It is readily understandable, therefore, that when the star of Serbia began to rise after her victories in the Balkan Wars of 1912-13 and a steady stream of Southern Slavs began to emigrate towards her from Austrian territory, and those who stayed behind began to see in her the representative of their race, Austria decided that the growth of Serbia must be stopped. Her own task, that of preventing a majority of her peoples from leaving an Empire wherein they were treated as inferior beings by a minority, became frankly impossible when a free State in the government of Slavs rose like a prison escape agency just across her borders. So Tisza and the others demanded war at the Crown Council in Vienna and deliberately threw Europe into flames and bloodshed. The great point to bear in mind is that Austria-Hungary is equally responsible; no dupe of Germany was she. The only difference is that Germany was out to rob the world, while Austria did not wish to disgorge long-stolen goods.

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

Roumania and the Allies. May 27.

Lord R. CECIL, Minister of Blockade, informed Mr. King that the treaty made with Roumania on August 18, 1916, was not still operative. He replied in the negative to the question whether, owing to Roumania having concluded peace with the enemy, the aims and objects as well as the exact provisions contained in that treaty were now definitely abandoned.

Mr. RUNCIMAN asked the Secretary of State for Foreign Affairs whether he could make any statement with regard to the recent Treaty concluded between Roumania and the Central Powers.

Lord R. CECIL: In view of the interruption of communications with Roumania I have not, as yet, been able to obtain the original text of this Treaty and the maps upon which the territorial adjustments are based, but it is clear from the summary which has been published in the Press, and which is without doubt substantially accurate, that this Treaty subjects Roumania to the complete military, economic, and political domination of the Central Powers. As my right hon. friend stated in the House on March 11 last, his Majesty's Government has deep sympathy with Roumania in the cruel position in which she has been placed, and it remains for her friends and former Allies to do their utmost at the eventual Peace Conference to obtain a revision of the harsh terms which have been imposed. The Allied Ministers at Jassy have, in fact, officially notified the Roumanian Government that their Governments cannot but consider as null and void the stipulations of a peace forced upon Roumania, in so much as they violate the rights and interests of the Allied Powers and the principles for which we are fighting. More specific protests and reserves have been formulated in regard to the abolition of an European Danube Commission which was instituted by International Treaty.

Proposed Reforms for India.

Colonel WEDGWOOD asked whether a statement would be made as to the constitution reforms that were contemplated for India; and, if so, when.

Mr. MONTAGU (Secretary of State for India): The Viceroy and I are presenting to the Prime Minister a report containing our proposals as to the steps which should, in our opinion, be taken in fulfilment of the announcement of August 20. At this stage, therefore, I am not in a position to make any statement.

Colonel WEDGWOOD asked whether the House would have an opportunity for discussing this subject, and Mr. Montague replied that the question should be addressed to the Leader of the House. But at the present stage the Prime Minister and the Cabinet must have an opportunity of considering the matter. He could not say when they would be able to consider it.

Mr. JOYNSON-HICKS asked for an undertaking that the Government would not put into operation any reforms, either by Orders in Council or by Proclamation, before introducing a Bill in the House. Mr. Montagu referred the hon. member to the pledge given on August 20 that there would be an opportunity for criticism of any proposals which might ultimately be brought before Parliament. The pledge would be observed strictly.

Sir J. JARDINE invited the right hon. gentleman to give an indication as to when the proposals would be laid before the House, and Mr. Montagu pointed out to the hon. member that only a fortnight had elapsed since he had brought the proposals to this country.

INDIAN CIVIL SERVICE.

It is officially announced that the Secretary for India proposes to alter the Regulations for the examination of candidates for the Indian Civil Service as follows: "No person will be deemed qualified who shall not satisfy the Civil Service Commissioners (1) (a) That save as hereinafter provided he is a British subject; (b) that if he (being a British subject) or his father or his mother was not born within his Majesty's Dominions and allegiance then at the time of his birth his father was a British subject or the subject of any State in India, and that such father still is or continued to be until his death a British subject or the subject of such State in India." It is intended that the new Regulations shall apply to candidates at the open competitive examinations of 1919 and subsequent years.

Reuter reports that the full text of the Bulgarian Socialist party's reply to the recent Inter-Allied Socialist Memorandum has been received. This is the first official answer from enemy countries to the memorandum. The Bulgarians accept the general proposals of the Allied Socialists and the majority of the territorial adjustments suggested. They maintain that for ethnographical reasons Macedonia should be united to Bulgaria, but it seems probable that they would agree to autonomy for Macedonia. The Bulgarians express the hope that the German Socialists will reply to the Inter-Allied Memorandum "in an equally moderate and conciliatory spirit."

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

While much has been heard of industrial activities in British India very little has so far appeared on the subject of similar developments in the Indian States during the war period. In this case silence has not been synonymous with inactivity; in one State in particular, Gwalior, progress of a remarkable kind has been accomplished. In the Indian States the influence of personal rule, it is scarcely necessary to point out, has the fullest play, and, in consequence, much depends on the personality of the ruler.. H.H. the Maharaja of Gwalior has long been regarded as a far-sighted and progressive administrator whose ambition it was to do all in his power to contribute to the material advancement of his State. The correctness of this estimate is fully borne out by recent developments in Gwalior, where a little over a year ago, through the initiative of his Highness, the Gwalior State Trust was established, and on its first year has achieved results of unquestioned importance for the future of the State.

***

The Gwalior State Trust was founded to organise commercial enterprises either already in existence or to be created, and to give assistance in the shape of money or advice to those desirous of undertaking industrial enterprises in the State. How far these objects have already been achieved may be gathered from the report of the first annual general meeting held at Gwalior recently under the presidency of H H. the Maharaja, when a most interesting survey of the activities of the trust was given by Mr. G. A. Moncrieff, who referred to what he termed their ambitious programme, and said that they had been very busy during the twelve months with preliminary investigation. He added, however, that they had not been merely busy with investigation, but could point to accomplished facts—a very modest statement, in view of work which has enabled the trust to declare a dividend of 5 per cent. in its first year!

***

To describe in full the trust's operations and plans would require much more space than is at my disposal, so I must perforce confine myself to outlining the main undertakings of the year. First of all the Scindia Mills, which Mr. Moncrieff pointed out had long been idle, were restarted by the Scindia Paper Mills, Limited, under the managing agency of Messrs. Balmer Lawrie and Co., of Calcutta; and have been working night and day at a profit. In this concern the trust has a considerable holding. Then the Gwalior Oil and Soap Co., Limited, has been formed, and has practically completed the erection of an oil mill at Gwalior. This company has had the marked advantage in these times of being able to secure much of the necessary machinery. Another company, the Gwalior Motor Services, Limited, is taking over the Gwalior Motor Service, and plans are under weigh for a great extension of this service. Then, as investigations have brought to light the suitability of certain clays in the State for the manufacture of roofing tiles and similar material, it is proposed to erect a factory for their utilisation with a view to the introduction into the State of what is thought certain to become a most flourishing industry.

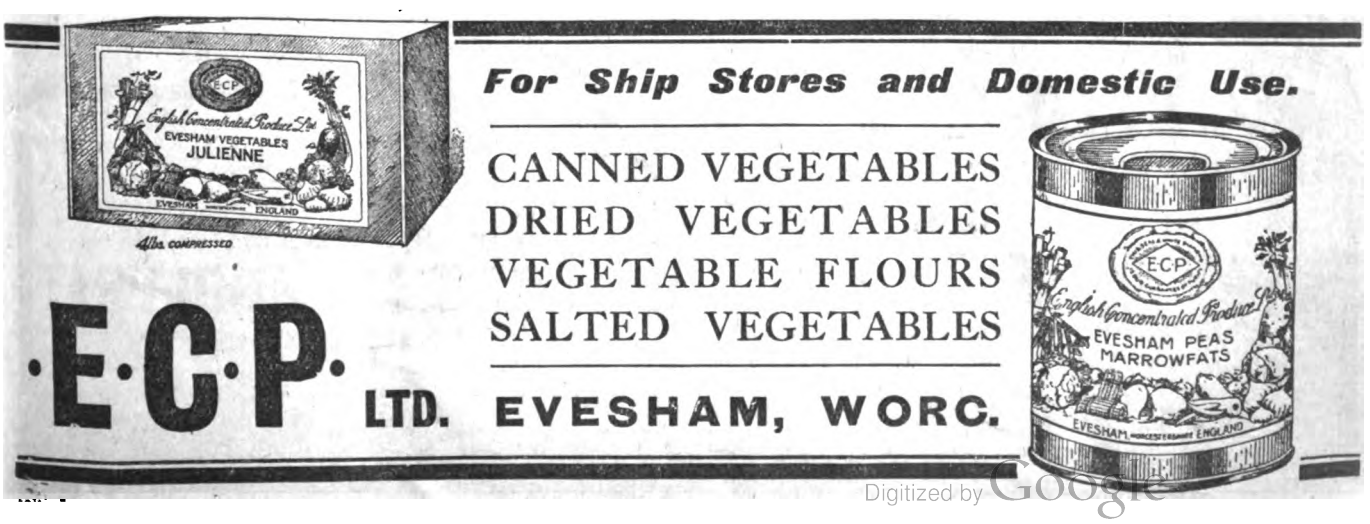
***

The principal development of the near future is in regard to agriculture, for the trust is forming the Gwalior Agricultural Co., Limited, to take over from fifteen to twenty thousand acres of selected land with a view to conducting farming operations on a large scale. Mr. S. Higginbottom is the agricultural adviser of the company, Mr. D. Griffin the agricultural and machinery adviser, and Mr. J. McGlashan the adviser in technical chemistry and sugar-cane cultivation, and the company will work in close touch with the Gwalior State Agricultural Department, which possesses admirable laboratories established by the Maharaja. As regards the utilisation of the land, Mr. Moncrieff stated that sugar-cone, wheat, oilseeds, and dairy farming were the subjects which at the moment were receiving most attention, but later fruit cultivation, canning, etc., would be undertaken. Finally, plans have been prepared under the advice of Professor Stanley Jevons for the laying out of an industrial city at Gwalior.

***

The continued effect of the war on the traffic through the Suez Canal is to be seen in the report of the company to be presented at the annual meeting in Paris on June 3. Last year the general maritime movement consisted of 2,353 transits, representing a net tonnage of 8,368,918 tons, as against 3,110 transits and 12,325,347 tons in 1916. In other words, there was a diminution of 757 transits and 3,956,429 tons, while the difference between the figures for 1917 and those for 1913—the best normal year—is represented by 2,732 transits and 11,664,966 tons. In short, the Suez Canal traffic has declined by well over 50 per cent. during the war. Rather more than half of last year's traffic, it is worth noting, consisted of movements of Government ships and freighters. In 1917 it will be recalled that the dues were again raised, and this step to some extent compensated for the decline in the traffic.

***



In no direction has the work of the Government of India been more fruitful than in connection with agriculture, and as a result of a steady process extending over many years the Indian ryots are being gradually educated up to the appreciation of better agricultural methods so that, as Mr. Chadwick, the Indian Trade Commissioner, put it in a speech before the Liverpool Rotary Club, it is no longer correct to speak of "the unchanging East." That this should be the case is the more satisfactory in view of the efforts now being made to place India's industries on a satisfactory basis, for it is obvious that the country as a whole will derive much more benefit from industrial expansion if the industry which always has, and always will be, India's mainstay makes progress in accordance with the trend of the times.

***

In this connection it is gratifying to know that the Indian ryots are far from failing to appreciate the benefits they have derived from British rule. Thus the recently issued Administrative Report of the Central Provinces refers to the desire shown by the ryots to lend steady support to the Government, while they have given a cordial response to special calls, as, for example, in connection with the War Loan. "In the Chattisgarh Division, for instance," says the report, "when the War Loan was started the cultivators spontaneously said that it was their duty to help the Government in view of all that had been done for them in the great famines, and the number of small contributors showed how strongly this idea had taken hold among the people."

***

It is reported that the Burma Gold Dredging Company, which has been carrying on operations at the confluence of the

Digitized by Google

main streams of the Irrawaddy above Myitkyina, is to be closed down. The company has paid no dividend, and Government has received no royalty on the operations.

***

It will be noticed that Germany was careful to stipulate in the peace treaty with Roumania for the resumption of the Roumanian debt service as regards future maturities. In addition, overdue coupons which have not been met are to be paid within three months after the ratification of the peace.

***

Another point in the treaty which calls for further reference is the stipulation for compensation for damage done through military operations. The main reason for Germany's insistence on this clause was, no doubt, because the considerable German interests in the oil industry suffered from the destruction of the petroleum wells on the retirement of the Roumanian army. Germany had very substantial interests in the Steaua Romana Company, a concern which increased its capital from £2,000,000 to £4,000,000 in 1913, all the new shares being taken by the German Petroleum Company of Berlin. The chairman of the Steaua Romana Company is Herr von Gwinner, chairman of the Deutsche Bank, and the company has offices in Berlin. It only remains to add that the company has properties, refineries, and pipe-lines in the most important oil districts of Roumania.

COMMENTATOR.

SMYRNA-AIDIN RAILWAY.

Payment of Debenture Interest.

General and class meetings of holders of Debenture stocks of the Ottoman Railway from Smyrna to Aidin are to be held on June 27 to pass a resolution in regard to the payment of interest on the Four per Cent. First Debenture stock and the Five per Cent. Second Debenture stock. It is proposed to take power to defer until the expiration of 18 calendar months after the half-yearly day fixed for payment of interest on the Debenture stocks which shall first occur after the termination of the war the payment of all or any of the instalments of interest. Deferred interest will be paid in simple interest at the rate of 5 per cent. per annum computed from the respective dates on which but for this scheme interest would have been payable. Deferred interest on the First Debenture stock may be satisfied by the issue of Four per Cent. First Debenture stock to the amount of £120 stock for every £100 of interest; deferred interest on the Second Debenture stock and any interest on the interest (in lieu of cash) may be satisfied by the issue of a like nominal amount of Five per Cent. Second Debenture stock. No dividends will be paid on any of the share capital while any interest deferred under this scheme remains outstanding.

THE RISING RUPEE.

Prospects of Further Advance.

Towards the middle of April the Indian Government raised the official rate for sterling exchange by one penny, thus placing the value of the rupee round about eighteenpence. This announcement probably conveys nothing more to the ordinary reader beyond the knowledge that to those fortunate enough to have money in India an opportunity presents itself to transfer funds home at a profit of about 11 per cent. compared with the pre-war exchange of 1s. 4d.

In these circumstances it might naturally be assumed that a rising flow of remittances would ensue to this country; but so far as we can gather, there is far from any rush to take advantage of the concession. The reason for this apparently apathetic attitude may be found in recent advices from India, which indicate that a still higher level is expected, and one authority in the leading Bombay newspaper states that there are many believers in an advance to 1s. 8d.

It is no doubt true that when the Indian Government departed from its previous policy by raising the exchange, public confidence in the stability of the rupee was rudely shaken. In support of the innovation, the Finance Minister declared that Government could not undertake to continue the issue of rupees at less than the cost of the coin, so that with the subsequent advance in the price of silver the rupee exchange was bound to follow.

The question now before those with pecuniary interests in India is whether the maximum has been reached, or is there likely to be another rise. At recent conferences held in Bombay and Calcutta, where the Finance Minister met the Chambers of Commerce in both cities, he laid particular stress upon the absolute necessity for raising rates by reason of the fact that Government would otherwise have been obliged to coin rupees at a substantial loss. Unfortunately, this admission dispels the belief that the Government were pledged to maintain the rupee in the neighbourhood of 1s. 4d., and it is difficult to combat the argument that Government need not enlarge upon the loss involved in minting rupees with silver bought at 49 pence an ounce, in view of the fact that formerly they pocketed a profit of 30 per cent. upon their coinage when silver was at half a crown.

It is only natural that merchants should seek to penetrate the veil of official reticence and ask for a pronouncement on the Government's future intentions, but as the whole matter hinges upon the course of silver, it is manifestly impossible to forecast its policy. What we do know is that enormous purchases of silver have been made from the American Government, which will build up the reserves of currency, and ought to place the Indian Government in a position to cope with all the calls upon its resources.

Advices to hand show that the replenishment of the Treasuries has begun, and as the process will now be continuous for a considerable time, it is extremely improbable that the Government will be forced to adopt such a drastic measure as making their rupee notes inconvertible—a step which would only be resorted to as a last resource.

Meanwhile importers are making huge profits because they are paying for goods at the rate of about Rs.13.6 annas to the pound, as against Rs.15 when the rupee was 1s. 4d. In ordinary conditions, the exporter would be penalised, but as all exports, except those of urgent national importance, are practically prohibited, and the Government is the principal buyer of the produce being shipped, it is apparent that the importer is reaping the benefit at the Government expense.

With no claim to a prophet's mantle, we must leave the question where it stands at present, but, taking a broad view of the position and considering the aversion which the Government must have to these disturbances in the rupee exchange, it is not at all unlikely that the large additions now being made to the currency may place any further advance in exchange out of court.

GOLD MOHUR.

BRITISH TRADE IN EGYPT.

(FROM OUR OWN CORRESPONDENT.)

CAIRO, April 15.

At a recent extraordinary general meeting of the British Chamber of Commerce an amendment to the statutes was voted to the effect that "the Chamber may further permit any person or firm not being a British subject to subscribe to the monthly journal, such subscription not constituting any right to membership or attendance at any meeting of the Chamber." As the reports in the local Press have been somewhat incomplete and are of a nature which might mislead the general public to think that the Chamber is making a new departure by admitting non-Britons as subscribers to the journal it may be as well if I state the full facts of the case.

The original statutes of the Chamber permitted non-Britons to become, and enjoy all the privileges of, members excepting that they could not vote, or serve on the committee. This meant that non-Britons could, and had the right to, obtain access to the confidential information put at the disposal of their British competitors by British organisations in this country or in other parts of the world. In view of the closer attention which is being given to the collection of commercial intelligence of use to British traders, and of the livelier official support that is being accorded to the British trade developments it was obvious that the British Chamber of Commerce of Egypt could not expect to receive this confidential information or have the right to claim official support if non-Britons could by rights obtain free access to such information and benefit by such support.

The Chamber has therefore now altered the statutes in the sense quoted above, and it is to be presumed that all non-British members have now been notified that they can from now onwards only be accepted as subscribers to the journal. It may be objected that acceptance of non-Britons in such a capacity is not compatible with the position of an institution intended to defend and promote British trade, but it must be pointed out that the journal contains no information of a confidential nature, and that in any case non-Britons can see it at the clubs or in the offices of British members.

Dr J. Collis Browne's Chlorodyne

Safeguard your Health with this Reliable Medicine.

Cuts short attacks of HYSTERIA, SPASMS, PALPITATION.
A true palliative in NEURALGIA, GOUT, TOOTHACHE, RHEUMATISM.
Checks and arrests FEVER, CROUP, AGUE.

THE FUTURE OF THE YEMEN

Its Natural Resources.

An interesting article appeared in the *Board of Trade Journal* of May 23 on the natural resources of the Yemen and their development, from which we give the following extracts :—

Yemen is chiefly agricultural, and any scheme for developing her resources should have as its main purpose the improvement of agricultural conditions. This could be effected as follows: The improvement of caravan routes by such repairs as are feasible, and by political measures to safeguard caravans from freebooters; the establishment of commercial confidence between growers and buyers—the system of "howalahs" (or letters of credit) answered fairly well until dislocated by the lack of integrity in Turkish rule; and an extended system of water supply.

Yemen farmers in the hills make use of suitable ravines to construct cement-lined tanks for the storage of surface-water. These answer very well within their limited scope, but local engineering talent is unable to cope with the enormous amount of surface-water that goes to waste. From observations taken at various times in different parts of the country, the average annual rainfall in the Yemen hills may be computed at 30 inches. This exceeds that of the United Kingdom, yet droughts are the bane of agriculture in Yemen. The country has been recklessly deforested under Turkish rule, and there is little doubt that the rainfall has thereby been diminished. Moreover, if definite steps are not taken to re-afforest suitable tracts, Yemen is bound to suffer severely in the not very distant future from a fuel famine.

The Yemen farmer has little to learn from outsiders as regards the details of practical agriculture under local conditions, but the crops he raises are not always chosen with an eye to the market. In a country which imports, in an average year, only £100,000 worth of cereals, and has a brisk market for imported cotton goods and synthetic indigo, to cultivate cotton and indigo on soil that would grow heavy crops of millet is not sound economy.

Consular reports mention the existence of petroleum on the Farsan Islands, and rock-salt at Salif, and state that gold, iron, copper, sulphur, coal, chrome, etc., are known to exist in different parts of this province. To these may be added lead, mercury, and agates.

Afforestation.

A moderate scheme to afforest the country would receive the support of the ashraf and sadah, who are the influential classes. Such a scheme should not, at first, aim at more than establishing nurseries of young trees suitable for firewood.

The market would easily stand the importation of more timber. The dhow-building industry alone could do with twice its pre-war supply, at least for some time to come, if coastal communication is to keep pace with reviving trade. It does dhows no good to lie up for the length of time that most Yemen craft have done. The introduction to up-country builders of light-girders as floor-beams would save the life of many a young tree. Girders are widely used in the spacious houses of Hodeidah for this purpose, but they do not find their way up-country, being too long and heavy for camel transport. Native buildings inland are, almost invariably, tall stone towers on a comparatively narrow base, which would only require light short girders; cumulative floor-strains need not be considered, as such buildings can be completely gutted by fire and yet stand indefinitely, and, to all outward semblance, intact.

For practical forestry, trees that flourish naturally in Yemen should be selected, and methods followed which are already familiar to the inhabitants. The highlands and lowlands should be considered separately, for, apart from their widely different botanical conditions, their populations differ considerably in temperament and calling. The white-flowered mimosa (*Acacia albida*) will do well in the highlands between 4,000 and 9,000 feet. Besides its value as firewood, it is a useful timber tree, supplying knees and ribs for dhow-building, as its wood is hard and weathers well, though the tree is too crooked and knotty for planking. It can be grown from cuttings in favourable ground, such as ravines where perennial moisture occurs.

Cuttings, however, will not suffice for any adequate scheme, and nurseries for seedlings must be organised. The highland farmer can easily be induced to spare a corner or two of his coffee terraces for this purpose, for he is fond of trees, and a trifling emolument would secure useful co-operation, for he is more a gardener than a farmer, as anyone who has seen him nursing his coffee through a drought will testify. The coffee would give the seedlings all the shade they require. The broad-leaved wild ficus can be grown from cuttings at mid-altitude in the vicinity of wells or perennial springs.

In the lowlands (*i.e.*, the foothills below 2,000 feet, and the Tihamah or maritime plain) the population is mainly pastoral, which means that young trees have little chance unless safeguarded for a considerable period. Even the agricultural population settled along the alluvial tracts of the larger wadis will not co-operate willingly.

Enclosed nurseries, with an adequate water supply, are, therefore, suggested. Walled gardens, quite suitable for such a purpose, already exist in the Tihamah, and are tended by responsible native gardeners. Aeromotors (wind-vane pumps) might be introduced in the Tihamah to save the expense of well-bullocks and attendants, but they would be unprofitable among the hills, where air-currents are capricious. As regards suitable trees for lowland forestry, the tamarisk is the tree for the practical forester. The Zizyphus jujuba, or jujube tree (the "ber" of India), can also be grown with advantage among the foothills and up to 4,000 feet. It grows slower than the tamarisk, and yields better timber.

Yemen is no Eldorado, and, in spite of its amazing fertility under favourable conditions, the lack of perennial rivers or adequate water storage is a handicap to agriculture. Still, it used to be a prosperous country before the Turkish occupation, and its resources could be expanded considerably by suitable measures inaugurated with tact. In any case, the comparatively large and settled population of the Yemen makes the country a desirable objective for importers.

ENGINEERING NOTES.

Mines in Chalcidice.

According to reports from Greece very rich mines of asbestos and other minerals have been discovered by Englishmen at Galatista in the Chalcidice peninsula, south-east of Salonika. The exploitation of these mines, the Greek papers state, will be conceded to a large British company. The discovery has naturally given great satisfaction to the surrounding districts. It would be very interesting if the experts would extend their investigations to the island of Thasos, north-east of the peninsula. There is no doubt that there are mines in that island, and valuable mines, known to and worked by the Thasians, as Herodotus tells us, but all attempts in modern times to find or exploit those mines have been baffled, discouraged, or abandoned. The geographical position of the island made the wily Turk cautious in granting concessions, and it is noteworthy that one given to a German in recent years, before the Balkan War, was cancelled or abandoned after the unsuccessful attempts of the Kaiser to establish a coaling station in Thasos.

Any local information should not be seriously regarded by the investigating engineers, who must undertake technical and scientific investigations on the spot. The historian Herodotus saw the mines, and says of them: —"For the Thasians, having been besieged by Histiaeus, the Milesian, and having large revenues, applied their wealth in building ships of war and fortifying their city with a stronger wall. Their revenues were derived both from the Continent and from their mines; from the gold mines of Scaptæ-Hyæ proceeded in all eighty talents yearly, and from those in Thasos less indeed than that amount, yet so much that, as they were exempt from taxes on the produce of the soil, there came unto the Thasians in all, from the Continent and the mines, a revenue of two hundred talents yearly, and when the greatest quantity came in three hundred talents. I myself have seen these mines and by far the most wonderful of them are those which the Phœnicians discovered, who with Thasos colonised this island, which on that occasion took its name from this Thasos, the Phœnician. These Phœnician mines are in that part of Thasos between a place called Ænyra and Coenyra, opposite Samothrace; a large mountain has been thrown upside down in the search." In spite of this definite information from the very accurate and truthful historian, little, if anything, has been done to find the mines in the place to which he refers. About twenty years ago the Khedive of Egypt (who was then supposed to be the owner of the island) sent a party in search of them, but without any satisfactory results. Fifteen years ago Herr Fr. Speidel, of Pforzheim, obtained a concession for forty years from the Turkish Government for the exploitation of a mine of zinc situated in a place called Vouves, a little north of Limenaria, and one year later he obtained another forty years' concession for the exploitation of any mines of iron, zinc, silver, lead and copper that he might discover within two years. In virtue of these concessions, exploitation work was at once begun, and considerable profits were derived, owing to the discovery, in the western and south-western part of the island, of a rich mine of zinc abandoned by the ancients, to whom its use was evidently not known. From many points of view, therefore, it is worth the while of British mining engineers who happen to be in that region at the present time to extend their investigations to Thasos.

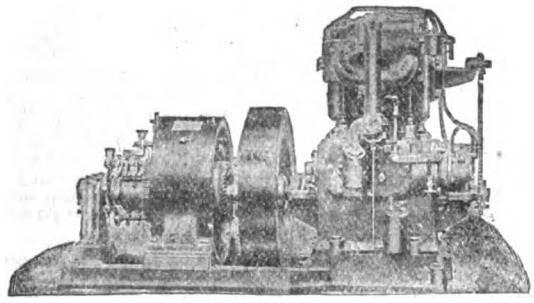
Machinery for Bread.

The latest news from a formerly famous agricultural machinery market, which may appeal to machinery engineers, in that agricultural machinery at the present time is being bartered to the peasants in Southern Russia by the Bolshevik Government in exchange for bread.

Small Threshers Wanted.

Small and modium-sized threshing machines are in great demand in Greece the large Ægean Sea islands, Crete, Cyprus, Egypt and the regions under British control in Asia Minor. The prospects of would-be buyers obtaining these machines from America is very slight owing to a similar demand in the United States.

INDIA'S ECONOMIC PROGRESS.



Mr. D. T. Chadwick, the Indian Trade Commissioner, speaking at a meeting of the Liverpool Rotary Club on May 23, dwelt on the recent economic developments in India and the organisation of trade information. He said that on the economic side of India, it was no longer right to talk of the "unchanging East." India was changing, and changing rapidly, economically, and the importance of that to this country lay not only in the fact that it was part of the British Empire, but that even before the war she was the seventh or eighth of the trading nations of the world, while outside of Europe she was only surpassed by the United States. Of the import trade of India, two-thirds went from this country, but, as regarded her export trade, England only took 25 per cent. of her products. Changes were taking place not only in the towns but even among the farmers, and out of the population of 315,000,000, 72 per cent. were engaged in agriculture. On the industrial side there was the same movement going on.

Budapest boot dealers have decided on a one-day strike as a protest against the fixing of maximum prices for boots.

LANCASHIRE COTTON.

An Unsettled Market.

(From Our Own Correspondent.)

Manchester, Wednesday.

The market has presented an unsettled appearance. Owing to the further restriction of output and the advance in wages, it has been difficult for buyers and sellers to fix a basis on which to do business. After protracted discussions, the employers and operatives have agreed to a rise in wages of 25 per cent. on list rates from June 10. Very varied ideas prevail as to the increased cost of production as a result of the shorter working hours and the higher payments to the workpeople. The market in all quarters has been distinctly dearer. Egyptian yarns may be said to be about 3d. a pound higher than ten days ago. The consumption of Egyptian cotton in Lancashire has recently increased. Crop reports are generally satisfactory. Mills in Bolton and district are exceedingly busy. Piece goods for Egypt have not attracted much attention. There has been an inclination on the part of shippers to hold aloof until better advices are received as to clearances abroad. More resales of cloth bought for Egypt have been reported in the market. India has not given much support, operations being confined to small lots, chiefly in bleaching descriptions. Advices relating to the monsoon are awaited with considerable interest. China remains very dull. Numerous manufacturers have scarcely known what to quote, but when in doubt have been on the top side. A smart advance has occurred in American yarn prices. Business to a considerable extent has been blocked, partly owing to the small supplies available. Export trade in yarns has been at a low ebb.

OVERSEAS TRADE.

An admirable piece of work has been done in the compilation of "The Register of Overseas Buyers," now published for the first time by Messrs. Bemrose and Sons, Ltd., of London and Derby (price £1 1s.). Here is, to quote the sub-title of the book, a tabulated list of buyers, agents, and importers in the Dominions and in the Allied and neutral countries, with information on customs, tariffs, imports, and exports. It is admitted on every hand that the ravages of war have to be made good by increased production, but increased production requires larger markets, and these must be sought overseas. Producers who have already catered for foreign markets must widen their operations; those who have not felt the need of entering this market must begin to pay attention to it. For both the "Register" will be of the greatest utility. The war has expanded some businesses beyond all recognition: the village bicycle shop has become the nucleus of a big industry. These cannot revert to their former insignificant existences, and may not be content, even if they are able, to rely upon the middleman. By means of the pages of the "Register" they can explore overseas fields for themselves "right now," as our American friends would say, and without the least difficulty can get into touch with an agent in Peking and Valparaiso, in New York and Colombo. Before they do this, however, it is to be hoped that they will mark, learn, and inwardly digest the excellent introduction to the book, which is a most informative guide to all interested in overseas trade. A point that is very rightly emphasised is the necessity of getting to work *now*. A number of firms feel that there is nothing to be done because they are full up with Government work, or would have difficulty in shipping orders. But as the main purpose is to cater for wider markets it is necessary to familiarise those markets with the existence of British goods, and it is certainly not a shrewd policy to adopt to wait until those who are now potential purchasers have made up their minds to place their orders elsewhere. We cordially endorse, therefore, the dictum of the "Register": "The opportunity is now."

INDIA'S TRADE IN APRIL.

Indian trade returns for April, 1918 (says Reuter), show an increase in imports of £2,307,000 and a decrease in exports of £506,000 as compared with April, 1917.

COMPANY NOTES & REPORTS

The report of the Suez Canal Company for 1917 states that the general maritime movement in 1917 was 2,353 transits, representing a net total tonnage of 8,368,918, diminution of 757 transits and 3,956,429 tons or 32.10 per cent, as against 1916, and a diminution of 2,732 passages and 11,664,966 tons, or 58.23 per cent., as against the last normal year, 1913. During 1917 the special movement of Government ships and freighters, whose dues were paid by the Governments, represented 1,402 transits, or 4,607,279 tons. This is more than half the general traffic of the year, being 55.05 per cent. The raising of dues during 1917 has to some extent compensated for the effects of diminished traffic. The directors have declared the following dividends for 1917:—Capital shares, gross francs 77.108, net francs 55; Usufruct shares, gross francs 52.103, net francs 42.630; Founders' shares gross francs 29.356, net francs 24,794.

The report for 1917 of the Travancore Tea Company shows that the credit of profit and loss, including balance brought forward, and after providing for directors' fees, Debenture charges, etc., is £24,920. A final dividend is proposed of 5 per cent. on Ordinary shares, making 15 per cent., which will absorb £2,335; Debenture sinking fund, £2,000; carry forward, £9,508. The difficulty of obtaining freight compelled the directors to restrict the crop that otherwise would have been harvested, and which fell to 2,136,414 lb., as compared with 2,411,489 lb. previous year. The yield was equivalent to 420 lb. per acre, against 514 lb. and 642 lb. during two previous years, and the average price realised was 7.55d. per lb., as compared with 8.13d.

The report of the Balmoral (Ceylon) Estates Company for 1917 states that tea crop was 844,874 lb. Cost per lb. f.o.b. Colombo 33.71 cents, net average price per lb. 10.32d. The Balmoral group gave a gross working profit of £8,932, equal to £15 12s. 4d. per acre, against £8,774, equal to £15 6s. 9d. per acre last season. The Sandringham group gave a profit of £7.253, equal to £13 13s. 2d. per acre, against £5,832, equal to £10 19s. 8d. per acre. Last year the total yield of tea was 818,219 lb., being at the rate of 741 lb. per acre all round; the cost of production was 34.23 cents per lb. f.o.b. Colombo, and the net average price for the whole crop 9.96d. per lb. The net profit amounted to £15,489, and after adding interest and £3.523 brought forward, less excess profits duty, 1916, £335, the total is £19,214. It is proposed to pay a final dividend of 11 per cent. on ordinary shares, making 21 per cent. for the year, and to carry forward, subject to excess profits duty, £5,872.

Dividends, Payments, etc.

The Upper India Couper Paper Mills Co., Ltd., of Lucknow, paid a 6 per cent. dividend and a 62 per cent. bonus per annum on March 30.

The Bank of England announces the numbers of 431 Four per Cent. Egyptian Government Irrigation Trust Certificates which have been drawn for redemption on July 1, 1918, when interest thereon will cease.

From to-day the registered office of the Eastern Assam Company will be at 2, East India Avenue, Leadenhall Street, E.C.3.

An interim dividend of 1s. per share, less tax, to be paid on June 24, has been declared by the Hyderabad (Deccan) Company.

The directors of the Imperial Bank of Persia announce an interim dividend for the half-year ended March 20 at 3s. per share, free of tax, payable on and after 18th proximo.

The register of the Bengal-Nagpur Railway will be closed from June 6 to June 29 inclusive. Warrants will be posted July 1.

Oil Outputs.

Baku Russian.—Week ended May 11, 50,300 poods.

Anglo-Egyptian Oilfields.—Production for the week ended May 19:—Gemsah, 22 tons (against 21 tons); Hurghada, 5,032 tons (against 4,632 tons). In addition to this, it has been found that the past production of one of the big wells in Hurghada has been under-estimated to the extent of 5,000 tons.

NEWS FROM ALL SOURCES.

The *Sudan Government Gazette* of April 7 contains a copy of the "Royalty on Sakaran Order, 1918," which provides that on and after May 1 a royalty shall be collected on sakaran in whatever form it is exported at the rate of 10 per cent. *ad valorem*.

The terms of the economic union between Germany and Austria-Hungary are reported to include the adoption of the mark as the currency of the Dual Monarchy.

A paper by Sir Dinshaw Wacha on "The Cotton Mill Industry of India," which was to have been read this week before the Royal Society of Arts, has been unavoidably postponed to a later date.

The current issue of the "Board of Trade Journal" contains a list of companies, firms, or individuals to whom licences under the Non-Ferrous Metals Act have been granted by the Board of Trade.

ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Street, Wednesday.

In the early part of the week a fair amount of business continued to be done, and prices were very firm; but during the last day or two the renewal of the German offensive on the Western Front has made business much quieter. The demand for Egyptian Government stocks has continued uninterruptedly, and there is a further rise to be recorded this week of 1½ points in Unifieds to 89, and half a point in the 3½ per cent. preferences to 75. A fair amount of business has taken place in Unifieds, but that done in the 3½ per cent. preferences has been exceedingly small. Some business has been done in City of Alexandria bonds round the current level of 81.

In bank shares a fairly large business has been carried through in Nationals, chiefly at 17¼, at which price there are still buyers, and the closing quotation of 17 5-16 shows a reduction of 1-16 from last week's price. In Agriculturals some business has been done round the current level. Agricultural preferences have risen a further 3-32 to 7¼, but practically no business has resulted owing to the scarcity of sellers. Anglo-Egyptian banks have again improved 5-16 to 16, but the demand has slackened, and there are at the close some sellers about at the advanced price.

In land shares Aboukirs have improved 9d. to 21s. 6d. on some well-informed buying. Delta Lands are 3d. lower at 12s. 9d., and Foreign Trusts are fractionally easier at 11s. 7½d. New Egyptians are 3d. down at 17s. 3d., and Sidi Salems have receded 3-32 to 2⅛, after having changed hands freely some days ago at 2¼. Union Foncières have been a good spot, and are 1-32 higher at 2 31-32.

In miscellaneous shares Markets have improved 6d. to 26s. 6d. on the better receipts, and Khedivial Mails have jumped 1s. 6d. to 37s. 6d. in sympathy with the general improvement in shipping securities—which are expected to benefit from the new Blue Book Rates shortly to be announced.

In Greek securities the tone continues strong, with many buyers, and stock very scarce. Rentes are a further ½ higher at 49, and the 1890, 1910, and 1914 loans are all one point higher at 61, 60, and 75 respectively. The 1902 loan has improved 1½ to 64, and there has been a jump of 4 points in Fundings to 60, at which price some business was done. Amongst the banks, both Bank of Athens and Ionian Banks are in demand round current levels, and some business has again been done in Piræus Athens 4½ per cent. bonds round 70½.

THE

GENERAL ANGLO-SERBIAN INDUSTRIAL & FINANCIAL COMPANY, LIMITED,

106, Bishopsgate, London, E.C.2

The Company has been formed to promote British Trade and Industry in SERBIA and other BALKAN STATES.

The Company is a Promoting Company, and is prepared to consider any proposals for the Financing and carrying on of any business in the above countries.

Agents in ROME, and as soon as circumstances will allow Branches will be opened in SERBIA and other BALKAN STATES.

Correspondence is invited from those interested in SERBIA and the BALKAN STATES, or contemplating business with these countries when communication is restored.

Annual Subscription, £1; postage, 2s. 2d. (inland), 4s. 4d. (abroad).

NOTES OF THE WEEK.

Events in the Macedonian theatre have developed along the lines anticipated in these columns last week, when the suggestion was made that the activities of the Italian and French troops on the western section of the line might shortly give the Greeks their opportunity for measuring their strength with that of the Bulgarians. On May 30, supported by French artillery, the Greek Army attacked the very strong enemy positions of the Skra di Legen, south of Huma and eleven miles west of the Vardar. According to the official report, all their objectives along a front of nearly eight miles were reached in a single rush. The enemy counter-attacked with considerable determination and under cover of strong artillery fire, but were at every point repulsed, and as the result of two days' operations they left between 1,700 and 1,800 prisoners in the hands of the Greeks.

The point chosen for the attack lies on the west side of the Vardar Valley, and will threaten the Bulgarian position at Ghevgeli, if the Allies are able to continue the success of the first two days. While the Greeks were delivering the main blow, British troops to the east and French troops on the west were also engaging the enemy's attention, and the Macedonian front became more active than it has been for many months. Not the least gratifying feature of the incident is the proof it has afforded that the Greek Army has made good. Competent observers have maintained all along that the reorganised Greek infantry left nothing to be desired. Their first real test has confirmed this opinion, and it was probably no mere act of courtesy that prompted the French Commander-in-Chief in Macedonia, after watching the engagement, to telegraph his congratulations to M. Venizelos. He spoke of the method and discipline that the Greeks had known how to combine in their operations, and suggested that the whole of Greece had good cause to be filled with pride over "a very fine war operation."

It is to be hoped that the initial success will be followed up, as it comes at a particularly opportune moment in the history of the Central Alliance. As far as can be judged, the attempt to extend the Austro-German Union to Bulgaria has failed; but Austria-Hungary cannot look back, and the process of regulating the absorption of the Dual Monarchy by her domineering partner is now being carried through in detail. With this object in view, Baron Burian, the new Austro-Hungarian Foreign Minister, is shortly to pay a visit to Berlin, when it may be expected that the last rivets of the contract will be driven. Bulgaria must necessarily be an interested spectator of the development of a pact which she has been invited to join, and the more she sees Austria-Hungary surrendering her independence, the greater will be her satisfaction over the instinct which prompted her to take as much as she could from Germany and to give as little as possible in return.

With Austria-Hungary virtually a German province, however, and Turkey wholly in Germany's grip, the position of Bulgaria, in so far as she desires to lead an independent existence, is by no means satisfactory. She will be tempted to attribute it to her lucky star that all the events which are calculated to clarify the situation are taking place simultaneously. The revelation of the real aims of German militarism in Russia and Mid-Asia, the absorption of Austria-Hungary, and the final test of Germany's power on the Western front are all important factors for Bulgaria. If Germany emerges successful from the last, the first two prove that Bulgaria must accept the inevitable and make the best of German domination. On the other hand, if Germany should fail in the West, her policy in regard to Russia and Austria-Hungary affords a strong warning to Bulgaria that her one hope of salvation lies in extricating herself from the grasp of the German octopus. Any military pressure brought upon her at the same time by the Allies will doubtless assist her in arriving at the only possible solution of her difficulty.

Another development not unconnected with Austria-Hungary's subjection to Germany is that the United States Government has abandoned any hope it may have entertained of being able to detach the Dual Monarchy from the Central Alliance. It will be remembered that at first President Wilson did not include Austria in his declaration of war against Germany; further, he was for a long time careful not to associate himself with the policy of *Austria delenda est*. In laying down last January the fourteen conditions on

Digitized by Google

which peace could be attained, he was not prepared to go farther than the stipulation that "the peoples of Austria-Hungary, whose place among the nations we wish to see safeguarded and assured, should be accorded the first opportunity of autonomous development." Events in the Dual Monarchy and the proceedings of the Congress of Opposed Nationalities of Austria-Hungary held in Rome have led to a fuller appreciation of the position, with the result that it is now officially announced that the nationalistic aspirations of the Czecho-Slovaks and Jugoslavs for freedom have the earnest sympathy of the United States Government.

It is of no small gain to the Allied cause to have the United States falling into line on this point. President Wilson a year ago had satisfied himself of the major guilt of Germany in regard to the precipitation of the war, and felt compelled to give Austria-Hungary an opportunity to break away from her sinister alliance. The idea, however, predicated an attitude of mind at the Ballplatz which did not exist, but which, if it had existed, would have prevented the outbreak of the war. Austria's treatment of her subject nationalities was too interwoven with her designs on the Balkans, which in turn formed an important part of Germany's scheme for world-domination, to make it possible that she should forgo those designs or treat her nationalities better, while Germany's power over her remained. The effect of the war has been to link the two Central Powers more closely together than ever, and there can be no peace for the world unless and until the nucleus of strength that Austria-Hungary brought to Germany by means of a population of between twenty and thirty millions unwillingly subjected to her yoke has been destroyed.

The Governments of Great Britain, France, and Italy have lost no time in taking note of the modification of the United States' views. At a meeting held at Versailles on June 3 in connection with the session of the Supreme War Council the Prime Ministers of the three countries placed on record that "the Allied Governments have noted with pleasure the declaration made by the Secretary of State of the United States Government, and desire to associate themselves in an expression of earnest sympathy for the nationalistic aspirations towards freedom of the Czecho-Slovak and Jugoslav peoples." The adherence of the Italian Government to this declaration puts the seal on the action taken in connection with the Rome congress of the Oppressed Nationalities of Austria-Hungary.

The intensity of the feeling among the oppressed nationalities has been shown unmistakably during the last few months, when in spite of the power of suppression that the war has placed in the hands of the authorities these unfortunate peoples have contrived to force their grievances upon the attention of the Government. There can be no doubt that the understanding reached between Italy and the representatives of the Jugoslavs outside Austro-Hungarian jurisdiction has been regarded by those still under Hapsburg domination as materially strengthening their position. Disturbances in Bohemia and other parts of the Monarchy are now almost continuous, but even more significant, and perhaps more embarrassing to the Vienna Government, is the constitutional challenge that the Czecho-Slovaks and Jugoslavs have thrown down. The Emperor Carl's inclinations, it is believed, would have led him to meet these people in a more or less friendly spirit; but his efforts to dissociate himself from German influence have failed, and the struggle within the Monarchy must continue until the nationalistic aspirations of the victims of Austro-Hungarian misrule have been realised. Certainly the struggle of these peoples for liberty has been on a heroic scale.

The death of Mar Shimun, Catholicos or Patriarch of the Assyrian Christians (Western Church), who is reported to have been killed by the Turks, adds another to the list of those who have been sacrificed by the Bolshevik defection from the Alliance. Mar Shimun's mountaineers, as is recorded on another page, have put up a gallant fight against the enemy during the last two or three years; but left in the lurch by the withdrawal of the Russian troops, they are rapidly being overwhelmed by the Turks. Their one hope of safety lies in the inaccessibility of their mountains; but once before in the war the problem of supplies has driven them to take refuge in Persia. This time, it is to be feared, they will have been cut off from this avenue of escape.

As recently as last October, it is stated, these mountaineers had penetrated to a point on the Zab River within fifty miles of Mosul. If they had been able to maintain their positions, and if General Marshall had continued his advance along the Kifri-Mosul road at the rate which took his forces to Altun Keupri, the Assyrians could have looked for protection from the south. But in the district of Salmas and Urumia they are far removed from effective assistance. A Turkish *communiqué* announcing the re-occupation of Kerkuk indicates that the general situation in this part of the world does not justify the throwing forward of a relatively small force any considerable distance ahead of the main army. To this extent the news runs counter to the expectations formed a little while ago of the prospects of the Mesopotamian Expedition, and it will be more satisfactory when further light can be thrown upon the operations in this region.

Busy men who are endeavouring to follow the course of political and constitutional developments in India will be grateful for the latest cabled news, which, besides giving a substantial amount of information, furnishes some convenient phrases as aids to the overloaded memory. The problems in hand are not, of course, capable of solution by phrase alone, but it becomes easier to carry them in the head when we read of a "tripartite scheme," with its branches of constitutional reform, extension of local self-government, and "Indianisation of the services," and, as everyone knows, classification and labelling constitute a necessary, if subordinate, part of any scientific undertaking. We may hope from the appearance of these phrases that the preliminary stage of loose rhetoric is over, and that energies are now being directed towards the definite task of reconstruction.

Naturally we have as yet no news of actual progress in the direction of constitutional reform, the branch of the scheme which remains in the hands of Mr. Montagu. We have been told that proposals have been formulated by him in consultation with the Viceroy, but we have also been told that those proposals have to be considered by the Cabinet; and since it is difficult to see how the Cabinet can find time for this just now, we must make up our minds to wait. In the second branch somewhat greater progress has been made. The Resolution issued by the Government of India, no doubt with Mr. Montagu's approval, clearly foreshadows an important extension of the electorate and a delegation of the power of the purse, two measures which, as we have before insisted, are indispensable, though they have hitherto possessed little attraction for Indian politicians. Some provision has thus been actually made for the foundations on which the new Constitution must ultimately be based.

The third branch of the scheme—now described as the Indianisation of the services—carries us back to the Report of the Public Services Commission, a painstaking, and, to our mind, on the whole a reasonable production, but unquestionably *infelix opportunitate*. Last year the politicians affected to treat this issue as dead, but recent debates in Council have given abundant proofs of its vitality, and we suspect that it will retain its interest for many years to come. The whole subject bristles with difficulties of detail, and would suffice to tax the energies of a Government with nothing else to do; it has to be handled in the stress of a great volume of more urgent work, and the most that can be hoped for is that the departments will succeed in dealing with it in a reasonable time, and without making an unusual quantity of really serious mistakes.

Digitized by Google

Meanwhile, people in this country are talking just now of a danger which threatens the efficiency of the Indian administration more immediately than any impending changes in the methods of recruiting its personnel. To put the matter somewhat coarsely, the Services are getting thoroughly stale. Their cadres were dangerously low even in time of peace; the "leave reserves" have practically been absorbed in the Army; ordinary furlough has for some years been unobtainable, and all over India men are keeping, or being kept, at their posts when a long rest would be beneficial not merely to themselves, but to the work which they are trying to do—work which has at the same time increased enormously alike in volume, in complexity, and in importance.

Anxiety on this score has undoubtedly been increased of late by a series of announcements of casualties among senior officers, men who would in the ordinary course have taken furlough a year or two ago, but who remained at their posts until the end. Such occurrences, coming as they have in rapid succession, tend naturally to produce an exaggerated sense of danger, but at the same time it must be remembered that the evil is cumulative, and that the risk will increase steadily as time goes on. There is unfortunately no immediate remedy; the war has first to be won, and until that task has been accomplished the increasing strain has simply to be borne; but it is well that the rest of the Empire should realise the position in which the Indian Services stand. In England the departments expand almost as rapidly as the work; in India the staff shrinks while the burden gains in weight.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, May 20.

The time has now arrived when there is a general movement amongst the various communities towards the sea. This year the congestion at Alexandria will possibly not be so great, as permission is being granted to residents and their families to proceed to Port Said, which, for all practical purposes, was closed last year. The Residency have already transferred to Ramleh, to the Villa Zervudachi, which they occupied last year. His Highness the Sultan will proceed officially to Alexandria for the summer at the end of this week with the Ministers, and at about the same time the staff of the various departments will take up their duties at the Government's offices at Bulkeley.

The Wheat Question.

The cereal situation has developed during the past month in a serious manner. As reported at the time, the Supplies Control Board fixed prices for wheat for every category, from the cultivator to the final retailer. These prices came into effect on May 1, but on that date scarcely any wheat or flour was available in Cairo, although a very large proportion of the crop was known to have been harvested. The Supplies Control Board took the matter in hand at once, and arranged for a delegation of Egyptian wholesale merchants to go to the provinces with the Inspector-General of Agriculture, with a view to securing the requisite quantities of wheat. No satisfactory arrangement could be come to, however, and it was eventually decided, since it was evident that speculators were concealing and withholding wheat and flour from the market, that the Ministry of Agriculture should, through its Inspectors, secure consignments of new wheat and sell at wholesale tariff rates to millers, who would undertake to grind the wheat at once and sell the resultant flour to retailers and consumers at tariff retail prices, to bakers who would convert it into bread without delay, and to retailers who would sell to the consumers at the tariff rates. Special stores have been taken in the centre of Cairo, and the distribution has already started. In the meantime, with a view to meeting the urgent needs of the poorer classes, arrangements have been made for the immediate distribution of certain stocks of imported flour, which the British Military Authorities had placed at the disposal of the Egyptian Government for the express purpose of alleviating distress.

Government intervention has been rendered necessary solely by the inexcusable attitude of the more important wholesale merchants and cultivators, who by holding up their stocks hoped to bring about a further increase in prices. There is no just ground for complaint at the figures fixed by the Supplies Control Board, for the price of most cereals is now treble what it was prior to the war, and so compares favourably with the price fixed for cotton, which is about double the pre-war maximum. The Supplies Control Board has quite rightly declined to have its hands forced, and has issued a notice to the effect that the prices now fixed will in no case be raised until next year's crop comes up for examination. The Board is determined to make use of all the powers conferred on it under the martial law regime, and it is generally considered that this show of determination will speedily have for effect a return to normal in so far as the local grain market is concerned.

The Cotton Purchase Commission.

The Commission instituted for the handling of the cotton crop which the British and Egyptian Governments have arranged to purchase is already preparing thus early for its work, even though it will not start operations until September 1. The Hon. Ronald Lindsay, its president, who has been unfortunately detained in England, is shortly expected to arrive, and Mr. J. Marshall, Public Custodian, has relinquished that post in order to assist the Commission. One of the great difficulties with which that body will have to contend will undoubtedly be the grading of cotton offered to it by the cultivators. An advisory Sub-Commission of cultivators and landowners is, it is understood, in course of constitution for the purpose of assisting the Commission in this respect.

The Nile Flood.

The Nile levels continue high. Double the amount of water is being discharged through the Assuan Dam as compared with the volume passed down during the corresponding period last year. The satisfactory feature is that water-lifting has been reduced to a bare minimum, thus effecting an appreciable reduction in the fuel requirements of the agricultural districts, though at the same time it is very sad that so much valuable water should go out to sea without it being possible under present conditions to make use of it for agricultural purposes.

SUDAN NOTES.

(From Our Correspondent.)

Khartoum, May 19.

The Governor-General's Tour.

The Governor-General and Sirdar has returned from a successful trip to the South, during which he visited the Sobat and went as far as Rejaf. He went by motor-car to Yei and examined the Libogo road, which may prove to be the outlet of the Haut Welle country. On May 20 he proceeds to Erkowit.

Weather and the Nile.

Local experts on weather assert that there is to be early rain and a great deal of it. The Nile has given some indication by rising slightly rather earlier than usual. The White Nile is still unusually high, and the fear of an exceptional flood seems to be well founded.

A report from the Sobat describes a curious mortality amongst fish. For days the river was full of dead fish, and the natives of the district, who were suffering from hunger owing to the effects of excessive flood last year, were enabled to satisfy their hunger in a manner which suits them, however unpleasant to European ideas. Unfortunately, the river then dropped, and there was left on the banks a mass of putrescent fish, which made life extremely unpleasant. No explanation of this phenomenon is at present forthcoming.

Personalia.

Mr. R. E. More, Governor of Khartoum, went North on leave recently. He had an attack of pleurisy and was advised to take a holiday.

Colonel E. E. Bernard, C.M.G., Financial Secretary of the Sudan Government, is expected to leave for the North for a change next week. His family has preceded him.

ATHENS LETTER.

(From Our Own Correspondent.)

Athens, May 19.

Lady Granville's Bazaar.

The British Legation was last Sunday in a state of unusual animation. Countess Granville some little time ago conceived the idea of raising a fund for the assistance of children of mobilised Greeks, and with the help of several ladies organised a bazaar, which proved an unqualified success. As soon as Lady Granville's project became known contributions began to flow in, and the solicitude of the British Minister and the Countess for the welfare of this country and their great popularity alike found recognition in the magnanimous response of all classes of the people here. The Legation was turned upside down for the occasion, and every inch of available space was utilised, either for stalls, on which attractive articles were on sale, or for means of entertaining the visitors. The public were admitted soon after four, and there was a continuous stream of people entering and leaving until midnight. Between six and seven the crowd was so great that admission had to be suspended for a short time, and many, after long waiting, went away disappointed. A military band provided good music, charming young ladies in becoming costumes served refreshments on a prettily-decorated terrace, in another part of the building a Punch and Judy show kept the children amused, and the long line of stalls laden with the numerous gifts of useful articles attracted willing purchasers at all times. In the evening several ladies and gentlemen gave various dances. King Alexander honoured the entertainment with his presence in the evening, whilst M. Venizelos and other Ministers were present before dinner. The total admissions exceeded three thousand.

It is expected that the proceeds of the entertainment and contributions will amount to nearly £10,000—a result which must be highly gratifying to Lady Granville, to whom the Greek Government have communicated their thanks for the care and untiring energy she has shown in this most useful work of charity.

Athens and the War.

No events of any importance have occurred in Athens of late. The economic position is distinctly better.

The mobilisation of further classes continues without incident, and the first wounded from the Macedonian front, who arrived a few days ago, received a very warm reception, M. Venizelos and others visiting the hospital ship when it reached port.

M. Benakis has offered a prize of £200 to those Greek soldiers who first capture a Bulgarian flag or cannon, and his example has been followed by other enthusiasts for kindred achievements against the Bulgars.

MOROCCO NOTES.

(From Our Own Correspondent.)

Tangier, May 20.

German Intrigue.

Letters received lately from England show that the recent exposure in *The Times* of German intrigues in Morocco has aroused much interest in England, and, among those who have friends in Morocco, some little anxiety.

German activity in this country has doubtless thrown considerable strain on the authorities responsible for its administration, but it has certainly failed to trouble the peace of mind of the majority of European residents, who do not think that, failing a very great and unlikely change in the European situation, it will have any great effect near the port, or, indeed, in any of the thoroughly settled country.

The Sugar Supplies.

A matter which is much more discussed in the French zone is the uncertainty as to Morocco's sugar supplies, practically all of which now come from France. So far as Europeans are concerned, this would not have much importance; for Morocco has been very fortunate in having much better provision of sugar than most countries in Europe, and some restriction in its use would do no harm at all. The native sugar supply is, however, a very different matter. The drinking of green tea with mint and, the essential feature, almost as much sugar as the tea will dissolve, is a custom observed by all, from the highest to almost the lowest, and it plays so important a part in the daily life of the country that to interrupt the indulgence in it would be far more serious than suddenly to cut off in England all drinking, all smoking, and entertainments, either public or private. From the great Kaid in his Alhambra-like palace to the camel-drivers sitting beside their beasts in the thorn-surrounded enclosures where caravans pass the night in the country, sugar is indispensable.

France has most wisely decided that nothing must be allowed to show that the war has in any way taxed her resources, or to furnish an instrument which agitators might use to cause unrest. Though she herself might go short of sugar, Morocco must not, and so far the supply has been maintained, in the circumstances, with wonderful regularity.

Lately, difficulties of fuel and transport have threatened to make the arrivals, though not the ultimate supply, more uncertain, and it has been thought prudent to issue regulations to steady the distribution and secure that the amount available shall be used to the best effect. As sugar forms so great a part of the imports of the French zone—more than a million and a-half pounds in value in 1914—such regulations have a great effect on the business life of the country, and many doubts are expressed as to whether the best system has yet been found.

PROPOSED SCHOOL OF ARCHÆOLOGY.

Upon the suggestion of the Palestine Exploration Fund, the British Academy has constituted an Organizing Committee with the object of founding a British School of Archæology at Jerusalem. A general committee will be formed later.

The Organizing Committee points out that the Palestine Exploration Fund, which achieved the great survey of Western Palestine, was for thirty-five years the only society in the field, and was the model and inspiration of other European societies engaged in Palestinian research, and that while American, French, and German schools of archæology existed in Jerusalem before the war, this country possessed no such institution. The proposed school would devote itself, both by excavation and surveying, to the furtherance of Palestinian archæology in all its branches. In addition to Hebrew and Jewish sites and antiquities, the school would include within its scope the Canaanite, Græco-Roman, Byzantine, Arab, and Mediæval periods.

An essential part of the scheme is that the school should be not only an excavating body, but also a training school for archæologists. Mesopotamia is too far away to possess a similar school of its own, and one or two of the more promising students at Jerusalem, after acquiring experience in Palestine, could be transferred there. The school will be British in the widest sense of the term, and will welcome students from all parts of the Empire.

The Palestine Exploration Fund has offered to conduct its future excavations in co-operation with the school, and further funds for excavation would be available from the Schweich Fund of the British Academy.

The Organizing Committee invites contributions towards an endowment fund. Though a special building may eventually become necessary, it is proposed in the first instance to rent a suitable building at Jerusalem for the purposes of the school. This, in addition to the director's rooms and an archæological library, should provide accommodation for at least five students. For the rent and upkeep of the building, the director's salary, and the cost of surveying in Palestine (apart from excavations) it is estimated that an annual income of at least £1,000 is necessary. A minimum endowment fund of £20,000 is therefore asked for.

Mr. Walter Morrison and Mr. Robert Mond have started the endowment fund by each contributing a donation of £1,000. Mr. Robert Mond will act as treasurer of the fund, and contributions should be made payable to him, crossed "a/c British School of Archæology at Jerusalem." All communications should be addressed to the Honorary Secretary, Professor I. Gollancz, British Academy, Burlington House, Piccadilly, W.

The following members of the Organizing Committee, in addition to whom Sir George Adam Smith and Mr. D. G. Hogarth, who are abroad, have been nominated, while the Archbishop of Canterbury, President of the Palestine Exploration Fund, has also consented to serve, sign the appeal:—F. G. Kenyon (President of the British Academy), Chairman; Robert Mond (Hon. Treasurer), Bryce, Arthur Cowley, J. D. Grace, Arthur Evans, Ernest A. Gardner, Percy Gardner, G. Buchanan Gray, A. C. Headlam, G. F. Hill, M. R. James, Leonard W. King, R. A. S. Macalister, D. S. Margoliouth, G. Montefiore, W. Morrison, W. M. Flinders Petrie, Reay, Anthony de Rothschild, I. Gollancz, Hon. Secretary.

PALESTINE EXPLORATION FUND.

The Annual General Meeting will be held (for business purposes only) at the Office of the Society, 2, Hinde Street, Manchester Square, London, W. 1, on Thursday, June 13th, at 4.30 p.m. There will be no Special Address.

THE NESTORIANS IN THE WAR.

(FROM A CORRESPONDENT.)

NEW YORK, April 10.

Death of Mar Shimun.

A telegram from Tabriz received by the State Department at Washington announces that Mar Shimun, head of the Assyrian [or Nestorian] Church, has been killed.

It was in 1903, when he was a boy of only sixteen, that Mar Shimun was chosen to become Catholicos, or Patriarch, in succession to his uncle, Ruwel (Reuben) Mar Shimun, who was then on the point of death; and he was consecrated Catholicos on April 12 of that year. Later he brilliantly justified the hopes set upon him. To all he showed the fine courtesy traditional in his family, and to his own people he was fatherly.

He was educated by native teachers and by members of the Mission established by Archbishop Benson of Canterbury at the patriarchal seat, Kudshanis, in Kurdistan. As the 138th Catholicos of the East, he maintained the ancient tradition: consecrated from birth to the service of God, like the Nazarites of old, he never ate meat in his life; and he was in every way a model to his people, who almost worshipped him.

Benjamin Mar Shimun was the eldest of five brothers. One of these, David, has been the leader of the Assyrian forces in holding the border against the Kurds; his son, brought up as a Nazarite, will, if approved by the people, in the ordinary course of events become the next Patriarch.

The late Bishop Collins of Gibraltar visited Mar Shimun in 1907, and was deeply impressed by the Patriarch and his people. He wrote: "The poorest Syrian of the mountains has preserved a national dignity, courage, and a freshness which are lovable."

The Assyrians.

Before the war the Assyrian Christians lived within a great triangle, extending from near Mosul on the Tigris northwards to Lake Van, thence south-westerly to the starting point, Mosul. Including 35,000 in Persia, they number altogether about 125,000 souls.

In January, 1915, the Turks captured the city of Urumia and held it till May. The defeat of Halil Bey at Salmas, Persia, in May made it possible for the Russians to relieve the Armenian city of Van and to re-enter Urumia. The next Turkish offensive, in June, was an attack, led by the Vali of Mosul, against the highlanders of Mar Shimun. The latter defended their narrow valley against the invaders with the utmost valour. But the Turks had with them some mountain artillery, so that they were able to batter down the resistance offered by the castles and churches; and at length the Assyrians were forced to abandon their valleys and to take refuge for three months in the fastnesses of almost inaccessible mountains. Here, amid the clouds, they preserved their freedom, but they ran short of supplies. With a handful of trusty warriors their brave Patriarch betook himself through untold perils to the Russian lines at Salmas, Persia, to secure assistance. The fall of Warsaw, however, had so weakened the Russians that for the moment they were unable to render effective aid; consequently Mar Shimun was forced in November, 1915, to lead his needy flock down to the plateaux of north-western Persia. They scattered throughout the plains of Salmas and Urumia; but here they did not find food enough to go round; and they also lacked houses and winter clothing. In those high altitudes, where snow is plentiful, their sufferings were intense, and within three months fifteen per cent. of the refugees had died of disease or of starvation.

In January, 1916, Mar Shimun visited the Grand Duke Nicholas, Commander-in-Chief of the Russian Army of the Caucasus, who received him with the honours due to the head of a Church and of a nationality. The Russians requested the Assyrian Highlanders to help defend the border against the Turks and Kurds. As late as October, 1917, the Assyrians held the Castle of Chal, only fifty miles from Mosul. But the withdrawal of the Russian forces has brought great disaster to the Assyrians, and thousands of women and children are threatened with extermination.

As early as 1915 America began to help feed and clothe 60,000 refugees in the plains of Urumia and Salmas. As the time went on conditions grew worse, and despite the systematic relief carried on under the auspices of the American Committee for Armenian and Syrian Relief, here in America, in raising of money and planting seed corn, the supply of foodstuffs in Persia is still inadequate; the last cablegram dispatches have brought reports of terrific famine and of an increasing death-rate from starvation.

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

Jews in Roumania. May 30.

Mr. KING asked whether the treaty of peace recently signed by Roumania guaranteed full and equal rights to Jews.

Lord R. CECIL: If the hon. member will read these treaty stipulations with care he will observe that the enfranchisement obtained for the Jews is of a most limited and conditional nature, and that the clauses have, in fact, been framed solely in order to give Germany an additional pretext for interfering in the internal affairs of Roumania. His Majesty's Government have the fullest sympathy with the cause of Jewish enfranchisement in Roumania and elsewhere; but it is to the full programme of liberation which the Roumanian Government had themselves adopted prior to this treaty, and not to this restricted scheme, that his Majesty's Government will adhere.

Prisoners in the Near East.

Mr. G. FABER asked the Prime Minister whether, in view of the treatment of our prisoners in Germany, the War Cabinet will forthwith endeavour to promote a direct exchange of prisoners, privates as well as officers and non-commissioned officers, with Germany, and also with Turkey and Bulgaria; and whether some high official can at once be appointed whose sole duty it will be to carry such exchange into effect as soon as possible, and meanwhile to ameliorate the lot of our prisoners as much as possible?

Mr. HOPE: The possibility of extending existing arrangements with Turkey and Bulgaria will, of course, be considered. As to the rest of the question, I would refer my hon. friend to the statement made by the Leader of the House.

Mr. HUME-WILLIAMS asked the hon. member for Sheffield (Central Division) whether, when British prisoners are sent back from Turkey, it will be arranged that at least one English doctor shall remain in each of the camps where prisoners are still interned?

Mr. MACPHERSON: My hon. friend has asked me to answer this question. Under the Berne Agreement of December last one British medical officer and five medical personnel of other ranks may be detained in Turkey per 1,000 British prisoners. The question of increasing the number, if found to be insufficient, is under consideration. It is hoped that the Turkish authorities will make a suitable distribution of this medical staff. The Netherlands Minister at Constantinople will doubtless include this among the many other points in which our interests are involved under the agreement.

Mr. HUME-WILLIAMS asked whether any of the 1,000 British prisoners recently agreed to be exchanged have yet started; if not, will he say how soon it is hoped they will be able to do so; and whether any of the camps in Turkey where prisoners are interned have been inspected since the Berne Agreement, and with what result?

Mr. J. HOPE: The Turkish Government have not yet given notice of the date upon which the 1,000 British invalid prisoners to be exchanged will be ready for embarkation; and I fear that in the most favourable circumstances it must be a considerable time before the first exchange takes place. It is unnecessary to add that his Majesty's Government have urged the Turkish Government to take the requisite measures at as early a date as possible. No inspections of internment camps in Turkey under the Berne Agreement have yet taken place, but a representative appointed by the Netherland Government to the Netherland Legation at Constantinople for this purpose left The Hague on the 24th inst., so that it may be hoped that the inspections will shortly begin.

Mr. HUME-WILLIAMS asked the Under-Secretary of State for War whether the present scale of living in Constantinople is such that officers have to pay £50 a month for the bare necessities of life; whether the present maximum payment to such officers is £25 a month—namely, £18 from the English and £7 from the Turkish Governments; and, if so, whether he will take immediate steps to see that the amount is increased?

Mr. FORSTER: After taking the best local advice obtainable, an amount was recently agreed upon to enable officers in Turkey to meet necessary expenses. At present we have no further

information to enable us to judge whether any revision is necessary.

Mr. HUME-WILLIAMS asked the Postmaster-General whether, if parcels for English prisoners in Turkey are to be sent to Alexandria for conveyance in ships destined to bring back such prisoners as are repatriated, he will arrange that such parcels shall be carried to Alexandria free of postage and of a greater weight than the present maximum, namely, 11 lbs.

Mr. PEASE: Arrangements have been made for the acceptance at post-offices of parcels for officer prisoners of war in Turkey for conveyance viâ Alexandria. Such parcels may contain only clothing, tobacco, and articles of a personal nature, but not food, and are accepted free of postage if they are addressed to the prisoner in care of the Commissioner, British Red Cross Society, Mark's Buildings, Alexandria. My right hon. friend regrets that it is not possible to accept parcels weighing over 11 lbs. for transmission by post; but he understands that such parcels, if sent to the Commissioner, British Red Cross Society, Alexandria, otherwise than by post, would be duly forwarded.

Italy and Roumania.

Mr. KING asked the Secretary of State for Foreign Affairs whether, having regard to the fact that all information affecting foreign policy was open to President Wilson, he has communicated to President Wilson the treaties made by the Allies with Italy and Roumania, respectively, on their entry into the war?

Lord R. CECIL: The reply is in the affirmative.

Mr. Montagu in India.

Mr. MONTAGU, Secretary for India, replying to questions put by Mr. Joynson-Hicks and Brigadier-General Page Croft concerning a letter of Sir Subramaniya Aiyer, K.C.I.E., to President Wilson grossly defamatory of British rule in India, said: The disgraceful letter is correctly described in the questions. Its impropriety is all the more inexcusable because of the position of the writer. I was amazed to read of its recent publication. But the assertions in the letter are too wild and baseless to require or receive notice from any responsible authority. No action has as yet been taken as regards the author, but I am in communication with the Viceroy on the subject.

Mr. MONTAGU, in reply to Mr. Joynson-Hicks, who asked if the right hon. gentleman would undertake to submit his proposals for the amendment of the Indian Government to Parliament in the form of a Bill, said the proposals of the Viceroy and himself were submitted to the Prime Minister, and embodied in a report which was now before the War Cabinet. The great pre-occupations of the War Cabinet at the present time had, however, made it impossible for them to come to a decision yet as to the course to be adopted. Ample opportunity would be afforded for considering the proposals which resulted from his mission to India. If the Government thought it right to give effect to them it would be necessary to introduce a Bill.

British Prisoners in Turkey. June 5.

Mr. J. F. HOPE (Lord of the Treasury), in a reply to Lieutenant-Colonel Sir F. Hall, said that the Netherlands Minister at Constantinople was authorised to increase considerably the money allowances to British prisoners of war in Turkey in case of necessity. As regards food, two months' supply for all prisoners, together with full supply of clothing for non-commissioned officers and men, were to be sent from Alexandria by the repatriation ships. Parcels containing clothing could be sent to officers in the same ships.

Reuter's correspondent at The Hague reports (June 5):—In accordance with the recently ratified Turco-British Agreement, several persons attached to the Dutch Legation in Constantinople have been instructed to visit British prisoners of war in Turkey with a view to promoting their interests. The camps in European Turkey will be visited by M. van Bommel, who is already attached to the Legation for prisoners of war service. The camps in Asia Minor will be visited by two officials temporarily attached to the Legation, namely, M. Mencen, who left for Constantinople on May 22, and M. van Tangeler, who is going to Constantinople on June 19.

PRESS ON THE NEAR EAST.

Congratulations to Greece.

The Times of June 4 welcomes the Greek success in a leading article. "The fine feat of arms accomplished by Greek forces on the Balkan front," it declares, "has not passed unnoticed in this country, even among the preoccupations of the grim struggle in France." After briefly recording the events of the fighting, as chronicled in the French official report, and quoting the Bulgarian report, "which cannot be suspected of exaggeration," the article concludes:—

In the words of General Guillaumat, the Commander-in-Chief of the Allied Forces in Macedonia, this success "must fill the whole of Greece with legitimate pride and still greater ardour for work and combat." To the Greek Prime Minister, M. Venizelos, it must afford, in particular, deep satisfaction, for it is thanks to him that the Hellenic Army is fighting for its own and the Allied cause. British pleasure at a gallant piece of work by our Greek Allies is no less keen than that of their French comrades-in-arms.

Refugees at Alexandria.

Mr. Leon Simon contributes to the *Zionist Review* an interesting account of the "Jewish Refugee Camps at Alexandria." There are now two of these camps, says the writer:—

There are now two camps—Shouna (so called because it is located in a *shouna* or warehouse hard by the quay), and Gabbari (once a quarantine station). The refugees number approximately 1,500, and are about equally divided between the two camps. These are all that remain of some 5,000 who have passed through the hands of the Refugee Administration. The rest have found work outside, and no longer need Government assistance. Those who remain are naturally the weakest from the economic point of view, for though conditions in the camps are much more than tolerable, and are certainly a great deal better than those to which many of the refugees were accustomed in the old times of Jerusalem, nobody would wish to stay in a refugee camp if he could earn support for himself and his family outside. But this remnant of the refugees is by no means unproductive. Many of the men obtain permits to go out and work during the day, paying a small fee to the Administration so as to prevent competition on unfair terms with local labour. A large number of women and girls are employed in the camps in making overalls for the army. And last, but not least, the boys are taught carpentering, and turn out folding chairs and tables for the Red Cross, thus not only supporting themselves and obtaining the means of remaining self-supporting when they grow up, but also contributing to the general welfare of the camps; for whatever profit the Administration makes by the sale of goods produced by the refugees is used for the benefit of the refugees themselves.

The camps, says Mr. Simon, present the appearance of contented communities, and the children in particular are very happy. There is the minimum possible disturbance of family life. Food rations are served out daily to each family, and the family may augment the rations by its own purchase.

The communal institutions include at each camp a Synagogue, a school, and baths (one hot bath a week is compulsory, at any rate for the children). Medical treatment is available at both camps, and at Gabbari there is a hospital which is a model of its kind. The sanitary arrangements are excellent, all things considered. The head of each family is responsile for the cleanliness of his own room, and is punished by a reduction of rations if he fails to keep it up to the standard. There has naturally been a great improvement in cleanliness and hygienic habits since the refugees first came.

All the refugees are anxious to get back to Palestine, though many of them came to that country from all parts of the world. Of the children we read:—

The schools, which were started by the Anglo-Jewish Association, provide instruction for nearly 600 boys and girls, from the age of three upwards. As at the Evelina de Rothschild school in Jerusalem, both Hebrew and English are used, but Hebrew remains the natural language of the children. Apart from the head-mistress, the teachers are all refugees. The children are evidently very happy at their work and their play. To the visitor they are the brightest part of the picture, because they direct one's thoughts, not to an unhappy past but to a hopeful future. In contemplating the camps as a whole one is torn by conflicting emotions—pity for the tragedy of the refugee's life, and thankfulness that these outcast members of an outcast people, who might have fared so infinitely worse, are well protected and cared for. But when one listens to the children's prattle there is no room for sadness: the mind leaps forward to the day when these little ones will do their part in the rebuilding of our national life. The *galuth* and the *geulah* here join hands.

The writer pays tribute to Mr. William Hornblower, the head of the Refugee Administration, of whom he writes:—"Had he been merely a first-rate administrator, he might have created an efficient but soulless machine to deal with the complicated problem presented by these waifs and strays. He is ever so much more than that. He has that sympathy and large heartedness which can prevent an instrument of relief from being merely a machine. One has only to see the way in which he is greeted by the refugees, and particularly the children, to realise that he has made himself a real father to them."

NEAR EAST BOOKSHELF.

"K OF K."*

JUNE 5, 1916.

This little shilling volume should be in the hands of every schoolmaster in the British Empire as an immediate text-book. We must not wait to educate the young generation; we must do it now. Take your "history and geography" class, Mr. Frank Fox's fifteen illustrations and four maps, and explain, in simple English, facts, dates and figures, the broad outlines of this great war. At the close of the booklet is "A Diary of Events," from August 3, 1914, to July 1, 1917. Faulty as this serviceable diary is, we will here use it as a peg on which to hang an appreciation of a certain entry, which must appeal to readers of THE NEAR EAST this week: "1916. *June 5, General Lord Kitchener drowned.*" The opportunity of this review invites us to step aside, from our strict business, to commemorate the second anniversary of the tragedy of the Orkneys. Kitchener of Khartoum will live immemorially when lesser men are forgotten. The magic modesty of a plain soldier whose sword-earned reputation summoned mushrooms of valour in a single dawn from the Heaven-befriended fields of the British Empire, shall never pass away. It is his and our most splendid guerdon that civilisation looks upon the British Empire as the only modest empire known to history. K. of K. was modest in his life and tragically modest in his death. It were unbefitting that any issue of THE NEAR EAST should, on an anniversary of his death, omit a tribute. So long as the East looks to England as the fount of justice, the waterfall of freedom, the river of fair play, so long shall history shed a tear over the weird water-depths of the Orkneys. "The British Army at War" is a little monument to Kitchener of Khartoum.

THE ECLIPSE OF RUSSIA.†

In three pregnant sentences Dr. Dillon sums up the situation in Russia. "In the Tsardom, whenever the political temperature grew too hot, the custom had for ages been to break the thermometer, not on any account to let in the cool air. . . . A certain polish of kindliness marked the Tsar's casual intercourse with people, but it is to be feared that it resembled the glitter of the gilt cross on the mouldering coffin. . . . The curse of Russia had from the beginning of her history been the absence of effective moral restraints and the operation of mechanical substitutes." The verdict is absolutely justified to-day. Whether the Tsardom was doomed before Nicholas II. came to the throne is, of course, a matter for speculation. Dr. Dillon holds that it was. What is scarcely a matter for doubt is that the weakness and folly of the Emperor hastened its doom. It is not likely, in his opinion, to be re-established; nor does he seem very hopeful of the future reunion of Russia as a powerful State. We are bound to say that Dr. Dillon is one of the few prophets whose predictions usually come true.

The author writes as a defender of Count de Witte, a plot to assassinate whom during the time he was Prime Minister the Tsar connived at. Time has scarcely justified Witte's policy in the Far East, or in the commercial treaty with Germany which is still in force; but neither has it justified the honest reaction of Pobiedonostoff, or the Cadets, and in the long run we doubt if it will justify Bolshevism, which has been described accurately as an inverted Tsardom. The Tsardom itself was an inefficient predatory system, just as Kaiserdom is an efficient predatory system; the difference in efficiency explains why one survives while the other dies.

This book, as its title implies, deals mainly with Russia, but it throws important light on Near Eastern questions generally. Dr. Dillon leaves no doubt that the Tsar abandoned the Armenians in 1894, and he divulges an amazing Russian plot to seize the heights of the Bosphorus in 1896, and so to capture Constantinople before the other Powers could intervene. The fact that the movement would certainly have precipitated a European war seems to have weighed with him as little as with William II. The origin of the Hague Conference a year or two later, as he points out, was due, not to any high-souled desire for peace, such as Western credulity attributed to the Tsar, but to the difficulty of keeping up in the race of artillery armament. No wonder the Germans, who must have discovered this illuminating motive, interpreted our offer of a naval holiday as an indication of a similar difficulty. They know better now.

On the Anglo-Russian agreement Dr. Dillon is singularly interesting. He worried for a rapprochement with England for some years before it actually came to pass. As regards the agreement itself, he quotes Witte as saying: "Personally, I should be disposed to give Great Britain considerably more than her demands; I would certainly make large concessions in Persia," and, Dr. Dillon adds:—

The same or similar language was addressed to the British Ambassador by the Tsar's Minister of Foreign Affairs, M. Izvolsky, when the scheme finally came up for discussion, but the British Government, on behalf of the Indian Government, declined to take all that Russia was willing to offer. This sounds incredible, but it is true. They might have had Ispahan in the British sphere of influence. I do not mention this refusal by way of a reproach. What is, however, blameworthy is the fact that a couple of years after the convention was ratified the British Government asked for some of the things which it had rejected. And it received a refusal.

We could have done with more of this curious story than Dr. Dillon packs away into the obscure footnote from which we have rescued it. What exactly happened between 1907 and 1909—or was it in effect 1910 when we suggested the revision? Lord Morley was at the India office in the former years, and we know from his own lips how strongly he was opposed to expansion. Was his successor of a different mind? In any case, the agreement has gone, and Russia is now out of Persia, and the Heights of the Bosphorus are not likely to fear Petrograd plots for a long time.

It is not merely that the Colossus has fallen, but that it has broken to pieces. Russia, as the West pictured it, never existed at all; possibly it never will exist. Unfortunately, Dr. Dillon left the country in 1914, and his account of events leading up to the revolution is hardly authoritative, although the cinemas will be grateful that he does not demolish the Rasputin legend. It is a thousand pities that the author did not remain in Russia after the war broke out, as he was its one authoritative interpreter to the rest of the world. He would almost certainly have been assassinated, but Dr. Dillon is sufficiently of a cynic to agree that it would have been worth while for the sake of getting a really first-hand and trustworthy account of the events of 1917 in Petrograd.

PERSONAL AND GENERAL.

CALENDAR OF THE WEEK

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian (New Style).	Julian (Old Style).	—	Moslem.	Jewish.
1918. June 7	1918. May 25	Friday	1336. Shaaban. 27	5678. Sivan 27
8	26	Saturday.....	28	28
9	27	Sunday	29	29
10	28	Monday	Ramadan. 1	30
11	29	Tuesday	2	Tamuz. 1
12	30	Wednesday	3	2
13	31	Thursday	4	3

Last Friday the Sultan of Egypt left Cairo for Alexandria.

Rev. H. G. Staveley, Army Chaplain, left Khartoum for England in the Middle of May.

Dr. Boshko Tcholak-Antitch, the Serbian Minister at Stockholm, has left London for Sweden.

At The Cedars, Chertsey, on May 26, the wife of Mr. A. G. Pawson, Sudan Civil Service, gave birth to a son.

The Earl and Countess of Bessborough have returned to Cavendish Square from Bessborough, Piltown, County Kilkenny.

On May 27, at Hillside, Merstham, the wife of Lieut.-Colonel A. J. O'Brien, C.I.E., Gujranwala, Punjab, gave birth to a daughter.

Colonel Milivoj J. Nicolaievitch, the recently-appointed Military Attaché to the Serbian Legation at Havre, left London last week to take up his duties.

Mr. Montagu Porch, who was married to Lady Randolph Churchill last Saturday, accompanied Professor Flinders Petre when the latter conducted his archæological explorations in the Sinai Peninsula.

His Majesty has been pleased to appoint a Companion of the Most Honourable Order of the Bath (additional for services during the war) Mr. J. E. Shuckburgh, head of the Political Department, India Office.

The marriage arranged between Lieut.-Colonel F. F. Carroll, D.S.O., and Miss Evelyn Bernard will take place at St. Joseph's Church in Cairo on the 15th inst. There will be no reception, but friends will be welcomed at the church.

Lord Reay, K.T., will preside at a meeting of the Royal Asiatic Society to be held at 22, Albemarle Street next Tuesday, June 11, at 4 p.m. Mr. J. N. Farquhar, D.Litt., will read a paper on "The Bhagavata Purana and the Sects Dependent Thereon."

Lieut.-Colonel Arthur Prescott Trevor, Indian Political Service, C.S.I., C.I.E., eldest son of Sir Arthur Trevor, K.C.S.I., was married on Saturday to Lucy May Eléni, eldest daughter of Lieut.-Colonel H. Peers and Mrs. Dimmock, at St. Mary's Church, Wimbledon.

On the second anniversary of the declaration of independence by the Shereef of Mecca the Arab Governor of Jeddah gave a reception at Government House to the British, French, and Italian diplomatists and their staffs, the leading Arab Government officials, and the chief European and Arab civilians.

The marriage of Captain B. W. Fagan, M.C., Oxfordshire and Buckinghamshire Light Infantry, son of the Hon. P. J. Fagan, I.C.S., and Gwendoline, elder daughter of Mr. and Mrs. William Moir, of Stoneywood, Kenley, Surrey, will take place to-morrow at the Parish Church, Coulsdon, Surrey, at half-past twelve o'clock.

At Buckingham Palace on Tuesday Brigadier-General Sir William Manning, Governor and Commander-in-Chief Designate of Ceylon, had an audience of his Majesty, when the King conferred upon him the honour of Knighthood and invested him with the Insignia of a Knight Commander of the Most Excellent Order of the British Empire.

The marriage arranged between Lieutenant Arthur William La Touche Bisset, Royal Navy, only son of the late Colonel Sir William Bisset, K.C.I.E., and Lady Bisset, of Hill House, Stoke Poges, and Miss Margaret Frances McNeil Grant, only daughter of the Lieutenant-Governor of Nova Scotia and Mrs. McCallum Grant, Government House, Halifax, will take place in Edinburgh on June 12, leave permitting.

The engagement is announced between Lieutenant Ronald Charles Campbell Orde, R.F.A., eldest son of Mr. and Mrs. C. R. Campbell Orde, of Copse Edge, Godalming, Surrey, and Gwyneth May, twin daughter of Mr. J. Penry Lewis, C.M.G., Ceylon Civil Service (retired), and Mrs. Penry Lewis, of Quisisana, Walton by Clevedon, Somerset.

On Saturday at Buckingham Palace the King invested Major-General Joseph Rimington with the insignia of the Order of the Star of India. At the same Investiture his Majesty also invested Colonel Gerard Irvine, I.M.S., with the Order of the Bath (Military Division), Lieut.-Colonel Francis Perry, I.M.S. (retired), with the Order of St. Michael and St. George, and Lady Meston with the Order of the British Empire.

The marriage of Major Bayne-Jardine, A.V.C., of the Ministry of Agriculture, and Miss Mary Shellaber Merivale, of Sydney, N.S.W., took place at All Saints' Church, Cairo, on May 8. Owing to the bridegroom's being on active service the wedding was quietly celebrated. The Rev. C. T. Horan conducted the service, the bride was given away by Mr. T. Dawson Shepheard, and Captain C. S. Cardrew, R.W.F., acted as best man.

Mr. Caclamanos, Hellenic Minister to Petrograd, has arrived in London to assist M. Gennadius in the extra work involved by the war. M. Caclamanos will thus be in charge of all matters connected with the relations with the various Allied Commissions, with the trade and navigation interests of Greece, and with the civil and military provisioning of the country. He will act in these matters in co-operation with M Gennadius, who continues at the head of the Greek Diplomatic representation in England, with the full and entire confidence of his Government.

H.H. the Aga Khan is among the latest donors to the Red Cross Necklace scheme, for which 2,100 pearls have now been received. The scheme has created great interest in Egypt. Lady Wingate has written saying that she has had a most generous response to the appeal, and has already received sixty pearls, including valuable gifts from her Sultania Highness Princess Fewkia, daughter of the Sultan, H.S.H. the Sultana Melik, widow of the Sultan Hussein, and H.S.H. Princess Kemal-ed-Din. The Governor of the National Bank of Egypt has also given her the greatest possible assistance.

The headquarters of the Red Sea Province moved from Port Sudan to Erkowit on May 24.

A telegram from Teheran received in Salonika reports that the Persian Cabinet resigned on May 31.

A collection of water-colours of the Holy Land, Egypt, Syria, and California, by Sutton Palmer, is now on view at the galleries of the Fine Art Society, 148, New Bond Street.

An exhibition of pictures and photographs by Australian official artists and photographers is now open at the Grafton Galleries. It contains many extremely interesting pictures of Palestine.

Mr. Charles Sarolea, Belgian Consul in Edinburgh, will deliver at the London School of Economics a course of public lectures on "Problems of Foreign Policy." The lectures will be given on Mondays and Wednesdays at 5.30 p.m. H.E. the Belgian Minister, Baron Moncheur, will take the chair at the first lecture of the series.

A telegram from Bombay, dated May 30, says:—The monsoon, which has commenced earlier than usual, is progressing here, and at the Colaba Observatory during the past week 7 ins. of rain have been recorded. Last year no rain was reported at this observatory till the week ended June 13, while even a ten-year average shows only 1.74 in. of rain for the first week of June.

TRAGEDY OF MONTENEGRO,

THE SMALLEST AND POOREST OF OUR ALLIES.

MONTENEGRIN RED CROSS AND RELIEF FUND,

11, VICTORIA STREET, LONDON, S.W.1

(Registered in City of London. Section 1. War Charities 1916)

needs £700 WEEKLY for Feeding Prisoners interned in Austria-Hungary.

Donations will be much appreciated and gratefully acknowledged by the Hon. Treasurer, LADY ROPER PARKINGTON, Claridge's Hotel, Brook Street, London, W.1.

APPOINTMENTS, PROMOTIONS, ETC.

El Kaimakam P. B. Stafford Bey, officer commanding 2nd Battalion, has been struck off the strength of the Egyptian Army.

General Iliesco, formerly Generalissimo of the Roumanian army, declares that now that King Ferdinand has accepted his resignation he has offered his services to the French Government.

The *Gazette* announces that Brevet Lieutenant-Colonel E. W. Costello, V.C., C.M.G., D.S.O., Punjabis, Indian Army, has been appointed temporary Brigadier-General whilst employed as a Brigade Commander.

Lieutenant R. S. Jenkins, Australian Imperial Force, has been attached to the Egyptian Army as a special service officer. He has been granted the temporary rank of Bimbashi, and attached to the Eastern Arab Corps for duty.

Captain B. K. Young, Royal Engineers, has been attached to the Egyptian Army as a Special Service Officer. He has been granted the temporary rank of Bimbashi and attached to the Military Works Department for duty.

Mr. H. W. Cook, of the Department of Technical Education, Egyptian Government, has been given the title of Senior Inspector of that department. Mr. Frank Webb, of the same department, has been made Inspector.

Dr. P. G. Williams, Director of the First Section of the Public Health Department, Egyptian Government, has been detailed to act as Director-General for that department until the successor of Sir David Semple is definitely appointed.

Major A. Lowden, Army Service Corps, has been attached to the Egyptian Army as a special service officer. He has been granted the temporary rank of Bimbashi, and his services have been placed at the disposal of the Sudan Government.

Bimbashi Teall, Inspector of Cairo City Police, has been promoted to the local rank of Kaimakam, and transferred to Alexandria as Assistant Commandant of Police. Sagh. Hamilton, Inspector, Ministry of Interior, formerly attached to the Alexandria City Police, has replaced him at Cairo, and has been granted the local rank of Bimbashi.

The King of Roumania has conferred the title of Counsellor of Legation on M. M. B. Boeresco, who, for several months, since M. Misu left London, has been acting as Roumanian Chargé d'Affaires. M. Boeresco has been for many years in London, where he filled his first diplomatic post in 1900 as honorary Attaché to the Roumanian Legation.

The Special Board of Indian Civil Service Studies have appointed the following as University teachers at Cambridge for one year from October 1 next:—Mr. R. H. Macleod, Indian Law; Mr. G. P. Moriarty, Indian History; Mr. J. D. Anderson, Bengali; Mr. J. L. Wyatt, Tamil; Mr. L. Allan Goss, Burmese; Mr. W. Doderet, Marathi; Dr. Rouse, Sanskrit; and Lieutenant-Colonel D. C. Phillott, Hindustani.

OBITUARY.

Lady Macpherson, who died at Exmouth last week, was the daughter of Mr. William Martin, of Calcutta, and married Sir Arthur George Macpherson, K.C.I.E., in 1860.

The *Sudan Times* received by the last mail contains news of the death of Mr. G. B. Brown, M.C., Civil Inspector at Shendi, Berber Province, on April 21. Mr. Brown had joined the Sudan Civil Service only since December, 1917, after three years' active service in the Army. He was taken ill at Shendi and was being taken to Khartoum, in charge of Dr. Hodson, when he died.

Second-Lieutenant Lionel Henry Liptrap Carver, Irish Guards, who has been killed in action, was the elder son of the late Rev. H. J. Carver, rector of Melbury Abbas, Dorset. On leaving Cambridge he entered the firm of the Bombay, Burmah Trading Corporation, spending ten years in the East. At the outbreak of war he joined the Rangoon and Moulmein Volunteers. He returned home in March, 1917, for military training, and joined the Irish Guards, going out to the front with his battalion last December.

Colonel Sir William Arthur Johns, C.B., C.I.E., died suddenly at Belfast on Monday at the age of 50. Educated at Uppingham and the Royal Engineering College, he entered the Indian Public Works Department in 1880. He had a distinguished career in India, and was employed with the Seistan Boundary Commission in 1902 and 1903, and in frontier surveys in 1912 and 1913. He was knighted in 1914. As a temporary colonel in the Army, he served in the present war in German East Africa from 1915 to 1917, being mentioned in despatches and receiving the C.B.

DOMESTIC ANNOUNCEMENTS.

DEATH.

RAMSAY.—Died at Salonika, on May 24, 1918, Gregor MacGregor Ramsay (formerly of Constantinople). Deeply regretted.

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

THE KITCHENER SPIRIT.

On June 5, 1916, Lord Kitchener met his death in the North Sea. The second anniversary of that tragic event finds the nation passing through an ordeal equal to that which it endured in the early days of the war, when it instinctively turned to Lord Kitchener as the master military mind of the Empire for such a crisis. His contribution to the salvation of Great Britain, and, therefore, of the Allied cause, was to think in millions when others could only contemplate an army of a few hundred thousand, and to see in the war thus beginning—for which others prophesied an end in three months—a gigantic conflict that must last for years. The event has surpassed even Lord Kitchener's far-seeing computations; but we have reason to be grateful to the man who first stirred the British people to a more adequate realisation of the problem confronting them. To-day the best tribute that can be paid to his memory is to reflect whether the nation as a whole has taken to heart his warning against short-sightedness, whether it is still allowing its vision to include the widest horizon that the enemy's ambition has formed, or whether it has fallen back upon that narrow outlook which sees no farther than the battlefields of France, and affects to discover at every turn the prospect of an early peace. On this point, it is to be feared, the national conscience is not altogether clear. During the last twelve months influences have been at work in our midst to dull the edge of British determination. The consistent opponent of the war has been discredited from the outset, and he has made no headway of his own effort; but every suggestion that has challenged the wisdom or the feasibility of a fight to a finish has provided him with encouragement. Some of these suggestions have come from the individualist who claims to see national bankruptcy in any reduction in his own large income or whose personal sacrifice or war-weariness has engendered the doubt whether the Allies can achieve all the aims to which they stand pledged. In other quarters there has been a tendency to regard the German people as having reached a changed and more reasonable mood, or to see a short cut to peace—if it were properly utilised—in the domestic troubles of Germany or in the detachment of Austria-Hungary from the Central Alliance. For each phase the Germans have known how to cater, and for a time were even more ready to push a peace offensive than to hazard a military one on the Western front. The change came with the Treaty of Brest-Litovsk, which was imposed upon Russia not as the outcome of the reasonableness of German diplomacy, but at the point of the sword. Militarism was once more in the ascendant, and the true character of Germany reasserted itself in the peace terms dictated to Roumania and in the interpretation placed on the pact with the Bolsheviks, which has enabled the Germans to compass the absorption of large tracts of Russian territory.

The impossibility of peace by negotiation was at once apparent. A terrific onslaught on the Allies followed, and the Germans tried to force a military decision in the West. There is no reason to suppose that they will succeed; but the prodigality of the slaughter entailed again raises the question, Is it all worth the while? As soon as these doubts have had time to permeate the minds already prepared for them we may expect a renewal of the German peace offensive, and this time the nation must decide whether it will allow itself to be deluded by false theories, as it was last year. Never was there greater need for the long view that will envisage not only the course of events in the West, but the whole trend of German activities in the East. In this connection we would commend the perusal of the article on the opposite page, in which Sir Valentine Chirol sets forth the nature of the German thrust into Asia. "Some people," he shrewdly remarks, "will doubtless try to minimise German ambitions in the Middle East and in the Far East as up to 1914 they minimised her ambitions in the Near East. Others, with more excuse, will contend that we have enough to do at the present moment to ward off the more urgent peril at our gates. But let us make no mistake about it. If Germany is out to crush us even more than the French in France, her whole thrust into Asia is aimed also at us." But she will rely upon the fierceness of her Western offensive to distract attention from the East, in the hope that a bargain peace may leave her, at the price of concessions in the West, with her power firmly established in Eastern Europe and in Asia, alike in the political, military, and economic spheres. If the Kitchener spirit is still upon it, the country and its Government will look beyond the immediate ordeal to which the Allied armies are being subjected in France, and will remember that, unless Prussian militarism is destroyed in all its ramifications, Germany will emerge a victor from the struggle and more powerful than she was in 1914, owing to the hold she has gained in the East.

The degree of vision that is now required of the British nation ought not to prove a tax upon its powers. Thirty-six years ago a soldier-statesman, with far less evidence than is now available before him, gauged the nature of the German menace. In a letter to a correspondent in 1882 (the words were quoted in the *Empire Magazine* of April, 1911) General Gordon wrote:—"So far as England is concerned, she need not for the next quarter of a century be under any apprehension of serious difficulties arising with any of her European neighbours; but in 1910 or thereabouts there will have arisen a Naval Power which may prove mightier than she, and should she (Germany) gain the supremacy, England will become extinct, both as a sea and a land Power, and all her dependencies, including India, will fall into Germany's clutches." The ultimate goal of militarist Germany remains the downfall of the British Empire, in order that there may be no effective challenge to German world-domination. In 1914 this goal was to be attained by the sudden overwhelming of France and the subsequent disposal of Russia, before any real attempt was to be made to try conclusions with Great Britain. The scheme miscarried in its original form; but for the moment a better way has presented itself for reaching the goal. If Germany can keep her present gains in the East, she trusts to finding herself, when the time comes for what she regards as the inevitable issue, in a far more favourable position for dealing a blow against the British Empire at its most vital spot, which she holds to be India. Even if she be forced to renounce her political aspirations, she trusts to her strangle-hold on the economic development of the countries of Eastern Europe and Hither Asia to make good all her war losses and to enable her to prepare for the next war. Russia constitutes the crux of the whole position. Unless she can be regenerated and won for the Grand Alliance she will come wholly under Germany's power, and before many years have passed will be a prodigious source of strength for Germany's aims. But the Allied Governments appear to have taken no definite steps to cope with the Russian situation, while Germany is gradually extending her influence eastwards and still further eastwards. The lead in this matter belongs to Great Britain, who, if her vision had been wide enough, would have realised that, for the ultimate safety of civilisation and to guard the gates of the East against the German menace, it is no less necessary to bring help to Russia than it is to provide men and material on the Western front.

THE GERMAN THRUST INTO ASIA.

By SIR VALENTINE CHIROL.

Except during the costly Dardanelles episode, doomed to failure by its blundering inception, the attention of the British people, and of its political and military leaders, has been concentrated throughout the war almost exclusively on the Western front, with the grave results we are now witnessing. If anyone wants to study the disastrous consequences of that insular frame of mind which has led us to regard the Eastern fronts as mere "side shows," let him study the masterly article by M. Chéradame in the May number of the *National Review*. No writer has followed with clearer insight and watchfulness the steady development of German policy in the Near East since William II. first startled the old Chancellor at the beginning of his reign by revealing to him his conception of Turkey as Germany's "bridgehead to world dominion," but his works, being written in French, have had far fewer readers in this country than they deserved. In the Near East all his worst anticipations have come true. If, as he argues with much cogency, we had thrown the forces squandered at Gallipoli into the Balkans in the spring of 1915, when the Serbians were still holding, and more than holding, the Austrians, Serbia would have been saved, Bulgaria probably rescued from temptation, Venizelos so strengthened as to carry Greece with him in the teeth of Constantine, Roumania free to concentrate all her military energies on Transylvania, and even the storm that has paralysed Russia possibly averted or at least delayed. Now Serbia is gone, Roumania gone, Greece seriously menaced, Bulgaria as well as Turkey tied to the German chariot-wheels, and Russia practically wiped off the war map.

In the East William II., it must be admitted, has already won more than a mere "bridgehead to world dominion." German ambitions are already looking far beyond the Near East into Central and Further Asia. There may be no use in expending vain regrets upon the past, but let us at least profit by its lessons, and, even amidst the crucial anxieties of the gigantic struggle in France, look the new dangers with which we are confronted in Asia in the face—undismayed but not unheeding.

Before the war Germany was moving only on one single line of eastward expansion—namely, the Baghdad line—the famous B.B.B. Railway (Berlin-Byzantium-Baghdad or Busreh). She had planned it out with great skill and was carrying it into execution with all her usual energy. But her control over it was still only indirect and in parts precarious. It depended upon the ascendancy she had acquired over Turkey—an ascendancy no doubt already consolidated by innumerable economic, political, and military rivets, but still not finally secured—and upon the acquiescence of the Balkan States, which was a far more doubtful quantity, and largely subject to Austria-Hungary's ability to dominate them. The Balkan wars, it was believed in Berlin, would almost certainly leave the Balkan States too exhausted for any further resistance to Germanic penetration. But they fell out otherwise than Germany had expected, and Serbia, at any rate, emerged to be the most stubborn obstacle in her way. Hence Germany's determination to sweep it off her path, which precipitated the great crisis of 1914. With the conquest of Serbia and the active co-operation of Bulgaria and Turkey as her subordinate allies—scarcely more subordinate, however, than the Dual Monarchy itself—the war has in this direction completely fulfilled Germany's purpose up to the point where the Turco-German forces have been driven back by the British in Mesopotamia, and to some extent menaced also by the British advance into Palestine. If we can hold our own in those regions, Germany's original scheme of penetration right down to the Persian Gulf may still be defeated, and so long as Baghdad remains in our hands, the B.B.B. line of German advance must remain incomplete, for it will lack the last and the most important link.

But the collapse of Russia, involving the subjection of Roumania, opens up to Germany other and even more formidable lines of advance into Asia, of which she has not been slow to measure the advantages. Bolshevism has thrown not merely European Russia but Asiatic Russia into the melting pot, and next to the British Empire, Russia was the greatest Asiatic, and it is essential to remember, the greatest Mohammedan, Empire in the world. For the new lines of advance opened up to Germany are politico-religious as well as geographical. Only a passing reference needs to be made to her new line of access to the Black Sea at Constanza through Roumania and the now Bulgarian Dobruja. Far more important is the hold she is acquiring through the Ukraine, where she rules by martial law even more effectively than through a dummy Ukrainian President and a dummy Ukrainian Government, over the whole of Southern Russia, including Odessa and the Crimea and the Northern Caucasus. The reports that reach this country from those unhappy regions are rare and vague, but amongst more recent ones, none is more significant than the announcement from German sources that the Ukraine Government at Kieff is insisting on the annexation of Rostoff on the Don, Novotcherkisk, and all the northern districts of Caucasia, which would bring under German control the great trunk railway running from Southern Russia through Rostoff and along the northern foothills of the main Caucasus range to Baku, the famous oil city on the western shores of the Caspian. In the Crimea and in Northern Caucasia, moreover, there are still large Mohammedan communities, who are doubtless being rapidly taught to look up to "Hajji Mohammed Wilhelm" as the "all-highest" Protector of Islam and the staunch ally of the Sultan and Khalif of Stamboul.

Meanwhile from the south-west the Turkish armies themselves, to whom the Bolsheviks handed over at Brest Litovsk, not only the Armenian provinces of Asia Minor rescued from Turkey by the Grand Duke Michael during the war, but Kars and Batoum and all the territories ceded by Turkey to Russia in 1878, are marching into Southern Caucasia to join hands with their co-religionists in Northern Caucasia, and are moving also towards Northern Persia, where the Turki population, also Mohammedan, though of the Shia, and not of the Turkish Sunni persuasion, has very close racial and linguistic affinities with the Osmanli Turks. The effect upon Persia as a whole of the elimination of Russia as an Asiatic Power may be left over for another occasion. Let us for the moment merely bear in mind that through the northern provinces of Persia bordering on the Caspian the Turks and their German masters can easily push their way, as far as Persian powers of resistance go, into Russian Trans-caspia, and seize the Trans-caspian Railway to Merv and Bokhara and the Central Asian cities of Samarkand and Tashkend, which the Russians extended to the banks of the Oxus, where that river alone divided the Tsar's dominions from those of the Ameer of Afghanistan. The starting-point of the Trans-caspian Railway, on the eastern shores of the Caspian, immediately faces Baku, which is, with Astrakhan, the chief Caspian harbour, and, as virtually all the shipping of the Caspian was in Russian hands, it is bound to pass now, like that of the Black Sea, into the hands of Germany or of those whom she chooses to appoint as her receivers for that part of Russia's bankrupt estate.

Thus through the Ukraine and along the northern

littoral of the Black Sea and through Asia Minor and along the southern littoral Germany is now acquiring control of two converging lines of advance into the Caucasus and, across or round the Caspian, into what was Russian Central Asia. Nor is that all. If Germany's grip on the Bolsheviks is as firm as it is described in a letter from M. Tereschenko, formerly Kerensky's Foreign Secretary, to the well-known advanced Revolutionist, Vladimir Burtseff, who has just escaped from the Bolshevik clutches and handed it for publication to a correspondent of the *Daily Chronicle* in Christiania, she may at any moment possess herself of a third and far more direct line of advance into Asia by the great Trans-Siberian trunk line. "Pro-Consul Mirbach (German Ambassador to Russia) is ruling in Moscow" writes Tereschenko. "Waves of Bolshevik eloquence still ripple, but grow calm as soon as the new ruler frowns. Lenin and Trotsky are in power in Moscow, only because it is in Germany's interests. One division would suffice to overthrow them, but the Germans know what they are doing. The Bolsheviks are more useful to them than the rule of their own generals. . . . They know only capitulation, betrayal, unquenchable thirst for power, greed and pleasure. . . . The power of the Bolsheviks is a Trojan horse painted brightly, draped with flags and loud phrases. But the German soldier sits within, ruling and calmly smiling." Moscow is the main terminus of the Trans-Siberian railway, of which a branch runs straight down from Orenburg to Tashkend, where it joins up with the Trans-Caspian Railway.

Nor does Germany require to pour in her own troops through any or all of these lines of advance. Even if she cannot perhaps rely on the whole rank and file of the German and Austrian prisoners of war in those regions whom Bolshevism has liberated and possibly infected, there are enough German and Austrian officers now at large there to apply the match to the powder magazine. For the turbulent and only partially settled populations of the old Central Asian Khanates—the Khirgiz broke out into active rebellion against Russia in 1916—contain plenty of explosive material. They are in touch to the East with all that Mohammedan fringe which runs along the borders of the Chinese Empire from Western Yunnan and Szechuan into Western Kansu. The Turkish Pan-Turanians claim them as the long-lost brothers of the Osmanli Turks. The claim may be far fetched, and might ultimately prove quite inacceptable to the long-lost brothers. Pan-Turanianism is made up of so many incongruous factors that in the long run it must almost certainly fall to pieces. But, like Bolshevism, it will play in the meantime into Germany's hands, and the tune to which she intends it to dance may be gathered from the new interpretation she places on the mystic B.B.B., which is read now Berlin-Byzantium-Bokhara, with an ultimate extension, of which both China and Japan seem to be taking note, to Kiao-chao on the far Pacific.

Some people will doubtless try to minimise German ambitions in the Middle East and in the Far East as up till 1914 they minimised her ambitions in the Near East. Others with more excuse will contend that we have enough to do at the present moment to ward off the more urgent peril at our gates. But let us make no mistake about it. If Germany is out to crush us even more than the French in France, her whole thrust into Asia is aimed solely at us. Not out of its own inner consciousness has the German Press drawn the inspiration that, even if our armies can be driven off the European continent in this war, the British Empire can only be destroyed when its oversea power, of which the chief seat is held to be India, shall have been shattered—in the next war, if not in this. Germany is confident that she already holds all the trumps in her hand. That is not so. She does hold some, but we have still some good cards to play, if we know how to use them. We have none, however, to throw away, as we have already thrown too many away in the past—least of all in Persia, which is now marked out in Berlin for a more important part than has yet been assigned to her in the war. The Persian situation must, however, be reserved for a subsequent article.

TANGIER TO TEHERAN.

The news of the death of Mar Shimun, head of the Nestorian (or East Syrian, or Assyrian) Church will be received with real regret in this country. Those who know nothing of the customs of the Nestorians may be surprised to read of a "Patriarch" only thirty years old, and one who was elected when he was only half that age, too! The explanation is that the patriarchate is hereditary; but as bishops may not marry—though other clergy of the Church are allowed to do so—the office descends from uncle to nephew. The Patriarch occupies an almost unique position. In "The Cradle of Mankind" the authors refer to the legend of Prester John: "the legend of a Christian King ruling his people in the midst of infidels; a King who was yet a priest and who celebrated Mass regularly; who had a kingdom in the midst of wild, inaccessible mountains, girdled by cloud and storm; and who was tormented by the harpies that came daily and snatched the food from his table." These stories, we are told, "are literally the fact in all essentials (or were so until very lately) with the Patriarch of the Nestorians in Kurdistan." Even "a very good imitation of the harpies" was supplied by the Kurds who ravaged the land.

***

The Bishop-Prince had no "soft billet." But he showed himself every inch a man, and travellers who made his acquaintance almost invariably brought away a favourable impression of him. The writers already referred to tell us that it would have been easy for him "to make comfortable terms for his House and himself had be been content to leave his people to look after their own interests. On the contrary, he has habitually sacrificed his own ease and comfort, and has run serious risks again and again in order that he may try to protect 'the sheep whom God has committed to him' either from Kurdish raider or from the worse oppression of the Ottoman minor official." The Nestorians I met struck me as self-respecting and courageous, and their Patriarch seems to have possessed those virtues to an extraordinary degree.

CORSAIR.

SCHOOL OF ORIENTAL STUDIES.
London Institution, Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.

For particulars, apply to E. DENISON ROSS, Director.

AYAHS' HOME,
26, King Edward Road, South Hackney, London.
ESTABLISHED 1825.
IN CONNECTION WITH THE LONDON CITY MISSION.

Hindustani spoken. Ayahs boarded and lodged at 18s. per week each until their Return Passage is paid or a Situation secured for them to return. Ayahs met at any Dock or Railway Station in London. Experienced, well-recommended Ayahs taken entirely off Ladies' hands for a certain payment, which differs according to time of year. Ladies proceeding to India or China requiring an Ayah can generally obtain one by applying to Mrs. FLETCHER, Matron.

THE CUSTOMERS OF
Messrs. HENRY S. KING & CO.,
AND THEIR BRANCH FIRMS
are invited to make use of their Correspondents,
THE NATIONAL BANK OF EGYPT,
at CAIRO and ALEXANDRIA,
who will be pleased to open Banking Accounts with them, and transact general Financial Business for them during their stay in Egypt.

FROM THE BIRTHDAY HONOURS LIST.

The list of "Birthday Honours" is a long one indeed. Among the recipients is Lord Oranmore and Browne, who becomes a Knight of St. Patrick. Lord Pentland, the Governor of Madras, and Lord Willingdon, Governor of Bombay, become Grand Commanders of the Star of India. The following is a list of recipients connected with India or the Near East, the paragraphs attached in some cases being information issued officially:—

KNIGHT OF ST. PATRICK.

GEOFFREY HENRY BROWNE, BARON ORANMORE AND BROWNE.

PRIVY COUNCILLOR.

SIR RICHARD WALTER JOHN, EARL OF DONOUGHMORE, K.P.
For special services rendered to the Government in India in connection with the visit of the Secretary of State for India to India.

KNIGHTS.

LOGIE PIRIE WATSON, ESQ.
Partner in Messrs. Cooper, Allen, and Co., Cawnpore, United Provinces, and a member of the Council of the Lieutenant-Governor for making Laws and Regulations.

DEBA PROSAD SARBADHIKARI, ESQ., C.I.E., LL.D., M.A.
Vice-Chancellor, Calcutta University, Bengal.

NILRATAN SARKAR, ESQ., M.D.
Medical Practitioner, Calcutta, Bengal.

GORDON FRASER, ESQ.
Managing Director, Messrs. Best and Co., Ltd., Madras.

HORMASJI ARDESHIR WADIA, ESQ.
Barrister-at-Law, Bombay.

ROBERT AITKEN, ESQ.
Secretary and Treasurer, Bank of Bombay, Bombay.

RAI BAHADUR SETH SARUPCHAND HUKAMCHAND.
Banker, Central India.

EDWARD DENISON ROSS, ESQ., C.I.E., PH.D.
Principal of the School of Oriental Studies.

G.C.B. (MILITARY DIVISION).

GENERAL SIR ARTHUR ARNOLD BARRETT, K.C.B., K.C.S.I., K.C.V.O., A.D.C.
General, Indian Army.

K.C.B. (MILITARY DIVISION).

LIEUTENANT-GENERAL SIR HERBERT VAUGHAN COX, K.C.M.G., C.B., C.S.I.
Indian Army.

LIEUTENANT-GENERAL HAVELOCK HUDSON, C.B., C.I.E.
Indian Army.

C.B. (MILITARY DIVISION).

COLONEL (TEMPORARY BRIGADIER-GENERAL) PHILIP JOHN MILES.
Indian Army.

COLONEL EDWARD LANGFORD SULLIVAN, C.M.G.
Indian Army.

COLONEL LESLIE WATERFIELD SHAKESPEAR.
Indian Army.

LIEUTENANT-COLONEL JOHN BLACKBURN SMITH, M.B.
Indian Medical Service.

G.C.S.I.

HIS EXCELLENCY THE RIGHT HONOURABLE SIR JOHN, BARON PENTLAND, G.C.I.E.
Governor of Madras.

HIS EXCELLENCY SIR FREEMAN, BARON WILLINGDON, G.C.I.E., G.B.E.
Governor of Bombay.

K.C.S.I.

SIR WILLIAM HENRY HOARE VINCENT, I.C.S.
An Ordinary Member of the Council of the Governor-General of India.

SIR THOMAS HENRY HOLLAND, K.C.I.E., D.SC., F.R.S.
President, Indian Munitions Board.

C.S.I.

HENRY STAVELEY LAWRENCE, ESQ., I.C.S.
Commissioner in Sind, Bombay.

LLEWELLYN EDDISON BUCKLEY, ESQ., I.C.S.
Commissioner of Revenue Settlement, Survey, Land Records and Agriculture, Board of Revenue, Madras.

CECIL HENRY BOMPAS, ESQ., I.C.S.
Chairman of the Board of Trustees for the Improvement of Calcutta.

MOSES MORDECAI SIMEON GUBBAY, ESQ., C.I.E., I.C.S.
Controller of Currency.

MAJOR-GENERAL RICHARD WAPSHARE, C.B.

COLONEL (TEMPORARY MAJOR-GENERAL) JOHN MACNEILL WALTER, C.B., D.S.O.

G.C.V.O.

COLONEL SIR WALTER ROPER LAWRENCE, BT., G.C.I.E., C.B.

G.C.I.E.

HIS HIGHNESS RAJA SRI RAMA VARMA.
Raja of Cochin, Madras.

SIR FREDERICK WILLIAM DUKE, K.C.S.I., K.C.I.E.
Member of the Council of the Secretary of State for India.

K.C.I.E.

THAKUR SAHIB LAKHAJI RAJ BAWAJI RAJ.
Thakur Sahib of Rajkot Kathiawar, Bombay.

LIEUTENANT-COLONEL WALTER JAMES BUCHANAN, C.I.E., M.D.
Indian Medical Service, Inspector-General of Prisons, Bengal.

HONORARY LIEUTENANT-COLONEL RAJA JAI CHAND, C.S.I.
Of Lambagraon, Punjab.

REAR-ADMIRAL DRURY ST. AUBYN WAKE, C.B., C.I.E.
Late Senior Naval Officer, Persian Gulf.

C.I.E.

KHAN BAHADUR NAWAB SAIYID NAWAB ALI CHAUDHURI.
Zamindar, Dhanbari, Mymensingh, Bengal.

CLAUDE FRASER DE LA FOSSE, ESQ.
Indian Educational Service, Director of Public Instruction, United Provinces, and a Member of the Council of the Lieutenant-Governor for making Laws and Regulations.

HENRY RAIKES ALEXANDER IRWIN, ESQ.
Singell Tea Estate, Darjeeling, Bengal.

BERNHARD MARTIN SAMUELSON, ESQ.
Chief Engineer and Officiating Joint Secretary, Public Works Department, Burma.

WILLIAM FREDERICK HOLMS, ESQ.
Public Works Department, Chief Engineer, Irrigation Works, Punjab.

GEORGE HERMAN COLLIER, ESQ.
Director-General of Stores, India Office.

THOMAS EMERSON, ESQ., I.C.S.
Collector of Tippera, Bengal.

JYOTSNANATH GHOSAL, ESQ., I.C.S.
Collector of Kaira, Bombay.

ALAN WILLIAM PIM, ESQ., I.C.S.
Magistrate and Collector of Benares.

GEORGE RAINY, ESQ., I.C.S.
Deputy Secretary to the Government of India, Finance Department.

MAJOR GEORGE HENRY WILLIS, M.V.O., R.E.
Mint Master, Bombay.

LIEUTENANT-COLONEL ERNEST ALAN ROBERT NEWMAN, M.D.
Indian Medical Service, Civil Surgeon, and Superintendent, Medical School, Dacca, Bengal.

EDWARD CHARLES RYLAND, ESQ.
Indian Police, Deputy Inspector-General of Police, lately Officiating Inspector-General of Police, Bihar and Orissa.

FRANCIS WILLIAM BAIN, ESQ.
Indian Educational Service, Principal, Deccan College, Bombay.

JOHN DESMOND, ESQ.
Executive Engineer, Public Works Department, Nagpur, Central Provinces.

JOHN ERNEST JACKSON, ESQ.
Chief Auditor, Bombay, Baroda, and Central India Railway, Bombay.

JOHN ROBERTSON HENDERSON, ESQ., M.B., F.L.S.
Superintendent, Government Museum, and Principal Librarian, Connemara Public Library, Madras.

SARDAR BAHADUR GURNAM SINGH.
Home Secretary to H.H. the Maharaja and General of State Forces, of Patiala, Punjab.

KUNWAR UNKAR SINGH.
Of Patiala, Kotaha State, General Superintendent of the Kotah State Police, Rajputana.

CHARLES ALFRED BARBER, ESQ.
Agricultural Service, Imperial Sugar Cane Expert, Madras.

NASARWANJI NAVROJI WADIA, ESQ.
Millowner and Merchant, Bombay.

RAJA RATAN SEN SINGH.
Of Bansi, son of Raja Ram Singh, District Basti, United Provinces.

COLONEL (TEMPORARY BRIGADIER-GENERAL) ROBERT GEORGE STRANGE.
British Service, commanding Presidency Brigade.

COLONEL (TEMPORARY BRIGADIER-GENERAL) ROBERT MONTAGU POORE, D.S.O.
British Service, commanding Jhansi Brigade.

LIEUTENANT-COLONEL (TEMPORARY BRIGADIER-GENERAL) CYRIL FRANK TEMPLER, C.M.G.
Director-General, Army Remount Department.

COLONEL ALFRED JOSEPH CARUANA.
Indian Army, Judge Advocate-General in India.

LIEUTENANT-COLONEL HERBERT AUSTEN SMITH.
Indian Medical Service, Surgeon to His Excellency the Viceroy of India.

MAJOR AND BREVET LIEUTENANT-COLONEL FREDERICK ADOLPHUS FLEMING BARNARDO, M.B., F.R.C.S.E.
Indian Medical Service, Deputy Assistant Director of Medical Services (Distribution), Bombay.

CAPTAIN SEYMOUR DOUGLAS VALE.
Royal Indian Marine, Principal Port Officer and Marine Transport Officer, Rangoon.

ARTHUR CECIL MCWATTERS, ESQ., M.A.
Indian Civil Service Controller (Hides and Wool), Indian Munitions Board.

MAJOR DAVIS HERON, M.B., F.R.C.S.E.
Indian Medical Service, Medical Officer, Seistan Consulate, and His Britannic Majesty's Vice-Consul for Seistan and Kain.

MAJOR EDWARD TILLOTSON RICH.
Royal Engineers, Survey of India.

A. V. VENKATARAMANA AIYAR, ESQ.
Assistant Secretary to the Government of India, Finance Department.

SARDAR BAHADUR FAZMAN ALI KHAN.
Adjutant-General, Kashmir State Army.

QADIR BAKSH KHAN.
Lieutenant-Colonel Bahadur Commandant, 1st Company, Maler Kotla Imperial Service Sappers, Punjab.

RODERICK KOPNELL BIERNACKI, ESQ., I.S.O.
Locomotive Superintendent, North-Western State Railway.

THE KAISER-I-HIND MEDAL.

HENRY NEWTON CROUCH, ESQ.
Additional Judicial Commissioner, Sind, Bombay.

ROBERT ALEXANDER BOSWELL CHAPMAN, ESQ., I.C.S.
Deputy Commissioner, Yeotmal, Berar, Central Provinces.

REV. CANON CECIL STANSFELD RIVINGTON.
Bombay.

REV. FATHER LOUIS VAN HOECK, S.J.
Rector, Roman Catholic Mission, Ranchi, Bihar and Orissa.

REV. ELIAS WILLIAM KELLY, M.A., PH.D.
Missionary Superintendent, Judson Boys' High School, Moulmein, Burma.

REV. HERBERT ANDERSON.
Secretary, Calcutta Temperance Federation, and Indian Secretary, Baptist Missionary Society, and Member, Licensing Board, Bengal.

SISTER MARY VICTORIA.
Clewer Sisters of St. John the Baptist, Principal, Diocesan College for Indian Girls at Ballygunge, Calcutta.

MRS. MARGARET VERNON.

SETH JAY DAYAL.
Of Muzuddinpur, Sitapur, United Provinces.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

India is having an abnormally early monsoon this year. It broke on May 25, and by the 30th it was reported that 7 in. of rain had been recorded at Colaba Observatory. How this compares with previous records will be gathered from the fact that last year no rain was reported at that observatory until the second week in June, while the average rainfall for the first week in June for the past ten years is only 1.74 in. Indians regard early monsoons with suspicion, and its outbreak more than a fortnight ahead of the ordinary time may no doubt give rise to apprehension. It would be premature to venture to forecast the course of the monsoon, but there is no reason to anticipate that the country will not be favoured with an abundant rainfall, such as is desired, by the time the season ends in September. In normal times a good or bad monsoon spells the difference between sufficiency and starvation, and it is scarcely necessary to emphasise its importance at a crisis like the present when the food supplies of the whole world are giving rise to such anxiety.

***

The past year has been a satisfactory one for the Indian General Navigation and Railway Company, notwithstanding the increasing pressure of adverse circumstances. The net profits were £65,800, as against £72,700, while the figures for gross profits were £159,800, as against £175,600. £3,500 is placed to the debenture sinking fund, and £9,000 is allotted to the insurance fund, as against £12,600. The dividend is maintained at 8 per cent., and the carry-forward is £1,700 higher at £26,500.

***

The Egyptian Delta Land and Investment Company's report for the past year shows a decline in the net profits of £E900, as compared with the previous year. The dividend is maintained for the fourth year in succession at 1 2-3 per cent.

***

Serbia, whose coalfields were visited recently by an enemy expert, who claimed to have discovered ten new coal-bearing localities, is not the only country in the Balkans with comparatively undeveloped fuel resources. Bulgaria presents a case in point. This country possesses extensive coalfields in the mountainous districts, which have been little developed, partly because of financial difficulties, and partly because of deficient communications. The position is best illustrated by the fact that Bulgaria has depended on external sources for almost two-thirds of her coal supply. In view of Bulgaria's relations with the Central Powers, it may be taken for granted that efforts have been, or will be made, by Germany and her Ally to exploit this convenient source of fuel supply as they can hope for future benefit from it; whereas nothing they do in Serbia can be of more than passing advantage—to themselves; for naturally the Serbs will be only too glad to utilise the discoveries made by the "expert."

***

The Government, I see, is to introduce legislation to give effect to the recommendations of the Committee on Bank Amalgamations. In the meantime an Advisory Committee is to be set up, which will include among its members Lord Inchcape and Lord Colwyn, a fact which assures the adequate representation of banking interests, as Lord Inchcape is a director of the National Provincial and Union Bank, while Lord Colwyn is also a bank director.

***

There has been a marked development of joint stock enterprise during the war in India, where investors have not hitherto been hampered by the restrictions imposed on capital issues on this side of the "Black Water." Their immunity in this respect has now ceased, as the Government of India have felt impelled to introduce legislation giving them control over new issues of capital. While this step will be far from welcome in business circles, both here and in India—owing to the distrust of further Government interference in trade matters—its incidence will be rendered less unpalatable by Sir William Meyer's assurance to the Bengal Chamber of Commerce that there is no intention of utilising the powers taken by the Government to bring about an entire suspension of fresh issues. The licences necessary for flotations under the Act will, it is understood, be readily granted when there is no likelihood that Government borrowings will in any way be prejudiced by the issues. In this respect the position will be much more satisfactory than it is in this country, where the most essential issues are most difficult to negotiate.

***

The control exercised by the Government of India over the hides trade has recently been the subject of questions in the Legislative Council. A member suggested that American tanners and manufacturers had secured the Indian trade in goat and sheep skins as a result of the embargo on tanned skins. This was denied by Sir George Barnes, who pointed out that while America took 371,000 cwt. raw skins out of a total export of 460,700 cwt. in 1917, the corresponding average figures for the five years preceding the war were 423,000 cwt. and 548,000 cwt. The object of the prohibition, Sir George said, was to preserve for tanners of hides the whole of the resources of tanning bark, which were insufficient for the production of the full number of tanned hides required.

***

It might have been thought that the wave of banking prosperity which has coincided with the war period in the Allied countries would not have extended to Germany, or if it had would not have been so-marked, owing to the very unfavourable financial conditions obtaining there. But it seems that the virtual bankruptcy of Germany has had little or no effect on the banks there, most of which have been able to show balance-sheets which the Press of the "Fatherland" has acclaimed as evidence of their strong position. Thus of the eight Berlin joint stock banks seven increased their dividends for the past year, while the remaining bank maintained its dividend at the previous rate. The Deutsche Bank, almost needless to say, enjoyed the distinction of the highest declaration—14 per cent.—an indication of its capacity to maintain and enlarge the role it played before the war in furthering the commercial penetration of Germany.

***

The recent dividend declaration indicated that 1917-18 was likely to prove an excellent year for Liptons, and this has been confirmed by the issue of the report, which shows that the company has had the most satisfactory year in its history. The gross profits amounted to £544,300, as against £442,800 in 1916-17, and £295,100 in 1915-16, while the expenses of management showed a considerable decrease at £170,300, as against £184,300. The net profits were £374,000, as against £258,500, and the dividend is raised from 7½ per cent. to 12½ per cent. For the next highest dividends it is necessary to go back to the first two years of the company, when the declaration was 11 per cent.; and the extent and rapidity of the improvement in the company's position will be gathered from the fact that for the first two years of war the Ordinary dividend was passed altogether. For the rest, I need only mention that the allocation to reserve is £100,000, as against £75,000, £25,000 is again placed to the war contingencies reserve, the ordinary depreciation provision is maintained at £44,100, the unexpended portion allotted to outlay on repairs—£54,600—has been placed to a suspense account, and £74,700 is carried forward, the latter item being an increase of £7,800.

THE EGYPTIAN INDUSTRIES COMMISSION REPORT.

I.—The Development of Commerce

The Commission of Commerce and Industry, which was created in March, 1916, under the presidency of H. E. Ismail Sidky Pasha for the purpose of ascertaining to what extent the commerce and industry of the country had been affected by the war, and of suggesting measures having for their object either the creation of new outlets for Egyptian products or the substitution of articles, the import of which had ceased, by other articles produced in Egypt or coming from authorised foreign sources, has now completed its work, and has presented a most interesting report. Dealing with the commercial position of the country, the report points out that the economic regeneration of Egypt dates from the time of Mohamed Ali, the founder of the reigning dynasty, who made great efforts to encourage industry and agriculture. To this end he invited the collaboration of Europe, facilitated the education of the people and established and started the execution of a general scheme of irrigation works. His work was carried on by Said and Ismail Pasha, and between 1800 and 1880 the external trade of Egypt increased by 3,000 per cent., and her population increased by 400 per cent.; but whilst since then her commerce has continued to rise, the expansion in imports has outstripped that in exports, and the country is more than ever dependent on foreign markets as the result of being a monocultural country. The report points out that Egypt was formerly an exporter of cereals, and also a transit house for the surrounding lands, and it expresses the hope that she will once again after the war resume her transit relations with other markets.

Defects in Legal System.

Dealing with commercial legislation, the report pays a tribute to the magistracy of the Mixed Courts, who, despite the somewhat defective legislation they are called upon to administer, generally contrive to adapt it to the necessities of the day, and to give decisions which have assisted in the satisfactory solution of the economic and commercial problems confronting the community. At the same time, it calls for certain reforms, such as a proper form of registration of all persons engaged in trade with full details of their business and standing, greater publicity as to the position and rights of wives of traders, legislation concerning Egyptian companies offering guarantees to shareholders and creditors by forcing companies to publish their balance-sheets and by fixing the responsibility of directors, etc., and establishing the conditions under which foreign companies should be allowed to operate in Egypt, also legislation in regard to insurance companies, which at present are free to enforce any policies they like, and are not bound to possess any property in the country as a guarantee towards their policy holders, and laws on trade-marks and warrants. It recommends the application of the law of bankruptcy to non-traders as well as reform of the law re commercial security, full publicity in regard to bills of exchange in circulation and protests in connection therewith, the unification of the system of weights and measures on the basis of the metric system and a more extensive control over the quality of foodstuffs offered for sale.

The Banking System.

With regard to commercial credit, the view is expressed in the report that there are adequate banking facilities in existence, and that any extension except in the direction of agricultural banking would not be to the benefit of the country. It notes with pleasure that one of the effects of the war has been to put an end to the system of unduly long credits which were so freely accorded before the war by importing houses, and thinks that a closer co-operation between the various banks in the matter of commercial intelligence might result in greater assistance not only to the banks in question, but also to trade in particular. It considers that the National Bank of Egypt, which, owing to its peculiar relations with the Egyptian Government, has become a sort of State bank, should develop itself in the direction of a central bank, of a controlling bank of the other banks, and that a revision of the conditions under which it is allowed to issue banknotes is desirable. It also considers that the time has come for purely Egyptian capital to play its part in the banking system of the country instead of confining its collaboration to making deposits in the banks, and that there is room for a bank directly designed to assist and protect industrial enterprises. Its initiation need not be pretentious, but once it was established as a going concern it would play a great part in the industrial development of the country.

The Question of Food Supply.

The commission gives it as its opinion that the agricultural and industrial activities of the country must be increased so as to relieve Egypt of the danger resulting from her being a one-crop country, so as to make the country independent of outside sources from the point of view of food, in order to provide for the abnormal increase which is taking place in the population and with a view to furnishing the wherewithal for the execution of all the works indispensable to the proper economic and social development of the country. Egypt must as soon as possible put under cultivation the vast area at present lying unproductive—for this it will be necessary to obtain funds from outside—and at the same time she must improve her agricultural methods, which are not in keeping with the times.

As regards transport, the railway system has been developed in a satisfactory manner, but the rates are in many cases too high and a drastic alteration is imperative. Also, greater use should be made of water transport, which could be much extended seeing the advantages which this country enjoys from its river and fine canal system, a river port is necessary, greater impetus should be given to road construction, and some means should be found for rendering the country less dependent on foreign shipping for the export of its products.

Commercial Education.

Turning to commercial education, the commission is of opinion that the general state of ignorance which exists amongst the Egyptians as to commercial methods is very detrimental to any progress, and it recommends that the system of commercial education should be greatly developed, that a year's apprenticeship in a commercial house should precede the granting of a diploma to successful graduates and that elementary commercial instruction should be given throughout the lower schools. The report calls attention to the fact that apart from the foreign chambers of commerce there exist no economic associations in the country. It considers that there should be a more active collaboration between Egyptian and foreign traders and that the Government should give to any movement in such a direction all its support; it also calls for a greater extension of the statistical service of the State.

Dealing with the organisation of the external and internal trade of the country the report says that the system of weighing cotton at Alexandria leaves much to be desired, and recommends that weighing by Government weighers should be introduced; it considers that the cotton trade is too much under the influence of foreign exporters, that the transit trade carried out by Egypt on behalf of countries further East could be developed if customs facilities were offered and tariffs reduced, and that this development would not only create a profitable trade for the country, but it would set up permanent stocks of commodities required by the country, on which it could draw in emergency, whilst it would open up important shipping and trade connections with lands which are, and it is to be hoped will continue to be on a greater scale, importers of Egyptian products.

Organisation of Import Trade.

With regard to the import trade, the commission considers that its organisation is very defective. This applies especially to the very considerable commission agency business. and the Commission outlines certain conditions which foreign merchants should insist on in their contracts with local commission agents, and which would do more to eradicate the abuses, which undoubtedly exist, than any amount of legislation. Coming next to the internal trade in agricultural products the commission says that the problem of agricultural credit is one of those meriting the most serious attention, and it considers that only the introduction of co-operative societies can solve it in a satisfactory manner. The markets also require proper control and it is also desirable that a proper river port should be created. In concluding this part of its report the Commission says that all the reforms outlined by it are subordinate to a greater extension of education and to the development of the national character, the importance of which it firmly believes is realised by the Egyptian Government.

LIONDA & COMPANY, Ltd. 34, Fenchurch Street, LONDON, E.C. 3.

TRADE IN FRENCH MOROCCO

Mr. P. B. Robinson, of the Bank of British West Africa, who, as is well known, takes a keen interest in Moroccan affairs, has given an interview to one of our representatives on the present commercial situation in the French zone of Morocco. He has just returned from a long tour in that country, and his remarks are, therefore, of extreme value.

"During the tour," said Mr. Robinson, "I visited Tangier and all the chief places in that portion of Morocco which forms the French Protectorate, and I was much impressed with the development taking place. Morocco is primarily an agricultural country, and the state of the crops, consisting chiefly of barley, wheat, coriander, linseed, etc., hardly left anything to be desired. Good roads either now exist or are being completed between the chief towns, which must facilitate enormously the future development of the country. Railways are badly needed, but the necessary steps are being taken for their provision by the Protectorate authorities. At the present time a light narrow-gauge railway exists between Casablanca and Rabat and between Sale and Fez, which is found to be very useful for travellers in these times, when the scarcity of petrol prevents the free use of motor-cars. The new town of Casablanca is now rapidly growing, and Casablanca is the central port for the imports and exports of the Protectorate. Other ports, however, notably Mazagan and Saffi, are to receive great attention with a view to their improvement. Large quantities of the produce of Morocco are shipped from both ports, and it is particularly desirable that the very necessary works at Saffi should be put in hand and completed without delay, in view of its special importance in relation to the grain-producing districts of the neighbourhood."

Stress was laid by Mr. Robinson on the great natural wealth of the country. "Apart from grain," he pointed out, "Morocco possesses great possibilities as regards the raising of cattle and pigs and the export of hides and skins and wool, and it would appear that there is hardly any produce suited to a dry climate which could not be satisfactorily grown there. Minerals are known to exist in Morocco, but exploitation has hardly commenced, though the prospects are undoubted."

British Trade Outlook.

"British trade with the French zone of Morocco," Mr. Robinson continued, "is protected by trade treaties, and British firms are not only entitled to the same treatment as is accorded to French firms, but the French local authorities from General Lyautey (who has done so much for Morocco) downwards welcome the co-operation of British firms in the development of the Protectorate. British goods are much sought after, and, apart from the existing large trade in cotton goods and in other directions, there is undoubtedly great scope for British manufacturers and export markets. The large crops of grain which Morocco now produces are raised almost entirely by primitive means, and agricultural machinery of a suitable type should find a ready market. The woollen cloth trade, which before the war was so largely in German hands, ought to be obtained by British firms, but in this connection I found that this country had so far apparently not succeeded in supplying a cloth of the same good quality as was formerly supplied by Germany. Hardware, cutlery, glassware, and crockery are all needed in very large quantities, and there would seem to be no reason why the British pottery merchants should not supply tea-cups of a good quality to take the place of those which came from Austria and Germany.

"Such a country as Morocco, with its excellent climate and fertile soil," Mr. Robinson added, "ought to receive the close attention of British merchants, who should be prepared to send out their own representatives from this country, and to study the needs of the Moors. Vast opportunities exist, especially in the interior, where hardly any firms appear to have established themselves up to the present. The Bank of British West Africa has established branches in all the chief places in the French Protectorate, and British trade is besides encouraged and protected by the British Merchants' Morocco Association, which has done much useful work since its incorporation; while there is also the British Chamber of Commerce for Morocco, which has accomplished excellent work in the interests of British trade. It is to be hoped that British steamship companies will see to it that as soon as circumstances permit Morocco is well served, as the existing service is inadequate and the various ports require to be directly served." Mr. Robinson added, in conclusion, that while it was of course apparent that during the war many difficulties existed in establishing trade with Morocco, it was most important that firms desirous of establishing a connection with the country should not wait until the war ended, but should commence at once to study the needs of the country, and should endeavour to supply the right kinds of articles now so far as that was possible.

EXPORTS TO PALESTINE.

Although, owing to military exigencies, it is not yet possible to authorise British traders to forward goods to Palestine direct, the Board of Trade give notice that arrangements are being made by the military authorities for the transport into Palestine from Egypt of a limited quantity of goods to meet the needs of the civilian population of the occupied territory. Firms desirous of exporting goods to Palestine by this route should apply to the Board of Trade, Commercial Relations and Treaties Department, Gwydyr House, Whitehall, London, S.W.1, for the necessary license, and should state in their application the name of the firm in Palestine to whom the goods are to be sent. In giving this notice the Board of Trade desire to emphasise the fact that the opportunities for trade and for the transport of goods are at present strictly limited owing to military requirements.

The P. and O. and the B.I. Companies are closing their offices in Northumberland Avenue, and their West End business will be resumed at new offices, 14, Cockspur Street, recently acquired by purchase, whenever these premises may be vacated by the Ministry of Munitions.

EGYPTIAN CROPS.

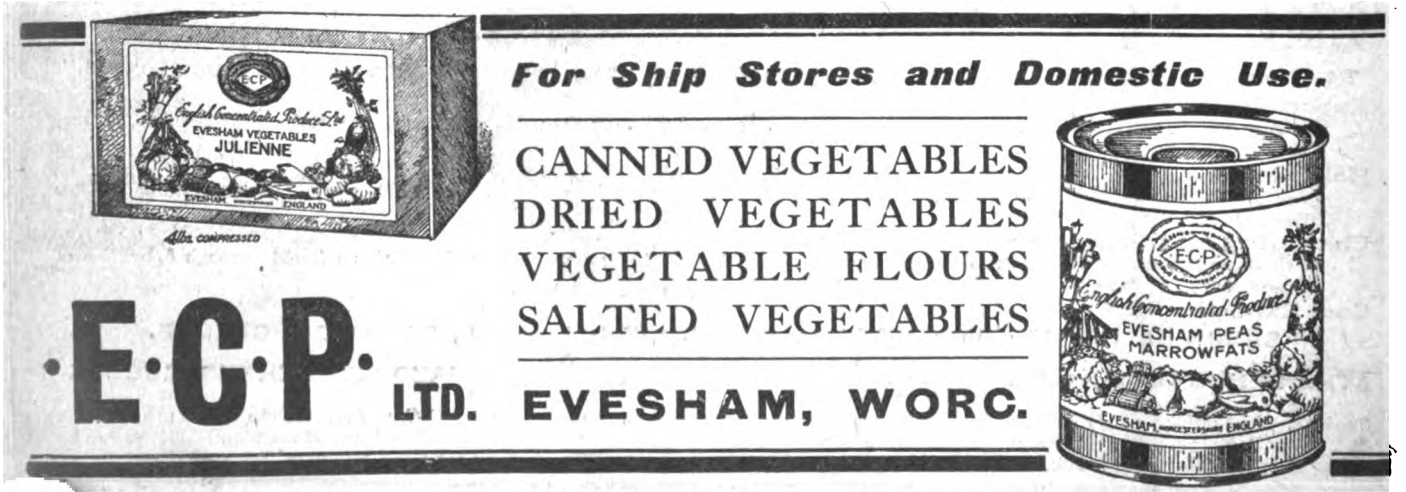
The bulletin of the Egyptian Ministry of Agriculture gives the following particulars regarding crop conditions in April :—

COTTON.—The weather has been extremely variable during the first half of the month, hot in some days and cold with wind, rain, and even hail in others, but warmer and more settled in the second half. It was on the whole distinctly unfavourable to the early-sown cotton, much of which did not germinate, and this necessitated an unusual amount of resowing. Resowing, hoeing, and watering are the common operations still in progress. The usual attacks at this season of mole-cricket, cutworm, and aphis are reported, but their damage is generally slight. Sore-shin attack, however, was somewhat severe in Beheira, Sharqiya, Giza, and Faiyûm, and was responsible for a good deal of resowing. On the whole, the crop is late and has made an unsatisfactory start, owing partly to the unpropitious weather prevailing immediately after sowing, and partly, but to a lesser extent, to the heavy attack of sore-shin in some provinces.

WHEAT.—The weather has been on the whole favourable, the high winds which prevailed during the month did little damage to the crop, as the wheat was nearly ripe. Attacks from two kinds of rust (P. graminis and P. glumarum) are still a common feature with baladi wheat, the latter, although less apparent, being found in the heads and having the greater influence on the yield. In Daqahliya and Faiyûm the pest exhibits a marked increase. On the whole, the crop is ripening well and shows a slight improvement on last month. Harvesting of the early crop has begun in Upper Egypt. Much less eel-worm is found this year than last.

BARLEY.—The variable weather had no effect on the barley, as it was in a too advanced stage. It has also escaped damage from rust, as the grains had sufficiently ripened before the attack became serious. Harvesting is now general, and is practically completed in Asyût and the provinces lying south. The yield is very satisfactory.

BEANS.—The crop having already fully ripened, no damage was caused by the prevailing weather. Broom rape and bean rust are still to be found, and the former has increased in Daqahlîya, where it has injured the crop to an appreciable extent. Harvesting is almost at an end, and the yield is up to expectation.



ONIONS.—Onions are almost all ripe, and harvesting is in progress. The crop was generally late this year, it having suffered to a certain extent from adverse weather during its growth.

RICE (Séfi).—Preparation of land for rice-sowing is very active. Fino has been put in in Beheira and Sultâni and Yapâni are now being sown.

MILLET (Séfi).—Ploughing, watering, and sowing are in progress. Early-sown millet is germinating regularly.

SUGAR CANE.—Planting is almost finished, and germination is satisfactory. Early-planted canes are progressing favourably.

The Turkish claims in the Caucasus, it is stated, include Novorostchisk, with all warships, harbour works and stores, for which compensation will be paid.

NOTES FROM MOROCCO.

(FROM OUR OWN CORRESPONDENT.)

TANGIER, May 20.

Import Duties.

A question, by no means a new one, but at present attracting rather more attention than usual, is the system of estimating import duties. The basis of those duties, so far as it is not affected by the periodical issue of a tariff of maximum and minimum values which allows of very great latitude, is the value of the goods delivered at the customs. As it is an open question how the exact value is to be decided, the customs officials have a fairly free field for the exercise of their ingenuity and they are sometimes, perhaps not always unfairly, charged with choosing the method of estimation which will give the highest value in the particular case. It thus happens that, in a country where profits are in ordinary times cut very fine, a merchant is often uncertain whether he will have to pay on the basis of his invoice, on current prices in Europe, not necessarily in the country of origin, or even, where there is no recognised price on quay, on the local price, which in some cases comes very near to charging merchants duty on the profit which they may make. The whole question rests on treaty and interpretation and it is no particular person's or nation's fault that it is at present in such an unsatisfactory position. The utmost that can be said at the moment is that it would be better to follow a uniform practice, even an unreasonable one, than by ringing the changes on all possible methods to leave merchants, in a great number of cases, quite uncertain as to what duty they will have to pay.

Discovery of Phosphate Beds.

The war, in Morocco as elsewhere, is stimulating the research for local sources of supply. News has recently been published of the discovery, or rather confirmation of the discovery, of important phosphate beds similar, according to expert opinion, to those which have proved to be of such value in Tunis. If that opinion should prove to be well founded the addition to Moroccan exports—up to the present almost entirely agricultural—may be very considerable, and hopeful expectations are already expressed of a yearly export that may reach one or even two million tons.

The palmetto, which covers great stretches of country and is the cause of most of the expense in clearing the ground for agriculture, has at last, it seems, been turned to commercial account. Trials, apparently exhaustive, were made years ago without much success, but now under the influence of war prices attempts have again been made and fibre has been manufactured which appears to be commercially satisfactory.

Backward Agricultural Methods.

It is to be regretted that farming in Morocco has not so far made the progress that might have been anticipated. Agriculture is the staple industry of the country, and the uncultivated area available, the climate, soil and admirable marketing opportunities admit of an enormous increase in the quantity and quality of the crops produced. The great bulk of the crops are still grown in the most primitive way by natives, and it has been quite recently stated that in one of the largest and best agricultural provinces, in which most of the European farming efforts have been centred, there were only five threshing machines. Up to almost the end of last year, owing to the lateness of the rains, there were serious fears of a crop failure, which, in the present state of the world's stock of food stuffs and transport, would have been very serious. Fortunately, though late, the rain has fallen abundantly, and most opportunely, and there is little doubt that the crops will be unusually good. The acreage, however, largely owing to the lateness of the rains, but partly also to the fact that the price of grain, all of which in the French zone, is bought by the military authorities, is fixed at a rate which, though leaving a profit, is low compared to European rates, has not encouraged native farmers to put forward quite their best efforts. On the other hand the prices of bread and other food stuffs required by the natives have been kept comparatively low; a fact which, in conjunction with the great care taken to maintain the supply at reasonable rates of other native necessaries, has helped greatly to confirm the general tranquillity.

THE WESTERN AUSTRALIAN INSURANCE COMPANY.

The Western Australian Insurance Co. (chief office 1, Queen Victoria Street, London, E.C.), are opening up in Bombay and have appointed Messrs. Allen Bros. and Co. (India) Ltd., of Canada Building, Hornby Road, as their agents for fire and marine insurance. The company was established in 1912 and the share capital now stands at £200,000, of which £100,000 has been paid up. The total assets of the company exceed £500,000.

The company has taken advantage of the elimination of German agencies in various parts of the world and in addition to branch offices throughout Australia, is firmly established in the United Kingdom (London, Liverpool, Manchester, Leeds, Belfast and Glasgow), Cape Town, Lourenço Marques, France, Egypt, Norway, Holland and Mauritius. Branches and agencies in other parts of the world are being opened as opportunity arises.

