jassy, have been appointed to fill the two posts.

The Dobruja.

From a foreign source we hear of the epilogue to an old German dream. About the middle of last century the German authorities made various attempts to extend their influence in south-eastern Europe by establishing agricultural colonies. None of these was able to persist, with the exception of a few established in the then barren Dobruja. They formed curious, isolated communities, which remained almost stationary in number and possessions. We are now informed that a Hungarian financial undertaking is engaged in transplanting these colonists from the Dobruja to Transylvania with a view to repopulating certain districts. It is probably the question of the frontier districts from which the Hungarian authorities propose to expropriate the Roumanian population. 2,500 hectares are said to have been placed at the disposal of these colonists.

Death of Aurel C. Popovici.

The death is announced of the Transylvanian leader, Aurel C. Popovici. At all times prominent among those who upheld Roumanian nationality in Hungary, he aroused general attention with his book "The United States of Austria" (1906), which advocated a federal Austria, comprising sixteen autonomous national provinces. The work is said to have greatly impressed the murdered Archduke. At the outbreak of the war he went to Switzerland, to avoid being entangled in national controversies. But upon him, as upon most other Nationalist leaders, the circumstances of the war forced the conclusion that a thorough solution of the problem now imposed itself. This change of outlook he recorded in a book, written in French, which forms in a way his political testament. Popovici did not live to arrange for the publication of his book, but it is hoped the necessary arrangements will be made by the friend to whom Popovici entrusted the manuscript of his work.

Conditions in Moldavia.

Strenuous efforts are being made by the authorities to cope with the difficult situation in which Moldavia has been placed by the collapse of Russia. A General Directorate of Public Alimentation has been set up, which is to be the only authority entitled to deal with supplies, and which is to work under the supervision of the Ministries of War and the Interior. According to information received by the Central Authority the surface placed under seed up to November 19 amounted to 215,127 hct., an increase, notwithstanding reduced means, of 6,000 hct. over the previous year.

Meanwhile, the available supplies are diminishing rapidly. On November 26 a decree had to be issued prohibiting altogether the consumption of meat except by the troops at the front. Certain exceptions will be made in favour of children and invalids. In order to dispel unjustified expectations with regard to food supplies from America, the American Red Cross Mission publishes a statement to the effect that the supplies it may receive will be destined exclusively to hospitals and invalid persons.

Everything possible is being done to prevent a recurrence of last year's epidemic of typhus. On the initiative of the British Mission, a number of transportable baths have been created which can be attached to railway trains, for the use of the rural population. These bath-carriages will move during the winter from station to station, the population being informed in time by posters of their arrival and departure.

AYAHS' HOME,

26, King Edward Road, South Hackney, London.

ESTABLISHED 1825.

IN CONNECTION WITH THE LONDON CITY MISSION.

Hindustani spoken. Ayahs boarded and lodged at 18s. per week each until their Return Passage is paid or a Situation secured for them to return. Ayahs met at any Dock or Railway Station in London. Experienced, well-recommended Ayahs taken entirely off Ladies' hands for a certain payment, which differs according to time of year. Ladies proceeding to India or China requiring an Ayah can generally obtain one by applying to Mrs. Fletcher, Matron.

CORRESPONDENCE.

THE INDIAN CORPS IN FRANCE.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—I ask your assistance to correct, before it is too late, certain mistakes which do grave injustice to the gallant regiment to which I have the honour to belong—the 39th Garhwal Rifles—to be found in a book, "The Indian Army Corps in France," recently published under the authority of the India Office.

The mistakes are all in the account of the 1/39th Garhwal Rifles' share in the Festubert action on November 23-24, 1914, pp. 123-132 ibid.

(a) The attack of the 1/39th Garhwal Rifles is confused with a large counter-attack by a number of units which started at 4.30 p.m. on November 23 (p. 120), and had entirely come to an end by 8 p.m. at latest on November 23.

The Garhwalis only reached Festubert village, 1,000 yards behind the scene of action, when this attack, having recaptured two-thirds of the lost line, had shot its bolt. The Garhwali attack on the remaining one-third did not start till 3 a.m. on November 24, and was an entirely one-battalion business. The interval of seven hours was entirely peaceful.

It is true that small portions of the 2nd Leicesters and 107th Pioneers attacked the right of the objective at 4 a.m., when the 1/39th were working up from the left; but this effort admittedly (p. 130) failed, and the whole objective was recaptured by the 1/39th, and by them alone.

(b) The credit of suggesting the attack from a flank along the trench, instead of assaulting it frontally, is assigned to Lieut. Robson, R.E., and Lieut. Robson's share in the proceedings—gallant though it was—is much exaggerated. Lieut. Robson's suggestion was entirely limited to the offer to precede one of two double companies which attacked, by a bombing attack. The method of "bombing along" (since so generally adopted) was Robson's own idea, and he deserves all credit for originating it and carrying it out. But though it killed a lot of the enemy and no doubt gave the attack a good start, it progressed no further than a few bays.

The idea of an attack from a flank from traverse to traverse was adopted by Col. Swiney some hours before he ever met Robson. It was, in fact, Col. Swiney's arrival at the head of the battalion in the 57th Rifles' trench (where Robson was) in order to launch the flank attack he had already planned, that enabled him to meet Robson for the first time. It was not General Egerton's permission to use his own discretion (p. 125) that led Col. Swiney *thereafter* to adopt the flank attack scheme, but his own

Digitized by Google

previous representations that the latter was the better way that secured the permission from the General.

I have before me now Capt. Lumb's statement in writing: "I met him (Robson) *coming back* before all Wardell's men had got in, and it was just after that that I got out of the trench with my push and got in ahead of Wardell's, and we took all those endless bays with rifle and bayonet, and never one bomb from our side . . . Robson might have rushed two or three bays. . . . I fancy all his bombs were thrown from one place." It seems, therefore, that bombs were exhausted and bombers returning *before* Lumb took the lead, which was conclusively proved to be when at least four-fifths of the objectives were still unrecovered.

(c) No credit whatever is given to the regiment for its haul of prisoners and booty. The machine-guns, trench mortar, and most of the 100 odd prisoners were captured by the 1/39th. The reference to these on p. 132, if anything, seems to assign credit for these to the artillery! The 1/39th had no artillery assistance.

I may say that I was present at this action in command of the double company held in battalion reserve by Col. Swiney. I was in repeated contact and consultation with him all night. All the above facts, except details of the actual fighting, are within my personal knowledge. Moreover, it was I who a day later drafted Col. Swiney's report, whereby it was my lot to collect and hear all available evidence. I write now in virtue of this and of being the senior surviving officer in the battalion and the only officer of the regiment in England.—I am, etc.,

K. HENDERSON, Major,
39th Garhwal Rifles.

TANGIER TO TEHERAN.

At the moment of writing I do not know whether Hit has been captured by our forces, but the chances that it has been certainly look good. It is hardly an attractive spot, and before the war one might have felt tempted to remark that it was not worth the bones of a single Pomeranian grenadier, or words to that effect. Nowadays nobody would insult any town by such a remark. But Hit really is one of the most melancholy-looking places on the Lower Euphrates, especially as you approach from the south, when the foreground to it is a dreary, untidy bit of plain, with bitumen wells and streams all discoloured with oil and tarry substances. The town itself is—or was when last I visited it—huddled up on some largish mounds, and it gives you the impression of a walled city; but it is dirty and grimy, as a result of the bitumen working, and does not tempt you to any close investigation.

***

The place is generally regarded as having supplied the pitch with which Noah covered the Ark within and without, and, in view of its proximity to the probable scene of the adventure, the tradition may well be a true one. Also it is tolerably sure that Hit was the source whence the builders of Babylonia obtained their material for "damp courses" and waterproofing purposes. Far south of Babylon itself, in the midst of the Lower Mesopotamian plain, I have seen a quay-front, dating back to many centuries B.C., faced with pitch that almost certainly came from Hit; and you find the precious stuff at nearly every Babylonion ruin you examine. In recent years the bitumen springs at Hit have been worked in the most haphazard and inefficient way. But once clear the Turk out of the land, and we shall almost certainly see a thriving industry spring up in the neighbourhood. One hears in Hit tales of "great lakes of bitumen" at certain spots that would make the mouth of any company promoter water. And the beauty of it is that they may quite well be true. No doubt the Germans know all there is to know on the subject. I hope they will never have a chance to turn the knowledge to account.

***

I am glad to see that a correspondent has written to *The Times* regarding the iniquitous prices now charged for dates. I referred to the subject a year ago, and I have reason to know that it has given rise to a good deal of indignation. Indeed, how could it be otherwise? We have Busreh and district producing dates in enormous quantities, and to-day there can surely be no shortage of homeward shipping. Why, then, have we to pay 2s. a pound upwards, instead of the pre-war price of, say, 4d. a pound? *The Times* correspondent complains—and I am not surprised—that in Newcastle, though dates are extraordinarily numerous there just now, one has to pay from 4s. up to 7s. 6d. a box for them. "It would be interesting," he thinks, if we were informed "why it is necessary for dates to rise from 4s. to 7s. 6d. per box within less than seven days, always remembering that at 4s. the price was enormously above what it would have been in pre-war times." He suggests that the Food Controller might investigate the case, and I respectfully endorse his suggestion. But if half I have been told be true, I do not feel very sanguine about it being adopted.

***

I am just a little puzzled to know why poor Abdul Hamid was followed to his last resting-place by, among others, the ex-Khedive and "members of the Central Committee of Union and Progress." For any member of the C.U.P. to pretend to mourn the death of the ex-Sultan is nauseating hypocrisy. But perhaps they merely wanted to be in the limelight, so to say. They have all the modern politician's liking for that kind of thing. For the ex-Khedive's presence, however, I can find no satisfactory reason. While Abdul Hamid was a power to reckon with, and, nominally, his suzerain, one would expect Bolo's friend to pay him homage. But Abbas Hilmi accepted the new order of things in Constantinople quite quickly, as he would accept anything that did not affect his pursuit of money, and I never heard that he had any great liking for Abdul Hamid, though, doubtless, being an intriguer himself, he admired the ex-Sultan's gifts that way.

***

Talaat Pasha's liking for being interviewed does not grow less with the passing of time. He has, I see, been giving a representative of the Vienna *Neue Freie Presse* his opinions of President Wilson and Mr. Lloyd George's respective pronouncements. Naturally, he said just what one would expect a tame Grand Vizier to say. What interested me in his remarks was his claim that Syria, Mesopotamia, and Arabia are "vital component parts of Turkey." What tosh! What have the Turks ever done for any of the three? They, or their ancestors, killed the splendid civilization of the Arabs; and they have never done anything at all to make up for that vandalism. Moreover, what is the language of those three "vital component parts of Turkey"? Arabic; and so little is Turkish understood that on one occasion a dignified Turkish pasha, who got cut off from his suite temporarily while crossing Lower Mesopotamia, had to take to dumb show to make his wants known to the natives. His imitation of a fowl drinking was life-like, so I was told by a certain *khanchi*. But incidents of this kind—and it was by no means a solitary case—do not lead one to think of Mesopotamia as very Turkish in spirit.

***

As a matter of fact, the Arabs of Mesopotamia have always hated the Turks with an exceeding bitter hatred, partly, perhaps, because they remember the coming of the Tartars, but more because the Turk has always oppressed them and despised them. If they have any voice in the matter, it is certain that they will never return under Turkish rule. Arabia, too, has shown that it has had enough, and far too much, of the Turks; and, of course, Syria has never made any close secret of her feelings. These three countries undoubtedly refuse to regard themselves as "component parts of Turkey," and, considering the haste lately displayed by the Talaats and the other Young Turks to shed all traces of Arabic influence from the wonderful New Turkey, it seems strange that the Grand Vizier should wish to retain these purely Arab regions for himself and his Hun and Tartar friends.

CORSAIR.

"THE NEAR EAST."

Bound editions of Volume XII. of THE NEAR EAST (November 3, 1916—April 27, 1917) are now ready, and can be purchased at THE NEAR EAST Office, 1, Devonshire Square, E.C.2.

The Index to Vol. XIII. (May 4—December 28, 1917) will be supplied to subscribers on application.

PERSONAL AND GENERAL.

CALENDAR OF THE WEEK

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian (New Style).	Julian (Old Style).	—	Moslem.	Jewish.
1918. March.	1918. February.		1336. Jomada I.	5678. Adar.
1	16	Friday	18	17
2	17	Saturday.....	19	18
3	18	Sunday	20	19
4	19	Monday	21	20
5	20	Tuesday	22	21
6	21	Wednesday	23	22
7	22	Thursday	24	23

India's "Our Day" Fund now stands at about £740,000.

M. Beza has been appointed Roumanian Vice-Consul in London.

Colonel Caretas, of the Roumanian Legation, has left London for Jassy.

The Gaekwar of Baroda has given the Viceroy of India five lakhs of rupees for war expenses.

M. Routhon, Deputy for Patras, has been charged with high treason and sent before a court martial.

The Grand Cross of the Order of the Saviour has been conferred by King Alexander of Greece on General Allenby.

A strong Zionist movement has grown up in Russia as the result of Mr. Balfour's declaration in favour of Palestine for the Jews.

The Press Bureau announces that a telegram has been received from Roumania saying that all officers serving there are well.

On Mount Athos, Southern Greece, the bodies of seventeen officers belonging to the "Breslau" have been washed up by the sea.

Two hundred Jewish volunteers have enlisted in New York for the Jewish battalion recruiting in England for service in Palestine.

M. Radoslavoff, the Bulgarian Prime Minister, has returned to Sofia from Brest-Litovsk after a short visit *en route* to Berlin and Vienna.

The Islamic Relief Society in Alexandria has received a donation of £E1,000 from Princes Kemal el Din Hussein and Omar Toussoun.

The Crown Prince of Serbia has decorated Miss Donaldson, daughter of the late Canon Donaldson, with the Order of St. Sava, 5th Class.

MM. Lazarevitch and Yoka Bratchinatz, Vice-Presidents of the Serbian Skupshtina, together with six deputies, have arrived at Corfu from abroad.

The members of the Serbian Military Mission and of the Serbian Economic and Industrial Mission left London on February 21 for Corfu.

A club for Australians and New Zealanders, provided from the Church of England Australian Fund for Oversea Soldiers, has been opened in Cairo.

Among recent wills is that of Lieutenant-Colonel Lawrence Anthony Murray Graeme, of Shaldon, Teignmouth, a Mutiny veteran, who left £24,921.

The Rev. H. Arnold, of the Sudan United Mission, returned to the Sudan from Australia at the end of last month. He has resumed his work at Melut.

Captain George Soutzu, of the Roumanian Government Committee in London, has recovered from his illness, and left town for Bournemouth to recuperate.

Mr. Hampson Gary, the new American Diplomatic Agent and Consul-General in Cairo, arrived there on January 24, accompanied by Mrs. Gary and their two children.

The King has given unrestricted permission to Lieutenant L. D. Bass-Thomson, R.N.V.R., to wear the Order of the White Eagle, Fourth Class (with swords), conferred on him by the King of Serbia.

£5,000 has been subscribed in Cairo in response to an appeal by Lady Allenby for comforts for the troops.

Austrian Jewish Deputies are appealing to the Vienna Government to secure at the Bucharest negotiations complete emancipation of Jews in Roumania.

A telegram from Bucharest reports the arrival of the Bulgarian representatives at the peace negotiations with Roumania. Nessimy Bey, Turkish Foreign Minister, and Izzet Pasha are also to be present.

The President of the French Republic has made M. Kyriakos Venizelos, Secretary to the Greek Legation in London, a Chevalier of the Legion of Honour. M. Venizelos is the son of the Greek Prime Minister.

The Vice-Chancellor of Cambridge University has received from Mrs. Agnes S. Lewis, of Castle Brae, Chesterton Lane, Cambridge, an offer of upwards of £4,000 towards the foundation of a Readership in Modern Greek.

The Acting Governor-General of the Sudan gave a garden-party at Khartoum on January 17, the anniversary of the visit of the King and Queen to the Sudan in 1912. All the Government offices were closed on that day.

A general meeting of the Poetry Society will be held at Leighton House on March 6, when Mr. G. C. Ashton Jonson will give a lecture and reading based on the "Rubaiyyat of Omar Khayyam," illustrated by music.

The carrying out of the death sentences on Greek soldiers and civilians in connection with the recent mutiny at Lamia has been postponed until further light is thrown on the conspiracy to overthrow the *régime* and prevent mobilisation.

At a meeting of the Union of Czech Associations in Switzerland approbation was expressed of the declarations by the Constituent Assembly of Czecho-Slav deputies on January 6, demanding the establishment of an autonomous Czecho-Slav State.

On February 25 the 69th regular Session of the National Serbian Skupshtina was opened at Corfu. Greetings were sent to the Serbian army and to the armies of the Allies, and a Bill was read providing for the assistance of the inhabitants of the occupied regions.

Among those present at the resumed Conference of the Labour and Socialist parties in the Allied countries, which reassembled at the Central Hall, Westminster, on February 22, were representatives of Serbia and consultative delegates from Roumania and South Slav organisations.

A number of Russian officers and military employees on the Roumanian front met at Jassy recently, and resolved in favour of supporting the reconstitution of Russia and the action of the new Provisional Government at Novo Tcherkask, composed of Generals Korniloff and Alexeieff.

The Consul-General for Montenegro, referring to a report in *Az Est* that a large sale of forest had been made in Montenegro and the insinuation in the Magyar journal that the Montenegrin Court was interested in a portion of the forest, denies most emphatically that the Austro-Hungarian plans were known to the Royal Court or Government.

To mitigate the lot of the Serbian prisoners in the Austro-Hungarian camps the Serbian Red Cross Society in London send out by special Government permit food parcels week by week, each parcel costing 5s. Donations towards this end and all offers of help should be sent to Mrs. Robert Frank, Prisoners' Department, Serbian Red Cross, 9, Ennismore Gardens, S.W.7.

TRAGEDY OF MONTENEGRO,

THE SMALLEST AND POOREST OF OUR ALLIES.

MONTENEGRIN RED CROSS AND RELIEF FUND,

11, VICTORIA STREET, LONDON, S.W. 1

(Registered in City of London. Section 1. War Charities 1916)

needs £700 WEEKLY for Feeding Prisoners interned in Austria-Hungary.

Donations will be much appreciated and gratefully acknowledged by the Hon. Treasurer, LADY ROPER PARKINGTON, Claridge's Hotel, Brook Street, London, W. 1.

Digitized by Google

Lieutenant-Colonel N. Arion, Military Attaché to the Roumanian Legation, accompanied by several Roumanian officers, has left London for Oxford, where he is expected to remain for several days.

The King has approved the appointment of Sir Ibrahim Rahimtoola, Knight, C.I.E., to be a member of the Executive Council of the Governor of Bombay in succession to Sir Mahadev Chaubal, K.C.I.E., C.S.I., whose term of office has expired. Sir Ibrahim Rahimtoola is an additional elected member of the Viceroy's Imperial Legislative Council and an additional member of the Council of the Governor of Bombay.

An engagement is announced between Major H. A. Hammick, M.C., Manchester Regiment, only son of Sir Murray Hammick, K.C.S.I., C.I.E., Member of Council of the Secretary of State for India, and Lady Hammick, of 23, Brunswick Gardens, Kensington, W., and grandson of the late Rev. Sir St. Vincent Hammick, Bart., and May, only daughter of Sir Philip Pilditch, J.P., and Lady Pilditch, of Bartropps, Weybridge Heath, Surrey.

The Roumanian Minister, M. Misu, had the honour of being received by the King on February 22. Three days later he left for the Continent. Among those who witnessed his departure were Mme. Misu, M. Nicolas Misu, the Brazilian Minister, the Serbian Minister and Mme. Yovanovitch, M. D. de la Chaussée, of the French Embassy; Prince Livio Borghese, of the Italian Embassy; Mr. Philip Gardner, of the Foreign Office; the *personnel* of the Legation, General Georgescu and Mme. Georgescu; and the Earl of Bessborough. M. Michel B. Borescu will act as Chargé d'Affaires during M. Misu's absence.

OBITUARY.

The Rev. Charles George Gull, Rector of Lithington, Sussex, who died at Cheltenham on February 22, was at one time Chaplain of St. Paul's, Valetta.

Colonel Jabez Lightfoot, who died on February 23 at North Fambridge, aged seventy-one, served in the Indian Public Works Department, and was for some time manager of the Oudh and Rohilkhund Railway.

Captain T. Fergusson Graham, who died at Brighton on February 21, in his sixty-third year, initiated the system of grass farms in the Punjab to supply Army forage, for which he received special commendation from the Government of India.

Lieut. Solomon Benzecry, Royal Fusiliers, who was killed in action on November 30, aged twenty-four, was born in Gibraltar, and was the son of Mr. and Mrs. R. Benzecry, of Gibraltar. All his ancestors on his father's side were Gibraltarians. He spent the greater part of his life in Gibraltar, but he was educated at Clifton College.

The death has taken place at Exeter of Lieutenant-Colonel George Masters Cardew, formerly of the 67th Hampshire Regiment, in his seventy-eighth year. He was the youngest son of Cornelius Cardew, Judge in the Bengal Presidency, and entered the Service in 1857, and was at Barrakhpore during the Mutiny. His subsequent service included the Afghan War, 1878-80.

Colonel Gervase Francis Newport Tinley, C.B., C.M.G., I.A., who died suddenly at Marseilles on February 18, saw service in the Zhob Valley Expedition, 1884; the Burma Expedition, 1885-9; and the Dongola Expedition, 1886. He was representative India Officer at Queen Victoria's funeral, and commanded the Indian Cavalry Contingent at King Edward's Coronation.

The death occurred on February 23 at his residence, 24, Park Lane, W., of Earl Brassey, in his eighty-third year. The deceased peer was a man of many activities. An ardent politician, a well-informed writer on various subjects, and a keen yachtsman, it is perhaps for the latter pursuit that he is now best remembered; his yacht, the "Sunbeam," not long ago presented to the Government of India for permanent use as a hospital ship, having a world-wide reputation. During his career Lord Brassey held a number of important posts. He was Civil Lord, and afterwards Secretary, to the Admiralty in Mr. Gladstone's 1880 Administration, and was Governor of Victoria from 1895 to 1900. He was raised to the peerage on the resignation of Mr. Gladstone's Home Rule Government, and was raised to an earldom in 1911.

Mr. John Claude White, C.I.E., who died suddenly after an operation on February 19, at the age of sixty-four, was educated at Rugby and Bonn, and at the Indian Engineering College at Cooper's Hill, and entered the Indian Public Works Department in 1876. He greatly distinguished himself at the time of the Sikkim Expedition, which he accompanied as Assistant Political Officer, and after the Convention with China in 1890 established our control over the foreign relations of Sikkim, Mr. White was appointed British representative there, and for the next twenty years was virtually the ruler of that state. Under his influence the Maharaja became a zealous supporter of the British Government, and he was also able to place relations with Bhutan on a better footing, which had considerable influence on the fortunes of the Tibet Expedition of 1904, when Mr. White acted as assistant to Sir Francis Younghusband.

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO,
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

THE ONLY ENGLISH HOTELS IN ALEXANDRIA.
Proprietor: AUGUSTUS VAN MILLINGEN.

WINDSOR HOTEL
(Facing the Sea, opposite Y.M.C.A.), ALEXANDRIA.
Full Pension, P.T.50; Room, P.T.20;
Lunch, P.T.15; Dinner, P.T.20.
For long stay, apply to the Manager.

SUMMER PALACE HOTEL,
GLYMENOPOULO, RAMLEH.
This Hotel is situated near the Beach. Open all the Year. Bathing Cabins.
Terms from: Pension, P.T.60; Lunch, P.T.20; Dinner, P.T.25.

ROMANUL NU PERE.

Many a Roumanian these days will be reminded of the national proverb, "the Roumanian never dies," and will take heart. Although nothing seems able to prevent the country from draining the cup of bitterness to the dregs, in the form of a German peace, there will remain the consciousness that the last word does not rest for all time with Germany. The conference at Bucharest will doubtless run the course prescribed for it in Berlin, for no alternative is offered to Roumania. The peace between the Central Powers and the Ukraine, followed as it has been by the despatch of German troops nominally to aid the Ukrainians against the Bolsheviks, has brought the enemy to the rear of Moldavia, and has cut off that province's source of supplies. The Roumanians must either accept Germany's terms or be crushed. No blame can attach to them for abandoning the unequal struggle, in the confidence that, however tragic the plight to which they are now reduced, they will yet emerge from their blackest hour a united and a greater people. Germany's purpose may be regarded as already revealed. Only a fit of madness could prompt her to attempt to stamp out the Roumanian race. She must recognize its existence, and may even endeavour to secure its goodwill by restricting as far as possible to individuals the penalties that will be exacted for Roumania's courage in seeking to bar the way to German aims. There are many ways in which the Balkan quilt can be patched together, particularly when the object in view is the principle of *Divide et Impera* rather than a solution which will bring content to all the peoples and peace and progress to the Peninsula. Bessarabia can be set against the Dobruja, or, as there can be no general peace yet, Bulgaria can be solaced with the widest promises in regard to Serbian territory. The best peace, from the German point of view, would be one which left all the countries embittered one against the other. By avoiding any vindictive punishment for Roumania Germany may expect to smooth the way to more exacting economic conditions, which are her real goal. Certain it is that the terms of peace will lay firmly the foundations of what is intended to be the exploitation of Roumania for Germany's benefit. Much depends on the spirit in which the German General Staff view the military situation, especially in regard to the degree of willing co-operation that they are still able to extract from the Bulgarians and Turks.

The only surprise that the negotiations at Bucharest could produce—except in so far as they might suddenly be influenced by developments elsewhere of overshadowing significance—would be the display of a generous attitude on the part of the Central Powers towards the King of Roumania. He has been dubbed a traitor to the Hohenzollerns, and imperial and kingly dignity may well demand exemplary punishment for a sovereign who has proved a renegade to the doctrine of Divine Right by refusing to allow personal considerations to stand in the way of the national will and the national interest. It is a further crime on King Ferdinand's part in Hohenzollern eyes that he has a British consort. We may feel confident that the King and Queen of Roumania are not likely to permit the question of their fate to jeopardise the negotiations with the enemy. No denunciations of them emanating from a German source could shake the devotion of the Roumanian people to their Royal House. The Roumanian attitude to all the terms of peace must be the same; they will be imposed at the point of the sword, and at the point of the sword they will be accepted in detail. The attitude of the Allies is clear, and it is to be hoped that the Roumanian Government will leave the enemy in no doubt as to its own attitude. The only settlement that will have any permanently binding force is the one that will receive the deliberate sanction of the Peace Conference at the end of the war. Treaties that Roumania or any of the component parts of Russia may be forced to make may serve Germany's present purposes, but they can have no more effect on the Allies' peace terms than the occupation of Belgium. Already there are indications that the conditions to be imposed at Bucharest are causing the Central Alliance more heart-searchings than they need cause the Roumanians. In its ardent pursuit of peace the Austrian Government has eagerly accepted the principle of "no annexations," and it would seem to be by no means anxious to spoil the chances of a general peace by proceeding at the first opportunity to annex Roumanian territory to which it can lay no claim other than the dictates of military aggression. In all these matters Germany, no doubt, will ultimately have her own way; but the process of adjusting the conflicting views of her partners will not strengthen the cohesion of the four States.

Upon the Allied Powers is imposed the obligation to leave no stone unturned in order to shorten the period of Roumania's ordeal. Germany's grip can only be entirely removed by her defeat in this war; but it is likely to be relaxed if Bulgaria and Turkey should find that there was no further object to be served in a continuance of the struggle. The problem resolves itself into the question of the just settlement in the Balkan Peninsula, and at no time could there be a more urgent need for a clear understanding on this point than at this juncture, when the Roumanians will want to be heartened by the knowledge of what they stand to gain by remaining loyal to their national cause in spite of their burden of a German peace. Bulgaria, it must not be forgotten, would have found no cause for throwing in her lot with the Central Powers in 1915, if she could have been guaranteed the portion of Macedonia to which, on the principle of nationality, she was entitled. Her appetite will have grown with the prolongation of the war; but so has the Allies' appreciation of the factors that make for peace in debated lands. One is that a country situated near the sea must have an outlet on that sea; another is that jurisdiction over a port must, wherever possible, coincide with the jurisdiction over the territory on the trade of which the port depends. If these broad principles are applied to the Balkans and, at the same time, sufficient stress is laid on the necessity of a solution that is likely to stand the test of time, is there not some reason to suppose that, after four years of exacting warfare, the States concerned will begin to realise that some triumphs can be too dearly bought? It may seem an inauspicious moment to preach the bankruptcy of Germany's ambitions when she is engaged in securing her hold upon Russia and Roumania. But it will not be lost upon the Bulgarians and Turks that German arms have won no victory since Wallachia was wrested from the Roumanians, ill-equipped and misled by Russian promises. Intrigue secured a temporary success in Italy; treachery and disintegration have made Russia impotent and an easy prey; Roumania has been betrayed, not conquered. In no direction is there the least sign that finality has been reached. The best that Germany has to offer Bulgaria is the prospect of standing on a powder magazine, which sooner or later must explode. We refuse to believe that a future of this character commends itself to the instinct of the Bulgarian people or to the considered judgment of its present rulers. In contrast to it the Allies can hold out the prospect of a United Balkan Peninsula, its grievances adjusted by mutual agreement, and all the peoples embarked on an era of peace and material development. In spite of rebuffs that may be accorded to the first presentation of this case, nothing ought to deter the Allies from bringing their point of view continually before the Bulgarians. They owe it to themselves, to the Bulgarians, and, above all, to the Roumanians, to whom they can hold out no other means of succour.

LITERARY SUPPLEMENT.

FRIDAY, MARCH 1, 1918.

At the end of the Supplement will be found a Bibliography of publications since 1914 *dealing with the Near and Middle East.*

REVIEWS.

CARTA TUA; MONTAGNA MIA.*

If the age we live in be pre-eminent as the age of science, we may also allow it to be that of the most highly drilled and gifted imagination. Let us yet further claim for it an exhibition of deliberate courage unsurpassed in any age. Science, imagination and courage are in the throes of the Titanic conflict we see around us; and we prefer to maintain that the Power of Good marshals our forces, in these three fields, against the Power of Evil, and shall prevail.

If ever we attain to anything approaching a Peace Conference, this contribution of Leon Dominian to such a peace will assuredly be in the hands of every plenipotentiary. The whole is a quiet, scientific, judicial survey of the insistent demands of the physical and political geography of Eurasia—the linguistic and topographical truths lying behind the specious phrase, "No annexations and no indemnities." The serenity of the author, no less than his simplicity and industry, inspires us to recommend the volume to the authors of the tragi-comedy of Brest-Litovsk—fly-leafing it with the pertinent comment, "What we are fighting for."

The reviewer takes leave to hope that the Prime Minister, whose wonderful career and present stress can leave him little leisure, will assimilate this book from cover to cover. Its issue under the auspices of the leading geographical society of the New World is significant and persuasive. Its insistence on the plain fact that the war is inspired by the Prussian desire to hold the bridge between Europe and Central Asia and Africa will find an echo among all readers of THE NEAR EAST.

To move to details! Sketching lightly the age-long conflict between man and nature, between language and physical geography, including the not wholly verified existence of a Keltic Europe, Mr. Dominian passes the border between tradition and history, and tells with a dispassionate pen the why and wherefore of the existing boundaries of language and nationality westwards of the Urals, the Caucasus and the Zagros Mountains. Look at the map! His huge subject may be simply subdivided by his excellent maps, coloured or in black and white; and many carefully selected photographs, typical of racial, architectural and geological habitat, enhance the value of the work. He first tackles the 2,000 year old conflict between the Latin and the Teuton, now typified by Flamand versus Walloon in Belgium, and by the more epic question of Franco-Teutonic rivalry west of the Rhine. Language, he says, decides unmistakably against the pre-war political boundaries in each case, but with pros and cons for both. He next depicts the Latin-Teutonic conflict in Switzerland, that strange tri-lingual political entity, a veritable chessboard of dialects, in which he only saves the reader from a prospect of stalemate by hinting at the enduring artistry and power of French culture the world over.

We have next the Italo-Austrian duel, from which we extract the headline of this short review. "Your map; my mountain," says the Venetian proverb, after centuries of Austrian rule. The Prussian ambition, so clearly exposed throughout the volume, might be rendered, "My map; my mountain." Moving north-eastwards from the embattled Trentino, the fateful valley-gorges of the Piave, the Brenta and the Adige, highways of mankind from before the days of Romulus and Remus, we have the chapters on the Scandinavian and Baltic languages, and the area of Polish Speech—bad reading, very bad reading for von Kühlmann, General Hoffmann, and Count Czernin. We can at least be glad that it is now on record that Poland, Esthonia and Lithuania are linguistic European entities, by surrender on the part of Trotsky, and by overt confession on the part of Kühlmann. Thus far, piously, but no farther, east and west of the Vistula, does our author show us the clamant way. Moving south-westwards and south, the survey verifies the claims to "self-determination" of Czech, Moravian and Slovak, and, next, of Magyar and Roumanian. These, with the linguistic rights of Croat and Serb, a profoundly detailed study, leave the Austro-Hungarian imperial double-crown in the position of the single feather on the naked parrot. This way lies, if the voices of Italy, Jugoslavia, Bohemia, and Roumania are admitted to be genuinely articulate, one high road to peace. Jugoslavia of the future has one language, two alphabets and three religions; but Mr. Dominian gives us the Serb proverb, radical in its unhappiness, "Brat yay mio, Koye vieray bio"—which we commend to the Irish Convention—"A brother is always dear, whatever his religion."

The final third of the book is devoted, "according to plan," to the language problem in the Balkans; to the "case" and peoples of Turkey; to a summary and to a valuable appendix. More than any other this portion of Mr. Dominian's toil calls for the attention of soldiers, sailors, airmen and statesmen, although the whole calm effort of the book is to show that language and physical geography have at all times overruled military genius and military ambition.

It needs but little prophetic imagination to warn us that war will not cease upon this earth, by any effort of mankind, until white, yellow and black agree to intermarry. Our author refrains from such imagination, confining himself to the purely scientific vista of the linguistic and geological bridge between Europe, Asia and Africa—the actual Turkish Empire. Here he finds, and admirably portrays, the *casus belli* of many millenniums—the great high road between East and West, made plain by the Wooden Horse of Troy, and still plainer by the Iron Horse of to-day. The first and best-managed railway in Asiatic Turkey, initiated in 1856, the Smyrna-Aidin, a British adventure, the author skilfully shows to be nothing less than the Doric Greek's penetration of the opulent Meander Valley, on foot, in pre-Homeric times. To sum up, Mr. Dominian is to be welcomed as the most powerful advocate that has yet appeared of the basic fact that the present war is an alliance between Eastern and Western culture against the now naked demoniac viciousness of Prussia. Sad as may be the position of the Slav at this moment, Slavic genius is the half-way house—linguistically. If Prussian reversion to, or retention of, the morals of man, when man had to dodge the Icthyosaurus and the Dinosaurus, expects to prevail against dawn, midday and twilight, it is doomed. No man of sense and courage can peruse this book and anticipate for the earth an eternal Prussian night.

*"The Frontiers of Language and Nationality in Europe." By Leon Dominian. Published for the American Geographical Society of New York. (Constable and Co. 15s.)

CONSTANTINOPLE OF THE CROSS WAYS*

"Anything but history," Walpole is reputed to have said; "because history must be false." It is part of the irony of the problem presented to European diplomacy by the Straits of the Bosphorus and the Dardanelles that its history provides very little, if any, material for its successful solution at the present time. Consequently at first sight a book on the subject which devotes more than 220 pages to the story of the rise, development, and vicissitudes of the problem, and only twenty pages to its solution, may seem to be unequally weighted. But the authors of this volume have done good service in marshalling all the salient facts, if only because they establish the case for a definitive settlement now that an opportunity offers. Whether the solution they propound is the right one is another matter.

Geography is at the root of the trouble, and, unfortunately, the Bolshevik method of simply ignoring it does not eliminate this perplexing factor. Despite the indifference of M. Kerensky's Provisional Government and the contempt of all realities shown by its successors in Petrograd, Russia's dependence on the Straits as an exit from the Black Sea remains. Out of a grand total of exports of 24 million tons in 1913 Russia sent 11 million from the Black Sea and the Sea of Azof. If the old Empire is to be split up into a number of independent States this Black Sea traffic may represent practically the whole of the export of the new State located in Southern Russia. Consequently the perpetuation of a system which still exposes to arbitrary interruption this trade and the corresponding inward trade—to say nothing of Roumanian and Bulgarian trade—is bound to lead, as of old, to friction, which has now culminated in the world war. For the problem of Constantinople and the Straits is part of the Near Eastern question. Mr. Phillipson and Mr. Buxton shrewdly lay stress on this fact, pointing out how the latter question has been aggravated by Russia's efforts to find a solution of the Straits difficulty. Here is an important waterway, with Constantinople as a toll-station on the bank. There must needs be a stream of traffic across it as well as along it, and there would be a call for some regulation of the two streams. The Turks' contribution to the problem has been, as it were, to throw a low drawbridge across the waterway, entirely blocking it, and to make its opening a matter more or less of caprice. As German influence increased in Constantinople there was a danger that the drawbridge would be replaced by a permanent structure. So long as the Turks remain at the toll-station the drawbridge will also be there, or will be liable to be thrown across at any time. Russia has decided—more or less vicariously—that she has no further interest in the future of the Straits. Is the ignorance of the Bolsheviks or of the present rulers of the Ukraine Republic likely to repudiate for all time the stern economic and geographical facts that make Southern Russia dependent on this waterway? There cannot be the least doubt on this point. In these circumstances, therefore, the Allies are justified in seeking a solution of the Constantinople problem without reference to current events in Russia. The original plan of leaving the administration of Constantinople in Russian hands falls through, for the time being. What, then, is to be the alternative?

The solution propounded by our authors is as follows:—

"The most rational, judicious, and practicable solution is to internationalise the Bosphorus and the Dardanelles on the lines of the régime applied to the Suez Canal, and place them, together with sufficient hinterland to safeguard the strategic position, under the administration of an International Commission somewhat similar to that which has existed in the case of the Danube."

They proceed to elaborate a number of provisions embodying the principles on which the regulation of the waterway is to be conducted, and continue:—

"Finally, as to Constantinople. The best solution in the circumstances is without doubt to constitute it a free town, and place it under the conjoint protection of the Powers, including the United States. Constantinople is so closely connected with the Straits that the establishment of a new régime for the latter imperatively demands the establishment of a new régime for the former."

The case for an international commission for an international waterway may be a strong one, and there is no reason why the scheme should not work well—in peace time. To what extent, however, has the Danube Commission functioned during the present war? If, as may be imagined, the Commission has become merely a Board of the Central Powers, what is the practical value of such provisions, in the case of the Straits, as "Blockade to be prohibited," "No act of war or hostility to be committed within their waters, etc."? No doubt, with the promised establishment of a League of Nations, things which seem unlikely enough now will become more practicable, and a Straits Commission may prove, until the outbreak of the next war involving hostilities in this part of the world, as successful as any of the numerous instances of international co-operation cited in this book. But what of Constantinople? It is one thing to administer a waterway where the jurisdiction over any individual is unlikely to extend beyond twenty-four hours at any one time; it is another matter to administer a cosmopolitan town by an international commission. Here our authors would have been well advised to have attempted a detailed constitution for the Constantinople of their well-meant aspirations. Is it to be administered by a municipal council? If so, it will presumably be international in character, and the nationality most strongly represented will probably be the Greek. Are Greeks to be allowed to be in a majority on the council? Probably not. Of what is the police force to consist and under whose orders is it to be? Obviously not Greek or Turkish. American, French, German, British? If so, it will have to be under the orders of a Greco-Turko-Armenian Council. Internationalisation is a blessed word, and is being much used these days; but we do not find many people ready to work out the system to its logical conclusions. The reviewer of this book foresees only friction with any attempt to apply the theories of internationalisation to the practical administration of Constantinople. By all means let the town be under the conjoint protection of the Powers; but the municipal control, for better or for worse, must be in the hands of a single authority. The police force offers the crux of the position. There is the precedent of Shanghai—also international, under the jurisdiction in part of 16 or 17 Consuls, any one of whom has it in his power to thwart the aims of good government and to outrage justice and equity. The Municipal Council is also international; but—and the but is very big—out of nine members seven are British, and the police force is British in constitution (British, Sikh, and Chinese constables) under British control. Accordingly, Shanghai leads a peaceable life, and prospers. Constantinople must try to find salvation on the same principle. It is not suggested that the British need apply for the job; but some attempt ought to be made to secure unity of municipal authority. Russia seemed to offer the obvious solution, but if she will not accept the post, another incumbent must be found for it.

*"The Question of the Bosphorus and Dardanelles." By Coleman Phillipson, M.A., LL.D., Litt.D. and Noel Buxton, M.A., M.P. (London: Stevens and Haynes. 1917. 12s. 6d. net.)

Have You Read?

THE WANDERER ON A THOUSAND HILLS.

By EDITH WHERRY, Author of "The Red Lantern." **6s.**

Edith Wherry's intimate knowledge of Chinese life made her first novel, "The Red Lantern," one of the most romantic and true stories of China ever written. The present story is even more beautiful and romantic, and incidently depicts real Chinese life with a truth that has rarely been excelled.

"For the first time in the history of English letters a book has been written capable of inspiring me with a wish to visit China. This epoch making result followed upon my perusal of this story of the Orient, so sympathetic and knowledgable."—*Punch.*

"In converting into comprehensible English terms the actual workings of the Celestial mind Miss Wherry has accomplished what has hitherto been impossible. The story is a consummate work of art."—*Globe.*

"The author reveals much power in presenting the life of the Orient"—*Times.*

"One can only say that if China is not as the author describes it, then it ought to be."—*New Statesman.*

REVOKE.

By W. DE VEER, Author of "Battle Royal," &c. **6s.**

"Revoke is excellently written and has the uncommon background on a northern Java port. The book leaves you longing for more which is an evidence of success."—*Observer.*

"The life and scenery of Java are pictured with a sure hand. The author has told the story well, and thus has made a very attractive novel."—*Land and Water.*

ESSAYS ON ZIONISM.*

The volume before us on "Zionism and the Jewish Future," edited by H. Sacher, may be taken as a fair statement of the ideas of British Zionists on this now urgent question. The first point which strikes the reader is the many-sidedness of this movement—sides so various as to be scarcely reconcilable. To some the material object of Zionism appears to be the benefit of the poor persecuted Polish Jew, to give him a home of liberty, where his special mode of life may find a chance of development. More than half the book—a very interesting half—deals with the special interests of East European Jews; but in other essays—and notably in the able article by Norman Bentwich on "The Future of Palestine"—the, as it seems to us, prior claims of the hundreds of thousands of Eastern Jews—in Turkey, Greece, Persia, Georgia, and Turkestan—are forcibly urged. Many thousand members of their communities have moved to Palestine, notably to Jerusalem, but though it is the love of Zion which has brought them there, it can hardly be admitted that they have to any considerable degree been admitted to equal right to development with the European Zionists of the colonies. Norman Bentwich adds: "The Yemen district of Arabia possesses a reservoir of Jewish labourers in the 50,000 people who at present eke out a wretched life in subjection to fanatical Arab tribes. Some thousands of them have already made their way to Palestine and proved their use as workers both in town and field, and the whole community is eager to move when their emigration can be organised." Without doubt these elements, if encouraged and supported, might be of invaluable use to the colonising movement, as they are true Orientals and can stand in a way few Western Jews can do the trying climate of the low-lying—but fertile—lands. They will help to maintain the character of Oriental life and customs which will need to be acquired by the Western Jew, if he is not to appear as a stranger in his ancient home. Among the early colonists costume and mode of life were modelled after Western ways, and pseudo-French modes in ladies' hats and boots seemed strangely out of place among those who claimed that in returning to the sub-tropical land of their Fathers they were returning to their "home."

The ideal of Zionism is placed—rightly, undoubtedly—on a high plane by the Very Rev. Dr. Gaster, who rejects the criterion of "nationality" as resting simply with a common language, common ethnical origin or political unity, and places it on a common faith: "No one can be a Jew who does not belong to the Jewish faith, and he who belongs to the Jewish faith belongs to the Jewish nation . . . he becomes identified with the hope of the advent of a Messiah, the great ideal outlook of the Jewish nation. . . . There may be degrees in the strength and quality of the faith which each one acknowledges as binding on him. But we have no inquisition. As long as a Jew has not publicly renounced his faith and embraced another he belongs to the Jewish nation. It is of extreme importance to realise that this alone constitutes a Jew—that the nationality of a Jew depends on his faith; for Judaism is a national religion." Such words are logical and clear. It would be well if some people in England would grasp this fact, which is certainly the feeling of the majority of those who are interested in this great movement.

The anonymous three-page "Note on the Boundaries of Palestine" is temperate and scientific, though probably many modern Biblical students would not admit that the "sovereignty of David and Solomon extended northwards as far as the Euphrates."

To many the chapters by S. Tolkowsky, of Jaffa, on the "Jews and the Economic Development of Palestine" and by Dr. Brodetsky on "Cultural Work in Palestine" will prove some of the most interesting in the collection. They are condensed but exhaustive accounts of what has been already accomplished. "The forty-five Jewish colonies existing to-day have a population of about 15,000 souls. They cover a total area of 110,000 acres, which represents nearly 2 per cent. of its cultivated surface." "There is no ground for fearing that by the increase of Jewish immigration we shall ever inconvenience the Arab population; on the contrary, 5,000 Arab labourers are to-day working in the colonies of Judea alone." It is most desirable that the leaders of Zionism should see to it that no injustice should be done to these many thousands of the indigenous population of Palestine, who, if treated with justice and generosity, will be of the utmost service to the new immigrants, but if antagonised by any semi-forcible dispossessment from their ancestral homes and fields will form a

* "Zionism and the Jewish Future." By Various Writers. (London: John Murray. 1917.)

Digitized by Google

source of embarrassment and difficulty to the new settlers for years to come.