The exportation and re-exportation from the French zone in Morocco of all raw hides (green, salted, or dried), or leather, tanned or prepared, of oxen, cows, calves or bulls, has been prohibited.

ENGINEERING NOTES.

An Acreage Meter.

Somewhere in the Near East before the war a tragedy resulted from a dispute between a farmer and a ploughing-tractor owner, as to the amount of land cultivated by the latter, whose calculations and charges were contested by the former. Such disputes, fortunately not always with tragic results, are often happening in the East, where, owing to the great number of comparatively small estates and small holdings, there are many contractors and private owners of agricultural tractors who undertake the ploughing on such estates, or small holdings, at an agreed sum per acre. Disputes and arguments over the acreage ploughed by any particular machine have been inevitable in the circumstances, and interested parties in the East will be glad to hear that they can be avoided by the use of an ingenious device that has recently been brought out as an accessory for tractors. It measures automatically the acreage ploughed by the machine to which it is attached, and, according to trustworthy information, its accuracy and time-saving qualities are much appreciated by farmers who have used it. It is claimed that this device can be fitted to any existing make of plough in ten minutes. It will measure from one 9-in. furrow up to six furrows, either 9 in. or 10 in. wide, The apparatus is bolted to the plough and connected to the lifting arrangement on the beam of the plough, so that when the plough is lifted from the soil the device automatically ceases to register on the dial. The meter records to one-tenth of an acre the amount of land cultivated. Apart from the value of the device for ploughing, it is obviously a useful fitting for corn drills, binders, mowing machines, and similar agricultural machines. Quite recently we referred to measures taken by a Government in the Near East to secure a reliable record of the quantities of wheat threshed by machines. A record of the acreage of ploughed and sown land as registered by this new device will, perhaps, meet in a simpler way the requirements of the officials.

A New Magneto Coupling.

A new device which makes the starting of large tractor engines easy, and entirely prevents the risk of "back-fire," has been brought out which should be of much interest to owners of such tractors in the East. It is automatic, and does not require setting every time the engine is started. It provides the means for coupling a magneto-generator with an internal combustion engine in such a manner that the magneto will generate current of sufficient voltage for the production of a spark of the necessary intensity however slowly the engine may be running, so that the engine may be started on the magneto without the employment of a battery-ignition system as is usual.

Self-Feeder for Threshers.

Many accidents happen annually in the threshing season through the incompetency or neglect of those employed in feeding the threshing machines. A new self-feeder for threshing machines with a detachable conveyor and band cutter is now being used, which, especially in countries where skilful feeders or farm labourers cannot easily be found, will be of much value to threshing machine owners. This feeder has a running canvas similar to that on a sheaf binder, and this carries the sheaves to oscillating kicker bars, which feed the sheaves gradually to the feed drum, the drum in turn passing them along to the concave of the machine. The conveyor is hinged to the feeder, and is driven from the feed drum spindle; it can be placed on the top of the stack and lowered to about 4 ft. from the ground. Endless slatted chains carry the sheaves along the conveyor, and band-cutting discs cut the bands as the sheaves pass under them, the sheaves being then delivered on to the feeder canvas. The conveyor can be worked from either side of the thresher. It is said that, apart from the safety it affords, it saves the labour of quite two men.

With reference to the announcement last month of the reopening of the parcel post to Ahwaz and Mohammerah and places in South Persia served through the latter place, it is notified that piece goods may not be sent by parcel post.

LANCASHIRE COTTON.

Position Unchanged.

(From Our Own Correspondent.)

Manchester, Wednesday.

The market this week has not shown any distinct change. The general conditions have not been at all favourable to a large turnover. Demand in many quarters has exceeded supply. The strong objection of the operatives to the new regulations of the Control Board as to playing off under the restriction of the output scheme has resulted in the authorities deciding to postpone the fresh regulations for a period of six weeks. The American cotton crop continues to do well, the official condition report of 82.3 per cent., against 69.5 per cent. last year, being better than expected. Generally satisfactory advices have again been received relating to the progress of the Egyptian crop. More spinners of Egyptian yarns are turning their machinery on to Government work. A large demand has been experienced for certain counts and qualities, and prices have tended to harden. A little more inquiry has been mentioned in cloth for Egypt, but buyers are still cautious. Rather more activity continues to take place for Singapore, Java, and South America. Offers for India in standard makes still lag behind. Some uncertainty exists as to the monsoon this season. Numerous manufacturers cannot entertain fresh contracts for delivery this year, and many sellers are not at all anxious to quote. American yarns have been very strongly held and supplies tend to become scarcer than ever. Only sorting up lots have changed hands in export bundles.

DANUBE TRAFFIC DELAYED.

The German papers learn from Bucharest that the resumption of traffic on the Danube via Vienna to the Roumanian ports cannot be started yet (says the Amsterdam correspondent of the *Morning Post*). Negotiations are proceeding as to the import of German and Austro-Hungarian goods into Roumania.

POWER LINE TO MOROCCO.

COMPANY NOTES & REPORTS

The report of the Egyptian Delta Land and Investment Company, Limited, states that the net profit for the year is £E3,185, which, added to £E21,294 remaining over after last year's dividend was paid, bring up the total available balance to £E24,480, from which the directors recommend the distribution of the same dividend as last year, viz., 4d. per share on 324,250 shares, which will absorb £E5,[illegible]

The report of the Lochnagar (Ceylon) Produce Company for 1917 states that the net profit, after writing off depreciation of buildings and machinery, is £6,354; £5,097 was brought forward, making £11,451, less excess profits duty, 1916, £3,593, leaving £7,858. The directors propose a final dividend of 2 per cent., less tax (making 6 per cent. for the year), and to carry forward, subject to excess profits duty, £6,165. London expenses and the whole of management expenses and general charges have been charged to revenue account. The tea crop amounted to 145,510 lb., of which 139,881 lb. have been sold to date at an average price of 10.75d. per lb. The rubber crop amounted to 152,078 lb., of which 129,993 lb. have been sold to date at a gross average of 2s. 3.91d. per lb. The net average price realised after deducting freight, loss of weight and all sale and warehouse charges, etc., is 1s. 11.39d. per lb. The tea crop for 1918 is estimated at 140,000 lb. and rubber at 175,000 lb., but this is subject to restriction of output.

The report of the Vellikelli Tea Company of Ceylon for 1917 states that the crop amounted to 328,314 lb. tea, being at the rate of 600 lb. per acre, which was below the average of recent years, chiefly due to the adoption of a finer system of plucking considered necessary in order to restrict the output on account of the shortage of tonnage. The price realised compensated for the increase in cost of production. Cost per lb. f.o.b. Colombo was 6.35d. and net average per lb. 10.77d. The net profit amounted to £5,616, and after adding interest and £2,041 brought forward the total is £7,776. The directors recommend a final dividend of 6 per cent on the ordinary shares, making 10 per cent. for the year, and to carry forward, subject to excess profits duty, if any, £3,563. In view of the increasing difficulties as regards exchange and the shipping of tea, the directors state it is absolutely necessary to carry forward a substantial sum.

The revenue accounts of the Great Indian Peninsula Railway Company for the half-year ended March 31 last having been passed by Government, the directors propose a dividend of 35s. out of surplus profit for the year on the 3 per cent. stock in addition to the guaranteed interest, making £3 5s. for the half-year, less tax.

The report of the Highland Tea Company of Ceylon for 1917 states that, after payment of all charges, the net profit is £4,509; £2,421 was brought forward, less excess profits duty 1916, £1,561, making £5,369. The directors recommend a final dividend of 6 per cent., making 10 per cent. for the year, less tax, to write off for depreciation of buildings and machinery £500, and to carry forward, subject to excess profits duty, £1,669. The crop was 400,210 lb., against 406,042 lb. and an estimate of 410,000 lb. Owing to restriction in shipments a considerable portion of the crops was sold on the Colombo market, the balance being shipped to London. The average gross prices realised in London were 1s. 2.22d. per lb. for Chrystler's Farm and 1s. 4d. per lb. for Glenorchy, and in Ceylon 43.70 cts. and 44.74 cts. respectively. The average net price all over was 9.71d. per lb., against 9.592d.

The net profits of the India General Navigation and Railway Company for 1917 were £65,767, against £72,686 in 1916. £3,500 has been transferred to the debenture sinking fund, and £8,974 to the insurance reserve. The dividend on the ordinary shares is maintained at 8 per cent., tax free, and £26,485 is carried forward against £24,727. The profit earned by the Mymensingh-Jagannathganj Railway was £23,962, against £22,554, and the Sylhet Lime Company contributed a dividend of 14 per cent. on the shares held by the company.

The report of the Orient Company states that including £4,143 brought in, accounts for 1917 show a profit of £32,356. Further dividend of 7½ per cent., making 10 per cent. for year, against 7½ per cent. for 1916, carrying forward £19,090, subject to excess profits duty, after placing £2,500 to reserve.

The report of the Ceylon Tea Plantations for 1917 states that the net profit was £154,889 (against £153,209). The final dividend is 30 per cent. on the ordinary shares, making 50 per cent. for the year (the same); and the carry-forward is £81,791. The tea yield was 454,619 lb. less; the rubber crop was 79,120 lb. in excess of 1916, the average rate of yield per acre being 237 lb.. the cocoanuts numbered 5,147,710, against 4,944,483, but owing to restrictions on export prices were unremunerative and a loss in these estates of £1,932 was entailed.

The report of the Ceylon Timber and Rubber Company for 1917 states that the area under rubber is 1,148 acres. The output amounted to 235,031 lb. (equal to an approximate landed weight of 232,680 lb.), against the estimate of 200,000 lb. The average net price per lb. was 1s. 9.95d., against 2s. 5.23d. The cost f.o.b. Colombo was 1s. 4.06d., against 11.76d. Administration expenses in London were 0.74d., against 0.48d. The stock of rubber unsold at December 31 has been taken into account at 1s. 6d. per lb. The year's profit of £6,282, after making allowance for 1916 and 1917 excess profits duty and income-tax, is reduced to £330; £7,604 was brought in, less excess profits duty 1914 and 1915, £4,391, making £3,543, which the directors propose to carry forward.

Dividends, Payments, etc.

The transfer books of the ordinary shares of the Calcutta Tramways are closed until June 20.

The Bombay Electric Supply and Tramways Co., Ltd., announce the numbers of 5 per cent. second mortgage debentures which have been drawn for redemption on July 1.

The preference stock transfer books of the Rohilkund and Kumaon Railway Co., Ltd., will be closed from the 17th to the 29th inst., inclusive, for the purpose of preparing the interest warrants payable to the shareholders whose names are on the register at the time of closing the books.

The principal of the issue of £150,000 first mortgage debenture bonds to bearer of the Khedivial Mail Steamship and Graving Dock Company will be paid on July 1 next, at Messrs. Glyn Mills Currie and Co., 67, Lombard Street, E.C.3.

In accordance with the provisions of the Khedivial Mail Steamship and Graving Dock Co.'s issue of £150,000 first mortgage debenture bonds to bearer, the principal moneys thereby secured will be paid to the bearers of such bonds on July 1, at the banking house of Messrs. Glyn, Mills, Currie, and Co., 67, Lombard Street, E.C.3, where they should be left three clear days for examination.

The directors of the Indian and General Investment Trust recommend a final dividend on the deferred stock at the rate of 9 per cent. per annum for the half-year to April 30 last (making 8½ per cent. for the year).

The transfer books of preference shares and debenture stock of the East India Distilleries and Sugar Factories will be closed from 16th to 30th instant.

Oil Outputs.

Anglo-Egyptian.—Week ended May 26.—Gemsah, 22 tons (previous week, 22 tons); Hurgada, 5,514 tons against 5,032 tons.

Baku Russian.—Gross production of crude week ended April 20, 49,200 poods.

SPANISH TAX ON COTTON.

On the proposal of the Commissioner of Supplies, Señor Maura, the Prime Minister, submitted for Royal signature a decree establishing a tax on imported cotton (says a *Reuter* message from Madrid, dated May 31). The tax, which must in no case be higher than one peseta per kilo, is fixed at 50 pesetas per 100 kilos for raw American cotton, 60 pesetas 50 centimos for Egyptian cotton and 37 pesetas 50 centimos for Indian cotton. The tax on manufactured cotton will be 20 per cent. higher than that fixed for Egyptian cotton.

THE ECONOMIC GEOLOGY OF PORBANDAR.*

This substantial volume contains a large amount of detailed information gathered during a geological reconnaissance of the State of Porbandar, a comparatively small area situated in that part of Western India which is known as Kathiawar. Architects and engineers in that part of the country will find it indispensable, and since it does not profess to cater for the general reader, we are not entitled to complain of its defects from his point of view. We may remark, however, that its value would have been increased, even to the specialist, by the inclusion of a summary of the information detailed in its pages, pointing out that there are apparently few attractions for the ordinary prospector, but that some admirable varieties of stone for constructional purposes are obtainable in quantities within the State. It is in the details given regarding these stones that the value of the book mainly lies.

BENGAL IRON AND STEEL.

At class meetings of holders of founders' and ordinary shares in the Bengal Iron and Steel Company on May 28 committees of holders were appointed to confer with Sir William B. Peat regarding the valuation of the founders' shares in the proposed reorganisation of the share capital.

ON 'CHANGE.

(From Our Own Correspondent.)
Throgmorton Street, Wednesday.

Business has continued very quiet during the past week, but on the whole the tone has kept good and prices firm. There has been at no time any pressure to sell, but on the other hand buyers are still adopting a waiting attitude. In Egyptian Government stocks prices are unchanged, and only in Unifieds at 89 has any business been practicable, at which price there are still buyers. Even at this high level sellers are scarce, as is also the case with the 3½ per cent. preferences and City of Alexandria Bonds.

In Bank shares there has been again a fair amount of business in Nationals without altering the price, and there are still persistent buyers of the shares whenever offered. Agriculturals, on the other hand, have been somewhat quieter on some few sales, and are 1-16 easier at 6. Anglo-Egyptian Banks have been dealt in to a small extent, and are unaltered at 15¾ x.d. Delta Light Railways are 1-16 firmer at 6½, but the price is rather nominal in the absence of business.

Amongst land shares Aboukirs are fractionally harder at 21s. 9d. Behéras close ¼ easier at 12¾, some few hundred shares having come on the market, with the result that these have been taken at a somewhat smaller price. In Delta Lands and New Egyptians some small transactions have been taking place, and the latter shares are 4½d. lower at 16s. 10½d. Egyptian and Foreign Trusts have been persistently bought, and are fractionally harder at 11s. 9d. In Sidi Salems some business has been done round the current level. Union Foncières are 1-32 easier at 2 15-16, after some small transactions at the price. United Egyptian Lands are fractionally easier at 1s. 6d.

In miscellaneous shares Alexandria Waters remain firm, although, owing chiefly to the increase of working expenses for the past year, the dividend is to be reduced to 12s. 9d., as against 13s. 9d. for the previous year. In Khedivial Mail shares there has been no alteration, although the repayment of this company's debenture debt on July 1 next must necessarily improve their position.

As regards Greek securities, the outstanding feature remains the constant demand and the practically absolute lack of sellers. The only quotable change of prices is a rise of one point in the 1910 loan to 61. Bank of Athens are ⅛ quieter at 3¾.

A Blue-book has been issued giving particulars of the movements of commercial vessels, cargo, and passenger traffic in Egyptian ports in 1917, and the number, tonnage, and nationality of commercial vessels passing through the Suez Canal in that year.

In view of the Board of Trade Order prohibiting the delivery of newspapers to retailers on the terms known as "Sale or Return," which comes into force in the United Kingdom on June 24, readers of "The Near East" who are not already subscribers will materially help the Management by giving an order to their newsagent or to the Office of "The Near East," 1, Devonshire Square, E.C.2, for the regular delivery of the paper. Annual Subscription, £1; postage, 2s. 2d. (inland), 4s. 4d. (abroad).

NOTES OF THE WEEK.

Only minor conflicts have been reported during the week from the Macedonian front. After the successful dash of the Greeks, which was not carried out without a fair number of casualties, it was to be expected that a brief respite would be required to consolidate the new positions. Accordingly, activity has been transferred to other points of the long line, the Serbians to the west being in particular conspicuous. In the meantime the Bulgarians have tried to challenge the success registered against them, but their efforts to make any real impression on the Allied line have failed. If the Allied forces could count on a marked superiority in the air their task would be considerably lightened. They have the advantage over the enemy in this arm, but it cannot yet be said to be sufficient for all their purposes.

In Palestine there has been a local operation in the coastal sector, where a portion of the enemy trench system extending over a frontage of a mile was captured on June 8. It was at this point that on May 28 the British line was advanced to a depth of nearly two miles over a front of more than five miles; but the two operations only serve to throw into relief the relative inactivity of General Allenby's forces since the right wing fell back after a raid on the Hejaz Railway. Air attacks, however, have been in evidence, special attention being given by British aircraft to the enemy's camps and aerodrome in the neighbourhood of Amman station. Turkish resistance has presumably been stiffened by a leaven of German troops and German officers, and the British advance has to be developed more cautiously.

To the south of Palestine our Arab Allies have been carrying out some more of those lightning raids which are a speciality of their mode of fighting. More methodical methods of warfare are not to be expected of them. But there cannot be the least doubt that their tactics are extremely embarrassing to the enemy, who can never tell where these irregular cavalry will turn up next. The latest exploits of the Arabs were directed against railway stations on the Hejaz line some forty and fifty miles north of Maan, an indication that their forces are gradually creeping up this railway. If they can persevere in their efforts in this direction, we may expect to find them sooner or later co-operating with General Allenby's troops in compelling the enemy to evacuate Amman. So seriously do the Turks regard the Arab menace that they have detached aircraft from their northern forces, which are none too well supplied in this arm, to deal with the Arab concentrations in the neighbourhood of Maan.

In the Caucasus region it is reported that the Turks have fallen back on Kars. A short while ago it was announced that they had occupied Alexandropol and Erivan, two important stations on the Tiflis-Tabriz Railway. The news from this theatre is too scanty to enable us to form any clear idea as to the actual course of events, but it will be noted that, according to a report from Constantinople, a peace treaty has been signed between the Ottoman Government and representatives of the Southern Caucasus. With one Turkish force at Erivan and another advancing into Persia south of Lake Urumiah, it seemed as if for the time being nothing could prevent the Turkish occupation of Azerbaijan. If the northern force is back again at Kars, it may be that the Georgian opposition to the invaders of their country is gaining strength. In these circumstances there may yet be some respite for Persia. Whatever feelings a skilful propaganda may have inspired among the Persians for Germany, there can be no doubt that this benevolent attitude, if it does prevail anywhere, does not embrace the Turks as well. Events in Russia, we imagine, are being interpreted among certain sections of the Persian population as a striking illustration of German might. They are inclined to accept the *fait accompli*, and do not see how Great Britain will be in a position to reverse it. But the Persians can have no desire to welcome the Turks even for the *beaux yeux* of Germany, and it ought not to be difficult for Great Britain to explain the difference between a temporary success brought about by the collapse of Russia and the gradual wearing down of Germany's power by the superior strength of the Allied Powers.

In view of all that is at stake in Mid-Asia owing to the German success in Russia, it is evident that Teheran is at this time a most important centre as far as Great Britain is concerned. It occupies, indeed, a similar position *mutatis mutandis* to that of Sofia during the latter end of 1914 and the early part of 1915. We can-

Digitized by Google

not afford, therefore, any repetition of the diplomatic bungling which went on for so long unchecked in Bulgaria. The outlook for the Allies is improved by the difficulties experienced by the enemy States in reconciling their conflicting interests when their policy resolves itself into one of "grab." Thus the Turks are showing some reluctance to exchange the Russians for the Germans as neighbours. They would prefer to have the Black Sea Turkish rather than Teuto-Ukrainian, and they would like the Caucasus to be the natural boundary betwen themselves and whatever State succeeds to the Russian heritage. These symptoms of independence are far from pleasing to the Germans, who have definite aims in regard to Mid-Asia, and have only bolstered up Turkey, in order that she may be a subservient instrument for the furtherance of those aims.

The situation in the Middle East thus calls not only for very careful handling, but also for rapid action. It may not be possible to achieve more in the military sphere than is being done at the present time; but a special effort should be made to checkmate enemy propaganda in these regions. That matter is of such importance that a consultative body of expert opinion might be called into being for the purpose.

At the recent Versailles Conference, as was stated in these columns last week, the Allied Governments formally recorded their desire to associate themselves (with the United States Government) in an expression of earnest sympathy for the nationalistic aspirations towards freedom of the Czecho-Slovak and Jugoslav peoples. This recognition of the oppressed nationalities of Austria-Hungary has been carried a step farther by a letter from the British Secretary of State for Foreign Affairs to the General Secretary of the Czecho-Slovak National Council in Paris. In this communication Mr. Balfour states that his Majesty's Government will be prepared to recognize the National Council as the supreme organ of the Czecho-Slovak movement in Allied countries, and they will also be prepared to recognize the Czecho-Slovak Army as an organized unit operating in the Allied cause, and to attach thereto a British *liaison* officer as soon as the need for this may arise. His Majesty's Government, the letter continues, will at the same time be prepared to accord to the National Council political rights concerning the civil affairs of Czecho-Slovaks similar to those already accorded to the Polish National Committee.

This declaration will reassure public opinion among the Czecho-Slovaks and Jugoslavs, for any more concrete recognition might be regarded as superfluous until the various sections of these peoples are reunited for the purpose of joint deliberations. It should give considerable stimulus to the already formidable agitation that is taking place in Austria-Hungary. The authorities of the Dual Monarchy appear to have abandoned any attempt to disguise the embarrassment caused by this agitation. It is now admitted to be, apart from the actual progress of the military operations, the chief problem of the day, and, to make matters worse, one for which a solution cannot be found without the intervention of Germany. In view of the conflict of interests between the two component parts of the Monarchy, it is unlikely that any early remedy will be found or that the steps proposed will meet with the approval of the oppressed nationalities, and so remove the existing *impasse*.

In the meantime the Austro-German press fulminates against the Czecho-Slovaks and Jugoslavs, both within the Monarchy and outside its jurisdiction. The wrath of the Central Powers is particularly directed against the incorporation of a Czecho-Slovak army in the forces of the Entente. That a guard of honour should have been drawn from this army on the occasion of the Prince of Wales's recent visit to Rome is held to be quite unpardonable. With a characteristic outburst of unctuous rectitude the Entente Powers are taken to task for the worst possible breach of the comity of nations; their crime no doubt is enhanced in German eyes by recollections of the failure attending certain efforts to raise an Irish regiment in Germany. In regard to the Czecho-Slovak forces, however, there is this notable difference, that the Allies had nothing to do with their formation, and have only now tardily recognised them when they are actually taking part in the operations on the Italian front.

Even if the Central Powers choose to pretend that the Allies had a hand in bringing into existence the Czecho-Slovak force co-operating with the Italians, they cannot keep up the fiction in regard to the similar army now fighting "on its own" in Russia. These troops, comprising whole regiments that voluntarily went over to the Russians at an early stage of the war, seem to have maintained their organization in spite of the collapse of the Russian Army, and are now carrying on independent operations against the Bolsheviks. According to a German report their numbers may be put at 150,000, and they are distributed over North and East Russia. One force is reported to be in the Cheliabinsk region, in the southern Urals, where they have occupied a section of the Siberian Railway and captured a quantity of arms and artillery. While Germany warns Russia that it would "endanger her dearly-bought peace," if she permitted the Czecho-Slovak troops to leave Russian territory with arms and to join the Entente, the Bolshevik administration has collected a Soviet force to disarm the Czecho-Slovaks, with orders to shoot all who resist. The existence in Russia of this army loyal to the Entente, especially if its numbers are as large as is estimated, ought to supply a further incentive for immediate action with a view to rallying the saner elements among the Russians against the German-Bolshevik policy of disintegration.

The news from Roumania suggests that the policy now being adopted in that country is to leave the Marghiloman Government, which has the approval of the Central Powers to enjoy the dry husks of authority, and to avoid occasions for conflict with the *de facto* rulers. A general election is in progress; but it was reported that the Opposition parties had resolved to abstain. General Averescu, who enjoys special popularity in Roumania, has come forward as an independent candidate, partly, as far as can be gathered, in protest against the theory that the Government can claim the support of the country, and has been returned in three constituencies. M. Marghiloman, making a virtue of necessity, has taken over for his party the reform programme which the Conservatives resisted so long, even to the expropriation of big estates for distribution among the peasants. But the legislation of this Government, no less than the terms of the Treaty of Bucharest, 1918, can have only temporary force, and Roumania does well to bide her time without attempting to kick overmuch against the pricks.

The suggestion has been made in the House of Commons that the entry of the King of the Hejaz into the war on the side of the Allies has radically altered the situation in regard to Great Britain's action in taking upon herself the whole burden of the war as far as Egypt is concerned. As a result of this policy recruitment in Egypt has remained on a voluntary basis. There will be a consensus of opinion in favour of the British Government's decision that no modification of this arrangement should at present be introduced, but it is satisfactory to learn that a thorough recruiting campaign is in operation, and has been attended with creditable results. Although Egyptian territory is being defended just as much by the Palestine Expedition as if fighting were taking place on the Suez Canal or the Sinai boundary, it would be a short-sighted—as well as a superfluous—departure on the part of the British Government to introduce compulsory service in Egypt.

The arrangements for the new war organisations in India furnish an apt comment on the remarks we made last week regarding the increasing pressure on the administrative Services. The Publicity Bureau is placed in charge of one member of the Viceroy's Council, while

Digitized by Google

another takes over the Transport and Food Board, thus following the precedent created when the Man-power Board was established some time ago. Each of these important undertakings would in this country have meant the creation of at least one new Department with a whole-time Minister in charge: in India they are placed under men whose hands are already quite full. We have no idea of suggesting that the arrangement will not work: the Man-power Board has achieved a striking success, and we anticipate that the new organisations will do the same; our point is merely that the pressure of work is thereby seriously increased on what ought to be, but is not always, the brain of the whole Indian Empire.

Some members of the House of Commons, and also some of the newspapers, obviously share the impatience of Indian politicians for news of the conclusions reached by Mr. Montagu regarding the most suitable lines of constitutional development. Questions or, as India prefers to put it, interpellations, appear to be of the essence of democracy, and Mr. Montagu is, we hope, too good a democrat to object to them, but so far he has successfully refused to be drawn, and we advise our readers to pay no attention to the unauthorised anticipations of his views which are being put forward in various interested quarters. The War Cabinet has its hands full, and has not yet been able to consider the report; but it has been decided to present the document to Parliament, and Mr. Montagu's proposals will be known before the Government has formulated its conclusions upon them.

The formal announcement of the constitution of the Imperial War Cabinet and Conference contains a novel feature of some interest to India. The Secretary of State and Sir Satyendra Sinha are members of both Cabinet and Conference, so that India has the full representation she is entitled to claim, but the Maharaja of Patiala has been invited to attend the Conference only, and apparently will not take an active part in the deliberations of the more definitely executive body. No such distinction was drawn in the announcements regarding last year's gathering, and no reason for the change has been made public, but we may be quite sure that it is not intended in any way to minimise the importance of the Indian Princes. The Imperial constitution is in process of growth, which means gradual definition and differentiation, and to our mind counsel rather than execution is the true sphere of the Princes.

Sir Valentine Chirol's articles in *The Times* on constitutional reform in India have naturally attracted much attention among people who have any attention to spare from the even graver pre-occupations of the moment. We need not summarise them beyond saying that their general attitude is what has been consistently advocated in these columns. Change must come, and India has to be trained in democratic ways; the hard facts of the situation must at all costs be faced; we must begin with the foundations; in primary political education the taxing power is the best text-book; and whatever changes are made the King's Government must still be carried on. All this has been said before, though it has rarely been said so well, but it needs to be repeated again and again until it eventually penetrates the not very accessible mind of British democracy in the lump.

Every friend of India must have heard with deep regret the news of the death of Dr. Venis, the great Sanskrit scholar, who, after completing the appointed years in the Indian Educational Service, was chosen as Research Professor by the University of Allahabad, and remained to the end engaged in the studies which he had made his own. Dr. Venis was a true Pundit; his knowledge was vast, but his power of imparting it was not less striking. He had a rare grasp of the workings of the Indian mind, and his influence over his pupils was extraordinary. It is not too much to say that he succeeded in founding a school, and we have no doubt that the traditions created by him will count for much in the development of that genuine Indian scholarship which is surely coming, though its advance is painfully slow.

EDUCATION IN EGYPT.

(By Our Cairo Correspondent.)

In a general Budget creating a record as regards both revenue and expenditure, it is only natural that an important administration like the Ministry of Education should figure for an unprecedentedly high credit. The educational estimates for the coming financial year amount to £E578,733, as compared with £E467,753 in 1917-1918 and £E505,557 in 1914-1915, the highest year on record. There is thus an increase of £E110,975 over the preceding year, and one of £E73,176 over pre-war levels. Of this increase £E95,932 is taken by the Central Administration, of which £E34,917 goes in salaries, wages and allowances, and £E39,500 in food, and £E15,043 to technical education. Of the extra expenditure provided for, £E27,838 is for elementary education, £E22,589 for boys' primary schools, £E16,534 for girls' primary schools and the training college, and £E16,894 for secondary schools. The revenue of the Ministry during the coming year is estimated at £E233,370, an increase over 1917-1918 of £E27,340, of which £E25,620 comes from additional school fees.

Part of the increase in revenue arises from larger numbers in attendance at schools and part from the raising of the fees in certain schools. The increase in expenditure is caused by developments, but for the most part it is due to higher prices. As the School Management Committee's note points out, meals in schools on the basis of the new contract for the current year will cost 80 per cent. more than in 1917, which on the old establishment alone means an addition of over £E30,000 to the food bill. The note goes on to explain that in the boys' primary schools, whilst only £E4 a year is being charged, as formerly, for the midday meal, the actual cost to the Ministry is between £E6.5 and £E8 per annum; in the girls' primary schools the food for a day pupil costs £E7.6 per annum and for a boarder £E33 per annum, whereas the fees charged are only £E7.5 and £E15 respectively.

A comparison of the two sides of the account shows that only 40 per cent. of the total expenditure is met by revenue from fees, income from property and sales from workshops, and that 60 per cent. of that expenditure has to be met out of the general exchequer. In view of the fact that a considerable part of this charge to the State is represented by the rise in the cost of food, which in the case of one day-school cited is barely covered by the revenue in fees, it is not surprising to read that the Ministry of Finance comments adversely on this state of affairs. Although the Ministry expresses reluctance "at this difficult juncture to reopen the question of increasing school fees so as to meet this increased expenditure, or in the alternative to suppress the midday meal in certain schools," one cannot help feeling that there is every justification for making an immediate addition to the fees charged, to cover the cost of at least the meals supplied. Such an increase cannot possibly prejudice the progress of education, and parents of pupils have no right to expect the State to provide food for them and thus absorb the funds which could be beneficially used in other directions. It is to be hoped that some defi-

nite action in the direction indicated will be taken before the next scholastic year.

Elementary Education.

The training of teachers is a subject of the greatest importance, and in this direction the production of staff required for the elementary schools takes first place. The first elementary training college was created in 1903, since which date considerable progress has been made. At the present time there is a training college for men and one for women in Alexandria and in Cairo, in addition to which all the fourteen Provincial Councils, except Assouan, have established training colleges for men teachers and ten of them for women teachers as well. When all these colleges reach their full development they will be able to supply each year 500 qualified men teachers and 300 women teachers for service in the Maktabs. This will probably not meet the demand, which is daily growing, but it will go a long way towards doing so.

As was reported recently in THE NEAR EAST, the Commission appointed to study the question of the extension of elementary education is approaching the end of its labours. Although it will shortly be in a position to present its report, the question is not yet at the point where provision can be made for it in the new Budget, but the Ministry hopes that "before another Budget comes up for settlement a definite scheme will have been approved, and that funds may be forthcoming for its inauguration not later than the financial year 1919-1920." (If the fees were only raised to cover the cost of food, as suggested above, funds would be already available for this purpose.)

Meanwhile the Ministry is doing what it can to secure progress in this matter. In co-operation with the Alexandria Municipality, it has initiated during the past year a scheme for a complete reform of the Alexandria Maktabs, whereby the sanitary conditions have been improved and the educational value of these schools has been enhanced. Likewise in connection with the Maktabs maintained by the Wakfs Ministry—130 in number—considerable progress has been made, and more should be possible during the coming year. The effective reform of all these Maktabs would require £E40,000 per annum. In 1914-1915 the Wakf granted for the maintenance of these Maktabs was £E22,140, but the outbreak of war necessitated a reduction to £E16,200. This coming year it has been raised to £E22,000 once more, which will enable the Ministry of Education to restore medical inspection and the free supply of books and school material as formerly, as well as to extend the system of paying fixed salaries to teachers in fifty-seven of the Maktabs.

The extension of this latter system is very important, and should have a decided influence on the educational value of these schools. Hitherto the teachers in nearly all these Maktabs have received an allowance of £E2 per month per head teacher and of £E1 per month per assistant teacher, and have supplemented this by dividing the school fees, which were collected on no fixed basis. This system has merely meant that the pupils have been exploited, that the less well-to-do are neglected in favour of those able to pay higher fees, and that free pupils, who are always intended to be provided for, are rejected. Three years ago it was decided to abolish this system in principle, and to replace it by the payment of fixed salaries to the teachers, who were to collect the fees and pay them in to the Treasury towards the general maintenance of the schools. Under the new system head teachers receive £E5 per mensem and assistant teachers £E3 per mensem, whilst school fees are limited to P.T. 10 per mensem. The extra cost this year of extending the system to 57 Maktabs will be £E1,282, whilst 15 per cent. free pupils will be admitted.

Infant Schools.

An innovation this year will be the creation of two infant schools. The committee's note on the subject remarks:—

For many years the Ministry of Education has made provision in its girls' primary schools for the appropriate training of girls, before they reach the age for admission to the primary course, by the establishment of infant classes, in which the children are taught largely through educational occupations (i.e., by Kindergarten methods) instead of books. No provision has, however, as yet been made in the Government schools for similar suitable training for infant boys. Boys are not admitted to the primary schools until the age of seven years, and are expected to have already acquired, before admission, some knowledge of letters and numbers. Parents are, in consequence, at present compelled to send their boys for a preliminary period to the Maktabs, or engage a tutor to teach them at home.

The practice of sending boys to the Maktabs for one or two years before placing them in the primary schools is detrimental both to the Maktabs and to these boys. The lowest classes of the Maktabs become overcrowded by pupils who are really intruders, but who largely monopolise the attention of the teachers because their parents are able to pay substantial fees. In consequence, the children for whom the Maktabs properly exist receive less attention than they require, with the result that there is an undue amount of stagnation in the lowest stages of the Maktab course. On the other hand, any special value that there may be in providing a more select environment for pupils of a higher social class in primary schools is impaired at the outset if parents are compelled to send their boys initially to the Maktabs. This disadvantage is felt in an especial degree by the parents who wish to place their boys in the Nasria or Moharrem Bey primary schools, in which the fees are higher than in the other boys' primary schools because they are attended by pupils of a wealthier class.

As an initial effort towards remedying this defect it has been decided to establish in Cairo and in Alexandria infant schools, which will serve as feeders, especially for the above-mentioned primary schools. The estimated cost will be £E4,561, and revenue from fees during the first year will, it is expected, amount to £E1,200. The reason why provision was made for appropriate teaching for girls in the Government schools long before it was introduced for boys is that the teaching must be given by women teachers, and it is, of course, impracticable to introduce women teachers into the boys' primary schools. It was therefore necessary to wait until such time as it was possible to create separate schools, and this time has now come.

Women's Education.

In this year's Budget provision is made for the separation of the Sania Training College and the Sania Girls' Primary School, so as to permit of the expansion of the Training College and the development of the Girls' Primary School as a high school. The development of female education in Egypt turns largely upon the expansion of the Sania Training College, which should supply teachers for the Girls' Primary Schools, the Women's Elementary Training College, and the Girls' Higher Elementary Schools, as well as furnish students for specialised training in England under the Educational Mission. Unless it is expanded in the same manner as the other training colleges, the Sania Training College will not be able to meet these needs. To permit this expansion it is essential that it should be separated from the Sania Primary School, which is attended by girls of the wealthier classes, and is neither a good practising ground nor a feeder for the Training College. On the other hand, the Sania Primary School, if separated, would be adaptable to the circumstances of girls belonging to the well-to-do classes, and should form the nucleus of a system of secondary education. The separation of these two schools will cost £E13,954, but it is well justified. A new Girls' Primary School is to be established in Cairo, and this will serve as a practising school for the Training College.

Egyptian Education Mission.

Provision has been made in the coming year's estimates for sending five additional students to be trained in England. At present the Ministry maintains thirty-three students in England, of whom seven will return to Egypt this summer. In view of the steady demand for qualified teachers for the Secondary Schools, as well as for assistants to the professors in the higher colleges, a demand which it is highly essential to meet, the Ministry considers it necessary not only to maintain the number previously authorised, but also to increase it to a total of thirty-eight. The cost of these extra students will increase the credit of the Egyptian Educational Mission to £E12,222, which, however, is still less than the pre-war amount of that credit by £E6,175. The note points out that notwithstanding that a large decrease has taken place since the war in the number of students studying in Europe on their own account, there are at present under the guidance and care of the directors of the Egyptian Educational Mission 146 students studying in England, 66 in France, and 30 in Switzerland.

A CHANGE AT GORDON COLLEGE.

Our Khartoum Correspondent writes, under date of May 19:—

Mr. M. F. Simpson, who has been at the head of the Gordon College for some years, first under Mr. Currie, C.M.G., and latterly under Mr. Crowfoot, is going to Egypt to take up an appointment in the Egyptian Ministry of Instruction. On the 16th he opened at Omdurman a club for the use of old members of the Government schools, and was presented with a set of silver implements for making coffee in the native fashion. Various speeches were made and considerable interest was shown in the founding of the club. On the following day there was a display in the grounds of the Gordon College, and a number of speeches were made by members of the staff, expressing their regret at his departure and their good wishes for his success in his new appointment. He is succeeded by Mr. N. R. Udal, who may be remembered as a fast bowler at Oxford University. A very large number of people were present, representing all classes of society. The first appearance of the Boy Scouts in the Sudan was witnessed with great interest. The gymnastic display was most successful.

TURKEY'S TROUBLES—PAST AND PRESENT.

Under date of May 20, Reuter's Athens correspondent reported that the revolutionary movement at Aidin was extending to Menemen, near Smyrna; that at Manissa (north of Aidin) 2,000 Turkish troops, sent thither to quell the disturbances, had deserted, and that desertions from the coast garrisons were very numerous. Essad Pasha (of Yanina) had been entrusted with the repression of the movement. A later message reported that the movement was still spreading, and that Essad Pasha had returned without achieving anything. An entire regiment in the Konia vilayet refused to go to the Palestine front, "seized their artillery and took refuge in the mountains between Sparta and Adalia," and "the troops sent against them were annihilated."

This kind of thing is no new experience for Turkey. Mutinies and "forcible protests" of all kinds have been common from very early days. The events at Aidin remind a correspondent of a letter sent in 1588 by W. Hareborne, first Ambassador to Turkey, to Lord Walsingham. The letter, dated June 9, is as follows:—

Here hath bine this weeke a great hurlieburlie in the Cittie for that the Grand Signioor myndinge to call in all false and light monney and give out a new coyne imposed a tribute of ten in the hundred uppon all goods moveable, five upon those immovable, and a duckett uppon everie head Jewe and Christian not otherwise to be taxed throughout all his kingdome, which after due and true computation made would have amounted to 16 millions of gold. But for that those Turkes which receave his paie began to rebell openlie in the Cittie and breake up the Chiefe Commissioner's house, after 22 of the chiefest were by Martiall Lawe executed with sundrie cruell deathes, the residewe promised their pardon, and surceased. Where uppon the Grand Signior fearinge by this example the dangerous issue thereof exempted all that take his paie of that burden, levinge it on the others, whoe must of force paie it, whereby it seemeth his treasure is utterlie exhausted in these persien warres, which also partelie appeareth in that he was wont to give me and the Ambassador of Germanie good money for the maintenance of some parte of our dailie diett, now paid us in such and soe ille coine as is not currant for ane thinge.

COUNTERACTING GERMAN PROPAGANDA.

We have made arrangements for forwarding free of charge to our readers pamphlets and other publications dealing with the British and Allied cause. This literature is in many European languages, and certain pamphlets and illustrated publications are also available in a number of Oriental languages. All applications should be addressed to the Editor, THE NEAR EAST, Devonshire Square, London, E.C.2. Among the most recent publications available for distribution free of charge are the following:—

"THE WELFARE OF EGYPT," by J. S. Willmore. A short summary of English administration in Egypt; alluding also to Germany's undermining influence, and the Mussulman's preference for the English rule. 36 pp. London: Hodder and Stoughton.

"TURKEY, A PAST AND A FUTURE," by A. J. Toynbee. Development of the new Turkish Nationalism and of German intrigue in Western Asia. Moslem ideas must prevail. Mesopotamia will develop its resources mainly by colonisation. 79 pp. London: Hodder and Stoughton.

"GERMANY, TURKEY, AND ARMENIA." 125 pp. J. J. Kelliher and Co., Ltd., London. Containing important statements by German missionaries, Danish nurses, German officials, and other foreigners, and extracts from foreign journals prohibited in Germany by the Censor.

"LOYAL INDIA," by Lord Hardinge of Penshurst. 15 pp. Sir J. Causton and Sons. On loyalty and service in the Indian Empire.

"THE CLEAN-FIGHTING TURK." A Spurious Claim. 4 pp. Reprint from *The Times*. This article, written by one who has exceptional experience of Turkish manners and customs, shows that the Turk behaves like a gentleman only when it pays him to do so.

"HORRORS OF ALEPPO," Seen by a German Eye-Witness, by Dr. Martin Niepage. 24 pp. T. Fisher Unwin, Ltd. The author, a teacher in the German technical school at Aleppo, reproaches German diplomacy for non-interference.

"MARTYRED ARMENIA." 56 pp. C. Arthur Pearson, Ltd., London. The author, a Bedouin, has acquired from reliable sources and from his own information, a mass of information regarding the atrocities committed by the Turk against the Armenian people. This he resolved to publish to the world, "to defend the faith of Islam against the charge of fanaticism."

"TURKISH PRISONERS IN EGYPT." 64 pp. A report by the Delegates of the International Committee of the Red Cross. Extracted and translated from the Official Reports of the Red Cross Society.

CORRESPONDENCE.

LAW REFORM IN EGYPT.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—It is universally acknowledged—and the tendency in recent years amongst thinking men has been to give greater weight to the fact—that the Judicial Committee of the Privy Council forms an important tie between the various parts of the British Empire, and that it exercises a very salutary influence on the subordinate Courts by checking any tendency to unjust or narrow provincial views and in co-ordinating the whole legal system. At the present time there is no colony, dependency, or protectorate of the Empire which does not in some form or another enjoy the right of appeal to the Privy Council; and when it was announced that Egypt had been made a Protectorate and that a Commission had been appointed to consider its laws and legal organisation, everyone interested in the country assumed that Egypt would at last escape from the baneful system of the Mixed Tribunals and come under the wholesome influence of the Privy Council. This we considered was the one certain benefit which Egypt was bound to receive on entering the Empire; other reforms in law and procedure might perhaps wait, as, in the long run, the judgments of the Great Appeal Court of the Empire would in many cases mould the law of Egypt in conformity with English ideals and principles, and would in other cases, by directing attention to anomalies and deficiencies, compel the necessary reforms.

It appears, however, from the recent preliminary report of the Commission and from news received from Egypt, that it is proposed to exclude the jurisdiction of the Privy Council and to set up a final Appeal Court in Egypt. Egypt would thus be deprived of the services of the great intellects on the Privy Council and the benefits of co-ordination, and would be thrown into a narrow provincial rut.

There have for some years been suspicions in Egypt that the Mixed Courts are too subservient to the Government, and though these suspicions may be quite unfounded, the fact to consider is that they exist, and the adoption of the recommendation could not fail to accentuate the grievance.

If once the effect of the report is realised in this country, surely this recommendation will be swept away in a storm of indignation, and Egypt will be given the same privileges as the rest of the Empire.—I am, etc.,

TOURIST.

THE JEWISH BATTALION IN CAIRO.

The Salonika paper *Pro-Israel* gives some interesting details regarding the English Army's Jewish battalion during its stay in Cairo. About 50 per cent. of the members of the battalion, it says, are English-born or naturalised, while the rest include the former members of the Zion Mule Corps, a large number of Russian Jews, and a curious mixture of Allied and neutral nationalities. They are nearly all teetotalers, and the canteens which were opened for the sale of alcoholic drinks had to close down within a fortnight for lack of business. There is so little crime, according to the statement of Colonel Patterson, the commander, that the police station is empty, and the detention cells have been turned into guards' bedrooms. There are a large number of tailors in the battalion, which accounts for the smart cut of the uniforms. Over twenty languages are represented in the ranks, and orders are given both in English and Yiddish. Only kosher food is supplied to the troops. Saturday is the day of rest instead of Sunday, and fast days are observed as part of the military regulations.

SERBIAN SONGS AT BATTERSEA.

We regret that, owing to pressure on our space, we were unable to notice last week a very interesting lecture-recital, "Ballads and Folk Songs of Serbia," given by Miss Vivian Edwards at the Battersea Polytechnic on June 1. The entertainment, which was in aid of the Serbian Relief Fund, attracted a large audience. Miss Edwards has a pleasing personality and an excellent soprano voice, and both her lecture and her rendering of Serbian songs gave much pleasure to her audience. The students of the Polytechnic illustrated the lecture with a number of *kolos*, or peasant dances, in which they wore the national costume. They were also assisted by three Serbian students, who gave themselves up to the spirit of the dances with obvious enjoyment and intense fervour. Of the songs, the most popular were, "When You Get Married Take Me," and a "Rukovet." The lecture was preceded by an interesting gymnastic display by the students of the Polytechnic, and at its conclusion the Croatian and Serbian National Anthems were sung. Miss Muriel Davenport and Miss Hedley at the piano, and Miss Lilian Spalding and Miss Amy Crouch on the violin, acquitted themselves admirably.

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

Goldstein Bey.

June 10.

Mr. JOYNSON-HICKS asked whether Goldstein Bey, the Assistant Postmaster-General at Cairo, was an Austrian by birth; whether when the war broke out he became naturalised as a Russian; whether his brother was interned; and why some English officer could not be found to replace this enemy alien?

Mr. BALFOUR: Goldstein Bey was an Alexandrian Jew of Hungarian nationality, and was born in Egypt, where he has resided since his birth. He had been in the employment of the Egyptian Postal Administration for thirty-two years when, upon the outbreak of war, he was, together with other enemy subjects, dismissed from the service of the Egyptian Government. He became a Russian protected subject on November 28, 1914, and was then reinstated in his post. I have no information as to the third part of the question; and as regards the last part, his case formed the subject of careful inquiry by the Aliens Registration Committee in Egypt, and he was, with the concurrence of the British General Officer Commanding-in-Chief, allowed to retain his functions. He acted as Postmaster-General during the absence of Borton Pasha, but I understand that that officer has now returned to his duties.

Mr. JOYNSON-HICKS asked why, if this man were so loyal, he should not have been naturalised as British instead of Russian?

Mr. BALFOUR said he understood that the curious complications in regard to persons of Egyptian birth and up-bringing arose entirely out of the old system.

Prisoners in Turkey.

Sir J. D. REES asked whether, in negotiating for the exchange of captives of war held by the Turks, the effects of winter in Asia Minor upon prisoners deprived of the means of fortifying themselves against cold, and more particularly upon Indian prisoners, was borne in mind, so as to emphasise the necessity for arranging for such exchange as might be practicable before the end of the approaching autumn?

Mr. J. E. HOPE: The considerations mentioned by my hon. friend are present to the minds of his Majesty's Government, who are not only doing their utmost to expedite the repatriation of invalid prisoners of war in Turkey, but are also preparing to forward by the repatriation ship two months' supplies of food for all prisoners, and full outfits of clothing for all non-commissioned officers and men. The same vessel will also take such parcels containing necessaries other than food as may be sent by the friends of officer prisoners of war to Alexandria for the purpose.

Sir C. SEELY asked whether the repatriation ship would leave soon?

Mr. HOPE: I am sorry to say we have not yet heard from the Turkish Government as to when their prisoners will be ready to be sent.

Lord H. CAVENDISH-BENTINCK asked whether the Government had decided to make fresh proposals to the Turkish and Bulgarian Governments for a complete exchange of prisoners.

Mr. HOPE: The British delegates who are now at The Hague for the purpose of negotiating with German representatives on the subject of prisoners of war have been instructed to communicate with the Bulgarian representative at that capital, who is understood to be familiar with the subject, with a view to laying the basis of a fresh agreement with the Bulgarian Government for the repatriation of British and Bulgarian prisoners of war on a larger scale. As my noble friend is aware, the agreement concluded with Turkey in December last has hardly entered into operation. Nevertheless, his Majesty's Government have under consideration the supplementing of it by a wider agreement. Th invalid prisoners to whom the present agreement applies would in any case have the first claim, so that time is not being lost.

Jugoslav Aspirations.

June 11.

Mr. OUTHWAITE asked what steps the British Government proposed to take to secure the liberation of the Czecho-Slovaks and Jugoslavs, who, for pursuing nationalistic ambitions, had been imprisoned without trial by the Austrian Government.

Lord R. CECIL: The British Government have no means of modifying the actions of the Austrian Government in these matters. But these persons are the enemies of our enemies, and as such are entitled to our warmest sympathy.

Lord R. CECIL, replying to another question by Mr. OUTHWAITE, said:—It will be for the liberated Czecho-Slovak and Jugoslav peoples themselves to determine their future status. His Majesty's Government fully recognised the many proofs given by these races of intense national feeling, and cordially acknowledge the assistance which the national troops of the Czecho-Slovaks and Jugoslavs are rendering to the Allied cause.

Conscription in Egypt.

Major EARL WINTERTON asked whether the present small *per centum* quota of native Egyptians conscribed for the Egyptian Army could be largely increased without prejudice to the essential industries of Egypt, and whether native Egyptians, whom the ballot for conscription selected, could escape conscription on payment of £20 Egyptian.

Lord R. CECIL: My noble friend will, no doubt, recollect that by the proclamation of November 6, 1914, Great Britain took upon herself the whole burden of the war as far as Egypt was concerned, and his Majesty's Government are advised that it would be undesirable to withdraw or amend this proclamation at present. Recruitment in Egypt is therefore being left upon a voluntary basis; but a thorough recruiting campaign is in operation, and has been attended with creditable results. Notwithstanding the proclamation, the Egyptian Government have made most generous contributions to the cost of the war.

Earl WINTERTON: Will the Government take into consideration that since the declaration of November, 1914, was made the situation has radically altered, owing to the fact that the King of the Hejaz and his Arabs are on our side?

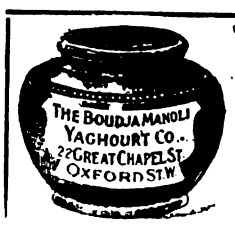
Lord R. CECIL: I will certainly take care that that consideration is brought to the notice of the Egyptian authorities.

A Slander on Montenegro.

June 12.

Mr. BALFOUR informed Mr. R. LAMBERT that the Montenegrin Government had officially denied the report which had been current in some quarters to the effect that a secret understanding was entered into with Austria-Hungary in 1915.

The Indian Report.



Mr. MONTAGU, in reply to Sir H. ROBERTS, said that owing to their heavy pre-occupation with the immediate work of the war, the Government had not yet been able to consider the report made by the Viceroy and himself as to the reform of the Government of India, and to formulate their conclusions on the proposals contained in it. They had decided that it should be presented to Parliament as soon as sufficient copies were available in India and in this country, so as to afford an opportunity of public discussion, and so that in coming to their final decision the Government might have the advantage of considering any suggestions to which its publication might give rise. Approximately, the publication of the report would be at the end of this month.

ITALY AND THE SUBJECT RACES OF AUSTRIA.

On Tuesday, at Burlington House, there was a meeting of the British Italian League, addressed by Mr. J. C. Powell, his theme being the part that Italy is called to play with regard to the subject races of Austria. Mr. H. Wickham Steed, who was to have presided, was prevented by an accident, but sent a letter, which was read out to the meeting by Mr. E. Bullough, who took the chair in Mr. Wickham Steed's absence. One paragraph of this letter said: "At this moment there is scarcely any subject of greater importance to the British public, to the Italian public, or to an Anglo-Italian body like the British Italian League than that of the oppressed races in Austria-Hungary. Drastically expressed, the question whether cities like London, Milan, Venice, and Rome will be habitable twenty years hence depends upon the solution of the Austrian problem. Unless the subject Hapsburg races are liberated and induced to unite as independent States in some non-German Central European federation, the Allies will not have won the war, and there will be no valid guarantee against a renewal of the war with tenfold frightfulness in the air by Germany at her own moment."

The meeting passed a vote expressing regret at Mr. Wickham Steed's accident.

Mr. Powell said the revolution in Russia and the entry of the United States into the war had intensified in Italy, as in other countries, the democratic conception of the war. The Italian Government had been sharply criticised in 1917, when the terms of the secret treaties made in 1915 were published, on the ground that it was driving into the camp of the enemy those who should have been Italy's allies. With the elimination of Russia, also, Italy saw an opening to become the successor of that Power in the protectorship of the Slav races. Without the dismemberment of Austria it would be impossible either to realise the just claims of Italy or to unite the Jugoslav or other peoples who lived partly in and partly outside the Austrian Empire. Of the many races who made up that Empire, there were only two that were entirely contained within its boundaries. These were the Czecho-Slovak and the Magyar, and in this case the national aspirations competed with each other. All the others—Italians, Jugoslavs, Roumanians, etc.—were in the position of *irredenti*, and, taught by long and bitter experience, were determined to escape from their prison house and join the main body of their race outside. The renaissance of Serbia since 1903 and the secession of Italy from the Triple Alliance had rekindled the hopes of these subject races, and the movement of revolt was so determined and so unanimous on their part that now they must either secede or be crushed. The Congress at Rome had shown that Italy had wonderfully overcome her ancient prejudice against the Croats as the instruments of Hapsburg tyranny, and had returned to the position of the champion of the unity of the oppressed races of the Austrian Empire. She was now called to a function in South-Eastern Europe worthy of her great endowments. This was the work of acting as organiser and moderator of a new and greater Balkan League, a task which would give scope to all her powers and demand for its successful accomplishment all the sagacity of a Cavour, combined with all the ardent democratic faith of a Mazzini. If, as her friends believed, she succeeded in this task, she would lay the whole world under an obligation.

NEAR EAST BOOKSHELF.

HOME RULE FOR INDIA: THE OPPOSITION VIEW.*

We recently noticed in these columns a collection of pamphlets stating the case for what has come to be known as Indian Home Rule, or, in other words, the immediate transference of the country to the control of the class which at present dominates its politics. The pamphlet before us gives the opposition view, and we may say at once that it gives it very well. Its contents, apart from a very short foreword, consist of extracts from addresses presented to Mr. Montagu in India, and of reports of public meetings and resolutions. The case is thus presented as it appears to Indians, and no attempt has been made to state the English or Imperial aspects of the question. The extracts which are given furnish in the aggregate a very remarkable mass of opinion. Until quite recently the supporters of Home Rule met with no formal opposition; now they have arrayed against them numerous and important sections of the people. We have definite repudiations of the policy in question from Moslems, Christians, and Anglo-Indians, and, most striking of all, from the lower castes and the depressed, or, as we prefer to call them, oppressed, classes, who are slowly and painfully becoming conscious of the oppression which has been their lot for centuries. The opposition is thus of varied origin, but the grounds on which it rests are practically uniform. Political change is recognised to be inevitable, and also to be welcomed, but the specific policy of Home Rule means danger and disaster. All the sections represented in this pamphlet fear that immediate Home Rule would mean merely the establishment of a narrow oligarchy. And the fear is justified by the whole of India's past history. Such an oligarchy must result in an increase in the oppression of which the lower classes already have ample experience, and must make any future democratic development more difficult even than now. The opposition therefore asks, not for any sudden or dramatic changes, but for that gradual and orderly progress which was promised in Mr. Montagu's statement in Parliament; the various sections protest most of all against any measures which would stereotype their present condition of inferiority.

Some good Indians grieve at these pronouncements as destroying the semblance of a unanimous India. Englishmen, on the other hand, will be disposed to welcome them as furnishing proof of a genuine step forward in Indian politics; they show that the people are beginning—though only just beginning—to find their voice, and that is a very great step forward indeed. The Indo-British Association is to be congratulated on its enterprise in bringing these early manifestations to the notice of the public; will it now go further, and put forward a constructive policy aiming at that gradual growth of a genuine democracy by the hope of which these protests are inspired?

* "Indian Opposition to Home Rule." (Published by the Indo-British Association, 6, Broad Street Place, London, E.C.2. Price 6d.)

"8,000 Serbs Buried in the Cemetery of an Austrian Prison-Camp . . ."

TERRIBLE MORTALITY.

"An Italian Medical Officer who has recently returned from imprisonment in Austria states that the mortality of the Serbian prisoners represents almost 100 per cent. In Mathausen Cemetery alone 8,000 Serbs are buried. . . ."—DAILY PRESS.

"Serbia is annihilated, thanks to our intervention."—BULGARIAN GENERALISSIMO JEKOFF.

The two statements quoted above are eloquent of the sufferings of the Serbian people.

In the prison-camps of the Central Powers the flower of Serbia's young manhood is being systematically annihilated.

These men in most cases die of hunger-typhus.

Their sufferings are awful to contemplate.

Do something to help them.

The Serbian Relief Fund, in addition to helping to maintain the Serbian refugees in foreign harbours of refuge, has, as far as its resources would allow, sent consignments of food to Serbian prisoners-of-war in the prison-camps of Germany and Austria. In many cases these supplies have been all that stood between the men and absolute starvation.

Will you not show your gratitude for the heroic self-sacrifice of the Serbian people during the early stages of the War, by helping to bring some measure of comfort to the sons of Serbia who so badly need your help?

The Serbian Relief Fund is the only authorised Fund under British administration working solely for the benefit of Serbians. This Committee can translate a donation from you into food for starving Serbian prisoners-of-war, food, clothing, and medical aid for the old men, women, and young children exiled from their native land.

Do not hesitate—but *prove* your gratitude to Serbia and your sense of British responsibility to a little nation by sending a donation to-day to the Hon. Treasurer,

THE RIGHT HON. THE EARL OF PLYMOUTH, C.B.,

SERBIAN RELIEF FUND

5, CROMWELL ROAD, LONDON, S.W.7.

Offers of voluntary help at home or abroad should be sent to Lady Grogan. Offers of clothing for men, women and children, to Mrs. Carrington Wilde, Serbian Relief Fund, 5, Cromwell Road, London, S.W. 7.

M. Venizelos returned to Athens last Friday from a visit to the front.

The Sultan of Egypt has given a donation of £E200 to the Belgian Red Cross Society.

On May 26, at Ooty, Madras Presidency, the wife of the late R. C. Callander, I.C.S., gave birth to a son.

Mr. Augustus Ottiwell Wood, Chief Manager of the Imperial Bank of Persia, Teheran, has been made a C.B.E.

M. Constantin Diamandy, the Roumanian Minister in Petrograd, arrived in London on Tuesday from Russia.

Colonel A. N. Pantchoulidzeff, Secretary to the Serbian Legation at Petrograd, left London for Paris on Tuesday.

Bishop Weldon, who has just been appointed Dean of Durham, was Bishop of Calcutta and Metropolitan of India from 1898 to 1902.

Sir Lumley Smith, who has just died, won the Le Bas University Prize in 1858 with an essay entitled "The Koran in India."

It is announced that Princess Laxmi Devi, grand-daughter of H.H. the Maharaja Gaekwar, is engaged to the heir-apparent of the Chief of Mudhol.

On Empire Day, Sir Richard Wingate, High Commissioner in Egypt, and Lady Wingate, invited a thousand convalescent soldiers to tea at the Residency.

Mrs. Hamilton-Grace, the founder and Joint Hon. Sec. of the Mesopotamia Comforts Fund, has been made a Commander of the Order of the British Empire.

Lieutenant-Colonel H. P. Picot, who has just returned to England from Switzerland, where he has done so much good work for British prisoners of war, has been made a Commander of the Order of the British Empire.

On May 31, at Bournemouth, the wife of Mr. Hugh Lloyd Thomas gave birth to a son. Mr. Thomas was Third Secretary at the British Embassy, Constantinople, before the war. He was transferred to Cairo in November, 1914.

Last Friday, being the birthday of H.I.M. the Shah of Persia, by the King's command the Hon. Sir Arthur Walsh, his Majesty's Master of the Ceremonies, called on the Persian Minister to convey his Majesty's good wishes and congratulations, which the Minister telegraphed to his Sovereign.

On June 6 at St. Dunstan's, Cheam, the marriage took place of Captain A. H. Popert, the Worcestershire Regiment, only son of Mr. E. P. Popert, Indian Forest Service (retired), and Margery Butler, elder daughter of Mr. and Mrs. E. F. Allen, of Rowsley, Cheam. The Rev. Canon Wesley Dennis officiated.

The engagement is announced between Lieutenant Bernard J. Finnie, M.C., Royal Fusiliers, second son of Mr. and Mrs. A. Finnie, of Nortonthorpe, near Huddersfield, and Gladys Oswald, younger daughter of the late Mr. C. O. Mackwood, of Colombo, Ceylon, and of Mrs. Mackwood, Albert Gate Court, Knightsbridge, S.W.1.

Four Commanders of the Order of the British Empire are grouped under the heading, "Egypt and the Sudan," in the official list. These are:—Mr. W. G. Hayter, Counsel to the Sultan of Egypt; Mr. G. C. Dudgeon, the agricultural expert; Mr. Cyril Goodman, of the Department of Health; and Major Montagu Fielden, Reserve of Officers (Civ. Sec.), Sudan Government.

The engagement is announced between Captain (acting major) Edmund Arthur Peel Luard, only son of Colonel A. J. H. Luard, D.S.O., late Norfolk Regiment, and Mrs. Luard, and Gladys Frances Alice Forde Tichborne, younger daughter of the Rev. Canon Forde Tichborne and Mrs. Tichborne, of Armagh, Ireland, and granddaughter of the late Major-General Swiney, Indian Staff Corps.

The Royal Humane Society have awarded a bronze medal to Elizabeth U. Hills, of Penshurst, Kent, a V.A.D. nurse, for saving a companion from the Tigris at Busreh in January last.

His Highness the Maharaja of Patiala and Sir S. P. Sinha, who are representing India at the Imperial War Cabinet and Imperial War Conference, arrived in London on Wednesday afternoon. They were met by Sir James Dunlop Smith, representing the Secretary of State for India.

Major Norman Bentwich, Military Cross, of the Camel Transport Corps, and Lecturer at the Khedivial School of Law at Cairo, who is one of the most prominent of the younger Zionist leaders in England and Egypt, has been appointed Procureur-General and Judge of Appeals for that portion of Palestine which is in British occupation.

A marriage has been arranged, and will shortly take place, between Major J. S. Oldham, Indian Cavalry, son of the late W. B. Oldham, C.I.E., I.C.S., and Mrs. Oldham, and Irene Beaumont Thomas, daughter of the late Richard Beaumont Thomas and Mrs. Beaumont Thomas, of The Glade, Englefield Green, and 23, Parkside, Knightsbridge.

An engagement is announced between F. Lionel F. Lennard, eldest son of Mr. and Mrs. F. Lennard, of 23, Adelaide Crescent, Hove, Sussex, and Aïda Dorothy Churchill Moore, only child of Mr. A. Churchill Moore, Egyptian Civil Service (retired), nephew of the late Lieutenant-General Sir Henry Moore, K.C.B., C.I.E., of Birksey Brow, Crook, Westmorland, and of Mrs. Churchill Moore.

The marriage will take place, at noon, on July 2, at Trinity Church, Sloane Street, of Major Douglas Venables, D.S.O., Royal Welsh Fusiliers, eldest surviving son of Mr. Rowland Venables, of Oakhurst, Oswestry, and Daisie, younger daughter of Lieutenant-General Sir Henry Le Geyt and Lady Bruce, and sister of the late Major H. K. Bruce, M.C., 2nd Goorkhas. No invitations will be sent, but all friends will be welcome at the church.

Our Cyprus Correspondent writes (May 2):—Preparations are being made for the summer migration to Mount Troodos. The High Commissioner will probably make an early move to "Government Cottage," and it is hoped that his health will greatly benefit from the fine mountain air. All hotels in the hills are preparing for the season, and it is expected that they will be well filled again this year, although visitors to Cyprus will not be numerous as far as can be foreseen.

In commemoration of Lord Kitchener's death (June 5, 1916) an effort is being made at Hobart, Tasmania, to raise a special body of recruits which will be known as "Kitchener's."

The Council of the Royal Society of Arts have awarded the Society's Silver Medal to Mr. Lawrence Balls for his paper, "Examples of Applied Science in the Cotton Industry"; and to Mr. H. M. Surtees Tuckwell for his paper, "The Tata Iron and Steel Works."

Under the auspices of the Serbian Red Cross, a conference on "Serbia and her Jugoslav Brothers" will be held this afternoon (June 14), at half-past three, at 9, Ennismore Gardens, S.W. H. E. Monsieur de Fleurian will preside, and M. Myatovitch will be the speaker.

We much regret that, owing to pressure on our space, we are unable to publish the list of recipients of the Order of the British Empire who are connected with India, Egypt, or other parts of the Near East. For the same reason, we are unable to publish the list of awards for service in Salonika.

On the recent anniversary of her birthday the Queen received from the Maharao of Kotah the gift of a lakh of rupees (£6,600), to be devoted to war purposes. This sum her Majesty has decided to devote to the Queen's Hospital at Frognal for sailors and soldiers suffering from facial and jaw injuries.

TRAGEDY OF MONTENEGRO,

THE SMALLEST AND POOREST OF OUR ALLIES.

MONTENEGRIN RED CROSS AND RELIEF FUND,

11, VICTORIA STREET, LONDON, S.W.1

(Registered in City of London. Section 1. War Charities 1916)

needs £700 WEEKLY for Feeding Prisoners interned in Austria-Hungary.

Donations will be much appreciated and gratefully acknowledged by the Hon. Treasurer, LADY ROPER PARKINGTON, Claridge's Hotel, Brook Street, London, W.1.

APPOINTMENTS, PROMOTIONS, ETC.

M. Chikalenko has been appointed Ukrainian Minister to Turkey.

Bimbashi R. P. Mahaffy, Barrister-at-Law, District Judge, has been transferred from the Blue Nile Province to Kordofan Province.

The Greek Government has appointed Colonel Ambrosius Frantzis as chief of a Greek Military Mission to this country and Military Attaché to the Greek Legation, and Lieutenant Constantine Rhodocanachis as Assistant Military Attaché.

The King has given the following officers permission to wear the Cross of the Redeemer, conferred on them by the King of the Hellenes :—Fourth Class.—Wing Cdr. (act. Wing Capt.) R. Gordon, D.S.O., R.N.A.S. (Maj. Temp. Lt.-Col., R.M.L.I.); Cdr. L H. Strain, D.S.C., R.N.V.R.; Staff Pay. G. H. Thomson, R.N. Fifth Class.—Hon. Lt. F. F. Ponsford, R.N.V.R.; Hon. Lt. G. G. Knox, R.N.V.R.; Lt. F. Hiscock, R.N.V.R.

OBITUARY.

Colonel Aylmer P. G. Dowdall, who has died at Chester, aged sixty-six, saw service in the Egyptian campaign. When attached to the Royal Sussex Regiment he took part in the Sudan Expedition, and was mentioned in despatches.

Captain Hugh Cathcart Dobbs, Indian Infantry, who is reported killed in action, was thirty-three years of age. He passed out of Woolwich into the Royal Artillery in 1903, and after promotion was gazetted to the Indian Army in October, 1906. From September, 1910, he was employed with the King's African Rifles.

The death is announced from Fyzabad, India, of Mr. Gerald Constantine Winnington-Ingram, youngest son of the late Rev. Edward Winnington-Ingram, and brother of the Bishop of London. He was educated at Bromsgrove School and New College, Oxford, and was appointed to the Indian Civil Service in 1893.

Major William Sturrock Anderson, late King's Royal Rifles, who has died at Bedford, saw service in the Afghan War of 1879-80, taking part in the march to Kandahar, and later in the Mari Expedition. In the Egyptian Expedition of 1882-4, he was present at the action at Kassassin and the battles of Tel-el-Kebir and Tamai.

Major Stanley Malcolm Bruce, Indian Cavalry, who has been killed in action, was born in August, 1878, and transferred from the Dragoon Guards to the Indian Staff Corps in 1899; he had his captaincy in February, 1907, and his majority in September, 1915. Before the present war he saw service on the North-West Frontier, in 1908, in the operations in the Zakka Khel country, and was decorated with the medal and clasp.

Surgeon-Major William Jasper Rendell, of Gonvena House, Wadebridge, has died, in his eighty-sixth year. He joined the Army as assistant surgeon in the Royal Scots, at Castlebar, in 1853, and transferred to the 55th (Border Regiment) in the Crimea in 1854. He served in Scutari and the trenches throughout the campaign. He also took part in the suppression of the Indian Mutiny, including the relief of Lucknow, and served through the first Bhootan campaign.

It is with much regret that we announce the death of Mr. Gregor McGregor Ramsay, which took place at Salonika on May 24, after a short illness. Mr. Ramsay was the third son of the late Mr. Alexander Ramsay, of Constantinople, where he was well known in shipping and other circles. He will be missed by a large number of friends, with whom he was a great favourite on account of his bright and lovable character. He left Constantinople at the outbreak of the war, and had since resided in Greece. Mr. Ramsay leaves a widow, three daughters, and one son.

It is announced that Major J. C. Jack, D.S.O., M.C., Royal Artillery, died on May 31 from wounds received three days earlier. He was educated at the Merchant Taylors' School, Crosby, and at Lincoln College, Oxford. After taking a History Honours Degree he passed into the Indian Civil Service in 1898, and was closely identified during the sixteen years of his service in India with the settlement operations in Eastern Bengal. Early in 1915 he obtained the consent of the Indian Government to come to England, and was gazetted to the Special Reserve of the R.H.A., going to the front in October, 1915.

The death of Prince Victor Duleep-Singh occurred last Friday at Monte Carlo. He was born in 1866, and was the eldest son of the late Maharajah Duleep-Singh, of Lahore. His mother was the daughter of Mr. L. Müller, of Alexandria, Egypt. He was educated at Eton and Cambridge; and in 1888 he was gazetted to the 1st Royal Dragoons, and served as captain in that regiment from 1894 to 1898. Prince Victor was an honorary A.D.C. to Lieutenant-General Ross while General Commanding in Halifax, Nova Scotia, from 1888 to 1890. In 1898 he married Lady Anne, daughter of the ninth Earl of Coventry.

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO,
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

THE ONLY ENGLISH HOTELS IN ALEXANDRIA.
Proprietor: AUGUSTUS VAN MILLINGEN.

WINDSOR HOTEL
(Facing the Sea, opposite Y.M.C.A.), ALEXANDRIA.
Full Pension, P.T.50; Room, P.T.20;
Lunch, P.T.15; Dinner, P.T.20.
For long stay, apply to the Manager.

SUMMER PALACE HOTEL,
GLYMENOPOULO, RAMLEH.
This Hotel is situated near the Beach. Open all the Year. Bathing Cabins.
Terms from: Pension, P.T.60; Lunch, P.T.20; Dinner, P.T.25.

NAJEM HOURY'S CYPRUS HOTELS COMPANY.
OPEN ALL THE YEAR ROUND—
NIKOSIA—Cyprus Palace Hotel.
LIMASSOL—Olympus Hotel.
FAMAGUSTA—Savoy Hotel.
FOR SUMMER SEASON—
PLATRES—Platres Hotel. 4,000 feet above sea level. Open from May till October.
TROODOS—Olympus Hotel. 6,000 feet above sea level. Open from May till October.
Perfect situation. French and English Cuisine. Moderate Terms. Excursions to Mount Troödos.
For Tickets and further Particulars, apply to
NAJEM HOURY & SONS, Limassol, Cyprus.
Proprietors of "The Army and Navy Stores."
Branches—Polymedia, Troödos, Nikosia, Famagusta, Larnaca and Platres
Head Offices and Central Stores: LIMASSOL.
All arrangements for Transport, &c., are made by the above Firm.

"NAVAL & MILITARY" HOTEL
HARRINGTON ROAD, SOUTH KENSINGTON, LONDON.
Only 200 yards from District Station and "Piccadilly Tube" (S. Ken. Station). For all Services and the General Public. Two Lifts. Excellent Cuisine. Exceptional Reception Rooms. 100 Bedrooms.
Cables: "NAVAMILOT LONDON." Telephones: KENSINGTON 5425 (4 lines.)

HOTEL SOMERSET,
ORCHARD STREET (by Selfridge's) OXFORD STREET, W.
Most comfortable and home-like Establishment. English cooking a special feature. Eggs, Butter, Poultry direct from the farm.
200 well-appointed bedrooms with fitted basins (h. & c.). 30 bath-rooms
15 private Suites. Passenger lift. Own Artesian Well.
Magnificent Georgian Dining Hall (100 tables,)
Inclusive terms from 10/- to 15/- daily; 3 to 4½ guineas weekly.
Double room 16/- to 21/- daily; 5 to 7 guineas weekly.
Bedroom, bath, breakfast (3 courses) 7/6 daily.

PRISONERS OF WAR.

It is a matter for profound satisfaction that definite steps are at last being taken to ameliorate the lot of British prisoners of war in Turkey and Bulgaria. Although we are prepared to learn that they have fared better in many respects than their fellow-prisoners in Germany, it is certain that in Turkey at least their fate has been a hard one. They have been spared to a considerable extent the studied brutality and refinement of cruelty practised by the Germans; but they will have had to suffer from the ignorance and callousness of their captors and gaolers as well as from the straitened conditions of the country as a whole. The picture that has been drawn of the sufferings of the rank and file in the course of their wanderings from Kut to the places of their internment is a black one indeed, and probably the worst is not yet known. When once the camp had been reached, however, the prisoners were more likely to have been the victims of their surroundings than of the deliberate aggression which has been the bane, and worse, of those who have fallen into German hands. The plight of the wounded may well have been pitiable, unless they were fortunate enough to have the attention of British medical officers. The special circumstances attending imprisonment in Turkey, it might be thought, would have prompted the early adoption of steps to secure the release of those who had been interned for any length of time; but the military disadvantage of effecting any exchange of prisoners with Germany appears to have been regarded as equally applicable to prisoners in the Near East. Moreover, both Turks and Bulgarians at first showed a tendency to resent either inquiry into the conditions of prisoners or schemes for improving those conditions. To what extent this attitude may have been due to a desire for concealment or was brought about by the methods adopted of initiating the discussion we have no means of knowing. But it was not until last December that Turkey was found to be amenable to negotiations. An agreement was drawn up at Berne for the exchange of a thousand invalid prisoners, and at the same time arrangements were made for the inspection of internment camps in Turkey by Dutch officials. The interests of British prisoners of war in Turkey have been in the hands of the Netherlands Minister in Constantinople since the entry of the United States into the war; but it is significant of the difficulties under which he has laboured that a formal agreement between Great Britain and the Turkish Government was necessary, in order that officials of the Dutch Legation might be allowed to inspect the camps.

Since the Berne agreement the attitude of the French and British Governments towards a general exchange of prisoners of war has undergone a complete change. France led the way, and Great Britain has been compelled by the weight of public opinion to follow so far in her footsteps that a conference on this subject is now in progress at The Hague between British and German representatives. It is natural that the prospect of a general repatriation of British prisoners in German hands should raise the question of a similar arrangement for those in Turkey. The Government have promised to give the matter their consideration; but they may be tempted to watch the working of their present agreement with the Turks before entering upon fresh negotiations. The fact that more than six months will have elapsed between the date of the agreement and the repatriation of the thousand prisoners does not augur well for the early adoption of a more comprehensive scheme. But with the principle once introduced, and the machinery for the inspection of camps by neutral officials in working order, subsequent arrangements stand a better chance of being carried out more expeditiously. The possibility of a change in Turkey's attitude not only on this question, but in regard to her relations with the Entente Powers as well, must be kept in mind. In view of the conspicuous success attending British dealings with the peoples of the East whom the war has brought within our jurisdiction, it might seem superfluous to suggest that in all negotiations with Turks and Bulgarians the representatives of Great Britain should be selected primarily for their special knowledge of those countries. But the story of the mistakes of British diplomacy in the Near East before the war justifies the warning, and a recent statement in Parliament serves as a reminder that it may not be out of place. It was announced that the delegates now at The Hague for the purpose of negotiating with German representatives on the subject of prisoners of war have been instructed to communicate with the Bulgarian representative at that capital with a view to laying the basis of a fresh agreement with the Bulgarian Government for the repatriation of British and Bulgarian prisoners of war on a larger scale. If the intention is to complete the negotiations at The Hague, it is to be hoped that the British delegation will be reinforced by someone who knows Bulgaria and the Bulgarians.

As far as the Near East is concerned, no less than in the case of Germany, the best method of ameliorating the lot of prisoners of war is to secure their early repatriation. In the meantime it affords some consolation to know that all that is immediately possible is being done for these hapless men. Monetary grants to officers have been increased; the ship to be used for the repatriation of the invalids will take two months' supplies of food for all prisoners, and full outfits of clothing for all non-commissioned officers and men. Facilities are also being afforded for the despatch by this ship to officers of private parcels containing necessaries other than food. The prisoners have not been neglected from this end in the past; but there has been irregularity in the arrival of the relief sent, and the capacity of the Turks to cope with their responsibilities has been limited. The arrangements now made for the distribution of two months' food are a guarantee, it is to be hoped, that in every case the parcels will reach their destination. But in this connection too much stress cannot be laid on the necessity of leaving nothing to chance or to Turkish or other improvisation. It is evident from the plan adopted for the repatriation of medical officers that too much latitude has been left for mismanagement. Under the Berne agreement one British medical officer and five medical personnel of other ranks may be detained in Turkey for every thousand British prisoners; but it was left to the Turks to make "a suitable distribution of this medical staff." With all the good will in the world they would be unequal to the task if, as is understood to be the case, the prisoners are distributed in comparatively small groups among a large number of camps. It is well, therefore, that the question of increasing the number should be under consideration; but it would have been better if the actual conditions had been appreciated in the first instance and provision made that no camp containing British prisoners of war should be left without a medical officer.

BYGONE EVENTS IN EGYPT.

By SIR MALCOLM McILWRAITH.

The Editor of THE NEAR EAST has done me the honour to request that I should send him a short article, and has suggested that it should be "something in the nature of reminiscences." And as I have derived much pleasure and profit from this publication, which serves to keep Anglo-Egyptians, among many other readers, in touch with the scenes of their former labours, I readily comply with this request. My only difficulty has been to find a suitable subject for some brief observations of a reminiscent order. But as I turned the matter over in my mind, my eye fell on the photograph of Boutros Pasha on my mantelpiece, and it occurred to me that a few words about the troubled times in which he lived, and which culminated in his tragic death, might be of interest. It is the only murder with which I have ever been brought into close contact, I am happy to say, and the circumstances have, accordingly, remained vividly impressed upon my memory.

In order to understand that sad occurrence, it is necessary to recall briefly the causes which led up to it. In 1907 Lord Cromer left Egypt, after a brilliant Proconsulship of twenty-four years, which had attracted the attention of the entire world. During the last ten or more of those years he had wielded almost absolute power, by reason of the practically unquestioned authority which his own merits had achieved. Possibly as a result, however, of this situation, the last years of his tenure of office had been somewhat stormy. Notably, since the events of Denshawai, in 1906, the forces of unrest and disaffection had considerably increased in Egypt, and a strong Nationalist party had sprung up and become organized. It was, therefore, foreseen, that whenever he retired there would be difficult times ahead, and such, assuredly, proved to be the case. Sir Eldon Gorst, one of the most successful of his former lieutenants, had been selected to succeed him; and the Liberal Government, which had taken office in 1905 after the crushing defeat of the Unionists at the polls, determined to inaugurate in Egypt a policy of political conciliation and administrative concessions, and to increase considerably the powers of the native officials.

As Sir Eldon Gorst himself expressed it in one of his annual reports, "The Egyptian Ministers and officials were encouraged to take more responsibility and initiative in the affairs of the country."* Space does not permit an explanation of the principles and practice which have governed the British administration of Egypt under the Occupation, nor the very profound and far-reaching difference, in various ways, which these simple words connoted. It must suffice to record here that the concessions which this change of policy entailed were, unfortunately, not accepted by the Nationalist party in the spirit in which they were made, but "were attributed both by the Egyptians and by the local European colonies to weakness, to an attempt to pacify the national agitation by ill-timed concessions and to an intentional diminution of British authority."† The new policy, therefore, whether for this reason only, or from other causes also, largely failed of its effect; and, instead of checking discontent, led to still louder and more determined demands for self-government.

A second contributory cause of the general agitation was increasing religious fanaticism towards Christians and the mutual hostility between Copts and Moslems, which had been stimulated by the appointment of the Coptic Minister, Boutros Pasha Ghali, as President of the Council, in succession to Moustapha Pasha Fehmy, in 1908. There had not, I believe, ever been a Coptic Prime Minister before,‡ and the appointment was therefore regarded as a daring innovation, although Boutros Pasha had been selected for the post solely by reason of the fact that he was immeasurably the ablest man in the Ministry.

The Copts are in a considerable numerical minority in Egypt, constituting, indeed, scarcely more than 8 per cent. of the native population But they are a highly intelligent portion of the community, better educated, as a rule, than their Moslem brethren, and they have, consequently, obtained what Moslems regard as a disproportionate share in the machine of government. The Copt, however, though an admirable clerk and a very efficient man of business, is not, as a rule, a leader of men, and is unsuited by temperament and training to exercise executive authority. Such authority is, therefore, seldom entrusted to him, and there have not been, for instance, any cases (so far as I can remember) of Coptic Mudirs.

If, therefore, argued the Moslems, such men are not even considered fit to be governors of a province, how can it be right to make one of their number the head of the whole Government? And many of them, accordingly, considered the appointment of Boutros Pasha to this position an act of political madness. On the other hand, this view exasperated the Copts themselves, who consider, on the contrary, that they have never had that share of high executive authority for which many of them pine, and which, under the British Occupation, they fully expected to obtain.

Lord Cromer once summarized most pithily, as follows, the situation in this respect, and the working of the Coptic mind:—

> The principles of strict impartiality on which the Englishman proceeded were foreign to the nature of the Copt. When the British occupation took place certain hopes began to dawn in his mind. "I," said the Copt to himself, "am a Christian; if I had the power to do so, I would favour Christians at the expense of Moslems. The English are Christians; therefore"—and it was here that the Copt was guilty of a sad *ignoratio elenchi*—"as the English have the power, they will assuredly favour Christians at the expense of Moslems." When the Copt found that this process of reasoning was fallacious, and that the conduct of the Englishman was guided by motives which he had left out of account and which he could not understand, he was disappointed, and his disappointment deepened into resentment. He thought that the Englishman's justice to the Moslem involved injustice to himself, for he was apt, perhaps unconsciously, to hold that injustice and absence of favouritism to Copts were well-nigh synonymous terms.

The strained situation, therefore, between these two classes of the community, greatly accentuated by an appointment which the Moslems so strongly resented, increased from day to day.

Finally, it was at this particular juncture, when the political atmosphere was so highly charged with electricity, that there was brought forward a certain scheme for extending the concession of the Suez Canal Company, which greatly exacerbated public opinion. The bargain was, in reality, a sound one, I believe, for the Egyptian Government, from the financial point of view, but it was utilized by the Nationalist Press as a weapon for creating prejudice against foreigners—both English and French—and was represented as the scheme of the Christian Minister, who desired to favour his co-religionists at the expense of his country. The proposal did not, legally, require the assent of the people's representatives, the General Assembly, but Sir Eldon Gorst—whether of his own motion or on orders from home I am unable to say—elected to submit it to them. Whatever result was hoped for from this course, the effect it in fact produced was merely to give considerably wider and more violent expression to the popular clamour against the scheme; and the sittings of the Assembly grew more and more turbulent each time it was discussed.

On Sunday morning, February 20, 1910, I was sitting in my office at the Ministry of Justice when, about 1 o'clock, I was startled by a series of some five or six sharp reports immediately under my window in the courtyard of the Ministry. I thought, however, that it must be merely the explosion of a motor tyre, and went on with my work, when suddenly my orderly burst into the room, crying out that Boutros Pasha (whose office at the Ministry of Foreign Affairs was on the floor above mine, and who had a few minutes previously descended the staircase) had been shot at when getting into his carriage at the door of the Ministry, and was "lying on the ground." I proceeded at once downstairs, where I saw, in the large central hall of the Ministry, a crowd of excited and shouting employees

* See Egypt, No. 1 (1911), p. 2.
† Ibidem, p. 3.
‡ There had been a *Christian* Prime Minister, for Nubar Pasha several times occupied that position. But the appointment of an Armenian did not raise the same questions, for the Armenian population of Egypt is very small.

dragging along a dishevelled-looking youth, with torn and disordered garments, who, I presumed, was the assassin. At that moment my secretary came up and handed me a little black Browning revolver, which had been taken from this man, five chambers of which had been discharged. Meanwhile, Boutros Pasha had been carried into the room of the Minister of Justice on the ground floor of the Ministry. There I found him, lying on the floor, being hurriedly examined by a native doctor, kneeling at his side, who had happened to be at the Ministry at the time—a circumstance which, at first, aroused some suspicion against him. The unfortunate Minister was fully conscious, and the doctor was trying to reassure him, repeating soothingly, "Ce n'est rien, ça ne sera rien!" while the poor victim gazed at him fixedly, endeavouring to gauge the sincerity of his assurances.

The Minister of Justice, however (Rushdi Pasha, now President of the Council), whispered to me some moments later that one of the bullets had passed through his side, and that "if it had touched his liver, he was a dead man." Such, unhappily, proved to be the case; and though an operation was performed on him that night, he only lived till morning. He was a most valuable and loyal coadjutor of the British Government, and a great loss to his country.

Meanwhile, the assassin had been taken into the large Council Chamber of the Ministry and searched. I found the Procureur-Général there (Saroit Pasha, now Minister of Justice) and he forthwith commenced the inquiry. The assassin proved to be a young apothecary, named Wardani, who had a chemist's shop in the Abdin quarter of the town, close to the Khedive's Palace, and who proudly proclaimed his membership of the Nationalist party. He declared that he had intended to kill the Minister because the latter had betrayed his country, alleging, among other reasons, that he had sold its interests to the Suez Canal Company for a huge sum of money—an allegation of which there never was a particle of evidence.

It would be impossible to relate here the course of the inquiry, though there were some interesting and dramatic moments. There were many complaints at the time that it took far too long, and that some more prompt and expeditious method of trial and speedy execution should have been found. Apart, however, from the fact that any such course would have been most unlikely to meet with the approval of the British Government and the House of Commons at that time, it is not the case that the proceedings were by any means unduly protracted. The prosecution, indeed, concluded their inquiry with the most commendable rapidity in sixteen days, though there were upwards of a hundred witnesses to examine—for it was most desirable to ascertain if Wardani had accomplices.

The case came on for hearing before the Assize Court exactly two months after the murder—several weeks earlier than the average period for murder cases in Egypt at the time, and one which compares very favourably with the average time occupied by such cases in England. Enormous efforts were made by the Nationalist party to save the assassin from paying the supreme penalty for his crime. They not only paid all the expenses of his defence, but they left no stone unturned in order to arouse sympathy for him among the lower classes, and to impart a sentiment of religious antagonism into the affair. The judges and prosecuting officials received, almost daily, threatening letters of great violence. The English judge, however (Judge Dilberoglue, now retired), who presided over the Assize Court, and the Public Prosecutor behaved with courage and resolution, and the assassin was, in due course, convicted and hanged. The time was, nevertheless, an anxious one for all concerned, for no one could tell who the next victim might be. I remember being informed by the head of the police that a band of ten young men—several of whom were said to be most desperate characters—had sworn, each of them, to kill a prominent official. So we all felt that we had our share of the danger.*

In the result, however—perhaps as a consequence of the firmness displayed by the authorities—Wardani found no imitators at the time. It was not till many years later after the outbreak of the war, that Egyptian public life was troubled afresh by attempts at political assassination, several being made against the person of the late Sultan Hussein, happily without success. In each case the assailants were arrested, brought to trial, and duly punished. It may be hoped, therefore, that their fate will prove a deterrent should there be any persons of similar proclivities now at large. The political conditions, however, which led to the sad fate of poor Boutros Pasha have now passed away, and it may be hoped that Egypt, under the new regime, has entered upon an era of prosperity and contentment which renders their recurrence unlikely

* Boutros Pasha, who was a particular friend of mine, was constantly in the habit of calling for me, on his way downstairs, when he left the Ministry at one o'clock, and driving me home to lunch, my house being on his way. Had he done so on the day of the crime, I might possibly have saved him—or perhaps shared his fate.

NEWS IN BRIEF.

It is proposed to raise a citizen corps from among the Indian railway employees throughout the country.

A British official report issued on Saturday said :—"There is no change in the situation in Mesopotamia."

The Czecho-Slovak National Council have opened a London office at Thanet House, 231, Strand, W.C.2.

The political Press Censorship at Constantinople has been discontinued and the military Censorship maintained.

A reactionary lieutenant in the Greek Army has been condemned to four years' imprisonment for christening children to whom he gave the name of the Kaiser.

A Note has been presented by the Persian Chargé d'Affaires in Moscow protesting against the treatment of the Persian population by the Soviet representatives in Turkestan.

According to a Constantinople telegram the *Tasvir I Efkiar* estimated the number of houses burned in the recent big fire at Stamboul as being at least 8,000, covering an area of 2,500,000 square metres.

The Paris *Journal* prints a telegram from its Zurich correspondent stating that Prince William of Wied, sometime Mpret of Albania, had a long interview on June 7 with the King of Saxony. The Prince, it is added, is a candidate for the Throne of Lithuania.

The judges of the Native Court in Alexandria held a general meeting recently under the presidency of Judge Saleh Hakki Bey, and discussed the programme of the season. Seven of the judges, including the president, decided to give up their summer holidays this year.

M. Radoslavoff, Bulgarian Prime Minister, is reported to have said that Bulgaria had received from Germany and Austria the fullest assurances that the Central Empires would support all Bulgaria's claims with regard to Eastern Macedonia, especially those relating to Drama, Seres, and Kavala.

Reports of the ceremony at Jerusalem on the arival of Dr. Weizmann's mission produced an extraordinary impression among the Jews in Galacia and Vienna; strong feelings of sympathy for England were evident. It was agreed to celebrate the date (April 11) in future years as a public holiday.

It has been decided, with the approval of the Secretary of State for India, to create, with effect from March 13, 1918, and for the remaining period of the war, two additional appointments carrying the rank of Surgeon-General, such appointments to be filled by officers of the Indian Medical Service in military employment.

Herr George Gothoin, member of the Reichstag, refers in the *Berliner Tageblatt* to the picture of a "future independent Jewish national State of Palestine" which, he says, the English have set before the world, and declares that it is in the interest of Eastern Jews, "as also of the Germans, that England's plan should fail."

The following alteration in the rank and titles of the Surgeon-Generals of the Indian Medical Service has been made by Royal Warrant, published in the *Gazette:* "Surgeon-Generals ranking as Lieutenant-Generals shall be granted the rank and title of Lieutenant-General, and Surgeon-Generals ranking as Major-Generals shall be granted the rank and title of Major-General."

In the elections for the Roumanian Parliament, to which candidates are returned by electoral colleagues, 60 Government candidates were elected for the first colleges of the Chamber of Deputies, as well as three Carpists. General Averescu was elected as an independent. Parliament, which is to open to-day, will meet in the National Theatre at Jassy.

There was a satisfactory decrease in the number of persons killed by wild animals and snakes in Assam during 1917. The total was 289, as against 340 in 1916. The number of wild animals killed was 1,490, as against 1,562 in 1916. The number of snakes killed was considerably smaller, 332, as against 1,409. Of the total number of persons killed by wild animals, 138 fell victims to tigers.

The Secretary of the Asiatic Seamen's Institute, Birkenhead, has been informed by the Board of Trade that lascars will be eligible for the award of the new torpedo badge if they have served on the articles of any British merchant ship sunk or damaged by torpedo or mine, and if they have afterwards engaged for and completed a further voyage on the articles of a British ship. Application for a badge must be made personally at a mercantile marine office.

The *Palestine News* reproduces a letter sent by the Greek Archbishop of Mount Sinai to Colonel Storrs, the British Governor at Jerusalem. After recalling the sympathy of the Greek Government towards the Jewish people as expressed by M. Venizelos and other statesmen, the writer states: "We who belong to Hellenic stock sympathise with the aspirations of the Jewish people regarding their settlement in Palestine, and we think no claim could be more justified than this. The Jews, as bearers of modern civilisation and as one of the most enlightened peoples of the world, will not only bring innate capacities to bear upon the development of Palestine, which has been desolated by Turkish misrule, but will instil into the poverty-stricken inhabitants a spirit of progress and emulation. I support with all my heart the aspirations of the Jews, who have the right to settle in the land of their fathers, which I pray may henceforth become the land of their birth, thanks to the initiative and the chivalrous protection of the great liberal British Empire."

PRESS ON THE NEAR EAST.

Reform for India.

Sir Valentine Chirol has contributed to *The Times* four articles on "Reform in India" (published June 6, 7, 8 and 10). From these we should like to quote many passages; but since considerations of space must not be ignored, we must content ourselves with some extracts from the last article:—

If, in the terms of the Pronouncement of August 20, the development of self-governing institutions in India can only be gradual and the realisation of responsible government progressive, no scheme of constitutional reforms based on that Pronouncement can fail to provide that throughout that evolutionary period Government shall remain armed with the necessary executive and administrative powers to secure the welfare and safety of India, for which the responsibility must still lie on our shoulders.

However cautiously every step may be taken in the transition from an autocratic to a democratic system, we cannot close our eyes to the stupendous magnitude of the change involved in it, especially in a country with no democratic traditions or instincts of its own, where it is the autocracy itself that has to teach democracy. Even the Indian *intelligentsia* which now talks democracy has only learnt to talk it from its alien teachers, and has certainly not yet learnt to put it into practice in the social life of India. Only a few of its leaders, for instance, have so far realised how incongruous democratic professions are with a social system which treats fifty or sixty millions of low-caste Indians as "untouchable" by the higher castes and banishes "untouchable" children to the outer verandahs of an elementary schoolhouse lest contact with them should defile their more fortunately-born schoolmates. It is to be hoped that the movement now on foot to remove this reproach will be more successful than others that have been started from time to time during the last half century, but that it should still be needed when Indians loudly claim that they are ripe for the most advanced democratic institutions is in itself significant.

The article concludes:—

Ready as we must show ourselves under the Pronouncement to transfer an increasing measure of power and responsibility to the people of India, we must preserve intact at every stage the authority needed for the exercise of such power and the discharge of such responsibility as we cannot safely transfer until the final goal is reached. It may be possible in the meantime to increase Indian representation in the Provincial Legislative Councils and in that of the Viceroy, and it is certainly most important that the basis of Indian representation in these Councils should be broadened, both by enlarging the electorates and by providing in other ways for the protection of influential minorities. Indians may be more closely associated and in increasing numbers both with the executive and administrative government of the country.

But the mainspring of government and the final authority will have to remain in the hands of those appointed by the British Government and the British Parliament to govern. The Government of the King-Emperor must be carried on—and for this reason, in addition to all others, that, so far as we can at present look into the future, the safety of India must depend, as it has depended in the present war, on the British Army and the British Navy.

Bulgaria and her Neighbours.

Some light is thrown upon Bulgaria's attitude to the war by the following extract from an article that appeared recently in the *Dnevnik*, of Sofia. Says the writer:—

With regard to equilibrium in the Balkans, it can be created only if Bulgaria, whose territories include all the high roads to the East, is made sufficiently strong to enable her to keep them and to safeguard the free commercial movement on them. Without this condition no equilibrium is possible, and the aspirations of the other Balkan States would be stimulated to acquire strategical points and to create other competing highways. However, it is clear that our national unity is in the interest not only of Austro-Hungary, which is thereby protected from the insatiable greed of Serbs and Bohemians, but also of the Turks, whose capital will become safe, and of the equilibrium of Europe as well. This is so plain and evident that only the blind or the personally interested cannot or will not see it.

The Troubles of Greece.

The *Observer* published last Sunday an interview which one of its representatives had with M. Gennadius, the Hellenic Minister in London. Referring to the brilliant success gained by the Greek Army, M. Gennadius remarked that it was inspiring for those friends of Greece who had remained faithful to her through good report and evil. "For," he added, "no doubt the long trial through which we had to pass before arriving at this stage was a little disheartening to those who could not have known the full details of that great crisis in the history of the country." He continued:—

To us, however, who knew what was occurring and had struggled through the whole of that period, the position of Greece during the last three years was not one of neutrality, but one of constant effort to free ourselves from the German influence and intrigue which had established itself in high quarters. And it is no exaggeration to say that this persistent and determined effort was as severe and as exacting as actual participation in the war. When you consider how even in those countries more fortunately situated than our own—countries which one after the other have gradually come into the war—German intrigue and German propaganda had made very powerful sections of the population, and, indeed, many important personalities, work in favour of Germany, it is not surprising that in Greece German influence had found for a long time a fruitful field of operations.

In Greece the reigning power was in the hands of a sovereign who at the age of eighteen had been sent to Berlin to receive his military education, and his consort was the beloved sister of the Kaiser. It was not, therefore, to be wondered at that he should have been under the influence of the Kaiser. Nor, on the other hand, was it surprising that a large section of Greek people, who are noble-hearted and generous by nature, should have hesitated for a long time to declare themselves openly against a sovereign who had undoubtedly acted during our two Balkan wars in a way calculated to evoke popular enthusiasm.

Moreover, you must remember that he was the first prince born in Greece amongst his own people—a prince whose advent Greek people had awaited for five long centuries of servitude and misfortune. It was hard to be convinced that this beloved prince would have acted treacherously towards his own country as he did, that he would have consented to secret arrangements with Germany, and that he would actually have allowed the secular enemies, the Bulgarians, to occupy our hard-won patrimony in Eastern Macedonia.

Our great statesman, M. Venizelos, was himself the first to exhaust every conciliatory means and use every persuasion before deciding that other measures must be adopted to safeguard the great interests of the country. During those three years, therefore, although Greece was not officially in the war, we carried on in Greece itself a struggle for the cause for which the Allies are fighting. In the end King Constantine was dethroned, and he and his entourage had to leave the country. It was a great wrench in many ways—a greater effort, I think, than has been made by others who have come into the Alliance under more favourable conditions.

Greece then entered upon a new period of reorganization of the army and of overhauling of finances, to say nothing of clearing the country from the germs of intrigue and dissension. The result of this work is now being made clear.

Articles to Note.

"The Future of Roumania," by Herbert Vivian; "India's Man Power," by St. Nihal Singh; and "Italy and the Nationalities of Austria-Hungary," by an Old Mazzinian, in the *Contemporary Review* (June).

"A Constructive Policy for India," by Mrs. Haigh; "Violence and Cunning: The Lesson of Brest and Bucharest," by Major-General Sir George Aston, K.C.B.; and "Shall England Save Austria," by the Very Rev. Canon William Barry, D.D., in the *Nineteenth Century* (June).

ROYAL SCHOOL
FOR
Daughters of Officers of the Army.

Patrons:
Their MAJESTIES THE KING AND QUEEN
and HER MAJESTY QUEEN ALEXANDRA.
Chairman: LT.-COL. A. GRUBB. J.P.
Vice-Chairman: SURGEON-GEN. SIR WILLIAM TAYLOR, K.C.B.

Daughters of Officers of the Army are admitted to the above Schools according to the circumstances of their parents, at rates of £20, £45, £65, and £80 a year. Granddaughters of Officers are admitted at £45, £65, and £80 a year according to circumstances, and a limited number of daughters of civilians are admitted at £120 a year when there are vacancies. There are 15 Scholarships, open to competition, in the School, of amounts varying from £10 to £20 up to one of £50.

As half of the School consists of pupils on the £15 foundation, which includes both board and education, a deficiency of about £2,500 a year has to be met by contributions, which are earnestly solicited. Donations of £5 5s., giving one vote for life, or subscriptions of 10s. 6d., giving one vote for the year, may be sent to

F. W. T. ATTREE, COLONEL (late R.E.), Secretary.
Office: Panton House, 25, Haymarket, S.W.1.

SCHOOL OF ORIENTAL STUDIES.
London Institution, Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

The second Indian War Loan is being raised in the form of 5½ per cent. War Bonds issued at par. Bonds redeemable in 1921 and 1923 will carry no premium, but bonds due in 1925 will be redeemed at 103 per cent., and those dated 1928 at 105 per cent. Subscriptions must be paid in full on application, and Indian Treasury bills will be accepted in payment subject to a discount of 4 per cent. per annum, and applications within certain limits will be received by the Post Office Savings Banks. The loan is free from Indian income-tax, but not from super-tax.

***

Turkey's financial position gets steadily worse, and as a natural corollary the country's dependence on Germany grows constantly greater. Since the C.U.P. inveigled Turkey into the war at Germany's command there have been incessant financial crises, each one somewhat more severe than the last, which have only been solved by the most dubious financial devices. Usually it has been the case that Germany has lent her support to Turkey's credit in some form or another; in one case, it will be remembered, gold was to be placed in safes at Berlin as a security for Turkey's obligations. In these transactions Germany has been careful to run no risk of losing anything (no gold, for instance, has passed from Berlin to Constantinople), while each crisis has enabled her to strengthen her hold over her unfortunate Ally. This process is naturally one which Germany can afford to continue indefinitely, and she will no doubt do so as long as she considers that the war position in general and her Eastern ambitions in particular can in any way be served by Turkish support.

***

At the same time the value of German financial support is depreciating in Turkey. This is clearly evident in connection with the failure of the latest Turkish war loan. The amount asked for was £T32,000,000, and when the subscription lists closed only £T12,000,000 had been subscribed, despite the fact that the conditions of the loan were extremely promising. The issue was one of 5 per cent. bonds at par with a 1 per cent. amortisation, and subscriptions could be made in paper money, of which so much is in circulation that it is reckoned as being worth one-fifth of its face value in gold. As the interest and the repayment of the principal were to be made in gold (to be provided by Germany), and the interest was payable in advance, it is significant that holders of paper money should not have availed themselves of this opportunity, and their failure to do so speaks volumes as to the internal situation of Turkey. Can it be that the average Turk no longer believes in German promises?

***

The influence of the war on the Ceylon copra trade is interesting as showing the impetus given by the struggle to increased business between different parts of the Empire. New markets had to be found for the copra, and Ceylon exporters naturally turned to India, where they have been able to dispose of considerable amounts. Some European merchants, however, have looked further afield in their search for markets, and shipments have been made to Australia and to the Cape. The value of the Australian market is at present problematical, as Australia has been in the habit of drawing her copra from the Pacific Islands, and its permanence must naturally depend on the quality of Ceylon copra and also on the price.

***

Some interesting particulars have recently been issued with regard to the position of the tanning industry in Madras after the war. It is stated that the position will be that while Madras hides will have earned a great reputation there will be competition from North India to contend with, and also the danger of the reintroduction of adulteration. The latter handicap, which has been so detrimental to India's industrial progress, is, at any rate, avoidable, and it is satisfactory to note that the best method of preventing it is being considered by the Government. Incidentally, it is pointed out that the pre-eminence of the South Indian tanneries is due to the fact that the best tanning agent for the production of good leather by unskilled labour—avaram bark—is only found in South India, and steps are being taken to encourage the planting of avaram.

***

The annual review of the seaborne trade of British India for the year ended March 31 is of chief interest for the light it throws on the development of Indian industrial enterprise under the stress of war conditions. Thus, while raw jute shipments declined from 540,000 tons to 273,000, the exports of jute manufactures were valued at Rs. 4,285 lakhs, against Rs. 4,165 lakhs. Decreases were recorded in the exports of oil seeds, raw hemp, and wool. The exports of tanned and dressed hides and skins amounted to 399,000 cwt., against 483,000 cwt., while a very marked decline took place in the exports of raw hides, the figures being 418,000 cwt., against 894,000 cwt., and a smaller decline in raw skins at 429,000 cwt., against 567,000 cwt. In imports, as might be expected, there were considerable decreases in machinery, iron and steel, railway plant and rolling stock, etc., but there were increases in chemicals, matches, and in goods sent by post. Imports of cotton twist and yarn and piece goods declined, but the value rose rapidly, and the imports of these goods increased in value by Rs. 403 lakhs.

***

For the rest it may be noted that despite the continued advance in prices the value of Indian exports was 4 per cent. less than in the previous year and 7 per cent. less than in 1913-14. The figures are, however, apt to be misleading, as, except in the case of wheat and cowhides, Government purchases consigned in Government vessels are not included. On the other hand, imports increased by 0.2 per cent., and here the total is 18 per cent. below the figures for 1913-14. There was an excess of exports over imports of almost Rs. 8,000 lakhs, this comparing with an excess of Rs. 9,100 lakhs in 1916-17.

***

Apropos of my reference to the Berlin banks last week, I see that the *Neue Freie Presse* reports that the seven leading Vienna banks also did well last year. Their dividends, it seems, were well in excess of those paid immediately before the war, while the principal bank, the Creditanstalt, paid over 12 per cent. for the first time in fifteen years. Two interesting points of comparison present themselves between the Vienna and the Berlin banking institutions. In Austria banking is apparently a cheaper process than in Germany, for the expenditure of the Creditanstalt in 1917 for administrative purposes amounted to 40 per cent. of the gross takings, as against 53 per cent. for the Deutsche Bank. The figures for other Vienna banks are somewhat higher, but they are still appreciably lower than the German figures. The incidence of taxation is, however, much heavier in Austria than in Germany, and while the Deutsche Bank paid only 6.3 of its gross profits in taxation, the Creditanstalt's taxation amounted to 22 per cent.

***

Too much light cannot be thrown on Germany's manœuvres in the East, where she is steadily endeavouring to consolidate her position in Roumania and the Ukraine, and at the same time is gradually endeavouring to develop her economic control in Central Asia. The German Press does not hesitate to state that these measures are not mere temporary expedients. Thus, the *Norddeutsche Allgemeine Zeitung* declares that Germany is buying all the available cotton in Central Asia to as far east as Turkestan, including the crops for many years ahead. Then the Russian treaty gives Germany free passage to Persia, and arrangements are being made by the enemy for trade with that country, while the occupation of Batoum gives Germany access to the districts bordering the Black Sea and the Caspian.

***

Roumania and the Ukraine are thus serving as pivots for the German exploitation of the East, and that fact suggests the future of these countries if Germany were allowed to have her way. They would both become in fact, if not in name, vassal states of the German Empire, and their rôle would be the undivided task of contributing to its development. Germany's ambitions are "never-endian" in the truest sense; otherwise she might well be content to modify her pretensions and to be satisfied with the exploitation of Roumania and the Ukraine, which between them are quite equal to solving the German food problem. One explanation of Germany's Eastern policy—if policy be a correct term for a career of brigandage—is that she knows quite well that she must lose the war in the end, and that she hopes that if she only has enough territory in her possession when the armistice is arranged that she will be allowed to keep something. But even in that she is doomed to disappointment.

***

I note with pleasure that among the recipients of the silver medals of the Royal Society of Arts is Dr. Lawrence Balls, who has been awarded this distinction for his paper on "Examples of Applied Science in the Cotton Industry," a précis of which was given in these columns recently.

***

The final dividend of the Indian and General Investment Trust gives a return of 8½ per cent for the twelve months ended in April, the same rate as for the previous year. For 1915-16 the dividend was 7½ per cent., while 7 per cent. was paid for the preceding four years. The rate was 5½ per cent. for 1909-10, and since then there has been a constant upward process.

ABYSSINIA AND ITS POTENTIALITIES.

(By Our Khartoum Correspondent.)

Khartoum, May 19.

The days of Eldorado are over, and it is impossible to find a land where money is to be picked up without trouble. Abyssinia has, however, remained the hope of the speculator, more especially the mining expert. There is no doubt that there is immense wealth in the country, but it cannot be got out without the expenditure both of money and expert labour. The first difficulty is that of reaching the European markets. For this it is necessary to find capital for railway building, or for mechanical transport of some sort, and that at least means roads of a kind that cost money. Gradients are very steep, and power is needed to shift big weights up the escarpment. The problem is not insuperable, but it costs money.

Roughly speaking, the wealth of Abyssinia may be divided, like that of other countries, into minerals, cereals and animals. Of these minerals are the most important, as they have a big claim on the markets of the world and can obtain capital with comparatively little trouble. What the minerals may be is not at all certain. Everyone knows that there is gold in Abyssinia, but there is probably also coal and a variety of other minerals of commercial value. The question is whether they can be got without too great an expenditure of capital.

There is only one railway in Abyssinia at present, and it feeds no mining area. Cereals do not offer much opportunity. There is a tremendous future in Abyssinia for coffee and a considerable quantity already finds its way on to the market, and with improved communications the amount is likely to increase. The centre of the coffee trade is at Zegi near Lake Tsana, but there is a very fair export from Gambeila, and this is due rather to the facilities offered by the Sudan Government steamers during the high Nile than to the special advantages of the district. The normal forms of cereals such as wheat and barley are grown in the vicinity of Harrar, and it is possible that considerable development might take place in that area if the political situation were more settled.

In animals Abyssinia is immensely rich. It is the great source of supply for a certain type of mule. Small, sure-footed, hardy, it will work in countries where the bigger types such as the Cyprian mule will die off with appalling rapidity. The Abyssinian horse varies very greatly. There are fair animals of a sort, but the great majority are small, badly bred, and only suitable for the mountain work that they are generally used for. Cattle equally are undersized, and are not suitable for export, as they do not repay the expense of railway fare.

There has always been a certain trade in hides. The fact that the Abyssinian himself enjoys eating a large amount of raw meat causes him to slaughter a larger number of animals for food than would occur in other countries, and so there is a quantity of hides. This will undoubtedly be an asset, but the whole question will have to be looked at from a far-reaching economic point of view, unless there is to be a net loss by the undue destruction of animals for food. Unlike the Arab, the Abyssinian has no qualms about making bullocks, and the breeding of mules is also an example of his disregard for the natural instincts of animals. It is possible, therefore, that the Abyssinian might prove to be amenable to modern methods of stock-farming. Even so a man would need to possess great knowledge and capacity to start stock-farming in Abyssinia. There is an immense reserve of obstruction about the Abyssinian which must not be overlooked. He dislikes the European, and he does not want him. He is convinced that he only comes to exploit his country, and he is passionately patriotic. Above all, society is based on a military ideal, and unless the outsider is prepared to accept the native on equal terms he will find that he has to deal not only with a peaceful boycott, but also armed resistance. Few countries are better adapted to guerilla warfare, and the people themselves enjoy it.

Whatever may happen to Abyssinia in the future, it is certain that its development depends on the good will of the people. It is true that Magdala stands as an example of successful action, but Adowa was equally a great defeat of a European power, and being more recent it has the greater effect Moreover, the Abyssinian does not count himself as a "coloured" man, but calls the European red and himself white, and if he be kept in a sheltered spot that is just the colour that he is, a kind of dead white. The tradition of the Abyssinian is to be hard. For this reason he hardly ever wears anything on his feet and dispenses to a degree that one may deplore with the advantages of cleanliness. Even a hat is looked upon by some as a sign of effeminacy.

AMERICAN ZIONISTS AND PALESTINE

A Zionist convention will be held at Pittsburg, U.S.A., on June 23, when a proposal will be made for the dispatch to Palestine of an engineering unit for the purpose of helping in the work of reconstruction and industrial development. Plans have been prepared by the Zionist Society of Engineers for the construction of aerial tramways and the provision of hydro-electric plant. It is proposed to make a complete survey of the raw materials available in Palestine, as well as to set up plants for extracting oil from the immense variety of vegetable products. Other schemes include the establishment of a sugar refinery, a modern tannery, cement plant, and the construction of roads.

THE MONSOON.

The Government of India issues the following summary of the monsoon forecast:—Monsoon.—Rainfall of Upper Burma and North-East India is likely to be in excess; in the remainder of India, excluding Lower Burma and the south of the peninsula, the outlook is roughly normal, though slightly, perhaps, on the unfavourable side. The rainfall of North-West India is not likely to be affected prejudicially by the accumulation of snow in the Himalayas.

CYPRUS NOTES.

(From a Correspondent.)

The cereal harvest promises to be quite a record one, surpassing all expectations. Barley is being cut, and the wheat crops are excellent throughout the island. The prospect of cheaper bread is welcomed in town and village. The outlook is cheerful all round; for although prices are high beyond all that could be imagined a few years ago, and although lack of regular communication causes no little dislocation of foreign trade and business, there is not much to complain of as Cypriots have done remarkably well owing to war profits.

The price of cereals has been fixed by the Government as follows: wheat 9s. the bushel; barley 4s; vetches 8s.; oats 2s. 2½d. Wheat crops have suffered in various places, especially in the Limassol District, from a winged pest which has so far baffled attempts to deal with it, viz., the *tinea temperatella*. In the grub stage it eats its way into the green shoots, which wither. The life history of the pest has been minutely studied by M. P. Gennadius, when Director of Agriculture, and even more fully by his successor M. Sarakoménos, who has published a treatise on it. In 1897 a special law was passed to prevent the spreading of this pest, but the methods provided for were not successful, and it still clings to certain areas. The havoc is fortunately not sufficient to mar the generally excellent prospect referred to.

As regards carobs, there has been a good deal of speculative buying. Merchants have been able to dispose of large quantities of last year's stock, selling in some cases at 25s. the Aleppo kantar (about £5 12s. per ton). They could have realised 35s. per kantar had shipping been available. It is probable that government will commandeer the entire crop of next summer at prices ranging up to 20s. per kantar, according to locality. The measures against the carob disease will again be watched with considerable interest.

CAPITAL ISSUES IN INDIA.

The advisory committees appointed to deal with applications for licences for new issues under the Indian Companies Restrictions Act are constituted as follows:—

Calcutta.—Mr. Gubbay, Controller of Currency; Mr. Stather Hale, Registrar of Joint Stock Companies (Bengal Government); the Hon. Mr. W. A. Ironside (in his absence the Hon. Mr. W. E. Crum) (Bengal Chamber of Commerce); and Mr. Niberon Chandra Sircar (Bengal National Chamber of Commerce).

Bombay.—Mr. Cook, Accountant-General; Mr. P. S. Mellor, Registrar of Companies (Bombay Government); the Hon. Mr. Malcolm Hogg (Bombay Chamber of Commerce); and Sir V. T. Thakersey (Indian Merchants' Chamber of Commerce).

THE MYSORE BUDGET.

The Mysore State Budget for 1918-19 provides a sum of Rs25 lakhs for industrial undertakings, including an iron scheme in the Shimoga District and a special provision of two lakhs made for putting up the sixth installation of the Cauvery power scheme.

ENGINEERING NOTES.

A New Type of Wheel.

It is often said, with more or less justification, that the wheel is the most difficult part of a tractor or wagon. This is a general complaint throughout the East where, owing to climatic conditions, especially in the summer, the wheels are often responsible for much inconvenience. There was a time when farmers, in despair at the troubles they experienced with the wooden wheels of their portable engines, threshing machines, winnowing machines, etc., preferred to dismantle the wheels and turn them into stationary machines. The introduction of iron wheels, though more expensive, relieved the situation, and farmers were particularly careful to see that in their orders the specification of the machine "with iron wheels for hot climates" should be well emphasised. But even these have given cause for complaint, and now with the introduction of tractors, wagons, and other vehicles for agricultural and transport service, the wheels are again a cause of difficulty to farmers in the East, as well as other regions where climatic and geological conditions and the great scarcity of skilful mechanics and operators have to be considered. Any developments in regard to this "wheel question" should be, in consequence, of supreme interest to a large number of farmers in the East, and on that account I think reference is called for to a new type of wheel, of British construction, which has recently been introduced primarily for agricultural tractors. The chief features of this new wheel are lightness, strength, and durability, these qualities being secured by the special construction of the hub and arrangement of the spokes. It is built of angle rims on which are riveted the tyres. The spokes are in the form of steel strips, each strip being bent to template to allow of their being riveted on one side of the rims and on the opposite side of the hub bosses. The strips are arranged in much the same way as in staggered wire spoked wheels, the difference being that each strip is continuous from one side of the rim to the other, and are absolutely interchangeable so that in case of accident a strip (spoke) or strips can be replaced very easily.

Agriculture in Mesopotamia.

In previous engineering notes we have pointed out the great possibilities of Mesopotamia and Palestine as markets for agricultural machinery and implements, and have suggested that manufacturers here should take more direct and energetic measures if they want to secure business in those regions, since plans are being prepared in foreign countries for the supply of suitable machinery in the immediate future. The facts recently given by a representative of the British Press with the Expeditionary Forces in Mesopotamia with regard to recent agricultural results there, provide further proof of the importance of that region as a machinery market. Owing to the success of the Euphrates irrigation scheme, he says, the supplies this year from the Euphrates side will be enormously increased, and the transport of the country will be hard put to it to bring in the grain. During the summer we have been at work on the irrigation scheme connected with the Hindieh barrage. The barrage, which was designed by Sir William Willcocks, and constructed by Sir John Jackson's firm, was finished before the war, but the Turk neglected to profit by it. The canalisation work connected with it was left incomplete, and the area to be cultivated was never brought under irrigation. This year nearly a hundred canals on the Hilleh branch which had fallen into disuse have been dug out. 300,000 acres have been brought under cultivation, and there is promise of "the greatest harvest in the memory of man, possibly the greatest since the days of Nebuchadnezzar."

Wagner's Engineering Tone.

A correspondent writing this week in a technical journal says that in noting the sounds of German air-engines as heard by him during various raids, he finds a Wagnerian tone about many of the German motors. To describe the sound in words is well-nigh impossible. But one curious characteristic is often noted, namely, a purring, which rises and falls in a curious cadence. This reminds the writer of an anecdote related by a well-known engineer and politician some years ago. A German opera was being played at Covent Garden when a gentleman in the audience became so enthusiastic with the Wagnerian music that he turned to his neighbour in the next seat and said: "How glorious! Does this music affect you?" "Not much," the neighbour calmly answered, "I am a boiler-maker."

Ezekiel on Aeroplanes.

It is said that the natives in Palestine and the neighbouring districts regard aeroplanes with extreme amazement. The "learned" cannot find anything in the Apocalyptic writings, or the Apocalypse, or even the "Halema" (the Arabian Nights)—in which visions and symbolical images intended to portray impending events are plentiful—that would predict the coming of flying machines. It would, perhaps, relieve the anxiety of the "learned" Orientals to know that the first chapter of Ezekiel contains a prophetic vision of the aeroplane, the description of which is very striking. The passage is as follows:—"Every one had four wings. . . . And they had the hands of a man under their wings on their four sides; and they four had their faces and their wings. Their wings were joined one to another; they turned not when they went; they went every one straight forward. . . . Their wings were stretched upward; two wings of every one were joined one to another, and two covered their bodies. . . . The appearance of the wheels and their work was like unto the colour of a beryl . . . and their appearance and their work was as it were a wheel in the middle of a wheel. When they went, they went upon their four sides; and they turned not when they went. . . . . And when the living creatures went, the wheels were lifted up from the earth, the wheels were lifted up. . . . And when they went I heard the noise of their wings." Could there be a better description of an aeroplane? The natives' wonder will increase when they see it.

CATALOGUES FOR MOROCCO.

The Acting British Vice-Consul at Tetuan, Morocco, desires to receive for filing at the Vice-Consulate catalogues in Spanish or French from any British firms, says the *Board of Trade Journal*. He particularly wishes to have catalogues from firms dealing in woollen and cotton goods, glassware, hardware, lamps (petroleum), electric installations and sanitary appliances. Firms despatching catalogues to the Vice-Consulate in response to this request should take care to ensure correct stamping—postage on all communications to H.M. Consular Officers must be prepaid. Packages sent at reduced rates by the Printed and Commercial Papers Post should be sent open.

LANCASHIRE COTTON.

The American Crop.

(FROM OUR OWN CORRESPONDENT.)

MANCHESTER, Wednesday.

The market tends to become dearer from week to week, and buyers of yarn and cloth who hesitate to place orders find they have to pay more money later on. American cotton rates have tended to advance, and supplies of yarn are cloth are getting smaller, so that appreciation in values is quite natural. The further restrictions upon spinning mills and weaving sheds have come into operation this week. The workpeople have also received for the first time the increase in wages of 25 per cent. The American cotton crop continues to do very well, but according to one or two advices during the last day or two the conditions in certain parts are not quite so favourable as a fortnight ago. Rather diverse reports are being received relating to the Egyptian growth, but the plants on the whole are doing well. In Egyptian yarns a considerable demand has been experienced, and inquiry has been well spread over different counts and qualities. Extreme difficulty is being experienced in securing adequate supplies of descriptions suitable for Government cloths. Although rather better clearances are said to be taking place in piece goods in Egypt, fresh buying continues quiet. Again there have been reports of local merchants re-selling goods in the Manchester market. Grey staples for India and China remain slow. Printing and finishing cloths have been in moderate request for the minor markets, and the home trade. American yarns have steadily hardened in price and demand has exceeded supply. Extraordinary profits are being made by spinners. Our export trade in yarns remains unimportant, although some demand has been met with for France.

INDIA'S COTTON INDUSTRY.

Mr. Montagu, Secretary of State for India, is to preside at a meeting of the Indian Section of the Royal Society of Arts on June 20, when a paper by the Hon. Sir Dinshaw E. Wacha on "Indian Cotton and the Cotton Mill Industry" will be read by Sir Charles H. Armstrong, late chairman of the Bombay Chamber of Commerce. This will be the concluding meeting of the Jubilee session of the Indian Section.

The Secretary of the Liverpool Chamber of Commerce has received a letter of thanks from the Serbian Minister in London for the way in which the Serbian Industrial and Commercial Mission were entertained when in Liverpool.

COMPANY NOTES & REPORTS

The report of the South Wanarajah Tea Company for 1917 states that the profit, after transferring £2,000 to reserve, writing off £500 for depreciation and £400 against coast advances, is £7,974; £1,365 was brought in, giving £9,338. The directors recommend a final dividend of 8 per cent. on the ordinary shares, making 12 per cent. for the year, and to carry forward £2,138. The tea crop, including 21,690 lb. of leaf purchased from other properties, amounted to 920,841 lb., which cost to produce 5.44d. per lb. and was disposed of at an average net price of 9.45d. per lb. For the preceding year 1,029,704 lb. of tea were secured, cost of production and net average sale price being respectively 5.51d. per lb. and 9.28d. per lb. The output of rubber rose from 5,300 lb. to 14,000 lb., the net profit being £782. As the result of the year's trading the directors are able to recommend the payment of a final dividend on the ordinary shares of 10 per cent., making a total distribution for the year of 14 per cent., less tax, the same as for the preceding year. Provision for excess profits duty is made in the amount transferred to reserve.

The report of the Indian and General Investment Trust, Ltd., for the year ended April 30, states that the funds are invested in 130 different securities; £223,482 are invested in Indian securities, of which £122,880 are in sterling, and of the total funds over £359,120 are invested in bonds, debentures, or debenture stocks. The average rate of exchange at which the money employed in India stands in the books is 1s. 4½d. per rupee. Interest and dividends on investments (after the deduction of £6,410 income-tax) amounted to £25,104, as compared with £26,009 last year. The sum of £6,206 (including £3,606 net surplus on sales of investments) has been transferred to reserve account, but against this an equal amount has been applied in writing down certain investments, thus leaving the net balance of £50,000 at credit of reserve account unchanged. Interim dividends amounting to £5,949 having been paid, there remains at credit of revenue account £7,322, including £1,000 brought forward. The directors recommend a dividend on the deferred stock at 9 per cent. per annum (making 8½ per cent. for the year, less tax at 4s. 8½d., and to carry forward £1,005. Relief in respect of Indian income-tax has been allowed and is passed on to shareholders by deduction from the dividends of tax at reduced rates. Meeting, Winchester House, E.C., June 18, 2.15 p.m.

The report of the Nuwara Eliya Tea Estates Co., Ltd., states that the profit and loss account, including £9,634 brought forward, shows a balance of £41,667. An interim dividend of 4 per cent. (paid less income-tax) was distributed on October 30; the directors now propose the payment of a final dividend of 5 per cent. and a bonus of 2 per cent., both less income-tax at 5s., making in all 11 per cent. for the year; leaving a balance to be carried forward (subject to excess-profits duty) of £12,467.

The report of the Calcutta Tramways Company for 1917 states that revenue, including interest on investments and deposits, less interest on loans and income-tax, and loss on sale of investments, amounts to £108,431; £9,596 was brought in, making £118,027. Deducting Debenture interest, Preference dividend and interim dividend on Ordinary shares, there is left £72,576. The directors propose a final dividend of 5s. 6d. per share, making 8 per cent. for the year, free of tax; to transfer to reserve for depreciation, etc., £25,000; to place to staff provident fund £1,299, and to carry forward, subject to excess profits duty and Indian super-tax to be ascertained, £8,434. The reserve for depreciation, etc., at the commencement of the year stood at £92,841. After deducting £17,483 written off for renewals and loss on sale on plant, and adding £25,000, proposed to be allocated, the reserve will stand at £100,358. Indian working expenses show a decrease of £1,805, principally due to the exclusion of Indian income-tax, now charged below the line, and to the reduction in the cost of maintenance and repairs, owing to the reduced mileage run and shortage of materials. Warrants will be posted 20th instant. Meeting, 1, Queen Victoria Street, E.C., 17th instant, noon.

The net revenue of the Delhi Electric Tramways and Lighting Company for 1917 was £15,119, as compared with £11,593. The profit, after providing £5,000 for depreciation of plant and transferring £1,500 to reserve for renewals, was £4,418, against £3,193; Preferred dividend at the rate of 4 per cent., less tax, £4,000, against 2 per cent.; forward, £1,508, against £1,089.

Dividends, Payments, etc.

The directors of the Assam Railways and Trading Company have declared the following dividends:—Pre-Preference shares, 8 per cent. per annum for half-year ending 30th instant, payable July 4; New six per cent. preference shares, 6 per cent. per annum for half-year ending 30th instant, payable July 4; "A" stock, dividend of 4 per cent. for half-year ended December 31 last, payable 22nd instant.

The directors of the Galaha Ceylon Tea Estates and Agency Company, Limited, announce that the dividend on the preference shares for the half-year to June 30, at the rate of 6 per cent. per annum, and the debenture interest for the same period, at the rate of 6 per cent. per annum, will be paid on July 1, less tax at 5s. 6d. in the £.

The directors of the East Indian Railway Company recommend a dividend of £1 7s. per cent. on the deferred Annuity capital and deferred annuity capital class "D" in respect of the company's share of surplus profits for the half-year ended March 31 last, in addition to the guaranteed interest of £2 per cent. for the half-year ending July 31, 1918. This will give a total return for the twelve months ended March 31 last of £6 16s. per cent.

The Telephone Company of Egypt gives notice of its intention to redeem the outstanding debenture stock on November 30 next, at the redemption price of 107½ per cent., but offers to redeem it at the same price on June 30 next.

The transfer books of the Assam-Bengal Railway will be closed from the 17th to the 29th instant, inclusive.

A meeting of holders of debentures in Bibi Eibat Oil will be held at 34, Bishopsgate, E.C.2, on the 21st instant, at noon.

The transfer books of the 6 per cent. mortgage debenture stock of British Burmah Petroleum will be closed from June 19 to 29, inclusive.

Nagolle (Ceylon) Rubber and Tea Plantations.—Final dividend for 1917 of 5 per cent., less tax, making 10 per cent. for the year, against 14 per cent.

The transfer register of Anglo-Persian Oil will be closed from June 15 to 28, inclusive.

The directors of the Land and Mortgage Company of Egypt, Limited, recommend a dividend of 5 per cent., less income tax, for the year to March 31.

The directors of Barnagore Jute Factory have declared an interim dividend of 5s. per share, free of tax, on ordinary shares. Last year the dividend was the same.

Bengal Iron and Steel Company.—The adjourned meeting of holders of founders' shares to consider the exchange of founders' for ordinary shares, held on June 11, was again adjourned, the committee of founders' shareholders appointed to confer with Sir William Peat and the ordinary shareholders' committee not having completed its work.

NEWS FROM ALL SOURCES.

Tenders are to be invited for the purchase of Ceylon monazite sand as soon as it is available.

Authority has been granted to the National Bank of Egypt to issue 25-piastre notes.

The exportation and re-exportation of pig skins from the French zone in Morocco has been prohibited.

Subscriptions to the Indian War Loan on the first day amounted to nearly six crores of rupees (£4,000,000).

According to a Constantinople telegram the number of houses burned in the recent big fire at Stamboul is estimated as at least 8,000.

A Cairo message states that the Egyptian crops are in splendid condition, and promise an excellent harvest. All cereals and beans are much above the average.

INDIAN WAR LOAN, 1918-19.

The whole of the subscriptions will be given to His Majesty's Government as part of the Indian contribution of £100,000,000 towards the cost of the war.

The Government of India announce the following issues:—

5½ PER CENT. WAR BONDS 1921 and 1923.

ISSUE PRICE par, payable in full on application. Interest payable on 15th March and 15th September, free of Indian Income Tax, but not of supertax if otherwise payable by the holder.

REPAYMENT AT PAR.—War Bonds 1921 on 15th September, 1921; War Bonds, 1923 on 15th September, 1923.

5½ PER CENT. WAR BONDS 1925 and 1928.

ISSUE PRICE par, payable in full on application. Interest payable on 15th March and 15th September, free of Indian Income Tax, but not of supertax if otherwise payable by the holder.

REPAYMENT.—War Bonds 1925 at 103 per cent. on 15th September, 1925; War Bonds 1928 at 105 per cent. on 15th September, 1928.

Applications for bonds will be received from 3rd June to 15th September by the Controller of Currency, Calcutta; by any Provincial Accountant-General or Controller; by the Banks of Bengal, Bombay, or Madras at their head offices and branches; and at Government District Treasuries. A commission of ¼ per cent. will be allowed to recognised bankers and brokers on allotments bearing their stamp.

Applications will also be received at any Post Office authorised to transact Savings Bank business from 3rd June to about 20th December. The same person may not apply for, or hold, through a Post Office stock to a greater value than Rs.10,000 in all of these issues.

Indian Treasury Bills outstanding will be accepted in payment for any issue of War Bonds at a discount of 4 per cent. per annum.

The Government of India also announce that after the closure of the main section of the second Indian War Loan on 15th September, 1918, they will be prepared to accept as further subscriptions to the loan at the rate of exchange of 1s. 6d. per rupee British Treasury Bills tendered in England under a discount of 3½ per cent. to an amount not exceeding previous cash subscriptions tendered in India, provided that the Treasury Bills are accompanied by a certificate that they were the property of the person in whose name the paper is held prior to 10th May, 1918.

POST OFFICE CASH CERTIFICATES (free of Income Tax).

These will be issued throughout the year on the same terms as at present.

India Office, 11th June, 1918.

OAKEY'S WELLINGTON KNIFE POLISH.
The Original Preparation for polishing Cutlery.
Canisters, 1d., 2d., 3d., 6d., 1s., 2s. 6d., and 4s. each.

ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Street, Wednesday.

It has again been a very quiet week, and although in the early part business looked like reviving, the renewed offensive of the Germans has for the time being made buyers scarce, and has checked the return of activity which seemed probable. In a general way holders are sitting tight and very few shares are coming out for sale.

In Egyptian Government securities there has been a persistent demand for Unifieds round 89, but hardly any business has been done; whilst the transactions in the 3½ per cent. prefs. have been infinitesimal, the sellers in both cases being very scarce.

In Bank shares Nationals have continued to be wanted, but only a small business has been carried through round the current level. Agriculturals have been somewhat dealt in, and Anglo-Egyptians have again improved ⅛ to 15⅞ on some renewal of enquiry.

In Railways Delta Lights are 1-16 easier at 6 7-16.

Amongst Land descriptions Aboukirs are fractionally easier at 21s. 6d., as also Delta Lands at 12s. 7½d., at which price some few hundred shares have been done. Behéras have been well supported round 12¾. Egyptian and Foreign Trusts have continued to be supported round the current price. In Gharbieh Lands a sale of 100 shares temporarily affected the price, but these shares have been absorbed, and the market is 1-16 firmer at 1 15-16. In Sidi Salems there are some substantial buyers at the present level; but, in the absence of sellers, business does not result. Union Foncières are 1-16 firmer at 3.

In Miscellaneous shares Egyptian Markets are 3d. firmer at 26s. 9d., and Khedivial Mails have advanced 1s. 3d. to 38s. 9d.

Amongst Greek securities business has been practically nil and all prices are unaltered. The same condition of affairs prevails in this market, namely, all buyers and practically no sellers.

INDIAN WHEAT FORECAST.

Reuter's Calcutta correspondent telegraphs that the Government Statistical Department's third wheat forecast states the crop will be a record one, both as regards area and yield.

GREEK DEBT SERVICE.

The Council of Foreign Bondholders issues the following information compiled from figures published by the International Financial Commission at Athens with regard to the revenues assigned under the Law of Control for the service of the Greek Debt from January 1 to March 31, 1918:—

—		Monopolies, Tobacco, Stamps, Stamped Paper, Naxos Emery.	Piræus Customs.
		Drachmæ.	Drachmæ.
Gross Receipts, Mar.,	1918	3,002,985	2,454,000
Do. do. do.	1917	2,086,926	1,379,000
Difference between estimated and actual receipts for 3 months	1918	+ 3,367,466	+ 6,091,000
	1917	— 62,086	+ 927,000

Note.—Of the surplus over the estimated receipts from monopolies, tobacco, stamps, stamped paper, and Naxos emery, 49 1-5 per cent. is applied towards increasing the minimum rates of interest and sinking fund of the External Gold Loans of 1881 to 1893.

THE ALEXANDRIA WATER COMPANY, LTD.

PAYMENT OF DIVIDEND.

NOTICE IS HEREBY GIVEN that a DIVIDEND of EIGHT SHILLINGS and NINEPENCE per £5 Share on Coupon No. 59 is PAYABLE on and after June 15, 1918, at Barclay's Bank, Ltd., 1, Pall Mall East London, S.W., and 54, Lombard Street, London, E.C., or at the Anglo-Egyptian Bank, Ltd., Alexandria, Egypt, upon the making of a declaration as to ownership in the form required by the above Banks, forms of which will be supplied upon application.

By Order of the Board,
H. R. C. BLAGDEN,
Managing Director.

Alexandria, Egypt, June 4, 1918.

NOTES OF THE WEEK.

With a lull on the Western front, and the Austrian offensive seemingly held from the very first, we shall probably not be wide of the mark in regarding the occupation of Tabriz by the Turks as the most significant piece of news this week. War rarely proceeds according to plan, and no graver reflection can be passed on the intelligence of the out-and-out "Westerner" than he passes himself in refusing to look beyond the Western theatre of the war. Fortunately for the Allies, Germany habitually plays her cards badly, and it will be due to this failing rather than to the statesmanship or prevision of the Entente Powers, if Germany does not succeed in mobilising some of the ignorant Russian peasantry to fight on her side before her resistance in the West can be broken down.

The inelasticity of the Allies' policy, caused by short-sightedness and the obsession of the Western front, is mainly responsible for the measure of success that the Germans are achieving in the East. It is no argument in favour of that policy to cite the growing discontent in Russia against the Germans. The Allies have no right to gamble on the enemy's mistakes; their cause deserves better generalship than that. They have consistently failed to turn to their own advantage any single phase of the Russian revolution, which owed its immediate origin to a national desire to see more effective war waged on Germany. And now in the fourth year of the war Persia is in danger of being overrun, and no check is offered to the onward sweep of German domination into Mid-Asia, because diplomacy has not succeeded in making satisfactory arrangements for the employment of Japan's great military strength.

The difficulty of the position is recognised, but it is a difficulty that ought to have been overcome long ago. What will be the verdict of history if the Allies can be shown to have been responsible for the prolongation of the war through their inability to discover a means for Japan's co-operation on behalf of the Russian people? The very fact that opinion in Russia is gradually veering round to an appreciation of the necessity for this course is proof that the ground was not hopeless months ago. In the meantime, however, much valuable time has been lost. The loss to the Allies' prestige throughout the East is incalculable; for these things cannot be gauged by European standards. Little or no allowance will be made for the exceptional turn of events in Russia. It will be argued that all that has happened is the direct outcome of German superiority, intellectual and material. In Persia, in particular, there is some danger lest even now the people begin to think that, just as Germany has eaten up the Russia with which the Persians are acquainted, so she is proceeding to demolish Great Britain, and that by the mere agency of the Turks. It is not suggested that British forces can suddenly be conjured into position to oppose the Turkish invasion of Persia. The occupation of Tabriz is the natural corollary of the failure to arrange during last winter for Japanese co-operation in Siberia with the approach of spring; and the situation in this part of the world may become still more critical, if the Allies continue indefinitely the policy of leaving a considerable proportion of their fighting strength unmobilised.

The public in the Allied countries is beginning to inquire at whose door this paralysis of Entente diplomacy lies. If it should be at America's, the fact, in the event of an undue prolongation of the war, will detract seriously from the merit of her splendid co-operation with men and material. If Japan alone hesitates, some of her own people will be the first to charge her with a half-hearted adoption of the Allied cause that stopped short of any real sacrifice. The case for Allied action in Russia is overwhelming. Naturally it must not be a blundering intervention, which would achieve nothing; for without the good will of the Siberian population it will be impossible for the Japanese army to approach Europe within a given time. There can be little doubt that Colonel Semenoff would have welcomed support at any moment during the last four months, and any conspicuous success on his part in Eastern Siberia might well galvanize true Russian opinion into action against the Germans and Bolshevism from one end of Russia to the other.

With the occupation of Tabriz the Turks will have effectually disposed of the last traces of Russian control of the Persian province of Azerbaijan. Whether the Persians will appreciate the change must remain for the present an open question. Between pro-Germanism from a distance and Turkish overlordship there is probably a wide gulf. Moreover, it is not quite clear to what extent the Turks are now operating on their own accord while carrying out what is in principle Germany's policy. In Transcaucasia they have proved apt disciples of their masters, and have faithfully followed the example set them in the Ukraine. While entering into negotiations for peace, they have been careful to push on with their armies in every possible direction, with the result that

Digitized by Google

the Georgians have appealed to Berlin for protection against the Turks.

Some light is thrown on the situation in Transcaucasia by the *Vorwaerts*. According to the information received by the Socialist organ, Transcaucasian independence was declared on April 27, and negotiations were entered upon with the Turks at Batoum for the establishment of peace conditions. In spite of these negotiations, the Turks continued to advance into the Caucasus, and the Georgians, finding that there was no hope for a Transcaucasian Federation, declared their separate independence on May 25, and have sent a delegation to Berlin in an attempt to secure a promise of the integrity of their new republic. In the meantime peace is said to have been signed between the Turks and Georgians; but the statement of the Turkish report that Tabriz was occupied with a view to protecting the wing of the Turkish army on the Caucasian front suggests that the Turks consider that they have more work on hand in the way of territorial conquests in this part of the world.

A month ago, it will be remembered, the objective of the Turkish force invading Persia to the south of Lake Urumiah was said to be Enzeli, on the Caspian Sea. The occupation of this port would turn the Bolshevik position in Transcaucasia, and leave Baku at the mercy of the Turks and Germans. Opposite Baku, on the eastern shore of the Caspian, is Krasnovodsk, the terminus of the Central Asian Railway, leading to Samarkand and Kushkinsk, over against Herat. Accordingly, any delay in coping with the Turco-German menace in this part of the world is likely to impose a heavy burden on Great Britain; for, even if the war came to an end to-morrow, she would still have to counteract the effects of German domination over the minds of the peoples inhabiting the Marches of Hindustan.

The fall of the Radoslavoff Cabinet in Bulgaria may well cause uneasiness in Germany, and the pains taken by the German Press to reassure its public that all is well with the "alliance" may be regarded as a measure of the anxiety felt in regard to the future attitude of the Sofia Government. Bulgaria's participation in the war on the side of the Central Powers was the work of King Ferdinand and of the Radoslavoff Cabinet, whose relations with Germany and Austria-Hungary have always been of an intimate character. If the country had been consulted in the matter, the great bulk of the population would have been opposed to war against the Entente Powers; but the prospect of settling old scores with Serbia was attractive, and feeling against Russia had increased. When war was declared the Bulgarian people accepted the situation and threw themselves loyally into the struggle, expecting, possibly, that they would obtain an early victory over the Serbians, and play a very minor part in the general European conflict.

There is some reason to doubt whether any treaty of alliance actually exists between Bulgaria and the Central Powers or Germany. Efforts were made to place the working arrangement between the respective countries on a formal basis; but King Ferdinand is supposed to have refused his consent on the ground that treaties, according to Bulgarian experience and German practice, had no value beyond that of other "scraps of paper." The absence of a binding agreement would explain the manifest embarrassment of Germany over the turn of events in Bulgaria; for the advent to power of one or other of the political groups which were originally opposed to the war would make the way remarkably easy for a new orientation of Bulgarian policy.

The reason officially given for Dr. Radoslavoff's resignation is a difference of opinion within the Cabinet on internal affairs. With a spontaneity which is too marked not to be suspect, the German Press points out that the Cabinet's position was undermined by the Treaty of Bucharest, owing to the decision to withhold the Northern Dobruja for the time being from Bulgaria, and it hastens to assure the Bulgarians that this question can quite well be settled in conformity with their interests. Another cause for disappointment with Dr. Radoslavoff's Government which Germany does not mind admitting is said to be its failure to obtain support from the Central Powers against the increasing pressure by the Allies on the Macedonian front. We shall probably not be far wrong, however, in concluding that the fall of the Radoslavoff Cabinet has an origin anterior to the Treaty of Bucharest, and that it has something to do with the steady growth of antagonism to the aimless prolongation of the war by Bulgaria. It may suit Germany's purpose to represent the Bulgarians as being dissatisfied with their Roumanian spoils, and no doubt the Radoslavoff Government found it useful to have the Press adopting this line. But it will be nearer the truth to speak of the Bulgarian people as heartily tired of the war, and as having their minds set on peace rather than on further conquests.

It is quite true that King Ferdinand is his own Foreign Minister, and that for this reason a change of Government in Sofia may mean little. But the King's shrewdness is not disputed, and there is no one in Bulgaria who is capable of forming a more accurate idea of the trend of events, political and military, in the Central Powers. The Allies' confidence in their own cause compels them to take into consideration the day when King Ferdinand and his people will not only recognise the mistake they have made—no doubt they do so already—but will also acknowledge it. Personal pique should not be allowed to rob us of the opportunity of securing by a single stroke the detachment of Bulgaria from the Central Powers and her restoration to her proper sphere within the association of Balkan States. The Bulgarians may have some accounts to settle within their own country; but they are not likely to be able to take the first steps in this direction until they receive the help of the Allies.

When the time comes for negotiations the Bulgarians, if given the opportunity, will prove good bargainers; but the Allies have a clear policy to follow in the principle of nationality and the settlement of the Balkans on terms that will enable the component countries within a few years' time to settle down to a friendly working agreement. If steps have not already been taken to convince Serbia and Greece that the Allies set more store on lasting peace in the Near East than on the most strongly supported historical claims to this or that strip of territory, we fear that some time may elapse before the Allied Governments will be in a position to take advantage of possible changes in Bulgaria. The points at issue can be brought within very narrow limits; but they do call for a round-table conference on the part of the Allies, in order that when the psychological moment arrives a clearly defined proposition can be submitted to the Bulgarians—to be accepted or rejected.

King Ferdinand's speech at the opening of the Roumanian Parliament at Jassy is of necessity a pathetic document. But the fact that it should have been read by the King in person is a sign that at least one German plan—in regard to the Roumanian dynasty—has so far miscarried. For the rest the speech serves to cover up the tracks of the Ministry which signed the Bucharest Treaty. This treaty, it points out, manifestly imposes painful sacrifices upon the nation, but the Roumanian people will examine it with "that manliness which exact comprehension of the State's interests in face of the real position lends." The acquisition of Bessarabia is instanced as a piece of good fortune, and in this respect Roumania will ultimately prove more fortunate than she had dared to anticipate in August, 1916. Her ordeal has been a severe one, but the complete union of the race will go a long way towards eliminating the bitter memories of the past two years.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, May 27.

Empire Day Celebrations.

The principal celebration of Empire Day took place in Alexandria, where the High Commissioner and Lady Wingate entertained a thousand soldiers at the Residency, and the usual meeting, culminating in children's sports, was held at the Sporting Club. The gardens of the Residency were in perfect condition, and every preparation had been made for the reception of the convalescents, who were chosen from all the hospitals and camps in and around Alexandria. An excellent tea was served, during which a military band played appropriate musical selections, and after cigarettes had been distributed, the men gathered at the foot of the main steps, where they were addressed by Sir Reginald Wingate. His Excellency spoke very feelingly of the pleasure it gave him and Lady Wingate to welcome so many of the men who had fought so gallantly for their King and Country, and of the significance of the day. The singing of the National Anthem brought the proceedings to a close, and the men, who appeared one and all to have thoroughly enjoyed their outing, were conveyed back to their hospitals and camps by special trams. The meeting at the Sporting Club was exceedingly well attended, and there was quite an unprecedented number of children present. It was opened by the reading by Mr. Percy Carver of a letter from the High Commissioner addressed to the boys and girls of the British Community, in which he explained to them what Empire Day meant and what their duty as children was to their country. The Union Jack was then broken, the Boy Scouts saluted, and the National Anthem was sung, after which Mr. D. Cameron delivered a short but happily worded address. The meeting was brought to a close by resounding cheers, and then the portion of the afternoon's proceedings most interesting to the youthful element, the sports, started. An excellent programme had been arranged, and some very good races and competitions ensued. The prizes were distributed by Lady Robinson. An Empire Day meeting was also held at Port Said, where the principal speaker was the Anglican Bishop in Jerusalem, who has returned for a short time from Palestine.

H.M. the Sultan.

The Sultan proceeded to-day in State to Alexandria for the summer. He travelled by special train, and was accompanied by the Ministers, the Acting Financial Adviser, and the members of his household. There was a large gathering of officials and notables on the platform to bid his Highness *bon voyage*, and he had an official reception at Alexandria, where the streets had been most profusely decorated, and large crowds welcomed him.

The Wheat Situation.

The distribution of wheat to millers, bakers, and retailers undertaken by the Government is proceeding apace, and a certain amount of relief has thereby been afforded. Complaints are appearing in the local Press as to shortage in Alexandria and other parts of Lower Egypt, and it is highly probable that the Government scheme will have to be extended beyond Cairo. Meanwhile, it is satisfactory to note, as demonstrating the determination of the Supplies Control Board to enforce its decisions, that special courts have been set up in various parts of the country for dealing with infringements of the proclamations or defiance of the orders issued. These courts have power to inflict fines, imprisonment, and corporal punishment. This is a marked improvement on the tariff law, which fixed £E1 as the maximum fine and one week as the maximum imprisonment that could be inflicted on anyone convicted of violation of the tariffs. The shop of a contravening merchant could also be closed for a week, but this had little deterrent effect, since he had usually made sufficient illicit profit to compensate him for the lost period, and at times even carried on business during the interval at another address. The wide powers conferred on these new courts should materially assist in the control of the situation, and after the first few examples the offending elements of the population will most probably realise that at last the Government is in earnest, and will come to their senses. There is little doubt that the firm handling of the wheat situation will have its influence on other cereals and articles of prime necessity, which have in the past been the object of speculative manœuvres. If only the same determination to obtain respect for the Government's decisions had been manifested two years ago the situation to-day would have been much easier, and the cost of living would possibly not have risen to the extent which it has.

The Fuel Problem.

The fuel problem continues to be acute, although the distribution of petroleum has been regulated and considerable economy in its consumption has been effected. Gas is the latest form of fuel to cause anxiety, and the Fuel Committee has just issued an urgent appeal to the public to restrict its use thereof to the barest minimum. It reminds consumers that severe restrictions have been imposed in England, France, and other countries, and warns the public that, unless there is a very marked reduction in the quantity consumed, it may become necessary to introduce similar restrictions in Egypt. Fortunately we are now entering the summer period, when less lighting is required, but it is particularly in regard to the gas required for cooking that a further reduction is called for. When the petroleum crisis was on users of oil fuel turned to gas for their household requirements, and thus greatly increased the call on the gas companies. The latter are now finding extreme difficulty in obtaining adequate coal supplies, and householders will voluntarily have to adjust their mode of living so as to reduce the quantity of gas which they have been consuming, otherwise they may be forced by law to do so to an even greater extent.

INDIA IN THE WAR.

The annual meeting of the National Indian Association was held on June 13 at 21, Cromwell Road, South Kensington, Sir James Meston in the chair. Mr. Basu, in speaking of the education of Indian women, said that it had not been the custom to send young girls to school, but when schools were started for boys they immediately became crowded. Girls had not attended schools, because of early marriage; but that custom was being gradually relaxed. Other difficulties were being overcome, and it was hoped that before long provision would be made for the education of all girls. Mr. Aftab Ahmed Khan said that the war had disclosed the fact that England and India were in dispensable to one another. Neither England nor India had ever before realised that fact as they did now; India, instead of promising to be a troublesome burden and a cause of weakness, had proved to be a source of unlimited strength and support to the Empire. The vital needs of India were defined and embodied in the new policy of the Government, and the good will of both peoples should be directed towards realising that great policy at an early date.

The Chairman spoke of the work done by the National Association both in India and in this country, the result of which had been to foster cordial relations between the centre of the Empire and its greatest dependency.

THE ABYSSINIAN REVOLUTION.

(From a Cairo Correspondent.)

Of the revolution in Abyssinia only fragmentary information has so far been published. It is only lately that a resident of the Abyssinian capital, who lives within a stone's throw of the Imperial Palace, and evidently occupies a privileged position, has been able to lift the veil and to reveal the real facts in a series of articles contributed to the well-known Cairo daily, *Al Mokattam*. Belated as the account is, it yet constitutes a record of considerable interest.

The correspondent begins by explaining the reason of the delay in these political revelations, which he attributes to the unusual secretiveness of the Abyssinian. As an instance he cites the fact of the death of the Negus Menelik, which took place five years ago, and yet was kept back from the people until the revolution. Indeed, some of the populace are said to believe that Menelik is still alive and in the Abyssinian capital.

The man of the day now is Tefri, the regent, and the probable successor to the Abyssinian throne. He is the son of Ras Makonin, and though he is only twenty-five years old he commands the full confidence and respect of the Abyssinians of all classes, as did his father, who ranked only second to Menelik. He is rather spare of build, of middle height; has a peculiar charm of speech, and knows French well and Arabic fairly.

Soon after the fall of Yassou [Jassu], on September 27, 1916, the revolution burst out in the capital. The revolutionaries, under the leadership of Tefri, then Dijaz, had so well laid their plans that, but for the treachery of a few of them, the new order would have been established without any untoward event.

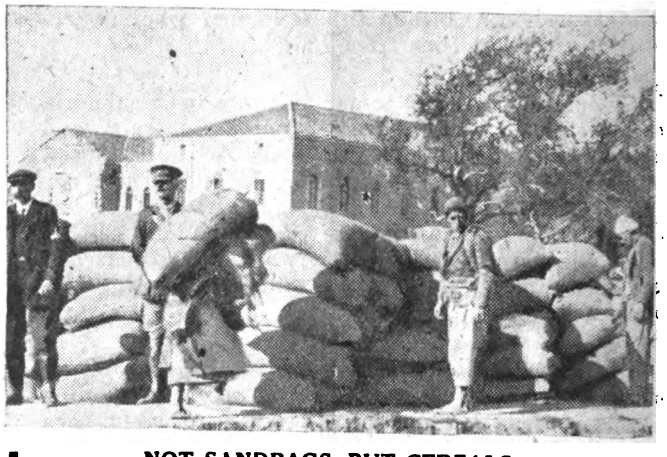
Prior to his death the Emperor Menelik appointed as heir apparent Prince Yassou, son of Ras Mikhail of Wulu, and grandson of Menelik by his daughter. But for this, Yassou would not have been the legitimate heir to the Abyssinian throne. In his will, Menelik further appointed as guardian Ras Tesma, who, however, died two years later, before Yassou came of age. Profiting by the circumstance, a band of adventurers formed round the young prince and exploited his inexperience. He was very restless, and in the course of his journeyings in the region of the Danakel and Somali he is said to have attempted to win over those tribes, although some of them were the subjects of neighbouring powers. His rashness did not stop there; he actually supplied these tribes with arms and ammunition, and called some of the leaders to the capital and treated them as Court favourites. As these acts were contrary to the spirit and letter of the Brussels International Convention, which provides against the arming of the Somalis and other similar tribes by the Abyssinian Government, some of the representatives of the Powers were compelled to lodge a formal protest and ask the Abyssinian Government what it meant by arming these tribes, and other such manifestations of covert hostility. Others of his unwise acts were the appointment of his father as king of Wulu and the annexing thereto of neighbouring territory, and the dispatch of a large quantity of arms and ammunition from the arsenal of his grandfather, Menelik.

All this, combined with his frequent absences from the capital and his neglect of affairs of State, together with his profligate conduct and his levity, which a band of unscrupulous Court favourites, native and foreign, skilfully exploited, roused among the Shawas the spirit of revolt. It lay, however, smouldering in their hearts for some time, as each hesitated to be the first to revolt.

Now, at the call of Yassou, Dijaz Tefri left Harrar, the seat of his province, and repaired in all haste to the capital. There he was ignored, and he could neither find out the motive of his recall nor obtain permission to return, although his wife, Yassou's own niece, was on the point of giving birth to a child. (She was, in fact, confined in her husband's absence.) Rumours, not utterly without foundation, began to circulate. According to some, Tefri was dismissed and given the Governorship of another province; according to others he was detained. The latter report was not far from the truth.

One day Yassou left the capital suddenly for Harrar, where, on his arrival, he proclaimed the dismissal of Tefri and appointed another in his place, at the same time ordering Tefri to proceed to Kafa, the seat of his new province. This new appointment was only a ruse. Yassou was aware that as soon as Tefri entered that province he would be ignominiously expelled by its Governor, and that, returning crestfallen, he would be at his mercy. Tefri, however, saw through the stratagem, and hesitated to depart. Yassou thereupon ordered his arrest; but, in view of the high esteem in which Tefri was held, no one dared execute the order. Was he not the son of Ras Makonin, whose name is held in reverence by the Abyssinians?

The attitude of open hostility which Yassou finally assumed, broke the last link in the chain which had hitherto held the malcontents back from open revolt. The absence of Yassou from the capital, and his failure to take any special precautions (thinking, in his conceit, that nobody would dare oppose him) provided the opportunity for Tefri and his partisans to carry out their designs for the dethronement of Yassou.



On September 27, the Abyssinian Feast of the Cross, Tefri, with the Elders, held a meeting, which was attended by the Archbishop Enba Mattaus, the chief of the Abyssinian clergy, in the Palace of Menelik. A resolution was there passed (and proclaimed to the people), condemning Yassou's conduct as being contrary to his grandfather's will, which had made him the heir to the throne, and such as to absolve them from the oath of allegiance taken before Menelik. The revolutionaries then asked the Archbishop to absolve them from their oath; and this he did with the unanimous consent of all the clergy present.

A man then fired his rifle—whether as the result of premeditation, or in an exuberance of real enthusiasm, is not known—and this produced a tumult among the crowd. A large number of the conspirators being present, the tumult soon spread alarmingly, especially as several hundred shots were fired, resulting in a few deaths and numerous casualties. The agitation lasted for about twenty minutes, and when it subsided the conspirators entered a hall in the palace, and, after a brief deliberation, proclaimed Waziru Zudito Empress of Abyssinia, in succession to her father, Menelik, and with Tefri as Regent to direct the affairs of State. They then sent for Waziru Zudito, who had till then been kept out of the capital in confinement throughout Yassou's reign. Orders were next sent to the revolutionaries in Harrar to lay hands on Yassou. A telephone clerk, however, betrayed the movement, and acquainted Yassou with all that had taken place at the capital, and Yassou thereupon took counter measures, thinking that no power in the land could stand against him.

(*To be continued.*)

A number of Serbian youths, the sons of farmers, arrived in England last week, and are now receiving instruction in British agricultural methods through the medium of the Agricultural Relief of Allies Fund. The Committee believe that such assistance will be of value to Serbia in the reconstruction of her agricultural industry after the war.

BUSREH: YESTERDAY AND TO-DAY.

The Busreh-of-yesterday was a very different place from the Busreh-of-the-day-before-yesterday, the port whence Sinbad sailed on his wonderful voyages and to which he—and many another hero of "The Thousand Nights and a Night"—returned laden with wealth sufficient to satisfy even the demands of an Arab audience listening, spell-bound, to the tale of his adventures. Indeed, the port of Haroun er-Rashid's time was actually *in* a different place from the Busreh-of-to-day and of yesterday; it lay off to the West, where Zobeir now is; and unless the Tigris and the Euphrates take it into their heads to scoop out yet other fresh beds for themselves, there seems to be very little chance of a British cruiser dropping anchor where Sinbad's ship finally came to rest. The chance is not entirely absent; for the twin rivers are wayward creatures, and in a land still haunted by *Jann* and *Afreet* much stranger things are possible. One suspects, however, that though the prosperity of the Abbasside times may return, with the help of British money and British guidance, it will be the Busreh of yesterday that will benefit; not neglected Zobeir.

Even the Busreh that I knew, the Busreh of yesterday—which, to descend to facts, means, in this case, the Busreh of the end of last century and the beginning of this—did not lie on the Shatt el-Arab, but a little way west of that noble stream. True, the Europeans, very wisely, favoured the river's bank, and practically all of them had their houses there; but the *Serai* and other Government buildings, as well as the bazaars and most of the native houses, were either on the banks of "the Creek," or at its head. This was a pleasant enough place to pass along when the tide was up. When the tide was out—— But why dwell on the horrors of low tide? Busreh of to-day, British Busreh, is no doubt eager to forget those unsavoury, if picturesque, days. Already it has reached a stage of glory that makes it equal to Zobeir-y Busreh at its best, and we may feel sure that it looks forward with confidence to greater glories—and better sanitation—still!

In spite of all its shortcomings, I am prepared to maintain that Busreh twenty years ago was not without attraction of a kind. The heat was as bad, the mosquitoes were quite as pertinacious then as they are now, if not worse: and there were plenty of other drawbacks. But the old days were full and cheerful for some of us. The cricket, the shooting, the rides in the desert, the jolly, informal calls, the excitement over the arrival of the mail boat—or, it may be, an incoming tramp—the minor excitement over the departures and arrivals of the Karun and Tigris steamers, and, finally, the rivalry with Baghdad—all these kept life from stagnating in Busreh-of-yesterday, as they did also in Baghdad. There were, and still are, a good many worse places than Busreh and Baghdad, though some of our fighting men in Mesopotamia may find the statement hard to believe.

II.

It is a little difficult to form a clear picture of present-day Busreh, perhaps more difficult to one who used to know the town than to one who has never set eyes on it. We hear of it now and again from soldiers and sailors, or their friends; the illustrated papers occasionally give us a peep at some corner of it, and the crop of books about it promises to be heavy. Much that we hear and read is rather startling, but on the whole it is mightily encouraging.

For purposes of my own I was a short time ago looking through some back numbers of the *Basreh Times*. It proved a fascinating occupation, and the picture that formed itself before me as I continued reading was in many ways a pleasing one, showing much progress and the promise of further progress in store. Perhaps some readers of THE NEAR EAST may be amused by a few extracts from the journal referred to.

The paper is intended primarily for our soldiers; and since they are tolerably sure to be more interested in news of "Home" and of the War than in local happenings, by far the greater part of the news space is given up to such items. But now and again we find scraps of "Local News," and the advertisements offer a mine that pays well for working. Thus, taking a single copy of the paper (that for January 15), we find the local "news" to consist only of an announcement that "The Base Band will play to-day" at such-and-such a hospital; and below this appears a list of subscriptions to the Busreh General Library. Incidentally, these things are interesting to one who remembers the only band that Busreh-of-yesterday could boast—that of "the Commodore"—and the library of old times. But they are not half so interesting as the "ads." These show us that trade seems to be "humming." Tailors advertise their goods and their skill in glowing terms; a photographer has established the "Mesopotamia Studio" in Tarik el-Jumar; various well-known British firms are ready to supply comforts for the inner man; H—— and Sons are very anxious that the world at large should know that they have opened a fancy goods store "(Where M.P. Stands)," at which you may purchase "Bronzwares" amongst other things; and rival "cinema palaces" clamour for patronage. Then we have a time-table of the "Mesopotamian Railways" (shades of Sinbad!) and a "Proclamation. In the Court of the District Judge, Basrah." Here, indeed, are proofs of Progress, with a capital P; trains scheduled to run on time, and a Court requesting persons claiming money to apply for it. Truly Busreh has changed hands since I saw it. Finally, we have another notice to the effect that Mr. A—— will not pay debts incurred by his wife. If that does not prove that the change is thorough-going, what will? In the old days Mr. A—— would just have put Mrs. A—— in a sack and dropped her into the Shatt el-Arab; or, perhaps Mrs. A—— would not have been tempted to run into debt! For it is not only the tailors whose advertisements are seductive: in some issues of the *B.T.* I find an advertisement of a Madame R——, a Bombay "Milliner and Costumier," whose "latest styles in millinery . . . costumes and evening gowns" probably prove irresistible to the ladies of Busreh, whether British or native. And Madame R——'s establishment is not alone in catering for the fair sex.

Legal notices crop up frequently in the *B.T.*, and one wonders how the dispensation of justice according to British methods, without fear and without favour, strikes the natives. The Court of Wards seems to be exceptionally busy, doubtless to the benefit of the Wards; but bankruptcy notices are not infrequent. In this connection there is a certain satisfaction in reading, in a list of persons whose affairs appear to have come to grief, the names of "Robert Wonckhaus and Co., Berk Putmann and Co., Dr. Hesse," and "Meisner Pasha." The "List of Persons Liable to Serve as Jurors or Assessors," which was published as a supplement to the *B. T.* on January 5, contains 118 names, the owners of which belong to nearly a score of different "nationalities," according to the list; and the jumble of names, Arab, English, Persian, Indian, Greek, etc., is decidedly quaint.

But the lawyers do not have things all their own way in Busreh—yet! On Boxing Day, for instance, and again on April 3 and April 6, Sport simply knocked Law out, so to say. The later date was that of the "Basrah Races, Spring Meeting"; the earlier of athletic sports for which elaborate arrangements were made to get the sightseers to and from the ground, rail, road, and river service all being strained apparently to their utmost capacity. Besides the racing and athletic sports, which are naturally rather rare events, there is evidently plenty of football; but this seems to be confined pretty well to the military.

At Busreh, as elsewhere, the Y.M.C.A. is doing splendid work. We notice reports of lectures and addresses, and constant reference to "Makinah University (in connection with Makinah British Y.M.C.A.)," which conducts classes in "Anatomy, Engineering, Theology, Chemistry, Mohammedanism, Arabic, Hindustani, Electricity and Magnetism, etc." Examinations are held, and the "University" seems to be going very strong indeed. Long may it do so!

For those more frivolously inclined there are the "picture palaces," already mentioned, and an institution described as "the new Halably Theatre." The programme at the latter at the time of its opening (about Christmas) is thus set out in the advertisement:—

Arabic Songs and Dances by:...
Miss Sarina.
„ Zakia.
Harp player:—Mrs. Zakia.
Jaklar-rak Qasim & Esqil:—Salman.
SALIM, Manager.

One wonders whether these Oriental Crummleses drew large audiences. The programmes of the "Splendid Palace Cinema" and the "Oriental Cinema" usually figure on the first page of the *Basreh Times*; and one gathers that this kind of thing is pretty much the same in Busreh as in, say, Brixton. Some of the items, however, are mildly perplexing. "Welcome Step-mother" is a change from the mother-in-law "joke." But what are we to make of "Charlie in a Perfume" (which is described as "comic"), "Lions' Hunthers," or "The time with wild" (both "drama")? Will some Busreh resident please explain? Finally, we note that, just before Christmas, the Oriental Cinema was showing a film entitled "Terrible Turk," and that, greatly daring, it was classified as "comic." To chase the T. T. from Busreh, and then to describe him as "comic" is, surely, the unkindest cut of all? Poor old Turk! But evidently Busreh is going ahead!

MUHANDIS.

TANGIER TO TEHERAN.

The editor of *Vorwärts* is anxious to get a good long rest—at least, that is what we are forced to conclude from his surprising lack of reverence for the All-Highest and the numerous All-but-the-Highests who are playing the deuce with the world. He writes of "petty Courts" being in a state of great excitement regarding the opportunities of obtaining a throne in the East. And not content with this scurvy way of treating the kinglets and the princelings, he goes on to suggest that, as there are only six thrones a-begging, while there are twenty-two dynasties, all the new thrones should be filled by Turkish princes. How is that for *lèse-majesté?* Imagine the Turks getting anything at all—except taskmasters—from their German "ally." Yes, the editor of *Vorwärts* must be deliberately working for the suppression of his journal.

***

As to what may befall the *Vorwärts* or its editor, I confess I do not care a rap. But the suggestion about the Turkish princes strikes me as being not without merit. At any rate, I, for one, should prefer to see a Turkish prince rather than a German one placed on any vacant throne; and I believe that most Englishmen—and most subjects of the Allied nations—would be of the same opinion. For one thing, Turkish royalties, though not exactly scarce, are not quite so numerous as the German variety; for another, they are much better mannered; for a third, they are infinitely more picturesque in their methods of "looting"; and—But why proceed? The name "German" stinks in the nostrils of all honest men to-day, and will surely do so for many years to come. The Turk is a blackguard, no doubt, but he is not in the same category as his "ally." British prisoners in Turkey, for instance, may suffer, as the result of inefficiency, of lack of means on the part of their captors; but I do not think there is the faintest chance of their ever bringing home such horrible tales of their treatment as we have all of us heard from men who have been prisoners of the "civilised" Teuton. No; if any thrones are knocking about the market, for heaven's sake keep the Germans off them, even if we have to put Turks on them to accomplish that end!

***

A few days ago I came across a quaint idea in a letter written by a soldier serving on the Western Front. He was describing how his platoon lost their way at night, when leaving the trenches, and he referred in moving terms to the bad going over rough ground in the dark. "The Germans," he wrote, "have greatly improved their star shells and flares, I think. But they didn't help us much." The notion of the kindly Hun helping our weary men on their way somehow appealed to my sense of humour. Strangely enough, a few days earlier I had heard an Australian gunner declare: "The star shells that Fritz sends over are simply lovely, and put ours quite in the background. They light up the country almost as brightly as the moon; and they hang about quite a long time." His tone was positively enthusiastic, too!

A "PRISONERS IN TURKEY COMMITTEE."

Colonel Sir Mark Sykes, M.P., presided at a meeting of representatives of the Central Prisoners of War Committee and of several regimental care committees held last Friday at 48, Charles Street, the residence of Lord Burghclere, for the purpose of considering the formation of a committee to further the interests of prisoners of war in Turkey. A committee was constituted to collect and co-ordinate information regarding the conditions of prisoners in Turkey, to make suggestions to the Government and to the Central Prisoners of War Committee, to supply information to members of Parliament and the Press, and to promote the interests of the prisoners in other ways. Lord H. Cavendish-Bentinck, M.P., was elected chairman, and an executive committee was appointed. An anonymous gift of £5,000 for expenses was announced. A circular explaining the objects of the committee will be sent to the next-of-kin of officer prisoners and to all care committees. All communications should be addressed to the Hon. Secretaries, Prisoners in Turkey Committee, 11, Chester Terrace, S.W.1.

A THIRTEENTH CENTURY FRENCH QUEEN OF SERBIA.

On Friday, at No. 9, Ennismore Gardens, M. Myatovitch recalled an incident in mediæval history, when a French princess sat on the Serbian throne. He said that in the thirteenth and fourteenth centuries, following on the establishment by French and Italian crusaders of the Latin Empire of Constantinople, there was a sort of French penetration of the Balkan peninsula. This was not industrial or commercial, but was political and cultural; it was carried out by French noblemen and troubadors. It was in connection with this movement that a French princess, Helen, became the Serbian Queen Yelena by marrying Urosh, grandson of Stephen Nemanya. There was some mystery as to who exactly she was. By one account she was the daughter of Baldwin II., Emperor of Constantinople; but Baldwin, born in 1270, could not have had a marriageable daughter at this time. There was documentary evidence which showed that she was a cousin of Charles of Anjou, the French King of Naples, and, therefore, also cousin of Charles's elder brother, Louis IX. (Saint Louis) of France.

Serbia, said M. Myatovitch, had produced many great women, but none greater than this French queen. Her biographer said that she was most beautiful, and very religious and charitable. Another chronicler said she was filled with wisdom and goodness. Undoubtedly she won popularity quickly with the Serbian people. She was a good mother, and had two sons. Of these the elder, Dragutin, when he grew up, married the daughter of the King of Hungary, and was instigated by his father-in-law to depose Urosh, who retired to Antivari, and before long died. Dragutin buried his father with every sign of respect, and mother and son were reconciled. Archbishop Danilo, who was present, described the interview—Dragutin falling on his knees weeping, and asking his mother to give him her blessing, and she, deeply moved, lifting him up and addressing him as "My king and my dear child." Dragutin gave his mother an extensive territory to rule over, and Archbishop Danilo said that when she took possession of this she took under her special care widows, orphans, and poor people. She undertook to build many new churches and to rebuild many old ones. She rebuilt the towns of Antivari and Dulcigno, which had been left in ruins after an incursion of the Mongols. In her dealings with the workers she was guided by the principle that the labourer was worthy of his hire, and that labour should be voluntary, not forced. As she was building and rebuilding so many churches, she established near her palace workshops, in which clever jewellers made gold and silver vessels, crosses, candlesticks, etc., often decorated with pearls and precious stones; where also artistic young monks wrote and illuminated beautiful books. Thus she played a great part in introducing the fine arts into Serbia. Beyond this, she gathered daughters of poor parents from every part of her province, brought them up, educated them, and found them husbands, giving them rich dowries. These girls became pioneers of French culture wherever they went in Serbia.

H.E. Monsieur Fleurian, who presided, said that recently in France church documents had been found evidencing the great extent to which intermarriage took place between French and Serbs at this period.

An appeal was made for the Serbian Red Cross Fund. Voluntary workers were wanted, it was stated, to assist in packing parcels for prisoners, and in making clothes for women and children interned in enemy camps.

By the Ukrainian-Russian armistice agreement a joint committee is to be established to deal with the exchange of goods, the return of railway rolling stock, the re-establishment of postal, telegraphic, and travelling facilities, and the appointment of Consuls and commissioners.

The Greek community in Liverpool will shortly issue an announcement as to their arrangements for celebrating the anniversary of the entry of Greece into the war, which will occur on the 27th inst. The observance will include a service at the Greek Church, at which a solemn Te Deum will be sung. Mr. B. A. Malandrinos, the Greek Consul-General in that city, has been invited to attend the banquet to be given at the Mansion House by the Lord Mayor of London the same evening.

NEAR EAST BOOKSHELF.

FRIENDS OF "SAID THE FISHERMAN."*

In this book Mr. Pickthall has embodied in the form of fiction certain impressions that he gathered during his apprenticeship to the East—if we may so term his early wanderings in Syria—impressions which, he tells us in the introduction, still remain clear after the lapse of more than twenty years. To his old friends and admirers, it may be noted in passing, this introduction will prove not the least interesting thing in the book; though they may read it with mixed feelings. The rest of the volume is given up to a collection of sketches which have very little connection with one another, but are individually extremely good. Mr. Pickthall's method of presenting his characters is objective; and we find it rather difficult to sympathise with them—or to avoid sympathising with the criticisms passed upon them by the author's European friends. But that, after all, is a question of one's point of view; and certainly Rashid the Fair and Suleyman the dragoman are a most entertaining pair; while most of the other characters in whose company we find ourselves, even if only for a few minutes, strike us as real flesh and blood folk of the Orient, not mere puppets, creatures of a Western imagination, tricked out in Eastern dress, and mouthing a few hackneyed Arabic phrases.

We like best of all the sketches that one which is entitled "The Hanging Dog." It describes how the author and his friends shot a dog that had made itself a particularly annoying nuisance to them, and how the villagers took the matter. The first claimant for damages, "a tall and dignified fellah," explained that the defunct beast was his, and had been dear to him as his own eyes, his wife and children. He demanded five pounds as compensation—which seems a small price to set on one's eyes, wife and children!—and retired indignantly when offered a beshlik (4½d.). The second contented himself with demanding only one pound, and also retired in a rage on receiving the same offer as his predecessor. Then came the headman of the village:—

"Who had heard, he said, of the infamous attempts which had been made to levy blackmail on us, and came now in haste to tell us of the indignation and disgust which such dishonesty towards foreigners aroused in him. He could assure us that the dog was really his; and he was glad that we had shot the creature, since to shoot it gave us pleasure. His one desire was that we should enjoy ourselves. Since our delight was the slaughter of animals he proposed to bring his mare—of the best blood of the desert—round for us to shoot."

No wonder that the author and his friend "felt exceedingly ashamed," and—after another dose of the same character—"dejected for many days." The incident is only to be fully enjoyed by those who know their Orient; but to them, Mr. Pickthall's way of telling it will be full of delight. There are one or two other things as good as this in the book, and many that are nearly as good.

NEWS IN BRIEF.

The members of the Serbian Government have arrived at Corfu from Salonika.

The old synagogue at Belgrade and the valuable Jewish library have been destroyed by fire.

The results of the Greek mobilisation in the Peloponnesus exceed by 20 per cent. those of the mobilisation of 1915.

A Pasteur Institute has now been established in Ceylon, the director being Dr. Nicholls, Director of the Bacteriological Institute.

General Sulkjevitch, the commander of the Tartars Corps, has become Prime Minister of the Crimea. Germans describe him as a Russian.

The Postmaster-General announces that parcels addressed to prisoners of war in Bulgaria are again being accepted at post-offices for transmission by post.

A number of Serbian lads who are being educated in England have offered to work through the long vacation from the middle of June to October on English farms.

The Bishop of Meglia (Istria) writes that it is in the interest of Roman Catholicism that South Slavs should resist the expansion policy of the Central Powers in the Balkans.

The Ukrainian Food Ministry has sanctioned the export of 150,000 poods (5,400,000 lbs.) of sugar to White Russia through the White Russian Chamber of Commerce at Kieff.

In Jerusalem the inhabitants are taking the greatest interest in propaganda cinematograph films. People almost fought for admittance when the film depicting the occupation of Beersheba was shown.

The *Vorwärts* states that a peace treaty has been signed between the Turks and Georgians, according to which, in violation of the treaty of Brest-Litovsk, the Achalkalaki district of the Tiflis Government has been ceded to Turkey.

According to the Balkan correspondent of the *Nieuwe Rotterdamsche Courant*, the proposal that the Russian Fleet captured at Odessa and Sebastopol should be handed over to Turkey is warmly supported by the whole Constantinople Press. The Grand Vizier told a deputation recently that the Porte was negotiating with Germany to that end.

The Athens correspondent of *The Times* reports that General Pallis, ex-King Constantine's aide-de-camp, was last Saturday tried by ordinary court-martial under charges of disloyalty to the present régime, and failing to report to the authorities the arrival of spy officers, of which he was aware. He was sentenced to four years' and one month's imprisonment.

In the Roumanian Ministry M. Mitilineu has been appointed Minister of Justice, Prince Cantacuzene Minister of Commerce, and M. Caroflid Minister of Agriculture and Domains. M. Deneta Dobrescu has been elected President of the Senate and M. Meissner President of the Chamber. The Foreign Minister, M. Arion, has become Vice-President of the Cabinet Council.

On May 15 an interesting ceremony took place in Jaffa. It consisted in the restoration of the Sepheri Torah—the Parchment Scrolls of the Law—to the various synagogues in Tel Aviv and Jaffa. Prayers were chanted, and then the Shofar or Ram's Horn was blown, and the scrolls were carried under canopies by the Chief Rabbi, Dr. Weizmann, and others to the various synagogues to which they belong.

A message received last Saturday reported:—Rainfall in India has been fair in Central Provinces East, Madras South-East, and Madras Coast North; normal in Burma and North-West Frontier Provinces; in excess in Bay Islands, Assam, Bengal, Orissa, Chota Nagpur, Bihar, United Provinces, Punjab East and North, and Central India East; scanty elsewhere. Some weakness is still likely in the Bombay monsoon.

SCHOOL OF ORIENTAL STUDIES.
London Institution, Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.

For particulars, apply to E. DENISON ROSS, Director.

PERSONAL AND GENERAL.

CALENDAR OF THE WEEK

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian (New Style).	Julian (Old Style).	—	Moslem.	Jewish.
1918. June	1918. June		1336. Ramadan.	5678. Tamuz.
21	8	Friday	12	11
22	9	Saturday.....	13	12
23	10	Sunday	14	13
24	11	Monday	15	14
25	12	Tuesday	16	15
26	13	Wednesday	17	16
27	14	Thursday	18	17

Lord and Lady Oranmore and Browne have returned to their residence in Cavendish Place from Ireland.

Prince George of Serbia attended a conference of the Serbian Red Cross at Grosvenor Gardens last Friday.

At a luncheon given in Salonika on Monday in honour of the new Allied Commander-in-Chief, M. Venizelos gave a very cordial greeting to General Franchet d'Esperey.

Sir James Barrie and Lord Burnham have consented to act on the General Committee of the London Memorial Fund for the Elsie Inglis Chair of Medicine at Belgrade University.

Brigadier-General Sir William Manning, the newly-appointed Governor of Ceylon, and recently Governor of Jamaica, was the guest of the West Indian Club at a luncheon on Wednesday at Whitehall Court.

An engagement is announced between Captain G. E. F. Sutton, M.C., Royal Air Force, and Enid Mary Kathleen, elder daughter of Mr. and Mrs. M. B. O'Connor, of Ballygunge, Calcutta, and of Ballygunge, St. George's Hill, Weybridge.

A marriage has been arranged between Lieutenant-Colonel G. R. Maitland, D.S.O., Indian Cavalry, second son of Sir John Nisbet Maitland, Bart., and Jean Hamilton, only surviving daughter of Major Robert Findlay, of Easterhill, Lanarkshire.

The following Tripos list was issued at Cambridge last Friday:—

Oriental Languages Tripos.—Class One.—V. G. Bhat, Fergusson Coll., Poona, and Non-Coll.; G. F. Saywell, Toronto Univ. and Christ's.

Captain Matila Costiesco-Ghyka, Assistant Military Attaché to the Roumanian Legation in London, has returned from Paris. The French Government have conferred on him the Cross of Chevalier of the Legion of Honour for services rendered on the Roumanian front.

The *London Gazette* of last Friday announced that Hon. Lieutenant-Colonel his Highness Maharajadhiraja Sri Sir Bhupindar Singh Mahindar, Bahadur, G.C.I.E., G.B.E., Maharaja of Patiala, has been granted the hon. rank of Major-General, to date from June 15, 1918.

An engagement is announced between Captain C. D. Carus-Wilson, M.C., Yeomanry, eldest son of the Rev. F. Neville Carus-Wilson and Mrs. Carus-Wilson, and Dorothy Sackville, youngest daughter of Major-General J. C. Berkeley, C.I.E., Indian Army, and Mrs. Berkeley.

The engagement is announced of Major Keith Thorburn, M.C., R.F.A., younger son of Mr. S. S. Thorburn, of Old Bracknell House, Bracknell, Berks, to Miss Henrietta Sybil Douglas Picot, M.B.E., only daughter of Lieutenant-Colonel H. P. Picot, C.B.E., and Mrs. Picot, of 33, Onslow Gardens, S.W.

A marriage has been arranged, and will take place on Thursday, July 4, at St. Marylebone Parish Church, at half-past two o'clock, between Waris Ameer-Ali, Indian Civil Service, elder son of the Right Hon. Ameer-Ali and Mrs. Ameer-Ali, of 2, Cadogan Place, and Annie Marguerite, daughter of Mr. Walter T. Hindmarsh Radford and Mrs. Radford, of 25, Park Crescent, Portland Place. There will be no invitations issued and no reception, but all friends will be heartily welcomed at the church.

Judge Van Horne, President of the Fourth Commercial Chamber in the Alexandria Mixed Court, has volunteered to join the American Army fighting in France. Addressing a deputation which waited on him to express the appreciation of his act felt by the Bar, he said that he thought it his duty to take part in defending the cause of right and civilisation with the army of his country, and that he had put his service at the disposal of his country. He is over 60 years old.

FOR SALE, two GIEVE'S LIFE-SAVING WAISTCOATS. 25s. each, good condition.—Apply, "B.A.," care of Chas. Barker and Sons, Ltd., White Lion Court, Cornhill, E.C.3.

The King has been pleased to approve, on the recommendation of the Lord Chancellor, of the name of Sir Satyendra Prasanna Sinha for appointment to the rank of King's Counsel.

We are pleased to notice in the list of naval appointments that Mr. Herbert H. Silley, son of Mr. Alfred Silley, formerly of Constantinople, has been appointed Temporary Surgeon in the Navy.

On Wednesday last week (June 12), at the Parish Church, Westbury-on-Trym, Gloucestershire, the marriage took place of Major Cyril Brittan Hosegood, R.E., second son of Mr. and Mrs. S. C. Hosegood, Rockleaze, near Bristol, to Sybil, second daughter of James Stanes, Coonoor, India, and niece of the late C. Bruce Cole and Mrs. C. Bruce Cole, Claremont, Westbury-on-Trym. The Rev. S. H. W. Hughes-Games officiated.

The offices of the Roumanian Military Attaché and Roumanian Government Committee have been removed to Canada House, Kingsway.

Colonel Sir Henry Trotter, K.C.M.G., will preside at the anniversary meeting of the Central Asian Society, to be held on June 26, at 4.30 p.m., at 22, Albemarle Street.

Professor Bogdan Popovitch, of Belgrade University, will address the Serbian Literary and Debating Society at Oxford on Saturday evening, his subject being "What we have to learn in England."

To celebrate the anniversary of the entry of Greece into the war, the Lord Mayor will give a dinner at the Mansion House on Thursday, the 27th inst., when representatives of the Allied nations will be present.

On Wednesday, June 26, at 5 p.m., Mr. Alexander Sefi will give a lecture on Syria at the School of Oriental Studies (University of London), Finsbury Circus, E.C. Anyone interested in the political and economical condition of that country will be welcome to attend.

A supplement to the *London Gazette* of June 14 contains a long list of "officers, ladies, non-commissioned officers, and men" whom General Allenby considers deserving of special mention for services in the advance into the Holy Land. Unfortunately we have not space to reproduce this list.

The Mayor of Westminster, supported by Lord Henry Cavendish Bentinck, M.P., will preside at a lantern lecture by Miss F. E. Latham on her experiences "With the Serbians and During the Great Retreat," at Caxton Hall this evening, at 8. The collection will be for the Serbian Relief Fund.

To inaugurate a fund for a memorial to Dr. Elsie Inglis, a meeting arranged by the Scottish Women's Hospitals for Home and Foreign Service will be held at the Mansion House on Friday, July 5, at 3. The Lord Mayor will preside, and the Earl of Selborne, Lady Frances Balfour, and Commander Locker-Lampson, M.P. will speak.

On June 22 and 27, at 3.15 p.m., the Indian Art and Dramatic Society will produce in Lord Leverhulme's garden, at Hampstead, "The Pearl Necklace," an Indian comedy, with music, under the direction of Mr. Ben Greet. The play is based on the historical drama "Ratnavali," written in 600 A.D. In addition to a strong cast, a large number of ladies and gentlemen in Indian costume will sing and dance in the Spring Festival. The music has been specially composed, and will be directed by Mr. Hugh Marleyn. For further particulars apply to Hon. Organiser, 14, St. Mark's Crescent, N.W.1.

On Tuesday Lieut.-General Sir Bryan Mahon opened an exhibition of pictures of the Macedonian front by Mr. William T. Wood at the Leicester Galleries. Sir Bryan said the pictures illustrated the great topographical difficulties, since lessened by good roads and innumerable bridges with which the Army had to contend on that front. He mentioned that the artist had provided the Army with minutely accurate drawings of the entire front as seen from balloons and observation posts, and had done his work so well as to be mentioned in despatches. Ten of Mr. Wood's pictures have been bought for the Imperial War Museum.

TRAGEDY OF MONTENEGRO,

THE SMALLEST AND POOREST OF OUR ALLIES.

MONTENEGRIN RED CROSS AND RELIEF FUND,

11, VICTORIA STREET, LONDON, S.W.1

The Military Governors of the various districts of Palestine received the leading notables of all religions on the occasion of his Majesty's birthday. Many expressions of congratulation and of loyalty to the King were received from all classes of the inhabitants of the country, both collective and individual.

On the occasion of the anniversary of the death of Constantine Paleologus XI., the last Emperor of the East, a solemn requiem was celebrated at Athens. The Metropolitan of Athens delivered a sermon, in which he pointed out that not a single Emperor of the Greeks had died in his bed; they all died on the field of battle.

OBITUARY.

Lieut.-Colonel William W. Hammond, late Rifle Brigade, died last Saturday, aged seventy. He saw service with the Burmese Expedition in 1886, and later with the Jowaki Expedition.

Mr. John Henry Lace has died at Exmouth. He joined the India Forest Department in 1881, and at the time of his retirement in 1913 was Chief Conservator of Forests, Burma. He was a Companion of the Order of the Indian Empire.

Second-Lieutenant Evelyn Anthony Cave-Penny, Indian Cavalry, who was killed in action on June 9 on an Eastern front, was nineteen years of age, and eldest son of the late Frank Cave-Penny, of Ardfin, Torquay, and of Mrs. Cave-Penny, of Ashburton. He had his commission in November, 1916.

Colonel Charles William Carrington, R.M.L.I., who has died at Bath, aged eighty-eight, saw service at the Battle of Balaklava and the siege and fall of Sevastopol, and received the medal with two clasps, the fifth class of the Medjidie, and the Turkish medal. Later he served in China, and for these services he was mentioned in despatches and received the medal with two clasps.

The many friends, both in England and in the Near East, of Mr. David Forbes, senr., of the firm of MacAndrews and Forbes, of Smyrna, will learn with real regret that he died on the 15th inst., at Bournemouth. Mr. Forbes began his long connection with the East in 1859, in which year he went out to Smyrna to join his elder brother, who had been established there for about ten years. When, after the Civil War in America, a tariff on manufactured articles was put on imports into the United States Mr. Forbes was sent over there (1870) to establish a factory and found a branch of the business. The development of the undertaking in America was most satisfactory. He possessed a singularly gentle and lovable character, and charmed all those with whom he came into close contact, though of a shy and retiring disposition.

We regret to announce that Admiral Sir Alfred Wyndham Paget died suddenly on Monday night, at 34, Hans Road, Brompton. The second son of the late General Lord Alfred Paget, he was born in 1852, and entered the Royal Navy in 1866. As a midshipman he served in the Galatea, under the command of the Duke of Edinburgh. In 1877 he was promoted lieutenant, and in 1882 he served on board the Ready in the Egyptian War, earning the Egyptian medal and the Khedive's Bronze Star. Two years later, in the Carysfort and Iris, he took part in the Sudan operations, and received the Suakin and Tofrek clasps. As Lieutenant-Commander of the Starling he served with the Naval Brigade under Sir Francis Grenfell, and was present at the action of Gemaizah on December 20, 1888. He was mentioned in dispatches and promoted to commander for this service, receiving also the Third Class of the Medjidieh. He was afterwards Naval Attaché in Paris, in Petrograd, and in Washington, and in 1905-6 he was A.D.C. to King Edward. In the present war he had done useful work with the R.N.R., having retired from the R.N. in order to get on to active service once more.

DOMESTIC ANNOUNCEMENTS.

DEATH.

FORBES.—At Bournemouth, on the 15th inst., suddenly, David Forbes, of Smyrna, in his 84th year.

ROYAL SCHOOL FOR DAUGHTERS OF OFFICERS OF THE ARMY.

At an Election of Four Pupils at £20 a year, on the 18th June, 1918, the following was the RESULT of the POLL:—

INDIA AND THE IMPERIAL CABINET.

This year's assemblage of the statesmen of the Empire has aroused comparatively little outward interest or enthusiasm in the Empire's capital city, and the fact that to the ordinary man their presence at this season appears a natural or normal thing shows how far we have travelled since the days before the war. In that remote epoch it was commonly thought and said that distance offered insuperable obstacles to frequent gatherings of the kind, while in some influential quarters the obstacles were not regarded entirely as matters for regret. Efforts, not always successful, and sometimes perhaps a little perfunctory, were made to hold a conference at intervals of four years, and when a meeting had closed without untoward incidents there was something very like a feeling of relief. The impossibilities of Peace have, in this case as in others, become commonplaces under the stress of War, and though the journeys to be undertaken are infinitely more tedious and are surrounded by dangers not hitherto anticipated we hear no suggestion that they are unnecessary, or that the time of busy statesmen is being unprofitably spent. Any such suggestion would indeed be curiously inappropriate. The Empire is at war as a unit, and each and every part of it is concerned in the twofold duty assigned to the Imperial Cabinet, the organisation of victory, and the decision how victory shall be used. Dominions and Dependencies alike have given of their best to serve the common object, and it is right as well as wise that they should share in the honour and responsibility of the decisions which are now required. We speak advisedly of decisions and not merely of deliberations, for, though the change was made so easily that comparatively few people have yet realised its significance, the Imperial War Cabinet is, what the Imperial Conference never was, in essence an executive body, the members of which decide what shall be done. From the standpoint of constitutional development, this is by far the most important feature of the changes which have been brought about. Last year saw the creation, for the first time in history, of a representative body empowered to act, and not merely to think, in the name of the Empire as a whole, and to exercise functions hitherto performed by the Government of the United Kingdom. The change does not indeed represent a complete and final solution of the central problem of Empire. Complex questions relating to the responsibility of Ministers and other cognate matters will later on have to be faced and solved, if the Empire is to stand, but the unanimity of the nations in regard to the war will prevent these questions from becoming acute until at least the war is won, and, however they may be decided in the future, the fact that they may come up for decision is of itself sufficient to indicate the magnitude of the progress already made. The statesmen who shall bring to the Empire victory and peace may be trusted to handle later on the problem of its internal organisation.

We have insisted on the constitutional importance of the Imperial War Cabinet, but we have no desire to depreciate the cognate organism from which the Cabinet takes its rise. The Conference has no executive authority, but nevertheless it can do much which the Cabinet cannot do. We have ancient authority for the statement that in a multitude of counsellors there is safety, and its truth is borne out by modern experience, provided always that executive authority be not paralysed thereby. The Cabinet must from the nature of the case be strictly limited in size, in order that it may be in a position to act promptly and with effect. The larger body, which is free from these limitations, has an ample field. It can discuss matters which are not yet ripe for action, it can focus opinion on difficulties that require the light, and it can do much to create a favourable atmosphere, and to bring about a comprehension of unfamiliar points of view. Most important perhaps of all, it can anticipate danger, and by anticipating prevent its realisation. In an Empire extending to all quarters of the world, and peopled by diverse races in very different stages of social and intellectual development, there are almost indefinite possibilities of dispute and disagreement. Difficulties may be dormant for an indefinite time, and then some trivial or accidental circumstance may bring them into prominence without a moment's warning, to the serious detriment of that good feeling which should prevail. Take as an example the question of emigration from India to other portions of the Empire. That question has many sides, and very much depends upon the point of view. For years the regional or departmental standpoint was maintained, and the result was a bitterness of feeling as between India and some of the Dominions, which at one time threatened to produce the gravest consequences, and which even now, when the actual difficulties have been largely removed, has left a sediment of mutual distrust and antagonism not readily to be dispersed. It is easy to see now that all this could have been avoided, if there had been in the past frequent opportunities for the candid exchange of views and opinions such as the Conference offers to-day. It stands in a word for the impartial examination of racial, regional, and departmental sentiments and prejudices, and for their subordination to the permanent interests of the Empire as a whole.

It would be superfluous to insist on the significance of these institutions to the people of the self-governing Dominions, but it is important to realise that they have no less meaning for the dependent populations. The inclusion of representatives of India in the Cabinet and the Conference is a fact pregnant with hope and inspiration, not merely for India herself, but for the other dependencies, which are as yet too small or too backward to claim similar privileges. An ideal is thus set before them, distant perhaps, yet calculated to appeal to the imagination of all the best and most progressive elements which they contain. For them the meaning of the word Empire has undergone a change. In the Victorian age it stood for security, justice and economic progress; it still stands for these primary benefits of civilisation—benefits so common in England that some Englishmen are apt to minimise their importance—but it also stands for something more: for responsibility, for self-realisation, in a word, for the unlimited opportunity of development, so that each and every community, no matter how backward or degraded, can aspire to climb to the level of the highest. The path thus opened is neither short nor easy; no community can hope to reach the end without sustained and arduous effort, but the inspiration and the vision have been given, and each now holds the future in its hands. To India herself the inspiration is even more direct and more immediate. The fact that her representatives are already sharing in the councils of the Empire shows how far she has progressed upon the upward path. In her case indeed there is some danger that the need for continued effort may be overlooked, for some of her prominent men appear to think that the summit has already been reached, and that it remains only to enjoy the reward of past labours. No greater mistake could possibly be made. Much has indeed been accomplished, but, though the future be assured, the work is not yet done, and the progress that has been effected should be regarded not as a sedative, but as a stimulus to fresh exertion. India is to be congratulated on the fact that her representatives take the juster view. The published opinions of the Maharajah of Patiala and of Sir Satyendra Sinha leave no doubt that they realise how much has to be done, and afford the best guarantee that India will not shrink from the exertions still required.

PERSIA AND THE ANGLO-RUSSIAN AGREEMENT.

By SIR VALENTINE CHIROL.

The "Peace Treaty" of Brest-Litovsk between the Bolshevik Government of Russia and the Quadruple Alliance of Germany, Austria-Hungary, Bulgaria, and Turkey, which for all practical purposes should spell Germany *tout court*, contains amongst its many strange provisions one that has hitherto scarcely attracted in this country the attention it deserves. Article VII. declares that "basing themselves on the fact that Persia and Afghanistan are independent States, the contracting parties pledge themselves to respect the political and economic independence and territorial integrity of these States." When Germany begins to make public professions of interest in the independence and integrity of a foreign country, one is at once reminded of what the wolf said to little Red Riding Hood about his large and beautiful teeth: "The better to eat you with, my dear!" We can put Afghanistan aside for the moment as it lies a good deal farther afield, and is not immediately liable to military pressure from the Germanic *bloc*, nor is the internal situation directly affected by the collapse of Russia. In Persia, on the other hand, both the military and the political equations have been profoundly altered. The most vulnerable provinces are no longer covered by Russian armies, and Russian influence has disappeared from Teheran.

The military aspects of the new situation created in Persia cannot prudently be dealt with under war conditions, and one may only observe in passing that the one redeeming feature, and a vastly important one, is the strong position we hold for checking a forward movement of the Turkish armies on to North-Western Persia, thanks to the British occupation of Mesopotamia. Without that "side-show," as so many of our military critics have been pleased to describe the conquest of Baghdad, there would be nothing to-day to prevent Turks and Germans from sweeping across Persia to the borderland of India. From the political point of view, however, the elimination of the Russian factor, though very disturbing, is by no means an unmitigated disaster in regard to our relations with Persia, and should even tend to strengthen rather than to weaken our hands. For nowhere has British influence suffered so much from association with the old Russian regime. Ever since the assassination in 1896 of Nasr-ed-Din Shah, who during his long reign of nearly half a century had secured something like order and tranquillity in Persia, that venerable but infirm kingdom has been steadily going down hill, and was saved only from complete disintegration for a long time by the rivalry of its two powerful neighbours, Russia and Britain, and then by a mutual understanding between them. Until the disastrous results of the Russo-Japanese war produced a more chastened mood amongst Russian statesmen and opened their eyes to the dangers of the policy of Asiatic adventure into which Germany had persistently and only too successfully helped to lure them in order to divert their attention from her own fields of ambition, especially in Turkey and the Balkan peninsula, the antagonism between Russian and British interests had been growing more and more acute at every point of contact and conflict right across the Asiatic continent from the Bosphorus through Persia and Central Asia to Tibet and China and the extreme Far East. Nowhere had it become more acute than in Persia, where in the opening years of this century Russian ascendancy was firmly established in Teheran on the two-fold basis of financial and military control. For by a series of loans that ministered only to the corrupt extravagance of the Shah Muzaffer-ed-Din, Russia held the power of the purse, and by organising under Russian officers a large force of so-called Persian Cossacks who could at any moment have "wiped the floor" with the wretched rabble of the Persian army, she held equally, though perhaps less visibly, the power of the sword. Moreover, the whole of the northern frontier of Persia and her capital were at the mercy of the Russian army-corps in the Caucasus and on the Trans-caspian Railway, whilst the Caspian itself was practically a Russian lake. When, therefore, Russia, sobered by her disasters in Manchuria, awoke at last to the significance of Germany's world ambitions and to the serious menace they constituted for her position as a great European Power, she was induced to follow the example which for similar reasons France, her ally, had already set her by composing all her colonial differences with Great Britain, and to entertain for the first time in a conciliatory spirit the idea of a friendly agreement with this country in regard to the Asiatic situation which successive British Governments had hitherto vainly sought to promote. The negotiations for such an agreement could naturally be conducted only on a basis of give and take, and the British negotiators had to reckon throughout with the very powerful German influences still entrenched at the Russian Court and in the higher ranks of the Russian bureaucracy that were bent on defeating any Anglo-Russian rapprochement. It was in Persia especially that accomplished facts had to be taken into account. The Anglo-Russian Agreement of 1907, whilst saving the face of Persia, virtually recognised the paramount position which Russia had unquestionably acquired in the north, and even, where it was more questionable, as far down as Ispahan in Central Persia, whereas British interests in the south received no special recognition from Russia, except in a small zone in the south-east, which our military authorities regarded as essential to the strategic safety of India. The other portions of the Agreement relating to Afghanistan and Tibet were held to afford on the whole a sufficient safeguard to British interests, and, though they did not escape criticism, opposition to the Agreement in this country concentrated mainly on the provisions relating to Persia.

The outbreak of the great war which Germany let loose on the world in August, 1914, and—let it be remembered despite the bitterness of later disappointments—the wonderful part played by the Russian armies in holding up the Germanic forces in the East until we had to some extent made good our own utter unpreparedness in the West—have more than justified the price we paid for the Anglo-Russian Agreement of 1907. At the same time the war has unquestionably shown that the price we paid in Persia was a high one, for the methods by which Russia continued after the Agreement to exercise the ascendancy it recognised to her were frequently harsh and oppressive, and British influence at Petrograd was the less able to check them in that they were more often due to the undisciplined initiative of the Russian agents on the spot than to any settled policy of the Russian Government itself; though on the point on which the Persian people were perhaps most sensitive of all, viz., Russian hostility to their feeble gropings towards constitutional liberties, the Russian agents doubtless merely reflected the reactionary tendencies of the autocracy. That the Persians often played into Russia's hands and made needless trouble for themselves by their own ineptitude, or that where British interests alone or mainly suffered, as in Southern Persia, we were content to treat their vagaries with extraordinary patience, is now neither here nor there. The Persians combine the pride of an ancient race with the sensitiveness of children, and they never forgave us for having come to an agreement over their heads and, as they read it, at their expense, with their exacting Russian neighbours. When the war broke out

Germany naturally urged upon the Persians that that was their opportunity to rid themselves of Anglo-Russian tutelage, and when Turkey joined the Germanic powers she added her appeal on the grounds of Mohammedan solidarity, whilst German agents sedulously spread abroad amongst the Persian masses the story that the Kaiser and his people had embraced Islam. Turkish troops and Kurdish horsemen harried the Persian border, and all the turbulent elements released in Southern Persia by the decay of the Shah's authority were easily mobilised against us under the leadership of German or German-paid *condottieri*. All that the Allies asked of Persia was the maintenance of her neutrality, and the Shah's Ministers for the most part realised that that way also lay her best hope of salvation. It is, however, no secret now that there were times when the issue trembled in the balance, and on one occasion the German and Austrian Ministers were quite confident of inducing the young Shah and his Government to abandon Teheran in their company rather than to face the possibility of a Russian occupation. Wiser counsels happily prevailed, and whilst a Russian expeditionary force held Kasvin and cleared Western Persia from Turkish incursions by moving down through Hamadan and Kermanshah with a view to co-operating with the British armies in Mesopotamia, Sir Percy Sykes raised a body of Persian gendarmerie, now known as the South Persian Rifles, under Anglo-Indian officers, which restored some semblance of order in Southern Persia and re-established the Shah's authority in Ispahan and Shiraz.

The British occupation of Baghdad stabilised the situation in Persia until the Russian débâcle threatened again to throw everything into the melting pot. The Russian army melted away, perhaps a little more slowly, but just as surely as on all the other fronts, and Russia ceased to count at Teheran. But as she had of her own volition thus dissolved the partnership by which we had been hitherto bound to her, we were free to put an end to the conditions which had made it a source of serious embarrassment in our own relations with the Persians. It is difficult to understand why the British Government should have still clung in these circumstances to the shadow of the Anglo-Russian Agreement of 1907, of which the name still stank in Persian nostrils, whilst all the substantial considerations for which we had entered into it had vanished with the collapse of Russia. From Lord Curzon's statement in the House of Lords, all that we have so far offered to do in response to Persia's appeal is to regard it as being temporarily "in suspense," and to promise a further consideration of the question after the end of the war. Yet it is surely whilst the war is still going on and, indeed, entering upon a new and very critical phase, that it is most urgent to regain as far as possible the influence we possessed in former times in Persia by removing the one serious stone of offence. We do not believe that Pan-Turanianism will ever succeed in securing from Persian Nationalism the permanent acceptance of Turkish hegemony based on political far more than on religious aspirations, but for the moment it may make a strong appeal to the anti-British feeling in Persia for which the Anglo-Russian Agreement is mainly responsible. It may be granted that the Persians themselves can throw very little positive weight into the scales in the conflict of such gigantic forces as this world-war has unloosed, but their formal neutrality at any rate has a definite value for us, and a spontaneous renunciation of the few advantages we derived from the Anglo-Russian Agreement, now that Russia has set us free by her own default, would strengthen the hands of the Shah's Ministers at a time when Persia is dangerously open to renewed hostile pressure. Had we made it at once, we should, perhaps, then have been spared so disquieting a symptom as the pilgrimage, unofficial it is true, of Persian deputies to Brest-Litovsk and Berlin to tender the thanks of the Persian people for Germany's disinterested solicitude for the independence and welfare of their beloved country! The Anglo-Russian Agreement of 1907 is as dead as Queen Anne. Why should we not, in Persia at least, make haste to bury it?

NEAR EAST IN PARLIAMENT.

HOUSE OF LORDS.

Sir S. Aiyar's Letter. June 18.

Lord HARRIS asked for information regarding the letter addressed by Sir S. Subramaniya Aiyar, late acting Chief Justice of the Madras High Court, to President Wilson, casting reflections on the British Government's rule in India. He noticed that the matter had been replied to by the Secretary of State in the other House, who said that the letter was disgraceful and improper. But notwithstanding that, the Government had decided to take no further notice of it. He expressed surprise and regret at that. He deprecated this inaction on the part of the Secretary of State towards one who, although learned in the law, had disregarded the law. Such treatment would be a discouragement to loyal and law-abiding subjects in India, and probably other members of the Order of the Indian Empire besides himself would resent being compelled to accept the comradeship of such a man as Sir S. Aiyar. It was rather odd that this ex-Judge should take exception to pensions and allowances when he was drawing a pension towards which he had not contributed.

Earl CURZON, Lord President of the Council, said the statements to which attention had been directed constituted a series of outrageous calumnies against the British Government in India. The writer of the deplorable publication was an old man, who retired from the Bench in 1907, and fell into the hands of Mrs. Besant and became the President of the Indian Home Rule League. The letter was written as long ago as June 24, 1917, but it came to the cognisance of the Government in this country a few weeks ago. It was addressed to President Wilson, and was entrusted to an American gentleman and his wife, who were known as lecturers and authors, for presentation on their return to the United States. At Washington it was communicated to the British Embassy, and transmitted thence to the Foreign Office. The Secretary of State for India was astonished by the letter and took it with him to India. Mr. Montagu did not wish to be responsible for bringing about the publication of the letter; still less did he wish to advertise the culpable folly of its author. Accordingly, when Mr. Montagu went, in company with the Viceroy, to Madras, they sent for the writer and administered to him a severe reprimand. That was at the end of last year or the beginning of this year. In May last the letter appeared in the Indian Press, and then was communicated to journals in this country. How the letter got into the Indian Press the Government did not know. There was reason to think that it might have appeared previously in the American Press. There could be no two opinions as to the character of the document. The question arose whether the act should be treated with the extreme severity which, no doubt, it merited, or should be regarded as a melancholy aberration on the part of an old man who in the course of a long career had done considerable service to the State, and whose utterances on a matter of this sort, now that he was in advanced years and feeble health, were devoid of influence. The Government of India were consulted, and replied that they had informed the writer that his action was regarded with regret and surprise by them, but in view of his great age, failing health, and past judicial services, they did not propose taking further notice of it. At the same time, they had warned him that any repetition of such conduct would not be passed over. In the circumstances there were good reasons for the course taken by the Government of India. It was inexpedient to do anything which might convert a person relatively harmless into a political martyr.

The Marquess of CREWE said he thought the answer which had been given satisfied those who had considered the question. He was disposed to think that in view of all the circumstances the Government of India had followed the most sensible course.

HOUSE OF COMMONS.

Indian Police. June 12.

Colonel YATE asked the Secretary of State for India if he would state what steps had been taken by the Government of India to increase the pay of the Indian police, both British and Indian; and whether any increases that had been given in any way covered the extra cost of living now entailed on the police by war prices.

Mr. MONTAGU: The increases of pay have been sanctioned within the past two and a-half years in most provinces for the lower grades of Indian police, and a time scale was sanctioned early in the war by way of relief to European officers. I am unable to say precisely how far the increases of pay which have been given cover the extra cost of living. Those granted to the lower rank no doubt to a great extent do so. Local governments have also a general power to grant compensatory allowances to lower-paid officials in all departments when food prices exceed certain limits.

Colonel YATE: Is there any prospect of this matter being seriously taken into consideration in view of the very low pay of the Indian police throughout the whole service?

Mr. MONTAGU: The question of the pay of Indian police will be taken into consideration when the report of the Public Services Commission is received. It is being considered now. The Government of India is corresponding with the local govern-

Digitized by Google

ments on the subject. I cannot say how soon their recommendations will be received, but I will inquire.

Sir Subramaniya Aiyer's Letter.

June 17.

Mr. MONTAGU, answering a question put by Colonel Yate, said that the letter of Sir Subramaniya Aiyer, K.C.I.E., to President Wilson had been carefully considered by the Government of India, who were causing Sir Subramaniya Aiyer to be informed that they viewed his action with surprise and regret, but that in view of his great age, failing health, and past judicial services they did not propose to take further action. Sir Subramaniya Aiyer would at the same time be warned that any repetition of such conduct could not again be passed over. Mr. Montagu added that he did not propose to interfere with the discretion of the Government of India in the matter.

Prisoners in Turkey.

Mr. J. F. HOPE (Lord of the Treasury), replying to Brigadier-General Croft on the subject of an exchange of prisoners between the British and Turkish Governments, said:—As my hon. and gallant friend is aware, an agreement for the exchange of prisoners is already in force. His Majesty's Government are waiting to learn from the Turkish Government the date upon which the first thousand British invalid prisoners will be ready for embarkation, and whether an assurance that the repatriation ship will be immune from attack has been obtained from the other enemy Governments. The Netherland Minister at Constantinople has been requested to press the Turkish Government for a reply on both these points.

The Status of the Ukraine.

Replying to a question put by Mr. King, Mr. BALFOUR said:—So far as I am aware, no allied State has recognised the independence of the Ukraine. I do not know exactly what date the hon. member accepts as that on which the Ukraine became separated from the Russian Republic when he asks whether since then any of the Allies has offered aid to the Ukraine. It may perhaps be sufficient to say that since that region became completely subservient to Germany it has received no assistance from the Allies.

PRESS ON THE NEAR EAST.

Our Serbian Guests.

To the *Welsh Outlook* Mr. J. Emsley Wood contributes an article entitled "The Serbian Tragedy and Young Serbia." Most of the ground covered is familiar to readers of THE NEAR EAST, but the concluding passages, in which the writer tells us something about the Serbian boys in Great Britain, give us fresh information. It is pleasant to find the writer testifying, from personal acquaintance with the Serbian boys resident in the Scottish capital, that "they are worthy of all the kindness and consideration which it is possible to bestow upon them." He goes on to say:—

The Serbian Minister of Education has truly said that the younger generations of Serbians are most eager to learn. As English formed no part of the school curriculum in Serbia, the boys had only a slight knowledge of our language on reaching this country, and the problem presented to the head master of any school to which they were attached was to make arrangements whereby the continuity of the instruction received in Serbian schools might be preserved in spite of the language difficulty. This was solved by the teacher making such acquaintance with Serbian as to be able to converse tolerably well with the pupils in their own language, and by making English for a considerable time the principal subject in their school time-table. . . . Now all of them are able to write and converse freely in English, and have made considerable progress in mathematics, physics, chemistry, French, Latin, Russian, etc., while several have passed the preliminary examinations for entrance to the Universities.

Keen, alert, intelligent, these brown-eyed Serbian lads are typical of their race. Compared with British boys, they are darker complexioned, more emotional and sensitive, while their natural courtesy and dramatic gestures remind one forcibly of our Gallic neighbours and Allies. Possessed of a fertile imagination and keen powers of observation, they are also very poetically disposed, and revel in the popular Pesmas and legends which they have largely to thank for the preservation of their nationality and their later resurrection as a nation.

They are passionately fond of the country which their fathers and ancestors have watered with their blood, and which possesses so many natural beauties that the Serb delights to repeat, "One travels the world over to return to Serbia." The young Serbs are imbued with the same brave spirit as their fathers, who lived up to the principle that Freedom is the only thing in this world for which too high a price cannot be paid, and are confident that when the present struggle is over the whole Southern Slav peoples will be united and the dearest dream of their nation for many centuries at last be realised.

Bulgaria and America.

Those people who cannot understand why America does not declare war on Bulgaria and Turkey would find a very good explanation of the case in an article ("Should we Declare War on Bulgaria?") in the *Independent* (New York) of May 25. This article shows that while there is nothing to be gained from a declaration of war against Bulgaria by the United States, there is much to be lost:—

We could not fight Bulgaria if we declared war against her, but Bulgaria could fight us. So far as known there has been no demand from the Allied War Council for American troops to be sent to Saionica, but, on the other hand, if we declared war against Bulgaria, Bulgarian troops might be sent to the French front and add to the strength of the Germans there. So far the Bulgars have refused to conform to the demands of their allies to send troops out of the Balkans in aid either of the German armies against France or of the Austrian armies against Russia. Nothing would suit Germany better than a break between Bulgaria and the United States, for that would enable her to draw upon Bulgaria for troops and supplies wherever they were needed.

As it is, Bulgaria is decidedly friendly to the United States:—

The Bulgarian Sobranje or congress has steadfastly stood out against a declaration of war against the United States. Premier Radoslavoff has offended the German and Austrian Governments by his refusal to break with America. Vice-Premier Pechoff has taken the same attitude and declared that he would resign if Bulgaria went to war against the United States.

Bulgaria has no love for her present allies. The hereditary hatred against Turkey has never become extinguished and has recently been revived in the disputes over the border territory in the vicinity of Adrianople. The German and Austrian officers who during the war have been in Bulgaria have, as everywhere, aroused resentment by their overbearing dispositions and harsh treatment of the population. Bulgaria has all too little food of her own, and she resents having it confiscated for the benefit of Austria and Germany.

Americans who have recently returned from Bulgaria report that they have been well treated throughout the war. The American schools in Bulgaria are running as usual and are well attended. The American Consul, General Murphy, still remains in Sofia, and is *persona grata* with the Bulgarian Government. There are now some twenty-five Americans resident in Bulgaria, missionaries, teachers, and commercial agents, and they have no complaint to make against the Bulgarians.

There can be no doubt, says the writer, that Bulgaria is heartily sick of the war, and if her soldiers have to spend another summer on the hot and fever-stricken lines of Macedonia they will be more disgusted than ever. But they cannot break with their Allies at the present time. The article concludes:—"The Bulgarian people are now realising that they are are on the wrong side. Before many weeks they will realise that they are on the losing side. When they find that they are not bound to their present Allies by bonds of sympathy or of interest, or of fear, it will be hard to keep them even nominally numbered among our enemies. In the meantime it is obviously our policy to avoid active hostilities toward Bulgaria as long as possible."

BRITISH AUTHORITIES AND PALESTINE RELIEF.

Benefits of the British Occupation.

Colonel Sir Courtauld Thomson, C.B., K.B.E., Chief Red Cross Commissioner for Malta and the Near East, has recently concluded a personal inspection of the relief work originated by the Bishop of Jerusalem and now organised by the Syria and Palestine Relief Fund (110, Victoria Street, Westminster, S.W.1) in Jerusalem and other districts now in British occupation. His tour covered a good deal of ground, from the coast to the Dead Sea, and has resulted in an interesting report.

Speaking of Jerusalem, the chief centre of the relief activities, Sir Courtauld Thomson remarks:—"The work that impressed me most was in connection with the care of the children. In an incredibly short space of time the latter, large numbers of whom are orphans, have been transformed from the lowest type of street ragamuffins into clean, decently behaved and well-trained boys and girls. A proposal is being considered to teach the elder children useful trades." Hundreds of women and girls also are employed, and wear an air of self-respect and well-being. In the distribution of food and clothing "extraordinary care is taken by the representatives of the Relief Committee to investigate the cases before relief is given. A small army of skilled investigators has been gathered together, including some very high-class Moslem ladies, who are giving their services as a labour of love."

The work, Sir Courtauld Thomson states, is carried out with the knowledge and approval of the military authorities, who are very sympathetic to the aims and objects of the fund. There is thus no overlapping, but rather ample scope for the Relief Fund in directions outside the control of the administration, and the work is proceeding smoothly and on business-like lines. "In my opinion the work carried out by the Relief Fund is most efficient and of very considerable importance," adds Sir Courtauld Thomson. "Large sums of money can be expended, not only with the greatest possible benefit to the people for whom the fund administers, but to the general advantage of the whole countryside." General Sir Edmund Allenby, Commander of the Forces in Palestine, has endorsed Sir Courtauld Thomson's report.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

The creation of a branch of the Mint in India has now been followed by an Ordinance of the Government of India granting authority for the coinage of a gold mohur of the fineness of a sovereign and of the value of Rs. 15.

***

The political aspirations that are leading Germany on to Mid-Asia are well known, but I am not sure that it is as generally recognised that industrial considerations drive her in the same direction. The desire to possess the Roumanian oilfields was natural enough, given the absence of all scruple in dealing with a vanquished enemy and property that belongs to others; but an even more imperative call in the eyes of some Germans—probably the most influential—is the possession of new iron ore deposits. The life of the German iron ores is estimated, I understand, at about fifty years; those of France at from three to four times as long, to say nothing of the fact that the French ores contain something like fifty per cent. more iron than the German ores; that is to say, their percentage of iron ranges from 45 to 50, while that of the German ore is between 30 and 35.

***

Hence the insistent demands in certain quarters for a German lien on France's mineral wealth as a result of victory in the present war. But in the East, too, there are valuable iron-ore deposits, apart from those of Poland and Lapland. In the matter of manganese ores, Germany is entirely dependent on supplies from abroad, and vicariously through the Turks or Bolsheviks she is now in sight of the big deposits in the Caucasus. In this part of the world she may not need to establish her hold on the ore in quite such a public fashion as she did in the case of the Roumanian oilfields. The Allies, therefore, have all the more reason to watch the Germans closely in their march eastwards, in order that they may not find when peace is concluded, and the opportunity of upsetting private arrangements has passed, that Germany is left with jumping-off places for fresh intrigues and further penetration in the form of concessions extracted in the course of her armed progress through these regions.

***

Reference was made at the recent general meeting of the Suez Canal Company to the increase of tariffs in 1917, which, it was stated, had compensated in a certain measure for the effect of traffic lost. There were, it will be remembered, two increases last year—one of 50c. introduced on January 1, and a second of 75c. imposed six months later, which brought the cost of transit up to 8f. 50c. These taxes increased the yield of the duties to 15,637,500 francs, but even at that figure there was a decrease of 15,000,000 francs compared with 1916. The board also abolished the benefits enjoyed by vessels in ballast, and the withdrawal of this concession is expected to have a notable influence on the receipts in the current year. In this connection it was pointed out that up to the present there had been a marked improvement in the receipts. The dividend of 65 francs net was based on the results of the year with the aid of a sum left over from 1916. It is gratifying to note that full confidence was expressed in the future, it being regarded as certain "that the revenue would attain not only the former standard, but grant full compensation for the sacrifices that present conditions impose."

***

Ceylon tea plantations on the whole seem to have had a better year than the Indian companies, thanks to the fact that they had rather better shipping facilities, and were thus able to dispose of their produce on the best terms. The report of the Ceylon Tea Plantations affords an example of the effect of war conditions on the island's main industry. The tea yield amounted to 4,213,000 lb., a decrease of 454,600 lb., but the net price realised was 10.68d., or 1d. in advance of the previous year's price. The rubber crop, on the other hand, increased by roughly 80,000 lb., but the price fell from 2s. 4.57d. to 1s. 11.92d. There was, however, an increase of £1,600 in the net profits, and the dividend has been maintained at the previous rate.

***

In a recent issue of the Journal of the British Chamber of Commerce for Egypt it is pointed out that German travellers' samples were packed in boxes of a very attractive appearance. That is just one of those details which seem insignificant, but which the astute German realises are all-important for successful trade in the bazaars. The journal advises British firms to use some more ornamental material than mere brown paper to wrap their samples in. Unfortunately, precedent is a stern master in this country, and until it has actually been done I shall remain dubious as to whether manufacturers will go out of their way to cater for Egyptian taste in this matter, unless convinced by bitter experience that there is no other way to increased trade except by meeting market requirements in such matters as this.

***

A syndicate has been formed, I understand, for the manufacture of matches in Ceylon, and preparations for the commencement of this new industry are well advanced, part of the machinery required having reached Colombo, and, presumably, no time will be lost in beginning operations. I shall follow the fortunes of this venture with keen interest, because hitherto the manufacture of matches has not been a success in India, where the home product has altogether failed to withstand outside competition. If the industry pays better in Ceylon it is to be hoped that it will lead to renewed efforts to establish the industry in India on a satisfactory basis, for there is no reason why India should not turn out as good and cheap matches as any country in the world.

***

This year's industrial exhibition in Gwalior was rendered exceptionally interesting by reason of a remarkably wide range of exhibits from the other Indian States, which shows that if for the time being Gwalior is ahead of the Indian States in matters of industrial development it is only a question of a relative advance, for in many of the States considerable progress has been made. Noteworthy among these exhibits were examples of the mineral, sericulture, textile, and metal ware industries of Indore. From Bhopal came textile and leather articles, while the hand industries of Jaipur, and the carpet and velvet industries of Kapurthala were also represented. Altogether, twelve Indian States sent examples of their industries to the exhibition, a fact which speaks volumes for the interest now roused in these States by questions of industrial development.

***

There seems every indication, I am glad to learn, that British firms trading in Morocco are availing themselves of the facilities for registering their trade marks. It is hoped that none of the firms concerned will fail to take advantage of this privilege, as the importance of trade marks registration in a country like Morocco is very considerable.

***

The British Trade Corporation has just formed a subsidiary undertaking entitled the Trade Indemnity Company which should prove a most important factor in the development of British commerce after the war. The capital of the new company is £100,000, of which £20,000 has been paid up, and there is, in addition, a reserve of £20,000, and its object is to assist British merchants and manufacturers by insurance in developing overseas business. Policies will be issued to insure the payment of commercial debts, and the company will be prepared to advance to an assured the amount of his liability in regard to a given debt against the transfer of the debt and the payment of interest on the amount advanced, pending the ascertaining of the outcome of an estate. Policies will also be granted insuring a client's turnover up to two-thirds against ultimate loss. The company will further issue policies covering a proportion of the losses that may arise in the event of a forced resale of goods owing to the buyer being unable to take up the shipping documents, and will also insure against a proportion of trader's losses in any one year over an agreed percentage of loss, and will finally assure approved accounts up to three-fourths of the amount of the debt.

***

It is scarcely necessary to emphasise the importance that should attach to the work of this company. In the past one of the great obstacles to the extension of our overseas trade outside the Empire, and especially in the Near East, was the uncertainty that often prevailed regarding the payment for goods. British merchants and manufacturers were extremely unwilling to do business with countries where unusual terms of credit were required, and where the risks, such as those attendant on international relations, for instance, were altogether greater than those encountered in other parts of the world. This attitude is comprehensible, but the only way to increase business is to take risks, and it is certain that if our ancestors had always acted on that principle there would have been no Empire to enable our merchants and manufacturers to decide where they would or would not trade. It may be hoped that the new company will remove the last objection on the part of British business men to interest themselves in what they regard as uncertain regions, as it will obviate the possibility of any serious loss in the process.

THE EGYPTIAN INDUSTRIES COMMISSION REPORT.

II.—The Development of Industry.

In opening its remarks on the development of industry in Egypt, the commission points out that it is a delusion to say that Egypt can only be an agricultural and can never become an industrial country. In an exceedingly interesting historical note it shows that even in Pharaonic times the people were almost as much industrial as they were agricultural, whilst under the Arab *régime* Egypt was one of the great industrial nations of the world. The decadence of Egyptian industries coincided with the conquest of the country by the Turks, and was due to the facts that the discovery of the Cape by the Portuguese changed the trade route from the East to the West, and caused Egypt to lose the privileged position she had held in that respect up to then; that Constantinople took the place of Cairo as the residency of the Khalif; that the representatives of the latter paid no attention to the development of the country's resources, but concentrated their efforts on exacting as much revenue as possible from the people; that public security deteriorated; that the manufacture of war material, which had been carried on on a large scale in Egypt diminished as a result of Egypt's loss of independence and the reduction in her armies; and that the Turks transferred to Constantinople most of the masters of crafts.

Mohamed Ali's Work.

On the other hand, the regeneration of the country dates, as already mentioned, from the time of Mohamed Ali, who was throughout dominated with the desire to see Egypt released from her economic dependence on the outside world. That wonderful man started by giving his attention to resuscitating the shipbuilding industry, and created the arsenal of Bulac, which is working to this day, and where the ships required for his Hejaz campaign against the Wahabis were built in pieces and transported on camel back to Suez, where they were put together. War material of every description was also made in the special establishments he set up, whilst the equipment of his troops led to the creation of the first factories, notably the factory of Khoronfiche, where silk, cotton and velvet weaving was started, and several cotton looms in various parts of the country. He created sail cloth and glass as well as paper, soap, oil and candle factories, encouraged the cultivation of the mulberry tree and the breeding of silkworms, and introduced the sugar-cane; and, with a view to providing apprentices to carry on the work in the future, he founded the present School of Arts and Crafts at Bulac and increased very considerably the number of Egyptians sent to Europe to complete their technical education. Whilst Mohamed Ali might be reproached with not having laid solid foundations for his industrial enterprises, which therefore suffered once his personal influence had been withdrawn, it is undoubtedly to him that the industrial regeneration of modern Egypt is due, and the failure of his projects may be attributed more to the methods adopted by his successors than to the errors of judgment committed by him.

Obstacles to Progress.

As regards the present situation, the one handicap under which industry has laboured has been the feeling of indifference and contempt which industrial questions appear to arouse, and as a result the theory has gained ground that Egypt can never count on any other resources than the natural products of her soil and her agriculture. Industry attacked in its most vital parts could not hope to thrive or succeed, and from the day when Mohamed Ali died it has steadily dwindled in importance. It is true that about the middle of the last century foreign products flooded the Egyptian market, and that as a result local industries further declined; but that state of things by no means justified the inertia which came into existence, and the commission considers as deplorable the failure of the public as well as the authorities to take steps to preserve the very important industrial birthright which had been handed down to them, and to adapt it to meet the new conditions which had arisen. Such adaptation and preservation would have been all the more possible, seeing that the period in question was one in which European industries were still making their way. The natural result of this general indifference was that foreign trash displaced the more trivial and unimportant Egyptian productions, the popular taste became Europeanised, and Egyptian industry lost the position which it had once attained thanks to the talent and taste of its workers, who are certainly endowed with qualities of ability, sobriety, and assimilation, of infinite potential utility in any industrial development, and who degenerated to such an extent that they will have to be re-educated. Indeed, the taste of the Egyptian craftsman has been spoilt by the inertia which has taken place; he finds no pleasure in anything beautiful or finished; he is contented with the second best; and is not offended by bad workmanship.

The public indifference and the defects in the character and education of the Egyptian workers are the two obstacles which must be overcome in order to bring about a renaissance in Egyptian industry. The Egyptian Government has shown that it is aware that something drastic must be done, and during the past ten years it has given very close attention to technical education, whilst the Egyptian public has now abandoned many of its prejudices against industry, thanks, it is to be admitted, to the success which local enterprises have obtained owing to the war, to the anxiety aroused by the spread of pests attacking the crops, and lastly to the lessons taught by the war.

Small Industrial Population.

Turning to the statistical side of the question, the census of 1907 showed that 380,000 persons were engaged in industrial occupations, all but 20,000 of these being men. These figures have no doubt been increased since then, but the recent census figures are not yet available. It is, however, interesting to note that on the basis of total population the proportion occupied with industry is 3.4 per cent., compared with 24.5 per cent. in England, 8.5 per cent. in Switzerland, and 4.12 per cent. in Argentine, an agricultural country similar to Egypt. The industrial population is mostly occupied with the small industries. The greatest number, viz., 94,925, are occupied with building, next comes the weaving industry with 83,238, followed by dressmaking, etc., with 76,409; foodstuffs account for 40,669, and metal work for 30,111. The small industries are those carried out in workshops employing a limited number of workers, or in the dwellings of artisans working generally on their own account, with the help of a few apprentices. This is the most important category, since it occupies the largest number of workers, and extends to all the villages and towns of the country. The chief of these industries are building, weaving, dyeing, metal work, ironwork, woodwork, tannery, boot-making, milling, production of candles, oils and soap, jewellery, and fine carpentry. Although these industries are carried out all over the country there are certain centres where they are particularly followed. Mahalla, in the centre of the Delta, specialises in cotton and silk weaving. Damietta in silk weaving, boot-making, and carpentry; Galiub and Akhmin in cotton stuffs, Assiut in weaving, mosaic work and shawls; Keneh in pottery, Nakkada in cotton and silk stuffs in demand in the Sudan.

(To be continued.)

PHOSPHATIC MANURES IN INDIA.

The Board of Agriculture in India has passed the following resolutions with regard to the report of the committee appointed to consider the value of local phosphatic manures :—1.—That with a view to encouraging the extended use of phosphatic manures, the board consider that a survey of the resources of the country in mineral phosphates should be undertaken by Government. In view of the vital importance to Indian agriculture of keeping the supply of phosphates at a price within the reach of the cultivator, the board suggest that control over all the internal mineral sources of supply should be retained by Government. 2.—That in view of the great distance over which manures must be carried in India from the centres of supply to the fields of cultivators, the board is of opinion that the question of reducing internal railway rates charged on such concentrated manures should be considered by the Railway Board.

TEA PRODUCTION IN INDIA.

A Blue Book, just issued, gives particulars of the production of tea in India in 1916. That year, it is stated, was not so prosperous as its predecessor, when a record outturn and a record price level were reached. Nevertheless, owing to increased acreage and scientific manuring, the outturn was larger than in any previous year except 1915, and the price was only 3 pies less per pound than the record of that year. The total area under tea was 650,800 acres, 2.5 per cent. greater than that in the preceding year. The area abandoned was 4,600 acres, while the new extensions (including replanting in areas abandoned in previous years) amounted to 20,500 acres. Thus the net increase during the year was 15,900 acres. Of the total area 601,400 acres were reported to have been planted during the year, as against 584,900 acres in the preceding year, and the total number of plantations was 4,486 in 1916, as against 4,437. The total production of both black and green teas in 1916 was 368,437,000 lb. (excluding Burma), as against 371,691,000 lb. The highest production in the year was in Lakhimpur, Assam, namely, 788 lb. per acre, and the lowest in Garhwal, U.P., namely, 52 lb. The total quantity of green tea reported to have been manufactured was 2,677,000 lb., compared with 3,043,000 lb. in 1915, and 3,050,000 lb. in 1914.

Export Trade.

The total exports by sea decreased by 47,000,000 lb., or 14 per cent., compared with 1915-16. Shipments to the United Kingdom decreased by 25,362,000 lb., or 10 per cent. Russia took about 9,000,000 lb. less than in 1915-16. France took only 80,000 lb., as against 183,000 lb. in the previous year. The total exports to Europe, excluding the United Kingdom, showed a net decrease of 9,100,000 lb. compared with 1915-16. Shipments to Cape Colony, Egypt, Madagascar, and Zanzibar and Pemba increased. The total trade with Africa increased by 34,000 lb., Cape Colony showing the most noticeable increase of 222,000 lb., which was partly set off by decreases in exports to East African ports and Natal. Of the American countries, shipments to Chile were almost double, but those to Canada and the United States were slightly less, compared with the preceding year. The total exports to America remained practically the same, namely, 13,200,000 lb. In Asia, the best customers of Indian tea are China, Ceylon, Persia, and Turkey (Asiatic), and the exports to these countries decreased. Russian Turkestan, to which there were no exports in the last two years, took about 913,000 lb. in the year under review. The trade with China consists almost entirely of tea-dust for the manufacture of brick tea for the Russian market. Australia, New Zealand, and Fiji took between them some 4,430,000 lb. less than in 1915-16. Exports by land decreased by 788,000 lb., or 41 per cent.

Prices and Prospects.

The average price per pound realised for all teas sold during 1916-17 at public auctions was 8a. 8p., against 8a. 11p. in 1915-16, and 7a. 7p. in 1914-15. The market was not subjected to the violent fluctuations of the preceding season.

The present position and prospects of the tea industry, the report adds, appear to be rather uncertain, depending entirely upon the duration of the war. If the war continues, the producers will, it is stated, have to face considerable difficulties owing to the shortage of tonnage, dislocation of finance and exchange, and lack of stores and machinery.

STAMP DUTIES IN MOROCCO.

A regulation has recently been issued, under Article 143 of the Morocco Order in Council, 1889, which makes binding upon all persons to whom the aforesaid Order in Council applies, the provisions of a Dahir, dated February 15, 1917, which came into force on February 1. This Dahir provides for the imposition in the French Zone in Morocco of various stamp duties on documents, including negotiable instruments (bills of exchange, cheques, etc.), receipts, passports, and also on advertising posters, luminous signs, etc.

The Ceylon Government has commandeered all petrol stocks. Ten gallons a month are to be allowed for cars and two gallons for motor-cycles.

ENGINEERING NOTES.

A Universal Tractor.

An agricultural machine that can be used for many purposes on a farm or large estate appeals to every farmer, but especially to the Oriental farmer, who, as a rule, is very keen on the possession of a servant, a beast, or a machine that can be "generally useful" on his farm. Thus, a new three-wheeled motor plough, which has recently been brought out by a well-known British firm of agricultural and general engineers, will be of much interest to landowners and farmers in the East. It is a self-contained motor plough, considerably larger than the usual run of this type of machine. The outstanding point is that it is a three-wheeled machine, all three wheels being driving-wheels. The ploughs, of which it normally carries four, are disposed within the wheel-base. The engine is placed in the framing near the front of the machine, and drives through two-speed-and-reverse gear of customary type to a counter-shaft. On the crankshaft are two chain-sprocket wheels, one of which serves to transmit the drive to the rear wheel, the other to the front live-axle. The drive to the rear steering-wheel is most interesting. This wheel is carried on a central bearing of large diameter, which surrounds, or contains, a vertical pivot. To the wheel itself is bolted a chain-ring, and this is coupled by a roller-chain to a driving pinion carried on a short length of shafting, which is supported by the same bracket and framing as the hub of the wheel. In consequence, when the wheel is turned in a horizontal plane for steering purposes, this driving sprocket pinion and its shaft turn with it. The end of the short shaft carries the pin of a universal joint, this pin being disposed so that it is in a direct line with the steering pivot. The other half of the universal joint is attached to an inclined short shaft, carried by the main frame, and on this short shaft is the sprocket-wheel, which takes the drive from the main countershaft. It is intended that the machine shall serve as a universal purpose tractor, and it is therefore fitted with drawbar, belt pulley for use when driving stationary machinery, and, furthermore, it should be noted that the front axle is sprung, an essential feature for a road machine.

Sudan Transport Difficulties.

A Sudan Government official has written to a London contemporary saying that owing to the abnormal use of transport animals for war purposes, and to the increased demand abroad for all overseas produce, there are considerable difficulties in the Sudan with regard to transport. He suggests that some form of mechanical transport would be a business proposition. The best means of transport in the Sudan at present is the railway but what is required is some mechanical means of covering districts at a distance from the railway line. Upon that point the writer asks for advice as to the most suitable tractor or similar vehicle. The best machine, he thinks, would be a slow-moving tractor, working with either a steam or oil engine. It would, of necessity, have to be strongly built for rough roads, and must not require too much water, as it will work in waterless areas. The cost of upkeep and fuel would be most important, as it would have to compete with camel transport. It should be capable of extracting itself and its trailers from sandy places, and no rubber tyres or other parts likely to perish with the heat could be fitted. The difficulty with a steam tractor is that it requires more water than is available on long desert journeys. Mechanical transport by Ford cars has been carried on for a long time between two towns on the desert in Egypt, but for military purposes, and this would be impossible as a business proposition. The tyres alone, the writer says, would cost more than could be made by freight. The sum of £3 per ton per hundred miles, he suggests, would be reasonable expenses, therefore a tractor moving 50 tons would cover £150 per trip each way. Against this must be reckoned: capital expense, fuel, wood, £1 per ton; coal, £20 per ton; petrol, 4s. 6d. per gallon; European skilled drivers, £25 per month, or two trips; and upkeep and depreciation.

Earning Capacity Insufficient.

In view of the above conditions the whole question resolves itself into one of cost of maintenance and service. This would appear to be limited by the maximum earning capacity on a ton basis, i.e., £3 per ton per 100 miles, or just over 7d. per ton-mile, which, as the journal remarks, would be altogether insufficient to cover the cost of road haulage by whatever means in such a district remote from works and with such very high fuel and other costs. The cost of operation of a 5-ton rubber-tyred lorry in such circumstances—and provided that rubber tyres were permissible, which they are not—would certainly exceed 6s. a mile, and on the writer's showing a 5-ton load would only bring in just under 3s. a mile!

It is not improbable that there may be some miscalculation on the part of the correspondent, for, of course, as the journal says, the employment of a tractor or traction engine capable of hauling 50 tons is quite out of the question; no practical machine of such capacity fitted with an internal-combustion engine is or has been on the market, and the use of a large caterpillar-type tractor would be impracticable, at any rate in the present stage of development of that class of design; and unless there is some way of very materially increasing the ton-mile earnings, the special and onerous conditions appear to preclude possible operation on a commercial basis. In the meantime, the question is of much importance from many points of view, for it is not only the Sudan, but many other regions in the East, Egypt, Palestine, Mesopotamia, Greece, also East Africa, Tripoli, Tunis, Morocco, etc., that are in great need of inland communication and transport, and it is not too soon for British engineers to study these countries' requirements in this respect. Makers of transport vehicles, especially, should try to make known their productions there, and thus enable interested people generally to study the particulars of the machines and communicate with them when orders are to be given.

Dry Powder Sprayers.

Before the use of sulphate of copper against that terrible pest of the vine, the peronosporos, wet spraying was almost unknown in the East. Dry spraying with sulphur powder was in general use throughout vine-growing districts, this being done once or twice and often three times a year. The powder was sprayed by means of small cylindrical castors made of tin, and hand bellows. These primitive devices are still being used, as sulphate of copper wet spraying appears not to protect the vine from other diseases which the sulphur prevents. In recent years wet spraying has been introduced for fruit trees, garden plants, etc., and the system is gradually growing in favour, but dry spraying is still favoured by the majority of the Oriental farmers. In Canada and the United States dry spraying is now preferred, and in a recent report of experiments conducted by the Quebec Department of Agriculture, it is stated that "dusting has many advantages over spraying under average conditions" for, apart from the time and trouble of preparing the liquid, which proved that "the amount of work accomplished with the duster was more than three times as much as with sprayers, which is very important in wet seasons, the spreading qualities of fine dust are greater than liquids, consequently more thorough work would be expected from the former in the hands of an inexperienced or careless worker." The Oriental farmer has, therefore, an excellent precedent in adhering to his old method of "dusting."

One of the newest apparatus for dry spraying is, we believe, suitable for general service with sulphur, lime, etc., and more important than anything else is very portable, and within the financial means of the average Oriental farmer or smallholder. It is a light apparatus on wheels, and can be worked by hand whilst it is stationary, or will work automatically as it is drawn through the plantation or the vineyards. It is provided with hose and lances for spraying high trees, and also piping and fittings for spraying along the ground as it is drawn along. With one or two of such apparatus, a very large number of castors and bellows and farm hands can be dispensed with, which means money and time-saving, and, in addition, perfect spraying.

LANCASHIRE COTTON.

A Dull Market.

(FROM OUR OWN CORRESPONDENT.)

MANCHESTER, Wednesday.

The market during the past week has been comparatively quiet. Buyers find the conditions distinctly against them, and in most quarters there has been considerable indifference on the part of producers as to booking fresh orders. It is understood that the work of the Cotton Control Board is being extended, and powers are about to be given to the members to consider the probable trade situation at the close of the war with the idea of making suggestions to the Government as to what action shall be taken in connection with this matter. Private and public reports relating to the American crop remain encouraging. As is usual at this time of the year, rather varied advices are being received relating to the Egyptian growth. Spinners of Egyptian yarns remain in a strong position. The majority of spinners are very independent. Only a small trade has been done in piece goods suitable for Egypt. Buyers are waiting for fuller clearances abroad before committing themselves to large contracts with local manufacturers. Standard goods for India and China have attracted very little attention. Some substantial contracts have been in the market in jeans for the Government. A healthy flow of orders continues to show itself in home trade fabrics. American yarns have been sold irregularly, but prices have again tended to harden. Certain marks are very scarce indeed. Very little has been done in export yarns.

JUTE EXPORTS AND GERMANY.

In the House of Commons on June 19, Commander Leverton Harris, Parliamentary Under-Secretary to Ministry of Blockade, asked by Sir J. D. Rees whether shipments of jute through England or directly from India were being consigned to the National Ropeworks, a German-owned factory in Italy; whether such consignments were reaching Germany as hemp *vid* Switzerland; and whether jute had been declared contraband of war, so that vessels found by our patrol ships to be carrying this product were brought before our Prize Courts for adjudication, said:—I will ask the hon. member to accept my regret for the delay which has occurred in replying to his question, and which is due to the fact that inquiries had to be made in India. In reply to the first part of the question, I am informed that five consignments of jute were shipped to this company under licence from India prior to April, 1917, the Italian Government having prohibited the export of jute from Italy. Since April, 1917, no further shipments have taken place. With regard to the second part of the question, proceedings were taken against the company by the Italian Government on the grounds that they had exported jute to enemy countries under the designation of hemp, and contrary to the prohibitions of export in force. The president and general manager were arrested upon a charge of trading with the enemy, but have since been released on the ground of insufficient evidence. The reply to the third part of the question is in the negative, but, as the hon. member will be aware, jute is a natural monopoly of British India, and his Majesty's Government have a complete control over its export and distribution. SIR A. FELL: Is the Department certain now that none of this jute is reaching Germany through Switzerland? COMMANDER LEVERTON HARRIS: Yes, Sir. We believe the Italian Government are taking every precaution.

EGYPTIAN EXPORT REGULATIONS.

The Egyptian General Post Office announced last month that by permission of the military authorities tobacco and cigarettes may now be despatched by civilians to military addresses abroad. It was also notified that the despatch of silk to the Allied countries is authorised. Cotton yarn and cotton twist, either imported, or of Egyptian manufacture, cannot be exported to any destination except in virtue of an export licence from the War Trade Department.

A WORLD-WIDE REPUTATION FOR OVER THREE-QUARTERS OF A CENTURY.

COMPANY NOTES & REPORTS

New Egyptian.

The report of the directors of the New Egyptian Company states that the profit and loss account for the year ended December 31 shows a credit of £35,613 11s. 11d. Deducting £5,442 10s. for the service of the debentures, there remains a profit for the year of £30,171 1s. 11d. Adding £16,630 6s. 7d. brought forward from last year, the balance at the credit of the account amounts to £46,801 8s. 6d., from which the directors recommend the payment of a dividend of 1s. per share (equal to 6 2-3 per cent.), less income-tax. The net income derived from the estates amounts to £23,390 19s. 4d., or an increase of £6,730 14s. 4d., as compared with the previous year. Owing to the high prices of agricultural produce and the greater fertility of the land, the rentals for the current year show a satisfactory increase. The British Government's decision to purchase the current cotton crop at the price of 42 dollars per cantar assures a substantial profit to the fellaheen. The flood of 1917 was the highest experienced since 1895, and with one exception all the estates have materially benefited. The Government's decision to restrict the cotton area to one-third will have little or no effect as far as the company's lands are concerned, as the managing director in Egypt has for some years past followed a similar policy. Continuing the method adopted last year, only sales for which deeds were signed on or before December 31 have been taken into account. The area sold was 531 feddans, 381 in Lower Egypt at an average price of £100 6s. 2d. per feddan, and 150 in Upper Egypt at an average price of £111 10s. 7d. per feddan. A further 916 feddans were sold at satisfactory prices, but the deeds were not signed at the conclusion of the financial year. The capital expenditure during the year in Lower Egypt amounted to £4,921 13s. 6d., as compared with £5,590 2s. 3d. during the previous year. The capital expenditure during the year in Upper Egypt was £937 17s. 11d., as compared with £365 11s. 4d. The area of the town sites in Cairo, Port Said and Khartoum remains the same as last year. During the year ended December 31, 1917, the company's loans were reduced by over £12,000. Since that date a further £20,000 has been paid off, and the debenture debt has been reduced by the purchase and cancellation of £25,000 debentures.

Bombay Electric.

The report of the Bombay Electric Supply and Tramways Company, Limited, states that the total revenue for the year from all sources, including the amount represented by sale of current to the tramways, amounted to £439,850—an increase of £66,383 over the total revenue for the previous year. The total expenditure amounted to £183,457—an increase of £26,769 over the total expenditure for the previous year. The net receipts from the year's working aggregated £256,393—an increase of £39,614 over those for the previous year. After deductions, aggregating £113,141, there remains an available balance of profit of £143,250, to which has to be added the amount brought forward, £5,214, making a balance of profit available for distribution of £148,465. The directors recommend that this sum should be appropriated as follows:—To dividend (free from all income tax to shareholders domiciled in India) for the year on six per cent. cumulative preference shares, £35,997; to payment of dividend (free from all income tax to shareholders domiciled in India) for the year on ordinary shares at the rate of 10 per cent. per annum and a bonus at the rate of 4 per cent. per annum, £100.800; to bonus of one month's pay to the company's officers and employees, £4,900; to be carried forward, £6,768.

Western Australian Insurance.

The report of the Western Australian Insurance Company for the year ended June 30, 1917, states that net premiums, which, in addition to marine, include fire and other departments, rose from £180,716 to £727,868. The 1916 net outgo losses and expenses was 85.76 per cent. of net premiums; 1917 losses were £522,216, or 71.75 per cent. of net premiums, and expenses of management and depreciation were £27,095, or 3.72 per cent.; total, 75.47 per cent. Balance carried down, £183,832. Including amount brought forward, total reserves for unexpired risks and contingencies amounts to £200,000, or 27.47 per cent. of 1917 premiums. Claims do not include outstanding losses. Paid-up capital increased to £100,000. Investments amount to £113,094; total depreciation allowances, £1,244. Transferred to profit and loss, £24,795. Directors declare dividend of 77 per cent. (against 76 per cent.), payable on £60,000.

The report of the Doranakande Company for 1917 states that the profit amounted to £8,708 and £5,827 was brought in, giving £14,535. The directors transfer to reserve development account £1,500, leaving to be carried forward £13,035. They recommend that in view of the critical situation a dividend should be deferred until position becomes clearer.

The report for the past year of the the Indian Peninsula Rubber and Tea Company shows crops harvested:—Coffee, 183½ tons, against estimate 186 tons; tea, 303.451 lbs., against estimate 300,000 lbs.; rubber, 122,639 lbs., against estimate 140,000 lbs. The manager's estimates for current years are:—Coffee, 175½ tons; tea, 350,000 lbs.; rubber, 157,000 lbs. Whole expenditure on estates for past year has been charged to revenue account and £1,000 written off for depreciation of buildings and machinery, leaving net profit £3,126. Including £2.837 brought forward, the credit balance is £5,964, which it is proposed to carry forward.

The net profit of the Panawatte Tea and Rubber Estates for 1917 amounts to £31,703, against £39,010; final dividend of 15 per cent. (making 22½ per cent. for the year), against 25 per cent.; depreciation, £1,000, the same; general reserve, £2,500, against £5,000; forward, £12,526, against £10,198.

Dividends, Payments, etc.

Upper Assam Tea Company.—Dividend of 12½ per cent (2s. 6d. per share), less tax, for 1917, payable July 1.

Hyderabad (Deccan) Company.—Interim dividend of 1s. per share, less tax, will be paid 24th inst. Coupon No. 25 will be met at the National Bank of India, 26, Bishopsgate, E.C.2, on that date.

Warrants for dividends on the preferred and deferred stocks of the Indian and General Investment Trust, Limited, have been posted.

Messrs. R. Raphael and Sons, Austin Friars House, E.C., announce the numbers of Three per Cent. Bonds of the Piræus, Athens, and Peloponnesus Railway, drawn for repayment at par on July 15.

Talons attached to the bonds of the Greek Guaranteed 2½ per cent. Gold Loan of 1893 should be lodged forthwith at the Bank of England Loans Office, 5 and 6, Lombard Street, E.C., in order to be exchanged for new coupon sheets.

Oil Outputs.

Anglo-Egyptian Oilfields.—Gemsah production for week ending June 9, 21 tons (last week, 611 tons). Hurgada production for week ending June 9, 4,633 tons (last week, 4,415 tons). Telegram mutilated.

SUDAN COINAGE.

An ordinance to regulate coinage in the Sudan entitled "The Coinage Ordinance, 1918" has recently been issued in a special number of the *Sudan Gazette*. The main provisions are as follows:—The Egyptian coinage of gold, silver, nickel and bronze, described in Article 1 to 10 inclusive of the Decree of his Highness the Sultan of Egypt entitled Law No. 25 of 1916 and in the second of the two Orders made by the Egyptian Minister of Finance and dated October 18, 1916, shall be legal tender in the Sudan. A list of the coins so described is set out in the schedule annexed. The British sovereign shall be legal tender in the Sudan at such rate and subject to such conditions as the Financial Secretary, with the consent of the Governor-General in Council may order. The Egyptian silver, nickel and bronze coins of the old issues minted under the Decrees of the Egyptian Government dated November 14, 1885, and November 13, 1887, shall continue to be legal tender in the Sudan until withdrawn from circulation by order of the Governor-General in Council after such a period of notice as may be specified in such order. No person shall be obliged to accept a payment in silver exceeding 200 piastres or in nickel and bronze exceeding 10 piastres.

NEWS FROM ALL SOURCES.

The proceeds of the annual sale of liquor licences in Rangoon amounted to Rs.7,50,405.

The paid-up share capital of joint stock companies incorporated in India and registered under the Indian Companies Act amounted to Rs.94 crores at the end of last year, as against Rs.75 crores at the end of June, 1914. In other words, there has been an increase since the war of roughly 25 per cent.

Mr. G. W. Black, who is succeeding Sir W. B. Henry as manager of the Alliance Bank of Simla, was formerly manager of the Presidency Bank of Madras, and since the war broke out has visited Russia, Italy, and France on an important mission.

The Government of India have prohibited the export of mineral lubricating oils to all destinations. For the present the prohibition applies only to imported oils.

Ceylon's revenue in the first quarter of the current financial year was Rs.1,69,09,395, as against Rs.1,73,54,063 for the corresponding quarter of the previous year.

The *Sudan Government Gazette* of April 25 contained a copy of a Proclamation prohibiting until further notice the import of gold into the Sudan in the form of coin, whether whole or broken, or ingots, save under licence from the Financial Secretary, Sudan Government, or his authorised representative.

TRADE WITH MOROCCO.

The *Board of Trade Journal* states that United Kingdom firms receiving offers of local agents' services to represent their interests in Morocco (including Melilla, Tetuan, Ceuta, and Tangier) are advised to make a personal application for further information on the offers to the Department of Overseas Trade (Development and Intelligence) before any such offer is accepted.

CO-OPERATION IN BURMA.

From the Burma Government resolution on the working of the Co-operative Societies Act, for the year ended June, 1917, it appears that the number of societies in Burma increased from 2,251 to 2,575, the members from 51,356 to 61,105, and the working capital from Rs106.82 lakhs to 150.08 lakhs. The Lieutenant-Governor was glad to note the special attention given to the development of the system of district central banks. The application of co-operation to schemes of land colonisation continued to be successful and areas in Upper Burma were settled in this manner.

An interim dividend of 5 per cent. (10s. per share) on ordinary shares has been declared by the directors of Ceylon and Indian Planters Company. Last year the dividend was the same.

The directors of Baracora (Sylhet) Tea have declared a half-year's dividend to date on preference shares of 5 per cent., less tax at 5s. 9d. in £, and final dividend on ordinary shares on account of 1917 of 22½ per cent., less tax at 5s. in £, payable 29th instant.

EGYPTIAN DELTA LIGHT RAILWAYS

THE MORTGAGE COMPANY OF EGYPT, LTD.

The Board having decided to pay a DIVIDEND on the 5% Cumulative Preferred Shares for the half year ending the 30th JUNE, 1918, WARRANTS will be posted on the 29th instant, and the books will be closed from the 17th JUNE to the 30th JUNE inclusive.

17th June, 191 ROBERT W. EGGAR, Secretary.

Digitized by Google

ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Avenue, Thursday.

Business has again been on a very small scale. In Government stocks the demand has continued, and there is a further rise of ½ to be recorded in Unifieds at 89, but sellers are as scarce as ever. In Bank shares the demand for Nationals has been persistent, but without altering the price or leading to much business, as the supply of shares at the present level seems to be very restricted. In Agriculturals a few transactions have taken place round the current price, and the same remark applies to Agricultural Preferences, which latter have been persistently inquired for. A feature has been the rise in Anglo-Egyptian Banks, which are again ½ higher at 16⅞. Land Banks have also risen ⅛ to 6¾ as the result of buying orders from Egypt, but no business has resulted.

In Railways, Delta Lights are 1-16 firmer at 6½, at which price a small transaction was effected. Amongst Land descriptions, Behéra Preferences are 1-16 firmer at 4 5-16, but buyers are finding it impossible to obtain shares. New Egyptians have been a feature, rising 9d. to 17s. 7½., on the issue of an exceedingly satisfactory report and the declaration of a dividend of 1s. per share, which is the first dividend since the war. The report confirms the very satisfactory accounts circulated for some considerable time past regarding the present position and the future prospects of this company. In other land shares there has been a certain amount of business passing round current levels, and there are, generally speaking, buyers available where shares are offered.

In Miscellaneous descriptions, Alexandria Waters are unchanged at 11 11-16 xd. Some business has been done in Salts and Sodas, and a feature has been the rise of 1s. 9d. in Khedivial Mails to 40s. 6d., and of 3-16 in the Preference shares to 3 15-16.

Greek securities have continued in strong demand from all quarters, but business has almost been impossible owing to the lack of sellers. The 1881 and 1884 Loans are 2 points up at 64. Monopolies have risen 4 points to 60. Rentes are 1 point higher at 50. and the 1890 loan has risen about 2 points to 61 xd. A further improvement of 2 points has taken place in the 1902 Railway Loan to 66.

BANKING ANNOUNCEMENTS.

ANGLO-EGYPTIAN BANK, LIMITED,

LONDON, ALEXANDRIA, CAIRO, MALTA, GIBRALTAR, TANTAH, MANSURA, BENI-SUEF, ZAGAZIG, PORT SAID, and KHARTOUM.

Subscribed Capital - - £1,500,000
Paid up Capital - - 500,000
Reserve - - - - - 710,000

The Bank undertakes every description of Banking Business on most favourable conditions.

IONIAN BANK, LIMITED.

Incorporated 1839.

SUBSCRIBED CAPITAL - - - £600,000
PAID-UP CAPITAL - - - - 495,580
RESERVE FUND - - - - 75,000

HEAD OFFICE—
28, Abchurch Lane, London, E.C.4.

BRANCHES—
Athens, Patras, Corfu, Cephalonia, Zante, Piræus, Tripolitza, Nauplia, Salonica, Syra, Chios, and Mitylene, in Greece; and at Alexandria, Tantah, Mehalla-Kebir, Mansourah, Fayoum, Wasta, Beni-Suef, Fashen, and Minieh, in Egypt.

Every description of Banking Business undertaken on most favourable terms.

THE IMPERIAL BANK OF PERSIA

(Incorporated by Royal Charter, 1889).

CAPITAL (fully paid) - - - £856,000
RESERVE - - - - - £196,000
Reserve Liability of Shareholders - £1,000,000

London Office: 25, Abchurch Lane, E.C.
Chief Office in Persia: Teheran.

Branches at Anwas, Birjand, Bushire, Hamadan, Isfahan, Kasvin, Kerman, Kermanshah, Meshed, Mohammerah, Nasratabad, Resht, Shiraz, Sultanabad, Tabriz and Yezd. Agency at Busreh.

The Bank is prepared to transact Banking business of every description in and connected with Persia and Mesopotamia; and in London grants Drafts, Telegraphic Transfers, and Letters of Credit, and negotiates or collects Bills on Persia and the Near East.

BANK OF MADRAS

Capital (Fully Paid up) - - Rs.75,00,000
Reserve Fund - - - - Rs.50,00,000

Head Office: MADRAS.

Branches.—Alleppey, Bangalore, Bimlipatam (*Outstation*, Vizianagram), Calicut, Cocanada (*Outstations* Narsapur and Rajahmundry), Cochin, Coimbatore (*Outstation*, Erode), Colombo, Guntur (*Outstation*, Bezwada), Madura, Mangalore, Masulipatam, Negapatam, Ootacamund, Salem, Tellicherry, Trichinopoly, Trivandrum, Tuticorin, and Bellary.

Current Accounts.—Opened on terms which may be ascertained on application.

Fixed Deposits.—The Bank allows interest on Fixed Deposits and receives small sums in Savings Bank. Rules and Terms on application.

Letters of Credit and Drafts.—Issued on the principal towns in India, Burma, and Ceylon.

Government and Other Securities.—Received for safe custody, Purchases and Sales effected and Interest and Dividends Collected and Credited to Account, or Remitted, according to instructions.

Loans and Cash Credits.—Granted, approved Mercantile Bills discounted and Bills of Exchange negotiated.

By order of the Directors,
W. B. HUNTER, *Secretary and Treasurer.*

THE ALEXANDRIA WATER COMPANY, LTD.

NOTES OF THE WEEK.

The fall of the Radoslavoff Cabinet has elicited many protestations to the effect that a change of Government entails no change in Bulgaria's foreign policy. King Ferdinand has hastened to assure the German Emperor that he need have no anxiety on this point, and has received in reply a eulogy of M. Radoslavoff and a testimonial to his own political intentions. M. Malinoff, the new Prime Minister, has very properly deprecated all attempts to prescribe a foreign policy for him before he has had time to take stock of the position. There can be no doubt that the first measures of the new Government must be directed towards providing food for the people and the army. While this task is being completed the Bulgarians will be able to watch developments both in Austria-Hungary and on the Western front. It will be soon enough to consider the question of foreign policy when the new Prime Minister has made his own position in the country secure.

M. Malinoff is a lawyer, not given to many words and well able to keep his own counsel. Before the war he held that Bulgaria's destiny lay in the maintenance of close relations with Russia, her liberator, and as a democrat he admired Great Britain and British institutions. During the last four years he may be trusted to have studied the general trend of events. In common with everyone else he will have noted that Russia's interest in the Balkans has been eliminated for many years, if not for all time. This fact must throw the Balkan States either into the power of Germany and Austria-Hungary or upon their own resources. Bulgaria has had some experience of the former condition, and if M. Malinoff is satisfied with the position, he will have no difficulty in confirming the Central Powers in their hegemony as far as Bulgaria is concerned. On the other hand, having once been interested in democratic institutions, he will recognise that this state of affairs will not be conducive to the spread of democratic principles. But it may be that on this matter his political outlook has changed as a result of the war; on this subject we have no information. On the other hand, if he still remains a democrat at heart and considers that the Balkan States as a result of the war will be thrown almost entirely on their own resources, we may have an explanation of the very pronounced anxiety in Germany over his appointment as Prime Minister.

On two aspects of the situation in the Balkans we have very positive information; first, that the food position in Bulgaria is serious, and secondly, that relations between Bulgaria and Turkey are sufficiently strained to cause annoyance to the Central Powers. Transport difficulties are said to be a prominent factor in the shortage of food supplies. If that is the case, it may be inferred that the subserviency of the Radoslavoff Cabinet caused it to part with both rolling stock and produce for the benefit of Germany and to the prejudice of Bulgaria. This may be one of the matters to engage the attention of the new Government, and German anxiety over the advent to power of M. Malinoff may be based on the fear that a number of arrangements which worked well under M. Radoslavoff will now be subjected to inconvenient, if not actually hostile, investigation.

The trouble between Turkey and Bulgaria was too fundamental to be avoided even by a Bulgarian Government in very intimate association with Berlin. In this connection it is of interest to note the difference between the German official and unofficial versions of the problem. Speaking in the Main Committee of the Reichstag Herr von Kühlmann, the Foreign Secretary, explained the position in regard to the Dobruja. All three allies unanimously considered it fair and just to let the portion of that territory occupied by the allied troops fall to Bulgaria. As, however, this territory was jointly conquered by Germany, Bulgaria and Turkey, it seemed fair that the transfer to Bulgaria should only take place after discussion among the allies. "The discussion with the two Central Powers would offer no difficulties." The position was different between Bulgaria and Turkey, for the latter sought compensation for the considerable sacrifices in blood and treasure in territory that had been ceded by Turkey to Bulgaria on the Maritza immediately before Bulgaria's entry into the war. These concessions had created a highly undesirable frontier, and "no impartial observer could doubt that what had taken place could not be permanent, and that friendly discussion concerning the matter and the clearing up of the position were absolutely essential. Unfortunately," continued Herr von Kühlmann, "there still exist between our allies certain sentimental grievances left by the Balkan War, which make the treatment of such delicate frontier questions appear rather thorny."

The unofficial version of the dispute, which is given in the *Weser Zeitung*, shows even more clearly that German sympathies are wholly with the Turks. Bulgaria is represented as continually expanding her war aims. At first she was going to be content with Macedonia and direct contact with Austria-Hungary. After Roumania's entrance into war she desired first Southern

Digitized by Google

Dobruja, but after the occupation of Roumanian territory to the mouth of the Danube she wished to incorporate the whole of the Dobruja. As a Greater Bulgaria can only be created at the cost of Roumania, Serbia, and Greece, the fear is expressed that Bulgaria may lack the statesmanship required to preserve her from being surrounded by irreconcilable adversaries. But the crux of the situation is shown to be the very explicit objection of Germany—the onus, of course, being put upon Austria-Hungary and Turkey—to having all lines of communication with Constantinople "passing for all time through Bulgarian territory," as would be the case, if the Bulgarians obtained control of the railway to Constanza and of the latter port.

When it is remembered that the Radoslavoff Cabinet was to all intents and purposes the creature of Germany, that King Ferdinand is his own Foreign Minister, and that these differences of opinion between Bulgaria and her partners arose under the late Government; it will be seen that the situation in Bulgaria is fraught with interesting possibilities. If he could have had his own way, M. Radoslavoff would have done nothing to embarrass the Central Powers, his real masters. When he has been forced to make himself a positive thorn in the flesh to them he is removed from office and a successor appointed who has been conspicuous in the past for his lack of sympathy with the Central Powers. King Ferdinand was strictly accurate when he assured the German Emperor that by M. Malinoff's appointment Bulgaria's foreign policy would not undergo any change. Her foreign policy has always been opportunist, and it will remain so. To-day it is clearly the opportunity of the Allies, and it is to be hoped that they are ready to profit by it.

If we may believe a Turkish newspaper, quoted by the *Vorwärts*, Turkey has also been dreaming dreams in regard to war aims. Taken all together, her demands are wonderfully comprehensive. Not only is the *status quo ante bellum* in regard to the Ottoman Empire and Turkish domination in Egypt to be restored, but Turkey is to be handed back Crete, Tripoli, Cyrenaica, and the Dodecanese. Further, she demands "the domination of Turkey over the Black Sea and the placing of all the States bordering that sea under Turkish protection; the placing of an Ottoman prince on the Crimean throne, a German prince in Georgia, and an Austrian Archduke in Armenia as Regents." The formulation of these terms might be held to concern only Turkey; but, unfortunately for Germany, they are introduced by a preamble which points out that, if Turkey had not entered the conflict, the Allies would have been saved five theatres of war, and that this would probably have meant the speedy defeat of the Central Powers. A very sound piece of reasoning. The least, therefore, that the Central Powers can do for Turkey is to see that she gets all she wants out of the war. It would be interesting to know to which demand the German Government feels more favourably disposed: that the war should be continued until Turkey is given all she asks for in Europe, Asia, and Africa, or that Germany should surrender her the Black Sea and its northern and eastern littoral. If the German Imperial Chancellor has time to spare for Turkey from St. Augustine and the annotation of awkward speeches made by his Foreign Secretary, he may be tempted to wonder, with Jehoram, whether a preposterous request is not being made with the object of seeking a quarrel.

The Turkish entry into Tabriz is reported to have been accompanied with typical excesses, which included the sacking of the American and British Consulates and the seizure of the American hospital. For this reason President Wilson is to be asked again to reconsider his decision that war should not be declared by the United States upon Turkey. The American Government can be relied upon to approach the matter from the point of view of the relative advantages to be gained from the two courses rather than of what may or may not be technically a *casus belli*. As the determining consideration when the question was last raised was that, in the event of Turkey wishing to drop out of the war, it would be useful to the Allies to have one of their number who was not actually in a state of war with Turkey, it is clear that the same point holds good still. More, indeed, than ever, in view of the strained relations between Turkey and Bulgaria, and the growing dissatisfaction in the Ottoman Empire with the war.

The announcement that three thousand German troops have landed at Poti, a Black Sea port thirty-five miles north of Batoum, carries the German thrust into mid-Asia an important step forward. Hitherto the German Government has appeared content to accept the Turk as its agent in this part of the world; but either from dissatisfaction with their methods of promoting German interests or because the straining of relations between Turkey and Germany causes Turkish loyalty to be suspect, the work is now to be carried on by the Germans themselves. It was not difficult to find an excuse for the landing of German troops. The appeal of the Georgians, whether official or unofficial, for protection against the Turks, or the propriety of affording help to their allies, the Turks, would do equally well to mask the real intention to establish German domination in the Caucasus, with its important mineral wealth. This new development in the Middle East makes it the more urgent that the Allies should take definite steps to counteract the menace. Fortunately, feeling in Russia is growing daily in favour of intervention, and is perhaps already a long way ahead of the Allies' preparations.

Military operations in Palestine during the past week have again been restricted to air work, with the exception of a cavalry reconnaissance east of the Jordan. This district remains the crux of the position, and until the enemy is definitely dislodged from the Hejaz railway at this point there can be no general advance to any great distance at other parts of the British line. Air attacks, however, to achieve decisive results must be on a big scale and frequent; in this matter General Allenby is up against the inevitable limitations upon his resources.

In the meantime the introduction of settled government in the occupied territory of Palestine is making headway. Civil Courts of Justice are about to be established. The Court of Appeal will be at Jerusalem; it will also sit as a Court of Assize, and go on circuit. For the present there will be two Courts of First Instance—at Jerusalem and Jaffa—with special Courts in the districts (*kazas*) where there is no Court of First Instance. The *personnel*, it is announced by *The Times* from Egypt, will include a certain number of British officers possessing legal experience and knowledge of Arabic, while the staff of the Courts will be reserved as much as possible for the inhabitants. Local law, which will be subsantially unaltered, will be administered, except for special provisions arising from the military operations and the special Turkish legislation.

Two interesting anniversaries occur this week—that of the Battle of Kossovo, 1389, celebrated as the Serbian National Day, and the first anniversary of Greece's entry into the war. The thoughtfulness of the Serbian colony in London in associating with their own national heroes whom they honour each June 28 the British soldiers who laid down their lives fighting on Serbia's behalf will be appreciated throughout the British Empire. The British public is also ready to pay its tribute to the splendid work done by the Greek Army in recovering within the short space of a few months from the demoralisation of the Constantine regime. It has been no mean achievement for an army to pull itself together so rapidly and so effectually that the first anniversary of Greece's entry into the war finds it already with such a notable success to its credit as that won recently on the Skra di Legen.

Last week's meeting of the Indian Section of the Society of Arts afforded Mr. Montagu an opportunity of turning aside for a moment from political and constitutional questions to discuss the economic position of

Digitized by Google

India, which, as we have so often insisted, is of even greater importance. It is satisfactory to be able to recognise that the Secretary of State has grasped the essential points, the excessive dependence of the people on a single source of livelihood, and the paramount need for a large development of industries, and it is perhaps not too much to hope that the impending reforms have been planned, and will be put into execution, in such a way as to help rather than hinder the economic change which will eventually give the people a more generous supply of the essential needs of life.

We do not know whether this opportunity was welcomed by Mr. Montagu, but at any rate his remarks fit in with the present temper of India as indicated in recent cablegrams and displayed at greater length in the mails which have just reached this country. Judging from these sources of information, politics are for the moment "off." The business of the hour is to "boom" the War Loan, and co-operate heartily with the new administrative machinery created as the result of the Delhi Conference, though criticism of this machinery is not entirely ruled out. Politicians have turned their energies to recruiting, and agitation, we are given to understand, is confined to a small and discredited minority. The picture is so attractive that one hardly dares to accept it, but we may at least hope that it represents the most important facts.

All this energy is directed primarily towards helping to win the war, but it must not be forgotten that much of it will yield a second crop in the coming years of peace. Industries which have been created or modernised will not disappear when the immediate need has passed, while any advance which may be made towards clearer economic thinking or saner economic action will constitute a permanent asset. The Publicity Board, for instance, is making a great effort to persuade the people not to hoard rupees, a practice of which the existence, so often denied, is established beyond question by the Currency Returns. Any progress in this campaign will be definitive, and every recruit gained now for the army of investors may be counted on for service in the period of financial stress which almost certainly lies ahead. All such help is given to India as well as to the Empire.

A few words must, however, be said regarding that "discredited minority" which holds aloof from such efforts, or seeks to extort concessions in the hour of need. A prominent Anglo-Indian journal complains that before the Delhi Conference a member of the Viceroy's Council negotiated with the Extremists, and suggests that the bargaining-spirit they displayed was due in part to his exertions. "Negotiating" is a dubious word, and we prefer to think that Sir Claude Hill tried to reason with the malcontents and bring them into line, but in any case the incident shows that the Extremists have had their chance. They have chosen their part with open eyes, and it is now right that they should be told what India thinks of their attitude and conduct.

India knows all about Honours Lists. What is wanted now is a List of Dishonour, perpetuating the fame of those who have failed her in the hour of need. Christendom still reads with contempt of the tribes who nearly thirty centuries ago refused to listen to the call when the young Hebrew nation was fighting for its life, and a woman's fiery eloquence has sufficed to brand Reuben and Gilead, Dan and Asher, with an immortality of shame. Will India not produce a Deborah to mete out the like measure to those unworthy sons who have busied themselves in seeking for political concessions while others jeopardised their lives unto the death?

Admiral Condouriotis, Greek Naval Minister, recently visited the island of Hydra, where so many Greek admirals have had their home, and assisted at the ceremony of depositing in the newly established Ethnological Museum there the heart of Andreas Miaoulis, who was in command of the Greek Navy in the War of Independence from 1822 to 1827. The relic has been till now in the Naval Ministry at Athens.

THE BRITISH IN ATHENS.

(From Our Own Correspondent.)

Athens, June 7.

In connection with the movement towards establishing a British Chamber of Commerce and Club,* and for the extension of British influence in Greece, a proposal has been put forward to establish a boys' school in Athens, to be run on the lines of an English public school. The suggestion proves a popular one. The question arises in the initial stages: how to obtain the necessary funds? But once the school is started there is every hope that contributions to an endowment fund would be received.

There are no two opinions that a British school for boys, run on English lines, with the object of providing a practical education to sons of British residents in Greece and to Greek boys, and under the management of a committee consisting of British officials and members of the colony, would be a distinct success. It should go far towards cementing the ties which already exist between the two nations, and, in due course, of creating in the rising generation of this country a sentiment in favour of British ideals.

The present appears to be the psychological moment for opening the school, and it is earnestly hoped that the Anglo-Hellenic League and other Phil-Hellenes will take up the matter energetically, and initiate an active campaign in England for obtaining contributions to start the school and towards an endowment fund to enable it to become eventually self-supporting.

It is proposed to open a similar school for girls, which, one is justified in believing, would become as popular as a boys' school.

The suggestion that a system of compulsory registration of British subjects abroad should be introduced has met with unanimous approval, as tending to bring the community automatically into touch with the Consulates every year and to promote cohesion.

COUNTERACTING GERMAN PROPAGANDA.

We have made arrangements for forwarding free of charge to our readers pamphlets and other publications dealing with the British and Allied cause. This literature is in many European languages, and certain pamphlets and illustrated publications are also available in a number of Oriental languages. All applications should be addressed to the Editor, The Near East, Devonshire Square, London, E.C.2. Among the most recent publications available for distribution free of charge are the following:—

"The Welfare of Egypt," by J. S. Willmore. A short summary of English administration in Egypt; alluding also to Germany's undermining influence, and the Mussulman's preference for the English rule. 36 pp. London: Hodder and Stoughton.

"Turkey, a Past and a Future," by A. J. Toynbee. Development of the new Turkish Nationalism and of German intrigue in Western Asia. Moslem ideas must prevail. Mesopotamia will develop its resources mainly by colonisation. 79 pp. London: Hodder and Stoughton.

"Germany, Turkey, and Armenia." 125 pp. J. J. Kelliher and Co., Ltd., London. Containing important statements by German missionaries, Danish nurses, German officials, and other foreigners, and extracts from foreign journals prohibited in Germany by the Censor.

"Loyal India," by Lord Hardinge of Penshurst. 15 pp. Sir J. Causton and Sons. On loyalty and service in the Indian Empire.

"The Clean-Fighting Turk." A Spurious Claim. 4 pp. Reprint from *The Times*. This article, written by one who has exceptional experience of Turkish manners and customs, shows that the Turk behaves like a gentleman only when it pays him to do so.

"Horrors of Aleppo," Seen by a German Eye-Witness, by Dr. Martin Niepage. 24 pp. T. Fisher Unwin, Ltd. The author, a teacher in the German technical school at Aleppo, reproaches German diplomacy for non-interference.

"Martyred Armenia." 56 pp. C. Arthur Pearson, Ltd., London. The author, a Bedawi, has acquired from reliable sources and from his own information, a mass of information regarding the atrocities committed by the Turk against the Armenian people. This he resolved to publish to the world, "to defend the faith of Islam against the charge of fanaticism."

"Turkish Prisoners in Egypt." 64 pp. A report by the Delegates of the International Committee of the Red Cross. Extracted and translated from the Official Reports of the Red Cross Society.

* This subject is dealt with fully in the Commercial and Financial Section p. 532).—Ed.

THE CAUCASUS.

A PERSIAN VIEW.

We have received from a Persian correspondent of distinction a note upon the Caucasus, which he requests us to publish. He is of opinion that the articles on this subject that have already appeared in THE NEAR EAST are of much interest, and he adds that in giving publicity to the view he puts forward we shall "render a great service not only to Persia, but also to England and the cause of the Allies." "For," he continues, "the success of our project would thwart the Turks' aim of annexing our former provinces, to which the Ottomans have no right, either historically, ethnographically, or on the grounds of religion—the inhabitants of the old Khanates belonging to the Persian Shiah sect, while the Turks are Sunnis." He adds:—

For some time past the Turks have been making efforts to persuade the Moslem inhabitants of the departments of Baku, Erivan, and Elizabetpol that they belong to the Turanian race and ought to join with the Turks in order to establish, with them, a great Turanian empire. Yet, as a matter of fact, these people are of pure Iranian stock, and their language was Persian until the Mongol invasion of Ghengiz Khan, who compelled them to adopt the language of the invaders. The celebrated poets Abul-Ula and Nizami of Ganja (Elizabetpol), and Khagani and Feleti, of Shirvan, who lived before the Mongol invasion (tenth and eleventh centuries), wrote their poems in Persian; and these treasures of our literature are to-day regarded as classics. Zoroaster was a native of Azerbaijan, and the first Guebres temples were erected near Baku. The three departments already mentioned—Erivan, Elizabetpol, and Baku—subdivided into eight Khanates, were for centuries an integral part of Persia, as is evidenced by the numerous monuments of Persian architecture that are scattered through eastern Transcaucasia.

Since the days of Peter the Great, the foreign policy of the Tsars was based upon territorial expansion towards the South and the East. To obtain their object they paid no respect whatever to the rights of their weaker neighbours. Thus, after a prolonged war, the Khanates of Baku, Shirvan, Shemakha, Ganja, Karabaugh, Shaki and Talish, which formed an integral part of the Persian Empire, were torn from the mother country. (Treaty of Gulistan, 1813.)

Russia did not pause very long at this point, and in 1826 war broke out afresh. In spite of the obstinate defence offered by the Persian troops, vigorously backed by the indigenous population, the Khanates of Erivan and Nakhchivan were conquered in their turn, and annexed to the Russian Empire. The inhabitants, who were for the greater part Moslems, protested, but their protests were ignored. However, a century of foreign domination was not able to efface their legitimate sentiment of loyalty towards their former country, nor to extinguish their hopes of being reunited with Persia.

After the Russian revolution the different Socialists who succeeded one another in power at Petrograd declared repeatedly, *urbi et orbi*, that the various nationalities of Russia had the right to dispose of themselves as they pleased, including the right to separate themselves entirely from the empire of the Tsars. The peoples of the Caucasus were not slow to avail themselves of this right; the Georgians and Armenians formed the Government of Trans-Caucasia, and the Caucasian mountaineers, Cherkesses, Chechenz, and Lesghians united to form a second State. This movement towards general freedom could not leave indifferent the population of the ancient Khanates—which now form the departments of Erivan, Baku and Elizabetpol. They are of the Persian race, and the Persian religion. A strong body of opinion calling for reunion with Persia made itself felt among the inhabitants of these regions without distinction of class. Their ardent hopes are based upon the generous support of the Governments of the Allies, who are fighting for the rights and liberties of oppressed peoples, and on the good will of the neutral nations. They hope that on the conclusion of a general peace the great injustice that has been done them will be repaired.

SCHOOL OF ORIENTAL STUDIES.
London Institution, Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.

For particulars, apply to E. DENISON ROSS, Director.

PROGRESS IN MESOPOTAMIA.

The following extracts are from a letter written by an Englishman in Lower Mesopotamia which has reached this country recently. They are necessarily somewhat disjointed, as the letter was not intended for publication, but they serve to show clearly that Mesopotamia is well on the road to prosperity again; and we may confidently expect that the Arabs will continue to rejoice at the driving forth of the Turk from a region for which he has done nothing, and in which he has always been hated. Whatever fate may be in store for Irak Arabi, it is tolerably safe to say that, if the Turk has any fond hope of the kind mentioned in the first paragraph, it is doomed to disappointment:—

Some people say that the Turks have let the campaign here fizzle out in order that we may clean, sweep, and garnish the country and leave it in good going order for their occupation! Sir William Willcocks' Hindieh irrigation scheme has been put into working order, and it is expected that 200,000 tons of grain will be harvested this year. The taxes on this will cover the whole cost of the capital outlay in one year!

Some of the river gunboats have just been handed over to the Inland Water Transport Department, for towing supplies, grain, etc. So, already, here the sword is, as it were, being turned into the ploughshare, and the wilderness blossoming like the "green bay horse," as the minister read, when he turned over two pages at once.

We are working under the Irrigation Department here; but in this particular area are more concerned, for the present, in protection from flood than in irrigation. . . . The floods have not come very high as yet. They are rather protracted, and although a third rise is now in progress, it seems rather doubtful whether, having dissipated themselves in this way, there will be a very big rise.

SERBIAN REFUGEES IN ALGERIA.

At the beginning of 1917 the number of Serbian refugees in Algeria was 329; now there are only 200. The students who had been placed in the educational establishments of the colony were sent to schools and colleges in France; whilst other Serbians who showed that they could maintain themselves were authorised to leave Algeria. It was intended to send back to the civil administration those Serbs who had been invalided in consequence of wounds received in the war; but this measure was not put into execution, the soldiers in question having been sent to the Kouba After-Educational College. All Serbian refugees, including invalids, sick, children, and those having situations in view, were sent to Algiers. The depots which had been organised earlier at Mers-el-Kebir and at the Philippeville Agricultural School were evacuated.

One hundred and seventeen refugees live at their own expense; they are officials who are being looked after by the Serbian Government, merchants, or landowners in Serbia who have not sought the assistance of the Administration, or agricultural workmen earning sufficient salary to ensure their existence. To all the others, the administration gives a daily allowance, and clothes and shoes are distributed, either free of charge or at a very low price. Finally, a fund was started, the proceeds of which will be distributed to the refugees when they leave for Serbia. They will thus be able, with the small amount which will be handed to them, to make the journey home under the best conditions. This fund amounts at present to about 700 francs. Our Algerian administration (says a Paris contemporary) may be congratulated on the very wise measures which it has taken to come to the aid of our unfortunate allies.

NEW BULGARIAN CABINET.

Under date of June 22 Reuter's Amsterdam correspondent reports:—A Sofia telegram states that the new Bulgarian Cabinet is constituted as follows:—

M. MALINOFF	Prime Minister and Foreign Affairs
M. TAKEFF	Interior
M. LUIPKEKEFF (?)	Finance
M. KOSTORIKOFF	Education
Professor DONALOFF	Justice
M. MADJAROFF	Agriculture
M. MOUCHANOFF	Public Works
Professor MOLOFF	Railways
General RAKA	War

Most of the members of the Cabinet belong to the Democratic Party. General Raka has been up to the present Commander-in-Chief of the Fourth Army; MM. Takeff, Luipkekeff, Mouchanoff, and Moloff were members of the first Malinoff Cabinet, which was n office from 1908 up to 1911.

The *Englishman* tells a good story of a Bengali soldier in Mesopot. He was acting as orderly to a British officer, and when the latter woke at dawn and wanted his bath and shaving water he yelled for his man. There was no answer. So he yelled and yelled until at last another Bengali, a sentry, put his head into the tent and was directed to at once unearth the missing orderly. He went away and returned with the quaint information:—"Mr. Surendranath Bose is also asleep, sir." The Bengali soldiers all politely call one another "Mr."

CORRESPONDENCE.

INDIA'S TEAK-BUILT SHIPS.

To the Editor of THE NEAR EAST.

Sir,—In the present dearth of tonnage which hampers our world-wide commerce, I would ask why it has not occurred to the rulers of British India that she could help materially in repairing the losses caused by the dastardly U-boat campaign. America is building standardised ships galore of pinewood, concrete, and even pumice-stone, but India's untold resources have never been brought to bear on the shipping problem. The teak forests of Burma produce timber of unrivalled quality, which defies the attacks of marine insects. Some of your readers may remember the "convict ship" which arrived in the Thames from Australia about 15 years ago. She had been launched at Rangoon in 1794, and was as sound as when she took the water 110 years previously. The supply of docile and ingenious labour is equally abundant; nor would capital on an adequate scale be wanting. If the Indian Government had been wise in time our mercantile fleet would have been reinforced by at least 100 teak built steamers. But my suggestion does not rest on theory; there is a precedent showing what energy and technical skill can accomplish. In 1777 Colonel Watson, then Chief Engineer in Bengal, obtained a grant of riverine land in Calcutta from Warren Hastings, and set to work excavating a series of dry docks; afterwards adding spacious store-houses and machinery moved by wind-power. He then laid down the keels of several large vessels, and construction proceeded merrily until litigation involved a nascent industry in ruin. The Calcutta Council was rent by faction, and one of the members opposed to Warren Hastings incited a Bengali, whose land formed part of the Government grant, to refuse the ample compensation tendered, and file an ejectment suit in the Supreme Court. It ended unfavourably for the enterprising Englishman, who wound up his business in disgust; not, however, until, within two years from starting, he had launched nine sea-going vessels, all of which proved splendid sailers. Three of them, yclept "Surprise," "Nonsuch," and "Laurel," were engaged for many years in the China trade, and afterwards plied between India and Europe. Anyone who is interested in the episode of Calcutta's mercantile life would do well to consult pp. 152 *et seq.*, Vol. II., of the delightful "Memoirs of William Hickey," lately published by Messrs. Hurst and Blackett.—I am, etc.,

London, June 24. F. H. S.

DISCOVERY AT NICOPOLIS.

The Greek Government has been carrying out excavations upon the site of the ancient city of Nicopolis, in Epirus, and has there discovered the remains of a large Basilica, including important mosaics, one of which depicts over 250 figures of animals, flowers, aquatic plants, and fishes, as well as merely ornamental designs. In addition to these there are two Greek inscriptions containing nine lines of writing. The artistic style of the mosaics recalls that of one recently found by British troops near Gaza, and also the great mosaic unearthed in the crypt of a religious edifice at Maghdeba, in Moab, both of which are dated to about the fourth century.

The first of the inscriptions refers to a house that a Bishop named Dometios built near the sea, and apparently alludes to one of the mosaics. The second speaks of Dometios as Archiereus and of his erecting the Basilica. Several bishops of this Nicopolis are mentioned by patristic authors as attending the great church councils; but Dometios is not named among them, so his name is an addition to the list of these prelates. It is possible that if search were made he might be found alluded to in some manuscript, and this would enable us to fix the period of his office.

The mosaic work is very similar to that in the cathedral of Aquileia, which ornamentation, we know, was of the fourth century, because an accompanying inscription mentions Theodorus Felix, who attended the council at Arles. The use of the title Archiereus, which corresponds to Pontifex Maximus, gives some clue to the date, indicating the end of the fourth century. This word appears also to assign to the prelate of Nicopolis the grade of Archbishop, and so would not have been employed until the city had been politically or ecclesiastically the metropolis. It was so created by Constantine. In one line of the metric inscription the poet utilises a sentence from Homer's Odyssey.

THE ARAB HORSE SOCIETY.

Entries of Arab stallions and mares, colts and fillies are now being received for Vol. I. of the Arab Horse Stud Book; also entries are taken for Arab crosses in Vol. I. of the Arab-bred Register. The society has been formed for the purpose of encouraging the re-introduction of Arab blood into English light horse breeding. List of members of council, application forms for membership, and entry forms for the Stud Book, and all particulars may be obtained from the Secretary, the Rev. D. B. Montefiore, Islip, Oxon.

NEWS IN BRIEF.

Ahmed Zulfikar Pasha, the Sultan of Turkey's son-in-law, has arrived in Berlin.

An American Zionist medical unit for service in Palestine has arrived in England.

The forthcoming re-establishment of Civil Courts of Justice in the occupied territory of Palestine is announced.

According to the *Tägliche Rundschau*, there are seventeen German professors on the staff of Constantinople University.

M. Madjaroff, who is Minister for Agriculture in the new Bulgarian Cabinet, was formerly Bulgarian Minister in London.

Mgr. Parthenyi, the Metropolitan of Sofia and President of the Holy Synod of the Bulgarian Church, has died after a long illness.

In the recent fire at Constantinople about 300 Greek houses were destroyed or damaged, and over 2,000 Greeks rendered homeless.

M. Pashitch, the Serbian Prime Minister, has sent a congratulatory telegram to Signor Orlando on the occasion of the recent Italian victory.

A Sofia telegram says that King Ferdinand has conferred on M. Radoslavoff, the retiring Premier, the Order of St. Cyril, the highest distinction in Bulgaria.

Baron von Kressenstein and Herr von Kardorff have left Constantinople for the Caucasus to investigate the conditions in the three newly-established republics.

The American Minister at Teheran reports that the invading Turkish troops sacked the American hospital at Tabriz and seized the British and American Consulates.

In celebration of the anniversary of the entry of Greece into the war a special service will be held at the Greek Church, Moscow Road, Bayswater, on Sunday next.

Only one candidate entered for the examination Honour School of Oriental Studies at Oxford, A. L. Squire, B.A., Walham College (in Hebrew and Aramaic), and he has obtained a second class.

The *Berliner Tageblatt* says that fourteen delegations of Jewish leagues will shortly go to Constantinople to discuss with the Turkish Government the question of Jewish emigration to Palestine.

The Rome Correspondent of the *Morning Post* states that the Roumanians of Austria-Hungary now in Allied countries are being organised into legions by a committee whose headquarters are at Rome.

The Greek Government decided last week to revoke the State donations of Manolhada estate in the Peloponnesus, and of Gholemi Forest in Macedonia, made in years past to ex-King Constantine. The State will enter on the ownership of the estates at once.

Queen Alexandra's Field Force Fund has received a request from the Indian troops on the Palestine front for a gift of tennis balls, illustrated papers, magazines, and literature. A large supply is needed, and it is hoped that the appeal will meet with a generous response.

At the monthly general meeting of the Zoological Society special attention was directed to two Grecian ibexes, born in the menagerie; to a ruby-throated warbler from India, presented by Mr. W. H. St. Quintin, F.Z.S.; and to an Indian chameleon from Calabar, presented by Mr. A. M. Kinloch, new to the collection.

At Buckingham Palace, on Wednesday, the King inspected detachments from two companies of the Indian Labour Corps, under the command of Lieutenant L. R. St. J. Farnon, Indian Army Reserve of Officers, and Second Lieutenant W. J. Park. The men belonged to the United Provinces, and are on short leave from the Western Front.

The total sum received by way of subscriptions to the Central Imperial Indian Relief Fund from the date of its inception up to March 31, 1918, together with the interest earned upon the money placed at fixed deposit, amounted to Rs. 1,62,53,000. The expenditure up to the same date amounted to Rs. 79,80,000, leaving as a balance in hand on that date Rs. 82,70,003.

The Postmaster-General announces that letters, postcards, and telegrams of a personal or domestic nature may now be sent to the civilian population of the occupied territory in Palestine; also parcels of a similar nature or for relief purposes. Remittances may be made by postal order. The rates, to be prepaid, are:—Letters, 2½d. for the first ounce and 1½d. per ounce thereafter; postcards, 1d.; telegrams, as for Egypt (transmission from Alexandria is by post, not by telegraph); parcels, 3 lbs., 3s.; 7 lbs., 3s. 4d.; 11 lbs., 3s. 8d.

It has been decided that officers on the Retired List or the Temporary Non-Effective List (Temporary Half-Pay List) of the Indian Army, who are employed under the War Office, may be promoted up to the rank of major under the time scale of promotion for the Indian Army, counting towards promotion all service which reckoned for promotion before re-employment, as well as service after re-employment. This promotion will have retrospective effect for rank and seniority, but will not carry any increase of pension, temporary invalid pension, or half-pay, and will not involve restoration to the active list of the Indian Army.

STRANGERS' HOME FOR ASIATICS,
WEST INDIA DOCK ROAD, LIMEHOUSE, LONDON, E.
"I was a stranger and ye took me in."
CONTRIBUTIONS ARE SOLICITED from the many who owe fortune or competence to India and China, and will be thankfully received by the SECRETARY or by MESSRS. BARCLAY & CO., LTD., 54, LOMBARD STREET, E.C.

TANGIER TO TEHERAN.

I am indebted to the *Independent*, of New York, for a story that made me smile at a time when I did not feel particularly like smiling. As it concerns a Near Eastern topic, I am at liberty to pass it on. It deals with "The Mysterious Disappearance of Zian Kali," and the *Independent* reminds its readers that "one of the prominent personages concerned in bringing on the Great War has absolutely vanished as completely as though he had never existed. This is Zian Kali who, according to various official documents, was one of the leading spirits in the Serbian conspiracy to assassinate the Austrian Archduke Francis Ferdinand." The article goes on to say that, according to the version of the French Yellow Book as "translated and prepared for Parliament by the British Government," the leaders of the conspiracy, Major Tankosic and Milan Chiganoc, after providing the assassin with revolvers and hand grenades,

"Suborned Zian Kali, pointing out that the two culprits must commit suicide after the crime," etc.

"That," adds the *Independent*, "is all that is said about Zian Kali. We are not told his nationality or what became of him, or why he had to be bribed."

***

The British text, however, is translated from the French. The *Independent*, therefore, reproduces part of the latter:—

"Ils apostèrent Zian Kali avec l'indication que les deux auteurs, après l'attentat, devaient se teur," etc.

And then comes an extract from the Austrian Red Book from which the French version was translated:—

Sie stellten Zyankali mit der Weisung bei, dass sich die Täter nach vollbrachtem Anschlage damit entleiben," etc.

And then, at last, the *Independent* suggests that "a man who did not know anything about the Balkans, but did know a bit about chemistry, would be likely to translate . . . . Zyankali by cyanide of potassium. I suspect that somebody at the Quai d'Orsay is feeling rather sorry for himself just now. "Zyankali" certainly does sound like "one of those queer Balkan names . . . sort of Turkish," as the *Independent* remarks. But it is surely almost cruelty to "rub it in" on the poor Frenchman by concluding the article: "The French Foreign Office missed a cue when they turned cyanide of potassium into a Serbian assassin, for if they had remembered that "Zyankali," *alias* KCN is a derivative of "Prussic Acid" it would have aided them in their effort to trace to Berlin the responsibility for the crime of Serajevo." A miss-cue, indeed, and following on a very "bad break."

***

The Sublime Porte may have lost its original fine flavour, but its sublime cheek appears to be as blooming as ever. At least, that is the impression left on my mind after reading carefully the list of "Turkey's War Aims" as set out in the *Aati* (?Aali) and reproduced in the *Vorwärts*. To ask, at this stage of events, for "the restoration of Turkish domination in Egypt" and "the ousting of all English influence" in Persia is truly great. "The surrender of the occupied territories of Irak, Palestine and the Jezireh" would naturally be welcome to Constantinople; but what about the Arabs, the Syrians, and the Palestine Jews? The idea of Turkish "protection" over "the States bordering the Black Sea" is gorgeously amusing. But it is quite eclipsed by the demand that Turkey's allies shall "see to it that Crete is returned" to her. Why does not the Turkish fleet go out and capture the island—taking in Cyprus at the same time? The much-vaunted Turkish air forces might also conquer the moon, to which, as the emblem of Turkish power, the Sultan surely has a right!