Dr. Brodetsky—and in another chapter Mrs. Benas—refers to that logical and necessary outcome of the educational prospects of Zionism, the establishment in Jerusalem of a Hebrew University "on the lines of European Universities, which shall form the rallying centre of all national spiritual effort." With the vast latent resources at the disposal of the Zionism movement it is impossible to doubt that this must be an early outcome of Jewish cultural activity, and one of the most important fruits of the whole movement.

If it has been only possible here to refer at any length to the practical side of Zionism, it is not that the earlier chapters dealing with the historic side are less interesting. To many English readers—especially perhaps the non-Jews—the "Century of Jewish History" by the Editor, and "Anti-Semitism" by A. M. Hyamson, will be most instructive, as showing the impelling force which has led so many Jews, with such widely different religious ideas, to come to the conclusion that Zionism is a needed idealism for their race against the various forces making for national disintegration.

LORD MORLEY ON INDIA.*

Lord Morley belongs to the school of philosophic Radicals, in whose ranks he stands about midway between the "enlightened self-interest" men and the "perish India" type. Had he lived a century earlier he would certainly have been with Burke against Warren Hastings, and he would have found excellent reasons for impeaching Clive; as it was, the strange tradition of English politics, which puts a lawyer at the head of the Navy and gives a Baptist Prime Minister the promotions to Anglican Sees, made John Morley, as he then was, Secretary of State for India in 1906. He was known to the world as a distinguished literary man who had forsaken journalism for politics—the "orchestra for the stage," as he puts it—as the friend and biographer of Gladstone, and some time Irish Secretary. An unbending agnostic, his enemies declared that he spelt God with a small "g"; his friends, in defence, maintained that his real religion was the Home Rule Bill, and that it was an article of faith with him that the devil resided in Dublin Castle. When he went to the India Office he discovered the principle of evil in frontier expeditions and Imperialism of all kinds, and he continually warned Lord Minto, the then Viceroy, who was by no means a fire-eater, against such seductive glories. Conformably to the old paradox, the democrat in office became the most autocratic of men.

The main article of Lord Morley's administrative creed in dealing with India was that we should transplant thither the spirit but not the letter of English political institutions, and his four years in office were an attempt to translate that ideal into fact. Whether he was satisfied with his achievement does not appear from this autobiography; nor does he refer to the developments which have occurred since he left, and which are now, under the Chelmsford-Montagu *régime*, apparently on the eve of carrying his theories a long way further. This reticence in some ways inclines one to doubt whether his heart was ever thoroughly in India. He would probably have been Irish instead of Indian Secretary in 1906, had the Liberals not been independent of the Irish vote and thereby have suddenly discovered that Home Rule was only of secondary importance; on that subject Lord Morley would never admit of any compromise. It must be confessed that this doubt is not diminished by the remembrance of his Indian speeches, which were cold and hesitating in delivery, and which displeased the little knot of Radical extremists by their moderation as much as they did the Tories by their suggestion of reform. Lord Morley makes it clear that he was not afraid of the extremists; he took their measure with the practised eye of the old Parliamentary hand, and found them talkative but impotent. As a matter of fact, he sometimes took rather considerable risks (debating risks) in dealing with them. He once reproached a member who was lecturing him on Indian policy with only having been six weeks in India. It does not appear that Lord Morley has ever been in India at all, but the rebuked Radical did not think of the retort, or at any rate did not make it. The reason for the Tory distrust was not altogether mere party animosity—there was plenty of that in the 1906 Parliament, but India was usually kept out of the ring—nor was it any die-hard attitude towards the rather modest reforms which Lord Morley introduced. It sprang mainly from the subconscious feeling that the Secretary of State was against his own officials. No particular words or acts could be pointed to to justify that impression, but the impression was there, and the reprint of his letters to Lord Minto in the second volume of this autobiography shows how just the feeling was. There is not one word to show that he recognised the good work of the I.C.S.; he refers to them throughout as Tchinovniks, as though they were merely efficient machines of oppression. He uses far more cordial language about Mr. Keir Hardie, whose visit to India about that time gained some notoriety.

In reading these recollections, one is tempted to wonder what would have happened had Campbell-Bannerman put Mr. Lloyd George at the India Office and given the Exchequer to Mr. John Morley, as he then was. The cold austerity of Mr. Morley would have fitted the Treasury better than Mr. George, who is capable of seeing poetry in the income-tax and making an almost lyrical speech over excess profits. Probably the present Prime Minister knew little enough of India in 1906, but so also did his senior colleague. But the country would have caught hold of his imagination, as it never seems to have done with Lord Morley; he is capable of great enthusiasms, which also was a quality denied to the older man. He would have made more mistakes, but he would probably have been more successful. But Mr. Lloyd George is one of the people whom Lord Morley most strongly objects to; he does not even mention him in these two volumes, which is something of a feat.

There are not many revelations and no indiscretions. It is made clear for the first time that it was Lady Campbell-Bannerman who decided her husband's course in 1905, and that both King Edward and Lord Kitchener wished the latter to go to India as Viceroy, but that Lord Morley would not hear of it. It is also evident that he left the Asquith Government in 1914 not, as some had hoped, because old age unfitted him for the strenuous times ahead, but because he disagreed with the policy of intervention, just as he had disagreed with the British stand over the Baghdad Railway in 1903. This last was a matter of conviction, for it was only later that he was flattered by the German Emperor, and even then he was not hypnotised like Lord Haldane, although, as a true democrat, he was not apparently indifferent to royal politeness.

A GREAT SAILOR.*

Admiral Sir Charles Napier belonged to an ancient Scottish family whose exploits are written large in the history of Great Britain. Born in 1786 at Merchiston, near Falkirk, he entered the Navy as a third-class volunteer in 1799, and saw much service in the Baltic and Mediterranean. In 1809 he took a brilliant part in the conquest of Martinique, where a small vessel under his command intercepted a French line-of-battle ship which was endeavouring to escape from the beleaguered port. By way of requiting exceptional services the Admiralty placed Napier on half-pay; whereupon he joined Wellington's army in Portugal and fought with distinction at the Battle of Busaco (September 27, 1810). Tiring of campaigns on land, he sought employment in a more congenial element, and in 1811 was given command of the "Thames" frigate. The next two years were the happiest of an intensely full and chequered life. Napier inflicted enormous damage on French commerce in the Mediterranean, destroyed land-batteries wholesale, and won the hearts of his crew by tempering strict discipline with justice. On the return of peace in 1814 he was again relegated to half-pay, and once more indulged his restless energy by accepting duties outside the scope of the Royal Navy. The Constitutional Party in Portugal gave him the command of a fleet which was fighting reaction personified in the usurper Dom Miguel. By defeating the Miguelites off Cape St. Vincent he concluded the civil war and placed Queen Maria da

THE HISTORY OF THE ANCIENT PEOPLES OF THE CLASSIC EAST.

By the late Sir GASTON MASPERO, Hon. K.C.M.G., Hon. D.C.L., and Fellow of Queen's College, Oxford; Director-General of Antiquities in Egypt. Edited by A. H. SAYCE, Professor of Assyriology, Oxford. Translated by M. L. MCCLURE, Member of the Committee of the Egypt Exploration Fund.

Demy 4to, cloth, bevelled boards, each **21s.** net.

I.—THE DAWN OF CIVILISATION. EGYPT AND CHALDÆA.
Fifth Edition. With Map and over 470 Illustrations, including three Coloured Plates.

II.—THE STRUGGLE OF THE NATIONS. EGYPT, SYRIA AND ASSYRIA.
Second Edition, revised by the Author, with much additional matter. With Map, three Coloured Plates, and over 400 Illustrations.

III.—THE PASSING OF THE EMPIRES, 850 B.C.—330 B.C.
With Maps, three Coloured Plates, and hundreds of Illustrations.
[This volume brings down the History of Egypt, Assyria, Babylonia, Persia Media, etc., to the conquests of Alexander the Great.]

The Athenæum says: "In Gaston Camille Charles Maspero the learned world has lost the leading Egyptologist of his time. . . . His more extended work is, perhaps, best seen in his 'Histoire ancienne des peuples de l'Orient classique,' in 3 vols., which contains a most lucid and readable account of the ancient East down to the coming of Alexander."

HISTORY OF INDIA.

From the Earliest Times to the Present Day. By the late Captain L. J. TROTTER. Revised Edition brought up to 1911, by W. H. HUTTON, B.D., Archdeacon of Northampton, Reader in Indian History, Oxford University. With four Maps and 22 Illustrations. Cloth boards, **10s. 6d.** net.

The Asiatic Review says: "It may be called the ideal handbook on the history of India in outline."

BIRKBECK AND THE RUSSIAN CHURCH.

Containing Essays and Articles by the late W. J. BIRKBECK, M.A., F.S.A., written in the years 1888—1915. Collected and edited by his friend, ATHELSTAN RILEY, M.A. With a portrait. Cloth boards, **8s. 6d.** net.

Published for THE ANGLICAN AND EASTERN ASSOCIATION.

THE DIOCESE OF GIBRALTAR.

A Sketch of its History, Work, and Tasks. By the Right Rev. HENRY J. C. KNIGHT, D.D., Bishop of Gibraltar. With Map and Illustrations. Cloth boards, **7s. 6d.** net.

[The story begins in the 16th Century with the Levant Company and Hakluyt's voyages, and records the life of our fellow-countrymen and their Church in the Mediterranean area down to the present day.]

THE LATEST LIGHT ON BIBLE LANDS.

By P. S. P. HANDCOCK, M.A., Lecturer of the Palestine Exploration Fund, Second Edition. With over 100 Illustrations. Cloth boards, **6s.** net.

[Brings together the results of the latest excavations and researches in Bible Lands. Among the valuable indices is one identifying, where possible, all places mentioned in the Bible.]

The *London Quarterly Review* says: "It is a book that every Bible student will want to have always at his side."

Gloria on the throne of Portugal. But official sloth and corruption thwarted his efforts to reorganise the navy. He returned to England in disgust, and spent five years in attempting to secure employment. At length, by sheer pertinacity, he obtained command of the "Powerful," a fine two-decker mounting eighty-four guns, and opportunities of winning fame which had hitherto been denied him. For the perennial Eastern Question assumed an acute phase, owing to the ambition of a soldier of fortune. An Albanian named Mehemet Ali had risen to high rank in the Turkish army and secured the Pashalik of Egypt. In 1811 he treacherously massacred the Mamluks, who had set up a military despotism resembling those of the Prætorian Guard in decadent Rome and the Janissaries at Constantinople. Astute, clear-sighted, a born organizer, but utterly without scruple, Mehemet Ali lost no opportunity of extending his dominions, and in 1838 he rose in rebellion against the Porte. After conquering Syria, he sent his son Ibrahim Pasha against the Turkish army, which suffered a crushing defeat on the Euphrates. In vain did the feeble Sultan Abdul Mejid offer his contumacious vassal the hereditary Pashalik of Egypt. It was Mehemet Ali's ambition to oust the dynasty of Othman from Constantinople; and it would have materialised but for the intervention of the Great Powers. In 1839 England, France, Russia, Austria and Prussia sent a combined fleet to the Levant, with orders to uphold the Sultan's sovereignty. But, by no means for the first or last time in history, concerted action was precluded by mutual jealousies. France secretly supported Mehemet Ali, insisting that he ought to retain Syria as well as Egypt. Thereupon the other Powers entered into a Convention (July 1, 1840) which excluded France from the settlement of the Eastern Question. It gave Mehemet Ali ten days within which he was to accept the hereditary government of Egypt and the administration of Syria. Indignation in Paris rose to fever-point; and Mehemet Ali, relying on dissension among the Frankish Powers, refused their ultimatum with contumely. The Gordian Knot was cut by Napier, who had received the command of a powerful squadron, with the rank of Commodore. He wrested Sidon from the Egyptians, defeated them thrice on land, and bombarded the great citadel of Acre. Then, after expelling Mehemet Ali's forces from Syria, he held out the olive-branch to the grand old adventurer, who granted him an audience at Alexandria. Napier's account of this episode is very interesting. Of Mehemet Ali he wrote:—

> I am not sure that the means he used were justifiable, but, judging him by an Oriental standard, which is the only fair way of judging him, he must be considered an extraordinary man. In less than twenty years he has created an army, navy and dockyard which would do credit to any nation; he has constructed nine or ten sail of the line, some of them very fine ships; he has made officers and sailors of his Arabs, and has instilled some of his own activity into the minds of the indolent Turks in his service. . . . The Pasha is a man of low stature, a good deal marked with the small-pox; his complexion is sallow, his eyes quick and penetrating. He wears a white beard, and when in good humour has a most fascinating manner; but when out of temper his eyes sparkle, he raises himself up in his corner, and soon convinces you that he is much more easily led than driven. He is easy of access, and, indeed, fond of gossiping, and seems well informed of everything that is said or done in Alexandria. He has many friends among the Franks, and when he once takes a liking the man's fortune is made. He has built a very handsome palace, and furnished it with taste. Opposite to it stands the harem where his wives reside, but the old gentleman has given up his visits to that establishment.

The negotiators found that they possessed many traits in common, and Napier actually persuaded his erstwhile foe to conclude a Convention (November 27, 1840) under which he resigned all claims to Syria in return for the here-

ditary Pashalik of Egypt, under the guarantee of the Powers. Although these arrangements were effected without regular diplomatic authority, they were afterwards ratified in substance by the Powers. In fact, Napier placed Mehemet Ali's dynasty on the throne of Egypt and settled the Eastern Question for thirteen years.

This Convention marked the zenith of his fortunes. He had succeeded as a soldier, sailor, and diplomat. But an old Greek dramatist warns us to "call no man happy until he is dead." The evening of Napier's glorious career was clouded by events for which he was certainly not responsible. In 1853 Nicholas I. reopened the Eastern Question, and Great Britain drifted into war with Russia; and Napier, who had become an Admiral and K.C.B., was appointed to command the Baltic Fleet. His ships represented the last word in naval construction, but they were ill-manned and worse found. In the words of his latest biographer—

the public was duped by dishonest politicians, whose interest it was to conceal the fatal effects of the cheese-paring economy by which they had sought to gain credit in time of peace.

His correspondence with Sir James Graham and the other muddlers in Whitehall is very sorry reading for all who have Great Britain's honour at heart. With one eye fixed on Fleet Street and the other on the House of Commons, they urged him to attack Cronstadt and Sweaborg, which bristled with far heavier guns than any at his disposal. But Napier's daring was tempered by a large measure of Scottish caution. He steadfastly refused to dash his wooden walls against granite; and the history of subsequent operations in the Baltic proves that he exercised a wise discretion. It may, indeed, be said that Great Britain owed him more for what he refrained from doing than for all the exploits which will keep his memory green for years to come. Of course, public opinion demanded a scapegoat for the comparative failure of Napier's Baltic expedition, and the Admiralty escaped punishment for their own sins of omission by casting him to the lions. He was curtly dismissed from command, and spent the remainder of his life in fruitless appeals for justice. It must be admitted that Sir Charles Napier excelled in the "gentle art of making enemies." He had a trick of expressing his opinions in nervous English, and never lost an opportunity of exposing the Admiralty's shortcomings. Posterity will render ample justice to his memory. Conceding all that can be legitimately urged against it, one recognises in Napier a seaman of the type presented by Hawke, Nelson and Dundonald. Mr. H. Noel Williams has succeeded in rehabilitating a career besmirched by ignoble envy, and his book has absorbing interest at this time of national stress.

F. H. S.

LE PRESIDENT WILSON.*

"The man of the hour," "the Arbiter of the War"; with these and similar well deserved, if highly coloured epigrams, the man is being hailed who, with Promethean constancy, defied a hostile universe. And the man who is claiming, who has claimed, the world's attention is not so much the President of the United States as President *Wilson*. Any book which contains within its covers a tolerable account of that personality cannot but be of absorbing interest.

M. Halévy very happily focuses on the individual. He discusses not so much President Wilson as Woodrow Wilson, the man, the historian, the essayist and, incidentally, the President. He traces the hero of his biography back to his Puritan ancestry, and describes the surroundings of his infancy which, it appears, had more than their usual share in moulding his character. The author significantly remarks that, as a young man, the subject matter Mr. Wilson chose for his prize essay was Pitt. It would have been of interest to have ascertained in what light the essayist of yesterday and the President of to-day regarded the 18th century statesman, and it is a pity that M. Halévy has not been able to obtain a copy.

It may be a revelation to many, but the pacific proclivities of President Wilson, once mistakenly conceived as rabid and worthy of a crank, appear under our author's able treatment in an entirely new garb. M. Halévy depicts his hero as a born, resolute fighter, who, however, owes no allegiance to the baser instincts of cupidity. President Wilson's present stand is but one out of many manifestations of his idealistic policy, to which he has constantly adhered throughout. Whether as a student of Political Science where his sway could not extend beyond the domain of thought, as a University organiser, or finally as the highest dignitary in the State, Woodrow Wilson, as becomes a man who has the courage of his convictions, never swerved from his goal.

The American point of view has always more or less baffled Englishmen. The Panama Canal policy in its inception, the Sackville-West affair, the Venezuela message, and a host of other incidents have taken by surprise those who did not realise that the fault lay in a defective system of internal politics. Mr. Wilson's rôle was, if anything, to dispel these superficial differences; and if his policy appeared for a time equally unintelligible to friend and foe, it was owing to his ultra-idealistic attitude, his sincerity and singleness of purpose. It is this avowed defect of American politics that seems to widen the scope of the ardent reformer and the assertive personality. True to the traditions of the English-speaking race, the Americans are too practical and too contemptuous of logic to worry about theoretical shortcomings. This characteristic finds its counterpart in the British constitution, which on paper is meaningless enough to lead de Tocqueville to pronounce it non-existent. In practice it is a wonderful machinery, a marvellous piece of constructive legislation full of wisdom, and certainly a masterpiece of practical politics. Transplant the British Constitution (in the letter) to a foreign land, and it will become the object of derision. Adopt the American balance of powers theory literally, and the machine gets clogged. In the words of M. Halévy, the American Constitution looks as though it was made to provoke conflicts. "It is a machinery well calculated to destroy power and negate government." And unless the sagacity of American statesmen could be trusted to overcome these difficulties, government would be impossible. But Americans have trusted to the sagacity of their statesmen. And if, at times, this illogical procedure has failed them, let us not forget that in the realm of international politics the American Government is a novice. A civil war followed by a period of unrivalled expansion absorbed the nation's energy. But the growing power of internationalism is forcing upon the American people a broader outlook. And it is matter for regret that M. Halévy should not give preminence to an incident of immense importance which illustrates at once the inevitable trend towards internationalism of American politics, and the brilliant liberality and breadth of vision with which President Wilson inaugurated his first tenure—viz., the repeal of the Canal Tolls Discriminating Act.

Withal, M. Halévy has written a brilliant essay. A note of profoundness runs through it: a profoundness, however, that does not repel the casual reader.

"We welcome the publication of Dr. Stuermer's book in English, for it is no ordinary war book."—*Times.*

TWO YEARS OF WAR SEEN AT CONSTANTINOPLE.

By

Dr. H. STUERMER,

late correspondent of the "Kolnische Zeitung" in Constantinople.
Translated from the German by E. Allen and the author.

SECOND EDITION. **6s. net.**

"The publication of this book in Switzerland last spring was an act of courage. The author was cut off at once, and perhaps for ever, from Germany and Austria-Hungary—from his friends, relations, and property there. . . . Anyone who reads the book through will find that cowardliness is the vice of which Dr. Stuermer consistently accuses the Germans in their dealings with the Turkish Government. Turkey and Germany, as is so often the case with accomplices in crime, are competing all the time in the exploitation of one another; and Dr. Stuermer confirms what we gather from other sources, that the Committee of Union and Progress are not getting the worst of the game. Germany destines Turkey to be her private economic domain, the Committee are determined to rid themselves of all European control, and make no fine distinction between German and Entente interference. . . . There is no space here even to refer to all the topics of importance which Dr. Stuermer discusses. We trust we have succeeded already in enlisting the interest of the reader for the book and his sympathy for the author."—*The Times.*

"I advise those who desire first hand knowledge of the political schemes and ambitions of the Germans and their Young Turkish friends to consult this book. It is a mine of information."—*Punch.*

"It is an honest and instructive book."—*Morning Post.*

"Students of Balkan affairs should not miss this remarkable record, which bears the stamp of truthfulness on every page.'—*British Weekly.*

HODDER & STOUGHTON, Publishers,
LONDON, E.C. 4.

REMINISCENCES.*

According to Carlyle, history is the essence of innumerable biographies; but future annalists of the Victorian Era will find scanty material in Mr. Gerard Van de Linde's garrulous recollections. He is fortunate in being the son of an eminent Dutch poet, who must have possessed great personal charm; still more so in having inherited the gift which a writer in *The Times* justly assigned to the founder of THE NEAR EAST—namely, "a genius for friendship." His career appears to have been modelled on that of Hogarth's Industrious Apprentice. Embarking on business in early manhood, he discovered the Philosopher's Stone of success, "Make yourself indispensable." After attaining eminence as a marine and produce broker, he found his true vocation in the arduous profession of chartered accountant. It took him far afield—to India, Egypt, America, and nearly every country in Europe. His reminiscences are mainly transcribed from a copious diary recording impressions of men and things in a spirit of breezy optimism which stands in marked contrast with the world's temper at the present hour. We are told in great detail what Mr. Van de Linde ate and drank, what hotels he favoured, and what trains or steamers he managed to catch. There is no attempt at psychological analysis, no glimpse of that underworld of fraud and self-seeking which exists in every great commercial centre. But this humdrum story of an uneventful life will doubtless interest Mr. Van de Linde's innumerable friends, and possibly benefit the finances of the Chartered Accountants' Benevolent Institution, to which he generously gives such profit as may be derived from its sale. F. H. S.

A WAR BIBLIOGRAPHY FOR THE NEAR EAST.

The following books dealing with the countries which come within the scope of THE NEAR EAST have been published during the war:—

The Frontiers of Language and Nationality in Europe. By Leon Dominian. Published for the American Geographical Society of New York (Constable and Co.).

The Eastern Question. By J. A. R. Marriott, M.A. (Clarendon Press.)

The War and Democracy. By R. W. Seton-Watson, D.Litt., J. Dover Wilson, Alfred E. Zimmern, and Arthur Greenwood (Macmillan and Co.)

British Foreign Policy in Europe. By H. E. Egerton, M.A. (Macmillan and Co.)

The German Road to the East. By P. Evans Lewin. (William Heinemann.)

Nationalism and War in the Near East. By a Diplomatist. Edited by Lord Courtney of Penrith. (Clarendon Press.)

Central Europe. (Friedrich Naumann.) With an Introduction by W. J. Ashley. Translated by Christobel M. Meredith. (P. S. King and Son.)

German Policy Before the War. By G. W. Prothero, Litt.D. (John Murray.)

La Question d'Orient. By Edouard Driault. (Felix Alcan.)

Germany's Annexationist Aims. By S. Grumbach. Translated, abbreviated, and introduced by J. Ellis Barker. (John Murray.)

The Rise of Rail Power in War and Conquest. By Edwin A. Pratt. (P. S. King and Son.)

The Intermixture of Races in Asia Minor: Some of Its Causes and Effects. By Sir William Ramsay. (Oxford University Press.)

L'Orient Mediterranée. By André Duboscq. (Perrin et Cie.)

The Gate of Asia. By William Warfield. (G. P. Putnam's Sons.)

Across Asia Minor on Foot. By W. J. Childs. (Blackwood and Son.)

My Round of the War: A Personal Narrative of War, Travel, and Adventure. By Basil Clarke. (William Heinemann.)

THE BALKANS.

The Rise of Nationality in the Balkans. By R. W. Seton-Watson, D.Litt. (Constable and Co.)

The Balkans, Italy, and the Adriatic. By R. W. Seton-Watson, D.Litt. (Nisbet and Co.)

German, Slav, and Magyar: A Study in the Origins of the Great War. By R. W. Seton-Watson. (Williams and Norgate.)

Geographical Aspects of Balkan Problems. By Marion I. Newbiggin. (Constable and Co.)

The Future of the Southern Slavs. By A. H. E. Taylor. (T. Fisher Unwin.)

The Reconstruction of South-Eastern Europe. By Vladislav R. Savic. (Chapman and Hall.)

The Balkan Peninsula. By Frank Fox. (A. and C. Black.)

The Slavs of the War Zone. By the late Rt. Hon. W. F. Bailey, C.B. (Chapman and Hall.)

Questions Balkaniques. By Yovan Cvijic. (Attinger Frères, Paris.)

The Memoirs of a Balkan Diplomatist. By Count Mijatovitch. (Cassell and Co.)

The Nomads of the Balkans. By A. J. B. Wace and M. S. Thompson. (Methuen and Co.)

The War in Eastern Europe. By John Reed. (Eveleigh Nash Co.)

Home Life in the Balkans. By Lucy M. J. Garnett. (Methuen and Co.)

Bohemia's Case for Independence. By Edouard Benes. (Geo. Allen and Unwin.)

Bosnie-Herzégovine. By Nikola Stoianovitch. (Albert Kundig, Geneva.)

La Responsabilité de la Hongrie. By M. G. Beck. (Payot et Cie.)

Les Slovènes. By Ivan Krek. (Librairie Félix, Paris.)

L'Alliance Balkanique. By Iv. E. Gueshoff. (Hachette et Cie.)

The Balkan Cockpit. By W. H. Crawfurd Price. (T. Werner Laurie.)

Hungary. By A. B. Yolland, M.A. (T. C. and E. C. Jack.)

A Dying Empire. By Bogumil Vosnjak, LL.D. (Geo. Allen and Unwin.)

The War and the Balkans. By Noel Buxton and Charles Roden Buxton. (Geo. Allen and Unwin.)

SERBIA.

History of Serbia. By Captain H. W. V. Temperley, M.A., F.R.H.S. (G. Bell and Sons, Ltd.)

Serbia. By L. F. Waring. B.A. (Williams and Norgate.)

The Story of Serbia. By Leslie F. Church, B.A. (Kelly.)

Serbia: Her People, History, and Aspirations. By Woislav M. Petrovitch. (Harrap and Co.)

The Guardians of the Gate: Historical Lectures on the Serbs. By R. G. D. Laffan, C.F. (Clarendon Press, Oxford.)

Through the Serbian Campaign: The Great Retreat of the Serbian Army. By Gordon Gordon-Smith. (Hutchinson and Co.)

The Flaming Sword in Serbia. By Mrs. St. Clair Stobart. (Hodder and Stoughton.)

The Story of a Red Cross Unit in Serbia. By James Berry, B.S., F.R.C.S., and others. (J. and A. Churchill.)

A la Suite du Gouvernement Serbe. By Auguste Boppe. (Bossard, Paris.)

La Retraite de Serbie—Octobre à Decembre, 1915. By Louis L. Thomson, Médicin-Major. (Hachette et Cie.)

The Stricken Land: Serbia as We Saw It. By the late Alice and Claude Askew. (Eveleigh Nash Co., Ltd.)

Serbia in Light and Darkness. By Fr. Nicholas Velimirovic. (Longmans, Green and Co.)

Under Three Flags: With the Red Cross in Belgium, France, and Serbia. By St. Clair Livingston and Ingeborg Steen-Hanson. (Macmillan and Co., Ltd.)

Experiences of a Woman Doctor in Serbia. By Dr. Caroline Matthews. (Mills and Boon, Ltd.)

Atrocities Committed by the Austro-Hungarian Army During the First Invasion of Serbia. By R. A. Reiss, D.Sc. (Simpkin, Marshall and Co., Ltd.)

For the Better Hour. By Princess Alexis Kara-Georgevitch. (Constable and Co., Ltd.)

ROUMANIA.

Roumania and the Great War. By R. W. Seton-Watson, D.Litt. (Constable and Co.)

Histoire des Roumains de Transylvanie et de Hongrie. By N. Jorga. (Imprimerie Gutenberg, Bucharest.)

Roumania's Causes and Ideals. By Leonard A. Magnus, LL.B. (Kegan Paul, Trubner and Co.)

A Roumanian Diary, 1915, 1916, 1917. By Lady Kennard. (William Heinemann.)

Notes sur la Guerre Roumaine, 1916-17. By Mons. N. P. Comnène. (Payot et Cie.)

Domestic Life in Roumania. By Dorothea Kirke. (John Lane.)

My Country. By H.M. the Queen of Roumania. (Hodder and Stoughton.)

AN EGYPTIAN REFORMATORY.

BY COLES PASHA.

(*Concluded.*)

We had, of course, great difficulties with the physically incapable (many were nearly blind), and the mentally deficient, to say nothing of those addicted to drugs no longer obtainable. The malingerers and those who pretended to be incapable of acquiring even the rudiments of a handicraft were, too, not a few at first, thus hoping to escape the period of cellular probation and be relegated to the domestic duties of the prison, especially the prison garden, which was where the then hopeless cases eventually drifted. But when the wastrels found that no advantage was thus gained—on the contrary, it meant deprivation of certain amenities in the establishment and postponement of release till the full period of their sentence had expired—it was remarkable what efforts they made. In fact, much of my time when inspecting the establishment was spent in listening to appeals from those who had been classed as hopeless by their instructors. But this improved state of affairs was only reached after the suppression of a very serious mutiny during the second year. The establishment, too, got at one time a rather bad name, owing to the discovery of some false coins which, with the connivance of some of the officials, were being fabricated by one or two who had proved themselves good craftsmen—too good, in fact! But notwithstanding these set-backs, during the three years I remained in Egypt the general improvement in the inmates can, I think, only be described as very satisfactory, if not marvellous. Some who were classed as hopeless degenerates improved wonderfully, and the crafts acquired by others left no doubt as to their ability to earn an honest livelihood on release should they wish to keep straight. What surprised me most was the facility with which some who were well on in life learned to read and write, and evidently took a pleasure in the limited amount of book-work attempted to be taught at the establishment.

My readers will probably say this is all very interesting, but how about the result? As prior to my leaving Egypt no one had been in detention long enough to qualify for release, I am unable to state what percentage were eventually classed as successes, but of the 400 who had completed the period of probation 190 were reported as doing well, 40 fairly well, 22 slight progress, 60 malingerers, and 88 as physically unfit or degenerates and incapable of earning an honest livelihood. But whatever the final verdict will be as regards those who were apparently doing all that was expected of them, the Institution must prove a success from my point of view, as the community will have been relieved of the presence of these offenders for a considerable period, and the Courts should have no hesitation in inflicting the further period of ten years should they again return to their evil ways. Presumedly, too, the Government will see the necessity of making some provision for the mentally and physically unfit, other than inflicting repeated sentences of imprisonment, as at present.

It may be argued that this long period of detention and the pay of the extra staff provided costs the department considerably more than ordinary imprisonment. This is undoubtedly true. £9 5s. against £18 5s. was tabled as the average annual cost of a prisoner and an inmate of the reformatory respectively the last year I was in Egypt. But against this we may write off the expense the State would have incurred in arresting and trying the same individual repeatedly during the same period had he been a free man, to say nothing of the saving to the community in the shape of stolen property!

Altogether, I doubt there being much in it, but we need not labour the point, as I do not think the Egyptian authorities were troubled on this score. What undoubtedly did trouble them was the civilised methods of prison administration I was gradually introducing, which many, the late Lord Kitchener amongst them, considered too humane for the Egyptian peasant.

To appreciate better this Egyptian point of view, let us see how habitual offenders were dealt with in the early part of the nineteenth century, when Lane visited Egypt. In "The Manners and Customs of Modern Egyptians," we are told that although the amputation of limbs for offences against property, as prescribed in the Koran, was no longer in vogue, still repeated offences were always punished by death, and the first and second offences by severe bastinadoing. "The Basha," too, had a summary way of dealing with cases coming before him, "a peculiar horizontal movement of his hand" leaving the offender in no doubt as to the disposal of his head! It may be admitted that our own system of justice about that period was, too, somewhat primitive, as sheep-stealing was punishable by death, and the skeletons of highwaymen in chains adorned many of our cross-roads. But, whereas in England a civilised administration of justice may be said to have commenced from that period, in Egypt the conditions we found in 1882 were not far removed from what Lane saw fifty years earlier, as I myself can testify. I will quote one case. A murderer, six months after we had occupied Egypt, was sentenced to death by the old Tribunals, and decapitated in the presence of the Governor of the province. But the sword, being somewhat blunt, and the Cowas, who was executioner, not an expert, it took about six strokes to accomplish. The next of kin, who in this particular case had refused "blood-money," then rushed forward and washed her hands (it was a woman) in the man's blood!*

Bastinadoing, too, was, of course, the standard punishment, only without any regular trial, and generally administered to extort evidence or taxes! I think the Egyptians may be excused for failing to appreciate up-to-date prison administration and an adult reformatory only twenty years later! But if new-fashioned prison methods did not altogether find favour, neither was there by any means an agreement as to the the new method of administering justice by the new Tribunals. There are two distinct schools of thought: the old school, voiced by the Governors and Executive generally, who are nominally responsible for the public security, and who only ask to be given back some of their old untrammelled authority. Then there is the younger generation, most of whom have graduated in the school of law, who are rather apt to look on elaborate procedure and other legal paraphernalia as all that is required—the shadow without substance. It is this latter school who are opposed to anything in the way of corporal punishment, and who can with difficulty be persuaded to inflict the capital sentence; neither do they quite realise that a civilised administration of justice must be completed by civilised methods of prison administration. I sympathise with the old school, but I reserve my arguments and powers of persuasion for the younger generation in the Justice, who undoubtedly represent all the intelligence of the country, and through whom alone we can eventually reach the civilised administration best suited to the country.

I fear that all this is rather a digression from the benefits which may be expected from the establishment

* These facts were elicited by me at an official inquiry.

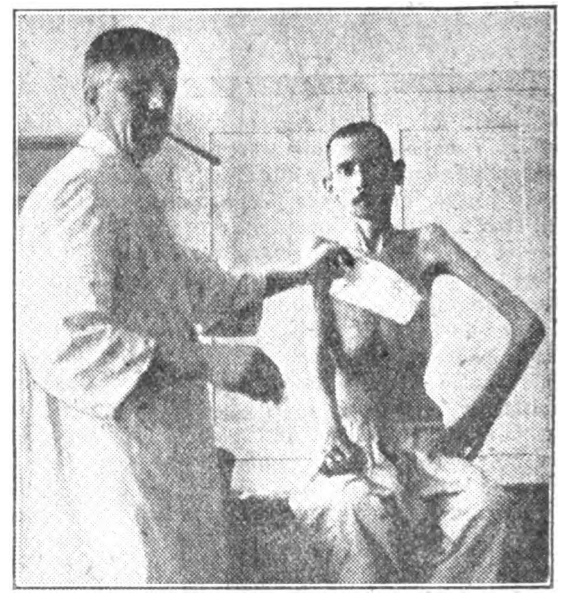
of an adult reformatory, and I have already exceeded the space I shall be allowed. Briefly, I did not expect miracles; on the contrary, I anticipated that of the six or seven thousand persons who are annually admitted to prison in Egypt on re-conviction, probably one-half are incorrigible, and should be more or less permanently under lock and key. I calculated that if we could get, say, 3,000 sentenced for an indeterminate period, and the remainder either flogged or provided for in asylums or almshouses, we should have gone a long way to rid the community of these pests. Having once got the principle accepted by the Courts, the only difficulty was to provide the necessary accommodation. Had I remained in Egypt my intention was to utilise the existing prisons, or portions thereof, as "Special Establishments" as the number of habituals sentenced to indeterminate periods increased.

In my long career I have generally found that, if one agitates long enough, one generally succeeds in attaining one's object. I should have gone on agitating till I had succeeded in getting (*a*) corporal punishment accepted as a punishment, rather than imprisonment in many cases, (*b*) labour in lieu of imprisonment as a punishment for all minor misdemeanours, (*c*) a more liberal administration of the First Offenders' provisions of the Code. Having thus reduced the prison population by several thousands, I calculated there would be plenty of accommodation for 3,000 habituals to be treated on reformatory lines.

But all the agitation in the world will not, alas! stop advancing years, and the autumn of 1913 found me leaving Egypt at the close of my official career with my life's work incomplete.

Since then the war has put a stop to all reforms in Egypt and elsewhere, and who can tell what the future may bring. New men new manners. I can, however, claim to have created the pioneer adult reformatory on this side of the Atlantic, and I am confident that the indeterminate sentence is the weapon with which all civilised countries will eventually combat the habitual offender.



THE WOMEN OF ROUMANIA.

A large gathering assembled at South Lodge, Rutland Gate, on February 25, to hear Mme. Také Jonescu and Dr. Nicholas Lupu speak on Roumanian women in peace time and in present conditions. In the absence of the Roumanian Minister the chair was taken by M. M B. Boerescu, the Roumanian Chargé d'Affaires, who said that His Excellency would have liked to be present and express the admiration and gratitude of his country for the splendid work done for Roumania by British ladies in this hour of trial.

Mme. Také Jonescu said that Bucharest had a reputation as the gayest of the smaller capitals of Europe. This was undeserved; the manifestations of human weakness were not peculiar to any one land, and she was convinced that in Roumania there was as large a proportion of exemplary wives, devoted mothers, and good women fulfilling useful duties in every sphere of life as in any other country.

Of the peasant women, she said that Roumania, being almost exclusively an agricultural community, the male population of the villages was relatively unoccupied during the winter months, but the women were never idle. Apart from household work and the care of their numerous children, they spun and wove all the clothes of their husbands, brothers, and sons, worked the exquisite silken embroideries on their own clothes, and the fine veils that the married women wore. This was in peace time. Since the outbreak of the war the Roumanian women, headed by Queen Marie, had tended the sick and wounded. They had never quailed before the advance of the invader, and, where it was found impossible to evacuate the wounded before the arrival of the enemy there were always brave doctors and nurses to remain.

Dr. Lupu also spoke of the industry of the peasant women. Besides the work already mentioned by Mme. Jonescu, he said the peasant woman helped her husband in the fields. Despite many simple joys, her life was a long martyrdom; she aged quickly; and ten or fifteen years after marriage she had the appearance of an old woman. The Roumanian woman rarely married a foreigner; when she did so she Romanised him. In Transylvania, when the Roumanian army entered the country, the Roumanian women there whose own men folk had been compelled to join the Austro-Hungarian army welcomed the invaders and helped them. Many of them had since paid for this with their lives. Five courts were sitting permanently to deal with such cases, and these had condemned fourteen thousand people to death or imprisonment.

A Serbian soldier (prisoner of war) suffering from hunger-typhus in Mathausen. Reproduced direct from an absolutely untouched, authenticated photograph. (*Serbian Office al.*)

If you were this Famished Serb Soldier

He was once a stalwart son of Serbia, his only crime that he fought to protect his home and those he held dear. Look on the photograph and you see the mere skeleton of a man with little left but the will to live. And he *wants* to live. If *you* were in his place would you not be grateful if bread were sent across the waters to feed you and bring back health and strength?

This man's case is but one amongst many. "There are concentration camps where one-half of the inmates have died. And this is not a case of an epidemic. . . . *They die there of cold and hunger.*"

This is the cold recital of irrefragable facts in a memorandum issued by the Serbian Legation. You who read this will feel an impulse to help those who cannot help themselves. You *can* help them. The way is clear before you. The Serbian Relief Fund is the only officially authorised Fund under British administration working exclusively for the relief of Serbians. This Committee is sending food to starving Serbians in prison camps, and is helping to keep alive and healthy the refugee Serbs—parents, wives and children of Serbian soldiers who are still gallantly fighting for the Allied cause.

Save for the soldiers, one part of the Serbian people is in the hands of Serbia's enemies; the rest are in exile. Their vital needs are Food, Clothing and Medical Aid. Help to succour them by sending a donation according to your ability to:—

The Hon. Treasurer:

The Right Hon. the EARL OF PLYMOUTH, C.B.

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

Ex-King Constantine. Feb. 21.

Mr. LYNCH asked the Secretary of State for Foreign Affairs whether means existed whereby ex-King Constantine might hold correspondence with his relatives in this country; and whether facilities are given by the Government for these communications?

The MINISTER OF BLOCKADE (Lord Robert Cecil): King Constantine's correspondence is subject to the ordinary disabilities affecting correspondence from neutral countries, and no special facilities are given in his favour.

Mr. PEMBERTON BILLING: Does this apply to packages sent from this country to ex-King Constantine?

Lord R. CECIL: It depends on the nature of the package.

Mr. LYNCH: Is the noble lord aware of the fact that a parcel of khaki uniforms was recently sent from this country to ex-King Constantine?

Lord R. CECIL: I am not aware of that.

Mr. BILLING: Is it a question of principle to allow packages to go from this country to ex-King Constantine, who is admittedly an enemy of this country and a spy?

Lord R. CECIL: I do not think that it is a question of principle. I do not quite understand the hon. member's question.

Mr. BILLING: Is ex-King Constantine regarded as an enemy or a friend to this country?

Lord R. CECIL: I should like notice of that question.

The Turkish Empire.

Mr. KING asked the Secretary of State for Foreign Affairs whether the memorandum of agreement between Britain, France, and Russia, embodying the arrangements made in the spring of 1916 for the partition of the Turkish Empire after the war, still embodies undertakings to which this country is bound; and whether he will indicate what are the religious interests in Palestine of this country which the memorandum declares are to be secured.

Lord R. CECIL: As I have already pointed out, I cannot at present undertake to discuss these agreements. The version of this particular agreement given by the hon. member is entirely inaccurate.

Mr. KING: Is it quite inaccurate to say that we do not recognise any special religious interests in Palestine?

Lord R. CECIL: I do not think that that quite covers my answer. What I said was that the version of the hon. member was entirely inaccurate, but I cannot discuss these agreements.

Mr. KING: As the last part of the question is not covered by the answer, cannot some answer be made to it?

Lord R. CECIL: Quite obviously not. The hon. member asks what religious interests in Palestine of this country are to be secured, and I have told the hon. member that I cannot discuss these agreements.

Bulgaria and Russia. Feb. 26.

Mr. NOEL BUXTON asked the Secretary of State for Foreign Affairs whether he had official information to the effect that peace has been concluded between Bulgaria and Russia; and, if so, on what terms?

Mr. BALFOUR, replying, said he had no official information to the effect that peace had been concluded between Bulgaria and Russia.

British Prisoners. Feb. 27.

Mr. J. F. HOPE, in reply to a question by Mr. Hume-Williams, said: The number of British prisoners who have reached Holland for internment under the Hague Agreement is 313 officers and 1,165 others. No news has yet been received of the ratification by the Ottoman Government of the Berne Agreement relative to prisoners of war which was signed on December 28, 1917. Some of the Turkish delegates at the conference are understood to have returned to Turkey immediately on its conclusion, while others are believed to be still in Switzerland. The text of the Agreement is alleged by the Turkish Government, however, only to have reached them about February 10. His Majesty's Government are unaware of any reason for delay in ratification, and have requested the Dutch Government to ascertain through its representative in Constantinople how the matter now stands.

IVAN MESHTROVITCH PURCHASE FUND.

The committee formed to obtain a characteristic example of the work of Ivan Meshtrovitch for a public collection has decided to apply the amount already subscribed—viz., £350—towards the purchase of the relief in wood, "Descent from the Cross." It is hoped that some heroic group in the round, like the "Mother and Child," originally thought of, may be secured in happier times. To complete the purchase of the relief a sum of £200 is still required, and the committee appeals with confidence to those who have been moved by the measureless sacrifice of the Serbian race and the tragic expression given to it in the art of the Serbian sculptor. The example chosen is a fitting symbol of the first, and would, it is believed, be welcomed among our national treasures as representing one remarkable side of Meshtrovitch's art. Contributions should be sent to the honorary secretary, Ernest H. R. Collings, 18, Ravenslea Road, Wandsworth Common, London, S.W 12. The chairman of the fund is Sir John Lavery, R.S.A., A.R.A.

THE PRESS ON THE NEAR EAST

A Long Trek.

The February number of *Blackwood's Magazine* contains, over the signature "H. C. W. B.," an interesting account of the 1,700 miles journey undertaken by some of the Kut garrison to their place of interment at Kastamuni. A large part of this long trek was done on foot by officers as well as by men. Kastamuni, indeed, is an officers' prisoners of war camp, and the rank and file of the garrison were detached at different stages of the journey for other destinations. Steamer accommodation was not sufficient for the numbers to be transported from Kut, and some had to march on the very first day. Baghdad would seem to have been reached without much hardship, but from that point the prisoners' troubles (and worse) began. The treatment of the officers was, according to Turkish lights, correct; that of the men, in the opinion of the author, constitutes "one of the blackest crimes committed during any war." Here is an account of the first day out from Baghdad:—

Most of us were weary, and many preferred lying on the floor of the corridors or vestibules at the end of the cars, to sitting straight up in the cramped compartments. We made several halts, and it was near midnight when we arrived. Our guards, a few gendarmes, seemed to have no idea where we were going, or what was to be done with us. Eventually we were told to leave our kit, which was to be brought along later, and were guided down towards the river. After walking a mile we found ourselves in a small Arab village on the river bank, and were conducted into a courtyard some forty yards square, where we were told we were to stay. There was a rough shelter round three sides, formed by brushwood supported on a rough wooden framework; this promised a certain amount of shade, and we were all glad to be in the open air, rather than in another barrack building.

On leaving Samarra the prisoners fared badly in the matter of transport: "By the time we had got our kit packed we had left for riding one reasonably large donkey and a diminutive beast between the six officers and seven Indian servants in our mess." At Tekrit, however, some additional animals were secured, and the 175 miles between Samarra and Mosul were covered in just under ten days.

An interesting point established by this narrative is that in June, 1916, railhead of the Baghdad Railway was still at Ras-el-Ain, or just beyond, and had by no means reached Nisibin, as had been generally believed. Between Mosul and Ras-el-Ain the transport was composed chiefly of carts—without springs, *bien entendu*. The 200 miles were covered in ten days. "Most of us had walked half the distance, and bumped in carts over the other half." Twelve hours of rail brought the party to Aleppo; thence by train to Islahie railhead for the journey over the Anti-Taurus range. By this time the prisoners were more in touch with contemporary events in Turkey, as the following extracts show:—

There were some Austrian troops in Aleppo, and we now began to meet many more Germans. Turkish training-camps were

EDUCATIONAL.