***

I have just read in the *Pioneer* what may safely be described as a chapter of accidents. The hero—and he appears to deserve the title even in these days—is an American of ripe age—97 years, and he is (or was at the time the *Pioneer* published its note) defendant in a shipping case in the Burma Chief Court. That—to one who regards "the Law" as something not worth the expense—seems pretty bad; but it is merely a beginning. The venerable litigant, "just before the case was instituted . . . had a fall in his bathroom and broke two of his ribs"; and it speaks well for his pluck that "though in great pain," he "went a few days afterwards to Moulmein." But in the train "he unfortunately broke two fingers when closing a window of the railway carriage. On his return to Rangoon he was confined to his bed, and," the *Pioneer* adds, significantly, "the case has consequently been postponed." M— only wonder is, that since Fate insists on using both barrels on the unlucky gentleman, he has only *one* case on hand.

CORSAIR.

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

Moslem Mosque, London. June 20.

Major Earl WINTERTON asked the First Lord of the Treasury whether the Government would consider whether, as a tribute to the loyal support and assistance in every respect of Moslems, irrespective of race, throughout the British Empire during the war, financial assistance would be given for the erection of a mosque to serve the interests of the Indian Moslem community in London?

Mr. BONAR LAW: The Government gratefully recognise the conspicuous services rendered by our Mohammedan fellow-subjects, but I am not aware of any reason why our appreciation should take the form suggested. I shall, however, be glad to receive any information on this proposal that my noble friend may care to give me.

Earl WINTERTON: Is it not a fact that Moslems have decided, as a memorial to those of their persuasion who have fallen in the war, to erect a mosque in London?

Mr. BONAR LAW: I was not aware of that. I shall be glad to have details from my hon. and gallant friend.

River Transport, India.

Mr. SHAW asked the Secretary of State for India whether his attention has been called to the strength of the feeling expressed in India in favour of a waterways board to look after the interests of river transport in India; whether he is aware of the delay in dealing with this subject; and what action it is proposed to take?

Mr. MONTAGU: I have no information, but I will inquire of the Government of India what the position is.

Prisoners in Turkey. June 24.

Mr. HOPE, answering a question put by Lieutenant-Colonel Lord Cavendish-Bentinck, said:—The necessary arrangements for the sailing of the repatriation ship, both those with the Turkish Government and those to be made by his Majesty's Government alone, are already complete, in so far as they can be completed at the present time. All that is awaited is, first, notice of the date on which the Turkish Government will have the first 1,000 British prisoners ready for embarkation, and, secondly, the assurance from the other enemy Governments that the ship will not be attacked. On the first point, the Netherland Minister at Constantinople has been requested to press the Turkish Government, and on the second point, the British delegates at The Hague have been instructed to press the German delegates to obtain an early reply from the German Government. A similar request has also been made to the Austrian Government through the Spanish Ambassador at Vienna.

The New Mohur. June 26.

Mr. MONTAGU informed Sir J. D. Rees that the Government of India had made an ordinance authorizing the coinage of 15-rupee gold pieces, and these were now being issued to the public. They were of the same standard weight and fineness as a sovereign. The Bombay branch of the Royal Mint would probably start the coinage of sovereigns at the end of this month.

BETWEEN SYRIA AND THE HEJAZ.

The R.P. Henri Lammens has a paper in the *Bulletin* of the Ecole Français Archeologique du Caire upon "The Ancient Frontier between Syria and the Hejaz," which gives an accurate account of the country between the Jordan and the Sinai Peninsula on one side and North Arabia on the other. Its interest is mainly historical and geographical, but in the concluding pages the author effectively points out, from past history, the region's potentialities, and the importance to Egypt and the British Empire of securing complete possession of the Akaba Gulf and its hinterlands, and restoring to some of their pristine prosperity the many fertile oases and wadis both to the west towards Petra and south-east in the Land of Midian.

Akaba, formerly Aila, was for more than a thousand years a flourishing port, and although much reduced in size, only fell into permanent decay upon the advent of the Turks, who were so fatal to Arabian progress. Its gulf and the Red Sea were once called "The Sea of China," indicating what distant voyages its vessels accomplished; and we know that Solomon kept a fleet of trading vessels at Ezion Geber, which fetched Indian products for his merchants.

The Akaba connection with the Red Sea is of great importance because it is the nearest maritime outlet for the countries north, east, and west of it, and even for Damascus to the Indian Ocean. The ancient Nabateans, Roman Emperors such as Trajan, and the Byzantines used it. It commands all routes except that of Pelusium, from Syria into Egypt, and defends Arabia from attacks from north or west. Abdul Hamid, not long ago, endeavoured to secure it as an embouchure for his Hejaz railway, but we refused permission.

The Germans employed a Turkish professor, an active Teuton and Turanian pioneer, to explore these lands. In his book, "In Nord Hegaz," he says that all these border countries could be colonised, and made to become a most flourishing part of the Ottoman Empire.

It would be quite feasible to restore fertility to Midian and Petra, and the mineral wealth of the former is well known. But the most profitable undertaking would probably be found in working for bitumen around the Dead Sea, where drilling was already being conducted at the outbreak of war. A light railway for oil trucks to Akaba could easily be constructed.

JOSEPH OFFORD.

NEAR EAST BOOKSHELF.

THE COPTS.*

This book contains a picture of the life of the Copts of to-day, and supplies details which supplement Lane's "Modern Egyptians" and Butler's "Ancient Coptic Churches of Egypt." The observers of the past, who have had a better training for ecclesiastical and ethnological observation than Mr. Leeder, have confined themselves too closely to Cairo, and have not devoted sufficient attention to Assiout and other provincial centres where Coptic life and culture is not in such a numerical minority.

The author describes a visit to a rich Coptic squire living in the country; he then deals with the life of an average Copt, taking its various periods in order from birth to death, with the beliefs and observances attendant upon each incident; he next leads his readers to a Coptic Church, describes the plan, fabric, and the ceremonies of the Mass (these last without great liturgical precision), and gives some account of the past history of Christianity in Egypt; then—one of the most interesting sections in the book—relates his visit to the late Bishop of the Fayoum, Anba Abraham, whose saintliness performed some cures and brought about some visions which it is quite impossible to describe otherwise than as miracles; and he ends with a brief description of a somewhat thorny subject, the attitude which the British in Egypt do, and should, take up towards the native Christians.

The volume contains few errors in fact; and those are mostly in liturgical matters, where the author is not quite at home; and indeed it is a difficult and technical subject. There can be no question as to the Invocation (p. 202) over the consecrated Elements: the appeal is that the Holy Ghost may be sent down upon them—there is no thought of an angelic descent at this part of the service, and both the Coptic original and the Arabic translation can have the former meaning alone. Again, the Eucharistic wine (p. 214) is *always* fermented; it may best be compared to a light Malaga, and it is made in much the same way. The prayer of blessing which Anba Abraham said over his visitors (p. 278) may be considerably amended: for "crucifix" read "cross," for "St. Gurgic," "St. George," for "St. Tadros el Mishriky," "St. Theodore the Eastern," for "Viloptaire" "Philopater" (another name for St. Mercurius), for "Aba Boxtor" "Apa Victor." The other corruptions in spelling—natural enough in a prayer locally translated—can be removed at sight.

Mr. Leeder, to sum up, has produced a book which has not, and does not profess to have, very much that is new to the scientific student of the Copts, their language, customs and religion, though there are details here which are not on record elsewhere; but it deserves to command a wide public among those who are in no sense specialists, but have a general interest in the East and the Christianity of the East, and wish to know more of the ways of the almost pure-bred descendants of perhaps the oldest race in the world.

AN INDIAN SAINT.†

Missionary effort has been more fruitful in the Madras Presidency than elsewhere. Ponnamal was a young widow living in one of the many Christian villages which have sprung up under the Church Missionary Society's tutelage. But it is questionable whether any Indian can shake off the iron bonds of caste and custom. Poor Ponnamal dragged out a miserable existence in her father-in-law's house until she was rescued from that purgatory of widowhood by Miss Carmichael. She joined a band of itinerant missionaries, and was afterwards placed in charge of a nursery for female infants whose parents had dedicated them to degrading temple-service. Here Ponnamal's sweet and beautiful nature found the fullest scope. She mothered the forlorn little creatures committed to her charge, and nursed them tenderly during the epidemics which devastated the settlement. Her death from cancer at forty deprived the society of a valued worker. She seems to have belonged to the small group of saints of whom St. Theresa was the finished type; but a sense of humour preserved her from fanaticism. Her brief career proves that Indian women may equal their European sisters in self-devotion and self-sacrifice. But these qualities very rarely find fair play in India, where the male attitude towards woman's claim to self-development is amusingly shown in a letter from "R. M. D." to the *Times of India*, quoted at p. 41:—

My purpos for writin to you this is to inform your many Englis brothers not to give honour and devotion to your ladys, because in the end they will becum proud and then they will want the vote. 2 or 3 thing happen in Victoria Gardens tomorrow (*s.e.*, yesterday), and then I all of a sudden made up my brain to write to you immediate. There was many Englis woman, and when Mans were sitting on bench and womans come, mans stand and give their sit to womans Mans and womans are similar in this world. Then why mens honours woman? If they honours old old womans, one thing; but they honours young young womans. My purpos to write is to inform the Englis *Saheebloks* (*s.e.*, "gentlemen") that when they do this they spoil their feminine lady, and then this lady get proud, and walk like peacock, and ask for vote.

Indian politicians regard Mill's "Essay on Liberty" as their Magna Charta, but are deaf to his pleadings for woman's claim to citizenship.

* "The Modern Sons of the Pharaohs." By S. H. Leeder. (Hodder and Stoughton. 16s. net.)

† "Ponnamal: Her Story." By Amy Wilson Carmichael. (Morgan and Scott, Ltd., 12, Paternoster Buildings, 1918. 4s. net.)

CASSANDRA JUSTIFIED.*

Mr. Blatchford belongs to a small group of writers who, as the great Duke of Wellington used to put it, "are able to see what is happening on the other side of the hill." Twenty years ago he clearly foresaw the German peril, and strove to bring it home to a nation absorbed in the pursuit of pleasure, business, or politics. We have it on the highest authority that a prophet hath no honour in his own country. Mr. Blatchford was dubbed a Cassandra, and his vaticinations fell upon deaf ears. The course of recent history proves that he gauged the situation with marvellous accuracy; and one cannot but regret that his power of expressing sane ideas has never been utilised in the public interest. Major Haldane Macfall opines in a telling foreword to our author's little book that "pacifists would be few and Labour Conferences would have voted right" if Mr. Blatchford had been entrusted with the organisation of a vigorous propaganda. It is proverbially easier to write a book than to christen it appropriately; and he has not been quite happy in his choice of a title for a convincing indictment of Prussia's economic strategy. "General Von Sneak" suggests one side only of her mischievous activities—the incredible treachery of her agents, who wormed their way into our national life in order to destroy it. Mr. Blatchford pursues the "Loathly Beast" in all his manœuvres; and should convince the most hidebound pacifist that a Peace by Agreement would spell ruin for all that civilisation implies. He deserves special credit for disclosing the hidden aims of the Mittel-Europa doctrine, with which Prussian junkerdom is bitten. Its ambition is to consolidate an empire ruled from Berlin, embracing Germany, Austria-Hungary, Bulgaria, and Turkey, which would be linked with Mid-Asia by the Hamburg-Baghdad Railway. But the highway leading eastwards is blocked at a point in the Balkans known as the "Iron Gates." It was in order to appropriate that stretch of Serbian soil, barely thirty-three miles wide, that Prussia let loose the dogs of war in August, 1914. She would evacuate Belgium and Northern France, restore Alsace-Lorraine and the Trentino to their rightful owners, and waive her claim to war indemnities if only she were permitted to hold her gains in the Near East. It is needless to enlarge on the ruin which would befall British India and Egypt should the Prussian nightmare materialise; and no sane man or woman will dispute Mr. Blatchford's thesis—that the ruffians who have engineered the most atrocious war in history must be rendered powerless to work further mischief.

F. H. S.

* "General von Sneak." By Robert Blatchford. (Hodder and Stoughton Price, 2s. 6d.)

4	21	Thursday	25	24

The Roumanian Chargé d'Affaires has left London for the South Coast.

The Earl of Minto spent the week-end at Minto House, Hawick.

M. Constantin J. Diamandy, Roumanian Minister in Petrograd, has left London for Paris.

General Paraskevopoulo, the Commander of the 1st Greek Army Corps, has received the Serbian Order of the White Eagle.

Lord and Lady Barrymore have left 20, Hill Street, Berkeley Square, for Ireland, where they will spend the next few months.

M. Take Jonescu, with a number of his supporters, left Jassy on June 15. It is understood that the destination of the party is Switzerland.

Sir William Garstin was the guest of the King and Queen at a small dinner party given by their Majesties on June 20 at Buckingham Palace.

General Franchet d'Esperey, the new Commander-in-Chief of the Army of the East, on his arrival at Corfu paid a visit to the Prince Regent of Serbia.

On June 24, at the Church of the Holy Redeemer, Chelsea, the marriage took place of Frederick Kennedy Boyd, Indian Civil Service, to Margaret Jean Tarver.

Major Mills, Yeomanry, of Bisterne, Hants, and Taverham Hall, Norfolk, was married at Alexandria on the 16th inst. to Miss Tuck, daughter of Judge Tuck, San Stefano, Alexandria.

On Saturday, at Buckingham Palace, Lord Oranmore and Browne was received in audience by the King, and was invested by his Majesty with the insignia of a Knight of St. Patrick.

Mrs. Carrington Wilde, who underwent a serious operation in the early spring, has now completely recovered, and is able to resume her work for Serbia at the headquarters of the Serbian Relief Fund.

Commander Sir Charles Cust, Bart., R.N. (Equerry to the King), represented his Majesty at the Memorial Service for Admiral Sir Alfred Paget, which was held at St. Margaret's Church, Westminster, last Friday.

The Greek Minister and Madame Gennadius, to celebrate the anniversary of the entry of Greece into the war, held a reception of members of the Greek community and British friends on Thursday afternoon, at the Legation.

The *London Gazette* announces that Professor Mahaffy, C.V.O., has been appointed a Knight Grand Cross of the Order of the British Empire. Professor Mahaffy, who is Provost of Trinity College, Dublin, is a very distinguished Hellenist and archæologist.

On June 20, at the Church of the Sacred Heart, Minehead, the marriage was solemnized of Mr. Douglas MacKinnie Bennett, Sudan Government, son of the late Hon. H. O. Bennett, of St. John's, Antigua, to Miss Cicely Olive Todd, daughter of the late Mr. W. Ansell Todd and Mrs. Todd, of 4, Clifton Hill, Bristol.

A marriage has been arranged, and will shortly take place, between Captain George Nigel Miller, 90th Punjabis, son of the late Charles Samuel Miller and Mrs. Miller, 1, Molyneux Park, Tunbridge Wells, and Dorothea Ella, younger daughter of the late St. George Robinson, of Woodville, Sligo, and Mrs. Robinson, Lumville, The Curragh, Kildare.

Major-General the Maharaja of Patiala had the honour of being received by the King at Buckingham Palace on Thursday last week, when his Majesty invested him with the Insignia of a Knight Grand Cross of the Most Excellent Order of the British Empire; and was invited to luncheon with the King and Queen.

A marriage has been arranged, and will shortly take place, leave permitting, between Major Russell Herbert Skinner, Punjabi Light Infantry, son of the late Colonel Russell Skinner and Mrs. Skinner, 13, Talbot Road, Westbourne Park, and Adeline De Vere, second daughter of the late James De Vere Allen, of Stokesdale, Victoria, Australia.

Lieutenant-Colonel Sir Theodore Morison, who left his work as a member of the India Council in 1915 at the age of 53 to train for the Army, and was gazetted to the Cambridgeshire Regiment, has returned from German East Africa, where he has been employed for the last two years in military, political, and administrative duties, and is spending short leave at his home, Old Avenue Lodge, Weybridge.

The marriage arranged between Lieutenant-Colonel F. C. Clarkson, Indian Medical Service (retired), son of the late Major-General J. P. Clarkson, and Beatrice Mary, only child of Mr. and Mrs. Sidney Barlow, of 4, Tor Gardens, Campden Hill, W., will take place at St. Mary Abbot's Church, Kensington, on Wednesday, July 10, at 2.30. Owing to the war, there will be no reception, but all friends will be very welcome at the church.

Sir John Anderson, of Christchurch Road, Tulse Hill, Surrey, Governor of Ceylon from 1916, left £18,336.

The Hon. Treasurer of the Montenegrin Red Cross and Relief Fund has recently received donations of £1,000 from the Bombay Presidency and War Relief Fund, Bombay, and £100 from the Nizam of Hyderabad.

The Duke of Connaught will open, on July 11, a home for fifty boys, the sons of soldiers and sailors killed or incapacitated, organised at Hornsey by the Waifs and Strays Society as "The Kitchener Memorial Home."

The annual general meeting of the Anglo-Hellenic League will be held at King's College, Strand, on Thursday, July 11, at 5 p.m. The Hon. W. Pember Reeves will take the chair, and Professor Gilbert Murray will deliver a short address.

To-day being the Serbian National Day, the Serbian colony in London have arranged, in the Church of St. Mary-le-Bow, Cheapside, at 11, for the recitation of the Orthodox Requiem Liturgy for the repose of the warriors who fell for Cross and Freedom on Kossovo Field, 1389, and for all Slav and British soldiers who have in this war together laid down their lives for the liberty of mankind. Bishop Bury will assist and speak, and the Lord Mayor and Sheriffs will be present.

APPOINTMENTS, PROMOTIONS, ETC.

General Michel Rashitch has been appointed Serbian Minister of War.

Bimbashi H. G. Ruddock, of the Artillery, has been transferred to Sudan Government.

Bimbashi J. O. Thurburn, M.C., Artillery, has been struck off the strength of the Egyptian Army.

The Hon. Sir Edward Hugh Bray has resigned his seat as Additional Member of the Indian Legislative Council.

The Rev. T. J. Ison, Assistant Secretary, Home Department, C.M.S., has been appointed Chaplain to the Forces in Egypt.

TRAGEDY OF MONTENEGRO,

THE SMALLEST AND POOREST OF OUR ALLIES.

MONTENEGRIN RED CROSS AND RELIEF FUND,

11, VICTORIA STREET, LONDON, S.W.1

(Registered in City of London. Section 1. War Charities 1916)

needs £700 WEEKLY for Feeding Prisoners interned in Austria-Hungary.

Donations will be much appreciated and gratefully acknowledged by the Hon. Treasurer, LADY ROPER PARKINGTON, Claridge's Hotel, Brook Street, London, W.1.

Brevet-Colonel R. Heard, I.M.S., has been appointed Honorary Surgeon to the Viceroy of India in place of Lieutenant-Colonel Bird, I.M.S., deceased.

Colonel Muspratt Williams, R.A., Chief Inspector of Explosives under the Government of India, has been granted one year's extension of his appointment.

Lieutenant-Colonel W. J. Buchanan, I.M.S., and Lieutenant-Colonel Robert Glen have resigned their seats as Additional Members of the Bengal Legislative Council.

The appointment of Brigadier-General Sir William Henry Manning as Governor and Commander-in-Chief of the Island of Ceylon and its Dependencies was gazetted last Friday.

The King has approved the appointment of Honorary Major-General his Highness Maharajadhiraja, Sri Sir Bhupindar Singh Mahindar, Bahadur, G.C.I.E., G.B.E., Maharaja of Patiala, to be Honorary Colonel of the 15th Ludhiana Sikhs.

OBITUARY.

Brigadier-General A. B. C. Williams, C.B., has died at Srinagar, Kashmir. He took part in the relief of Chitral in 1895. After service in China, he acted as Divisional Supply Officer during the operations in the Mohmand country, for which he was mentioned in dispatches.

Lieutenant Evelyn Anthony Cave-Penney, Indian Army, who was killed in action on June 8, was nineteen years of age, and the eldest son of the late Frank Cave-Penney, of Ardfin, Torquay, and of Mrs Cave-Penney, of Rogues' Roost, Ashburton. He served in Mesopotamia, and was present at the battles of Imam Dur and Tekrit. He went to another Eastern front in December last.

Our Cyprus Correspondent writes :—The Greek community of Limassol has lost one of its best-known and most esteemed citizens by the death of M. Andreas Themistokles. who was for many years Head of the High School, and under whom many of the present and rising generation were educated. He studied for some years in Germany, and was an ardent supporter of the "Hellenic" party. He exercised a great influence over his pupils, and was widely respected.

We regret to announce the death, at Edinburgh, on June 15, after a long and painful illness, of Paula Theodora Copeland, M.D. Edinburgh, daughter of the late Ralph Copeland, Ph.D., Astronomer Royal for Scotland and Professor of Astronomy at the University of Edinburgh, and of Mrs. Copeland, 153, Colinton Road, Edinburgh. Dr. Copeland graduated in 1907, and went to India in 1908, where she held a post at the Lady Dufferin Hospital, Agra, for several years, and was subsequently chief physician at the Lady Aitchison Hospital, Lahore, which post she filled until her health broke down. She sacrificed her health and life to her profession and her devotion to duty, and her loss will be keenly regretted.

Lieutenant-Colonel Thomas Pelham Johnson, D.S.O., A.S.C., who died on June 12, was the youngest son of the late Rev. F. A. Johnson, rector of Stratford St. Andrew, Suffolk, and of Mrs. Johnson, of Beccles. He was born on June 16, 1871, and twenty years later he passed out of Sandhurst with honours, and after a few months at Dresden was gazetted to the Bedfordshire Regiment. He went to India in the following year, and served with Sir Robert Lowe's force against the Chitral rising in 1895 as assistant commissariat officer, being awarded the Indian Frontier medal after the storming of the Malakand Pass and the action near Khar at the descent into the Swat Valley. Later he saw service in Uganda and in South Africa, and in the present war he had been at the front since 1914, with very brief intervals.

Lieutenant-Colonel (Temporary Brigadier-General) George Norman Bowes Forster, C.M.G., D.S.O., who was reported missing on April 4, is now reported killed on that date. He was born in 1872. He served in the Nile Expedition of 1898 under Lord Kitchener in the reconquest of the Sudan, for which he held the Queen's medal and the Khedive's medal, with clasps, for Atbara and Khartoum. Later he served with distinction in South Africa from 1899-1902, being mentioned in dispatches and receiving the Queen's medal with five clasps. He went out to France with a battalion of his regiment in 1914, and during part of his time on that front he commanded a battalion. He had been twice wounded, and had been mentioned in dispatches several times. He married, in 1902, Margaret Ethel, elder daughter of Brigadier-General R. A. Gilchrist, Indian Army.

DOMESTIC ANNOUNCEMENTS.

DEATH.

COPELAND.—At Edinburgh, on June 15, 1918, Paula Theodora Copeland, M.D.Edin., late Chief Physician at the Lady Aitchison Hospital, Lahore, India. Deeply regretted.

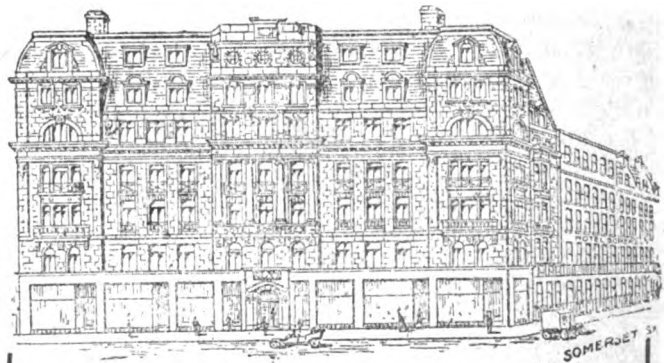
WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.



GHEZIREH CASINO,
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

THE ONLY ENGLISH HOTELS IN ALEXANDRIA.
Proprietor: AUGUSTUS VAN MILLINGEN.

WINDSOR HOTEL
(Facing the Sea, opposite Y.M.C.A.), ALEXANDRIA.
Full Pension, P.T.50; Room, P.T.20;
Lunch, P.T.15; Dinner, P.T.20.
For long stay, apply to the Manager.

SUMMER PALACE HOTEL,
GLYMENOPOULO, RAMLEH.
This Hotel is situated near the Beach. Open all the Year.
Bathing Cabins.
Terms from: Pension, P.T.60; Lunch, P.T.20; Dinner, P.T.25.

NAJEM HOURY'S CYPRUS HOTELS COMPANY.
OPEN ALL THE YEAR ROUND—
NIKOSIA—Cyprus Palace Hotel.
LIMASSOL—Olympus Hotel.
FAMAGUSTA—Savoy Hotel.
FOR SUMMER SEASON—

FRIDAY, JUNE 28, 1918.

AUSTRIA AND AN ODYSSEY.

In these days of great happenings little attention can be given to the doings of any individual body of men; but exception may well be claimed for the remarkable experiences of the Czecho-Slovak army in Russia, in view of the close relationship between this force and the internal situation in Austria-Hungary. At an early period in the war whole Czecho-Slovak regiments were taken prisoners by the Russians, and ultimately, as the war dragged on, asked to be enrolled as fighting units in the Russian army. To understand their action it is necessary to know something of conditions in the Dual Monarchy. The Slav peoples were in the Austro-Hungarian Empire, but never regarded themselves as of it. Although in a majority, they were treated as a subject population, and their existence was a continuous struggle against disabilities and oppression. No secret was made of their attitude by either side; but as they were held in the Monarchy by force, so it was reckoned that by discipline and terrorism they could be made to fight in the Austro-Hungarian army. The military authorities were aware that they could not command their willing allegiance, and various precautions were taken to compel their loyalty. Thus, as far as possible troops from the Italian irredentist territory would be sent to fight on the Russian frontier and Slav troops against the Italians. But in the circumstances of the present war this ideal solution could not be adopted indefinitely. Slav and Czecho-Slovak regiments had to fight in Russia, and when the opportunity presented itself acted as it was expected that they would act. For every case of deliberate desertion, however, there were, no doubt, many instances where Czecho-Slovaks were taken prisoners in fair fight. Once in Russian hands their anomalous position could not fail to secure recognition, and the demand to be allowed to fight on the Russian side followed as a matter of course. We are indebted to the Bolsheviks for the estimate that the Revolution found some hundred and fifty thousand Czecho-Slovak troops in Russia. At first they paid little heed to the movement, but kept to their business of fighting. When, however, it was no longer possible to engage the enemy on the Russian front, they demanded to be sent where they could meet Germans on the field of battle. Before their transfer could be effected the disintegration of Russia had taken place. There could be no question of the side on which these sturdy champions of liberty would range themselves when the true nature of the German-Bolshevik tyranny was revealed; but they had no mind to fight Russians, and were even prepared to consent to disarmament, provided they could be transported to an actual theatre of the war.

It was at this stage that the Czecho-Slovak Odyssey began, the destination being Vladivostok, 5,386 miles from Moscow. The troops were distributed over a considerable portion of Russia, and with the best of good will and some attempt at organisation it might have been possible to transport a hundred and fifty thousand men this distance in two or three months. What happened was that the Czecho-Slovaks were left practically to their own devices, until the fiat went forth, doubtless from the German Higher Command, that their departure was to be obstructed at all costs. Those who were already embarked on the long journey across Siberia found their progress blocked by Red Guards, and at more than one place *en route* have had to fight a passage through the opposing forces. In the chaos prevailing throughout Russia it is easy to conjecture what their experiences were. From the peasantry along the railway route the small detachments could probably count upon being sped forward on their way and food would be forthcoming; but a railway does not run itself, and unless there is unity of control, it must soon cease to perform its function as a line of communication. Already, however, a force of fifteen thousand Czecho-Slovaks is said to have reached Vladivostok, and here they await transport to Europe. To the circumstance that they are almost entirely unarmed we must attribute their omission to lend a helping hand to Colonel Semenoff, who has been holding against considerable odds parts of the railway line along which they travelled. The addition of their numbers to his small following would otherwise have placed him in a strong position, and have paved the way for Japanese co-operation, which, though late in the day, must inevitably be forthcoming. According to the latest reports their compatriots in Western Siberia have fared more successfully, and are now masters of large sections of the Trans-Siberian Railway, to the great satisfaction of the non-Bolshevik population. Of the loyalty of Siberia to the true interests of Russia there can be no question; but the Bolsheviks are in power, and those who are opposed to them have lacked organisation and, it would seem, leadership. The Allies are believed to be waiting until they receive an invitation from a body of men sufficiently representative of Russian opinion to justify their intervention on Russia's behalf. In the meantime, critical weeks and months go by, and Germany has to face only a portion of the strength that is capable of being mobilised against her. The Czecho-Slovaks may be the means of rescuing the Allies from a false position.

From the staunchness of the Czecho-Slovak determination to fight for their liberty we may infer the bitterness of the feeling that Austro-Hungarian government has engendered among the oppressed nationalities. It is the key also to the reports of present conditions in the Dual Monarchy which the authorities can no longer conceal. The Austro-Magyar minority set itself to keep two-thirds of the population in subjection, thereby weakening the physical strength and the morale of the nation. In the hour of trial their criminal policy has reaped its reward. A nation whose soldiers can undergo all that the Czecho-Slovak troops in Russia have experienced and retain their resolve that nothing shall keep them back from fighting their arch-enemy cannot remain unwilling subjects of any Power for ever. The time comes when human endurance is exhausted, and the victims realise that liberty is the only alternative to death. This moment would seem to have been reached by the Slavic races of the Dual Monarchy. Even the Government realises that a solution must now be found for the Slav question, and in its distraction turns from one proposal to another. But between the policy of continued repression and palliatives that have no chance of acceptance by the nationalities concerned, the only middle course is one of heroic measures such as the Hapsburg dynasty cannot yet bring itself to contemplate. Its choice to-day lies between saving a third of its inheritance and the loss of the whole. Time was when more generous treatment of the Czechs and Southern Slav peoples might have kept them within the Empire. But their cup of suffering in this war has been filled too full to make such a solution of the problem any longer practicable. How the end of the present anachronism will come about it is not possible to say; for the fortunes of the German-Magyar residue of the Monarchy will depend in some measure upon political developments in the German Empire. But the ground has been prepared by the Allies' recognition of the Czecho-Slovak National Council and of the Jugo-Slav Committee, while the exploits of their nationals in the Allied armies is an indication that their respective States when formed will be able to render a good account of themselves as the guardians of the peace in South-Eastern Europe.

STRANGE TENANTS.

By Estelle Blyth.

The Moslems have a beautiful story (it is hardly general enough to be called a legend) that by night Jerusalem is guarded by the spirits of those who have loved and served her in the past. These, a great host of invisible but living intelligences, in serried ranks encompass the Beloved City, defending her from the dreaded influences of jinns and all other horrid denizens of darkness. By day her busy citizens can defend her in their waking hours; by night, God, who cares for Jerusalem always, allows the disembodied spirits of her former lovers to defend her. A thought so beautiful and so suggestive is not easily forgotten.

The people of Palestine believe firmly in spirits and apparitions, and a sympathetic attitude towards such beliefs is rewarded by a variety of interesting confidences. From these recollections I will take only such as came within our personal ken.

Exorcising Demons.

A Moslem peasant woman, who daily brought milk and *laban* to an English house, delighted to tell how she had been exorcised by a sheikh and so freed from a demon which had taken possession of her. Her story was perfectly clear and connected. She was sitting in her garden, she said, when a man, very tiny and malformed, and altogether of horrible appearance, suddenly appeared before her and demanded water to drink. Frightened at his uncouth and repulsive aspect, she bade him begone; whereupon he jumped down her throat, and apparently remained there. So far the account of the possessed one. Those who lived with her said that she became subject to strange fits, in which her body grew perfectly stiff, and she would howl, and foam at the mouth, and utter strange wild words in a voice not her own. Of course, this was the demon, declaring his presence. The fits left her exhausted, but absolutely herself again. Her distracted relations sought help from all the neighbouring sheikhs, who consulted together upon this horrible affair, and decided to exorcise the unclean spirit, which, after much prayer and excitement on their parts, was successfully expelled. From that day to the day when we heard the story (a matter of some eighteen months) the woman had been perfectly sane and well.

Far kinder treatment this than what was meted out by some Abyssinian monks to a poor, frail, old woman of their congregation, who was afflicted in like manner. They declared that she must be possessed by a very evil spirit indeed, for she would rave and yell and throw herself about in her paroxysms, and was positively dangerous when the fit was upon her. So, one winter night, during one of those wild storms of rain and howling winds that sometimes vex Jerusalem, they seized her (when the fit was *not* upon her), chained her by hand and foot in their church, and beat her pitilessly by way of taming the demon. Afterwards they opened the doors of the church and turned her out into the cold and exposure of the convent courtyard, still wearing the chains. When morning came, she made her way to an English house close at hand—somehow "England" always means protection to the weak and oppressed—broken, shivering, and bruised, with heavy iron rings on her poor wrists and ankles where the chains had been. She did not claim English sympathy in vain. It is impossible to understand how anyone could have had the heart to touch her, such a thin, bent, little creature as she was, with a wizened, pinched, brown face, and pathetic eyes that seemed to ask always why life for her was what it was.

Is it permissible to mention here that rumours of possession by evil spirits cropped up at one time in a small community of faith-healers of European extraction? I never heard what the symptoms were; but the head of the community having successfully ejected from one member a devil, which he described as "slimy and subtle," next diagnosed one "like a black dog" in another. After wrestling with this undesirable tenant for two hours, during which time he and the victim remained upon their knees, the unfortunate possessed one came to the very sensible conclusion that if there were a devil in her it ought to have come out by then, and if there were not the reverend head of the community had no business to accuse her of harbouring such things.

Delightful things happened in Jerusalem; life at home seems very humdrum in comparison.

"Little People" of the East.

An old Moslem, the step-brother of one of our servants, had an unpleasant experience in that Moslem cemetery on the hill above Jeremiah's Grotto. He fell asleep there towards sundown, and slept on until long after dark, when he suddenly awoke to find himself surrounded by a throng of tiny people whose angry appearance and threatening gestures, albeit they made no sound, frightened him considerably. He tried to break through the ring, first on one side, then on another, but, notwithstanding their diminutive size, their infuriated aspect held him prisoner for some time. At last, seeing that they were beginning to close in upon him, sheer terror enabled him to break through, and he ran for his life, pursued by the little furies to a certain limit, when they vanished. A long illness followed, from which he arose an old and silent man, according to his relations, who said he could hardly be persuaded to talk of his terrible experience.

Hajj —— was a dear od Takroori (Sudanese) of whom we were very fond. He had begun life brilliantly as a slave-raider, but having captured on one occasion a number of little children he was so filled with remorse that he abandoned slave-raiding, placed the little victims in a mission school at Cairo, and eventually took service in an English house at Jerusalem. As a servant he was subject to lapses, but he was the most charming and good old man, and a passionate lover of children. One afternoon in Ramadan, towards sunset, he spread his coat in a quiet corner of the Mosque enclosure, and went to fetch some water to wash his feet before saying his prayers. Returning presently, he found that a white-haired man of very striking and majestic appearance had annexed his quiet corner, and was praying upon his outspread coat. The Hajj was vexed at the intrusion, and asked him to move; but the other only motioned him away with his hand. Hajj then touched him on the shoulder, telling him to move, whereat the stranger turned and looked him full in the face, and disappeared. Hajj said that it was the Prophet Moses whom he had thus irreverently disturbed, and he fell to the ground unconscious. He was found there some little while later and taken home, and on recovering his senses he recounted what had happened. He was deeply penitent for his act of irreverence, and each time he told the story he would conclude by saying that he would not live long after he had incurred the wrath of Moses. As a matter of fact, he died before the year was out.

"Black Magic."

Dealers in black art there certainly were in Jerusalem; we used to hear of them from time to time, though not, of course, from those who actually had resort to them. The most noteworthy case was that of two Jews, a man and a woman, who came from Africa, and who, from all accounts, were thoroughly versed in the dark secrets of their trade. They also dealt in the cheaper and more harmless branches of love philtres and potions of various sorts, and they attracted such a large following of foolish people of all creeds that the Greek and Latin clergy put a very severe ban upon such of their flocks as dealt with them. The sorcerers quietly faded out of Jerusalem, no doubt with well-lined pockets, and the unholy epidemic they had started in the place died down. In passing, I may mention the curious fact that in one of the colonies at Jerusalem certain houses were found to be practising black magic secretly, especially at full moon. The discovery was made quite accidentally by an Englishman, who was instrumental in putting down most of it after a hard struggle; I cannot say for certain that he was entirely successful. No one who has lived in the East will scoff at the assertion that the most unhallowed influences *did* centre in that particular colony; it was one of the few places at Jerusalem through which we never went alone, and we did not pass by it more often than we need. For the inhabitants, who had the reputation of being entirely irreligious, were disagreeable to meet, even casually. Moreover, in that colony was practised a regular system of cruelty to animals that nothing was able to stop. No other colony or quarter, not even the German, had this sinister reputation.

A Latin monk once told us of a house somewhere in Moab which was suddenly taken in possession by evil but unseen forces. The usual course of rappings, levitation, discharge of missiles by unseen hands, disappearances, and so on, was reported, suggesting the presence of mischievous elementals, and eventually the couple whose quiet house was thus tumultuously invaded appealed to the Latin Patriarch for help. After the most careful and minute investigation on the spot, the unseen forces were exorcised, the house was cleansed and blessed, and peace settled upon it once more. The case was filed at the Latin Patriarchate, with all the evidence gathered during a most exhaustive inquiry extending over a period of some months. It was a Latin monk also who once volunteered the curious bit of information that, as a rule, the natives, whether belonging to the Greek or Latin Churches, appeal to the Greek priests to exorcise evil spirits inhabiting houses or individuals. It throws a most vivid light on the conservative habit of the Eastern mind.

Crusaders' Spirits.

One more story occurs to me in closing, though, as the incident took place a few months after we left Jerusalem, it is not, like the rest, a matter of personal reminiscence.

Digitized by Google

Soon after the participation of Turkey in the war, the Turkish officials at Jerusalem took over the various buildings there which belonged to the Allied nations; and the church and monastery of St. Anne were amongst the first to be requisitioned. This very beautiful Crusading church was used by Saladin as a school for the sons of his nobles, and an Arabic inscription that he put up is still in its place over the west door. Since 1856 it has belonged to the French, who were wise enough to accept what had been previously offered to the British, and refused by them, for reasons too foolish to be enlarged on. The Turks used St. Anne's as a barracks, but after a very short time the soldiers in a body petitioned to be removed; it was impossible to sleep there, they said; the place was too full of spirits who were angry at being disturbed, and would not let them rest. The Turkish authorities were too wise to combat such a general protest; they removed the men, and informed the Algerian Fathers that they might resume their property. To this the Fathers very properly replied that they had been dispossessed by force, and the Turkish Government must formally return the property to the French Government, which had been insulted in their ejection. I never heard the conclusion of the matter; but we can be sure that now, under English rule, all is fair and straight again. There is something very delightful in the thought of the spirits of those old Crusaders gathering to defend a church of theirs.

If the people of Palestine feel that you are sympathetic towards them, they will let you into their lives with simplicity and willingness. And, inasmuch as to share another's life is bound to enlarge the outlook of your own, you come to realise ever more and more clearly that the circles of life are connected by many bridges, and that there are in truth more things even in this life than the frozen philosophy of the North cares to admit.

PRESS ON THE NEAR EAST.

Bulgaria's New Cabinet.

The *Times* correspondent formerly in the Balkans, in writing of Bulgaria's new Cabinet, thinks that, if his reading of the situation is correct, "it would appear that the new Government in which the former Russophil party is predominant, will be more heartily disposed to continue an Austrophil and Germanophil policy by prosecuting the war than its predecessor, which represented a coalition of the Radoslavists and Stambolovists, both traditionally in favour of the Central Powers and opposed to Russia. As Russia is no longer a danger to Bulgaria, and as her present rulers have abandoned all claim to Constantinople, the only link which held together the two Russophobe parties has disappeared." He adds:—

Apart from the proposed condominium with Germany, Austria, and Turkey in Northern Dobrudja, which has violently irritated Bulgarian irredentism, the national sentiment has been provoked by the Turkish demand for territorial "compensation" for Bulgarian expansion in the southern portion of that province, while the general discontent has been increased by the food crisis. The troubles which have broken out in Austria may soon find their counterpart in Bulgaria, where the war has never been popular, and would never have been undertaken but for the hope of recovering Macedonia from the Serbs and Greeks with the promised aid of Germany. It must be remembered that Bulgaria entered the present war exhausted by two previous struggles, and war-weariness is universal. It is impossible to say what developments may take place, and the situation needs careful watching.

Freeing the Arabs.

The *Spectator* (June 22) contains an article with the above title, which makes interesting and cheerful reading. A study of the map may be disheartening; for "the blank space is so large compared with the area occupied by our armies," the blank space being, of course, that labelled "Syrian Desert" or "Arabia." But:—

In reality, the situation is far more promising than the map would suggest. In the first place, though the great Arabian Desert, which stretches from the Indian Ocean to the mountains of Armenia and from the Tigris to the Syrian plains, is a region apart, it is by no means self-contained and self-supporting. The Arabs have to trade with the outer world, exchanging their produce for European goods and arms. Their chief markets are in Syria and Mesopotamia, to which they make periodical visits. But the British blockade of Germany and Turkey has closed the Syrian marts, and the occupation of the Tigris and Euphrates Valleys has placed the Mesopotamian marts under British control. The Arabs must now conduct their trade under our supervision. Without our approval, they could import or export nothing of commercial value. The remote oases of Arabia, to which few Europeans have ever penetrated, are as much subject as Berlin or Constantinople to the all-pervading influence of the British Navy. This economic factor, so little regarded, counts for much in the effect which our Eastern campaigns have undoubtedly exercised over the Arab race as a whole. Our armies may be only on the fringe of Arabia, but they impress the Arab, who is above all a keen man of business, by their obvious mastery of his outlets for trade. From the Turk he can get nothing; through the British he can get almost everything that may be imported in time of war. Trade is a great teacher, and the moral of British economic superiority must have been impressed by now on many an Arab tribe that has never seen a British soldier.

The writer then deals with the 'fundamental antagonism" between Arab and Turk, and expresses the opinion that—

the Turk never had much influence over these wandering tribes, and must have still less now that he has little to offer them as a set-off against the solid attractions of our good government in Mesopotamia and our trading facilities. The Arabs, though torn by tribal dissensions, have a strong feeling of kinship and are united by their economic interests. Nomad chiefs who own land in the Tigris and Euphrates Valleys are naturally predisposed to a British occupation which makes their property more secure, and therefore more valuable. One nomad who feels that he has gained by our advent is likely to impress the fact on others, and we may be sure that all Arabia has by now a shrewd idea of the superiority of British control over the misrule of the Turk. These considerations are greatly strengthened by the innate antagonism between Turk and Arab, and by the Hedjaz revolt, which has shown that the Turk, although a Moslem, can be lawfully fought by other Moslems. It will be seen, then, that the British armies in Palestine and Mesopotamia have already exerted a marked influence over the whole of that vast region which separates their fields of action, and that there is nothing fantastic in the programme of freeing the Arabs which General Maude announced at Baghdad.

The Greek Soldier.

Mr. Crawfurd Price contributes to the *Pall Mall Gazette* (June 20) an article, "The New Balkan Crisis," which begins thus:—"It cannot be repeated too often that it is possible for us to force the evacuation of Belgium and restore Alsace-Lorraine to France, and yet lose the war. To-day the Balkan Peninsula is a bridge which links up the Central Empires with Turkey, and which to-morrow, if we do not take heed, may become the pivot of further attempts at world conquest. It must be transformed into a rampart against German aggression." This is sound argument, and if it were not for the fanatical "Westerners," it would be, by now, superfluous to repeat it. But, facts being as they are, Mr. Price's first sentence holds good. What we wish to quote from the article, however, is Mr. Price's estimate of the Greek soldier. He says:—

It has been the fashion with some in this country—a fashion instituted by Bulgarian propaganda—to deride the martial value of the Greek soldier. The answer has been given in the Struma Valley. It is my firm conviction that, given the necessary equipment and the moral encouragement which can only be afforded by a recognition of his vital national interests, the Greek soldier will again win his spurs and play an important rôle in the struggle for the freedom of the Balkan peoples.

Let us remember that hitherto that moral encouragement has been entirely lacking. The baneful influence of Constantine destroyed the very spirit which it is a monarch's duty to uplift. And we ourselves have been far from blameless. We punished the whole nation for the sins of its ruler, whom we alone had the power to remove. We played into the hands of the Germanophil propaganda.

The article concludes:—

Greece can raise an army of 350,000 men—a force sufficient to turn the scale in the Balkans. They are there where they are wanted, and they make no demands on transport save for a few boatloads of munitions. The rapidity with which the mobilisation can be effected and the military value of the troops will largely depend upon national unity and moral, both of which M. Venizelos is now endeavouring to restore with such conspicuous success.

In both of these respects we can and must (in our own interests as much as those of Greece and Serbia) lend valuable assistance. The application of our oft-quoted principles to the Balkan problem, a definite and logical policy in the Near East, coupled with an assurance that the blood-ties of the battlefield will be binding at the Peace Conference—all these things will do much to clear away the aftermath of Germano-Royalist propaganda. Once reassured on these points, the Hellenes may be relied upon to fight and beat the Bulgarians—and that is the common task of the Allies in Macedonia.

MANCHESTER SYRIAN ASSOCIATION.

The Manchester Syrian Association held a very successful meeting last Friday evening, at the Midland Hotel. The meeting was addressed by Colonel Sir Mark Sykes, M.P., Mr. A. Seti, of the London School of Oriental Studies, and Lieutenants Abdu and Hosheimy, of the Army of the Hejaz. At the close of the meeting a resolution was carried with great enthusiasm, recording the deep sense of gratitude to Sir Mark Sykes felt by the Syrians of Manchester for the honour he had conferred on them in coming to Manchester specially to meet them, and for his address. The meeting also asked him to convey to H.M. Secretary of State for Foreign Affairs the respectful gratitude of the Syrian community for the constant interest in the welfare of the Syrians displayed by H.M. Government, and its unbounded loyalty to the cause of the Allies. Subscriptions amounting to £3,200 were announced as offered for medical work and other purposes in the occupied territory in Palestine and Mesopotamia and in the regions operated in by the Hejaz forces.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

I pointed out that the fiasco of the latest Turkish loan would render further assistance from Germany inevitable, and this week we have the news that Javid Bey is to make another of his unwelcome appearances in Berlin. Evidently the leaders of the C.U.P. think that there may not be any undue eagerness on Germany's part to finance them again, and so they are putting up a very pretty piece of bluff by talking of the necessity of reducing their army and not incorporating new drafts if they fail to obtain money. The Turk is, of course, a past-master at diplomacy of this order, and it is all so purposeless, for it is as certain as anything can be that Germany will assist the Sublime Porte again—with credit—on terms. As to the form in which she will lend her credit, I should think it conceivable that she may resort to another theatrical device like the deposit of gold in a safe in Berlin. But whatever its form, we can be sure that no tangible security will be transferred to Constantinople.

***

The land companies were naturally bound to benefit by the existing prosperity in Egypt, and the same tale of increased profit is told at each succeeding general meeting. The latest of these companies to hold its meeting, the New Egyptian Company, has had results fully up to expectations. Mr. A. A. Baumann, the chairman, declared that in the past six years he had not been able to present a better balance-sheet, and he pointed to the fact that the assets now exceed the liabilities by £106,484, equal to 4s. 9d. per share, the excess being represented by reserve from profits on sales of land not yet in cash, £19,284, the capital reserve of £40,398, and the profit and loss account £46,801. Two other items of interest mentioned were the reduction of the debenture debt to £79,650, and the decrease to date of loans on properties in Lower Egypt to £115,525.

***

The company's profit for the year, after charging debenture interest, amounted to £30,171, compared with £9,607 the previous year, to which has to be added the carry forward of £16,630. This sum has been utilised to provide a dividend of 1s. per share, leaving a balance of £30,062. It may be noted that during the year land sales gave increasingly good returns. Thus 531 feddans realised an average of £103 10s. per feddan, and subsequently 916 feddans were disposed of for an average of £116 12s. 6d. per feddan, while from January 1 to April 30 a further 210 feddans were sold at an average of £143 5s. per feddan. The position is thus one which should prove very satisfactory to the shareholders, for obviously a continuance of present conditions will ensure them a larger distribution in the near future.

***

I learn that the Bank of British West Africa, which is to open yet another branch in Morocco, at Marrakech, on July 1, has decided to open shortly a branch at Alexandria. This latest instance of the enterprising policy of this bank is very welcome. No institution has done more for the furtherance of British interests in Morocco and the West coast of Africa, and there is much to be said for extending British intercommunicating banking facilities along the whole of the North African littoral. It is to be hoped that the branch at Alexandria will prove the forerunner of the extension of the bank's activities to other leading centres.

***

An interesting sidelight on the effect of the war on India's industrial development was given by Mr. Montagu in his speech at the Royal Society of Arts last week. He pointed out that the supply of British-made goods having fallen off owing to shipping difficulties and other reasons, they had to fall back on the Indian mills for Army supplies, and the cotton textiles required for Army purposes were now being manufactured entirely in India. "To meet the requirements of a year," he added, "20 million yards of khaki drill, 3½ million yards of khaki drill shirting, and 17½ millions of khaki puggaree cloth had to be made. Six large modern mills are wholly occupied in making materials for tents, and even the khaki dyes used are now obtained to an increasing extent from Indian resources. All this has given a tremendous fillip to the industry, and one may hope that the ground gained will not be lost when peace comes." Mr. Montagu emphasised the fact that what was true of cotton might be applied to other branches of industry, and added that in his visit he was greatly impressed with the demands that met him everywhere that more should be done to encourage the manufacture in India of goods of which India provided the raw materials.

***

I understand that it is proposed to hold an exhibition in Baghdad in August at which examples of local industries will be on view. This will be the first exhibition to be held in Baghdad, and it is hoped that it will serve the useful purpose of affording an indication of the scope and value of the work of native craftsmen. The authorities are to be heartily congratulated on initiating this enterprise, for the exhibition should give great encouragement to the local workers, and should do much to further the re-establishment of Baghdad's local industries, which in past ages were famous for the beautiful workmanship of the objects produced.

At the recent general meeting of the Bank of Abyssinia, held at Cairo, the chairman gave a promising account of the progress of this institution during the past year ended December 31. At the end of the year the bank's holding of dollars, on a valuation of 7.50 dollars per £1, stood at £173,300, against £129,900 at the end of 1916, when the valuation basis was 10 dollars per £1, giving an increased valuation of £43,300, and making a total gross profit of £72,400. The net profit amounted to £59,500, out of which £4,700 is written off for various depreciations, £8,800 is accounted for by the debit balance of 1916, leaving a surplus of £46,300. Finally, it may be noted that the deposits stood at the end of 1917 at £232,900, against £142,300 at the end of 1916, and £144,800 at the end of 1915.

***

I learn that a scheme is under contemplation for producing paper pulp in Burma from the bamboo. A Bombay corporation, the All-India Industrial Syndicate, is responsible for the enterprise. It is intended, I understand, to crush the bamboos into pulp by a special process, and then export the pulp for treatment by the Home paper manufacturers. Probably the undertaking will not be commenced for some months, owing to the necessary preliminary work, and to the difficulty of obtaining machinery.

***

A recent appointment of interest to "Indiamen" is that of Mr. Frederick Palmer, C.I.E., M.I.C.E., of Messrs. Rendel, Palmer, and Tritton, as honorary adviser to the Air Ministry in engineering questions associated with the Department of Works and Buildings. Mr. Palmer was engineer to the East Indian Railway from 1884 to 1901, and was responsible for the construction of the bridge over the River Sone. Subsequently he was chief engineer for a number of years to the Calcutta Port Commissioners.

***

Egypt supplies an illuminating example of the ingenious way in which substitutes have been found for goods unobtainable or only to be procured in insufficient quantities owing to the war. For some time efforts have been made to meet the fuel shortage there by the utilisation of cottonseed oil-cake instead of coal. Egypt produces annually some 85,000 tons of cottonseed oil-cake, for which there is no internal demand, and owing to the lack of shipping there was a great accumulation of the cake, so that its use as fuel solves a double problem. It is stated that 1¾ tons of cottonseed oil-cake are roughly the equivalent of a ton of coal, so that as the cake costs about a fifth of the price of coal it will be realised that there are distinct advantages in its use. Apparently the new fuel is giving satisfaction, for it is reported to be in use in hotels, restaurants, and private houses.

INDIA'S TRADE IN 1916-17.

The annual review of the trade of India is always an interesting document—so far as Blue-books can be interesting—and the present issue, dealing with 1916-17, a period in which the effect of the earlier war conditions on trade and commerce was tending to become more or less stable, while the incidence of the later factors was not yet fully felt, is no exception to the rule. The period was on the whole one in which favourable circumstances held the balance. The monsoon was excellent, and crops were generally better than in the previous year, while wholesale prices for food grains showed a fall of 3 per cent. at the end of March, 1917, compared with the prices of March, 1916, though they marked a rise of 4 per cent. in oilseeds, and of 45 per cent. in cotton. Two other factors are noted in the review; the shortage of tonnage, which severely hampered trade, and financial difficulties owing to the curtailment of Council Bills.

Were the verdict to be given on figures alone it might be said that India's trade during the period in question was remarkably buoyant all things considered, as there was a very marked increase in the trade returns. Imports amounted to £99,748,000, compared with £87,991,000 in 1915-16, an increase of 13.4 per cent.; exports totalled £155,436,000 against £128,356,000, an increase of 21.1 per cent.; while re-exports stood at £5,155,000, against £3,231,000, an increase of 59.6 per cent. These figures have to be read in the light of changing values, however, as the period was one which witnessed a considerable rise in prices, and an attempt has been made in the review to estimate these figures on the basis of the prices obtaining in 1915-16. The result shows that the imports would have been valued at nearly £78,329,000, and the exports at £135,551,000. On the same basis it was calculated that the decrease in imports on account of the decrease in volume was £9,662,000, and the increase in exports owing to the increase in volume was £7,195,000.

As regards the distribution of this trade, it may be noted that the proportion falling to British Empire was less than in 1915-16, but that all the same a record level was reached of nearly £147 millions. The Empire's share in the import trade was less than in the pre-war quinquennium, but even so it represented almost two-thirds of the imports in the year under review, while the percentage of the exports was over 50, against 42 per cent. in the pre-war quinquennial period. The respective figures were £65,580,000 out of £99,748,000 for imports, and £80,925,000 out of £160,591,000 for exports. One other feature in regard to the year's trade demands notice, and that is the marked expansion of Japan's trade with India. The imports from Japan in 1916-17 amounted to £8,889,000, compared with £4,998,000 in 1915-16, and £3,187,000 in 1913-14, while her share of India's exports was £17,652,000 compared with £12,302,000 in 1915-16, and £15,130,000 in 1913-14. This gives Japan the first place in the import trade outside the British Empire, while as regards exports she takes second place to the United States, whose purchases from India are on an increasing scale, and in the year in question totalled £20,787,000, against £14,176,000 in 1915-16 and £14,567,000 in 1913-14.

Imports.

Turning to the analysis of the trade, we find that the chief increases in imports were in cotton manufactures, £6,526,000; motor-cars and cycles, £567,000, paper and pasteboard, £592,000; woollen piece goods, £517,000; mineral oil other than kerosene, £500,000; and hardware, £485,000. The main decreases were in railway plant and rolling-stock, £1,767,000, and sugar £778,000. Imports of cotton manufactures amounted to £35,376,000, against £28,850,000 in 1915-16, the increase being almost entirely due to the rise in values. Only 29,530,000 lb. of cotton yarn were imported, against 40,427,000 lb. in 1915-16, while the figures for Indian production of cotton yarn stood at 680,570,000 lb., against 722,425,000 lb. There was also a decrease in the quantity of all kinds of cotton piece goods, except coloured goods, a decrease, it may be added, which was not borne out by the values. Thus imports of grey goods decreased 26 per cent., but were valued at £11,247,000, a decrease of 7 per cent.; white goods decreased 3 per cent., but were valued at £8,529,000, an increase of 20 per cent.; while the value of coloured goods (whose quantity increased by 27 per cent.) was £10,059,000, an increase of 76 per cent. The share of the United Kingdom in the coloured goods trade was represented by 403,710,000 yards, against 322,530,000 yards, while the imports from Japan rose from 3,349,000 yards to 21,937,000 yards. Imports of cotton hosiery rose from £427,000 to £942,000, Japan supplying 90 per cent. of the goods, while the United Kingdom's share was a meagre 8 per cent.

The quantity of sugar imported in 1916-17 was 440,100 tons, as against 515,900 tons in 1915-16. Java was the principal source of supply, with 377,700 tons, and Mauritius, the Straits Settlements, and Japan with 22,900 tons, 14,800 tons and 11,600 tons respectively accounted for the bulk of the remainder. For the year under review, it may be added, the increase in India's production of cane sugar was estimated at less than 1 per cent. A further decrease took place in the imports of iron and steel, the figures being 257,200 tons, against 424,600 tons in 1915-16, 608,600 tons in 1914-15, and 1,018,200 tons in 1913-14. The United Kingdom's share was 176,700 tons, a decrease of 112,700 tons on the figures for the previous year. Copper imports also showed a further heavy fall, the figures being 1,700 tons, a decrease of 70 per cent. The United Kingdom supplied 63 per cent., and Japan 26 per cent. Sheets for tea chests made up 65 per cent. of the imports of lead; in this case the United Kingdom's share was 83 per cent., while Ceylon was responsible for the remaining 17 per cent.

Imports of machinery amounted to £4,009,000, an increase of 14 per cent. Cotton mill machinery was valued at £858,000, an increase of £58,000, jute mill machinery at £719,000, an increase of £95,000; electrical machinery at £293,000, an increase of £74,000; tea garden machinery at £147,000, an increase of £54,000, and mining machinery at £105,000, a decrease of £27,000.

Exports.

The most important increases in exports were in raw cotton, £6,172,000; hides and skins, including leather, £5,610,000; seeds, £4,214,000; food grains, £3,889,000; jute manufactures, £2,451,000; and cotton manufactures, £2,102,000. The chief decrease was in tea, in which commodity there was a decline of £2,140,000. Jute and jute manufactures comprised 25 per cent. of the exports of Indian merchandise, the value being £38,629,000. Exports of raw jute amounted to 539,800 tons, against 600,100 tons in 1915-16, but there was an increase in value from £10,428,000 to £10,859,000. The figures for jute manufactures, India's chief export, showed a further notable increase at £27,770,000, against £25,319,000 in 1915-16, and £13,499,000 for the pre-war quinquennium. It is pointed out that during the year there were 74 mills at work, while four new mills came into existence.

Cotton exports amounted to £31,297,000, against £23,023,000 in 1915-16. As regards raw cotton, the crops of 1915-16 and 1916-17, which come into the year under review, were both below normal, and so demand exceeded supply, resulting in very high prices, and exports declined to 425,000 tons from 443,000 tons in 1915-16. Japan took 68 per cent. of the raw cotton, Italy 11.4 per cent., and the United Kingdom 9.4 per cent. Exports of cotton twist and yarn amounted to £4,999,000, or £384,000 above the figures for 1915-16, the increase here, as in practically every case, being due to the rise in prices. China, as usual, was India's best customer, taking 135,980,000 lb. out of a total trade of 160,417,000 lb. There was a marked increase in the exports of cotton goods, the amount being 244,745,000 yards, as against 113,465,000 yards in 1915-16 and 90,200,000 yards for the pre-war quinquennium. Aden was again the chief market for Indian cloth, her imports being 58,591,000 yards, against 19,423,000 yards in 1915-16. Persia, Asiatic Turkey, East Africa, the Straits Settlements, and Ceylon also provided growing markets for this commodity.

Exports of food grains showed an increase of 19.6 per cent. on the previous year's figures at 2,914,600 tons, but were still much below normal. Rice exports increased from 1,340,000 tons to 1,585,000 tons, the chief purchasers being the United Kingdom and Ceylon. Wheat was exported to the amount of 733,664 tons, against 652,880 tons, the value being £5,970,000, against £5,627,000 in 1915-16. At the previous year's level of prices the value of the exports would have been higher by £349,000. The harvests of 1915 and 1916 both come into the review, and it is worth noting that as the result of the bad harvest of 1915 exports of wheat from April to August, 1916, showed a marked decrease on the previous figures. The 1916 harvest, however, was good, and the exports of wheat from September to March were above the average of the pre-war quinquennium. As regards other food grains, exports of barley rose 26 per cent. to 209,000 tons, exports of beans were almost doubled, the figures being 68,000 tons, against 34,000 tons in 1915-16; while the exports of grain, owing to the demand from Egypt, increased from 32,500 tons to 38,100 tons.

There was a large increase in the exports of hides and skins, the figures being for raw hides and skins, including cuttings, £9,606,000, against £6,530,000 in 1915-16; for tanned hides and skins £6,212,000, against £3,741,000; and for unwrought and manufactured leather £81,000, against £18,000. Here, again, the increased prices have to be taken into consideration, and the total increase of £3,074,000 is accounted for by this factor to the extent of £2,400,000. The chief feature in the trade in raw hides and skins was the marked increase in exports to the United States. Out of the total exports of 44,700 tons of raw hides, America took 23,000 tons, while her share of the 28,400 tons of raw skins exported was 24,800 tons. The United Kingdom, it may be added, took 7,200 tons of raw hides and 2,000 tons of raw skins. Of the trade in tanned hides, nine-tenths of which consisted of cowhides and the exports of which amounted to 14,000 tons, against 12,000 tons in 1915-16, the United Kingdom took 99 per cent. of the exports. The United Kingdom and the United States were the main buyers of tanned skins, the former taking 5,400 tons and the latter 2,300 tons.

With regard to the tea trade, which was the subject of detailed comment last week, it need only be said that the season was satisfactory, and as regards the rest of the exports it need only be noted that exports of oilseeds increased from 700,000 tons, valued at £6,748,000, to 928,200 tons, valued at £10,962,000, but were still much below the pre-war average, while exports of raw wool amounted to 48,000,000 lb., a decrease of 17,000,000 lb. on the previous year.

INDIAN OPIUM STOCKS IN CHINA.

In the House of Commons on June 20, Sir W. Collins asked the Under-Secretary of State for War whether he had official information to the effect that the whole of the surplus Indian opium stocks had been purchased by the Chinese Government with a view to resale to a syndicate, described as an anti-opium society, thus reviving the opium traffic in China; and, if so, whether his Majesty's Government proposed to take any and, if so, what steps with a view to obviate the revival of the traffic in Indian opium in China?

Mr. Balfour, who replied, said:—His Majesty's Government have received official information to the effect that an agreement has been concluded between the Chinese Government and the Opium Combine for the purchase of the stocks of Indian opium in bond at Shanghai and Canton, but they have no official information as regards the resale of the stocks to a syndicate. His Majesty's Government have not taken any part in, or given any official countenance to, the negotiations which led up to this agreement, but, inasmuch as the stocks of Indian opium which have been purchased by the Chinese Government were imported into China under the terms and during the course of the 1911 agreement, they were unable to prevent the conclusion of this private transaction. The importation of certificated Indian opium into China has ceased to be legal with the expiration on December 31 last of the 1911 agreement. His Majesty's Government, therefore, have no reason to fear that the formation of a Chinese syndicate for the purpose of disposing in China of the stocks of Indian opium remaining unsold at that date in the hands of the combine will lead to a revival of the traffic in opium between China and British India.

BRITISH TRADE WITH GREECE.

Chamber of Commerce and Club for Athens.

(From Our Own Correspondent.)

Athens, June 17.

In January last the British Minister convened a meeting of British residents and British officials in Athens and the Piræus for the purpose of discussing proposals for the extension of British trade and influence in Greece. The meeting was well attended. Earl Granville explained that a memorandum had been drawn up in the Foreign Office on the subject of commercial policy, and an account was given of the various methods employed by the Germans before the war for carrying out their policy of peaceful penetration. His Lordship expressed a wish for closer relations between the Legation and the British colony than had heretofore existed, and he desired to consult the meeting as to the best means of attaining that end. The principal subjects discussed were the formation of a social club and a Chamber of Commerce, and the establishment of British schools;* and committees were formed to deliberate as to the best means of carrying out these proposals and to report at a subsequent meeting.

At the second meeting, which took place on February 19, progress was reported, and it was decided to proceed at once with the formation of a Chamber of Commerce and Club combined, and with a view to raising the funds required for installation and current expenditure it was decided to issue founders' endowment shares of ten pounds each. The work of organisation was proceeded with by the same committee, and the club premises in the Annexe to the British Legation were opened at the first general meeting of the founders, which took place on the King's birthday, June 3, under the presidency of the British Minister, 19 founders being present.

Mr. Waugh, the Commercial Attaché of the British Legation, who has taken a leading part in carrying out the scheme, informed the meeting that British residents in Greece had generously subscribed altogether over £1,000 in founders' shares, and that there had been a satisfactory number of applications for membership, not only in Athens and the Piræus but also from Salonika, Patras, Chios and Samos. He said there had been some misunderstanding as to the combination of Club and Chamber of Commerce, and he had several times been asked whether this was a commercial club. Some people, he said, viewed anything commercial rather doubtfully, and had pictured in their minds the commercial room in a provincial hotel as still to be found in England, where bagmen of the Pickwickian type sit and look at each other's samples. This club, Mr. Waugh explained, would not be like that. It would be called the British Club, and it was intended to be a centre where all Englishmen in Greece could meet, and which they could use as a social club, but at the same time it was intended to be more than that. If it had been suggested to start a social club pure and simple to-day, Mr. Waugh did not think that there would have been a very great response. People would not have felt inclined to subscribe for a club where the only object was recreation and amusement, and he did not think there was a large enough colony to make such a thing possible. It was intended to be a club and a national centre for British people in Greece. It was not an original idea. It was taken partly from watching what the Germans were doing before the war. They had institutions where they could meet, and where every national object of theirs had its headquarters, and where was carried out a great deal of useful work in their own interests. The French did the same thing, and at Constantinople had a very fine building called the "Union Française," where all their firms, committees, and institutions had their headquarters, the Chamber of Commerce among others. The club, Mr. Waugh added, was intended to be a sort of masonic institution, where all Englishmen could meet on equal terms; there must not be any exclusiveness, all Englishmen should be welcome and a spirit of liberal comradeship should exist. As far as the Chamber of Commerce was concerned, it would be in the same building and under the same committee, but for ordinary purposes would be quite distinct. It had two rooms distinct from the other rooms of the club, and there should be no intrusion of the business element into the club rooms.

On the conclusion of Mr. Waugh's remarks, the draft constitution was submitted to the meeting and passed, and the following gentlemen were elected to serve on the committee: Mr. S. de Bilinski, chairman; Mr. E. Bates, hon. treasurer; Mr. H. E. Mountain, hon. secretary; and Messrs. J. Anderson, C. S. Butler, G. Calfoglou, J. McDowall, A. T. Waugh, and C. Whittall. Votes of thanks to all those who had helped in organising the institution were proposed by Lord Granville, and the proceedings then terminated.

The same evening at ten o'clock Lord Granville declared the institution open in the presence of a large gathering. The club will, doubtless, prove of much use not only to the large number of naval, military and civilian officials serving in Athens, but also to officers on leave from Salonika or passing through Athens. The establishment of a British Chamber of Commerce in Greece should go far towards the promotion and extension of British trade in the Hellenic Kingdom.

Constitution of Chamber.

The capital of the Chamber of Commerce and Club is provided by the issue of 100 founders' endowment shares of ten pounds each, to be allotted by the committee to applicants who must be British subjects, British officials or persons nominated by the British Minister.

Firms holding founders' shares may nominate a British subject in their employ to vote in the election of the committee. Founders' shares, in case of death or otherwise, may only be transferred with the approval of the committee, and in any case only to persons qualified as stated above. All British subjects shall be eligible as members on simple application to the honorary secretary, subject to the approval of the committee, which has power to reject any candidate by a majority of votes. The subscription shall be 100 drachmae per annum for British subjects resident in Athens and the Piræus and 25 drachmae for those resident in other parts of Greece and in the United Kingdom or abroad. Members resident in Athens and the Piræus elected after June 30, shall only pay 50 drachmae for that year.

Foreign subjects interested in trade with the United Kingdom shall be eligible for election by the committee to membership of the Chamber of Commerce, but such members of the Chamber of Commerce shall not have access to the club rooms and shall not be eligible to serve on the committee. The subscription for these shall be 50 drachmae for residents in Athens and the Piræus and 25 drachmae for residents elsewhere.

The officers of His Majesty's ships and of the British army, Auxiliary forces, and Civil Service visiting Athens shall be made honorary members for such period as the committee shall decide. Other British subjects visiting Greece may be introduced by any member with the approval of the committee, and shall enjoy the use of the club rooms on terms to be decided by the committee.

* This subject is dealt with on page 519.

A MOSLEM BANK FOR TUNIS

The Comptoir Commercial Arabe.

An interesting experiment in the financial world of Tunisia (says the United States Consul at Tunis, Mr. Edwin C. Kemp), is the establishment in the Souk-El-Grana, Tunis, of the first Moslem bank in the Regency, the Comptoir Commercial Arabe, whose capital of 400,000 francs (£16,000) is entirely subscribed and managed by Arabs. For the present the bank's activities are limited to mercantile transactions, the capital being too small for a general banking business. The Koranic prohibition of interest is also a delicate matter in a Moslem community so conservative as Tunis, where Moslem depositors sometimes waive the interest on their deposits in the French banks of the city.

The establishment of this bank is also of interest as showing the result of contact with the French in developing the often-denied ability of the Arab to organise. This ability has already been shown in the chain of wholesale and retail grocery stores managed entirely by Djerbians (the Lotus-eaters of Homer), who maintain a successful monopoly of the native trade, and are even taking a considerable share of the European trade, in spite of keen competition from the city's French, Italian, and Jewish grocers.

CROP PROSPECTS IN ALGERIA AND MOROCCO.

The *Matin* says that according to experts the prospects of the cereal harvest in Algeria and Morocco are very favourable (says a *Reuter* message.) It is estimated that Algeria alone will produce 23,000,000 quintals of grain, which means that North Africa will be in a position to supply several million quintals to the Mother Country.

The Government of India is to undertake a re-survey of the Mayo salt mine at Khewra.

It is stated that during the past two years more than four hundred agricultural machines and appliances have been despatched to Turkey from Germany.

POWER LINE TO MOROCCO.

Regular Service of First-Class Steamers taking cargo to and from **London** and **Rabat, Larache, Tangier, Casablanca, Mazagan, Saffi** and **Mogador.** Loading Berth—Morocco Wharf, Wapping.

ENGINEERING NOTES.

Prospects in Mesopotamia.

It is to be hoped that British manufacturers and exporters are keeping the future possibilities of trade in Mesopotamia well in mind, for it is certain that few regions of the Near or Middle East will offer better prospects for enterprise of the right kind after the war. How rapidly the country repays development has already been fully proved in the brief period that Mesopotamia has been in British occupation. This aspect is well borne out in a recent letter from a correspondent, "Sir W. Willcocks's India irrigation scheme," he writes, "has been put into working order, and it is expected that 200,000 tons of grain will be harvested this year, and the taxes on this will cover the whole cost of the capital outlay in one year!" The fact that this result is being achieved under war conditions speaks volumes for the country's future under proper auspices ...

Motor Cars for India.

Motor car manufacturers would be well advised to spare no efforts to cultivate the Indian market after the war, for recent returns show that the use of the motor car in India has made rapid strides during the last few years. Thus, in 1916-17, 4,778 motor cars were imported, against 3,121 in 1915-16, 2,005 in 1914-15, and 2,800 cars in 1913-14. Almost the whole imports in 1916-17 came from the United States, the figures being 4,169, while the United Kingdom supplied 489. How this compares with pre-war imports can be seen from the figures for 1913-14, when the United Kingdom supplied 1,669 motor cars, against 868 from the United States. In this respect the war has given America a great advantage, and it will take our manufacturers all their time to recover the position lost through war restrictions. In India, as elsewhere in the East, it need hardly be emphasised that attention to local requirements is one of the most important essentials for trade development, and if the competition which has grown up during the war in regard to motor cars and other commodities is to be successfully combated it will only be by the most careful treatment of the market.

Lifting Laid Crops.

Australian ingenuity is responsible for the invention of a device which will be welcomed by every farmer, especially those in the East, where unreasonable winds and rains frequently lay the crops flat and harvesting becomes tedious and disappointing. This device is for picking up crops laid flat by wind and rain, and is in the shape of a false comb for attachment to any stripper, harvester or reaper thrasher. It is claimed that the merit of the design lies in a wonderful flexibility and free movement of the prongs forming the comb, and the fact that any prong broken or bent can be replaced by a "spare" in less than a minute.

Radiator Tablets.

It is most important that the cooling system of an internal combustion engine should be kept at its maximum efficiency, and this can only be obtained by the prevention of "fur" or scale forming on the walls of the water-jackets or in the radiator. At an interesting demonstration, which was recently given before the Junior Institution of Engineers, showing how hard water can be rendered innocuous in its depositing of scale on the walls of radiators and jackets, some tablets were employed for the purpose which, according to subsequent reports, proved very successful. They are, it appears, specially made by a British firm, and should undoubtedly meet with a good reception in the Near East, where hard water has often been responsible for accidents to engines and boilers.

Aluminium Coating.

By a new process recently invented, aluminium can be fixed securely to cast-iron, yielding a surface equal to rolled aluminium. The iron article is first galvanised or tinned, and then dipped in molten aluminium at 700°—800° C. Whilst so immersed the surface of the work is swept by steel brushes, with the result that the tin or zinc passes into the molten aluminium and is replaced by aluminium on the surface of the iron. Two or more aluminium dipping baths may be employed, but most of the tin or zinc remains in the first bath. Excellent adhesion and freedom from corrosion are claimed, and the total cost of the coated work shows a saving as compared with solid aluminium.

OLIVE CULTIVATION IN BALUCHISTAN

The Forest Administration in Baluchistan refers as follows in its report for 1916-17 to attempts that are being made to bud the wild olive trees, which are plentiful in certain parts of the country, with buds from European olives:—About 200 European trees were imported from the South of France in 1910 and planted at Fazil Kach and at Turwekan in a pass in the mountains between Hurani and Loralai, in order to give a plentiful supply of buds for the wild trees in the neighbourhood. These imported trees have grown well and they fruited in 1916. The fruit was large and seemed to contain plenty of oil. In 1911 a number of old wild olive trees were cut down in order to produce by coppicing from their stumps young shoots fit for budding with the European olive. In 1914 these young wild olive shoots were ready and were budded in May. It turned out, however, that this was a little late in the year. Moreover, for the olive the best bud appears to be the "resting bud," which should be put in in September. Only eleven out of the 100 buds put in in May, 1914, were successful. A few others have been tried in subsequent years, and there are now in all about 50 wild olive shoots budded with the European olive. The budded portions are growing vigorously and should give fruit in a year or two. If it turns out that these budded wild olive shoots give, like the European plants from which they were taken, good, large fruit containing plenty of oil, it will then be worth while pushing the experiment forward on a great scale, and the eye of imagination can foresee that a flourishing olive-oil industry may arise in Baluchistan. There are numerous streams near the wild-olive belts which could be used for turning mills to crush out the oil. Experiments similar to the Baluchistan experiments are being carried on in Kashmir and the Punjab Salt Range; and when the time comes for the budded trees to bear fruit, the results in these places will be compared with the Baluchistan results.

LANCASHIRE COTTON.

Position Unchanged.

(From Our Own Correspondent.)

Manchester, Wednesday.

In many respects the market during the past week has been in a waiting attitude, and fresh features of importance have been scarce. Producers remain in a very strong position, as there is very little yarn and cloth offering, and spinners and manufacturers who can deliver quickly can dictate terms of fresh contracts to their customers. In spite of the probability of a large American crop next season prices continue to be maintained in both New York and Liverpool. A little uncertainty exists as to the position of the Egyptian growth. Certain telegrams of a rather adverse character have not been confirmed, and it is believed here that the plants are doing generally well. Prices in Egyptian yarns have again gone against buyers. Producers are in a very strong position. Many sellers are quite indifferent as to booking fresh orders for some time to come. No development has occurred in the demand in piece goods for Egypt. Resales have again been reported. Prices in Cairo are said to be not so satisfactory as a few weeks ago. Leading shippers to India have adopted a waiting policy. A little more inquiry has been mentioned in dyed sorts for China. The inquiry in sized materials for Singapore and Java has tended to fall off. Stock lots have been much sought after by home trade buyers. Extensive contracts have recently been placed in jeans and drills for the Government. American yarns have stiffened in price, but a limited business has been done. There has been no activity whatever in shipping bundles.

USE OF INDIAN COTTON.

At a meeting of the Preston Chamber of Commerce on June 25, Mr. A. O. Goodier, the secretary, referred to the suggestion that an extended use should be made of Indian cotton, and stated that the idea was regarded with disfavour by employers and operatives alike, as it would involve the introduction of new plant and the adoption of new processes in the spinning and weaving sections.

INDIA'S GOLD COIN.

Mr. Montagu, Secretary of State for India, replying to Sir J. D. Rees on June 26, said that the Government of India had made an ordinance authorising the coinage of 15-rupee gold pieces, and these were now being issued to the public. They were of the same standard weight and fineness as a sovereign. The Bombay branch of the Royal Mint would probably start the coinage of sovereigns at the end of this month.

General Allenby notifies the appointment of a Cotton Control Commission of five, of which the Hon. Ronald Lindsay is chairman (says a Reuter message from Cairo dated July 17), in connection with the Government purchase scheme outlined in the official statement issued here on March 12, by which the British and Egyptian Governments, acting in concert, decided to acquire the Egyptian cotton crop from August 1 of this year.

COMPANY MEETING.

New Egyptian.

The annual general meeting of the shareholders of the New Egyptian Company, Ltd., was held on June 25 at Winchester House, Old Broad Street, E.C., Mr. Arthur A. Baumann (Chairman of the company) presiding. The London Manager and Secretary (Mr. Thomas Day) having read the notice convening the meeting and the report of the auditors, the Chairman said: Gentlemen,—I congratulate the shareholders upon the very substantial improvement in the financial position of this company since our last annual meeting. Indeed, since I first took the chair, some six years ago, I have not been able to present a better balance-sheet than that which we lay before you to-day. As there are a great many shareholders who are warrant shareholders, and, therefore, have not received the report and accounts, I will, with your permission, go through the main points as summarily as I can. Our total assets, taken at or under cost, amount to £749,069 odd, while our liabilities amount to £642,584 odd, thus showing an excess of assets over liabilities of £106,484, which is equal to 4s. 9d. per share. This excess of assets is represented by reserve for profits on sales of land not yet in cash, £19,284; capital reserve, £40,398; and profit and loss account, £46,801. Our agricultural land appears at £404,599 for 7,988 feddans, which is equal to £50 12s. 11d. per feddan. The increase in the investments from £973 to £9,048 is accounted for by the purchase of £8,500 Five per Cent. War Loan, and since the close of the financial year, on December 31 last, we have purchased from the trustees for the Debenture holders their holding of £11,500, making £20,000 held at date. It will be seen that our cash at the bank appears at the satisfactory figure of £103,723, which compares with £24,130 last year, and £9,240 the previous year.

Turning to the debit side of the balance-sheet, we have purchased and cancelled since the close of the financial year £25,000 debentures, thus reducing our debenture debt at date to £79,650 as compared with the original issue of £125,000. That, of course, does not appear in the accounts, as the transaction took place after the close of the financial year, but I tell you it for your information. Another important reduction of our indebtedness is the decrease of £12,679 in our loans on our Lower Egypt properties, and since December 31 we have paid off a further £20,823, thus reducing our loans at date to £116,525. The other item which requires, perhaps, some explanation is caution money in respect of sales and leases, £56,026. This represents the cash received in respect of sales of land for which deeds had not been signed at December 31, and cash received on account of caution money and fees in respect of sales in course of negotiation, and deposits received in respect of 1918 leases. Well, gentlemen, the result of these accounts is this, that the profit, before charging debenture interest, amounts to £35,613, as compared with £15,021 last year. The net profit for the year, after charging debenture interest, amounts to £30,171, as compared with £9,607 in the previous year, and with the carry forward of £16,630 the balance to the credit of the profit and loss account amounts to £46,801, from which the directors recommend the payment of a dividend of 1s. per share, or 6 2-3 per cent., less income-tax at 5s. in the £, which will absorb £16,739, leaving a balance of £30,062. The net income derived from the company's estates, notwithstanding the sales of land, amounts to £23,390, as compared with £16,660 last year and £8,443 in the previous year, which is a very considerable advance.

With regard to the sales of land during the year, we sold 531 feddans at an average of £103 10s. per feddan, and a further 916 feddans at an equally satisfactory price, or the more satisfactory price of £116 12s. 6d., but as the deeds were not signed on December 31 the profit on this area has not been taken into the accounts. Thus you will see that we have a good deal to come into the current year. From January 1 to April 30 this year we have disposed of a further 210 feddans at an average of £143 5s., and the demand still continues. I think you will agree with me that this is a very good price to get for the land. The water supply has been, on the whole, remarkably good. This has been largely due to the excellent state of the river, but the better distribution by the irrigation service has had marked effect, and great credit is due to the Government in doing as much as possible in these difficult times, both as regards irrigation and drainage, to assist cultivators. You will see, gentlemen, from this report and the accounts that Egypt has been safe and prosperous during the war. The safety and prosperity of Egypt are due to three causes or factors. No doubt you have read among the items of Turkey's war aims the restitution of Egypt to the Sultan of Turkey. That is an aim which I do not think Turkey will realise, and that Egypt has been so safe and prosperous must be ascribed to the labours and to the prescient statesmanship of Lord Cromer, Lord Kitchener, and Lord Milner. The second cause of the prosperity of Egypt is the extraordinary fertility of that green ribbon which runs through the desert of Egypt. A country which produces cotton, maize and sugar, and which may produce tobacco, is bound, in these days, to be of very great value to the world at large. We ought also, in common justice, to remember that much of this prosperity and of your profits is due to those engineers and financiers who made the great dam at Assouan. But neither a firm and good Government, nor fertile soil, would have filled your pockets had it not been for the great ability and energy of your managing director in Egypt, Mr. Suares, supported, as he has been throughout, by a cheerful, loyal and devoted staff, and we who sit here in London and direct things generally, manage the finances and draw the profits—when there are any—ought to record our sense of the services of the managing director in Egypt and his staff. I now beg to move, gentlemen, "That the directors' report, together with the annexed statement of accounts duly audited, be received, approved, and adopted, and that a dividend of 6 2-3 per cent., or 1s. per share, less income-tax of 5s. be paid."

Mr. T. F. Dalglish: I have great pleasure in seconding that resolution.

Sir Ernest Spencer (Deputy-Chairman): I have great pleasure in proposing the re-election as a director of your chairman, Mr. A. A. Baumann, who retires by rotation. It is not necessary, I am sure, for me to add anything to that resolution, which speaks for itself.

Mr. Edward Nathan seconded the motion, which was unanimously adopted.

Sir Westby B. Perceval, K.C.M.G., said he had great pleasure in proposing the re-election of Mr. Thomas F. Dalglish as a member of the board of directors. The chairman seconded the motion, which was unanimously agreed to.

Mr. Hacking: I have great pleasure in proposing that the auditors, Messrs. Cooper Brothers and Co., be re-elected at a fee of 100 guineas, and while I am on my feet I would like to compliment the management on the very satisfactory report. At the same time, I may say that, after being so long without a dividend, I thought possibly that, with such a good balance-sheet, we could have received rather a higher dividend, but I would not like for one moment to question the wisdom of the directors, and it may be that what they do not pay now they may be able to distribute at some other time. As the chairman has very properly said, I feel that it is a long time since the finances of the company were in so good a condition as we find them to-day. I beg to move the re-election of the auditors. Mr. Macleod seconded the motion.

The Chairman put the motion, which was carried unanimously.

Mr. Hacking: I do not think we ought to separate without passing a vote of thanks to the chairman and to the board generally, and I think it would be well if, from the body of the room, we included in that vote of thanks our appreciation of the services of the management, and particularly of the management in Egypt.

Mr. Macleod seconded the motion, which was passed unanimously.

The Chairman: On behalf of my colleagues I beg to express our appreciation of the vote of confidence and thanks which you have just passed. It is quite true we might have paid you a bigger dividend, and our accounts would have justified it, but the money is there—it has not disappeared—and it will reappear, unless I am very much mistaken, in the shape of dividends, I hope, very soon.

COMPANY NOTES & REPORTS

The report of the Ellawatte Ceylon Tea Estates, Ltd., for 1917 states that the profit for the year was £3,431, and the balance brought forward £1,281, making £4,711. It is proposed to pay a final dividend of 4 per cent. on the ordinary shares, making 10 per cent. for the year, less income-tax, and to carry forward £1,612.

The report of the Scottish Assam Tea Company for 1917 states that estimating unsold portion of crop on what is considered a safe basis total receipts were £41,679, expenditure £30,007, showing a surplus of £11,672; £1,001 was brought in, making £12,673. The directors recommend a dividend at 8 per cent., less tax; to place to reserve £2,000, making £12,000; to special reserve for probable requirements in near future £2,000, and to carry forward, subject to income-tax and excess profits duty (if any), £3,988.

The report of the Telbedde Ceylon Estates, Ltd., for 1917 states that the profit for the year was £9,356 and balance brought forward £3,482, making £12,838. It is proposed to pay a final dividend of 15 per cent. on the ordinary shares, making 20 per cent. for the year 1917, less income-tax, £2,600, and to carry forward £6,038.

The report of the Doolgalla (Ceylon) Company for 1917 states that after writing off depreciation from values of machinery and buildings and small amount of preference dividend, credit at profit and loss is £3,504. In view of the difficulties connected with shipping and exchange, directors do not feel justified in recommending a dividend.

The report of the Upper Assam Tea Company states that profits are estimated at £40,000. Deducting excess profits duty there is left £33,200. After providing for debenture interest and income-tax (£4,890) there remains £21,838. The directors recommend a dividend of 12½ per cent. (2s. 6d. per share), less tax at 5s. in the £, which will absorb £6,765.

The report of the Land and Mortgage Company of Egypt for the year ended March 31 states that the gross earnings amount to £28,442, as against £35,509, and net earnings to £7,410, as against £7,313; £11,259 was brought in, the balance to credit of profit and loss being £18,669. The directors recommend a dividend of 5 per cent. for the year, less tax, and to carry forward £11,169.

The report of the Bombay, Baroda, and Central India Railway Company shows gross earnings Rs.8,08,71,000, against Rs.7,40,76,000, and working expenses Rs.3,57,19,000, against Rs.3,15,76,000. The total net earnings of the whole year 1917-18 amounted to Rs.4,51,52,000 (which compares with Rs.4,25,00,000). The directors recommend the payment in July of a final dividend of 1½ per cent., together with a bonus of 1½ per cent., plus the guaranteed interest for the half-year of 1½ per cent. This makes a return of 6½ per cent. for the year, and compares with 5¾ per cent. for the previous year.

Dividends, Payments, etc.

Telephone Company of Egypt.—Six per cent. (6s. per share), free of tax, on preferred and deferred shares, making 10 per cent. for year; £12,797 to income-tax account; £8,446 for excess profits duty (1916); £111,577 forward. Last year, dividend same; £150,000 to reserve; £87,376 forward. In January, 1918, a resolution was passed for the sale of the company's undertaking to the Egyptian Government.

Egyptian Salt and Soda—Coupon No. 32 of £100.000 First Mortgage Debentures due 30th instant will be paid July 1 by National Bank of Egypt, 6, King William Street, E.C.

British Darjeeling Tea—5 per cent. (1s. per share), less tax (interim), payable at once. Last year, 4 per cent. (paid in March).

Associated Tea Estates of Ceylon.—Dividend on the preference shares for the half-year ended June 30 at the rate of 6 per cent., to be paid on June 29, less tax at 5s. 6d. in the £.

Anglo-Ottoman Tobacco.—Dividends of 6 per cent., less tax, on 6 per cent. Cumulative Preference and Participating shares, and of 10 per cent., less tax, on ordinary shares, payable July 1, against Preference coupon No. 6 and Ordinary coupon No. 5, at the registered office, 39, Duke Street, Aldgate, E.C.

ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Avenue, Wednesday.

There has been a little more doing this week, and the tone has been a good one. This better feeling has no doubt been brought about to a certain extent by the good news from the Italian front. The reports constantly being received from Egypt are also of a very satisfactory nature, and a good many buying orders have been coming from over there.

In Government stocks there are persistent buyers of Unifieds at 89½, at which price some business has been done. But the scarcity of sellers continues, which remark applies equally to Egyptian 3½ Prefs.

In Bank shares a fair amount of business has been doing in Nationals, which have advanced 3-16 to 17¼. Agriculturals have been quiet. Anglo-Egyptian Banks have again been a feature, advancing ⅝ to 17.

In Railways, Delta Lights are 1-16 firmer at 6 9-16. Land shares have been quietly enquired for. Aboukirs are 1s. higher at 22s. 6d. Béhéras have improved ⅜ to 13⅛, and Béhéras Prefs. are 1-16 harder at 4⅜. New Egyptians are 4½ firmer at 17s. 3d. There has been a persistent demand for these shares from Egypt but not much business has been possible as sellers at the present level are rather scarce. Union Foncières are 1-16 up at 3 1-16.

In Miscellaneous shares Alexandria Waters have improved 3-16 to 11⅞, and Salts and Sodas are 1s 3d. up at 39s. 3d. There has been a big demand for Khedivial Mails, which at one time changed hands at 44s., but are closing at 43s.—a rise of 2s. 6d.

In Greek securities the demand has continued, and most prices are again higher. The 1881 and 1884 loans are both a point up at 65. Monopolies have risen two points to 62. Rentes and Larissas are a point higher at 51 and 62 respectively. Fundings have improved two points to 62, and the 1910 Loan has risen a point to 62.

NOTES OF THE WEEK.

Only minor operations in Palestine and along the Macedonian front have been reported during the past week. From Mesopotamia there has been a complete absence of news since the Turkish report of the re-occupation of Kerkuk. In the latter theatre the arrival of summer inevitably limits the activities of both sides, and it will be recalled that there was a long period of quiescence at this season last year. There is, moreover, a close relationship between the situation in North-West Persia and General Marshall's battle front in Mesopotamia. Unfortunately, it is not easy to discover how in existing circumstances the Allies can exercise much influence in the former. Further news of the Turkish advance into Persia is lacking. The United States Government has formally requested Turkey to furnish an explanation of the report that Turkish troops have sacked the American hospital at Tabriz and seized the American Consulate. But a hint to the effect that the attitude of the United States may depend upon the standing of the troops responsible for the outrage suggests the nature of the explanation that will be forthcoming.

All possibility of misunderstanding with regard to the attitude of the United States Government towards the future of Austria-Hungary has been removed by a fresh declaration on the subject of the nationalistic aspirations for freedom of the Czecho-Slovaks and Jugoslavs. In an official statement the Secretary of State calls attention to the attempts made by the Central Powers and others to misinterpret the former announcement, and declares the position of the Government to be "that all branches of the Slav race should be completely freed from German and Austrian rule." There can be no doubt that this unequivocal declaration is a far more satisfactory statement than any other so far issued by the Allied Governments. Neither the Czecho-Slovaks nor the Jugoslavs had been altogether satisfied by President Wilson's previous references to their future, for they claimed to have discovered some subtle differentiation between the Poles and themselves. These misgivings will now be dissipated. The Allies are pledged to such a dismemberment of Austria-Hungary as will leave all the Slavic peoples free to decide upon their own forms of government.

This clear statement of the Allies' resolve, emphasised, as it has been, on the occasion of the presentation of colours to the Czecho-Slovak Army in France, comes at an opportune moment. If it could be brought officially to the notice of the Austro-Hungarian Government and people, it might save them from wasting their time and their hopes on artificial peace offensives at the bidding of Germany. The choice before them is definite—either to continue the struggle until Germany, who is by no means as hard pressed as the Dual Monarchy, admits defeat, or to accept with what grace they can muster the secession of the Slav peoples, who have hitherto been kept in unwilling subjection by the Hapsburg Throne. Other rectifications of existing frontiers will have to follow. The Poles are to be no less free than the Slavs; and, needless to say, the Treaty of Bucharest, 1918, will not be allowed to stand. To-day these declarations on the part of the Allies cannot be dismissed as vainglorious boasts. The announcement of the arrival of a million American troops in France introduces a factor the importance of which will not be lost upon the Central Powers.

Any seeming coldness on the part of the Allies to the cause of the oppressed nationalities of Austria-Hungary has been amply redeemed by the warmth of the ceremony connected with the presentation of colours to the Czecho-Slovak Army in France. This force, as President Poincaré reminded his audience, is comprised entirely of volunteers. Some have already seen service in the French Army, also as volunteers, and have distinguished themselves by their valour in Flanders, Picardy, and Champagne. To this nucleus have been added others—"Czechs incorporated forcibly in the Austro-Hungarian armies, who by unheard-of efforts had succeeded in throwing off the chains, and other Czechs, hastening from all parts of the globe to their brethren's appeal, gradually grouped under the National Czecho-Slovak Council, and ended by forming troops sufficiently numerous and homogeneous to be united in a separate army and to receive a national flag." Nor will it be forgotten that yet other Czech legions are on their way across Siberia to join their strength to this army in France. Welcome as must be the pledges of the Allied Powers, it will mean still more to the martyr nations of Austria-Hungary that their own countrymen are fighting to deliver them from their present bondage.

The situation in the Caucasus has not been rendered more comprehensible by the announcement that the Republic of Azerbaijan, which was reported to have sent delegates to Berlin, is not the Persian Province of that name, but Tartar Azerbaijan, the territory lying south-east of Georgia and bordering upon Persia. Thus, while Georgia is supposed to have placed itself under the protection of Germany, Tartar Azerbaijan comes under

Digitized by Google

Ottoman suzerainty. Apart from the districts of Batoum, Ardahan, and Kars, which are annexed to Turkey, there remains a tract of country mainly inhabited by Armenians. This also is to receive a form of local government under the Turks; but the net result would be, if these arrangements were to hold good for any length of time, that the whole of the territory between the Black Sea and the Caspian would pass under the domination of Germany, to be exploited by her for her own ends in Middle Asia.

The report that the Germans are endeavouring to promote the union of the Bulgarian Church with the Roman Catholic Church does not come as a matter of surprise. A movement in this direction may be said to have been in existence for many years, and in the hurly-burly of Bulgarian politics has never wholly died down. At one time, when it was thought that the removal of the Bulgarian Exarchate from Constantinople to Sofia was necessary in order to curry favour with Russia, the mere mention of the possibility of opening up the way to Rome was sufficient to cause the project to be dropped, as it was realised that the Macedonian Bulgarians, who have never been without their influence in Bulgaria, would not consent to such a step. If the proposal is seriously entertained now, it is difficult to believe that Macedonian approval of it has been secured. On the other hand, the anxiety of the Germans to give a permanent basis to the breach between Bulgaria and Russia by detaching her from the Eastern Church, is at least comprehensible, and the Berlin authorities are not likely to be troubled by any consideration for differences of opinion that may arise among the Bulgarians over the question.

In his speech at the gathering at the Mansion House to celebrate the entry of Greece into the war, Mr. Winston Churchill very rightly made M. Venizelos the central figure. For the rest he drew in clear outline the story of the part that Greece has played in regard to the European struggle. History will surely rank high the attainments of a man who, overwhelmed in the general downfall of the Allied cause in the Near East, has yet within a short time succeeded in rescuing himself and his country from the ruins. The achievements of the Greek Army in Macedonia have shown that M. Venizelos had good material to work with. When a true perspective is possible, therefore, it may be that his greatest claim to the lasting gratitude of his countrymen will be shown to be not the mere routine work of reconstruction in which he has had, as Mr. Churchill pointed out, invaluable assistance from the Allies of Greece, but in the wisdom and foresight which he has brought to bear on Greek policy in connection with European affairs, when the direction of it has been in his hands. He has stood consistently for the unity of the Balkan Peninsula. To this end he called into being the Balkan Federation, and at the beginning of the great war was prepared to recommend a territorial exchange which would give Bulgaria a portion of Greek land, if by so doing the unity of the Peninsula could be secured.

To-day the provocation for any Greek to inveigh against the arch-enemy of his country is strong, and he can hardly be blamed for giving way to it. But we confess to a feeling of regret that the distinguished and honoured lieutenant of M. Venizelos in this country should have taken as his text at the Mansion House the crimes of "the predatory Bulgar" rather than avail himself of a unique opportunity of emphasising for the benefit of the British public, whose knowledge of Near Eastern affairs is altogether inadequate, the community of interest of the Balkan States that is one day to give them as a federation a position in Europe to which individually they can never aspire. M. Gennadius preferred to live in the present than to dwell on the future, and his speech reflected the martial ardour of the Greek troops that has recently carried them victoriously up the Skra di Legen. He uttered an emphatic "Hands off!" to an Ally of this country and of his own. The allusion was plain in the words: "We only ask that the Peninsula may be left alone, free and owned by the peoples of the Balkans. We can expect no sure peace if others seek a footing there." The statement may be very true; but it is the hope and the belief of the Allies of Italy and Greece that the point at issue will be settled amicably between the two countries by an exchange of views between the responsible statesmen.

M. Gennadius pointed out that he was constrained to speak plainly regarding the suggestion that Bulgaria should be satisfied at the expense of Greece and Serbia, adding that he felt confident that "such an iniquity is impossible even as a topic of serious discussion." He is right in supposing that there is not the least chance of Greece being forcibly despoiled by her Allies for the benefit of Bulgaria. But what his audience missed in his speech was the reflection of the breadth of vision shown by M. Venizelos in distinguishing between the essential and the non-essential, and in his readiness to sacrifice the latter provided he could be sure of leaving Greece greater and more prosperous than when he first took charge of her destinies. One thing is certain—the Allies are not minded to incur all the sacrifices they have incurred for the prospect of leaving the Balkans identically the same storm centre as it has been for the last forty years. M. Venizelos in their eyes stands or the hope of better things, and it is a disservice to Greece for anyone to hint that the Balkan States will have learnt nothing and will have forgotten nothing as a result of this war.

In the course of his indictment of Bulgaria, M. Gennadius cited an incident of the summer of 1906, when "the Bulgars in twenty-four hours wiped out the flourishing Greek towns of Anchialos and Stenimachos, simply because they were inhabited by Greeks." The crimes that have sullied the pages of Balkan history are terrible indeed, and there is little likelihood of any attempt being made by Western peoples to exonerate the authors of those crimes. But when it is related that the Bulgarians' "whole history is a succession of pillage, murder and treachery," the British public's present concern is to know what hope there is for such a people in the future, and whether the only remedy offered by those who thus inveigh against them is to exterminate them lock, stock and barrel. Those who are more optimistic regarding the future of the Near East hold that the root of the trouble in the past lay in the tradition of vendetta that had settled on the peoples of the Balkans, so that it was practically impossible to shut off any one incident in a water-tight compartment and to say that on such and such people and on them alone does responsibility rest. The case quoted by M. Gennadius is particularly one to the point. As related by him, it stands forth as an unprovoked outrage that could only be perpetrated by utter barbarians. The Greek Minister, however, omitted to state that the Bulgarians in question deliberately set themselves to wipe out those two villages in July 1906, because they had been worked up into a frenzy by the fate, as reported to them, of their fellow-countrymen a few months earlier at the village of Zagoritchané, near Kastoria.

The story that led to the cold-blooded murders at Anchialos and Stenimachos, as M. Gennadius will recall, was that the village of Zagoritchané had been attacked by Greek brigands, who, in addition to killing women and children on the spot, had led some thirty of the men away to a neighbouring wood, and there cut their throats. We are not concerned with the accuracy in every or any detail of this report; but only mention it as an indication of a state of affairs in the Balkans which makes references to past crimes of no value as a contribution to the future settlement of the Near East. It may be, indeed, that the brigands acted under deep provocation; if it were so, it would still more confirm our contention.

It would not be correct to assert that the impending publication of the Montagu-Chelmsford report has aroused popular excitement regarding the future of the Indian constitution, but at the same time we are glad

Digitized by Google

to recognise that anyone in England who cares about the subject has at last been given reasonable facilities to learn something regarding the issues it involves. In the last week or two there have been quite a number of Indian political articles, more or less illuminating, in various daily, Sunday, and weekly journals, while it must be a long time since any Indian topic was honoured by the almost simultaneous publication of three such books as those by his Highness the Aga Khan, Mr. Lionel Curtis, and Mr. G. M. Chesney. If, as there is some reason to fear, the report itself should turn out to be a somewhat heavy dish, the epicure is thus happily provided with a large and varied choice of *hors d'œuvres*.

A different, if allied, question was raised by *The Times* in its recent article on "a real injustice to India," the gist of which was that the Imperial Conference should take the initiative in obtaining practical recognition of the principle of reciprocity as between India and the Dominions. The reciprocity in question has nothing to do with tariffs, but is concerned with what was until last year the burning question of freedom to visit, or to settle in, any part of the Empire; India has been, and is, open to anyone, but the Dominions are not open to Indians; and one of the outstanding results of last year's Conference was the general agreement that in this matter India and the Dominions should stand on precisely the same footing. Agreement having been reached, the next step is legislation to enforce it, and itis legislation for which *The Times* is pressing.

Obviously the only thing that can be done is to empower India to restrict the admission of citizens from the Dominions. The "Free Nations" already have this power, and are not inclined to surrender it, so reciprocity means that India in her turn should be empowered to close her seaports. It is a little depressing that almost the first move towards the new conditions connoted by the Conference should have to be made in the direction of restricting rather than fostering Imperial intercourse, but we suppose it is inevitable, and we may, at any rate, hope that, if India is given new powers, she will employ them with such wisdom and discrimination as to furnish the rest of the Empire with a bright example of their proper use.

The case against India in regard to slackness in shipbuilding is not quite so black as it was painted in the letter from F. H. S. which we published in our last issue. It is true that an earlier start might have been made with advantage, but the possibilities of rendering substantial help "occurred to the rulers of British India" quite a long time ago, as time is measured now. For some months past there has been great activity in turning out cargo boats on the west coast, small in size, but capable of taking an active part in the coasting trade, and thus releasing larger vessels or easing the strain on the railways; while much more ambitious schemes are in hand, ships up to 1,500 tons are, we believe, actually under construction, and it is now fairly certain that the "national" dream of building steam vessels on the Hugli is, thanks to the Tata Ironworks, within measurable distance of realisation.

The main difficulty in any sudden advance is, as usual in India, the lack of adequate supplies of skilled labour. In the days of which "F. H. S." writes, shipbuilding was still a living art, and the tradition at least of the great Portuguese carracks built at Bassein survived in the Indian seas. A nucleus of skilled shipwrights was then available, and development involved mainly the organisation of unskilled or semi-skilled labour to "dilute," in the modern phrase, the small but efficient existing industry. It was the advent of the iron ship that destroyed the potential resource. The indigenous shipwright, skilled in handling teak-wood, is now scarcely to be found, and the present Controller of Shipping—if that be the precise title—has the more difficult task of creating the industry anew, a task in which he has our most cordial wishes for success.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, June 3.

Entertainment to Wounded Soldiers.

A monster tea party was given by General and Lady Allenby in the Ezbekia Gardens last week to over 500 convalescent soldiers, who were drawn from all the hospitals and convalescent homes in the Cairo district. They were conveyed to and from the Gardens in lorries and trams, and were provided with a most sumptuous tea. For the entertainment of the soldiers a display by the Cairo Fire Brigade had been arranged, and the convalescents, some of whom knew by personal experience what good "fire work" is, thoroughly appreciated the excellent display of the Cairo Fire Brigade, which fully maintained its reputation for efficiency and smartness.

Food and Other Supplies.

The wheat situation continues to improve. Very large supplies have been brought into Cairo by the Government, and the stringency in other towns is reported to have been relieved. The prices of flour have now been fixed for the whole country, and the next step will be the regulation of the price of bread. From what can be ascertained, the wheat crop is a good one, and the supply of breadstuffs will be ample, provided wastage does not take place and distribution is organised.

The Special Military Summary Court instituted in Cairo for dealing with contraventions of the orders of the Supplies Control Board held its first sitting last Friday. There were seven cases before the Court, in all but one of which a conviction was obtained. It is interesting to note that the sitting was attended by a large number of cereal merchants, who, it is to be hoped, will have been duly impressed by the attitude of the Court.

So that there should be no doubt as to the authority under which the Supplies Control Board is acting, and as to the jurisdiction to which persons disobeying its orders are amenable, a notice has been published to the effect that all orders issued by the Board are to be deemed orders under Martial Law, and that anyone guilty of an infringement thereof will be liable to be tried by Military Court.

In view of the fact that there is reason to believe that hoarding has been going on in Alexandria, all inhabitants of that City owning, possessing or controlling more than 10 ardebs of wheat or wheaten flour have been called upon to declare their stocks before the 7th instant. It is expected that large quantities will thus be made available for consumption.

Since the shortage of paper is becoming more acute, and merchants appear to be taking advantage of the difficulty experienced in obtaining fresh supplies from abroad, the Supplies Control Board has intervened, and has issued an order calling upon every person owning, possessing, or controlling any stocks of newspaper, printing, tribunal, writing, foolscap, or typewriting paper and school exercise books exceeding 20 kilos in weight to declare such stocks before June 22.

Department of Public Health.

A special Commission, under Dr. Andrew Balfour, has recently been engaged in looking into the Public Health Administration of Egypt. At its last meeting the Council of Ministers approved the formation of this Commission, which consists of Lieut.-Colonel Andrew Balfour (President), and Lieut.-Colonel C. F. Stammers, Dr. E. S. Crispin, and Dr. C. Todd (members). The Commission is entrusted with the mandate to examine the organisation and duties of the Department of Public Health and its relation to other services of the State, to submit proposals tending to broaden the sphere of action of the department, and to suggest the number and nature of the posts necessary for the proper working of the department. The Commission is debarred from making any nominations to these posts.

The Banknote Issue.

Four days ago the National Bank of Egypt began the issue of P.T. 25 notes, in addition to the denominations already in circulation. Hitherto notes of the value of

Digitized by Google

L.E. 100, L.E. 50, L.E. 10, L.E. 5, L.E. 1, and P.T. 50 only have been issued, and the issue of a note of such a small denomination as P.T. 25 is an entirely new departure, which has been caused by the local shortage of silver coins. The Egyptian Government has done all in its power to meet the demand for silver coinage, and has imported very considerable quantities during the past two years, but the opening up of Palestine, where the Egyptian coinage is legal tender, the growing requirements of the Sudan, and the great prosperity of Egypt have created a demand for silver which even the new supplies from India could not enable the Government to meet. The issue of these and even smaller notes has been under consideration for some time. In fact, the notes have been ready printed for the past year.

Palestine News.

Since May 15 the iron railway bridge across the canal at Kantara has been open to traffic. Passenger trains do not run through yet, but goods booked to Palestine are taken right across from the Egyptian to the Military system. It is interesting to note that passengers from Cairo reach a point near Ramleh, in 13 hours now, and that if a motor is waiting for them they can be in Jerusalem within 15 hours of leaving the Egyptian capital.

It is announced that Gabriel Bey Haddad, who is on the Staff of the Military Government of Jerusalem, has been promoted Major in the British Army. Haddad Bey was for many years in the Public Security Department of the Egyptian Government, from whose service he retired ten years ago. When Borton Pasha was appointed Military Governor of Jerusalem he selected Haddad Bey as one of his principal assistants. Colonel Storrs, who succeeded Borton Pasha, very wisely retained him, for Haddad Bey, in the short time that he has held his new post in Palestine, has succeeded in acquiring great influence over all sections of the population and is proving most invaluable to the Occupied Enemy Territory Administration in the settlement of the many intricate problems which not unnaturally arise in the government of a country like Palestine.

PRISONERS IN TURKEY.

A resolution passed on June 27 by the Executive Committee of the Prisoners in Turkey Committee "begs respectfully to draw the attention of the War Cabinet to the enormous mortality among British and Indian prisoners in Turkey, and to urge that the Ottoman Government be asked without delay to enter into negotiations for a wide exchange of valid prisoners." A memorandum on this subject prepared by the committee states:—

The death-rate of British and Indian prisoners in Turkey has been exceedingly high. Although no exact statistics are available, it would appear from figures given by Mr. Hope in the House of Commons on April 23 that more than half of the British soldiers, and almost as large a proportion of the Indians, have already perished in captivity.

The efforts made by the Central Prisoners of War Committee and others to alleviate the condition of prisoners in Turkey are to a large extent unproductive. Owing to transport difficulties food and clothing either do not reach the camps at all or are many months—even over a year—on the way. The supplies which the Dutch Minister at Constantinople has been able to buy locally seem to be unsatisfactory both in quantity and in quality. Money has been remitted to camps, but owing to scarcity of supplies and to depreciation of the Turkish paper currency its purchasing power is very small. According to recent information bread costs from 2s. to 4s. per lb., sugar about 20s., potatoes about 1s., and other articles are proportionately expensive. In the winter the prisoners suffer severely from cold, because fuel is either unobtainable or beyond the prisoners' means.

The Berne Agreement, recently ratified, provides only for the exchange of civilians, doctors, and invalids. To save further mortality it appears urgently necessary that the Ottoman Government be asked to agree to the exchange of a large proportion of the valid prisoners—say, of those who have been more than eighteen months in captivity. The committee is aware that the exchanges due under the Berne Agreement have not yet been carried out, but it does not consider that further negotiations should be postponed on that account. In view of the difficulty experienced in effecting a transfer of prisoners by sea the committee ventures to suggest that efforts be made to arrange for further exchanges to take place through the lines in Palestine, like the exchanges which were carried out in Mesopotamia in 1916.

GEORGIA AND TRANS-CAUCASIA

(From a Correspondent.)

For the last three months the news from this important bridgehead from Europe to Asia has been of a most confusing nature, partly because the telegraphic lines of communication are controlled by the Bolsheviks and the Turks, partly because of confusion regarding names. One hears announcements about "Caucasus," "Caucasia," "Cis-Caucasia," "Trans-Caucasia," and Georgia. Before going further it is necessary, therefore, to give the correct names. The whole area of the Caucasus, situated between the Black and Caspian Seas, is divided by the chain of the Caucasian Mountains into two distinct parts—North Caucasia and Trans-Caucasia. In the North Caucasus the districts of Terek and Daghestan form a mountaineers' republic. They have declared themselves independent, and claim the entire area of North Caucasus, the capital of the new republic being Vladikavkas. This claim is not recognised by the Kuban Cossacks, who claim the entire territory of North Caucasus, and have constituted a separate republic, together with the Don Cossacks, with the capital of Ekaterinodar. The head of this Cossack republic, General Krassnoff, asked the commander of the German troops in the Ukraine to co-operate with him against the Bolsheviks. Whilst General von Eichhorn seems quite ready to accept the invitation, the German Ambassador in Moscow, Count Mirbach, appears to be against it. It is also reported that General Korniloff, with some Cossacks, is in North Caucasus, organising an attack against the Bolsheviks. The Caucasus is the more interesting as there are huge quantities of grain stored in that country, which the Central Powers would try to secure for themselves, and, with the capture of the entire Black Sea Fleet, this operation seems to be quite probable.

In Trans-Caucasia, after the appearance of the Bolsheviks in Petrograd, a separate State was formed, consisting of three nationalities—Georgians, Tartars and Armenians. It was a federal republic, with the capital in Tiflis, and a national army consisting of Georgians and Armenians.

As readers of The Near East are already aware, the Bolsheviks, at the Brest-Litovsk Conference, ceded the large districts of Batoum and Kars to Turkey, entirely ignoring the Trans-Caucasian Government. This act was not recognised by the Trans-Caucasian Government, which mobilised the army in order to prevent Turkish invasion of the provinces. Being entirely isolated from Allied assistance, after stubborn fighting they lost Batoum and Kars, which Turkey occupied. After this Turkey offered to send delegates for peace negotiations, but the negotiations were broken off, the Trans-Caucasian Government declining the terms proposed by Turkey. Fighting was resumed, and the Turks penetrated into the eastern part of Trans-Caucasia, where they joined hands with the Tartars, who broke away from Trans-Caucasia and came under the influence of Turkey. At this stage Germany intervened and invited the Trans-Caucasian Government to send delegates to Batoum for negotiations. After these negotiations the Trans-Caucasian Government, which consisted only of Georgians and Armenians, was compelled to accept the loss of Kars and Batoum districts, but would not agree to abandon the important port of Batoum, on the Black Sea, the chief outlet of Trans-Caucasia. Germany and Turkey agreed to return Batoum, but suddenly Turkey made a new claim to the Soukhum district on the Black Sea. This was prevented by the concentration of Georgian troops in that town. By the occupation of the Kars and Batoum districts and by the breaking away of the Tartars, the only territory remaining in Trans-Caucasia free of enemy occupation was Georgia, inhabited by Christian Georgians; and on May 26 the Georgian Diet assembled in Tiflis and declared the Independence of Georgia.

It is rumoured that Turkey has demanded that the Georgian Government should send delegates to Constantinople for peace negotiations; and it is further declared that a Peace Treaty with Turkey has been signed, although nothing is known as to the terms.

Independent Georgia, after being stripped of her fairest provinces by Turkey, comprises 40,000 square miles of territory, with the capital in Tiflis; the Government is republican, and the Prime Minister is Mr. I. Ramishvili, member of the first Duma.

It is obvious that, under some pretext, the Turks and Germans will enter the country, in order to dominate it in the same way as they have done in Ukrainia. Dr. Paul Rohrbach announced some weeks ago that, through the domination of the Ukraine and Georgia, Germany hoped to obtain the necessary raw materials and strategic communications towards the Middle East. In addition to this, the Turks have penetrated Northern Persia. With-

Digitized by Google

out outside Allied pressure, it is to be feared that further penetration on the part of the Central Powers and Turkey will be continued far into the depths of Turkestan.

According to a Stockholm telegram, an unsuccessful attempt has been made on the life of Mr. A. Tchenkelli, Foreign Minister of Georgia, in Tiflis. A bomb was thrown by a Turkish agent, who was arrested. Mr. Tchenkelli was a Georgian member of the former Duma, and offered stout resistance to the Turkish Government in negotiations.

It is also announced that the Georgian diplomatic delegation has arrived at Berlin in order to settle the conditions of the Georgian State with the Central Powers. Constantinople has been proposed by the Central Powers as a place for conference. On June 19 thirty-two Georgian and Armenian delegates arrived in Constantinople from Trans-Caucasia. The leader of the Georgian delegation is Mr. Geogechkori, the former Prime Minister, and the leader of the Armenian delegation is Mr. Aharonian. This delegation is going to attend a special conference with the Central Powers.

It is once more evident that the centre of gravity in the Eastern contest between the British Empire and Central Powers is Trans-Caucasia and Georgia, which are entirely isolated from immediate contact with the Allied forces, and therefore left to the mercy of the Central Powers. This is the more clear as, according to a recent message from Tiflis, the Turkish Government is demanding the disarmament of Georgian and Armenian troops. Should this plan succeed, Trans-Caucasia will be left entirely undefended.

In face of all these happenings, it is very remarkable that the Bolsheviks have surrendered various economic concessions to the Central Powers, thus providing Germany with excuses for penetrating into the Middle East. In this way Germany is gradually completing her scheme of threatening India and Afghanistan along the road Berlin-Constanza-Batoum-Krassnovodsk-Kushk and through Erivan to Tabriz.

TANGIER TO TEHERAN.

Last week I hinted delicately that Turkey's war aims, as outlined by the *Aati*, did not err on the side of moderation. As a matter of fact, it seemed to me that the gentleman who drew them up would probably take an outside size in *fezzes*. But after reading Count von Roon's views on what Germany's peace terms should be, I am bound to confess that the Turks' demands look quite modest. Serbia and Montenegro the Count would award to Austria and Bulgaria; Egypt would revert to Turkish rule again; various little adjustments of European boundaries in the West would be made, including "the cession of the Flanders and French coast as far as and including Calais" to Germany; the payment of £9,000,000,000 to the Huns would be made by the United States; *and* "the surrender of the entire British Navy to Germany" is demanded. My only wonder about the indemnity to be paid by America is that the confident Count did not make it a round sum—ten thousand millions. And as to the surrender of the British Navy, has he not heard that his friends the Turks are collecting such trifles? Obviously, then, the correct thing would be to throw it in with the Egyptian lot for Brother Turk, who could then run the smaller craft on excursions on the Bosphorus (and the Nile) for the benefit of Prussian cheap trippers of the future.

***

By the way, a correspondent has written, pointing out that the name of the Turkish newspaper referred to above is actually *Aati*, not Aali. "Aati," he writes, means "future," and is employed in Arabic and Turkish phrases, *e.g.*, *Sene-i-atiye*, next year; *Mushar (un) el atiye*, hereinbelow indicated. I am obliged for the information. When writing the original paragraph, I could not clearly decipher the name of the journal in question, owing to a blur in the printing, and, not feeling sure of my reading, put the alternative. Subsequently I found that in my first choice I had "spotted a winner." But I am sure that some of my readers will be glad to have the translation of the title, as given by my correspondent.

***

Another "impending apology." This time from the *Egyptian Gazette*. That esteemed journal begins a paragraph thus: "Philosophical circles in Cairo and Alexandria (if there are any)" . . . Shades of Rameses the Twoth. "If there are any," indeed!

A correspondent has kindly sent me another example of an oracle being given in Ancient Egypt by statues of the gods weighing heavily upon their bearers, as already described in these columns.* There was (writes my correspondent) a dispute as to the ownership of a field, which was decided in the manner referred to by the statue of the deified Pharaoh Aahmes I. when carried in his sacred barque (or ark) by his priests. One of the claimants to the field was a priest, "Pasar, son of Mes," and when the statue was carried into the field this priest's assertion that the place belonged to him was confirmed by the statue becoming very heavy. A monument shows the priests carrying the ark and Pasar adoring, "in return" (as my correspondent puts it) "for having had the field divinely decided to be his." The inscription says, *inter alia*:—"The priest Pasar came to the field which belonged (to my) son. Was established the truth. Came the God at the saying, 'It belongs to Pasar, son of Mes,' and *the god became very heavy* in the presence of the priests of Pehnebra." The names of the priests who were carrying the statue are given, and the inscription mentions that it was made by the temple sculptor, and that the judgment was given in "the year 14, Paophi 25, which my correspondent tells me was August 21, 1287 B.C." My correspondent adds: "The same belief still exists in Thebes. There is a recent sealed declaration there of bearers of the bier of Sheikh Es Said Yussuf, stating that when they reached the shrine of Sheikh Abu-el-Abbas the bier became so weighty they had to stop."

***

The latter case seems to be on a par with the story told by Mr. Somers Clarke of the happenings at Hilal; and, though the cynic would doubtless remark that carrying a heavy bier *is* tiring work, I should not be prepared to say that it could not be true. But with regard to the first case mentioned, I must admit I do feel a trifle sceptical myself. The fact that the claim was made by a priest and that the bearers of the statue were all priests also seems not insignificant. The priests of Ancient Egypt, we know, were not above a bit of trickery now and then, and it would obviously have been a very easy matter for them to "work the oracle" in this particular instance and in the particular manner cited. But against that we have to ask ourselves whether Pasar, son of Mes, would be anxious to perpetuate his gratitude to the deified Pharaoh if the "decision" had been obtained by fraud. So we are at liberty to pay our money and take our choice once more.

CORSAIR.

THE COPTS IN EGYPT.

A member of the Coptic community in London calls attention to certain passages in the article by Sir Malcolm McIlwraith, published in our issue of June 14, which has given rise to comments among that community. He writes:—"May I ask whether Sir Malcolm McIlwraith could give any facts in support of his statement in your issue of the 14th ult. that the Moslems of Egypt argued (against the appointment of the late Butros Pasha as Premier) that if the Copts "are not even considered fit to be governors of a province, how can it be right to make one of their number the head of the whole Government?"

The second statement by Sir Malcolm McIlwraith to which our correspondent refers is:—"The Copt . . . though an admirable clerk and a very efficient man of business, is not, as a rule, a leader of men, and is unsuited by temperament and training to exercise executive authority. Such authority is, therefore, seldom entrusted to him, and there have not been, for instance, any cases (so far as I can remember) of Coptic Mudirs." Regarding this he writes:—"A long list of names of Copts who exercised high executive authority under purely Mohammedan rule is given in Mr. Leeder's 'Modern Sons of the Pharaohs' just published"; and he suggests that if Sir Malcolm McIlwraith cares to go through this list, he may see reason to withdraw his statement.

PRESS ON THE NEAR EAST.

A Problem of Empire.

Last Friday *The Times* contained a leading article entitled "A Real Injustice to India." This article begins:—

Last year the Imperial War Conference—at which for the first time the representatives of India sat with the Ministers of the self-governing Dominions—passed a resolution accepting the principle of reciprocity of treatment between India and the Dominions, and recommending to the favourable consideration of the Governments concerned a memorandum presented to the Conference by the Indian representatives. Has not the time come to go a step farther and to pass from abstract resolution to a definite constructive plan? The moment is favourable. The Dominion and Indian representatives are here again in no less good will than that which inspired the resolution last year. Mutual forbearance has done much to draw the venom which made the question of Asiatic immigration into the Dominions so dangerous some years ago.

The writer proceeds to remark, bluntly, that

the real difficulty between India and the Dominions has not been overcome; and unless it can be disposed of it will remain a possible cause of offence, only too ready to the hand of ill-disposed persons who may be looking for an opportunity to make trouble between the various parts of the British Commonwealth. To pass a resolution accepting the principle of reciprocity and to leave it in the air, so to speak, without any attempt to found upon it a definite measure of reciprocal treatment, is to do a foolish and—it may well prove—a dangerous thing.

The Dominion prohibition against Indians settling in their country, the article points out, involves very severe restrictions upon visits by Indians, "even Indians of high position, whose good faith is beyond question and who have no desire whatever to do more than visit Dominion territory." These restrictions are irritating, and at times they have very awkward results; and they are one-sided in operation, since people from the Dominions can visit India without let or hindrance. Reciprocity, says the writer, in this case can only mean the assertion by the Government of India of the right to exercise control over people claiming the right to enter its country—an elementary right of any Government, and one already asserted by the Dominion Governments. The article continues:—

As the settlement of Indians in the Dominions is precluded already, and as people in the Dominions have no desire whatever to settle in India, this would mean, in practice, that visits to India by people from any one of the Dominions would be subject to the same restrictions as that particular Dominion continued to impose on the visits of Indians—not a very serious thing from the Dominion point of view, but highly important in its moral effect in India. If, in short, effect is to be given to the reciprocity resolution of the Imperial War Conference of 1917, the Government of India must be in a position to assert its title to deal with the Dominion Governments—so far as the interests and sentiments of its people go—on terms of clear equality. Its power of decision should not be less, for instance, than that of the Crown Colony Government in the Transvaal when it determined to treat this very matter, pending the grant of responsible government, as the Government of a self-governing colony would treat it. This would be practical reciprocity; and we may add that it should be effected by a system making the restrictions operative at the port of departure instead of at the port of entry as at present.

"Bulgaria's Grievance."

In a leading article, with the above title, the *Manchester Guardian* remarks that the dispute between Turkey and Bulgaria, "already lively," has been intensified by von Kühlmann's references in the Reichstag to it. "The 'Dobrudja Committee,'" says the *Guardian*, "has issued a statement protesting against the 'ambiguous explanations' of Herr von Kühlmann, which really mean, it says, that in spite of his alleged impartiality, he supports the 'disloyal claims' of Turkey; lest the effect of this protest should be lost, the Bulgarian Government is circulating it abroad through the official telegraph agency. Later we read:—

At the end of May the Bulgarian papers were talking threateningly about the "discomfiture of German policy in the Near East" which would follow if Bulgaria were not satisfied. Then, at the beginning of June, they began to suggest that the question was about to be settled in their favour: Turkey would receive compensation, "but not at the expense of Bulgaria. The view that something may be granted in the Adrianople district will never be realised; it has been definitely abandoned." Now comes von Kühlmann, with a speech in which, while approving of the union of the Northern Dobrudja with Bulgaria, he speaks sympathetically of the "highly undesirable" frontier with which Turkey has been left by her concessions to Bulgaria, and, by inference, of the justice of her claim to have it rectified. The Bulgarians are the more annoyed because they see with bitterness the rapidity with which Turkish ambitions are swelling all round the Black Sea. "The Turks," said one of the chief Sofia papers the other day, "believe that they can now achieve anything," and "to-morrow God alone knows what Turkey will be asking for."

"Berlin insisted that Serbia must be massacred."—*Prince Lichnowsky.*

"*An Italian Medical Officer who has recently returned from imprisonment in Austria states that the mortality of the Serbian prisoners represents almost 100 per cent. In Mathausen Cemetery alone 8,000 Serbs are buried. . . .*"—DAILY PRESS.

"*Serbia is annihilated, thanks to our intervention.*"
—BULGARIAN GENERALISSIMO JEKOFF.

The two statements quoted above are eloquent of the sufferings of the Serbian people.

In the prison-camps of the Central Powers the flower of Serbia's young manhood is being systematically annihilated.

These men in most cases die of hunger-typhus.

Their sufferings are awful to contemplate.

Do something to help them.

The Serbian Relief Fund, in addition to helping to maintain the Serbian refugees in foreign harbours of refuge, has, as far as its resources would allow, sent consignments of food to Serbian prisoners-of-war in the prison-camps of Germany and Austria. In many cases these supplies have been all that stood between the men and absolute starvation.

Will you not show your gratitude for the heroic self-sacrifice of the Serbian people during the early stages of the War by helping to bring some measure of comfort to the sons of Serbia who so badly need your help?

The Serbian Relief Fund is the only authorised Fund under British administration working solely for the benefit of Serbians. This Committee can translate a donation from you into food for starving Serbian prisoners-of-war, food, clothing, and medical aid for the old men, women, and young children exiled from their native land.

Do not hesitate—but *prove* your gratitude to Serbia and your sense of British responsibility to a little nation by sending a donation to-day to the Hon. Treasurer,

THE RIGHT HON. THE EARL OF PLYMOUTH, C.B.,

SERBIAN RELIEF FUND,

5, CROMWELL ROAD, LONDON, S.W.7

Offers of voluntary help at home or abroad should be sent to Lady Grogan. Parcels of clothing for men, women and children to Mrs. Carrington Wilde, Serbian Relief Fund, 5, Cromwell Road, London, S.W.7.

(Registered under War Charities Act, 1916.)

NEAR EAST BOOKSHELF.

THE CASE FOR DYARCHY IN INDIA†.

We welcome this handy reprint of Mr. Lionel Curtis' letters on responsible government, which have led to much salutary discussion since their appearance in India last winter, and we advise everyone interested in Indian politics to get the book and study it carefully for himself. Mr. Curtis is, of course, no novice in the art of constitution-building, and his services in connection with the union of the States of South Africa are now generally recognised. He has faced the problem set by Mr. Montagu's momentous declaration of policy, and he finds the solution in what has come to be spoken of as Dyarchy, and which consists of two parallel governments, one of which, beginning with functions of small importance, shall gradually expand until it covers the whole field. The bureaucrat finds the idea horrible, and we fancy the subjects would find it occasionally inconvenient in practice. The case for it is simply that "you must learn to walk before you can run." The people of India have at present not the faintest idea of what responsible government means; they can never learn this from any government which is not responsible; therefore, give them at the start a government responsible for small things, roads and drains and the like, and let them learn by experience how to manage, and finance, their own affairs. As they learn the lesson, hand over by degrees the whole machine, and let the bureaucracy vanish finally with its long-drawn task fulfilled. The scheme is severely logical, too logical perhaps, for a country where the feelings tend to outstrip the reason, but our present purpose is not to recommend the adoption or the rejection of Mr. Curtis' proposals, but to urge people to get the book and master the proposals for themselves. They may agree with them or not, but in any case they will close the book with a clear and definite grasp of the problem which now awaits solution.

BOOKS RECEIVED.

"Rhymes from an Eastern Battlefield." By W. E. Gladstone Solomon. (London: W. Thacker and Co. 3s. 6d. net.)

"India in Transition." By H. H. the Aga Khan. (London: The Medici Society, Ltd. 18s. net.)

"India under Experiment." By G. M. Chesney. (London: John Murray. 5s. net.)

"Boundaries in Europe and the Near East." By Colonel Sir Thomas H. Holdich, K.C.M.G., K.C.I.E., C.B., D.Sc. (London: Macmillan and Co., Ltd. 8s. 6d. net.)

"Tales of the Sarai and Other Verses." By A. G. Shirreff. (Oxford: B. H. Blackwell. 2s. 6d. net.)

"The Purdahnashin." By Cornelia Sorabji. With a Foreword by the Countess of Minto. (London: W. Thacker and Co. 2s. net.)

"Life's Fitful Fever." By Kate Everest. (London: John Richmond. 6s. net.)

"Three Campaigns." By Lawrence O'Shea. (London: Arthur H. Stockwell. 2s. net.)

The July issue of *Production*—the journal of the British Empire Producers' Organization—sustains, or, rather, amplifies, the reputation which this publication has already established. Its contents are varied, interesting and instructive. Captain Richard Jebb writes on the Imperial Conference, and there are other articles on the New German Menace in Production, on Post-War Finance, and on Britain and the Levant.

INDIA'S CHRISTIAN RECRUITS.

The recruits enlisted in India during the year ending March 31 numbered 285,200 combatants and 159,300 non-combatants. The Punjab Mahommedans, who form about one-thirtieth of the population, have supplied nearly one-fifth of the recruits, while one man in every twelve in the Frontier Province is serving. Some Punjab districts, however, have done badly, and one certainly has had its reputation redeemed only by the Christians in it. Sir M. F. O'Dwyer, the Lieutenant-Governor of the Punjab, said in February:—"The only class in Lyallpur that has done well is the Indian Christians, whose battalion I had the pleasure of inspecting at Ferozepore last August. Most of these men were formerly humble menials, the servants of the Zemindars, but they have realised that *khidmat* (service brings *izzat* (honour), and they can hold up their heads henceforward, for they have shown that they are men and do not fear a soldier's lot in time of war."

† "Letters to the People of India on Responsible Government." By Lionel Curtis. (London: Macmillan and Co. Price 3s. 6d. net.)

SYRIA AND ITS FUTURE.

At the School of Oriental Studies on June 26, Mr. A. Sefi gave an interesting lecture on Syria. He said that the large number of Syrians now abroad enjoying peace and prosperity under the benevolent and liberal institutions of America, France and Great Britain, are seeking, and the Allies have promised to aid them, to obtain the full independence of their country from the Turkish rule, which had before the war, kept it backward, and since the war has meant the murder and deportation of a large number of its most liberal young men and families, and has left nearly 200,000 of its inhabitants to die from want. This treatment also roused the anger of their kinsmen the Arabs, who thereupon threw off their allegiance to the Ottoman Government, and for the past eighteen months have been co-operating, under the lead of the Shereef of Mecca, with our armies in Palestine, to drive away the Turk from Syria. The Shereef, a fine specimen of a highly cultured and honourable Arab, whom the Hejaz now acclaims as its king, is most ably seconded by his two sons in the field of battle. He has become for the Arabs, their Khalif also. This word "Khalif" originally meant, "Successor of the Prophet," and so it applied only to Abu-Bekr, the first Khalif. When Omar succeeded him, the Arabs began by styling him "Khalif of the Khalif," but finding it impossible to continue adding the future successor's style in the same manner, that is, K of the K of the K, of the K, and so on *ad infinitum*, they adopted the style of Amir Elmuminin: "Prince of the Faithful," which has since been his real title. Our Government now, the lecturer believed, addressed King Hussein as Majesty. This is (he said) the Syrian question of the present day.

Mr. Sefi continued: "It would be hopeless for me to attempt in a lecture of one hour's duration to explore the vast field of Arabian literary, poetical and scientific achievements in the past in which Syria is associated, or to describe localities, and supply the imagination with fascinating images of a land of abundant magic lore, perpetual sunshine and beauty of nature, only equalled in extent by its past and present tribulations.

"The classical limits of Syria are from El-Arish to the Euphrates, and from Ila to the sea. Its political border to the South is the River Kishon which divides it from the old principality of Samaria. Syria consequently comprises what we call Palestine, the land of the Philistines, Canaanites, or Phœnicians, from which was subsequently formed the old Jewish kingdom of the children of Israel. Palestine (P and F being interchangeable in Sanskrit) is of Sanskrit derivation and means 'the land of the Shepherds' as Goshen is 'Abode of the Shepherds' and Surya (Syria) is 'Regent of the Sun,' and so it is spelt in Arabic."

After giving some description of Biblical Syria, the lecturer went on to say, "At the fall of the Byzantine power in Syria at the hands of the Arabs, Islam overran the land. What was Islam? Nothing more, at first, than the old religion of the Bible, preached to the pagan Arabs in a particular version, and with new laws, which the state of the country called for. Mohammed's eloquence, however, was so great and his earnestness in God's cause so intense, that he inflamed the imagination of a warring race, and set it running to spread their newly discovered faith. The collection of Mohammed's sayings forming the Koran was accounted miraculous, as Mohammed was unable to read or write. And certainly it is a marvellous literary and poetical production, made to be chanted, like the Psalms of David.

"The Arabs took up the task and discharged the heavy mission laid on them. Opposition created war shocks; war created the appetite for conquests; and world power gave great wealth, and the taste for ease and comfort. The zeal for the new faith got swamped in worldly concerns, and intrigues among Moslems disintegrated their unity, and set their tide ebbing and rolling them back to their desert fastness as if nothing had happened! But not before they had left descendants and influences, which have lasted to this day, in Egypt, Persia, India, Africa, Spain, Italy, Malta and France. Freedom, however, was and is, of the essence of their nature, and was the basis of their early power.

"Turks followed the Arabs. No power is first raised to any extent, except on integrity, and so was the early Ottoman power. But with autocracy there is no guarantee, and Syria is now passing through its greatest trial. Its population is the most enlightened and best educated in the Ottoman Empire, and is mainly Mohammedan, except in the principality of Mount Lebanon, where it is mostly Christian. Beyrout formed part of the Lebanon until about 1840. The best chance for missionary work among such a community is in its example of Christian love, and helpful education, such as the Jesuits and Americans are giving.

"Palestine claims also, through the Jews, a separate organisation, but in fairness to all these peoples, a Customs Union for land produce must be established between them and between them and Egypt and Mesopotamia, in days to come—soon we hope. This will leave the very important question of protecting them from each other's future trespass and greed. We do not want another Balkans: one is quite enough! Arabia, however, is now alone in having a national government, so the others must learn how to manage their affairs. Perhaps what is now taking place in the cause of justice and freedom will suggest to those of them who are abroad how to acquire military and administrative experience with the Allies."

Lord Oranmore and Browne has left Cavendish Place for Ireland.

The Greek Medal for Military Valour has been conferred on Lieutenant-Colonel Helliwell, of the British Army.

Sir S. P. Sinha has been obliged to cancel his engagements for a few days owing to influenza.

On the suggestion of the Serbian Minister, the Elsie Inglis Memorial Chair of Medicine at Belgrade will be filled by a woman when the university resumes after the war.

Mr. Laurence Currie and Sir Marshall Reid, members of the Council of the Secretary of State for India, had the honour of being received by the King at Buckingham Palace on Tuesday.

On Saturday, at an open-air Investiture at Buckingham Palace, the King invested Lieutenant-Colonel Sir Theodore Morison with the insignia of a Knight Commander of the Order of the Star of India.

On June 22, in Cairo, the marriage took place of Major C. H. Reinhold, M.C., I.M.S., Staff, to H. Margharethe, eldest child of Charles Allington Gardner Hayward, of Allington, near Honiton, Devon.

An engagement is announced between Mahlon Wells Hole, A.E.F., and Marjorie Gavin Roberts, second daughter of Mr. T. Roberts, Bengal Civil Service, retired, and of Mrs. Roberts, Ingleside, Netley Abbey.

At Simla, on June 6, Captain H. N. G. Geary, Royal Engineers, youngest son of the late Grattan Geary, was married to Renée Joyce, youngest daughter of the late Colonel Fred A. Wilson, Indian Political Department.

The King of the Hellenes, says Reuter's Agency, has telegraphed to Miss Helena Schilizzi, expressing his congratulations and high satisfaction for her constant endeavour and successful work in aid of the Greek cause.

A Vienna telegram states that the ex-Shah of Persia, Mohammed Ali, arrived there on Sunday with his family and suite from Odessa. After a few days' stay in the capital he will proceed to Karlsbad for a cure.

An engagement is announced between Major William Wrexley-Smith (Indian Army) and Miss Barbara De Friston, eldest child of the late William Friston, artist, of London, and of Mrs. Friston, of Bournemouth, Hants.

An engagement is announced between Arthur V. Watson, late 22nd Cavalry, I.A., youngest son of the late Lieut.-General G. V. Watson and Mrs. Watson, and Margaret, younger daughter of the late Rev. Robert and Mrs. Merrick.

Sir Satyendra Sinha (member of the Executive Council of the Governor of Bengal) had the honour of being received by the King at Buckingham Palace last Friday.

Mr. Duguid Stewart Gilkison, of Thornbrake, Wimbledon, chairman of Messrs. Peirce, Leslie, and Co., Ltd., Billiter Street, E.C., and the Malabar Coast, Southern India, who died on December 10, aged 77, left £206,247, of which £200,169 is net personalty.

A marriage has been arranged, and will take place at Christ Church, Chelsea, at two o'clock on the 9th inst., between J. H. W. Knight-Bruce, Sixth Royal Regiment, and Daphne, widow of Lieut.-Colonel A. F. Ferguson-Davie, C.I.E., D.S.O., Indian Army. There will be no reception or invitations, but all will be welcome at the church.

The engagement is announced of Captain P. A. Clutterbuck, M.C., Coldstream Guards, eldest son of P. H. Clutterbuck, C.I.E., Chief Conservator of Forests, United Provinces, India, and Mrs. Clutterbuck, of East Molesey, Surrey, and Dorita, younger daughter of the late F. Seymour-Weldon and Mrs. Seymour-Weldon, of East Molesey, and granddaughter of the late W. Simpson, M.D., R.N.

The marriage arranged between Lieutenant C. R. S. Paterson, Indian Infantry, fifth son of the late Colonel Paterson, I.A., and Mrs. Paterson, of 34A, Longridge Road, London, and Grace, only daughter of the late Thomas Quin and Mrs. Quin, of Thurles, Bournemouth, will take place shortly, leave permitting, at the Oratory, Brompton Road. The time and date will be notified later.

Major Sir H. Fairfax-Lucy, Bart., Chairman of the Warwickshire Territorial Force Association, and Inspector of Q.M.G.'s Services at Headquarters, Scottish Command, has accepted the Vice-Presidency of the Leamington and Warwickshire Branch of the Discharged Soldiers and Sailors' Federation. Sir H. Fairfax-Lucy's great uncle was Chief Revenue Commissioner to the old East India Company.

This week the British Farmers' Red Cross Fund has made a further payment of £20,000 for the provision of medical stores and comforts at advance depôts in Palestine, Egypt and the Near East.

The Italian Jewish community has elected Cavaliere A. L. Bianchini and Dr. G. Artom to go to Palestine as delegates to the Zionist Commission which is operating there to establish a Jewish national home.

M. Venizelos has sent a message to the Lord Mayor of London in which he said that he was "profoundly touched by the honour paid to Greece" by the banquet given at the Mansion House last week to celebrate the anniversary of Greece's entry into the war.

The Constantinople newspaper *Tiempo* reports that the Grand Rabbi of Turkey, Haim Nahum Effendi, intends to proceed to Switzerland, and has conferred with various members. It is rumoured that the Grand Rabbi has a political mission, and that his journey is connected with Turkey's desire for peace.

In response to the appeal on behalf of the Chair of Medicine for Serbia, which is to be the London memorial to Dr. Elsie Inglis, an anonymous donor has sent £1,000, and £100 has been promised if another £500 is forthcoming by this afternoon, when a meeting will be held at the Mansion House formally to open the fund. Contributions should be sent to the Countess of Selborne, 66, Victoria Street, S.W. 1.

In commemoration of the anniversary of the entry of Greece into the war as Allies of the Entente Powers, a solemn Te Deum was rendered at the Greek Church, Moscow Road, Bayswater, on Sunday morning. The Archimandrite, Dr. Pagonis, officiated, assisted by Dr. Moschovokis. The members of the Greek Legation attended in full Court dress, including M. Gennadius (the Greek Minister), M. Caclamanos (Minister Plenipotentiary), and M. Michalocopoulos (Special Mission). The Serbian Minister and his military suite were also present.

The Mayor of Candia (Crete) has sent the following telegram to the First Lord of the Admiralty:—"I beg you to accept the profound sympathy of the city of Candia on the death of the glorious Admiral Noel, liberator of Crete." The First Lord sent the following reply:—"Please accept the grateful thanks of the Admiralty for your generous message of condolence on the death of Admiral of the Fleet Sir Gerard Noel. Lady Noel asks that her gratitude may also be expressed to you." Admiral Sir Gerard Noel, who died on May 23 last (as reported in these columns at the time), was second in command of the Mediterranean Fleet in 1898, when he represented Great Britain in the Council of Admirals at the pacification of Crete, for which service he received the K.C.M.G.

TRAGEDY OF MONTENEGRO,

THE SMALLEST AND POOREST OF OUR ALLIES.

MONTENEGRIN RED CROSS AND RELIEF FUND,

11, VICTORIA STREET, LONDON, S.W.1

(Registered in City of London. Section 1. War Charities 1916)

needs £700 WEEKLY for Feeding Prisoners interned in Austria-Hungary.

Donations will be much appreciated and gratefully acknowledged by the Hon. Treasurer, LADY ROPER PARKINGTON, Claridge's Hotel, Brook Street, London, W.1.

APPOINTMENTS, PROMOTIONS, ETC.

The London *Gazette* announces that Major-General G. de S. Barrow, K.C.M.G., C.B., Indian Army, has been appointed temporary Lieutenant-General from M[illegible]) to 29, 1918.

M. Milan Rakitch, who has been appointed Counsellor to the Serbian Legation in London, has arrived and entered on his duties. He was formerly Chargé d'Affaires of the Legation at Stockholm.

OBITUARY.

Lieut. John Herbert Paterson, Indian Cavalry, attached Royal Air Force, who is reported killed while flying on an Eastern front on June 21, was the eldest son of Mr. John Paterson and of Mrs. Paterson, of Shalimar, Beckenham, Kent. He was twenty-five years of age.

Colonel Samuel J. Lea has died suddenly at Fairbourne, near Barmouth, aged sixty-seven years. He took part in the Nile campaign, fought in the South African War, and had been D.A.A.G. in Ireland. His only son, Lieutenant-Colonel Lea, is serving in France.

Lieut. George Young, Black Watch, who was reported wounded and missing on March 26, and thereafter a prisoner of war, is now stated to have died in hospital on April 8. A son of the late Mr. James Young, Calcutta, and of Mrs. Young, Rockmount, Helensburgh, he was living in India as a tea planter when war broke out; but in 1915 he returned home and took up a commission.

Lieut. Arthur Kinnaird Stanley, Gloucestershire Regiment, who was killed on June 15, aged twenty-three, in Italy, while gallantly leading his company, was the eldest son of the Rev. A. E. Stanley, Senior Chaplain, his Majesty's Indian Service, and of Mrs. Stanley, of The Croft, Billingshurst, Sussex. He was educated at the Dean Close School, Cheltenham, and enlisted on the day that war was declared.

Major Claud Fitzroy Clarke, Indian Cavalry, died in hospital in London last Sunday after a long illness contracted on service abroad. He was only son of Marion, widow of James Ferrier Clarke, M.D., late of Nightingale Lane. He was born in February, 1883, and obtained his commission in the East Surreys from the Imperial Yeomanry in 1903. After promotion he transferred to the Indian Army, in which he had his captaincy in 1911.

Major R. G. M. Pritchard. Yeomanry, attached Indian Cavalry, has died of wounds received in action on June 7. He was the third son of the late R. K. Pritchard, of Bryntirion, Bridgend, Glam., and was born in 1876. At the outbreak of war he held an appointment under the Home Office as Inspector of Mines for a Scottish district. He served with the Glamorgan Yeomanry in the South African War, in which he earned the Queen's medal with three clasps and was mentioned in despatches. After several months with his regiment during the present war he volunteered for service with the Indian Cavalry, and saw considerable fighting with them in France, being once wounded, before the regiment was transferred to another front, where he met his death.

Vice-Admiral Frank Hannam Henderson, C.M.G., D.S.O., died suddenly on June 26 at Haslar Hospital after an operation. A retired flag officer, he accepted a year ago an appointment on active service, and in a junior grade to that which he obtained in the Navy patriotically undertook the command of convoys. For his success in this work he was awarded the D.S.O. Born in 1850, he was the youngest of four brothers who became naval officers, the sons of Mr. John Henderson, J.P., of Felderland, near Sandwich, Kent. The surviving brothers are Admiral Sir Reginald Henderson, Admiral William Henderson, and Captain John Henderson. The late Admiral entered the Navy in December, 1862, and as a sub-lieutenant in the Vulture was promoted for his services in capturing a slave dhow off Ras-al-Had. During the Ashanti War, 1873-4, while a lieutenant in the Active, he was Transport Officer and Beachmaster, and received the medal for his services. He was senior lieutenant of the Eclipse during the Egyptian War, 1882, receiving the Egyptian Medal and Khedive's Bronze Star. While in the Eclipse, he jumped overboard from the poop of the ship when she was lying off Busreh, and rescued an ordinary seaman who had fallen from the main top. For this gallant action he received the bronze medal of the Royal Humane Society. When commanding the Racoon he was in charge of a landing party in an expedition to the Lamu Forest country. As captain of the Fox, he was senior officer of the West Coast Division during the outbreak of rebellion at Sierra Leone. For his services on this occasion he was twice mentioned in despatches and received the C.M.G. In 1872, when promoted out of the Vulture, instead of returning home by sea, he rode across Persia, crossed the Caspian, and made his way back to England by way of the Volga and Moscow.

Reuter's correspondent in Washington reports (July 1):—The United States has formally requested Turkey to furnish an explanation of the report that Turkish troops have sacked the American hospital at Tabriz and seized the American Consulate there. Officials of the State Department declare that the standing of the troops responsible for this indignity will have a bearing on the attitude of the United States in this matter.

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO,
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

THE ONLY ENGLISH HOTELS IN ALEXANDRIA.
Proprietor: AUGUSTUS VAN MILLINGEN.

WINDSOR HOTEL
(Facing the Sea, opposite Y.M.C.A.), ALEXANDRIA.
Full Pension, P.T.50; Room, P.T.20;
Lunch, P.T.15; Dinner, P.T.20.
For long stay, apply to the Manager.

SUMMER PALACE HOTEL,
GLYMENOPOULO, RAMLEH.
This Hotel is situated near the Beach. Open all the Year.
Bathing Cabins.
Terms from: Pension, P.T.60; Lunch, P.T.20; Dinner, P.T.25.

HOTEL SOMERSET,
ORCHARD STREET (by Selfridge's) OXFORD STREET, W.
Most comfortable and home-like Establishment. English cooking a special feature. Eggs, Butter, Poultry direct from the farm.
200 well-appointed bedrooms with fitted basins (h. & c.). 30 bath-rooms
15 private Suites. Passenger lift. Own Artesian Well.
Magnificent Georgian Dining Hall (100 tables,)
Inclusive terms from 10/- to 15/- daily; 3 to 4½ guineas weekly.
Double room 16/- to 21/- daily; 5 to 7 guineas weekly.
Bedroom, bath, breakfast (3 courses) 7/6 daily.

AYAHS' HOME,
26, King Edward Road, South Hackney, London.
ESTABLISHED 1825.
IN CONNECTION WITH THE LONDON CITY MISSION.
Hindustani spoken. Ayahs boarded and lodged at 18s. per week each until their Return Passage is paid or a Situation secured for them to return. Ayahs met at any Dock or Railway Station in London. Experienced, well-recommended Ayahs taken entirely off Ladies' hands for a certain payment, which differs according to time of year. Ladies proceeding to India or China requiring an Ayah can generally obtain one by applying to Mrs. FLETCHER, Matron.

STRANGERS' HOME FOR ASIATICS,
WEST INDIA DOCK ROAD, LIMEHOUSE, LONDON, E.
"I was a stranger and ye took me in."
CONTRIBUTIONS ARE SOLICITED from the many who owe fortune or competence to India and China, and will be thankfully received by the SECRETARY or by MESSRS. BARCLAY & CO., LTD., 54, LOMBARD STREET, E.C.

FRIDAY, JULY 5, 1918.

NOTICE.—The publication of this issue of THE NEAR EAST *has been delayed for twenty-four hours, to enable us to include in it a summary of the Report on Indian Constitutional Reform.*—ED.

THE NEW ORIENTATION OF BRITISH POLICY IN INDIA.

Government have done well to publish without delay the joint Report submitted to them by the Viceroy and the Secretary of State for India on "Indian Constitutional Reforms." To whatever criticisms it may be open it is an able and historic document, not unworthy of the theme with which it deals, namely, the trusteeship of this country for the welfare of one-fifth of the human race, inhabiting the vast sub-continent which is our Indian Empire. The growth of that Empire since its foundations were unconsciously laid little more than three centuries ago by a handful of merchant adventurers who sailed away under a charter granted to them by Queen Elizabeth in the closing years of her reign to seek out an almost unknown land across almost unknown seas, and to open up a new world to British enterprise, forms one of the most wonderful and, in spite of many human shortcomings, one of the most splendid chapters in our history. The East India Company, created merely to trade, became gradually, under the stress of changing circumstances, the one power capable of saving India from the anarchy and disintegration that followed the decay of the Moghul Empire. Both controlled and strengthened by the authority of the British Parliament, the company learned to govern as well as to trade, and ultimately, ceasing to trade, devoted all its energies to the colossal task of governing a dominion of which the expansion was bound to proceed automatically until it reached its natural geographical boundaries. For British rule, direct or indirect, could alone secure the establishment of the Rule of Law which the British people have steadily, though not always consciously ensued to whatever part of the world their power and their civilisation have penetrated, and which they are even now ensuing in the great war that is being waged against the international lawlessness of Germanic ambitions. With the establishment of the Rule of Law in India the ground was cleared for rearing the great framework of government and administration which have given India, as her best sons have recognised, a measure of peace, and order, and justice, and opportunities of moral and intellectual and material progress such as she had never known in the long course of her chequered history. The Indian Mutiny itself proved only a disturbing episode of which the chief result, mainly formal, was the transfer to the Crown of the authority hitherto vested in a great corporation whose functions and responsibilities had long since outgrown its original mercantile character. The Crown carried on the framework, and for the most part through the same agencies and by means of the same machinery.

It is at this stage approximately that the Report takes up the story of British rule. Its most notable feature during these last sixty years has been the growing ferment of new ideas imported into India by Western education, which has given for the first time in their history to the small but rapidly expanding class of Indians who have learnt English in their schools and Universities a common language and with it a common sense of nationhood and common aspirations towards the ideals of freedom and self-government which inform English literature and all that English literature stands for. This ferment and the unrest which it has created have been productive of both good and evil. Forces, some frankly revolutionary, others, in their essence, fanatical and reactionary, have too often perverted Western knowledge to dangerous uses. But, as the authors of the Report justly remark, "we must admit that the educated Indian is a creation peculiarly of our own; and if we take the credit that is due to us for his strong points we must admit a similar liability for his own." We cannot, at any rate, ignore him, for he not only has a monopoly to-day of all the liberal professions, and of the many Government services he is qualified to enter, but we have ourselves opened the doors of public life to him and given him steadily increasing opportunities of making his voice heard in the conduct of political affairs and even in the counsels of government. The Morley-Minto reforms were a notable recognition of his growing influence, for he was for the first time admitted even into the Viceroy's Executive Council, and given largely increased representation with largely increased powers except of actual control in new Indian Legislature. Lord Morley at the time stoutly repudiated any intention of paving the way for the introduction of Parliamentary institutions in India, but the subsequent course of events defeated his intentions, and the splendid rally of India to the Empire during the war, involving a widespread readjustment of views concerning the position of India within the Empire, led the Imperial Government as well as the Government of India to consider a new orientation of British policy in India, to which expression was definitely and solemnly given in the momentous Pronouncement of August 20 last.

The Report, which embodies the results of Mr. Montagu's Mission to India and of his conferences with Lord Chelmsford, does not disguise the enormous difficulties of the task we have undertaken. It is nothing less than the gradual transformation of the whole system of autocratic government under which we have ruled a vast Asiatic dependency into a system of responsible government, based on representative institutions, analagous to that by which the great self-governing Dominions now rule themselves. The first half of the Report consists of a masterly study of Indian conditions and of the present situation in India, which shows how slow and laborious the process of transformation must be. But the Secretary of State and the Viceroy are nevertheless convinced that it is our duty to face difficulties, and within our power to surmount them. They recognise at the same time that changes can only be made very cautiously and tentatively and within a relatively narrow field, lest we should shake the foundations of the great structure of government on which the welfare and peace of India must for a long time yet rest, and indeed the safety of the Empire. We publish on another page a summary of the principal recommendations they have made to the Imperial Government. They contemplate a first experiment in responsible government by devolving upon Indian Ministers, responsible to the Legislative Council in which there is to be an Indian elected majority, certain definite powers within the sphere of provincial government. If the experiment succeeds, those powers are to be periodically enlarged until they cover the whole range of provincial government and administration. While the Government of India and the India Office will have to relax proportionately some of the control they have hitherto exercised—as indeed the Royal Commission on Decentralisation recommended ten years ago—the paramount authority of the Supreme Government and of the British Parliament are to remain intact until India has qualified through progressive stages of political education to complete self-government. Meanwhile the creation of an Indian Upper Chamber, of an Indian Privy Council, and of a Council of Ruling Princes, the granting of British commissions to Indian officers and the larger employment of Indians in the higher public services are suggested as reasonable and practical measures for promoting the closer association of the best Indian elements with the British element, whose co-operation is essential to the political advancement of India towards self-government "as an integral part of the British Empire." The very complicated details of

Digitized by Google

so large a scheme of constructive statesmanship will invite and will doubtless receive abundant criticism, and the scheme itself will probably satisfy neither the Indian Extremists, who are clamouring for immediate Home Rule, nor those amongst the British communities who refuse to recognise the slightest need for any change. But those who, equally averse from sweeping revolutions and from stagnant conservatism, realise that progress is the law of our national existence wherever British power has taken root, will not be daunted by the difficulties or even dangers which so great an experiment must involve, nor regard its success as beyond the compass of British statesmanship.

INDIAN CONSTITUTIONAL REFORMS.

The Montagu-Chelmsford Report, which covers 300 closely printed pages, is divided into two almost equal parts. Part I., entitled "The Material," forms the basis upon which the scheme of reforms presented in Part II., called "The Proposals," is drawn up. It starts with a comprehensive survey of the present situation in India, of the forces which were shaping it before the war, and of the changes which the war itself has wrought.

The war has affected India in many ways, but above all it has become the predominant factor in the present political situation. Whatever qualifications may be needed in the case of particular classes, the people of India as a whole are in genuine sympathy with the cause which the Allies represent. The reasons of the entry of Britain into the war appealed to the educated classes, and they have never faltered in their allegiance. However much they may find fault with the Government, they are true in their loyalty to the British Crown, and, as it would be easy to show from their own lips, they fully recognise and value the higher aims of British policy. German ideas involving the subjection of the weak to the strong, and the maintenance of the theory that might is right fill them with repugnance and alarm; and the savage barbarities practised by German troops and sailors have repeatedly been contrasted with the clean methods of the Allies. The spectacle of Indian troops going forth gladly to fight for justice and right side by side with the British army appealed intensely to India's imagination. . . . But for the real and lasting effects of the war on India's destiny we should look neither to the generous help of the Princes, nor to the loyalty of the people as a whole, nor to the misguided activities of revolutionary gangs, nor yet to the attitude of the political leaders. They must be sought deeper, and, we think, in two main directions. First, the war has given to India a new sense of self-esteem. She has, in the words of Sir Satyendra Sinha, "a feeling of profound pride that she has not fallen behind other portions of the British Empire, but has stood shoulder to shoulder with them in the hour of their sorest trial." She feels that she has been tried and not found wanting, that thereby her status has been raised, and that it is only her due that her higher status should be recognised by Great Britain and the world at large. The war has given an interest in public affairs to many thousands who were indifferent before. Many men, using language familiar to them in the past, claim that she should receive some boon as a reward for her services, but we do not think that this expresses the general feeling well or justly. We prefer to say that we find a general belief that India has proved herself worthy of further trust, and of a more liberal form of government, and that whatever changes are made should be made in recognition of her own progress rather than as the reward for any services which she has rendered.

Further, the war has come to be regarded more and more clearly as a struggle between liberty and despotism, a struggle for the right of small nations and for the right of all people to rule their own destinies. Attention is repeatedly called to the fact that in Europe Britain is fighting on the side of liberty, and it is urged that Britain cannot deny to the people of India that for which she is herself fighting in Europe, and in the fight for which she has been helped by India's blood and treasure. The revolution in Russia in its beginning was regarded in India as a triumph over despotism; and notwithstanding the fact that it has since involved that unhappy country in anarchy and dismemberment, it has given impetus to Indian political aspirations. The speeches of English and American statesmen, proclaiming the necessity for destroying German militarism, and for conceding the right of self-determination to the nations, have had much effect upon political opinion in India, and have contributed to give new force and vitality to the demand for self-government, which was making itself more widely heard among the progressive section of the people.

These paragraphs constitute the keynote of the Report.

Two important chapters describe the growth of the present administrative system, of the measures which have already brought about a closer association of Indians with the conduct of public affairs in the Legislative Councils, and especially under the Morley-Minto Reforms. Their relative failure is acknowledged and explained as follows:—

In the light of these anticipations it is not hard to understand how the Morley-Minto constitution ceased in the brief space of ten years' time to satisfy the political hunger of India. The new institutions began with good auspices, and on both sides there was a desire to work them in a conciliatory fashion. But some of the antecedent conditions of success were lacking. There was no general advance in local bodies; no real setting free of provincial finance; and in spite of some progress no widespread admission of Indians in greater numbers into the public service. Because the relaxation of Parliamentary control had not been contemplated, the Government of India could not relax their control over local Governments. The sphere in which the councils could affect the Government's action, both in respect of finance and administration, was therefore closely circumscribed. Again and again a local Government could only meet a resolution by saying that the matter was really out of its hands. It could not find the money because of the provincial settlements; it was not administratively free to act because the Government of India were seized of the question; it could, therefore, only lay the views of the council before the Government of India. As regards legislation also, the continuance of the idea of official subordination led to much of the real work being done behind the scenes. The councils were really more effective than they knew; but their triumphs were not won in broad daylight in the dramatic manner which political ardour desired. This was one reason why more interest was often shown in resolutions than in legislation. The carrying of a resolution against Government, apart from the opportunity of recording an opinion which might some day bear fruit, came to be regarded as a great moral victory; and it is evident that topics that are likely to combine all the Indian elements in the council offered the best opportunity. Because the centralisation of control limited the effectiveness of the councils, the non-official members were driven to think more of display than they might have otherwise done; and the sense of unreality on both sides deepened. All this time the national consciousness and the desire for political power were growing rapidly in the minds of educated Indians; and the councils with their limited opportunities proved to be an insufficient safety valve. While therefore inside the councils there are signs of hardening opposition and the weariness which comes of sterile efforts, outside the councils the tide of feeling was rising more quickly. For a short time after their inception the Morley-Minto reforms threatened to diminish the importance of the Indian National Congress and the Muslim League. It seemed as if the councils where elected members took a share in the business of government must be a more effective instrument for political purposes than mere self-constituted gatherings. But with the disillusionment about the reformed councils the popular conventions, where speakers were free to attack the Government and give vent to their own aspirations untrammelled by rules of business or the prospect of a reply, naturally regained their ascendancy; and the line taken by prominent speakers in them has been to belittle the utility of the councils, if not to denounce them as a cynical and calculated sham. We cannot now say to what extent improvement might have been effected by gradual changes in the rules of business, by relaxing official discipline, by permitting freer discussion, and by a greater readiness to meet the non-official point of view. However, this may be, events have proved too strong. The councils have done much better work than might appear to some of their critics. But they have ceased to satisfy Indian opinion, and their continuance can only lead to a further cleavage between the Indian members and the Government, and a further cultivation of criticism unchecked by responsibility.

A chapter on the existing structure of Government, in which full justice is done to its great achievements and to the high qualities of the public services, leads up to a dispassionate examination of the "Conditions of the Problem" in the light of Indian history and traditions and the actual state of the people, of whom the vast majority are a hard-working but profoundly ignorant peasantry absorbed in their daily toil and with no outlook beyond their village fields, whilst racial and religious and caste differences perpetuate ancient lines of cleavage far deeper than the Western mind is apt to realise. The one great ferment we have introduced into the social life of India has been Western education,

and the Report recognises its increasing potency both for good and for evil.

In estimating the politically-minded portion of the people of India we should not go either to census reports on the one hand, or to political literature on the other. It is one of the most difficult portions of our task to see them in their right relation to the rest of the country. Our obligations to them are plain, for they are intellectually our children. They have imbibed ideas which we ourselves have set before them, and we ought to reckon it to their credit. The present intellectual and moral stir in India is no reproach, but rather a tribute to our work. The *Raj* would have been a mechanical and iron thing if the spirit of India had not responded to it. We must remember, too, that the educated Indian has come to the front by hard work; he has seized the education which we offered him because he first saw its advantages; and it is he who has advocated and worked for political progress. All this stands to his credit. For thirty years he has developed in his Congress, and latterly in the Muslim League, free popular convocations which express his ideals. We owe him sympathy because he has conceived and pursued the idea of managing his own affairs, an aim which no Englishman can fail to respect. He has made a skilful, and, on the whole, a moderate, use of the opportunities which we have given him in the legislative councils of influencing Government, and affecting the course of public business, and of recent years he has by speeches and in the Press done much to spread the idea of a united and self-respecting India among thousands who had no such conception in their minds. Helped by the inability of the other classes in India to play a prominent part, he has assumed the place of leader; but his authority is by no means universally acknowledged and may in an emergency prove weak.

After carefully analysing and rejecting the solution of the problem propounded in the Resolutions of the Indian National Congress and Moslem League, as altogether unsound in principle and leading in practice to a mere deadlock from which there could be no issue but either a dangerous leap into the unknown or equally dangerous retrogression, the authors of the Report develop their own proposals, which are set forth in Part II. They recommend in the first place a large readjustment of the relations between the Provincial Governments and the Government of India, with financial, as well as legislative and administrative, devolution, a complete separation of revenues, and separate powers of provincial taxation and provincial borrowing. Within this enlarged sphere of provincial government they are prepared to transfer certain specific powers—which might include in the first stage local self-government, urban and rural minor public works, primary and secondary and technical education, sanitation, excise, and taxation for provincial purposes—to Indian Ministers, associated with the Governor-in-Council, for the general conduct of government, but responsible for the exercise of the specific powers transferred to them to the Legislative Council, in which there should be an Indian majority elected on the widest suffrage that existing conditions in India could allow of, and subject to the maintenance of a communal representation wherever and as long as it remains indispensable. Indians would thus be able to learn self-government for themselves in a field which, at first narrowly circumscribed, would be capable of steady expansion if justified by results, until it finally came to include the whole sphere of Provincial Government. Meanwhile, the Governor-in-Council would retain, except in regard to the "transferred subjects," all his present powers, and provision is made for safeguarding his paramount authority for the purpose of securing legislation deemed by Government to be essential to the peace or tranquillity of the province which the Legislative Council might refuse to pass, or in other cases of direct conflict liable to produce dangerous consequences. The responsibility of the Governor-in-Council to the Government of India thus remains essentially untouched, as does that of the Government of India to the Secretary of State and the British Parliament.

The Report, in fact, lays down definitely that the Provinces are the domain in which the earlier steps towards the progressive realisation of responsible government should be taken, and that the authority of the Government of India in essential matters must remain indisputable pending experience of the effect of the changes in the Provinces. Whilst recommending a large increase of the Indian elected element in the Viceroy's Legislative Council, the Report therefore proposes the creation of an Indian Council of State as the supreme legislative authority for India, which, together with the creation of an Indian Privy Council and of a Council of Ruling Princes, would presumably strengthen the conservative influences in the country and bring them into closer touch with the Supreme Power.

Other recommendations deal with the consequential reconstruction of the India Office and the India Council, the need for a closer relationship between the Native States and the Government of India, and the larger recruitment of Indians into the Public Services, in regard to which the Report goes a good deal further than the Royal Commission of 1912, but suggests also measures for protecting and improving the position of the European element. Except in respect of the immediate granting of British commissions to Indian officers and a more liberal recognition of Indian military services, the Report considers that the question of the Indian Army and of the larger changes that may be necessary in our military policy must await the end of the war.

The Report concludes with some interesting expressions of opinion as to the development of Indian industries and commerce, including a forecast of the recommendations of the Industrial Commission, the position and duties of the non-official British community, our obligations towards the Eurasian community, and the delicate but very vital question of social relations between Indians and Europeans.

This bare outline of a great State paper, admirably drafted and constructed, can do but very imperfect justice to the large and many-sided scheme which it develops. The spirit in which the authors of the Report have approached their task may perhaps best be gathered from the following passage:—

We believe that the announcement of August 20 was right and wise; and that the policy which it embodies is the only possible policy for India. We have seen it estimated that the number of people who really ask for free institutions does not exceed five per cent. of the population. It is in any case a small proportion; but to the particular numeral we attach no importance whatever. We are not setting about to stir 95 per cent. of the people out of their peaceful conservatism, and setting their feet upon a new and difficult path merely at the bidding of the other five per cent.; nor would that be our reason, whether the articulate minority were 20 per cent. or one-half per cent. of the whole. Our reason is the faith that is in us. We have shown how step by step British policy in India has been steadily directed to a point at which the question of a self-governing India was bound to arise; how impulses, at first faint, have been encouraged by education and opportunity; how the growth quickened nine years ago, and was immeasurably accelerated by the war. We measure it not by the crowds at political meetings or the multiplication of newspapers; but by the infallible signs that indicate the growth of character. We believe profoundly that the time has now come when the sheltered existence which we have given India cannot be prolonged without damage to her national life; that we have a richer gift for her people than any that we have yet bestowed on them; that nationhood within the Empire represents something better than anything India has hitherto attained; that the placid, pathetic contentment of the masses is not the soil on which such Indian nationhood will grow, and that in deliberatly disturbing it, we are working for her highest good.

If, then, our faith is right, what are the conditions of success? Obviously, there is much to change. The habits of generations have to be softened if not overcome; we have to call forth capacity and self-reliance in the place of helplessness: nationhood in place of caste or communal feeling. But we have great influences working with us in the spirit of liberty that is stirring in Asia, as in the rest of the world, and the intense desire of educated Indians to prove that their long period of tutelage may be ended, and that they may take their place in the forefront of the world as a self-governing part of the Empire. The task is a great and worthy one, but it calls for some effort and self-sacrifice from every element in the community.

DEATH OF SULTAN OF TURKEY.

As we go to press news reaches us, through Reuter's agent in Amsterdam, that the Sultan of Turkey died on Wednesday evening.

Sultan Mohammed V. (Mehmed Reshad Khan) was born in Constantinople on Shawal 21, 1260 A.H., or November 3, 1844 A.D., and was the son of Sultan Abdul Mejid and the younger brother of Abdul Hamid II., whom he succeeded. He was proclaimed Sultan on April 27, 1909, when Abdul Hamid was deposed by the Young Turks; and throughout his reign he was little more than a cipher, all power being in the hands of the so-called Committee of Union and Progress.

He was not deeply interested in politics, but it was generally believed that he was at heart more friendly towards England than towards Germany; and he did what he could to prevent his unhappy country from taking the fatal plunge into war.

He is survived by two sons: Prince Zia-ed-Din Effendi, born 1873; and Prince Omar Hilmi Effendi, born 1888. Upon the assassination of Prince Yussuf Izzeddin, Prince Wahid-ed-Din, a brother of the late Sultan, became Heir-Apparent. He was born in January, 1861.

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

Lent I.C. Servants. June 24.

Colonel YATE asked the Secretary of State for India whether members of the Indian Civil Service whose services have been placed at the disposal of the War Office receive the same rates of pay whether serving in East Africa, Mesopotamia, Palestine, Egypt, Italy, France, or the Mediterranean, or whether there is any differentiation; and, if there is a differentiation, whether there is any reason why the same rule should not equally apply to all.

Mr. FORSTER: Indian Civil Servants giving military service under the War Office are, as a general rule, in receipt of Indian civil furlough pay, plus the standard military emoluments of a British officer in the area in which they serve. If the hon. and gallant member has in mind any particular case in which the treatment appears to him to be anomalous I shall be happy to inquire into it.

Colonel YATE: Will the right hon. gentleman inquire whether officers serving on the East of the Suez Canal get a different rate of pay from those serving on the west of the Suez Canal?

Mr. FORSTER: I will make inquiries.

Turks in Tabriz. June 27.

Sir J. D. REES asked whether the Secretary of State for Foreign Affairs could give any information regarding the occupation of Tabriz by the Turks.

Lord ROBERT CECIL said:—The Turkish forces have been in occupation of Tabriz since the 7th inst. The British Consul and colony have left the city and are on the way to Teheran. It is understood that the enemy forces have taken possession of the British and United States Consulates and the United States hospital, and have disregarded the protests made to them on this head by the Spanish Consular Agent, under whose protection these premises had been placed.

German Missionaries in India. July 1.

Colonel YATE asked the Secretary of State for India whether all German missionaries in India had now been interned or repatriated; and, if not, how many still remain and under what conditions they remain.

Mr. MONTAGU: More than two years ago the great body of missionaries of enemy nationality were repatriated from India. About 50 men were granted exemption on account of age, infirmity, long residence in the country, and the like, and they are no doubt still in India. A larger number of women, mostly nuns, were also for similar special reasons allowed to remain in India. For some of these persons residence in particular places, such as monasteries and convents, has been appointed. In other cases special restrictions of the kind have not been thought necessary, and have not been imposed.

Arms in India. June 3.

Colonel WEDGWOOD asked whether, in view of the increasing external danger to India, the Secretary of State for India was yet prepared to consider the repeal of the Arms Act, so that Indians might no longer feel both degraded and helpless in the face of danger.

Mr. MONTAGU: The Government of India has in contemplation an amendment to the schedule of the Arms Act in order to remove racial discrimination.

Colonel WEDGWOOD: Is it not most essential that in a country where there are a considerable number of dangerous wild beasts, people should have the right to carry arms?

Mr. MONTAGU: I admit the force of the argument, but a great deal of misapprehension arises from confusing the Act and the schedules. I do not think the Act itself requires amendment.

NEWS IN BRIEF.

A serious fire at the Piræus on June 19 destroyed large stocks of foodstuffs and tobacco, valued at some millions of francs.

According to Herr Gothein, German Progressive Deputy, there is a complete crop failure in Roumania owing to the war and the weather.

Forty-five persons have been killed and many injured in a collision between an express and goods train between Mircesti and Roman, in Roumania.

The Postmaster-General announces that letters for British East Africa conspicuously marked by the senders for transmission via the Sudan will be sent by that route.

On the occasion of the anniversary of the entry of Greece into the war, M. Pashitch, the Serbian Prime Minister, sent a telegram of congratulation to M. Venizelos.

The Jewish Correspondence Bureau at The Hague reports that the Polish Zionists have resolved to collect 1,000,000 marks for the establishment of a colony in Palestine.

A deputation of Greek scientists and professors waited on M. Venizelos last week to urge the Government to take sterner measures against the anti-national activities of the reactionary remnants.

There are in India 600,000 blind people, of whom about 34 000 are in the Madras Presidency. The only schools for the blind in that Presidency are those of the Church Missionary Society at Palamcotta.

M. Malinoff, Bulgarian Prime Minister, has expressed his firm resolve to inaugurate a regime of order and strict equality in all domains of the State. It is expected that the Sobranje will shortly be convoked in extraordinary session

Mr. Nahum Solokow, having made certain representations as to Roumanian Jews on behalf of the Zionist organisation, Mr. Balfour has replied that the British Government are most anxious to do everything in their power to secure a just and permanent settlement of the Jewish question in Roumania.

During excavations in Cyrenaïca (Tripoli) two statues have been found, one representing a Roman matron of the second century, the other a winged figure of Victory. A new temple containing a colossal statue of Demeter, with long inscriptions belonging to the third century B.C., has also been discovered.

A Bucharest telegram states that the *Roumanian Gazette* publishes a Royal amnesty Decree pardoning all German subjects who have been convicted or are being prosecuted for offences committed with the intention of helping their country or for any infringements of the special law for enemy subjects.

A telegram from Sofia says that M. Radeff, who for a long time past has been in charge of the Political Section of the Bucharest Ministry for Foreign Affairs, has been appointed Secretary-General of the Ministry in succession to M. Zlatanoff, who has resigned. M. Passaroff, Bulgarian Minister in Berne, has been relieved of his functions.

The executive committee of the Lord Kitchener National Memorial Fund has set apart a sum of £5,000, to be devoted to discharged officers and men who require financial assistance to complete the studies which they were pursuing at Universities and schools of University rank, with a view to graduation, when they joined the Forces.

A Council under the presidency of the Archbishop of Canterbury has been formed for the purpose of helping a number of Serbian Church students to complete their studies at an English University. The plan outlined by the Council involves the complete maintenance of nearly forty students, and includes not merely the cost of their education, but also the necessary expenses of board, lodging, clothes, etc.

Rainfall in India has been fair at Orissa, Chota Nagpur, United Provinces East, Bombay Deccan, Haidarabad, Malabar, and Madras Coast North; normal in Bay Islands, Burma, Assam, Kashmir, and Central Provinces proper; in excess in Bengal, Bihar, North-West Frontier Province, Rajputana East, Central India West, and Konkan; and scanty elsewhere. Some improvement is likely in the Arabian Sea monsoon.

The Mayor of Piræus has sent the following telegram to the Lord Mayor of London:—"On the occasion of the anniversary of the political union of Greece and her entrance into the war for right and liberty at the side of the Great Powers, the Piræus Municipality, whose first citizen happens to be M. Venizelos, addresses her sincere gratitude to the honourable Allies who saved once more the country from despotism and barbarism."

Replying to letters from Sir Stuart Samuel and Mr. C. G. Montefiore, on behalf of the Joint Foreign Committee of the Jewish Board of Deputies, Mr. Balfour has written confirming the publicly-announced statement that the British Government "have the closest sympathy with the emancipation of the Jews in Eastern and South-Eastern Europe, and are anxious to do everything in their power to secure a just and permanent settlement of the Jewish question throughout the regions concerned."

Reuter's Agency is informed that an appeal has been made on behalf of the Armenians to the British Labour Conference. After declaring that the Brest-Litovsk Treaty will prove perhaps the greatest calamity in Armenia's history and horror, it goes on to speak of the unprecedented atrocities committed since the war in Turkish Armenia, when about a million persons have been massacred and the life of the country brought to a standstill. The appeal concludes with "a fresh and supreme appeal to democracy from a people which has suffered frightful martyrdom."

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

A very appreciable advance has been made towards the economic union of the Allies after the war by the acceptance by the Inter-Allied Parliamentary Commercial Conference at its third annual meeting at Westminster this week of Sir Watson Rutherford's scheme for the establishment of an Inter-Allied Commercial League, the object of which is to carry out in all the Allied countries "such measures as may be adequate to secure that the German conspiracy to dominate the trade of the world, including dumping, espionage, and other similar practices, may be defeated." This step brings the question definitely out of the area of mere academic discussion into the field of action, and we shall probably not have to wait long now for developments.

***

In view of Germany's pre-war trade methods the Allies really have had no option as regards the use of the economic weapon at their disposal, and it is surprising in the circumstances that they should have hesitated so long to make known their intentions. It will be interesting to see Germany's attitude towards the Allies' union in defence of their economic interests. Probably to deceive their people Germany's rulers will fall back on the cry that the Allies are contemplating an economic war, but whether Germans will be so deluded is another matter. It is certain, at any rate, that those of them who know their own history will have no illusions on the subject. Up to 1914 Germany gave the world an admirable exposition of the theory of economic war by conducting a trade offensive in other countries by means of the most unscrupulous tactics, and during the war she has shown exactly the same spirit in the treaties she forced on Roumania and Russia, both of which show clearly her views on "free commerce," when she feels able to carry her will into effect. Obviously between that policy and the preservation by the Allies of their own resources there is a wide gulf fixed. The one is economic war pure and simple, the other merely the closing of the open door.

***

Rightly used, the economic weapon is likely to have no little effect in diminishing Germany's desire for resistance. The Allies control the most important sources of the world's supply of raw materials, and it is perfectly open to them to decide to cut Germany off entirely from these sources for a period of years in the event of the struggle being continued after a given date. There is ample evidence that Germany dreads this use of the economic resources of the Allies. The great warehouses at Bremen and Hamburg are empty, and Germany hopes to fill them, however the war ends, by the adroit development of her commercial penetration. Once the German business man becomes convinced that the Allies will make the fullest use of this weapon, and will be prepared to refuse to trade with him, and so bring him to economic ruin, we may see a rapid change in his attitude, which will be speedily reflected in the attitude of the German Government.

The Egyptian Industries Commission has reported adversely on the question of attempting to revive tobacco cultivation in Egypt in present circumstances owing to the need for increased food production. This decision has not been well received by a section of the native Press, which seems altogether to overlook the difficulties involved in imposing a further strain on the limited area of irrigated land. For obvious reasons it is out of the question to undertake any considerable extension of irrigation at the present time, and the land available for food production after the curtailment of the area under cotton leaves none to spare for other purposes. The introduction of tobacco cultivation, as I have already pointed out, would make an excellent addition to Egypt's industries, but it would be the height of folly to introduce the industry at the expense of food production, and thus lay a further and unnecessary burden on the tonnage of the Allies.

***

Apropos of the recent reference in our Engineering Notes to the problem of providing efficient and economical transport in the Sudan it may be noted that the *Journal of the Sudan Chamber of Commerce* expresses the view that the research work of Mr. John Wells on the question of the production of gas from vegetable matter may have a far-reaching effect on the Sudan's development, especially in the South, where there are unlimited supplies of the material needed for the production of gas. "There would doubtless be considerable trade development," our contemporary adds, "in the Bahr-el-Ghazal and Mongalla Provinces if a cheap means of transport were available. Railways are costly to lay, and petrol-driven motor lorries very expensive to run. Recently accounts have appeared in the English newspapers of omnibuses being run on gas, and should this have been found successful there seems to be no reason why gas-driven lorries should not be made use of. Naturally the question requires very careful consideration, but it certainly looks on the face of it that it might be the means of providing cheap transport which is so necessary for the development of the Southern areas."

***

The Indian crop forecasts have not infrequently aroused criticism on the ground of their varying character. In the case of the cotton crop a defect of this nature is obviously serious, and I am glad to see, therefore, that a number of valuable suggestions for remedying this shortcoming were laid by Mr. Findlay Shirras, Director of Statistics, before the Indian Cotton Commission. Mr. Shirras showed that the relation of the season's outturn to the normal is rarely determined or reported, and that the tendency has been to underestimate a good crop. Only twice in the last ten years has the final forecast been in excess, while the average underestimate has been 9.6. This tendency was due, he explained, "firstly, to the ingrained pessimism of Indian cultivators and village officers. The cultivators possess an ineradicable instinct that it is imprudent to estimate a bumper crop as a bumper crop." Mr. Shirras suggested that the reporting agency should be improved by employing men with a practical training in agriculture, and he also recommended the advisability of enquiries from ginning firms after the ginning commenced as to how the crop was turning out.

Judged by the Western standard, Serbia's code of commercial law is remarkably stringent. A good instance is afforded by the regulation that the members of a board of directors are responsible to the shareholders to the extent of their entire wealth in the event of the management bringing about failure or the necessity of writing down capital. This law is excellent in theory, but I question whether it has worked out well in practice. Of course, it gives shareholders the most perfect security, given directors of standing, but I should think it must have operated to the detriment of initiative, and may have had some influence on Serbia's comparative lack of development. Another interesting law provides that if a person renders a second time an account which has been paid, and receives payment owing to the loss of the receipt, on its being proved that the account had already been paid he is imprisoned without the option of a fine.

***

Egypt is evidently beginning to feel the silver shortage very acutely, for the recent issue of 25 piastre notes has now been followed by one of 10 piastre notes. In a communiqué on the position the Government state that the silver circulation, which was 2,500,000 at the beginning of the war, has risen to 7,000,000 owing to higher prices, the growing prosperity of the country and the tendency of small cultivators to hoard. The last reason, of course, holds good more or less throughout the East, and the average Egyptian is at least as great a hoarder as the average Indian, which is saying a good deal, his special weakness being silver ornaments for his women folk. Unfortunately, a remedy is hard to find for this Eastern practice, which was a nuisance in peace time, and might be described by a much stronger epithet now.

***

Remarkably good results have been achieved by the Burmah Oil Company during the past year, the profits, after allowing for depreciation, amounting to £2,305,100, against £1,276,600 for the previous twelve months. Against the increased profit of £1,028,500 has to be set an increase of £920,000 in the excess profits duty, the amount due under this head being put at £1,250,000, against £330,000 for 1916, but even so the company has been able to raise its dividend from 30 to 32½ per cent., while part of the reserve is to be capitalised by the distribution of a bonus of one new share for every two now held, the new shares ranking for dividend from January 1 last.

***

British manufacturers of motor-boat engines should keep the possibilities of the Indian market carefully in mind as regards trade after the war. There is a good deal of motor-boat construction going on in India at the present time, one firm, as a matter of fact, having turned out 100 launches in twelve months, and there is every indication that the use of motor-boats will steadily increase with the coming of peace. At the present time, while some of the engines come from this country, most of them are supplied by the United States. This is, however, essentially a market which should be in British hands, and it is hoped that our firms will leave no stone unturned to reverse the positions as soon as trade conditions permit the unlimited export of machinery.

THE EGYPTIAN INDUSTRIES COMMISSION REPORT.

II.—The Development of Industry.

(*Continued.*)

The report states that the general conditions under which some of the small industries are carried on are very bad. The workshops are mostly situated in the worst parts of the town, where the ordinary requirements of hygiene are entirely neglected, and one in particular consists of several hovels, more or less ruins, where there is little light or ventilation, whilst in another prosperous workshop, where the motive power is provided by a team of cattle, the space is so small that workers and animals work side by side amid the worst possible hygienic conditions. Added to this drawback—for the absence of proper accommodation must react on the workers—there is a persistent disinclination to use improved methods, and in many cases the old tools and antiquated system of work merely tend to add to the cost of the finished article compared with the European variety. Moreover, the manner in which locally produced articles are put on the market is prejudicial to the interests of the producers. The latter keep very primitive books, if they keep any at all; in nine cases out of ten they do not know what an article has cost them to make, and their only preoccupation is to provide for their immediate wants. Thus they buy raw material only when they want it, and sell their products only when they require money. They have no idea of watching the markets, and are entirely at the mercy of the middlemen, who take full advantage of their peculiarities. The report cites the example of two centres, one of which, Akhmin, depended upon tourists for the sale of its textiles, and now that the annual invasion has ceased has taken no steps to find an outlet for the textiles for which it is justly famous; the other, Kena, a pottery centre, and where the makers, though they are in complete control of the production of the goolah (water bottle), far from co-operating in order to obtain the best possible terms, compete with one another, and so are at the mercy of the middlemen, who make enormous profits at their expense. It is to a great extent due to this mad rivalry between people of the same trade that the stagnation in certain branches exists to-day.

Progressive Methods Required.

The Egyptian industrial worker scorns publicity, and shirks anything which appears to be a call to progressive methods. That the small industries can thrive if properly carried on is proved by the fact that the few in which foreigners are engaged, such as soap-making, tanning, boot-making, shirt-making, and clothes-making, have made progress, especially since the outbreak of the war. Whilst, however, this is all very unfortunate, the Commission puts on record the fact that it has come across some Egyptian workers who have given proof of a spirit of order and progress. The evil, deep though it may be, is, in its opinion, not irremediable, and Egyptian industries, whilst showing serious defects, possess certain latent elements which may be productive of progress if properly handled. The Commission sees a ray of hope in the fact that the war has to a great extent awakened throughout Egypt activities hitherto unsuspected, and, looking at the results so far obtained, it is easy to see that the industries of Egypt only require for their development the assistance of circumstances and of conditions of which they have been deprived in the past.

With regard to the large industries, most of those which contribute to the wealth of the country are carried on by outside capitalists, such as the Cotton Spinning Company of Alexandria, the alcohol industry, the sugar refineries, and the seed crushers. There are also others, such as the metal, cigarette, cement, salt and soda, tarbush, brick, beer, rubber, preserves, cotton, rice, and flour milling factories, which also render considerable services to the community. Practically all of them have managed to survive the preliminary period of organisation, which is always a test; but numerous others created during the boom went under, and helped to add to the bad name which Egypt acquired during the crisis, and which conduced to an apparent confirmation of the theory that industry could not succeed here. Whilst nothing has been officially done to encourage industries, certain people have, notwithstanding, had the courage to "carry on," and the Commission considers that in the circumstances the situation as regards the greater industries holds out the best of hopes, and is worthy of the liveliest support. At the same time, it expresses its regret that, with but very few exceptions, the Egyptians should always have hesitated to put their capital into industrial enterprises, a feature which it hopes will disappear as soon as technical education has become more extended and a better organisation of industry has been brought into being.

Limitations of Agriculture.

Coming to the point of the country's need for new industries, the Commission raises the question as to whether agriculture will suffice to enable the people of the country to find the necessary subsistence. It points out that at the present rate of increase the population of the country in 1945 will be 20,000,000, and that if the total cultivable area is devoted to cultivation it will barely suffice to meet the needs of that population, unless in the meantime some very marked improvement takes place in the average yield per feddan; and this it may be noted is conditional on the present rate of increase being maintained and the people remaining in their present social condition. But it may be taken for granted that the social condition of the people will improve, and that consequently they will require more than at present, whilst improved well-being will conduce to a higher rate of increase. Further, there is every probability that in the very near future mechanical methods will be introduced for cultivation purposes, and as a result the number of people for which each feddan will provide occupation will become reduced. Resuming its argument, the Commission comes to the definite conclusion that agriculture alone cannot meet the needs of the people and bear the charge of the national and private debt, which together amount to about £E160,000,000. The Commission points to improvement and extension of agriculture and to the development of commerce and industry as the sole means for the country to meet the problems which cannot fail to confront it in the near future. Nor does it consider that agriculture will suffer from industrial expansion; rather will it benefit since the raw material required for those industries will consist for the most part in agricultural products, and thus the price will be raised and the country in general will benefit, whilst local industry may be able to provide agriculture at relatively cheap prices with some of the articles which it has hitherto obtained from abroad. The starting of industries in Egypt will not harm the great industrial countries, since, if it entails a reduction in the import of certain commodities which the country will itself produce, on the other hand the demand for other commodities will increase. The Commission sees in the after-war conditions which will bring about an industrial renaissance every hope that Egypt will have a share therein, for if Egyptian capitalists may not yet have learnt the wisdom of investing their funds in industrial enterprises the heavy taxation in belligerent countries will drive European capitalists to look for outlets where the fiscal charges are not so great, and there is every reason to believe that a great influx of foreign capital will take place into Egypt, where that capital will be used for industrial purposes.

* The first article of this series appeared on June 7, and the first half of the present article on June 21.

The Madras Government has sanctioned the establishment of an engineering school at Vizagapatam.

The Washington correspondent of the Associated Press announces (says a Reuter message) that the United States Treasury Department has arranged with Great Britain for the supply of rupee exchange, in order to finance in America civil and military business in Indian exports. The price of the rupee will be 35.73 cents for telegraphic transfers.

LANCASHIRE COTTON.

Irregular Business.

(From Our Own Correspondent.)

Manchester, Wednesday.

An irregular business continues to be done in the market. Supplies in yarn and cloth tend to become more limited than ever. Official reports relating to the American cotton crop have been better than expected, and there is every probability of a yield next season of over 15,000,000 bales. Rather diverse news has been received relating to the Egyptian growth. It is understood that spinners will have to make fresh financial arrangements in connection with purchasing supplies from the Government after the end of this month. It is said that the system of three months' bills will be abolished as the authorities will require cash. Egyptian yarns remain very strong. Owing to the Bolton holidays many sellers have refused to quote, and a limited business has been done. It is exceedingly difficult to secure early delivery of certain counts and qualities. Some advices from Egypt with regard to cloth are a little better, but dealers on the other side are undoubtedly still over supplied. Trade for India has chiefly been in fine fancy goods. The off-take for China remains unimportant. Some useful lines have been put through for South America. American yarns have been very stiff in price, but the turnover has been restricted. There has been very little done in export bundles.

BRITISH COTTON-GROWING.

At the annual meeting of the British Cotton Growing Association held in Manchester on July 2, Mr. William Howarth referred to the loss which the association had sustained by the retirement from the chairmanship of Mr. J. A. Hutton. From a financial point of view the work of the past year was very satisfactory; but the making of profits was not the chief object of the association, and the war had curtailed the development of the schemes of cotton production. The main difficulty was that of transit. It should be borne in mind that when, through the efforts of the association, a new road or railway was made, cotton was not the only commodity that was carried upon it. The Empire Development Committee now sitting in London could hardly spend its time more profitably than in considering the provision of proper transit in all parts of the world.

About the association's future, it was difficult to say anything with confidence. There were three alternative proposals before the Departmental Committee which was considering the question of cotton-growing within the Empire. The first was the formation of a Government Department to take over the work. The second, the reconstruction of the association as a public trust, with Government assistance and under Government control. The third was that the development of the work should be left to ordinary commercial enterprise. The last of these suggestions was generally considered as impracticable. The second seemed likely to be adopted. On the motion of the chairman, seconded by Mr. J. M. Thomas, of Rochdale, the Council's report and the statement of accounts were adopted. Lord Derby was re-elected president of the association.

CHINA AND INDIAN OPIUM.

Mr. Balfour's announcement in the House of Commons on June 20 that the Chinese Government and the Opium Combine had concluded an agreement for the purchase of the stocks of Indian opium bonded at Shanghai and Canton (says Reuter's Peking correspondent) came as a shock to China, where it is realised that instead of marking the end of the opium traffic, this deal reopens the whole of China both to cultivation and smoking, and destroys the result of the years of magnificent work against the opium habit in which China has effected the greatest social reform in her history. The Government intends to establish a vast opium gabelle, but hesitates to announce the scheme. It is believed that a British intimation of disapproval of the scheme can save the situation and earn the gratitude of the whole of the Far East.

EGYPTIAN CROPS.

The bulletin of the Egyptian Ministry of Agriculture gives the following particulars regarding crop conditions in May:—

Cotton.—The weather has been changeable and generally too cold, especially at night, to benefit the cotton. Rain and hail falling on the 4th and 5th caused a good deal of local damage. Towards the end of the month the weather improved and was more favourable. Water supply was ample. Resowing, thinning, hoeing, and watering are now proceeding. Mole-cricket and cut-worm attacks are common, and slight damage is reported; attacks from sore-shin are also occasionally noticed, but the damage caused is not of importance. Cotton-worm egg-masses have appeared on isolated areas. Owing to the unsatisfactory weather conditions of this and last month, the crop is now unquestionably late, although it is less so in Upper than Lower Egypt. Resowing had to be done twice and even thrice in many places, and the fact that it has proceeded up to the end of May shows to what an unusual extent it has been necessary. The early crop was affected most and the late one is doing comparatively well.

Wheat.—The weather has been generally favourable, though spells of hot winds occurring early in the month in Upper Egypt caused some damage to the unripe crop, shrivelling up the grains and delaying harvesting for a time. Harvesting, threshing, and winnowing are now general, but in a few provinces, owing to the scarcity of labour, they are not as much advanced as in the others. In Asyût and Girga, the crop has been harvested in excellent condition. It is giving a normal yield, though less than last year, owing to the severe attack of rust and the scarcity of artificial manures.

Barley.—Harvesting and threshing are nearly completed and winnowing is proceeding. The yield is appreciably above average.

Beans.—Harvesting is over and threshing practically finished. Despite the recent attack of rust the evidence of a good outturn throughout the country is unmistakable, and it is satisfactory to record the recovery of this crop after its failure in 1916.

Rice (Sêfi).—The weather is favourable. With an abundant water supply, a large increase in the rice area is expected this year. Watering and the preparation of land for the completion of sowing are in progress. The area already sown is coming up well, early rice having germinated regularly. Sowing of Fino is finished in Gharbiya, and Yapani is now being put in.

Millet (Sêfi).—Weather favourable and water supply ample. Sowing of late crop is still proceeding, while the early one is being thinned and hoed. Slight attacks of borer and mole-cricket are reported in Beni Suef and Minya, but the damage is insignificant. The crop is progressing favourably and is generally rather earlier than last season, except in parts of Beni Suef.

Sugar Cane.—The weather was, on the whole, favourable though variable, and occasionally hot and windy. Weeding, hoeing, manuring, and watering are being carried on. No pests are reported. The growth is satisfactory, and early-planted canes are doing well. Planting seem to have continued later than usual this season.

MOROCCAN LOCUST BEANS.

The Board of Trade are in receipt, through the Foreign Office, of information to the effect that, by an Order of the Resident-General as Commander-in-Chief, locust beans have been added to the list of goods the export of which, from the French zone of Morocco, is only permitted in so far as concerns such quantities as are not retained by the "Service de l'Intendance," and under licence issued by the Director of the Service.

Messrs. Thomas Cook and Son have obtained permission to run a truck by the military railway between Cairo and Jerusalem for the conveyance of packages, weighing between 11lb. and 264lb., addressed to merchants and other private individuals. The service is weekly.

Speaking at a meeting of the Liberal Club in Athens M. Venizelos stated that all necessary measures were now being taken to enable Greece to cope with all the economic problems which would arise after the war.

ENGINEERING NOTES.

An Expanding Road Wheel.

Reference was recently made in these notes to the difficulties experienced in the East with the road wheels of vehicles. Private or commercial motor cars, tractors, wagons, or agricultural machinery are always in trouble, especially in the hot season, owing to wheel difficulties and consequent repairs, and the trouble is greater where rubber tyres are used. A new and very interesting design of road wheel, which has recently been brought out, will, we think, prove very popular with owners of vehicles with wheels for solid tyres. The object of the design is to overcome a difficulty frequently experienced when fitting band tyres, in that there is very often a slight difference between the outside diameter of the wheel and the bore of the metal band upon which the tyre has been vulcanised. The present device aims at expanding the felloe of the wheel while still maintaining it concentric with the hub. The wheel itself, although in one piece, is made with its two halves struck from different centres, so that at opposite points on the circumference there is a step, and between this part of the wheel and the base of the tyre are thus formed two grooved wedge-shaped spaces. Suitable wedges are made to fit these spaces, and by a slight collective movement of these wedges in either direction the outside diameter of the wheel may be increased or diminished. The advantages in the use of these expanding wheels are obvious.

Regulations for Sale of Machinery

The new order of the Government for the sale of agricultural machinery and implements will be of particular interest to importers and users of such machinery in the East. It will remedy a situation which gave opportunities to profiteers at home, and aided the efforts of foreign competitors abroad to the detriment of British trade. According to the new Order: 1. On or after July 1, 1918, no person shall offer to sell, sell or deliver any agricultural or dairy implement not purchased by him direct from the manufacturer thereof unless he shall hold a permit from the Minister of Munitions for such sale or delivery. 2. On or after July 1, 1918, no person shall offer to sell, sell or deliver any agricultural or dairy implement purchased by him at a price exceeding the net cost thereof delivered to him by more than 17½ per cent. where such net cost amounts to £40 or upwards, and by more than 25 per cent. where such net cost amounts to less than £40, provided that this clause shall not apply to any offer, sale or delivery of (a) any agricultural implement at a price not exceeding £2; (b) any dairy implement at a price not exceeding £1; (c) any part of an agricultural or dairy implement at a price not exceeding 10s. 3. It shall not be made a term or condition of the sale of any agricultural or dairy implement that the purchaser shall purchase or cause to be purchased any other article or goods. 4. Every person dealing in agricultural or dairy implements shall keep a true and complete record of all such dealings, and the price at which every agricultural or dairy implement shall be purchased or sold by him, and shall furnish to the Director, Agricultural Machinery Department, Ministry of Munitions, as and when required by him, such returns as to agricultural and dairy implements purchased, sold or delivered by or to him at such times and in such form as the said Director shall from time to time direct. All such records shall be open for inspection by a representative of the Ministry of Munitions at all reasonable times. 5. For the purpose of this Order the expression "Agricultural Implement" shall mean any machine, implement, vehicle, or other article or part thereof designed or adapted or commonly used for agricultural purposes, etc. 6. All applications for permits under this Order shall be addressed to the Director, Agricultural Machinery Department (Price Control Section), Ministry of Munitions, 8, Northumberland Avenue, W.C.2.

In conjunction with the above Order the Minister of Munitions has taken steps to control the prices chargeable by manufacturers for all agricultural and dairy machinery and implements, and no manufacturer will be allowed to receive any part of the percentages referred to in Clause 2 which are chargeable in addition to the manufacturer's prices to cover agency, distribution, and other selling expenses.

Gas Containers in the East.

Users of town-gas as fuel for their motors in the East find that the gas-containers on the top of the car soon lose efficiency, and deterioration begins sooner than expected. The Gas Traction Committee in its recently issued interim report put the life of a well-made flexible container at eight months. In a much shorter period an inferior fabric, or any fabric used for the purpose in hot climates, would develop porosity to such an extent as to involve a loss of 50 per cent. of its contents. A rubber paint which has recently been brought out will, it is said, effectively cure this defect. This new paint is applied in two coats, the first of which is almost absorbed by the fabric, whilst the second completes the proofing. The paint not only reinforces the proofing, but protects it from the action of the sun, so that it is true economy to apply it early in the career of the bag. It is rapidly applied by brush, and dries rapidly. It is made up in dark green, dark blue, and grey.

An Engineering Amalgamation.

The firms of Messrs. Ruston, Proctor and Co., Ltd., of Lincoln, and Messrs. R. Hornsby and Sons, Ltd., of Grantham, are well known throughout the Near East, and in that region it will be of much interest to their friends to hear that the two firms are to be amalgamated the new joint concern taking the title of Ruston and Hornsby, Ltd. An idea of the importance of the deal is furnished by the fact that the present capital of Ruston, Proctor, and Co., is £950,000, and of Richard Hornsby and Sons, £455,450.

WATER POWER IN INDIA.

In the House of Commons on July 1 Colonel Yate asked the Secretary of State for India what steps the Government of India proposed to take to inaugurate an early investigation into all possible sources of water power in India, with a view to a thorough hydrographic survey of the whole of India with regard to electric power.

Mr. Montagu said: The Government of India propose to constitute a small committee of electrical, mechanical, and irrigation experts to visit the different provinces, and, after conference with the local officers, to examine promising sites and to report whether a detailed survey is worth undertaking. The local Governments are being asked to collect information, both physical and commercial, in advance, in order to facilitate the committee's investigations

ADULTERATION OF INDIAN PRODUCTS

Mr. Montagu, replying to a further question by Colonel Yate, who asked what steps had been taken by the Government to put a stop to the mixing, adulterating, and watering of Indian-grown cotton, said:—The Government of India are now considering, in consultation with the Chambers of Commerce in India, the measures to be adopted to prevent the adulteration of Indian products, including cotton. Similar inquiries are being undertaken by the Indian Trade Commission in London. Special legislation has not been introduced, and hitherto the view held by the Government of India is that it would be extremely difficult to carry such legislation into effect, that trade would be seriously hampered, and that as a practical remedy such measures would prove ineffectual. While keeping an open mind on the subject, the Government of India consider that the proper agency for dealing with these abuses is the trade itself, either by an arrangement between exporters and buyers that the latter should insist on freedom from adulteration, or by the establishment, under the control of Chambers of Commerce, of some system under which the purity of products would be certified before export.

Including provincial subscriptions, the first Turkish Internal Loan amounts to £T14,000,000.

Burma's trade for the year ended March 31 was valued at Rs.30,57,27,981, against Rs.31,33,21,639 for the previous year.

COMPANY MEETING.

GREAT INDIAN PENINSULA RAILWAY.

The 137th half-yearly general meeting of the stockholders was held on June 28 at the company's offices, 48, Copthall Avenue, London, E.C., Sir Charles H. Armstrong (the chairman of the company), presiding. The Secretary (Mr. R. H. Walpole) read the notice convening the meeting.

The Chairman, in moving the adoption of the report and accounts, referred in feeling terms to the death of Mr. Alexander H. Campbell, the oldest director of the company, and announced that in his place the directors had appointed Sir Frederick Sprott. Proceeding, he said that the first business was to sanction a dividend from surplus profits, and, as mentioned in the report, they proposed to distribute 35s. per cent., in addition to the guaranteed interest of 1½ per cent., which made a total distribution for the year of 4¾ per cent., or ¼ per cent. less than was paid a year ago. This did not mean, however, that their returns were less, for their profit was considerably greater, but as the Inland Revenue authorities had raised the question of excess profits duty, and as they had not yet admitted the company's contention that they should be placed on the statutory basis of 6 per cent., they were compelled under the circumstances to carry forward a sum sufficient to meet a claim for excess profits duty if such should eventually be made.

The surplus profit for the year, after meeting all interest and other charges, was Rs. 2,00,49,181.0.2. After deducting 19-20ths for the Government share, there remained for the company Rs. 10,02,459.0.10, and this amount, less Indian income-tax, had been transferred to this country at 1s. 6d. exchange, which was 2d. above the normal rate, and the sum at their disposal in sterling was £70,940. This was a larger figure than usual, but some portion of the excess was due to the higher exchange at which the money had been remitted and the remainder to a considerable extent to the fact that they had been unable during the year to do much in the way of renewals and repairs. On this account they would have a large claim to put forward on the Inland Revenue authorities as a set-off against any amount that might be claimed from the company for excess profits duty.

Their percentage of expenditure to gross receipts for the half-year under review had increased from 50.90 to 53.65, although their train mileage was reduced, but that was, perhaps, hardly as much as they expected, for expenses had increased in all directions. Salaries and wages had been advanced, and working costs, including the price of coal, had steadily risen. During the current year they would have to pay a great deal more for their coal than they paid during the year just ended, and in many other ways expenses would also increase.

So far as could be seen at present, traffic prospects for the present war were satisfactory, but working costs were steadily increasing, and in all probability would continue to increase. As the monsoon had only just started, a forecast of next season's crops could not yet be made, but as India was very prosperous, there ought, in the ordinary course of things, to be a free movement of passengers and a large carrying trade in goods and raw materials.

Mr. J. E. Dallas seconded the motion, which was carried unanimously. The dividend, as recommended by the directors, was agreed to. The retiring directors and auditors were re-elected, and a vote of thanks was accorded to the staff.

Prior to the general meeting, the eighteenth annual meeting of annuitants was held under the presidency of Mr. H. C. E. Wenden, C.I.E.

The Chairman said that since they last met they had unfortunately lost by death two of their annuity trustees, Colonel Firebrace and Mr. A. H. Campbell. Both Colonel Firebrace and Mr. Campbell had been annuity trustees since 1900, the date of the commencement of the annuities, and Colonel Firebrace had also, since 1916, been chairman of the annuity trustees. It was with much regret that they had lost the services of these colleagues, who had been for so long associated with the trust. The main business that day was to elect two trustees in the places of those whom they had so unfortunately lost, and the trustees suggested that Mr. A. Brereton and Sir Frederick L. Sprott should be appointed to fill the vacancies. Both these gentlemen were fully qualified to accept the position.

The appointments were unanimously agreed to.

COMPANY NOTES & REPORTS

The report of the Burma Ruby Mines, Ltd., for the year ended February 28 states that income and expenditure account shows a surplus of £3,601, of which 30 per cent. of profits payable to the Government of India absorbs £1,080. This leaves £2,521 to be carried forward, reducing the net deficiency to £6,754.

Burmah Oil.—The directors of the Burmah Oil Company have declared a final dividend on the ordinary shares of 1s. 6d. per share, tax free, making 15 per cent. for the year, and a bonus of 3s. 6d. per share, equal to a further 17½ per cent. per annum. This total of 32½ per cent. compares with 30 per cent. for 1916. Profits, after allowing for income-tax, amounted to £2,776,968. There have been allotted to depreciation £471,838, to fields reserve £80,000, to insurance reserve £20,000, and to general reserve £200,000. The carry forward is £1,383,977, subject to excess profits duty, estimated at £1,250,000. The directors also recommend the capitalisation of part of the reserve, to be issued in the form of 952,000 fully-paid ordinary shares, and to be allotted pro rata to ordinary shareholders registered 31st proximo. This will equal one new share for every two now held, and the new issue will rank for dividend from January 1 last.

The report of the Eastern Assam Company for 1917 states that the available balance is £51,957. An interim dividend of 5 per cent. was paid on December 15 last, and the directors now recommend that a final dividend of 5 per cent. and a bonus of 5 per cent. be declared, making 15 per cent., free of income-tax, for the year ended December 31, 1917. The balance to be carried forward at credit of profit and loss account will be £36,670.

The report of the Ouvah Ceylon Estates, Ltd., states: Profit for the year, £25,523; balance brought forward, after payment of excess profits duty to December 31, 1916, £3,242; interim dividend of 2½ per cent. (less income-tax), £4,000; transfer to reserve account, £2,500; leaving a balance of £22,265, out of which it is proposed to pay a final dividend of 10 per cent., making 12½ per cent. for the year 1917 (less income-tax), and to carry forward, subject to excess profits duty, a balance of £6,265.

The report of the Ceylon Proprietary Tea Estates for 1917 states that the net amount at credit of profit and loss, including balance brought forward after providing for 1916 excess profits tax, general expenses, directors' fees, etc., is £23,078. It is proposed to pay a final dividend of 7½ per cent. on the ordinary shares (making 12½ per cent.), to place to income-tax account £750, to staff pension fund £750, to write off for depreciation £700, and to carry forward (subject to excess profits tax) £8,321.

The report of the Panagula Rubber Company for 1917 states that the net profit for the year amounted to £16,528, to which has to be added £1,725 brought forward from last accounts, giving a total to be dealt with of £18,253. It is proposed to pay a final dividend of 8 per cent., making 12 per cent. for the year; place to reserve (making it £11,000), £1,000, and to carry forward to next accounts £3,073.

The report of the Pundaloya Tea Company of Ceylon for 1917 states that the crop amounted to 891,218 lb. tea, a decrease of 183,055 lb. Balance at credit of working account amounts to £9,595, to which has been added interest and £3,833 brought forward, less excess profits duty £635, making £13,518. Deducting Preference dividend and setting aside for income-tax to December 31 last £3,154, the directors recommend a dividend of 7 per cent., less tax, on the Ordinary shares, payable 6th instant, and to carry forward £5,414.

The report of the Yataderia Rubber and Tea Co., Ltd., states that the profit for the year is £17,146, which, added to £3,834 balance from last account, amounts to £20,980. From this has to be deducted interim dividend of 2½ per cent. paid on October 13, 1917, £3,500, leaving a balance of £17,480, which it is proposed to appropriate as follows:—Final dividend of 5 per cent., making 7½ per cent. for the year, £7,000; reserve fund, £2,000; buildings and machinery account, £2,000, and to carry forward £6,480.

The report of the Rangoon Electric Tramway and Supply for 1917 states that the net profit was £21,665, and £2,903 was brought in, giving £24,568. The directors recommend a dividend on ordinary shares of 3 per cent. for the year, free of tax, and to carry forward £4,258.

The report of the Delhi Electric Tramways and Lighting for 1917 states that the profit was £4,419, which with £1,089 brought in gives £5,508. Dividend on preferred shares at 4 per cent., payable, less tax, on 17th instant, £4,000; carried forward, £1,508.

The New Sylhet Tea Estates in 1917 made a profit of £9,382; brought forward, £2,826; excess profits tax refunded, £1,295. To general reserve, £2,000; dividend of 20 per cent., against 15 per cent.; forward, £4,811.

Dividends, Payments, etc.

The directors of the Bank of British West Africa, Ltd., have declared a dividend at the rate of 4½ per cent., less income tax, for the half-year to March 31. This, with the interim dividend of 3½ per cent. paid in December, makes 8 per cent. for the year.

The transfer books of the ordinary stock of the Bengal and North-Western Railway Company will be closed from July 6 to July 20 for the purpose of preparing the dividend warrants for the half-year ended March 31 last.

The directors of the British Burmah Petroleum Company have declared an interim dividend at 7½ per cent. per annum, or 3 3-5d. actual per share, free of tax, payable July 31 to holders registered July 15.

The directors of the Eastern Telegraph Company announce the payment on July 15 of a dividend at the rate of 3½ per cent. per annum, less tax, on the preference stock for the quarter ending 30th instant, and a first quarterly interim dividend of 1½ per cent. on the ordinary stock, free of tax.

The share transfer books of the Burmah Oil Company will be closed from to-day until July 17.

The transfer books of the Ordinary stock of the Bengal and North-Western Railway Company, Ltd., will be closed from July 6 to 20, inclusive, for the purpose of preparing the dividend warrants for the half-year to March 31, payable to those shareholders whose names are on the register at the time of closing the books.

The annual meeting of the British Indian Tea Company will be held at the registered office, 14, St. Mary Axe, E.C., on July 19 at 11.30 a.m. The transfer registers will be closed from July 6 to 19 inclusive. An extraordinary meeting will follow the ordinary meeting, when certain regulations will be submitted for approval.

The directors of the Khedivial Mail Steamship and Graving Dock Company have declared, payable 15th instant, an interim dividend of 5 per cent., or 1s. per share, on the ordinary shares, less tax at 5s. 3d. in the £.

The directors of Egyptian Markets, Ltd., announce a final dividend of 5 per cent. on the ordinary shares, making 10 per cent. for 1917.

The ordinary stock transfer books of the Delhi, Umballa, Kalka Railway Company, Ltd., will be closed from July 13 to 27 inclusive, for the purpose of preparing dividend warrants for the six months to March 31, payable to shareholders whose names are on the register at the time of closing the books.

The directors of Egyptian Delta Land and Investment have declared a dividend of 4d. per share, payable from the 1st instant.

Oil Outputs.

Baku Russian—Week ended May 25, 51,560 poods.

Anglo-Egyptian—Week ended June 23: Gemsah, 479 tons (against 22 tons); Hurgada, 6,079 tons (against 4,068 tons).

ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Avenue, Wednesday.

This has been a very short week owing to the Stock Exchange having been closed on Monday. But the slight revival in activity noted last week was followed at the re-opening of our market this week by quite a revival of business, and a good many transactions have taken place. Egypt has been sending over persistent buying orders, and locally buyers have also been taking a hand.

In Government stocks Unifieds have risen a further point to 90½. A like advance has taken place in Egyptian 3½ per cent. Prefs. City of Alexandria Bonds are also 1½ points up at 82½. The 3½ per cent. Egyptian Tribute 1894 and the 4 per cent. 1891 are both 1 point higher.

In Bank shares there has been no change in Nationals, but in Agriculturals all the shares offering round 6 have now been taken, and the market has a harder appearance. A fairly substantial business was done to-day in Agricultural Prefs up to £7 7s. ex div., at which there were further buyers, the price closing at 7⅞xd, representing a rise of about 5-16 from last week's level of 7¼ cum. div. Anglo-Egyptian Banks are a further ¾ higher at 17¾. Land Banks have improved ⅛ to 6⅞.

In Land shares there has been a fair amount of business in Béhéras, and Delta Lands have improved 4½d. to 13s. New Egyptians, on persistent buying, have improved 1-3 to 18s. 6d. In Sidi Salems there has been some renewal of inquiry, and the price is ⅛ higher at 2¼. Union Foncières on buying both from Egypt and locally have improved 1-16 to 3⅛.

Amongst Miscellaneous descriptions there has been a jump of half a point in Alexandria Waters to 12⅛, and Salts and Sodas have risen 3s. 3d. to 42s. 6d. Khedivial Mails, in changing hands round 44s., closed unaltered at 43s. Egyptian Markets are fractionally lower at 26s. 6d.

In Greek securities a fair amount of business has been done in some of the loans. 1881's and 1884's are both a point higher at 64 ex div. Monopolies are unaltered at 60 ex div. 1890's are 1½ points higher at 63½. 1902's have improved 1 point to 65 ex div., and the 1914 loan is also 1 point up at 76.

NAVIGATION OF THE DANUBE.

At the session of the Inter-Allied Parliamentary Commercial Conference at the House of Lords on July 3, M. Drago Yoksimovitch, a member of the Serbian delegation, submitted a series of propositions protesting against the treaty imposed upon Roumania regarding the navigation of the Danube, declaring the question to be of international concern, claiming for every Danubian State the right to participate in the settlement of the question, repudiating all the privileges forcibly acquired in this connection, and expressing the hope that the Allied Governments would, at the Peace Conference, secure the revision of this question in the interests of commerce and with special regard to the interests of the small Balkan States. Subsequently the Conference adopted a resolution affirming the European character of the Danubian navigation question, and embodying the propositions of the Serbian delegation.

Mr. R. P. Carreras, Deputy Traffic Manager (Commercial) of the Great Indian Peninsula Railway, who has spent 47 years in the company's service, is going on eighteen months' leave prior to retirement.

NOTES OF THE WEEK.

The chief military operations in the East during the week have taken place in Albania, where Italian and French troops have made a successful advance. In this region the Allied front occupies an irregular line from the coast, north of the Bay of Valona, to the River Osum, where it turns north-east towards Lake Ochrida. Twice before during the last two months our Allies on this sector have assumed the offensive. On this occasion the results promise to be more substantial. The Italians on the western part of the line announce the taking of thirteen hundred prisoners; the French have to their credit the capture of the Mali Gjarpeef summit, Bosnia Mountain, an important position due west of Koritza. The Franco-Italian front in Albania falls behind the Allied line in Macedonia, and it would undoubtedly facilitate operations in the Monastir-Vardar sector, if the western wing could be moved farther north. The country, however, is mountainous and practically roadless, and for that reason does not lend itself to military operations on a large scale.

Although the reverse is a comparatively minor one, it will be particularly unpalatable to the Austrians at this juncture. They will not be in a position to reinforce their troops in Albania to any extent, and if the Allies can follow up their initial success, they will doubtless find that the constant bombing from the air to which Durazzo has been exposed has materially interfered with the whole scheme of the enemy's defence. The latest Italian report speaks of the action as still in progress. Hitherto the Allies have not been able to press home their small offensives in the Macedonian theatre. This was particularly noticeable in the recent fighting west of the Vardar, where the character of the advance justified the expectation that it would be possible to reach a definite objective in Bulgarian territory. In the new operations in Albania, British monitors are co-operating along the coast, and with the support of Italian naval forces should render the Austrians' task of reinforcing their front line still more difficult, as they must rely mainly on the road passing through Durazzo.

The interest attaching to the operations in Albania centres in their potentialities with reference to the Allied position in Macedonia. When the Franco-British Army landed at Salonika it was pointed out in THE NEAR EAST that the Greek port was by no means the most practical channel for bringing help to Serbia. In view of the fact that the Serbians, if attacked by the Bulgarians and Austrians, could only retreat by way of Albania, the suggestion was made that the ports of Alessio and Durazzo ought, even then, in October, 1915, to be occupied in order to protect the Serbian rear. All this, however, is ancient history to-day; but the fact remains that the occupation of Durazzo by the Allies would be the first step to a complete change in the character of the Macedonian operations. What is left of the old *Via Egnatia* leads from Durazzo through Elbassam to Struga at the northern end of Lake Ochrida, and thence to Monastir. It may not be an ideal transport route, but it offers a better line than the one at present occupied by the Italians and French in Albania, and if that line can be advanced still farther north, it will be invaluable as a lateral communication. Recent Italian successes in the Adriatic suggest that the Italian fleet may now be more free to play a part in the Albanian campaign.

The anniversary of Greece's entry into the war, which was marked in this country by a gathering at the Mansion House, was the occasion for special celebrations in Greece itself. The dominant note of that day was the national unity that had been achieved under the guidance of M. Venizelos. As far as can be gathered from the telegraphic reports, there was a complete absence of bellicose utterances, and the correct lead was given by the Prime Minister in emphasising the internal progress made by the country during the past year. M. Venizelos had a day or two before congratulated the Italian Government on the splendid successes of its army on the Piave, and he was not likely to introduce a discordant note in the proceedings by suggesting the possibility of a future clashing of interests between Greece and Italy. In a review of the conditions to-day as compared with those of a year ago, he had previously called attention to the satisfactory state of affairs in the Epirus, where hearty collaboration had been established between the Greeks and Epirots, whose common interests were tending to a closer *rapprochement*. The inference to be drawn from this allusion is that the delimitation of spheres of influence between Greece and Italy, who acts on behalf of Albania, has worked smoothly. The importance of any tendency in the Balkans to substitute harmonious relationships where opportunities for friction were formerly exploited to the utmost cannot be overestimated. It is the one task to which genuine statesmanship, wherever it is to be found among Balkan peoples, will devote itself at this time.

Guerilla warfare in the Hejaz and Southern Palestine continues with apparently uniform success for the Arab

Digitized by Google

forces. The number of the Turkish posts that have been accounted for as a result of their raids since the declaration of independence by the King of the Hejaz must now be considerable. It would be of interest to know the estimated strength of the enemy garrisons still left in the country; for if a comprehensive effort, made perhaps with some Allied support, had any prospect of bringing the campaign in this region to an end, it would surely be a sound policy to make it, even at the risk of maintaining the *status quo* in Palestine for a brief space. A desultory campaign is not good for the troops taking part in it.

The death of Mohammed V., Sultan of Turkey, brings to an end the mute, inglorious career of one who was more suited to the uneventful life of a private citizen than to be a member of the ruling house of Turkey and destined himself to gird on the sword of Osman. It was part of the irony of his position that his reign should be marked by continuous warfare, and that the very circumstances which led to the consummation of the acme of Ottoman ambition—the elimination of Russia as a power to be feared—should also bring in their train the inevitable partition of the Ottoman Empire. The prospect before the new Sultan Vahid ed-Din is as unattractive as the fate of his predecessor. Whether he remains subservient to the Committee of Union and Progress, or decides to take the reins of government into his own hand, he must reap the reward of a policy that was not his own and submit to the further curtailment of the Ottoman heritage. For the moment, no doubt, he will be buoyed up, as his Ministers are, by the promise of German support in the near future, which is to restore to Turkey all the lands now in the occupation of the Allies and to confirm her in her hold on additional European territory. It is within the bounds of possibility that a serious attempt will be made to keep this promise; but if the Allies can introduce vision into the conduct of their Eastern campaigns, they should experience no difficulty in frustrating Turko-German plans from the very outset.

The hard logic of facts is dealing as severely with the Bolshevist school in Great Britain as with our extreme "Westerners." But while no golden bridge is to be offered to the latter, the former has the consolation of being able to worship at the shrine of the man who, having paved the way for Bolshevism by destroying with a stroke of the pen the discipline of the Russian Army, is now seeking to rehabilitate himself as peripatetic denunciator-in-chief of the Bolsheviks. Russia, it is to be hoped, will redeem the past without such help. There will be little desire in any quarter now to cavil with the verdict passed as the result of the latest successes in Russian Turkestan that Bolshevism merely implies "criminality let loose." In such circumstances it is hardly worth while to attempt to elucidate the situation where Bolsheviks, Germans, and Turks are contending for separate or joint mastery. For the moment the Caucasus is the happy hunting ground of all three. Salvation for unhappy Russia will have to come from the East, and until some form of ordered government is set up in Siberia there seems to be no prospect of administering the *coup de grâce* to German intrigue and Bolshevik criminality in Mid Asia.

The stand made by the Czecho-Slovaks against the riot of Bolshevik disorder would seem to have achieved surprising results in a short time—a clear proof that Russia needed only a definite lead to enable her to come to herself again. It should be remembered, however, that her task does not end with a mere revolt against Bolshevism. She needs to take up arms against the German invaders—armed and unarmed—and to hurl both back from her borders. This cannot be done by a few Czecho-Slovak divisions, nor can Russia mobilise and equip within the necessary limit of time her demoralised or non-existent army. Accordingly, if a Provisional Government in Siberia should set its face against Allied assistance, it will merely be giving to Russia with one hand what it is taking away from her with the other. The war has lasted too long for further mistakes in the Allies' Eastern policy. As far as can be judged, the unofficial element in Siberia is ready and anxious for Japanese intervention. It rests, therefore, with the Allied Governments to see that the official element does not prejudice Russia's interests through ignorance of the real state of affairs or of the Allies' purposes.

July is the month of Democracy, and it was in accordance with the fitness of things that the Report on Constitutional Reforms in India should see the light between Independence Day and the anniversary of the fall of the Bastille. In our leading article last week we gave our own first impressions of the scheme set forth by Lord Chelmsford and Mr. Montagu, and we have now to notice its reception by the public of this country. On the whole we think the writers have no grounds for complaining of a bad Press. The general attitude is one of wise suspension of judgment, but the suspension is tinctured with a strong element of hope that Lord Chelmsford and Mr. Montagu will prove to have found the right line of action in a position of admitted complexity.

The only exception we have so far noticed to this general attitude is to be found in the organs of the Extreme Right, which lost no time in classing Mr. Montagu as a Bolshevik, or—along with Lord Chelmsford—as a pair of political cheapjacks offering a packet of quack nostrums to an ignorant or undiscerning public. These organs had, however, made up their minds beforehand, and so were able to spend in phrase-hunting the time devoted by others to the study of the report. Apart from them, the preliminary verdict is that it is a bold scheme of constructive statesmanship, or a conscientious attempt at reform, or some similar formula which leaves the door open for a more matured and detailed pronouncement.

In Anglo-Indian circles the balance is perhaps for the moment less favourable. The scheme is by no means universally condemned, but the practical difficulties in the way of its realisation are accorded at least their proper weight, and the tendency is noticeable to fix on this or that particular feature as unworkable. Allowance must, of course, be made for the factor of age; the younger generations are for the most part hard at work, and the Anglo-India of England is at present distinctly an elderly community, with vivid memories of an India which has passed away, and a somewhat vague perception of the changes which have come about. The views of the younger men tend, we should say, more in the direction of the phrase used by one of them: "It's an awfully tough job, but we may be able to bring it off."

It is worth bearing in mind that the scheme of reform derives no adventitious support from the popularity of its authors. Lord Chelmsford is practically unknown to the man in the street, and is still blamed for the errors and omissions of his predecessors, though he has done his best to make them good. Mr. Montagu's popularity in Indian political circles is a thing apart, if it be any longer a thing in being. In England he is known chiefly for the indiscretions of his early Under-Secretary days, in the light of which the report reads almost as a palinode. To some extent, then, India may be said to be, for once, in luck; at least there is a reasonable prospect that her future will be decided on the merits of the case, rather than on considerations affecting the prestige of some popular politician.

Indian critics, who see in the Secretary of State's Council the chief stronghold of a reactionary bureaucracy, will be glad to notice evidence that it is moving with the times. In the note appended to the report by the Members of Council, they reserve to themselves freedom to reconsider the details of the various important measures suggested, "when public criticism shall have been received": that may not be the last word of Democracy, but at least it indicates an approach to the attitude of the aspirant who concluded his address to the electors with the pregnant phrase: "These, gentlemen, are my sentiments, but I can assure you that, if they do not suit, they can be easily changed"

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, June 10.

The King's Birthday.

There were no celebrations in Egypt on the occasion of his Majesty's birthday, but congratulatory telegrams were received by the Residency from all parts of the country and from all elements of the population. His Highness the Sultan cabled his congratulations direct to the King, and the Prime Minister, accompanied by the other Ministers, called at the Residency in order to give formal expression to their loyal wishes for his Majesty the King-Emperor and for the success of the British arms. During the course of the day H.M. the King telegraphed his thanks to the Sultan direct and to the Ministers through the High Commissioner. The Birthday list of honours is understood to contain the names of numerous officers and officials in Egypt and Palestine. As yet no official announcement has been made, although unofficially some of the names are known.

The Ramadan Fast.

To-day starts the Moslem fast of Ramadan, which will continue for the next thirty days. As is inevitable when the fast falls in the summer, the community suffers considerably; for not only is the temperature high, but the period intervening between sunrise and sunset is naturally longer than during the other seasons of the year. Official hours in the State Departments are fixed for Moslems as from 10 to 1 instead of 8 to 1, but in the circumstances little real work is done during those three hours. Owing to the lighting regulations, the mosques will not be illuminated during the Ramadan month, as is usually done, but the closing time of the native "cafés" has been slightly extended to meet the requirements of the fasters.

His Highness the Sultan.

Since his arrival at Alexandria, the Sultan has held two receptions, the first on the occasion of his taking up his official residence at Ras el-Tin, and the second on the first day of the Ramadan fast. On both occasions the attendance was very large. This is the first Ramadan reception that has been held since the year of the accession of the late Sultan Hussein.

His Highness is taking great interest in racing, and has purchased some very good horses, which are entered in his name and run under his colours. The Sultan has signified his intention of attending the meetings in Alexandria, as he did during the past season in Cairo, and the Alexandria Sporting Club has erected a special pavilion for his accommodation.

The Y.M.C.A.

The Young Men's Christian Association is still doing much good work in Egypt and Palestine. Depôts and huts have been erected at the various rest camps that have been created on the coast, and further extensions behind the lines are under contemplation, so as to provide the men with every means of recreation and relaxation during the tiring hot weather. It is interesting to note, as illustrating the enterprise of the officials in charge of the advance work of the Y.M.C.A., that during the Es Salt operations the Association's cars, carrying comforts for troops, were among the first to reach the east bank of the Jordan.

The Supplies Situation.

The special military courts created for the purpose of dealing with infringements of the Proclamations concerning supplies are being kept fairly busy; and some exemplary sentences have been inflicted in Alexandria and Cairo.

A congress of cereal merchants was held this week, under the presidency of Mr. W. Ross-Taylor, the chairman of the Supplies Control Board. Representatives from all the Provinces attended. The proceedings opened with a speech from Mr. Ross Taylor, who explained the reason the Government had had for intervening in the question of wheat. He pointed out that the original intention was merely to meet an emergency, and that it all depended on the attitude of the merchants whether the Government should continue indefinitely to buy up wheat in the provinces and supply consumers in the towns, adding that the Government was prepared to continue its present scheme and extend it to other cereals, if the situation warranted such extension. Mr. Ross Taylor said that the Government was ready to assist merchants to overcome the difficulties created by certain elements in the country, if the merchants for their part were ready to assist the Government. He suggested that an association of merchants should be formed to control the cereal trade, and that separate local committees should be created in each Mudiria to watch the transactions carried out there. In the end a committee, composed of representatives of the cereal trade in Cairo, Alexandria, and each Mudiria, was appointed to consider the question and also to elaborate a scheme for licensing *bona fide* cereal merchants to trade in cereals.

The general situation appears daily to be improving and the merchants are showing a markedly more amenable attitude.

MOHAMMED V. AND ASTROLOGY.

The news of the death of Mohammed V., Sultan of Turkey, has moved me to send to The Near East the little story quoted below, relating to this monarch and hastily jotted down at the time it was told me. It is only a straw, but it shows which way the wind of inclination blew in the mind of Mohammed V. early in his reign, and in the days of the Balkan War, when his capital was threatened by the Bulgarian army that now professes to be in harmony (one cannot believe it) with present Germano-Turkish war activities and ambitions. It throws light, though but a passing beam, on the tastes of the deceased Sultan, kept for so many years of his life in an atmosphere of mental darkness and of physical fear, and yet at the same time cultivating, in his solitary, and perhaps heavy, way tastes for the mystic, the poetical, for religion, and for the languages of the Near Eastern lands. The future biographer will be likely to credit Mohammed V. with the virtues of a kindly disposition and a taste for, as well as a certain amount of knowledge of, the poetry and lore of his land, gained under most depressing and disadvantageous circumstances.

December 17, 1912.—A Persian friend of ours, a poet, who is on our British Relief Commission staff, went to the Palace three days ago to see the Sultan about giving some extra *konaks* (houses) for sheltering some of the refugees during the winter. —— Bey reports to H—— that the Palace, or its attendants, were all in reposeful attitudes when he arrived, that his Majesty, together with his Chief Chamberlain, was listening with obvious patience to the report of a general just from the field. Suddenly the whole atmosphere changed, attendants woke up, the Sultan's face brightened with interest—the name of a modern Egyptian astrologer was mentioned, and his book on "The Future of Princes"! "Please get me two copies of this book," said the Sultan; "I am always deeply interested in the work of this man!" So astrology took precedence in interest to war—real, actual war. In spite of the fact that over in Scutari, at the railway station across the Bosphorus, there are railway carriages marked "Constantinople-Baghdad," we are still in the days of the Arabian Nights. Europe has airships; we still have astrologers.

SERBIAN SUFFERINGS.

We have received from the Serbian Legation a statement regarding the sufferings of Serbian prisoners in Austria-Hungary, from which we extract the following passages:—

Mr. Zivko Topalovitch, a barrister-at-law and one of the leaders of Serbian democracy, was recently released from Austrian captivity. He is a lieutenant in the Serbian Army, and was captured three years ago and taken to an internment camp in Austria-Hungary as a prisoner of war. At a meeting held at Corfu, under the presidency of Dr. Ninchitch, Minister for Public Works, Mr Topalovitch lectured on the conditions of the Serbian prisoners of war in the Austrian internment camps. His narrative is genuine and exceedingly valuable. With his excellent knowledge of the German language, and thanks to his being well known in Austrian Social-Democratic circles, he was able to furnish important information touching the life and treatment of our war prisoners and the civil population scattered all over Austria-Hungary in various internment camps.

In the Hungarian Pustas.

. . . Tired and hungry, exhausted from the strain of long fighting and marching, and from the lack of the most elementary necessities of life, our prisoners arrived from their march from Serbia to Upper Hungary in rags, bare-footed, and half-starved at the places allotted for their internment. And what places! Vast muddy, boggy ground, from which everywhere sprang water, enclosed by barbed wire, without roads or a single building; and into such enclosures our prisoners were driven and herded like cattle. These "internment camps" represented the common Hungarian Pustas, or deserts, so to speak. The half-starved prisoners were compelled to make their own shelters. A great number of them died before the completion of these shelters. Epidemics made terrible havoc among them, typhus taking a prominent place. The greatest mortality among our war prisoners at this time was due chiefly to the bad arrangements and lack of shelter. Those who survived were dispersed in various camps, consisting of barbed wire enclosures provided with huts made of wood. In summertime these huts afforded some kind of shelter, but in the winter they offered no protection against the terrible Carpathian cold.

The bulk of our prisoners arrived after the over-running of Serbia in the winter of 1915 and the spring of 1916. With the arrival of new prisoners the already over-crowded camps and huts became entirely intolerable. At this time the Austro-Hungarian authorities simply depopulated the northern districts of Serbia by carrying into captivity all the Serbian population without respect to age or sex. The frontier population suffered most, being carried away and interned all over northern Hungary. In this winter, which was very long and exceedingly cold, it seemed as if all the evils had conspired together to exterminate our people. The icy-cold Carpathian nights were not judged by a thermometer, but by the number of dead bodies of the Serbian soldiers. The wretched creatures, exhausted by want of food, clothes, and suitable shelter, were not able to resist this intense cold. There was no coal. Cards for coal existed nominally; but even the officers sometimes did not see a single piece of coal during a whole week. Beetroot was the only food available, but it did not contain the necessary nourishing ingredients for the human body, so that our men gradually wasted away until they became almost skeletons.

Insufficient Food.

All the hospitals were full of sick men and tuberculous cases. The number of our men was rapidly diminishing every day. It was quite a common thing to see a group of soldiers walking to their work when suddenly one of them would drop dead; his comrades would pick him up, put him in a little cart, and drive him back to the camp. Death was caused through exhaustion, the heart suddenly stopping, owing to lack of driving power.

When the first spring days came the soldiers began to eat grass from the neighbouring meadows. As a consequence of this a number of new and peculiar diseases developed, the abdominal organs being particularly affected. Many deaths occurred, the cause of which was medically ascertained to be due to the eating of grass. Only extreme desperation drove these hungry wretches to such a step. The victims were not only soldiers, but also officers. At night sleep was not possible, everyone having a mortal dread of bed, for during the night terrible pain and convulsions started, caused by hunger, which is more terribly felt lying down that sitting or walking. Very often we officers were compelled to jump through the window in the night in order to steal a beetroot.

In almost all these camps our people are mercilessly exploited, being employed on incessant and heavy work which is beyond their strength. Hungry and weak, they are driven into the munition factories, the sugar factories, and mines, working there in the most difficult circumstances and with only the daily pay of 6d. Very often there is neither air nor light. No matter whether they work or not, there is no possibility of finding any kind of food; they have only the food allotted them. Rules and regulations for the protection of workers are not applied to Serbian prisoners.

In the War Zone.

The terrible state of our prisoners is still more aggravated on the battle-front. Serbian war prisoners are employed on work which is forbidden by the Law of Nations. They are employed in the firing lines to perform duties that should be performed by the enemy fighting forces. How many of our war prisoners perished, as a consequence of wounds received, hunger, and cold, nobody can tell. Being in the war zone, they are all subjected to a regime of terror, and for the smallest offence they are shot. During the Russo-German fighting in the region of the Pripet, where the construction of roads and railways was practically impossible, and where even the cattle could not move, the Serbian war prisoners were employed to drag wagons with provisions and ammunition for the Austrian troops. For nearly a year these prisoners were employed on such work. Sick or exhausted men were not sent back so that these happenings should be kept secret.

The Austrian "straff" regime prevailed everywhere; at the front, in the factories, in the internment camps, as well as in occupied Serbia. This regime of beating and killing with the butt-ends of rifles and with heavy sticks is being applied everywhere and on everybody without any distinction of age or sex.

It is particularly applied to the Serbian people. But it seems that all this does not satisfy the infuriated Austrian jackals. A great number of Serbian people have been sent to Asia Minor under the tender mercies of the Turks. And who else is there to take care of these unfortunate people? In the Turkish deserts they will wither away like plants without water. In spite of all these tortures and this servitude, the greater part of our men are stoically enduring. Their enemies are the masters of their bodies, but not of their souls.

Even in such moments the majority of our people do not lose hope. They are suffering without uttering a word of reproach to anyone. At the same time, they feel entitled to the moral and material sympathy of their Allies

COUNTERACTING GERMAN PROPAGANDA.

We have made arrangements for forwarding free of charge to our readers pamphlets and other publications dealing with the British and Allied cause. This literature is in many European languages, and certain pamphlets and illustrated publications are also available in a number of Oriental languages. All applications should be addressed to the Editor, THE NEAR EAST, Devonshire Square, London, E.C.2. Among the most recent publications available for distribution free of charge are the following:—

"THE WELFARE OF EGYPT," by J. S. Willmore. A short summary of English administration in Egypt; alluding also to Germany's undermining influence, and the Mussulman's preference for the English rule. 36 pp. London: Hodder and Stoughton.

"TURKEY, A PAST AND A FUTURE," by A. J. Toynbee. Development of the new Turkish Nationalism and of German intrigue in Western Asia. Moslem ideas must prevail. Mesopotamia will develop its resources mainly by colonisation. 79 pp. London: Hodder and Stoughton.

"GERMANY, TURKEY, AND ARMENIA." 125 pp. J. J. Kelliher and Co., Ltd., London. Containing important statements by German missionaries, Danish nurses, German officials, and other foreigners, and extracts from foreign journals prohibited in Germany by the Censor.

"LOYAL INDIA," by Lord Hardinge of Penshurst. 15 pp. Sir J. Causton and Sons On loyalty and service in the Indian Empire.

"THE CLEAN-FIGHTING TURK." A Spurious Claim. 4 pp. Reprint from *The Times*. This article, written by one who has exceptional experience of Turkish manners and customs, shows that the Turk behaves like a gentleman only when it pays him to do so.

"HORRORS OF ALEPPO," Seen by a German Eye-Witness, by Dr. Martin Niepage. 24 pp. T. Fisher Unwin, Ltd. The author, a teacher in the German technical school at Aleppo, reproaches German diplomacy for non-interference.

"MARTYRED ARMENIA." 56 pp. C. Arthur Pearson, Ltd., London. The author, a Bedawi, has acquired from reliable sources and from his own information, a mass of information regarding the atrocities committed by the Turk against the Armenian people. This he resolved to publish to the world, "to defend the faith of Islam against the charge of fanaticism."

"TURKISH PRISONERS IN EGYPT." 64 pp. A report by the Delegates of the International Committee of the Red Cross. Extracted and translated from the Official Reports of the Red Cross Society.

Although the Roumanian Socialist Party strongly opposed Roumania's participation in the war, the German military authorities have placed them all under arrest.

The following letter has been received by Mr. Sokolow on behalf of the Zionist Organisation from the Prime Minister's secretary in reply to a letter thanking the British Government for their promise to do their utmost to secure a just settlement of the Roumanian Jewish question:—"Mr. Lloyd George wishes me to thank you for what you say in regard to the friendship which exists between this country and the Jewish people, of which there has lately been such abundant evidence, and to reiterate the hope that the triumph of the Allies' cause will make possible the realisation of your people's aim to establish for themselves once again a national home in Palestine."

TANGIER TO TEHERAN.

The compositors at the St. Clements Press are, as a class, an intelligent and amiable set of men, I feel sure. They read my writing, and occasionally they introduce novel punctuation into my notes, in a way beyond praise. But one of them, I suspect, is a villain of the very deepest dye who rejoices in perpetrating "bloomers"; and to him I attribute the appearance of "Balu Yusuf" instead of Bahr Yusuf (Joseph's Canal); of "Smugglers' Lane, Salcombe," instead of Smugglers' Lane, Holcombe, and some other liberties taken with proper names. And now——! Well, now he has converted "tuer" into "teur," and afforded the lynx-eyed *Independent* a chance to "Ziankali" me, so to say. If, therefore, you hear of "a norrible murder" in the neighbourhood of Portugal Street within the next few days, you will doubtless draw your own conclusions as to the victim and the avenger.

***

Apropos of printers' errors, I wonder who was responsible for a curious blunder in *The Times* last Saturday. In reading Mr. Lloyd George's message in connection with France's Day, I found this passage:—

> "Soldiers and people alike have, with unswerving courage and a fortitude and patience unique in history, valiantly stemmed the tide of a base and brutal militarism bereft of all ideals which, if successful, would break up and end the liberties of free peoples."

That, it seems to me, is exactly the opposite of what Mr. George intended to say; for surely he would tell us that it is the militarism, not the ideals, that would "break up and end the liberties of free peoples." In that case, we should expect to find commas before and after "bereft of all ideals." But perhaps the lawyer's instinct still survives, and the "comp" may be guiltless in regard to this particular offence.

***

The late Sultan of Turkey did not cut a picturesque figure on the world's stage. Abdul Hamid, with all his faults, did manage to impress his personality upon us; and may be said to have been a not entirely unpopular "villain." He could make our flesh creep at times. Poor Mohammed the Fifth had no such strength of character; he was a kind of "walking gentleman," or, at best, the "heavy father." But those who had opportunities of forming a first-hand opinion were almost always rather favourably impressed by him. At least, they all agree in describing him as amiable and thoroughly well-intentioned; and he appears to have been sincerely religious, without being fanatical. Perhaps the fact—for it really does seem to have been a fact—that he belonged to the Mevlevee Dervishes may account for his charity and breadth of view. That he was a mystic is very natural; his life had been a most unhappy one, and he doubtless turned from the world of "realities" to the world of "fancies" in sheer weariness of spirit.

***

I may have been a (respectable) pirate in my younger days, but I have never gone in for forgery, even on a small scale. I am, therefore, unable to speak as an expert; but it seems to me that a square coin would be rather easier to forge than a circular one. Now, the new two-anna nickel piece, which is being minted at Calcutta and Bombay, is square; and consequently I was not surprised when a friend told me a few days ago that it had not been in circulation a month before "spurious imitations" found their way on to the market, so to say. I hope, however, that this will not be allowed to militate against the new coin's claims to popularity. Square coins have certain advantages over circular ones—they can, for instance, be packed without so much waste of space—and if your Oriental wishes to forge a coin, the fact that it is circular, instead of square, certainly will not baulk him. As a matter of fact, your Oriental manipulator of the coinage is even more ingenious than his Western fellow. Some years ago I was told in more than one Eastern city that a particular issue of British gold coins was in strong demand among the natives, the reason being that the relief in these coins was unusually high, and that the natives had found that they could reduce this, to their own profit, of course, without making the coins impassable. Their *modus operandi* was simple but ingenious, and, I was told, they took great pride in their cleverness.

***

A number of the *Basrah Times* just received contains an advertisement of the Busreh and District Football League Cup Final. The list of prices of admission leads off with:—"Officers and Sister, Rs. 1." It would be of interest to a friend of mine to know whether officers are allowed to take in some other fellow's sister, and how many officers may take in one sister for one rupee. Not for worlds would I suggest to this inquirer that a nursing "Sister" may be intended.

CORSAIR.

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

German Activities in India. July 10.

Mr. MONTAGU, Secretary for India, in reply to Mr. Rowlands, said that the statement that before the war the East India export trade in raw hides was largely in the hands of, and controlled by, the Calcutta Hide Trade Association, which worked with a Hamburg association and by its methods virtually maintained a monopoly, was, he believed, substantially correct. The Calcutta Hide and Skin Shippers' Association consisted of seven firms, of which five had been wound up under the Enemy Trading Act, while from the remaining two enemy interests had been completely eliminated. He had ascertained from the Government of India that three alien employees (two Swiss and one Italian) of liquidated firms had started business. The export trade in raw hides was now controlled by the Government of India, who, on behalf of his Majesty's and the Italian Governments, purchased the exportable surplus of certain classes. As purchasing agents five British or Indian firms were employed, but other firms, including the two reconstructed firms and the three new alien firms referred to, were permitted to participate in the export trade of hides not required by the Government. They did not, however, in any sense enjoy a monopoly of such trade. The Government of India had the future regulation of this trade under consideration. The measures already adopted had done much to divert this trade to British and Indian merchants, and there was every reason to think that the enemy control of this important trade had been permanently eliminated.

Propaganda in India.

Mr. MONTAGU, in reply to Sir J. D. REES, who asked whether a publicity bureau had been established for the purpose of publishing reliable information and of counteracting enemy activities regarding the war among the peoples of India, said: Yes, sir. Boards have been formed in each province, with a Central Bureau at Simla, and the new organisation is being kept in close touch with the Ministry of Information here.

The San Francisco Conspiracy.

Sir J. D. REES asked whether the trial of German-Indian conspirators, concluded in May in San Francisco, clearly established the fact that the German Consulate at that city instigated, aided, and abetted an Indian revolutionary movement, and that proof was forthcoming of the payment of no less than £400,000 to one Bengali conspirator?

Mr. MONTAGU replied: The statement of my hon. friend is substantially accurate, though I cannot vouch for the exact amount of the large sums of money undoubtedly paid by the German authorities in the hope of fomenting sedition in India.

CORRESPONDENCE.

THE FUTURE OF THE BALKANS.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—In your last issue, in Notes of the Week, you seem to urge the Allies "to convince Serbia and Greece that they set more score on lasting peace in the Near East than on the most strongly supported historical claims to this or that strip of territory," or, in other words, that they would rather see a Bulgaria aggrandised at the expense of both Serbia and Greece (incidentally and Roumania), that would impose its recent acquisitions on her weakened neighbours, than the formation of the different Balkan boundaries on ethnographical principles. This contention applied to the rest of Europe would mean that Germany's achievements in East and West should be recognised as final. When in articles like this, which is but an example of scores of others, you set a contradictory logic first as to the aims and then as to the objects and means that the Allies should pursue, I fail to see in what way you are serving the Allied cause. What seems most evident in the present relations between the great western nations and Germany, according to this train of ideas, should not be applied in Eastern problems. Why this inconsistency?

Need we be constantly reminded of the causes that led to the present situation in the Balkans? The exaggerated tenderness shown towards Bulgaria that characterised the Allied point of view during the initiation of the Balkan crisis, in spite of all intervening events, is still apparently entertained in circles that ought to be better informed. It is forgotten that, broadly speaking, Bulgaria, especially after the Serbian defeat, stands politically in the Balkans in the position that is occupied by Germany in Western Europe. The avowed object of Bulgaria's policy, like that of Prussia, is the strengthening of her position for the ultimate domination of the Balkans. Her geographical position lends an irresistible support to this view; and while it determines her aims, by virtue of the Germanic expansion in the East it will necessarily draw her side by side with the Central Empires. These latter, in the circumstances, know only too well that there can be no better *point d'appui* for the furtherance of their aims in the East than Bulgaria, and, in fact, for this reason, broadly speaking, Bulgaria is bound eventually to play for them in the Balkans the rôle that is assigned to the Magyars in Hungary.

The position of the other Balkan States, which, moreover, are identified with the Allies, is quite different. In the course of future developments they will in no way play Germany's game, and, if anything, they will be the clearest expression of those principles that have been proclaimed by the mouthpieces of the Allies over and over again. Of these States, after the defeat of Serbia and the elimination of Roumania, the only one that offers possibilities for Allied scope in the Near East is Greece; and yet of all the small nations that are battling in the ranks of Germany's foes, there is hardly one whose potentialities are so ignored by Allied publicists, especially in England. This lack of essential knowledge is exhibited by none so much as by those very people to whom Near Eastern problems form the chief concern. We are thus witnessing another instance of depreciation of facts, and we are really afraid that only a Bulgarian descent to Salonika might, as it did in similar occurrences, bring the truth to the surface. Although it can hardly be disputed now that the original bartering of Serbian and Greek territories to a doubtful Bulgaria is the starting-point in the series of blunders of the Allied policy in the Balkans, this being also the main cause of ex-King Constantine's preponderance in Greece during the early years of the crisis, it is surprising that lingering ideas in support of Bulgaria's aims of conquest are still to be found persistently in organs like THE NEAR EAST. The reality of the situation is thus obscured, and we are drawn virtually again to face unnecessarily perplexing problems, solely for the sake of far-off dreams, as it were. In view of Germany's plans in the East, which are but a step from realisation, however, the Allies cannot afford to ignore where their real interests lie, and through which means they can strike effectively. A mere glance at a map of the Near East will show to anyone that, in the present state of affairs, Greece, and only Greece, can still offer to the Allies the possibilities for a new order of things in the East. Serbia may be satisfactorily restored, and the vista for a new South Slav State opened, only through Greece; Roumania given a helping hand only through Greece; nay, even Russia, possibly, I may venture to say, in view of the drawbacks and distance of an access through Siberia and Turkestan, might in the last resort be linked with the West through Greece. Even though the inherent difficulties may seem to be too great at the present for ventures on a large scale, the fact none the less remains that Greece is to-day an asset in the Allied battle front that can hardly be overestimated. Speaking of the Near East, Greece is to the Allies what Bulgaria is to the Central Powers, and the interests of the Allies will gain next to nothing if Bulgaria is allowed to retain her unjustifiable acquisitions. On the other hand, a strengthened Greece will be the best jumping-off ground for Allied scopes in the East, insidious influences never being able to deter her from her true mission.—I am, etc.,

G. G. SARRIS

67, Bridge Street, Wye, Kent, June 28, 1918.

***We cannot admit the accuracy of our correspondent's interpretation of the words to which he takes exception, as "historical claims" do not necessarily correspond with present-day "ethnographical principles." The goal that THE NEAR EAST has always kept before it is a harmonious Balkan Peninsula instead of one divided into two hostile camps; but there can be no alternative to the latter fate if Bulgaria is to be assigned permanently to the German sphere of influence. The analogy between Bulgaria's position in the Balkans and Germany's aspirations does not hold good, for the reason that, however German in attitude and method a Sofia Government may be, the Bulgarian peasant is not the willing slave of government-made opinion that the German proletariate is. It is not suggested that violence should be done to any of our Allies for a present enemy; but that the statesmanlike vision which led M. Venizelos to bring the Balkan Federation into existence for a definite purpose should become a permanent factor in the Near East, and convince all the States concerned that nothing short of a working agreement between them can promote the real interests of any one country. If our correspondent's view is correct, Bulgaria is to remain the Ishmael of the Balkans and there is to be no permanent peace in the Peninsula. We cannot subscribe to such a pessimistic view, nor can we despair of the wisdom of the different Governments proving equal to a solution which may entail minor sacrifices here and there for the sake of unmeasurable gain in the future.

The Postmaster-General announces the loss at sea through enemy action of mails for India and the East containing letters, etc., and parcels which were posted in London or received in London from the provinces on the dates mentioned:—Letters, etc. (June 20-27) and parcels (June 14-27) for Aden, British Somaliland, Ceylon, India, and Seychelles; letters, etc. (June (June 20-27), but not parcels, for Dutch East Indies, Malay States, North Borneo, Philippine Islands, Sarawak, Siam, and Straits Settlements; newspapers and other printed matter, samples, etc. (June 20-27) for Hong Kong and the South of China; parcels (June 14-27) for Egypt, Sudan, and Cyprus; unregistered letters, etc. (June 19-26) for the Mesopotamian Expeditionary Force and Aden Field Force; parcels (June 12-23) for the Egyptian Expeditionary Force; and (June 12-27) for the Mesopotamian Expeditionary Force and the Aden Field Force.

EDUCATIONAL.

ROYAL SCHOOL
FOR
Daughters of Officers of the Army.

Patrons:
Their MAJESTIES THE KING AND QUEEN
and HER MAJESTY QUEEN ALEXANDRA.
Chairman: LT.-COL. A. GRUBB. J.P.
Vice-Chairman: SURGEON-GEN. SIR WILLIAM TAYLOR, K.C.B.

Daughters of Officers of the Army are admitted to the above Schools according to the circumstances of their parents, at rates of £20, £45, £65, and £80 a year. Granddaughters of Officers are admitted at £45, £65, and £80 a year according to circumstances, and a limited number of daughters of civilians are admitted at £120 a year when there are vacancies. There are 15 Scholarships, open to competition, in the School, of amounts varying from £10 to £20 up to one of £50.

As half of the School consists of pupils on the £15 foundation, which includes both board and education, a deficiency of about £2,500 a year has to be met by contributions, which are earnestly solicited. Donations of £5 5s., giving one vote for life, or subscriptions of 10s. 6d., giving one vote for the year, may be sent to

F. W. T. ATTREE, COLONEL (late R.E.), Secretary.
Office: Panton House, 25, Haymarket, S.W.1.

SCHOOL OF ORIENTAL STUDIES.
London Institution, Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.

For particulars, apply to E. DENISON ROSS, Director.

NEAR EAST BOOKSHELF.

THE FUTURE OF SOUTHERN ASIA*.

This book is inadequately described by its title, for while it deals fully with the subject of India, its scope extends from Singapore to Cairo and Zanzibar. It is a book to be studied carefully by every student interested in the future of this huge portion of the world; the distinguished writer has from his position a much wider outlook than the ordinary Indian publicist, while his peculiar standpoint differentiates him from the well-known European authorities on these topics. To do adequate justice to the book would require a volume of almost equal magnitude, and we must content ourselves with giving a very brief sketch of its principal lines. First, as regards India, his Highness has no very novel proposals. He writes wisely and justly of the need for industrial development, educational and sanitary progress, social reform, a national army and navy, and other outstanding requirements; while, as regards constitutional matters, he follows closely the line taken by Mr. Gokhale, proposing large provinces and states, internally autonomous, and federated under a Viceroy, assisted by "an Imperial Senate." He will have none of Mr. Curtis' dyarchy; he desires the provincial executives to be responsible to the Viceroy, but controlled in legislation and in finance by assemblies based on a widely extended franchise, and he passes very lightly over the possibilities of a prolonged deadlock presented by this arrangement. The executive, after all, must have money, and must have certain legal powers. What is to happen when the Legislature persistently refuses these necessities? It is an awkward question, and we are not surprised that the amateur builders of constitutions should pass it by on the other side; but its existence has to be faced by the architects charged with the actual construction, and we fancy that Mr. Montagu must have learned this fact by now. The most striking part of the writer's contribution to the discussion of internal reforms is his insistence on India's imperative demand for an Emperor: he sees in King George the direct successor of Asoka and Chandragupta, and he urges that under the new conditions the Viceroy should be chosen from the Royal Family. Here he is undoubtedly voicing a very powerful sentiment of great numbers of people whose opinions rarely reach English ears.

Having thus reached a great Indian federation of autonomous provinces and states, his Highness proceeds to argue for its extension. Afghanistan, Persia, Arabia, Mesopotamia, Ceylon, the Straits, Egypt, and East Africa might all be expected to come, or to be brought, within its scope, and thus would be established an impenetrable barrier to the progress of German and Turkish ambitions across the south of Asia. He regards political pan-Islamism as dead, but evidently fears the pan-Turanian cult, and he points out that the complete federation would put Islam in a much more influential position than it can hold in India taken by itself. The claims of India to East Africa are urged with exceptional force and with intimate knowledge; Mesopotamia, it is argued, must be kept for the Arabs, and India's true line of expansion is to be found across the Arabian Sea. Such is the general scheme of the book, but a bald summary fails to do justice to the care with which it is built up and the arguments on which it is based. To appreciate these, the book itself must be read, and its readers will probably feel with the writer of these words that the ill-health which has of late prevented his Highness from personal activities in the arena of Indian politics has not been without compensating advantages, in that it has afforded the leisure for producing this luminous survey of an even wider field.

NEWS IN BRIEF.

A Bucharest telegram says the Gregorian Calendar has been introduced in Moldavia and Bessarabia.

The War Office announced on Monday that there was no change in the situation on the Mesopotamian front.

Bombay is suffering from a visitation of a fever of the influenza type, which prostrates its victims for three days.

A meeting to welcome the American Zionist Medical Unit will be held at the London Opera House, Kingsway, on Sunday, at 2.15 p.m.

It is officially announced in Athens that seven of the ringleaders of the Serfidje disorders, a lieutenant and six sergeants, have been executed.

During June, on the Macedonian front, our aeroplanes shot down eight hostile machines and drove down five others out of control. We lost only one machine.

Sir Mark Sykes, M.P., speaking at Hull in support of the Zionist movement, said that there were real difficulties in the way, and the task of overcoming them would be a glorious one for Zionism.

The food question in Alexandria has now been entrusted to a new local commission composed of Midhat Yeghen Pasha, the Governor; Hopkinson Pasha, Dr. Granville, Miralai Garvice Bey, Mr. Abdy, and Mr. Halford.

At a meeting held at Sofia on Saturday, under the presidency of the Rector of the University, it was resolved to make a national celebration of the fifteenth anniversary of the great Macedonian insurrection of 1903.

An official Turkish *communiqué* issued in Constantinople on July 7 says:—This morning five enemy aeroplanes attacked Constantinople with bombs. Thanks to our defensive measures, not even material damage was done.

The King of Italy has bestowed the Grand Cordon of the Crown of Italy on M. Popovitch, the Prime Minister of Montenegro, and has created other members of the Montenegrin Cabinet Grand Officers of the same Order.

A telegram to the Dutch Press quotes a Bucharest paper as saying that in the new Roumanian constitutional law the rights of the Crown will be changed in such a way as to affect the Crown's power of concluding alliances and declaring war.

A Ministerial circular issued in Cairo advises intending pilgrims to Mecca to notify their intention before July 21, in order that the requisite shipping accommodation may be found. The Holy Carpet leaves Suez on September 4 for Jeddah.

In commemoration of the silver wedding of the King and Queen, Major General his Highness the Maharaja of Patiala has presented letter cases with a suitable inscription to 6,500 wounded sailors and soldiers in the hospitals of the London district.

The Greek War Ministry announces that as a result of a recent engagement between deserters and a pursuing force seven deserters were killed and twenty wounded. The casualties of the attacking force were one sergeant killed and one sub-lieutenant wounded.

Mr. Tilak has been granted permission to proceed to England in connection with an action for libel that he is bringing, on condition that he gives a written undertaking to abstain from all political activity in this country, and to return to India at the conclusion of the lawsuit.

A telegram has been sent by the Emperor of Austria to the new Sultan of Turkey expressing his condolences on the death of the late Sultan, and adding:—"The gigantic battles in which we have been involved have strengthened the alliance which unites us and Germany and Bulgaria."

The King inspected a detachment of the Indian Labour Corps, under the command of Captain W. Street and Second Lieutenant W. E. U. Grove, Indian Army Reserve of Officers, on Wednesday. The men of the party are Chins and Burmans from Lower Burma, and are on short leave.

A magnificent example of Punjab loyalty is afforded by the Zemindars of the Lyallpur district, who have (says *The Times* Simla correspondent) spontaneously offered a gift of a twenty-fifth of the entire wheat crop, estimated to be worth 21 lakhs (£140,000), to the Government for expenses of the war.

PERSONAL AND GENERAL.

CALENDAR OF THE WEEK

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian (New Style).	Julian (Old Style).	—	Moslem.	Jewish.
1918. July	1918. June		1336. Shawal	5678. Ab.
12	29	Friday	3	3
13	30	Saturday.....	4	4
14	July 1	Sunday	5	5
15	2	Monday	6	6
16	3	Tuesday.....	7	7
17	4	Wednesday	8	8
18	5	Thursday	9	9

Lady Muriel Paget has returned to London from Russia.

Lord Lamington has left 26, Wilton Crescent, for Lamington.

Lady Maxwell has arrived at 7, Grosvenor Place, from Brighton.

Lord Islington has now recovered from his recent illness, and has resumed his duties at the India Office.

Captain Edward Davis, Military Attaché to the American Legation at Athens, arrived in London from the Continent last week.

Lieut.-Colonel C. E. Wilson, Governor of the Red Sea Province, has been awarded the Croix d'Officier of the Legion d'Honneur.

Major-General the Maharaja of Patiala was one of the guests at a dinner given by the King and Queen at Buckingham Palace on Tuesday.

The King of the Belgians has conferred on the Maharaja of Patiala, on his visit to the Belgian front, the Broad Ribbon of the Order of Leopold.

To-day is King Peter of Serbia's seventy-fourth birthday. A service will be held at the Russian Church, but there will be no official reception at the Serbian Legation.

Sir Murray Hammick and Sahibzada Aftab Ahmed Khan (Members of the Council of the Secretary of State for India) had the honour of being received by the King at Buckingham Palace on July 4.

While inspecting Colombo Cathedral, the Bishop of Colombo met with an accident; owing to the collapse of the belfry-staircase, the Bishop fell a distance of 12 ft., but he is now progressing favourably at the hospital.

Mr. Herakles Mikhaïlides, who has been called to the Bar in London, is a son of Mr. M. J. Mikhaïlides, who was for some years a member of the Legislative Council of Cyprus, and recently President of the Municipal Council of Limassol.

M. Lefevre-Pontalis, the new French Diplomatic Agent in Egypt—who succeeds M. Defrance, transferred to Havre as representative of France at the Belgian Court—is well known in Cairo, having been Secretary at the French Agency from 1896 to 1899.

The engagement is announced between Lieut. Francis Rimington Bacon, Cameronians (Scottish Rifles), only son of the Rev. R. C. and Mrs. Bacon, of 61, Bickenhall Mansions, and Winifred Marie, youngest daughter of Colonel G. H. Brook Coats, C.B., Indian Army, retired, of 5, Powis Square, Brighton.

The Queen, in reply to an inquiry from Lady Chelmsford, has signified her acceptance of a gift from the women of India in commemoration of the silver wedding of their Majesties, the gift to take the form of a fund for promoting the education of the children of Indian soldiers who have fallen in the war.

The engagement is announced between Captain P. V. Fearon, A.S.C., attached the Queen's Regiment, younger son of Colonel J. P. Fearon, D.L., and Mrs. Fearon, of Reigate, and Vera Mabel Drake, only daughter of the late Francis C. Drake, of the India Office, and Mrs. Drake, of Doverscourt, Bexhill-on-Sea.

A marriage has been arranged, and will take place in London on July 31, leave permitting, between Lieutenant Cromwell H. Varley, D.S.C., R.N., only son of Mr. and Mrs. C. O. Varley, 26, Barkstone Gardens, late of Tangier, and Georgiana Rosalind, only daughter of Captain H. A. Steward, the London Regiment, and Mrs. H. A. Steward, of Chilworth Hill, Surrey.

The marriage arranged between Reginald McC. Harrison-Wallace, lieutenant, the Royal Scots, only son of Mr. G. McC. Harrison-Wallace, late chief engineer in Sind, Karachi, India, and Mrs. Harrison-Wallace, and Evelyn Blanch Longman, daughter of Mr. and Mrs. R. Longman, The Lodge, High Wycombe, will take place on August 1 at All Souls, Langham Place, W., at 12. There will be no reception, but all friends will be welcome at the church.

The marriage took place, on July 4, at St. Marylebone Parish Church, of Mr. Waris Ameer-Ali, Indian Civil Service, elder son of Mr. and Mrs. Ameer-Ali, of 2, Cadogan Place, and Miss Annie Marguerite Radford, daughter of Mr. Walter T. Hindmarsh Radford and Mrs. Radford, of 25, Park Crescent, Portland Place. The bride, who was given away by her father, was attended by her sister, Mrs. Noel Curtis-Bennett, as dame of honour. Captain Drew Faussett was best man, and the rector, the Rev. Dr. Morrison, officiated.

King Ferdinand of Roumania has approved of General Averescu's retirement from the Army.

Under the auspices of the Persia Society, Mr. Alexander Finn will lecture next Monday afternoon at 3.30, at 22, Albemarle Street, on "Some Happenings in Persia."

Mr. William Hoey, D.Litt., of Oxford, late of the Indian Civil Service, Lecturer in Hindustani at Oxford, left personal estate in the United Kingdom valued at £3,094.

M. Adossides, hitherto Director of M. Venizelo's Political Bureau and lately appointed Governor-General of Macedonia, has arrived at Salonika. His predecessor, M. Argyropoulos, has been appointed Minister to Scandinavian countries.

The Zionist organ, the *Judische Zeitung*, of Vienna, comparing the Jewish policy of the Entente and that of the Central Powers, remarks: "The dignified and unreserved declaration of the Entente in favour of Zionism has gained the sympathies of Jewry, whereas the Central Powers in this respect have never displayed anything but reserve and hesitation. By leaving the Jewish question in Roumania unsettled the Central Powers have lost a good occasion for gaining the gratitude of Jewry. The solution which has been adopted is dissatisfying and disappointing."

The King has given permission for the wearing of the following decorations:—Egyptian Order of the Nile.—Second Class: Mr. H. J. Boyd-Carpenter, Senior Inspector, Egyptian Ministry of Education. Third Class: Dr. E. C. Madden, M.D., Professor of Surgery, Egyptian Government Medical School. Fourth Class: Mr. W. J. Dilley, Lecturer, School of Engineering, Giza; Mr. H. Swift, Lecturer, Sultania Training College for Schoolmasters, Cairo; Mr. W. M. Colles, Professor, School of Medicine, Cairo; Mr. R. Marquand, Director of the European Office, Egyptian Ministry of Education. Fifth Class: Mr. W. H. Brockway, Superintendent of Physical Training, Egyptian Ministry of Education.

APPOINTMENTS, PROMOTIONS, ETC.

Mr. A. de Silfwerhjelm, Swedish Consul at Alexandria, has been promoted to the rank of Consul-General.

Bimbashi A. C. Hewitt, Equatorial Battalion, Egyptian Army, has been granted the temporary rank of Kaimakam.

Bimbashi Grove, Equatorial Battalion, Egyptian Army, has been transferred to the Sudan Government as Inspector.

Mr. J. R. de C. Taylor, of the Rifle Brigade, late R.F.C., has been appointed Aide-de-Camp to Sir William Manning, the newly-appointed Governor of Ceylon. On leaving Sandhurst Mr. Taylor was attached to the Flying Corps and gazetted to the Rifle Brigade. While flying in France last year he received severe injuries in an accident, from which he has practically recovered.

TRAGEDY OF MONTENEGRO,

THE SMALLEST AND POOREST OF OUR ALLIES.

MONTENEGRIN RED CROSS AND RELIEF FUND,

11, VICTORIA STREET, LONDON, S.W.1

(Registered in City of London. Section 1. War Charities 1916)

needs £700 WEEKLY for Feeding Prisoners interned in Austria-Hungary.

Donations will be much appreciated and gratefully acknowledged by the Hon. Treasurer, LADY ROPER PARKINGTON, Claridge's Hotel, Brook Street, London, W.1.

OBITUARY.

Lady Cunningham, wife of Sir Henry Cunningham, K.C.I.E., died on Monday at 83, Eaton Place, aged seventy-three. She was a daughter of the first Lord Lawrence.

Sir Clive Oldnall Phillips-Wolley has died in British Columbia. He was formerly Vice-Consul at Kertch, had done exploring work in the Caucasus, and was author of "Sport in the Crimea and Caucasus."

Colonel T. R. Cowie, of Hughenden, Sidcup, Kent, late of the Indian Army, has died at the age of seventy-five. He was employed under the military department until 1869, after which he was appointed to the Oudh Commission, and served in Oudh in various capacities, including that of District and Sessions Judge, until 1898. He retired in 1900.

Lieut.-General the Hon. Bernard Matthew Ward, C.B., a Crimean veteran, has died at Staplecross, Christchurch, Hants, aged 86. The only surviving son of the third Viscount Bangor, he entered the 47th Foot in 1850, and in the Crimean campaign took part in the Battle of Inkermann and the Siege of Sebastopol. He was mentioned in despatches, and in addition to the medal with two clasps received the Sardinian and Turkish medals.

Mr. Frederick Mytton Halliday died on July 3, at Old Park, Stoke d'Abernon, Surrey, aged 83. The eldest son of Sir Frederick James Halliday, he entered the Bengal Civil Service in 1856, and became Commissioner in 1878. He was appointed Chairman of the Port Commissioners, Calcutta, in 1887, and he officiated at various periods as an Additional Member of the Governor-General's Council. In 1889 he became a member of the Board of Revenue, and he retired in 1891.

General Sir William Campbell, who died on Friday at his residence, Marchwood, Malvern, aged seventy-one, entered the Royal Marine Artillery in 1864. He saw service in the Ashanti War, and later in the Egyptian Expedition of 1882, being present at the bombardment of Alexandria, the occupation of Port Said, and the surrender of Fort Gemal. He was mentioned in despatches, and received the medal and Khedive's Star. Sir William was A.D.C. to Queen Victoria and to King Edward VII.

Lieutenant-Colonel William Bovet, R.E., Divisional C.R.E., who died of wounds on July 5, was born in 1874, and obtained his commission in the Royal Engineers in 1893. From Chatham he went to India in 1895, joined the Bombay Sappers and Miners, and served as C.R.E. in Baluchistan in 1897, being mentioned in despatches. In January, 1903, he was ordered to Somaliland, where he was attached to General Manning's column, returning to India in the autumn of 1904. In the present war he had served in Egypt and in France, and had been twice mentioned in despatches.

The *Egyptian Gazette* of June 10, just received, contains news of the death of Mr. R. R. Smithard, Principal of the Higher School of Commerce under the Egyptian Department of Technical Education. Mr. Smithard had nearly thirty years' service in Egypt to his credit and had done much excellent work, first as an assistant master in the Government Schools, later as an inspector in the Department of Technical Education, and since 1914 as first Principal of the Higher School of Commerce. He was a prominent Freemason, and was P.D.G.M. in the Grand Lodge of Egypt. He had been an energetic voluntary war worker, acting as Secretary of the Classification Committee. He had been in very indifferent health for more than a year past.

Mr. James Sutherland Cotton, formerly editor of the *Academy*, died on Wednesday at Salisbury. He was born at Coonoor, in the Madras Presidency, in 1847, and was the third son of Joseph John Cotton, of the Madras Civil Service. Mr. Cotton always showed the liveliest interest in Indian affairs. He assisted Sir W. W. Hunter in compiling the "Statistical Account of Bengal," in twenty volumes, and also in the compilation of both the nine-volume and the fourteen-volume edition of "Imperial Gazetteer of India." He was also the author of a decennial report on the moral and material progress of that country, of a quinquennial report on its education, and of a "life" of Mountstuart Elphinstone in the "Rulers of India" series. He was hon. secretary of the Egypt Exploration Fund, and rendered valuable services in that capacity.

Major Claude Fitzroy Clarke, Indian Cavalry, died on June 30 at Lady Ridley's Hospital, 10, Carlton House Terrace, after a long illness contracted whilst on active service. After serving in the Boer War he obtained a commission in the 1st East Surrey Regiment, and in 1903 transferred to the 2nd Battalion and went to India. In 1907 he transferred again to the Indian Army and joined a cavalry regiment, with which he went to France, and fought in the first Battle of Ypres in 1914. In March, 1916, he was invalided home. Refusing an offer to return to India, he, at his own desire, rejoined his regiment in France early in 1917, and with it he served up to February of this year, when he was again attacked with his former complaint, from which he died. He married on August 22, 1906, Violet Wakefield Angelo, eldest daughter of the late Lieutenant-Colonel J. W. E. Angelo, I.A.

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO,
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

THE ONLY ENGLISH HOTELS IN ALEXANDRIA.
Proprietor: AUGUSTUS VAN MILLINGEN.

FRIDAY, JULY 12, 1918.

A HOUSE DIVIDED.

Opinion may be divided as to the prospects of a breach between Bulgaria and the Central Powers—a prospect contemplated by President Wilson more than six months ago, and one which he has presumably not yet abandoned. But there can be no doubt as to the bitterness of the internal struggle through which Bulgaria has been passing. Although allowance has to be made for the forcible methods of conducting political controversy habitual in the Balkans, it is obvious that in the present instance feeling has outstripped any consideration for unity as a national asset in war-time. Hitherto this consideration has held the field, and the unanimity shown by all political parties during the earlier stages of the war has been cited by friends and foes alike as proof of the popularity of King Ferdinand's foreign policy. If the Press is a reliable guide, the harmony of the Bulgarian nation is now a thing of the past, and we may infer that a change of Government was not effected until the untenable position of the Radoslavoff Cabinet had been well established. The late Prime Minister had been in power for five years, an unusually long period for Bulgaria, for it has only been exceeded once—by Stambuloff. As an inevitable result of this protracted tenure of office, Dr. Radoslavoff had added to the ranks of his enemies by the mere fact of his inability to satisfy all those who would look to him for place and preferment. But he might have continued to ignore his political opponents, if the general dissatisfaction with what is held to be the unnecessary prolongation of the war had not come to a head with the scarcity of food in the towns. Bulgaria is, probably, still self-supporting in the matter of foodstuffs, and the evidence that the peasantry is short of provisions is not convincing. On the other hand, difficulties of transport, from whatever cause arising, have curtailed the supplies of the towns and created unrest. At the same time, the peasants resent a war of unlimited duration, and do not appreciate the policy that compels Bulgaria to continue fighting when she has gained apparently as much as, if not more than, she wants. The result is a volume of criticism, which is well calculated to render the Germans anxious and to provoke the mild reprimand that the Bulgarians are unduly "sensitive." Bulgarian *amour propre* was gravely offended by the terms of the Treaty of Bucharest. If Roumania had been allowed to keep the Cernavoda-Constanza railway line and that part of the Dobruja lying to the north of it, feeling in Bulgaria would not have been as bitter as it now is as a result of the decision to take Northern Dobruja from the Roumanians without passing it on immediately to the Bulgarians. Probably from a belief in the value of a safety-valve, the Bulgarian Press was allowed to discuss freely and to emphasise the necessity for Bulgaria to adopt a very firm attitude in regard to the Northern Dobruja and to entertain no compromise on the subject of Turkish claims to a portion of the Maritza Valley. When, therefore, Dr. Radoslavoff was forced to give way on both points—for agreement with Turkey is to be antecedent to the cession of Northern Dobruja—his position was at once shaken.

The opening move in the battle between the different political parties took the form of mild reproaches between the Opposition Press for the subserviency of one or the other organ to the Germanisation of Bulgaria. The Nationalist *Mir* started the criticism of the Government with a tentative suggestion that the time had arrived for a new orientation of Bulgarian policy, prompted evidently by the tightening of the bonds between Germany and Austria-Hungary, and by the prospect of further pressure in the same direction being brought to bear upon Bulgaria. The *ballon d'essai* must have been regarded as successful, for, although when, a day or two later in May, the Emperor Karl arrived in Sofia, the *Mir* accorded him an exemplary welcome, on the following day it published an article which the censorship would not allow to be sent abroad. The tenor can only be gauged from the denunciation of it that followed in the official Press, which at once characterised the *Mir* and the party that it represented as "traitors to the National cause." Nationalists, who were "hirelings and foreign tools," were threatened with the direst penalties, while at the same time grave warnings were uttered against any attempt to undermine the national unity. As might have been expected, this reply was the signal for a general Press war. The Democratic Party's Press does not seem to have directly attacked the Government, but it subjected the relations between Germany and Bulgaria to a somewhat acrid analysis. In view of this attitude, the selection a few weeks later for the post of Prime Minister of the leader of the Democrats was calculated to give the Germans furiously to think, and it is not a matter for surprise that protestations were considered advisable as to the continuity of Bulgaria's foreign policy resulting from King Ferdinand's direction of Bulgarian affairs. The standpoint of M. Malinoff's organ was that Bulgaria could not accept the German estimate of what was or was not in her interest. Although the question of the Maritza territory affected only a few square kilometres of land, and for this reason might not loom large in the eyes of Germany, "whose blows are shaking the whole planet," the transfer of this piece of territory had been "the first condition" of Bulgaria's intervention in the war.

A further weapon in the Opposition's armoury, of which the Democrats made no little use, was the failure of the Germans to provide the Bulgarians with sufficient military support to enable them to withstand the Greek attack. While, therefore, it may be true that internal differences, including the problem of food supplies, led to the fall of the Radoslavoff Government, the fact remains that the quarrel of the party now in power with the late Cabinet turned mainly on the relations of Bulgaria with Germany. In these circumstances feeling between Sofia and Berlin is not likely to be over-cordial. Between this frame of mind and a definite breach of the alliance there may be a wide gulf; but the moment would seem to be opportune for making Bulgaria better acquainted with the war aims and peace conditions of the Entente Powers. In many quarters the mere suggestion that there must one day be peace between Bulgaria and the Allies arouses fierce indignation. The prospect is regarded as a betrayal of our friends, and a perplexed world is left to draw the inference that the Entente Powers will really be rendering a service to Europe and the Balkan States by leaving the latter at the end of the war in the same condition of rivalry and bitterness as that in which they were five years ago. Yet the same people are prepared to squander an enormous amount of time and ink on the subject of a League of Nations for the maintenance of the future peace of the inhabited globe. The Balkans have long been one of the worst storm centres, and for dealing with them there is an adequate League of Nations already in existence, with the requisite power and authority, as soon as Bulgaria is detached from the Central Powers, to lay down conditions of peace and to see that they are carried into effect. But it is never predicated of the League in the wider sphere that it should perpetuate injustice and enforce grudging acquiescence by a tyrannous use of power; the fundamental idea is the content of all the constituent parts. So, too, in the Balkans the Entente Powers have to aim at producing first a general contentment, as a result of even-handed justice rather than of vindictiveness, and then the Peninsula will keep the peace of its own accord. But so long as the settlement is approached from the point of view of any one single State, Bulgaria, Greece, Serbia, or Roumania, there can be no satisfactory solution. The problem is one for an impartial Court of Appeal: it cannot be decided by perfervid partisans in the market-place.

RUSSIA, POLAND, AND THE NEAR EAST.

By A. WYATT TILBY.

The Russian correspondents, or what remain of them, are uncertain whether what was a single Empire two years ago now contains fifteen or eighteen separate and sovereign Governments. Nor is the exact number important; what really matters is that none of these separate authorities shows the least sign of co-operating, far less of coalescing, with the others. The fact is, perhaps, not very surprising. Those who have held power once always like to keep it; it may be more attractive to be head of a local Soviet than a mere representative of a province in a Federal Assembly. This particular weakness of human nature is seen in every country—in America under Washington, in Australia when the Commonwealth was first mooted, and it has long been notorious in the Balkans. The point is that America and Australia have conquered this weakness; Russia has not done so, and shows no indication of doing so.

One of the difficulties in her path is in no danger of being overlooked. The division of Russia suits German policy admirably, for it keeps the giant Eastern neighbour helpless, and Berlin will spare neither time nor money to keep alive the Russian separatist spirit. But another difficulty in the path of Russian reunion is quite likely to be overlooked. It lies in the fact that the centre of gravity in the country has shifted from north to south.

When Peter the Great founded his capital he succeeded in creating a Government machine in the north of Russia. But Petrograd for two centuries has been little more than a Government machine. The real wealth of the country lies in the south, and the moment the machine of administration in the north was fatally damaged, the nakedness of Petrograd was visible. Petrograd was, and remains, an artificial political centre; it produced, and still produces, nothing but edicts. The one difference—it is a considerable one—is that before 1917 people obeyed the edicts, now they do not. The *raison d'être* of Petrograd has ceased to exist.

All things are possible in Russia to-day, but all things are not equally likely. It is very unlikely that in any reconstruction—that overworked word is more appropriate in Russia than England—Petrograd will regain its old political ascendancy. It has on its borders an independent and probably hostile Finland; it is too susceptible to German influence; it never has been, and never will be, an economic capital. Very probably its population will diminish now that the majesty of sovereignty has fled; it would not be surprising if the future of Petrograd was as the capital of a small north Russian State of the calibre of Norway or Sweden.

If that is so, something will have to fill the vacant place left by the eviction of the Colossus from Eastern Europe. And scanty as our information is, the general trend of events clearly indicates what is beginning to take the place of Russia. The weight of population, the fertility of a district and its mineral resources count for much when political geography is in the making; and the economic weight in the huge amorphous mass east of Germany lies in two great countries—Poland and the Ukraine. Those two countries, which together contain the greater part of the wealth of the old Russian Empire, or what is left of it, will be the centre around which the new State, or rather States, will group. We may take it that the maps of the future will reinstate Poland and the Ukraine as political entities, whichever side wins. Their boundaries, administration, and internal powers will differ according as the Allies or Germany wins, and they will in any event depend partly on the fate of Austria. But it is as certain as anything can be in these days of revolutionary politics that Poland and the Ukraine will emerge as entities on the new map of Europe that is drawn up by the Peace Conference.

The policies which these two States would adopt is another matter. Poland is naturally anti-German; its reason for being anti-Russian has now disappeared. The Ukraine is more susceptible to German, and perhaps still more susceptible to Austrian, influence; but the Germans have a pleasant way of exploiting their friends that leads to trouble, and the pro-Germanism of the Ukraine is admitted by the German Press itself to be diminishing, under the pressure of agreements made in Berlin and exploitations directed from Berlin. If this aspect increases in the politics of Kieff, the Ukraine will begin to grope after its own foreign policy. For a time it would be neither surprising nor reprehensible were particularism to prevail at a time of nascent national consciousness, and the Government declare that it had no foreign policy save that of peace with all its neighbours; that it had flung away ambition, that curse of Imperialistic States; and that such matters as the Black Sea and the Dardanelles and the Balkan problem were of no interest to the Ukraine. We all do these things when we are politically young; it is calf-love for an ideal.

Sooner or later, however, a foreign policy is bound to emerge under the pressure of economic needs, if not of political events. Unless Germany is content to ruin her home agriculture for the sake of her industries and the *beaux yeux* of her friends in Kieff, which is not a very likely supposition, the Ukraine will have to export its surplus corn elsewhere than to Austria and Prussia, now her only market for corn in Western Europe, and as it is improbable that rail-transport will be cheaper than sea-borne freight after the war, the Ukraine will have to interest itself in the navigation of the Black Sea and the Dardanelles. And the State that interests itself in those matters cannot, even by a magnificent gesture, renounce the Balkan problem.

How far the Ukraine will carry weight in Balkan politics is another matter. It may or may not achieve a stable home Government—so far it has lamentably failed in this direction. But even if it secures reasonable stability at home, it will not be able to devote all its energies to its southern neighbours. Unless old jealousies count for nothing in the new world, which some cynical politicians doubt, the Ukraine will not work very cordially with the other new State of Eastern Europe—Poland. The secular quarrel between the Poles and Ruthenians is by no means dead, and nothing is gained by pretending that it is. It has flamed out within the last few weeks over the eternal question of the partition of Eastern Galicia; there is always the Cholm device of the Germans to cause trouble; and memories are almost as long in Eastern Europe as in Ireland. Even if the Poles and Ruthenians were willing to bury the hatchet, some obliging German would always be ready to dig it up for them.

In the long run, however, Poland's political interest must follow her trade, which runs down the Vistula to the Baltic and not across the Carpathians and the Steppes. To the new Poland, therefore, Dantzig is vital and Eastern Galicia is not. On the other hand, although the Ukraine buys much from Germany and will have to buy more in the future, and also sells much to Germany, her main route of traffic must lie down to the Black Sea and not across the plain to Germany. A glance at the railway map in the pre-war Continental Bradshaw is sufficient to demonstrate this fact. If, therefore, human reason ruled human affairs, which it does not invariably do, there should not be any inevitable clash of interests between Poland and the Ukraine, and a *modus vivendi* between Warsaw and Kieff should be possible, with wise statesmanship at each end. There remains one consideration which cannot be fully discussed here. Germany foresees a shortage of minerals after the war, and her Press has made a dismal song about the Non-Ferrous Metals Act. But since Germany must have metals for her industries, and she cannot get them from the British Empire, she will seek them in Eastern Europe and on the Asiatic frontier, where Britain cannot, from the nature of things, have much influence. There are vast deposits of metals in the Caucasus, and the road to the Caucasus lies through the Ukraine. Unless Germany is thoroughly beaten, therefore, she will do her utmost to keep open the road through the Ukraine in order to secure the mineral wealth further afield. For that reason alone the German hand is likely to lie heavy on Kieff; and the Germans also, we may be sure, have not overlooked the fact that in the settlement of the Balkan question.

which they desire to arrange in their own economic interests, the Ukraine might have a good deal to say, unless German diplomacy made its hand felt in the capital of the new State.

But in the long run, unless Germany were to succeed in utterly dominating the new State, a Ukrainian fleet will become necessary in the Black Sea, and the old Turko-Russian question will have to be fought out once more in a new form. For the Russian renunciation of Constantinople may apply to Russia, which has vanished; it cannot permanently apply to the Ukraine, which has taken its place. The renunciation of the Russian revolution may in the end prove to be the seed of another war.

PRESS ON THE NEAR EAST.

In French Morocco.

In an article, "French Work in Morocco," the Tangier correspondent of *The Times* praises highly "the really admirable work that France has accomplished in her Moroccan Protectorate," especially during the war. He has recently made a journey through the French zone; and he comments: "The very fact that 1,600 miles of this distance was by motor-car and nearly 400 miles by military railway is sufficient to give some idea of the vast works which have been undertaken and carried out. The change from the anarchy of only half-a-dozen years ago to the peace and prosperity now existing is indeed remarkable." He continues:—

A series of good crops has culminated this year in a superlatively fine harvest. The vast wheat, barley, and bean fields of the French Protectorate are a sight worth seeing. Never in the memory of the people have there been such crops. It is as if Nature has put forward a supreme effort in these days of need. Mile upon mile, almost for hundreds of miles on end, I passed through immense fields of wheat and barley, as level and as green, a few weeks ago, as a billiard table—to-day ripened.

The result is admirable, and speaks volumes for the encouragement of the French authorities and the splendid response of the natives—for with very little exception the whole of these agricultural districts are owned and worked by the Moors. Their methods are naturally primitive, but the wealth of the result is enormous. All this grain will find its way to France.

As to German intrigues, the correspondent writes:—

There are two principal regions in the Protectorate which the French have not yet occupied, and each of these regions forms a danger zone which cannot be overlooked. The first, extending along the borders of the Spanish zone for almost its entire length, was described in my articles published in *The Times* of April 30 and May 1. This strip of the French zone is strongly held by native chiefs directly in the pay of Germany and under German orders—Raisuli, Kassim ben Salah, and Abdul Malek. The forces of Abdul Malek are commanded by Germans, and there is a regular German camp situated in the mountains to the north of Taza, near the borders of the Spanish zone. They receive from the Mediterranean coast all the moneys and supplies necessary for carrying on their campaign. They are kept carefully informed of every movement of the German troops in Europe, so that their "acts and agitations" may coincide with the German offensives. Quantities of murderous incendiary literature reach them for distribution amongst the tribes.

The tribesmen of the northern spurs of the Lesser Atlas also are "kept in a perpetual state of agitation and aggression by German propaganda and German money." The article concludes:—

I have motored in the last few weeks, almost alone and entirely unguarded, for hundreds of miles through country that has been closed for centuries, and into which any attempt to penetrate would have meant certain death, and everywhere I found a smiling, friendly, and satisfied people. It is, indeed a task of which France may be proud, but she must not close her eyes to the fact that all this peace, all this prosperity, is threatened. German intrigue, German propaganda, and German money are everywhere. The Spanish zone, of which so little is occupied, is a source of constant danger from the abuse the Germans have made of Spanish hospitality. From every side attempts are being made to destroy all that France has accomplished.

"A Puppet Ruler."

Under the above title a note in the *Pall Mall Gazette* describes the late Sultan of Turkey as "of no consequence before his elevation to the throne," and as having scarcely gained importance from the exchange of a prison for a palace. The writer goes on to say:—

No more perfect instance of government by camarilla has ever been exhibited than that which Enver and Talaat instituted nine years ago, and have been able, by a propitious conjunction of circumstances, to sustain down to the present time. Much of its stability has been due to their own remarkable repertory of all the self-protective gifts of the desperado—still more, perhaps, to the convenience which Germany found in purchasing their support and their "cannon-fodder" for her own purposes. Under the signboard of "Union and Progress" they have succeeded in eclipsing the most horrible records of Ottoman power in the way of massacre and oppression, and in helping us to a more vivid understanding of the Dark Ages.

The *Manchester Guardian* comments in much the same strain on the dead Sultan:—

Mohammed V., who has just died, passed from a prison to the throne, but the throne itself was a more magnificent prison. Though credited with the private virtues, he had no training for personal rule, and he was surrounded by men who had made him Sultan and were determined to remain his masters. Undoubtedly, throughout his reign he was a figure-head. The guess has been made that he did not approve Turkey's entry into the war, and perhaps the murder of the Heir Apparent by Enver Pasha and his colleagues may be taken to confirm this guess. Whatever the truth, he counted for nothing in Turkish politics.

Turkey's Anxieties.

The *Daily Graphic* also declares that Mohammed V. "counted for so little in his Empire that his death must not be expected to have any appreciable result in connection with the war." But it affords a good opportunity to glance at the situation in Turkey. After referring to Herr von Kühlmann's recent admission that all was not quite satisfactory as between Turkey and Bulgaria, the article continues:—

That admission was a reflection on the diplomatic ability of the Emperor of Austria, who was sent to Constantinople by the Germans in May to compose the differences which had arisen between Bulgaria and Turkey over the partition of the Dobrudja. Turkey had demanded compensation in the Balkans for the Bulgarian acquisition of the Dobrudja, and the result of that demand was the placing of the northern part of the Dobrudja under a kind of commission of the Quadruple Alliance. That step angered Bulgaria exceedingly, and the Emperor of Austria did not succeed in persuading Turkey to abandon her demands for Balkan compensation. . . .

There are other causes of friction between the Ottoman Government and Germany. One of these is financial. Turkey is hopelessly bankrupt. Her war debt alone demands an amount of interest which is in excess of the entire revenue of the Empire! Many appeals have been made to Germany for help, but all have been in vain. Nor is that all. When the Turks, owing to the disbandment of the Russian Army, were able to overrun the Caucasus again and make some easy conquests there, it was not long ere they received a stern hint from Berlin to the effect that they were not to carve up the Russian cake according to their liking. Altogether it is hardly surprising that a Bulgarian newspaper recently made a reference to "the anxious and dispirited Turks."

Their military situation, with Baghdad and Jerusalem lost and their Eastern prestige shattered, cannot but add to their anxiety and depression. All this must react upon the hitherto strong position of the pro-German Enver Pasha.

Unfortunate Roumania.

Under the title, "The German Peace," a writer in the *Outlook* reviews the treaty forced on Roumania by the Central Powers. "If," he says,

If any of our pacifists contemplate the possibility of making reasonable terms with the Boche, they should first study the plight of Rumania, and should then reflect what the peace terms imposed by an undefeated Germany would be like. Annexations masquerade as "rectifications of frontier," indemnities are levied in some specious fashion by a number of so-called agreements, and economic subjection is carefully concealed. The cry of "No annexations and no indemnities," the idea of no "economic war after the war," have been flouted by the Central Powers with all the cynicism and contempt which they would display towards a pliant and credulous peace conference.

The various humiliations to which Roumania has been subjected, the losses she has suffered, and the gains of her enemies are then considered in detail. The article concludes:—

As some compensation for these drastic arrangements, Roumania is to have the fostering care of Germany. But she is first compelled to indemnify her enemies and numerous so-called neutrals for all the damage done by the German military measures.

It is hard to say what is left to the unfortunate victim, yet the German National Liberal Party claims for the conquerors an over-abundance of generosity. According to her enemies, Roumania has been allowed to retain her original individuality: she is still a nation.

Yes, she is still a nation, though with little left but the name. However, there are men who will keep the spirit of nationality alive until the day when full restitution will be made. Those who signed the treaty, said Take Jonescu, may call themselves Roumanians, but their souls have always been German. Their evil work cannot live. Roumania has still a king and queen, and thousands of loyal Roumanians are dispersed throughout Europe. To them the Allies owe a debt of honour, and that debt must be paid. The noblest war aims are those which are most simple and most imperative: the complete and unconditional restoration of Belgium, Serbia, Montenegro, and Roumania.

On the occasion of Independence Day the King of the Hellenes and M. Venizelos addressed to President Wilson a telegram of congratulations.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

During the war banking institutions in general have had to cope with a marked increase in business, but none of the banks has experienced such expansion as Messrs. Cox and Co., the Army bankers. This process, due, of course, to the fact that Messrs. Cox and Co., as the chief Army bankers, have had to deal with a greatly increased number of military accounts, has been a progressive one since 1914, and the fact that the tendency has been considerably accelerated during the past year sufficiently explains the decision of the bank to increase its capital from £450,000 to £650,000. The balance-sheet shows that current and deposit accounts stand at £18,775,203, compared with £13,497,831 last year, and £4,088,811 in 1914. In other words there has been an increase since the war broke out of more than 300 per cent. The aggregate figures for the same years are respectively £19,653,620, £14,247,423, and £4,739,934. It may be noted that the liquid nature of the bank's assets has been more than maintained, and cash in hand, at call, and short notice now stands at £9,259,050, against £5,939,538 in 1917, and £1,200,443 in 1914. Other features of interest in the balance-sheet are the increase in the reserve fund from £80,000 to £425,000, and the bank's holding of £827,800 in Treasury Bills, which did not appear in the previous balance-sheet.

***

At the luncheon given by the Federation of British Industries and the Association of Great Britain and Serbia last week to the Serbian delegates to the Inter-Allied Commercial Conference, notable speeches were made by the Serbian Minister and Dr. Douritch, in which they emphasised the vital urgency for close economic co-operation between Serbia and the Allies, in particular Great Britain, after the war. The Serbian Minister gave an assurance on behalf of his Government of Serbia's economic unity with the Allies in the future, and pointed out that after the work of reconstruction their aid would be needed in helping Serbia to circumvent the policy of commercial penetration of the Central Powers.

***

One method, perhaps the most important for achieving this end, was pointed out by Dr. Douritch, who urged the necessity for Great Britain to take an interest in banking concerns in Serbia. Before the war, in Serbia as elsewhere, the Central Powers were enabled to carry on their commercial penetration, principally because their banking facilities gave them an advantage over other countries. Trade between this country and Serbia was hampered, for instance, because British business men did not understand, and consequently failed to make allowance for the fact that, as Serbia is an agricultural country, the inhabitants are only in a position to meet their obligations after the harvest. The German and Austrian merchants understood the position perfectly, however, and made arrangements through their banks for credit facilities, and so *faute de mieux*, the Serbians had to do business with them.