SCHOOL OF ORIENTAL STUDIES.
London Institution, Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.

For particulars, apply to E. DENISON ROSS, Director.

ROYAL SCHOOL
FOR
Daughters of Officers of the Army.

Patrons:
Their MAJESTIES THE KING AND QUEEN
and HER MAJESTY QUEEN ALEXANDRA.
Chairman: LT.-COL. A. GRUBB. J.P.
Vice-Chairman: SURGEON-GEN. SIR WILLIAM TAYLOR, K.C.B.

Daughters of Officers of the Army are admitted to the above Schools according to the circumstances of their parents, at rates of £20, £45, £65, and £80 a year. Granddaughters of Officers are admitted at £45, £55, and £90 a year according to circumstances, and a limited number of daughters of civilians are admitted at £120 a year when there are vacancies. There are 15 Scholarships, open to competition, in the School, of amounts varying from £10 to £20 up to one of £90.

As half of the School consists of pupils on the £15 foundation, which includes both board and education, a deficiency of about £2,500 a year has to be met by contributions, which are earnestly solicited. Donations of £5 5s., giving one vote for life, or subscriptions of 10s 6d., giving one vote for the year, may be sent to

F. W. T. ATTREE, COLONEL (late R.E.), Secretary.

Office: Panton House, 25, Haymarket, S.W.1.

Digitized by Google

much in evidence at the stations we passed after leaving Aleppo, and a good deal of material was going south on the railway. Most of this was going to Egypt to assist in the attack which ended so disastrously for the Turks.

We spent the night at Islahie under some rough tent shelters. All our clothes had been fumigated in a steam wagon specially designed for the purpose.

The following morning we noticed a crowd of men, women, and children moving off along the road and looking very wretched. Our guards said that these were Armenians who had been working on the line, but were being taken away to make room for our troops, who would be sent to work in their place; they also added that these Armenians would be marched off into a waterless spot in the hills, and kept there till they died.

We left our camp in the evening, travelling the first part of the way in carts over one of the most bumpy roads ever seen. After a halt at the foot of the pass we marched up, starting at midnight. There was a fine moon, and the scenery as we climbed higher became very grand. The road appeared to be only lately completed, and was probably due to German energy. As we neared the summit three or four bodies were seen lying in the ditch beside the road: these were evidently some of the Armenians we had seen starting off that morning.

* * *

As we neared the railway again at Bozanti we noticed a few British prisoners. These were naval men taken in the Dardanelles. They said they were being paid, and apparently had not much to complain about. We were not allowed to stop and speak to them, and can only hope they have fared better than our own troops who were put to work shortly afterwards on the neighbouring sections of the line through the Taurus.

At Bozanti we were able to buy a few stores, some of which were British and had been left behind at Gallipoli when we evacuated the Peninsula.

The rest of the journey was comparatively uneventful. Kastamuni was reached on July 5, and the party was halted outside the town while a number of local gendarmes formed up on each side of the road to lend some degree of state to the entry.

The Voice of Albania.

It will be news to many that there is an Albanian daily paper—in Boston, U.S.A. *Dielli* ("The Sun"), we are told, is "the organ of the Nationalist Albanians who want an Independent and Sovereign State of Albania," and it is well that the Albanian point of view should not be lost sight of, even if it can only be adequately heard by way of America. Certainly, if the views of *Dielli* obtain, there will be trouble ahead with any settlement that does not take Albanian requirements into consideration.

In the issue of January 18 there is a forceful article by the Rev. Fan S. Noli, president of the Albanian Federation, who takes up the challenge of an American military critic, who appears to have written in support of the policy of a "window on the sea" for Serbia. This critic is charged with having defended the partition of Albania, having offered Northern Albania to Serbia to satisfy the latter's demand for access to the sea; "and, what is worse, he interprets in that spirit Section XI. of the fourteen conditions of peace set forth by President Wilson in his address before Congress." From the reverend father's reply we take these passages:—

In my humble opinion, free access to the sea for Serbia through Northern Albania is a military impossibility. Here are some facts to prove my assertion:—

Serbia had before the Balkan wars a population of about two millions. To this she added more than one million of unwilling Albanian subjects and about a million of equally unwilling Bulgarians and Turks by annexing the Albanian province of Kossovo and the Bulgarian province of Northern Macedonia as the fruits of her victorious wars against Turkey and Bulgaria in 1912 and 1913. She may now consummate her happiness by annexing Northern Albania, and thus acquiring her much-coveted free outlet to the Adriatic Sea. . . . But the fact is that the Albanian subjects of restored Serbia, with a window upon the sea, will amount to about two millions. And *that is the question*.

* * *

These Albanians will live up to their record; they will unquestionably fight the issue with the Serbians, if they are compelled to undertake such an ungrateful task, and the odds will not be on the Serbians' side at the end of this war, as they were at the end of the Balkan wars. Serbia is now depopulated by war, by famine, by contagious diseases, by ruthless Austro-German deportations and massacres. The Huns have done their work in poor Serbia as efficiently as in blood-soaked Armenia. Of the two millions of Serbians there hardly remain one million, mostly old men, women and children. Now, have these old men, women, and children any chance against two millions of stalwart Albanian highlanders, about whom Lord Byron said:—

"Where is the foe that ever saw their back."

To ask is to answer. The whole thing is worse than preposterous from a military point of view, it is simply ridiculous.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

An extraordinary general meeting of the Roumanian Consolidated Oilfields was held on February 27, at which it was decided to bring an action against the British Government for compensation in respect of the destruction of the company's properties and plant in November, 1916. Apparently the proceedings will take the form of a Petition of Right, which, it is held, will ensure a definite answer to the company's claim. This, it may be mentioned, is for £1,270,700, plus 5 per cent. interest, but Sir Watson Rutherford said at the meeting: "If they would pay us for our stocks, which they destroyed, £197,000, and give us an assurance that our claim for the residue was admitted in principle, and the British Government would see that after the war, within a reasonable time, the rest of our claim (to which there is no answer) would be paid, we should be quite willing to let the matter stand over."

***

All things considered the position of the Imperial Bank of Persia disclosed by Sir Hugh Barnes at the general meeting this week must be regarded as extremely satisfactory. All the bank's branches have been reopened, and business has improved as the result of the growth of confidence and a sense of security in the country. Sir Hugh thought the outlook was promising, but emphasised the need for improved communications, if Persia's trade is to be developed. "It is possible," he said, "that after the war the Persian Government may see its way to embark on a programme of development, and, if so, the bank, as the State Bank of Persia, will be in a position to render it valuable assistance."

***

Recent events have accentuated, if possible, the unfortunate position in which Roumania has been placed since the dawn of "democracy" in Russia, and in the circumstances it is not difficult to find the basis for the belief of the Central Powers that they will be able to conclude peace with our Ally. How British interests in Roumania will be affected in that eventuality may be gathered from recent advices from Amsterdam, which suggest that Germany and Austria intend to try to secure a monopoly of the Roumanian oilfields. It is stated that a proposal will be made to the Roumanian Government to expropriate all the petroleum wells in the country and lease them for a long term to the Deutsche Bank, who were largely interested in the oilfields before the war. The control of the oilfields would be of inestimable value to the industries of the Central Powers, and on that account it may be accepted as probable that they will insist on this monopoly as a condition of peace, colour being lent to this view by the statement that Bulgaria alone was advancing substantial territorial claims against Roumania.

***

Naturally Roumania will object very strongly to any such proposal, for the expropriation of her oilfields would deprive her of her most valuable economic asset on which the hopes of her future progress are mainly based, but in the circumstances anything may happen, and it would be too much to assume that Germany may not obtain the temporary control of the oilfields. I use the word "temporary" advisedly, because it must be clear that there can be no permanence about any such arrangement while the war remains undecided. When Germany has been decisively beaten it will be the pleasant duty of the Allies to revise any arrangements of this kind. So that there is not the slightest reason for pessimism on the part of shareholders in British oil companies there should Germany obtain her desired concession. The position would be materially unchanged so far as they are concerned. And what applies to them applies equally to those interested in other British undertakings in Roumania.

***

There is one aspect of Germany's desire to obtain this monopoly which is of particular interest, and that is the light it throws on the sincerity of her protests against an economic war. The mere suggestion that the Allies might be compelled to punish her by economic measures brought forth new threats and frightfulness from Germany, yet she is now calmly proposing a monopoly in oil which is nothing if it is not economic war. But Germany proved long ago that she was a law unto herself in anything that concerned her own interests, so that her present *volte face* will occasion no surprise. It should, however, serve to remove the last vestige of opposition to the recourse to economic measures by the Allies to protect their trade from German penetration.

***

There is a serious shortage of preservatives for hides and skins at the present time, due partly to the scarcity of raw materials owing to the war, and partly to the absence of German proprietary articles. Besides obtaining the control of the hides trade in various parts of the world, the Germans, with their usual care, entered very thoroughly into the question of the preservation of the raw material, and the preservatives they introduced, mainly of an arsenical nature, were in very general use before the war. The fact that these preparations are no longer available has made a considerable difference. The present situation may be gauged from the fact that white powdered arsenic, which cost £13 a ton when the war broke out, is now quoted at from £130 to £150 a ton, and even at that price is scarcely obtainable. Naturally, the position has made the provision of substitutes a necessity, and steps have already been taken in this direction, notably in France, where some excellent results are stated to have been obtained.

***

An important interview with Dr. Douritch, Professor of Political Economy, Belgrade University, and Commercial Attaché at the Serbian Legation, on the results of the recent tour in this country of Serbian business men, in the arrangements for which he played a leading part, will be found on page 180. Dr. Douritch, I am glad to write, expresses his complete satisfaction with the tour, which, he points out, has enabled the Serbians to explain very frankly to British merchants and manufacturers the value of economic relations between the two countries. Now that their interest has been awakened in the question its importance must be kept constantly before them if we are not to be taken at a disadvantage by the coming of peace. For to be interested in promoting trade with a country is one thing; it is quite another to take the necessary steps to that end, and here I must lay stress once more on the need for preparation now, if our business men are to hold their own after the war. To enter the Serbian market or any other trading sphere entails immediate preparation. To put it off until the war ends would be little less than futile.

***

It is interesting to note what pains the Central Powers are taking to investigate the economic possibilities of the lands they have invaded. One of the latest instances of their keenness in this direction is referred to by a Bulgarian paper, which describes the visit of an "expert" to the Serbian coalfields. The expert, who, it seems, found ten new localities where mines could be successfully operated, and a rich field of coal near Usce along the river Ita, made an excellent report on the coalfields, which he declared offered admirable opportunities for the investment of capital. I may mention here that, while Serbia's coal resources were perfectly understood before the war, only fourteen mines were being worked in 1910. At the outbreak of war this number had been increased to over twenty, but any further development was out of the question, owing to the lack of miners, enterprise, and capital. Here, then, is a concrete example of a direction in which Serbia will require our help, that is unless we are willing to allow Germany to profit by the work of the expert already mentioned.

***

An interesting development in Bulgaria at the end of last year was the action of the Ministry of Finance in prohibiting the use in Bulgaria and in the occupied territories of Roumanian, Serbian, and Greek banknotes, silver and nickel money. Holders of these moneys were given a date by which to declare their holdings to the National Bank of Bulgaria, and those who had extensive holdings were allowed to export them.

The Serbian Industrial Mission

Interview with Dr. Douritch.

The opinion seems to be general that it would have been difficult to devise a more promising scheme for the promotion of economic relations between Great Britain and Serbia after the war than the recent visit of the Serbian Industrial Mission to the chief commercial centres of this country, in the course of which the members of the mission have had an opportunity of explaining how Serbia's future requirements can best be met and the possibilities for trade between the two countries. Obviously the results of the tour cannot be gauged during the war, but this much can be said—that the visit of the mission has given British merchants and manufacturers a clear insight into the value of trade relations with Serbia, and from the way in which they have welcomed the tour, no less than from their speeches at the numerous functions held in honour of their Serbian visitors, it is permissible to draw the most hopeful conclusions. Among the Serbians the visit is looked upon as having been highly successful. This was the note struck by Dr. Douritch, Professor of Political Economy, Belgrade University, and Commercial Attaché at the Serbian Legation, in an interview which he recently accorded to a representative of THE NEAR EAST. Without saying so in as many words, he made it clear that the tour had fully come up to expectations, and that it would probably have the most auspicious consequences.

Explaining Serbia's anxiety to establish permanent economic relations with the Allies, he emphasised Serbia's unfortunate situation before the war. "We were practically cut off from the Allies," he said, "and we were economically dependent on Austria and Germany. In future it will not be enough for our political sympathies to be with the Allies, while our economic interests take another direction. We desire to have our relations with the Allies established on the concrete basis of permanent friendship and mutual development. What I have been trying to put forward must interest the Allies, because

"1. Serbia is a country which must develop economically. Her restricted development was unnatural, and, in a way, an accident, because Serbia was handicapped by her hostile neighbours—the Turks and Austrians. The country simply could not develop. Bearing this in mind, and also remembering that Serbia possesses great natural riches and has an industrial population, it will readily be realised that as soon as she is in a position to develop a great economic future will lie before her.

2. "Serbia represents only a small part of the Serbian race, and accordingly, in talking of Serbia to-day, we must think of the future Jugoslav State, with its population of twelve millions.

"3. It is essential for the Allies that Serbia should not only be free politically, but also that she should be strong in the economic sense, because only thus can she fulfil her rôle in the Near East of guarding the free development of other countries and of preventing the political and economic domination of the Central Powers from spreading southward through the Balkans. I am glad to say that this has been more and more understood in this country of late."

It was felt, he pointed out, that it would be an excellent thing if the Serbian position was fully explained to the more prominent business men among the Allies, in order that they might understand what Serbia would need after the war. With that end in view, it was arranged that a number of Serbian business men, representative of their country's trade and industry, should visit the leading commercial centres in France and Great Britain to meet the leaders of commerce and industry, and to study the industrial organisations of these countries.

"The results of the tour in Great Britain," Dr. Douritch continued, "may be considered quite satisfactory in present conditions. Its object was to get into touch with prominent business men, to find out what they produced and would be able to produce in the future, to inform them of our economic conditions and our needs and of our ability to pay for our imports. In this the mission was a perfect success. It is known to-day in the business world here that Serbia produces raw materials which Great Britain has to import. Serbia's need for manufactured articles of all kinds is also fully realised. Particular stress was laid by the members on the fact that she will require vast quantities of machinery as soon as the war ends for constructing roads, railways, ports, and rebuilding her destroyed industries.

"British business men now understand," added Dr. Douritch, "that Serbia could have been a large consumer of British goods before the war, but that, as a matter of fact, practically all her trade was done with Austria and through Austria with Germany. There are many reasons to account for this, but it will suffice if I merely touch on the economic side of this question and outline what is required if strong commercial relations are to be established between Great Britain and Serbia.

"1. There must be direct maritime communication. This was the subject of continuous attention during the tour, and everything connected with it was considered, including the possibility of the creation of an Anglo-Serbian shipping company.

"2. It was explained to British engineers that new roads and railways will have to be constructed to bring Serbian ports into communication with Serbian territories, and I am glad to say that they realised the extent to which the relations of the two countries are bound up in this work.

"3. Regarding the question of credit, to which special attention was paid, I pointed out to the various Chambers of Commerce that Austria and Germany were able to give credit to Serbian merchants, but that Great Britain was unable to do so, because British banks did not offer facilities for the process. The Austrian banking organisations were, of course, specially organised to favour foreign trade. They were not out to render a special kindness to Serbia; on the contrary, they claimed their full interest and more. They realised, however, that in an agricultural country like Serbia people were only able to pay their foreign debts once or twice a year, and they offered facilities accordingly. The result was that even French and British goods were imported by Serbia through Austrian merchants, though it was more expensive to order that way. This is quite understood here now, and it is realised that British industries need a new link between the banks and the manufacturers. So far as I know, it is intended to establish a bank which will serve this purpose, and it has been promised that Serbian trade will be the object of special consideration by this institution. As a matter of fact, some people here are seriously considering the establishment of a British bank in Serbia which would serve the special purpose of promoting trade between the two countries, and would endeavour to work in close touch with Serbian banks and Serbian capital."

"The first practical result of the tour," said Dr. Douritch, in conclusion, "has been the establishment of a society called the 'Anglo-Serbian Committee,' which has as president Sir Algernon Firth and as secretary Vice-Admiral Sir Charles Dundas, and it is hoped that this society will form the nucleus of an organsation which will have the object of promoting economic relations between Great Britain and Serbia. Such an organisation, with its headquarters in London and branches in different industrial centres, and including among its members those with whom the mission was able to come in touch would be an invaluable instrument for the purpose."

TRADE OPENINGS IN GREECE

It is no longer a question in this district of separate or individual trade opportunities, says the United States Consul at Patras, Mr. A. B. Cooke. The entire market is practically depleted so far as concerns articles brought in from abroad, and the merchants of the district would be glad to be able to get into working touch with the American market so as to replenish their stocks. The question now is primarily one of transportation facilities.

One of the local importers, in a conversation with the Consul as to importations, said: "I am interested in all sorts of goods. I am ready to pay cash for them. The price is of secondary importance. It seems impossible to secure ship space at present, even at exorbitant rates. Nevertheless, I want to get into touch with some responsible American export houses, with a view to arranging business for the future." This man was one of the responsible import commission agents of Patras.

Increase in Prices.

Practically every article on the market of this district, in every line, from hairpins to harvesting machines, commands a price three to ten times higher than it did two years ago, and the goods are being eagerly bought by the people even at such prices. In 1915 hairpins were one cent a package, now (October 1917) they are 10 cents; bleached cotton was 14 cents a yard, now 42 cents; charcoal 20 dollars a ton, now 60 dollars; sugar 9 cents a pound, now 29 cents; rice 8 cents a pound, now there is none on open markets; acetylene was 3 cents a pound, now 27 cents.

The markets of this district are interested especially in the following lines of merchandise: chemicals, clothing, cutlery, druggists' supplies, dry goods and notions, farm implements, furniture (metal), groceries, haberdashery, hardware, kitchen utensils, leather and leather goods, lumber (staves shooks), office supplies, paints and oils, stationery and vehicles.

EGYPT'S TRADE IN 1917.

A Record Year.

(From Our Own Correspondent.)

Cairo, January 26.

The year which has just closed has constituted a record in the annals of this country in so far as concerns the value of merchandise passing through the Egyptian Customs. The returns for the month of December, just published, which give the total figures for the entire year, show that during 1917 imports amounted to £E31,838,998 and exports to £E41,049,612. as compared with £E30,886,883 and £E37,461,763 respectively during 1916, which up to now had been the record year. It is interesting in this connection to compare the total value of trade which passed last year through the Customs with that recorded before the war. Last year the value of imports and exports together came to £E72,888,610, whilst in 1912—the highest pre-war year—the total was £E60,482,080. Of course the state of the world's markets and the high freights have inflated prices, and the actual quantities are much less than they were five years ago, but it is important to note that the balance of trade on the year was further developed in favour of Egypt. If one takes into account re-exports (£E529 739) and movements of specie (£E1,239,219 imported and £E44,300 exported) one finds that the balance of trade during 1917 was £E8 544,494 in favour of this country as against £E5 901,315 based on the same calculations in 1916.

Imports.

The principal items under imports were preserved meat, £E1,403,175; leather goods, £E301,442; rice, £E246,757; flour, £E709,986; raw sugar, £E329,585; coffee, £E550,161; tea, £E295.153; petroleum, £E596,008; mineral oils, £E205.297; liqueurs, £E261,565; dried fruits, £E204.870; stationery, £E548,748; coal, £E3.509 831; matches, £E221,373; medical drugs, £E338,900; chemical manures, £E752.806; textiles, £E11,722,640; cotton threads, £E721,247; cotton tissues, £E689,854; wool tissues, £E630.796; silken goods, £E528.728; sacks, £E1,084.573; mixed tissues, £E338 218; ready-made linen and millinery, £E494.150; worked iron and steel, £E1,083.557; and tobacco, £E3.040,441.

The chief increases were borne by rice, £E129.484; flour, £E121,641; sugar, £E120 254; coffee, £E129,903; tea, £E169.019; chemical manures, £E373,466; textiles, £E2,078.238; cotton tissues, £E1.255.582; wool tissues, £E213,449; sacks, £E462,475; worked iron and steel, £E154,341; and tobacco, £E2.225,766. Decreases were recorded in preserved meat, £E290,731; jams, £E270.317; beer, £E362.038; petroleum, £E361.719; liquid fuel, £E104,869; stationery, £E228.278; construction wood, £E181,630; coal, £E1.856.805; and furniture, £E125.709. An indication of the manner in which prices have risen even since last year is afforded by the fact that the quantities of flour, coffee, cotton threads and cotton tissues have decreased, although the values have risen, whilst the relation of value to quantity of most of the other articles is out of all proportion.

Exports.

Under exports the chief items have been: eggs, £E453.901; tanned goods, £E768.215; cotton seed, £E1,818 257; cotton cake, £E587.691; onions, £E289.054; cereals, £E642.594; sugar, £E907,115; gum, £E370,361; cotton, £E33,495,193; wool, £E159,346; and cigarettes, £E405,765. There was a falling off of £E199,329 in eggs, £E753,922 in maize, £E182,320 in alcohol and £E112,265 in wool; but on the other hand tanned goods increased by £E349,512, sugar by £E266,475, gum by £E346,571, and cotton by £E3.681,511. Here again the rise in prices manifested itself. Thus sugar exports increased by 40 per cent. in value but decreased by 10 per cent. in volume, whilst cotton fell of by 25 per cent. in quantity but increased by over 12 per cent. in value.

Trade by Countries.

Turning now to the share which the various countries had in Egypt's trade last year we find that although the total imports for the year increased by £E952,110, Great Britain sent just about that amount less. The Empire as a whole, however, maintained its position, thanks to a substantial increase in imports from India, the Imperial share remaining at about 62 per cent., at which it stood in 1916. America likewise fell by about half, and Spain, France, Italy, Sweden and Russia showed substantial decreases. On the other hand Greece had a remarkable increase, about trebling her 1916 figures due to tobacco imports, whilst China, Japan and China more than doubled their shipments. Under exports Great Britain increased her share to just a shade under 60 per cent. as compared with 53.2 per cent. in 1916; the rest of the Empire also did well, India trebling her purchases. Italy and Japan made very large increases in the amount of cotton they took, and Greece doubled her purchases under cereals and tanned goods; the United States, Spain and Russia, however, reduced very much their cotton orders.

The Sudan.

Trade with the Sudan flourished during the year. Imports into Egypt rose from £E923,175 to £E2,116.973, which shows that the Sudan is certainly coming to the assistance of her neighbour. Exports from Egypt also increased from £E1,157.891 to £E1,491,784. The chief imports from the Sudan were: livestock £E509.936, (159.149 head)—an increase of £320,668 (61.242, head) over the preceding year; maize £E385.060 (50.000 tons)—more than double the amount and value of 1916; sesame £E197,430, gum £E206.550 (4.500 tons)—against £E28.294 (728 tons) last year; cotton £E362,858 (2.523 tons)—just under treble the value and double the weight of 1916. Exports to the Sudan of note were: refined sugar, £E366,124; cotton tissues, £E315,531; and tobacco, £E159,251.

GERMAN MONEY FOR TURKEY.

According to a Constantinople telegram, dated February 22, appearing in Tuesday morning's *Tageszeitung*, says Reuter's Amsterdam correspondent in a message dated February 27, Djavid Bey, the Turkish Minister of Finance, in the course of the Budget debate in the Chamber, said that, with the extraordinary military expenditure, he estimated that the deficit for the coming Budget would be about £T14,000,000, and would have to be covered by financial operations concerning which, the Minister said, he had recently been in negotiation with Germany.

The expenditure for the current year amounted so far to £T128,000.000. The total war expenditure, including expenditure on munitions of war bought in Germany and military requirements there, amounted to about 230 millions, which, together with 155 millions of pre-war debt, raised the total Turkish debt to about £T385,000.000. Loans hitherto taken up in Germany amounted to 200 millions and from Austro-Hungarian banks 10 millions, but the sums actually paid by Germany amounted to 70 millions.

The Minister said that Turkey had during the entire war continued to pay in full the interest on the old debt, not only to holders in allied, but also to holders in hostile, countries, to whose credit about eight millions were deposited in the Ottoman Bank.

INDIAN COTTON CROP.

The Government of India's final memorandum on the cotton crop, says Reuter's Calcutta correspondent, estimates a 14 per cent. increase in acreage and a 10 per cent. decrease in the yield as compared with last year.

LANCASHIRE COTTON.

A Stronger Market.

(From Our Own Correspondent.)

Manchester, Wednesday.

Prices in the market this week have tended to go against buyers. A stronger tone has prevailed in raw cotton circles. Rather more anxiety is showing itself with regard to the prospects for the new crop in the States. A feature of interest has been the narrowing process between the near and distant positions in futures in Liverpool. The Egyptian growth continues to make good progress. The receipts at Alexandria so far this season are 4,680,000 cantars, against 4,369,000 cantars same time last year. Local spinners are complaining of irregular receipts on this side, but it is of interest to note that on Monday last the imports into Liverpool amounted to 13,880 bales. A rather increased business has been done in Egyptian yarns, and certain producers have strengthened their position. The starting of more looms on fine counts is having the effect of improving the position of Bolton spinners. For anything wanted very full rates have had to be paid. Rather more inquiry has been mentioned in cloth for Egypt, but transactions of importance have been few and far between. India has again sent forward offers in dhooties for Calcutta, but not much has been done. Demand for China still lags behind. Some Burnley manufacturers are running fewer looms than at the beginning of the year. Owing to the shipping situation there is every probability of production in both spinning and weaving being reduced at an early date. A rather larger turnover has transpired in American yarns at hardening rates. There has not been much life in export descriptions, but a fair amount of business has been about for France.

Shipping Outlook.

There was a good deal of surprise in Lancashire cotton trade circles at the end of last week when it was announced that owing to the shipping situation the members of the Cotton Control Board had been called up to London to consult with the President of the Board of Trade on the position of affairs. It is understood a very full discussion took place, and further consideration of the matter was adjourned pending a written communication from Sir Albert Stanley. A meeting of the Cotton Control Board was held in Manchester on February 25, when further attention was given to the matter, but no official report has been published of the proceedings. The anxiety is with regard to the future imports of American cotton. At the present time spinners of this class of the raw material are only allowed to run 60 per cent. of their machinery, and weaving concerns 70 per cent., except firms engaged on Government contracts. In well-informed circles it is now believed that a further reduction to 50 per cent. in American spinning, with similar action in the weaving department, is inevitable. The position of stocks at the moment is not really discouraging, but there are fears that imports during April and May will be very small indeed. The Government has determined that the requirements of the cotton trade will have to suffer in order to provide more tonnage for foodstuffs and men and munitions from the United States.

The Hungarian Ministry of Commerce has declined to register the trade-mark "Gott Strafe England" on the grounds that it is contrary to the principles of International Law and is calculated to injure Hungary's foreign trade interests after the war.

ENGINEERING NOTES.

Co-operation in Serbia.

In last week's "Engineering Notes" we referred to the agricultural co-operative societies which existed in Serbia before the war, and suggested that the re-establishment of those societies would greatly facilitate the development of the rich agricultural resources of that country. The Serbian societies were well organised, on the same principle as those in France, in Italy, Germany, etc., but on a smaller scale. They were intended to rescue the Serbian agriculturists from the clutches of moneylenders—who charged 120 per cent. —and the village innkeepers, who bought their produce at a price that left a very small margin of profit. People's banks were in existence, but these did not sufficiently meet the case of the average cultivator. By a well-planned system several agricultural credit banks were established in 1893. These banks not only received deposits and made loans to the farmers, but saw to the buying of cattle, seeds, fertilisers, implements, and other things, thus serving the purpose of supply associations.

Purchase of Machinery.

They also procured the necessary agricultural machinery which local associations held in common. They undertook also the sale of produce, and arranged for various forms of insurance, including insurance against sickness, famine resulting from loss of crops, and also against an inadequate supply of labour. In a report of the Union of Agricultural Co-operative Societies of Serbia, a few years ago, 228 agricultural credit and savings banks were mentioned, which at that particular time had granted 8,209 loans, representing a total of £25,000, and had bought agricultural necessaries to the extent of another £15,000. These may seem small figures compared with corresponding returns in France and Italy, but considering that Serbia is a small country, and that these agricultural credit banks began only a few years ago, the results are distinctly creditable. The re-establishment and reorganisation of these agricultural co-operative societies and credit banks in Serbia is of vital importance for the country's future.

Harvesting and Stubble Breaking.

In view of the existing shortage of labour, any contrivance tending to combine either manual or mechanical work so as to secure the maximum of production for the minimum of labour is a matter of special interest. Experiments have been made in France for carrying out harvesting and the breaking up of stubble simultaneously with a tractor. For this combined work the harvester may be placed either in front or behind the cultivator. In the first case, the cultivator should be placed on the side opposite to that of the harvester; in the second, it can be attached in the midline. Ploughing up stubble immediately after harvesting has, it is said, the advantage of diminishing soil drainage, while the slightest rain has a useful effect on nitrification. On the other hand, carting the sheaves is more difficult: a slight thing, however, when the advantages are taken into consideration. Farmers in the East should try this combined work in their fields next season.

Agricultural Machines for Morocco

An American engineer who recently arrived from Morocco says that the use of modern agricultural machinery and implements such as tractors, ploughs, harrows, drills, and reaping machines is extending there, and is much appreciated by the farmers. The demand this year, he says, depends largely on the activities of British and American manufacturers.

New Flax De-Seeding Machine.

A new machine for de-seeding flax has been brought out which should interest flax growers in the Near East, where the de-seeding process is carried out in a more or less primitive manner. In the new machine the seed is taken off the flax by a gradual process. The machine has a series of combs mounted on carrying belts, the teeth of such combs being disposed at an angle to the base plates of the combs, which are attached to the carrying belts. The straw of the flax undergoing treatment is gripped between the resilient surfaces of endless belts and fed across the path of the combs at an angle, the devices for mounting the comb-carrying belts being preferably arranged adjustably, so as to obtain the best angle for treatment in any given conditions. The flax is fed in between the feeding belts, and as it is carried forward the combs function in order, gradually effecting the removal of the seed, the de-seeded flax being fed out at the opposite end of the machine.

COMPANY MEETINGS.

Imperial Bank of Persia.

The twenty-eighth ordinary general meeting of this company was held on February 25, at the Cannon Street Hotel, Sir Hugh S. Barnes (the Chairman) presiding.

The Chairman said that this was the first occasion that the bank had been unable to hold its annual meeting within the calendar year. The reason was the delays and difficulties of the mail service both by land and sea. Since their last meeting they had, to their great regret, lost by death their colleague, Mr. Frederick Sassoon, who took a keen interest in the bank with which his firm had always been closely connected. In place of Mr. Sassoon he was glad to say that Mr. David Gubbay, of Messrs. David Sassoon and Co., had been elected to a seat on the board. They had also appointed as a director Colonel Sir Henry McMahon, who possessed a first-hand knowledge of Persia.

Compared with 1915, the close of 1916 showed a great improvement in the bank's position in Persia, for they had re-opened five of their branches and only three remained closed. During the past year the improvement had continued, and in May last they found themselves once more with all their branches in working order. There had been some return of confidence and a slow growth of a sense of security among the people, which had reacted favourably on the bank's business, and led to a slight increase of trade. Assuming that the war ended, as we all hoped and intended it should, in the victory of the Allied Powers, he thought the prospects of Persian trade were encouraging. One of the main trade routes into Persia had been the river route from Busreh to Baghdad, and thence by the old caravan road through Kermanshah to Northern Persia. With more efficient administration in Mesopotamia and improved river services this route was likely to assume ever more than its old importance. The chief obstacles in the way of an improvement of trade in Persia were the difficulties of transport and supply, arising from the want of good communications. He ventured to suggest that what was greatly needed for the prosperity of the country was the construction of railway communication with the central plateau. It was possible that after the war the Persian Government might see its way to embark on a programme of development, and, if so, this bank, as the State Bank of Persia, would be in a position to render valuable assistance.

The result of the year's working was that, after making full provision for all bad and doubtful debts, they were enabled to pay a dividend of 8s. per share, free of income-tax, against 7s. last year; to add £30,000 to reserve, bringing that fund up to £190,000; to write off £10,000 from their bank premises, and to carry forward £24,239. In conclusion he moved the adoption of the report and accounts, and that the payment of the final dividend of 5s. per share, free of income-tax, on January 2, be confirmed.

Mr. W. A. Buchanan seconded the resolution, which was carried unanimously.

COMPANY REPORTS.

Black Sea Amalgamated.

The report of the Black Sea Amalgamated Oilfields, Limited, states that the cost of all wells drilled by the company during the year under review has been debited to revenue account, instead of being, as formerly, charged to capital account, and subsequently written off as depreciation. On this basis the profit and loss account for the period, shows a loss of £211. As in the previous period, the items in the profit and loss account and the floating assets, less liabilities, have been taken at the rate of 16 roubles per £1, the actual rate ruling on January 13 last being 16.3 roubles per £1. The production of crude oil for the year was 19,422 tons, as compared with 24,689 tons for the ten months ended January 13, 1916. The falling off in the production is almost entirely the result of shortage of expert labour and lack of special materials for dealing with wells under repair.

COMPANY NOTES.

Dividends, Payments, etc.

The directors of the British Burmah Petroleum Company recommend a balance dividend for the year ended July 31 last of 4 4-5d. per share, free of income-tax (making 7½ per cent.), payable to holders registered 8th proximo.

The directors of the East Indian Coal Company recommend a dividend at the rate of 8 per cent., less tax, for the half-year ended October 31 last.

Oil Outputs.

Anglo-Egyptian.—Gemsah production for week, 21 tons (previous week 21 tons). Hurgada production for week, 6,547 tons, against 2,940 tons.

Bibi Eibat.—Week ended January 6, 39,300 poods (634 tons). Week ended January 13, 37,550 poods (606 tons).

European Oilfields.—Week ended January 20, 60,100 poods.

Maikop Orient—Plot 435a, well 3.—Week ended January 26, 14,800 poods.

Russian Petroleum.—Week ended January 19, 38,085 poods.

BULGARIAN SAVINGS BANKS

Increased Deposits.

It has been officially announced that from January 1 to October 30, 1917, the deposits in the 294 postal savings banks throughout Bulgaria reached the unprecedented amount of $11,820,800, says the United States Consul-General at Sofia, Mr. D. I. Murphy. As the deposits during the entire year of 1916 were $7,857,153, it will be seen that the increase in the 10 months of this year amounted to $3,963,647. The showing is all the more remarkable when it is remembered that the depositors are mostly owners of small farms and working people. As the great majority of the men of Bulgaria are serving under the colours, it must be assumed that the women, who have done nearly all the farm work and much of the ordinary work of the country, have also managed to effect these tremendous savings.

In asking the Sobranje for a war credit of £40,000,000, the Bulgarian Minister of Finance said he hoped soon to be in a position to declare that this heavy loan would not be borne by the Bulgarians.

POWER LINE TO MOROCCO.

"The only preparation for removing what may be called the sequelæ of a mercurial course."—Sir R. Martin.
"The late Lord Clyde said:—I am never without it, for when feeling depressed or out of sorts from anxiety or fatigue, a dose or two animates me."
"It cured me of Torpid Liver after all other remedies failed."—Earl of Aldborough.

N.B.—Indispensable to all who value Health.

A WORLD-WIDE REPUTATION FOR OVER THREE-QUARTERS OF A CENTURY.

ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Street, Wednesday.

The quieter state of our market reported in our last issue has continued throughout the present week, but there are indications to-day that a renewal of activity at any moment is not improbable. In Government stocks there has been a persistent demand, but not much business has been done, as sellers have continued scarce. Unifieds are ⅜ higher at 86¾, the 3½ per cent. loan is ¼ firmer at 73¾, and City of Alexandria bonds are ½ up at 78½.

In bank shares a certain amount of business has been doing, but prices are all unchanged except Agriculturals, which are 3-32 easier at 6 11-32. In railways Delta Lights have been a feature, and are closing ⅜ higher at 7.

Among land shares a fair business has been doing in Aboukirs round 24s. 6d., at which price the shares are 3d. firmer than last week. In Behéras there have been some small sellers, and, in the absence of support, the shares are 1-16 easier at 14. Delta Lands are also fractionally lower at 15s. 9d., and Egyptian and Foreign Trusts have also shed 3d. at 10s. 6d. New Egyptians have continued to be the most active market of all the land shares, but the price remains unchanged at 19s. 3d. In Sidi Salems there has been again a good deal of interest, and many transactions have taken place, with the result that the shares have advanced a further shilling to 50s. These £4 shares still look one of the cheapest lock-up purchases for capital appreciation, as the company is selling land on a substantial scale at between £61 and £64 a feddan.

Union Foncières, after some transactions at about 3 1-16, have firmed up to-night to 3 5-32, being 1-32 higher than last week. In Miscellaneous shares Markets are 3d. firmer at 26s. 9d., with a fair amount of business doing, whilst Salts are remaining a firm market at 14s. 3d. Khedivial Mails, after dropping to 40s. sellers, close unchanged at 40s. 3d., after being in the meanwhile up to 41s.

In Greek securities some further transactions have taken place in "Currant" Bonds at 95, but in all the other loans dealings have only been trifling, except for Rentes. These are a point up at 44, at which price some business was done.

NOTES OF THE WEEK.

The position of Roumania has for some time been so desperate, attacked on the front by the enemy and in the rear by her late Ally, that not a single soul will blame her for having accepted the German ultimatum insisting on peace. There was, in fact, nothing else for it, for the Roumanians could not even, like the Serbs, fight their way out to friendly territory at however desperate a loss. In no sense could Russia be called friendly territory—the Bolshevik attitude towards the nation was perhaps even more menacing than that of Germany and Austria. It is the most cruel fate of the war.

The actual negotiations were preceded, on the German side, by a certain amount of Press camouflage, which was universally received with scepticism. There was talk, for instance, of handing over Bessarabia to Roumania, and certain other details were suggested of a more or less kindred variety, but there is not a word of these matters in the treaty. The terms are as harsh and stiff as could have been suggested by any Prussian dragoon; and it is to be hoped, rather than expected, that they will be noted in detail by the advocates of a "peace by negotiation which shall leave no rancour" as an indication of Germany's idea of peace terms with her enemies.

Roumania is to resign the whole of the Dobruja to Bulgaria, which thus gains the long-coveted annexation, or rather one of them—for she has yet to achieve her ambitions in Serbia and Macedonia. It is true that the second article in the treaty "provides for the maintenance of a trade route for Roumania via Constanza, to the Black Sea," but that is little more than a phrase. It is further expressly stated that "the economic measures corresponding to the situation are likewise conceded in principle." The details of this clause will probably be further elaborated in a subsequent auxiliary treaty; from the language both of Berlin and Vienna during the past few days, it is not difficult to fill in the gaps. Germany has deprived Roumania of her chief port for a definite purpose; it happens to placate her ally, Bulgaria, and it helps to drive her commerce eastwards. It is Germany's aim to get control of Roumania's produce for all time, and she proposes to do it by this means instead of by any definite clause in the treaty of peace. The Deutsche Bank in Bucharest, in co-operation with Berlin, will treat Roumania as a subject economic province. Her industries would be financed from Berlin to the precise extent that Germany thinks wise, and no further, and while Germany lends Roumania money on Germany's terms, she will also buy Roumania's produce on Germany's own terms. It is economic slavery that would face Roumania, and nothing else, if the treaty were to stand for all time.

A further sinister detail emerges in the third clause, which stipulates that "the frontier rectifications demanded by Austria-Hungary on the Austro-Hungarian-Roumanian frontier are accepted in principle by Roumania." No details are given, but from what is known of German theories of frontier rectifications in France, and Austrian theories of the same kind in Italy, it is easy to understand that Hungary will seize every strategic point on her Roumanian frontier. It may be noted that, as regards the north-eastern frontier of Roumania, the position of the recently proclaimed Moldavian Republic in Bessarabia is left open. The question of the dynasty is also not mentioned, and an official statement of the German Under-Secretary for Foreign Affairs in the Reichstag announces that this is regarded as "an internal Roumanian one."

The treaty, as it stands, is a disastrous one for Roumania. If it were the final peace treaty, it would leave her with no national dignity and no national independence, at least in the economic sphere. But it is not the final treaty, and Germany must be conscious of the fact that so long as the Western Allies keep the field against her these dictated arrangements must be provisional, and with even less hope of stability than Napoleon's paper kingdoms of Westphalia and elsewhere. It is the final settlement that counts, and not the intermediate separate peaces which Germany is so anxious to procure that she has recently put about the idea that both Serbia and Greece were ready to come to terms.

There is one significant point about the treaty signed at Buftea which will not be forgotten when the terms of the general peace conference come to be discussed. In the case of Russia, she is made to resign her territory absolutely and without qualification; in the case of Roumania, although the Central Powers insist on her complete resignation of the Dobruja, they do, in fact,

Digitized by Google

admit, in spite of themselves, that Roumania occupies a special position at Constanza. In the event of their final victory such an admission would, of course, be practically worthless, but when they are defeated, it will be useful to have it on record that out of their own mouths they recognised, at the very moment of their greatest triumph, that Roumania held a position at Constanza which Russia did not, for instance, hold at Riga.

The actual problem of the Dobruja, as THE NEAR EAST has long maintained, cannot be settled by either the Roumanians or Bulgarians obtaining the whole of that province. The line of demarcation drawn at Berlin in 1878 was not very scientific, but it did, in fact, recognise approximately that Bulgaria had special rights in the southern, as Roumania had in the northern, district. The Treaty of Bucharest was less fortunate, and it left Bulgaria with a grievance—a grievance that was none the less real because it was the consequence of Bulgaria's treacherous conduct in the Balkan war. But Bulgaria has now gone even further in the opposite direction. Any permanent settlement that pretends to be based on justice will have to recognise the fact that Bulgaria has a legitimate claim to the southern Dobruja up to a point near the Constanza railway, while Roumania has an indefeasible right to the northern Dobruja and to the railway line from Bucharest to Constanza.

The treaty of peace between Russia and Germany, or at least those clauses of it which it was thought wise to give to the world, has been published. After Lenin's hopeless statement, "Their knees are on our chests"—did not he help to put them there?—most of the details can cause little surprise. Russia definitely becomes an isolated, almost an inland, State—if the word State can still be applied to her. She has lost her outlet to the Black Sea, the outlet to the Pacific can no longer be considered hers, and on the Baltic she has lost every port except Petrograd, the least satisfactory of them all. She has also lost the Baltic provinces, Russian Poland, Finland, and the Ukraine. The German triumph is complete and absolute, and the psychological effect on the two countries is bound to be considerable, quite apart from any political or economic consequence.

Russia is now definitely cut off from the Balkans, not so much by the treaty itself as by the enforced recognition of the independence of the Ukraine; and a long chapter of history, which may be traced back as far as the first missionaries from Byzantium into Slavonic lands, is now closed. Whether it will ever reopen only time will show—the future of Russia is one of the great problems of the world, and the events of this week have shown that it embraces the future, not only of Russia, but of Siberia.

The Germans, however, have not been satisfied with forcing Russia to resign what she had indeed already given up, her share in Balkan polity. Acting on the hint given by Lenin in his infamous proclamation ordering the freeing of Armenia, they have forced Russia to give up Kars and Batum to Turkey. This may do something to compensate Turkey for the loss of Mesopotamia and Palestine, and will no doubt be defended by the Germans on the ground of historical restoration, but they do, in fact, reopen the Caucasus question in the way that is most convenient for Germany.

The surrender of these places effectively weakens Russia economically, which is a part of German policy. But to have allowed the Ukraine State to possess them would have raised the possibility that that new entity, which will be the dark horse of European politics for some years to come, would eventually have become inconveniently powerful, and that had to be avoided at all costs. On the other hand, their cession to Turkey will not make the Ottoman Empire, enfeebled as it is by the war, independent of Germany, but it will, at the same time, do something to draw Turkey's attention towards the Pan-Turanian idea, which Germany is now sedulously fostering.

The surprise of the treaty at first sight was the expression of mutual disinterestedness in Afghanistan and Persia. There was no need for Russia to proclaim this, since she has already announced her disinterestedness in matters much nearer home, and her influence in Teheran and Kabul must now be a minus quantity. Germany, on the other hand, notoriously has ambitions in Persia, where she has done her best to stir up trouble on general principles since 1914; in Afghanistan, too, her hand has also been traced, although the good sense of the Amir has caused it to fail. It is of interest in this connection to recall Sir Francis Younghusband's statement on Monday that, if the German intrigues in Afghanistan had been successful, they intended to proceed to declare a republic in India on February 21, 1915. But the question arises, Why was this clause put into the treaty?

It was possibly inserted by Germany to mislead the rest of the world—the Russians, by their own confession, were bound to agree to anything suggested by the victor. But in any event it will not deceive a child. Germany has taught us the exact value of her pledges, and her disinterestedness as regards Persia is precisely on a par with her protection of Belgium. It must, too, be read in connection with the semi-official German statement that "by the establishment of free transit with Russia we have secured direct commercial connection, *via* Russia, with Persia and Afghanistan, which was hitherto barred." There is no need to comment on the extreme significance of this statement.

The death of Prince Mirko of Montenegro will not come as a surprise to those who have known something of the inner history of that unfortunate country. When the overrunning of Serbia left Montenegro at the mercy of the enemy and forced King Nicholas's Government to take refuge in flight, the decision was taken to leave some officials behind in the hope that they would be the means of securing better treatment for the population at the hands of the Austrians. With these officials stayed Prince Mirko. He was suffering at the time from an incurable malady, and his removal shortly afterwards to a nursing home in Austria was prompted by medical and not by political considerations. Once in Austria's power, he had no option as to the rôle that he had to play, and it is beside the point to inquire whether he played it *con amore*, as the enemies of the dynasty allege, or from diplomatic motives, because there was no alternative.

It has been a great misfortune for Montenegro that the prestige and affection which King Nicholas has inspired among his subjects have not been bespoken by his sons. The success attending the matrimonial alliances of the King's daughters was not repeated in the case either of the Crown Prince or Prince Mirko. Montenegro has now passed through a fiery ordeal, and when her independence is restored there must needs be a new orientation of her position. There is no call to anticipate that decision, and for that reason we have deprecated in these columns any attempt to prejudice the free choice of the Montenegrin people at the end of the war.

The week has seen little fighting of importance on the two British fronts in the East. There has been evidence of a cautious forward move in Mesopotamia, where General Marshall is apparently feeling his way and testing the Turkish dispositions; the Turkish statement, expected and duly forthcoming, that he had failed to take his objective may be left to the future to answer. In Palestine a further advance over a section of the line has been chronicled, and the Turks, in response, have proclaimed a British repulse.

Incidentally, a letter which has been published from a soldier in Palestine gives a pleasant picture of the Army being welcomed by the population, and having food pressed upon them by the people who have been liberated from the Ottoman Empire. The impression

Digitized by Google

given is that of an army dominated by high spirits and success, as it has every right to be. A somewhat deeper note was struck in the letter from the same front read by Mr. Macpherson in the House of Commons a few days before, written by one to whom the analogy of the Crusades appealed, as it must have to many at home, with striking force. The Palestine campaign has been responsible for many similar communications, some of which almost reach the rank of literature; and England may yet produce a Tasso worthy of the occasion.

A deep impression has been made on the country by the Prime Minister's statement as to the circumstances which led to Sir Stanley Maude's death. Almost at the very moment when victory had crowned his arms he risked his life, and, as the event showed, sacrificed it to an instinct of courtesy towards those with whom he was brought in contact. The war has not furnished us with so many instances of chivalry that we can afford to forget General Maude's acceptance of the tainted cup proffered by his hosts, lest his refusal of the best they had should wound their susceptibilities. It is a noble story, fit to be compared with Sidney at Zutphen, and England, for whom he died, will not be ungrateful.

Our recent article on "Politics and Poverty" has won from our contemporary *India* a tribute of compliments and an inquiry. The compliments merit some acknowledgment; we are accused of "cheerful insolence," of "cant and hypocrisy," of "shoddy economics," and of various other indiscretions, among which we must admit the charge of cheerfulness, and our castigation is adorned by an apposite quotation from J. S. Mill, that prophet of Victorian Liberals and modern Indian politicians. The question which lurks among these compliments indicate, however, that our critics have failed to grasp our argument: they are anxious to know how we suppose the poorest classes in India would be affected, if British merchants should be ousted "by the Tata firm or some other"; and though we made no suggestion of the kind, a few words may be said for the benefit of those who, like our contemporary, are more familiar with abstract politics than with practical finance.

The ousting of "British merchants" might or might not hurt the Indian workmen, but it formed no part of our argument; the question at issue is the supply of capital, not its control. India's income does not at present suffice for the reasonable needs of her inhabitants; to increase it quickly, much more capital is wanted than the country as yet supplies; either, therefore, the inhabitants must continue poor, or some portion of the necessary capital must be obtained from outside. The latter alternative is preferred not merely by philanthropists, but by many of the hardest-headed men of business in the country, and our contemporary has doubtless heard the rumour that "the Tata firm" itself has recently opened relations for this very purpose with the London money market, just as another Indian finance corporation had already done. Our point is that the inflow of capital should not be impeded.

Now, the language recently used in India might very well constitute a serious impediment to that inflow. Capital is going to be scarce for some time; the question whether Indian politicians are financially unsound is already being raised in responsible circles, and if an unfavourable opinion should unhappily gain ground, then less capital would come to India, industrial development would be checked, and the poorest classes would have to wait longer than is necessary for that improvement in their material environment which is a condition precedent to social and political advance. That is our view, and perhaps we may suggest to our critics that, before they pronounce it to be "shoddy economics," they might see what their oracle Mill has to say upon the subject; he is, of course, out of date, but his observations on capital have withstood the criticism of half a century more successfully than most of his work. The question is dealt with elsewhere in this issue in a discussion of the Indian Budget.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, February 4.

The Duke of Connaught's Visit.

H.R.H. the Duke of Connaught arrived in Cairo on January 29, accompanied by Lieut.-Colonel Sir Malcolm Murray and Captain Ashworth. He was met at the station by the High Commissioner and his staff, and proceeded to the Residency, where he stayed during his sojourn in Cairo. On January 31 his Royal Highness, accompanied by Sir Reginald Wingate, General Sir Edmund Allenby, and General H. D. Watson, together with their respective staffs, drove over in State to Abdin Palace, where he was received by the Sultan, to whom he presented the insignia of the Grand Cross of the Order of the Bath, which H.M. the King conferred on his Highness on the occasion of his accession. Later on in the morning the Sultan, accompanied by Rushdi Pasha, the Prime Minister, returned the visit to the Residency, where he presented the Duke of Connaught with the Grand Cordon of the Order of Mohamed Ali. During both visits the streets were lined with troops, and military guards of honour were drawn up at the Palace and the Residency.

His Royal Highness left this week for Upper Egypt and the Sudan, where he intends making an extended visit. Lieut.-Col. J. K. Watson, Military Attaché to the Residency, who accompanied the Duke of Connaught when he travelled in Upper Egypt and the Sudan on his last visit to this country, has been specially attached to his suite during his absence from Cairo. On the evening of his arrival the High Commissioner and Lady Wingate gave a small dinner party in honour of his Royal Highness, the other guests including General Sir E. and Lady Allenby, Major-General Watson, Lieut.-Colonel Sir Malcolm Murray, Lieut.-Colonel J. K. Watson, Lieut.-Colonel Lord Dalmeny, Capt. and Mrs. Napper. On the eve of his departure for the south a banquet was given by Sir Reginald and Lady Wingate, the other guests who had the honour of being invited including Sir Hussein Rushdi Pasha, Sir William and Lady Brunyate, Bishop and Mrs. MacInnes, Sir Milne and Lady Cheetham, Said Zulfikar Pasha, Lewa Logan Pasha, Lewa Herbert Pasha, Lieut.-Colonel Watson, Lieut.-Colonel G. S. Symes.

The Sultan's Bodyguard.

A picturesque and interesting ceremony took place on Tuesday afternoon on Abdin Palace Square, when the Sultan presented new colours to his bodyguard. The square had been cleared of the crowd which usually is to be seen on it at all hours of the day, and a special portion had been roped off for the Ministers, the Diplomatic Corps, the senior Government officials, the officers of the British Forces, and the notables. The bodyguard was already drawn up, and presented an imposing spectacle when the Sultan, who made his first public appearance in uniform and on horseback since his accession, rode on to the square, followed by his aides-de-camp. After an inspection of the guard all the officers passed before his Highness, and took the oath of allegiance to him and the new flag on a copy of the Koran, which was held by the Palace Imam. The Sultan then dismounted and handed the new colours to Kaimakam Hassan Tewfik Bey Badr, the Officer Commanding the bodyguard. His Highness addressed a few words to the men as he handed the flag over, and the Kaimakam made a suitable reply. A review of the troops followed. At the conclusion of the ceremony the Sultan, accompanied by his Ministers, went over to the barracks and took tea with the officers in their mess.

State Purchase of the Telephones.

The Council of Ministers at its sitting on February 2 approved of the purchase by the Government of the telephone system of Egypt, to which reference was made in last week's letter. The project has still to receive the approval of the shareholders, and as soon as this is obtained the transfer will take place. The purchase will be as from January 1 last, and interest at the rate of

Digitized by Google

5 per cent. will be paid up to the date on which the purchase is completed.

A Link with the Crimea.

Yesterday there passed away a link with the Crimean War in the person of Madame Peter, better known in historical records as Madame de Ronsard. This fine old lady, who was born in 1828, and was therefore in her 90th year, had served the cause of humanity since her earliest years. As far back as the Schleswig-Holstein-Denmark campaign of 1848 she helped to nurse wounded soldiers, and, happening to be in Constantinople when the Crimean War broke out, she threw in her lot with the Sisters of St. Vincent and St. Paul, and worked most valiantly with them on the field of battle. For a time, too, she assisted Miss Florence Nightingale. She again distinguished herself during the cholera epidemic of 1862 in Paris and Marseilles, but her most notable work was done during the Franco-German War and the Commune, when she was several times wounded, and was decorated by M. Thiers for conspicuous bravery under fire. Subsequently she returned to Constantinople, and married a second time, but her husband being delicate they came to Egypt, where he died soon afterwards. A few years ago she was discovered in Cairo in a destitute state, the business which she had been carrying on having completely failed, owing to her own and her partner's bad health. Subscriptions were raised to prevent her having to go into a workhouse, the late Lord Kitchener and Mr. Asquith being amongst the givers, and it is a satisfaction to know that the last remaining years of this romantic and heroic old dame were made as happy and as comfortable as it was possible to make them.

The Shortage of Cattle.

The Government has issued an appeal to large landowners for co-operation in the efforts that are being made to remedy the shortage of cattle, which is now very acute. The reduction in the numbers of cattle and buffaloes available for agricultural purposes started about the year 1908, but since the outbreak of the war it has become accentuated owing to the fact that the ordinary foreign channels of supply—Syria, Serbia, etc.—have been cut off, and the country has had to turn to its own stock for its meat requirements, which have augmened in proportion as the population of the country has increased; whilst the number of animals bred and reared annually has fallen off. The decrease in cattle in the nine years has been about 38 per cent., and in buffaloes about 32 per cent.

Every effort has been made to stimulate livestock imports from the only source of supply now open to Egypt, the Sudan, where there is an unlimited supply, which, although it would not be fit for agricultural purposes, would certainly materially assist in meeting the demand for meat in Egypt. Epidemics and transport difficulties have so far stood in the way of providing an adequate and steady supply of Sudan livestock for this country; but there is every reason to believe that we are approaching the time when that consummation will be attained. In the meantime something must be done to protect the working cattle at present available, and, if possible, to increase their numbers, since import of fresh blood from outside is impossible and will remain so for some time after the war. The situation, which interests a large portion of the population, has been thoroughly discussed with all classes of experts, and an amendment to the existing laws regulating the ages under which cattle may not be slaughtered for meat is under consideration with a view to raising the age-limit and so providing more animals for agricultural and breeding purposes.

It is in regard to the provision of fresh stock that the assistance of the large landowners is now being invoked, as they are the only category who can afford to rear cattle on any larger scale than is being done at present. One of the great causes of the falling-off in the number of animals bred and reared is the shortage of fodder, due to the high prices which cotton and cereals fetch, making it unprofitable to feed young cattle during the summer. Endeavours are being made to overcome this difficulty by getting the cultivators to make silage out of berseem. Very successful experiments have been carried out on a fairly large scale by the State Domains, and the next step is to get the landowners to adopt the same procedure. A circular has now been issued explaining the process, and offering to give demonstrations to any proprietors interested in the matter. Some of the largest and most influential landowners have promised to co-operate, and it is hoped that their example will lead the majority to do likewise, and so assist in removing the present serious menace to what is one of the most important factors in the agricultural life of the country.

ATHENS LETTER.

(From Our Own Correspondent.)

Athens, February 10.

The Mutiny at Lamia.

The calling up of eleven more military classes was evidently by pre-arranged plan the signal for the outbreak of a revolt of part of the garrison at Lamia. Although the trouble spread to Thebes and Halkis, it seems to have been nipped in the bud, and the court-martial is likely to deal severely with the ringleaders. Two executions have already taken place. There is, however, much fertile ground for sedition, and the arrest and exile of a further number of royalists who had been allowed to remain in Athens in the expectation that they would not foment trouble is, therefore, a wise measure. Their continued presence here has become a source of menace, and they are better out of the way. Owing to his age, M. Skouloudis is kept under arrest in his residence, but the following have been deported from the capital: Prince Ypsilanti, Equerry to the late king; M. Lambros, former Premier; MM. Zalacostas, Baltazzi, Triantafyllos and Tsaldaris, former Ministers; Colonel Hadzopoulo, Jean Ralli, G. Anastassopoulo, D. Kallimassiotis, S. Stays, A. Cannellopoulo, and C. Mitsopoulo.

In a statement issued to the Press, M. Venizelos stated that the seditious movement at Lamia showed that there was an organised reaction against the success of the mobilisation. The Government was, therefore, compelled to adopt various measures with a view to dealing with a movement of this nature. Events at Lamia had convinced the Government that it had to modify its attitude towards its adversaries, and it was resolved to crush this reaction.

The newspapers express great indignation at this want of patriotism at such a critical time. The *Embros*, which is anti-Venizelist, says that at a time when Greece is preparing to mobilise her military forces to make a more imposing force in the international conflict the movement of part of the Lamia garrison cannot but provoke in every Greek heart not only just indignation, but a painful surprise.

The *Kairoi*, a Venizelist paper, says that this is another proof of the Royalists' blunders. The promoters of the outbreak at Lamia have chosen the wrong moment for their act, at a time when Radoslavoff proclaims that Bulgaria will keep Oriental Macedonia because it is Bulgarian, and that, whilst Bulgaria has doubled its territory, her enemies have been crushed. Any indulgence at this time, says the *Kairoi*, would be an affront to the heroes who are fighting at the front.

The Press in general advocates strong measure being taken by the Government to punish the leaders, so as to prevent a recurrence of the outbreak. The King left for Salonika on Wednesday, breaking the journey at Lamia where he reviewed the garrison, and, in addressing the troops, his Majesty said that he was profoundly pained at the seditious movement in which, unfortunately, certain officers had taken part. He advised them all to devote themselves to the present régime which he, their King and head of the Army, had recognised. Greece must help the Protecting Powers in their great struggle, and not only is he a traitor who creates an obstacle, but traitor also is he who thinks of revolting. "You must submit to the orders of the Government, which enjoys my full confidence," was the final exhortation of King Alexander.

The Food Supply.

M. Embiricos has finally left the Ministry of Supplies, and M. Vourloumis (Bourloumi) has been appointed to succeed him; but General Bonnier is assisting in the reorganisation of this department. In leaving his post, M. Embiricos has the satisfaction of seeing the fruits of his labours. He undertook one of the most arduous tasks at a moment when the country was practically depleted of all stocks of the necessaries of life, and time was required to make the necessary arrangements with the Allies for victualling Greece and then to bring supplies into the country. The effect of his labours are now visible, and he has skilfully

Digitized by Google

tided over the acute phase. His successor assumes office with filled warehouses.

The Allies have shown their sympathy with Greece in supplying her wants. During the past month large supplies of foodstuffs and general merchandise have arrived; in fact, the port of Piræus has become congested, and storage room is difficult to obtain. The economic condition of the country has thus become much more satisfactory, but the utilisation of the country's resources has still to be efficiently organised. It is said that M. Embiricos's resignation arose from a difference of opinion with M. Venizelos over the oil question. M. Embiricos was in favour of a monopoly, but the Premier considered it advisable to allow free trade in oil. Fuel continues to be scarce, and is always a source of anxiety to householders. Meat is obtainable with great difficulty and at a very high price.

To-day, another census of Athens and the Piræus is being taken, and, as on the former occasion, no one is allowed out of doors until the signal is given by gunfire that the census has been completed. The streets are, therefore, lifeless this morning, and all traffic of every description is suspended.

General News.

The visit to Athens of General Guillaumat, the French Commander-in-Chief at Salonika, was made the occasion of a demonstration of amity towards France. In the principal streets there was a good display of French and Greek flags, and a handsome reception was given the general on his arrival at the railway station, where he was met by M. Venizelos and a large number of high officials. During his stay in Athens he was received by the King, a reception of the French Colony was held at the French Legation, and the Government gave a dinner in General Guillamat's honour. A review of the troops of the garrison was also held.

An Inter-Allied financial commission has been formed here to deal with financial questions arising out of the loans which are being made to Greece by the Allies. The British delegate is Mr. Bilinsky, manager of the Ionian Bank. By a recent decree the banks are not allowed to sell remittances for a larger sum than 1,000 francs per month to one person, without a special warrant from the Ministry of Finance.

GERMAN AIMS IN THE EAST.

In the course of an address delivered at Caxton Hall, Westminster, on February 27—the subject being "German Aims in the East and West"—Colonel the Earl of Denbigh, C.V.O., said that Germany had long been intensely jealous of England. She had worked with infinite cunning for the undoing of the British Empire and British trade and for securing the military domination of the world. Her methods at first had been those of peaceful penetration, but about 1911 she had decided that things were not going fast enough, and had resolved to force war on the world after the harvest of 1914. The murder of the Archduke provided the excuse for a war that had already been determined on. If Germany succeeded in carrying out the *Mittel Europa* scheme, an immense belt of territory controlled from Berlin would divide and dominate Europe. Germany would then be able to destroy Britain's position in the East, for if Palestine could be invaded from Egypt, so could Egypt be invaded from Palestine. If this was followed up by the seizing of Malta, a barrage of submarines could be established from Sicily to Tunis, so that we should be practically turned out of the Mediterranean. Even without this, with two hundred submarines behind the protection of the Dardanelles and a German army in Asia Minor, our position would be one of great peril. The question for us was as to whether we were going to maintain the position we had in the world, or were we, in the words of a music-hall song, going to "get out and get under"—to get out of our Empire and to get under Germany.

CYPRUS NOTES.

(FROM A CORRESPONDENT.)

Mails and the Crops.

Mails received on January 17 were the first to reach Cyprus for six weeks. They have long been very irregular, often with intervals up to three weeks.

The rainfall since November has been satisfactory and well distributed. Young cereal crops are well forward in many parts, and prospects so far are favourable all round.

Most of last summer's crop of carobs is held in stores, owing to lack of shipping. Merchants cannot take advantage of the high prices offered in France and England (up to £34 the ton). The Cyprus Government has offered to purchase 22,000 tons, at £4 18s. a ton, the beans to be delivered at Famagusta, as in a previous year. Merchants have declined these terms, stating that they would lose if they accepted this price. Greece, it is said, and other countries have paid far higher prices for carobs from Crete and Spain.

The Rise in Prices.

Prices of various commodities have continued to rise. There has been but little meat in the markets for some time. In the coming months young lambs are generally slaughtered in large numbers, and the season is always looked forward to. They are often killed when far too small. The Government very properly last November prohibited the slaughter of lambs weighing less than six okes (16 4-5 lb.) dead weight. Another regulation provided that after November 26 no one in any municipal area might slaughter cattle, sheep, goats, or pigs for food, or sell meat, or trade as a butcher, except under a permit from Government, issued by the Commissioners and Provost Marshals. Large quantities of lambs were formerly shipped to Egypt, which seriously reduced the local supplies and sent up prices.

There has been considerable hoarding, as well as breaches of the regulations fixing tariff prices. Many cases have come before the Provost Marshals, offenders in some instances being sent to prison.

COUNTERACTING GERMAN PROPAGANDA.

We have made arrangements for forwarding free of charge to our readers pamphlets and other publications dealing with the British and Allied cause. This literature is in many European languages, and certain pamphlets and illustrated publications are also available in a number of Oriental languages. All applications should be addressed to the Editor, THE NEAR EAST, Devonshire Square, London, E.C.2. Among the most recent publications available for distribution free of charge are the following:—

"WELFARE OF EGYPT," by J. S. Willmore. A short summary of English administration in Egypt; alluding also to Germany's undermining influence, and the Mussulman's preference for the English rule. 36 pp. London: Hodder and Stoughton.

"MESOPOTAMIA; THE KEY TO THE FUTURE," by Canon Parfit. A short account of the past history, present development, and future prospects of Mesopotamia, showing that the settlement of its problems is of vast importance to the progress and prosperity of the world. 41 pp., with map. London: Hodder and Stoughton.

"TURKEY, A PAST AND A FUTURE," by A. J. Toynbee. Development of the new Turkish Nationalism and of German intrigue in Western Asia. Moslem ideas must prevail. Mesopotamia will develop its resources mainly by colonisation. 77 pp. London: Hodder and Stoughton.

"ARMENIAN ATROCITIES: THE MURDER OF A NATION," by A. J. Toynbee, with speech by Lord Bryce. An account of the atrocities committed by the Turks on the Armenians, with documents. 117 pp. London: Hodder and Stoughton.

"THE VERDICT OF INDIA," by Sir M. M. Bhownaggree, K.C.I.E. The writer describes what England has done and is doing for India, and explains the German delusion as to its internal condition. 57 pp. London: Hodder and Stoughton.

"VOICE FROM INDIA," address by Maharajah of Bikanir. Speech delivered to Indian delegates at House of Commons. 24 pp. Empire Parliamentary Association, London.

"THE MURDEROUS TYRANNY OF THE TURKS," by Arnold J. Toynbee, with a preface by Viscount Bryce. A brief sketch of Turkish history to show that the expulsion of the Turks from Europe and their confinement to a portion of Asia Minor will be the only adequate requital for their atrocious treatment of subject races during this war and previously. 35 pp. London: Hodder and Stoughton.

"THE JUSTICE OF ROUMANIA'S CAUSE," by A. W. A. Leeper. An explanation of the international position of Roumania in Europe and of her rights in the war. The author shows that her cause is legitimate, and that she has taken great risks and endured much to deliver her people from Hungary's oppression. 24 pp. London: Hodder and Stoughton.

TANGIER TO TEHERAN.

That small word "other" seems to spread pitfalls in the most unlikely places. A correspondent of *The Times* once reported that "theatres, churches, and other places of amusement were closed" on a certain occasion. Now comes the official abstract of the Indian Budget, which is reproduced elsewhere in this issue. After noting the provision of a recurring grant for primary education, the official annotator proceeds: "*Otherwise* provision for expenditure has been generally restricted to urgent needs"! This, if you please, when the Minister for Education is discharging some of Mr. Montagu's functions at the India Office. I wonder on whose foot this particular brick has fallen. But I fancy that, as both Indian official circles and Indian politicians are in accord on the subject of the urgency of primary education, they will enjoy the episode together.

***

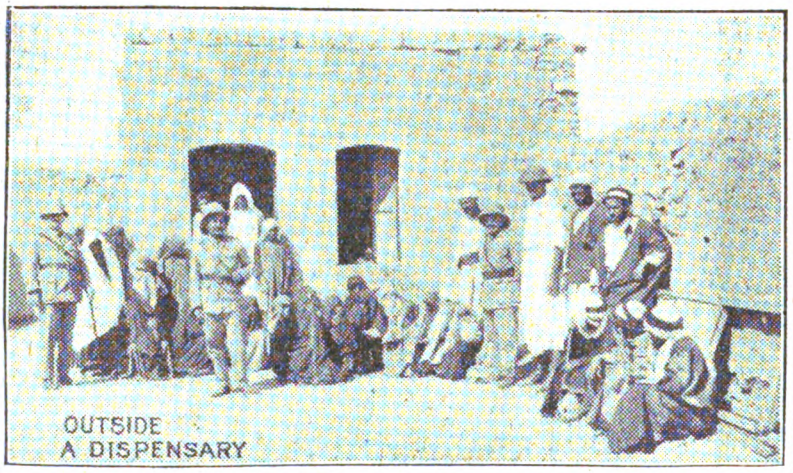
Divorce has always been easy—for the man, at any rate—in the Orient, and anyone who has lived in those parts any length of time must have heard many tales of husbands putting away their wives for utterly inadequate reasons. But it is a little surprising to learn that in Ispahan, as a result of food shortage, husbands are actually divorcing their wives because they cannot give them bread. Yet such is the fact, according to reports from missionaries in that city, where the "staff of life" would seem to be even more difficult to obtain than it is further westward. The state of affairs thus revealed is deplorable enough, and the poor women who are the victims of their husbands' economy will have our sympathy. But, even so, Ispahan may congratulate itself that it is not at quite such a low ebb of morals as Petrograd appears to be. In that home of Bolshevism there have been 38,000 applications for divorce since the Revolution! This is said to be the result "of the simplification of divorce proceedings." It looks to me as if it would be a good move to make those proceedings very much less simple.

***

The Turkish report of the great victory in the Bay of Chandarli is, I am informed on the very highest authority, not accurate in detail. The coast batteries may—or may not—have "successfully opened fire against an enemy ship," and it may even be true that "the crew . . . were taken prisoners." But the attempt to add a touch of artistic verisimilitude to the report by giving details of the said crew is a failure. It serves, indeed, to show that Turkey still remains painfully ignorant of naval affairs. For we are told that the crew consisted of "the captain and three men." Even the Turks might have known that with three men it is customary to send a commodore at least, if not an admiral.

***

The break-up of Russia by the Bolshevists has been a sorry business for that country and for the Allies, but it looks as if it may prove a very real benefit to Anglo-Persian relations. The plain fact is that for a number of years we did what we did not wish to do—what we much wished *not* to do, indeed—simply in an attempt to keep the world's peace. To adopt Oriental phraseology, we were forced to wear the Mask of Greed, and thus compelled to conceal the Countenance of Benevolence. The situation was, admittedly, not one calculated to afford us great satisfaction; but our policy was an honest effort on our part to do the best possible thing in the circumstances; and fortunately the wisest Persians understood our difficulty. To-day there is an end to the humiliating position, and we are free to act towards Persia as our national instinct prompts us. I agree with what the Persian Minister said at a recent meeting of the Persia Society: the friendship between Persia and Great Britain requires a little stimulating. For all that, the friendship is a real one. We want to see a strong and independent Persia, for our own sake as well as Persia's; and we have not any desire to grab territory from the Shah. Nor have we had any such desire, in spite of appearances during the past few years.



***

The Baghdad "war stamps" will doubtless prove objects of keen competition between philatelists, and advertisements that have appeared lately seem to show that they are already fetching fancy prices; but to the uninitiated they are hardly likely to appeal forcibly. Here is a chance for Imagination. Cannot our authorities issue a commemoration stamp worthy of the occasion: one typifying the release of Arabian Baghdad from the yoke of the Tartar oppressor by the British? Such a stamp would have a far-reaching influence throughout the East, and would play its part in that re-awakening of the Arab consciousness that is so much to be desired.

CORSAIR.

SYRIA AND PALESTINE RELIEF FUND.

PERHAPS TO YOU THIS PICTURE

OUTSIDE A DISPENSARY

IS NOT VERY INTERESTING?

110, VICTORIA STREET, LONDON, S.W. 1.

BUT MANY A SUFFERING MAN, WOMAN AND CHILD WILL NEVER FORGET THE PLACE.

Here, after the Turkish retreat and the British advance, scores of desperately wounded civilians were brought —Christians, Jews, Moslems—men, women and children. Here a few died, but many lived and were restored to health. Here clothing and food were distributed.

AMONG A BATCH OF STRETCHERS ARRIVING, ONE WITH A VERY SMALL CHILD LYING FORLORNLY AT EITHER END, THE TWO BETWEEN THEM NOT COVERING HALF THE STRETCHER. THE MOTHER DIED ON THE WAY TO THE HOSPITAL. NO ONE HAS BEEN TO LOOK FOR THEM.

MANY HOSPITAL UNITS FULLY EQUIPPED.
MANY DISPENSARIES AND SPECIAL CLINICS
ARE OPERATING IN PALESTINE TO-DAY.

RECONSTRUCTION IS BEING ENERGETICALLY PUSHED FORWARD.

£100,000 WANTED.

SYRIA AND PALESTINE RELIEF FUND, 110, Victoria Street, London, S.W.1

NEAR EAST BOOKSHELF.

WOE IS ARMENIA!*

This book should be read. Not because the author says "Lower down" when he means farther south; not because he says the Kurds must go back to the Armenian plateau whence they came, after he has freed Armenia from both Turk and Kurd; nor yet because he says (page 97), "Few, if any, ever arrived there, all dying by the way"; but because, in spite of these signs of hasty work, and in spite of something worse, the subject needs to be studied by the million.

Language evaporates under any effort to describe the iniquities of the Young Turk Triumvirate—Enver, Talaat, and Jemal, who, instigated by their Prussian masters, are the leading *dramatis personæ* in this court of unaccomplished justice. And yet in this presentation of the case against Turkey we read this of Jemal, the satrap of Syria, "With his army behind him, he has twice already defied the orders of Talaat, and I am inclined to think that he is the coming Strong Man of the effete Empire with whom it would be well worth while to make friends, even at a highish price." Mr. Benson goes on to say, "The Allied Powers should keep an undazzled eye on him, for it is quite possible that, having defied Talaat successfully, he may go on to defy the real rulers of Turkey, who live in Berlin." In other words, we should buy criminals whom we cannot execute. We should offer Jemal Pasha a villa in Monte Carlo and £40,000 a year, and thus condone the ghastly Young Turk massacres of Armenians, Greeks, Syrians, and Arabs. For this reason the reviewer asks our readers to read Mr. E. F. Benson's essay, but, having read in detail of the horrors of Ottoman rule, to turn down the suggestion—the purchase of one of the butchers.

Mr. E. F. Benson in the rest of this book brings an unanswerable suit "to the bar of an inviolable justice"—Burke's phrase. Warren Hastings was acquitted. Jemal, Enver, and Talaat will not get that British-rented villa in Monte Carlo.

LES TURCS ONT PASSE PAR LA.†

The reviewer has not seen this American bride's letters, from Tarsus, to her mother in the United States, in plain English; only the French rendering is before him. But so well do we love France and the United States that the French edition suffices to prompt us instantly to congratulate the author. Do you still wish to find a difference between the Young Turk and the Old? Read here! Are you a Lansdowne that can talk of a peace by negotiation? Read here! Did you blow, justly, Sepoys from the gun-muzzle, in 1857, and yet will not declare the fate of Enver, Talaat, and Jemal? Read here! Have you shaken the hand and eaten the salt of the desert son of Islam? Read here! Believe me—the happy, generous, fierce offspring of England, Scotland, Wales, and Ireland has played, and is going to play, a mighty part in avenging the peoples of the Near East. *Les Turcs ont passé par là.* This charming "Yankee" girl, carrying for most of the time, what she democratically describes her first baby, born in the middle of those ghastly Armenian massacres of 1909, witnessed the Turk passing "*there.*" We later know what happened to the Armenians in 1914—and to the Greeks, and to the Syrian Christians. President Poincaré and President Wilson, the Queen of England and the Queen of Italy, if they should read these letters of human touch cannot but echo the verdict of Paul of Tarsus: "Brethren! these things ought not so to be." And shall not any more!

Buy, or borrow, this American missionary girl's booklet if you wish to know how richly civilisation has merited its present dilemma. *Les Turcs ont passé par là!* As the booklet is in French, let me misrender the tag of the heroes of Verdun: *Ils ne passeront plus.* True! they will "pass" no more, however prodded by Huns, if America will only understand. And yet this is only a little girl, straight from Bryn Mawr, the chief woman's university of the United States, writing home from Asia Minor to her "Momma." Some letter-writing!

Owing to an oversight, the book entitled "Armenia and the War," by A. P. Hacobian (Hodder and Stoughton, 2s. 6d. net), was omitted from the Bibliography published last week.

*"Crescent and Iron Cross." By E. F. Benson. (Hodder and Stoughton, 5s. net.)

†"Les Turcs ont passé par là!" Diary of an American lady during the Armenian Massacres. Done in the French language by Berger-Levrault. Paris. Helen Davenport Gibbons.

"SUDAN NOTES AND RECORDS."

The proposal to establish a scientific journal for the Sudan was a thoroughly sound one, and the committee responsible for giving effect to the scheme is to be congratulated on the "vision" that prompted the enterprise, and on the achievement in the form of the first number of "Sudan Notes and Records" A particularly happy start is made with an article by Professor G. A. Reisner, of Harvard University, on the ancient history of the Sudan, which lays stress on the important part which from the earliest time has been played by Ethiopia, or the region now known as the Sudan, in view of its geographical position as the gateway to the wealth of Central Africa. In a foreword, General Sir Reginald Wingate, on the ground that knowledge is power, in Africa and elsewhere, expresses the hope that the quarterly will be the means of recording and disseminating information that will conduce to a clearer outlook on the country and a better understanding of its natives, for the benefit both of the Government and of the community at large. In these days when European nations are liable to have overseas title-deeds examined somewhat closely, it is well that the British nation as a whole—not merely Sudan officials and residents—should appreciate the importance of every single link in the long-drawn chain that is known as the British Commonwealth. If we start from the premise that the sea is this island's life-blood, we must accept the Suez Canal as an indispensable artery, which cannot be separated from Egypt. Then with something like 6000 years' acceptance of the principle that Egypt and the Sudan must go together behind them, Britons have a strong *a fortiori* case, which takes them some way into Africa. But the verdict will ultimately rest on the principle that by their fruits they will be known. In this matter Sir Reginald Wingate sounds a typical note. "The creeds, the superstitions, and the folklore of primitive tribesmen," he writes, "are subjects of the deepest interest in themselves, and, apart from their anthropological and ethnological values, are of importance as contributing to that sympathetic comprehension of the people and their mentality, which is so essential to a successful administrator." So long as these considerations influence British administration of native peoples, there is little chance of their title-deeds being seriously called in question. All that makes for a wider dissemination of knowledge regarding the peoples who are brought within the orbit of the British Empire is to be welcomed, and we may certainly look with confidence to "Sudan Notes and Records" fulfilling this rôle admirably.

Other articles included in this number deal with the Sakia in Dongola, a native institution representing a highly organised system of co-operative farming, and Nubian elements in Darfur. Two papers are of general interest: Major C. H. Stigand discusses "Scent and Sight among Game and Other Animals," and Mr. S. Hillelson writes on "Arabic Nursery Rhymes," giving the original of one or more jingles which are familiar enough to English and other nurseries.

For readers in England we would mention that single copies of the quarterly (price 3s.) can be obtained from the Sudan Government Railway Office, 5, Northumberland Avenue, London, W.C.2. The annual subscription is 50 P.T. (10s. 6d.).

PERSONAL AND GENERAL.

CALENDAR OF THE WEEK

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian (New Style).	Julian (Old Style).	—	Moslem.	Jewish.
1918. March.	1918. February.		1336. Jomada I.	5678. Adar.
8	23	Friday	25	24
9	24	Saturday.....	26	25
10	25	Sunday	27	26
11	26	Monday	28	27
12	27	Tuesday	29	28
13	28	Wednesday	30	29
14	March 1	Thursday	Jomada II. 1	Nisan 1

The Anglican Bishop in Jerusalem has arrived safely in that city.

M. Romanos, the Greek Minister in Paris, has arrived in London.

Prince Alexander, the Serbian Prince Regent, arrived at Corfu on March 4.

Colonel Sir Swinton Jacob, the eminent Indian architect, left estate valued at £32,875.

King Alexander of Greece has conferred the Grand Cross of the Saviour on General Pétain.

Dr. Weizmann had the honour of being received by the King at Buckingham Palace on March 4.

H.H. Maharaja Sir Pertab Singh visited the Exhibition of War Photographs in Colours at the Grafton Galleries on March 5.

Princess Rosetti Rosnovanu, the wife of the Secretary of the Roumanian Legation at The Hague, left London, on March 4, for Holland.

Among recent wills is that of Lord Basil Blackwood, who was killed in action in France on July 4. He left property of the value of £6,685.

The Rao of Cutch has offered to continue defraying the expenses of an Indian Infantry regiment at an annual cost of £36,000 till the end of the war.

Mr. Guthrie, of the American Mission on the Sobat River, arrived at Khartoum at the end of January, accompanied by Mrs. Guthrie and their children.

A Constantinople telegram says that the ordinary session of the Turkish Lower House has been prolonged for a fortnight for the purpose of discussing the Budget.

A movement has been inaugurated by the Serbian Mission in New York to bring a large number of young Serbians, who are now lodged in France and England, to the United States.

The will has been proved of Major Claude Askew and Mrs. Alice Askew, who were drowned in the Mediterranean last October, whose property has been sworn at probate at £5.

According to a Bucharest telegram to the *Berliner Tageblatt*, M. Misu, the Roumanian Minister in London, has been instructed by the Roumanian Government to conduct the peace negotiations.

M. Michel B. Boerescu, the Roumanian Chargé d'Affaires, and Lieutenant-Colonel N. Arion, the Roumanian Military Attaché, were among the guests at a dinner given by the Princess of Monaco on March 3.

A marriage has been arranged between J. E. Goudge, Indian Civil Service, of Sitapur, United Provinces, and Phyllis, youngest daughter of Mr. John Hooke and the late Mrs. Hooke, of 23, Birdhurst Rise, Croydon.

The recruiting figures for India during January constituted the highest monthly total during the war, says *The Times'* Bombay correspondent. The Punjab contributed nearly 13,000 combatants, and the United Provinces 6,400.

According to a Budapest telegram to the *Frankfurter Zeitung*, twenty-one Roumano-Transylvanian teachers in Kronstadt and its environs have been suspended from their office for a period of five years owing to "their prejudiced attitude."

The Duke of Connaught returned to Cairo from the Sudan on March 2, and in the evening of that day held at the Residency an Investiture of the Order of the British Empire. The recipients included Anglo-Egyptians and native officials.

Sir Henry Babington Smith, Director of the National Bank of Turkey, who has been appointed to assist Lord Reading, arrived at an Atlantic port a few days ago.

The *Leipziger Neueste Nachrichten's* statement that negotiations with Serbia and Montenegro are only a matter of weeks, and that M. Pashitch's resignation is connected with impending peace negotiations, are categorically denied by the Serbian Legation.

The Hankow War Charities Committee has forwarded another donation of £1,205 to the Overseas Club from the British residents at Hankow, to be divided amongst the British Red Cross, Scottish Red Cross, Serbian Relief Fund, and Overseas Club comforts for prisoners of war.

Speaking in the Main Committee of the Reichstag on March 14, Baron von dem Bussche, Under-Secretary for Foreign Affairs, replying to an observation by a deputy on the question of the Roumanian Throne, said: "The dynastic question is an internal Roumanian question."

The marriage arranged between Errol Mews, lieutenant, R.F.A., second son of Herbert Mews, Whychcote, Portelade, and Ruby Evelyn, elder daughter of the late C. A. Ionides and Mrs. Ionides, of 10, Second Avenue, Hove, will take place on March 16, at All Saints' Church, Hove.

A marriage has been arranged, and will take place early this month, service conditions permitting, between Lieutenant Herbert Henry Coldicott, G.H.Q., Egypt, only son of Mr. and Mrs. Herbert Coldicott, of Leamington, late of Warwick, and Jean Lilias (Lilka), only daughter of Mr. and Mrs. J. B. Andrews of Saba Pacha, Alexandria.

From Serbian sources Reuter's Agency learns that the Governor-General of Bosnia and Herzegovina has proclaimed a state of siege under a penal code of the most ruthless character, every violation of which is visited with the death penalty. The proclamation was issued from Serajevo and signed by General Sarkotich. It applies to districts essentially Serbian.

Mr. James I. Craig has resigned the office of Controller of Supplies in Egypt, and has been succeeded by Mr. W. Rose Taylor, Legal Adviser to the Ministries of Public Works, War, and Agriculture. The office of Controller of all Supplies in Egypt was created last September, Mr. Craig, who was previously Controller of State Statistics, being the first holder of the office.

The Manchester Chamber of Commerce has given an aeroplane to the Empire of India. The machine, which is named "Manchester," was presented on Saturday at a gathering in the city, which included Lord Desborough, President of the Imperial Air Fleet Committee. A telegram was read from the Viceroy stating that in India scope for air activity and usefulness had greatly developed.

The annual report of the Fitzwilliam Museum at Cambridge states that during the past year valuable additions were made to the collection of Greek vases, many of which came from the Hope collection. The friends of the Fitzwilliam have contributed five good examples of Greco-Buddhist sculpture—probably from the neighbourhood of Gandhara. Messrs. Spink and Son gave a finely carved head of Buddha.

Our Cyprus correspondent writes:—

Mr. H. Lucach has been appointed Commissioner of Famagusta.

Mr. Baxendale, Commissioner of Famagusta, has been appointed Commissioner of Larnaca.

Mr. Thomas Greenwood is transferred from Larnaca, and is to act as Commissioner of Papho, while Major Bayly acts as Chief Commandant of Police.

News has been received that Colonel Gallagher, D.S.O., Chief Commandant of Police, now on active service, has been wounded, receiving injuries in the face.

Mr. Russell, King's Advocate, who has recovered from an attack of typhoid fever, is proceeding on leave to Khartoum.

Mr. Bowring, Receiver-General, who also suffered from typhoid fever last year, is going on leave to Egypt.

TRAGEDY OF MONTENEGRO,

THE SMALLEST AND POOREST OF OUR ALLIES.

MONTENEGRIN RED CROSS AND RELIEF FUND,

11, VICTORIA STREET, LONDON, S.W.1

(Registered in City of London. Section 1. War Charities 1916)

needs £700 WEEKLY for Feeding Prisoners interned in Austria-Hungary.

Donations will be much appreciated and gratefully acknowledged by the Hon. Treasurer, LADY ROPER PARKINGTON. Claridge's Hotel, Brook Street, London, W.1.

Digitized by Google

Mr. Macpherson states that, with the assistance of the Admiralty and the Ministry of Shipping, transport facilities will be increased, and this will enable an increased number of officers and men in the Salonika Army to go on leave.

A resolution has been passed by the Manchester branch of the British-Italian League welcoming the announcement that a conference is to be held in London on March 13 between the Anglo-Serbian, Anglo-Hellenic, Anglo-Roumanian, and British-Italian leagues, and expressing the hope that the deliberations of the conference may lead to a friendly settlement of the differences of view at present existing between the peoples on both sides of the Adriatic. The view is expressed that the points of difference still outstanding are confined within narrow limits, and that it is of urgent importance to the future of freedom in Europe that a friendly settlement should be speedily concluded.

APPOINTMENTS, PROMOTIONS, ETC.

Temporary Miralai C. H. Little Bey, D.S.O., has been promoted to the rank of Miralai.

Bimbashi H. C. E. Jebb, Sudanese, has been appointed Deputy Assistant Adjutant-General, Egyptian Army.

Mr. T. E. S. Armston, formerly of the Customs Guards at Alexandria, has been appointed Commandant of Police at Baghdad.

Lieut.-Colonel (Temporary Colonel) E. S. Herbert, C.M.G., has been granted the temporary rank of Brigadier-General whilst serving with the Egyptian Army.

El Kaimakam P. G. W. Maynard Bey, Second Inspector, Mongalla Province, and El Bimbashi G. C. V. Irwin, Second Inspector, Sennar Province, have been re-transferred to the Army.

Kaimakam C. S. Northcote Bey, Senior Inspector Bahr el Ghazal Province, has been transferred to the same capacity at Mongalla Province, and has been replaced at Bahr el Ghazal by Kaimakam E. D. Bally Bey, of the Intelligence Department at Khartoum.

OBITUARY.

Mr. George Goodwin Dey, I.C.S., retired, whose death has taken place in his 70th year, served in Assam as Officiating Judge of Sylhet and Cachar, and as District and Sessions Judge.

The death has taken place, in his eightieth year, of Sir Chandra Madhab Ghose, who was a Judge of the Calcutta High Court from 1884 to 1906. In the latter year he officiated as Chief Justice.

The death occurred on March 2, at Haywards Heath, of Major-General Sir Wykeham Leigh Pemberton, K.C.B., in his eighty-fifth year. His war service included the Mutiny campaign, when he was present at the siege and capture of Delhi, the capture of Futtehpore Sikree, and the final capture of Lucknow.

The death is announced from Vienna of Prince Mirko of Montenegro, second son of the King of Montenegro. When King Nicholas and his family retired before the Austrian invaders, Prince Mirko stayed behind, and two years ago entered a sanatorium in Vienna.

Lieutenant Edward Nevinson Bell, I.C.S., Indian Infantry, who died of dysentery in India on February 10, was the eldest son of the Rev. W. A. Bell, for thirty-two years rector of Charlynch, and was educated at Marlborough and University College, Oxford. He entered the I.C.S., and went to Burma in 1903, and was for some time District Judge at Mandalay, subsequently going to Shewbo and then to Pakokku.

Lieutenant-Colonel George Alexander Walker Lamond, R.E., who was recently invalided to Colombo after long service at various fronts, died there on February 25, aged 39. He was employed for many years with the firm of Sir John Aird, at home and in Egypt, and was engaged in the construction of the three Nile barrages at Esnah, Assiout, and Aswan, for his share in which he received the Medjidieh and Osmanieh Orders from the Egyptian and Turkish Governments. Colonel Lamond was a prominent Rugby player, representing Scotland against Wales and England.

Mr. Duncan Mackinnon, of Loup and Balinakill, Argyllshire, formerly chairman of the B.I.S.N. Company, died at his residence in Hyde Park Square on February 27, aged seventy-three years. He was a nephew of the late Sir William Mackinnon, and gained his early business experience at Glasgow in his uncle's firm of East India merchants, subsequently going out to Calcutta, where he was ultimately placed in charge of Messrs. Mackinnon, Mackenzie and Co., agents of the B.I.S.N. Company. On his return to London he was appointed a director and later chairman of that company. He retired a few years ago, and was succeeded by Lord Inchcape. His two sons, Captain William Mackinnon and Lieutenant Duncan Mackinnon, were killed in action last year.

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO,
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

THE ONLY ENGLISH HOTELS IN ALEXANDRIA.
Proprietor: AUGUSTUS VAN MILLINGEN.

WINDSOR HOTEL
(Facing the Sea, opposite Y.M.C.A.), ALEXANDRIA.

FRIDAY, MARCH 8, 1918.

THE INDIAN BUDGET.

The salient features of the Indian Budget can be stated in very few words. The year now closing has yielded a huge surplus; the coming year will start with the promise of a surplus, smaller indeed, but ample for all ordinary purposes; there will be no additions to taxation, and the annual loan will be devoted entirely to the war. It is Sir William Meyer's last Budget; he has borne a heavy burden during the last five years, a burden rendered all the more irksome by the ill-informed invective of which he has been the target in this country as well as in India; and while we do not assert that he has made no mistakes, or has invariably risen to his opportunities, we are glad to be able to recognise that he will leave India financially sound, and in a position to face the unknown future with a reasonable confidence. In order to appreciate the present position we must glance back for a moment at the Budget propounded last year. India was then able to pay her own way, but the statesmanlike decision to offer a war contribution of one hundred millions sterling involved a substantial increase in taxation to provide for the new burden of interest and sinking fund. With the aid of these additional resources it was hoped that the accounts would balance. As a matter of fact, the balance has been altogether upset, but the discrepancy is on the right side; income has exceeded the estimate by 11½ millions, and, after providing for over three millions of additional military expenditure, the country is eight millions sterling to the good. It was natural to ask why the revenue has so greatly exceeded the estimates, and the answer to this question is threefold: the year has been prosperous, so that ordinary revenue has come in well; there have been some substantial windfalls; and the yield of the new taxation, and also of the railways, has been much greater than was anticipated when the last Budget was framed. The Indian Financial Department has thus maintained its reputation for what it calls caution, and its critics denounce as "under-budgetting"; that old controversy will doubtless be revived in the discussions now opening in India, but our immediate concern is rather with the future than with the past.