Happily there is now no question that British business men recognise their obligations with regard to trade with the Balkans, and especially with Serbia, Roumania, and Greece, but the doubt in my mind is whether they will translate their intentions into action in time, or whether they will postpone matters until it is too late for them to play their full part in post-war trade with these countries. So far I have seen few obvious signs of preparations; indeed, to my knowledge the tendency seems to be for British merchants and manufacturers even to put off advertising the fact that they exist and wish to do business until, to use their own delightful phrase, "they know quite what is going to happen." Of all policies I can imagine none more fatal.

***

The further extension of the basis of taxation announced by the Greek Finance Minister was only to be expected, as it was obvious that new sources of revenue would be required to enable the Greek Government to meet the liabilities it inherited as the result of the maladministration under the late King, and its growing expenses in connection with the war. The principal feature is a tax on excess profits, which is estimated to yield £1,600,000, and the other measures include the taxation of earned and unearned income, a tax on production, and a tax on Greek capital deposited in foreign countries. *Prima facie*, the new taxation seems to be well devised, and it should ensure that those business men—and by all account there are many of them—who have made large profits since 1914, shall contribute their fair share to the national exchequer.

***

From Mr. Montagu's reply to a question by Mr. Rowlands regarding the position of the Calcutta hide trade it appears that the question of the control of this important trade after the war still remains undecided. What reason there can be for any further delay in taking the necessary steps to ensure that henceforward it will remain in British hands is a mystery. The history of the trade is fully known, as are also the dangers which must be guarded against in the future; while the authorities cannot maintain that they have not received the fullest guidance as to the best course of action. This is essentially one of those cases where preparation in advance is highly desirable, for it is impossible to say when the war may finish, and we may be quite sure that the Germans will be quite ready to take advantage of any loopholes that may exist to establish their former position in essential trades.

***

It was inevitable that the light thrown during the war on the *rôle* of the German banking system in the enemy's policy of commercial penetration should raise the question of the conditions under which foreign banks should be allowed to establish themselves in this country in future. This question, it is understood, has been considered by the committee of clearing bankers, who have drawn up a report, which has been laid before Lord Cunliffe's Committee on Currency and Exchange, to the effect that certain restrictions on the operations of foreign banks here are advisable.

***

The position of the Anglo-Egyptian Oilfields is shown by the report, which has just been issued, to have greatly improved during the year under review. The gross receipts amounted to £532,458, against £225,608 for 1916, and after deducting all working expenses and writing off £55,780 for depreciation a profit remains of £348,555. This enables the debit balance brought in to be met and leaves £6,399 to be carried forward. The company has a contingent liability in respect of accrued interest on income bonds and preference capital payable out of profits amounting to £121,332, and now as there are funds in hand it will be possible to commence the payment of these arrears. Shareholders have every reason to be satisfied with the results of the year's working, since it is evident that a continuance of present conditions will mean substantial dividends in due course.

***

The factor responsible for the improved position of the company was the largely increased output from the Hurghada field of 134,500 tons, against 54,800 tons in 1916, and 34,261 tons in 1915. In this connection it may be pointed out that the directors state that the view that the western incline at Hurghada might be regarded as definitely proved, has now been confirmed. The sphere of the company's operations is, however, limited, and negotiations are in progress with the Egyptian Government with a view to larger areas being placed at the disposal of the company. This development is regarded as essential if Egypt is to possess an extensive oil industry, and the hope is entertained that the Government will see its way to meet the company in this respect.

***

Some interesting extracts have been published by the *Il Sole*, of Milan, from a German confidential circular sent by the German Foreign Office to leading German firms with a view to preparations for trade after the war. Of these extracts the following, in particular, which is quoted by a contemporary, is most suggestive:—"It would be wise for all German houses having large interests abroad to employ in foreign countries representatives or travellers who may be able to successfully pass themselves off as French or British or American. There is a probability that for a certain period after the war German travellers and agents will meet with difficulties in negotiating business in enemy and even in neutral countries. We must undoubtedly be prepared to face a considerable amount of personal prejudice, and for that reason our commercial transactions would be rendered much easier by preferably employing travellers and agents who may be taken for British or French, or at least for Dutch, Spanish, or American." It is quite remarkable in the circumstances that the Germans should anticipate "a considerable amount of personal prejudice" in their future business dealings. Equally they seem to regard the peoples of the Allied countries as singularly simple individuals if they imagine that after all that has transpired they are again to be duped by enemy machinations.

BRITISH COTTON PRODUCTION.

Need for Increased Supply.

Exceptional interest attaches to the recently issued report of the British Cotton Growing Association at the present time, when so much attention is being paid to the question of the economic unity of the Empire, in view of the fact that the Empire is far from reaching that ideal as regards cotton production. That this should be the case is not due to any lack of the necessary facilities for cotton growing, since, as a matter of fact, with few exceptions, notably the British Isles, Canada, and New Zealand, most of the constituent parts of the Empire contain land suitable in every respect for the cotton crop. There is also the fact that much of the cotton grown within the Empire is not of the desired standard. With conditions as they were before the war, it might have been possible to go on for some years without making any special efforts to bring about a different state of things. Unfortunately, certain factors have come of late years to have an increasing influence on the situation, and their incidence makes it essential that the cotton production of the Empire should be greatly increased as soon as possible, and that for that purpose the fullest official support should be lent to those authorities to whom is due what extension of cotton growing there has been during recent years. Notable among these factors, and one to which pointed attention is called in the report, is the increased consumption of cotton in the United States. The process has been more or less a continuous one over the past twenty-odd years, but in the last few years the rate of internal consumption has been greatly accelerated. In this connection the report calls attention to the fact that "the Southern mills, in particular, are steadily increasing their consumption, going from 2,307,000 bales in 1910-11 to 4,350,000 bales in 1916-17." The following table gives a convincing picture of the development of the American cotton industry:—

	Crop.	American Consumption.	Percentage.
1890-5* ..	8,345,000 ..	2,607,000 ..	31·2
1896-1900* ..	9,549,000 ..	3,208,000 ..	33·5
1901-5* ..	11,087,000 ..	4,010,000 ..	36·2
1906-10* ..	12,109,000 ..	4,619,000 ..	38·1
1911-15* ..	14,394,000 ..	5,346,000 ..	37·2
1910-11 ..	12,075,000 ..	4,361,000 ..	35·6
1911-12 ..	16,101,000 ..	5,391,000 ..	33·5
1912-13 ..	14,104,000 ..	5,389,000 ..	38·2
1913-14 ..	14,552,000 ..	5,503,000 ..	37·8
1914-15 ..	15,136,000 ..	6,088,000 ..	40·2
1915-16 ..	12,862,000 ..	6,810,000 ..	53
1916-17 ..	12,900,000 ..	6,940,000 ..	54

Outlook in India and Egypt.

"Evidently, unless the present tendency should be checked, which there is no reason to anticipate, Lancashire must expect that each year less American cotton will be at her disposal, and the question arises how best to make good the shortage. India is the main producer of cotton within the Empire, but Indian cotton is not satisfactory in quality, and in addition not only is Indian consumption of it on the increase, but there is also a growing demand for it in Japan. It is very possible that the application of science to cotton growing (which was the subject of a series of able articles in these columns recently by Mr. J. W. McConnel) and the efforts of the authorities in India to put a stop to the practice of adulteration may eventually result in the production of a quality of cotton sufficiently good for any purposes. In that case, given an increased production, consistent with her growing requirements, India may play a very important part in the solution of the problem of sufficiency in cotton production. The problem would certainly be much simplified, as India's production amounted in 1916-17 to 4,827,000 bales, as compared with 631,000 bales produced by Egypt, the next important source of supply. In the circumstances, however, it seems more practical to base our hopes on increased production in fields where the cotton is of the required quality, and where local requirements are unlikely to compete with the export trade. Both these conditions are fulfilled in Egypt, and it is the more to be regretted, therefore, that in the years immediately preceding the war there was only a slight increase in the area under cotton cultivation, and while it amounted in 1911 to 1,711,241 feddans as against 1,128,151 feddans in 1897, it had only increased to 1,755,270 feddans in 1914; while the crop, which amounted to 7,495,600 kantars in 1910 and 7,383,740 kantars in 1911, was no more than 6,450,573 kantars in 1914. Last year's crop estimate shows a further diminution at 6,379,936 kantars, a yield which is, however, much in advance of the returns for 1915 and 1916. There is no question, however, that the yield can be immensely increased, and evidence given before the Committee appointed by the Board of Trade to consider the best method of continuing and developing the work inaugurated by the association was to the effect that by drainage and irrigation schemes another 800,000 bales of 400 lb. each might be added to the Egyptian crop.

* The annual average for the period.

Development in New Fields.

The work of the association has mainly been carried on in what the report terms "new fields in the British Empire," which include West Africa, British East Africa, and Uganda, Rhodesia and Nyasaland, the Sudan, and the West Indies. The production in these fields amounted in 1912 to 71,490 bales of 400 lb. each, in 1913 to 72,800 bales, and in 1914 to 82,350 bales, a rate of increase which would doubtless have been accelerated but for the war. As it was, the production was in 1915 75,200 bales, in 1916 78,800 bales, and is estimated at 72,600 bales in 1917. Values have, however, gone on increasing owing to the rise in prices, and while the 1911 yield was valued at £840,000, the figures for 1915, were £1,123,200, for 1916 £1,500,000, and for 1917 £2,700,000, a fact which may not be without its influence on future developments. It would be difficult to praise too highly the work of the association in encouraging cotton production in these regions, and it is certain that if hitherto the results of the association's efforts have been small if measured in statistics, this painstaking pioneer work will be of immeasurable value in years to come. Beyond question the most promising of these fields is the Sudan, the prospects of which may be estimated from the statement before the committee already referred to that by the aid of dams and irrigation works within a period of 25 years about 440,000 bales of 400 lb. each could be produced there every year. The prospects in other fields are also undoubted, while the war has brought within the region of possibilities the introduction of cotton-growing on a large scale in Mesopotamia, which in many respects offers ideal scope for its cultivation, but, while admitting that, there seems no question that the outlook as regards a marked extension of cotton production in the Empire in the immediate future centres on developments in Egypt and the Sudan, and whatever efforts may be made elsewhere, it is essential that our endeavours should be concentrated on realising the possibilities of these two countries. We quote, in conclusion, the statement in the report that "in comparison with Lancashire's requirements, it is true the British cotton growing production is small, but it is not negligible, and one must not lose sight of the fact that a very firm foundation has been laid for the benefit of Lancashire and the Empire. The Association's members may now see in the appointment of the Empire Cotton-Growing Committee evidence of having by their cheerful sacrifices of the past convinced the Government authorities that the question of the development of cotton-growing in the Empire is worthy of closer attention than it has hitherto received."

COTTON GAMBLING IN INDIA.

A Reuter message states that powers have been given under the Defence of India Act to native rulers and to the Bombay Government to constitute a Cotton Committee to restrict gambling and forward contracts with the object of maintaining the supply of cotton for national industries.

CYPRUS CROP PROSPECTS.

(From a Correspondent.)

Everything points to another very prosperous year for the peasants. The barley harvest, when fully assessed, should prove to be more than 30 per cent. above that of last year, and wheat 20 to 25 per cent. The cost of labour has risen to double what it was not many years ago, when 1s. (9 piastres) a day was an average rate, while in the Papho District it was considerably less. Tobacco cultivation has, as anticipated, absorbed many labourers, especially women. Indeed, the employment of women and girls in this industry was one of the arguments which the Director of Agriculture always urged in favour of its resuscitation.

Carob growers and merchants are at present perhaps the most disappointed class, and owing to the very inflated prices paid for some consignments that have reached England there has been considerable heartburning on the part of those who have been less fortunate in disposing of their stocks. The exportation of last year's crop, so long delayed owing to want of shipping, has been gradually carried out. As much as £45 to £55 a ton (800 okes) has been paid for some parcels. This works out at about £5 a kantar (180 okes). In the past £1 a kantar has been considered a high price in Cyprus; while 16s. was often an average. No wonder, therefore, that while exaggerated prices have been fixed for other articles of produce—cereals, tobacco, etc.—both merchants and villagers should have been tantalized by the news of these sales. The latter, it is argued, might now at last have a chance of paying off their debts, which handicap all their efforts for improvement.

The Government has recently given notice that carobs of the next crop will not be allowed to be exported, and that the military authorities will be willing to purchase them at 20s. 6d. the kantar, f.o.b. Villagers have been petitioning the Government and their members of Council that these prices may be reconsidered, as being unfair. Carob merchants on their part, also, regard themselves as aggrieved. Indeed, when it is considered what high prices have been fixed for articles such as raisins and wheat, there seems to be some ground for complaint. The price of raisins is fixed at 3½ piastres the oke (£15 11s. the ton), about double the pre-war rate; that of wheat at 9s. the bushel being analogous.

The wine-producing villages are looking forward to another good season, but it is too early to make any forecast regarding the vintage. The movement of families to hill quarters has begun.

EGYPTIAN COTTON CROP.

A Reuter telegram reports that the condition of the cotton crop in Upper Egypt is 100 per cent., and in Lower Egypt 96 per cent. of the normal. The crop has considerably recovered from the effect of the much retarded start.

The Alexandria General Produce Association comments as follows in its monthly report on the cotton crop:—

Lower Egypt.—The temperature during June has been generally favourable, although towards the end of the month there has been a little humidity. Crops in some districts are as well advanced as at this time in 1917, but, generally speaking, the crop is about ten to fifteen days late. Plants are healthy and in good condition. Eggs of the cotton worm have been reported in all provinces. Measures have been taken for destruction by picking off the affected leaves. Up to the present there has been no appreciable damage. Water irrigation continues to be abundant.

Upper Egypt and Fayoum.—The temperature has been generally favourable. Lateness of the crop previously reported still exists. Appearance of cotton satisfactory. In one or two isolated districts cotton worm eggs have appeared, which have been destroyed. Water abundant.

A Reuter message state that a Bucharest telegram published in the *Vossische Zeitung* says that M. Inculetz, the Bessarabian Minister in the Roumanian Cabinet, has stated that in consequence of the long drought the harvest in Bessarabia was extremely bad.

LANCASHIRE COTTON.

Business Restricted.

(From Our Own Correspondent.)

Manchester, Wednesday.

The market has not been at all active during the past week. Very few producers have been at all anxious to sell, and on the other hand buyers are afraid of paying to-day's prices for lots of quantity, especially when long delivery has to be given for the completion of contracts. There is a possibility of some trouble amongst the operatives as a result of the Control Board abolishing the rota system of "playing off" workpeople. Some difficulty has arisen in connection with the interpretation of the recent wages award, but no strike is expected. Users of Egyptian cotton and merchants are waiting for definite regulations relating to the control of the article from the beginning of next month. It is said that the local banks will have to be appealed to to finance imports. Some advices relating to the crop are not altogether satisfactory. The plants are late and a certain amount of resowing has been necessary. The strength of Egyptian spinners has been well maintained. Very little yarn has been offering for quick delivery. Some concerns have made very big profits during the past half year. Not more than a sorting up trade has been done in piece goods for Egypt. Rather better advices continue to be received from Persia. Operations for India and China have been very limited. Engagements of manufacturers are irregular, but there is no running after fresh orders. American yarns have again moved off quietly; but late rates are well held. Only retail sales have been put through in shipping counts.

Record Cotton Trade Profits.

According to Mr. Frederick W. Tattersall, of Manchester, there has been more money made in the Lancashire cotton trade during the first six months of this year than in any similar period in the history of the industry. The majority of firms have made record profits. Mr. Tattersall has compiled an analysis of the stocktaking results of sixteen large spinning companies, and the figures show that on share capital there has been a gain of over 45 per cent. per annum, whilst on share and loan capital combined there has been a profit of over 33 per cent. per annum, after allowing interest on loans. The share capital of these concerns amounts to £608,552, and loans to £220,820. In the mills there are over 1,500,000 spindles. Most companies have paid either increased dividends, or a special bonus to shareholders. Sufficient details are not available for reliable figures to be published relating to the weaving section of the trade, but the past six months has been a very prosperous period, especially for firms who both spin and weave. Owing to the shortage of raw cotton, and the considerable amount of machinery stopped, demand in both yarn and cloth exceeds supply, and there is every probability of big profits being continued, at any rate until the end of the war.

EGYPT'S TRADE IN APRIL.

Further Improvement.

(From Our Own Correspondent.)

Cairo, June 2.

The Customs returns for April show a further improvement in the external trade of the country. Imports during the month amounted to £E4,720,082 and exports to £E5,060,634, as against £E2,565,282 and £E3,227,617 respectively a year ago. The total for the four months is £E15,739,518 in imports and £E18,153,291 in exports.

The chief items under imports were preserved meat £E178,173, coffee £E60,542, vegetable oils £E71,314, stationery £E126,732, coal £E355,670, textiles £E2,643,799 (cotton piece goods £E1,592,117, woollen textiles £E97,309, cotton thread £E131,223, sacks £E304,216, ready made underclothing and hosiery £E120,626), manufactured iron and steel £E155,935, and tobacco £E262,333. The main exports were cotton seed £E508,226, sugar £E261,979, cotton £E4,192,889, and cigarettes £E51,375. No petroleum, benzine, or manures were imported or cotton-cake exported.

Commerce with the Empire.

In the increased trade of Egypt the British Empire had a good share. Great Britain sent goods worth £E2,500,554, as against £E1,502,751 the previous April, India increased her sales from £E113,512 to £E662,330. Australia rose from £E86,780 to £E181,903, and British African possessions from practically nil to £E35,823. France doubled her sales to £E236,997, Italy trebled hers to £E312,631, and Japan made a jump from £E30,500 to £E213,118; America and Chili were the only countries showing any considerable decrease. All the meat, flour, furniture, natural indigo, cotton yarn, sacks, coal, and 90 per cent. of the cotton piece goods and manufactured iron and steel came from the British Empire.

Under exports, Great Britain doubled her share to £E3,726,123, whilst the United States rose from £E302,941 to £E1,050,006; most of the other countries showed marked decreases. Between them Great Britain and the States took all the cotton crop, whilst the former took all the cotton seed and eggs. Most of the sugar went to French possessions in the Mediterranean. New silver to the tune of £E145,200 was imported from the United Kingdom.

Trade with the Sudan was fairly brisk. Imports totalled £E216,624, a slight falling off as compared with April, 1917, but exports jumped from £E117,588 to £E229,528. The principal items sent by the Sudan to Egypt were maize £E40,694, gum £E38,671, and livestock £E56,899, whilst the chief exports from Egypt were sugar £E81,230, and cotton piece goods £E59,124.

EGYPT'S FINANCES.

Increased Surplus in February.

(From Our Own Correspondent.)

Cairo, May 30.

The February accounts of the Ministry of Finance show a further increase in the surplus at the disposal of the Government. During the month revenue amounted to £E1,442,752, and expenditure to £E1,238,528, thus bringing the totals to £E20,279,286 and £E16,600,593 respectively, as compared with £E17,811,972 and £E15,441,682 a year ago. There was, therefore, at the end of February a surplus of £E3,678,693, against one of £E2,370,290 on the same date in 1917.

Chief Features.

During the months the chief heads of revenue were: Customs £E334,244, tobacco dues £E120,382, mixed courts fees £E112,138, railways £E417,074, Excise £E83,398, and direct taxes £E94,462; and the principal items of expenditure were: Irrigation £E127,620, railways £E310,659, war gratuities £E47,362, War Office £E69,846, ghaffirs £E66,053, police £E45,215, pensions and indemnities £E61,377. With regard to the surplus this year, it is only right to point out that the 1916-17 accounts did not include excise or ghaffir cess, which account for £E1,022,369 this year. If this amount is deducted from the total revenue figure and allowance is made for the expenditure on the other side for ghaffirs, the extra amount included in the 1918 accounts is £E352,812, which makes the increase in surplus just under one million Egyptian pounds.

Estimate Exceeded.

It is interesting to note that the total revenue for the eleven months exceeds the estimated total for the year (£E19,525,000) by £E756,286, and that the total expenditure is £E2,924,407 less than the budgeted amount for the whole twelve months. Customs, fisheries, mixed courts fees, telegraphs, post office, railways, assay, sale of land, military exemption fees, state domains and mehkemehs receipts all exceed the totals budgeted for each of their departments, so that it is evident that the additional revenue is derived from almost every source open to the Government. In the case of mixed courts, railways, domains and customs, the excess over budgeted totals is already very considerable.

BRITISH TRADERS' ENTERPRISE.

Levant Chambers of Commerce.

The recent letter from our Athens correspondent describing the formation of a British Chamber of Commerce and Club at Athens has brought forth some interesting comments from a correspondent recently resident in Constantinople. "The new departure in Greece brings back memories," he writes, "of the foundation of the British Chamber of Commerce of Turkey at Constantinople some thirty years ago, an innovation which was not regarded with entire approval in official circles. The Chamber proved a great success, and its sphere of action was subsequently extended to include Roumania, Greece, Serbia, and Bulgaria, its title being changed to the British Chamber of Commerce for Turkey and the Balkan States. It had several correspondents in each country, and it issued a quarterly publication, which contained most useful information for the development of British trade in all its branches. In time the Chamber became a very powerful institution, rendering invaluable services to British traders and manufacturers, its utility in this respect being fully recognised by the British Government. The next development followed in the last decade, when a British Chamber of Commerce was founded at Smyrna, which has also much good work to its credit. One of the staunchest supporters of this institution was the Vice-Consul, Mr. C. E. Heathcote Smith.

"As regards the Athens Chamber it is a noteworthy fact that out of the nine gentlemen appointed on the committee four have the advantage of having been connected with one or other of these Chambers. Thus, Mr. H. E. Mountain was secretary of the British Chamber of Commerce of Turkey for twenty years, Mr. A. T. Waugh, British Consul at Constantinople, latterly attended the Board meeting, Mr. C. S. Butler was the representative and correspondent of the Constantinople Chamber in Athens, and Mr. C. Whittall was connected with the British Chamber of Commerce at Smyrna, so that the new Chamber will start its career with the great advantage of having the guidance of men fully cognisant of German methods in the Near East, and is to be hoped that their efforts to combat enemy commercial penetration after the war will meet with adequate support from bankers, manufacturers, and shipowners, etc., at home, whose failure to do so in the past allowed the Germans to carry out their ruthless commercial policy.

"With reference to the foundation of a British Club, it appears that Mr. Waugh, in the course of his remarks said: 'It was not an original idea and that' it was taken partly from watching what the Germans were doing before the war,' etc. Apparently Mr. Waugh overlooked the fact that a British Club was founded in Constantinople early in 1913, one of the objects being that it should be a centre where all Englishmen could meet. It was hoped that in the course of time it would become the headquarters of every national institution, and, as a matter of fact, the British Chamber of Commerce had already considered the question of taking up its quarters under the same roof, but unfortunately the premises were not large enough, and did not provide sufficient accommodation."

The Greek Minister of Agriculture left London on July 6 for Paris.

Mr. Bourre, general manager of the Land Bank of Egypt, has been appointed a director of that bank.

A German message from Jassy states that an economic agreement has been arrived at between Roumania and the Ukraine.

Messrs. E. Lugton and W. T. Gillies, of Lever Bros., Ltd., arrived at Khartoum at the beginning of last month. Mr. Gillies is to conduct an advertising campaign in the Sudan, in the form of demonstrations of Messrs. Lever's soaps, perfumes, etc.

A Berlin telegram states that the Roumanian Government intends placing the Roumanian gold reserves now in the Kremlin under the protection of the German authorities at Moscow. Hitherto the gold has been in the custody of diplomatists of the Entente.

ENGINEERING NOTES.

A Useful Flour Mill.

Nothing appeals to the Eastern agriculturalist like a machine that prepares flour or deals with water for irrigation, and which is within his means to purchase and employ on his own farm. Hence, flour mills and pumps are of particular interest to him, and, as a rule, head the list of what he will buy when opportunity offers. A new flour mill that has recently been brought out will be of much interest to such farmers and landed proprietors throughout the East. It is a combined stone mill and flour dresser which is low in cost, automatic in action, and requires no experienced assistance. The mill grinds by means of stones fitted on a horizonal snaft, running at a comparatively high speed, and is arranged to receive the wheat through an automatic feed, grind it into meal, and deliver the meal at the foot of an elevator, which carries it into the dresser. This latter machine extracts the flour in one, two, or three qualities, as desired, the product, as well as the bran and offals, being delivered into separate sacks. We understand that four sizes of this combined plant are made, with 14 in., 18 in., 24 in., and 30 in. stones, the elevator in the two larger sizes being placed between the mill spout and the dresser. This mill, it is said, is supplied for the production of Government regulation flour, which it does with success. What will attract the attention of Oriental buyers is the stones of the mill, for there is a prejudice against mills fitted with iron plates instead of stones, a design which has not been always successful.

Simultaneous Ploughing and Sowing.

An interesting achievement in connection with the national food-growing campaign will undoubtedly revive the spirits of Oriental farmers who are lamenting the "impossibility" of ploughing and sowing their land in time under existing difficulties, such as the scarcity of labour, machinery, and draught animals. These conditions prevail all over the world at present, and where there is a sufficient amount of energy remedies can be found for these drawbacks. Machinery is a little easier to procure now than before, not, of course, for "prompt delivery," but the sooner the order is given to the British manufacturer the earlier will be the delivery. The use of machinery solves the problem of labour. Draught animals such as buffaloes, bullocks, mules, camels, etc., for field work are now out of date; the price of three or four of them will buy a small tractor, which requires no food except oil when at work, and can do the one day's work of four bullocks in three hours operated by a farm lad or a woman.

The combined operation of ploughing and sowing is an innovation which should appeal to farmers who can procure or hire the necessary machinery. But it must be mentioned that the most serviceable machines for this purpose are of British manufacture, and buyers who cannot find or communicate with British manufacturers should hesitate to buy machines offered on the spot, or "to be delivered shortly," for it is said that a good number of agricultural and other machines are about in the East for sale with the names "Max" or "Fritz" chipped off or painted over. Intending purchasers must make a point of getting into touch with the British manufacturer; and, on the other hand, there is the corresponding obligation for the latter to make an effort to reach the Eastern market now awaiting him.

The operation to which we have referred is a further proof of the utility of the modern farm tractor. A War Agricultural Committee issued orders to the owner of a park to break up and plant 30 acres (14 hectares, or 33 feddans, or 120 stremmata) of rolling parkland with wheat. At the time the instructions were issued the season was well advanced, so that it was necessary to hasten the task with all speed. Two tractors were pressed into service, hauling two and three furrow ploughs, and breaking the land to a depth of from 5 to 6 inches. As the ploughing progressed one of the tractors was withdrawn from ploughing to be hitched to a disc harrow. Neither machine was kept continuously at the one task, a change-over being frequently made, and by this arrangement it was rendered possible to keep the disc harrow close up to the plough. While the third and final harrowing operation was in progress a seed-drill was set to work, frequent changing-over again being practised. Upon the completion of seeding, a combined harrow and roller, with the harrows working under the pole of the roller, was hooked on to the smaller tractor. Altogether, seven distinct operations were carried out in five tractor movements. The whole of the task was completed by two women who handled the tractors, and one man in charge of the implements, except in seeding, when the additional assistance of a boy was required.

MOTOR CARS IN THE NEAR EAST.

The number of motor cars in use in Europe is 522,112, according to figures compiled by the Fiat Press Bureau. Most persons, if asked which country had the greatest number of cars per head of population would reply England, and doubtless would be surprised to find that they were wrong. The record is held by the tiny principality of Monaco with one car for every 95.6 inhabitants. The country with the smallest number of cars, and also with the greatest number of inhabitants per car, is Crete, which is officially returned as having three cars or one for 121,666.6 inhabitants. Naturally, geographical conditions are an important factor in determining the proportion of cars, hence the fact that a country like Serbia had much leeway to make up before the war. The following is a list of cars in service in the Near Eastern countries in the last years for which returns are available :—

	Cars.		Year.		Inhabitants per car.
Bulgaria	3,050	..	1916	..	1,419.6
Roumania	2,500	..	1913	..	2,899.
Greece	800	..	1917	..	4,890.5
Turkey	500	..	1913	..	—
Serbia	200	..	1914	..	22,450.
Malta	100	..	1917	..	2,240.
Cyprus	15	..	1917	..	18,257.
Crete	3	..	1917	..	121,666.6

THE CEUTA-TETUAN LINE.

Some interesting particulars of the Ceuta-Tetuan railway in the Spanish zone of Morocco, furnished by the British Vice-Consul at Tetuan are given in the *Board of Trade Journal*. The Vice-Consul states that the line, which was officially opened in the third week of May, has a total length of twenty-five miles, mostly along a level plain; five tunnels of a total length nearly half a mile, and five small bridges had to be constructed. The line is of narrow gauge, only one metre, and the rolling stock consists of six 50-ton engines of American make, one saloon carriage, twelve other carriages of 1st, 2nd, and 3rd class, and ten vans. It is a line that is not likely to be extended into the interior, though some day a line will presumably be laid to connect Tetuan with the Tangier-Fez railway. This, however, will have to be a normal gauge line, and will pass through much more difficult country than the Ceuta-Tetuan line.

The construction of this railway was decided in January, 1913, says the journal, when a decree was issued ordering the preliminary studies of the lines. The studies were concluded and the plan for the whole line presented in April, 1914. The work was entrusted to the engineering department of the Spanish zone, but, little or no progress being made, the construction and exploitation of the line was put up to adjudication, and the Compania Espanola de Colonizacion, which alone tendered, obtained the contract. the total cost of the work to be approximately 10,850,000 pesetas and the time allowed for the construction one year, which had later to be extended to two years.

RAILWAY DEVELOPMENT IN MOROCCO

The development of railway communication is assuredly one of the most satisfactory spectacles which the zone in Morocco offers, says a French contemporary. Thanks to this work, the pacification of Morocco has been extended and effected with a minimum of troops. The various parts of Morocco have ceased to be isolated, the commercial exchanges are established, and the Empire rapidly becoming pacific, is unified. The iron horse, destined to enhance the economic value of the country, is penetrating towards the interior, and the collected products are being brought to the coast and exported to France. The railway, therefore, whilst acting as a conciliator, has been the principal agent of the rapid development of the country which has been the admiration of the traveller.

The United States has advanced 15,790,000 dollars (£3,158,000) to Greece.

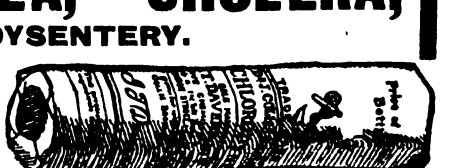
The British Government has approved the appointment by the Persian Government of Mr. J. A. Hill to be acting Consul at Sheffield.

The French Motor Car Co., Ltd., occupies the largest premises of any firm in the Calcutta motor trade in its new building in Circular Road. The company employs about 700 people in Calcutta and Bombay.

Dr J. Collis Browne's Chlorodyne

Safeguard your Health with this Reliable Medicine.

Cuts short attacks of HYSTERIA, SPASMS, PALPITATION.



A true palliative in NEURALGIA, GOUT, TOOTHACHE, RHEUMATISM.

Checks and arrests FEVER, CROUP, AGUE.

The Best Remedy known for COUGHS, COLDS, ASTHMA, BRONCHITIS.

ACTS LIKE A CHARM IN DIARRHŒA, CHOLERA, DYSENTERY.

Of all Chemists, 1/3, 3/-, 5/-.

THE ADEN SKIN MARKET.

Effects of Shipping Shortage.

The winter season was a comparatively dull one in the Aden skin market, owing mainly to the lack of shipping space to the regular export markets, says a recent American consular report. Normally this market handles nearly equal parts of Arabian and African skins, but at present there are in Aden very few of the African or sun-dried skins known as flints. The Arabian or brine skins have been arriving in nearly normal quantities, but they are now coming in much more slowly, as the market is already overstocked. There have been a few African skins in the Aden market from British Somaliland, although it is reported that these skins, as well as the bulk of the Abyssinian skins, are being shipped direct from Jibuti. A week ago a few hundred bales of African skins from the Italian colony of Eritrea were reported to have arrived in Aden. For the past two years most of the skins from Eritrea have been shipped to Italy, but it is understood that the demand in Italy has fallen off recently and that some Eritrean skins will now regularly come into Aden on the chance that shipping space to Great Britain or America will be available.

Shipments via Bombay.

Some shipments have lately been made from Aden to Bombay for trans-shipment to the United States. Space is readily obtainable from Aden to Bombay, and local exporters hope to find space from Indian ports to America. Skins can be shipped from Aden to Bombay at a rate of Rs.120 per ton weight, and the reported Bombay-to-America rate is Rs.1,000 per ton weight. Recent quotations for any possible space direct from Aden to American ports have been from Rs.1,200 to Rs.1,400 per ton weight. A ton weight of skins measures up to 120 cubic feet, or about four bales of 350 skins each. The measurement of a ton, weight varies somewhat, according to the compactness with which the skins may be baled and according to the size or weight of the skins. Since the beginning of the present year 282 bales of skins have gone from Aden to Bombay and 78 bales to Calcutta for trans-shipment to America. There have been no direct shipments.

Prices below Normal.

Prices in the local market are about 16 per cent. below normal. Goat skins which normally are offered at Rs.24 per score can now be bought at Rs.20. Skins of this quality are selling at from Rs.26 to Rs.28 per score in Jibuti, because of the shipping space available. It is unusual for Jibuti prices to be as good as those prevailing in the Aden market; and the fact that they are now even higher is plainly an exceptional circumstance, and one which may permanently develop the growing tendency to export Abyssinian skins direct from Jibuti, in place of marketing them through Aden, as has been the long-established practice. At this time last year the local prices for skins were considerably higher than those paid normally, owing to the greater demand from abroad, which induced speculation. There are plenty of skins in Red Sea markets, and they can at present be had in large quantities if a means of shipping them can be found. The quality of the skins which have come into Aden this season is said to be fair, but this applies particularly to the brine skins, as too few flint skins have come in to permit an accurate estimate as to the general quality.

East Indian Railway.—Annual meeting will be held at Cannon-Street Hotel, E.C.4, on 31st instant at 12.30 p.m.

Lord Brassey has accepted the Presidency of the British Federation of Iron, Steel, Tin Plate and Metal Merchants.

Machinery of all kinds, including belting for machinery, was imported by India last year to the value of £3,490,250, compared with £4,003,480 in 1916.

The *Neues Wiener Tagblatt* states that the harvest began throughout Hungary on June 29, says a Reuter message. The crop prospects are said to be good, though the harvest may be somewhat delayed owing to the weather, which is unfavourable, being cold and wet and lacking in sunshine.

COMPANY NOTES & REPORTS

Bank of British West Africa.

The report of the Bank of British West Africa, Ltd., for the year ended March 31 states that, after providing for current charges, rebate, bad and doubtful debts, there remains a net profit of £17,514 1s. 3d., to which must be added £18,176 16s. 5d. brought forward from last year, making a total of £89,690 17s. 8d. Of this sum £19,978 2s. 10d., being 3½ per cent. for the six months to the end of September, has already been distributed in interim dividend, and the directors now recommend the payment of a final dividend of 4½ per cent. for the second half-year, absorbing a further sum of £26,100, making the distribution for the year 8 per cent., less income-tax. £10,000 has been applied to writing down premises and furniture account, £10,000 has been added to reserve and £2,000 to the bank's insurance fund. The balance of £21,612 14s. 10d. is carried forward. The investments held stand in the books of the bank at less than their market value as on March 31, 1918. Notwithstanding the continuance of war conditions, the result of the year's operations is again satisfactory. A branch has been opened at Ebute Metta (Nigeria), and, as an experiment, a sub-branch has been established at Victoria Road, Lagos. The bank's branches in Morocco have been increased to five during the year by the establishment of branches at Fez and Saffi. The directors retiring by rotation are Mr. Clifford B. Edgar, Mr. George Miller, and Mr Mazzini Stuart, who, being eligible, offer themselves for re-election. The auditors of the bank, Messrs. Harmood Banner and Son, offer themselves for re-election. The warrants for the final dividend for the year will, subject to the adoption of this report, be posted to the shareholders on July 17. The ordinary general meeting will be held at the Cannon Street Hotel, E.C., on July 17, at 12 noon.

Anglo-Egyptian Oilfields.

The report of the Anglo-Egyptian Oilfields for 1917 states that producing efforts were again mainly concentrated upon Hurghada field, with the result that a much larger output was obtained from this area. Total production of crude amounted to 134,500 tons, against 54,800 tons. Directors hope that application to Egyptian Government for larger areas will be granted. Erection at Suez of extended refining plant was completed at end of 1917, and capacity of refinery at Suez is now 1,000 tons per day. During the year, whenever refinery was not fully occupied with Egyptian crude, it was utilised to refine imported distillate for associated companies, and £75,172 has been received from them for treating this oil. The directors propose to write off for depreciation an amount based on that allowed by the income-tax authorities—namely, £52,000. The balance-sheet shows that operations have been sufficiently profitable to remove the adverse balance in the profit and loss account, and there are some funds in hand to start paying off the arrears of interest due on the Income bonds. The debit brought down was £342,156, and the year's profit of £348,555 leaves a credit of £6,399. The sum paid to the Egyptian Government in respect of the operations of the company since its inception amounted at the close of the year to £78,585. Phoposals are put forward for increasing the number of directors to eight and their remuneration to £2,400. The annual general meeting will be held at Winchester House, E.C., on July 18, at 2.30 p.m.

Alexandria Water.

The report of the Alexandria Water Company, Ltd., states that the balance of profit and loss account, after making provision for depreciation and usual allowances, and after deducting the interim dividend of 4 per cent., paid December 15, is £69,000, from which should be deducted 6 per cent., to complete, with the interim dividend, the 10 per cent. on the capital, £36,000, leaving £33,000, of which one-half is due to the municipality, according to the conventions, and the other half to shareholders, which represents 2s. 9d. per share, and this, added to the 6 per cent. above mentioned, makes a total of 8s. 9d. per share. The directors therefore recommend shareholders to fix the dividend payable at 8s. 9d. per share, which, with the interim dividend, makes a total dividend of 12s. 9d. for the year.

The Ederapolla Tea Company of Ceylon in 1917 made a profit of £8,788, against £10,135; final dividend is 15 per cent. (making 20 per cent. for the year), against 25 per cent.; forward, £3,139, against £2,739.

The Yatiyantota Ceylon Tea Company in 1917 made a profit of £22,632, against £28,748. Dividend on the Ordinary shares is 10 per cent. (making 16 per cent. for 1917), against 21 per cent.; forward £7,998, against £6,365.

The report of the Shawlands Estates of Ceylon for 1917 states that, including £711 brought forward, the profit was £3,482. Directors propose dividend of 5 per cent.; to depreciation, £500; to taxation reserve, £750; to coast advances reserve, £300; forward, £682.

The available profit of the Colombo Electric Tramways and Lighting, after providing for debenture interest and including balance brought forward, £35,239, against £36,889. Dividend of 10 per cent., free of tax, for 1917, same as 1916; £13,500 to general reserve and renewal fund, against £15,000; forward, £8,655, against £8,805.

The gross revenue of the Neboda (Ceylon) Rubber and Tea Estates for 1917 was £67,835, against £69,599, and the gross profit, including the balance from 1916, less excess profits duty for 1915 and 1916, was £48,476, against £48,111; final dividend is 7 per cent., making 10 per cent. for the year, and the carry forward is £19,201 (out of which reserve has to be made for excess profits duty).

The profit of the Poonagalla Valley Ceylon Company for 1917, after providing for interest, amounts to £13,753, against £13,088; excess profits duty, 1915 and 1916, £4,330. Final dividend of 4 per cent. (making 8 per cent. for the year), the same; depreciation, £1,000; capital expenditure in 1917, £1,414; debenture redemption fund, £1,000; forward, subject to excess profits duty, £7,228, against £6,419.

The report of the Hewagam Rubber Co., Ltd., states that the net profit for the year, after writing of £2,000 from estates account for depreciation, and placing £1,460 to income and excess-profits tax reserve, and £750 to manuring suspense account, is £24,720, which, with £1,338 brought forward, makes £26,059, dealt with as under:—Interim dividend of 3 per cent., paid November, 1917, £7,200; dividend of 5 per cent., now recommended, making 8 per cent. for the year, £12,000; carrying forward, £6,859.

The directors of the Assam Oil Company announce that it is impossible to have the accounts prepared in time to call the meeting of the company during this month. They therefore propose to postpone it until after August. They have declared a dividend at the rate of 8 per cent. per annum, less tax, payable 19th instant, and do not expect to recommend any further payment on account of the year. The payment of 8 per cent. on the ordinary shares involves the payment of an additional 1 per cent. on the Participating preference shares. The result of the year's work has been good, the profit being the largest yet earned.

Dividends, Payments, etc.

The directors of Eastern Assam have declared a further dividend of 10 per cent., making 15 per cent. (free of tax) for 1917, against 17½ per cent.

Piræus-Athens Peloponnesus Railway Company Four per cent. Bonds. The Bank of Athens will pay coupon No. 13 due 14th inst., at 22, Fenchurch Street, E.C.3.

With regard to the Piræus, Athens, and Peloponnesus Railway Three per Cent. Bonds, Messrs. R. Raphael and Sons announce that the coupons and drawn bonds due July 15 will be paid on that date at their office, Austin Friars House, E.C.

London County Westminster and Parr's Bank.—Interim dividend of 10 per cent. for the half-year ended June 30. The dividend, 10s. per share (less tax), will be payable on August 1. A year ago the dividend was 9 per cent.

The ordinary stock transfer books of the Rohilkund and Kumaon Railway Company, Limited, will be closed from July 13 to 27 inclusive, for the purpose of preparing dividend warrants for the six months to March 31, payable to those shareholders whose names are on the register at the time of closing the books.

ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Avenue, Wednesday.

The tone of our market continues very favourable in all directions. Buyers are abundant, and there is great competition for everything offering.

In Government stocks Unifieds are again a point higher at 91½, while the Three and a-Half per Cent. Preís. are ½ up at 76½. A feature this week has been the demand from Egypt for Turkish Four per Cent. 1891 and Three and a-Half per Cent. 1894. Both these are most attractive securities in view of the fact that they are both subject to annual drawings at par. In both cases prices have risen one point, to 83 and 73 respectively. City of Alexandria Bonds have recovered practically the whole of their dividend recently deducted at 82, but no business takes place as sellers are non-existent. In Bank shares Nationals are a further ⅛ up at 17⅞, after some business as high as 17¾. Agriculturals are also 1-16 firmer at 6 1-16, all shares available at the latter price having been absorbed. Agricultural Prefs. are 1-16 firmer at 7 7-16, but here also there are no sellers at present. A further substantial rise of ¾ has taken place in Anglo-Egyptian Banks at 18½.

In Railways, Delta Lights have large buyers near the current level, but no shares are on offer. In Land descriptions Aboukirs are 3d. firmer at 22s. 9d., with some business passing. Behéras have also given rise to a certain amount of business at the current level, and Behéra Prefs. are ⅛ up at 4½. In Delta Lands some small transactions have been effected round the current level, and the same remark applies to Foreign Trusts. Gharbieh Lands are 1-16th higher at 2, but there are only buyers about. In New Egyptians the price, after receding on realisations to 18s., is again firm and unaltered at 18s. 6d., after a very fair amount of business, this being about the only share in which there is anything like a free market. Sidi Salems have improved 1-16th to 2 5-16ths, with a few hundred shares changing hands and with further buyers about. In Union Foncières there has been a persistent demand, and the price is 1-32 higher at 3 5-32, but sellers are few and far between.

In Miscellaneous shares the feature has been the continual improvement in Salts and Sodas, which are 3s. 9d. up at 46s. 3d. This rise has been due to small local buying, and orders from Egypt are at a considerably lower level. Khedivial Mails are 6d. easier at 42s. 6d.

In Greek securities there has been but small business passing, and in a general way there are only buyers at the current prices. Ionian Banks have improved ⅛ to 5⅝, and Piræus-Athens 4½ per cent. Bonds continue wanted.

GREEK DEBT SERVICE.

The Council of Foreign Bondholders issues the following information compiled from figures published by the International Financial Commission at Athens with regard to the revenues assigned under the Law of Control for the service of the Greek Debt from January 1 to April 30, 1918:—

—		Monopolies, Tobacco, Stamps, Stamped Paper, Naxos Emery.	Piræus Customs.
		Drachmæ.	Drachmæ.
Gross Receipts, April	1918	2,121,879	1,856,000
Do. do. do	1917	1,987,403	850,000
Difference between estimated and actual receipts for 4 months	1918	+ 3,081,012	+ 7,955,333
	1917	— 483,016	+ 885,333

Note.—Of the surplus over the estimated receipts from monopolies, tobacco, stamps, stamped paper, and Naxos emery, 49 1-5 per cent. is applied towards increasing the minimum rates of interest and sinking fund of the External Gold Loans of 1881 to 1893.

THE IMPERIAL BANK OF PERSIA

(Incorporated by Royal Charter, 1889).

CAPITAL (fully paid) - - - £650,000
RESERVE - - - - - £190,000
Reserve Liability of Shareholders - £1,000,000

London Office: 25, Abchurch Lane, E.C.4.
Chief Office in Persia: Teheran.

Branches at Anwaz, Birjand, Bushire, Hamadan, Isfahan, Kazvin, Kerman, Kermanshah, Meshed, Mohammerah, Nasratabad, Resht, Shiraz, Sultanabad, Tabriz and Yezd. Agency at Busreh

The Bank is prepared to transact Banking business of every description in and connected with Persia and Mesopotamia; and in London grants Drafts, Telegraphic Transfers, and Letters of Credit, and negotiates or collects Bills on Persia and the Near East.

BANKING ANNOUNCEMENTS.

ANGLO-EGYPTIAN BANK, LIMITED,

LONDON, ALEXANDRIA, CAIRO, MALTA, GIBRALTAR, TANTAH, MANSURA, BENI-SUEF, ZAGAZIG, PORT SAID, and KHARTOUM.

Subscribed Capital - - £1,500,000
Paid up Capital - - 500,000
Reserve - - - - - - 710,000

The Bank undertakes every description of Banking Business on most favourable conditions.

IONIAN BANK, LIMITED.

Incorporated 1839.

SUBSCRIBED CAPITAL - - - £600,000
PAID-UP CAPITAL - - - - 485,580
RESERVE FUND - - - - - 75,000

HEAD OFFICE—
25, Abchurch Lane, London, E.C.4.

BRANCHES—
Athens, Patras, Corfu, Cephalonia, Zante, Piræus, Tripolitza, Nauplia, Salonica, Syra, Chios, and Mitylene, in Greece; and at Alexandria, Tantah, Mehalla-Kebir, Mansourah, Fayoum, Wasta, Beni-Suef, Faschen, and Minieh, in Egypt.

Every description of Banking Business undertaken on most favourable terms.

BANK OF MADRAS

Capital (Fully Paid up) - - Rs.75,00,000
Reserve Fund - - - - - Rs.50,00,000

Head Office: MADRAS.

Branches.—Alleppey, Bangalore, Bimlipatam (*Outstation*, Vizianagram), Calicut, Cocanada (*Outstations* Narsapur and Rajahmundry), Cochin, Coimbatore (*Outstation*, Erode), Colombo, Guntur (*Outstation*, Bezwada), Madura, Mangalore, Masulipatam, Negapatam, Ootacamund, Salem, Tellicherry, Trichinopoly, Trivandrum, Tuticorin, and Bellary.

Current Accounts.—Opened on terms which may be ascertained on application.

Fixed Deposits.—The Bank allows interest on Fixed Deposits and receives small sums in Savings Bank. Rules and Terms on application.

Letters of Credit and Drafts.—Issued on the principa towns in India, Burma, and Ceylon.

Government and Other Securities.—Received for safe custody, Purchases and Sales effected and Interest and Dividends Collected and Credited to Account, or Remitted, according to instructions.

Loans and Cash Credits.—Granted, approved Mercantile Bills discounted and Bills of Exchange negotiated.

By order of the Directors,
W. B. HUNTER, *Secretary and Treasurer.*

BANK OF BENGAL.

Capital, Fully paid up.. .. .. .. Rs.2,00,00,000
Reserve Fund Rs.1,54,00,000
Reserve for Depreciation of Investments Rs. 67,00,000

Head Office: CALCUTTA.

Branches: Clive Street, Park Street, and Burra Bazaar, Calcutta, Agra, Akyab, Allahabad, Benares, Cawnpore, Chittagong, Dacca, Delhi, Hyderabad (Deccan), Jalpaigubi, Lahore, Lucknow, Moulmein, Nagpore, Naraingunge, Patna, Rangoon, Secunderabad (Deccan), Serajgunge, Simla.

Agency in Bombay: Elphinstone Circle.

Current Accounts opened free of charge. **Fixed Deposits** received at interest.
Government and other Securities received for safe custody; purchases and sales effected.
Interest collected and **Remittances** made.
Loans and Cash Credits granted. **Discount Accounts** opened and approved. **Mercantile Bills** discounted.
Savings Banks Deposits received and interest allowed.
Copies of Rules, Rates, etc., may be had on application at the Head Office and at any of the Branches.

By order of the Directors,
N. H. Y. WARREN,
Secretary and Treasurer.

NOTES OF THE WEEK.

The war has produced no greater surprise than that of the appearance of a handful of the Slavic peoples of Austria-Hungary as the saviours of the once mighty Russia. For this in effect is the rôle now being played by the Czecho-Slovak troops who have successfully challenged Bolshevism. While the Allied Governments were still debating the ethics of their position, analysing political parties in Russia, or counting the number of Japanese Army Corps required for the occupation of a small corner of Eastern Siberia, the Czecho-Slovaks have pricked the Bolshevik bubble by the mere display of disciplined force in opposition to the mob-law preached by Lenin and Trotsky. The men who owe their presence in the country to their faith in Russia as the saviour of their race have themselves rescued the Russians from a fate perhaps more terrible than the one they had endured at the hands of Austria-Hungary.

But, as was urged in these columns last week, the troubles of Russia are not over because the Czecho-Slovaks have occupied a few points of the Trans-Siberian Railway. The main value of their assistance lies in the fact that they have proved that Bolshevism was not Russia, and that, lying cowed beneath it, was the sober sense of the real Russia, only waiting for a helping hand. How long the Allies would have continued to deny her the assistance she needed will now not be known. The soldiers on the spot have done what was required in so far as they have checked the orgy of Bolshevist criminality and have supplied rallying centres for the better elements of the great Russian people. Their achievement is the more remarkable as they can hardly have acted on any systematic plan. The total Czecho-Slovak forces in Russia can hardly have amounted to a hundred and fifty thousand. They are now spread in detachments over the six thousand miles that separate Vladivostok from European Russia; but everywhere they have shown the same capacity for making themselves masters of the situation and for inspiring confidence and respect among the distracted Russian people.

With the occupation of Kazan the Czecho-Slovaks have introduced an important rallying-point into Russia proper. Hitherto, their activities have been most marked in Siberia, where they have established themselves at various points along the railway between the Urals and the Pacific. The haphazard character of the movement has allowed a number of different Russian organisations to spring into existence, with a tendency to arrogate to themselves the status of provisional governments. At present, three of these governments, so-called, hold the field in Eastern Siberia, and to prevent unnecessary complications and delay, it seems to be the duty of the Allies to offer their assistance to the Russians in Siberia with a view to establishing a simple government which will gradually be able to extend its authority into European Russia. In the meantime, the Czecho-Slovak troops will form the nucleus of a reformed Russian Army. A few months or weeks ago their intention was to take ship across the Pacific in order to continue their real business of fighting the Central Powers. Now they have all the opportunities for service that they require, and there need be no further thought of returning to Europe.

The Italians and French continue to press forward in Albania, and the latter must be by now at no great distance from the great Roman highway that passes through Elbasan on its way from Durazzo to Monastir. This line may well be the prepared position to which the Austrians admit that they are falling back. Somewhere in the neighbourhood of Lake Ochrida the Austrian left will be in touch with the flank of the Bulgarian Army. If the Austrians are forced to yield more ground, the Bulgarian line must retire with them or be left at this point in the air. The recent course of the military operations in the Macedonian theatre points to the inability of the Allies to make much headway against the Bulgarians so long as the Austrians remained well to the south of Lake Ochrida. It was sound strategy that broke off the offensive after the capture of Skra di Legen, and gave fresh attention to the Franco-Italian position in Albania. The success of this left wing has been rapid, and if it can be pressed home yet a little farther, the effect must before long make itself felt on the Bulgarian battle front in Macedonia.

The only incident reported from Palestine during the week is an enemy attack on the British positions seven miles north of Jericho, and against the Jordan bridgeheads. In this part of the battle-line there have been no military operations of any importance, apart from air-raids, since April, when General Allenby's attempt to reach the Hejaz Railway was followed by an immediate withdrawal to the Jordan. After an initial success on the Abu Tellul ridges the enemy were driven back by a counter-attack, and lost over five hundred prisoners. The main interest attaching to this incident

Digitized by Google

centres in the fact that of these prisoners three hundred and fifty were German. The Turks had been reinforced by German troops some months ago, but as it is unlikely that the numbers of the latter are very great, the loss in one action of four hundred or more—for they will have suffered casualties as well—will not be without its effect, particularly on the minds of the Turks, who will have been led to believe in the invincibility of the Germans. As the enemy report of these encounters claims that his gains at Abu Tellul were held in spite of extremely violent counter-attacks, we may also discount his statement regarding the fighting west of Jordan, which represents the Indian cavalry division engaged as having been "almost annihilated."

Among the million and more of American troops who have reached Europe special reference may be made in these columns to the Zionist American Legion and the American Zionist Medical Unit, both on their way to Palestine. The appropriateness of the Jews' forming separate regiments to take part in the recovery of Palestine has appealed to this country as well as to the United States; but the idea of a separate medical unit to aid in the sanitation of the land and the distribution of relief to the suffering population originated with the women Zionists of America. This organisation will ably supplement the medical work already being done in Palestine under British and American auspices, and it will conform to the traditions of all such work, inasmuch as it goes out to assist in the uplifting of all the people irrespective of creed. It will be no small factor in the success of the Zionist movement that it should prove itself a channel for the spread of civilisation throughout the countries bordering upon Palestine.

The Germans would seem to be showing themselves in their true colours in Roumania. In spite of the ratification of the treaty of peace there has been no relaxation of German control in the occupied territory; on the contrary, the Germans appear to be giving fresh turns to the screw they have fixed on the unfortunate inhabitants. According to the evidence of Roumanian officers who have succeeded in leaving the country in order to take service in France, one of the humiliations imposed is to compel all ranks of the Roumanian Army to salute German soldiers, even the privates. The result of these and other measures has been to alienate those Roumanians who might have been favourably disposed towards the Germans, unless it be the few people who benefit directly from the German occupation, as in the case of Government officials. Of the latter there are some to be found willing to perpetuate the system that has brought them position, and to this end an attempt is being made, it is said, to secure the reversion of the Roumanian throne for Prince Joachim of Prussia, one of the German Emperor's sons.

Unless our reading of the Roumanian character is at fault, there will be both active and passive opposition to the suggestion that King Ferdinand should abdicate. His position has been an exceedingly difficult one, and it is known that he has been ready to sacrifice himself, if by so doing he could render any service to the country. Hitherto, however, the Roumanian people have taken up the wise attitude that his retention of the throne is an asset to them. It argues an ignorance of the German character to suggest that a change of dynasty would secure to Roumania some alleviation of her lot. The German attitude towards the Roumanians is the result not so much of a policy as of character. German officials would find it impossible to treat the vanquished Roumanians in any other way, whoever occupied the throne. There might be some relaxation in the *mot d'ordre*, but the effect would not be appreciable to the rank and file of the Roumanian population. It is evident that opinion in Germany is dissatisfied with the decision to allow King Ferdinand to remain on the throne. A symptom of this feeling is to be noted in the attempt to create prejudice against the Royal family. A story is now published to the effect that the Crown Prince made an appeal to the Crown Council, when it was considering the ultimatum of the Central Powers, not to accept the peace conditions, but to continue the war until the bitter end. The episode, if true, would do credit to the heir to the throne, and there must be many in Roumania to-day who are wondering whether any fate could have been worse than their present one, when scarcity and disease are added to the humiliations they have to endure at the hands of the Germans.

It was inevitable that the ill-advised proposal to use Cyprus as a bait for Greek military assistance in the Near East at an early stage of the war should have given impetus to the agitation of a section of the Greek community for union with Greece. At the same time it attracted more general attention to the island, and the British Government may be supposed to have realised now not only that Cyprus plays an important part in the scheme of the British Empire, but also that it has been exposed in the past to a fatal policy of neglect or indifference on the part of Great Britain. That policy will have to give place to a more satisfactory administration in the near future in the interests of the colony as well as by way of an answer to one of the arguments used by the agitators. It is fair to the latter to state that officially they have dissociated themselves from Greek pro-Germanism. They realise that they stand a better chance of gaining their end by adopting the rôle of dutiful democrats and pleading the principle of nationality than by renewing past threats. The weakness of their case lies in the presence of a Turkish population, for it is evident that at a time when an end is to be put to the grievances of subject nationalities, Great Britain could not be a party to handing over a fairly large body of Turks to Greek jurisdiction. No doubt the position of Cyprus will come up for discussion, and for this reason as well as for the sake of the island it is to be hoped that the British Government will lose no time in putting into force a more generous policy in regard to the island and its needs.

The decision of the Central Powers to leave the dispute between Bulgaria and Turkey to these two countries has not brought about, so far, any improvement in their relations. In order to dispel any doubt as to the attitude of the new Bulgarian Government on the subject, a semi-official Note was issued in Sofia at the beginning of the month, roundly declaring the Turkish demands in connection with territory along the Maritza to be unjustified, and adding that Bulgaria refused to recognise the existence of a Maritza question. Perhaps the most pertinent comment in the Bulgarian Press is that of the *Mir*, which, after pointing out that the Turco-Bulgarian frontier was settled by the treaty of 1915, said: "Treaties concluded between the Allies ought not to be 'mere scraps of paper,' otherwise the alliances themselves will have no value."

The circumstances attending the dispatch of a Dutch convoy to the East have given rise to considerable criticism of the British Government on the ground that it has waived the right of search on the high seas. When all is said and done, there would seem to have been much cry and little wool. A Dutch Minister appears to have been indiscreet enough to declare that Holland proposed to send out an armed convoy which would resist search by either of the belligerent groups. The Netherlands Government was at once informed that the British Government would most certainly carry out its right of search. An appeal *ad misericordiam* evidently followed from The Hague, and, rather than be the cause of a Cabinet crisis in Holland, the British Government agreed to carry out its right of search before the convoy sailed instead of on the high seas. A far more effective search seems to have been exercised than would have been possible at sea, and the Dutch Government has had to put up with much in an endeavour to save its face. It only remains for a German submarine to meet the convoy and to mistake it for a fleet of British hospital ships.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, June 17.

The New Star.

The new star discovered in England has been plainly visible here in Egypt. It was first observed on June 9 by Mr. J. C. Radford, of the Egyptian State Railways. It rises due east about 7.30 p.m., and is distinctly visible shortly afterwards. According to the telegrams its magnitude in England was 0.9, but here in Egypt it is estimated at between 0.4 and 0.3.

The Zionist Movement.

Dr. Weizmann, accompanied by other members of the Zionist Commission, has just returned from a trip to Akaba, where he met Shereef Faisal, the son of the King of the Hejaz and the leader of the Shereefian army. It is understood that the meeting was most satisfactory and that, as a result, friendly relations have been established between the leaders of the Arab and the Zionist movements. The negotiations for the creation of a Hebrew University in Palestine have made considerable progress, and the laying of the foundation-stone will, it is expected, take place shortly.

Public Health.

The Public Health Commission, presided over by Lieut.-Colonel Andrew Balfour, is busy in carrying out its investigations, and is taking evidence from the senior officials attached to practically every administration. The Commission will also visit the more important centres in order to enquire into local conditions and verify statements made to it. It is at present in Alexandria.

A certain amount of anxiety has been caused by the appearance of typhus in various parts of the country. Energetic steps have been taken to combat the outbreak, and it is hoped that its extension has now been stopped.

Meanwhile, an agitation appears to be starting in Alexandria for the reorganisation of the local sanitary service. At one of its recent meetings several members vigorously attacked the Municipality on the score of the state of the public health in the city, and the manner in which the medical and sanitary staff is recruited. At the close of a somewhat lively meeting it was decided to appeal to the Government to authorise Colonel Balfour's Commission to investigate the state of affairs in Alexandria and draw up a special report with a view to a reorganisation of the sanitary service of that city.

The Agricultural Situation.

We are approaching the time when a decision will have to be taken as to the area which is to be allowed to be put under cotton in 1919. The reason a decision will have to be come to within the next two or three months is that under the agricultural system adopted in Egypt the cotton area determines the area which can be put under wheat and barley during the preceding winter. This year, it will be remembered, the cotton area was reduced, as a result of negotiations between the British and Egyptian Governments, to 1,350,000 feddans, or 400,000 feddans less than the normal. The object of this reduction was to enable the country to produce more cereals and make good the local shortage of breadstuffs resulting from the serious reduction of flour imports, which in pre-war years averaged about 200,000 tons per annum. There seems little doubt that the reduction in the 1918 cotton area will have to be maintained in 1919, as flour imports have not revived; but the question which now arises is whether the extra area put under cereals has been sufficient to make good the reduction in breadstuff imports. The Government experts and statisticians have no doubt by this time collected all the information necessary to show whether this is the case or not, and before the end of the summer we ought to have a definite decision on this point.

The Question of Supplies.

The improvement in the wheat position, as reported in previous letters, appears to be maintained, but the authorities are now being confronted with another serious problem—that of the sugar distribution. Egypt produces more than sufficient for the requirements of her population, and export of the surplus is very strictly controlled by the Supplies Control Board. There is, however, a shortage of supply on the local market, and investigation appears to prove that this shortage, as in the case of most other foodstuffs, is due in great part to the manœuvres of the middlemen.

It is not always the commercial element which is solely responsible for disregard of the tariff or frustration of the Government's intentions. Very often the general public is equally to blame, and contributes by its attitude towards the critical situations which arise. An illustration of some of the difficulties with which the authorities are confronted in this respect is afforded by what has taken place in connection with the distribution of Australian flour. As may be recollected, about a month ago, when the crisis was acute, the Government decided to intervene. It arranged to distribute Australian flour that it had managed to secure to the more needy classes of the Cairo population with a view to alleviating distress pending the arrival of the wheat which it had been arranged to purchase in the provinces. The flour was easily disposed of, and the urgent needs of the people appeared to be relieved. It has transpired, however, that many of the purchasers instead of using the flour for their own requirements resold it to bakers, etc., who, as bread is not subject to a tariff, were able to offer much higher prices than those at which the Government had sold the flour to the people, who, in exchange, purchased very inferior flour at lower prices, and so made a profit out of the well-meant action of the Government.

This curious mentality of the local population and the general lack of public spirit on the part of even the better-class Egyptians make the task of those who are responsible for the distribution of supplies in the country exceedingly difficult. In the circumstances, it may become necessary to take even more drastic and farther-reaching action than has been contemplated so far.

PRISONERS IN TURKEY COMMITTEE.

We give below the full list of the members of the Prisoners in Turkey Committee. The office of the committee is at 25, Chester Square, S.W.1. The committee will be glad to receive donations to meet expenses, and we cordially commend its appeal to the notice of our readers.

The chairman is Lord Henry Bentinck, M.P. The committee is as follows:—The Countess of Albemarle (Norfolk Regiment Prisoners of War Help Organisation); Miss A. M. Anderson, C.B.E.; A. Baker; Lieut.-Colonel Sir R. L. Baker, Bart., M.P.; Lady Henry Bentinck; J. Bliss, M.P.; E. A. Box (Official Secretary to High Commissioner for Australia); Miss Burbury (Hampshire Regiment, except 4th, 5th, 6th, and 7th T.F. Battalions); the Lady Burghclere (Lady Burghclere's Prisoners' Fund); Sir J. G. Butcher, Bart., K.C., M.P.; Mrs. Clarence Buxton (Central Prisoners of War Committee); Mrs. Malcolm Campbell (R.A. Prisoners of War Fund); the Lord Carnock, G.C.B., G.C.M.G., G.C.V.O., K.C.I.E.; Miss M. E. Chomley, O.B.E. (Australian Red Cross); Lt.-Col. Hon. T. H. A. E. Cochrane; Lady Gertrude Cochrane; Lt.-Col. Godfrey Collins, M.P.; Mrs. H. R. Bromley Davenport (Invalid Comforts Fund); Lord Devonport; Col. L. Dorling, C.B., D.S.O.; G. Owen Dunn; Hon. Mrs. Maxwell Earle; Mrs. Ernest Floyer; Major W. L. Foster, D.S.O., R.H.A. (R.A. Prisoners of War Fund); Major Arthur Haggard; Col. Sir Fred Hall, M.P.; Lady Henderson (R.A.F. Prisoners' Fund); Sir W. E. Hume-Williams, K.B.E., K.C., M.P.; Capt. E. H. Keeling, M.C.; Mrs. S. van B. Laing; Lady Lowther; the Lady MacDonnell (Irish Women's Association); Sir Charles McLeod; Sir John Mellor, K.C.B.; Mrs. Douglas Pass; H. E. Pears; Brigadier-General E. Page Croft, C.M.G., M.P.; Lieut. E. Pinnington; Lady Robb (Lady Robb's Prisoners of War Fund); F. O. Rybot; Sir Charles Seely, Bart., M.P.; Mrs. Stephenson (Essex Regiment); Lieut.-Col. A. Stirling, M.P.; Mrs. Algernon Strickland; Col. Sir Mark Sykes, Bart., M.P.; Mrs. Thackeray; Miss Mary Thornton (Royal Navy Prisoners of War); Mrs. C. M. Wilson (Oxfordshire and Bucks L.I. War Prisoners' Fund); Cecil J. Wray (New Zealand Prisoners of War Department).

Jews in Roumania, says the official *Steagul*, of Bucharest, are shortly to be placed by a Government Bill on an equal footing with other citizens.

Turkey now promises an early report on the Tabriz incident, when the American hospital was pillaged and the American Consulate occupied by Turkish troops.

THE ABYSSINIAN REVOLUTION.

(From a Cairo Correspondent.)

Meantime Tefri despatched a force of a few hundred for reconnoitring purposes to Misu station, which lies halfway between Diredawa and Adis Abeba. Yassou did likewise, with the result that a meeting occurred, a fight ensued, and Yassou's force, although it is said to have been superior, was defeated, leaving many dead and wounded on the battlefield. Overwhelmed by despair, Yassou hastened to his father's capital, to join forces with him. Realising now* the gravity of the situation, he gave up all his previous plans, and proceeded to Walua by way of Diredawa. During his sojourn in Harrar he had gathered round him a number of Somalis—a fierce and warlike tribe living in the neighbourhood of Harrar and Diredawa. These, the Abyssinians attacked, killing many of them, as soon as Yassou fled; for they knew with what sinister design Yassou had been keeping them there. The same thing occurred in the vicinity of Harrar and Diredawa. As soon as the inhabitants learned of Yassou's flight and the triumphal entry of Tefri's men into the town, they cleared those places of the Somalis and Danakels, killing all who fell into their hands.

When King Mikhail, Yassou's father, heard of the plot in the capital and of his son's overthrow, he gathered together his men, numbering about 80,000, and marched on the capital. Arriving at Ankuber, a town about four days' journey from Adis Abeba, he attacked the inhabitants and killed all Tefri's partisans, who put up a brave fight against overwhelming odds. Intoxicated with this easy success, Mikhail's men gave themselves up to looting, drinking, and rioting for some days. Meantime Tefri had raised a considerable army, and on October 19 marched at its head, and joined El Feturari Hebet Jorjis, the Minister of War, one of the most distinguished Abyssinians, an able general and a true patriot, who had already met Mikhail at Kermash, a place near Ankubar. On October 27, the belligerent forces came to grips at Sejli. It was a fierce battle, which started at five in the morning and ended, at eight in the evening, in the rout of Mikhail's troops and his surrender. The losses on both sides are estimated at over 10,000 dead and wounded.

On returning with King Mikhail as prisoner, Tefri and his party had an enthusiastic reception. Mikhail was subsequently despatched to a place about two days' journey from Adis Abeba, where he is still living as an exile.

Zuditu, who had been acquainted with the supreme decision installing her on her father's throne, had now arrived; and was taken at night into Menelik's palace, which had fallen into a state of neglect during Yassou's reign. Ras Tefri also installed himself there, and set about preparing for the coronation ceremony. On February 11, 1917, Zuditu was crowned Empress of Abyssinia, in the Church of St. Jorjis, in the presence of the representatives of the Entente Powers, who had officially recognised the new Government.

After a wearisome journey through a dreary country, and over a bad road, Yassou arrived at Ankubar, where he learned of his father's march on the capital through Ankubar, of his laying waste that town, and of his surrender after the defeat of his troops in the battle of Sejli. Realising that he was no match for Tefri and his party, he decided to fortify himself in the mountain Mejdelé, which is a natural fortress, not to be carried by storm. Here he remained for some time, until he found means to escape to Dessi, where a few thousand of the inhabitants of Wulu, who had escaped from the battle of Sejli, rallied round him. With these he prepared to attack the Government troops. The opposing forces remained on the *qui vive* until August 30, 1917, when they met in a stoutly contested battle, which ended in the victory of the forces of the new government and the capture of the rebel leaders.

On receipt of this intelligence at Adis Abeba a salvo of guns was fired to announce the victory. Ras Tefri, who had intended joining the fighting forces, departed no more. As to Yassou, he fled away into the interior of the Danakel country, where he has since remained. All his partisans have forsaken him, and many of them are constantly arriving at the capital, to surrender themselves and beg protection.

Tefri's chief endeavour now is to re-establish order and reassure those who are still apprehensive of the inhabitants of Wulu, over which a governor has been appointed. A commission will shortly be proceeding from the capital with a view to delimiting the country according to the exigencies of the present situation.

One of the consequences of the revolution is the appointment of Ras Weled Jorjis, King of the Joundar, with the annexation of some territory thereto; another is the dismissal of Betuwud Hile Jorjis, the late Prime Minister, who is still in prison on the charge of having been secretly plotting with Yassou and his party against the new government. Dijaz Emru, one of Tefri's relatives, has been appointed governor of Harrar and district, receiving his authority and instructions direct from Ras Tefri.

There is general confidence in Ras Tefri's ability to effect the needed reforms in the domains of politics, administration, commerce, and public security. As happens in every country, however advanced it may be, after a revolution, a sort of anarchy has lately been prevailing; public security and justice are unsettled; and this is chiefly due to a misconception by the masses of the true principles of liberty. In spite, therefore, of Tefri's recognised ability, energy, and patriotism, the difficulties that beset his path are such that the progress of reform is bound to be slow, especially as he has not yet altogether a free hand, and as he lacks the necessary number of collaborators having ability, energy, and enlightened views equal to his own.

CORRESPONDENCE.

FOR THE SETTLEMENT OF THE BALKANS.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—In your very tactful and lenient criticism of the Greek Minister's speech at the Mansion House you rightly pointed out that what the British public desires to know in regard to the Balkans is by what means a stable condition of tranquillity and harmony can be established in those much-tried regions which will conduce to the future happiness of the Balkan peoples, and to the peace of Europe. It is not a question of satisfying Bulgaria "at the expense of Greece and Serbia." By the Treaty of Bucharest, Greece and Serbia satisfied themselves at the expense of Bulgaria, and what remains to be done is to arrive at an equitable settlement which will satisfy the reasonable claims of all. Unless this result can be attained, the Balkan menace to peace of Europe will remain as before.

Most persons will, I think, agree that the Mansion House is not a suitable place for the ventilation of Balkan animosities. Hitherto foreign diplomatists, when accepting the hospitality of the Chief Magistrate of the metropolis, have invariably imposed the greatest reserve on their utterances. M. Gennadius has brushed aside the valuable traditions of restraint which have always been maintained by his colleagues by addressing the summons "Hands off!" to an Ally of this country, and of Greece, by heaping a series of epithets—hitherto unheard at the Mansion House—on a rival Balkan nation, and by accusing a section of the British Press of deliberate suppression and perversion of the truth. While making these accusations M. Gennadius laid himself open to the charge of *suppressio veri* by keeping out of sight the massacres committed by the Greeks at Zagoritchané and elsewhere, the real cause of the pogroms at Anchialos and Stenimachos, which he declares to have taken place at those towns "simply because they were inhabited by Greeks." Furthermore, the "subsidies" and "military equipment," which, M. Gennadius states, were supplied to Bulgaria by Germany for some years previously to the war were, in

SCHOOL OF ORIENTAL STUDIES.

point of fact, delivered in accordance with the terms of a loan for which Bulgaria first applied to France and then to Great Britain in 1911, before having recourse to Germany. Owing to Greek intrigues in Paris, although Greece was then preparing to ally herself with Bulgaria, the loan was refused—first by the French and then by the British financiers—and Bulgaria was literally thrown into the arms of Germany.

Bulgaria has associated herself with the enemies of this country, and cannot escape the consequences of her error. But most Englishmen will agree that nothing is lost by fairness to an adversary.—I am, etc.,

FIAT JUSTITIA.

London, July 10.

TO THE EDITOR OF "THE NEAR EAST."

SIR,—Will you allow me to thank you for your comments in your issue of July 5 on the speeches delivered at the Mansion House dinner to celebrate the entry of Greece into the war? It is good to remind us that the future of the Balkan States depends on the coming of a Balkan federation; exactly, you might have added, as the future peace of Europe depends on the formation of a League of Nations.

Are you not, however, hypercritical, if not unjust, in finding fault with M. Gennadius for his denunciation of Bulgaria? "There is not the least chance," you say, "of Greece being forcibly despoiled by her Allies for the benefit of Bulgaria." But as a matter of fact, to despoil Greece for the benefit of Bulgaria, in order to attain some sort of "settlement" in the Balkans, is exactly what was solemnly proposed by the *Quarterly Review* in an article the appearance of which nicely coincided with the visit of M. Venizelos to London last autumn.

And "to despoil Greece"—that is to reward her for fighting with us by taking away something she would have retained by remaining neutral—is also the gist of a proposal recently put forward in the interest of scientific frontiers by Sir Thos. Holdich, who proves his qualifications for writing about the Balkans and for presiding over the Geographical Society by proposing to compensate Greece by offering "as an equivalent for Macedonia" to restore *Crete* —which has belonged to her since 1913!

It was, therefore, not quite unnecessary of M. Gennadius to remind us that Bulgaria is as much the enemy of the Balkans as Germany is the enemy of Europe.

You regret that M. Gennadius should have recalled the Bulgarian destruction in 1906 of the Greek towns of Anchialos and Stenimachos. You go out of your way to assert that this outrage was provoked by a murderous attack by Greek brigands on the Bulgarian village of Zagoritchané. As a matter of fact, there is some evidence, I believe, that this story of a previous outrage at Zagoritchané was concocted after the event. But I will not weary you with a discussion about past atrocities. So strongly, so overwhelmingly do I agree with you that our "present concern is to know what hope there is for such a people" (as the Bulgarians) "in the future, and whether the only remedy offered by those who inveigh against them is to exterminate them, lock stock and barrel!" Of course, our concern is with the future, and our one war aim is to build a stable future in the Balkans as in Europe. Only, if we are fighting to bring the Bulgarians into a future Balkan Federation, it is not irrelevant to know something of the difficulty, to put it mildly, of the Bulgarian character in the past. "M. Gennadius," you say, "preferred to live in the present rather than to dwell on the future." Surely he was right. If, for example, we are fighting to bring the Germans into a future League of Nations, it is not unimportant to remember that the Germans sank the Llandovery Castle.—I am, etc.,

JOHN MAVROGORDATO.

The Anglo-Hellenic League,
43, Aldwych, London, W.C.
July 11, 1918.

[We have not space to deal with each *non sequitur* in our correspondent's letter. Briefly it may be stated that there is a wide difference between "despoiling Greece forcibly" and a settlement, approved of by Greece, which, as proposed by M. Venizelos in 1915, would include a rectification of her northern frontier in return for compensation elsewhere. The central point of the remarks in THE NEAR EAST which seem to have prompted our correspondent to send the above letter was that the massacres referred to by M. Gennarius had been provoked by a murderous attack by Greek brigands on a Bulgarian village. In regard to this our correspondent writes:—"As a matter of *fact* there is *some* evidence, *I believe*, etc." His belief may be a matter of fact, but it hardly affects the authenticity of an incident vouched for by British consular officials. It is certainly not a fact that "we are fighting to bring (*sic*) the Germans into a future League of Nations."—ED.]

At a convention held in New York of Orthodox rabbis in America resolutions were adopted warmly praising Great Britain and the other Allies for what they have done for the Jews in Palestine.

NEAR EAST IN PARLIAMENT.

HOUSE OF LORDS.

Indian "Reformers." July 17.

Lord LAMINGTON asked his Majesty's Government whether there was any precedent for debarring an elector of this country who had committed no offence against the law from speaking in public, and whether they would not reconsider their decision prohibiting Dr. Nair from addressing public meetings or writing to the Press.

Lord ISLINGTON replied that the question of prohibiting Indians coming into this country from addressing public meetings on the subject of Indian reforms had received prolonged and careful consideration by the Government. The question was complicated by the former decision in connection with the visit to this country of Mr. Tilak. He agreed with Lord Lamington that Dr. Nair was a gentleman of the highest integrity and loyalty to the Crown. He had stated his intention to combat Mr. Tilak's influence in regard to Home Rule for India, but the Government thought that in imposing restrictions on one they should impose restrictions on the other, and this course was approved by the Prime Minister. He quite admitted that the action taken might be open to criticism, but he hoped Dr. Nair would continue to display that loyalty that had characterised him in the past by abiding faithfully and honourably by the conditions imposed on landing in this country. He was given an unconditional permit before leaving India, but on landing in this country was asked to give an undertaking not to speak on Home Rule.

HOUSE OF COMMONS.

Prisoners in Turkey. July 11.

Colonel Sir CHARLES SEELY asked what steps the Government were taking to expedite the carrying out of the agreement for the exchange of English and Turkish prisoners of war concluded at Berne in September last?

Mr. JAMES HOPE: As I stated on June 24, we have endeavoured to hasten the execution of this agreement by making representations through the Netherlands Minister at Constantinople, the Spanish Ambassador at Vienna, and the British delegate at The Hague Conference. I should be extremely grateful if my hon. and gallant friend could suggest to me in private anything more that could be done. I may add that the agreement was concluded not in September but on December 28.

Mr. HOPE, replying to a question put by Lieut.-Colonel SIR F. HALL said he could say nothing fresh on the subject of a further agreement for an exchange of prisoners with Turkey. But with regard to the terrible death-rate among our prisoners in Turkey, it must be borne in mind that the greater number of deaths occurred in the march up country from Kut, and however deplorable the present position, the mortality had not continued on the same scale.

Indian Reform. July 15.

Mr. MONTAGU (Secretary for India), replying to Colonel WEDGWOOD, said steps were being taken to embody in draft Bill form the proposals for Indian reform. Asked when he proposed to set up a Standing Committee of the House on Indian affairs, he replied that he could not answer the question until the Government had decided on the policy to be adopted. He could not say whether the draft of the Bill would be completed within three months.

Prisoners in Turkey.

Mr. BONAR LAW, replying to Lord Henry Bentinck, stated that as soon as the delegates from The Hague had returned, the question of exchange of prisoners with Turkey would be dealt with.

Colonel YATE asked whether an allowance of money is made by the Dutch Minister at Constantinople to all warrant officers, non-commissioned officers, and men, British and Indian, who are prisoners in Turkey; what the amount is for each camp; and whether he considers the amount adequate?

Mr. FORSTER: The Dutch Minister at Constantinople has been authorised to make money allowances within certain limits to warrant officers, N.C.O.s, and men, when he thinks it necessary. These limits are considered adequate. I will communicate the limits to my hon. and gallant friend confidentially, if he desires.

Colonel YATE asked Mr. HOPE whether he was aware that, owing to the non-arrival of money at a prisoners' camp in Turkey, British prisoners were reduced to selling their clothing and the gold stoppings of their teeth in order to buy food; and whether he would endeavour to arrange for the establishment of an emergency fund at each camp in charge of the senior British officer or non-commissioned officer?

Mr. J. HOPE: His Majesty's Government have received a statement to the effect mentioned by my hon. and gallant friend, which was, I believe, from Kedos. It was stated at the same time that, according to letters from that camp, dated February last, the issue of the relief allowance from the Netherlands Legation was three or four months overdue. An inquiry on the subject was made by telegraph of the Netherlands Minister at Constantinople, who replied that according to the receipt signed by the senior officer at Kedos the allowances were received with no such inordinate delay as would appear from the letters in question. The Dutch inspectors will be requested to investigate the origin of the apparent discrepancy. The Netherlands Minister has been consulted by telegraph as to the advisability of establishing emergency funds at the various camps.

TANGIER TO TEHERAN.

The new Military Governor of Athens, General Ynisserlis, has announced his intention of making things unplasant for women who indulge in scaremongering. He will, he says, make a show of them throughout the streets. The idea seems an excellent one, if strictly carried out. In past days small children who told lies—or, shall we say, were guilty of perpetrating terminological inexactitudes?—were made to wear a red flannel "tongue" tied round their necks. How would it be if the scaremongers were treated the same way? *Their* badge of dishonour might be a representation of the "many tongues" with which Dame Rumour is credited.

***

For one moment of wild delight on Monday I had hopes of acquiring wealth with ease. An advertisement told me that "certain 1-rupee, 5-rupee, and 10-rupee notes of the Government of India" were "being washed ashore on the South Coast of England," and—well, I saw visions. But, it seems, the cold-blooded authorities have taken certain steps which would render nugatory any efforts on my part to emulate the professional "wreckers" who, I understand, are doing rather well these days. It is almost enough to make me hoist the "Jolly Roger" once more.

***

Ever since Herr von Kühlmann ran his infamous bureau for the dissemination of false information in Constantinople I have entertained a particular dislike for him, and his share in the humiliation of Roumania has only intensified the feeling. I am, therefore, frankly delighted that he has fallen, though—I need hardly add—I have no sympathy with those who engineered it. "When rogues fall out," etc. With Kühlmann's qualities as a statesman I am not much concerned, but I do know that his reputation as a man was bad, and deservedly so. His conduct in Bucharest was—well, worthy of a German Blackguard of Rank, shall I say?—and even the well-drilled and docile German Press seems to have got a bit restive about it. And in Constantinople he must have left behind him a reputation beneath contempt, as far as morals are concerned. Now he has failed as a statesman, his request to be allowed to retire having been "immediately granted" by the Kaiser. Yet the fatuous German journals had the audacity recently to compare this poor specimen of a man with our own Foreign Secretary! Morally, intellectually, in any way you may regard them, Mr. Balfour towers above von Kühlmann as a mountain towers above a midden.

***

Colonel Yate, who has an aptitude for conveying information in the form of (parliamentary) questions, recently asked the Secretary of State for India:—

> Whether he can state who are the Mr. and Mrs. Henry Hotchner, who are described in the letter addressed by Sir Subramaniya Aiyer, K.C.I.E., to President Wilson, as having graciously consented to leave their home in India in order to convey the letter to President Wilson personally in Washington; what position Mr. and Mrs. Hotchner occupied in India; of what nationality they are by birth; whether they travelled from India to America on a British passport; whether they are now engaged on propaganda work on behalf of the Home Rule for India League in America or elsewhere; and whether they are to be permitted to return to India?

In due time—it was on July 10, I think—Mr. Montagu replied that he understood that the lady and gentleman with the German-sounding name (that was not *his* expression of course; he is always studiously parliamentary) were United States citizens by birth, and that they had lived for some time at Adyar, in Madras. Then came what was to me the really interesting part of the reply. The interesting couple had, said Mr. Montagu, "co-operated in Mrs. Besant's theosophical work. They appear to be giving theosophical lectures in the United States. Mr. Hotchner is said to be at the head of the American section of the Temple of the Rosy Cross or the Brotherhood of the Mystic Star," etc., etc. After that, I was rather surprised to learn that "the question of allowing their return to India would be considered by the Indian Government, if and when they applied for a passport visa." I should have thought it would have been "turned down" without any consideration at all. Has not India enough Rosy Brothers-of-Mystic Stars without importing them from the United States?

CORSAIR.

A silver wedding gift of £2,000 from Sir Sassoon David will be, by direction of the King and Queen, devoted to the welfare of Indian prisoners of war, and the gift has been made over to the Committee of the Indian Soldiers' Fund for this purpose.

The Hope of a Nation

In the havens of refuge where willing workers toil to bring health and happiness to the war-ravaged Serbian exiles, there are thousands of little children whose tender years have known the privations and horrors of war.

These tiny mites are the hope of Serbia, for one day in the future they will go back to a free Serbia to be the seed of a great new nation built on the ashes of the old. Stay—it is too definite to say that—for it can only come to pass if we, who owe a heavy debt of gratitude to Serbia, determine that

The Children of Serbia Shall be Preserved!

It is a fact that the infantile death rate among the Serbian exiles is terribly high. Death stalks among these innocent young victims of war and takes an increasingly heavy toll. More doctors and nurses, more hospitals and dispensaries, more food and clothing, more housing accommodation must be provided if the little ones are to be kept alive to repeople the new Serbia.

All *can* be provided if money is forthcoming. The money you subscribe is a message of hope for the Serbians and Serbia because the Serbian Relief Fund can quickly translate it into material aid, into life-giving assistance for Serbian children, and comfort and contentment for their sorrow-laden parents.

Whatever your donation may be—great or small it will be welcomed and gratefully acknowledged—it will play its part in sending succour to those who are in such sore need.

The Serbian Relief Fund is the only officially authorised Fund under British administration working exclusively for the relief of Serbians.

Send *your* donation to-day to!

The Hon. Treasurer:

THE RIGHT HON. THE EARL OF PLYMOUTH, C.B.

THE SERBIAN RELIEF FUND

(Registered under War Charities Act, 1916.)

NEAR EAST BOOKSHELF.

THE IMPERIAL TOUCH.*

The "Side-Shows" of the Great War of Repingtonian anathema, undertaken by the Imperial Forces of the British Empire, will rank in history as true-blue offspring of the England of Drake, Clive, and Wolff. Not the least of them is the story here told in clear narrative by Mr. Massey, who by this little volume alone justifies his selection by the London Press to be their one and only war correspondent in Egypt. His unvarnished tale starts with the first Turco-German drive on the Suez Canal, and continues with the adoption of the Eastern offensive by the "Egyptian Expeditionary Force," the battle of Romani, the capture of El-Arish, the mile by mile laying of the desert railway, and the battle of Rafa, of January 8, 1917, which cleared the Sinai Peninsula of Turks and Germans, gave us first view of the Promised Land, and facilitated the capture of Gaza and Southern Palestine. The second portion of the book describes the Western Egyptian operations against the Senussi, culminating in the capture of the Siwa Oasis. The Desert Campaigns will no doubt be snowed under, years later, by leviathan volumes whose authors will be independent of the Censor; but all who keep libraries in Egypt, the men who have been through the campaigns, and their proud relatives throughout the Empire will doubtless treasure this early record of the Imperial Touch. The author has a very pleasant style, which can be grim or merry as the narrative demands. He insists in his opening on a protest to those who consider campaigning in the East or West frontiers of Egypt as a picnic compared with the famous mud of Flanders, and his story confirms the protest. He cannot refrain from quoting a gem of criticism attributed to the late Lord Kitchener on the occasion of his first war visit to the Canal: "Are you defending the Canal, or is the Canal defending you?"—whence, of course (*se non é vero é ben trovato*), the abandonment of canal dug-outs and the British entry into Jerusalem. Incidentally the author allows us to see how even in 1916 the new arm of the air made for rapid victory. One quotation may be allowed as a tribute to the boys "down under":—

Battle of Romani, August 4, 1916.—"The Royal Flying Corps opened the ball. . . . Round about Enna the Turks fixed bayonets and prepared to charge, yelling out the cry made for them in Germany: 'Allah, finish Australia.' To this the Light Horsemen replied: 'Allah, you bastards! We will give you Allah.'"

NEWS IN BRIEF.

Seventeen outlaws in the Lamia revolt in Greece have been proclaimed brigands.

Six hundred Greek Volunteers and Reservists from Egypt arrived in Athens on July 11. They were given an enthusiastic reception.

It has been declared in Vienna that the Austro-Hungarian Government has decided to take the whole of this year's Serbian harvest.

Turkish delegates from Kazan and environs—namely, Yusuff, Muzaferoff, and Osman Tokombetoff—have left Constantinople for Berlin.

Essad Pasha has left Salonika for Paris, where he will undergo an operation for cataract, subsequently joining his wife in Switzerland.

It has been decided by the Roumanian Cabinet to solve the Jewish question on the widest basis. The right of appeal to the Supreme Court will be given to those who have suffered any disadvantage.

The Jewish Correspondence Bureau at The Hague learns from Budapest that the representatives of the Jewish organisations in Germany have accepted the invitation of the Turkish Government to discuss the Palestine question.

The cruiser Mejidieh, which was mined on March 31, 1915, in the Gulf of Odessa, and subsequently raised by the Russians, has arrived at Constantinople. The cruiser was seized by the Germans after the capture of Sebastopol.

Representatives of the Entente Powers, says the *Vossische Zeitung*, have presented to Roumania claims for compensation for war material, bought and paid for by the Entente, which is still in the possession of the Roumanian Government.

A refugee reports that the Austrian garrison at Kragujevatz recently mutinied in consequence of the bad food supplied to it, and killed many officers. The mutiny was suppressed after a regular battle in which machine-guns and artillery were used.

Professor Sotiriades, of Athens University, who lately made a prolonged lecturing tour in the Peloponnesus for the purpose of enlightening the people on the war aims of the Entente, has arrived at Salonika on his way to visit the Greek Army on the Macedonian front.

The Government of India is considering the desirability of establishing four copyright libraries in India—one each at Calcutta, Delhi, Madras, and Bombay—to each of which it will be incumbent on the publisher of every book to send a copy of his publication for record and future reference.

Replying to birthday congratulations from the Serbian Government, King Peter said: "I put my trust in God and in the help of our Allies that we may soon join in celebrating the liberation and union of our people which has suffered so much, but whose courage has never been shaken."

In commenting upon the resignation of Herr von Kühlmann, the entire Turkish Press expresses regret at his departure from office, but the *Tasvir-i-Evkiar* adds: "Let us point out that German policy has not been completely infallible regarding our affairs during the control of Herr von Kühlmann."

The Maharaja Jam Sahib Ranjitsinhji, of Nawanagar, has sent the following telegram to Mr. Montagu, Secretary for India: "Please accept sincere congratulations on Indian reforms recommended by yourself and Viceroy to Parliament. My gratitude in special for recommendations on behalf of Native States, and my Order wish your progressive, enlightened, and generous scheme every success."

Mr. T. C. Wiggin, Superintendent of Minor Roads in the North Central Province of Ceylon, was killed on May 18 in the Tamankadua district of that island. Hearing that a rogue elephant was haunting Yakure, where it had killed a boy, he tracked it down, and after firing several shots without effect, hid behind a bush, where he was discovered and trampled so badly that he died while his servants were carrying him in from the jungle.

On the occasion of the name-day of King Peter of Serbia, M. Pasitch, the Prime Minister, sent to his Majesty a message of congratulation, in which he expressed the wish that "the Almighty may guard you so that you may be able to see the fruits of the sacrifices which the Serbian people have made for the greatness of their country and for the liberation and union of the Jugoslavs." In his reply, the King warmly thanked M. Pasitch and the Government for their message.

BEYROUT COLLEGE.

A New York correspondent writes (July 1, 1918):—"The latest news from Syria, by way of New York, as late as the middle of April told of commencement (commencement exercises?) at the Syrian Protestant College at Beyrout as taking place two months earlier than usual. There were many references to the expectation of the college opening in the fall, and to plans to provide food enough for a boarding department next year through the courtesy of certain officials. The number of students enrolled reached 700 during the year, largely students of the Preparatory Department. At the date of writing there were not lacking covert references to sickness, implying cases of hunger-typhus and disease of the same nature."

Viscount Hardinge has arrived at Harrogate.

Sir Roper and Lady Parkington have left Brighton for Harrogate.

Lord Lamington arrived at 26, Wilton Crescent on Wednesday from Lanark.

The King has sent a donation of £100 to the Montenegrin Red Cross and Relief Fund.

Prince George of Serbia has left London for Paris, where he expects to stay.

M. Voyslav Marinkovitch, formerly Serbian Minister of Commerce, has arrived in London from Corfu.

Mr. G. Paddock, the American Consul at Tabriz, has reached Teheran in safety with a party of Europeans and Americans.

Lord Methuen, Governor of Malta, has been awarded by the French Government the Grand Cross of the Legion of Honour.

King Alexander of Greece left Athens on Friday for Salonika, whence he is proceeding to the front to review the Greek troops.

On July 15, at 153, Banbury Road, Oxford, a son was born to Captain Leland Buxton, of the Arab Bureau, Cairo, and Mrs. Buxton.

We understand that Mr. Franklin E. Hoskins has been asked to become Honorary Director of the Syria and Palestine Relief Fund's work in the Holy Land.

H.E. the High Commissioner in Egypt and Lady Wingate recently paid a visit to Jerusalem, arriving on June 11, and spending some days in visiting the principal historic sites.

A marriage has been arranged, and will shortly take place, between Second-Lieut. Kenneth Francis Howlett, eldest son of Mr. Francis R. Howlett, Toppesfield, Maidstone, and grandson of the late General Sir Arthur Howlett, K.C.B., I.S.C., and Helen Boyce, eldest daughter of the late David B. Fairbairn, Balerno, Midlothian.

A marriage has been arranged between Mr. J. Keith Edwards, only son of Mr. and Mrs. Keith Edwards, of Mells Lodge, Halesworth, Suffolk, and Mrs. Osborne Roberts, widow of the late Osborne Roberts and twin sister of the Hon. Mrs. Melton Astley, and daughter of the late General G. A. Strover, Commissioner of Pegu, Burma.

The marriage arranged between Lieutenant-Colonel N. M. S. Irwin, D.S.O., M.C., the Essex Regiment, eldest son of Mr. and Mrs. W. S. Irwin, Motihari, India, and Margaret Mullock, widow of Lieutenant-Colonel S. G. Mullock, Essex Regiment, will take place at St. Marylebone Parish Church at noon next Saturday, July 20. Friends will be welcome at the church.

On July 15, at St. Peter's Church, Harborne, Birmingham, the marriage took place of the Rev. Thomas Wentworth Pym, D.S.O., Chaplain of Trinity College, Cambridge, temporary Chaplain to the Forces, second son of the late Walter Ruthven Pym, Bishop of Bombay, and Dora Olive, elder daughter of the late William Ivens, of Harboro' Parva, Rugby, and of Mrs. Ivens, 16, Victoria Road, Harborne.

The Indian representatives at the Imperial War Council and members of the Council of the Secretary of State for India were entertained at luncheon at the Savoy Hotel on Wednesday by the London Moslem League. In the absence abroad of the Aga Khan, Syed Ameer Ali presided, and had on his right the Maharaja of Patiala, and on his left Sir Satyendra Sinha. Among others present were:—Sahibzada Aftab, Ahmed Khan, Sir P. Pattani, and Sir P. Bhupendra Nath Basu (members of the India Council), Sir Abbas A. L. Baig, Lord Lamington, Sir Theodore Morrison, Sir M. M. Bhownagree, Mr. A. Yusuf Ali, Sir James Dunlop-Smith, Sir Denison Ross, Colonel C. E. Yate, M.P., Colonel A. C. Yate, Mr. A. S. M. Anik, and Mr. M. H. Ispahani.

The marriage arranged between Captain John Harold Thompson, C.F.A., eldest son of Captain John Pickering Thompson, A.S.C., and Mrs. Thompson, The Orchards, Longparish, Hants, and Miss Georgina Yule, second daughter of the late Andrew Yule, of Calcutta, and Mrs. Yule, 24, North Gate, Regent's Park, will take place, leave permitting, at 2 on July 20, at St. Stephen's Church, Avenue Road, Regent's Park.

The marriage took place quietly in London, on the 3rd inst., between Captain Nigel Laurie Mitchell-Carruthers, of the Indian Army, son of the Rev. W. and Mrs. Mitchell-Carruthers, and Mrs. C. O'Brien-Butler, widow of Captain C. O'Brien-Butler, Royal Irish Regiment, and daughter of Mr. C. O'B. Jameson, of Monasterevan, Co. Kildare. The Rev. W. Mitchell-Carruthers officiated, and the bride was given away by her uncle, Brigadier-General S. B. Jameson.

Last Friday, being the birthday of the King of Serbia, by command of the King, Mr. R. F. Synge, Deputy-Marshal of the Ceremonies, called on the Serbian Minister at the Legation to offer his Majesty's congratulations. His Excellency thanked Mr. Synge for King George's message, the full text of which was telegraphed to King Peter. During the day cards were left on behalf of the Prime Minister, the Secretary of State for Foreign Affairs, the Lord Chamberlain, and Colonel Sir Douglas Dawson.

A reception was given by the Northbrook Society at 21, Cromwell Road on July 11, in honour of Mr. Montagu. Mr. Austin Low, chairman of the society, welcomed Mr. and the Hon. Mrs. Montagu. Others present included:—The Maharaja of Patiala and his staff, Sir S. P. Sinha, Princess Soph'a Duleep Singh, Lady Sydenham, Lord and Lady Carmichael, Sir Charles and Lady Bayley, Sir P. O. and Lady Pattani, the Rt. Hon. and Mrs. Ameer Ali, Sir Murray and Lady Hammick, General Sir Herbert and Lady Cox, Mr. Bhupendra Nath Basu, Sahibzada Aftab Ahmed Khan, Sir William and Lady Duke, Sir Theodore Morison, Col. Sir Havelock and Lady Charles, Sir Marshall and Lady Reid, Mr. and Mrs. Laurence Currie, Sir Frederick Fryer, Lady Curzon Wyllie, Sir Edward and Lady Chamier, Sir Richard Stapley, Sir Henry and Lady Burt, Sir Herbert and Lady Holmwood, Sir Arthur and Lady Hertzel, Sir M. M. Bhownaggree, Sir Hugh and Lady Barnes, the Hon. Gertrude Kinnaird, Mr. N. C. Sen, and Mr. G. R. S. Mead (secretary).

Djambolet Bey, the former Turkish Minister at Stockholm, has been appointed Turkish Minister of the Interior.

The Lord Mayor has received a telegram from General Sir Francis Wingate, the High Commissioner of Egypt, stating that Egypt has contributed £2,870 in response to his appeal for France's Day.

The Rev. C. G. T. Colson, having resigned the Secretariat of the Armenian Refugees (Lord Mayor's) Fund to take up an Army Chaplaincy in France, Mr. Edmund Bourne, late Secretary of the Milnese Mission, has been appointed by the committee to the vacant post.

In the *Vossische Zeitung* Herr Georg Bernhard maintains that the greatest influence is still exercised by the Roumanian Queen. "On the balcony in Jassy she waves the French Tricolor, and she makes no secret of her belief that the Treaty of Bucharest will have to be revised."

On Monday, at a meeting of the Persia Society, held at 22, Albemarle Street, Mr. Alexander Finn delivered a most interesting lecture on Life in Persia some thirty years ago. We hope to give a report of the lecture in our next issue. The Persia Society has closed its course of lectures and discussions for the summer, but will reopen in October. For the autumn and following months an active propaganda has been prepared. Papers will be read, and probably a news sheet, containing items relating to Persia, will be issued by the society. Branches will be opened in the provinces. The object of the Persia Society is to make the country better known, and its secretary, Captain Hogg, 22, Albemarle Street, will be glad to give information to anyone desiring it.

TRAGEDY OF MONTENEGRO,

THE SMALLEST AND POOREST OF OUR ALLIES.

MONTENEGRIN RED CROSS AND RELIEF FUND,

At Buckingham Palace on Wednesday, the King inspected a detachment of the Indian Labour Corps, under the command of Second-Lieutenant H. W. Moore and Second Lieutenant R. B. Campbell. The men come from the Ranchi district of Bihar and from the United Provinces, and are on short leave from the Western Front.

The fifty-fourth annual meeting of the Royal School for Daughters of Officers of the Army was held at 25, Haymarket on July 16, Lieut.-Colonel Alex. Grubb, J.P. (chairman), presiding. The report stated that the financial position was very satisfactory, and, despite the constant increase in the cost of living and management, there was still a balance. A large house at the very gates of the Royal School had been secured by the committee on favourable terms, and adapted as a real home for the youngest children. Educational work and progress had been very satisfactory. Lieut.-Colonel A. Grubb and Major-General Sir Edmund Leach, K.C.B., were re-elected on the committee, and Surgeon-General Sir F. W. Trevor and Major-General W. F. Cleeve elected.

APPOINTMENTS, PROMOTIONS, ETC.

General Gramat, a Frenchman, has been appointed Chief of Staff to the Greek Army.

Mr. Landale Johnston has been appointed Sessions Judge of Kumaon in place of the late Mr. W. J. D. Burkitt.

Colonel A. Frantzis, the newly-appointed Military Attaché to the Greek Legation, has arrived and taken up his duties.

The *London Gazette* announces the appointment of Colonel (temporary Brigadier-General) C. A. Fowler, C.B., D.S.O., Indian Army, to be major-general.

OBITUARY.

Mr. James Dyer Tremlett, late of the Bengal Civil Service, who has died in the eighty-second year of his age, joined the Service in 1860, and was from 1884 till his retirement in 1889 a Judge of the Chief Court of the Punjab.

Major-General William Allan, colonel of the Welsh Regiment, died at Bidborough, Kent, last Friday, aged eighty-six. With the Welsh Regiment he took part in the battles of the Alma and Inkerman, the assault on the Redan, and the siege and fall of Sebastopol. In 1890 he was brigadier-general commanding the troops in Cyprus.

We regret to announce that Prince Mirza Mohammed Ali Khan, Ala es-Sultaneh, G.C.V.O., father of the Persian Minister in London, died on June 24 in Teheran. The Prince, who was eighty years old, came of a distinguished Azerbaijan family, and had played an important part in his country's affairs for many years. He had been Persian Consul-General in India, in Baghdad, and in Tiflis, representing his country's interests in the Caucasus from 1882 to 1890, when he was sent to London as Minister. In the latter capacity he was in England almost fourteen years, and during that time he did all that was possible to increase the friendship of the two countries. In 1904 he was summoned to Teheran, but the following year he returned here as Ambassador Extraordinary, having been given the title of Prince by Muzaffar ed-Din Shah and entrusted by him with a special mission to King Edward. In 1906 he was summoned to Persia again and appointed Foreign Minister; and, though he returned to England as Special Envoy at the Coronation, his work thereafter lay chiefly in his own country. He was more than once Prime Minister, and whether in or out of office he served his country well. Sincere sympathy will be felt by the many friends in this country of H.E. the Persian Minister in the loss which he has sustained.

ANGLO-HELLENIC LEAGUE.

The annual meeting of the Anglo-Hellenic League was held on Thursday at King's College, London, the occasion being taken for addresses by Dr. Pember Reeves, who presided, and Professor Gilbert Murray. H.E. the Greek Minister also spoke.

Professor Gilbert Murray, in the course of his remarks, said that the true heritage of Greece had nothing to do with empire or territory; it was a spiritual heritage, and did not belong to Greece alone. If we wanted to read an inward philosophic account of the deterioration of character and exacerbation of feeling that took place during a long war, we had only to consult the pages of Thucydides. If we wished to turn to war's more comic and less edifying aspect, we found in Aristophanes a description of all the minor difficulties of daily life, all its limitations and absurdities. There we even found jokes about the Food Controller. If we thought how we were to build a better world when the war was over, it was not possible to do that without going back to the writings of ancient Greece and thinking again on the lines of Plato.

Of modern Greece, Professor Murray said that among the Balkan nations she was the most free, the best educated, and the most civilised. Her history was less stained with crime. Politically, the problems which she had been called upon to solve were of peculiar difficulty. The Greek nation was bound to expand, and had continually, though interruptedly, expanded against the pressure of stronger nations all round.

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO,
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

THE ONLY ENGLISH HOTELS IN ALEXANDRIA.
Proprietor: AUGUSTUS VAN MILLINGEN.

WINDSOR HOTEL
(Facing the Sea, opposite Y.M.C.A.), ALEXANDRIA.
Full Pension, P.T.50; Room, P.T.20;
Lunch, P.T.15; Dinner, P.T.20.
For long stay, apply to the Manager.

SUMMER PALACE HOTEL,
GLYMENOPOULO, RAMLEH.
This Hotel is situated near the Beach. Open all the Year.
Bathing Cabins.
Terms from: Pension, P.T.60; Lunch, P.T.20;
Dinner, P.T.25.

HOTEL SOMERSET,
ORCHARD STREET (by Selfridge's) OXFORD STREET, W.
Most comfortable and home-like Establishment. English cooking a special feature. Eggs, Butter, Poultry direct from the farm.
200 well-appointed bedrooms with fitted basins (h. & c.). 30 bath-rooms
15 private Suites. Passenger lift. Own Artesian Well.
Magnificent Georgian Dining Hall (100 tables,)
Inclusive terms from 10/- to 15/- daily; 3 to 4½ guineas weekly.
Double room 16/- to 21/- daily; 5 to 7 guineas weekly.
Bedroom, bath, breakfast (3 courses) 7/6 daily.

AYAHS' HOME,
26, King Edward Road, South Hackney, London.
ESTABLISHED 1825.
IN CONNECTION WITH THE LONDON CITY MISSION.
Hindustani spoken. Ayahs boarded and lodged at 18s. per week each until their Return Passage is paid or a Situation secured for them to return. Ayahs met at any Dock or Railway Station in London. Experienced, well-recommended Ayahs taken entirely off Ladies' hands for a certain payment, which differs according to time of year. Ladies proceeding to India or China requiring an Ayah can generally obtain one by applying to Mrs. FLETCHER, Matron.

STRANGERS' HOME FOR ASIATICS,
WEST INDIA DOCK ROAD, LIMEHOUSE, LONDON, E.

INDIAN CONSTITUTIONAL REFORMS.

We have given in a previous issue a summary of the Report on Indian Constitutional Reforms, and we have now to express our opinion of the measures put forward by its authors, Lord Chelmsford and Mr. Montagu, and accepted as regards the main lines by their associates in the recent enquiry. With us it is a question of measures and not of aims, for, as our readers are aware, we have accepted the declaration of policy made last August as a settled fact, and we start with the postulate that India's feet are to be set on the road leading to responsible government, but that the pace of her journey is to be regulated so that her energies shall not be overtaxed. Further, we accept cordially the conclusion that nothing is to be gained by proceeding further on the lines of the Morley-Minto reforms; their essence is the absence of responsibility, and no conceivable development of their familiar features can lead to the object in view. We agree also that this conclusion leads necessarily to some form of administrative dualism during the inevitable period of transition; if complete responsible government is, as we postulate, to be reached by degrees, the functions of the administration must be divided for a time between the old executive and the new, and we have to consider whether the particular form of dualism now recommended is wise and workable. A complete criticism of it would fall under three main heads, the introduction of responsibility, which is essentially a matter of the franchise, the precise division of functions, and the working of the machine, but as regards the first and second of these the materials for judgment are still incomplete, since their determination is left to be worked out by committees. We are far from complaining of this feature of the scheme, which affords some grounds for hope that the various provinces will not be forced into a framework of administrative uniformity, but until the committees are set to work it would be useless to go into these matters in detail. There remains the working of the administrative machine, and here the details given in the Report are sufficient to enable a comprehensive judgment to be formed. The dualism is to be internal, that is to say, there are not to be two distinct administrations at work in the same area, but there is to be a single government with two branches, Ministers exercising the functions for which they are responsible, a Council exercising the reserved functions, and a Governor in charge of both branches, driving Councillors and Ministers as a team, and presenting to the public an appearance of unity which may or may not be in accordance with the realities of the situation. This is the essence of the scheme, and we proceed to its examination, passing by many topics which, however important in themselves, must still be classed as secondary.

Let us admit at once that the scheme is open to many of the objections which are now being urged. It is cumbrous, it is costly, it is far in advance of any really popular demand; it will embarass the men who have to work it, and annoy many of the men who have to vote; it will certainly not conduce to administrative efficiency as the term is understood in India, and the expert bureaucrat may fairly join the full-blooded demagogue in rejecting it with scorn and contumely. But when all these admissions have been made, the case is not closed. The authors of the scheme can plead that, confronted with a problem of unexampled magnitude, they have faced each difficulty in turn, and that, whatever the defects of their scheme may be, it will at least lead to the desired result, and set India's feet on that road which in all her wanderings she has never yet trodden. With those of us who are neither bureaucrats nor demagogues, that plea will carry weight, and taking the scheme as a whole, our considered opinion is that, given an appropriate division of functions and a sufficiently extended franchise, there is only one reservation to be made before we accept the main lines as a reasonable attempt to attain the end in view.

That single reservation is, however, by no means unimportant. As we read the Report, the writers when confronted with each successive difficulty, have thrown the burden of its solution on the provincial Governor, and so far as we can see, they have not paused to consider the cumulative effect of these items, the natural result being that the burden has become too great to be borne. If the scheme is not to break down, each province must be provided with a Governor of quite exceptional qualities. The Governor with his Council will remain responsible to Britain and to the Empire for the maintenance of law and order, a responsibility which will be no lighter under the new system than now; the standard of administration must, therefore, at all costs be maintained, while at the same time the level of statesmanship must be considerably raised. Hitherto, the Central Government has in practice assumed the duty of deciding on questions of policy, or at least has interfered to such an extent as to minimise the responsibilities of the Governor regarded as a statesman, but the provincial autonomy which is a feature of the new scheme will render this course impossible in future, and the Governor must have a greatly-increased share in determining the policy to be followed in the province under his control. Again, he must be even more of a politician than present-day Governors have learned to be, adept in leading and persuading, with a genius for compromise, and a certain flexibility of fibre, not very commonly found in association with the qualities of a firm administrator. Lastly, he will be called on to decide a variety of questions relating to the division of the provincial functions, and particularly the provincial resources, and he will need for their solution that calm and detached attitude which is sought for, though not always found, in the judicial sphere. Each province will require then not merely a wise statesman, a strong administrator, and a supple politician, but also an impartial judge, and the combination of qualities is by no means common. We do not assert that the resources of the British Empire are inadequate to the supply of Governors of the calibre required, but we are not confident that they will be secured by the existing methods of selection. Looking back over the last thirty years, we can recall no period when the personality of the Governor would not have imperilled the new scheme in at least one province of India, and there have been times when failures would have been more numerous than successes. It is, indeed, the fashion just now to build high hopes on a new world after the war, but we see no grounds for thinking that human nature will undergo a sudden change, and we anticipate that high appointments will continue to be determined in great measure by a consideration of competing claims, whether personal, Service or political, though the nature of the claims considered may possibly undergo some modification. Consideration of claims has not hitherto proved uniformly successful in providing India with the Governors she has needed, and whatever promises may be made, we do not believe that any guarantee of suitable appointments can be given for the future. In a word, we hold that the success of the scheme depends on better Governors than India is likely to get, and we urge its reconsideration from this point of view: if the burden is too heavy for the men who will have to bear it, the risk of serious failure becomes too great to be incurred.

BOUNDARIES IN EUROPE AND THE NEAR EAST.

By JAMES D. BOURCHIER.

Sir Thomas Holdich's interesting and suggestive book ("Boundaries in Europe and the Near East"—Macmillan and Co.), which deals with the important question of territorial readjustment after the war, comes as a welcome contrast and corrective to much of the partisan literature which has latterly appeared in connection with this important and intricate subject, and will largely help to dispel the confusion which has thereby been created in the public mind. Appeals to the prevailing war spirit tend to deaden the sense of justice with which the grave problem of future frontiers in the Near East, and especially in the Balkans, should be approached, and the appearance of a dispassionate and scientific examination of the difficulties with which the question is surrounded is, therefore, opportune and timely.

In the outlining of new boundaries the author bases his views on two main principles—"firstly, of harmonizing results with the will of the people concerned, and, secondly, of the acquisition of strong scientific boundaries." As the root cause of boundary violation and aggression—the overflow of surplus populations—is universal and based on laws of nature, it can only be dealt with by an international agreement and fair geographical adjustment. It is necessary to divide nations into separate geographical units in such a manner as to set definite and scientific barriers between countries liable to mutual aggression. It is further necessary to give each country space and opportunity for internal development, such as may remove all incentive for discontent and desire for encroachment on other preserves. The first difficulty is to define the real basis of nationality; racial affinity cannot always be counted upon, and ties of religion and culture are negligible as binding forces; patriotism, on the other hand—*i.e.*, the love of a country—is the most potent of binding forces where it is strongly developed. But geographical environment, the author thinks, is what has mainly shaped and moulded the character of the various peoples of the Near East; and, this being so, they should be given, in the making of frontiers, a geographical environment shaped to suit their idiosyncracies and needs, in order that contentment and peace may be attained.

What, then, are the fundamental conditions of natural environment which conduce to the development of strong nations? Affinity of race and sentiment being "collateral questions," what are the primary necessities of geographical *habitat*? The first of these is sufficient space, the advantages of which in the fusion of diverse populations are illustrated in the United States and in the Argentine Republic. Next to space come conditions of cultivable land, means of communication with other countries, and open ports for the exchange of produce. Every country, to be contented and happy, wants its waterway outlet, either by sea or river. Finally, the natural boundaries must be well defined and as strongly defensive as nature or art can make them. In illustration of these principles, Sir Thomas Holdich gives a general description of the natural configuration of the Balkan Peninsula, which, unfortunately, is very inadequately supplemented by the map which appears as a frontispiece to his book. The important mountain barriers of the Carpathian and Rhodope ranges are duly delineated, but the still more important Dinaric system, which bars access from the interior of the Peninsula to the Adriatic, unaccountably disappears. The map, it may be added, is open to further criticism as representing only the Jugoslav and Roumanian national claims to territorial expansion, while those of the Greeks, Bulgarians, and Albanians are not indicated. A map showing the author's proposals for the readjustment of territories would have been very helpful; it is necessary to glean these one by one by reference to the several lectures which make up the book, and no opportunity is afforded of judging how the realization of his suggestions would affect the general political contour of the Balkan Peninsula.

Beginning with Italy, whose aspirations "must be regarded as inseparable from Balkan considerations," Sir Thomas Holdich observes that she is remarkably well provided with sea and mountain frontiers, and to this circumstance he attributes the might and magnificence of the ancient Roman Empire. But Italy aims at the command of the Adriatic and the possession of Trieste and Fiume, and it was mainly with these objects that she entered upon the war. Her aims are regarded with sympathy by the author, who believes that the Italian element in Istria and along the Dalmatian coast is "quite strong enough to warrant the claims of Italy on the score of race affinity." On what data he relies for this statement he does not say: it conflicts with the generally accepted view that the Italian population of Dalmatia is an almost infinitesimal minority, and that in Istria the Slovene and Serbo-Croat populations form the majority. In the town of Trieste only the Italians are more numerous than the Slovenes, who predominate in the suburbs. But the importance of the natural frontier provided by the "Dinaric backbone" appears to weigh most with the author, who seems disposed to assign not only Istria, Trieste, Fiume, and the Dalmatian coast to Italy, but also, in view of the importance of assuring her command of the Adriatic, approves of her appropriation of Albanian Valona at the gateway of that sea. In this way, he hopes, Southern and South-Eastern Europe will be protected against the Germanic advance. Whether he proposes the incorporation of Dalmatia with Italy or the independence of that province is not quite clear. On page 38 he suggests that Italy's eastern boundary should be defined by positions on the Dalmatian coast commanding the shores of the Adriatic, on page 67 he supports the independence of Dalmatia, and on page 73 he urges that this maritime province should become at least an Italian protectorate.

These proposals are open to criticism from the point of view of nationalities, as the author admits. So far as the Adriatic ports are concerned, their somewhat cosmopolitan character, like that of all the maritime towns in the Peninsula, may be allowewd. But how does Sir Thomas Holdich propose to satisfy the just claims of the Western Balkan nations to free access to the sea? He gives Cattaro, the natural port of Montenegro and her possession in the Middle Ages, to Italy, and accords to her only Castelnuovo, a small port on the Cattaro fiord, the inconveniently situated Antivari and the Boyana outlet in part controlled by Albania, now an Italian protectorate. As Italy will dominate the Cattaro inlet, and as she will possess Spizza, which dominates Antivari, she will practically control all the Montenegrin outlets. His treatment of Albania, which must some day aspire to independence, is still more severe. Of her two ports he assigns Valona to Italy and Durazzo to Serbia. Albania will remain a maritime State without ports; her only consolation will be the joint control of the Bogena outlet with Montenegro: this at best will only profit the districts in the extreme north of the country, and, for the present at least, to a slight extent, as the river is only navigable for small vessels In view of the immense advantages which he accords to Serbia on the Ægean coast, the author might well have left "the poor man's lamb" to Albania. It is difficult, however, to believe that the States of the future Jugoslavia would ever be satisfied with Durazzo as their only outlet to the Adriatic. Croatia without Fiume would be in a sorry plight, and the road from Durazzo, as the author states, is not of much use as a commercial highway to Serbia. Is it necessary to conclude that the Dinaric chain must always remain an impenetrable barrier to commercial access to the Adriatic? There is at least an important passage already open through the valley of the Narenta. Trieste is of such vital importance to Austria and to Hungary (if she loves Fiume) that any change of ownership can only be maintained in future at the point of the sword.

With regard to the future Jugoslav federation, consisting of Serbia, Bosnia and Herzegovina, Dalmatia, Croatia, Southern Styria, Southern Carinthia, Slavonia, Syrmia, and possibly a part of Carniola, Sir Thomas Holdich suggests no new frontiers, regarding existing boundaries as satisfying scientific conditions. On the south, however, he proposes great changes. He accords the whole basin of the Vardar to Serbia, including the port of Salonika and as much of Macedonian territory as will ensure its protection. The new boundary should enclose the whole basin of the Bistritza, starting from the Grammos peaks on the Albanian frontier and following the "great southern divide" (apparently the mountains forming the northern

boundary of Thessaly) to the Gulf of Salonika. On the east the new boundary would start from the tri-junction of Serbia, Bulgaria and Greece, near Strumnitza (as proposed by the Bucharest Treaty), and follow the eastern rim of the basins of the Struma and Mesta to the present boundary between Greece and Bulgaria, giving Serres and Kavala to Serbia. The proposal, which aims at satisfying the requirements of "a Greater Serbia, the premier State in a Jugoslav federation," with regard to new commercial outlets, will undoubtedly be welcomed by the Government at Corfu, but it takes no account whatever of nationalities, for the Bistritza valley (notwithstanding its name) and the coast line, including the Chalcidice Peninsula, are Greek; the Vardar valley is Bulgarian, and the indigenous population of Salonika is mainly Turkish and Jewish. Sir Thomas denies that there is any principle of homogeneous nationality to be found in Macedonia, but in this he is at variance with the principal authorities on the subject. For the northern frontier of Jugoslavia he provisionally accepts the Drave, and draws a line from near the head of that river to Fiume, which port, he thinks, Italy might claim, were it not the only Adriatic port open to the northern provinces (States?) of the Jugoslav federation. He appears to disallow the Jugoslav claim to the Torontal and to the region between the Theiss and the Danube.

With regard to Bulgaria, Sir Thomas Holdich points out the advantages she enjoys from her territorial compactness, quadrilateral boundary, and naturally defensive frontiers. Her only weak point is the artificial frontier with Roumania (drawn by the Bucharest Treaty). With the extension of Bulgarian territory to the mouth of the Danube—*i.e.*, the annexation of the Dobruja—this weakness, the author says, would disappear; consistency would require him to approve of the change, but he is naturally influenced by a feeling of delicacy towards Roumania. In regard to the strip of coast line left to Bulgaria at Bucharest, he remarks that it is singularly devoid of good harbours and ports, but he nevertheless holds that, if Bulgaria can construct a railway line to Porto Lagos (now a fishing village), she will be "hardly justified" in claiming Kavalla. At the same time he admits that, should Bulgaria acquire Kavalla, it would become her principal seaport. This indeed is only what we might expect, owing to her lack of any good harbour on the Ægean coast and the presence of a mountain barrier forbidding communication with the sea. Sir Thomas Holdich has no proposals to make with regard to future Bulgarian frontiers. The Bulgarian claim to Macedonia has no meaning for him, as it is based on nationality, and he regards the population of that country as a mere amalgam. He would approve, indeed, of a new frontier between Bulgaria and Serbia formed by the watershed between the Vardar and the Struma. This would give Kavalla and Serres to Bulgaria, while Serbia would have Salonika, and a kind of equilibrium would thus be attained; but he thinks that, for political reasons, this will not be carried out. In general he is fair and even sympathetic towards the Bulgarians. What had the Powers of the Entente, he asks, done to help Bulgaria in the hour of adversity, when the Treaty of Bucharest left her shorn of the greater part of the fruits of hard-won victory over Turkey "We must remember that it was Bulgaria who started the crusade on behalf of the Christian provinces of Turkey, and it was a well-prepared and hard-fighting Bulgaria that took the field. . . . It was the indomitable spirit of the Bulgarian peasant soldier, his hardness and his bravery, that was chiefly responsible for the defeat of the Turks." What was the result? "Bulgaria was frankly despoiled of very nearly all she had gained." After pointing out that the Treaty of Bucharest has been a signal failure, and that its effect was to sow the seeds of another war, Sir Thomas Holdich continues:—"No country in the world would have accepted the position into which Bulgaria was forced without a real (if unexpressed) determination to achieve *revanche* on the first opportunity. . . No other course could possibly have been expected of her." In view of the anti-Bulgarian philippics to which we are frequently treated, the author does well to remind us that "in the matter of savage barbarity there is nothing to choose between Greek or Serbian, Turk or Bulgarian, Balkan Moslem or Balkan Christian, and that it is to be found ingrained even in the highest product of Mid-European *Kultur* and philosophy." "The Bulgarian is neither better nor worse than his neighbours, and Bulgaria is bound from her geographical position to be powerful in any Balkan coalition. Therefore, it seems better in our own interests that Bulgaria should be strong and friendly."

Of Roumania Sir Thomas Holdich writes that she can claim a certain priority of interest owing to the extent of her territories, which exceed those of any other Balkan State, and the development of her commerce; he also appears to acknowledge the Roumanian claim to descent from Roman colonists, which is now treated with some scepticism by scientific writers. The Roumanians are most probably the descendants of Latinized provincials, with here and there some local admixture of Roman blood, especially in the Carpathians. Community of language, sentiment, and religion forms a better basis for the Roumanian claim to Transylvania than the assertion that that province was the original home of the race. This claim Sir Thomas Holdich regards as comparatively weak, while he attaches greater importance to the national pretensions to the Bukovina and Bessarabia. In the former province the Little Russian (Ukrainian) and Jewish elements are considerable; in the latter there is a genuine and fairly homogeneous Roumanian element, except in the southern districts. Of all the countries in the Peninsula, Roumania, as a buffer State between Austria-Hungary and Russia, needs strong defensive frontiers. In the Bukovina she would acquire a mountain stronghold of great military value; Bessarabia would make an important contribution to her fighting strength, but its eastern boundary, the Dniester, is not perhaps preferable as a defensive feature to her present boundary, the Pruth. The boundary with Bulgaria, which she acquired by the Treaty of Bucharest, though insisted on for strategical reasons, is, in the author's opinion, of no military significance whatever. Although rivers, as has been proved in the recent war, possess little defensive value as compared with mountains—the Germans were held up for a long time in the Carpathians, but, together with the Bulgarians, crossed the Danube with comparative ease—Roumania, if she loses the Dobruja, will gain the river as a frontier, and must balance this advantage, though coupled with the loss of complete control of the estuary, against the disadvantage of her former weak frontier. On the other hand, Transylvania is indefensible on the west, and, unless Austria-Hungary ceases to be dangerous, would it be wise for Roumania to part with the great defensive barrier of the Carpathians in order to occupy an exposed region?

Dealing with Greece and Albania, Sir Thomas Holdich observes that, owing to the fascination of her language, her history, and her beauty, Greece has always been treated by our politicians with a weakness which has almost amounted to political flirtation. Albania has also received a somewhat similar indulgence, and it seems almost improper to discuss hard facts in relation to these favoured nations. In both countries, and more especially in Albania, mountain barriers, by hindering communications, have produced much local independence of sentiment, and many persons are disposed to regard Albania as for the present at least incapable of self-government. To this it may be replied that a cantonal system like that of Switzerland, with a central Parliament, would probably be best adapted to present conditions. Owing to the absence of roads, sea communication along the coast is as essential to the economic development of Albania as a central trunk line is to that of other countries, and this would seem to be an additional reason why her only remaining port should not be assigned to Serbia. The author seems scarcely aware that in Albania religious differences count for less than in any country of the Peninsula, except perhaps Bulgaria. He notes the fact that it was a Greek bishop who ex-communicated the Albanian language, but omits to state that the Young Turks did practically the same thing. He rightly observes, however, that conversion to Islam has not made a Turk of the Albanian.

Sir Thomas Holdich justifies his proposal to transfer Greek Macedonia (as set up by the Bucharest Treaty) almost *in toto* to Serbia on the ground that, owing to the great mixture of races, ethnology may be dismissed in dealing with problems of geographical redistribution. The claim of Serbia to access to the sea cannot, of course, be denied, but the question would wear a different aspect if he would allow her to possess a sufficiency of ports on the Adriatic. Coast lines, he points out, now acquire an increased importance owing to the development of submarine warfare, and it is impossible to say how far Greece in the unregenerate days of her monarchy has not contributed to the destruction of the transports and liners of the Allies. Greece is essentially a maritime country; she possesses the nucleus of a powerful fleet, and must be reckoned with in the Balkan settlement. In addition to the seaports mentioned by the author, Greece possesses excellent harbours at Poros, Navarino, Corfu, and especially at Suda, in Crete; he seems to confound Crete, which he thinks has been refused by Greece, with Cyprus. With a view to the security of our communications with the East, we should maintain friendly relations with Greece; though we owe nothing to the Greece of recent history, we may owe much to her in future, and we must, therefore, satisfy her claims to compensation for the loss of Macedonia. She should have Crete (which, however, she has already), the province of Adrianople, and the "hinterland of the Black Sea," apparently even Varna and Burgos. There is no other alternative, the author thinks, unless to allow the Turks to remain or to permit Bulgaria to annex the rich province of Adrianople (accorded to her by the Treaty of London, drawn

up by Great Britain). The idea of the author evidently is that Bulgaria will remain permanently hostile, which would certainly be the case if his suggestion was carried out. The claims of Greece in Asia Minor the author considers visionary, because he disregards the claims of nationalities; they may be excessive, but they should be satisfied in reason.

Sir Thomas Holdich writes rather as a geographer and a soldier than as a student of nationalities, and some of his conclusions may, therefore, seem strange to those who are familiar with the ethnology of the Balkan Peninsula. His book also contains interesting and valuable chapters on the Czechs and Slovaks, Poland, Russia, Turkey, Syria, Mesopotamia, and Alsace-Lorraine, but space forbids criticism of them.

PRESS ON THE NEAR EAST.

The Future of Palestine.

The *Menorah Journal* (New York) for June contains a number of articles grouped under the heading "Palestine Regained—What Then?" in which various well-known people express their views on this interesting subject. Viscount Bryce comes first. He says very truly, that "those who have sympathised with the sufferings which the Jews have had to endure in Eastern Europe, and who have admired the constancy with which they have clung to the venerable traditions of their race and faith, are glad to see that the fulfilment of the chief among their hopes seems now attainable—the hope that a part of the people of Israel might find a safe home in the land consecrated by their most sacred memories, and might be able to restore it to its long lost prosperity."

A very different view of the case is taken by Professor Morris Jastrow, Junr. He writes quite frankly:—"To my mind the establishment of a Jewish State, from the point of view that the Jews constitute a nation that should be given the opportunity of developing a national life, is fraught with the greatest possible dangers to the Jews and to the religious peace of the world." His article proceeds:—

In the first place, to hand over Palestine to the Jews, as the programme of the Nationalistic and Political Zionists demands, is to run counter to one of the fundamental issues involved in the war, namely, disposing of a country without the consent of those who live in it and who are by virtue of that fact its citizens. Palestine does not belong to the Jews; it belongs to those who live in the country. Even from the historical point of view it is not specifically the possession of the Jews. Long before the Hebrews came there, it was populated by a variety of groups who may be conveniently classed under the general designation of Arabs; and besides the Arabs, the population of Palestine also included many elements that were not Semitic. The ancient Hebrews conquered a *portion* of Palestine, dispossessing the earlier inhabitants, and, according to conditions prevailing in antiquity, the Hebrews became the owners and rulers, until they, in turn, were conquered by other peoples and deprived of their independence. We cannot ignore two thousand years of history and maintain that because the ancestors of the present Jews were for some hundreds of years in possession of Palestine, they have a prior right to become the rulers of that country. If we recognise the legitimacy of the Jewish conquest, then we must also recognise the legitimacy of the reconquest which took Palestine away from the Jews.

Furthermore, Professor Jastrow considers the establishment of a Jewish State would mark the return to a thoroughly antiquated and exploded form of political government, which would make citizenship dependent upon ethnic accident. A little later he writes:—

If the question of the former ownership of Palestine forms the justification for the present claims of the Jews on that country—then it is obvious that the claim must be restricted to that portion of Palestine that was actually in the hands of the Jews. As you are aware, this represents a small portion of the interior—a stretch of about seventy to eighty miles long by twenty to thirty miles broad. The seacoast was never in the hands of the Jews, the southern part being occupied by the Philistines, and the northern part by the Phœnicians. The richest section of Palestine to the east of the Jordan was never Jewish. It certainly would be an act of violence that would arouse the strongest opposition to make a modern Jewish State co-extensive with the *entire* Palestine; and on the other hand, to create a tiny State within Palestine would be an absurdity. That would be an *imperium in imperio* and prevent that natural expansion which is incident to growth and economic progress.

Again, Palestine is as sacred to Christians and to Mahommedans as it is to Jews, and it is certainly impossible to ignore so obvious a fact. To answer that the organisation of the Jewish State will not interfere with the privileges enjoyed at the present time by Christians and Mahommedans is merely to beg the question, for the main point involved in the idea of a Jewish State is the control of the country by the Jews. Considering that the Jews constitute about 10 per cent. of the population, the Mohammedans about 60 per cent., and the Christians about 30 per cent., it must be apparent that handing over the control of the country or any part of it to a minority will, apart from other considerations, arouse the greatest possible opposition, and intensify the sufficiently bitter feelings of Jews, Mahommedans and Christians towards one another.

Professor Jastrow, in a word, strongly opposes the idea of the Jewish State in Palestine. His article concludes: "I venture to think that an assured home for Jewish colonies, with local autonomy, and under conditions which will promote their growth, will answer all the requirements without involving the Jews of the world in complications that would ensue upon the actual organisation of a Jewish State, and which would seriously disturb the religious peace of the world and react most unfortunately on the status of Jews throughout the world."

Professor Jastrow is followed by Professor Werner Amran, who begins by saying: "After carefully reading Professor Jastrow's paper, I am convinced that he would be a Zionist if he had not misconceived the nature and aims of Zionism." After outlining his own understanding of what Zionism is, he continues:—

The fundamental error of Professor Jastrow's conception of Zionism is the thought several times expressed by him that Palestine will be "handed over to the Jews" without regard to the rights of the non-Jewish people now living there. He assumes this to be the "programme of the nationalistic and political Zionists." He also inferentially assumes this to be a necessary plank in the platform of orthodox Jews who, as he seems to think, desire to see the Temple and the ancient theocracy restored. But the Zionists do not want Palestine to be handed over to them, the Orthodox do not expect Palestine to be handed over to them, and the Powers will not hand Palestine over to them.

So far as Zionists are concerned, their wishes are set forth in the Basel platform, in which there is nothing about handing Palestine over to them. They demand the right for the present to enter Palestine under international protection, and for the future, when they are numerically strong enough, to be invested with responsibility—which is at the same time both a right and a duty—to take the leading part in the government of the land in which they live. They do not ask that Palestine should be handed over to them together with its Christian and Mahommedan populations, who should willy nilly be governed by a handful of immigrant Jews.

So far as the orthodox Jews are concerned, they are equally innocent of any such intent. They do expect the restoration of the Kingdom of David and of the Temple and the sacrifices on Mount Zion, but *they do not expect it now*. They expect this restoration Beaharith Hayamim, at the end of days, in the far-distant and indefinite future, by some miraculous divine intervention. As to the present problems, the orthodox Zionists are quite as practical as the non-orthodox Zionists.

Lack of space prevents our quoting further from this series of articles, but they certainly deserve study by all who are interested in the question.

Persia and Great Britain.

In an article "Policy in Persia," the *New Statesman* suggests that Persia will no doubt be drawn deeper than at present into the vortex of the struggle byGermany's political necessities, and that it may therefore be well to take stock of the situation. The writer then reviews the events of the past ten years, the policy that we pursued—against our will, very largely—in regard to Persia, and the feelings to which that policy gave rise in Persia.

The odium incurred by the Tsardom could not altogether be avoided by those who accepted it as a partner. Since the disappearance of the Tsar's agents from the Persian stage this odium has been laid more than ever upon our shoulders, and the process has been eagerly assisted by the German propaganda. Indeed, certain Persian leaders—and those not the least worthy or patriotic members of the nation—who saw in the Tsardom the chief national enemy, have unfortunately been induced to commit themselves to Germany and to look to her for Persia's salvation.

The article counsels the Persian people to be patient, remembering that the drawbacks of a policy pursued for ten years cannot be got rid of in a moment. It concludes:—

Meanwhile, the Russian danger to Persia has vanished, and the dangers which actually threaten her come not from Great Britain but from Berlin, Constantinople and Baku. The Democratic leaders at Tabriz, the Shahsevan and Jangali insurgents in the N.W. mountains, and other elements in Persia which are actuated at the moment by hostility to ourselves, could all testify to the designs on Azerbaijan, the richest and most nationalist of Persian provinces, which are being unfolded, under the guise of irredentism, by the Tartars of Trans-Caucasia. Ottoman troops, too, have crossed the Azerbaijan frontier (as they have frequently done in the past, since this province has for centuries been an object of Turkish covetousness), and a Turkish communiqué has triumphantly announced the occupation of Tabriz. But Turkish statesmen do not confine their ambitions to a mere portion (even though it be the richest) of Persian territory. They aim at binding Persia to Turkey as a subordinate ally, and in unguarded moments they have referred to the new relation between Germany and Austria-Hungary as their model. And behind Turkey stands Germany, who cares little for academic Pan Turanianism or Ottoman megalomania, but sees in these movements, and in the inevitable breakdown in which they will end, a step towards the establishment of her own dominion.

In face of this danger, Persia, England and all other countries which value their national individuality have the strongest reason to work together, and the utmost must be done on all sides to remove such misunderstandings as hinder this before it is too late.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

The report of the Egyptian Markets for 1917 shows that earnings were again affected by cattle plague, the days lost through this cause being five times as many as in 1916. In the circumstances it must be regarded as satisfactory that the decline in receipts from this branch of business is only from £40,100 to £34,300, or a weekly average per market of £5 9s. 9d. against £6 8s. 5d. Improved receipts are recorded for the general markets, the figures being £21,800 against £18,300, representing an average of £3 9s. 11d. against £2 18s. 6d. The gross market receipts amounted to £56,400, against £58,600, and the revenue from nitrates, etc., to £19,000, against £17,000. The surplus amounts to £46,900, against £44,700, and the available balance to £53,600, against £49,800. Out of this £17,000 goes to the Government for their proportion of the profits and for excess profits duty, an increase of £7,000; the share and debenture sinking funds take £3,700, while £2,000 is allocated to the reserve. The ordinary dividend is 10 instead of 12 per cent., and that on the deferred capital £8 3s. per share instead of £13 3s.

***

It is a noteworthy fact that at a time of rising values Indian prices have on the whole shown a steadier tendency than those in most of the other countries affected by the war. This can be seen from a statistical review of prices and house rents in India at the end of 1917 compared with the figures obtaining in July, 1914, and similar periods. Wholesale prices have risen 43 per cent. in Rangoon, 68 per cent. in Calcutta, 94 per cent. in Karachi, 109 per cent. in Bombay, and 111 per cent. in Madras. Retail prices, however, which mainly refer to foodstuffs, show a much smaller increase, the percentages being 13 for Madras, 17 for Rangoon, 21 for Calcutta, 29 for Bombay, and 35 for Karachi. At the last-named place sugar, wheat flour, eggs, potatoes, and cereals showed the greatest rise, at Bombay, milk, tea, and meat, and at Calcutta salt and ghee. The rise in house rents has varied considerably and ranges from 41 per cent. in Karachi to 9 per cent. in Calcutta.

***

An interesting Indian company report is that of the Hyderabad (Deccan) Company, a coal-mining undertaking, which has clearly had a most satisfactory year. The dividend is maintained at last year's rate of 3s. a share, but, in addition, a bonus of 8d. per share is recommended, making a return of over 6 per cent. Allowing for this distribution £20,000 is carried forward, £1,000 less than the amount brought in.

***

At the general meeting of the Bank of British West Africa this week the chairman, Lord Selborne, pointed to the many encouraging features of the accounts, notably the great increase of current accounts and deposits. On the other hand, he said, there were the many great and peculiar difficulties of the times, among them the shipping difficulties. He also referred to the fact that they had no longer a monopoly in West Africa. "That was a very agreeable situation so long as it lasted," he said, "but it could not permanently endure; and lastly, the charges they had to meet were constantly increasing." In view of these conditions, and with the future obscure, Lord Selborne added that he thought they would be doing the shareholders a bad service if they had adopted anything but a cautious and conservative policy. As regards the development of the bank's business, to which attention has so frequently been drawn in these columns, Lord Selborne referred to the good promise held out for the bank in Morocco. "The directors felt," he concluded, "that the proper policy for them to adopt was steadily, but prudently, to broaden the basis of the bank's operations, and wherever possible to occupy places left vacant by the Germans. It was proposed to extend the bank's operations to Egypt, and they were about to establish their first branch in that country."

***

An illuminating commentary on the extract I quoted last week from a circular stated to have been sent out by the German Foreign Office is provided by the *Hamburgischer Correspondent* which refers to the work of the Society of Commercial Agreements in dealing with "the question of employing in the interests of German foreign trade those Germans who before the war were resident in foreign countries." The journal says that some of these men "will be unable to return either because the German foreign business in which they were interested is liquidated and cannot be reopened, or because its continuance is regarded as unprofitable." This is putting it rather less diplomatically than the circular with its touching reference to the fear that Germans might encounter "a considerable amount of personal prejudice" after the war.

***

And how are these worthy Germans to be employed? On this point the journal is no less frank. "There must be many German houses," it says, "which realise that new men will be necessary to work up trade connections in enemy or neutral countries. The struggle in the world market will be keen, and intensive work will, therefore, be necessary. There is thus a supply of German labour for foreign countries and also a demand for it." In other words, the object of the society is to marshal as many regiments as possible of those Germans who took part in the policy of commercial penetration before the war as the best means of recovering Germany's lost trade (in conjunction, of course, with the employment of suitable foreigners as suggested in the circular). As evidence of the intentions of Germany to resume her aims of economic domination on a greater scale after the war I convey this instance to my readers. In the face of this and innumerable other examples of Germany's intentions the surprising thing is that there should be a single individual in the Allied countries opposed to the Allies taking the necessary steps in defence of their economic interests.

***

According to the official forecast this year will be the first since the outbreak of war in which there has not been a marked increase in indigo cultivation in India. The area under indigo for 1917-18 is put at 690,600 acres, and the output at 87,800 cwt. In 1914-15 the acreage was 148,400, in 1915-16 it had increased to 353,100, while last year it amounted to 756,400 acres. The yield of indigo was 55,100 cwt. in 1915-16, and 95,500 cwt. in 1916-17, two-thirds of which was contributed by Madras. Even the high figures for 1916-17, however, were only about half the totals for 1895, the year of the appearance of synthetic indigo.

***

In view of the difficulties existing at the present time the results of the past year's working of the Alexandria Water Co. can only be regarded as highly satisfactory. The quantity of water consumed declined from 21,934,000 to 21,567,300 cubic metres, but this was accompanied by an increase in consumers of 1,200, their number being 39,800 at the close of the year. The total receipts amounted to £176,100, a decrease of £3,200, and on the expenditure side working expenses were £6,600 higher, this being due mainly to the increased cost of fuel and pumping charges. The net revenue amounted to £95,600, against £105,400, and the available balance is £111,700 against £120,900; £12,000 is placed to depreciation against £12,100, the gratuity to the staff accounts for £3,300 against £3,100, while £2,900 is placed to provision against compensation compared with £700. This leaves the disposable surplus at £93,000, against £105,000 and the balance available after deducting the municipality's share provides a dividend of 12s. 9d, against 13s. 9d.

***

In regard to trade enterprise during the war, we should do well to take a leaf out of America's book. American firms intend to take a leading part in Balkan trade in the future, and they are not waiting until the war ends before making their plans. On the contrary, everything that can be done now is done. Thus, it is proposed, I believe, to establish a factory at Salonika to house agricultural machinery destined to help Serbians in rebuilding their country when the time comes. I do not in any way underestimate the handicaps that the war imposes on business enterprise, but while the Americans, for instance, may possibly be better situated in this respect than we are, I feel that there is really no reason why the essential business of preparation should be postponed.

***

Attention is being directed by the native Press in Egypt to the decline in sheep-breeding in that country, one paper going so far as to declare that in the absence of adequate measures "with the passing of time native sheep may disappear altogether." It is urged that the same care given to cattle-breeding that has been bestowed on irrigation and agriculture would have established sheep-breeding on a satisfactory scale, and would have enabled Egypt to have drawn an excellent revenue from wool. In the past, it is pointed out, sheep-breeding was the subject of considerable encouragement, notably by Mohammed Ali Pasha, who interested himself in the improvement of Egypt's wool produce, and for this purpose encouraged the importation of merino sheep. There is no question that the development of sheep-breeding on a large scale would be a desirable addition to Egypt's industries, but this, like other matters, is a question which can only be properly dealt with after the war.

COMMENTATOR.

EGYPTIAN INDUSTRIES COMMISSION REPORT.

III.—The Question of New Industries.*

Turning to the question whether industry can succeed in Egypt, the commission records its opinion that Egypt must continue to give its prime attention to agriculture and increase its return so as to meet the needs of a growing population, and that industry must merely be regarded as a means of assisting agriculture and not of supplanting it. There is no intention to convert Egypt into an industrial country in the ordinary sense of the word. It is only desired to enable the country to produce all its requirements and sometimes those of foreign markets, and to prepare for the crisis which menaces it. In other words it is desired to give it as far as possible economic autonomy.

The question of fuel is always a large factor in the creation of industrial works; but the report considers that the relative dearness of coal need not constitute a real obstacle to the institution of industries except for those for which coal is the principal raw material, that the improvement of heating apparatus tends materially to reduce the cost of fuel; that engines worked by gas, petroleum, etc., can advantageously replace steam engines and give important economy; that the existence of oilfields in Egypt may one day solve the fuel problem; and that, apart from the abundant vegetable combustibles available in Egypt, it is possible that new forces such as the hydraulic energy of the water in the reservoirs may before long be put at the disposal of industry. In addition, there is a vast potential force which Egypt possesses in a more marked degree than most countries—sun-heat, which, as soon as science has found a means of harnessing it more effectively, could convert Egypt into one of the most intensive industrial centres the world has ever known. Thus most of the elements of production and energy exist in Egypt in a sufficient degree to permit of industries being started with every prospect of success. The commission is not blind to the fact that the non-existence of satisfactory iron deposits will entail that Egypt will always have to be dependent on the European metal industry; but she can easily provide for the repair of machinery which she cannot manufacture, and whilst Egypt cannot for the time being, at any rate, aspire to become an industrial country in the strict sense of the word, nevertheless she possesses the physical elements necessary for the existence and success of industrial activities.

Necessary Conditions.

With regard to the question as to whether there is room in Egypt for new industries, the commission considers that in each case certain fundamental conditions must be fulfilled. They are :—

1. The existence in the country of the necessary raw material. (In this case industries using agricultural products have the greatest prospect of success.)

2. The existence of a local market for the products of the new industry.

3. The articles produced should be such that if imported from abroad they would have to bear heavy charges of handling, freight, etc., relative to the cost of manufacture.

4. The labour necessary for carrying on the industry must be available in the country. (In regard to this the commission says that if the Egyptians lack directing qualities they nevertheless possess all those making for good workmen, and that, whatever defects they may evince if left to themselves, they would, under proper direction, be second to none in ability or application.)

5. The cost of the fuel necessary to the industry must add but a small percentage to the cost of production.

6. The existence of adequate capital. (Of this there is no lack in Egypt, and its investment in industrial enterprises is purely a matter of education, and in this respect also an industrial bank could do a great deal of good and render much assistance.)

Industries Recommended.

Taking next the question of the new industries which could be introduced with success into Egypt, the commission recommends the following to the attention of the Government and of those interested in the subject :—

The manufacture of paper (preferably wrapping paper) or pulp for which Egypt produces in abundance the raw material such as rice-straw, "bourdi" and other vegetable fibres, and in connection with which the commission has examined several projects which there is every reason to believe would succeed.

The ceramic industries, certain branches of which are already handled in the country, but of which many others such as china, porcelain, etc., could be profitably introduced.

Glassware.—The figures of the glass imports show that there is a very good prospect for a resumption of an industry which was at one time very prosperous in this country.

Ready-made clothing and boots, both of which have enjoyed considerable extension since the outbreak of the war. The former requires little motive power, and if endowed with more modern organisation could have great chances of success, although the raw material has all to come from abroad. As regards bootmaking, it is already practised in certain centres, but is productive of very defective work. In this instance the requisite raw material is available locally, and it only requires the local tanneries to be developed.

Chemical Manures.—Of these Egypt imports an enormous quantity every year, and it should be possible to produce them locally so as to reduce the cost of cultivation. In the main they consist of nitrogenous and phosphoric manures. The former could be produced in the form of calciocyanamide by means of the Assuan waterfall, whilst the latter could be produced out of the phosphates and superphosphates which Egypt possesses in such a large quantity.