The prospects of the coming year are undoubtedly favourable. The estimates provide for a moderate decline in revenue and a substantial increase in ordinary expenditure, leaving a margin of two millions sterling, a sum which is not unreasonable in times like these. There is, happily, no need for any increase in taxation, and it is satisfactory to be able to record that some provision has been found possible for a few of the country's most urgent needs. There is, in fact, a limit to the policy of restricting expenditure, which was quite rightly adopted at the outbreak of the war, and in India that limit has been nearly reached. Even in ordinary times the civil administration is economical to the verge of meanness; for nearly four years it has been absolutely starved, and a continuance of this policy, which has already resulted in the retardation of material progress, could lead only to an ultimate breakdown. We welcome, therefore, the additional provision which has been made, and we have particular satisfaction in recording an additional allotment for the Police Department, where the inadequacy of salaries has long been a public scandal and has of late threatened to become a public danger. The Departments will, of course, not be satisfied, and for at least another year they will have to go very slowly, but that is, we fear, inevitable in the conditions now prevailing throughout the civilised world.

The most significant figures are, however, to be found in that intricate section of the Budget which deals with the capital account. Stripped of their technicalities, these figures tell us not merely that India is doing good work for the Empire, but that she is being well paid for what she does. The Imperial Government and Dependencies are, in fact, spending in India at the rate of about seventy millions sterling a year, and the magnitude of these payments has, as the commercial world knows, entirely upset the ordinary currents of remittance, and led to a temporary alteration in the sterling value of the rupee. Nor is the element of paradox wanting, for we find that India, despite her poverty, has been lending money to her neighbours, and even to the United States, that she has been investing part of her balances in this country, and that next year she expects to increase her receipts from interest by well over a million pounds—by no means a negligible offset to the cost of her contribution to the war. Regarding this contribution, the Budget gives information of real importance. It will be remembered that, while the amount of the contribution was fixed at one hundred millions, only about one-tenth of this sum was expected to be raised by way of loan, the balance being covered by an annual payment to meet the interest and sinking fund. Instead of one-tenth, the proportion already paid exceeds one-third, the precise figure being £35,139,000, and a further payment is to be made by the issue this summer of a short-term loan, which is estimated to bring in twenty millions sterling. This amount may seem small when compared with the results of last year's effort, but that comparison is by no means fair. To obtain a just idea of the meaning of these figures, we must recall that as lately as three or four years ago the Indian money market was never asked by the State to raise more than two or three millions annually, and the fact that a financier so eminently cautious as Sir William Meyer should now talk of tens of millions is evidence not merely that India is for the moment prosperous, but that the whole financial outlook of the country has been permanently changed. India is learning rapidly how to apply her savings, and perhaps also some portion of her hoarded wealth, to useful and practical purposes. That lesson once learned is not likely to be forgotten, and the habit of investment may be trusted to establish itself and expand until it dominates the commercial and industrial life. The process of what it is the present fashion to call Reconstruction will in the case of India be marked chiefly by unprecedented demands for additional capital. The construction of railways has fallen far behind, while the re-equipment of the open lines will present an even more urgent and not less costly problem. The fields, the forests, and the canals have all been starved. Existing industries will clamour for new machinery, while many fresh ventures, both great and small, are waiting eagerly for the moment when they can obtain the necessary plant. During the last three years India has learned much, and has awakened to something like an adequate conception of the immensity of her natural resources. For some time to come there will be an urgent need for all the commodities which she can supply, and it is scarcely an exaggeration to say that her whole industrial future will depend on the way in which she utilises the opportunities presented by the establishment of peace. The idea that she can unaided finance her own reconstruction is, we fear, a dream; she will still require capital from outside, but such borrowing will be costly, and the larger the sums raised within her borders the more satisfactory will be the ultimate result. The Budget tells us that the lesson of investment is now being learned, and that is the best news that India at the present moment can issue to the world.

THE EMIRATE OF MECCA UNDER THE TURKS.

Ottoman apologists have endeavoured to represent the action of the Emir Hussein of Mecca in proclaiming himself independent of the Porte as the revolt of a mere official against the Government under which he held a salaried appointment. This argument, however, is not supported by facts. We in Europe have for many years become accustomed to watch the rapid ebb of the tide of Turkish conquest, which at one time thundered against the gates of Imperial Vienna and now barely wets the west wall of Adrianople. And in Africa we have seen country after country reappear above the desolating flood of Ottoman domination. Kingdoms and peoples in two continents, after centuries of blighting slavery, have revived, and are warming themselves in their recently recovered places in the sun now that the shadow of the Horse-tails no longer paralyses their national life; but nowhere in Europe or Africa has a people been released from its servitude by the efforts of the same race of kings as that under which it originally lost its liberty to the conquering Turk. In Asia alone is it possible to observe this historical phenomenon. The Principality, or Emirate, of Mecca, which at the beginning of the tenth Mohammedan and sixteenth Christian centuries was still under Egyptian influence, became subject to the Turks when Sultan Yawuz Selim (Selim the Grim) conquered the last of the Mamluk Sultans of Cairo, and shortly afterwards arrogated to himself and his family the very Khalifate itself. The somewhat shadowy overlordship of Cairo was in course of time transformed into a definite Protectorate by the Government of Constantinople. Advantage was taken of the economic necessities of Mecca, which is the capital city of a country incapable of feeding either its native population or, still less, the numerous visitors which the annual pilgrimage draws to the Holy Places in it and its vicinity. This poverty of local production has made the pilgrimage essential to the existence of the inhabitants of Mecca, as the money spent by the pilgrims alone enables the purchases of the necessary foodstuffs to be effected which have to feed natives and visitors alike. The Princes of a State so artificial from an economic point of view have inevitably been greatly exposed to external influences, and have often been dependent upon the pious offerings of faithful Moslems for the wherewithal to strike a balance in their Treasury. The Emirs of Mecca, as being responsible for the welfare of the pilgrims while in their territory, have been put to great expense in restraining the predatory tribes of the desert, who at all times have looked upon pilgrims as proper persons to plunder. The Government of the Holy City has also had to arrange for the maintenance and pay of the large staff of preachers and guides required for the spiritual oversight and temporal direction of the pilgrims. In addition to this the ruler of the chief sacred city of Islam has been expected to maintain a state and hospitality befitting his position, and to keep the most cultured and civilised Court in Arabia, although the Hejaz is very far from being the richest part of the peninsula. In addition to these public burthens incidental to his position as Temporal Prince of a centre of pilgrimage, the Emir of Mecca for centuries past has been surrounded by an ever-increasing clan of Sherifs, or scions of the sacred family sprung from the marriage of the Khalif Ali (himself an agnate of the Prophet Mohammed, being of the house of Hashem and the clan of the Koreish) with the Prophet's daughter Fatima. In the old line of Hassan, the elder son of this marriage, the Emirate of Mecca with the guardianship of the Holy Places is hereditary; and in normal times the succession has, somewhat naturally, tended to be from the father to that son who had commonly been associated with him in the Emirate during his declining years, although in theory the Emirate might lawfully be vested in any male of the Sherifian family, provided that his descent was regularly established. When Mecca first came under Ottoman influence this succession from father to son was in force, and it was not for another century that the Turkish theory of the succession of the eldest agnate came to be widely practised at the bidding of the Porte.

Soon after this, however, the Emirs of Mecca became the prey not only of the Porte itself but of the local Turkish Valis of the Yemen and of the Hejaz. Any excuse was good enough to cause the Government to dethrone a reigning Emir, and the tenure of the Sherifian throne became so uncertain and so hazardous that by degrees the prestige of the Emirate was abated. Family intrigues were deliberately fostered by the Government, and the Turks, by exploiting the fact that the Court of Mecca relied considerably upon the Ottoman subsidy, almost succeeded in reducing the hereditary sovereignty to the level of a temporary administratorship. For instance, the Emir Saad Ibn el Sherif Zeid ibn Muhsin was twice deposed, and had to abdicate twice; his son Said reigned five times as sole Emir, and once in association with his father. He abdicated once, and suffered four depositions; three other Emirs had three reigns apiece; eight reigned twice. During the last three hundred years of the Turkish period there were thirty-eight depositions, and the length of reign decreased from the seventy-three years of that of the Emir Mohammed Abu Noma Ibn el Sherif Barakat, the second Prince under the Turkish domination, to the one day of that of the Emir Maarin Ibn el Sherif Mesaid Ibn Said, the fifty-third on the list. These depositions were sometimes effected at the whim of the local Turkish Vali, as, for example, when Ahmed Pasha, Vali of the Yemen, in 1627 (A.H. 1037) lost his luggage at sea off Jeddah, and deposed the Emir Muhsin Ibn el Sherif Hussein Ibn Hassan because the divers furnished by that Prince were unable to recover enough of it to please the passionate Pasha. On other occasions there was even less excuse than this, and the appointments to the dignity thus violently rendered vacant became more and more capricious. The twenty-sixth Emir, on being deposed, was succeeded by a fifth cousin, although at the time he had a brother alive, as well as an uncle and two first cousins, all of whom had already sat upon the throne, two being destined to do so again. The twenty-seventh Emir, deposed in his turn, was followed by a fourth cousin once removed, and the deposed fifty-sixth Emir made way, at Ottoman dictation, for his father's sixth cousin so far as the male line was concerned.

Still, in spite of these violent fluctuations of individual fortune the dynasty survived, and the Turk, who, except for his own reigning house, has neither regard nor interest for any man's fraternity, was overawed by the splendour of the descent of the Sherifs of Mecca from the Prophet himself in the first instance, and from Father Abraham, well three thousand years before him, in the second, and never entirely absorbed the kingdom of the Hejaz. A flickering memory of independence was always nursed amid the most depressing circumstances, and the religious position of the Emir was emphasised annually at the time of the Pilgrimage, when thinking Moslems looked upon the Emir and mentally compared the Arabic-speaking descendant of the Prophet with the tongue-tied Turanian in Stambul, who claimed to be Commander of the Faithful because a fortunate and truculent forebear had been able to requisition the title from its terrified possessor.

Thus the religious duties attaching to the Emirate of Mecca preserved it from the fate common to the temporal monarchies overrun by the Turks, and happier than any of the European kingdoms which have been from time to time disgorged by the defeated and reluctant Khakhaws of Constantinople, the Holy City has once again emerged into the sunlight of independence as the capital city of a considerable kingdom under the guidance of a dynasty which has not changed during more than thirteen centuries. Thus the action of the sixty-eighth Emir of the Ottoman period in proclaiming the independence of Mecca and the Hejaz in June, 1916 [Shaban 1334 A.H.] was only taking a long-sought and heaven-sent opportunity to re-establish the position alike of his dynasty, the Holy City and the Arabian race by casting off the Turanian fetters which had too long shackled the free-born Hagarenes of the desert edge.

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

Italy and Dalmatia. March 4.

Mr. BALFOUR, in reply to Mr. NOEL BUXTON, who asked whether his attention had been drawn to the statement of the American Minister in Sofia to the effect that the American Government had let it be understood that it would not countenance Italy's claim to Dalmatia, said that the American Minister at Sofia was alleged to have made such a statement in the Press, but he was not aware whether the allegation was correct.

The Late Sir Stanley Maude.

Mr. LLOYD GEORGE, in moving that a grant of £25,000 be made to Lady Maude in recognition of the eminent services rendered by the late Lieutenant-General Sir Frederick Stanley Maude whilst commanding his Majesty's Forces in Mesopotamia, said :—I never submitted a proposal to the House with a greater conviction of its merits and of its claims on the acceptance of this House. The services which Sir Stanley Maude rendered, notably in Mesopotamia, to the Empire were distinguished, far-reaching, and permanent in their effect. He found British prestige at a very low ebb in a quarter of the globe where prestige counts for very much. The British Army in the East had suffered a series of severe reverses. One great enterprise on which a good deal of the strength of the Empire had been concentrated had to be abandoned. One British Army had surrendered to a Turkish force, after another British Army had been defeated in a series of attempts to relieve it. In Egypt we had a large force sheltering behind the desert and the canal from an inferior Turkish army; and this tale of discomfiture and humiliation spread throughout every bazaar in the East, and, like a tree, it grew as it spread. Before it ran into irreparable mischief for the Empire, the genius of Sir Stanley Maude had changed and restored the position. I know well how much of this success was due to the reorganisation of the transport service by Sir John Cowans and his able staff, the reorganisation of the medical service by Sir Alfred Keogh and his assistants, and the reinforcements brought in by Sir William Robertson and Sir Charles Monro; but the enemy also had had time to reinforce, and the enemy also had time to strengthen his forces. The ground lent itself to entrenchments. These entrenchments were constructed under the advice and direction of German engineers. The Turk was fighting at his best in a climate which suited him and did not suit us. But against all these obstacles the leadership of Sir Stanley Maude and the valour of his Army triumphed.

The highest proof of generalship is not so much in the winning of a victory as in the exploitation of it. No general ever made better or wiser use of his victory than did Sir Stanley Maude. The relentless pursuit of the defeated army which ultimately destroyed it and ended in the dramatic capture of Baghdad, which was sounded throughout the East—these were amongst the finest feats in military history. And they had a magical effect on the fame and position of Britain throughout the whole of the East. The Germans realised it. Sir Stanley Maude's achievements had destroyed their cherished dream. They sent one of their ablest generals there to effect a re-conquest, and I do not think it is too much to say that their abandonment of that enterprise was due very largely to their appreciation of the fact, when they came there, that they were confronted by a leader of exceptional resource and power.

But Sir Stanley Maude's real greatness was displayed in the use which he made of the victory after it had been obtained. He showed as much wisdom as an administrator as he displayed skill as a general. Every great general has a strain of statesmanship, and Sir Stanley Maude showed great gifts of statesmanship in his administration of that difficult country. Whilst ruling with a firm hand, he won the esteem and affection of that gifted but suspicious race, not merely by the equity of his rule, but by the intelligent sympathy which he displayed. He possessed that rare tact which is a blend of gentleness and understanding, and the article which appeared in an Arab paper after his death, and was, I think, published in the British Press last week, is the highest tribute which could have been paid to his great qualities as a governor and a man.

He died a victim of the inbred courtesy of his fine character. I heard the story the other day from a member of his staff. He visited a plague-stricken area at the invitation of its inhabitants. They were anxious to give him a welcome for the many kindnesses which he had displayed, and they gave him a great welcome. They offered him a small act of hospitality, and although he so well knew the peril that he had actually forbidden any soldier in his escort to eat or drink while on that visit, he himself ran the risk rather than hurt the susceptibilities of a people who were anxious to give him a welcome. There was cholera in the cup, and he died in a few days. He will always be remembered as one of the great figures of this war, not merely for what he achieved, but for what he was. I know not what destiny may have in store for the famed land which he conquered, but of two things I am certain. The first is that the whole course of its history will be changed for the better as a result of the victory and the rule of Sir Stanley Maude; and the second is that his name will always be cherished by the inhabitants of that land as that of the gentlest conqueror who ever entered the gates of Baghdad.

A few days ago a record of his will appeared in the papers. It was a pathetic document. Had he devoted his great qualities of energy, insight, organisation, and industry to his own affairs he would have amassed a great fortune. He consecrated them all to the service of his country, and he died a poor man. The least the country he served so well, and for whose cause he gave his life, can do is to see that those he has left who were dependent upon him shall not, at any rate, be left in penury.

Ex-King Constantine. March 5.

Lord ROBERT CECIL, Minister of Blockade, replying to Mr. Lynch, said that, in view of the doubt which existed as to whether the Greek Government were or were not making any payments to the ex-King of Greece, his Majesty's Minister at Athens received instructions early last month to ascertain definitely what action the Greek Government were taking in the matter. Lord Granville was informed in reply that no pension had up to now been paid to King Constantine, since the latter had from the first refused to accept one. No other communications had passed between his Majesty's Government and the Greek Government in the matter. Mr. LYNCH asked whether the papers would be accessible to any member of the House in order that the inner meaning of these transactions might be seen. Lord R. CECIL.—The hon. member is very suspicious. There is no inner meaning whatever, but I shall be very pleased to show him any papers he desires to see on this subject.

Mr. PEMBERTON BILLING asked whether Lord R. Cecil was aware that there were at the present time at a London tailor's hampers of clothes waiting to be despatched to King Constantine or his agent, whether it was proposed to grant permission for the despatch of the goods, and whether supplying him with goods constituted trading with the enemy. Lord R. CECIL said the last part of the question had already been answered. To the rest of the question the answer was in the negative. Mr. BILLING.—Is it proposed to despatch these hampers or not? Lord R. CECIL.—That is a large question.

CONDITIONS IN JERUSALEM.

The following extracts are taken from a letter written not long after the surrender of Jerusalem by one of the Syrian workers of the late Bishop in Jerusalem, Bishop Blyth :—

"It does seem strange to me to be able to write English letters again freely. The last three years were simply terrible. We really do owe a great deal to those who have rescued us.

"I personally did not have to go through very bad times, but some of the inhabitants had a miserable time of it. . . . I got to know nearly all the Turkish influential people, and this helped to get me out of many dangers. One cannot deny that there was some risk in safeguarding the interests of the belligerent Powers, especially the English, but we were always glad to feel that we were able to do something in return for all that was done for us by Bishop Blyth. I have done all I could to keep his furniture, and I am glad to say that I succeeded in doing so. I have often had big rows with some of the officers who attempted to carry away his things, for I considered that his property was something sacred, and that the Turks must not have any of it.

"Little Jemal Pasha lived in the Bishop's house, and I got to know him very well. I have his photograph. . . . The last of the Turkish civil governors left the Bishop's house four hours before the English came into Jerusalem, and the good tidings of surrendering the city to the English was first announced in the Bishop's study. . . . The Church (St. George's) was ready for a service three or four days after the entering of the British troops; no damage was done to it at all, except the digging for guns. The Bishop's house was used by high military people, and when the Governor (Turkish) came to live in it I got him to whitewash it all. It is now perfectly clean and new: the furniture was repaired."

Another letter from Jerusalem, written about the same date, describes how, within three hours of General Allenby's entry, all the shops in the city were open again and the shopkeepers freely displayed things that they had hidden for three years from the Germans and the Turks.

CORRESPONDENCE.

THE FUTURE OF CYPRUS.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—In your issue of December 21 last you published a letter from Dr. Lanitis on the subject of the union of Cyprus to Greece.

All those meetings, petitions and telegrams to the British Government that he quotes as proof of the public feeling in Cyprus on this important subject were artificial, and were not the real feelings of the public at all, but specially organised meetings and petitions got up by a certain class of agitators.

I have lived for twenty years in Cyprus, and I flatter myself that I know the island and the true feelings of the population better than Dr. Lanitis does. If a true vote were to be taken on a certain unknown date, so that the agitators and moneylenders had absolutely no opportunity of influencing the voting, I venture to predict that 90 per cent. of the votes would be in favour of the British administration.

There is, however, no need of voting in this matter at all, for it is difficult to see how any British Government, after our present experience of submarines, could hand over Cyprus to any other Power, which might make use of the island as a submarine base at the mouth of the Suez Canal.

I am, etc.,

Ismailia, February 5, 1918. W. H. WILLIAMSON.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—May I be permitted to say that the recent communication of Dr. Lanitis anent the desire of the Greek population of Cyprus for union with Greece represents the true situation, and is amply sustained by the facts.

That a Greek island should desire to become a part of the Greek kingdom is so natural that it is utterly futile for anyone to attempt to uphold a contrary proposition. There is not a scintilla of evidence to sustain the contention of your correspondent in Cyprus that the desire for annexation is not shared by the majority of the Greek inhabitants of the island. It is unnecessary to enumerate the various facts given by Dr. Lanitis, in order to prove that such a desire not only exists, but is universally shared by all the Greeks of the island. All that is necessary is to go to any graduating exercises of any Greek school, in any town or village on the island, and the true feeling of the Greek will reveal itself in unmistakable form; or the first Greek that you encounter on the street or country road will enlighten you on the subject.

The desire for annexation or union to Greece exists despite the fact that the Greeks of the island appreciate all that British administration has done for them.

They do not deny that the coming of the British was a blessing, in that it rid them of the infernal Turkish rule; nor do they deny that the British rulers of Cyprus, with but few exceptions, are men eminently fit for their posts, men who have the welfare of the inhabitants at heart; nor do they minimise the importance of the various reforms undertaken with a view to the betterment of the inhabitants; but as Greeks, they claim that their heart beats fast at the thought of union with the mother country, Greece, and that that event is the goal which they cherish so highly. All liberty-loving peoples would look upon the Cypriots with contempt, if they did not entertain such views—views which are perfectly natural and which are peacefully presented.

I very much regret that Dr. Lanitis did not mention in his letter something about the great desirability of reforming the judicial system of Cyprus, now that the island is a British colony. The present system is obsolete. As is well known, the district courts of Cyprus are made up of one Englishman (president of the Court), one Greek, and one Turk. *Prima facie*, such a system would commend itself to all as representing the three potent elements of Cyprus. Due consideration of the actual status of the judiciary will reveal that such a system is at present highly inequitable; for whereas the English and Greek members of the Courts have been men fairly well versed in the law, the same cannot always be said of the remaining member. Knowledge of the Koran may be useful, but I am not prepared to say that it is likely to fit a person to act as judge in a court of the greatest Empire on earth. The need of the day is for men learned in the law to act as judges; and not for Turkish imams and hodjas in a place where but one-sixth of the population are Turks. The court of assize, whose duty it is to try capital offences, should contain but one Englishman (Chief Justice), the other members being natives. Fortunately, Cyprus has been blessed with a very capable Chief Justice, Sir Charles Tyser. I am not prepared to advocate the adoption of the jury system in Cyprus; from close observation of its working in America I am convinced that the jury system has served its purpose, and should be discarded everywhere.—I am, etc.,

BARKER D. BAIRAM,

THE PRESS ON THE NEAR EAST

The Palestine Commission.

At the annual conference of the English Zionist Federation held last month, it was stated that the objects and status of the Commission shortly to be sent to Palestine had been laid down as follows:—

The Commission should represent the Zionist Organisation. It should act as an advisory body to the British authorities in Palestine in all matters relating to Jews or which may affect the establishment of a National Home for the Jewish people in accordance with the declaration of his Majesty's Government.

The objects of the Jewish Commission, it was added, should be:—

(1) To form a link between the British authorities and the Jewish population of Palestine;

(2) To co-ordinate the relief work in Palestine and to assist in the repatriation of exiled and evacuated persons and refugees:

(3) To assist in restoring and developing the Colonies, and in organising the Jewish population in general;

(4) To assist the Jewish organisation and institutions in Palestine in the resumption of their activities;

(5) To help in establishing friendly relations with the Arabs and other non-Jewish communities;

(6) To collect information, and report upon the possibilities of the further development of the Jewish settlement and of the country in general;

(7) To inquire into the feasibility of the scheme of establishing a Jewish University.

Jerusalem University.

The *Zionist Review* has an interesting statement by Mr. Bertram B. Benas on this subject of a Jewish University in Jerusalem. He writes:—

The day after the deliverance of Jerusalem was proclaimed the present writer, in the capacity of counsel, had the privilege of drafting the agreement for the sale of the land upon the Mount of Olives, where the Jewish University is to be built. The idealism and the practicality of the Jewish National leaders were never more convincingly illustrated than in their decision that the day of the liberation of Judea's ancient capital was the day upon which the first of the foundations of the restored Jewish National Home should be laid, and that the first foundation should be the Temple of Learning. The land purchased was at one time the property of the late Sir John Gray Hill, of Liverpool, a former President of the Law Society, one of the most eminent English maritime lawyers, and a nephew of Sir Rowland Hill. At the opening of the Palestine Exhibition, held in Liverpool in 1912, Sir John delivered an address, from which the following words may be quoted:—

"More than twenty years ago we bought a bit of land on the Mount of Olives, on the highest point in the hills which stand about Jerusalem, and there we built a house, and we have passed part of our time, and recently (as we are getting too old for adventures) all our holidays, there, and we only returned from our beloved home to this dripping June of England last Saturday, so that I think we know something of Jerusalem and its people also. From our house we have, I think, the most glorious view in the world. On the one side we look down upon the Holy City and the great area where the Temple once stood, and the beautiful Mosque of Omar, built, no doubt, out of the remains of the Temple, now stands. We also see the Church of the Sepulchre. On the other side we see spread before us the Wilderness of Judea, which descends to the Jordan Valley and the Dead Sea, 4,000 feet below us (for we are 2,700 feet above the Mediterranean, and the Dead Sea, which generally shows like one entire sapphire in the brilliant sunshine, is 1,300 feet below it), and the Mountains of Moab, with their great gorges and purple shadows. And to the north we see many of the Old Testament villages, Ramah, Mizpah, Michmash and others. Thus we look upon ground which attracts the greatest of human interest and the widest

SCHOOL OF ORIENTAL STUDIES.

of human sympathies. If then we are enthusiastic about the Holy Land, you will understand why.. . . Our place is called Ras Abou Kharoub, which means the head or eminence of the Father of Kharoub trees."

Thus it can be seen that the site of the University is one of the most historic and most beautiful of sites in the whole world. To the goodwill for the idea manifested by Lady Gray Hill, who has continued the late Sir John's cordial support of all Zionist work, and by their nephew, Sir Norman Hill, the possibility of completing the acquisition of the site, in the face of extraordinary difficulties created by the world cataclysm, is in a very considerable measure due, and they may be assured of the heartiest gratitude of those who have held the ideal of the University as of the foremost import for the future of Jewry.

THE PSYCHOLOGY OF A MILITARY HOSPITAL.

We are indebted to a correspondent for the following extract from a letter from a resident in Egypt:—

"I had six months' nursing in a military hospital at Salonika, as one of six lent by the British Red Cross to the Greeks"—(the experiment was not a success). "We were therefore withdrawn, and I went on to Egypt, where I have been nursing since June in one of our own military hospitals. I am in a surgical ward, which receives very serious cases. If there is anything that brings the atrocity of war home to one with overwhelming force, it is the sight of precious young lives shattered, often beyond repair. My work is not cheering, but I like it, and my admiration for our patients knows no bounds. A hospital ward is interesting from a psychological standpoint. It is subject to the strangest whims. Sometimes, apropos of nothing, the men will suddenly burst into song; on other days nothing that happens will break their moody silence. Sometimes the ward has a first-class appetite, and next day the food is carried away, almost untouched. Anon a mania for playing card games attacks the whole ward, and on the morrow you will see everyone busy trying to work military badges on canvas. Over and over again will 'up' patients refuse to take exercise in the garden; and an hour later the same men will not enjoy the afternoon nap so eager are they to be out of doors. On the whole they act like big children, and nothing surprises me more than to see them obeying the sisters' imperious behests without a murmur.

"I admire and respect the nursing staff, but wish they would not be so keen on cultivating hobbies, such as a worship of tidiness or discipline, carried to such excess as to sacrifice the patients' comfort. I have seen a badly wounded man ruthlessly roused from sleep at 4 a.m. in order to be washed, because the process ought to be finished by 6 a.m., which is breakfast-time. Often, too, a sister orders me to shake a patient who, after a restless night, has managed to doze off, because rule enjoins that the bed must be re-made at a certain hour. Another nursing fad consists in tucking a patient's bedclothes in so tightly all round that he can scarcely move hands or feet; and this not because he is wounded, but in order to keep his bed 'tidy.' A climax comes when an inspection is announced. On one occasion a general officer kept us all waiting for two hours, during which treatment was suspended; the 'up' patients were forbidden to sit on their beds, and had to stand or squat on the floor. No tea was served, and when at last the great man did arrive he hurried through the wards, looking neither to the right nor left. That evening the hospital was in a bad temper."

THE FUTURE OF MONTENEGRO.

We have received from Monsieur R. Shurbatovitch, in explanation of the fact that he has severed his connection with the "Montenegrin Committee for National Unity," a communication in the form of an open letter to M. Radovitch, the President of the Committee. The following are the salient features of the letter:—

"When last year you formed a 'Committee for National Unity,' and elected yourself as President, I was one of the first to join your organisation, under the belief that your object was the same as that which actuates the whole of the Southern Slav peoples. But, alas! I found myself mistaken. Not only had your Committee no mandate from the Montenegrin people, but it did not even possess any democratic constitution or basis.

"It would appear that you are for unity under military direction, whilst Montenegro is for unity with the equal respect and freedom for each State in the Union, and she wishes to enter into this Union with the same rights as she desires Serbia and all other Slav States to possess. Your idea of unity seems to be the capitulation of Montenegro to Serbia. The Montenegrin people do not take this view.

"Although I have never taken any active part in your campaign, I cannot any longer remain silent, and by silence appear to consent to your action."

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

The interesting announcement is made in the Indian Financial Statement that a further War Loan is to be issued in India in the form of short term bonds, free of income-tax, and Post Office Cash Certificates. The previous loan realised £30,411,600, and the forthcoming one is estimated to produce £20,000,000. This seems a very conservative forecast, and there is little doubt that this figure should be easily passed. But whether any appreciable advance will be made on the previous loan is a moot point. It has been one of India's chief handicaps to industrial development that the population as a whole is disinclined to subscribe money for any purpose, so that the country has been dependent on external capital for the extension of its industrial enterprises. This failing, it has been urged, could be overcome by education, especially by the advertisement that would be afforded by one or two successful ventures. The 1917-18 loan made it evident that India is still a difficult country in which to raise money, but it is very possible that the publicity resorted to in connection with that issue may have had a distinct effect in counteracting this tendency. If so the 1918-19 loan may be a great success.

***

I understand that the movement to preserve and develop the metal resources of the Empire has led to the establishment of a British Metal Bank, which is to have a capital of £1,000,000, and will, it is stated, be known as "The National Metal and Chemical Bank." The idea underlying this step is that such an institution would be of the utmost value in counteracting any attempts on the part of the German Metallgesellschaft and its associated enterprises to re-establish their position after the war. That such attempts must be expected is beyond question, and, judging by a project which is on foot at Frankfurt-on-Main, we must be prepared for competition of an even more insidious character than was the case before the war. The Frankfurt proposal is to establish a new Metallgesellschaft not in Germany, where its purpose would be obvious, but in Sweden, so that it may be able to pursue its operations unhampered by the peculiar reluctance of other countries to allow the Teuton any further scope for peaceful penetration!

***

The eleventh hour additions to Germany's peace terms with Russia are very interesting. Russia is to give up Batum, Ardahan, and Kars, thus losing the fruits of the Berlin Treaty of 1878. Ostensibly this is in the nature of a consolation prize for the Turks to set against their misfortunes in Mesopotamia and Palestine, but as Turkey is practically a vassal of the Teutonic Powers, the intention of the move is obviously to give Germany a footing on the eastern littoral of the Black Sea in order to further her Eastern pretensions. Batum will serve this purpose well. It is an important commercial centre, and its value to Russia may be gauged from the fact that it serves the great oil producing areas of Baku. Supposing that Germany were in a position to enforce this treaty it would mean that she was in touch with yet another oil centre, with a convenient "jumping off ground" (to use her own phrase in connection with Belgium) in the neighbourhood of the port when a suitable opportunity arose for further acquisitions of territory.

***

But for the fact that oil enters into the question, I am perfectly sure that Germany would not have omitted to add what may well prove a serious bone of contention to the peace terms. In the Franco-German war the Teutonic aim was the possession of iron, and this, as we have only too good reason to know, was achieved by the capture of Alsace-Lorraine. This time it is oil that is desired, for Germany realises quite plainly that the possession of oilfields or convenient access to them is indispensable for success in the commerce of the future, not to speak of the next war which she is already contemplating. I expect, therefore, as the war goes on that we shall find that Germany, in the knowledge that her visions of territorial aggrandisement in other directions are impossible of achievement, will concentrate more and more on her Eastern policy, in which the oil question will play a large part, and she may well be satisfied, if not actually contented, with the result of the war if she is left as well off as regards oil as she was with regard to iron in the former struggle.

***

It will be noted that Germany does not contemplate the acquisition of territory containing oilfields, possibly hoping by this manœuvre to persuade the Allies that her designs are innocuous, but after the exposures we have had of German methods of exploitation in all parts of the globe it is unthinkable that anyone will be deceived by this obvious device. For all practical purposes the expropriation of the Roumanian oilfields would mean that, as far as Roumania was concerned, her oil lands might as well be situated at Baghdad for all the benefit she would derive from them, and in the circumstances it would be better for her if they were, since instead of serving as an instrument for the development of the country they would be utilised by Germany for commercial penetration until Roumania was Germanised in all but name. With regard to Batum, Germany's intentions are more subtle. Here there is no demand for oil concessions; but as Batum's importance in relation to the Baku oil industry is somewhat similar to that of Calcutta to the Indian hides trade, her views as to the desirability of Batum are not difficult to grasp.

***

As will be seen from the details given elsewhere by our Cairo correspondent, the Sudan's trade in 1917 more than came up to expectations. Both imports and exports showed a marked increase on the 1916 figures, though, as might have been expected, the advance was much more pronounced as regards exports. As a result, the Sudan has a most satisfactory balance of trade, due to no small extent, of course, to the growing dependence of Egypt on her neighbour for food supplies. The position is not likely to be materially changed in this respect for some time after the war, for the general shortage of commodities and the demands that will be made on the world's shipping in the general process of reconstruction will continue to make the Sudan the most convenient market for Egypt. When normal conditions have been restored, however, the Sudan may find its trade with Egypt affected to some extent, but by that time it may be expected that the Sudan will have found alternative markets for its produce.

***

Some useful work is being accomplished by the newly organised Department of Overseas Trade in arranging exhibitions of enemy goods, so that British manufacturers may see exactly what they have to compete against. These exhibitions are not a new feature, but the new series are on larger and more comprehensive lines than those formerly conducted by the Intelligence Branch of the Board of Trade. Their scope may be gathered from the fact that the latest exhibition in London contains about 10,000 samples of German and Austrian wares. Besides holding these exhibitions in London, the Department has sent a collection of samples to Manchester and other industrial centres, where it has been inspected by many thousands of manufacturers; while many samples have been lent to firms for the purpose of reproduction. The results of this spade work should be apparent after the war, provided our manufacturers bestir themselves and show the necessary enterprise for tackling foreign markets.

***

The figures for the Egyptian Savings Bank accounts for the past year are of interest for the light they throw on the country's steady development. During the year 21,990 accounts were opened, and 16,946 were closed, and at the end of December the accounts open numbered 203,260, as against 198,216 at the end of 1916. There was again a satisfactory surplus of receipts over withdrawals, the figures beig £E696,644, as against £E571,978 in 1916. These statistics point to the fact that Egypt's present prosperity is not confined to one section of the community, but is of widespread incidence.

THE INDIAN BUDGET.

Surplus of £5,600,000.

The Financial Statement of the Government of India was presented in the Viceroy's Legislative Council by the Finance Member, Sir W. S. Meyer, K.C.S.I., K.C.I.E., on March 1. The chief features of the statement are the following, rupees being converted into pounds for convenience of account at the conventional rate of 1s. 4d. the rupee.

The revised estimate compares with the Budget Estimate, as follows:—

—	Budget, 1917-18.	Revised Estimate, 1917-18.	Increase + Decrease —
	£	£	£
Imperial revenue	66,420,000	76,677,400	+ 10,257,100
Provincial r'v'n'e	32,450,800	33,723,900	+ 1,273,100
Total	98,870,800	110,401,300	+ 11,530,500
Imperial expenditure	66,284,600	70,852,300	+ 4,567,700
Provincial expenditure	32,548,600	31,467,700	— *1,080,900*
Total	98,833,200	102,320,000	+ 3,486,800
Add—			
Addition to Provincial balances	—	2,256,200	+ 2,354,400
Deduct—			
Drawn from Provincial balances	*97,800*	—	
Total expenditure met from revenue of the year	98,735,400	104,576,200	+ 5,840,800
Imperial surplus..	135,400	5,825,100	+ 5,689,700

The principal items of revenue contributing to the total improvement of £11,530,500 are—Railways (net receipts), £3,788,000; customs, £1,733,100; salt, £1,459,900; exchange, £1,000,000; income-tax, £946,500.

The increase under customs is mainly due to higher prices which raise the yield from *ad valorem* duties. The bulk of the increase occurs in manufactured cotton. Substantial increases also occur in tobacco, silver bullion, sugar, excise on cotton manufacture, and export duties on rice. Large gain from exchange arises from high rates at which Council bills are sold at present. This head bears the loss on a portion of the rupee coinage owing to the purchase of silver during the latter part of the year at high prices. Smaller increases under a number of heads make up the balance. Under expenditure, the greater part of the total increase of £3,486,800 (Imperial £4,567,700, Provincial £1,080,900 decrease) comes under military services (£3,057,600).

The total amount of Council drawings in 1917-18 is estimated at £34,839,300, to be met as follows:—From Treasury balances, £24,760,700; from paper currency reserve, £8,658,600; from gold standard reserve, £1,420,000.

Indirect remittances, *i.e.*, expenditure defrayed by the Government of India in India on behalf of the Imperial Government and Dependencies, against which sterling credits are received by the Secretary of State in England, amounted to £66,059,100. Other disbursements in India of an analogous character against recoveries elsewhere are shown in the Revised Estimates, as follows:—Excess payments for foreign money orders, £6,266,900; funds supplied to Ceylon, £1,272,000; credits established in favour of the Federal Reserve Bank of New York in order to provide rupee exchange for American purchases of war material in India, £2,666,700. The above payments, amounting (exclusive of Council drawings, £34,839,300) to £76,264,700, have been met mainly from the Indian proceeds in 1917-18 of the Indian War Loan, £30,411,600; the receipts from Indian Treasury Bills, £30,000,000; and from the credits for silver received in India, £13,333,300.

The sterling equivalent of the Indian War Loan receipts has been paid to the Treasury in partial liquidation of India's war contribution of £100,000,000. The amount paid is £35,139,000, which includes proceeds received in 1916-17 in addition to the £30,411,600 received in 1917-18.

Closing cash balances, 1917-18, after providing for the investment of £20,000,000 from home balances in a special reserve for the repayment of short-term borrowing in India, are estimated at:—In India, £15,969,500; in England, £8,056,100; the latter exclusive of £6,000,000 held on account of the gold standard reserve.

1918-19.

The Budget estimate compares as follows with the revised estimate for 1917-18:—

—	Revised Estimate, 1917-18.	Budget Estimate, 1918-19.	Increase + Decrease —
	£	£	£
Imperial revenue	76,677,400	73,999,200	— *2,678,200*
Pr'vincial reven'e	33,723,900	34,347,700	+ 623,800
Total	110,401,300	108,346,900	— *2,054,400*
Imperial expenditure	70,852,300	71,707,700	+ 855,400
Provincial expenditure	31,467,700	34,443,000	+ 2,975,300
Total	102,320,000	106,150,700	+ 3,830,700
Add—			
Additions to Provincial balances	2,256,200	—	— *2,351,500*
Deduct—			
Drawn from Provincial balances	—	*95,300*	
Total expenditure met from revenue of the year	104,576,200	106,055,400	+ 1,479,200
Imperial surplus	5,825,100	2,291,500	— *3,533,600*

The principal increase in revenue (1918-19) is £1,307,300 under interest receipts, mainly due to increased investments in the paper currency and the special reserve mentioned above. There is a decrease of £1,940,600 under salt, resulting from the stoppage of indents for Northern India salt owing to accumulation of uncleared indents and to low output in the current year in consequence of the damage to salt works from rains.

Under expenditure, the main increases over the Revised Estimates are:—Civil works, £835,100; education, £759,000; political, £381,100; posts and telegraphs, £332,400; police, £320,600; military services, £248,000.

Provision is made by a recurring grant of £200,000 for primary education under the second of the above heads. Otherwise provision for expenditure has been generally restricted to urgent needs.

No new taxation will be imposed in 1918-19.

CAPITAL TRANSACTIONS, 1918-19.

CAPITAL EXPENDITURE.

	£
Railways	4,202,300
Irrigation	466,700
New Delhi	266,700
Discharge of debt—	
India Bonds	500,000
Debentures of railway companies	2,624,900
Temporary debt in India	2,716,700
Provincial deficits	95,300
Total	£10,902,600

RESOURCES FOR MEETING CAPITAL EXPENDITURE.

Imperial surplus	2,291,500
From famine grant	553,400
Unfunded debt	1,215,300
Reduction of cash balances	3,601,300
Repayment of advances credited to Federal Reserve Bank of New York	2,666,700
Net receipts under other transactions after providing for £2,000,000 for Council Bills unpaid at end of 1917-18	574,400
Total	£10,902,600

It is assumed that Indian Treasury bills issued in the current year will be replaced.

Closing balances, 1918-19, are estimated at—In India, £11,119,900; in England, £9,284,400; the latter exclusive of £6,000,000 held on account of the gold standard reserve.

Indirect remittances, *i.e.*, payments in India on behalf of His Majesty's Government recoverable in sterling, are estimated at £74,020,000.

No provision is made for meeting Council bills sold in 1918-19; such drawings will be financed by special measures. On the other hand, the estimates provide £12,000,000 for purchase of silver and also for a remittance of £16,347,000 from England to India by means of further note issues against investments in the paper currency reserve, so as to enable Indian Treasury balance to meet war disbursements (*i.e.*, indirect remittances) on behalf of Home Government. As a further means for meeting these disbursements it is proposed to issue a second War Loan in the form of short-term bonds, free of income-tax, and Post Office Cash Certificates. The proceeds of this loan, which are estimated at £20,000,000, will, as in the case of the 1917-18 War Loan, be made over to the British Government in further liquidation of India's contribution to the war.

TRADING WITH THE ENEMY.

The Controller of the Foreign Trade Department has issued a new Consolidating List, containing the names of over 3,500 persons and firms with whom persons in the United Kingdom are forbidden to trade under the Trading with the Enemy (Statutory List) Proclamation. Although the Statutory List has now been in existence for nearly two years, cases still come to the notice of the Foreign Trade Department in which firms are corresponding with persons on the Statutory List, and they not infrequently give as an excuse that they have never heard of the list. It is important that everyone engaged in foreign trade should realise that he is under an obligation to make himself familiar with the Statutory List and to observe it in his dealings. Failure in this respect renders him liable to the heavy penalties provided by the Trading with the Enemy Acts, and these apply to holding any communication whatever with anybody on the Statutory List and not merely to entering into an agreement or continuing to carry on business with such persons. In exceptional cases, where it appears to be necessary and where it is not contrary to the public interest, a licence may be obtained from the Foreign Trade Department exempting from the prohibition.

The Statutory List is published at intervals in a consolidated form, and additions are made approximately at intervals of a fortnight. Copies of the Consolidated List and of all additional lists may be obtained at a small cost from the Superintendent of Publications, his Majesty's Stationery Office, Imperial House, Kingsway, W.C.

JAPAN AND INDIAN COTTON.

Reports from Bombay that the Indian Government is inaugurating a rigorous restriction of the export of cotton and is contemplating levying an export duty are causing the utmost concern here (says Reuter's Osaka correspondent in a message dated March 3) because Japanese mills depend on India for raw cotton, the imports of which into Japan are enormous.

With regard to the above telegram, Reuter's Agency understands that Osaka—the Manchester of Japan—always becomes excited about this time of the year in view of the introduction of the Indian Budget, and apparently there was some apprehension that the Indian Government might levy an export duty on that commodity.

MOROCCO TRADE NOTES.

(From Our Own Correspondent.)

Tangier, January 22.

The fears aroused by the long postponement of the rains have proved to be without justification, for sufficient rain has fallen all over the country to permit of ploughing, and a spell of fine weather is what is now needed for the work to be done. The season is, however, far advanced, and conditions will have to remain very favourable if good crops are to be reaped. So far there are no reports of the coming of locusts, and as the usual time of their arrival is past it is possible that the country will be spared a visitation this season. In view of the agricultural uncertainties the authorities have wisely suspended the purchase of the 1917 crops for export to France, though it is doubtful whether the Moors would have brought their produce to market so long as there was any probability of crop failure. The authorities, it may be mentioned, have prohibited the export of almost all agricultural products, which are bought by them and shipped to France; the list of prohibitions has recently been made still more complete.

Tea Imports.

An official notice was published towards the end of last month which stated that the British Government having forbidden the export of tea from Great Britain, the authorities in the French zone had collected orders from merchants in Morocco for Shanghai tea firms, and had arranged with the French Government for transport facilities for bringing the tea direct from Shanghai to France.

The tea trade occupies an important part of the business of London firms dealing with Morocco, and steps taken by them early in November resulted in permission being granted by the British Government for the export of a very large quantity of tea to Morocco provided it was brought to Great Britain by neutral or Japanese vessels. There is some curiosity to know what the ultimate effect of the special facilities for direct import from Shanghai offered by the French Government with a view to maintaining the regular supply of one of Morocco's chief needs will be on one of the staple articles of British trade with Morocco.

A Petrol Shortage.

An announcement appeared a few days ago in the Press stating that in order to husband the supplies of petrol a regulation would soon be issued forbidding the use of private motor-cars and restricting public motor-car services. Such a restriction, however necessary, would be severely felt, as motor-cars are the chief means of communication. The railway (a narrow gauge line) serves little more than Casablanca, Fez, and the intermediate towns, and its pace is not great. The rest of the country depends on motor-cars.

Slow Road Construction.

Much disappointment is felt at the very leisurely progress made in constructing the road between Kenitra and Tangier. The road from the south ends some 20 to 30 miles from Kenitra, and from that point to the Tangier zone, some 80-90 miles, traffic has to use a track impassable in winter. Curiously enough the Tangier zone is the only one of the three zones—French, Spanish, Tangier—through which the Kenitra-Tangier road passes where the work has been done. In summer motor-cars do the journey between Tangier and Rabat in a day, and during last summer a public motor-car service, half of which was maintained by a British motor-car company, carried mails and passengers, and provided a better means of communication more regular than any other available, inclusive very often of the telegraph line, which is of intermittent value.