Manufacture of Sisal Rope.—Sisal has been but recently cultivated in Egypt, but the experts who have examined the Egyptian variety declare that it is of first-class quality and that the fibre is of excellent length. The importance of this crop resides in the fact that it is cultivable on lands which cannot be sown with cotton. There is room for the cultivation of larger areas and for the erection of factories for the manufacture of rope and cord, of which the country requires a large quantity.

Preservation of Fruit, Vegetables and Fish.—Only one serious attempt has been made to preserve fruit on any large scale and practically none to preserve vegetables or fish. The cost of fuel involved is, however, small. There is plenty of labour available, certain specialised raw material such as dates, roses, and bitter oranges can be obtained in abundance in the country, and the local demand, judging by the Customs statistics, is fairly considerable. There is every reason to believe that the country could produce sufficient for its own requirements, and with the Government encouraging the growing of fruit trees and vegetables and protecting the fishing industry there is a very good prospect open to those who take up the preserving industry.

In addition there is the granite, stone, and marble industry, which, considering the vast amount of raw material existing, could be made quite profitable; the manufacture of candles, which now that the supply of stearine is locally assured by the Salt and Soda Co., has become a practical proposition; of starch, which has been started since the war, and for which all the raw material exists in the form of such agricultural products as rice, wheat and maize; and of sulphuric acids and other acids; and the weaving of woollen carpets, for which all the raw material exists, and which merely requires State assistance to put it on its feet. On each of these industries most interesting and detailed notes have been drafted at the instance of the commission, and are attached to the report as appendices. Space precludes any summary of the valuable information contained in those notes being given here.

(To be concluded.)

* The previous articles of this series appeared on June 7, June 21, and July 5.

THE INDIAN HIDES TRADE.

Questions in Parliament.

July 15.

Colonel Yate asked the Secretary of State for India whether, seeing that in the three and a-half years before the war nearly 19,500,000 cowhides were exported from India to the ports of Hamburg, Bremen, and Trieste, and this important Indian trade had practically passed into German hands, he would now state what measures had been taken, or were being taken, by the Government of India or the Home Government to prevent the possibility of this German monopoly ever being re-established, and to ensure that in future the industry be wholly British and Indian.

Mr. Montagu : I would refer my hon. and gallant friend to the reply I gave on July 10 to a question asked by my hon. friend the member for Dartford.

Colonel Yate : Is there any reason why there should be any further delay in settling this matter definitely? Why is it still under consideration?

Mr. Montagu : It is not under consideration. I gave a complete reply, showing that the German influence in this trade has been completely and permanently removed.

Colonel Yate : Were not the words which the right hon. gentleman used "The Government of India have the future regulation of this trade under consideration"?

Mr. Montagu : Yes. That refers to the after-the-war policy. I think all the steps possible for the moment have been taken.

A Calcutta Business.

July 17.

Sir J. D. Rees asked the Secretary for India whether Messrs. Ernsthausen, now Howieson, formed a company after the war began, called East India Exports (Limited); whether such company had been taken over or leased to Messrs. Grace Bros. and Co., who now sought a place on the British Hides Committee; and whether he would inquire into this matter, lest German influence, which formerly completely dominated this trade, would be perpetuated in any direct or indirect manner.

Mr. Montagu : The answer to the first part of the question is in the affirmative. I understand that Grace Bros. (India) have either acquired the business of East India Exports (Limited) or purchased the Howieson interest in that company. If my hon. friend can supply me with information supporting the suggestion contained in the last part of the question I will consider whether any further inquiry is necessary.

Mr. Roch asked whether the attention of the right hon. gentleman had been called to a recent case in the Prize Court in which the position of Messrs. Grace Bros. and Co. was considered.

Mr. Montagu : Yes. Before this transaction took place we inquired both of the Board of Trade and Foreign Office if there was anything against the firm of Messrs. Grace Bros. and Co., of India, and we were informed that there was nothing.

Sir J. Rees : Is the right hon. gentleman aware that the activities of Messrs. Ernsthausen, now Howieson, are viewed with the utmost suspicion and disapproval by the whole of the British commercial community in Calcutta, and will he, therefore, strain a point and make further inquiry, as it is somewhat difficult to get information?

Mr. Montagu : It is difficult, but the Government of India and the India Office are consistently endeavouring to set up a hide industry in India, which will get rid permanently of all German connection, indirect or direct. I am informed in this case that the business has been sold outright to this new firm.

Mr. Holt : Will the right hon. gentleman carefully investigate the connection between the firm of Ernsthausen's, or Howieson's, and the new firm of Messrs. Grace Bros. and Co., whose conduct was commented upon in the Prize Court?

Mr. Montagu : Of course, in these matters we are concerned only with India, and must take the advice of the Board of Trade and the Foreign Office.

Sir J. Rees : Is the right hon. gentleman aware that so long as Howieson's is a *persona grata* with the Government of India the suspicion of the British commercial community in Calcutta will never be allayed?

No answer was returned.

ENGINEERING NOTES.

American Machinery Regulations.

Reference has already been made to the new order of the British Government for the sale of machinery and implements, which, as was pointed out, will put a stop to a trade in the East that enabled profiteers to enrich themselves, and permitted importers to deal in machinery of doubtful origin. It is gratifying that similar and stricter measures have been taken in America. A proclamation recently issued by President Wilson requires importers, manufacturers, and distributors of agricultural implements and machinery to obtain a Government licence for trading. Licensees are required to furnish information regarding their business, whenever it is thought necessary, by representatives designated by the Secretary of the Agricultural Department, and must permit such representatives to inspect the property and records pertaining to their business. Information obtained in this manner is not to be disclosed without authority. Unjust profits, resales within the trade without reasonable justification, attempts to monopolise, unreasonable increase of prices or restriction of supplies, etc., are prohibited.

Ploughs for Asia Minor.

In view of the fact that in Asia Minor rain is practically unknown between April and October it is easy, granted that the new régime does not improve the climatic conditions, to form an idea of how a plough will have to be built in order to be able to turn up the soil of the sun-hardened surface. Although the hand-plough is now being used, it will certainly not be long before the tractior plough will have to be introduced. The great scarcity of draught animals in Asia Minor will make machine traction absolutely necessary in scientific farming, and the lack of labourers will not be the last reason to cause proprietors to change over to machinery. The difficulties in dealing with the soil begin with the ploughing. The ploughs really serviceable in Anatolia and the rest of Asia Minor must be fitted with special devices for the purpose of disposing of the weeds which grow very quickly and in great abundance, and cutting devices are necessary which can be used on level ground. In some parts of the interior the stony surface must be taken into consideration, and it is easy to conceive that in such districts only very solid machinery and implements can hold their own in the market.

A Useful Steam Tractor.

In some countries it may be a question of convenience or choice whether cultivation is done by oil tractors, steam tractors, or steam ploughing tackle, but in the principal agricultural districts in the Near and Middle East the question of fuel, the nature and condition of the soil, and the outlay are the things that have first to be considered. While in some parts liquid fuel may be easily obtained at a lower cost than hard fuel, such as coal, wood, etc., in others it may be the reverse. Again, while, for instance, a ploughing tractor can work satisfactorily in one part of an estate, in another, owing to the nature of the ground, it may give disappointing results. The present high cost of oil fuel and alcohol has considerably discouraged the purchase or employment of tractors with internal combustion engines, and steam tractors, therefore, are in much favour. Steam ploughing has been extensively used during the last two or three decades in Roumania, Greece, Egypt, Asia Minor, Southern Russia, and in some of the large Mediterranean islands, but, as a rule, only on large estates, for the cost of a steam ploughing tackle is beyond the means of the average farmer, who has to be content with the modern ploughing tractor. There has been, however, a certain amount of hesitation in purchasing these tractors in the East. Most, if not all, of them are designed or equipped for direct ploughing, and while they generally work satisfactorily, on soils liable to pack they meet with difficulties. In such cases cable ploughing is needed, and ordinary tractors cannot be used for direct as well as for cable ploughing on this account. A new type of tractor, which has recently been attracting the attention of British agriculturists, will undoubtedly be of much interest to landowners and farmers in the East and in countries like Morocco. It is a comparatively small, but powerful, steam tractor, of the gear-driven pattern, which can be used both for direct and cable ploughing, according to the condition of the land. It is fitted with a winding drum for cable ploughing, the drum being able to carry 150 to 200 yards of steel cable. The power is transmitted through a bevel wheel and clutch just inside the fly-wheel, and a bevel-driven vertical shaft to a pinion and gear on the drum. For paying out the cable the winding drum is disengaged by the clutch, which is within easy reach of the driver. The cable is prevented from uncoiling by an automatic brake on the drum, and a coiling gear ensures an even winding of the cable. It must be mentioned here that hitherto the machines used for this kind of ploughing have been big, powerful traction engines, but it must not be forgotten that since the engines of a tractor run at a much higher speed they are considerably more powerful for their size than the larger engines, and thus there is, after all, not such a very great disparity between the powers. The use of this new type of small machines increases the scope of cable ploughing possibilities, for with their lighter weight and greater handiness they can enter and work on fields where ploughing would not be profitable to the bigger and far more expensive tackle. One of the special features of this new type of tractor is the system of springing, which considerably reduces vibration and increases the life of the vehicle, and results, at the same time, in an economy of upkeep. The tender has a water tank with a capacity of 90 gallons, and an extra 45 gallons may be carried. The bunker will hold 2 cwt. of coal. When the tractor is not required for ploughing, the winding drum can easily be dismantled.

Small Threshing Machines.

With the approach of harvest the majority of farmers in the East are longing for the possession of a mechanical thresher. Those in hilly districts, and most of those in the plains, depend on the men who make it a business to go with a team of horses or oxen from village to village and thresh for the small-holders, at a price varying according to the demand, the competition, and the weather; with the war the price, of course, is very high. The threshing by these professional threshers is done in a primitive method. The sheaves of wheat or barley are scattered on a threshing floor, a circular piece of ground 20 to 30 ft. in diameter, with a pole fixed in its centre. The horses or oxen, tied together, run abreast around the pole, treading on the sheaves until threshing is completed. The separation of the wheat from the finely cut and bruised straw is done by winnowing in a soft breeze. A rain during the threshing is very injurious, and no breeze for winnowing often means many days' exposure of the wheat on the threshing floor. Yet these farmers have the means and can pay for a small modern thresher, but all they know in that line is the large threshing machines driven by portable engines which they see in the plains, but which are beyond their reach. In Scotland there are manufacturers who specialise in the small and light types of threshers, and such machines as used by Scotch farmers and colonials are very suitable for the Oriental farmer. They are made in various sizes, to work by hand, by treadle, horse-gear, small oil-engine, or steam engine. It is said that Scotch manufacturers of these machines have been doing remarkably well during the war, and can turn out machines in large numbers; but it is inexplicable why they ignore the great Eastern markets. The firms that will go into the matter seriously and introduce their small threshers in the Near and Middle East, before the war is over, will be amply rewarded.

Another Sea Tunnel.

Commenting on a proposal to construct a tunnel under the Straits of Gibraltar, a Madrid contemporary (*El Mundo*) says:—"Once this tunnel is opened the position of Spain in the south of Europe will be as enviable as that which Germany enjoys in the north—the central position—which would concede to us enormous and positive advantages. At the end of the war Moorish soil will acquire great development by its means of communication, inasmuch as Morocco will be one of the countries where Europeans will go in pursuit of riches to replace what is now being squandered."

LANCASHIRE COTTON.

Position Unaltered.

MANCHESTER, Wednesday.

The conditions in the market during the past week have not shown any particular alteration. The general demand has continued quieter, but producers, owing to extensive engagements, have presented a stiff front to buyers. Although the authorities are constantly being pressed to provide more tonnage for American cotton there appears to be little probability of larger imports just at present. The abolition of the rota system has been postponed for a fortnight, and in the meantime negotiations for a settlement of the differences between the Control Board and the trade union officials are taking place. It is believed that some compromise will be arranged. Advices relating to the Egyptian crop have been rather less favourable and prices have advanced. Government types are now on view in Manchester. Egyptian yarns have hardened, and the undercurrent of demand remains healthy. It is extremely difficult to secure early delivery of certain counts and qualities. Some reports from Egypt with regard to piece goods are more encouraging. Offers have been about, but not much progress has been made in the way of fresh business. Staple goods for India remain slow. Something has been done in dhooties for Bombay. The China market remains under a cloud. Occasional transactions have been put through for Java and the Straits Settlements. Manufacturers are not meeting with quite so many orders from home trade buyers. American yarns have again been slower, but the tone remains firm. Users have now got rather larger supplies at the sheds and there is less pressure for deliveries. Export yarn demand may be described as dull.

THE INDIAN OPIUM TRADE.

Mr. Balfour, Secretary for Foreign Affairs, replying to a question by Sir J. D. Rees on July 12, said:—The trade in Indian opium with China ceased with the expiration on December 31 last of the Agreement relating to opium concluded between the United Kingdom and China on May 8, 1911. His Majesty's Government would of course take all possible means to prevent the resumption of the opium trade between British India and China should any attempt be made to revive it. I have no precise information as to the firms and individuals constituting the opium combine, but I understand that it is a private and unofficial syndicate or association of merchant importers of opium at Shanghai. So far as I am aware, the functions of the combine are to regulate the price of the stocks of Indian opium in bond and generally to protect the interests of the members of the association.

Sir J. D. Rees.—Is it not the case that what has happened points to the general weakness of the policy pursued? Is it likely it can be carried out?

Mr. Balfour.—I understand, although it is a subject with which I have not very great intimacy, that there is every hope that the trade between India and China is finally severed.

GREEK CROP PROSPECTS.

The wheat, barley, oats, and rye crops in Macedonia are decidedly good over an area which is estimated to be 20 per cent. larger than last year, says the Salonika correspondent of *The Times*, in a message dated July 12. In Thessaly the crops are still better over a similarly increased area, while Peloponnesus, Attica, Ætolia, Acarnania, and Epirus expect a bumper yield. Reaping is now nearly finished, and the safety of these winter crops is practically assured. The maize, tobacco, and other summer crops everywhere in Greece have been nourished by abundant rains, and now present a splendid appearance. The Government has taken measures to requisition all agricultural products at prices reasonably remunerative to the producers.

The Indian gold output for June amounted to 41,260 ozs., an increase of 370 ozs. on the return for the previous month.

COMPANY NOTES & REPORTS

Egyptian Markets.

The report of the Egyptian Markets, Ltd., for the year ended December 31, 1917, states that the number of cattle market days lost during the year was 4,403, as compared with 863 during the year 1916. No further additions to the number of markets outside the Government concessions have been made, but steps have been taken with a view to securing a considerable extension of the company's area of operations after the termination of the war. The gross receipts from the cattle markets show a decrease of £5,320, as compared with the year 1916, the total being £32,696 against £38,016. This decrease is entirely owing to the closing of markets. The gross receipts from the general markets continue to be satisfactory. For the year under review these were £21,824 as compared with £18,260 for the year 1916, an increase of £3,564, which is accounted for by the growing popularity of the markets and the prosperity generally of the country. The net receipts from the forty-seven slaughter-houses worked during the year were £1,560, against £2,043 from fifty slaughter-houses worked during 1916, a decrease of £483, principally due to the high price of meat. Three slaughter-houses, formerly worked by this company have, under the original agreement with Government, been handed over to local municipalities. The expenses in the trading account show an increase of £2,189, which is attributable in part to wages and expenses of market keepers, necessitated by the increased cost of living and higher scale of wages generally in Egypt, and in part to account adjustments. The net profit derived from the sale of miscellaneous articles was £19,896, as compared with £16,978 for the previous year, an increase of £2,918. In view of the very great difficulty experienced in securing supplies of chemical manures, in consequence of war restrictions, these results are considered to be highly satisfactory. The final settlement of the Government share of profits and the excess profits duty left an additional amount of £1,280 13s. 5d. for distribution to the deferred shareholders, for the year 1916. The dividend distributable on the deferred shares for that year was, subject to the adjustment of the above accounts, estimated to be at the rate of £13 3s. per share, the actual amount divisible was equal to £14 11s. 6d., 67/300 per share. The increases in the amounts disbursed have been adjusted in the accounts under review. The net revenue for the year 1917 from all sources amounted to £46,894 12s., an increase of £2,148 15s. 7d. over the previous year. After deduction of the amount of £17,000, which it is estimated will be required to meet payment of the Government share of profits for 1917 and of the excess profits duty, a balance of £29,894 12s. remains, which, with the balance of £6,740 7s. brought forward from 1916, makes a total of £36,634 19s. to be dealt with. After meeting the fixed charges of the annual premia for the amortisation of the share capital and debentures, £3,743 11s. 6d., debenture interest, £2,840, and carrying the sum of £2,000 to reserve, a balance of £28,051 7s. 6d. remains available for distribution. The directors recommend the payment of a final dividend (No. 27) on the ordinary shares for the year ended December 31, 1917, of 5 per cent., making with the interim dividend of 5 per cent. paid in December, 1917, a total of 10 per cent. for the year, absorbing in all £17,470; and in accordance with the terms of the memorandum of association of the company, and subject to settlement of the proportion of profits due to the Government, and excess profits duty, the payment of a dividend (No. 8) on the deferred shares at the rate of £8 3s. per share for the year 1917, which will absorb £2,445 and leave a balance of £8,136 7s. 6d. to be carried forward, which balance is also subject to the settlements above referred to. The ordinary general meeting will be held at Winchester House, Old Broad Street, E.C., on July 25, at 12 o'clock noon.

Hyderabad (Deccan) Company.—Final dividend for the year 1917 of 1s. per share, less tax, making a total of 3s. per share for the year, also a bonus of 8d. per share, less tax, carrying forward £20,781. For 1916 the distribution was 3s. per share, £21,884 being carried forward.

The net profits of the Imperial Ceylon Tea Estates for 1917 were £9,692 (against £10,881). From this £1,000 has been set aside for depreciation of buildings and machinery. Dividend of 5 per cent., less tax (the same); £1,000 is placed to excess profits duty reserve account, and £4,542 is carried forward (against £1,351).

The interim report of the Bengal Dooars Railway Company for the half-year ended March 31 shows that the approximate net earnings were £30,179 (against £32,882), which, together with £28,458 brought forward and £2,819 from interest and profit on exchange, makes £61,456 (against £62,749). Interim dividend of 3½ per cent. on the ordinary stock on account of the year ending September 30, 1918, subject to English income-tax less relief from Indian income-tax (the same as a year ago), leaving £36,915 to be carried forward, as compared with £39,249 carried forward at March 31, 1917. Warrants will be posted on July 31.

The report of the Darjeeling Company for 1917 states that accounts show profit of £14,292 and net balance of £12,828; adding £4,959 brought forward, makes available £17,787, subject to excess profits duty, if any. The directors recommend a dividend of 5 per cent., less tax, place £4,000 to reserve, making it £15,000, leaving £7,016 to be carried forward to next account.

The report of the Nedeem Tea Company for 1917 states that the balance brought forward (less excess profits duty for that year) was £23,055 and after providing commission profit was £63,604. Adding £519 for interest on investments and deducting £20,974 for income-tax, there is available £66,204. The directors recommend a final dividend on the ordinary shares of 15 per cent., less tax, payable 27th instant, making 20 per cent. for the year, allow for reserve £5,000, for machinery and tramway account £3,000, and for additional remuneration to directors £2,000, and carry forward £25,829.

The directors of the London County Westminster and Parr's Bank have declared an interim dividend of 10 per cent. (10s. per share) for the half-year ended June 30, payable, less tax, on August 1. The balance-sheet shows:—Liabilities—Capital (subscribed, £27,314,260), 1,365,713 shares of £20 each, £5 paid, £6,828,565; reserve, £6,828,565; current deposit and other accounts, £230,425,743; acceptances, endorsements, etc., £8,139,002; total liabilities, £252,221,875. Assets—Cash, £72,456,800; bills discounted, £50,972,921; investments, £48,707,879; London County and Westminster Bank (Paris), £400,000; Ulster Bank, £1,904,219; advances and other accounts, £66,429,299; liability of customers for acceptances, £8,139,002; bank and other premises, £3,211,756; total assets, £252,221,875.

The Dalkeith (Ceylon) Rubber Estates' profit for 1917 was £16,358. Interim dividend of 1d. per share, but no final dividend; forward £16,197.

The gross profits of the Galaha Ceylon Tea Estates and Agency Company for 1917, including balance brought forward from 1916, and after providing £750 for depreciation of machinery, is £28,491. Excess profits duty, 1916, absorbed, £4,612. The directors propose to pay a final dividend of 7 per cent. on the ordinary shares (making 15 per cent., free of tax, for the year), to place £2,000 to reserve, and to carry forward £3,319, subject to excess profits duty.

Madras Electric Supply Corporation.—4 per cent. (9 3-5d. per share) on ordinary shares for year; £7,000 to a depreciation and renewal fund; £5,727 forward. Last year, no dividend on ordinary shares; 6 per cent. on preference shares; £6,000 to a depreciation and renewal fund; £5,836 forward.

The report of the British Indian Tea Company for the year ended April 30 last, states that after meeting all charges, including an interim dividend of 3 per cent., there is an available balance at credit of profit and loss of £19,742. Out of this balance the directors propose paying a final dividend of 9 per cent. (less income-tax) on the ordinary shares, making a total distribution of 12 per cent., and carrying forward a balance of £14,268

Dividends, Payments, etc.

Delhi Umballa Kalka Railway.—Interim dividend for half-year ended March 31 last, of 5 per cent. and bonus of 1 per cent. on ordinary stock, less tax at 3s. 9d. in the £, payable 29th instant.

Bengal and North-Western Railway.—After placing, as usual, £35,000 to sinking fund, directors declare interim dividend for half-year ended March 31 last of 3 per cent. and bonus of 1 per cent. on ordinary stock, less income-tax at 3s. 9d. in the £, payable 29th instant.

Anglo-Persian Oil.—Transfer books of cumulative 6 per cent. participating preference shares (issue 1909-1911 and issue 1918) will be closed from 17th to 30th instant, inclusive. Dividend warrants payable 31st instant.

The Bank of Bengal has declared a half-yearly dividend of 12 per cent., a bonus of 4 per cent., and a special bonus of 1 per cent. per annum. Rs.450,000 have been transferred to the reserve and Rs. 555,283 carried forward.

The Bank of Bombay has declared a profit on the last half-year of 15½ lakhs of rupees; dividend at the rate of 2 per cent. and a jubilee bonus at the rate of 1 per cent. per annum. Five lakhs of rupees have been transferred to the reserve and a similar sum carried forward.

The 3 per Cent. Debenture stock transfer books of the Bengal and North-Western Railway Company, Ltd., will be closed from July 1 to 13, inclusive, for the purpose of preparing interest warrants payable to those stockholders whose names are on the register at the time of closing the books.

Oil Outputs.

Anglo-Egyptian.—Gemsah production for week, 21 tons; last week, 21 tons. Hurgada.—Production for week, 1,860 tons; last week, 12,799 tons.

SUGAR PRODUCTION IN PERSIA.

It is believed that the cultivation of sugar-cane was formerly more important in the Province of Mazanderan than at present (says the American Minister at Teheran, Mr. J. L. Caldwell, in a recent report), for it seems that it has been abandoned on account of the difficulty in extracting the juice. Cane is cultivated at present round the edges of cotton fields, but it could doubtless be cultivated profitably on a large scale on soil of the right sort. The zone of cultivation is found in the rectangle formed by the Caspian Sea and a parallel line passing Amol, Barfaruche, and Sari. Since the beginning of the war, the price of sugar having greatly advanced, the cultivation has again been taken up. It is estimated that the harvest of the past year totalled about 120,000 Tabrizi batmans (1,560,000 lb.), of which Mazanderan consumed about half; 10,000 batmans were sent to Teheran and 50,000 batmans were transported in coasting ships to Enzeli, Chassovar, etc. The production is about 1,600 lb. per acre.

Two Varieties of Cane.

There are two kinds of sugar-cane grown in the province: First, the Indi Lale, the seeds of which are planted, which produces a syrup about the thickness of molasses of grapes, and second, Sheker Lale, of which one plants the shoots, yields a moist sugar which can be solidified. Before the war 12 khavars (of 8 pouds, or 288 lb. each) of moist sugar cost about 100 tomans to produce, and could be sold for about 120 tomans. Therefore, with such small profits, peasants could plant only around the edges of fields or in small quantities, for while the expenses of production amount to about 120 tomans for 12 khavars, that amount can now be sold for 240 tomans or even more. Moist sugar is worth at least twice as much as the syrup from Indi Lale.

Primitive Methods.

Sugar-cane is planted in the spring and must be harvested in the fall before it is cold enough for frost. The fields must be well tilled, with the help of oxen. Much moisture is necessary and in dry years good crops are not obtained. When the crop has been cut it is stacked on the ground; near by a hut is erected for cooking the juice. Four oxen are needed for crushing the cane. The juice is boiled during the night and about 50 mans (300 lb.) of dry reeds are used as fuel in one night. The process necessitates the presence of at least four persons. When done, the sugar is poured into moulds and removed as soon as it

ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Avenue, Wednesday.

The tendency again this week has been a very favourable one, buying orders have been coming in in large numbers; but, unfortunately, the great scarcity of sellers has prevented much business being done.

In Government stocks Unifieds have risen 1½ to 93, and Egypt 3½ per cent. Prefs. are one point higher at 77½.

In Bank shares the feature has been a rise of 1-16 in National Banks to 18 11-16, whilst Agriculturals are ⅛ better at 6 3-16, and Agricultural Prefs. are 1-16 up at 7½. Anglo-Egyptian Banks, on the other hand, have fallen back after their recent heavy rise £1 to 17½. This decline is due to the reports that the contemplated working arrangements between the English Joint Stock Banks and foreign banks will not be permitted.

In Railways Delta Lights are 3-16 higher at 6⅞.

Amongst Land shares Aboukirs are fractionally higher at 23s., and Allotments are ⅛ up at 4½. Behéras have been persistently enquired for from Egypt, and are ¼ higher at 13⅜. Delta Lands, on local enquiry, are 3d. higher at 13s. 3d., and New Egyptians are 9d. up at 19s .3d. on a persistent demand. Union Foncières have been bought for Egypt, and are ⅛ higher at 3 9-32, and Sidi Salems have improved 1-32 to 2 11-32.

In Miscellaneous shares Alexandria Waters are ⅛ up at 12½, and Salts and Sodas are 1-32 higher at 2 11-32. Khedivial Mails have recovered the dividend at 2⅛ x.d.

In Greek securities the 1881 and 1884 loans are a point up at 65, the 1890 loan has risen 1½ points to 65, and Monopolies are 2 points higher at 62. The demand for these securities has continued, but business has been slack as sellers are scarce.

NEWS FROM ALL SOURCES.

The head office of the Ionian Bank will be removed as from the 20th instant to Basildon House, Moorgate Street, London, E.C.2.

Cheese production in Eastern Greece for 1917-18 is estimated at from 25 to 30 per cent. in excess of that of last year. Even so, the production will be something like 20 per cent. below normal.

Lloyds Bank announce that, in order to provide additional facilities for overseas trade, they have arranged to open on July 15 a separate Colonial and Foreign Department at their Manchester office, under the management of Mr. Frank Cawley.

The British-Borneo Petroleum Syndicate state that an agreement has been entered into with the D'Arcy Exploration Company (a subsidiary of the Anglo-Persian Oil Company, Limited) for the exploitation and development of the Borneo oil interests owned by the syndicate.

ROUMANIAN FINANCIAL ITEMS.

The entire amount of the money borrowed by the State from the Roumanian National Bank for covering war costs is 1,600,000,000 leï (£64,000,000).

Roumania's National Debt, which has trebled since her entry into the war, to-day amounts to over £210,700,000, and to this sum, according to M. Saulescu, Minister of Finance, "must be added the burdens laid upon us by the Peace Treaty."

Besides a graduated income-tax and war profits tax, the following official measures are to be introduced in the Roumanian Chamber:—An alcohol monopoly, increase on probate duties, stamp duties, taxation of mortmain property, a special tax for coffee and tea, a reduction in the number of officials, and an internal loan.

The directors of the Bank of Madras have declared a dividend of 10 per cent. and a bonus of 2 per cent. Rs4½ lakhs has been transferred to the investment account and Rs384,356 carried forward.

THE IMPERIAL BANK OF PERSIA

(Incorporated by Royal Charter, 1889).

CAPITAL (fully paid) - - - £850,000
RESERVE - - - - - £190,000
Reserve Liability of Shareholders - £1,000,000

London Office: 25, Abchurch Lane, E.C.4.
Chief Office in Persia: Teheran.

Branches at Ahwaz, Birjand, Bushire, Hamadan, Isfahan, Kazvin, Kerman, Kermanshah, Meshed, Mohammerah, Nasratabad, Resht, Shiraz, Sultanabad, Tabriz and Yezd. Agency at Busreh.

The Bank is prepared to transact Banking business of every description in and connected with Persia and Mesopotamia; and in London grants Drafts, Telegraphic Transfers, and Letters of Credit, and negotiates or collects Bills on Persia and the Near East.

BANQUE FRANCO-SERBE.

Head Office—
14, RUE LE PELETIER, PARIS.

Paid Capital - Frs. 12,000,000

Central Office—Belgrade.
Branches—Skoplye (Uskub), Bitolj (Monastir).

London Office—
27, THROGMORTON ST., E.C.2.

Correspondence is invited from all those having Serbian interests or contemplating business with Serbia when communication is restored.

BANKING ANNOUNCEMENTS.

ANGLO-EGYPTIAN BANK, LIMITED,

LONDON, ALEXANDRIA, CAIRO, MALTA, GIBRALTAR, TANTAH, MANSURA, BENI-SUEF, ZAGAZIG, PORT SAID, KHARTOUM, JAFFA, and JERUSALEM.

Subscribed Capital - - £1,500,000
Paid up Capital - - 500,000
Reserve - - - - - 710,000

The Bank undertakes every description of Banking Business on most favourable conditions.

IONIAN BANK, LIMITED.

Incorporated 1839.

SUBSCRIBED CAPITAL - - - £800,000
PAID-UP CAPITAL - - - - 485,580
RESERVE FUND - - - - 75,000

HEAD OFFICE—

NOTES OF THE WEEK.

The death of the Tsar of all the Russias might have meant more to the Near East, if it had not been preceded by his compulsory withdrawal from the European stage so many months before and by the eclipse—temporarily, we believe—of Russia herself as a world power. To what extent Nicholas II. was personally responsible for Russian foreign policy during his reign must be left for the present an open question; the vacillation that marked the autocratic regime suggests that he was for the most part a pliant tool in the hands of others. It would be difficult indeed to reconcile his own well-known leanings towards peace with the restless ambitions that characterised Russian diplomacy. In the Balkans Russia was compelled to champion the Slav cause, but it may be doubted whether the Tsar entertained the Imperialistic designs in that direction that have been associated with his Government. He was credited with a strong liking for the Serbians, which would have sufficed to render the Bulgarians suspicious, and may have contributed to perpetuate the jealousy and unrest that have long been the bane of the Balkan Peninsula.

Although the personal influence of Nicholas II. in the Near East may have been negligible, the tragedy of his death is not likely to pass without leaving its impression on the Balkan people and their rulers. Where a foreign dynasty is on the throne the failure of the sovereign to sink his own identity in that of his adopted country inevitably discloses a tendency towards an autocratic regime. Autocracies, however, will be out of favour at the end of the war, and exotic Sovereigns in the Balkans will read in the murder of the Tsar a cogent warning against setting themselves up, even with the best intentions, as the sole arbiters of their people's interests.

An interesting picture of Mesopotamia under British jurisdiction was drawn in outline by Lord Robert Cecil on Tuesday in answer to a question in the House of Commons. The work of redeeming the country from the state of ruin into which it had fallen under the Turks is making very satisfactory progress. As might have been expected from Arab tradition, there is an insistent demand for education, which is being met as rapidly as the supply of teachers will admit. Already thirteen Government primary schools are in existence, as well as four municipal State-aided schools, a teachers' training school, and a survey school. Irrigation work, as was stated some time ago in these pages, has been undertaken on a comparatively large scale, with the result that large tracts of land hitherto untilled have been brought under the plough. Use has been made of mechanical tractors and artillery horses to supplement the ordinary means of cultivation, and a variety of naval craft has been liberated by the authorities to transport the harvest to its destination. The opening up of the country by road, rail, and improved water transport, Lord Robert Cecil continued, together with the establishment of security on the highways, has resulted in an increase of trade and a lowering of prices of commodities.

A further statement to the effect that the contrast between the improved condition of Mesopotamia and that of the neighbouring country occupied by the Turks had not failed to impress the population probably puts the case very mildly. The contrast is not infrequently the subject of comment in Arab papers and in Arab correspondence, but the very hyperbole in which the writers feel constrained to indulge renders it difficult for their tributes to be reproduced in the British Press. It is only right, however, that this Arab appreciation of Great Britain's effort, or as Lord Robert Cecil expressed it—the opinion that the British people mean well by the Arab race—should be generally known. An attempt will be made to challenge the establishment of the *pax Britannica* over Mesopotamia and Syria; but on this point the interests of the Arabs and of the world's peace can be shown to coincide, and the contrast between the present regime and the old must be continually emphasised to prevent the growth of the fallacy that the new order can be maintained without the guiding hand of the British administration.

The news from Albania continues to be satisfactory. Progress in this mountainous country must necessarily be slow, but the Italian and French troops continue to advance steadily. No less important than the fact that they are covering ground is the attitude of the Albanian population in the occupied territory. Assistance is freely rendered, the first desire of the Albanians being apparently to avenge themselves on their Austrian taskmasters. In point of mileage the Allies have still more than half the distance between Berat and Elbasan to cover. But that their rate of progress is taxing all the Austrians' powers of resistance is shown by the capture up to July 19 of over three thousand prisoners, together with considerable quantities of guns, ammunition, and military equipment. Some hundreds of Italian and Russian prisoners have also been liberated—a further indication of the extent

Digitized by Google

to which the enemy's calculations have been upset by the Allied advance.

A correspondent with the Italian troops gives in *The Times* a picturesque account of the occupation of Berat. The proceedings were genuinely cordial, and General Ferrero, the Italian commander, appears to have won the hearts of the inhabitants by his kindly attitude and his declaration of Italian policy. The Italians had come, he announced, as friends and brothers, not as conquerors. They would respect alike the religions and the laws of Albania, but they would look to the Albanians to respect one another's religion. Independence and freedom were guaranteed; schools would be established where needed, and, no less important, good roads would be constructed. A start had already been made with the road connecting Berat with Valona, along which the Italians had advanced, and which is stated to be "as great a work of benefaction as it is a marvel of military engineering." The Italians do well to win the confidence of the Albanians by practical demonstrations of their goodwill instead of relying merely upon promises. They have no easy task before them in establishing a protectorate over the country; but the work will be half finished, if before the end of the war they can convince the Albanians that their material needs, which have been accumulating for many years now, have a better chance of being supplied under the temporary protection of Italy, than if Albania is once more left a prey to international as well as to domestic rivalry.

As the months and years pass it is impossible to disguise the cumulative anxiety that is felt in this country over the fate of British and Indian prisoners in Turkish hands. Such statistics as the authorities are able to supply are not reassuring. The total number of our soldiers taken prisoners by the Turks amounts to 474 British officers, 221 Indian officers, 4,815 other British ranks, and 9,769 other Indian ranks. Of the total of over fifteen thousand officers and men, over three thousand are known to have died in captivity, but very nearly the same number must be presumed to be dead, as all steps taken to trace them have been in vain. There has been no lack of effort in Great Britain and India to alleviate the lot of these prisoners, on the part both of the Central Prisoners of War Committee and other similar organizations; but the actual benefit to the men interned has been almost negligible in view of the fact that such a small proportion of the parcels sent ever reached them. It is very rightly feared that, unless more practical steps are taken to deal with the problem, the terrible mortality among the prisoners —already 55 per cent. for the British rank and file— will become higher still. By a resolution passed at the end of last month, which was published in THE NEAR EAST of July 5, the Prisoners in Turkey Committee has decided to urge the Government to enter into negotiations with Turkey for a wide exchange of valid prisoners. The proposal probably embodies the best solution available in the circumstances; but the dilatoriness with which effect is being given by Turkey to the Berne Agreement for the exchange of unfit and civilian prisoners does not promise well for any other undertaking on a still larger scale.

In discussing the subject in the House of Lords on July 24 Lord Newton was not optimistic. He pointed out that the Turkish Government probably "did not care a fig" whether their prisoners in our hands were released or not, and, consequently, they were not likely to display much zeal in effecting an exchange. He repudiated the suggestion that experts had not been employed in the negotiations with the Turks, and he assured the House that no means had been neglected to impress upon the Turks the advisability of coming to an agreement with us. On this point it can only be said that there are experts and experts, for the failure in the first negotiations regarding the Kut prisoners was clearly due in part to ignorance of or indifference to Turkish psychology. One interesting disclosure made by Lord Newton was that Austria-Hungary was responsible for the stoppage of parcels consigned to our prisoners in Turkey, and the British Government had accordingly stopped parcels sent to Austrian prisoners in this country.

The discussion of Indian constitutional reforms may now be said to have reached a definite stage, for while we cannot assert that, as some sanguine people hope, moderate opinion is united in favour of the official proposals, at least, there is no doubt that extreme opinion is united in hostility. So far as the Extreme Right is concerned, this attitude was manifest from the outset, while the news cabled last week from Poona shows that Mr. Tilak, on the Extreme Left, had attempted, and not without success, to rival the vituperative energy of a particular journal. The position taken up in each case is intelligible, though there may be two opinions regarding the validity of its logical foundation, but our present purpose is merely to record the facts. The scheme stands for the moment, like Mr. Pickwick, between Pott's fire-shovel and Slurk's carpet bag.

We must note by the way how unfairly the plan of muzzling Indian politicians in this country has worked out. As Lord Islington explained in Parliament last week, Mr. Tilak was permitted to come here on a pledge of silence, but he is still in India, and consequently can say what he likes. Dr. Nair, on the other hand, is in England, and therefore we are not permitted to hear his views. This is, we think, unfortunate as well as unfair, for while it was easy to forecast Mr. Tilak's attitude, we are by no means certain what Dr. Nair would say, and his opinion is much the more important of the two, because there is no doubt that he speaks for the silent and oppressed classes, whose cause he has made his own, and English people ought to know how the champion of the lower castes regards the Chelmsford-Montagu scheme.

As regards recent contributions to the discussion, we can record little that is either new or valuable. Letters have now taken the place of leaders, and the only letter we have seen which really counts is Lord Montagu of Beaulieu's plea for increased attention to the economic development of India. The Reforms report indeed implicitly recognises this need, and lays down that Government must shoulder its responsibility for the industrial development of the country, but despite this recognition, the risk remains that development may be sidetracked, while all the available energy goes to hauling the heavy political train. We welcome this letter accordingly, and we hope that the writer will secure the support of the English Press in keeping economic needs prominently before the public.

Many of the remaining letters, which do not count, are nevertheless interesting from the light they throw on the mental attitude of the writers, who may be divided into two classes: those who still dream and those who have just wakened up. The latter class are rubbing their eyes, and noticing that India somehow looks different; they are puzzled, and most of them want some sort of a commission to sit and find out what has happened. Their request is natural enough, but they would not have made it, if they had kept awake, and we earnestly hope that there is no chance of the question being hung up in this way. The facts are clear enough, amateur schemes have been sifted, official proposals have been made, and what is now wanted is the final decision of the Cabinet.

Of the writers who dream, the most interesting to our mind is Sir Bampfylde Fuller, who wants to scrap the authority of Parliament at the start. We have a great deal of sympathy with the suggestion, which would certainly appeal to genuine Indian sentiment, but we fear it is incompatible with the hard facts of practical politics. The present House of Commons is stale, too stale even to abdicate; the next House, which will be the first-fruits of our recent revolution, is an unknown quantity, and may in theory do anything; but we anticipate that it will resemble its predecessor in tenacity of power if in nothing else, and that it will want to see India much nearer to years of discretion before it begins to think of surrendering the guardianship which of late has been somewhat negligently and capriciously exercised.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, June 24.

The English Language in Egypt.

With reference to the resolution passed by the Egypt, Levant and North Africa Section of the Manchester Chamber of Commerce concerning the question of the establishment of English as the official European language of Egypt, and the incorporation in the Egyptian Legal Code and procedure of such items of English law and procedure as may be practicable, it would appear that the Chamber is not fully informed of the situation. The letter to the High Commissioner refers to the grave disadvantage suffered by British interests owing to the fact that the English language is not the official European language of the country, French or Italian having the preference in all legal procedures. This is, however, an incorrect exposition of the situation; for, since March, 1904, English has been one of the judicial languages recognised by the Mixed Courts, the others being Arabic, French, and Italian. As regards making English the official European language, every effort is already being made in this direction, but such a change cannot be made by a simple stroke of the pen.

Already the tendency as regards the linguistic medium is in every respect pro-English. In the ordinary schools English and Arabic are now the sole media of instruction, and in the higher schools the Law School is the only one where any courses are given in any European language other than English; it has, moreover, been definitely arranged that these courses shall disappear after next year. The young generation of officials nearly all speak English; while it is noticeable that a larger proportion of the higher Egyptian officials speaks the same language, as compared with what was the case a decade ago. Official correspondence is carried on more and more in English and in Arabic, and it is merely a question of time for English to become the official European language, without any arbitrary intervention; though so long as France and Italy have important commercial interests in the country their languages will have to be recognised before the Courts.

While on the subject of a linguistic medium, it is interesting to note that examiners all agree that the standard of English among students nowadays is very low, and that a Committee is sitting to investigate the question. The falling-off dates from the time when it was decided to start giving instruction in certain scientific and allied subjects through the medium of Arabic instead of English, and the situation has been aggravated by the depletion of the English staff of the Ministry of Education owing to the war. This change-over in linguistic medium of instruction was made in the face of much opposition, which still continues, and which based its objection on the fact that the standard of instruction in these subjects would fall off, if they were taught in Arabic. The question has been discussed on many occasions in this correspondence, and I do not now propose to devote any further space to the subject beyond saying that the general lowering of the standard of English amongst Egyptian graduates, if it is proved to be due to the change referred to, should certainly strengthen the position of those who have throughout opposed that change.

As regards the introduction of English law and procedure into the Egyptian Code, this is already being done, and the Note on the first year's work of the Capitulations Committee, a review of which appeared in The Near East of May 3 and May 17, clearly indicates that, in commercial matters at any rate, British precedents will be considered in the matter of filling gaps and remedying defects in the Egyptian Legislation.

The Question of Currency.

Notwithstanding the authority given to the National Bank of Egypt last month to issue bank notes of P.T.25, in addition to the denominations already authorised, the demand for silver currency has continued in excess of the supply; and the Egyptian Government has been compelled to issue currency notes of the value of P.T. 10 in order to relieve the situation. The causes, which have led up to this currency scarcity were dealt with in this correspondence at the time. In an explanatory note attached to the Ministerial Decision, the Government states that whilst before the war the quantity of silver in circulation was £E2,500,000—which sufficed for the country's requirements—to-day the amount in circulation has attained £E7,000,000, which is inadequate, and in view of the difficulty in obtaining silver and minting it, the Government has been forced to resort to the expedient of issuing currency notes. It points out that these notes are only an emergency measure and that as soon as more silver can be obtained, or the local demand decreases, they will be withdrawn; it adds that in order to insure that this is done at the earliest moment, all profit on the issue will be carried to a special account. Meanwhile, the currency notes, which are made legal tender in the same manner as pieces of P.T. 10, can be exchanged at the Government Treasuries for bank notes, and will be accepted by the Government in payment of taxes or any debt due to it. It should be mentioned that it is generally conceded that the issue of P.T. 25 notes was a mistake, and that they should have been for P.T. 20. The issue of currency notes of P.T. 10 will remedy this, while at the same time relieving the situation as regards silver currency.

The Native Bar.

A law has been promulgated this week modifying the existing regulation governing the Native Bar and admission thereto. The new law lays down that an advocate must at the end of his period of apprenticeship undergo a written and oral examination before he can be permitted to plead in his own name before the Central Courts. The previous regulations did not provide an examination at the end of the apprenticeship, and allowed an advocate to plead in his own name before the Central Courts after he had satisfied a special commission that he had spent two years attached to the office of a recognised advocate and had attended the courts regularly. It should be pointed out that the recent report of the Capitulations Committee laid down that for admission of advocates to the new unified Bar it would be necessary in the future to undergo an examination on the expiration of the period of apprenticeship; and this amendment of the regulations of the Native Bar may be regarded as an initial attempt to carry out this very sound recommendation.

Justice in Palestine.

The *Palestine News* announces the re-establishment of civil courts of justice in the occupied enemy territory. These courts will be based on the system in force under the Turkish *régime*, but will have certain modifications which will bring justice appreciably nearer the people. The highest court will be a court of appeal at Jerusalem. This court will also sit as a court of assize and will go on circuit, a procedure unknown under the pre-war administration. There will be two courts of first instance, one at Jaffa and one at Jerusalem, and, in addition, there will be in each of the other *kazas*, where there is no court of first instance, a special court, which will be composed of a British administrative officer and either a magistrate and a notable or two notables. These special courts will be convened when required, and will try cases beyond the jurisdiction of the magistrate. There will be in addition nine magistrates scattered about the country for the hearing of small cases or those in which both parties consent to bring their dispute before the magistrate's court. Great care has been taken in the choice of *personnel*. Several British officers with legal experience and knowledge of Arabic have been appointed to the courts, and the rest of the staff has been selected from local men whose integrity, qualifications, and ability are well known. The pay of the latter has also been increased to remove the temptation to which the inadequate salaries paid by the Turks laid them open. The courts will administer the law hitherto existing in the country, which will remain substantially unaltered except so far as special provisions may be necessary to provide for difficulties created by the existence of the war and special Turkish legislation, but the jurisdiction of the religious courts of the Moslem and other communities will remain untouched.

SUDAN NOTES.

IRRIGATION AND RAILWAYS.

(From Our Khartoum Correspondent.)

Khartoum, June 12.

A writer in the April number of *Blackwood's Magazine*, quoting Nubar Pasha's observation that the Egyptian question was the irrigation question, contends that the Sudan question to-day is the railway question. The general argument in support of this appears to be that it would pay the Sudan better to build railways in the Eastern Sudan than to construct irrigation works in the Northern Gezireh. The writer, who has clearly studied the question on the spot—though possibly not very recently—overlooks the rather obvious point that, so far as Egypt is concerned, as it was in the days of Nubar, so also it is now. The control of the Nile is literally of vital importance to Egypt, and, even to those who have no particular technical knowledge of the subject, it appears fairly obvious that the Blue Nile Dam is an essential part of Egypt's programme, which must be carried out as quickly as possible.

As a matter of fact, the proposal will be of great and lasting benefit to the Sudan, and offers an opening for the investment of foreign capital which, it is to be feared, no railway without some strong additional attraction would ever do. This is proved by the known interest taken in the proposal by the cotton spinners of Manchester and the recent announcement of British Government support. The Sudan will get the financial benefit, and can fairly be expected, therefore, to pay the interest on the capital expended. On the other hand, Egypt, equally jealous of every drop of water, undertakes other costly works—all part of a vast scheme—as a result of which the release of an adequate supply of water for the Sudan cotton crop is assured. The bargain is very fair.

It seems, therefore, at least probable that while the Sudan may be in a position to raise money for irrigation works and to secure the requisite approval of the Egyptian and British Governments, thereto (for both flags fly in the Sudan), its railway schemes, important and urgent as they are, may have to wait until the country can prove by increasing returns its economic and financial stability.

All interested in the welfare of the Sudan, however, and especially those who live in it, will at least hope that some strategic or other valid reason may induce the powers that be not to wait too long; and of all the schemes proposed (and they extend west, south and east), those advocated by the writer in *Blackwood's Magazine* do appear of supreme importance. The advisability of taking the line from Sennar to Gedaref *viâ* Singa, however, seems doubtful. Once the dam is built, river transport between that place and Sennar will be easy, and a bridge over the Blue Nile at Singa would be expensive, and can be entirely obviated by taking the line over the dam. The cost of such a bridge would go far to pay for a branch line to Singa, if really necessary. It is understood that the railway authorities have always advocated the route *viâ* Mafaza and Gedaref, but, as a result of careful surveys, advised against taking the line from Kassala to Suakin *viâ* Tokar because of the engineering and other difficulties in Khor Langeb and Khor Baraka and the fact that the region is subject to floods and sand storms, which at certain periods of the year would involve complete suspension of traffic. Tokar can be reached from Suakin by a branch line of sixty miles which will meet all requirements and which, being a branch line, could be more cheaply laid.

The line from Thamiam to Kassala would be 214 miles long, whereas from Suakin to Kassala *viâ* Tokar it would be 350 miles. This would mean a heavy additional outlay in capital, even were such a line practicable. From Kassala to Port Sudan *viâ* Thamiam would be about 342 miles and to Suakin *viâ* Tokar 350 miles, but Suakin to Port Sudan involves a further distance of forty-six miles.

One word more on the economic aspect of these questions. The writer in *Blackwood* asserts that a line from Sennar to Suakin *viâ* Singa, Gedaref, Kassala, and Tokar would pay far better than launching out into expensive irrigation schemes of unproved utility. This seems a somewhat rash statement. According to their published figures the Sudan railways have done well since the war, but this has been largely due to the heavy rains, which have enabled the country to make large exports of grain to meet military requirements. In 1917 practically 100,000 tons of dhurra were sent to Halfa and the Red Sea. Only four years ago the rains were so bad that dhurra had to be imported from India by the Government to feed the starving population. The railway must have traffic, and, therefore, wants, or should want, irrigation. Equally, the people need to be secured against starvation, and this is only possible when irrigation is assured.

One of the reasons, no doubt, for building the railway south of Khartoum was the irrigation scheme which lay ahead, but which could not be tackled without a railway. Similarly, the great attraction of the Kassala railway (as the article seems to realise) lies in the fact that an irrigation scheme for the Gash delta only awaits the arrival of railhead to be seriously considered. Other similar examples elsewhere might be quoted. Given a sound economic scheme, a railway will follow as surely as day the night. But Governments being human and finance being finance, the wise man is he who puts his scheme of development in the front line rather than his railway.

LIFE IN PERSIA THIRTY YEARS AGO.

Anecdotes and reminiscences interesting and amusing formed the subject matter of the paper which Mr. Alexander Finn read before the Persia Society at 22, Albemarle Street on July 15. Mr. Finn went out to Persia forty years ago, and was our Consul-General there for many years. Among other stories told, one related an adventure of a Mr. Hoeltzer, a great rider. Water is carried from one place to another by means of underground conduits called kanats, which have air-holes at intervals. As often as not these air-holes have nothing to show their whereabouts. One day, when a party were out coursing, Hoeltzer's horse was seen careering about riderless. The rider could not be found, so the men dismounted and walked up a line of wells. Presently they found a hat on the edge of one of these, and calling down, got a reply from a feeble voice that the speaker was quite safe, but standing up to his waist in water, and that the sides of the well were too slippery to climb up. Ropes were unobtainable, but eight pairs of stirrup leathers were buckled together, and the victim was hauled up battered and wet, but smoking a pipe and apologising to the ladies for keeping them waiting.

Mr. Finn described the horse racing, which in his day took place in March every year on ground to the west of Teheran. The course was within a few yards of two miles round, and there were six races. The first of these was six times round the course; others were two, three, or four times round it. There were never less than twenty-three starters, and on one occasion there were thirty-one. The jockeys were lads of fifteen or under, but one of them was said to have ridden in every race for six consecutive years. Another veteran in the field was a Turkoman horse with a diamond aigrette between the ears. This had been given by the Shah, because of the horse having won the great race five or six times running. His Majesty also gave the horse an annual pension of 100 tomans, and had him led out every year to look on at the scene of his former triumphs. The racecourse was kept by some 3,000 troops, and between the races dancing boys performed, and bands played.

"Mudakhil," said Mr. Finn, was a word which meant much in Persia. The nearest to an English equivalent was the word "persk." "Dak yek" (one in ten) was the acknowledged percentage of every seller or buyer (or both) on any transaction. The honest people were those who were content with that, but others sought a larger profit. In 1876 it was decided to light the main streets of the capital—of course, with oil. An Armenian, Jehangir Khan, was charged with the business, and made a profit of ten tomans on each lamp. But then he expected that when the lighting was completed he would be congratulated by the Shah, and, consequently, have to make a substantial monetary offering to His Majesty—so substantial that he would gain nothing on the transaction after all. A former minister had suggested the lighting of the streets within the palace enclosure: the idea was accepted, but, for so long as he lived, he had to pay for the lighting. But the Shah's English gardener managed to get neatly out of a similar position. One day the Shah said to him, "Staley, I hear you want to make me a present." "Yes," was the reply, "I have it ready close by." Staley went to fetch the present, and returned with a dish of radishes. The Shah laughed and said, "Zarang" ('cute).

"Pedder sookatch" (son of a burned father) was the commonest expletive. General Adrienne, an Italian artillery instructor in the Persian service, noticed that a bugler called out, "Pedder sookatch" three times every morning before sounding the reveillé. Asked why, he replied that he knew that every man in camp would be applying the epithet to him the moment the bugle sounded, and he liked to have his say first.

MOROCCO.

(From Our Own Correspondent.)

Tangier, July 10.

The South Road.

Tangier is at present cheered by the presence of a Spanish official, who has reawakened the almost moribund hopes that the road southwards through the Spanish zone will be completed some day. Whatever blame may or may not be due to the Spanish authorities for the delay in a work that means so much both to Tangier and to the rest of Morocco, it must be admitted that the drawbacks of the track which now does duty as road have been much lessened, especially in winter, by the unvarying courtesy and kindness of both officers and men in the military posts in the country traversed. There are, indeed, few of any nationality who have ever lost their way, been benighted, or stuck in the mud between here and the French zone who will not testify to this fact. The individual soldier invariably gives ready help, and does not seek, and will not take, reward in any form. The officers put their services absolutely at the disposal of those in need of them, and whatever help they can give, whether it is to send soldiers to pull out or guard a car deep-bedded in the mud, or to turn out of their quarters and give shelter and food to the stranded travellers, is given with readiness and courteous zest; and their chief anxiety seems to be to prevent these stray guests feeling any sense of obligation.

Still, with all the kindly helpfulness that is met with on the way, the track from here southwards is almost impassable in even moderately wet weather, and the completion of the permanent road will be immensely welcome. As soon as the comparatively few miles, in the French as well as the Spanish zone, that are needed to link Tangier with the southern road system are finished it will be possible to go from Tangier by car to all western Morocco and past Fez and Taza to Algeria. When once again the autumn stream of those who seek sunny winter resorts begins to flow from England some part of it will certainly reach Tangier. There is little doubt, if the road is only open, that these visitors will not all be content to visit Tangier alone, but that many will go on by land to see the south, especially Fez and Marrakesh, which can already offer all that can be asked for in winter climate, beauty, and interest, and will soon, no doubt, be able to supply all other requirements of the most captious travellers.

Fire at Fez.

Details are only now reaching Tangier of a very serious fire that broke out in Fez on June 22, and destroyed a great part of the most important bazaars. A very important trade in Manchester goods is carried on in Fez and in the quarter that has been burnt, but, fortunately, it seems, though hundreds of little shops were destroyed, the main stores or warehouses (*fondaks*) were not touched. The most venerated mosque in Morocco, Mulai Edress, was, it is said, in danger, but, thanks to the energetic steps taken, no serious damage seems to have been done. The destruction of a place with such associations, especially at a time like this, would have had a great effect throughout the country, and it is extremely fortunate that the city was in charge of capable authorities. In the old days such a fire might well have involved the whole city.

EAST v. WEST.

As towards the close of some hot Eastern day
Beside the marble fountain I recline,
The world of care and labour falls away,
The cool and blessed night at least is mine.

Thus should it be; and thus would I restore
With thoughts of home the freshness of my heart,
Did not that Eastern genius bar the door
Of fancy, saying "Thou shalt not depart."

So speaks he; and the moonlight steals along
The countless arabesques; I seem to hear
From out the pillared dark the soft, sweet song
Sung by the slave-girls to some dead vizier.

In vain the Western spirit strives to free
Itself from that Circean reverie.

Fez, 30/9/17.

The Simla correspondent of *The Times* reports:—The Government has taken powers under the Defence of India Act to deport any person acting in a manner prejudicial to the public safety or the defence of British India. Such powers already exist in regard to foreigners.

What are your Natural Products?

We are interested in the Natural Products of your Country and desire to negotiate with you for the purchase of large or small consignments. We are particularly interested in

CORRESPONDENCE.

THE CYPRUS "TRIBUTE."

TO THE EDITOR OF "THE NEAR EAST."

SIR,—In your issue of April 5 you published an extract from Captain Ferguson's article in *Chambers's Journal* to Cyprus. The statement made therein that the tribute to Turkey has ceased is incorrect. The proper way of putting it is that there never has been a "tribute" in the strict sense of that word: that the so-called tribute was never at any time paid to Turkey; that the money in question was, until lately, sent to London and divided equally between the French and English Governments. At present, a sum of approximately £45,000 is paid to France annually. On the other hand, the real tribute due by Egypt to the Sultan has ceased since the outbreak of war, while the so-called Cyprus tribute is still paid to France. I gave an explanation of the Cyprus "tribute" at great length in your paper of December 31, 1915; unfortunately, no one has impugned its veracity.—I am, etc.,

GEORGE N. HOUSTON.

Kyrenia, June 12, 1918.

COUNTERACTING GERMAN PROPAGANDA.

We have made arrangements for forwarding free of charge to our readers pamphlets and other publications dealing with the British and Allied cause. This literature is in many European languages, and certain pamphlets and illustrated publications are also available in a number of Oriental languages. All applications should be addressed to the Editor, THE NEAR EAST, Devonshire Square, London, E.C.2. Among the most recent publications available for distribution free of charge are the following:—

"THE WELFARE OF EGYPT," by J. S. Willmore. A short summary of English administration in Egypt; alluding also to Germany's undermining influence, and the Mussulman's preference for the English rule. 36 pp. London: Hodder and Stoughton.

"TURKEY, A PAST AND A FUTURE," by A. J. Toynbee. Development of the new Turkish Nationalism and of German intrigue in Western Asia. Moslem ideas must prevail. Mesopotamia will develop its resources mainly by colonisation. 79 pp. London: Hodder and Stoughton.

"GERMANY, TURKEY, AND ARMENIA." 125 pp. J. J. Kelliher and Co., Ltd., London. Containing important statements by German missionaries, Danish nurses, German officials, and other foreigners, and extracts from foreign journals prohibited in Germany by the Censor.

"LOYAL INDIA," by Lord Hardinge of Penshurst. 15 pp. Sir J. Causton and Sons. On loyalty and service in the Indian Empire.

"THE CLEAN-FIGHTING TURK." A Spurious Claim. 4 pp. Reprint from *The Times*. This article, written by one who has exceptional experience of Turkish manners and customs, shows that the Turk behaves like a gentleman only when it pays him to do so.

"HORRORS OF ALEPPO," Seen by a German Eye-Witness, by Dr. Martin Niepage. 24 pp. T. Fisher Unwin, Ltd. The author, a teacher in the German technical school at Aleppo, reproaches German diplomacy for non-interference.

"MARTYRED ARMENIA." 56 pp. C. Arthur Pearson, Ltd., London. The author, a Bedawi, has acquired from reliable sources and from his own information, a mass of information regarding the atrocities committed by the Turk against the Armenian people. This he resolved to publish to the world, "to defend the faith of Islam against the charge of fanaticism."

"TURKISH PRISONERS IN EGYPT." 64 pp. A report by the Delegates of the International Committee of the Red Cross. Extracted and translated from the Official Reports of the Red Cross Society.

Two classes of non-commissioned officers and men of the Greek Navy, classes 1910 and 1911, have been called up.

The Hetman of the Ukraine has confirmed the law establishing a Senate at Kieff which "will represent the highest legal and administrative authority in the land."

The War Office issued the following statement on Tuesday evening concerning Mesopotamia:—There is no military operation to report. Great heat prevails throughout the country, but the health of the troops remains good.

The Athens Court of Cassation having rejected the appeal of the Greek officers from Görlitz, Lieutenants Hazzopoulos and Calamaras, who were condemned to death for treason by Court-martial, the two officers were shot at dawn on July 22.

The Lord Kitchener National Memorial Fund now amounts to £460,000. Recent subscribers are: "Two American Admirers of Lord Kitchener" (per Viscount Reading), £5,000; The King of Tonga and the Europeans and natives of Tonga (per Sir Bickham Escott), £4,665; inhabitants of the Falkland Islands, £410; Europeans and natives of the Gilbert and Ellice Islands (per Mr. E. C. Elliott), £377. All remittances should be sent to the Lord Kitchener National Memorial Fund, Mansion House, E.C.

NEAR EAST BOOKSHELF.

MONTENEGRO.*

The fates have dealt harshly with Montenegro. For her size—her population is little more than a quarter of a million—she has performed prodigies of valour, but she has been overwhelmed at a comparatively early period of the war, and now she can offer nothing to the Allied cause which has any chance of making itself felt among the armed millions on the Western front. As far as Great Britain is concerned, however, she is not likely to be allowed to sink into permanent oblivion. Tennyson's words are still with us:—

> O smallest among peoples! Rough rock-throne
> Of Freedom! warriors beating back the swarm
> Of Turkish Islam for five hundred years,
> Great Tzernagora! never since thine own
> Black ridges drew the cloud and broke the storm,
> Has breathed a race of mightier mountaineers.

and although she has had to bow before the storm, few will have regarded her present sorrow as anything but the prelude to a larger destiny. For this reason most people will be tempted to receive with a shrug of the shoulders the efforts that have been made to prejudice Montenegro in the eyes of the Allied Powers, to represent her as having been half-hearted in the fight, and too ready to discuss terms of peace with Austria-Hungary. There are many axes to be ground in the Balkans, and for a short period the situation in Montenegro was complicated enough to lend plausibility to any explanation. But a good deal of water has passed down the Drin since Mt. Lovtchen capitulated to the Austrians, and nothing can explain away the fact that Montenegro has undergone a cruel martyrdom at the hands of the enemy, and if it was for this that she made terms with the invaders, then she is to be pitied all the more.

Mr. Devine is one of the staunchest of Montenegro's friends, and in his attachment to the country and the people is at one with practically all those who know both. He occupies special ground in that he has been in close association with the Government and people both before and during the war. For this reason the criticisms and the intrigues directed against the country have touched him to the quick, and in writing a popular history of Montenegro he has felt obliged to take up the cudgels on her behalf against those who have attacked her with slander and insinuation. To the readers who have paid no attention to anti-Montenegrin bias the book may seem unduly weighted in this respect. But the author, realising that the object of those who started the campaign was to prejudice her in the eyes of the Allied Governments, and that Montenegro is not represented by a Minister of her own at the Court of St. James's, has taken the opportunity to deal at length with the Press campaign. Thus within a short compass we have a timely book, which gives a brief but readable summary of Montenegrin history and brings the tale down to the present day. Those who would understand why Montenegro has been assailed will find a full *exposé* of the personal equation in the episode.

PRESS ON THE NEAR EAST.

Life in the Karun Region.

Writing in the *Field* on "A Visit to Daniel's Tomb," Mr. R. Cheesman gives some pleasing pictures of animal life and wild scenery along the Karun River, in south-west Persia. He writes:—

The head of navigation for the larger river boats is the village of Nasrie, situated on the left bank of the Karun below the first rapids. Nasrie fills a more important place in the life of the river to-day than even Ahwaz. The cargoes which are brought up to it have either to be carried to shallow draught boats above the rapids, or taken by picturesque caravans of camels, mules, and donkeys, with their fierce Bakhtiari drivers, on long journeys over the mountains into the interior. The landscape is a desert, the flatness to the north broken by occasional small sandstone ranges of hills and mounds, sun-baked and sterile; though the ruins of gigantic canals are witness alike to the former agricultural wealth of the country and to the engineering genius of its ancient dynasties. With an average rainfall, good crops of wheat and barley are still grown round the villages on either bank, and just for this short period the khaki uniform of the landscape is changed to green. But a drought may mean complete failure of the crops. In the plain the Persian gazelle waxes fat on a few scorched fibres of grass, and apparently exists without water; while jackals and wolves pick up a precarious living from any animals that die in the caravans. There are also desert foxes, small animals with long brushes, which have their earths in the mounds, and come out at sunset to prey on the flocks of large pintailed sandgrouse. Occasionally they may catch a see-see, the plump little partridge which lives on the bare hills. In time of adversity they probably devour any carrion that the jackals leave. On the higher crags of the Ahwaz Hills a few pairs of Egyptian vultures and ravens nest in the spring.

Again, further up stream:—

The jungles afford a sanctuary for numerous herds of the European species of wild pig, and at daybreak many family parties can be seen wending their way home from foraging expeditions in distant cornfields. First comes the boar, a black and brown patriarch with tusks beyond the wildest dreams of his Indian relative; and following him the sows, with their families of little striped piglets trotting in single file. It is possible that nearer the Pusht-i-kuh Mountains, where the jungles are broader and the reputation of the Bakhtiari tribesmen keep people from wandering off the beaten track, the Persian lion may still be found, but with the increase of more accurate firearms among the shepherds and herdsmen the decrease of lions was inevitable. Another rare straggler is the Persian fallow deer. I have seen specimens of his handsome spotted skin obtained in these jungles. In the spring the loud crowing of the francolin, a large partridge of black and brown, challenges his neighbour to combat; and the Persian nightingale—named after Hafiz, the Persian poet—arrests attention as he pours forth his tale of love in melodies equal to those of our English bird. The two species differ only in the slight matter of the length of wing feathers.

One of the quaintest creatures is the spring-tailed lizard, which lives in colonies and burrows in the desert. It is a large and quaint reptile with the unchangeable smile of a cathedral gargoyle. In May he sits outside his burrow in the sun in full war-paint, a glory of purple and bright yellow, which makes him look more grotesque than ever. The reason for his smile becomes apparent when he is handled. One naturally avoids the mouth, but as soon as the hand is considered in range, round comes the thick spring-tail with the suddenness of a rat-trap and the flick of a whip-lash. It is a grim kind of humour that appeals to lizards.

In Lower Mesopotamia.

A highly interesting account of an official tour made by the Deputy Civil Commissioner of Busreh and party is given by the *Busreh Times*. The tour took the party through the Gharraf region—the region watered by the Shatt el-Hai, that is to say, and the following passage will give some idea of life along this old bed of the Tigris:—

The history of the country, physical as well as political, is written upon its face. Whether or no the Tigris once ran down what we call the Hai—the Gharraf is the Arab name for it—for centuries, every year, as the spring brought high water, a huge volume of water has come down this stream, which at other times is dry. Flood waters in this country, as all the world knows, carry an enormous load of silt. So the Gharraf, receiving nothing but flood water, has year after year built for itself a rapidly rising causeway along which it flows, well above the surrounding country. As the level of the river-bed rises so do the bunds along its banks, by which its waters are kept in place. The process, in the absence of any systematic conservancy, can have but one end. Sooner or later vigilance or material resources fail. The bank is breached. Miles of cornlands are flooded, and thereafter the river takes a new course, leaving to lands formerly dependent on it no trace of their prosperity save a name such as "Mother of wheat" or "Father of frogs" to tell of broad acres under winter or summer crops. This is the fate which of late years has overtaken Shattrah and the lands to the south and west of it adjoining Nasiriyah. Seven years ago the bank breached about three miles above Shattrah on the eastern side of the river, and a small canal, known as the Beda, found itself the unwilling and unworthy recipient of nine-tenths of the waters of the Gharraf. These it was, of course, quite unable to carry. Extensive flooding resulted all along its length, and thousands of acres formerly dependent in it were thrown out of cultivation. The consequent dislocation of tribal politics may easily be imagined. Every tribe, and every man in every tribe, fortified his position, if it were worth retention, alike against the waters and against his neighbours. If it were not, he moved elsewhere, and strove to snatch a parcel of watered land from some weaker or less wary fellow. Thick walled towers of mud rose from the earth on every side, like mushrooms, to guard alike the mouths of the channels and the lands lower down along these, over which their waters were spread. All this can be seen from any house-top in Shattrah, while the sun sinks to rest in a blaze of glory and the smoke of unseen fires hangs low upon the sky line, and countless flocks of swarthy sheep stuffed to repletion with delicious green grass come bleating homewards over the level plain.

PRISONERS IN TURKEY.

In a written reply to a question asked by Lord Henry Cavendish-Bentinck, Mr. Hope says:—

Clothing is issued to British prisoners in Turkey by his Majesty's Government, or by the Netherlands Minister at Constantinople on their behalf. Officers receive pay from the Turkish Government at 4s. 6d. or 4s. per day, according to rank. They also receive a relief allowance from his Majesty's Government, through the Netherlands Legation, up to a maximum of £T.18 (£16 4s.) per month. Other prisoners receive a relief allowance up to £T.10 (£9) monthly, but no pay except when working, as regards which the Turkish Government has stated that they receive from 50ps. (9s.) to £T.1 (18s.) per week when employed at large working stations under the orders of the military authorities. Those employed in other work do not receive pay. According to the statements of prisoners, it would appear that they are by way of receiving from 3ps. to 5ps. (7½d. to 11½d.) per day, which, however, does not always reach them.

With regard to food, the Turkish Government has stated that British prisoners receive the same rations as Turkish soldiers, consisting, according to locality and season, of meat, vegetables, boiled wheat, bean oil, etc. Here again, it appears from the statements of prisoners that the rations are not sufficient. Officers receive no rations. I regret that, in the absence of reports by the Netherlands Legation, whose representatives were not allowed before the Berne agreement to inspect camps, his Majesty's Government have not comprehensive information. All the above refers to Indian prisoners equally as to Europeans.

Madame Gennadius, wife of the Greek Minister, has left town for Bournemouth.

The King of the Hellenes visited the Greek sector on the Struma on July 18.

The Maharaja of Patiala was enrolled an honorary freeman of Cardiff on Wednesday.

Essad Pasha arrived in Athens last week and paid a visit to the Minister for Foreign Affairs.

Lady Elcho has gone from Escrick Park Hospital for Officers on a visit to the Countess of Wemyss at Gosford.

M. Michel B. Boeresco, the Roumanian Chargé d'Affaires, visited Mr. Balfour at the Foreign Office on Wednesday.

Sir Ronald and Lady Graham were among the guests at a dinner party given by the King and Queen on July 18.

Lord Methuen, Governor of Malta, arrived in Rome on Saturday. He has visited the Italian front, and will proceed to the British front.

Lieutenant-Colonel N. Arion, Military Attache to the Roumanian Legation, who left London for the Continent on Thursday last week, has returned.

The engagement is announced of Captain G. J. R. Lowe, R.A.M.C., to Madeline, only daughter of the Hon. C. R. Cumberland and Mrs. Cumberland, of Colombo, Ceylon.

On June 15, at St. Joseph's Church, Cairo, the marriage took place of Lieutenant-Colonel F. F. Carroll, D.S.O., and Miss Evelyn Bernard, daughter of Colonel and Mrs. E. E. Bernard. The service was conducted by the Rev. Father Fitzmaurice.

The King has appointed, as an additional Companion of the Order of the Indian Empire, in recognition of meritorious services rendered in connection with the war, Sirdar Kishen Singh, Lieutenant-Colonel in the Bharatpur Imperial Service Transport Corps.

A marriage has been arranged, and will shortly take place, between Brigadier-General P. R. C. Groves, D.S.O., R.A.F., elder son of J. Groves, late of the Public Works Department, India, and Margot, elder daughter of the late Clayton Glyn, of Durrington House, Harlow, and Mrs. Glyn.

An engagement is announced between Douglas L. McKenzie Fearn, third son of the late Major G. H. Fearn, I.M.S., and Mrs. Fearn, of Panchgani, India, and Bertha Gwendolen, only daughter of Mr. and Mrs. Hugh Nisbet, of Verona, Wilbury Crescent, Hove, and late of Maymyo, Burma.

The marriage arranged between Captain George Nigel Miller, 90th Punjabis, and Miss Dorothea Ella Robinson, younger daughter of the late St. George Robinson, of Woodville, Sligo, and Mrs. Robinson, of Lumville, The Curragh, will take place quietly at St. Ann's Church, Dublin, on August 6.

The engagement is announced of Lieutenant A. A. L. Miller, R.N., surviving son of Sir John Ontario Miller, K.C.S.I., and Lady Miller, 6, Sussex Place, Hyde Park, W., and Evelyn Mary, second daughter of Mr. W. H. More, Crown Receiver for Wales, etc., and Mrs. More, Crown Lodge, Harlech, N. Wales.

Sir Alexander McRobert and Sir Logie Watson, of the Cawnpore Woollen Mills, have recently returned to Cawnpore from Afghanistan. They went to Kabul at the personal invitation of the Amir, to advise his Majesty regarding an extension of the woollen mills originally established through the agency of the Cawnpore Mills Company. During their stay, which was rendered particularly enjoyable by the King's hospitality, a visit was paid to Paghman, his Majesty's summer residence. Afghanistan is a rich country, and the visitors were much impressed by one drive of forty miles through gardens and vineyards practically the whole time.

An engagement is announced, and the wedding will shortly take place, between Surgeon F. A. V. Denning, Royal Navy, eldest son of Doctor and Mrs. Denning, of Denmark Hill, S.E., and Daisy, only daughter of Engineer Captain Archie R. Emdin, C.M.G., Royal Navy, and Mrs. Emdin, of H.M. Dockyard, Malta.

A marriage has been arranged, and will take place in August, between Commander Lionel Turbett, Royal Indian Marine, Director, Sea Transport, Mesopotamia, second son of the late Thomas Turbett and of Mrs. Turbett, 2, Crosthwaite Park, Kingstown, Co. Dublin, and Constance Hilda, younger daughter of Mr. and Mrs. W. Rhodes James, Coonoor, South India.

M. Take Jonescu arrived in Paris on Sunday. He intends to proceed to most of the Allied countries in order to inform the various Allied Governments and enlighten the public regarding the position of the people in Roumania resulting from the Treaty of Bucharest, says *Reuter's* correspondent. M. Jonescu will visit Great Britain at the end of the month, and will afterwards go to America.

A marriage has been arranged, and will take place at the old Parish Church, Ayr, at 2.30 on Wednesday, August 14, between Captain Edward D. Atkinson, D.F.C., Royal Air Force, son of the late J. H. Atkinson, of Calcutta, and Nancy, second daughter of Mr. and Mrs. David Rowan, Dunskaig, Ayr, Scotland. No invitations are being sent, but all friends will be welcome at the church.

A telegram from Berlin to the *Kölnische Zeitung* says that the ex-Khedive of Egypt is on his way to Germany to visit the Kaiser.

Sir Alexander Hope, 15th Bt., of Pinkie House, Musselburgh, late of the Bengal Civil Service, left personal estate of the value of £25,798.

The Rome correspondent of the *Morning Post* reports that an influential Italian Committee for securing Armenian Independence has been formed. The committee includes the ex-Ministers Luzzatti, Barzilai, Ruffini, Scialoia, and Admiral Triangi, whose wife is an Armenian, the Mayor of Rome, and the Editor of the *Corriere della Sera*.

Yesterday afternoon, on the invitation of the Lord Mayor, a public meeting was held at the Mansion House to inaugurate the Serbian (Jugoslav) National War Aims Committee in Great Britain. Mr. Balfour, Sir R. Borden, Mr. A. Henderson, and the Serbian Minister were among the speakers. We hope to give a report of the meeting next week.

M. Marghiloman, Roumanian Prime Minister, states that the position in Bessarabia has now considerably improved. The land has been divided among the peasants by an autonomous National Council, which has also received the right to carry out agrarian reforms. The administration is autonomous, and the Government has only appointed a General Commissioner.

Commenting on reports in Roumanian newspapers that the Minister of Justice, M. Dobresco, has retired, and has been replaced by M. Mitilineu, the *Vossische Zeitung* says that M. Mitilineu is regarded by the well-informed as being in the Queen's confidence, having been her private secretary; and adds that apart from this, M. Mitilineu is known to be a friend of the Entente.

On Thursday, last week, the Indian representatives on the Imperial Conference and the Imperial War Cabinet—the Maharaja of Patiala and Sir S. P. Sinha—were entertained at luncheon at Claridge's Hotel by the Indian residents in London. Syed Ameer Ali presided, and among those present were: Mr. E. S. Montagu, Mr. W. Massey, Sir R. Borden, Sir Joseph Ward, Lord Islington, Lord Reay, Lord Desborough, Lord Elphinstone, Lord Lamington, Mr. B. N. Basu, Lieutenant-Colonel Clive Wigram, Sir F. W. Duke, Sir James Meston, General Sir Herbert Cox, Sir Valentine Chirol, Sir P. Pattani, Sir James Dunlop Smith, Sir Thomas Barlow, Aftub Ahmed Khan, A. Yusuf Ali, A. S. M. Anik, M. H. Ispahani, T. Lall, and N. C. Sen.

TRAGEDY OF MONTENEGRO,

THE SMALLEST AND POOREST OF OUR ALLIES.

MONTENEGRIN RED CROSS AND RELIEF FUND,

11, VICTORIA STREET, LONDON, S.W.1

(Registered in City of London. Section 1. War Charities 1916)

needs £700 WEEKLY for Feeding Prisoners interned in Austria-Hungary.

Donations will be much appreciated and gratefully acknowledged by the Hon. Treasurer, LADY ROPER PARKINGTON, Claridge's Hotel, Brook Street, London, W.1.

APPOINTMENTS, PROMOTIONS, ETC.

Kaimakam D. Mills Bey, Eastern Arab Corps, has been appointed second in command of the Western Arab Corps.

M. Jean Papas, who has been specially attached to the Greek Legation in London, has arrived and entered upon his duties.

Bimbashi G. C. Gowland, Military Works Department, has been struck off the strength of the Egyptian Army with effect from June 5.

Mr. M. G. Harris, who was formerly British Vice-Consul at Cairo, is now acting British Consul-General for the City and Port of Alexandria.

Bimbashi I. R. B. Bond, M.C., Staff Officer, Khartoum District, has been promoted to the rank of Kaimakam, and appointed second in command of the Eastern Arab Corps, and replaced as Staff Officer, Khartoum, by Bimbashi H. B. H. White, D.S.O., Eastern Arab Corps.

It is announced that Mr. John Stavridi, Greek Consul-General in London, has ceased to be honorary counsellor to the Greek Legation. Mr. Stavridi has received a telegram from the Greek Foreign Minister explaining that, owing to the presence in London on a special mission of the Greek Minister in Petrograd, there is no longer any raison d'être for the post Mr. Stavridi occupied. M. Politis expresses his warmest thanks for the services rendered by Mr. Stavridi as honorary counsellor.

OBITUARY.

Lieutenant Robin Creswell Carver, Royal Air Force, formerly of Benha, Egypt, was killed in a flying accident in England on July 17. He had his commission in August last year.

Lieutenant Eric Bainbridge, who was reported missing as long ago as September, 1916, is now officially reported dead. He was 18 years of age, and was the youngest son of the late Reginald Newton Bainbridge, of Assam, and Mrs. Emily Bainbridge.

Lieutenant-Colonel J. R. Webster, D.S.O., M.C., Sherwood Foresters, who was previously reported missing, is now reported as having been killed on March 22. He was engaged in business in Bombay when the war broke out and joined the Indian Expeditionary Force as a motor dispatch rider, in which capacity he served on the Western front for some months. He obtained a commission in February, 1915, and was wounded twice. He had been confirmed in the rank of temporary lieutenant-colonel in command of a battalion of his regiment shortly before he was killed.

Captain Chetwode Percy Evill, M.C., is reported killed. The only son of the Rev. H. Marten Evill, of St. Martin's Vicarage, Hereford, he was educated at Haileybury and King's College, London. He obtained the degree of A.M.I.C.E. in 1910, and became assistant engineer on the Bombay, Baroda, and Central India Railway in 1911. In 1914 he joined the Indian Army Reserve of Officers and was attached to the Sappers and Miners. Later, attached to the Farid Khot Imperial Service Sappers, he served from May, 1915, to February, 1918, in the East African campaign, and during that period he was twice mentioned in dispatches and was awarded the Military Cross.

DOMESTIC ANNOUNCEMENTS.

MARRIAGE.

HOYLAND—WOOD.—On Friday, July 5, at the British Consulate and St. Andrew's Church, Patras, Greece, by the Rev. F. W. Moore, C.F., Captain Harold Allan Dilke Hoyland, Special List, British Salonika Force (formerly of Constantinople), to Winifred Helen, eldest daughter of F. B. Wood, Esq., I.S.O., H.B.M. Consul, Patras, and of Mrs. Wood.

NEWS IN BRIEF.

The Postmaster-general gives notice that the mail service to Roumania is suspended.

A special session of the Indian National Congress will be held in Bombay in the middle of August in connection with the reform scheme.

Rainfall has been in excess in Upper Burma, Assam, Bengal, Bihar, Punjab South-West, Kashmir, and North-West Frontier Province; fair in Lower Burma; and scanty elsewhere. The Bombay monsoon is likely to continue weak.

It is stated by the American Committee for Armenian and Syrian Relief that the worst reports of the famine in Persia are confirmed. The committee is cabling £20,000 to India for the purchase of grain, to be dispatched by motor-truck to Persia.

A *Reuter's* message from Athens, dated July 17, states: The Areopagus to-day rejected the appeal of Lieutenants Hazzopoulos and Calamaras and their accomplices. Lieutenants Hazzopoulos and Calamaras were sent on a secret mission to Athens from Görlitz, the German quarters of the Greeks who surrendered at Seres and Kavalla. The execution of these officers, and of the lawyer Counoupis, will probably take place this week.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.

FRIDAY, JULY 26, 1918.

EGYPT AND "RECONSTRUCTION."

Although the war has brought nothing but gain to Egypt, it is symptomatic of the awakened interest in the essential things of national life, which is to be met with in every country to-day, that attention there is also being directed to the problems of the time when peace will have been restored. If in any part of the world a return to pre-war conditions might have been contemplated with some degree of complacency, it would be along the banks of the Nile. But apart from the changed spirit possessing the nations, Egypt, it has to be remembered, has acquired a new status, which gives her added responsibilities and makes fresh claims upon her self-respect. When the highways of the world once more teem with commercial activity, renewed, sooner or later, on a scale far greater than ever before, it ill behoves Egypt, situated on the bridge connecting the West and the East, to adopt an attitude of supineness. Moreover, it may well be that the period immediately following the cessation of hostilities, with all its complex problems for the different States whose conditions have been revolutionised by the events of the war, will introduce in regard to the chief necessaries of life a régime of "each for himself," with the inevitable disabilities for those who cannot keep themselves in the forefront. For Egypt, whose dependence on foreign trade may have presented no anomaly in the past, this prospect has rightly become a disquieting one, and she does well to formulate her plans betimes. Already during the war she has found it necessary to make various adjustments, and has learned that she cannot live on cotton alone. It was easy enough in the old days to rely upon the annual importation of two hundred thousand tons of cereals. Now there has to be a nicely balanced allocation of the areas under cotton and under cereals, and State intervention is required to enforce the decisions of the experts, in order that the country may not go short of breadstuffs. The inhabitants have been no less dependent on foreign sources of fuel, in addition to numerous manufactured articles, which, though not essential to everyday existence, have become so much a feature of modern life that they cannot be dispensed with readily.

Egypt has relied for so long upon her agriculture that the tradition has become established that she can never count upon an industrial future. The absence of coal and iron may prevent her from becoming a great manufacturing centre, but there would seem to be no reason why she should not remove from herself the reproach and material disadvantage of being a one-crop country. This, at least, is the verdict of a Commission appointed to ascertain to what extent the commerce and industry of Egypt have been affected by the war, and to make suggestions for the future. The Commission—a full summary of whose Report has been appearing in recent issues of THE NEAR EAST—raises the interesting point whether agriculture can be relied upon indefinitely to afford the people their subsistence. At the present rate of increase there will be twenty million inhabitants in a little over twenty-five years from now, and only a very marked improvement in the average yield per feddan would then meet the needs of the population, even if the total cultivable area were devoted to cultivation. This calculation, it may be noted, is based on the assumption that the people remain in their present social condition. It is far more likely that a considerable improvement will take place, and that the needs of the people will increase proportionately. Moreover, with the introduction of improved agricultural machinery the number of those for whom each feddan will provide occupation will become reduced, and other means of livelihood must be found. The Commission looks to the development of commerce and industry, as well as to an improvement and extension of agriculture, as the sole method of dealing with problems of the immediate future, and those that will have to be 'faced later. Practically the only obstacle in the way of the goal which the Report has in view is contained in the one word conservatism—the conservatism of the agriculturist, of the industrial worker, and of the trader who fears any change in the existing state of affairs which makes Egypt dependent on a large import trade. To remove some of their objections, it is pointed out that industrial expansion need inflict no injury upon agriculture, rather will it benefit the latter, as its raw material must be provided for the most part by the agricultural products of the land, while local industry may be able to provide agriculture at relatively cheap prices with some of the articles which it has hitherto obtained from abroad. Nor in the long run will the development of Egyptian industries prejudice the import trade; it may bring about a change in the commodities imported, but the increased prosperity of the country will be reflected in an increase in the volume of the goods received from abroad.

It is not to be expected that the goal which is thus marked out for Egypt can be reached without Government assistance, and the Commission has formulated a number of recommendations regarding the ways in which State aid can be given. They cover a wide extent of ground, ranging from temporary subventions and advances to reform of the Customs tariff and reduced transport rates. The Commission feels that, while there are adequate banking facilities in existence, there may be room for an agricultural bank and for one directly designed to assist and protect industrial enterprises. In regard to the Customs regime it favours a drastic revision of the tariff with a view to affording assistance to local industries, but it is careful to point out that it does not advocate ambitious schemes that might unfavourably affect the public revenue, or assistance to any enterprises that do not present adequate guarantees. Not the least valuable section of the Commission's recommendations deals with the question of industrial and technical education, into which it enters at considerable length. It desires to see industrial schools already existing brought into line with the industries carried out in the districts where they are situated, and others established for the purpose of assisting and supporting the industries of the different provinces. Hitherto, it may be inferred, the relation between the industrial school and local industries has been of the vaguest character. The matter, in the opinion of the Commission, ought now to be approached more uniformly and in a more practical manner, in order that the spirit of co-operation may be inculcated into all sections of the people, for the industrial renaissance of Egypt imposes obligations alike on capitalists, industrial masters, the workers, and the general public. Industries are by no means unknown to Egypt. For the most part, however, they have been carried out on a small scale in the past, and the Commission indicates those which are capable of expansion, as well as a number of new industries which seem to merit attention. The secret of success will lie in the extent to which the education of the Egyptian people can keep pace with the growing needs of the country. In this connection it may be well to inquire whether the great University of El Azhar is rendering to the country to-day the practical assistance that it must be within its power to render if organised on sound lines. Its prestige in the past could hardly have stood higher in the Arab world, but it will be found wanting if in the new era it is unable to adapt itself to the material needs of those who seek its guidance and instruction.

MAN AND HORSE.

By S. B.

In the East we are all interested in horses, they are so part and parcel of our daily lives; and in those lives most of us will have come across horses which, tractable enough with natives, have hated white men as a class with exceeding bitterness.

When that is the case it points to something wrong. When a horse is handled from an early age, and experiences nothing but care and kindness, it does not occur to him to be vicious. In India the early handling is in the hands of Indians, and Indians, though they mean well, are not always very wise. They will shut up a horse in a dark stable when he is the happier and the better for God's sunlight and an intelligent interest in his surroundings. They will tie him up head and heels when even a couple of hours a day in a paddock makes all the difference in the world. But they feed him and water him, not always very judiciously, and the horse knows that they make many mistakes; but the horse is very forgiving, and because the intentions are good he makes allowances.

Then he passes into the hands of the white man, and is ridden. It is possible that the white man does not ride very well, and often he regards the horse as a machine, a mere means of locomotion. A shoe pinches, the saddle is badly stuffed, and the horse is punished when it is the man who should be beaten. The horse refuses a fence and is thrashed, but often it is the man, not the horse, who baulked; and though the man may not confess it, the horse knows it. The man wants to ride faster than the horse can go, and then there is the whip. There is also the spur, and the spur is often used when there is no intention to use it, but merely because the man cannot hang on without his heels. The mouth is hauled about, the bit is too severe—it is all punishment for the horse. The punishment is unjust, and the horse is like a child; and, like a child, he resents injustice.

So the horse comes to hate the white man who rides him, and from the individual he comes to hate the race. He suffers the native grooms, the syces—they can groom him, and lift up his feet, and crawl under his belly to save the long circuit, and ride him barebacked with a watering bridle. The syces are fools; still, they mean well, and the horse all his life is suffering fools gladly. But the white man is another affair, and once the race hatred is acquired he has only to appear at the loose-box and the horse dashes at him with open mouth. The syce is permitted to saddle, but the white man must not mount. In one of Captain Thomas Williamson's charming old coloured prints of 1805 there is a picture of a sportsman trying to mount a grey country-bred. The syce is hanging on to the horse with a *jháran* over his eyes, the blindfolded steed is lashing out for all he is worth, and the white man is hopping about on one foot and aiming at the stirrup with the other. It is a picture to the life.

It must not, however, be assumed that all horses in India are like the murderer in Macbeth, whose only object in life was to make reprisals. The horse is very magnanimous, and more often than not he accepts memories of old wrongs with surprising toleration. The man-eater is the exception, and, moreover, the trait may not be the fault of his owner at any particular time. A horse of that description is nevertheless a nuisance, and the advice of Scripture to "agree with thy adversary while thou art in the way with him" is sound advice. I have personally not known any ordinary horse that firmness and kindness would not cure in the end.

The worst case I ever had was that of a Biluch mare—at least, she was nominally a Biluch, though the only Biluch part of her seemed to be her ears. She was a terror; the very sight of a white man came to her like the flicker of neuralgia, and aroused all the devil in her. She was such a freak, such a perversity, that only her beauty and her quality made the trouble worth while. For a month no food, no water, ever passed her lips unless I gave it with my own hands, and she came to welcome my coming with the soft neigh that horses give when they expect food. Then I took a risk—I went into her box empty-handed. She threw back her ears and showed her teeth viciously, but I stood my ground and told her I was surprised at her ingratitude, and she turned away ashamed. I had never any trouble with her after that.

Mares and geldings are seldom naturally vicious. If they turn ill-tempered and vindictive, it is because they have reason to believe that man is vicious, and they seek to defend themselves. They are what man makes them, and once convince them that man is kind and just and reasonable, and they will render loyal and cheerful obedience. But with entires it is different. We have been told how the Ardrossan colt hated Jem Robinson, how Mentor hated Mat Dawson, and how Muley Idris behaved when he had Fred Archer within reach of his teeth. In India, too, we have abundant examples. The T.B. Waler, "Recall," was a very bad-tempered horse; "Lucky Boy," winner in his day of the Civil Service Cup, was a perfect devil, and a horse by the T.B. Sir Simon de Montford, by St. Simon, was fit to kill any other horse he could approach.

The Arab horse is more usually a gentleman, but even Arabs can be unreliable. I once had an Arab that turned into a fiend when he was about eight years old. I left him in charge of an old syce, with whom he had been on good terms, when I went on leave, and found on my return that he had savaged the old man very badly. I then sold him, and his new owner wrote afterwards to say that the pony was an irreclaimable brute, "but," he added, "he is the best polo pony I have ever owned, and I would not part with him for worlds, though he has always to be played in a muzzle."

With entires we have, however, to remember what they are. The wild stallion of the prairie is as much a fighter as the jungle-cock. He has to be; he commands a harem, he protects his mares and foals. He holds his family only by fighting and defeating his rivals. He protects his family from man by vigilance, from wolves by courage and combat. If he were soft-hearted, mild-tempered, irresolute, he would cease to be; he would certainly not fulfil his business in life. And so it may be that domesticated entires may have instinctive memories of themselves in a wild state:—

"With flowing tail and flying mane,
Wide nostrils, never stretched by pain,
Mouths bloodless to the bit or rein,
And feet that iron never shod,
And flanks unscarr'd by spur or rod."

THE S. AND P. RELIEF FUND.

The C.O.S. should give its blessing to the Syria and Palestine Relief Fund for carefulness in investigation! In a land where begging has been reduced to a fine art from time immemorial, it would be easy to be imposed upon; but when it is part of the relief workers' task to care for the professional beggar with other sufferers, considerable acumen is needed. Sir Courtauld Thomson, British Red Cross Commissioner for Malta and the Near East, who has recently concluded a visit of inspection, speaks in the highest terms of the precautions employed against imposture. When you are relieving scores of thousands, a small army of investigators is needed, and this army is in the field and includes some Moslem ladies of high social position, whose work is a labour of love.

It is this thoroughness and the strong principles behind the organisation of the relief work which make its labours so acceptable to the military authorities in Palestine. Most cordial relations have existed from the outset between the Fund and the Army, and the Fund may be said to hold towards the military authorities in Palestine very much the position which the Red Cross organisation holds in relation to the Army. However perfect the Army organisation may be, in dealing with large tracts of occupied territory, there is a wide scope for voluntary enterprise, in moments of emergency, in supplementary ways, and in work outside the scope of the State.

To become self-supporting is to relieve the Fund, and every effort is made to put the destitute in the way of earning their own living. Hundreds of women are at work in Jerusalem, some of them making lace for sale. But now and again the supply of materials fails, and the relief workers have to discharge the women. Needles are hard to come by, and very expensive; cotton also is a heavy price. What with the terrible necessity of the would-be workers, the cost of materials, the difficulties of transport in war, the relief workers have need of all the courage and patience they can muster.

THE ABYSSINIAN REVOLUTION.

The Cairo correspondent who sent us the particulars of the Abyssinian Revolution that were published in our issues of June 21 and July 19, writes:—Since I last wrote, news has come from Jounder that its ruler, Ras Weled Jorjis has died, aged about 70. He was the son of Wizru Aya Hellush, daughter of King Sahla Salasi, the aunt of the Negus Menelik. He left no issue; and it is thought that the Government will send an official to administer the province provisionally. It is reported that the Government contemplates taking active steps in certain parts where disorder still prevails.

SCHOOL OF ORIENTAL STUDIES.
London Institution, Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.

For particulars, apply to E. DENISON ROSS, Director.

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

Army Commissions for Indians.

July 22.

Mr. MONTAGU, Secretary for India, replying to Colonel Wedgwood, said:—The King's commission will be granted to Indians under four categories—(1) A certain number of substantive King's commissions in the Indian Army to selected Indian officers who have specially distinguished themselves in the present war. (2) A certain number of King's commissions conferring honorary rank in the Indian Army to selected Indian officers who have rendered distinguished service not necessarily during the present war, and who, owing to age or lack of educational qualifications, are not eligible for substantive King's commissions. Such honorary commissions will carry with them special advantages in respect of pay and pension. (3) A certain number of temporary but substantive King's commissions in the Indian Army to selected candidates nominated partly from civil life and partly from the Army. (4) A certain number of King's commissions to Indians on qualifying as cadets at the Royal Military College, Sandhurst. For this purpose ten Indian gentlemen will be nominated annually during the war for cadetships.

Colonel WEDGWOOD: Does that answer mean that Indian students in this country will be able to get temporary commissions, or will they be debarred unless they go to Sandhurst, under the third heading?—Mr. MONTAGU: Under the third heading they will be nominated in India.—Colonel WEDGWOOD: Even if they have obtained qualifications in this country by being at Oxford or Cambridge they will be ineligible for commissions?—Mr. MONTAGU: No commissions will be given without adequate training.

Mr. C. ROBERTS: Is there any provision for military training for these officers or candidates for that rank in India?—Mr. MONTAGU: Yes, sir. No substantive commissions will be granted without adequate training. It is intended to provide adequate training under the third heading in India.

Indian Reforms.

Mr. DENMAN asked Mr. Bonar Law whether, having regard to the fact that each month's delay in granting constitutional reforms to India added to the difficulties of granting them and diminished their value when granted, he would allow an early discussion of the Secretary of State's report?

Mr. BONAR LAW said the subject was very important and also complicated, and before it could be properly discussed time should be given for its study. He knew the same thing was true of every member of the Government, and he fancied it was true also of most members of the House. He had already said that if there was a general desire for a discussion of the report he would find the opportunity. But he did not think anything would be gained by discussing it before the recess.

Mesopotamian Operations.

July 23.

Lord R. CECIL, replying to Sir J. Jardine, who asked for information as to the military and political matters on the coast of the Red Sea, the Hejaz, and adjoining Sultanates, and in Mesopotamia, said:—General Marshall's operations on the Euphrates in March, and his subsequent operations in the neighbourhood of Kerkook in April, resulted in inflicting on the Turks casualties amounting to about 10,000 men, of whom 7,500 are prisoners of war, the capture of 30 guns, and much other war material.

As regards the operations of the Mesopotamia Political Administration, very satisfactory progress is being made in redeeming the country from the state of ruin into which it had fallen under the Turks. Thirteen Government primary schools, four municipal State-aided schools, a teachers' training school, and a survey school have been opened; extension classes in agriculture have also been started. The local demand for education is very insistent, and is being met as rapidly as the supply of teachers will permit. Large tracts of land hitherto untilled have been brought under the plough through the combined efforts of the people and the Political Administration; use has been made of mechanical tractors and artillery horses, which have supplemented the ordinary means of cultivation. The opening up of the country by road, rail, and improved water transport, and the establishment of security on the highways, have resulted in an increase of trade and a lowering of prices of commodities. The contrast between the improved condition of Mesopotamia and that of the neighbouring country occupied by the Turks, where disorder and famine are chronic, has not failed to impress the population and its leaders, the local notables, and tribal chiefs. The relations between our troops and the people are excellent, and a spirit of harmony and co-operation prevails. The opinion is frequently expressed that the British people mean well by the Arab race. Turning to the operations of the forces of our Ally, the King of the Hejaz, the casualties inflicted on the Turks by the Arab armies along the line between Dera'a and Ma'an amount to about 2,000, in addition to which two locomotives have been destroyed, 122 culverts and bridges demolished, and railway communication between those two points permanently interrupted. In the interior, five Turkish convoys, aggregating 1,500 camels, have been captured by the Shereef Ali, and a severe defeat has been inflicted on the Emir of Hail by the Shereef Abdulla.

Sir J. D. REES inquired what kind of education was being given. Was it an English education? Lord R. CECIL: I am afraid I do not know the details, but I am sure it is the best education. In answer to other supplementary questions, Lord R. Cecil said he would inquire whether steps had been taken to open up the coal mines in a part of the area. The subject of irrigation was being considered, but he could not give the details of any scheme of that nature. He did not think that pilgrimages to the Hejaz had been interrupted.

British Prisoners in Turkey.

Mr. HOPE, Lord of the Treasury, replying to Lieutenant-Colonel Lord H. Cavendish-Bentinck, said: I am informed by the military authorities that the following deaths have taken place in prisoners' camps in Turkey since January 1, 1917:—Three British officers and 518 other ranks, including Colonials, one British naval officer and eight naval ratings; six Indian officers and 732 other ranks. I am informed by the military authorities that 474 British officers, including the Royal Navy and Colonials, and 4,815 other ranks, and 221 Indian native officers and 9,769 other ranks, have been taken prisoners by the Turks up to June 30 last. Fourteen British officers, including the Royal Navy and Colonials, and 1,655 other ranks, and five Indian native officers and 1,358 other ranks have died in captivity. The above figures include all those of whose deaths there is evidence; but I regret to say that, as I have previously stated, there are a large number of British and Indians missing who have not been traced.

A NEW INSCRIPTION OF ASOKA.

In the first number of the "Hyderabad Archæological Series," a scientific journal published by the bounty of his Highness the Nizam, there was printed, with translation, a commentary by pundit Rao Sahib H. Krishna Sastri, another specimen of an edict of Asoka, who is often called by French scholars Pujadari. The inscription was discovered in 1915 by Mr. Beadon, a mining expert, near to the village of Maski, not far from Lingsagar, and about a hundred miles distant from Siddapur, at which other texts of Asoka had been found.

Although there are several other epigraphic edicts or decrees of this king, this is the first one which assigns him the name of Asoka, which name we knew from Indian ancient literature. There is a certain similarity in the wording of the various specimens, and the new one, where defective from exposure, can, in most places, be restored from inscriptions found at Rupnath and at Bairat.

In all such cases the *editio princeps*, when examined by other specialists, has to be somewhat modified, and in this instance Monsieur E. Senart, the doyen of Sanskrit scholars in France, has in the *Journal Asiatique* given a fresh rendering of the text, with quotations from others, and philological arguments. At the same time he points out where the new text tends to improve our translation of previously-found inscriptions of Asoka.

Our space does not permit of a discussion of the reasons adduced by M. Senart for his rendering, but we give it in full, retaining the French because translations from translations are well known to be dangerous:—

> Au nom d'Asoka, cher aux Devas. Depuis plus de deux ans et demi je suis bouddhiste (laïque), et je n'avais pas beaucoup entrepris: mais voici un an et plus que je me suis rapproché du Samgha, et je m'en suis rapproché beaucoup.
>
> Ceux qui précédemment étaient dans l'Inde de véritables dieux, sont maintenant des dieux déchus. Cet objet est possible à obtenir même par les fidèles les plus humbles. Car il ne faut pas imaginer qu'un puissant seul le puisse obtenir. A tous, humbles et puissant, il faut dire: (Agissez ainsi et cet objet) sera acquis pour longtemps et il s'étendra, s'étendra indéfiniment.

Readers who are acquainted with Asoka's other statements will observe that here again part of his intention was to set forth that men such as the Brahmins and Ascetics professing to explain the esoteric meaning of the Vaishnavas and sacred books were no longer to be considered as veritable prophets or instructors. That their position was abolished by Asoka, and they had forfeited the confidence of the people, and their gods ceased to be respected also. J. O.

There was a severe earthquake shock at Cairo at 10.10 p.m. on July 16. No damage was done.

Finding it necessary to bring all means of transport strictly under Government control, the Greek Government has taken over the Piraeus-Peloponnesus railway.

On the occasion of the feast following on Ramadan, Moslems in Egypt offered up prayer that God might "grant complete victory to the magnanimous nation of Great Britain and her noble Allies."

A Kieff telegram says:—"Turkish authorities are undertaking the mobilisation of Mohamedans at Elizabetpol, Transcaucasia. Officers of the old Russian Army are appointed if they know the Turkish and Tartar languages."

The Postmaster-General announces that, as the mails for India and the East are no longer despatched on Fridays, but at irregular intervals, of which no notice can be given, it is advisable to post correspondence for those places as it is ready, and not to defer it until the end of the week.

Preliminary forecasts show that the acreage under jute in Bengal, including the State of Cooch Behar, is 2,250,836 acres, a decrease of 161,591 acres as compared with last year; that in Behar and Orissa, 150,567 acres, a decrease of 72,705 acres; and that in Assam, 90,300 acres, a decrease of 10,000 acres—a total decrease of 9 per cent.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

I have read with considerable interest a paragraph on Balkan trade in the current issue of the *Mercantile Guardian*, which suggests that my view that Balkan trade prospects are fully realised in this country is not altogether justified. As I think my readers may be interested in the paragraph in question, I quote it in full:—

An engineer who has put in thirty months in the Balkans studying Serbia, Macedonia, Bulgaria, and Roumania, with an eye to the special interests of German trade, confesses disappointment. The markets will be inconsiderable for years to come. There is room enough for machinery and modern products, but as there is neither money nor enterprise the engineer understands that it is a vacant room. The people are too primitive. The conclusion is as one might expect, but it is not solely in Germany that false anticipations have been encouraged. At any rate, in British trading circles extravagant hopes have not been believed.

***

Some comment seems to be called for on the paragraph. I may point out that the engineer in question examined the trade prospects "with an eye to the special interests of German trade," and in the circumstances it is not surprising that the results of his inquiries were disappointing. As far as Germany is concerned, there is no question that the Balkan markets "will be inconsiderable for years to come." The Allied countries there have suffered too much at the hands of the Central Powers, both before and during the war, for it to be likely that there should be scope for further "commercial penetration" in the future, provided the traders of Great Britain and the rest of the Allies make it possible for them to abstain from trade relations with the enemy. If this country, France, and the United States do their duty, there will be a "vacant room" for the Germans and their allies in the Balkans, but it will not be because "there is neither money nor enterprise."

***

I have frequently pointed out that the Allies will be bound to give the fullest assistance to Serbia and Roumania in the shape of money and goods. Financial aid will naturally be the most important means of helping these countries to recover their former position, and, while Germany would no doubt be only too ready to furnish this aid on "terms" so that she might resume her dubious commercial manœuvres, she will be unable to do so for the simple reason that her finances will be unequal to meeting the normal calls on them. As to our contemporary's statement that "in British trading circles extravagant hopes have not been believed," it is scarcely a question of "extravagant hopes." No one expects the Balkan markets to prove a gold mine for traders, but they certainly will offer excellent prospects after the war, and both on this account and because it is a national duty to counteract German influence in the Balkans, British traders will be blind to their own interests if they fail to cultivate these markets.

***

Obviously if Palestine is to be developed in accordance with expectations a very considerable extension of banking facilities in that region will be required. It is, therefore, satisfactory to be able to record the fact that the Anglo-Egyptian Bank has turned its attention in that direction, and has established branches at Jerusalem and Jaffa. The premises which the bank has taken in these towns are those which formerly housed the Deutsche Palestina Bank, one of the subsidiary enterprises of the Deutsche Bank in the work of commercial penetration before the war, and one which Palestine will probably not be "privileged" to receive again.

***

A question of interest to former British residents in Turkey was raised in the House of Commons this week by Sir Fred Hall, who asked whether any steps had been taken, or were proposed to be taken, to compensate British subjects who have had to abandon their businesses and have had their goods and properties seized by enemy Governments. In answer Lord Robert Cecil pointed out that such claims obviously cannot be settled until the conclusion of hostilities. He would consider, he added, the suggestion that funds belonging to the Ottoman Government should be used for the purpose of compensating British interests in Turkey. The refusal to entertain requests for compensation before the end of the war will, it is to be feared, disappoint some claimants, but it is not to be supposed that the Government would turn a deaf ear to the applications of those for whom the withholding of some payment on account entails real hardship.

***

A contemporary relates a curious story regarding the methods adopted by the merchants of Baghdad to meet the demand of the British soldiers for Persian carpets and rugs. It seems that such brisk business was done in these articles when the troops first entered Baghdad that the traders came to the conclusion that it would be well worth their while to import carpets and rugs from Cairo and London. This intention was carried out, with the result, it is stated, that carpets and rugs that originally emanated from Baghdad have commenced to flow back there, and have been bought freely in the Baghdad bazaars at ever increasing prices. If we accept the facts as stated it makes a piquant story, to say the least of it, and one which is thoroughly in keeping with the ways of the East. Congratulations are no doubt due to the Baghdad merchants for their astuteness, but equally I must condole with the Shipping Controller on what appears to be an extraordinary waste of tonnage, which could surely be put to better use at the present time.

***

I am interested to see that the question of the adoption of English as the official language of Egypt on which I commented recently in connection with its advocacy by the Manchester Chamber of Commerce has been receiving considerable attention in the Egyptian native Press. The attitude of these papers is distinctly one of cordial approval. Thus one journal says that "the English only do good and fulfil a duty if they think of promoting their language in any direction." Evidence in the same direction is to be found in the correspondence columns. Thus another journal contains a letter from "An Egyptian," in which he says:—

Those who follow public affairs in Egypt are of opinion that the English have not made enough efforts to spread their language. Although there are a good many schools of foreign missions and many private schools which teach French, the English have not opened special schools to teach their language, and its instruction in primary and secondary schools of the Government has advanced very slowly.

These indications are the amplest support of my contention that an excellent opportunity of making the change presents itself at the present time, and I am tempted to ask, "Why the delay?"

***

Presiding at the recent general meeting of the Anglo-Egyptian Oilfields, Sir Marcus Samuel pointed out what Egypt owed to the development of the oil industry at the present time. "The opportune production of oil," he declared, "has saved Egypt from the horrors of a fuel famine, and relieved to an enormous extent the shortage of tonnage for the requirements of the Empire." Dealing with the future of the Hurghada field, he said that if an output of 1,000 tons a day was to be maintained it would be necessary to keep at least 30 wells in operation. "In the considered opinion of our technical advisers," he went on, "the anticlinal at Hurghada, in so far as it has been proved, would barely support that number. Consequently we have made most urgent representations to the Egyptian Government that it should enable us to explore for and, if possible, find further territories upon which a permanent business can be developed." He added that the company held certain exploratory rights over considerable territories from the Egyptian Government, but they had been unable to carry out any prospecting programme owing to war conditions and to the desire of the Government that they should concentrate on production at Hurghada.

***

The year has not been a good one for the Indian tea industry, but all the same a few companies have continued to make quite a satisfactory showing. The Jhanzie Tea Association, for instance, whose report has just appeared, achieved results very little below those of the previous year, the net earnings being £39,165, compared with £45,400. The dividend is all but maintained at 14, against 15 per cent., £5,000 is again placed to the reserve and contingencies fund, and £22,638 is carried forward, subject to excess profits duty. The crop amounted to 2,715,800 lb., against 2,495,200 lb. in 1916, but this increase was counterbalanced by the lower price obtained of 11.34d., against 12.74d. It remains to add that 9.117d. was the price per lb. paid by the Government.

***

The Department of Statistics in India recently issued some interesting particulars regarding industrial establishments in that country, showing that in 1915 there were 4,053 industrial establishments which provided employment for 1,335,147 persons; 171 of these establishments were owned by Government, local authorities, or State Durbars, and 3,882 either by companies or individuals. Cotton mills and cotton ginning and pressing factories employed over 400,000 persons, while the jute mills had 250,764 workers. The forty-one tanneries and leather works, it is interesting to note, had 9,339 employees. Particulars of industries employing less than 5,000 persons are not given separately; 649 industries come under this category, the employees totalling nearly 100,000.

THE MONTAGU-CHELMSFORD REPORT.

India's Economic Position.—I.

Not the least interesting portion of the Montagu-Chelmsford Report is a comprehensive survey of the commercial and industrial outlook in India and of the various developments in these spheres of activity in recent times. Explaining their reason for dealing with this question, the authors state that in the course of their discussions the conviction was forced upon them that economic factors enter largely into the political situation in India. In this connection they quote the following words of the late Mr. Ranade, which are most apposite in view of the insidious efforts of Germany to bring India under her economic domination by means of control of important industries such as the Calcutta hides trade :—

> The political domination of one country by another attracts far more attention than the more formidable though unfelt domination which the capital enterprise and skill of one country exercise over the trade and manufactures of another. This latter domination has an insidious influence which paralyses the springs of all the various activities which together make up the life of the nation.

Emphasis was laid in the recently issued report of the Egyptian Industries Commission on the disadvantageous position of a country more or less dependent on agriculture. That much the same view is taken of India may be gathered from the statement that the economics of a country which depends to so great an extent as India on agriculture must be unstable. It is pointed out that there is still no great margin of taxable capacity among the peasant classes; that their poverty raises the question whether the development of industries would not materially raise the general level of well-being; and that it is "clear that the lack of outlet for educated youth is a serious misfortune which has contributed not a little in the past to political unrest in Bengal." The report goes on to refer to discontent at the fact that the principal feature of India's trade "continued to be the barter of raw materials valued at relatively low prices for imported manufactures, which obviously afforded profit and prosperity to other countries industrially more advanced," and says that "patriotic Indians might well ask themselves why these profits should not accrue to their country; and also why so large a portion of the industries which flourished in the country was financed by European capital and managed by European skill." Some such complaints, it is added, began to mingle with the criticism of Government that made itself heard during the time of Lord Curzon's administration; and as it progressed the movement in favour of an industrial revival tended steadily to assume more of a political colour :

> The fact that India's foreign trade was largely with the United Kingdom gave rise to a suspicion that her industrial backwardness was positively encouraged in the interests of British manufactures, and the maintenance of the excise duty on locally manufactured cotton goods in the alleged interests of Lancashire is very widely accepted as a conclusive proof of such a purpose. On a smaller scale, the maintenance of a Stores Department at the India Office is looked on as an encouragement to the Government to patronise British at the expense of local manufacturers. In 1905 there was instituted as a bye-product of the National Congress an annual industrial conference, which had the result of linking the movement towards industrial independence more closely with politics; and the fact that Government officials were allowed and even encouraged to assist the conference failed to compensate for the lack of a more striking manifestation of Government's good-will.

The report proceeds to point out that as the desirability of industrial expansion became clearer the Government of India fully shared the desire of Indian leaders to secure the economic advantages following the development of manufactures, and adds :—"We have observed elsewhere that English theories as to the appropriate limits of the State's activity are inapplicable to India. We believe that this is true in the case of industries, and that if the resources of the country are to be developed the Government must take action."

Economic discontents definitely merged in political agitation, the report goes on, over the Bengal partition. The swadeshi movement was the positive and the boycott the negative expression of the same purpose.

> The advanced politicians took up and tried to put in practice the ideas for new developments promoted by the newly-instituted industrial conference, while at the same time they encouraged or countenanced the boycott, which had been adopted in the hope of bringing pressure to bear on manufacturing opinion at home in favour of the annulment of the partition. These events synchronised with Japan's defeat of Russia, an event which dazzled the imagination of many young educated Indians. In Japanese progress and efficiency they thought they saw an example of what could be effected by an Asiatic nation free of foreign control. Many students helped by scholarships granted by patriotic persons or associations hurried to Japan for technical and industrial training. Many of them returned to take part in the *swadeshi* movement of the years 1907 to 1909. Numerous small factories for making matches, hosiery, pencils, cutlery and the like were started, and many collapsed through some or all of the many ways of breakdown, which must be expected when patriotism is called upon to make good the want of business experience and hard practical training. We are informed that the cause of failure generally was not so much the lack of some degree of technical knowledge as inability to apply it under commercial conditions.

Following the ineffectual boycott and the losses and disappointments occasioned by the failures of indigenous enterprise came the failures of Indian banks in the Punjab and Bombay.

> Side by side with this went on the steady progress of enterprises under British control, and a marked expansion of foreign trade. We feel no surprise that there remained a feeling of bitterness among the advanced party. But the moral of these disastrous adventures is one for all parties to read. The people have recognised their inability to carry out their own programme without the help and guidance of Government; and they confine themselves for the most part to pressing their claims for State assistance and for a policy of tariff discrimination against foreign imports. Public opinion has expressed itself again and again in the Councils, on the platform, and in the Press. Moreover, the war has created a new position. The prohibition of imports from enemy countries was welcomed as giving India an opportunity, in spite of the difficulties which beset it, of replacing foreign articles by home products. After the war the need for industrial development will be all the greater unless India is to become a mere dumping-ground for the manufactures of foreign nations which will then be competing all the more keenly for the markets on which their political strength so perceptibly depends. . . . On all grounds a forward policy in industrial development is urgently called for, not merely to give India economic stability, but in order to satisfy the aspirations of her people, who desire to see her stand before the world as a well-poised, up-to-date country; in order to provide an outlet for the energies of her young men, who are otherwise drawn exclusively to Government service or a few overstocked professions; in order that money now lying unproductive may be applied to the benefit of the whole community; and in order that the too speculative and literary tendencies of Indian thought may be bent to more practical ends, and the people may be better qualified to shoulder the new responsibilities which the new constitution will lay upon them. These considerations led Lord Hardinge's Government to recommend the appointment of the Industrial Commission which is at present sitting.

BANK AMALGAMATIONS.

Position of the Exchange Banks.

During the past few weeks considerable excitement has been caused in the City by the rumours of further bank amalgamations, in one of which it was said that the National Bank of India would be incorporated. The report concerning this institution, however, has been set at rest by the public announcement that it is not included in the combination. It is understood that when negotiations were in progress, and probably when Government sanction was applied for, the India Office raised objections to the participation of the National Bank of India in the scheme, with the result that their name does not now appear in the combine. It is quite within the bounds of possibility that the promoters have not given up hope that the objections made by the India Office may eventually be overcome. The amalgamation in question embraces various powerful interests in the City, as well as a large Scottish bank, and an institution with important connections in South America.

City opinion, although not exactly alarmed at these amalgamations, is beginning to look askance at them, and it may as well be said that they are not altogether in favour in the discount market. Opportunities have been taken of sounding Manchester exporters on this matter, and some of the merchants there have no hesitation in expressing their strong disapproval. Manchester opinion on this subject is not one to be lightly ignored, particularly by an Eastern exchange bank, because of the immense volume of shipments from that market to the East, which necessitate finance through the channels specially employed by the exchange banks. It is, of course, true that a large amount of the requisite finance is now supplied by other banks and discount houses, but the intimate connection between the Lancashire shipping firms and the exchange banks, which has been fostered for many years, is likely to be severely strained should any of them be absorbed by a combination, however powerful. It is possible that one of the arguments adduced in favour of such an amalgamation may be that further capital is necessary to provide for expansion and competition after the war, but the exchange banks to-day are stronger than they have ever been, and it may reasonably be assumed that they are in a position to keep their Eastern branches supplied with funds sufficiently ample to meet the demands upon them for crop movements and the requirements of trade. Further fresh capital, if required, would be forthcoming without any difficulty, subject to Treasury sanction.

No doubt after the war there will be a very large inquiry for money to finance new enterprises and furnish further accommodation for industrial developments, but it is not going to relieve the present situation in India to place large sums in the London market at the disposal of the exchange banks, because in present conditions the facilities for remitting money thence are so much curtailed that the credits could not be availed of to more than a very moderate extent. It is as well to emphasise this aspect of the situation because, even if it be true that Government are willing to grant assistance to the exchange banks by placing funds at their disposal here, the intention, to be of any service, will have to go beyond that, and include arrangements for transfer to India where the money can be used. Under existing conditions merchants and banks are tied hand and foot by Government restrictions, which have been borne with exemplary patience, and those imposed on the remittance of money to India and Ceylon have seriously hampered estate management and certain branches of legitimate trade.

GOLD MOHUR.

GREEK CONTROL OF TRANSPORT.

The Government has decided that, under present conditions, it is necessary to bring all means of transport strictly under Government control, as has been done in other countries at war, including the United States, says Reuter's Athens correspondent, in a message dated July 17. As a result of this decision, the Government has taken over the Piræus-Peloponnesus Railway.

MOROCCO NOTES.

Favourable Crop Prospects.

(From Our Own Correspondent.)

Tangier, July 10.

A visit a few weeks ago to Morocco's chief grain growing districts fully confirmed the general report that this year's crops will be far above the average, even if they do not amount to a record. Such of the early crops as were still unreaped were as a rule splendid, and the late crops—maize, chickpeas, etc.—gave promise of better results than have been seen for very many years. The country has this year undoubtedly had very good luck—luck which, if only for the brilliant services rendered by her sons on the battlefields in France, she fully deserves. The authorities instead of being engaged, as at one time seemed quite possible, in seeking whence and how food could be brought to a country which had exported its last year's crops and had no crops this year, will now have the difficult but satisfactory work of finding tonnage to carry a very large surplus for export.

The fertility of the soil, when, as is usually the case, the amount of rainfall is sufficient, is remarkable, and the climate permits of a most unusual range of crops. The Agricultural Department continues experiments to find more valuable crops in order to make better use of the exceptional conditions, but so far as is generally known has not arrived at definite decisions. Strangely enough, until this year the country imported nearly all the European potatoes required. Years ago an Englishman grew on the coast, and exported to London, early potatoes which obtained the highest price on the market, but for some reason potato growing has not become general, though the condition for growing the crop, especially of early varieties, are admittedly excellent. It is quite certain that large areas of the country would make excellent vineyards; but any scheme of wine production on a large scale would probably clash with the interests of other wine growing centres, and it seems unlikely that such a use of Moroccan land would meet with favour.

Rising Land Values.

Moorish farmers, after several good years, and no longer afraid to draw attention to their prosperity, are much more ready to buy than to sell land, and cases are reported recently of their buying large blocks of land up to £8 per acre. They are keen farmers, and ready to adopt, whenever they see a probable profit, new crops and new methods, and this enterprise on their part is to be encouraged. Nevertheless, in course of time, and when, as is probable, a large number of Algerian colonists come to settle in the country, it is possible that there will be some difficulty in reconciling the interests of the new-comers and those of the natives. The responsible authorities are said to be most anxious that native landowning should not be in any way discouraged, and schemes have been proposed by which tribes which have rights over more land than they can at present cultivate should surrender the surplus on fair terms, thus making it available for European colonisation. So far the supply of uncultivated but useful land is very large, and there is room for all; but undoubtedly farmers of this most intelligent race of natives, capable of working up to the European standard and content with less than European profits, will often be able and willing to offer better prices for land than European competitors.

Among other produce of which there is this year a large surplus for export are almonds, but at the present [illegible] exporters state that they are in difficult position. Almonds are [illegible] very few articles of Moroccan produce which are allowed to be sold for [illegible] the French military [illegible] if it were allowed, nearly all would be exported to England. The British Government, however, does not, it appears, at present permit the importation from Morocco of any quantity than that imported in 1916: the crop of that year was very poor, also some shipments made in that year did not arrive till the next year, and do not appear in the 1916 returns. The whole amount permitted has, it seems, been shipped without touching the present large crop, which is in great danger of finding no market. If this turns out to be the case the demand for cotton and other British goods in the almond growing districts will certainly be much less than it otherwise would be, as the growers will have less to spend. It is to be hoped that in view of the great need of preserving all outlets for British goods some concession may even now be found justifiable.

Expansion of Industries.

Under the influence of high prices and freight difficulties local industries are beginning to spread beyond Casablanca. Thus there is now a small soap factory in Marrakesh which turns out an article that is said to compete successfully both in quality and price with similar types of soap made in France. Another sign of development is the tendency that is now beginning to manifest itself for business to spread inland. Independent Morocco had important coast towns, inland cities such as Fez and Marrakesh, and small villages, consisting chiefly of huts or hovels, but there were extremely few centres to correspond with European country towns. There seems every reason to think this will no longer continue to be the case, and that little country towns will become numerous, each of them a fresh centre for development which will certainly raise the standard of life and the requirements of the country Moors. Some of the few existing country towns like Settat are developing a vigorous business life, and round some of the chief country markets, which, except on market days, had nothing but the butchers' poles to mark their existence, are springing up stores and shops which certainly mark the beginnings of new towns.

LANCASHIRE COTTON.

An Uneventful Week.

Manchester, Wednesday.

As far as fresh business is concerned the week has been rather uneventful. Matters which require adjustment, however, tend to increase. A serious development has occurred in connection with the dispute between the Control Board and the Trade Union Officials. The Control Board resent the interference of the Board of Trade and it is said that the members are prepared to resign if their action is not confirmed. A communication from Sir Albert Stanley is expected before the end of this week. Some uncertainty still exists with regard to the conditions under which Egyptian cotton will be bought and sold from the beginning of next month when the Government takes over control. It is rumoured that the Egyptian futures market will be closed. There is scarcely anything new to be said as to the crop. A slump in American cotton prices has occurred in New York as a result of a report that the purchases of the Allied Governments in future will be made through the War Trade Department at Washington. Prices in Egyptian yarns have tended to advance and the scarcity of supplies is very acute. A very fair business has been done at full rates. Although rather more inquiry has been met with in piece goods for Egypt the sales have not been important. It is again stated that goods are moving off more freely abroad. A little more trade has been done in mull dhooties and jaconets for Bombay and Madras. Some testing of prices has occurred in shirtings for Calcutta. Government business has been about in heavy materials. American yarns have been rather more irregular in price when tested and the tone remains slower. Export bundles may be described as generally inactive.

A new company has been formed at Alexandria, called the Eastern Trading Company, for the import and export trade. The company's capital is £E10,000 in £E4 shares.

The *Vossische Zeitung* states that the Roumanian Finance Minister, M. Saulescu, has announced that representatives of the Entente Powers have presented claims for compensation for war material, bought and paid for by the Entente, which is still in the possession of the Roumanian Government.

EGYPTIAN CROPS.

The bulletin of the Egyptian Ministry of Agriculture gives the following particulars regarding crop conditions in June:—

Cotton.—The weather has been windy during the first-half and exceptionally hot in the middle of the month, and on the whole warmer and more favourable than in May; the nights were moderately cool and damp. Water supply is abundant. Besides the usual watering, hoeing and thinning are still going on in the late cotton. The cotton-worm attack, although prevalent in Lower Egypt and Giza, is generally light. Some isolated cases have been reported from Upper Egypt provinces. The work of hand-picking and burning of leaves infected with egg-masses is being vigorously carried on, and in rare cases newly-hatched eggs have been found. The pink boll-worm is reported to be present to a remarkable extent in the stigmas of flowers examined in Sharqîya, and the common boll-worm has been noticed in the terminal shoots in Beheira. The crop, favoured by the weather, has considerably, though not completely, recovered from the effect of a much retarded start. Flowering is profuse and the formation of bolls has commenced in early-sown areas.

Rice (*Séfi.*)—The weather has on the whole been favourable, but the prevailing high winds, especially in the afternoons, have been an unsatisfactory feature and have frequently necessitated running-off the water to prevent the waves from dragging the young plants up by the roots. Water supply plentiful. The sowing of fino is nearly completed in Daqahlîya. Yapani is still being planted. The shortage of labour for weeding and transplantation has somewhat retarded operations. Rice-worm is very common in Beheira and Gharbîya and is causing a certain amount of damage. The plants are looking well and the crop promises to be good.

Millet (*Séfi.*)—Weather favourable and water supply ample. Thinning, hoeing, and watering are being carried out. Attacks from stalk-borer are noticed in a few provinces, but damage caused is slight. Plants look uneven owing to the wide variations in time of sowing. Early-sown millet is in excellent condition, but the late-sown is still very backward and apparently suffering from lack of manure. The area put under millet this year is much larger than usual.

Sugar Cane.—Weather seasonable and water supply sufficient. Hoeing and watering are proceeding. The crop is progressing favourably and plants are healthy.

Wheat.—Threshing and winnowing are going on everywhere. The harvesting of the crop is still being carried on in a few districts of Daqahlîya, Sharqîya, and Qalyubyia. The results of threshings have been influenced by the attack of rust, these from the *Hindi* being excellent both in respect to yield and quality, whereas those from the *Baladi* have turned out less favourably. The yield of *Tibn* seems to be less than last year, probably owing to lack of artificial manures.

Bersîm.—Weather favourable on the whole, but the intense heat prevailing on some days of the month has caused some damage to the late crop. Grazing is still being carried, but to a very limited extent. The bulk of the seed crop is ripe and harvesting is general; threshing, however, is comparatively neglected. The yield is not quite satisfactory and is rather bad in places.

INDIA'S JUTE FORECAST.

The preliminary forecast shows that the acreage under jute in Bengal, including the State of Cooch Behar, is 2,250,836 acres, a decrease of 161,591 acres as compared with last year, while that in Bihar and Orissa is 150,567 acres, a decrease of 72,705 acres, and that in Assam is 90,300 acres, a decrease of 10,000 acres. These forecasts show a total decrease of 9 per cent. as compared with last year's final figures.

An embargo has been placed by the Bulgarian Government on all this year's grain crops of Bulgaria, Macedonia, the Morava district, and the Dobruja.

EGYPTIAN INDUSTRIES COMMISSION REPORT.

III.—The Question of New Industries.*

There are in addition other industries which are in their infancy, but which could be easily developed, such as the modern tanning industry, the manufacture of soap, and the extraction of edible and lubricating oils, for all of which the raw material exists in the country, and the development of which the commission recommends to the Government's very serious attention. There are also certain industries, mainly what might be called native industries, which still require a certain amount of assistance, such as weaving, basket-making, tannery, leather work, metal work, woodwork, artistic and building industries, whilst there are others which have been created since the war, such as the tarbush trade, bedsteads, rubber, uniforms, cement, construction material and milling, which, having succeeded in establishing themselves, are deserving of every encouragement on the part of the authorities.

Methods of State Aid.

As regards the assistance to be given to industries, the commission puts it on record that only those are deserving of assistance which are stable, can withstand competition, and are of a nature to benefit the general public. At the same time the commission deprecates the idea that encouragement should only come from the State, and it reiterates its opinion that the people must also collaborate in any assistance which is given to any industry. This leads the report to detail the means by which State assistance can be given to industry. They are the following :—1. Reform of the Customs tariff; 2. Extension of professional education; 3. The exemption of Egyptian industries from all excise duties unless such duties are also imposed in the form of an additional Customs duty on similar imported articles; 4. The application of reduced rates and special facilities for the transport of Egyptian manufactured articles. To a certain extent this is accorded at present, but it should be more general, and although this might mean a decrease in revenue, it should in the long run be compensated by an increase in traffic. 5. The better adaptation of the Nile and canal and lock systems to transport work; 6. Preference to be given to local products and local firms over foreign products and foreign firms, in Government adjudications especially, when the prices offered are comparatively equal; 7. The granting of temporary subventions and concessions on favourable terms for the development of industrial enterprises of a nature to develop the country's resources; 8. State advances against guarantee to provide capital for creating, developing, or improving an industry; 9. Greater financial assistance by the State to enterprises of public utility affecting Egyptian industry; 10. The creation by the State of an organisation which would provide the preliminary expenses in the case of new industries and of a chemical laboratory for research work in this connection; 11. The creation of commercial and industrial museums and exhibitions; 12. The propagation of general information concerning commercial and industrial questions; 13. The creation of co-operative industrial societies; 14. The appointment of qualified specialists as instructors and travelling inspectors for the purpose of giving advice in the development and improvement of the smaller native industries; and 15. The creation of an industrial bank.

Assistance for Sound Enterprises.

The commission is not of opinion that the measures of State assistance which it has outlined would unfavourably affect the public revenues. It has no wish to recommend that the country's resources should be expended on objects of doubtful value, or the return from which would not be felt some long time, to the detriment of the many great development works which are before the authorities, and the execution of which will have such considerable effect on the country and the State. No assistance is to be accorded to any enterprise which does not present adequate guarantees, but in the event of such assistance being given the advances or expenditure incurred by the State, which would in any event not be of great magnitude, would assume the aspect of an investment from which it would derive benefit under many forms. The commission recommends a drastic revision of the customs régime so as to afford assistance to local industries, and it points out that if, contrary to its expectations, the concessions made to those enterprises are not entirely compensated by the raising of the duties on those articles which are better able to bear such higher duties, then there are new impositions which the State could levy, such as succession duties, stamp duties, income tax, etc.

Industrial and Technical Education.

The commission deals at length with the question of industrial and technical education, and takes branch by branch. As regards industrial education it recommends :—1. The existing industrial schools must adapt their syllabus more closely to the industries which are carried out in the district where they are situated, and must maintain closer relations with those industries and with the employers carrying them on; 2. The creation of industrial schools for the purpose of assisting and supporting local industries in certain recognised provinces, and an increase in the number of model workshops and finishing courses; 3. The introduction in some of the industrial schools of training in the building trade; 4. The elaboration of a more complete scheme tending to the better preparation of the teachers and foremen required at the industrial schools; 5. An improvement in salaries and prospects of the instructors and directors of agricultural schools; and 6. A more efficient control over the organisation and syllabus of the industrial schools by the central authority entrusted with the development of industry and industrial education.

Its recommendations with regard to technical education are as follow :—(1) Industrial chemistry to be taught in the Polytechnical and Arts and Crafts Schools; (2) reconstruction of the Bulac Arts and Crafts School and the erection of a similar institution at Alexandria; (3) the institution of closer relations between industrial employers and the schools; and (4) development of the artistic branch of industrial education.

Finally, the commission strongly advocates the creation of a permanent organisation to encourage, assist, direct and develop the commerce and industry of the country. This organisation, which should have attached to it a superior council of commerce and industry, should be either a Ministry of Commerce and Industry, constituted similarly to the other Ministries, or a department attached to a Ministry, but having complete independence of action and a separate budget; or, again, it might be formed by the centralisation of the existing organisations dealing with the subjects. Whilst making these recommendations, the commission abstains from stating its preference. Certain considerations of higher policy and of expediency enter into the question, and it considers that its duty is limited to calling the serious attention of the Government to the urgency of the question.

In conclusion, the commission devotes a section to what it calls the duty of the Egyptian nation in the matter of the industrial renaissance of Egypt, and it sets forth in a few eloquent lines the individual duties falling to the Egyptian capitalists, the industrial masters, the workers and the general public, who can all play their part in giving back to the industry of their country some of the glory which was hers centuries ago.

ENGINEERING NOTES.

Post-War Prospects.

Everyone now understands that from the moment when peace is restored there will begin another, and still more costly, war—that of trade—for history tells us that a trade boom almost invariably follows in the footsteps of a great war, though depression may subsequently result, and the nation that has been defeated is the one that usually puts forward the biggest efforts to capture trade and to try to retrieve the fortunes shattered by the war. Therefore, German competition of a particularly virulent character may be expected; in fact, the Germans have already been very active in neutral countries and in countries where they can exercise direct or indirect influence. In Spain, it appears, they have been actively at work in taking over one concession after another, and dispatching travellers, male and female, in all directions in the Iberian peninsula; while their efforts in Russia, Roumania, and elsewhere in the East, are of a Machiavellian character, though, it is to be hoped, of ephemeral commercial results. However, there is ample evidence that they are preparing for the forthcoming trade war, and that, in fact, they are prepared; and it is even suggested that huge quantities of all kinds of machinery and implements and other goods are stored "to flood the markets of the world" as soon as peace is restored. In the meantime, we are without any definite plan of action; and, with regard to the engineering trade, it is stated that the reports of the Parliamentary Committee appointed in July, 1916, under the chairmanship of Lord Balfour of Burleigh, to consider the commercial policy of the country are unanimous that there must in future be increased combination in the engineering and other important manufacturing trades. It is excellent advice and evidence that the Committee, after a lengthy investigation, came to the right conclusion—that British engineers and other manufacturers could and should depend on their own resources in regard to initiative and enterprise, and help themselves instead of relying principally upon State aid. This view has been advocated in these columns since the war began. It was the systematic energy, initiative, and enterprise of our rivals, aided by the apparent indifference and inadequate business methods of British traders, that assisted them to gain markets in which British goods, and especially machinery, are highly appreciated. Let British business methods in foreign trade keep pace with the times, allow a slight relaxation of cast-iron rules, give opportunities to the foreign buyer to come into direct touch with the British manufacturer or his *bonâ fide* and responsible representative, and the German trader will be defeated. It is also necessary—at least, as regards the Near and Middle East—to study the changes that have taken place. New markets have opened; regions hitherto of small importance will now offer great opportunities to enterprising engineers and contractors; while the possibilities of the old markets for machinery are much greater than before.

Machinery for Greece.

An interesting glimpse of the trade possibilities in Greece was given recently by a British official who pointed out that the agricultural districts in Macedonia, Epirus, and the islands offer openings for good trade in machinery, flour mills, oil mills, and gas motors for working small plants, as well as in electric tramways and motor omnibuses for carrying mails and passengers in districts where there are no railways, etc. The business that can be done in Greece, says this official, is very important and of great value, and United Kingdom engineers and firms should do their utmost to secure some of the prospective trade. Goods, he adds, should be brought direct to the buyers' notice by advertisements. British machinery and articles of all kinds have always received a market preference in Greece, but the better methods adopted by foreign competitors tended to diminish the opportunity of British firms. Is such a market to be left alone until the war is over, when other competitors, who know the market will enter it fully prepared?

COMPANY NOTES & REPORTS

Messageries Maritimes.

The Messageries Maritimes report for 1917 states that the receipts of the Domain Privé were 28,874,229 francs and the expenses 22,041,851 francs; the receipts from the subsidised lines were 86,436,557 francs and the expenses 72,170,766 francs. The total excess of receipts over expenditure was thus 21,098,169 francs. It is proposed to devote the sum of 2,700,000 francs to the distribution of a dividend of 6 per cent. on the preference and ordinary shares.

Beciu Oil Fields.

The report of the Beciu (Roumania) Oil Fields for 1917 states that operations are at a standstill owing to the property in Roumania having been destroyed by order of the British Government and in view of the impossibility of resuming operations in that country while the political situation continues as at present. As the company has no revenue there is no profit and loss account to submit, and the balance-sheet is practically the same as at December 31, 1916, subject to the inclusion of the expenditure which has been incurred during the year under review. A claim for the value of the property has been filed with the British Government, but settlement has not yet been effected. Meeting, 15, Leadenhall Street, E.C., August 1, noon.

The report of the Constantinople Land and Building Company states that no accounts have been received from Constantinople for the year 1917. The credit balance for 1917 is £153, which, added to £5,440 brought forward, makes £5,593 to be carried forward. Meeting, 25, Bucklersbury, E.C., 31st instant, 3 p.m.

The report of the East India and Ceylon Tea Company for 1917 states that trading profit was £29,814 and profit and loss account credit £24,287. The directors place to general reserve £4,500 and to provision for income-tax £3,000, and recommend a dividend of 10 per cent., less tax, on the ordinary shares, leaving to be carried forward, subject to excess profits duty, £9,257.

The report of the Imperial Ceylon Tea Estates for 1917 states that, after providing for income-tax, Debenture interest and all general expenditure, net profit amounts to £9,692. Directors set aside for depreciation £1,000, after which, including £1,351 brought in, there remains £10,042. Directors propose a dividend of 5 per cent., less tax, place to excess profits duty reserve account £1,000, and carry forward £4,542.

The report of the Burnside Tea of Ceylon for 1917 states that net profit was £2,364, and £373 was brought forward, giving £2,737. Directors write off capital expenditure incurred in 1917 £783, and carry forward £1,963. Profits are more, but directors think it wiser not to recommend dividend.

The report of the Makum (Assam) Tea Company states that the accounts are delayed. Directors declare second interim dividend of 7½ per cent. (9d. per share), less tax, payable 24th instant. Last year, final dividend of 10 per cent. and bonus of 5 per cent., making 20 per cent. for year.

The report of the Jhanzie Tea Association for 1917 states that profit was £39,165; £6,153 was brought in, giving £45,318. The balance for disposal is £37,638. The directors transfer to reserve £2,000, to contingency and extension fund £3,000, and recommend a final dividend of 10 per cent. less tax, making 14 per cent. for the year, leaving to be carried forward £22,638, subject to excess profits duty.

The accounts of the Hyderabad (Deccan) Company for 1917, after setting aside £22,000 for depreciation and £5,000 to a dividend reserve, show a credit balance of £61,848; final dividend of 1s. per share (less tax), making a total of 3s. per share for the year, and a bonus of 8d. per share (less tax); forward £20,782.

The report of the Ceylon Estates Investment Association for the year ended March 31 shows balance brought in £2,392, less excess profits duty £1,305. Profit on year, £2,856; available £3,943. Directors propose dividend of 10 per cent., less tax, writing down tea machinery and factories by £300, transfer to reserve £400, and carry forward £1,133.

The report of the Noyapara Tea Company for 1917 states that the balance brought in was £7,745, profit for the year £6,632, and surplus from 1916 crop £532, together £14,959; income-tax balance of £594 leaves £14,365. The directors propose a dividend of 10 per cent., less tax, and carry forward, subject to excess profits duty, £11,865.

The directors of the Bank of Bengal announce the following profit distribution:—Dividend, Rs12,000; bonus to shareholders, Rs4,00,000; special shareholders, Rs1,00,000 (all free of Indian income-tax); reserve fund, Rs4,50,000; pension fund, Rs1,00,000; carried forward, Rs5,55,283. Total, Rs28,05,283. The above represents a dividend at the rate of 12 per cent. per annum, a bonus of 4 per cent. per annum, a special bonus of 1 per cent., or the same as last half-year.

The profits of the Nedeem Tea Company for 1917 were £63,604. Final dividend 15 per cent. less tax (against 15 per cent. dividend and 10 per cent. bonus), making 20 per cent. for year, against 35 per cent. Forward, £25,829, against £23,055.

Dividends, Payments, etc.

The Bengal-Nagpur Railway Company, Ltd., notify to the holders of Debenture bonds to bearer, amounting to £374,900, falling due on August 18, that the debentures will be paid off at Lloyds Bank, 72, Lombard Street, E.C. The debentures should be left at the bank three clear days for examination prior to payment.

Dooars Tea.—Dividend of 21¼ per cent. (4s. 3d.) per share on ordinary shares, making for 1917 27½ per cent., payable August 19, less tax at 5s. Accounts delayed.

Hyderabad (Deccan) Company.—Meeting will be held 30th instant at Winchester House, E.C., at noon. Transfer books will be closed from July 22 to August 3, inclusive.

Bibi Eibat Oil.—A meeting of holders of debentures will be held at 34, Bishopsgate, E.C.2 on August 2, at noon.

Empire of India and Ceylon Tea.—Dividend of 18¾ per cent. (3s. 9d.) per share on ordinary shares, making for 1917 22½ per cent., payable August 19, less tax at 5s. Accounts delayed.

Monerakelle Rubber Estates.—Interim dividend of 4 per cent. on ordinary shares, less tax at 5s. 3d. in the £, payable 31st instant.

Oil Outputs.

Anglo-Egyptian.—Gemsah production for week, 20 tons (last week 21 tons). Hurghada production for week, 2,365 tons (last week 1,860 tons).

NEWS FROM ALL SOURCES.

A petition has been presented to the Privy Council by Lord Inchcape and others for a Charter of Incorporation to the Chamber of Shipping of the United Kingdom. All petitions for or against the grant should be delivered at the Privy Council Office on or before August 16.

At the annual meeting of the Indian Tea Association last week, Lord Sydenham was elected president for the coming year, in succession to Sir Henry Seymour King, to whom a cordial vote of thanks was passed for his valuable services to the industry.

The *Vossische Zeitung* states that the Banque Générale de Turquie, which was founded by the Hungarian Handelsbank and the Lower Austrian Escompte Gesellschaft, has opened its offices in Galata.

According to the *Neue Freie Presse*, the Bavarian Lloyd Company, in conjunction with the Deutsche Bank, has established the Bulgarian Lloyd Company in Bulgaria and the Roumanian Lloyd Company in Roumania. These companies will, it is stated, proceed to further developments in the Balkans.

An Annexe of the Greek Legation in London for the execution of Greek Government orders, etc., under the direction of M. Caclamanos, has been established at 25, Knightsbridge.

Cuts short attacks of HYSTERIA, SPASMS, PALPITATION.

A true palliative in NEURALGIA, GOUT, TOOTHACHE, RHEUMATISM.

Checks and arrests FEVER, CROUP, AGUE.

The Best Remedy known for COUGHS, COLDS, ASTHMA, BRONCHITIS.

ACTS LIKE A CHARM IN DIARRHŒA, CHOLERA, DYSENTERY.

Of all Chemists, 1/3, 3/-, 5/-.

Always ask for a 'Dr. Collis Browne' THERE IS NO SUBSTITUTE.

ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Avenue, Wednesday.

We have had an active week and a general improvement in prices where altered. In Egyptian Government stocks some transactions have taken place in Unifieds round last week's level at 93, whilst the 3½ per cent. prefs. have changed hands at 78, an advance of ½.

In Bank shares Nationals have improved 31-16 to 18⅞, but the scarcity of sellers has stood in the way of business. Agriculturals have firmed up 1-16 to 6¼, but Anglo-Egyptians, after their recent heavy rise, have reacted a further half point to 17. In Railways Delta Lights have improved ⅛ to 6⅞.

Amongst Land descriptions some business has been done in Aboukirs round 23. Allotments have been in request at 4½, but no business has been done in the absence of sellers. Behéras have changed hands round 13⅜. Delta Lands have been done at 13s. 6d. —an advance of 3d.—and look ripe for an improvement. In Foreign Trusts small transactions have taken place round the current level. New Egyptians have been a strong market, and a very large business has been done up to 20s. 6d., the closing price being 20s., an advance of 9d. since last week. Sidi Salems have been in persistent demand, but no business has been carried through whilst Union Foncières are 1-32 higher at 3 5-16. United Egyptian Lands are fractionally firmer at 1s. 7½d.

In Miscellaneous shares some small business took place in Alexandria Waters round 12¼, and in Egyptian Markets in the neighbourhood of 22s. 6d. Salts and Sodas have again been a feature, and are closing ⅛ higher at 2 15-32. Khedivial Mails are 1-16 up at 2 3-16 on buying orders from Egypt.

In Greek securities there is a further rise to record of one point in the 1881, 1884, and 1890 Loans to 66, and in Monopolies to 63.

TRADE WITH PALESTINE.

The following additional particulars with regard to trade facilities with Palestine are given in the *Board of Trade Journal*:—

On goods shipped from the United Kingdom to Palestine via Egypt, free storage will be granted, when available, in the customs warehouses at Alexandria and Port Said. No Egyptian customs dues will be levied on goods in transit for Palestine. After eight days' storage in the customs warehouses above mentioned, goods may be transferred to the bonded warehouses at charges up to 6 piastres per ton weekly, but on goods which are not transferred to bonded warehouses, landing charges and porterage are about 15 piastres per ton. The quickest route for goods from the United Kingdom to Palestine is to Port Said and thence by rail. To facilitate handling, goods should be forwarded in packages limited, when possible, to 100 kilos weight; heavy costs will otherwise be incurred in sorting and repacking of the contents of bulky cases. Machinery should be packed with due regard to this consideration. It is desirable that exporters from the United Kingdom should appoint British forwarding agents in Egypt, who would keep them in touch with the Trade Information Bureaux in Cairo. Persons desirous of entering into trade relations with Palestine are reminded that they should apply in the first instance to the Commercial Relations and Treaties Department, Board of Trade, Gwydyr House, London, S.W.1, for the necessary licence to trade.

EXPRESS NILE STEAMER COMPANY.

It is reported that the Express Nile Steamer Company assets have been acquired by the Banco di Roma for £E72,000. The company, which was founded in 1906 with an authorised capital of £E100,000, last year purchased the assets of the Société Anonyme des Entrepots et de Commerce, which had a capital of £E28,000.

Advices from Paris announce the forthcoming issue at 85 per cent. of an Interior Roumanian Loan without limitation of amount with a view to augumenting the budgetary resources in view of the large increase of expenses.

NOTES OF THE WEEK.