The French zone is still in winter time, so far as letters and passengers are concerned, cut off from communication with Europe, very often for a week or ten days at a time, and is at the mercy of steamer services and the state of the sea. The completion of the road offers very few difficulties beyond the distance which in some places stone has to be conveyed, and unskilled labour is cheap and available, but the work goes on as casually and intermittently as if a delay of one or two or three years was a matter of complete indifference.

Bank of British West Africa.

So far as the British colonies are concerned, the New Year was most propitiously marked by the opening of new branches of the Bank of British West Africa at Saffi and at Fez. The Saffi branch brings the bank's work into close touch with an important district of the south, where British trade influence has long been particularly and happily marked. The Fez branch is a most important development, as it will vastly increase the probability of British trade profiting by the great opportunities which the position of Fez in the new economic organisation of Morocco will assuredly offer. The career of this bank in Morocco, which commenced only three years ago, has been remarkably successful, and it would be difficult to exaggerate the degree of encouragement and assistance that its work has given to all British enterprises in Morocco. The bank has earned the confidence and appreciation of the Moroccan business world as a whole, but from the British Colonies it has earned much more. From these a real debt of gratitude is due both to those who have directed the vigorous policy of the bank and to those who have so skilfully carried out that policy in this country.

ALGERIAN MARKET FOR MACHINERY.

No great activity of any kind is being manifested in the Algerian machinery market at present, says a United States Consular report. War conditions have made the strictest economy necessary, and goods are not being purchased unless the profits to be derived therefrom can be readily determined beforehand. The lack of shipping facilities is also a serious obstacle to the importation of merchandise.

Machinery is imported into Algeria chiefly from France. It is also imported to a limited extent from Great Britain, the United States, and other countries. Before the war Germany sold a considerable amount of machinery to Algeria. The bulk, however, comes from France, but it is not necessarily of French manufacture, as it is the custom of Algerian importers to buy even foreign products as largely as possible from French agencies of the foreign houses. This simplifies negotiations, since they are familiar with French business methods, and also simplifies the customs formalities. The duty on imported machinery varies according to the article. The French customs tariff applies, and the duty is roughly from 12 to 40 francs per 100 kilos.

SHIPPING TO MOROCCO.

At the instance of the executive committee of the Manchester Chamber of Commerce, the attention of the Shipping Controller has several times been drawn to the inadequate shipping facilities for the various North African ports. Whilst the Controller undertook to do all that was practicable to facilitate trade services, he was unable to arrange for augmented sailings to a considerable extent. In order that he may be kept fully informed as to trade requirements arrangements have been made, at his request, for the Chamber to prepare a monthly schedule showing the weight of goods ready for shipment to the various ports on the North African coast.

BRITISH INDUSTRIES FAIR, 1918.

The fourth British Industries Fair, organised by the Board of Trade since the outbreak of war, will be opened in the Pennington Street premises of the London Dock on Monday next, March 11. The building in which the fair will be held this year is situated within twelve minutes' walk of Mark Lane Station on the Underground Railway, and a service of motor omnibuses will ply between Mark Lane Station and the fair.

In order to avoid any possible interference with the production of military requirements, the fair has again been confined to the following industries, viz., pottery, glass, stationery, paper, printing, fancy goods and toys. As in former years, the right to exhibit has been confined to manufacturers, and some 425 firms are exhibiting.

Although the number of exhibitors is approximately the same as last year, the area covered by the forthcoming fair is very much larger than in the case of any of the previous fairs, and, therefore, manufacturers will be able to display their goods to better advantage. In spite, however, of this increase in area, the whole of the space available was allotted to manufacturers before Christmas, and it has unfortunately proved impossible to accommodate a number of firms which had omitted to apply for space in good time.

Admission to the fair is again confined to bona fide trade buyers, and invitations have been issued by the Board of Trade direct to over 60,000 firms in this country. Any firms which have not yet received an invitation, and desire to visit the fair, should apply for a card of admission to the Director, British Industries Fair, Board of Trade, 10, Basinghall Street, E.C.2.

The *Ahram* states that it has been decided to double the railway lines between Ismailia and Kantara.

POWER LINE TO MOROCCO.

Regular Service of First-Class Steamers taking cargo to and from **London** and **Rabat, Larache, Tangier, Casablanca, Mzagan, Saffi** and **Mogador.** Loading Berth—Morocco Wharf, Wapping.

ENGINEERING NOTES.

Agricultural Steam Engines.

Manufacturers of portable steam engines and tractors may be reminded that the present high prices of machinery and of fuel oil have tended to restrict the use of oil engines for field work throughout the East. In several districts in the Near East single and double steam-engined ploughing tackles have been introduced, and many second-hand portable and traction steam engines, and even road-rollers, have changed hands to be employed in field work. According to recent information they are at present more economical for such work than oil engines. This is certainly the case in India, where steam ploughs have been used to excellent effect. In the Bombay Presidency, for instance, 1,200 acres of rough virgin land were broken up to a depth of one foot, and the large clods harrowed down at a cost of 15 rupees (or £1 1s. 4d.) per acre; while in another district 554 acres of grass-bound land were broken up to a depth of 16 inches, at a cost of 25 rupees (or £1 13s. 4d.) per acre. These are very satisfactory results, and compare favourably with those obtained in the Near East, what difference there is being in favour of the latter owing to climatic conditions. In view, therefore of the great need for mechanical power for agricultural purposes in the East, and the apparent preference for steam engines at present and perhaps for a few years yet. British manufacturers and exporters should not lose sight of these facts, for competition is already in progress for those markets.

Seed Dressing Machines.

Farmers in the East are seldom satisfied with the economic results of their work, and this is especially the case with regard to the export trade. They complain, for instance, of the much lower price that they obtain for their seeds in the local markets than that which the local buyer or the exporter subsequently obtains The reason is, as a rule, that the farmer adheres to the old-fashioned methods of preparing his seeds for the market. He knows little or nothing of the winnowing or dressing machines. He tosses up the threshed straw with a fork on the threshing floor, and the wind separates the seed from it as cleanly as the process will allow. He brings the seeds to the market in that unattractive condition, and, of course, does not receive a proper price. This generally happens with seeds such as wheat, barley, canary seed, linseed, etc. The buyer or exporter has to complete the cleaning process with the assistance of winnowing and dressing machines in his warehouse, and then obtains the full value of the seeds, thus reaping a large profit. Some farmers, as I have already said, know little or nothing of such machines, and the local seed buyer is not anxious to give them any unnecessary information. Others know the machines, but what they have seen or heard of them is that they require mechanical power, which is an expensive item for the average farmer and smallholder. It should, therefore, interest such farmers and smallholders in the East to know that there are small seed dressing machines of British manufacture which can be driven by a small oil engine or a horse-gear, or a treadle, and even by hand; and, as a rule, the price of these machines is within the means of the average Oriental farmer.

A Good Grain-Cleaner.

One of the latest type of these machines is a linseed dresser, which can deal not only with linseed, but also with other kinds of seed and grain. With the necessary changes of riddles, it can be employed for cleaning wheat, barley, oats, peas, dari seed, rapeseed, canary seed, etc. For linseed dressing the power-driven machine is capable of dressing from 60 to 70 bushels of linseed per hour; while the hand-power size can deal with 25 to 40 bushels of seed per hour. In place of the blower used in the hand-power machines, the power-driven plant has a double exhaust for the extraction of dust, light shapes, straws, etc., from the seed; and has, of course, a larger riddling surface and a more regular motion. It is evident that by the employment of such modern seed dressing machines the appearance, quality, and value of the seed are greatly improved; and if this fact and how the machines can be obtained is made known to agriculturists and farmers in the East by the various makers, the result would be undoubtedly very satisfactory for the latter.

Caucasian Tea Factories.

The news that the Germans have demanded the surrender of Batum and Kars indicates not only their determination to replenish their stores of petroleum, but also to master a region which has recently proved to be quite suitable for the production of tea and other tropical products. The raising of the tea plant along the coast of the Black Sea, near Batum was progressing very satisfactorily before the war. The total area of land under tea in the district was, then, 810 acres, which included besides Imperial estates, 270 acres on the property of Messrs. K. and S. Popoff, and the plantations of several small proprietors. The owners of these plantations by paying a fixed rate of 5d. for every pound of ready-made tea turned out by the factory were able to send the produce to the tea-making factory belonging to the Imperial Domains for manipulation; but in consequence of the increase in the output of tea from the plantations on their own estates, the Imperial Domains authorities were unable to continue to undertake the manipulation of tea of outside growers, and the latter were obliged to erect small factories for themselves. The factories were equipped, it is stated, with machinery, etc., of British manufacture. The administration of the Imperial Domains intended to increase the area under tea cultivation within the limits of their estates to 540 acres, and also to erect a second tea factory later on; but instead of this scheme, some alterations were being made to the existing factory, among which was the addition of a new mechanical drying room, when the war broke out. It appears that the Imperial Domains authorities were contemplating at the time the lease of lands to persons desirous of growing tea who would be prepared to sell their leaf for manipulation to their factories, but the war upset their plans, and new plans on an undoubtedly great scale are now to be prepared by the Germans.

The London offices of the Société Orientale de Publicité (the Egyptian Publicity Company) have been transferred to Albion House, 59, New Oxford Street, W.C.1.

SUDAN TRADE IN 1917.

An Excellent Year.

(From Our Own Correspondent.)

Cairo, February 11.

The Sudan Customs have just issued the statistical returns for the month of December, and from them we are able to see the progress made in the external trade of that country. Undoubtedly the past year has been an excellent one for the Sudan, surpassing all predictions. Imports amounted to £E2,976,967, or an increase of 15 per cent. over the previous year when the total was £E2,579,091, whilst exports reached the respectable figure of £E3,465,980, which was over 50 per cent. better than that of 1916. The balance of trade swung over entirely in favour of the Sudan, and taking into account re-exports was about £E800,000 better than the previous year when the balance was £E120,000 against the country.

Increased Exports to Egypt.

As might well be expected Egypt was the largest customer of the Sudan. Her purchases amounted to £E2,589,541, an increase of £E1,544,291 over 1916, the chief commodities taken by her being livestock, cereals, cotton and gum. Great Britain had a slight increase, from £E649,827 to £E707,636; but with the sole exception of Italy and India all other countries showed a falling off in their purchases, due undoubtedly to the shipping difficulty. Under imports into the Sudan Egypt again was the largest supplier, her share coming to £E1,845,162 as against £E1,539,286 the previous year. Great Britain sent £E170,448 less than in 1916—£E396,260—and trade with the Union of South Africa rose from £E100,401 to £E156,550, due mainly to increased coal imports. The other countries showed little change, the most important alteration being decreases in imports from Arabia and Italy of respectively £E10,421 and £E14,377.

Chief Imports and Exports.

The chief imports were flour, £E66,828; refined sugar, £E409,555; coal, £E318,590; cotton fabrics, £E776,205; sacks, £E110,047; tobacco, £E68,068; tea, £E75,083; whilst the principal exports were cattle, £E255,744; sheep and goats, £E234,490; dhurra, £E658,824; sesame, £E202,130; gum, £E743,018; cotton, £E564,303; camels, £E49,395; hides and skin manufacturers, £E187,486; ivory, £E56,670; dates, £E54,050; ground nuts, £E61,420; senna, £E71,781, and gold bullion, £E67,533.

The Rise in Prices.

An indication of the manner in which prices have risen is afforded by the following facts: Sugar imports fell off by 845 tons, but the value rose by £E79,405; 94 tons more tea were brought in, but the value of the total import increased by £E23,708; of flour less than half the quantity imported in 1916 came in, whilst the value fell by only 25 per cent.; coal imports diminished by about 10,000 tons, but the value rose by £E26,737; and imports of cotton fabrics fell off by 879 tons, whereas the value increased by 18 per cent. or £E121,690. It is, however, satisfactory to note that the Sudan profited from the general rise in prices in so far as concerned its exports, the value of all of which rose out of all proportion to the quantity, and that it was able to convert an adverse balance of trade into a most favourable one. Indeed in every respect 1917 will stand as a landmark in the trade annals of the Sudan, which in the twenty years since its reconquest has built up a very important external trade, with practically no outside help, and within the past ten years has more than trebled its commercial transactions with foreign markets.

LANCASHIRE COTTON.

Output Again Restricted.

(From Our Own Correspondent.)

Manchester, Wednesday.

A smart advance has occurred in raw cotton rates during the past week, and spinners and manufacturers have been forced to put up their quotations for yarn and cloth. A feature of interest has been the decision of the Control Board to restrict the output of mills engaged on American cotton from 60 per cent. to 50 per cent. This action has not been unexpected in view of the increasing shipping difficulties. The Government has been unable to allocate any freight space for the importation of raw cotton across the Atlantic for this month. There seems to be no prospect of lower rates in the near future. A stronger feeling has prevailed in Egyptian cotton circles. Imports from Alexandria are disappointing, but spinners are understood to hold large supplies at the mills. An improved demand has been experienced in fine Egyptian yarns, especially in combed descriptions, and a big business has been done. This section of our trade continues very prosperous. Rather more demand has been reported in miscellaneous cloths for Egypt. Some buying has transpired in grey shirtings, and printed and dyed goods have been in request. India has not given very much support, although a few more sales have been put through in dhooties for Calcutta. Bids for China remain poor. Certain South American markets continue to provide an encouraging turnover. Home trade remains very busy. American yarns are distinctly dearer on the week, and an increased demand has been met with for quick delivery. Certain counts and qualities are very scarce. Limited companies continue to report large profits. India has again bought fine yarns on a free scale, and some producers are sold up to the end of the year.

INDIA'S SILVER HOLDING.

In the course of their weekly bullion letter, Messrs. Samuel Montagu and Co. state that the silver holding of the Indian Treasury continues to shrink. Substantial additions will accrue before long as a consequence of purchases made by the Government. Whether these will counterbalance or exceed withdrawals remains to be seen.

COMPANY REPORTS.

Bank of Mysore.

The report of the Bank of Mysore, Ltd., for the year ended December 31 last states that the net profit amounts to Rs1,99,101, which with Rs10,872 brought forward aggregates Rs2,09,973. An interim dividend at the rate of 8 per cent. per annum was paid for the half-year ended June 30, which absorbed Rs40,000, and there has been placed to reserve fund Rs50,000. The directors now recommend a final dividend at the rate of 8 per cent. per annum for the half-year ended December 31 (Rs40,000), to place to reserve fund (making Rs1,00,000 for the year and raising the fund to Rs2,75,000) Rs50,000, and to carry forward Rs23,880. The directors have continued their policy of maintaining strong liquid reserves. Cash and investments aggregate over 22½ lakhs, representing 37 per cent. to liabilities of all kinds. The bank continues to make steady progress. The working capital has increased by 11 lakhs during the year. The balance-sheet shows:—Deposits: Mysore Government, Rs10,00,000; fixed deposits, Rs33,39,042; savings bank and prudential deposits, Rs93,106; current and other accounts, Rs16,93,815. Reserve fund, Rs2,25,000. Cash and investments, Rs22,61,656; loans, cash credits and overdrafts, Rs47,06,980; bills discounted, Rs4,63,792.

NATIONAL BANK OF EGYPT.

NOTICE IS HEREBY GIVEN that an ORDINARY GENERAL MEETING of the Shareholders of the National Bank of Egypt will be HELD on SATURDAY, the 6th April, 1918, at 4 p.m., at the Head Office of the Bank in Cairo for the purpose of:—

Receiving the Directors' Report.
Receiving the Auditors' Report.
Submitting the Accounts for the year ended 31st December, 1917.
Declaring a Dividend.
Confirming appointment of two Directors.
Electing Auditors for the year 1918 and fixing their remuneration.

All Shareholders holding a minimum of 20 shares have the right to take part in the General Meeting provided the Shares be deposited under the following conditions at one of the following places, where cards of admission or proxy forms will be delivered:—

In Egypt, at the latest the 1st April, 1918.
At the Head Office, Cairo.
At the Branch of Alexandria.
At the Agencies of the Bank at Assiout, Assouan, Benha, Beni-Suef, Chibin-el-Kom, Damanhour, Fayoum, Keneh, Luxor, Mansourah, Minieh, Port Said, Rod el Farag, Sohag, Tantah, Zagazig, and Mousky (Cairo).
At the Office of the Anglo-Egyptian Bank: Bank of Athens.
Banque Belge pour l'Etranger.
Imperial Ottoman Bank.
Banque d'Orient.
Banco di Roma.
Cassa di Sconto e di Risparmio.
Comptoir National d'Escompte de Paris.
Credit Lyonnais.

In the Soudan at the latest the 27th March, 1918, at the Agencies of the National Bank of Egypt, at Khartoum, Port Sudan, and Suakim.
In Europe, at the latest the 15th March, 1918.
In Paris at the Offices of the Société Marseillaise
In Italy at the Offices of the Banca Commerciale Italiana.
In London at the Agency of the National Bank of Egypt, 6 and 7, King William Street, E.C.

F. T. ROWLATT, Governor.

Cairo, 25th February, 1918.

ON 'CHANGE.

(From Our Own Correspondent.)
Throgmorton Street, Wednesday.

Our market has been very quiet this week, and there has been a reaction on profit-taking in certain directions in order to provide funds for subscriptions in connection with the War Loan week. Government stocks have continued in demand, but business has been practically at a standstill, as there have been hardly any sellers on this side.

In bank shares there is no change whatever to report, excepting a slight decline of 1-32 in Agriculturals to 6 5-16, and a rise in Anglo-Egyptian Banks, on the other hand, of ¼ to 14⅜.

In railways, Delta Lights, after easing to 6⅞, have firmed up again, and close unaltered at 7.

In land shares, Behéras are ¼ easier, at 13⅜, Delta Lands are 9d. lower, at 15s.; and New Egyptians are 3d. easier, at 19s. Sidi Salems, after changing hands at 47s. 6d., close only 1s. 3d. down, at 48s. 9d. Union Foncières are 1-16 lower, at 3 3-32. Generally speaking, offerings have been gradually absorbed, and Egypt has continued to get support.

In miscellaneous shares, prices have remained firm, and there has been a very fair amount of business doing in Egyptian markets and Salt and Sodas. Khedivial Mails have fractionally declined again to 40s.

In Greek securities, Rentes are again 1 point up at 45, and 1890's 1 point down at 55. Some business was done in Fundings at 53½. Other prices are all unchanged, but there are small sellers of "Currant" Bonds at 95.

Paris Bourse.

Closing prices included:—Egyptian Unified, 96.25, against 96.05; Turkish Unified, 62.85, against 62.85; Credit Foncier Egyptien, 750, against 750.50; Ottoman Bank, 485, against 494; Suez Canal Shares, 4,645, against 4,650.

Oil Shares.

Prices were generally unchanged. Anglo-Egyptians (B) were steady at 35s.-36s., and Roumanian Consols remained at 9s.-10s.

INDIAN TREASURY BILLS.

Up to February 23 Indian Treasury Bills have been sold to the following amounts:—Three months' bills, face value Rs9,37,75,000; eight months' bills, face value Rs19,86,65,000; nine months' bills, face value Rs6,42,45,000; twelve months' bills, face value Rs83,25,000; total, Rs36,50,10,000; equal, at 1s. 5d. the rupee, to £25,854,900. The total sales up to February 16, amounted to Rs34,79,00,000 (equal, at 1s. 5d. the rupee, to £24,642,000).

FRENCH LOAN TO MOROCCO.

The prospectus of the French Loan to Morocco has been issued in Paris. The loan, which bears 5 per cent. interest, payable on March 1 and September 1, is issued in 408,928 obligations of 500 francs each. The price of issue has been fixed at 89 per cent. The proceeds of the loan are to be used for public works, including the development of Casablanca, the construction of roads, etc.

The 5 per cent. debenture stock transfer books of the Delhi, Umballa, Kalka Railway Company, Ltd., will be closed from March 15 to March 28, inclusive, for the purpose of preparing the interest warrants payable to those stockholders whose names are on the register at the time of closing the books.

BUYERS' GUIDE.

SUEZ CANAL RECEIPTS.

The traffic receipts of the Suez Canal were as follows on the undermentioned dates:—

	1917. Francs.	1918. Francs.
February 24, 25, 26.....	380,000	500,000
February 27.....	180,000	310,000

The Postmaster-General announces that, except for naval and military addresses, the parcel post to Aden is suspended, and letter-packets must not exceed 8 ozs. in weight.

BANKING ANNOUNCEMENTS.

ANGLO-EGYPTIAN BANK, LIMITED,

LONDON, ALEXANDRIA, CAIRO, MALTA, GIBRALTAR, TANTAH, MANSURA, BENI-SUEF, ZAGAZIG, PORT SAID, and KHARTOUM.

Subscribed Capital - -	£1,500,000
Paid up Capital - -	500,000
Reserve - - - - -	710,000

The Bank undertakes every description of Banking Business on most favourable conditions.

IONIAN BANK, LIMITED.

Incorporated 1839.

SUBSCRIBED CAPITAL - - -	£600,000
PAID-UP CAPITAL - - - -	485,580
RESERVE FUND - - - - -	75,000

HEAD OFFICE—
25, Abchurch Lane, London, E.C.4.

BRANCHES—
Athens, Patras, Corfu, Cephalonia, Zante, Piræus, Tripolitza, Nauplia, Salonica, Syra, Chios, and Mitylene, in Greece; and at Alexandria, Tantah, Mehalla-Kebir, Mansourah, Fayoum, Wasta, Beni-Suef, Faschen, and Minieh, in Egypt.

Every description of Banking Business undertaken on most favourable terms.

THE IMPERIAL BANK OF PERSIA

(Incorporated by Royal Charter, 1889).

CAPITAL (fully paid) - - -	£850,000
RESERVE - - - - -	£160,000
Reserve Liability of Shareholders -	£1,000,000

London Office: 25, Abchurch Lane, E.C.
Chief Office in Persia: Teheran.

Branches at Anwaz, Birjand, Bushire, Hamadan, Isfahan, Kazvin, Kerman, Kermanshah, Meshed, Mohammerah, Nasratabad, Resht, Sabzavar, Shiraz, Sultanabad, Tabriz and Yezd. Agency at Busreh.

The Bank is prepared to transact Banking business of every description in and connected with Persia and Mesopotamia: and in London grants Drafts, Telegraphic Transfers, and Letters of Credit, and negotiates or collects Bills on Persia and the Near East.

THE GENERAL ANGLO-SERBIAN INDUSTRIAL & FINANCIAL COMPANY, LIMITED,

106, Bishopsgate, London, E.C.2

The Company has been formed to promote British Trade and Industry in SERBIA and other BALKAN STATES.

The Company is a Promoting Company, and is prepared to consider any proposals for the Financing and carrying on of any business in the above countries.

Agents in ROME, and as soon as circumstances will allow Branches will be opened in SERBIA and other BALKAN STATES.

Correspondence is invited from those interested in SERBIA and the BALKAN STATES, or contemplating business with these countries when communication is restored.

GRANT & CHINN,

The British Sanitary Engineers
" of Egypt and the Sudan, "
CAIRO and ALEXANDRIA.
Telegraphic Address: "TUBULAR."
Agents for SHANKS, OF BARRHEAD; and THE BERKEFELD FILTER CO.

NOTES OF THE WEEK.

Military activities during the week on the Eastern fronts have been very pronounced. Two successive advances have been made by the British in Palestine; the first thrust evoked little opposition, the second was strongly contested, but the Turks were repulsed by General Allenby and gave ground. A report from German sources has it that General von Falkenhayn has been recalled from Aleppo. Nothing is known as to the truth of the rumour, or, if it be true, as to the appointment of his successor. In Mesopotamia, again, another considerable advance has been chronicled. The Turkish garrison of Hit, now successfully occupied by the British, has continued its retirement up the Euphrates, and is reported to be in occupation of Khan Baghdadi, twenty-two miles above Hit. Their retreat was not accomplished without heavy casualties being inflicted on them by our air forces, which bombarded them with bombs and machine-gun fire at heights varying from 2,000 to as low as 100 feet.

The Turks, meanwhile, are progressing in Armenia, as was fully foreseen after their reoccupation of Trebizond. They report that an attack by Armenian bands was easily beaten off, and we shall have to look for the triumphant announcement of their entry into Erzeroum during the next few days. After that it is probable that the silence—the silence of death—will once again descend on this unhappy land, which has been sacrificed by the Bolsheviks. For the time being the Armenians must bear their misfortunes with the knowledge that the Allies are one and all determined to restore their freedom before peace is declared—but the road of liberation is a long and difficult one, and they will have to suffer much before that day comes.

It is difficult to keep pace with the development of Euxine politics. A deputation from the inhabitants of Batoum and Ardahan is reported to have been presented to the Sultan—it would have been interesting to have had details of its composition, and of the reasons which prompted this foregathering—and the Sultan's answer was brief and confident: "The territories you inhabit were once separated from my Empire, but they will never again be torn from our hearts." Prophecy is proverbially dangerous, as even the German Emperor has discovered since his promise to the troops that the autumn leaves of 1914 would not have fallen from the trees before his victorious armies were back in their homes; and in this particular case the Sultan may have to put a new meaning on his words. Whether Batoum remains in his heart does not much matter, but it is unlikely to remain permanently in his jurisdiction.

A curious message has been received from the Republic of the Caucasus—whose limits are not easily defined at the moment—regarding their relations with Turkey. The tone of the message is distinctly anti-Bolshevist, as might be expected, and it appears that the Caucasus is by no means inclined to lie down with the Turco-German lion, or rather inside that distended animal. But certain negotiations are being carried on, and a deputation from the Republic has been sent into Trebizond. As the matters which it is discussing, the membership of the deputation, and the Turkish authority it is discussing with, are all undefined, one can do little more than place the fact on record and await fuller details.

Very largely, of course, the situation there depends on the German plans during the forthcoming spring. Mysterious hints have been given in the Berlin Press during the past week to the effect that the much-advertised offensive in the West—"the last great battle which is to crush the Allies and end the war"—is postponed indefinitely. We shall do well to accept these statements with due reserve, but the fact remains that the Germans have still three alternative fronts. There is Italy, Salonika, and the Black Sea. For the moment at least the latter holds the field.

The Germans have pressed forward through the Ukraine, which they now hold in the hollow of their hand, and they are in occupation of Odessa. The continued invasion of a country with which one has formally made peace creates a position which defies analysis; but the German aim is patent. By controlling Odessa they will obtain full control at the other end of the exports of the Ukraine, just as by the occupation of Constanza they will obtain full control of the exports of Roumania. But this, although important and indeed essential to German industry, is only the basis of their aim. The proposed superstructure is more important and more menacing.

A hint as to German intentions in this matter is given in the remarks of Herr Nadolny, who was Counsellor of Legation at Teheran, made last week and reported in the *Norddeutsche Allgemeine Zeitung*. He stated that "after the Russian wall in the north of Persia has been burst we may hope also that the English wall in the south will be broken through, and that German labour will succeed in penetrating through the breach, thus contributing to the prosperous development of Persia." The destruction of "the English wall in the south" presupposes, of course, the defeat and withdrawal of the

Digitized by Google

British Mesopotamian force, for unless the Baghdad Railway is restored to Germany, the road to Persia cannot be reconstructed; further, it implies the driving of the British out of the Persian Gulf—a rather difficult task, as to whose accomplishment it will be noted that the German diplomatist only expresses a hope. He is far more confident as to the breaking down of the Russian wall in the north of Persia, and for this no doubt he has some reasonable ground. The German occupation of Odessa is the first and a very long chapter in the writing of that particular history.

The occasion on which these remarks were made was a meeting of the German Persian Society in honour of the Persian Parliamentarians who are visiting Berlin. These gentlemen are presumably identical with the two who were stated to be Persian delegates to the abortive Stockholm Conference last autumn. Some details as to their title to represent Persia at that gathering were given in THE NEAR EAST at the time, and their continued presence in Berlin is probably due to the very considerable difficulties in the way of their returning to Persia at the present moment. They may conceivably have to postpone their homecoming until the German Secretary of Legation returns to Teheran—after the war.

The final details of the Roumanian peace treaties have still to be received. But some interest attaches to various indications as to the way in which the wind is blowing across the Dobruja. Dr. Radoslavoff, the Bulgarian Prime Minister, in one of those interviews which he finds so convenient, has stated that "after the war Bulgaria and Hungary will have a common frontier. This will be the line of the Morava. Bulgaria will acquire the Dobruja, and if Roumania should be given Bessarabia the political claims of Hungary on Transylvania would only be strengthened." These remarks were made for a purpose—for M. Radoslavoff is not "a child in these matters"—and their purpose is fairly evident. They are intended mainly for digestion in Berlin.

A cordial agreement between Bulgaria and Hungary, on the basis of sharing in the spoils, is not in the least surprising. Hungary has notoriously large ambitions, which are concealed under the term "frontier rectifications," which, no doubt, would turn out on examination to be something like the German plan for the occupation of Verdun as a "guarantee" of French neutrality in 1914. But Bulgaria is evidently dissatisfied at the statement in the peace treaty with Roumania that the Dobruja is to be handed over to the Quadruple Alliance, and not to Bulgaria *tout simple*. This curious stipulation looks almost as though Berlin did not trust Sofia very far; and in view of the variegated past of M. Radoslavoff, one can only applaud the caution which Berlin has shown in this matter.

A note in the *Deutsche Tageszeitung* on this point is of interest. It is said there that the Dobruja will only be ceded to Bulgaria on certain economic and political conditions, and that "these concessions have reference to the future economic relations between the Central Empires on the one hand and Bulgaria on the other. The Roumanian oilfields will be territorially ceded to Hungary, but will be administered under joint German, Austro-Hungarian, Roumanian, and Bulgarian control, the yield being divided amongst the interested parties in proportions which have yet to be fixed." That Roumania will not get very much out of this joint control may readily be believed; but apparently Bulgaria, and probably Hungary, are also dissatisfied. Hence the wooing of Budapest by Sofia.

Meanwhile, the destiny of Bessarabia remains an open question. It is continually being mentioned, possibly as a trap for Roumania, but it is more than doubtful whether Germany has any intention of handing that country over to Roumania, and the fact that German troops are now at Odessa and have cut off Roumania back and front appears to be a decisive indication against the idea that Germany will give any compensation to a defeated State. In connection with this matter, the German plans for a full control of the Black Sea and the surrounding countries are gradually becoming known; of much significance is a report from Stockholm that the German Government contemplates the construction of a canal from the Baltic to the Black Sea, opening up communication between the Kiel Canal and the Black Sea. The project, of course, is not a new one, but hitherto it has belonged to what Wagnerians call "future-music." The cost of the scheme is put at a hundred millions sterling.

The overdue mails from India have now been distributed, and their contents should enable readers in this country to form some idea of the course taken by the winter flood of political discussion. It was inevitable that projects of constitutional reform should occupy practically the entire field, and, as was only to be expected, the details have obscured the principles to an extent which makes rather dull reading; perhaps, therefore it is worth while to set out briefly the salient facts as they appear when viewed from this side of the world. The past year has brought great changes. At the beginning of 1917 India was still seeking for a sign, and the politicians at least professed to be in doubt regarding England's intentions for the future. The sign has since been given: everyone now knows, what most people already felt, that India has to develop gradually, but as quickly as possible, a complete system of responsible government, and this knowledge has given a new and practical tone to many of the discussions which have recently taken place.

There is, we think, general agreement that the immediate changes must affect the provincial governments rather than the central administration, that the provincial legislatures must be constituted largely by direct election, and that arrangements must be made to secure the direct representation of the mass of communal and sectional interests which in effect make up an ordinary province at the present day. Accepting these conditions, the problem is to convert the provincial bureaucratic machine into a self-governing organism, and the discussions of the past winter have in effect, though not always in form, turned on the rival methods put forward to secure this object. Some politicians, it is true, profess to see no difficulties, and think that the change can be effected by a stroke of the pen, but this attitude may fairly be described as assumed for tactical purposes, and the complexity of the problem is in fact realised in quarters where its very existence is indignantly denied.

Perhaps the most popular method of procedure is to remodel the machine from the top: take the Governor "out of politics"; entrust the administration to a Council with a steadily increasing Indian element; bring this element into subordination to the Legislature, and we are assured that the problem is solved. It is an attractive programme on paper, but its weakness has been clearly brought out of late, and we believe it is not quite so popular as it was. Indians have already, in practice, a large measure of power, but no effective responsibility: this line of action will certainly increase their power, but critics urge that responsibility will continue to lag behind. Indian Councillors will remain human beings, and it is not to be expected that they will devote themselves mainly to fitting the yoke of popular control more tightly on their own necks. Starting as autocrats, the tendency will be for them to give the people what is good for them, rather than what the people want, and while that course may mean efficient administration, it will not lead to responsible self-government.

The alternative course, which has made most headway during the winter, is to proceed by departments: set up forthwith an executive responsible to the Legislature for the administration of a few of these, and hand over the remainder by instalments as experience is gained, until the bureaucratic machine is at last completely absorbed. This scheme, originally put forward by an unofficial conference, has, of course, been

Digitized by Google

riddled with criticism: it involves for an indefinite period a cumbrous dualism in administration; it means a serious, if temporary, sacrifice of efficiency, and, speaking generally, it offends all those bureaucratic traditions which India has cherished throughout the centuries. Its outstanding merit is that it brings definite responsibility into existence from the outset, and in the opinion of its supporters this result is so important as to outweigh the attendant inconveniences.

On this view Mr. Montagu has to choose between two alternatives of the kind which have contended since politics first began. He may take the Tory side, and give more power to the few, or he may follow Radical principles and make the few responsible to the many from the outset, though in accordance with the conditions of the country their powers and their responsibility will at first be limited to certain well-defined branches of administration. No indication of his decision has yet been allowed to reach the public, and prophecy is not our business at the present moment. India has had her say. The scene of the discussions will presently shift to Whitehall, and the result will doubtless be announced in a Parliament which has even graver matters to discuss, and of which it can be said only that the needs of India are assured of generous and sympathetic consideration.

Some comment has been caused by Mr. Zangwill's article in a Sunday paper on the future of Palestine. He appears to accept, or rather to acquiesce, in the British Government's decision to hand over Palestine to the Jews rather grudgingly: he complains that Palestine is too small, and that it is a pity that the present inhabitants have had their rights specifically safeguarded by the proclamation. We doubt if he will get much sympathy over these two points. The rights of those in possession are invariably safeguarded by the British Government; it is a fundamental principle of British rule, sanctified by hundreds of treaties with native chiefs in all parts of the world—the Treaty of Waitangi is one conspicuous instance. Where these rights were not safeguarded, as in Ireland in the old bad days, it led to trouble and civil war. Mr. Zangwill can, if he chooses, cite the war of extermination waged by the ancient Israelites in their first conquest of Palestine in justification, but it is notorious that the Jews did not carry out their policy very thoroughly at the end, and there is no likelihood that it will be revived at this time of day.

The remainder of the complaint is not much more substantial. It is really not the fault of the British Government, but of geography, that Palestine is not large enough to accommodate all the Jews in the world; in any event, it is highly improbable that every Jew will want to return to live in Palestine. The habits of centuries cannot be so easily broken. And should any large number desire to assemble together in any corporate existence, and land not be found available in Palestine, there is no reason why some other colonial experiment elsewhere should not be tried.

Another point in Mr. Zangwill's article is his statement that Lord Lansdowne, whom he regards, perhaps too partially, as the only likely successor to Mr. Lloyd George, has also approved the proposed solution of the Palestine question; and that the Turks themselves now recognise, and perhaps regret, their mistake, since they are frantically bidding for Jewish support. It would have been interesting to have more details of these subterranean politics than Mr. Zangwill has chosen to provide; and more particularly a statement as to the attitude of the Jews of the Central Empires on the question, which should have been available to Mr. Zangwill as head of an international movement. The Jews seem prudently to have lost no time in making themselves reasonably safe in the possession of Palestine, even in the event of an Allied defeat, according to Mr. Zangwill—an eventuality which we will not contemplate. But can he not give us some more particulars of the opinion of the Jewish communities in Germany?

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, February 11.

The Duke of Connaught.

H.R.H. the Duke of Connaught on his way south spent a few days at Luxor, where he visited the temples and other sights. He has now arrived in Khartoum, where he is staying at the Palace as the guest of the Acting Governor-General.

The Sudan.

Sir Murdoch Macdonald, the Adviser to the Ministry of Public Works, was due back from Khartoum this week, but he has returned to the Sudan at the request, it is understood, of the Duke of Connaught. He will, therefore, not be back in Cairo until the end of the month. The Sudan appears to have become a great attraction to British and Egyptian residents of this country. It is the only place within reach of Egypt where, without crossing the seas, one can obtain a complete change and rest. Alexandria may be very nice in the summer, but, all said and done, it is nothing less than "Cairo by the sea," and for the official element of the population it certainly does not possess the features which make for rest from the normal life out here. If one excepts the new but somewhat primitive resorts of Ras-el-Bahr and Borollos, Port Said is the only place in Egypt meeting in any respects the requirements of the residential population. Unfortunately, it has been shut to the general public for the past two years. In view of the occupation of Palestine it is sincerely to be hoped, however, that during the coming summer that very attractive seaside resort will once more be thrown open to residents, and that thus the pressure on Alexandria will be relieved. Meanwhile, those who can afford the expense are making a visit to the Sudan, where recent visitors include Sir Murdoch Macdonald, Dr. Douglas Dunlop, Judge Halton, Mr. J. Langley, and Ismail Sidki Pasha.

Cotton Seed Control.

The Cotton-seed Control Board, which is supervising the purchase of cotton-seed on behalf of his Majesty's Government, has again had to notify the public that it cannot receive any further consignments owing to the congestion of stocks at Alexandria. The stock at present in that port is 1,353,000 ardebs, as against half that quantity and 1,000,000 ardebs in 1915 and 1916 respectively. So far only 2,000,000 ardebs have arrived at the port from the interior since September 1. This is approximately the same quantity as had been received up to the corresponding date in 1915, and about 170,000 ardebs less than had come to hand during the same period in 1916. The total cotton-seed crop available for export may be estimated at between 3 and 3½ million ardebs, so that there are still about 1,250,000 ardebs to come down. These added to the present stock make about 2,700,000 ardebs still to be shipped. Since September 1 only 830,000 ardebs have left the country, and unless further shipping accommodation is immediately provided and continues to be allotted by the Shipping Controller during the next six months, the arrival of the new season's crop will find about one-third of the previous year's seed still unshipped, a state of affairs that will seriously interfere with the handling of the new crop of cotton, as well as of cotton-seed.

In this connection it is certainly a very great pity that the Egyptian Government did not see its way to restricting the cultivation of cotton more than it has done. It is all very well for Lancashire to oppose any reduction, and to say that that commodity is required for the prosecution of the war and for legitimate trade demands; but if, as is certainly the case, there is not sufficient shipping to take the cotton and seed away from Egypt, and if, as appears inevitable, about one-third of the old crop will still remain unshipped when the new one comes on to the market—with the result that the handling of the latter will be much interfered with—there would appear to be no sound argument in

Digitized by Google

favour of preventing the country from further extending its cultivation of cereals, the extra production of which could easily be absorbed locally, and could be of material use to the British Force.

Indeed, the interest which the latter have in the question appears to have been overlooked. They have had to import flour for their own requirements in the past, and they must continue to do so in the future for the simple reason that the local supply even under the present régime of a restricted cotton area, will be barely sufficient for the requirements of the country itself. Had a greater restriction been imposed on cotton cultivation then more cereals would have been grown, less flour would have had to be imported, less ships would have been taken up for that purpose, and—it is clearly permissible to make this deduction—more ships would, in consequence, have been available to take away cotton and seed from Alexandria.

There is little doubt that the decision to reduce the cotton area should have been come to one year before it was actually decided on. Even as it is, a wide enough view of the question has not been taken. In the light of the present situation the British and Egyptian Governments, when they made up their minds to restrict the cotton area, should have so arranged the proportions as to ensure that the production of cereals would be such as entirely to meet the needs of the country and the British Forces, and that the cotton crop available for export would be kept within the limits approximating that for which shipping accommodation could be provided in the period intervening before the advent of another crop. Thus the object before the two Governments, *i.e.*, the rendering by Egypt of greater assistance in the prosecution of the war, would have been attained. At present the opposite is the case, for it can scarcely be contended that the Empire in general is benefiting from, or the prosecution of the war is being facilitated by, the warehousing in this country of about one million and a-half cantars of cotton and a like number of ardebs of seed, the while the British Forces are being compelled to import their cereal requirements. Apart from that, Egypt herself is suffering, since cotton prices locally are falling and those of cereals are steadily rising. In the circumstances a further and considerable restriction of the cotton area next year would appear inevitable, if a more serious political and economic situation than that at present in sight is to be avoided.

THE PALESTINE CAMPAIGN.

The Renewed Advance Towards Nablus.

From the frequent short official reports which have come in it is clear that with the beginning of this month a determined advance has been inaugurated upon our next great objective—Nablus, the ancient Shechem, "the natural capital" of Palestine.

It may be useful to summarise the all-too-scanty facts which can be gathered from these reports.

At the beginning of the month—March 3 is the first date actually mentioned—an advance of 1½ miles was made from somewhere to the north of Bireh, on each side of the Nablus road. To the east of the road we appear to have been further forward than on the road itself or to the west, as an earlier account mentioned our capture of Durah, nearly four miles north of Bireh. During all that week "hardly a day passed without the enemy being compelled to yield positions of value." Our central advance was supported by the Irish on the west, and by south-west country troops still further west in the foothills bordering upon the maritime plain, where, near the sea, we hold posts considerably to the north of our line inland. On the 6th the Turks, evidently fearing an advance across the Jordan eastwards, blew up their new bridge at El Ghoraniyeh, on the road to Amman. By the 7th "our advance was to a maximum depth of three miles on a front of eighteen miles."

The 9th inst. was a day of specially heavy fighting on a wide front. On our extreme right, in the Jordan Valley, our troops crossed the River Aujeh, and London infantry, assisted by mounted troops and armoured cars, carried by storm by 3 p.m. a strong Turkish position from the hills of Abu Tellul to Khurbet el Beiyudat, constructed right across the road up the Jordan Valley. In the centre our Army advanced two or three miles and captured Kefr Malek, the most easterly village on the central plateau, the lofty mountain (3,316 feet) Tell Asur—the ancient Baal Hazor—and Silwad, the village which dominates the Wady el Jib near Ain el Haramiyeh. Tell Asur is a place of such extraordinary natural strength that it is not surprising that it is reported that the enemy were unwilling to abandon it without a struggle, and three times they advanced in vain to retake it. The advance was continued without pause during the night, and the next day (March 10) our men, on a twelve miles front, pushed on irresistibly some 3,000 yards and captured the lofty ridges to the north of the Wady el Jib, occupying on their way the Burj Burdawil (the ruins of the summer residence of King Baldwin of Jerusalem), Attara, on a lofty hill (2,663 feet above sea level), which dominates the neighbourhood, Ajul, 2½ miles to the north-west, and Deir es Sudan, another two miles north-west. Our flying corps meanwhile assisted the advance by bombing the reserve troops and transport to the north at El Lubban, apparently Khan Labban, the well-known ruined khan at the foot of the steep descent which the Nablus road makes into the Plain of Lebonah (Judges xxi., 19).

Difficult Country.

All those readers of THE NEAR EAST, and they must be many, who have ridden through Palestine, will realise the extraordinarily "precipitous and difficult country" in which our Army is now engaged. The battle has centred round the well-known Ain el Haramiyeh and the higher part of the Wady el Jib—more familiar to the tourist at the Wady el Haramiyeh—the "Robbers' Valley." Its steep and rocky sides, terraced to considerable heights and full of beautiful old olive trees, present countless opportunities for taking cover, and yet it is only by clearing out this gorge that the high road, so vital to our operations, can be secured. The Turks appear to have made a strong line of resistance running from Kefr Malik in the east through Tell Asur, Khurbet Burdawil, Attara, and eastwards to Deir es Sudan, and our overpowering and extremely rapid advance will, we hope, have completely disorganised their defence and necessitate a retreat to a new line considerably in the rear. We may be sure General Allenby, with his methods of lightning strokes, will not allow the enemy much opportunity of re-fortifying another such line within any easy distance. Our whole northern front—from the sea to the Jordan—and we have that, too, to guard between the mouth of the Aujeh and the Dead Sea—covers over 35 miles in a straight line, much of it among the most intricate mountainous country. It is not as long a line as General Allenby had to provide for further south, but a far more difficult and broken country. The weather is said to have been unfavourable, but the winter's rains must soon be drawing to an end, and amid the beautiful climate and the verdure and freshness of early spring those who have to live out of doors in the mountains of Samaria will have little to complain of in this direction.

On the 12th inst. Indian and South and East Anglian troops on a front of eleven miles advanced no less than three miles over the difficult country where the foothills begin to flatten down to the maritime plain Rentis and El Lubban (to be distinguished from the village on the Nablus road), on the southern bank of the Wady Deir Ballut, and Deir Ballut and Mejdel Yaba, on the northern side, were successively taken, as well as El Mirr, out in the plain a little west of the great fountain of Ras el Ain. Deir Ballut and El Mirr were held in strength as vital points in the Turkish system of defence.

Meanwhile our flying corps have been giving the Turks to the east of the Jordan no immunity. The depot at Shunet Nimrin, where the Jerusalem-Amman road enters the mountains of Moab, as well as the Hejaz railway stations at Kulaat el Hesa, east of Et Tafileh, El Kutrani, thirty-five miles further north, and the aerodrome west of Kerak have been effectively and repeatedly bombed. These last raids should be of substantial assistance to our Arab Allies, who must be now harassing the Turks centred around Maan and El Kerak.

ROUMANIAN NOTES.

(From a Correspondent.)

The Armistice.

Following upon the decision of the Petrograd Government to conclude an armistice on the Russian front, a similar step was decided upon by the commander of the Russian troops on the Roumanian front. The circumstances were such that the Roumanian High Command could not avoid being involved in the offer of armistice. There was no thought that the armistice could and would lead to a separate peace. People firmly believed that there was too great a cleft between the German and the Bolshevik outlook for an agreement between them to be possible, and therefore all considered it advisable to join in what they could not prevent or avoid. The fact itself that the duration of the Roumanian armistice was timed upon the Russian one sufficiently indicated, as it was pointed out, the motive which inspired the action of the Roumanian Government.

A mixed Russo-Roumanian delegation therefore met the enemy delegation in Focshani, and the act of armistice was duly signed on behalf of the Roumanian High Command by General Lupescu, on December 9, 1917. Generally speaking, the armistice of the Roumanian front was concluded on lines similar to that concerning the Russian front. There were, however, a few interesting divergences. While the denunciation of the Russian armistice was subject to seven days' notice, the Roumanian armistice only provided for seventy-two hours' notice. Moreover, it was to have a provisional character, and was to be replaced by the general armistice concerning the whole of the Eastern front, which the Petrograd Government was then negotiating. The reservation introduced by the Roumanian delegation, which made the continuation of the Roumanian armistice dependent on that of the Russian one, was also involved in a provision put forward by the enemy delegation. It was to the effect that the Roumanian armistice was automatically to come to an end should the enemy Command decide upon a new offensive in the East, even if such an offensive were not to affect the Roumanian front.

In the Occupied Territory.

There is suggestive material contained in an ordinance issued by the German Command about the middle of last year, which prohibited the export of wine, spirits, raw materials of all kinds, mineral products and their derivatives from "any part of the occupied territory, with the exception of that portion of Dobruja which belonged to Bulgaria until the Peace of Bucharest." The export of any such materials can only be carried out by special permission of the German High Command. Now, since there was no possibility of exporting things to the unoccupied Roumanian territory, and since Roumania had no neutral neighbour, the order obviously intended to give the German authorities complete control over the Roumanian supplies to the exclusion of Germany's allies. Any infraction of the order was to be dealt with by German court-martials. It is rumoured that the order created considerable displeasure in Bulgaria, and that open accusations of "unjust treatment" were uttered against the German High Command.

The same spirit pervades an ordinance for the regulation of fishing in the Danube. Art. 16 formally forbids "allied soldiers" (i.e., Turks, Bulgars, and Austrians) to fish in the Danube, without special and written permission of the German authorities mentioned in the order. One wonders what is the difference between the German as master and the German as friend.

The German authorities have assumed complete control over all the public and private financial activities in occupied territory. A "Bank Inspectorate" has been instituted which supervises all the transactions of private banks, which are obliged to submit even their ordinary correspondence to the censorship of the Inspectorate. The ordinance concerning these matters is signed by von Mackensen, who states that only himself or the German High Command has the right to decide the details of the working of the Inspectorate.

POSTAGE OF NEWSPAPERS TO NEUTRAL COUNTRIES.

By an order of the War Office all papers posted to neutral countries are stopped, except those sent by the publishers or newsagents who have obtained special permission. No information is given as to the disposal of such stopped papers. Readers are therefore asked to bear in mind that if they desire to post a copy of THE NEAR EAST to a friend in a neutral country they should order its despatch by the publishers, at Devonshire Square, London, E.C.2.

ATHENS LETTER.

(From Our Own Correspondent.)

Athens, February 17.

A Patriotic Demonstration.

Last Sunday morning the streets of Athens were quite deserted save for the military mounted patrols, who arrested any person not provided with a special pass to be out. The census was completed by half-past two, and shortly afterwards the whole of Athens seemed to turn out, and the streets in the evening were a striking contrast to the morning.

The demonstration organised by various bodies as a public protest against the seditious movement at Lamia was, if one may judge by numbers, a satisfactory proceeding, and the newspapers describe it as a great success. It was probably one of the largest gatherings of its kind during the present war, for it is estimated that 40,000 took part in it. Special trains brought crowds from the Piræus with representatives from various corporations and their banners. All these collected in the Omonia Square, which soon became a dense mass of humanity. Several speeches were made and a number of resolutions carried, embodying reproval of those who took part in the base act against the country; advice to the Government to deal severely with the organisers and to take all the necessary measures to stifle any new attempt at reaction; expressions of devotion to the policy of the Government to restore the national prestige, and to secure the realisation of the ideals dictated by the glorious traditions of Hellenism; and a declaration of readiness to make all the necessary sacrifices for the success of the great struggle.

A procession was then formed and marched up Stadium Street, amidst continuous cheering. It proceeded to the Premier's residence, where a large crowd had already gathered. M. Venizelos appeared at his balcony and spoke a few words, and was then followed by M. Repoulis, who made a long and inspiriting speech. The procession subsequently proceeded to the residence of the Serbian Minister and to the American and French Legations, where short speeches were made, and finally passed by the British Legation. A short speech was made here by one of the members of the delegations. Lord Granville appeared on the balcony to express his thanks, concluding his remarks with "Ζήτω ἡ Ἑλλας, Ζήτω ἡ Νίκη."

The whole of the proceedings appeared to be most orderly and there were no signs of the least friction anywhere. The reliable Cretans—gendarmes and police—were stationed at various corners.

The Aftermath of the Mutiny.

Whilst the population of Piræus and Athens is expressing its indignation at the recent seditious movement, the court martial at Lamia is dealing severely with the mutinous soldiers. The authorities here are deporting to various islands scores of officers and others identified with the Royalist régime, who are all better out of the way; five ladies connected with the former Court, who have been trying to corrupt young officers, have been confined in a monastery. These measures which are now being taken were advocated, it is said, when M. Venizelos came into power, but the Premier took a more lenient attitude. Now that his leniency has been abused the offenders are not being spared. The rising was apparently organised in Athens, and the misguided soldiery, influenced by stories of the downfall of the Venizelist Government, were induced by the ringleaders to take the fatal step. They are now paying the penalty of their folly. Several have already been executed and many condemned to various terms of imprisonment. The rounding up of the mutineers continues, but the majority have surrendered of their own accord.

The Government are to be congratulated on the prompt and severe measures taken to suppress the revolt and to deal so severely with the guilty. This severity seems to have had a salutary effect, and it is reported that the call to the colours is being responded to in a very satisfactory manner.

King Alexander has been paying a visit to the Macedonian front, inspecting the different sections, and General Bordeaux, the head of the French Mission, has spent several days at Lamia in connection with the recent events.

TANGIER TO TEHERAN.

Although Petrograd does not lie on a straight line drawn between Tangier and Teheran, I feel compelled to wander from a strictly Euclidian path in order to ask myself or my readers whether anybody can tell me what has happened to a worthy contemporary, the *New Europe*. A little while ago we were told that under no consideration was Palestine or Mesopotamia or a single German colony to enter the orbit of the British Empire; mainly, as far as one could tell, for the *beaux yeux* of the Bolsheviks. Again, the same periodical held up to our perfervid worship the democratic diplomacy of Russia. This is some of the light and leading vouchsafed:—The Bolshevik Government is acclaimed as "imposing its will on enemies at home and abroad." "Here we have the secret of the strength of Russian diplomacy . . . so situated, a *Realpolitiker* or an *ancien régimist* could have done nothing but accept a peace dictated by German generals. From this calamity Russian diplomacy saved Europe." Six solid pages of this. The British Government is urged to adopt "the Russian procedure for peace by public discussion. . . We might at once make a beginning by appointing to Petrograd an 'envoy extraordinary'" of the Bolshevik type is implied. I rubbed my eyes and turned to the second page of the cover to learn whether there had been a wholesale clearance of the former "collaborators." But they are still there—also the suggestion that the journal stands "*pour la victoire intégrale.*" What does it all mean? According to the *New Europe*, Bolshevik diplomacy has "saved Europe." This kind of thing is calculated to Bolo one over.

***

The gratuitous reference to Persia and Afghanistan in the German-Russian treaty of peace puzzled me at first, as it seems to have puzzled a good many cleverer people. For why should the Germans wish to notify the world at large that they hope to stir up fresh trouble for the Allies—and especially for Great Britain—in those two countries? They have tried it before, and failed. Why expect better luck now? Is it a bit of red-herring diplomacy, so to say—an attempt to divert attention to a field where they have no real intention (or hope) of making any important move? Or is it, on the other hand, an example of that smacking-of-the-lips-before-food that the Teuton is so great at? Does he really mean to do his best in Iran and Afghanistan; and is he crowing in advance lest he may have no chance to crow later on? Any one of these things is possible, I take it, and only the future will show which—if any—of them it is to be. But lately I have been wondering whether some Teuton with a taste for history, and some sense of the dramatic, may not have been responsible for the apparently unmeaning reference.

***

Such an one would probably think along lines something like these:—"For nearly a century Russia threatened Afghanistan, and rather more than threatened Persia; and as one result she gave the hated English many an anxious time during that period. In fact, ever since the Russian-inspired siege of Herat, ever since the early Victorian days, there was rivalry between the Bear and the Lion over that district, and John Bull always felt anxious for his Indian possessions. And now [our Teuton philosopher might continue] the collapse of Russia will free England from that anxiety once and for all. That must not be! *We* will step into the breach; *we* will take up the part abandoned by Russia. And thanks to our shining armour, our mailed fists, our genius for organisation, our invaluable Kaiser, and (above all!) our KULTUR, we shall succeed where clumsy Russia failed. So, in course of time, we shall absorb both Persia and Afghanistan and—*Gott strafe England!* But, lest there may be a little hitch somewhere in this so-wonderful programme, let us indicate our intentions at once in our magnanimous Treaty of Peace." That seems to me to be a possible explanation of the mention of Iran and Afghanistan in the precious Treaty, and I offer it for what it is worth. But, of course, the imaginary Teuton's views are his own—I decline any responsibility for them!

***

Turkey has been called "an unlucky country," and upon the whole I take it that very few people would dispute the statement. But in one way at least she appears to be extraordinarily lucky in regaining possession of territory which she ought by all rules of the game to have lost for good and all. In those dim and far-away days when Turk and Bulgar were not quite such bosom friends as they now are (!), Enver and his gang lost Adrianople to the Bulgars; but luck, pure luck, gave it back to them without any effort on their part, and an amazed Europe saw the adventurers' triumphal re-occupation of the lost city. Now they are once more masters of Erzeroum, Trebizond, and all the rest of the territory wrested from them at such cost by the Grand Duke Nicholas and General Judenitch. And finally they may, it seems, get back the long lost Kars, with Ardahan and Batoum thrown in! How long they will be allowed to keep these places remains to be seen; the end of the war is not yet; and arrangements of this kind, made in Germany, are likely to be only temporary. But for the moment the wonderful "luck" holds good. Turkey could no more have turned the Russians out of Erzeroum than she could have turned the Bulgarians out of Adrianople. But in Turkey luck seems to be as whimsical as everything else is. Fortune, we are told, helps the bold gambler, up to a point. It certainly looks as if Enver, Talaat and Co. might be regarded as living illustrations of the truth of the saying.

***

Indian newspapers recently to hand contain an account of the sad end of the Faridpore Praying Palm. This remarkable tree used to bow down, as if prostrating itself in worship, at the hour of evening prayer, and apparently it remained bowed through the night, only assuming the erect position again in the morning. In these circumstances, we need hardly be surprised to learn that in course of time it attracted pilgrims in considerable numbers, or that its custodian was made (on its behalf) the recipient of many offerings. But, alas, how are the mighty fallen! On the very day that a distinguished scientist of Bengal, Sir Jagadish Chandra Bose, was to lecture upon it in the Bose Institute, a telegram was received by Lord Ronaldshay, reporting that the pious tree had expired, and that "the upper part was lying flat." On top of this one of the Anglo-Indian journals is unkind enough to suggest that the poor tree "must have heard" that it was about to be exposed as "a humbug." If that be so, I can only say that I, in turn, am ready to bow to the shade of the palm as to the possessor of supernatural gifts.

CORSAIR.

CORRESPONDENCE.

THE CAPTURE OF BAGHDAD.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—Monday, March 11, was the anniversary of the entrance of our troops into Baghdad. Owing to the generosity of so many last year something over £18,000 was collected in connection with "Mesopotamia Day." The Army in Mesopotamia is now very large, and this Fund fears that there is only sufficient money to carry on its work for a limited period. I therefore take this opportunity of asking for further contributions to help in alleviating and lightening the hardships of the troops who have suffered so many privations and attained such gallant successes—more especially in the conquest of Baghdad. And surely this of all other days seems to be the moment when we should try and show our appreciation of what they have achieved not only for England, but for the whole Empire.—Yours faithfully,

STELLA MAUDE,
Hon. Organiser of Mesopotamia Day, 1917.

Donations should be sent to the Hon. Secretaries, M.C.F., 15, Aldford Street, Mayfair, London, W.1., and cheques cross "Coutts and Co."

"THE DEATH OF PRINCE MIRKO."

TO THE EDITOR OF "THE NEAR EAST."

Sir,—The order of the Prince Regent Alexander of Serbia that the Serbian Court shall go into mourning for six weeks as a sign of sympathy for the death of his uncle, Prince Mirko of Montenegro, will give the greatest satisfaction to all the Serbians and Montenegrins who are at present suffering inhuman agonies under the iron heel of the enemy.

It also proves that no dissension exists between the ruling houses of Belgrade and Cetinje as some people imagine, or that there is discord between these people, who are the children of one mother, and brothers by blood and religion.

The tragic history shared by these people for the last five hundred years has convinced them that only brotherly love and unity has saved their souls in the past, and will also save them in the future.

Prince Mirko was the greatest personality after King Nicolas in Montenegro, and many hearts will ache and mourn for him, and millions of voices will utter the usual last wish of the Serbians to their dead. "*Laka mu zrna Zeml ja bila!*" ("Lightly may the black earth rest over him!").—Yours faithfully,

D. JANITSCH.

Polperro, Lyncroft Gardens, N.W.,
March 12, 1918.

NEAR EAST BOOKSHELF.

DIPLOMACY—GASTRONOMIC* & CLASSIC.†

We like both these books. The first because it takes us home, but we sincerely hope that Sir Walter Townley, for instance, Minister at The Hague, will not give us a similar book about diplomatic existence there, or at Bucharest, or Teheran, or Buenos Aires, or Washington, where he has been, and that Colonel Harrison, if he has served the United States in other foreign capitals than Cairo, will likewise not give us another in exactly the same dinner-dress. We tremble indeed to think what Colonel Harrison might have written about, or eaten in, say, Petrograd or Peking, and when we compare this collection of *table-d'hôte menus* with "My Four Years in Germany," we gather that even in the United States the diplomatic service is not recruited from one dead level of digestion, and heartily we thank Mr. Gerard. After all, what could the homely diary of a diplomat be "anyway," anywhere, if his attention is riveted on the colours of antimacassars and wall-papers, the tint and body of wines, the shape of entrée dishes, the paquinity of gowns, the diaphaninity of puff-pastries, and the adipose tissues of diners-out?

Here they are—the old familiar faces—passing in review, but so inadequately reviewed. Here are the unseeing Abbas whose was in vain urged to look to England for high honour. Prince Mahomet Ali, who, like his brother, repelled by Lord Cromer's lack of elasticity, seems to have made much of "our American agent"; the late and present Sultans of Egypt; Prince Said Toussoum; the Nazley Hanem; the last but one and the last Khedivahs; Riaz, Tigrane, Boutros Ghali, Fakhri, Yacoub Artin, Mustapha Fehmy, Mazloum and a quantity of other pashas; Cromer, Kitchener, Grenfell, Wingate, Rennell Rodd, Garstin, Palmer, Dawkins, Alonzo Money (what a dinner he gave!), McIlwraith, and the English Secretary of the Khedive, Brewster Bey; the whole diplomatic corps, of course; the Ghazi Mukhtar, Slatin Pasha, Baron and Baroness de Malortie, Count and Countess de la Sala, Lady Zohrab, Mrs. Jones Parry (and her "extensive" tea-parties at Shepheard's), and the ladies of all the above gentlemen that owned any (and their gowns); the Duke of Connaught, passing through; the Earl of Lonsdale, passing through—we will not lengthen our list.

Further, Colonel Harrison, a proud and devoted husband of an elegant but ailing wife, takes us into many of, if not all, our familiar haunts—Lord Cromer's study the Khedive's selamlik, Shepheard's bar, the Khedivial stables and orange groves, Ghezirah racecourse and the Arabesque kiosk near by, where, in those days, you could play petits-chevaux (a vain, uncanny swindle) until 8 and 9 a.m., and others redolent of what the Portuguese call "higgi liffi"; but into the *rez-de-chaussée* of Cairo life, apparently, his curiosity did not guide him—a common and clamant sin of most diplomatists except the artistic Japanese and the pestiferous German. "How those poor people must have bored each other!" is one abiding impression quite unconsciously conveyed by our author, and conveyed because he, lucky fellow, was but a two-winters' stayer, and seems thoroughly to have enjoyed himself. He also shows that he was a modest man and a merry diplomat and a mere unintriguing, non-diplomatic, American business man, as he emphatically told Boutros Pasha Ghali. He gives us two excellent portraits of himself and two of the late Mrs. Harrison, and some thirty other personal photographs of the leaders of Cairo society in his day. A Minister or an Ambassador who neglects to fill portfolios with portraits of the eminent people around him must be, as the French wit said, either a fool or a philosopher.

A special feature of the book is the notes. To them you must look for anything historical or biographical of the events and personages which pass on Colonel Harrison's narrow stage.

We resolved at the outset to finish with a quotation from a book that has vividly revived fragrant bouquets of dead violets; and we will. Here it is:—

At one of the Cairene gastronomic tourneys to which (think of it!) that superman, Lord Cromer, condemned himself for a whole quarter of a century, he pulled a cracker with Mrs. Harrison, and remained with the billet-doux in his own hand. The billet-doux reads:—

"On voit le défaut du voison,
Mais on n'aperçoit pas le sien."

The author comments: "He was gallant enough, referring to her, to say that he did not agree with the first line."

"The morning of March 25 is still fresh in my memory, when" (the year is 1909, and Senator Tittoni had, of his own statesmanship and initiative, compelled Austria-Hungary to accept a compromise on the annexation of Bosnia-Herzegovina) "the usher of the Consulta announced the German Ambassador, Count Monts. I had for a moment interrupted the work on which I was busy, and was looking out of the window from which one's first glance falls on the giants of the Piazza del Quirinale, of which Goethe has said that neither eyes nor thought suffice to grasp them: beyond, the eye rests on the dome of St. Peter's and on Monte Mario, which on that morning was radiant with the splendour of an early Roman spring. Before this magnificent panorama, which combines the beauty of nature and of art, the interview with Count Monts took place. With serious mien he told me" (you must read the prologue and the epilogue of the Demosthenian beauty of this subdued narrative) "that he had to make a most important communication to me. He was charged by his Government to ask me for the immediate recognition of the annexation of Bosnia-Herzegovina. I answered Count Monts with expressions of astonishment at the demand, which appeared to me inopportune and unjustified at a moment when my proposal for settling the question by means of a conference with a programme previously agreed upon, had met with general" (that is, Austrian, Russian, French, British, Italian and German) "approval. Count Monts replied that the conference had become useless now that Russia had already, at Germany's request, agreed to recognise immediately the annexation of Bosnia-Herzegovina. The other Powers could not do otherwise than follow her example. I observed to Count Monts that no communication from St. Petersburg had reached me, and that in any case I had solemnly declared to the Italian Chamber that Italy could accept the annexation of Bosnia-Herzegovina if it were accompanied both by the abolition of . . . (etc., etc.). Count Monts asked me if this were my last word upon the subject, and, having received my answer in the affirmative, was about to take leave of me, when the usher announced Count Lutsow, the Austrian Ambassador. I begged Count Monts to remain, and in his presence informed Count Lutsow of our conversation. Count Lutsow hastened to say that . . . (etc., etc.)."

This is Italy, through the mouth of one of her most brilliant sons, describing in solemnic language how Prussia and Austria prepared, premeditated, pre-ordained this present war so far back as 1909. There is no trace of red mullets or their accompanying *garniture* in this historic little volume. We are so optimistic as to the result of this war that we can twit Colonel Harrison with his antipodean brother-diplomat—a scion of the race of Regulus, Cicero and Macchiavelli and Mamiani and Mancini. We can even venture to assert that Secret Diplomacy has its uses when backed by fearless patriotism and faithful wisdom. This little book, indifferently translated into English as it is, is yet exceedingly welcome, for it emphasises modestly, for whosoever cares to read it, the too commonly despised intellect of Modern Italy. Tittoni was accused by Germany of telling France, in July, 1914, that Italy would not fight with Germany and Austria, and thereby urging France to keep a stiff upper lip. He pulverizes in dramatic manner this Prussian accusation. He shows us Classic Diplomacy on an eminence as high as Italian history has ever led us to emplace her.

* "The Homely Diary of a Diplomat in the East, 1897-1899." By Col. Thomas Skelton Harrison. Houghton, Mifflin Co. $5.

The Greek Minister called at the Foreign Office on March 7.

M. Romanos, the Greek Minister to Paris, left London on March 10 for the French capital.

Sir Richard Temple's Indian and Oriental library realised a total of close on £2,000 at Christie's.

M. Themistocles Sofoulis, Deputy for Samos, has been elected President of the Greek Chamber of Deputies.

The Jewish regiment marched through Cairo on March 10 amid the great enthusiasm of the Jewish population.

On account of the death of Prince Mirko of Montenegro, the Serbian Court will go into mourning for six weeks.

According to a telegram from Sofia, received in Amsterdam the life of the Bulgarian Sobranje has been prolonged until demobilisation.

The Postmaster-General gives notice that the mail service and the money order service to Russia (except Finland) and to Roumania are suspended.

March 6, the anniversary of the capture of Yanina by the Greek army in 1913, was duly observed in all the Greek camps, where religious services were held.

The Lord Mayor of London and Sir William Dunn, the ex-Lord Mayor, have been appointed by King Alexander of Greece Grand Officers of the Order of the Saviour.

Captain G. E. Soutzu, of the Roumanian Government Committee in London, has returned to town from Bournemouth after several weeks' absence through illness.

Mr. Howard Head gave a demonstration of a mobile X-ray department constructed for service in Mesopotamia at a meeting of the Röntgen Society held last week.

The War Office has directed that one battalion of the King's Own Malta Regiment (Militia) shall be raised for active service anywhere oversea for the duration of the war.

The will of the late Colonel George Fletcher Ottley Boughey, C.S.I., who was for many years connected with the Indian Public Works Department, has been proved at £24,250.

The King of the Hellenes has sent a message to King George thanking his Majesty in the warmest terms for conferring on him the Grand Cross of the Order of the Bath.

In an article on "The German Horror in Serbia," M. Pierre Loti says that a quarter of the population has already succumbed to famine, cold, and the odious services exacted.

Sir Michael Culme-Seymour, Vice-Admiral of the United Kingdom, who served in the Burma War of 1852 and with the Naval Brigade in the Crimea, celebrated his 82nd birthday on March 13.

Reports received by the Armenian Information Bureau indicate that the handing over of the Trans-Caucasian districts will mean further massacres and the final extermination of the Armenians.

Captain Jovan K. Tanovitch, representative of the Serbian Press Bureau in London, has been decorated by the King of Serbia with the highest honour, the Karageorge Star with Swords, for bravery on the Salonika front.

Replying to a deputation from the inhabitants of Batum and Ardahan, the Sultan of Turkey said:—"The territories you inhabit were once separated from my Empire, but they will never again be torn from our hearts."

An engagement is announced, and the marriage will shortly take place at Tring, between Captain W. L. A. Harrison, M.C., R.A.M.C., only son of Dr. and Mrs. Harrison, of 33, Granville Gardens, W., and Rosalie Sibyl, elder daughter of Captain S. S. Flower (R. of O.) and of Mrs. Flower, of Giza, Egypt, and Tring, Herts.

On March 4 King Alexander of Greece dined with Earl Granville, the British Minister. His Majesty will shortly go to the Macedonian front, where, it is understood, he will make a prolonged stay.

Lady Jellicoe has received a telegram from H.H. the Maharaja Holkar of Indore, subscribing £1,000 to the Centenary Fund of the British and Foreign Sailors' Society, which Lady Jellicoe is organising.

It is announced from Corfu that the Jugoslav Division, formed of Serbian, Croat, and Slovene volunteers from Austria-Hungary, which constitutes a new unit of the Serbian Army, has been in action on the Salonika front.

The Earl of Denbigh will deliver an address on the "Mittel-Europa Policy of Germany in its Relations to Sea Power" at a Navy League meeting to be held at His Majesty's Theatre, Haymarket, on Sunday afternoon, March 24.

The Zionist Society of Engineers of America has appealed to Jewish engineers in New York to study conditions in Palestine with a view to preparing for the time when technical skill and experience will be needed by the Jewish people.

Prince Alexander, the Serbian Prince Regent, has accepted the resignation of the Cabinet, handed in by M. Pashitch on February 27, and has requested the old Cabinet to continue in office until the constitution of a new Ministry.

The Serbian Minister presided on March 8 over the first of a series of conversaziones held at the headquarters of the Serbian Red Cross, 9, Ennismore Gardens, Kensington, with the object of aiding the funds of the society and making the people of this country better acquainted with Serbia.

The *Echo de Paris* states that the French Government does not intend to avail itself of the safe conduct passes provided for General Berthelot and the Roumanian Mission, and that it is probable that the Mission will retire towards Russia, where it would be possible for it to carry out a new Mission.

Under the auspices of the London University Zionist Society, a series of six university extension lectures on "The Historical Geography of Palestine" will be delivered by Dr. E. W. G. Masterman on Saturday evenings from March 16 to April 20, at 7.30 p.m., at Gresham College, Basinghall Street, E.C.

On the occasion of Mr. Bonar Law's speech in the House of Commons on March 7, M. Haidoukovitch, the Montenegrin Minister of War, occupied a seat in the Distinguished Strangers' Gallery. In the evening, accompanied by Mr. Alex Devine, he was entertained at dinner by Mr. Ronald M'Neill, M.P., and met a number of members of Parliament interested in Balkan affairs.

The engagement is announced of the Rev. Norman H. Tubbs, M.A., Caius College, Cambridge, Principal of Bishop's College, Calcutta, youngest son of Mr. and Mrs. Alfred T. Tubbs, of Woodlynch, Hornsey Lane, Highgate, and Miss Norah E. Lunt, younger daughter of the late Prebendary and Mrs. Lunt, of Walcot, Bath. The wedding is arranged to take place at Agra on May 1.

President Poincaré has addressed a most cordial telegram to King Alexander of the Hellenes announcing the bestowal of the Grand Cross of the Legion of Honour on his Majesty. King Alexander has sent to President Poincaré a message, couched in the warmest terms, expressing his thanks for the decision of the French Government to confer this decoration upon his Majesty.

Since his return from the Sudan, says *The Times* Cairo correspondent, the Duke of Connaught has inspected units and hospitals in the Cairo command. Sir Reginald Wingate gave a garden party at the Residency in his honour. The Sultan, who was present at the garden party, also entertained the Duke of Connaught at Abdin Palace. The Duke has held several investitures, conferring the insignia on those recently granted British military and civil honours. On March 6 there was an imposing investiture at Gezira, where the Duke reviewed the Cairo garrison.

TRAGEDY OF MONTENEGRO,

THE SMALLEST AND POOREST OF OUR ALLIES.

MONTENEGRIN RED CROSS AND RELIEF FUND,

11, VICTORIA STREET, LONDON, S.W.1

(Registered in City of London. Section 1. War Charities 1916)

needs £700 WEEKLY for Feeding Prisoners interned in Austria-Hungary.

Donations will be much appreciated and gratefully acknowledged by the Hon. Treasurer, LADY ROPER PARKINGTON. Claridge's Hotel, Brook Street, London, W.1.

A supplement to the "London Gazette" was issued on March 12 with the names of the officers, ladies, non-commissioned officers, and men recommended for special mention by Lieutenant-General Sir Stanley Maude, Commander-in-Chief of the Mesopotamia Expeditionary Force. There are about 1,400 names in the list, and among those mentioned are Rear-Admiral D. St. A. Wake, Major-General Sir H. T. Booking, Lieutenant-General Sir A. S. Cobbe, Major-General Sir P. Z. Cox, Major-General V. B. Fane, Major-General Sir G. F. MacMunn, Lieutenant-General Sir W. R. Marshall, and Major-General J. C. Rimington.

OBITUARY.

Mr. William Hebard Hudson, who died suddenly in Rome on March 4, at the age of seventy-nine, entered the Indian Civil Service in 1861, and was for some time Civil and Sessions Judge in the North-West Provinces.

The death is announced in Edinburgh of Mrs. Currie, widow of the Rev. Dr. James Currie, and mother of Mr. James Currie, C.M.G., of Lincoln College, Oxford, and some time Director of Education in the Sudan Government.

Deputy Surgeon-General William Sly, who died at Lowestoft on March 6, saw service in the Indian Frontier Campaign of 1863, taking part in the defence of the Sungars at the Umbeyla Pass, the storming of the Conical Hill, the burning of Lalloo, and the action in the Bonair Pass.

Colonel Sir George Malcolm Fox, who died on March 10 at Rustington, Sussex, was born in 1843. He served in the 100th Royal Canadians and 42nd Royal Highlanders, and took part in the Egyptian Campaign, receiving the medal and clasp and Khedive's Star.

The death is announced from India of the Rev. Kenric George Foster, Canon of Lahore Cathedral. Educated at Trinity College, Cambridge, he joined the Indian Ecclesiastical Establishment in 1900, and served with the Indian Expeditionary Force from 1914 till 1916.

M. Jules Charles-Roux, who died in Paris on March 6, aged seventy-seven years, was Vice-President of the Suez Canal Company, and acted as President in the absence of M. Jonnart. He was also President of the Conseil d'Administration de la Compagnie des Messageries-Maritimes.

Sir Alexander Hope, of Craighall, fifteenth baronet, who died on March 7 at Pinkie House, Musselburgh, at the age of ninety-three, served in the Bengal Civil Service for thirty years, and for some eight years before retiring was District Judge of Saran. He was on furlough during the Mutiny, and thus saw nothing of that outbreak.

Dr. Sybil Louie Lewis, of Hull, who died on March 10, after three days' illness, went out to Serbia with members of the Scottish Women's Hospitals, and worked there for sixteen months in fever-stricken districts, returning in February, 1916. She went to Macedonia the following August, and remained there until last December, when she returned to Hull.

VISITORS TO THE SUDAN.

Our Khartoum correspondent, writing early in February, says:—Sir Murdoch Macdonald has been in Khartoum for some days in connection with the Gezira irrigation scheme. It is apparently determined finally to set the scheme in motion, as the fuller inquiries go to show that the original estimates understated the potentialities; therefore the scheme has the very highest chances of success.

Sir Said Ali Mirghani, K.C.M.G., recently visited Cairo and took the opportunity of being examined by the medical authorities there, and they confirmed the verdict of the Khartoum doctors who had recommended an operation. The operation was performed at Khartoum after his return, and Dr. Madden, the senior surgeon of the Egyptian Medical Training School, came to Khartoum expressly to perform it. He was assisted by Dr. Ali Bey Ibrahim, the well-known practitioner of Cairo. The operation, which involved the removal of one kidney, was most successfully performed on January 29; the patient has borne it very well, and the bulletins have been uniformly good. The trouble was of long standing, and the operation was done at a fortunate moment.

Among interesting visitors to Khartoum by the last mail are the Under Secretary for Agriculture from Cairo. There was also Ismail Pasha Sidki, lately a Minister in the Sultan's Government, who has come to examine certain matters in connection with the Local Resources Board. It is understood that his object is the collection of statistics. A number of the Governors of Provinces within easy reach of Khartoum have visited the capital in order to confer with the Government. Major A. Cameron from Sennar Province, Mr. Sagar from Kordofan, Mr. Iles, C.B.E., from the Blue Nile, Mr. Struve from the White Nile, Mr. Browne from Berber, and Mr. Tippetts from Halfa, were all present. Mr. More, of Khartoum Province, was, of course, available, as well as Mr. Matthew, the Acting Governor of the Red Sea Province.

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO,
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

THE ONLY ENGLISH HOTELS IN ALEXANDRIA.
Proprietor: AUGUSTUS VAN MILLINGEN.

WINDSOR HOTEL
(Facing the Sea, opposite Y.M.C.A.), ALEXANDRIA.
Full Pension, P.T.50; Room, P.T.20;
Lunch, P.T.15; Dinner, P.T.20.
For long stay, apply to the Manager.

SUMMER PALACE HOTEL,
GLYMENOPOULO, RAMLEH.
This Hotel is situated near the Beach. Open all the Year. Bathing Cabins.
Terms from: Pension, P.T.60; Lunch, P.T.20; Dinner, P.T.25.

NAJEM HOURY'S CYPRUS HOTELS COMPANY.
OPEN ALL THE YEAR ROUND—
NIKOSIA—Cyprus Palace Hotel.
LIMASSOL—Olympus Hotel.
FAMAGUSTA—Savoy Hotel.
FOR SUMMER SEASON—
PLATRES—Platres Hotel. 4,000 feet above sea level. Open from May till October.
TROODOS—Olympus Hotel. 6,000 feet above sea level. Open from May till October.
Perfect situation. French and English Cuisine. Moderate Terms.
Excursions to Mount Troödos.
For Tickets and further Particulars, apply to
NAJEM HOURY & SONS, Limassol, Cyprus.
Proprietors of "The Army and Navy Stores."
Branches—Polymedia, Troödos, Nikosia, Famagusta, Larnaca and Platres
Head Offices and Central Stores: LIMASSOL.
All arrangements for Transport, &c., are made by the above Firm.

"NAVAL & MILITARY" HOTEL
HARRINGTON ROAD, SOUTH KENSINGTON, LONDON.
Only 200 yards from District Station and "Piccadilly Tube" (S. Ken. Station). For all Services and the General Public. Two Lifts. Excellent Cuisine. Exceptional Reception Rooms. 100 Bedrooms.
Cables: "NAVAMILOT LONDON." Telephones: KENSINGTON 5425 (4 lines.)

HOTEL SOMERSET,
ORCHARD STREET (by Selfridge's) OXFORD STREET, W.
Most comfortable and home-like Establishment. English cooking a special feature. Eggs, Butter Poultry direct from the farm.
200 well-appointed bedrooms with fitted basins (h. & c.). 30 bath-rooms
15 private Suites. Passenger lift. Own Artesian Well.
Magnificent Georgian Dining Hall (100 tables,)
Inclusive terms from 10/- to 15/- daily; 3 to 4½ guineas weekly.
Double room 16/- to 21/- daily; 5 to 7 guineas weekly.
Bedroom, bath, breakfast (3 courses) 7/6 daily.

REDRESSING THE BALANCE.

The review of the military situation given by Mr. Bonar Law in the House of Commons last week, when moving the Vote of Credit, was subsequently described in the course of the discussion as the gloomiest speech that had been made from the Government benches since the war broke out. Inasmuch as the Chancellor of the Exchequer undertook to give a survey of the position in the different theatres of war, the speech in parts may have merited the criticism; but only those who wish to be misled by false hopes will find fault with an attempt to represent to the British public things as they actually are. The defection of Russia has passed through so many stages and been spread over such a long period that there is a tendency to imagine that its final consummation has been robbed of its prejudicial effect upon the Allied cause. That this is not the case is shown by the fate of Roumania, which is the first-fruit of the Russian tragedy. Instead of thinking of the war only in terms of the Western front, and being buoyed up with expectations of an Allied advance or the disastrous failure of an enemy offensive, we shall do well to regard it from now onwards from the point of view of the average Roumanian; in other words, instead of an undefined goal which they are continually expecting to come upon, so to speak, round the corner, the Allies must abandon the idea of any end to the struggle until the distant peak on the horizon has been reached. As it is unthinkable that there should be any peace settlement which does not secure complete rehabilitation for Roumania, let us concentrate attention on the kind of work likely to be entailed in bringing that about, rather than pin our faith on some sudden *coup* in France or Flanders. If the objective is known to be some distance away and difficult to attain, the preparations made to reach it are more likely to bear fruit than if they are planned for a brief enterprise. The Allies are pledged, not only to restore peace to the world, but also to bring contentment and ordered government to the peoples affected by the war. That the magnitude of the task should have been enhanced since the pledge was given, by the course of events in Russia, does not free them from their obligations. But as their responsibilities have grown, the methods adopted to meet them must also be planned on a larger scale.

Not the least interesting portion of Mr. Bonar Law's speech was devoted to the position of Turkey. He was by no means inclined to underrate the effect of the operations against that country. On the contrary, he claimed that they entailed for Great Britain a great military advantage. Their full significance was to be realised by considering what our position in the East would have been to-day, if after we had been compelled to abandon the Dardanelles expedition, we had left the expedition in Mesopotamia where it rested after the capture of Kut or had left the position in Palestine as it was after our ineffectual attempt at invasion. Great Britain is an Eastern Power, and it was calculated by those who were competent to give an opinion that to the millions of India the taking of Baghdad would have a bigger effect than almost any possible military operation. The value of what has been achieved in Mesopotamia may also be gauged by the fact that the Germans definitely promised the Turks that they would turn the British out of Mesopotamia. Steps were even taken to give effect to this promise, but they had to be abandoned. Further, it may be regarded as no small gain that great discontent prevails to-day in Turkey. "The feeling there is that in spite of the success of the Central Empires against Russia and Roumania, which have caused so much joy-bell ringing in Berlin and elsewhere, the Central Powers are not able to help Turkey, and the Turkish Empire is falling to pieces while all that is happening." So far so good. We may feel confident, however, that Germany will not easily admit to the Turks the bankruptcy of her military power. She will have specious explanations for the decision to leave the British more or less unchecked at this stage in Mesopotamia and Palestine, and will know how to buoy up the Turks with elaborate promises in another direction. Some indication of the current of German thought is given by the stipulation as an after-thought in the Brest-Litovsk Treaty that a strip of territory in the Russian Caucasus must be surrendered to the Turkish Empire, and by the references to Persia in the same document. Turkey is being encouraged to look beyond the passing phases of the present struggle, and relying on the lost territories being restored to her by German victories in the West, to aim at an empire stretching from the Mediterranean to Central Asia, which, developed by German enterprise, will far outweigh the inconvenience of one or more unsuccessful minor campaigns.

Pessimism may be left to pacifists; optimism is based on the righteousness of the Allied cause, and only asks that long views should prevail. The crime of Bolshevism has not only weakened the Allies, but it has also imposed upon them the duty of righting the wrong done to the real Russia. Only personal co-operation with the loyal elements in the country can effect this, and the Allied Governments have to determine how such co-operation can be attained. The one practical method that suggests itself is to entrust Japan with the task as the mandatory of the Allies. She is on the spot; she is ready for the enterprise and has the capacity to carry it through to a successful finish. A *sine qua non* is that the Japanese should take action with the cordial consent of those Russians to whose aid she will be advancing. Their army will stand in no need of assistance, other than that provided by the friendliness of the country through which their lines of communication will run. For political purposes it may be necessary that British and American missions be associated with the Japanese action; but for some time to come the chief problem will be a military one. For there can be no question of Japan confining her activities to Eastern Siberia. The object of the Allies is to free Russia from the German-Bolshevik incubus and to restore her independence; they are not called upon to mobilise the Japanese Army merely to save accumulated munitions at Vladivostok. Germany has satisfied herself that her successes in the East have given her a fresh lease of life. Let the Allies also lay their plans far ahead, and show that Turco-German dreams of a Central Asian Empire are going to be shattered by the liberation of these very countries, it may be not before 1919, by an Allied force on the spot. Action to this end, however, should not be delayed. The menace of German designs in the East is well known to Japan, and they can be furthered as well by Bolshevism as by militarism. Great Britain has to remember India, and the Allies as a whole can hardly fail to appreciate the advantage of once more building up the ring fence around the Central Empires.

PRO-AUSTRIAN PROPAGANDA AND ITALY—I.

BY RICHARD BAGOT.

The efforts being made in this country to promote a conciliatory policy towards Austria with a view to detaching her from Germany will not have escaped the attention of readers of THE NEAR EAST, or of those who believe—and rightly believe—that unity and reciprocal loyalty among the Allies is the only sure road to victory over the Central Empires.

We are assured by those who are seeking to further a pro-Austrian propaganda both in England and in the United States that we Anglo-Saxons have no quarrel with Austria-Hungary, and we are asked to lament the fact that in fighting that Empire we are fighting against an "ancient ally." A well-known writer on military subjects, concealing his identity under the *nom-de-plume* of "Achilleius," has even gone so far as to assert that we English deeply regret that British troops should be fighting with the Italians against the Austrians. It is an assertion which, however correctly it may represent the private sentiments of the individual in question, or the desire of the Vaticanists, is certainly not representative of those of the vast majority of the English people in whose name he so complacently arrogates to himself the right of speaking. Simultaneously with these assurances, we may observe a persistent endeavour to alienate British sympathies from Italy, and to excite suspicion and ill-feeling towards the Italian people. The similarity between the tactics and arguments adopted by our Austrophils and those employed by the pro-Germans in Italy is remarkable. It is also not a little significant and instructive. The ultimate aim, both of our own pro-Austrians and of the Italian—or, rather, the Vaticanist and revolutionary—pacifists in Italy would appear to be the cynical betrayal of the national honour of their respective countries; while their primary aim would seem to be the creation of such bitterness of feeling between the Anglo-Saxon, the French, and the Italian peoples as would effectually break up the alliance existing between them, and compel Italy to retire from the war—disgusted, disillusioned, and deceived.

It is obvious that the detachment of Austria-Hungary from Germany would in itself be a diplomatic victory of the highest importance for the Allies, since it would almost certainly lead to the speedy defection of Bulgaria and Turkey from the German cause. It is not easy, however, to discover the grounds upon which any reasonable suppositions that Austria would welcome any such detachment are based. The various peoples composing the Austrian Empire are, no doubt, heartily sick of the war, and fully conscious of, and disgusted at the manner in which they have been exploited by Germany; while the middle and lower classes—but not the armies or the ruling castes—are certainly suffering from serious shortage of food and of other necessities. But where do we find any evidence of a desire on the part of the Austro-Hungarian political leaders, or of the Hapsburgs, to conclude a separate peace, or, indeed, to assume any position which would signify secession from the alliance with Germany? And what are the terms which our British Austrophils would wish the British Government to offer to our "ancient ally" in order to induce her to detach herself from Germany? They are careful not to define those terms—and, as the Italians would say, *si capisce!*

Now there are, it may be hoped, very few people among the Entente nations who would not welcome peace and agree to any reasonable and honourable negotiations by which it might be secured upon a lasting basis. But what, we must again ask of our Austrophils, leads them to suppose that Austria would agree to any terms or conditions of peace which would not be in direct and open violation of the compact existing between Italy and her Allies? It is at least unfortunate, though by no means accidental, that insistency on the fact that we have no quarrel with Austria is accompanied by a persistent though covert attempt to carry on in this country a propaganda which is nothing more nor less than anti-Italian in its nature. Just as our pacifists in general persist in asserting that the war aims of the Allies have never been clearly stated, notwithstanding the definite exposition of them so repeatedly and so clearly given by the Governments of all the Allied nations, so our Austrophils insist upon asserting that the special war aims of Italy are of an imperialistic and even of a grossly fantastic nature, notwithstanding the fact that Signor Orlando, Baron Sonnino, the representatives of every political party in Italy, and the most responsible organs of the Italian Press have repeatedly and persistently shown those aims to be quite the reverse. It is not, on the surface of things, easy to understand why the legitimate interests and the national necessities of Italy, alone among the Allies of Great Britain, should be disowned, and, indeed, denounced, by English agitators in favour of a process of moral whitewashing of Austria and of ignoring her guilt in deliberately lending herself to the engineering of a war which she is conducting by methods not a whit less barbarous and treacherous than those employed by her partner. It is true that the entry of Italy into the war was exploited by the so-called Nationalist party in order to persuade the Italian people to accept its imperialistic policy. It is also true that the policy of that party, had it ever had the remotest chance of being carried into full effect, would have been a negation of the very principles for which the Allied Nations and Italy herself are fighting; and it was not for nothing that the majority of Italians, with true Italian sarcasm, called their exaggerated Nationalists *i nostri Prussiani!* But some excuse must be made for the "Prussians" of Italy. Irredentism had for some decades before the war become little more than a pious tradition. That it had any remnants of life at all in the heart of the average Italian was due to Austrian stupidity and bad faith in dealing with her subjects of Italian race in the unredeemed provinces. In Lombardy and in the Venetian provinces Irredentism, of course, had never ceased to be a living force—a sacred heritage of sons whose fathers had suffered from Austrian tyranny and cruelty. But in the centre and the south of the Italian kingdom the people had long ceased to concern themselves very deeply with the fate of their unredeemed kindred either in the Trentino or in the trans-Adriatic provinces. This indifference was not unnatural; and, moreover, the Italians both of the centre and the south are not lacking in cynicism or in humour of a certain quality. The fact that considerable numbers of their race were subjects of an alien and hated Government left them, so to speak, comparatively cold. Emigration, in their eyes, was the obvious remedy for any subjects dissatisfied with their Government. It was a remedy they adopted themselves; and it was certainly a simpler and more convenient one for Italy to counsel her unredeemed children to adopt than that of going to war with Austria. It was also less costly—and taxation was quite sufficiently high as it was. It was not, indeed, until Italy had actually declared herself to be no longer neutral, but on the side of the Entente Powers, that the interest of the great mass of the Italian public in Irredentism re-awakened, and that the vital importance to the nation of a rectification of the Austro-Italian frontiers and supremacy in the Adriatic was generally recognised. This re-awakening of public opinion was largely due not only to the

Nationalist party, but also to the "Pro-Dalmazia" and other kindred societies, as well as to the numerous publications widely circulated under their auspices. For the first time, perhaps, the greater Italian public—the agricultural and the industrial and commercial classes—realised that the redemption from foreign domination of the Trentino and the Adriatic provinces was not merely a matter of national sentiment, but of national safety and independence, and it would be manifestly unfair to forget or to ignore the part played by the Nationalists in this re-awakening, merely because of the imperialistic programme which at the commencement of the war was advocated by their leaders and by their official organ. One of the many misconceptions and prejudices which still obtain in this country regarding the Italian people is that they are uneducated, and therefore easily led astray by political or other agitators. Also, that they are a sentimental race; whereas they are entirely the reverse of sentimental, being not only remarkably shrewd but also extremely sceptical. The fact that illiteracy reaches a high percentage in certain classes of the community is often quoted in support of these completely erroneous conceptions. The superficial Anglo-Saxon critic of the Italian populace is apt to assume that, as in Great Britain, illiteracy is as a general rule inseparable from intellectual incapacity, and very often from a condition little removed from cretinism. He is unaware that the Latin illiterate—and especially the Italian illiterate—is of quite another category. The illiterate Italian peasant—who, by the way, is gradually but surely disappearing—has frequently, and, indeed, usually, as sound a grasp of social and political matters as his more lettered colleagues. It is probable, I think, that he has very often even a sounder judgment concerning them, since he listens to all opinions and criticisms on current political and social events and on those who are responsible for or dealing with those events, and forms his own individual opinion, which is apt to be surprisingly shrewd and logical.

Those who have mixed on friendly terms with the agricultural and industrial classes in the regions in Italy where illiteracy is still common, and who have frequented the local *caffé* and similar social resorts when the labours of the day are over and newspapers are read aloud by the literates and the local politicians discuss current topics, will never again fall into the error of assuming that, because in Italian of the lower orders happens to be illiterate, he is necessarily either ignorant or lacking in a remarkable natural intelligence rarely possessed by his counterparts in these islands; and still less that he is unable to exercise a reason and a judgment which are so naturally acute as to make him often more than a match for many who can read and write. This characteristic of Italian illiteracy is dwelt upon here, because it is frequently asserted by Austrophil writers and speakers in this country that the aims and aspirations of Italy in fighting on our side in the war are not only purely egoistic and, indeed, reprehensible, but that illiteracy itself has been exploited by Italian politicians and the Interventionists generally in order to persuade an ignorant population to submit to the imperialistic policy of a party not only bent upon the dismemberment of Austria, but also upon preventing the Southern Slav races from realising their legitimate national unity and independence. I have already observed that what may be called the full programme of the Nationalist party as presented by its organ, the *Idea Nazionale*, and by its leaders and sympathisers, was never approved of by the great mass of the Italian people. It cannot be denied that this programme created serious suspicions and misunderstandings regarding Italy's eventual war aims, not only among the Slav peoples of the eastern Adriatic, but also among her Allies. The natural alarm of the Jugoslavs quickly found its expression in the formation of committees in Paris, London, and other capitals, and in the speeches and writings of their sympathisers both here and in France. It may be suggested that there was a period during which both the Jugoslav representatives and a considerable portion of the Italian Press somewhat lost their heads, since each side plunged into a controversy the bitterness of which was scarcely warranted by the situation and the facts at issue. It was assumed—very erroneously—by many prominent and influential people in this country that Italian official and public opinion was entirely in sympathy with the imperialistic aspirations of a single political party in the Italian State; and Signor Salandra's cryptic expression—*sacro egoismo*—bade fair to be nearly as unfortunate for his country as was for Germany the German Chancellor's lapse into truth when he confessed to the wrong done to Belgium. It is scarcely necessary to point out that this period of misunderstandings and bitterness has now happily passed, and that both Italy and her Slav neighbours recognise that their national security and prosperity depend upon complete political and social harmony and friendship; while the Italians now fully realise that the formation of a great and independent Slav State, with proper access to the Adriatic, alone could ensure permanent peace and reduce to impotency the Austro-German intrigues in the Balkans and the Nearer East.

In the meantime, however, it may be well to recall to mind the attitude towards this question of an Italian political party which more faithfully reflects Italian public opinion than is, perhaps, altogether realised in our country. So far as Irredentism is concerned—and in this term the proper political, military, and naval control by Italy of the Adriatic is, of course, implied—the Italian Reformed Socialist Party, which was represented at the Inter-Allied Conference in London held in August of last year by two delegates, officially declared its views as to the two main objects—apart from those which it characterised as being of an idealistic, though none the less powerful incentive—for the sake of which Italy entered this War of Liberation. Those two primary objects were declared to be as follows:—

1. "To reunite with the Mother-Country those populations of the same race who dwell beyond the old, unjust, and arbitrary political frontier under the Austrian rule.

2. "To ensure, within the circle of Nature's boundaries, along the chain of Alps and the Adriatic Sea, the safety and tranquillity of the Italian nation—there being no doubt that the Italy which emerges from this war must embrace the populations of the Trentino, of the Gorizia region, and Istria. Other populations of Italian origin and sympathies are scattered along the eastern shores of the Adriatic and in the Dalmatian Archipelago, from the Quarnero to the Ionian Islands. The delimitations of boundaries between the Italian State and the Slav State or States, which will emerge from the breaking up of the Austro-Hungarian Monarchy, must be conducted in a just and conciliatory spirit, and in a manner to avert all future grievance and discord. And, should it happen that in the settlement of frontiers certain groups of the Slav race are comprised in the Italian State, while certain groups of the Italian race remain yet comprised in the Slav State or States, previous mutual guarantees should be given for the maintenance of local autonomy, and for the free development of individual activities.

"Given the above views, the Italian Reformed Socialist Party hold that the new eastern boundaries of Italy should be traced in obedience to ethnical, political, and military considerations, and so as to ensure the safety of the Italian nation, while avoiding all undue interference with the rights of those free nationalities which shall be constituted in the East."

This Declaration, the present writer believes, represents the views and aspirations which the great bulk of the Italian people holds concerning Irredentism in general and the justice which must be maintained towards Slav rights and aspirations by Italy. It was made at a time when the period of misunderstanding above alluded to was in its most acute phase, and its spirit has now been adopted even by the more intransigent among the Nationalist party; while there is ample evidence, from their subsequent speeches and assurances, that the Ministers of the Italian Government are in full accord with it—as, indeed, there can be little doubt that they had always been even before it was formulated on the occasion mentioned.

It is significant that, notwithstanding this Declaration and notwithstanding the repeated assurances of the

Digitized by Google

Royal Government of Italy, our Austrophils continue to represent our Italian Ally as seeking merely selfish aims, and do not scruple to advocate a policy with regard to Austria which, if adopted, would be an act of treachery and dishonour as gross as any that have stained the good name of the Central Empires. We may now pass to examining the motives underlying the propaganda in favour of initiating a conciliatory policy towards Austria-Hungary, and how far they are consistent either with the dignity or the loyalty of Great Britain, as well as the sources from which they spring.

(To be concluded.)

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

The Roumanian Treaty.

March 11.

Mr. KING asked the Secretary of State for Foreign Affairs whether Roumania has concluded a separate peace with the Central Powers; whether its terms were submitted to the Allies before being accepted; and whether it is the policy of the Allies to bring the terms of this peace for revision before the Peace Conference or a League of Nations after the War?

The SECRETARY OF STATE FOR FOREIGN AFFAIRS (Mr. Balfour): I understand that a peace has been provisionally concluded, but has not yet been ratified. His Majesty's Government were informed of the enemy's terms before they were accepted. As regards the last part of the question, his Majesty's Government have the deepest sympathy with Roumania in the cruel position in which she has been placed, and it will certainly be our duty and our endeavour to obtain at the eventual Peace Conference a revision of the harsh terms which have been imposed.

Warrant Officers (Pay).

Sir J. D. REES asked the Secretary of State for India whether any, and, if so, what, measures are contemplated for improving the position of warrant officers in India in respect of the pensions they earn, the amount thereof, and the period they are required to serve; whether the increased cost of living has been taken into account and any allowance given on that account; and whether any increases of pay and pensions have been given to warrant and non-commissioned officers in the British Army since 1914?

The PRESIDENT OF THE BOARD OF EDUCATION (Mr. Herbert Fisher): The Secretary of State has not at present under consideration a revision of the permanent pension rules for warrant officers of the Indian Departments, nor have allowances been granted to pensioners of these classes on account of the increased cost of living. The answer to the third clause of the question is in the affirmative. The question of the application to warrant officers of Indian Departments of the new Royal Warrant regarding disability pensions arising out of this war is under reference to the Ministry of Pensions. The question whether any increases in pay should be given in certain cases has been referred to the Government of India. I shall be glad to let the hon. member know further when a reply has been received.

Cow Hides.

Mr. SHIRLEY BENN asked the Secretary for India whether he has received a report from the Imperial Institute on the subject of the trade in raw Indian cow hides; and whether it is intended that this report shall be published at an early date.

Mr. FISHER: The Report has been received. Its publication at present is not proposed, as the Government of India, to whom it has been sent, desires first to form their own conclusions on the subject. The Board of Trade agree that this course is advisable.

Indian Cavalry Corps' Gallantry.

Lord LAMINGTON asked the Secretary for War whether units of the Indian Cavalry Corps that took part in the battle of Cambrai did not behave with the greatest gallantry and performed signal service; and whether information further than what had been supplied could be given. He said that reports had been received from many sources as to the gallantry of this corps, but no official statement had been made. The many casualties which they suffered were proof of the high test to which they were put.

The EARL OF DERBY (Secretary of State for War) expressed his gratitude to the noble Lord for giving him an opportunity of testifying in public to the great service rendered by these soldiers from India. There was one particular incident associated with their gallantry at Cambrai which he would like to mention. So greatly was their bravery on that occasion appreciated by the Guards Division that they made a present of plate to that particular regiment as a memento. That showed the great appreciation in which these Indian cavalry were held by other forces of His Majesty's Army. It would be understood that in important operations like these Sir Douglas Haig could not possibly dwell on the achievements of every regiment, but he stated that British as well as oversea and Indian regiments performed splendid feats, which could not be recorded in the despatch. But in this particular case he (Lord Derby) wrote to Sir Douglas Haig asking him to let him have an account of the part played by the Indian cavalry in the Cambrai affair. In reply, he had received something which was almost in the nature of a despatch. It was very interesting, and he proposed to circulate it to the Press. On the occasion in question, as on all others, the Indian cavalry had acted up to their splendid reputation.

THE PRESS ON THE NEAR EAST

Syria.

The World has a graphic pen-picture of Syria by Bernard Maimon. This is his peroration:—

Syria is, without exaggeration, the most picturesque and at the same time the most fertile country of Western Asia, worthy of being the country of a great people both by the richness of its soil and by its geographical position. Here are the plains of Sharon, Acre, Tyre, Sidon, and many others. The valley of Sharon is watered by half-a-dozen rivers.

Here real mountains rear their crests—not like the wretched little calcareous ranges of Abdul-Aziz and Sindjar in Mesopotamia, between which flows the Khabur, nor like the artificial hills in the boundless alluvial plain of Babylonia! In Syria the smallest hills, with their terraces where the vine grows and the olive-tree flourishes, often give the impression of vast pyramids, beside which the Chaldean Ziggourats and the great pyramids of Egypt would seem but toys.

One can well imagine the surprise of the Assyrians or Egyptians who, for the first time, gazed upon Mount Carmel, which in truth deserves its name of "Kerem," that is to say, "garden," from its luxuriant vegetation, flowering shrubs and aromatic herbs which reach to its very top! The Bargylus (Ansayrieh), a range of more than 150 kilometres in length, has its western spurs clothed with vines and olive-trees, whilst its higher slopes are covered by forests of pines and firs. Its loftiest peak, Casius, in Arabic "Djebel-el-Akra," that is to say, "The Bold Mountain," springs suddenly to a height of 5,000 feet above the level of the Mediterranean. The Lebanon, the Syrian Mont Blanc, which rivals the Bargylus in length, and the inexhaustible forest of which, composed of cedars of enormous size, furnished the neighbouring powerful kings, to the east and to the south, with the timber for their palaces, and Phœnicia with the wood for its countless ships, reaches in Timarum, its principal peak, the height of 3,230 metres. Here, too, is the Anti-Lebanon, parallel with the Lebanon, where Jebel-Esh-Sherki reaches an altitude of 2,712 metres, a mountain of the most picturesque beauty with its wild and rocky gorges. Mount Hermon, the sacred mountain, shrub-and-forest-clothed, the highest peak of which is covered with snow, is very little less than 3,000 metres in height. SUCH IS SYRIA.

British Assistance for Persia.

The era of playing second fiddle to Russia in Persia is over, and Great Britain is now in a position to indulge her own instincts for helping the Persians on lines that they can understand and appreciate. Our first concern has been for the restoration of ordered government in the provinces; in due course, it is to be hoped, we shall contrive to give the Teheran authorities support and practical advice in their task of bringing the whole country once more under the central administration. In two articles this week a writer in *The Times* tells the story of what Sir Percy Sykes and the South Persia Rifles have accomplished. General Sykes landed at Bandar Abbas in March, 1916, with a staff of only three British officers of the Indian army.

Notwithstanding the obstacles to recruitment, the levies increased numerically very rapidly when the start had been fairly made. But the strain on the staff in training the men, carrying on office and administrative duties, arranging for supplies and transport, and working out plans of medical organisation was carried almost to breaking point. It could not have been borne without the enthusiastic leadership of the chief, whose powers of organisation are no less remarkable than his capacity for understanding the Persian and gaining his good will. A strong element in the latter qualification for his command is an intimacy with the Persian tongue so great that on some of his shooting expeditions in Central Asia in the old days of peace he was presumed to be of Persian nationality.

Within three months of his arrival at Bandar Abbas General Sykes had pushed inland 250 miles to his old post at Kerman, where he met with a most cordial reception both from the Persian officials and the public. After setting matters right there, he marched north-westward to Yezd and thence to Ispahan. The arrival of the force at the latter town was a great relief to the population, which had been threatened with an incursion of robber bands, and Sir Percy Sykes was able to open up the Ahwaz road. Thence the force turned southwards to Shiraz, inspiring more than one robber chieftain with a wholesome awe of its powers on the way. The length of this jig-saw march from Bandar Abbas, via Ispahan, to Shiraz was about 1,100 miles, and it was carried out in circumstances of the most arduous and, in some places, of a perilous character.

All this was accomplished within a period of eight months from arrival in the country. The British personnel had been added to little by little; and the military escort from India now comprised some 800 troops. On reaching Shiraz Sir Percy Sykes took over the mutinous gendarmerie, and in due course the act was officially recognised by the Persian Government. The force now numbered some 5,000 men.

Lack of means of inter-communication proved a serious obstacle, and was one of the first things to engage the attention of Sir Percy Sykes.

A very important part of the operations of the Rifles has been the improvement of road communications, especially in the

Digitized by Google

province of Fars, of which Shiraz is the capital. The main roads between that city, Yezd, and Ispahan have been so improved that they are at last available for wheeled traffic, all the difficult passes having been cut down. In more than one awkward place the rocks have been blown up, and modern engineering has brought the high places low and made the rough places smooth. It would be an enormous gain if fairly easy communications could be established between Shiraz and the port of Bushire; but the precipitous and broken line of country leads competent observers to doubt whether a modern road, or railroad, can ever be profitably built. To the north, however, we have the best evidence of the improvement the Rifles have effected in the fact that the commandant made a record last summer by motoring from Shiraz to Teheran in 5½ stages.

The improvement of communications has been the more appreciated by the Persians because it has facilitated the growing security of trade exchange. Through last autumn, when the raiding season is usually at its height, no robbery occurred on the main road from Shiraz to Yezd and Ispahan; and it was far safer than it had been at any time for a decade past. Altogether the position in the early summer months was most encouraging. The force was steadily mounting up to the maximum limits. On the whole the recruits were well behaved, their strong prejudices having been overcome by the exercise of tact and understanding of the Persian psychology. The applications for service in the cavalry were so numerous as to be embarrassing, in view of the great difficulty there is in obtaining good mounts in a country like Persia. The great province of Fars was enjoying far more tranquillity and order than it had known for many years, and altogether Sir Percy Sykes and his staff had cause for satisfaction that their efforts had been so fruitful.

ARTICLES TO NOTE.—"From Salonika to the Albanian Coast." By the late Major Claude Askew in *The Windsor Magazine*. "Palestine and Jewish Nationalism," in *The Round Table*.

CANON HORSLEY ON THE HOLY LAND.

On March 12, at the Royal Victoria Hall, South London, Canon Horsley described a recent visit to the Holy Land, illustrating his lecture with the magic lantern. He said that Palestine was a beautiful country, but its fertility had been very largely destroyed. The terraces into which the hill sides had once been cut had been broken, and the trees had nearly all been cut down, with the result that the heavy rains washed away all the cultivable soil, leaving only the bare rock. Only in one place had he come across a small wood of scrub oak. Generally he saw only occasional stunted olive trees, and, in some districts, a few palms. Turkish misgovernment was largely, though by no means entirely, responsible for the neglect of the country. An inhabitant of Jerusalem had told him that he wanted to make an orchard, but that so surely as he planted a fruit tree the Turks came and demanded a tax. Of the inhabitants of the country Canon Horsley said that the Arab fellaheen were a much finer race than the Syrians, and still more so than the Jews. The traveller saw their black tents throughout the country, and their customs and habits took us right back to the time of Abraham. One slide showed a shepherd with a flock. The sheep of Palestine, said the lecturer, were often black, the goats were hornless, and both sheep and goats had long black ears. Hence the task of separating the sheep from the goats was a difficult one. The shepherd alone could do it. Another slide showed a child apparently wearing large black spectacles. This appearance, the audience was told, was due to flies settling on the ophthalmic discharge from the eyes. The majority of the inhabitants of Palestine were said to suffer from diseases of the eyes, and blind beggars were very common. Nazareth was now a town of ten thousand people, nearly all Christians, belonging to the Greek Church; but Capernaum was a ruin, and very few of the villages of Galilee mentioned in the Gospels were still existing. The principal town of that part of Palestine was now Tiberias, into which place it was not recorded that Our Lord ever entered.

SYMPATHY WITH ROUMANIA.

Mr. Balfour has addressed a letter to the Roumanian Chargé d'Affaires (says Reuter's Agency) declaring that the British Government has the deepest sympathy with the Roumanian Government in the present situation, and follows with anxious attention the course of events in Roumania.

M. Misu, the Roumanian Minister to Great Britain, who is now on his way to Roumania, will conduct the negotiations with the Central Powers on the terms of peace, including the delimitation of the frontier with Hungary, the traffic on the Danube, access to the Black Sea, economic questions, and other delicate matters.

The Roumanian Government is deeply impressed by the expressions of sympathy from the Allied Governments, and also by the large number of private expressions of sympathy that are reaching it daily.

The members of the Royal Family and the Government are still at Jassy.

PROMINENT INDIAN INDUSTRIES.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

In view of the fact that the peace terms imposed on Roumania will be revised when the Allies have obtained a decision in the war comparatively little interest attaches to the measures by which Germany hopes to fetter the development of our Ally except in so far as they afford an indication of Teutonic aims in the East. Viewed from this standpoint, what is known of the terms merits more than a little attention. The Dobruja we know is to be handed back to Bulgaria, but whether Constanza, Roumania's chief port, is to go with the Dobruja is by no means so clear. Roumania is to lose the port, while being allowed a trade route through it to the Black Sea, and that is all that is definite on the subject, which makes me suspect that Germany thinks the Dobruja, plus Constanza, would be altogether too big a plum for a country so insignificant as she no doubt deems Bulgaria to be, and so she proposes to have it herself. I can see no other solution which would account for the peculiar silence regarding the fate of the port.

***

Germany's wish to possess Constanza can very easily be understood. Constanza was one of the principal channels of Roumanian trade, and it was, in particular, the centre for the export of oil to the Allied countries. Reference to the export figures for 1913 will illustrate this point. In that year Roumania's exports amounted to four and a-half million tons, of which oil accounted for 1,036,000 tons. Of these exports a million and a quarter tons passed through Constanza, including 909,000 tons of oil in various forms, of which 700,000 tons went to the Allied countries and 130,000 to Germany, Austria, and Turkey. In Germany's hands the port would become a powerful weapon for economic warfare, for it could and would be used to prevent the Allies from having access to the Roumanian oilfields. On this ground alone Germany no doubt desires to retain Constanza, but there are two other reasons no less potent which are likely to influence her decision: one is that the possession of the port can be made an instrument for the economic subjugation of Roumania, which is essential to her purposes if the former project is to be worked satisfactorily.

***

The remaining reason brings us back to the subject I discussed in these columns last week—Germany's Eastern ambitions, which have been given a new turn by the Turkish failure to withstand the British offensives in Mesopotamia and Palestine. If Germany is to find a new way to the East she must either Germanise or neutralise the Black Sea, since it lies almost directly across her Eastern path. Her Russian negotiations have given her through Turkey an important footing on the Eastern side of the Black Sea, and, while she already has an excellent port at the other end in the shape of Constantinople, Constanza is more accessible to the Central Empires and, incidentally, an easier place to reach by land if military measures become desirable at any time. Its acquisition, if that be Germany's intention, can only be a means to an end, for it would be the height of folly to imagine that the process would stop short there. If the war were by any misfortune to end with Germany in possession of Constanza, it is certain that before long she would find occasion to force a land route to the port.

***

Germany's anxiety to obtain a commanding position in the Black Sea should not, however, in my opinion, be entirely attributed to her Eastern pretensions, though I have not the slightest doubt that they are, and have been all along, the chief influence in her aggressive policy towards the East. Another factor in her calculations, I fancy, has been the desire to safeguard Turkish sea communications from interference by Russia, not from any regard for her Ally, but because she feels that step to be the necessary preliminary before she can reap certain economic advantages from Turkey. It must be remembered that oil is only one of many articles of prime necessity for which Germany is dependent on her imports from other countries. Cotton, of course, is entirely imported, and Germany's supplies of copper are by no means sufficient for her needs. In the event of an economic war the Allies' control of these commodities would constitute a serious menace to Germany. Now, Asia Minor is an excellent cotton-growing country, and possesses, in addition, important deposits of copper, to mention no other economic riches. Hence Germany's solicitude for Turkey's Black Sea frontier.

***

Sir William Meyer showed very clearly in his speech on the Budget statement how India has benefited from the fair success that attended last year's War Loan. He pointed out that the heavy demands on the resources of the Government for disbursements on behalf of the Home Government and for the finance of war exports and similar transactions resulted in the transfer of the Government's resources to London to an embarrassing extent. Against this it was impossible to obtain counter remittances in silver or gold, because of the high price and keen competition for the former metal, and because of the necessity for preserving the central gold resources of the Empire. In the circumstances the financing of these disbursements has only been possible, he explained, owing to the success of the War Loan and of the Indian Treasury Bill issues. The estimate of the forthcoming War Loan was, he said, to be regarded as a minimum. "No one," he continued, "will be better pleased than I if this estimate should be very largely exceeded, and India's effort should once more show that she can override the cautious calculations of her financiers!"

***

An interesting review of his five years' tenure of office as Finance Member concluded Sir William Meyer's speech, in the course of which he dealt at length with India's various contributions to the war. He said that besides the increase in expenditure for military purposes, and to provide the interest and sinking fund charges in respect of the war contribution of £100,000,000, there had been a net outlay in India for His Majesty's Government of £128,000,000, and as a result of the operations India had lent £67,000,000 to the Home Government over and above the £100,000,000, while £16,000,000 more was to be lent in connection with further investment of paper currency reserve funds in Home Treasury Bills. Emphasising the fact that no one would have imagined before the war that India could have undertaken these responsibilities, he said: "The generally favourable monsoons have assisted in bringing about this result. Our trade conditions have again been wonderfully prosperous, considering all the adverse circumstances which had to be faced, and have indeed led to the paradoxical result that the pecuniary resources of the Government of India have had to be strained to the utmost to meet the demands on it necessitated by the Secretary of State's Council drawings for the assistance of trade, coming as these did on top of large war expenditure on behalf of the Home Government repaid in London."

***

The case for banking amalgamations was put very forcibly by Mr. Walter Leaf at the recent annual meeting of the London County and Westminster and Parr's Bank. Discussing the wider aspects of the amalgamation policy, he referred to the movement in that direction in Germany where the three great banks—the Deutsche, the Dresdner, and the Disconto-Gesellschaft—have built up a formidable combination for the purpose of attempting to capture the finance of the world after the war. Amalgamation was the most effective weapon, he pointed out, with which to meet German competition after the war. This is self-evident, since it is obvious that British banks operating with restricted resources would stand little chance against rivalry of the character that must be expected. As it is, they will have their work cut out to hold their own as regards foreign business, owing to the remarkable development of German banking institutions and, in particular, of the Deutsche group, which has been gradually extending its sphere of operations especially in the Near East.

COTTON GROWING IN THE BRITISH EMPIRE.

The Part Played by Science.—I.

By John W. McConnel.

In 1915 there was published for Dr. W. Lawrence Balls, formerly Botanist to the Egyptian Government Agricultural Department, a book entitled "The Development and Properties of Raw Cotton," which was reviewed at the time in this journal. This may be described as the first book in which an attempt has been made to give in popular language an accurate and scientific description of the growth of the cotton plant and the development of the cotton fibre or lint. As the book was written shortly after the termination of the nine years which the author spent in Egypt, which were principally devoted to the study of the development of cotton, it naturally consisted very largely of a record of the author's own observations and discoveries, and it gave also some description of his methods of recording the salient features both of the growth of individual plants and of the consequent analysis of records and forecasts of cotton crops.

It is evident from the writings of many of the best workers in scientific cotton growing that this book and the other writings on cotton by Dr. Balls—notably his three papers published among the *Transactions of the Royal Society*, have put the entire question of cotton improvement and extension on to a new plane. The science of cotton growing is, of course, still in its infancy, but it has now been definitely recognised that such a branch of science exists, and a beginning of its exploration has been made. It may be taken to be admitted that, to meet the growing need of the world for an increased supply of cotton, and particularly for cotton suitable for use in making goods of high class, there is a correspondingly increasing need for the utilisation of natural science in the growing of cotton. Dr. Balls went even further than that, for his book showed that he had found, as most or all other workers on cotton had found, that there are no scientific terms in which spinners are able to express to growers an accurate description of what they desire cotton to be. It is now being realised in this country that scientific investigation into the processes of spinning and manufacturing cotton will be required before spinners can describe their needs to growers.

But as regards the application of science to the growing of cotton, it may be taken to be now generally agreed that uniformity is the most valuable characteristic in cotton. It is also clear that both heredity and environment are factors which conduce to or interfere with uniformity. Dr. Balls has shown that it is only from pure strains of cotton that an approximation to uniformity of fibres can be obtained, and for this purpose the practical application of Mendel's Law is necessary, whether the pure strains are bred intentionally by considered and artificial crosses, or merely isolated from the complexity of strains which naturally obtains wherever cotton is grown. On the other hand, this book made it clear that it is only by the detailed study of individual plants that the effects of different environmental treatments can be quickly and accurately ascertained.

Recent Developments.

Since the book was published we have moved forward. The need for more cotton and for better cotton is no longer the opinion of a few. The need is known to all concerned in the industry. It has been recognised in official reports and in deputations to the Government. A Government inquiry into the possibilities for cotton in the Empire has been ordered. At the same time, belief in the results to be obtained by the application of science in the solution of our industrial problems has grown to quite a surprising extent. Among other new developments there is good prospect of an association being formed to conduct research into all the problems of the cotton industry, from the growing of the plant to the completion of the finished article—perhaps even to the further stage of reconstructing the fabrics when worn out. The present time seems, therefore, opportune for an inquiry into the progress already made, or in process of being made, in the utilisation of science for the growing of cotton. Perhaps some attempt may also be made to indicate in a general way where science is most wanted. The inquiry will be confined to the growing of cotton in the British Empire.

Two striking features of the cotton industry may be mentioned before proceeding further. The raw material, *i.e.*, the cotton is, of course, entirely imported so far as the British Isles are concerned. On the other hand it is estimated that three-fourths or four-fifths of the cotton used in Great Britain is exported in the form of yarn or piece-goods. Thus we have the peculiar situation that the greatest manufacturing industry draws all its raw material from beyond the seas, and sends away again the great bulk of the manufactured article. Under such conditions it is obvious that even the existence, to say nothing of the prosperity, of the industry depends on such factors as superior organisation, superior technical skill and cheapness of transport. Up to the present time it may be stated with some pride that Great Britain has been equal to the occasion.

Speaking in general terms, and disregarding a few specialities, it may be stated that by far the greater part of the world's exports of cotton goods are produced in this country. Great Britain's power to compete in any other country is only limited by that country's own development of cotton spinning and manufacture. The only considerable exception to this statement is found in the growing power of Japan, where the combination of the appliances of high civilisation, together with wages still remaining on the level of backward races, has created a new competition of admittedly serious character in China, and to a less extent in India.

Growing Demand for Cotton.

Our purpose in this paper is to consider the British cotton industry from the point of view of the raw material. We must start by recognising the fact that since the industry began to take its modern shape, at any rate for the last hundred years or more, the great source of the world's supply of cotton has always been the United States. In later years, however, it has become apparent that the increase in the world's consumption of cotton is tending to outpace the increase in supply, and there has grown to be a strong desire that Great Britain should turn to account the great opportunities of the Empire, and should endeavour to grow her own cotton. This aspiration has gained strength during the war, and this for two reasons: In the first place, the unity of the Empire has been welded on the anvil of war from a dream for the future into a basic fact. And, again, the definite incorporation of Egypt and the Sudan in the Empire, has brought with it the actual fact of growing, not only a very considerable quantity of cotton, but in particular the only large supply of cotton superior in quality to the general type of the American cotton crop. Thus a great stride has been made towards answering a question which is really important, not only to the cotton industry, but to the whole industrial organisation of the Empire. This question is, to what extent and by what means it may be possible for the British Empire to grow within its own boundaries the cotton its united manufacturing powers can consume?

There is nothing inherently impossible about the matter. The limiting conditions under which cotton growing is possible have never been accurately listed, but some of them are well known. Tropical, or semi-tropical regions; irrigation facilities, or a rainfall of sufficient quantity, and generally at such times as suit the plant; climate sufficiently regular in temperature and moisture to give in each year the period necessary for the growth of the plant and of the fibre; a reasonable freedom from injurious insects; a population large enough to make high cultivation possible, and sufficiently civilised to appreciate the advantages of growing crops useless to themselves but having a money value when marketed in other countries; and it must be admitted that at present another necessary characteristic of the population is a readiness to work hard for a wage which, measured by European rates, would be considered contemptible, but which does, in fact, bring to the cotton worker a degree of comfort hitherto unknown. Now all these conditions are to be found in the British Empire. So far as latitude goes, Cyprus, and nearly all India, the whole of Africa, and a great part of Australia, besides the West Indies and Central America, in fact nearly the whole Empire except British North America, New Zealand, and the British Isles themselves, come within the bounds where cotton is possible, and there are immense areas where other conditions also are favourable.

There has, indeed, been a very good foundation laid already. In the British West Indies cotton-growing was resuscitated about sixteen years ago. There is now grown mainly in the smaller Windward and Leeward Islands half, or more than half, of all the cotton grown in the world, which is suitable for making the very finest and strongest goods. The quantity is very small, but the intrinsic value is very great. What is, perhaps, of even greater importance is the fact that while cotton of a kind is indigenous in those islands, this particular development of cotton of exceptional merit has been practically created by the definite scientific work, and if the time comes, as seems not improbable, when larger quantities of the same kind of cotton are needed, it should not be impossible to extend the industry to other suitable British colonies. Man can do again what man has done by science, and not by accident. In the next place, we have Egypt and the Sudan, which are, as mentioned before, the present source, and, it may be added, the only immediately available source for the bulk supply of what is known in this country as fine cotton. Something must be said later as to the position in Egypt of science as related to cotton. But the point to notice at the moment is that the Empire has not to achieve the getting, but merely to secure the keeping and enlarging of its own and the world's bulk supply of fine cotton.

Poor Production in India.

India also must be named. And in India there is a great problem. India is the ancient home of fine cotton and of the finest cotton goods. And yet India, under British control, has been only known as the producer of very poor crops, and of very undesirable qualities of cotton. Practical improvement was for a long time rendered difficult, partly by the dislike of a bureaucratic Government to accept assistance from outside, while a further obstruction is that jealousies and suspicions are so often allowed to separate the important spinning industry of India itself from the still greater industry in Lancashire, whereas in truth their interests in this matter are not in conflict. But it seems probable that the real reason for the past want of progress, perhaps one may even go so far as to say the real reason for the long-continued uncertainty as to the possibilities of progress, was that science was so little used in the early efforts at improvement.

Lastly there is Africa, the Africa beyond the boundaries of Egypt and the Sudan—East Africa, West Africa, and the rest. It is in these regions that the chief work of the British Cotton Growing Association has been done. If progress is to be measured by the actual quantities of cotton grown, the Association has not so far made a great achievement. Something less than one bale in every sixty required by this country is the most that has so far come in any year from these parts of Africa. But the Association has done two things: it has brought to light many of the difficulties which have to be overcome in growing cotton, and shown that there are many countries where cotton cannot be an economic success. It has also made a real and promising beginning with cotton in many districts of Africa, notably in Uganda and Northern Nigeria. And there is little doubt that after the war progress will be more rapid. But perhaps it may also be said that one lesson to be drawn from the work of the Association is of the same kind as the lesson from India. It is, that nothing can be done without science. This remark is in no way intended to reflect upon the early work of the British Cotton Growing Association, or upon the early efforts at improvement in India. The science of constructive botany seems really to be a very recent discovery. Certainly ten or fifteen years ago there was no knowledge readily available—either in the cotton states of America or elsewhere—which could have been applied either to the selection of cotton seed or to the cultivation of the plant. Through much tribulation this knowledge has now come to birth, and, even yet, it will be many years before there is any approach to complete knowledge of the subject.

BRITISH INDUSTRIES FAIR

Capturing Enemy Trade.

The British Industries Fair, which was opened on March 11, in the Pennington Street premises at the London Docks, which were placed at the disposal of the Board of Trade by the Port of London Authority, marks a further stage in the process of the manufacture in this country of goods which before the war were more or less a monopoly of the enemy countries. It is on the same lines as the previous fairs, and while it comes fully up to the standard set by its predecessors it surpasses them in many respects, notably in the range and variety of the exhibits which show very plainly that for enterprise and ingenuity British manufacturers are in no respect behind their Continental rivals.

Since the last fair was held industry has had many further restrictions laid upon it, with the result that the lot of manufacturers of goods not essential to the immediate national purpose has been far from easy, but despite these adverse conditions the list of exhibitors is distictly promising. There are roughly speaking some 400 firms represented at the fair, and they are allowed to show only articles of their own manufacture included in the following trades:—earthenware and china, glass, fancy goods, paper, printing, stationery, and toys and games. With its restricted scope the exhibition is, of course, in no sense representative of British trade possibilities; its interest, however, lies in the evidence it affords of the readiness with which our manufacturers have embarked on new lines of trade. Viewed from this point the present fair is of good augury for the future.

A satisfactory feature is the great care that has been taken to preserve the business character of the exhibition. No doubt the public would have flocked in their thousands to see the products of British enterprise if they had been been invited, but the fair is not for them and entrance is confined to *bona fide* buyers both for the home and overseas markets. Altogether some 100,000 tickets have been sent out to business firms by the Board of Trade, and the attendance this week which has been much larger than on previous occasions shows that the utility of the fair is now fully recognised in business circles.

China and Glass Ware.

By far the most interesting section of the exhibition is the display of china, and glass ware. Those who are ever ready to decry modern decorative art, would, indeed, be difficult to please if they failed to admire some of the delicate examples of pottery on view. There are tea and dinner services, vases, and ornaments in most exquisite designs, not at all inferior so far as the eye can see to the art of the past. Less ornamental but of great importance are the specimens of chemical glassware, porcelain, filter papers, etc., for the laboratory and for scientific purposes. Before the war the manufacture of glass and porcelain for use in laboratories was in the hands of Germany and Austria, and this is one of the trades captured through the war. Since last year, when a number of exhibits of chemical glassware, etc., were shown, a considerable advance has been made in the development of the trade, and there is now every reason to think, that this country will hold its own in this industry against any competition after the war.

Fancy goods are much in evidence, nearly a hundred stalls being devoted to articles of this description. Here a word is called for with regard to leather work which figures very prominently in this section. Before the war Germany and Austria flooded this and other markets with all kinds of small articles made of leather, as was only to be expected in view of the hold they had on the hides trade. Handbags, pocket-cases, wallets, and anything, in fact, for which there was likely to be a demand in the leather line was provided by the enemy to the injury of home manufacturers. If Germany and Austria are able to get the hides after the war—and they will only be able to do so at a price—they will no doubt try to regain their lost trade, but judging by the exhibits they will find the competition too much for them, especially as they will not be in a position to cut prices as they did in the past. The specimens on view are certainly much better than the enemy product, and there is every reason for thinking that the manufacture of such articles as pocket-cases, wallets, purses, etc., should in the future prove a very profitable branch of industry. It is particularly to be hoped that this will be the case since this industry has been taken up by numbers of discharged soldiers, who are responsible for some of the most artistic productions at the fair.

Toys, Printing, and Stationery.

In the toys section something like 170 firms are exhibiting, and here, too, gratifying progress has been made. Germany and Austria found toys of all kinds a very remunerative branch of their export trade, and they were helped so far as this country was concerned by the antiquated methods of manufacturers in general who seemed to adopt the maxim that any kind of toy would do for a child, and when they failed to withstand enemy competition with dolls with wooden expressions and singularly uninteresting toys they were the first to be surprised. All that is changed now, and the toys exhibited will bear comparison with the best products of any country, their workmanship and design being highly satisfactory.

Present conditions naturally limited the exhibits in the printing and stationery section; but even so the 80 firms represented made a very creditable show between them. Mention must be made here of the excellent display of printing by the Medici Society which is one of the features of the exhibition. In this section as in others there is evidence of progress by manufacturers in new directions, notably in making wax crayons and school chalks.

In the light of the experience gained as the result of the fairs that have been held since the war broke out there can be no question that the institution of this annual event has so far fulfilled expectations. It has provided a method by which manufacturers can advertise their wares to the best advantage; it has also given buyers, both for the home and foreign markets, an opportunity they never had before of obtaining exactly the type of goods they require. The facilities it offers in this respect are now fully realised by both these classes of the business community. The future of the fair depends, however, on post-war developments, for it is hoped that it may not only rival, but eclipse, the Leipzig fair, which has been such an excellent medium for the introduction of German goods to foreign markets. Success in the real sense depends on this happening.

AMERICAN HELP FOR SERBIA.

Immediately upon the recovery of Serbian territory now in the hands of the enemy (says a United States trade report) it will be necessary to supply the remaining civilian population of that territory with relief in the shape of most necessary tools, foodstuffs, medicinal products, agricultural implements, live stock, raw materials for factories, household utensils, and the like. Before the war Serbia was largely dependent upon the Central Powers for these things, and while it will prove difficult for the Serbian merchants to adapt themselves to the usages of the Allied markets, especially our own, a complete willingness and desire to do so is assured.

American manufacturers may, therefore, anticipate with the liberation of captured Serbian territory a market for the following articles:—Tractors, ploughs, harrows, rollers, seeders, cultivators, mowers, reapers, scythes, compresses, sickles, whetstones, thrashers, hoes, corn shellers, spades, picks, axles, shovels, wagons, cart axles and wheels, spray pumps, spray bags, sulphur, copper sulphate, raffia, pig iron, tin plate for utensils, oxen, cattle, horses, sheep, goats, fowls, incubators, seeds, saw-mills, motor trucks, saws, saw sharpeners, nails, chains, measuring instruments, rails, corn, wheat, flour, hardtack, dried vegetables, lard, eating oil, canned meat, milk, coffee, tea, sugar, shoes, leather, clothes, cotton, wool, iron and steel bars, galvanised sheets, tin plate for canning purposes, wire, lubricants, cordage, coke, calcium carbide, soap, candles, river steamers, and barges.

BULGARIAN EXPORTS.

Statistics of Bulgaria's imports and exports during 1915 and 1916 are not obtainable, says the United States Consul-General at Sofia, Mr. D. I. Murphy, in a recent report. The Director of Prevoyance, to whom I applied some time ago, has recently informed me, however, that he believes he will be able to furnish such information for 1917. His letter of November 8 states: "In the first half of the present year there have been exported from Bulgaria 29,048,955 kilos of merchandise and 1,868,589 separate pieces, valued at 159,480,858 leva." Normally this sum would be equivalent to $30,779,806 (£6,156,000), but owing to the depreciation of Bulgarian paper money in circulation it represents at this time but $17,720,092 (£3,544,000).

It cannot be ascertained exactly what articles entered into this exportation, but it is believed that the vast bulk of the merchandise was foodstuffs, and that the "pieces" represent cattle, sheep, and hogs. It has also been ascertained that the exports went mainly to Germany, there being no commerce with the world outside of Germany, Austria, and Turkey.

RESTRICTIONS IN EGYPT.

General Sir Edmund Allenby has issued a proclamation prohibiting the import of gold into Egypt except under licence, says *Reuter's* Cairo correspondent. Owing to the delay in obtaining the quantities of millet and maize required by the British Expeditionary Force, the proclamation further orders all holders of these commodities to declare the quantities held by them within ten days. In the event of persons not complying with the provisions of this proclamation, quite apart from their liability to prosecution under Martial Law, all undeclared quantities of millet and maize will be liable to confiscation.

TUCKEY'S

PURE MALT POT STILL

"SPECIAL" YEARS 10 OLD. SCOTCH WHISKY "LIQUEUR" YEARS 12 OLD

MADE FROM SCOTCH BARLEY IN THE HIGHLANDS.

AGENTS FOR EGYPT: ISHERWOOD BROS., CAIRO.

THE LANCET says:—"It is well adapted for dietetic purposes owing to its purity and quality."

ENGINEERING NOTES.

Baltic-Black Sea Canal.

According to a report from Berlin, the commercial agreement between Germany and Russia will contain a plan for the construction of a great canal from the Baltic to the Black Sea. The cost, it is stated, will be twenty milliards of marks, and German financiers are ready to provide the money. Commenting on the subject, Scandinavian newspapers show that Germany intends to use the canal as an economic weapon against Russia in order to bring her under German domination. The idea of such an enterprise is not new. A few years before the Balkan War the Russian Government obtained the sanction of the Tsar for the appointment of a Special Commission to examine the question of constructing the canal, and among the schemes ready for consideration at the time was one in which an American and a British firm were interested. Under this scheme the Rivers Dvina, Beresina, and Dnieper were to be utilised, and the termini of the canal were to be at Riga and Kherson. The length of such a canal would be about 1,000 miles, and it would have a breadth on the surface of about 212 ft. and at the bottom of 114 ft., with a uniform depth of 27 ft. 6 ins. Its construction would probably occupy six years. At a speed of eight knots, as has been found practicable in the case of the Suez Canal, the passage of ships would occupy five days. The great advantages that such a waterway, under German control, would afford to German trade are obvious. And if the other scheme for the construction of a navigable canal to unite the Black Sea and the Caspian Sea is also carried out by German capitalists, another route for the German aim known as the "Drang nach Osten" will be opened.

Towards the East.

It is proposed to construct the canal joining the Black Sea with the Caspian Sea from Astrakhan, in the Caspian Sea, to the Rivers Manytch and Don, with a branch to Taganrog. It will be a short canal, and very economical in construction. Goods going from Astrakhan to Warsaw travel 1,855 versts, but by this canal and viâ Odessa they would travel only 1,123 versts. By the union, therefore, of this canal with the Baltic-Black Sea canal, at a point north-east of Kherson, where the River Dnieper turns from a southerly to a westerly direction, an important waterway would be opened from Riga in the Baltic to Kherson in the Black Sea, and Astrakhan in the Caspian Sea, and thence along the Caspian to Astrabad, in Persia, or to Baku, in Transcaucasia, and other Caspian ports. Such a waterway, dominated by Germany, would be a very dangerous economic weapon in her hands against British trade in the East.

In previous engineering notes we referred in details to the other German scheme, the "Central Europe Waterway," or the Rhine-Main-Danube Canal, which is particularly supported by Bavaria and Austria. The attention paid to this scheme is due to the fact that it is considered that it will assure Germany a commercial route which cannot be blockaded or cut off in war, while in peace it will provide the most effective means for the strengthening of German commerce.

Energetic Japan.

In view of the possible intervention of Japan in Siberia, and of the remarkable strides that Japanese trade has recently been making in the markets of India as well as of the Middle and Near East, a few notes on the energetic industrialism and thoroughness of the Japanese will be of interest at the present time. Apart from other industrial products, agricultural machinery and implements of Japanese manufacture are becoming more and more known to the Oriental farmers, who in some cases find them more suitable for their work and much cheaper than the European articles. It is noteworthy, however, that while the export of such kinds of machinery is systematically pursued by the manufacturers, very effective and timely measures are being taken by Japan for the development of home industry and agriculture. For instance, according to recent reports, regulations which are expected to prove of considerable benefit to the farmer of small means in Japan—and the majority of the farmers there belong to this class—were passed at a recent special session of the Diet. The regulations in question aim at promoting the establishment of agricultural warehouses throughout Japan, and provide for the granting of a subsidy amounting to 20 per cent. of any sum expended in purchasing, erecting, or repairing buildings to be used as warehouses. The amount set aside by the Government for the current year is reported to be 75,000 yen, and it is anticipated that 150 warehouses will be erected at various places. In the past the small farmer in Japan has suffered, like the small farmer in the Near and Middle East, from a defective selling system, which has compelled him, when funds were lacking, to dispose of his crop to the middleman at an unprofitable figure. The erection of warehouses will enable him to store his produce until a reasonable price is forthcoming, or until he can obtain ready money by raising a mortgage on his produce. How simple and very beneficial such a system would be to the struggling small farmer in the nearer East!

Threshing Machines.

Manufacturers of small threshing and winnowing machines are reminded that there will be a good demand in Palestine for such machines in the near future, and probably this year, if facilities for transport can be arranged. Threshing is done there either by hand or by bullocks treading out the grain, and the winnowing is done by hand. Both processes are slow and wasteful. Threshing and winnowing machines capable of being moved from place to place, as farms are small, would prove a great success. Such machines would find a good sale also in Greece, the Ægean Islands, Cyprus, and Crete.

Irrigation and Milling Machines.