An important meeting was held at the Mansion House last week (at the moment when THE NEAR EAST was going to press) under the auspices of the Serbian (Jugoslav) National War Aims Committee. It was important for two main reasons: first, because a satisfactory settlement of the Near Eastern Question hinges upon an appreciation of Jugoslav war aims; and secondly, in view of the fact that the principal speech was delivered by the British Secretary of State for Foreign Affairs, who received a great ovation. Mr. Balfour's utterances were, as usual, of a cautious nature. But he listened to a formal statement of the Serbian war aims, and announced that in common with every member of the audience he had heard it with profound sympathy. For the rest he dealt mainly with the position of Austria-Hungary, and will have allayed the suspicions of those who have feared that the British Government was inclined to treat the Dual Monarchy too leniently. The last hope, said Mr. Balfour, that Austria can herself, of herself, and from herself develop into a free nation, a free and homogeneous nation, and can achieve freedom, has been shattered. There could be no hope for the Czecho-Slovaks in the north, and the Jugoslavs in the south, he added, if the Central Powers were victorious in this war.

The list of invited guests included the Italian Ambassador and the French Minister Plenipotentiary. In these circumstances it was not to be expected that there would be in the list of Serbian war aims any international indiscretion or a repetition of the "Hands Off" warning addressed to Italy in the same building a few weeks earlier. The Serbian policy of "the Balkans for the Balkan peoples" was enunciated, but there was no reference to Dalmatia, and the principle was made somewhat skilfully to apply to Austria-Hungary and its absorption of Bosnia and Herzegovina. On the other hand, it was stipulated that there should be no hegemony and no intervention in any form with regard to Balkan internal affairs, but free and independent development of the Balkan nations, which would naturally exclude all pretensions for domination of one over others, and would lead to a league of the Balkan States. No exception can be taken to this aim, and we welcome the bold declaration made during the progress of the war that a league of the Balkan States is still an aim of the Serbian Government. Indeed, all the speakers wisely insisted upon the point that the enemy of the Balkans was Austria-Hungary, and allowed it to be inferred, if they did not actually state it, that with the elimination of the Dual Monarchy the Balkan countries would be able to look after their own harmonious development.

As has been pointed out before in these columns, this is the only doctrine that can make a strong appeal to the British public. If the peace and security of the Balkans require the defeat and dismemberment of Austria-Hungary, there must be some reasonable prospect of the Balkan States keeping the peace among themselves afterwards. This would be impossible, if one State is to be kept in permanent subjection by the others. The position, no doubt, is in some respects anomalous, and cannot be rightly understood by those whose vision is bounded entirely by a Balkan horizon. It is necessary to recognise that Bulgaria has been an agent and not a principal. If she were not part of the Balkans which will have need of a league one day, the question of her punishment would present no difficulties. But part of her crime consists in playing the game of the arch-enemy, and when the influence of the latter has been eliminated, there will be a sufficiently strong element in Bulgaria ready to admit with conviction the error of the country's ways. The Balkan States have a strong interest in preventing any one of their number from remaining within the orbit of the Central Powers. They have, therefore, to see that their policy is calculated to detach Bulgaria from Austria-Hungary rather than to crystallise the present association between the two countries in a permanent union.

The Italian-French advance in Albania appears to have been stemmed for the time being. On July 24 the Austrians were able to launch a counter-attack, which, although repulsed, proved that the enemy had received some useful reinforcements. Before the end of the month the Italian official report announced that "the systematization on the line of resistance having been completed, our advanced troops on the Semeni and to the west of the Osum-Devoli have lessened the pressure against the enemy troops. Fighting activity has, therefore, diminished considerably." Whether the Allies have gained sufficient ground in Albania to enable other sections of the line to move forward on the Macedonian front remains to be seen. They are still some distance from Elbasan, through which the old Roman highway runs to Monastir, but the knowledge

Digitized by Google

that the offensive may be resumed from this quarter at any moment will add to the embarrassment of the Bulgarians in the event of further activity on the part of the eastern portion of the line. In this connection it may be noted that two successful attacks against the Bulgarian positions were reported on July 30, one by British troops to the west of the Vardar, and the other by Serbian troops.

Pathetic interest attaches to the visit of M. Take Jonescu to England, in view of the bereavement which has befallen him in particularly tragic circumstances since he was here last. But a cordial welcome awaits the Roumanian statesman both on personal grounds and because he is known to represent the unconquerable spirit with which Roumania is facing her present troubles. He can do useful work in this country by letting his British audiences know at first hand something of what a German victory means for a conquered people. Speaking in Paris, M. Take Jonescu declared that the German slavery which has been imposed on Roumania has changed even the Germanophiles into Germanophobes, and he added that the English people does not know how to hate the Germans as the Roumanians know. We have no desire to share the latter's experience; but it will be well to remember, when owing to our island security we are tempted to let the dead past bury its dead, that the conditions imposed on Roumania were nothing as compared with those that the Germans are credited with having prepared for Great Britain and France.

The Metropolitan of Athens is expected to make a short stay in England on his way to the United States, where his presence is required in connection with certain ecclesiastical questions. Archbishop Melitios was formerly head of the Greek Church in Cyprus, and is well known as an out-and-out partisan of the union of that island with Greece. During his visit to England, however, it may be expected that he will prefer to keep this political question in the background, and to raise the much-canvassed subject of a closer association between the Church of England and the Greek Church. What practical advantages are to accrue to the two Churches is not always made clear by the advocates of more intimate ties, although in principle the proposal to bring two branches of the Christian Church closer together has everything to commend it. There are, however, not only differences in belief and ritual to be overcome. The Greek Church enters prominently into the life of the Greek people, but it is perhaps more to them as a national symbol than as a spiritual mentor and inculcator of a moral code. The parish priest, that is to say, officiates but does not preach.

The ex-Khedive has been paying a visit to Berlin, and has been receiving assurances which were evidently intended for Turkish consumption as well as to hearten him. There was nothing lacking in the stage management. The new German Foreign Secretary, Admiral von Hintze, made his *début* in public on this occasion, and delivered himself of the interesting remark that "the Egyptian people was longing for the return of its lawful Prince, to whose good government it owes its prosperity." We should like to think that the speaker believed the statement, as it would furnish conclusive proof that Germany is no longer as well served as she used to be by her agents in Egypt. The ex-Khedive, not to be outdone, supplied the antistrophe to the Berlin chorus: "The hearts of my poor people, enslaved by brute force, beat for the cause of the Quadruple Alliance, and believe in their liberation from the yoke of England." But the purpose of the meeting was the renewal of German promises for the "liberation" of Egypt, India, and the occupied portions of Turkey. With regard to this, it is unnecessary to attempt to improve upon the comment of the *Vorwärts*: "Such all-the-world-liberation will nowhere be taken as anything but war cant." And it adds brutally: "We have still quite a lot of liberating to do at home. With all our hearts we wish success to the Irish, the Indians, and the Egyptians, but they themselves do not expect that we shall be willing to shed any German blood for their liberation."

Although this all-the-world-liberation attitude of the German Government may deceive no one in Germany, it is likely to be used in certain quarters in this country in an attempt to weaken the British resolve that the war shall leave German militarism no encouragement for further schemes of world domination. Sir Malcolm McIlwraith, therefore, has rendered good service in calling attention in a letter to *The Times* to the real character of the man, who is declared by the German Foreign Secretary to be responsible for Egypt's prosperity, and for whose restoration to the throne of Egypt the people of the country are said to be longing. The British case against Abbas Hilmi is so admirably put in this letter that the salient passage cannot be too widely circulated.

It may be worth while, writes Sir Malcolm McIlwraith, in order to elucidate the meaning of "liberation," in this particular instance at any rate, to call the attention more particularly of the latter classes (i.e., Labour and Socialist circles in England) to the delicious humour of the declaration that the Egyptian people owe their prosperity to and are longing for the return of the man who, in spite of all that British control and advice could do to prevent it, by a skilful and unscrupulous manipulation of public trusts (*wakfs*) over which he had improperly obtained control, for years despoiled the poor and defenceless classes of his subjects, largely widows and orphans, of enormous sums of money destined by the founders to charitable purposes; who persistently and clandestinely tampered with the administration of justice in those Courts of Mohammedan law where he could exercise influence, with the same object and the same result; who obstinately covered with his protection corrupt judges who prostituted their office for his benefit or that of his friends; who surrounded himself with a gang of unprincipled adventurers and parasites who preyed upon the people in innumerable ways for their own and their master's enrichment; who, while spending nothing he could help on charity or public purposes, squandered upon female favourites huge subsidies in order to provide the funds for which he systematically sold titles and decorations to all who would pay for them, at a regular and well-known tariff; and whose zeal and solicitude for "good government," as distinguished from "the yoke of England," are strikingly shown by the circumstance, revealed by his confederate's counsel at the Bolo trial in Paris, that at the moment of his downfall he was preparing to foster the delicate and exotic plant of political morality in the new Representative Assembly, which he himself only a few months previously had inaugurated with considerable pomp, by bribing its members to do his bidding to the extent of no less a sum than 40 million francs!

The Zionist Commission, which left England last March under the leadership of Dr. Weizmann, has lost no time in giving effect to one important item of its programme, the creation of a Hebrew University at Jerusalem. Already before the war a site had been secured at Mount Scopus (Mount of Olives), and munificent donations had been promised from Jews in all parts of the world. The ceremony of laying the foundation-stone has now been performed, in the presence of General Allenby, of officers of the French and Italian detachments in Palestine, of a representative gathering of Palestinian Jews, a deputation of Egyptian Jews, and the heads of other communities. The establishment of a Hebrew University at Jerusalem has been a cherished project of Zionism for many years, and there would seem to be no reason why the ambition of an institution "founded complete from the beginning" should not be realised. The medium of instruction will be Hebrew, although this provision does not mean necessarily that all subjects from the outset will be taught exclusively in Hebrew.

The presentation made to Lord Morley by his Indian admirers may be regarded from at least two points of view. In one sense the occasion was undoubtedly well chosen, for it marks the close of a long and not inglorious period. As the Chelmsford-Montagu Report says, the reforms with which Lord Morley's name is associated were "the final outcome of the old conception which made the Government of India a benevolent despotism." That old conception was formally abandoned last August, though its logical basis had been sapped at a much earlier date, and it was obviously appropriate to recognise the devoted efforts made to strengthen a position which ten years ago was already becoming untenable. Lord Morley's bust will stand in the National Liberal Club as a reminder of the past and as a herald of "the coming of the milder day."

On the other hand, some at least of the audience must have been conscious that the Morley-Minto reforms cannot be truthfully described as a practical success. As Mr. Montagu, who, of course, was present on the occasion, justly says in the joint report, "the reforms of 1909 afforded no answer, and could afford no answer, to India's political problems," and whatever may be done in the future, there is no doubt that many of their most important features will have to be discarded. Educated Indians owe a debt of gratitude to Lord Morley, but the obligation is derived rather from his general attitude towards the country and the people than from any of the concrete measures which he introduced.

Regarding the new project of reform, there is little progress to be reported. The Chancellor of the Exchequer told the House of Commons last week that the members of the Government had not had time to read the Report, and no reasonable being can doubt that his statement was substantially correct, but delay will be a serious misfortune all the same. The matter is far too important to be disposed of by any authority below the highest, and England as well as India needs to know whether the undoubted risks of the Chelmsford-Montagu scheme are to be boldly faced, or whether a drastic revision of the proposals must be undertaken. Every month's delay must menace the difficulties of the overstrained administration in India, and officials as well as politicians stand in urgent need of a clear order, such as the Imperial Government alone can give.

The scheme for the grant of commissions in the Army to Indians appears to be a well-designed attempt to meet a really difficult situation. "Defence is of the essence of self-government," and now that England stands formally committed to the task of building up an Indian nation, it is impossible to refuse the claim of Indians to be admitted to the noblest profession in the world. On the other hand, in Asia at least, the Millennium is still a long way off, and till it comes the task of the Indian Army is likely to be much too serious to justify any risk of inefficiency among its leaders. The people who clamour most loudly for commissions have had very few opportunities of learning what an officer has to do, and on the evidence available the practical soldier is fully entitled to his opinion that the raw material is not altogether promising.

The question can be settled only by experiment, and the chief merit of the scheme now published is that it will give the experiment a fair chance. Some of the candidates will have proved their fitness in the field, the one absolutely conclusive test: others will have given evidence of at least their keenness by their activity in the recruiting campaign, and they with the other untried cadets will undergo what we have no doubt will prove to be a searching ordeal during the period of training at Sandhurst or some other school of instruction. We hope that most of them will succeed in making good, and that the failures, if failures there must be, will realise that they had chosen a profession for which they were unsuited, and return gracefully to civil life.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, July 1.

Egypt's Waterways.

The extraordinary rise in the price of all commodities brought about by the war has compelled the exercise of ingenuity for the utilisation to the utmost of local resources, and one of the most important questions that challenge attention in this connection is certainly that of improving Egypt's waterways. That the authorities are now fully alive to the importance of this question is evidenced by the reply of the Under Secretary of State for Public Works in Cairo to the communication submitted to him by the President of the British Chamber of Commerce of Egypt. The full text of this interesting correspondence has been published in the June issue of the chamber's journal, and no more useful purpose can be served than to give the widest possible publicity thereto, and invite the expression of expert opinion on a question so vital to Egypt's economic life. The Under Secretary of State, in dealing with the principal points of Mr. Williamson's letter, embodying the scheme he drew up at the request of the Chamber, dismisses the suggestion relating to the creation of cross canals for promoting direct water traffic from east to west in the Delta, as being too costly. In an open letter published in the *Egyptian Gazette* Mr. Williamson demurs to this in the following terms:—

> It may be so, but also it is possible that, after thorough examination and study, it may be found that, by providing a lock here and there to connected waterways of different levels, by increasing the depth of water in some sections of canals or drains, by widening or straightening other sections, and by excavating short new connecting links, it may be possible to pass boats of considerable size from east to west; but, be that as it may, that is only one out of many improvements to inland navigation which will come only when a special department is created to take in hand the improving of the river canals and drains of Egypt, as far as that can be done without detriment to the supply of irrigation water and the drainage of the land.

Mr. Williamson justly refers to the increased cost of coal, even after the war, as militating against rail in favour of water transport, and to this may be added, in support of his argument, the factor of the comparatively cheap and abundant supply of liquid fuel from the Egyptian oilfields which, in view of the continual improvement of oil motors, may be found to overrule any considerations of economy in regard to the cutting of these cross canals.

If this important question had received earlier attention and been solved, the country would not have experienced certain difficulties which it has recently encountered. Owing to the arrival of many heavy cargoes simultaneously, there has been considerable congestion on the railways, the principal medium of transport to the interior, whose capacities were already taxed to the utmost by military exigencies. The position became at last such that all the Customs quays and warehouses, and all the bonded stores were filled to overflowing, and the insurance companies refused to cover any further risks as their limits had been exceeded. It is said that one unfortunate steamer bound from the Far East lay about forty days in harbour before she could finish the discharge of her cargo. Her demurrage claim must form an interesting case.

Of course, other causes contribute to this abnormal congestion, but the fact remains that rail transport could not cope even with first requirements, and cases are known where consignees in Cairo have waited weeks before they could receive their goods from the seaports. Had a well-developed system of water transport been in existence, such a state of affairs would not have been brought about. The evil has been aggravated by the scarcity of river craft. All the available tonnage was, of course, requisitioned by the military, who, however, in spite of their need of much more, have been trying to accommodate the public as far as circumstances permitted. What is now a matter of immediate and urgent interest is the increase of river craft, and the military are said to have been exercising commendable activity in this direction.

The Retirement of Mr. D. A. Cameron.

With the retirement of Mr. Donald A. Cameron, who, after occupying the post of British Consul-General

Digitized by Google

at Alexandria for nine years, has now left for home, an interesting and remarkable figure has disappeared from Anglo-Egyptian officialdom. Mr. Cameron began his official career in this part of the East as Consul at Suakin in 1885, whence he was transferred in the same capacity to Benghazi, Tripolitania. There he remained from 1888 to 1889, when Lord Cromer called him to hold a judgeship in the Native Court of Appeal, which post he retained until 1897. He again returned to the Consular Service, and was Navy Agent for the Suez Canal in 1903, and Consul-General for the Suez Canal district at Port Said from 1905 until 1909, when he succeeded to the retiring Consul-General at Alexandria.

Mr. Cameron is a good Arabic scholar, having published an Arabic English vocabulary in 1892. His "Egypt in the Nineteenth Century," which is now unfortunately out of print, may be considered as one of the best historical accounts of the period between the reign of Mohammed Ali and the British Occupation.

Economic Crises.

There has been quite a crop of "crises," but as the most serious of them, viz., the petroleum crisis and the wheat crisis, have been satisfactorily settled, it is legitimate to hope that the authorities will not fail to cope with the others. These relate to bread, sugar, and cottonseed oil. Verily Egypt is the land of Paradox, and nowhere else would it be believed that, where the wheat problem has been solved that of bread would not be included in the measure. The agitation of the public and the Press seems to be moving the authorities to quicker action, and it is to be hoped that the profiteers will shortly be disposed of. Once wheat is brought within the tariff, there is no earthly reason why its by-product should be left outside and the public exposed to the greed of the bakers, who are selling their bread at prices out of all proportion to those of the tariffed *matière première*. The requisite administrative machinery for dealing with the situation is already in existence, in the Supplies Control Board. It is not long, however, since this board came into its present form, and some excuse may be found for its having so far found time to deal only with the more important phases of the economic problem. These minor questions are, indeed, engaging the attention of the board at present, and the President's success in dealing with the more difficult problem of wheat and flour justifies hope for a speedy solution of those minor ones. Already an order has been issued by Mr. Ross Taylor on behalf of the Supplies Control Board, laying down a series of restrictions in regard to inter-provincial transport of sugar, and it is expected that these measures will make it impossible for the profiteers to further indulge in stock hiding and surreptitious selling.

The cottonseed oil crisis was the very last one would have dreamed of. The production is far in excess of the requirements of the population, even making allowance for the practical cessation of olive oil imports; and yet in the country *par excellence* of cotton we find a dearth of cottonseed oil and the article selling at double the tariff price. The greater is the wonder, as cottonseed is a monopoly of the Government, and the oil manufacturers are already there under official control. A flagrant case of hiding of oil stocks has been brought to light recently, and the exemplary punishment of the offender should serve as a warning to others.

CORRESPONDENCE.

"BOUNDARIES IN EUROPE AND NEAR EAST."

TO THE EDITOR OF "THE NEAR EAST."

Sir,—Reviewing the book of Sir Thomas Holdich, "Boundaries in Europe and Near East," Mr. Bourchier speaks of "scientific writers who treat with scepticism the claim of the Roumanians as descending from Roman colonists." Perhaps he alludes to some Magyar and Bulgarian chauvinists, but no one who has a wider historical knowledge would take these people as "scientific writers." Our existence as a very homogeneous people of nearly fourteen millions, without any dialect in our language, with profound Latin traditions, outweighs entirely all the theories of the so-called "scientific writers."

Regarding the book of Sir Thomas Holdich, I have to point out:—

(1) Michael the Brave, of Wallachia (1593-1601) united under his rule not only Transylvania and Wallachia, as Sir Thomas writes, but Moldavia, too. (At that time Bukovina and Bessarabia being an integral part of Moldavia.)

(2) In the seventeenth century the national sentiment of the Roumanians was not absent, and "their patriotism not dead," but quite the contrary. Our culture attained, at that time, a very high degree. Under Basil Lupu (the Wolf) and Mathi Basarab, Moldavia and Wallachia were the most powerful help for the culture in the Near East. In these principalities were printed books for Serbia, Bulgaria, Armenia, Mount Athos, even for the Christians of Arabia, and the Roumanians of Transylvania largely contributed to this cultural and pious work. ("The Travels of Macarius" Patriarch of Antioch, written at that time, offer a wonderful picture of Moldavia and Wallachia in the seventeenth century. English translation, London, 1824.)

(3) In the time of Sherban Basarab (not Sherman) the Bible was translated into Roumanian, and until now this translation is the most important monument of the Roumanian language.

(4) The election of Cuza (1859) was not a failure, as Sir Thomas says, but the greatest success of our social and political achievement. Modern Roumania was based upon his reforms.

(5) The present King of Roumania is not the son of the late King Carol (not Carlos), but his nephew.

We do not agree with Sir Thomas Holdich that a modern State would require "strong boundaries" à la Brialmont, because we are sure that humanity will repudiate the ideal of the militarism of the Central Powers.

The "strong scientific boundaries" could be a good guarantee for the so-much-desired peace of the world only if the power of nationality was not limited or oppressed, but liberated. The power of a State, we think, is not derived from its wealth only, but also from its intellectual distinction, from its moral tendencies and ideals. If a nation remains divided under different rules and laws, though enjoying "the geographical environment," and living in a State with "strong boundaries," it will be but a mutilated organism, and its intellectual unity will never be shaped, its contribution to human civilisation will never be what it might be.

This great war has implanted the principle of liberty in the breasts of all the nationalities, and fired their ideal of gaining freedom from oppressive laws to which they never consented. The freedom of all nationalities will establish the peace of the world, we think, better than "strong boundaries."—I am, etc.,

D. N. CIOTORI.

INDIA'S DEBT TO THE KING.

The annual meeting of the East India Association was held on July 30 at Caxton Hall. Lord Reay, who presided, in his opening remarks, referred to the King's announcement that after the war the Prince of Wales would visit India as well as other parts of the Empire. Very few heirs to the Throne, he said, had had such opportunities as his Royal Highness had had or had used them so well. The King was the first British Sovereign in history who had personal knowledge of every part of his widespread Dominions, and India owed a deep debt of gratitude to his Majesty for the interest he had shown in her affairs and his knowledge of them. The speaker warmly welcomed the decision to grant commissions in the Army to Indians who had shown, as he had always foreseen, that whenever the occasion arose our Indian fellow-subjects would prove their valour in the battlefield. It would be always remembered with pride that it was by the aid of Indian troops that the Germans were prevented from getting into Paris at the beginning of the war.

TANGIER TO TEHERAN.

At the time of the Spanish-American War, I remember, just after the capture of one of the Spanish fleets, an American paper published a cartoon that tickled my fancy. It depicted Uncle Sam, in the character of a little boy, dressed in a sailor's suit and regarding a lot of toy warships in some perplexity. "What am I to do with them?" he was asking, and his own answer was: "I know a little girl who collects 'em. P'raps I'd better give 'em to her." A portrait of the little girl in question, in the corner of the picture, showed Queen Victoria in *very* early Victorian garb, with shortish skirt and long pigtails and something-elses.

***

My thoughts have been carried back to this drawing by the messages which are finding their way to this country regarding what was formerly the Russian Black Sea Fleet. A few weeks ago I suggested that Turkey had (apparently) started collecting that kind of thing. Now, I see that she has actually sent a request to Berlin that the whole of the Black Sea Fleet should be handed over to her. Doesn't she wish she may get it! The German Government replied:—"1. That the Dreadnoughts and several other of the best Russian ships had been destroyed. 2. That the remainder of the fleet was the rightful booty of Germany, because the vessels were captured by the Germans. 3. That amongst the vessels captured there was not one that was in a fit state for navigation, that their repair would occupy many months, and that Turkey did not possess the means to carry out these repairs." This may, or may not, have been very satisfactory to Brother Turk, but if I were in his place I should want to know:—(1) How the Germans meant to effect the repairs, and (2) how they purposed getting their "rightful booty" past the inconveniently active British Fleet.

***

In dividing the spoils, I see, Germany does not quite ignore her "allies." In face of their determination not to be forgotten, that would be a task beyond the powers of even the Prussian Superman. So Austria is to have a few "job lots" among the warships; Turkey and Bulgaria get one or two destroyers; and the "merchant fleet" falls chiefly to the Turks and Bulgars. The trouble is, of course, that in spite of German boasts about their mastery of the seas none of the new acquisitions dare show its bows outside the Dardanelles

***

If you have ever seen an Arab, or other Eastern, funeral procession, you must surely have been impressed by the wailing of the women, and I should be much surprised to learn that the impression was a favourable one. It is, in fact, lacking in genuine feeling as a rule, and one is bound to suspect that the "mourners" extract much satisfaction from their own performance. Now, I see by the Egyptian papers, that Alexandria has had enough of it, and that women are no longer to take part in funeral processions there. It is as well. I remember seeing an American lady try to comfort an Arab woman who was wailing the death of a child (not her own, I hope). The woman looked very puzzled at first, but when the American lady's servant translated what was said to her, she burst out laughing. "The *sitt* must not worry. She herself did not grieve. But this weeping and wailing was just the custom of her folk." And she resumed her beating of her breast and her loud lamentations.

***

A certain gunner has been writing in the *Manchester City News* an account of a visit he and some friends paid to Kazimain, a suburb of Baghdad, famous for its glorious gold-capped minarets. Not unnaturally, he refers to the trams that run to the spot, which seem to have afforded him and his friends as much amusement as they cause to most Europeans who behold them for the first time. They are indeed "fair game." But the gunner's arithmetic—or his veracity—seems to be a bit at fault. For he first declares that the tram on which his party returned "proceeded at the leisurely pace of one mile an hour," and later announces that when he and his friends were in process of dismounting from the top "there was a distance of quite five hundred yards between the point where the first man got off and when the last of the four of us managed to reach the ground." I am not very strong in mathematics, but I think I am right in working the problem out at about seventeen minutes. Poor time for four presumably active British soldiers to take in alighting, even from a Baghdad-Kazimain tram!

PRESS ON THE NEAR EAST.

The Italians in Albania.

A special correspondent of *The Times*, writing from Avlona on July 23, contributes an article "In Liberated Albania," in which he emphasises the different feelings entertained by the Albanians for the Austrians and for the Italians.

Judging from what one heard and saw at Berat and Fieri, the whole of Albania must be simply seething with the spirit of revolt against the Austrians. At both these towns Albanian mountaineers were flocking to offer their combatant services to the Italians. While I was at Berat yesterday, two deputations which had succeeded in crossing the border line between the contending parties came to beg weapons with which to arm the peasantry in the rear of the enemy. They reported that many hundreds were already attacking the enemy in the north, and thousands of others only lacked rifles to follow their example.

It is certain that the Austrians have aroused the bitter hatred of this people by their cruel treatment and merciless requisitions. A fair idea of what must have been the privations of the population can be gained by a walk through the streets of Berat and Fieri. The shops were open, but contained little that could satisfy the needs of the stomach. Of groceries there was not a scrap of any kind. The goods displayed consisted principally of hardware, ironmongery, glassware, and picture postcards. The only article that appeared to be really abundant was Hunyadi Yanos water, with which most of the shops were generously provided.

No more striking evidence of the diametrically opposite conditions prevailing in the parts of Albania occupied by Italy and those held by Austria could be afforded than the contrast between the well-filled shops to be seen in Argyro-Castro and Avlona and the emptiness of those of Berat. Famine, we were informed, had caused hundreds of deaths in Berat alone. Even people who had well-to-do relatives in America anxious to succour them had died of starvation because of the impossibility of receiving remittances thence.

As to the improvement of communications—always one of Albania's great problems—we read:—

The contrast between the roads on the Italian side and those for which the Austrians were till the other day responsible was no less remarkable than that between the food supplies of the people on either side. Indeed, the Austrians have done practically nothing to improve the roads which they found on their arrival in Albania. Their motor service was as meagre and defective as the Italian is abundant and perfect. It appears that in the whole district of Berat they had only six motor-cars, all in a dilapidated condition. Nearly all their transport was effected by Decauville and aerial railways. The Italians were not content with the sections which they captured between Berat and Fieri, but began immediately to make new roads. The extraordinary activity of the Italians may be depended upon to complete these new roads within a few weeks.

Good Work in Macedonia.

Mr. Thomas H. Mawson contributes to the *Contemporary Review* an article, "The British Soldier in Macedonia," which he begins by remarking, very truly, that the work of our men in that region "has all too long gone unrecognised." A little lower he says:—

The work which I desire to advertise and commend is, in the pre-war sense, civilian rather than military in its character; indeed, though performed by a military force, it is a force which is civilian in its origin and composition. And while it is true that the military aspect of our operations is much more important than the official reports suggest, it is this civilian work which is revolutionising Macedonia. Most notably it is the civilian aspect which has in such a remarkable way endeared our soldiers and their officers to the native population; but the civilian achievements altogether are giving to the British Army and our race a status in the East such as we have never before enjoyed. Yet so far no one has thought it worth while to make anything beyond a passing reference to this most important part of our operations.

A great change has come over the attitude of the native population; and Mr. Mawson is of opinion that "the turning-point was the behaviour of the British Army on the night of the terrible fire which destroyed three-fourths of the entire habitations of old Salonika, and rendered houseless 75,000 people. It is on occasions like this that the evidence upon which is based the legend of the adaptability of an Englishman to every emergency is most pronounced." He continues:—

When we grasp the fact that this large and congested population was removed without the loss of a single life, we begin to realise how hard and successfully our men worked.

At the outbreak of the conflagration the British military authorities seemed to take supreme command at once, and, though the native population had had little experience of the spirit of self-sacrifice and devotion to a plain duty which always characterises our forces, they soon discovered and recognised that the spring of our action was not mercenary but humane. Our men, in a language universally understood, though not verbally expressed, naturally administered comfort and assurance and served all, irrespective of nationality or class, and the women and children simply flocked round them. There was general surprise that they should refuse every material recompense which the inhabitants tried to thrust upon them, and I am told that not a single case of looting or avoidable destruction of household or personal treasures was heard of. This, of course, goes without saying; they are only mentioned because the facts were a new experience to the native population, an experience which has placed British integrity upon a pedestal. The work of the Army, it need not be added, did not stop at rescue; it was extended to the feeding and improvised housing of the people, which was accomplished with amazing quickness, ingenuity, and success. The praise of the British was in every mouth.

Many other examples are given of good work done for the country and its inhabitants by our soldiers. We must content ourselves with one: the case of "a certain wretched village" which was transformed:—

The village, comparatively near to one of our important lines of communication, was in such a disgusting state that it was an open question whether it should not for sanitary reasons be destroyed and the inhabitants removed from the place. The officer, however, set to work with a scavenging gang and likewise a draining, repairing, and water-laying squadron. Incidentally, he employed the inhabitants, both men and women, in the work of introducing cleanliness and order into the village, and by paying them for such tasks as washing their own houses evoked in them genuine amazement. At the same time he opened a canteen and communal kitchen run on the lines of an army canteen and at army prices—with the result that the native food profiteers were driven out of business. He further provided a public bath and instituted bath drills for every inhabitant twice a week—whether compulsory or not it is not for us to say. The outstanding fact is that the people appreciated so much the change wrought by the officer that six months later, when he had to depart to headquarters to take up other duties, the population wept and sorrowfully escorted him to the outskirts of the village, where he is to-day accepted as the ideal of an English gentleman, strong, just, and generous.

Old-Time Travel.

"Old Caravan Roads and Overland Routes in Syria, Arabia and Mesopotamia" is the title of a fascinating article contributed to the *Nineteenth Century* (July) by Mr. F. D. Harford. To some extent many of these roads have fallen into disuse, but for the traveller and the student of the past they still have much interest, and the article makes excellent reading throughout. Here is one paragraph:—

The most interesting old caravan road, so far as Great Britain is concerned, was that across the "Great Desert" between Basra and Aleppo, which during its whole course of some 750 miles ran entirely through the Desert, following a chain of wells or springs, but without ever actually touching the Euphrates or passing through a town. During the eighteenth century and in the early part of the nineteenth century some of the official correspondence of the East India Company was sent by this route from Bombay to London, and *vice versâ*, as it was then the quickest route to India. Colonel John Taylor, in a book on overland postal routes, published by him in 1795, estimated the time required, under the most favourable conditions, for sending mails from Bombay to London by this route at ninety to 101 days, and from London to Bombay at sixty-four to seventy-nine days' actual travelling. In this book he gives a number of interesting itineraries from Constantinople, via Vienna and Hamburg, to England, and also from Dover to Venice, Genoa, and Messina, with the names of all the post-stations right across the Continent, details as to the inns, and the distance between each station.

To-day the traveller from Busreh (or "Basra") usually prefers the comfort of the B.I. to the fatigue of the "Great Desert," and the rare Europeans who do go overland usually keep close to the rim as long as possible. As for the old route it is never followed nowadays save by the hardy Bedawi—or the refugee! On the other hand, the northern routes from Baghdad *via* Deir and Palmyra, or through Meskene and Aleppo, are still fairly well used by both mule and camel caravans.

It is difficult to say when caravans ceased to travel between Basra and Aleppo, but the introduction of steam navigation on the great rivers and the general insecurity conduced to this result. Mr. Barker, British Consul-General at Aleppo, writing in 1822, spoke, however, of caravans of 2,000 to 3,000 camels going from Baghdad to Aleppo twice a year in spring and autumn, "the routes being then secure owing to the commands of Mehemet Ali to the Arabs to desist from robbery, who obeyed them in spite of the remoteness of his seat of power." The British Consul at Baghdad reported in 1834 that of all the roads that led to Baghdad not one was safe for small parties of travellers, and that owing to this insecurity few caravans came from Damascus to Aleppo, but that even in that year they brought £250,000 worth of European produce to Baghdad. The routes from Damascus and Aleppo via Diarbekr, Mandeen, and Mosul were "absolutely impassable except for an army." The British Consulate at Baghdad, however, long maintained a rapid postal service across the Desert to Damascus, and the Ottoman Government followed its example.

On July 28 banners were presented to Jugoslav and Czecho-Slovak troops in Italy who are to fight side by side with the Italians.

NEAR EAST BOOKSHELF.

"THE GUARDIANS OF THE GATE."*

Both these works are inspired by the same thought—that Serbia guards the gateway to the East, and that her independence means the end of German ambitions in the East. But the methods of proving the thesis are different, for each writer follows his characteristic bent. Mr. Laffan, a rising young University historian who has been with the Serbian Army, uses historical arguments to prove the thesis, while Mr. Price relies on his personal experiences with the Serbian Army to enforce it.

Mr. Laffan gave his lectures in the winter months to the British Motor Units associated with the Serbian Army. We should bear this fact in mind in viewing his book. On the whole, his sketches are slight but conspicuously good, and above all marked by a genuine attempt to be moderate and to look at matters from a historical perspective. He has read widely, and has the personal touch only given by one who has seen and known as well as read. Thus he brings before us Milosh—the founder of the Obrenovitch dynasty—and reveals, as in a flash, the strange semi-Oriental atmosphere in which he lived.

"His office of State was a little room furnished with maps and captured Turkish flags." He was "unable to read or write"—seated on cushions on the floor, with a turban on his head, he gave audience to his visitors, exactly in the fashion of his Turkish predecessors" (p. 35). "His wife imitated her husband's methods of dealing with rivals. When Milosh, who in so many ways continued the Mahommedan tradition, was captivated by other ladies, his wife would finish them off with a gun and then retire into the mountains until her lord's anger had evaporated" (p. 36). A thumbnail sketch of this kind makes it easier to understand modern Serbia, and the tremendous difficulties which she has surmounted.

Mr. Laffan treats of Macedonia and of Jugoslavia, two of the most vexed questions in history, with an obvious desire to be candid and fair. This treatment is a refreshing contrast to that of some apologists of Serbia, who have yet to realize that a country so heroic and with so splendid a history gains more by the moderate statement of her claims than by a fanatical one Even if one does not always agree with Mr. Laffan, one always feels that he is trying to be fair. The most important parts of his book are therefore perhaps not the historical ones, but those which deal with the events of the present day which he knows at first-hand —the military campaign for the recovery of Monastir and the political campaign which led to the proclamation of Jugoslavia at Corfu. His summary of Jugoslav aspirations (pp. 265-82) is particularly well worth reading in this connection.

Mr. Crawfurd Price's volume is evidently only an instalment of what is intended to be the standard military history of the war from the standpoint of the Serbian Army. His first sixty-six pages contain introductory political matter of no special novelty, but the whole of the rest of the volume deals with the Serbian part in the war to the end of 1914, with a wealth of first-hand information from Serbian Staff sources such as no other writer has produced. At times the writer appears a little overburdened with his material, but on the whole it is a direct and well-told narrative drawn from original materials which have been used by no other English writer. He appears also as no blind eulogist of the Serbs. His comments on the failure of the Serbian Staff to follow up the Austrians after their first invasion (132-3) are suggestive and illuminating. He makes us realize throughout the extraordinary difficulties produced by the lack of medical stores, tents, ammunition —even rifles; and the farther the narrative proceeds the greater becomes our astonishment at the heroic deeds of these peasant soldiers. We cannot but agree with Mr. Price that "the victory of the Kolubara was one of the finest deeds in military history."

From the technical point of view, apart from the deficiencies of material, the Serbian General Staff had great merits. Putnik and Mishitch were probably the ablest living Balkan strategists, and in Stepanovitch, Jurishitch and Mishitch himself Serbia had commanders of great merit in the field. Until the psychology of that singular democrat, the Serb soldier, is understood, we cannot appreciate the great achievements of his leaders, who understood how to direct this superb *élan* in exactly the right directions. As warriors the Serbs have always excelled; a few facts will show what men they are to-day. The marches recorded by these writers are truly astonishing. Thus the 14th regiment marched 64 kilos "between midday and next morning," and went into action immediately afterwards. A third Ban regiment (i.e., oldish men) marched 74 kilos "as the crow flies" in just over twenty-four hours without a single casualty" (Laffan, p. 264). In the second Austrian invasion the combined division covered forty-three miles in twenty-four hours! (Price, p. 160.) One wonders if troops have ever been asked to do more, and the exploit of the 3rd Ban seems almost incredible. In the invasion of Syrmia, "chafing at the slowness of the movement, many threw themselves into the river and commenced to swim across, *singing as they swam*." Again, there is the story of the colonel who seized the regimental standard and rallied his men and re-took an exposed height under an artillery cross-fire (Price, p. 161), and of the forty dare-devils who captured the heights above Semlin (Price, p. 171).

The men seem half children and half heroes of legend; perhaps their characteristics are best embodied in the Karageorges—King Peter and his heroic son, Crown Prince Alexander, who still bear traces of the sufferings of the terrible retreat. The portrait of King Peter prefixed to Mr. Laffan's book shows us a benign old man with a patriarchal beard. Yet Mr. Price tells us (p. 236) how, on his re-entry into Belgrade on December 15, 1914, "he stayed to trample underfoot a Hungarian flag freshly hauled down from his palace" before he proceeded "to a hastily arranged Te Deum attended by his sons and the British Military Attaché." One cannot help thinking of the romance of his life. Driven from Belgrade when a boy by his father's deposition, returning to it in 1903 as a King, driven from it in July, 1914, to return with glory in December. Again an exile in the retreat of 1915 amid an inferno of tragedy and sorrow such as no ruler of this age has witnessed, yet, "often on foot, despite his seventy-six years, sharing the misery and sufferings of his men." Men say the old man has said that he will not die until he sees Belgrade once more.

* 1 "Historical Lectures on the Serbs." By R. G. D. Laffan, C.F., with a Foreword by Admiral Troubridge. (Clarendon Press, 1918.) 2 "Serbia's Part in the War, Vol. I. The Rampart Against Pan-Germanism." By Crawfurd Price. (Simpkin, Marshall and Co., 1918.)

A TOOL OF THE KAISER.*

The work of stirring up a neutral, peaceable and not overstrong, nation to take part in a war for your own benefit, utterly regardless of the interests of your victims, is fit only for blackguards and ruffians; and W. Griesinger, the German agent whose doings in Persia are exposed in this pamphlet, stands self-convicted of being a blackguard of the first water. He had, before the war, committed some crime which could only be blotted out by the Emperor's pardon; and we may be sure that when he offered his services to the German Government he was welcomed as the right type of man to employ on its particularly dirty work. He was accordingly despatched as—to quote his own words—"member of Niedermayer's Expedition through Persia to Afghanistan and India."

His evil star prompted him to keep a diary while he was employed on this precious expedition; and in due time the interesting document found its way into British hands. Now, in the form of this threepenny booklet, it is likely to afford instruction and no little amusement to the English-speaking world at large. Of the objects of the expedition it is not necessary to write in detail; they may be summed up as the making of trouble for the Entente in any and every way possible, and it was hoped to set Afghanistan, Baluchistan and Persia—to say nothing of India—in a blaze. Fortunately for the countries concerned, those amiable hopes were not fulfilled. The Persians, Afghans and Baluchis proved to be not quite so pliant as Griesinger and his companions expected—and the Prussian character showed itself at once in violent abuse of these "mendacious," "underhand," "swine," this "cowardly pack of cads."

As a matter of fact, it is precisely this violent raging against everyone and everything whenever he fails to get his own way that makes Griesinger's diary such good reading to an Englishman. The "agent" of the Kaiser stands self-convicted as an abusive swashbuckler of the most foolish kind, who, though ready for any underhand work, accomplishes little or nothing, and is thoroughly and permanently disgruntled. He seldom finds a good word to say for anybody—we must except two Swedish officers of gendarmerie, "quite charming men. . . . splendid figures," with whom he and his companions got tipsy—but his bad words are many and violent. The Persians, the Armenians, the Baluchis, the Turks, are to him all "swine," and the Bengal conspirators with whom he and his gang hoped to work are "greasy, blackguardly revolutionaries," while officials who do their duty and refuse to let these German plotters run amok are marked down for assassination. But his hottest wrath and his choicest abuse are reserved for his co-plotters, the German Legation at Teheran, Field-Marshal Von der Goltz, and even the Great Ones in Berlin! As the Introduction points out, the Diary is indeed an interesting revelation of German temper and German blundering. It is a vivid document; we dare not call it a human one, for that would suggest that its author was human, whereas he is plainly only a low brute.

PERSONAL AND GENERAL.

CALENDAR OF THE WEEK

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian (New Style).	Julian (Old Style).	—	Moslem.	Jewish.
1918. August	1918. July		1336. Shawal	5678. Ab.
2	20	Friday	24	24
3	21	Saturday.....	25	25
4	22	Sunday	26	26
5	23	Monday	27	27
6	24	Tuesday	28	28
7	25	Wednesday	29	29
8	26	Thursday	Julkada 1	30

Sir Roper and Lady Parkington are staying at Harrogate for the cure.

The Earl and Countess of Bessborough are leaving England for Ireland this week.

The Countess of Cromer gave birth to a son and heir at Hill End, Hitchin, on Sunday.

The Earl of Lathom has returned from India, and is staying in London for a few weeks.

Lord and Lady Oranmore and Browne left 12, Cavendish Place on Wednesday for Castle Macgarrett, Co. Mayo.

To-day is the birthday of the King of the Hellenes, who was born at Tatoi in 1893. His father's birthday falls on August 3.

Lord Methuen, Governor of Malta, who has been in Italy a week, returned to Rome on Friday from a visit to the Italian front.

M. Milan Yovanovitch, the newly-appointed Attaché to the Serbian Legation in London, has arrived, and entered upon his duties.

Mr. Bhupendra Nath Basu, member of the Council of the Secretary of State for India, had the honour of being received by the King at Buckingham Palace on Tuesday.

Mr. Pandeli Ralli having let his house, 17, Belgrave Square, to the American Ambassador, all correspondence for Mr. P. Ralli should be addressed to him at Alderbrook, Cranleigh, Surrey.

Reuter's Paris correspondent reports that on Sunday M. Poincaré, M. Clemenceau, and M. Pichon separately received M. Take Jonescu, the Roumanian statesman, who will shortly leave for London.

When returning from the Serbian front, the train conveying King Alexander of the Hellenes was bombed by an enemy airman at Florina. The bomb just missed the engine. There was no damage or loss of life.

In the list of honours which appeared in *The Times* of July 29 we read that the King has been pleased to approve of the award of the D.S.O. to Captain S. H. La Fontaine, M.C., for services rendered during the campaign in German East Africa.

The Shah of Persia has conferred on Mirza Medhi Khan, the Persian Minister in London, the title of Ala-es Saltaneh, the rank of Prince, and the Order of Amir Nooyan, all of which were possessed by the Minister's father—the late Prince Mirza Mohamed Ali Khan.

Sir Satyendra Prasanna Sinha, one of the delegates to the Imperial Conference, was formally called within the Bar on Tuesday upon taking silk. As he was the first native legal member of the Viceroy's Council, so he is the first native Indian to become a K.C. at the English Bar.

The King has granted permission to Miss Anna Lilian Muncaster, M.B., Ch.B., to wear the Insignia of the Fourth Class of the Order of St. Sava, conferred upon her by the King of Serbia in recognition of her services as physician at the Scottish Women's Hospital at Ostrovo.

The marriage between Captain K. Murray, only son of the late F. H. Murray and Mrs. Murray, Bengal, India, and Miss Phyllis M. Daniels, daughter of the late Alfred Daniels and Mrs. Daniels, of the Old Vicarage, Chalfont St. Peter, will take place to-day at St. Peter's, Cranley Gardens, S.W.

A marriage has been arranged, to take place shortly, between Kenneth de Berniere Lynn-Smart, late Indian Army, son of the late Captain Lynn-Smart, R.N., and of Mrs. Lynn-Smart, of Frensham, and Audrey Ottilia, youngest daughter of the late Mr. A. J. Brown and of Mrs. A. J. Brown, Cheviots, Eltham.

The Maharaja of Patiala, who represented India at the Imperial War Conference, has left London for the Continent. Among those who saw him off at the station were Lieutenant-Colonel Sir James R. Dunlop-Smith, who represented the Secretary of State for India, Sir Satyendra Sinha, and a representative from the War Office.

The marriage will take place at St. John's Church, Ealing, at 10, on August 3, of Major Arthur Willis, York and Lancaster Regiment, only son of Mr. and Mrs. J. H. Willis, recently of the British Embassy, Constantinople, and Audrey, younger daughter of Mr. T. M. L. Thompson, formerly of the P.W.D., India, and Mrs. Thompson, of 14, Churchfield Road, Ealing.

The marriage will take place early in September (arrival from the East permitting) of Captain J. Donald Fraser, Lancers, Indian Cavalry, youngest son of the late Colonel Fraser, R.A.M.C., and Mrs. Harden, Orchardton, Dundrum, County Dublin, and Hilda Marion, only daughter of P. C. Cowan, D.Sc., Local Government Board, Ireland, and Mrs. Cowan, Ailesbury Road, Dublin.

A marriage has been arranged, and will take place early in September, between Elyn, only daughter of George Jasper Nicholls, LL.B., late Judge of the Indian Civil Service, and Mrs. Nicholls, Longfield, Bideford, and Lieut. Hector Bruce Mackenzie, M.B., Ch.B., N.Z.M.C., son of Hon. Sir Thomas Mackenzie, K.C.M.G., High Commissioner for New Zealand, and Lady Mackenzie.

The King has granted Mr. Fergus Armstrong, M.D., F.R.C.S., authority to wear the Cross of Officer of the Order of the Star of Roumania, with swords, conferred by the King of Roumania in recognition of his services with the Roumanian Red Cross at Jassy and Bucharest; and to Miss Florence Bryce Jack to wear the Insignia of the Fourth Class of the Order of St. Sava, conferred by the King of Serbia in recognition of her services with the Scottish Women's Hospital at Ostrovo.

The Athens correspondent of *The Times* reports, on July 24:—The Metropolitan of Athens, Archbishop Meletios, has left for England, where he will meet the Archbishop of Canterbury, with a view to drawing closer the bonds between the Greek Orthodox and the Anglican Churches. From England he will proceed to America, where he will carry out the work of the reorganisation and reconstitution of the Greek Church there, installing an Archbishop and Bishops, and forming dioceses.

The British Government has recently presented to Mr. J. B. Jackson, of the Diplomatic Service of the United States, a loving-cup bearing the Royal Arms and a suitable inscription. Mr. Jackson, who was formerly Minister to Roumania, Serbia, and Bulgaria, was employed on special service in Germany during the early part of the war. He was engaged in visiting and reporting on the prison camps, and he was able, by his influence and sympathy, to mitigate in some degree the sufferings of the British prisoners.

On Thursday last week (July 25) Lord Morley was presented with his bust in marble, which had been subscribed for by his Indian admirers. The presentation took place at the National Liberal Club. Lord Lincolnshire, the President, was in the chair, and among those who attended were Mr. Montagu (Secretary of State for India) and Mrs. Montagu, Mr. Birrell, M.P., Princess Dhuleep Singh, Sir S. P. Sinha, Sir M. M. Bhownaggree (Chairman of the Presentation Committee), Mr. N. C. Sen (Secretary) and Mrs. Sen, Sir Abbas Ali and Lady Baig, Lord and Lady Carmichael, Sir William and Lady Duke, Sir A. and Lady Hirtzel, Sir Edwin Pears, Sir P. Pattni, Mr. Basu, and Sir C. and Lady Lyall.

The ex-Khedive of Egypt has been visiting German Main Army Headquarters.

It is stated that the King of Bulgaria has gone abroad for reasons of health.

The Hong Kong St. George's Society has sent through Mr. Murray Stewart a donation of £1,500 to the Montenegrin Red Cross and Relief Fund.

TRAGEDY OF MONTENEGRO,

THE SMALLEST AND POOREST OF OUR ALLIES.

MONTENEGRIN RED CROSS AND RELIEF FUND,

11, VICTORIA STREET, LONDON, S.W.1

(Registered in City of London. Section 1. War Charities 1916)

needs £700 WEEKLY for Feeding Prisoners interned in Austria-Hungary.

Donations will be much appreciated and gratefully acknowledged by the Hon. Treasurer, LADY ROPER PARKINGTON, Claridge's Hotel, Brook Street, London, W.1.

Digitized by Google

The Agent-General for Victoria, Australia (Sir Peter McBride) has received authority to pay to the Serbian Minister £500 from the Lord Mayor of Melbourne's Serbian Relief Fund, making the total amount of charitable funds received from Victoria for distribution by him £452,661.

The Crown Prince of Serbia, telegraphing his greetings to the Lord Mayor of London in connection with the meeting organised last week under his presidency, expresses his resolve and that of his people and army "to fight to the end at the side of our mighty Allies in this struggle for the freedom of the world."

The King has granted permission to Mr. Graham Hutcheson Stewart, master of the steamship Figuig, and Mr. Arthur Pitto, agent of the "Santé Maritime" at Casablanca, Morocco, authority to wear the insignia of the Fourth Class of the Shereefian Order of the Ouissam Alaouite, conferred by the Sultan of Morocco for valuable services.

Professor Pavle Popovitch, last Friday, at 9, Ennismore Gardens, delivered a lecture entitled "A Chapter of Serbian Literature." The paper dealt chiefly with the stay in London of M. Obradovitch (1742-1811) and his impressions of his visit. Mrs. Aldridge, who presided, appealed for contributions to the Serbian Red Cross Fund, which sends parcels to prisoners of war in Austria and Germany, looks after Serbians who require help in London, and provides many Serbian women and children with clothing.

Reuter's Amsterdam correspondent reports that a Berlin telegram announces the death in that city of Hakki Pasha, Turkish Ambassador. Hakki Pasha was fifty-six years old, and had held many positions of importance both under the old régime and under the Young Turks. Abdul Hamid held him in high esteem and entrusted him with several missions; and he had been at various times Minister of Education, Minister of the Interior, and Grand Vizier. He had also been Turkish Ambassador in Rome, and came to this country in connection with the Baghdad Railway negotiations.

OBITUARY.

Lord Wenlock, who died on July 25, at Hestercombe, Taunton, saw service in the Sudan in 1884-85, and received the medal with clasp and the bronze star.

Brigadier-General R. A. Gilchrist died on July 30 at Bowood, Folkestone, aged seventy-two. He joined the Indian Army fifty-three years ago, and took part in the Abyssinian Expedition in 1868.

Colonel Henry Isham Wheler died on July 28 at St. Helier, Jersey, in his seventy-ninth year. He served in the Bhootan Expedition in 1864 and received the medal with clasp. He retired from the Bengal Staff Corps in 1883.

Lieutenant-Colonel E. Gunter, late East Lancashire Regiment, died on July 30 at Clifton, Bristol, in his seventy-seventh year. He received his first commission in 1858, and saw service in the Afghan War of 1879-80. He was present at the Battle of Ahmed Khel and the action of Urzoo.

Lieut.-Colonel Laurence Corban, whose death at Llandrindod Wells is announced, saw active service in the Egyptian campaigns of 1882 and 1884-5. He was present at Mahuta, Kassassin (both engagements), and Tel-el-Kebir. He was mentioned in despatches, and received the Egyptian medal with clasps and the Khedive's Star. On retiring at the end of 1898 he became Deputy Lieutenant for the County of Hereford, where he took an active part in political affairs.

Captain Charles David Danby, M.C., R.A.F., who is reported killed, held an engineering appointment in Egypt under the Government when war was declared, and at once came home and obtained a commission in the Royal Tyne Engineers. He was transferred in the spring of 1915 to the R.F.C., and was later sent to the front. He was one of the first to take photographs over the enemy lines, and was awarded the M.C. for a daring flight, from which he returned with valuable photographs. He also received thanks and a congratulatory note from the Commander-in-Chief. He was killed in an accident while flying in the North of England on July 18, a few days after his thirty-first birthday.

"TURCO-ARMENIAN PEACE."

A telegram received by Mr. Aneurin Williams, M.P., chairman of the Armenian Refugees (Lord Mayor's) Fund, reports that the peace treaty between "the Armenian Independent Republic of Ararat" (capital, Erivan; population, 400,000) and Turkey has been ratified at Constantinople. The telegram adds:—

"Armed peace prevails at present, except in the district of Baku, where Turco-German Tartar forces are trying to force their way to Baku. Fighting is going on 80 miles west of Baku. Except for several sporadic murders, there have been no large-scale massacres of Armenians hitherto. Prospects are distinctly gloomy. Our compatriots at Kars, Alexandropol, and other districts occupied by Turks have left their homes at Vladikavkas. Great distress prevails."

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO,
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

THE ONLY ENGLISH HOTELS IN ALEXANDRIA.
Proprietor: AUGUSTUS VAN MILLINGEN.

WINDSOR HOTEL
(Facing the Sea, opposite Y.M.C.A.), ALEXANDRIA.

FRIDAY, AUGUST 2, 1918.

AFTER FOUR YEARS.

The Allies enter upon the fifth year of the war in good heart. It is not claimed that the end is in sight, or that the remainder of the stupendous task set them is otherwise than difficult and hazardous; but they have much to encourage them for the work before them, and in this spirit they renew their determination to see the thing through. Mistakes there have been, and may well be again; not the same mistakes, it is to be hoped, but the problems to be solved are intricate and numerous, and it is inevitable that war-wearied human nature should seek to shirk some of them, in the belief that, if it makes sure of the major difficulties, the minor ones will right themselves. This view must be persistently challenged, for the existence at the end of the war, unsolved, of the least of the questions around which it is being fought, will inevitably leave the germs of future trouble once more to infect the world. The return of August 4 affords an opportunity of taking stock of the general situation, both military and political, as well as in regard to any advancement towards the establishment of a new order after the war. For the purposes of this review our horizon has to be restricted to the Near and Middle East; but it cannot be overlooked that the ultimate decision has to be sought against the German army, wherever the bulk of it is to be found—and that, as things are, implies the Western front. While, from the point of view of numbers engaged, there can be no comparison between the battlefields of France and Italy and those of the different theatres in the East, the latter are not to be contemptuously dismissed as side-shows, after the manner of the military "expert" endeavouring to camouflage his ignorance of the complicated political questions that centre in South-Eastern Europe and Western Asia. The simile of the beleaguered fortress still applies to the Central Alliance, in spite of the freedom of action that they have temporarily won by the defection of Russia; and it requires little imagination to appreciate the damage that might have been inflicted on the Allies, if they had failed to throw a cordon round the whole perimeter from which Germany or her subordinates could issue to attack the army of investment. Circumstances, or the Allies' errors of judgment, have allowed the enemy garrison to retain its outer lines of defence in the East at a considerable distance from the centre of its system. Instead of winning Bulgaria over to the Allied cause and marshalling the Balkans for an attack on Austria-Hungary, the Allies have only been able to establish a small foothold on the Macedonian coastline. The attempt to roll up the Turkish forces by the capture of Constantinople failed, and it was only possible to renew the attack on the confines of the Ottoman Empire. Notable progress has been made both in Mesopotamia and Palestine; but the fact remains that the successes in these regions have been too remote from Turkey's nerve-centre to weaken the hold that the Germans have fastened upon the country through the corrupt clique that dominates the capital. It follows, therefore, that if Turkish resistance is to be overcome by military defeat alone, the beginning of the fifth year of the war finds the Allies still a long way from being able to drive an effective wedge between the Central Powers and their vassal states.

In a war of this duration, however, a variety of considerations intervene to reinforce a purely military decision. Especially is this to be anticipated in the case of countries whose peoples, as distinct from the Governments and a few political supporters, have never taken kindly to the domination established by the Germans under the name of an alliance. Thus, in Bulgaria and Turkey, is to be met none of the enthusiasm for a popular cause which will carry the Germans, and, in a lesser degree, the German-Magyar population of the Dual Monarchy through the direst economic straits, with the probable result that sooner or later public discontent will paralyse the Government's powers of resistance. It is an encouraging factor of the situation to-day that the Allied Governments have brought themselves to pay more attention to the political aspect of the powerful organisation by means of which Germany hoped to impose her will upon a subject world. The most has not yet been made of the opportunities offering; but the leaven is working gradually. It was not, however, only in regard to enemy countries that the Allies stood in need of a new political orientation. Unwillingness to subject their own war aims officially to a critical analysis had been carried to somewhat dangerous lengths, and numerous cross-currents had been gaining power and volume in the Alliance itself. This source of weakness has now been almost entirely eliminated. The vagueness that characterised the Allies' intentions with regard to Austria-Hungary and the future of the Czecho-Slovak and Jugoslav peoples has given place to a clearly enunciated pledge. The disintegration of Austria-Hungary is to be effected, in order that the subject nationalities may be free to work out their own independent development. There is, perhaps, some justification for the omission to place on record the Allies' views in regard to the future settlement of the rest of the Balkans. But, as the peace of Europe can never be guaranteed as long as the seeds of disunion and unrest remain in the Balkan Peninsula, it would seem a natural precaution to take to emphasise the need of a settlement that will make for the harmony of the constituent States. We are of opinion that the ground which has yet to be covered before this goal is reached is sufficiently difficult to render it advisable that those countries which have to tread the road should be familiarised as much as possible with the details of the route. The Allied Governments, however, seem content to put off the consideration of the question, with the result that public opinion in some of the Allied States is encouraged to indulge in individualistic theories instead of concentrating its attention on the means of ensuring the harmonious co-operation of the Balkan countries.

For the steps taken to facilitate the establishment of a new order after the war our examination is of necessity restricted to the portions of the Ottoman Empire which have been liberated from Turkish jurisdiction. In the Hejaz, which has gained its freedom by its own efforts, we are able to see the beginning of a regime of order and enlightenment that, for the first time since the benumbing influence of Turkish sovereignty overtook the land, will allow the Arab to display his capacity for political and economic progress. In Mesopotamia the primary consideration is, under British guidance, so to develop the natural resources of the country that its former glories may be revived, and that the Arab world may have an object-lesson of what is required as the material basis of a successful modern State. The position in Palestine is not so simple. As far as the section under British military occupation is concerned, all possible steps are being taken to alleviate the wretched condition into which Turkish misrule or neglect has brought the land and its inhabitants, and no effort is spared to satisfy its immediate needs, whether in the matter of communications, food, water-supply, or agricultural implements. More ambitious schemes for promoting the well-being of the country have to be postponed, both because the area occupied is relatively small, and in view of the decision to promote a Jewish settlement of Palestine after the war. With regard to other countries in the Near East, the work of preparing for the period of reconstruction is practically confined to steps initiated for the promotion of inter-Allied commercial interests. In this respect Great Britain has a special need to be up and doing, and we may point with satisfaction to the measures taken to familiarise British manufacturers with the openings for trade in the Near East, and Near Eastern purchasers

Digitized by Google

with the facilities existing for the supply of all their needs by British factories. The war has brought the Near East and Great Britain much closer together. The future must not be left exclusively either to the soldiers or to the traders. In between their operations will come a Peace Congress that will crystallise the decisions of the Allies in regard to the future of this part of the world. It is for the people of Great Britain and the Allied countries so to keep in touch with Near Eastern affairs that they may be able to ensure that their Governments will reject any proposal for a settlement that does not guarantee the permanent peace of the Peninsula.

A JEWISH FEAST.

THE ANNUAL FEAST OF RABBI SIMEON BEN YOKHAI AT MERON.

Annual festivities at sacred tombs are common to all the three great religions in Palestine. Thus the "Holy Fire" in the Church of the Holy Sepulchre draws thousands of Oriental Christians together every Eastertide, and at the same time the Moslems from all over the land pour down into the Jordan Valley to celebrate the feast of Nebi Mûsa at the (to them) traditional tomb of Moses. Both these celebrations have been repeatedly described. The corresponding Jewish feasts held in Galilee are little known outside Palestine, but are certainly quite as picturesque, and among Oriental Jews are times of great rejoicings. These two annual spring festivals are the one at the tomb of Rabbi Meyer Baal Nes, held on the thirtieth day after the Passover, at Tiberias, and that at the tomb of the Rabbi Simeon ben Yokhai on the thirty-third and thirty-fourth days after the Passover, at Meron, on the slopes of the Jebal Jermak to the west of Safed. The latter is the more ancient feast, but many Jewish pilgrims manage to attend both, and hundreds of Jews stream up from Tiberias—every donkey, mule, and horse available being requisitioned—to attend the great gathering at Meron. It is not my purpose to enter into any historical account of the gatherings, or of those in whose honour they are held, but as I had an opportunity of attending the Meron feast some years ago, and as, with the influx of new ideas into the land, it is to be feared that many of the picturesque features will fade away, I propose to narrate—from notes taken at the time—my impressions of the occasion.

We left Safed on Thursday, May 2, at 5 p.m. Pilgrims had been pouring along the road to Meron all the day long, and at 2.30 that afternoon a famous Torah (copy of the law) from the Chief Sephardim Synagogue had been carried in procession—its passage to Meron being celebrated by a great collection of alms en route. This much-venerated Torah is said to have been stolen some centuries ago and to have been carried to Constantinople; but from there it returned of its own accord, a month or so later! When we took the road, there was one almost continuous line of people walking or riding to Meron. At an old cistern—Bir esh Shih—about halfway, a tent had been erected, and bread and water were being distributed gratuitously to those in need. A few yards further on is a ruin reputed to be the tomb of Rabbi Yosêa Galilee; here a number of Jews were collected together reciting prayers.

Our fresh horses steadily outstripped the jaded and overloaded beasts, each conveying the food and household utensils, as well as at times two or more members of a Jewish family.

Close to Meron itself we passed the Chief Rabbi of Safed, whose bowed and aged frame was swaying about on the back of an ass. A mounted Turkish soldier, with rifle to knee, rode in front for his protection. A few yards farther, and we found ourselves amidst the excited crowds scattered around the tomb. Before we could dismount a group of three musicians commenced a musical welcome in our honour, which we promptly diverted to greet the arrival of the more honourable visitor behind—the Chief Rabbi. As the setting sun left us but a few minutes more of daylight we hastened to use its light to visit the tomb of the famous Hillel, on the hillside to the west. Here are shown the sarcophagi of the great teacher and of his thirty-six disciples—all, alas! to-day empty. It is a strange underground chamber with the sarcophagi on three sides, each with a massive stone lid. In the darkening interior we could see the drops of moisture gathering on the roof, to fall upon the puddles on the floor, while every sarcophagus was brimful of water. The damp, the gloom, and the semi-desertion of the site were in strange contrast to the flaring lights and noisy crowds gathering around the tomb of Simeon. The only visitors to Hillel's tomb were two Yemen Jews from Silwan (Siloam), who, like a large proportion of those in the neighbourhood, were unblushing mendicants.

Crossing some fields towards the site of the festal proceedings, we reached the rear of the Synagogue just as a burst of applause from the roof marked the conclusion of a sword dance by two Aleppo Jews. We then entered the outer court of the Synagogue. The centre was occupied by a booth sheltering the stalls of several provision sellers, and round this gyrated a vast moving crowd. By squeezing and pushing—and being pushed—we at length pressed our way into the shrine itself and found ourselves before the tomb of the saint. This, a raised oblong structure of whitewashed stone, occupied the south-east corner of the building, and was ablaze with the candles of the worshippers. A few pious Jews, in marked contrast to most of those present, were engaged in prayer. Nearer the centre of the Synagogue was the less honoured tomb of Rabbi Eliezer, Simeon's son. As we wandered about, an ever-increasing string of beggars attached themselves to us, and we were not sorry to escape again into the open courtyard. Thence we ascended a stone staircase to the surrounding gallery, from which the swaying multitudes in the court below could be observed. Although all the front places had been taken hours before, one kind old Jewish matron made a place for me, from which I could look down for hours upon the proceedings. It was now growing dark, and the young folk on the roofs and galleries occupied themselves by throwing a stream of flaming green and red matches upon the heads of the dense and moving crowd. Some landed upon the straw mat, but not a few, impelled with surer aim, did visible damage to hats and clothes. The utmost good humour appeared to prevail, however, and I had many friendly greetings from happy faces. I only saw one quarrel, when a young man, apparently the worse for liquor, forcibly ejected a woman from a seat which he coveted.

Two Jewish bands—fiddle, drum, and cornet—played turn about without cessation in friendly rivalry, but barbaric discord; and circles of Jews revolved in the court below. Sometimes they would dance shoulder to shoulder, with arms closely intertwined; at other times they threw themselves about, frantically waving their arms up and down. The Ashkenazim Jews, with their long cloaks, fur-lined caps, their *peyût* and their long ragged beards, looked most extraordinary, throwing themselves in wild contortions as they circled round in front of the Synagogue door. In another part a circle of Separdian (Spanish-speaking) Jews went through various forms of more dignified, though, perhaps, more noisy, dance.

At times one could see in the semi-darkness swords being slowly waved, while at others a chorus in honour of Rabbi Simeon, accompanied by clapping of hands, would vary the programme. Suddenly the former group was joined by a man with a girl of about seven perched upon his shoulders. She was clad in white, with a gold braided cap on her head, and while she clung with all her might to her father's head, he twisted and turned and gyrated among the dancers with unwearied energy. We learned that she was a child who had during the past year been spared to her parents through a severe illness, and this was their way of returning thanks—probably in fulfilment of a vow made in the hour of anxiety. This father was soon joined by others bearing shoulder-high boys of three years old who had been brought to have their side locks trimmed by the Rabbis on the morrow. Some of these children seemed to be actually enjoying themselves—as, with us, such children enjoy bank-holiday outings, with all the attendant discomforts—but one could not help wondering what they would be like the next morning after such a shaking-up, in such an atmosphere, at such an hour. The darkness was now deeper, and only a few lamps suspended over the court, supplemented by frequent fireworks, illuminated the scene. Presently, looking eastwards to the mountain mass of Safed, we saw amidst the twinkling town lights a number of brighter points, which, we learned, were bonfires lit there in honour of the feast.

About nine o'clock the excitement around us—on the Synagogue roof—deepened, and presently an iron brazier

upon a pole, which had been filled with clothes saturated in olive oil, was ignited. A middle-aged Jew from Bokhara waved this torch with wild delight, holding it at times suspended over the dancing crowds below—illuminating a scene quite Dantesque—and at other moments shaking it recklessly over the people around him on the roof. The Turkish guards took speedy advantage of the illumination to detect and summarily eject any Moslems they found scattered among the crowd. When the flames flagged fresh clothes—now a *kumbaz* (cloak), then a *kamis* (shirt)—were thrown upon the top. The holder of the brazier became more and more reckless in his movements, and scattered clouds of sparks and blazing fragments of garments, while the packed multitude around him jumped and shouted in excitement. Once in wilful carelessness, to the great disgust of the *Shammas* in attendance, he brought the blaze almost in contact with the sacred *adlakah*, or bonfire, the kindling of which is the chief feature of the evening.

This bonfire consisted of a pile of garments saturated in pure olive oil arranged upon a pillar of stone about five feet high. Two such constructions are built upon the roof, one in honour of Simeon and one of Eliezer. Over each a *Shammas* (Synagogue servant) presided, and all the evening each was occupied in accepting offerings of garments and olive oil for the fire. While oil was being freely given, the attendants did no little business by selling, at an enormously enhanced value, small quantities of it for its supposed healing virtues. As the time drew on the presentations of oil arrived with increasing rapidity.

About 9.30 there was a stir along the gallery, and a group appeared escorting the Chief Rabbi, whose duty it was to kindle the Adlakah in honour of Rabbi Simeon. This privilege is annually sold, and this year it had been purchased for 25 Napoleons by a Jew in Russia who, being unable to attend himself had, as is customary, deputed the Chief Rabbi to act for him and kindle the fire in his name. The aged Rabbi was assisted to a step within reach of the bonfire; he then wound a silk scarf soaked in oil around a stick, and having kindled this from the brazier, attempted to light the oil-soaked mass of garments. They were somewhat slow to ignite, so the brazier itself was lowered until it almost rested upon the combustibles. Sparks flew in clouds and were thrown by the wind over the Chief Rabbi and his supporters; the fur-lined cap of the former showing signs of ignition was hurriedly removed, leaving him in his less dignified skull-cap. To us the old gentleman would have seemed to be in a very uncomfortable position but for the glimpses we caught of his earnest and delighted face at intervals as he actively poured streams of fresh oil upon the blazing flames. As the fire blazed, a perfect frenzy seemed to take possession of the crowd, which, amid loud shouts, danced up and down or surged backwards and forwards. After a quarter of an hour the second fire—close to where we stood—was kindled, without special ceremony, from the first bonfire. Most of our neighbours gave themselves up to having a "good time," and roared, shouted and gesticulated with delight. In contrast to the majority, we saw three aged dames peering from a recess close to the fire, whose scared and shining faces were animated by the deepest reverence, while their toothless jaws worked up and down with mumbled prayers.

A third beacon was now kindled, just over the entrance, near the tomb of Rabbi Isaac Nifhah, and shortly afterwards, as we were leaving, we saw a blazing brazier being carried up the hill to light yet another bonfire at the tomb of Rabbi Yohannan Sandlar.

We picked our way out of the noise and smoke into the quiet environs. As we mounted our horses the moon rose calm and still behind the mountains of Safed, to disappear as we descended the steep and rocky hill from Meron, to reappear once more as we pursued the quiet and now deserted road back to Safed.

We left the crowds to carry on, amidst growing excitement and licence, their semi-pagan ceremonies all the night through and for twenty-four hours beyond. Noise and crowds and blazes seem to appeal to the multitude everywhere under the patronage of various religions. The "Holy Fire" in Jerusalem presents almost identical features—similar disorderly and excited crowds, loud chants and shouts, and finally a blaze of light. A good old-fashioned "Guy Fawkes" day of half a century ago—originally a semi-religious demonstration—appeals to the same tastes.

It has been stated that at Meron costly garments and even jewellery are cast into the fire; but I saw nothing of this kind of offering, and if such a custom existed, it is not continued now.

The second day of the feast is not so important as the first, but is marked by one custom peculiar to itself. Jews on this occasion bring their three-year-old boys to the tomb of Rabbi Yohannan in order that the Rabbis may cut their hair to make the beginnings of the *peyût* or side locks so greatly valued by the orthodox.

E. W. G. Masterman.

NEWS IN BRIEF.

The introduction of an alcohol monopoly in Roumania has finally been decided upon.

King George's Fund for Sailors has received £1,500 from the Viceroy of India, representing the first response to his appeal.

A Kieff telegram to the *Rheinisch Westfälische Zeitung* states that the efforts of General Skoropadski to sever the Ukrainian Church from the Great Russian Church have failed.

Roumanian troops in the districts not occupied by the Central Powers are distributed as follows:—The 1st, 2nd, and 3rd Army Corps are in Moldavia; the 5th Army Corps is in Bessarabia.

Rainfall has been in excess in Assam and Mysore; normal in Upper Burma, Bengal, Kashmir, and Madras South-East; fair in Lower Burma, and scanty elsewhere. The Bombay monsoon is likely to continue weak.

On the anniversary of Serbia's entry into the war, M. Pashitch sent to Mr. Lloyd George a long telegram congratulating him on what he has done for the Allied cause, and expressing Serbia's confidence in the near dawn of victory.

Sunday, the anniversary of Austria's declaration of war on Serbia, was duly observed among the Serbian troops and in the schools of Corfu. A Solemn Requiem Mass was celebrated for the defenders of Serbia who have fallen in battle.

The Postmaster-General announces that, according to information furnished by the Swiss Post Office, parcels may again be accepted for transmission viâ Switzerland to prisoners of war in Turkey. Such parcels may be posted at any post office.

A Roumanian Legion of 20,000 men, to be recruited in the United States and the Allied nations for service against Germany, will be formed immediately under plans adopted by the National Roumanian League in session recently in Youngstown, Ohio.

It is stated by the *Rheinisch-Westfälische Zeitung* that the Ukraine naval ministry is taking possession of the shipyards in Nicolaievsk, declaring at the same time that Nicolaievsk will be Ukrainian territory, although hitherto it has belonged to the Crimea.

On July 25, at Buckingham Palace, the King inspected a detachment of the Indian Labour Corps, under the command of Second Lieutenant H. Bull (Indian Army Reserve of Officers). The men of the party came from the United Provinces, and were on short leave from the front.

The famous explorer, Sven Hedin has just published a book entitled "Jerusalem," forming the first part of a larger work dealing with Palestine, in which he defines Zionism in the following words:—"Zionism is the struggle of Judaism against annihilation, and its object is the building-up of a genuinely Jewish population in Palestine, with agriculture as its economic basis and Hebrew as its vernacular."

According to the *Israelitisches Wochenblatt für die Schweiz*, the "Makkabi" Zionist Society for Zurich, in response to an appeal of the National Fund Commission, has decided to purchase at least 100-200 *dunam* of land in Palestine. The Jews of Switzerland have in this way commenced to fall into line with those of Galicia, Poland, and Russia, where large sums have been subscribed for this purpose, especially (in the last-named country) since the British Declaration.

The Cairo correspondent of *The Times* announces the foundation of a Hebrew university at Mount Scopus, near Jerusalem. General Allenby attended the ceremony, as did French and Italian officers and a deputation of Egyptian Jews. Twelve stones, symbolical of the Twelve Tribes of Israel, were laid, the first by Dr. Weizmann, the others by representatives of the various branches of Jewish life in Palestine and the Diaspora. Chairs will be created for all arts and sciences, and will include one for Arabic.

Speaking at a luncheon given on Monday at the Cannon Street Hotel by the Candlewick Ward Club to representatives of the Allied Nations, the Greek Minister said that when victory came, as come it would, the gratitude of the world would go out to England for her great share in carrying on the war and maintaining it to a victorious end. The Serbian Minister said that the whole of the civilised world was pitted against Germany. Victory was now approaching, and the victory would be due to the fact that Great Britan had exerted all her force and used all her resources.

THE GERMANS IN ROUMANIA.

From an officer of high rank who has just reached London from Roumania Reuter learns that the Germans in that country are pursuing their "scrap of paper" policy. They go far beyond even the barbarous exactions of the peace treaty, and are daily imposing new conditions. They have demanded 120,000 tons of grain, and in case of non-compliance threaten to starve the population of occupied Roumania. The Germans also uphold the demands of the Bulgarians for 126,000 tons of grain, and declare that if these are not given they will not surrender the Roumanian prisoners, who are being brutally treated.

The German policy is to bring about a revolution and the removal of the King and Queen, together with all politicians faithful to Roumania and the Allies.

The food conditions are terrible, and famine confronts the country. Already Roumania has lost by death through the war 800,000 people, or 11 per cent. of the population, a figure which will be vastly increased by starvation.

NEAR EAST IN PARLIAMENT.

HOUSE OF LORDS.

Commissions for Indians. July 25.

Lord SYDENHAM asked whether steps were being taken to grant commissions to selected native officers of the Indian Army who had rendered distinguished service in the war, and whether provision was being made to confer commissions on young Indians trained in the Imperial Cadet Corps or elsewhere.

Lord ISLINGTON (Under-Secretary for India) said that the subject of granting commissions to the Indian Army was an innovation, but it was of great importance to the future of the Indian Army and the interests of the Empire. The proposals for commissions which the Government had approved fell under different categories. There was, first of all, that which allowed that every year a definite number of commissions in the Army would be given to young Indians, who would go through a course in a military training college prior to the commission being granted. For the present ten commissions would be granted each year under that category. The cadets would come to this country and be trained at Sandhurst. The question as to the age of these cadets had not been finally decided, but a decision would be arrived at shortly. At Sandhurst the course would be precisely the same as that for British cadets, and it was hoped that the first batch would be admitted in January next. For the present it had been decided that all cadets should come to this country. As to the second category of Indian officers alluded to in the speech of his noble friend, a limited number of permanent and substantive King's commissions were to be given to the native Indian Army as special rewards to those who had distinguished themselves in the present war. There were already a not inconsiderable number that were about to be appointed who would come in this category, but the number had not yet been decided upon owing to the difficulties in obtaining the information necessary from the different theatres of war. In addition, it had been decided to grant a certain number of King's commissions, conferring honorary rank in the Indian Army, to specially selected Indian officers. He reminded the House that India had already during the war recruited over a million men to serve in his Majesty's forces, and an offer to raise a further half million during the present year had been made. It was felt both by the Government of India and the Commander-in-Chief that such sacrifices in the common cause could not rightly be taken advantage of unless Indians were granted commissions in numbers corresponding in some measure, at any rate, with the expansion of the Indian Army. His Majesty's Government, therefore, had approved the grant of a considerable number of King's commissions to be held temporarily during the war. The Indians nominated for these temporary commissions were to be drawn both from civil life and from the Army, and the age limit was to be between 19 years of age and 25. Those selected from civil life would be nominated by the Viceroy on the recommendation of the Commander-in-Chief, local governors, and political administrators. It was hoped that many young Indians of high territorial position would now join the Army and make it a life career. As regards temporary commissions, preference would be shown to officers and non-commissioned officers who had proved their aptitude for leadership, and every candidate would be subjected to a qualifying examination as a test of his general education. All candidates eligible for a temporary commission would have to join a school of instruction. At the end of the war these temporarily commissioned officers would be eligible for appointment to permanent commissions.

Case of Dr. Nair. July 31.

Lord LAMINGTON asked whether, in view of the speeches and communications to the Press that had been recently made in this country, the Government would not relax the embargo enforced on Dr. Nair or any other Indian from expressing his opinion?

Lord ISLINGTON said that since the last debate on this subject the Government had further considered the position. They had decided to release Dr. Nair from his undertaking, and he had been informed accordingly. In view of the principle of non-differentiation, the Government had also considered the case of Mr. Tilak, who was coming to England in connection with a lawsuit, and on his arrival they would deal with any appeal he might make.

HOUSE OF COMMONS.

For Prisoners in Turkey. July 25.

In reply to Captain Stanley Wilson, Mr. J. F. HOPE said: No pilfering of parcels for British prisoners of war in Turkey while passing through Austria has taken place recently because the transmission of such parcels through Austria has been stopped for the past five months. It is for this reason, therefore, and not on account of any pilfering in Austria, that the delivery of parcels to Austrian and Hungarian prisoners of war in British hands has been stopped. In view of the far greater numbers and necessities of the British prisoners of war in Turkey, I cannot agree that this measure should be reconsidered on account of any possible consequent stoppage of the delivery of parcels to British prisoners of war in Austria. I am happy to be able to inform my hon. friend that another method for parcels for Austria was adopted some time ago, and I have seen a letter from a British prisoner of war in Salzerbad, dated June 8, in which he stated that the parcels had arrived in sacks on the previous day, and that there was a decided improvement in the food parcels. Parcels for Turkey are also to be sent via Switzerland, so soon as their transmission through Austria is resumed, and endeavour is being made to arrange for their packing at Geneva and conveyance to Constantinople in special sealed sacks.

Indian Commissions. July 29.

Major Sir S. SCOTT asked how many commissions in the Imperial Army are to be granted to natives of India, and whether the proposal has received the approval of the Army Council and the military advisers of the Government.

Mr. MONTAGU: No actual number has been fixed. The proposals were formulated by the Commander-in-Chief in India, and approved and recommended by the Government of India. The military members of the Army Council were not in agreement with the Government of India and their military advisers.

Prisoners in Turkey.

Lord HENRY CAVENDISH-BENTINCK asked the Under-Secretary of State for War what steps have been taken to ensure that the British doctors who are prisoners in Turkey are suitably distributed among the different prisoners' camps; and whether he will arrange that our rights for exchange of doctors under the Berne Agreement shall be waived, in so far as to allow of at least one British doctor remaining at each camp, and at least one per 1,000 prisoners at camps with more than 1,000 prisoners?

Mr. MACPHERSON: This matter is under consideration, and I hope that it will be possible to make arrangements on the lines suggested.

Lord HENRY CAVENDISH-BENTINCK asked what reply has been received from the Dutch Minister at Constantinople to the question whether he can continue to supply clothing locally to British prisoners; and whether, as the dispatch of clothing to officer prisoners is permitted and the date on which the clothing to be sent by the repatriation ship will leave Alexandria is uncertain, the War Office will sanction the dispatch of clothing and blankets overland to non-commissioned officers and men?

Mr. MACPHERSON: As it is probable that the Netherlands Minister at Constantinople will be unable to supply clothing to the men in Turkey in the future, and as information has been received that the Austrian Government have removed the restrictions on the dispatch of parcels through Austria, it is hoped to arrange for the dispatch of goods overland, as the date of departure of the repatriation ship from Egypt is still unsettled.

Indian Pay and Income Tax.

Colonel YATE asked the Secretary of State for India whether, considering that officers who entered the Indian Army before July 1, 1881, who accepted the leave rules of 1886, are residing out of India pending retirement on leave pay until such retirement, and that though leave pay is reckoned as full pay the Income Tax Commissioners are not conceding to those officers the concession granted under Section 31 (b) of the Finance Act of 1916, while, on the other hand, the Secretary of State for India has ruled that these officers, though they receive pay at leave rates, are not on leave, but are unemployed officers, and, therefore, he cannot move the Treasury to treat these officers as though they were on leave, he will now put a stop to the hardship to these officers by permitting those who have attained the age limit to be retired on the pensions due to them?

Mr. MONTAGU: I am in correspondence with the War Office on the subject of allowing senior officers on the unemployed list to retire on pension, and shall endeavour to arrive at a decision with as little delay as possible.

Colonel YATE: Will the decision be arrived at before the adjournment?

Mr. MONTAGU: That depends on the War Office. I hope so.

"A First-class Fighting Man." July 30.

Colonel WEDGWOOD: Whether the Under-Secretary of State for War was aware that no effort had been made to recruit blacks from the Sudan?

Mr. MACPHERSON: I do not know about the Sudan, but the figures of recruiting in other Protectorates are very remarkable.

Colonel WEDGWOOD: Is not it well known that the Sudanese are the best fighting men?

ROYAL SCHOOL
FOR
Daughters of Officers of the Army.

Patrons:
Their MAJESTIES THE KING AND QUEEN
and HER MAJESTY QUEEN ALEXANDRA.
Chairman: Lt.-Col. A. GRUBB. J.P.
Vice-Chairman: Surgeon-Gen. SIR WILLIAM TAYLOR, K.C.B.

Daughters of Officers of the Army are admitted to the above Schools according to the circumstances of their parents, at rates of £20, £45, £55, and £80 a year. Granddaughters of Officers are admitted at £45, £55, and £80 a year according to circumstances, and a limited number of daughters of civilians are admitted at £120 a year when there are vacancies. There are 15 Scholarships, open to competition, in the School, of amounts varying from £10 to £20 up to one of £50.

As half of the School consists of pupils on the £15 foundation, which includes both board and education, a deficiency of about £2,500 a year has to be met by contributions, which are earnestly solicited. Donations of £5 5s., giving one vote for life, or subscriptions of 10s. 6d., giving one vote for the year, may be sent to

F. W. T. ATTREE, Colonel (late R.E.), Secretary.
Office: Panton House, 25, Haymarket, S.W.1.

SCHOOL OF ORIENTAL STUDIES.
London Institution, Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.

For particulars, apply to E. DENISON ROSS, Director.

NOTES AND NEWS.

Unmistakable evidence of the strong feeling on the part of British traders in favour of a policy calculated to defend the economic interests of the Empire is to be found in the recommendations laid before Mr. Hughes by the deputation representative of the organised rice trade of the Empire with regard to the future of the trade after the war. In order to appreciate the cause of these extremely drastic proposals it is necessary to recall the history of the Burma rice trade, which affords one of the most glaring examples of the neglect of the Empire's raw materials. India's contribution to the world's rice supply has been about 40 per cent., and in 1913-14 British countries took 42.6 per cent. of this amount. The United Kingdom's share was, however, very low, being only 6.7 per cent., as against 13.8 for Holland, 13.1 for Germany, and 8.7 for Austria-Hungary. This was not because there was no greater demand for rice in this country, but simply because rice-milling, once a flourishing industry here, had been practically killed by foreign competition, and though the consumption of rice was on a large scale, it came to us from India through foreign countries.

***

During the war the position has been that the absence of foreign competition has led to a revival of the rice-milling industry, but the permanence of a trade restored by such artificial conditions can scarcely be counted on unless definite steps are taken to encourage the trade. The proposals in question meet this need in a most thorough manner. It is proposed to place an additional export tax of five annas per maund on shipments to Europe outside the United Kingdom, and to prevent any foreign participation in the rice-milling industry for twenty-five years. The recommendations further provide safeguards for the trade in Burma by ensuring that traders of other nationalities can only carry on business under licenses renewable annually and under strict Government control. The policy embodied in these recommendations is certainly calculated to protect the rejuvenated rice-milling industry of the United Kingdom, and to further the utilisation of Indian rice within the Empire.

***

Conditions in Roumania just now are better imagined than described. Nominally Germany has made a peace with Roumania which gives her a semblance of self-government; actually the country is at the mercy of the enemy, and has to submit to the treatment that would be accorded to a vassal state. A vivid glimpse of the present state of things was given to a representative of Reuter's Agency by an officer who has just reached this country from Roumania. He stated that Roumanian industrial enterprise is being stifled by the Germans, and that all machinery, except plant for oil wells, has been taken out of the country. In addition, 97 per cent. of the normal exports of the country are in German hands. The picture is rounded off by his statement that Germany demands 120,000 tons of grain, threatening to starve the population in the event of non-compliance, and also supports Bulgaria's demands for 126,000 tons of grain. Clearly there is only one hope left to the Roumanians, and that is the victory of the Allies. Their sufferings, pending that event may be terrible; but, however insupportable their lot, they will be buoyed up by the sure and certain knowledge that the Allies will in the end reverse the treaty which spells the end of Roumania as a country.

***

Considerable attention is being paid in Italy, says a writer in a contemporary, to the question of the establishment of a ferryboat service between Otranto and Valona. This project is of special interest, because it is probable that one of the first railways to be constructed in the Balkans after the war will be the line from Valona to Monastir, and when that is completed there will be a second route to the East outside the territory of the Central Powers, though it is scarcely likely that the Valona route will prove a very serious rival to the proposed Jugo-slav route.

***

A question to which I have devoted some little space—the adoption of English as the official language in Egypt—formed the subject of an interesting note in last week's letter of our Cairo correspondent, in which he explains that every effort is being made in the direction of making English the official European language, but that a change of this kind cannot be effected "by a simple stroke of the pen." The tendency, he points out, is in every way pro-English, and the only unsatisfactory feature he records is that the present standard of English among students is very low, and is now the subject of inquiry by a committee.

***

The announcement this week that the Egyptian Government has decided to issue notes for P.T.5 provides an interesting commentary on a reference in the same letter to the currency question. Our correspondent pointed out that the issue of notes for P.T.25 failed to meet the situation which had arisen through the shortage of silver, and the Government had, therefor, been compelled to issue notes for P.T.10. Evidently this measure has not proved sufficient, and the authorities have had no choice but to issue notes of a still lower denomination. The most interesting feature in the situation is that there is now almost three times the amount of silver in circulation in Egypt than there was before the war, but the country's requirements have undergone such an expansion that even that increase is not nearly adequate.

***

It is interesting to recall the fact that Fez, which was recently the scene of such a disastrous fire, had at one time in the distant past almost a monopoly in the production of morocco leather, which it owed to the arrival of refugees from Cordova. Fez was also formerly famous for the manufacture of the headgear known by its name. It gradually lost this trade, which was taken over by the Balkan towns and by Turkey. In this connection it is worth mentioning that an attempt was made in recent years to manufacture the fez in this country. There is no reason why this trade should not be carried on successfully here, and perhaps further attention will be given to the question after the war.

The appreciation in Egyptian securities still continues, fully bearing out what has been said in these columns with regard to the continuance of the prosperity that has come to Egypt as the result of the war. The absence of the usual throngs of tourists has been more than compensated for by the presence of the troops, while the continued rise in land values is a sufficient indication of the demand for Egypt's produce. Nothing could bring out more clearly the change that has taken place in Egypt than a comparison between the prices of the leading securities at the outbreak of war and at the present time. Beheras furnish a good example of the process that has been going on. When war broke out they stood at 8¼, while their present figure is 14⅜. The shares of the National Bank have risen from 13½ to 21⅛, New Egyptians are 22s. against 10s., and Union Foncières, to give a final instance, are 3$\frac{15}{32}$ against 1¼. These changes speak for themselves as to present conditions in Egypt. As to the future it can only be said that the prosperity of to-day is generally held to rest on firmer foundations than that of over a decade ago. It follows, therefore, that any reaction that may come will not have anything like so serious an incidence as was the case at that period.

***

The tribute paid to Major W. I. le Breton by Colonel St. John Cooke at this week's meeting of the Egyptian Markets was well deserved, for his services to the company have been of inestimable value during his thirteen years' tenure of the chairmanship, and it would be difficult to exaggerate the influence on the company's position of his strenuous work and self-sacrifice on its behalf. Colonel St. John Cooke pointed out that since Major le Breton joined the board "the company has prospered as it never did before, and it is continuing to prosper." The character of its prosperity may be gauged from the fact that the company has paid an average dividend of 10 per cent. on its ordinary shares for the past seven years, a rate which has been maintained during the war despite serious difficulties. For eleven of the years of his chairmanship Major le Breton has also been managing director, and he now feels that the time has come when he can only retain the chairmanship. It was, therefore, decided at the meeting to appoint Mr. F. J. Horne, the secretary of the company, to the managing directorship, an appointment on which the company is to be congratulated, for Mr. Horne's valuable services during his nineteen years as secretary are the best possible proof that he will prove a worthy successor to Major le Breton.

***

A very satisfactory survey of the position of the East Indian Railway Company was given at this week's meeting by Sir David Barbour, who pointed out that the net receipts for the year showed an increase of Rs. 69 lakhs on the figures for 1917. For the past half-year the gross receipts were Rs. 628 lakhs, as against Rs. 583 lakhs for the corresponding period in 1917, while the expenditure has only slightly increased at Rs. 221 lakhs against Rs. 218 lakhs. This improvement, it may be noted, has been fully maintained in the current half-year, the gross receipts from April 1 to July 27 showing an increase of Rs. 42 lakhs on the figures for the corresponding period in 1917.

THE MONTAGU-CHELMSFORD REPORT.

India's Economic Position.—II.

In addition to political considerations it is pointed out that "on economic and military grounds Imperial interests also demand that the natural resources of India should henceforth be better utilised." To traders of limited outlook new sources of manufacture may be regarded with apprehension, but it has to be borne in mind that by the creation of wealth purchasing power is increased, "and changes in the configuration of trade that disturb individuals must be accompanied by a total increase in its value which is to the good of the whole." With regard to the military grounds reference is made to the strong light thrown by the war on the military importance of economic development :—

> We are agreed therefore that there must be a definite change of view; and that the Government must admit and shoulder its responsibility for furthering the industrial development of the country. The difficulties by this time are well-known. In the past and partly as a result of recent *swadeshi* experiences, India's capital has not generally been readily available; among some communities at least there is apparent distaste for practical training, and a comparative weakness of mutual trust; skilled labour is lacking, and although labour is plentiful, education is needed to inculcate a higher standard of living and so to secure a continuous supply; there is a dearth of technical institutions; there is also a want of practical information about the commercial potentialities of India's war products. Though these are serious difficulties they are not insuperable; but they will be overcome only if the State comes forward boldly as guide and helper. On the other hand, there are good grounds for hope. India has great natural resources, mineral and vegetable. She has furnished supplies of manganese, tungsten, mica, jute, copra, lac, etc., for use in the war. She has abundant coal, even if its geological distribution is uneven; she has also in her large rivers ample means of creating water-power. There is good reason for believing that she will greatly increase her output of oil. Her forest wealth is immense, and much of it only awaits the introduction of modern means of transport, a bolder investment of capital, and the employment of extra staff; while the patient and laborious work of conservation that has been steadily proceeding, joined with modern scientific methods of improving supplies and increasing output, will yield a rich harvest in future. We have been assured that Indian capital will be forthcoming once it is realised that it can be invested with security and profit in India; a purpose that will be furthered by the provision of increased facilities for banking and credit. Labour, though abundant, is handicapped by still pursuing uneconomical methods, and its output would be greatly increased by the extended use of machinery. We have no doubt that there is an immense scope for the application of scientific methods. Conditions are ripe for the development of new and for the revival of old industries on European lines; and the real enthusiasm for industries, which is not confined to the ambitions of a few individuals, but rests on the general desire to see Indian capital and labour applied jointly to the good of the country, seems to us of the happiest augury.

A policy of financial subsidies, it seems, is favoured by many Indians as the best method of recovering the lost ground. In this connection the report states that if the speculative element in Government activities is to be minimised there must be a marked expansion of the technical services of the country. The financial success resulting from the appointment of scientific officers to the agricultural services suggests, it adds, that opportunities have been lost in other directions :—

> We are advised, for instance, that tanning, glass-making, soap-making, sugar-refining, and the manufacture of a great variety of vegetable dyes, drugs and essential oils are instances of industries which are now pursued on primitive lines and which present obvious opportunities for the application of technical science. The old metallurgical and chemical industries of the country, which have fallen even more completely into decay through the importation of foreign articles, also offer opportunities for profitable investment on a large scale if conducted on modern lines.

The Industrial Commission.

The writers state that they understand that the report of the Industrial Commission "is likely to lay stress on a substantial increase in the scientific and technical services of the country and their organisation under a separate department of the Government of India, whose business would bring it into close relations at various points with the Department of Commerce, the Army Department, the Department of Education and the Finance Department." The view is expressed that the questions waiting to be solved will give ample scope for this new agency, and that they are sufficiently related to justify a new administrative unit.

Connected intimately with the matter of industries, the report goes on, is the question of the Indian tariff, a subject which was excluded from the deliberations of the Industrial Commission because it was not desirable at that juncture to raise any questions of the modification of India's fiscal policy.

> We have no immediate proposals to make; we are anxious merely that any decisions which may hereafter be taken should be taken with full appreciation of educated Indian opinion. The theoretical free trader, we believe, hardly exists in India at present. As was shown by the debates in the Indian Legislative Council in March, 1913, educated Indian opinion ardently desires a tariff. It rightly wishes to find another substantial base than that of the land for Indian revenues, and it turns to a tariff to provide one. Desiring industries which will give him Indian-made articles to use, the educated Indian looks to the example of other countries which have relied on tariffs, and seizes on the admission of even free traders that for the nourishment of nascent industries a tariff is permissible. We do not know whether he pauses to reflect that these industries will be largely financed by foreign capital attracted by the tariff, although we have evidence that he has not learned to appreciate the advantages of foreign capital. But whatever economic fallacy underlies his reasoning, these are his firm beliefs; and though he may be willing to concede the possibility that he is wrong, he will not readily concede that it is our business to decide the matter for him. He believes that as long as we continue to decide for him we shall decide in the interests of England and not according to his wishes; and he points to the debate in the House of Commons on the differentiation of the cotton excise in support of his contention. So long as the people who refuse India protection are interested in manufactures with which India might compete, Indian opinion cannot bring itself to believe that the refusal is disinterested or dictated by care for the best interests of India. This real and keen desire for fiscal autonomy does not mean that educated opinion in India is unmindful of Imperial obligations. On the contrary, it feels proud of, and assured by, India's connection with the Empire, and does not desire a severance that would mean cutting the ties of loyalty to the Crown, the assumption of new and very heavy responsibilities, and a loss of standing in the world's affairs. Educated Indians recognise that they are great gainers by the Imperial connection, and they are willing to accept its drawbacks. They recognise that the question of a tariff may be mainly, but is not wholly, a matter of domestic politics. We could not conclude our discussion of India's industrial development without some statement of what we believe to be the opinion of educated Indians upon this subject. But our inquiry has not been concerned with fiscal questions; and the views expressed upon them have come before us only as the main reason which those who ask for popular control over India's finances gave in support of their request. It is obvious that any tariff that might be framed for India must take account not only of the views of educated Indians, but of the probable incidence of the burden of taxation upon the masses of the population. It has been decided by Parliament that the fiscal relations of all parts of the Empire and the rest of the world should be considered after the war, and we assume that this consideration will be by an Imperial Conference on which India will be adequately represented.

The report then refers to the non-official European community in India, who in the main "are engaged in commercial enterprises; but besides these there are the missions. . . . There are also an appreciable number of retired officers and others whose working life has been given to India, settled in the cooler parts of the country." When complaints are rife, it proceeds, that European interests are selfish and drain the country of wealth which it ought to retain, it is well to remind ourselves how much of India's material prosperity is due to European commerce.

> Our concern, however, is not so much with the past as with the future. From discussions with them we know that many of them accept the trend of events, and are fully prepared to see Indian political development proceed. India has benefited enormously by her commercial development in European hands; nor is the benefit less because it was incidental and not the purpose of the undertaking. What, then, are the obligations of the various parties? Clearly it is the duty of British commerce in India to identify itself with the interests of India, which are higher than the interests of any community; to take part in political life; to use its considerable wealth and opportunities to commend itself to India; and having demonstrated both its value and its good intentions, to be content to rest like other industries on the new foundation of government in the wishes of the people. No less is it the duty of Indian politicians to respect the expectations which have been explicitly held out; to remember how India has profited by commercial development which only British capital and enterprise achieved; to bethink themselves that though the capital invested in private enterprises was not borrowed under any assurance that the existing form of government would endure, yet the favourable terms on which money was obtained for India's development were undoubtedly affected by the fact of British rule; and to abstain from advocating differential treatment aimed not so much at promoting Indian as at injuring British commerce. Finally it is our duty to reserve to the Government the power to protect any industry from prejudiced attack or privileged competition. This obligation is imposed upon it, if not by history, at least by the duty of protecting capital, credit, and, indeed, property without discrimination.

SHIPBUILDING IN INDIA.

The Government of India announces that recent investigations do not confirm the supposition that the local resources of India, in existing war conditions, can economically be turned to account for the construction of cargo steamers for Government use (says Reuter's Simla correspondent in a message dated July 25). The Government is, however, prepared to encourage the construction by private enterprise of such wooden sailing ships, with or without auxiliary power, as can be readily built in India. The proposals for building ferro-concrete ships in India are to be held in abeyance for a few months pending the results of experiments elsewhere.

The trade returns from British India for June show that the imports have increased by £2,918,000, and the exports by £421,000, compared with the corresponding month last year.

The *Rheinisch-Westfaelische Zeitung* states a corn monopoly will be immediately established in the Ukraine, in accordance with the decision of the Cabinet, which orders all producers to deliver their produce direct to the State depôts.

BURMA RICE INDUSTRY.

Proposals for Post-War Control.

Mr. Hughes, Prime Minister of Australia, received a deputation of representatives of the associations in the rice trade connected with the British Empire Producers' Organisation, on July 30 to discuss proposals concerning the trade in rice after the war. The deputation, which represented the Burma Rice Shippers, London and Liverpool Rice Brokers' Associations, Liverpool Rice Millers' Association, Liverpool Seed, Oil and Cake Trade Association, and Liverpool Exporters' Association, put forward recommendations providing for the elimination and liquidation of all enemy rice milling firms in Burma; to make it impossible for subjects of enemy countries to reside in, trade in, own property in, or own a share or influence in any firm in Burma, at least for a considerable number of years after the termination of the war; and to allow firms of Allied or neutral nationality, and eventually all firms of enemy nationality, to reside and trade in Burma only under licence renewable annually and subject to strict Government control. They also proposed to place an additional export tax in Burma of five annas per maund on all shipments of rice to Europe—the United Kingdom excepted, direct or indirect—and to prohibit any alien, or his representative, from setting up or working any rice mill in the United Kingdom or British possessions for a term of twenty-five years.

On behalf of the deputation Mr. R. McCraken (chairman of the Rice Section of the Organisation) said that altogether about 99 per cent. of the rice imported into Great Britain was supplied by the associations they represented.—Mr. C. Findlay said the surplus of the Burma crop annually available for export was from 2½ to 3 million tons, of a normal value of about twenty millions sterling. Before the war about 40 per cent. of the European milling and export trade was in German hands.—Mr. Charles Wimble said the rice from Burma had been taken to Hamburg, finished, and dumped down here to the detriment of British trade. He also declared that railway charges in the past in this country had been more advantageous to the Germans than to the home trader. This had been harmful to the industry in Great Britain, and mills had had to close down.

Mr. Hughes said the rice industry seemed to be an industry in which it was possible for the British Empire to be self-contained. The policy which they advocated of developing and maintaining a trade which had been built up largely by British capital, and wholly on Empire territory, had his earnest support, and he would be pleased to do anything he could to help them in eliminating those enemy interests which threatened that great industry. They would not expect him to commit himself to all the methods by which they proposed to accomplish that object. He added that he had no doubt the British Government would develop the policy which by a recent declaration it had enunciated of accepting the principle of the Paris Economic Conference. It had declared that it was in favour of what was known as Imperial Preference. He expressed no opinion about either of these things, except to say that they seemed to him, along with other steps that the Government had taken in regard to Imperial trade—such as the purchase of certain raw materials from Australia and elsewhere for the purpose of manufacture in this country—finally to indicate the road that the Government proposed to take. He could not for the life of him see, in the face of what had been said and done, that the Government could adopt any other policy than that which, at any rate, involved a radical departure from their economic policy before the war.

THE CALCUTTA HIDES TRADE.

In the House of Commons, on July 24, Mr. Rowlands asked the Secretary of State for India (1) whether he was aware that the firm of Schroder, Smidt and Company was closed down under the Enemy Trading Act, and that J. Frericks, who was the manager of the firm, had started in business for himself; could he say what was Frerick's nationality; whether Schroder, Smidt and Company were connected with the Calcutta Hide Trade Association; if so, what action had been taken in order to prevent the trade again going into the same channel; (2) whether he was aware that the firm of Smidt, Sanders and Company was closed down under the Enemy Trading Act, and that Max Staub, who was the manager of the firm, had started business in his own name; could he say what was Staub's nationality; whether Smidt, Sanders and Company were connected with the Calcutta Hide Trade Association; and, if so, what action had been taken in order to prevent the trade again going into the same channel?

Mr. Montagu: The two firms have been wound up under the Enemy Trading Act. They were connected with the Calcutta Hide and Skin Shippers' Association. The two individuals mentioned are Swiss by nationality and were in the employ of the firms. They have since started business in the trade on their own account, and are carrying it on to the limited extent described in my answer to my hon. friend's question of July 10. I am asking the Government of India whether they are satisfied that they are not acting in any way on behalf of the liquidated firms or still associated with them.

INDIA'S LAC PRODUCTION.

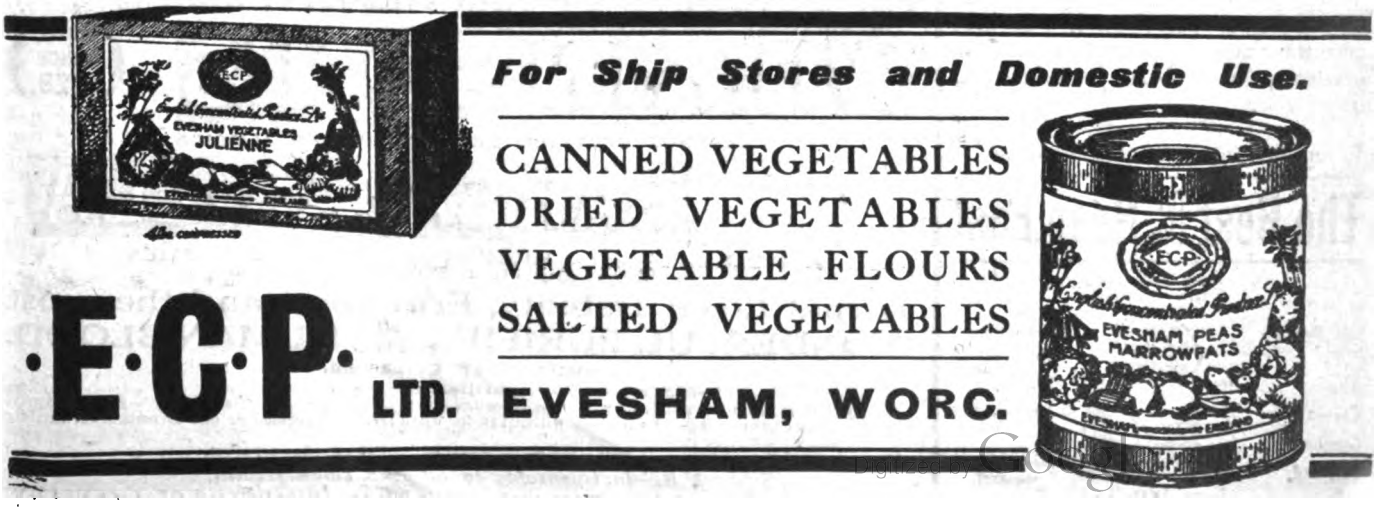
Colonel Yate asked the Secretary of State for India, on July 29, whether, in view of the importance of lac to the commercial and military interests of the Empire, and the fact that India held a practical monopoly of this natural resin, large quantities of which used to go to Hamburg and Bremen before the war, information could be given as to what measures would be adopted by the Indian Government to encourage the production of Indian lac and facilitate supplies to British markets?

Mr. Montagu: I can at present make no statement on the subject, but the general question of post-war economic policy is now engaging the close and constant attention of the Government of India.

An agreement has been made between the Secretary of State for India and the Tata Steel Company, by which the latter acquires additional land for extensions, and undertakes to expend £2,000,000 within ten years.

EGYPT'S COMMERCE.

British Empire's Share.



(From Our Own Correspondent.)

Cairo, June 20.

The detailed statistics of the Customs Administration for 1917 have just been issued, and it is interesting to see the position held by Great Britain and the other parts of the Empire in the import and export trade of Egypt. Of the total imports the British Empire supplied 61.9 per cent., as compared with 62 per cent. in 1916 and 37.6 per cent. in 1913; of the exports the Empire took 60.8 per cent., as against 53.7 per cent. and 43.4 per cent. in 1916 and 1913 respectively. No other country comes anywhere near.

Coming now to the various categories and taking imports first, we find that the British share is as follows (the country given in brackets is either the runner up or the highest on the list) :—Cotton tissues 86.2 per cent. (Italy 12.8 per cent.), in coal 98.8 per cent., sacks 99.7 per cent., worked iron and steel 85.2 per cent. (America 8 per cent.), cotton threads 92.1 per cent. (Italy 6 per cent.), flour 99.5 per cent., coffee 49.2 per cent. (Brazil 29.8 per cent.), machinery 49.5 per cent. (Switzerland 24 per cent.), fresh fruit 45.5 per cent. (Italy 28.4 per cent.), tea 38.6 per cent. (other far Eastern countries 57.3 per cent.), alcohol and liqueurs 59.2 per cent. (France 27.7 per cent.), mineral oils 47.8 per cent. (America 28.4 per cent.), other oils 52.2 per cent. (Italy 17.8 per cent.), millinery 24.5 per cent. (Japan 41.3 per cent.), rice 99.6 per cent., ready-made linen 38.4 per cent. (Japan 24.5 per cent.), wines 52.7 per cent. (France 22.6 per cent.), pepper 91 per cent., writing and printing paper 42.8 per cent. (Italy 26.4 per cent.), indigo 100 per cent., skins 50.5 per cent. (France 19.4 per cent.), boots 56.1 per cent. (Switzerland 33.7 per cent.), beer 72.5 per cent. (Holland 23.4 per cent.), condensed milk 39.5 per cent. (America 28.6 per cent), common soap 87.6 per cent. (Greece 5.9 per cent.), ready-made clothes 50.4 per cent. (France 23.7 per cent.), drugs and medicines 51.6 per cent. (France 31 per cent.), meat and preserved fish 98.9 per cent., and tissues other than cotton 62.3 per cent. (Italy 11.3 per cent.), chemical manures 5.3 per cent. (Chili 92.3 per cent.), haberdashery, etc., 32.5 per cent. (France 25.2 per cent.). In practically every category the British Empire has improved its position as compared with 1916, the only notable exceptions being chemical manures, machinery, pure alcohol and liqueurs, and boots.

Turning to exports we find that the Empire has the monopoly of cotton seed, cotton cake, natural wool, and that all but 0.1 per cent. of the eggs and silver ingots were taken by it. Of the other categories it received under cotton 62.1 per cent. (America 15 per cent.), sugar 45.2 per cent. (France 45.4 per cent.), cigarettes 35.1 per cent., gum 13.7 per cent. (France 76.1 per cent.), onions 81.3 per cent. (France 11.1 per cent.), rice 24.8 per cent. (Greece 64 per cent.), gold bar 98 per cent., natural phosphates 89.6 per cent., salt 94.7 per cent., cotton seed oil 2.7 per cent. (France 90.2 per cent.), flour 60.6 per cent. (Rhodes 32.5 per cent.), common soap 72.4 per cent. (Arabia 20.5 per cent.).

A WORLD-WIDE REPUTATION FOR OVER THREE-QUARTER

COMPANY MEETINGS.

Egyptian Markets.

The annual general meeting of the Egyptian Markets, Limited, was held at Winchester House, Old Broad Street, London, E.C., on July 25, Major W. I. le Breton (chairman of the company) presiding. The Secretary (Mr. F. J. Horne) read the notice convening the meeting and the auditors' report.

The Chairman said: Our report has told you that we lost, in 1917, more than five times the number of market days, to horned cattle, that we so lost in 1916. In other words, 4,403 in the one year, against 863 in the other. A year ago I had to warn you that a serious increase of cattle plague was then taking place, but, serious as this has been, I must guard against exaggeration of it, by explaining that a considerable number of the days lost was due to the desire of the authorities to discourage free dealings in animals at our markets, which, it was believed by them, would aid their slaughter. Under these additional adverse conditions I feel you will share our satisfaction that the decrease of earnings from our cattle markets only amounted to £5,802, or about 15 per cent. Had it not been for the causes explained these receipts would undoubtedly have established a record.

The receipts from our general markets continued to show satisfactory increase, viz., of no less than £3,564. Our combined receipts from cattle and general markets are consequently only £2,240 below the previous year, and this is more than wiped out by the additional profits we have made from our miscellaneous business. Our business with the salt companies of Egypt has taken a decided turn for the better, and, under a recent arrangement with the Salt and Soda Company, the entire profit remains our property. Turning now to the business we have done for the Government, we have made about the same profit as in the previous year, from forage classed as "Dreis." I mentioned to you at our last meeting that at the beginning of the year under review we obtained from the Government a contract for the supply of another kind of forage, known as "Tibbin." I can only tell you that, as a result, we made a fair profit on the first contract, but at the close of the year the accounts for the second period had not been adjusted, so we have not felt justified in taking any profit on the latter into the accounts of the last year, and whatever there is will come into the accounts for 1918. This contract has terminated. At the request of the Government authorities in Egypt, we undertook for them the sale of a small quantity of German dyes seized at Alexandria. We carried out this little business, under somewhat difficult conditions, in a manner that not only earned the approval of these authorities but drew very useful attention to our successful management of it, and, as a consequence, I am most pleased to tell you that we have secured the sole agency from Messrs. Levinstein for the sale of their dyes in Egypt. Our expenses show a bigger increase than is really the case. The explanation of this is that in former years we had to debit our miscellaneous business and credit our expenses with certain charges for its conduct and supervision by our staff. Under the arrangements which were the subject of our recent extraordinary general meeting, and which were given effect to from January, 1917, we are no longer required to do this; our working expenses are, therefore, not relieved, but correspondingly our profits on such business are not reduced. Apart from this, however, we have had to grant increases of pay and also a war bonus to our staff, the latter for the duration of the war, to meet the enormously increased cost of living in Egypt. We have also had to pay considerably more for materials and for printing.

Our report will have shown you that, after providing for our sinking funds and debenture interest, the resulting sum for disposal is £40,311 0s. 6d., an increase of £2,148 15s. 7d. over the previous year. We are glad to be able to recommend that the ordinary dividend, for the seventh consecutive year, be made up to 10 per cent. by our now declaring a final distribution of 5 per cent., and that our deferred shareholders receive £8 3s. per share. We have put aside £17,000 to meet the estimated participation by the Egyptian Government and the liability for excess profits, which latter, as you are aware, is now taken at 80 per cent., against 60 per cent. last year. We have put £2,000 to reserve, making this up to £8,500, and if our recommendations be approved our carry-forward will be increased by £1,396 0s. 6d. We have, I fear, no right to reckon upon any improvement in the general conditions which so seriously affect and distress us all. Our market earnings this year, according to quite recent advices, are now being further affected by the compulsory recruiting of the natives for labour and transport services and have fallen considerably. So long as our markets continue closed to horned cattle and suffer from a shortage of other animals, and also in the attendance of the public, our consequent loss must go on increasing, but not so comparatively, for we have already reached the time at which our markets suffered heavily last year from being closed to horned cattle. On the other hand, if any important number of our markets be reopened, we should recover, I believe, by leaps and bounds. Similarly, with regard to our most important manures. We are hopeful that our recently-acquired agency for dyes may be of considerable value to us. I have told you that we have already proved our ability to deal with such business. The immediate want of dyes has been recognised by the Government of Egypt, and as a consequence of their action a small quantity has already been consigned to us by the manufacturers. In conclusion, I would again make the somewhat unnecessary suggestion that our best thanks are due to our able general manager, Mr. C. E. Duffield, to his assistants and the staff generally. In spite of greatly reduced staff and of exceptional difficulties, delays in correspondence, shortness of supplies in important directions, and the carrying out of work for the Government under very stringent regulations, everything under Mr. Duffield's control has been carried on without any avoidable hitch.

The Chairman then moved the report, which was seconded by Lieut.-Col. A. St. John Cooke, D.S.O., and was carried unanimously. The retiring directors (Major W. I. le Breton and Mr. W. O. Joseph) were re-elected; the retiring auditors (Messrs. Price, Waterhouse and Company) were reappointed; and the dividends on the ordinary and deferred shares as recommended were agreed to.

Lieut.-Col. Cooke, explaining to the meeting that they could no longer persuade Major le Breton, the chairman, from carrying into effect the desire expressed by him four years ago, to reduce his duties in connection with the company, said:—Since the retirement—11 years ago—of Mr. A. F. Joseph from the position of managing director, that position has virtually been filled by Major le Breton, and our first proposal is that, as a graceful and practical form of recognition for the extra and special work done by him since then and of the satisfactory results accrued therefrom to the shareholders, a sum of £1,000 be voted to Major le Breton, and I would like to add that this represents to a small degree only the value of his services to the company and our appreciation of them. I make this proposal with peculiar pleasure, as I have had the privilege of sitting on the board with Major le Breton for more than eight years, during which time I have seen the hard work he has put in and the very close touch which he has personally maintained between our fighting forces in the Egyptian fields and your directing board in London. Now, gentlemen, I have explained to you the wish of our chairman to retire, and that he has, at our urgent request, agreed for the present to retain his position, but he still feels a desire to be relieved of such of his duties as are additional to those of chairman; in other words, the duties of a managing director. In order to relieve Major le Breton of the additional work, and thus retain his services as long as possible, we propose to appoint such a managing director, and we have agreed, subject to your approval, that Mr. F. J. Horne, who has acted as secretary for the past 19 years—practically from the commencement of business by the company—is the most suitable man for that position. This appointment can only be made by increasing the number of directors, and we are, therefore, going to ask you to sanction an addition of one more director to the board on the distinct understanding that the next vacancy which occurs on the board will not be filled. It is proposed that the position of secretary thus vacated will not be filled until the vacancy on the board above referred to has occurred, so that the additional cost to the company will be very small.

The motion, "That the approval of the meeting to a payment of £1,000 to Major W. I. le Breton be heartily accorded as a slight recognition of his valuable services to the company, and to the number of directors being increased to a maximum number of six for the purpose of appointing Mr. F. J. Horne as managing director to the company," was seconded by Mr. W. Home, and was carried unanimously. Major le Breton and Mr. Horne briefly thanked the meeting, and the proceedings then terminated.

East Indian Railway.

The seventy-first annual general meeting of the East Indian Railway Company was held on July 31, at Cannon Street Hotel, the deputy-chairman, Sir David M. Barbour, K.C.S.I., K.C.M.G., presiding in the absence through ill-health of Lieut.-Col. Richard Gardiner, R.E., the chairman of the company. The secretary (Mr. C. W. Young) read the notice convening the meeting.

The Chairman, in moving the adoption of the report and accounts, said that the earnings for the year ending March 31 were in excess of the earnings of the previous year by 76 lakhs of rupees, in round figures; the working expenses were in excess of 7 lakhs, and the net receipts increased by 69 lakhs. For the half-year ending March 31 last the gross receipts had been, in round figures, 628 lakhs of rupees, as against 583 for the half-year ending March 31, 1917, while the expenditure had been 221 lakhs, as against 218 lakhs. That left a balance of 407 lakhs for the half-year, from which must be deducted the various interest and annuity charges, and also the payments to the Delhi-Umballa-Kalka and the South Behar railways. A sum of 202 lakhs remained to be divided between the Government and the company, of which the company's share was Rs.16,82,269, which was reduced by payment of Indian income-tax to Rs.15,80,640. That amount had produced in sterling the sum of £118,494, and, with the balance brought from the last account, enabled the board to recommend a dividend of £1 7s. per cent., making with the dividend paid in February last a total dividend of £2 16s. per cent. for the year 1917-18, subject to the payment of income-tax at the rate of 3s. 9d. in the £. For the current half-year the prospects from a financial point of view were quite satisfactory, the gross receipts from April 1 last to the 27th of this month being in excess of the receipts for the corresponding period in 1917 by no less than 42 lakhs of rupees.

The Rt. Hon. Lord Kilbracken, G.C.B., seconded the motion, and it was carried unanimously.

The Chairman proposed the payment of a dividend for the half-year (subject to English income-tax at 3s. 9d. in the £) of £1 7s. per cent. on the deferred annuity capital and the deferred annuity capital, Class "D," of the company, in addition to the guaranteed interest of £2 per cent. Mr. Albert B. Miller seconded the motion, and it was carried.

The Chairman proposed the re-election of Lieut.-Colonel Richard Gardiner, R.E., as a director of the company. Lord Kilbracken seconded the motion, and it was carried.

The Chairman said that, to fill the vacancy on the board caused by the death of Mr. F. M. Halliday, the directors had taken the occasion to mark their sense of the services rendered to the company by Mr. Young, as secretary for nearly eighteen years, by electing him to a seat on the board, and by nominating him managing director instead of secretary. In that way they would retain Mr. Young's valuable experience, which would have been lost had he severed his connection with the company. He moved Mr. Young's re-election. The motion was seconded, and carried unanimously, and the retiring auditor, Mr. Herbert M. Adler, was reappointed.

ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Avenue, Wednesday.

There has been a large business doing this week with a general rise in prices.

In Government stocks, Unifieds and 3½ per cent. Prefs. finish 1 point up at 94 and 79 respectively. City of Alexandria Bonds have also improved a point to 83. There has been a jump of 2 points in Turkish 4 per cent. 1891's to 85, and of one point in Turkish 3½ per cent. 1894's to 74.

In Bank shares Nationals have been a feature, persistent buying orders carrying the price up 2¼ to 21½. Agriculturals have improved ⅜ to 6⅞, and Agricultural Prefs. are ¼ up at 7⅜. Anglo-Egyptian Banks have turned the corner, being inquired for again round 17⅛, a rise of ⅛, whilst Land Banks have jumped ⅜ to 7¼. In Railways, Delta Light are ¼ up at 7⅛, but the lack of sellers prevents business.

In Land shares Aboukirs are 6d. higher at 23s. 6d. Béhéras have risen 1¼ to 14⅜ on buying from Egypt, and Béhéra Prefs, are 3-16 higher at 4 11-16. Delta Lands have again come into favour, and have risen 2s. 3d. to 15s. 9d., whilst Foreign Trusts are 6d. up at 12s. 3d. The latter security looks cheap in view of the appreciation in many of their holdings. There has been a revival in Gharbieh Lands, which have been neglected for so long, and to-day some few hundred shares changed hands at 2½, at which price there were still buyers. New Egyptians have been largely bought, and the price closes 2s. higher at 22s., after business up to 22s. 6d. Another interesting feature has been the revival in Sidi Salems, which, on buying orders from Egypt, have to-day risen to 2 9-16, an advance of 7-32. Union Foncières have been a strong market, and are 5-32 higher at 3 15-32.

Amongst Miscellaneous shares, Alexandria Waters are ⅜ up at 12½, and Salts and Sodas have improved 3-32 to 2 9-16. There has been a big demand for Khedivial Mails for Egyptian account, with the result that the price closes 4s. higher at 47s. 9d.

In Greek securities the scarcity of sellers continues, and there is a further slight appreciation in prices.

LANCASHIRE COTTON.

(From Our Own Correspondent.)

Manchester, Wednesday.

Traders in the market continue to hold diverse views as to what attitude should be adopted at the moment. There is a fear in some quarters of prices going still higher, but at the same time there is a feeling that depreciation in values may take place within the next few months. At the time of writing the dispute between the Cotton Control Board and the operatives is still unsettled. It is hoped, however, that as a result of the deliberations in London, some adjustment of the difficulties will be reached. Generally favourable advices have been received relating to the Egyptian crop. Considerable interest will be taken during the next week or two in the working of the Government regulations with regard to the control of the article. Certain users may be harassed by not being able to meet with their usual types. Egyptian yarns remain very strong. Demand in most counts and qualities has exceeded supply. Now and again special prices have been paid for early delivery. In piece goods for Egypt the increased inquiry has been maintained. As a result of freer clearances in Cairo, rather more business has been done here. Lancashire goods are now having to compete to a greater extent against Japanese makes. Decidedly more inquiry has been met with in cloth for India than for some time back. An encouraging business has been done in light bleaching goods, and occasional sales have been put through in grey shirtings. Although many of the offers are too low, it is believed that dealers on the other side are being forced to operate on a larger scale. No news of any importance has come through from China Now and again fair Government contracts have been arranged. American yarns have been somewhat irregular in price when tested. During the last day or two a little more business has been done. Export yarns remain slow, especially for India.

NOTES OF THE WEEK.

The Near East has suffered too much from the course of events in Russia to remain an indifferent spectator of the interesting developments now taking place in Siberia. Five months ago attention was drawn in these pages to the German menace to Asia, and to the culpable delay on the part of the Allies to invite Japan to pull her full weight in the Alliance. But valuable time continued to be lost by the failure of one or more Governments either to appreciate the gravity of the situation or to be able to overcome past prejudices. From the achievements of the Czecho-Slovaks in Siberia it is evident that only the nucleus of a disciplined force was required to provide the better elements in Russia with the rallying point that they needed. Now, at last, the Allies' hands have been forced by the courage and determination of a small body of men, who were called upon to stem the Bolshevist tide under the most adverse conditions. The fact that they hail from the Near East is of good augury for the part that that region will have to play after the war as the barrier to any revival of Germany's efforts to dominate Asia Minor and the Middle East.

The exigencies of diplomacy have required that the proposal for Allied action in Russia should emanate from the United States and be formally accepted by Japan. From Washington and Tokio have issued two documents explanatory of the circumstances which have led to the steps now being taken. Both are typical of the authors. The Japanese declaration calls attention to the danger to which the Czecho-Slovaks in Siberia are exposed, and connects the dispatch of troops with the necessity for relieving the pressure on the Czecho-Slovak forces. It contains, also a formal guarantee that on the realization of the objects indicated all Japanese troops will be immediately withdrawn from the Russian territories and the sovereignty of Russia will be left wholly unimpaired in all its phases, whether political or military.

The American declaration is fuller, and is eloquent of the misgivings that clearly have had to be overcome before President Wilson could bring himself to sanction the dispatch of troops to Russia. Even now the term "military intervention" is expressly ruled out of court, and it is stated that "as the Government of the United States sees the present circumstances military action is possible in Russia now only to render such protection and help as is possible to the Czecho-Slovaks against the armed Austrian and German prisoners who are attacking them, and to steady any efforts at self-government or self-defence in which the Russians themselves may be willing to accept assistance, whether from Vladivostok or from Murmansk and Archangel." Accordingly the proposal is that the Governments of the United States and Japan should each send "a force of a few thousand men to Vladivostok, with the purpose of co-operating as a single force in the occupation of Vladivostok, and in safeguarding, so far as it may, the country to the rear of the westward-moving Czecho-Slovaks."

There can be little doubt that, if the action of the Allies is restricted to the occupation of Vladivostok, it will not constitute any very serious embarrassment to Germany, nor will it bring much practical help to Russia. A subsequent clause in the American declaration, however, suggests that a loophole has been left for a more adequate expedition. "No conclusion," it is added, "that the Government of the United States has arrived at in this important matter is intended as an effort to restrict the actions or interfere with the independent judgment of the Governments with which we are associated in the war." In these circumstances it is to be hoped that Japan will take a broader view of the position, and will realise that the principle on which she should act is that of "*Bis dat qui cito dat.*" The demoralised and demobilised Russian troops, with hundreds and possibly thousands of officers murdered, cannot, with the best intentions, become effective armies in a few weeks or months. Even if they could, they would be almost entirely lacking in equipment, especially artillery. On the other hand, every encouragement should be given to Russian Volunteer Forces to join the Japanese. The Bolsheviks are evidently becoming desperate, and will not hesitate to give the Germans all the facilities at their command to cope with the situation. The Germans will certainly try to force an issue before the Russian reorganisation is completed, and, although the vast extent of Russia will prevent them from making any lasting impression, the lot of that part of Russia under their domination will become worse than it is already. There is a further possibility that they may even succeed in mobilising Russians against what they would term the Japanese invasion.

Digitized by Google

President Wilson's dilemma can be appreciated; but experience is entirely in favour of a bold policy. The

Allied cause has suffered enough in the past from half-hearted efforts. There can, however, be no question that it was a happy inspiration to announce that the United States propose to send to Siberia "a commission of merchants, agricultural experts, labour advisers, Red Cross representatives, and agents of the Young Men's Christian Association, accustomed to organising the best methods of spreading useful information and rendering educational help of a modest kind." The usefulness of these novel camp-followers, however, will be proportionate to the military successes of the Japanese and Czecho-Slovak forces.

While, as is suggested elsewhere in this issue, it is well that any misunderstanding entertained with regard to the international position should be ventilated, it seems necessary to point out that a great deal of superfluous anxiety is being displayed at this moment in Greece. As if acting on a *mot d'ordre*, which most certainly does not emanate from the Government of M. Venizelos, the Greek Press is giving utterance to many sentiments which do no credit to itself and are not helpful to the Alliance. If Bulgaria "holds under its sanguinary claws populations belonging to Greece, Roumania, and Serbia," the fault is in part, though not exclusively, that of Greece's late King and of the three States which dictated the Treaty of Bucharest, 1913. Before peace is made with the "Bulgarian wolf" the sanguinary claws will have been not merely cut, but extracted. In any case they are entirely artificial, and, as was shown in the second Balkan War, are powerless to do any harm unless their roots are firmly fastened in German militarism. This latter evil will have ceased to exist after the war, and therefore the Bulgarian bogey will lose all the frightfulness which it has worn for the last three years. The views of the Greek Press as to the settlement of the Balkan question would be welcomed at this time; but if they merely recapitulate the terms of the Bucharest Treaty, the Press must be told that that particular solution has been tried and found wanting. The Entente Powers have no desire to favour Bulgaria at the expense of their Allies, but they must evolve a lasting settlement in the Balkans, and no disucssion on the subject can be profitable, unless it starts from this point and keeps this end in view.

A striking commentary on the policy that has always been put forward in these columns as the only feasible one for the future of the Balkans Peninsula was supplied in a message to *The Times* on the new Greek Army from its Salonika correspondent. Unfortunately, the end of the article disappeared in the later editions of the day's issue, and the passage in question may, therefore, have escaped the notice of many. The correspondent had described the splendid qualities shown by the Greek soldiers, and closed his narrative with a reference to the hospitals that he had visited after the Skra di Legen battle in which the Bulgarian wounded were lying side by side with Greek patients. He added:—From French, as well as from Greek officers, I heard that, when the 1,700 prisoners had surrendered, the first words of the Greek soldiers to them were fraternal and conciliatory: "We have done our duty. You have bravely done yours. The fortune of war has favoured us, so now let us be friends." This spirit holds out a far brighter promise for the future settlement of the Near Eastern question than the mutual bandying of atrocity stories.

The Turkish occupation of Urumiah, a town some sixteen miles to the west of the lake of the same name, indicates that the Turks are continuing their penetration of the north-west of Persia in spite of all that is happening elsewhere to distract their attention. Their aim is to extend Ottoman rule to the Caspian Sea and possibly beyond, in order that they may at least be able to point to some compensating successes in the event of the return to peace finding the British in possession of Mesopotamia and Palestine. The immediate objective is Baku; but in view of the opposition that is likely to be encountered in that region the Turks seem to be attempting to reach the Caspian Sea through Persia with the idea of approaching the port both by sea and by land. In this enterprise they can count on the support of the Germans, who are anxious to see the Turks prepare the ground for their own *Drang nach Asien*, but have no intention of allowing their vassals to retain all the spoils of victory for themselves.

The German-Turkish thrust across the Caucusus to the Caspian Sea represents a serious breach in the Allied investment of the enemy fortress. In Baku the Germans will secure much-needed supplies of oil, and the possession of the town will complete the conquest of South-Eastern Russia. Their command of the Black Sea renders this advanced post to some extent independent of the course of events in other parts of Russia, and they might hope to retain the Bucharest-Batoum-Baku line when other ways of approach to Mid-Asia are barred to them. What, then, is the Allies' answer to this move on the part of the enemy? Much will depend on the extent to which the Allied Governments have been able to envisage the war and Germany's deep-laid plans as a single whole. If the "Western" obsession remains, they will probably wish to ignore the Caucasus, and be content to see General Marshall busied with the economic development of Mesopotamia rather than using his resources to bring the campaign in this theatre to a close. If, on the other hand, longer views prevail, the importance of establishing a further rallying point for the Russians against Bolshevism and the German invasion will be realised, and General Marshall will receive, from whatever source may be available, sufficient reinforcements to enable him to clear Persia of the enemy and to afford some measure of support to the Caucasian peoples, who are by no means anxious to bow their necks to German and Turkish invaders.

It is satisfactory to hear of continued activity on the part of the Royal Air Force in the Mediterranean. As has been pointed out before in these columns, both Palestine and Mesopotamia are far removed from the nerve centre of the Ottoman Empire. What is required now is that British pressure should be felt by those Turks who come more immediately under the spell and power of the Committee of Union and Progress. The Air Force in this respect can act the part of a whole battery of long-range guns, carrying three or four times the distance of the "Berthas" that have been trained on Paris. A summary of recent raids mentions attacks on Kuleli Burgas, on the Oriental Railway; on Karagatch station, the present bone of contention between the Turks and Bulgarians; and on Uzun Keupri, where the station and an aerodrome were successfully bombed. Further attacks have been made on military and naval objectives in Constantinople. Not the least advantage of this policy is that it must strengthen the conviction of the average Turk that the absence of immunity from air raids is to be connected with the waning power of Germany.

There is in existence a book containing the names of a large number of Spaniards, arranged by towns and occupations—the number is probably less than 47,000—who have desired to place on record their unbounded admiration of Germany, her methods, her achievements, and her *Kultur*. The trees on the cover of the volume, bearing the coats of arms of Spain and Germany, with their branches and roots intertwined, are intended to represent the closeness of the ties that in the opinion of the signatories link the two countries together. With the possible exception of the people whose names are to be found in this suggestive publication there can be few Spaniards who can be satisfied with the use to which their country is being put by Germany for the furtherance of her intrigues in Morocco. So long as the resultant trouble was confined to French territory, Spain had no need to be put seriously out of countenance; but the stirring up of native tribes to lawlessness and pillage is apt, like unrestricted submarine warfare, to react on neutrals as well as enemies. This stage seems to have been reached in the north-west corner of Africa, where the tribesmen, having been driven away by the French from the hunting grounds to which they were sent by German

Digitized by Google

agents with German gold, are now continuing their outrages at the expense of the Spaniards. The situation would be, of course, intolerable to any other nation.

The news from India, published at the end of last week, shows, at any rate, that the political extremists are not to have things all their own way. At the outset they made a bold effort to stampede opinion in opposition to the Chelmsford-Montagu proposals, but the manifestoes of the moderate leaders in Bombay and Madras, taken with items of news from various other parts of the country, suffice to establish the failure of that attempt, and they are now doubtless concentrating their energies on organising a hostile majority in the impending special Session of the Congress. Prophecy regarding the action of that somewhat elastic body would be futile; there may conceivably be a straight vote, the issues may be conveniently clouded, India may once again effect a synthesis of contradictions, or finally there may be a definite split. All these things have happened before, and we shall hear in due course which of them happens on this occasion.

On this side the most interesting pronouncement of the week-end was the address delivered by Dr. Nair, now in enjoyment of the privilege of free speech through the somewhat tardy concession we recorded last week. Dr. Nair is afraid that the Brahmins may be able to capture the new constitutional machinery and use it to the detriment of the classes for whom he speaks, and undoubtedly this is a danger which must be taken into account. Given a narrow franchise and a perpetuation of the privileged position now enjoyed by the dwellers in the towns, it is by no means improbable that the interests of the peasants would suffer, not because Brahmins as a class are malignant or oppressive, but simply because, like most of us, they are the creatures of their environment. As we have said before, the franchise is the essence of the whole matter, and until its limits are settled, judgment on the scheme of reform must necessarily be suspended.

We notice, by the way, that an attempt is being made to discount Dr. Nair as being nothing but an anti-Brahmin, and we must enter a protest against any attempt to extend to this country the immunity from open criticism which Brahmins still enjoy in most parts of India. As David Harum said, "a reasonable amount of fleas is good for a dog," and Brahmins who for a good many centuries have enjoyed the best that India has to offer will be all the better for hearing from time to time a little of the candid, or even caustic, criticism which is common form in those lowly Indian circles which their position debars them from frequenting.

So far as it has gone, the whole discussion of Indian reforms gives point to Sir Frank Younghusband's comment that it is a great adventure upon which we are about to embark. In that respect it is like all England's dealings with India since the far-off days when Queen Elizabeth granted the first charter to "certain adventurers of the City of London" for "traffique and marchandise to the East-Indians," and we shall do well to approach it in the same spirit—an adventure, indeed, and one to be undertaken and carried through with the caution, zeal and ability which marked the preparations of Thomas Smith, James Lancaster, and the other "committees" of the original East India Company.

The debates of last Tuesday carried the matter a stage further. Little that was said was new, but on the whole both Lords and Commons did justice to the occasion, and it was made perfectly clear that while the principle of the gradual extension of responsible government meets with practically unanimous approval, the methods of procedure proposed by the authorities have been received in a favourable though not an uncritical spirit. Lord Sydenham's rather gloomy prognostications are clearly not shared by any large proportion of the Legislature, and it is fair to say that the dominant note in the debates was hopefulness.

LETTER FROM CAIRO.

(From Our Correspondent.)

Cairo, July 8.

Syria and Palestine Relief Fund.

Bishop McInnes, Anglican Bishop in Jerusalem, has published lately in *Al Mokattam* an account of the five months' work done by the Relief Fund which owes so much to his initiative. This account has been circulated also among the various Christian communities and the Moslems in Jerusalem, in order to dispel certain misconceptions and to reply to certain criticisms in regard to the manner of distribution of relief. The Bishop begins by affirming the high principle on which the Fund was founded—viz., to afford relief where it was most needed, irrespective of creed, and adds pointedly that, whereas the greater part of the money was subscribed by Protestant churches in Great Britain, America and other parts of the world, it has been distributed without favour among the poor of the various Christian churches and of the Moslems as well. If the Jews have received only a small share, it is because they needed help less, having already been well supplied by their own funds.

Reverting to the criticism in regard to the manner of distributing relief, the Bishop explains that of the two gifts received from the Cairo Committee, the first, consisting of £250, was devoted to special medical work in Khan Yunes. As to the second, which consisted of £1,000, and part of which had been received from friends in Manchester for use in Southern Palestine, half of this amount had already been spent in Jaffa, Bethlehem, Hebron, Ramallah, and other places; while of the remainder £250 was spent on the needy Moslems of Jerusalem. The misconception arose from the fact that some of the Christian churches, having heard that the Bishop had received this £1,000, each thought that the sum was destined for its own community. It was, of course, impossible for the Bishop to depart from the principle of giving relief without any distinction of creed. He makes this mild reproach: "Indeed, it is hoped that there are not many people who would really wish that, before giving bread to a starving mother and her children, or receiving a sick man into hospital, we should first ask: "To what religion do you belong?"

The figures given in the concluding part of this report are so interesting that they may be reproduced:—

It may interest readers to know that of our forty-eight British and American workers now carrying on relief work in Palestine no less than forty-five are honorary workers, their salaries not being paid by the Relief Fund, but by other societies and bodies who have most nobly lent their services during this time of great need.

The following are the statistics to which I alluded above, made up (in round figures) to the end of May for Jerusalem alone:—More than 17,000 garments have been distributed, 2,600 blankets, 43,000 kilos of rice, 16,500 tins of milk, 3,200 food rations per

Government stores, 25,000 oranges, 57,000 portions of soup. All these distributions have been made after careful examination of each case by a band of voluntary investigators, for whose services we are very deeply grateful.

We are housing, clothing, feeding, and teaching about 600 orphans, employing about 450 women in sewing, etc., and treating many thousands of sick people in our hospitals and dispensaries. The cost of these various enterprises works out as follows: £2,660 on orphanages, £1,200 on soup kitchens, £1,700 on clothing, £470 on free distribution of rice, milk, oranges, and food rations, £1,750 on medical work, £1,550 on industrial work, £550 on special help for refugees, £1,000 on cash distributions through the Military Governor to various committees, £3,400 on automobiles, and £780 on miscellaneous expenses. Grand total spent by the Syria and Palestine Relief Fund in Jerusalem to the end of May, 1918, £15,000.

As the war drags on the amount of misery increases, and along with it the need for help. The Syrians of Egypt, seeing that no help can be sent to their fellow countrymen beyond the occupied territory in Palestine, have lately turned their attention to the poor refugees in their midst, whose needs have been growing with the progressive rise in the prices of all necessaries of life. Over 400 families of such unfortunate refugees are now receiving help.

Anglo-Egyptian Recipients of Birthday Honours.

In this year's Birthday Honours Anglo-Egyptians have not been forgotten. Twelve of the higher officials who have rendered special services in connection with the war have received the O.B.E. (4th class), Sheikh Mohammed Mustafa El Marghani, Grand Kadi of the Sudan, being appointed an Honorary Officer. Special mention may be made of Mr. Robert Earle Monteith-Smith, Assistant Director-General of Public Security, and Chairman Executive Y.M.C.A., Egyptian Expeditionary Force, who has rendered signal service in ably and promptly solving the petroleum problem, which at one time assumed an alarming character. The system devised by him has proved such an unqualified success that its adoption is now being recommended for coping with other economic crises, with, of course, such modifications as the circumstances of each case require.

The Pilgrimage to Mecca.

In accordance with its traditions, the Government has this year afforded all facilities possible under existing conditions for the performance of this sacred duty, which is of primary importance to Moslems. Owing to the difficulty of transport, certain regulations had of necessity to be laid down for strict observance by intending pilgrims. The limited number provided for will have obtained the privilege in the order of precedence by application.

The Mahmal ceremony in Cairo will take place on August 31, and the procession will leave Suez on September 1. In view of the unusually high cost of transport, the following rates will be found to be very moderate:—£E20 per passenger, 1st class; £E15, 2nd class; £E10, 3rd class. These rates do not include the following charges:—Quarantine dues, £E1.60; sanitary dues at Jeddah, 190 milliemes; insurance of provisions, £E1½; passport fee, 125 milliemes—all of which apply equally to each class. Of course the pilgrim will have to pay his own railway fare to Suez and back, as well as that of food during the sea voyage. The Government will undertake to provide the necessary facilities for camel transport between Jeddah, and Mecca and Arafat, and will publish in due course the expenses relative thereto.

Protection of Nile Bridges.

In view of the prospect of an unusually high Nile and of the increasing call on labour for Army auxiliary work, the Government has this year been compelled to enact a law empowering the local authorities to requisition labour for the protection of Nile bridges. This may seem reminiscent of the Corvée, but it differs therefrom in two important points; first, the payment to the labourer of good wages; and secondly, the absence of any brutal treatment, the Kurbash in pre-Occupation days having been the almost invariable accompaniment of the Corvée. As many as 10,000 men have been called out for work on this public service. In one Irrigation Circle in Upper Egypt, where the dearth of labour does not seem to be so keenly felt, this extreme measure has not been applied, and the work has been given to contractors by tender.

TANGIER AND GREAT BRITAIN

(From Our Own Correspondent.)

Tangier, July 26.

The Growth of Casablanca.

A few weeks ago a local French paper published a detailed study of the maritime questions affecting the French zone of Morocco, which pointed out how greatly the future of Casablanca port depended on the future of Tangier. The writer dwelt on the extraordinary advantages which Tangier's position, at the junction of the Mediterranean and Atlantic, gave her as a port of call and transhipment, and held that, if Tangier became French, the position would be taken full advantage of, but that in any other case a considerable part of Tangier's possible traffic would go to Casablanca.

It may be doubted whether all the hopes built on Casablanca port in the way of attracting passing traffic, of becoming in some measure the substitute for Las Palmas, will be fulfilled, but that it will justify the expense incurred on it is practically certain. Contrary to much expectation the harbour works, which have now arrived at a point more than half a mile from land, have not seriously suffered from the heavy seas which they have to face, and a very few years should see Casablanca with a great, secure, well-equipped harbour able to meet all modern requirements. The French Protectorate in Morocco will then have, with subsidiary ports, which are now in course of improvement, extremely good shipping facilities within easy reach of all its most fertile provinces. Tangier, even when linked up by railway, could scarcely be a serious rival in any but passenger traffic to Casablanca, and certainly cannot be said to be in any sense essential to the development of the French zone.

Sir Harry Johnston in an article published some months ago in the *Daily Chronicle*, and written in answer to a letter advocating the cession of Gibraltar to Spain, held that such a cession might perhaps be contemplated, if Tangier were given to Britain in its place. Such an exchange has long been a familiar theme of local discussion, and the idea has its supporters even among those who have very close ties with Gibraltar; though it is taken for granted that in such an event those whose interests in Gibraltar had to be sacrificed would not be allowed to suffer.

The Statue of Tangier.

The present political position of Tangier is not easy to define. A few years ago she was apparently within an ace of receiving definite status, with the powers, obligations and privileges of the Powers concerned carefully laid down. At the last moment the scheme proved unacceptable to one at least of the nations involved in it, and Tangier has continued under rather a vague form of government that certainly ought to be unworkable. Tangier is still part of the Sultan's country, still *makhzen*, but with the special position, recognised in international agreements, which, in effect, leaves much power of obstruction, though, perhaps, less of initiative to the Diplomatic Corps, consisting, of course, at present only of representatives of the Allied or neutral Powers. The actual municipal work is largely performed by a body originally formed out of subscribers to a fund for dealing with matters concerning the health of the town, but now, apart from the official representatives on it, nominally elected so as to ensure that each colony shall, more or less, be represented by a number equal to its importance.

It is not an ideal form of government, and it supplies plenty of anomalies which can easily be made food for ridicule; but bad as the system is, and great the advantage that is often taken of it, Tangier rubs along in many ways better than towns with a perfectly definite and logical form of government, and all the most modern apparatus of municipal life. The freedom enjoyed is almost unlimited, and it is not abused as much as might be expected. Many who arrive here from more regulation-ridden centres sigh with relief on arriving on a pier where there is not an official to be seen, no formality but the Customs, and, apparently—fortunately, only apparently—no supervision. Such freedom in war-time might be regretted, and must have its dangers, but, at any rate, they are less than those which the conditions of the surrounding country present. There are scarcely any town police, and those that there are can only act in a very limited sphere, but their absence is only occasionally regretted; there are sanitary attempts, in default of a sanitary system, but the general health is good; there are scarcely any taxes, but, except for the want of a good water supply, the absence of the things for which taxes are supposed to pay, is not very acutely felt. Altogether, if it were definitely settled that Tangier should remain international, and it were realised that no effort of any Power to emphasise its local importance could possibly affect Tangier's status, it would almost seem that Tangier might form the exception to the rule that condemns international government as sterile and unprogressive.

That Tangier is still to some extent, as Sir Harry Johnston says, Anglicised is certainly not due to any encouragement given by the British Government. Other governments

have not spared money, effort, or thought to increase their national influence and interests in Tangier; ours, till recent years, has stood coldly aloof, and has not only failed to show any initiative in attempts to improve the country's position, but has been apt to discourage the initiative of individuals. Other countries lavishly supplied schools, not only for their own colonies, but to teach their own languages to colonies which had no schools of their own. There was once a British school which, though it had some financial help from the British representative, was never given the personal encouragement and care that would have made it flourish; and it ceased to exist. To-day, comparatively few out of a considerable and most loyal British colony can speak their country's language. No effort was made to hold the colony together, to celebrate national occasions, to encourage any feeling of patriotism. It was a colony to be controlled, but not encouraged. The chances given by the nearness of Gibraltar, which, in any other country's hands, would have been used to encourage national interests here, was left, officially, unimproved, and except for an occasional visit from officers coming to Tangier for pig-sticking, or parties of soldiers spending a few hours' leave, Tangier was allowed as few reminders as possible of Gibraltar's existence.

British Interests.

Despite all, British interests here are by no means dead, and could, with the smallest encouragement, make up all lost ground. The added beauty which trees and verdure have given Tangier is due almost entirely to British and American effort, which transformed the district known as the "Mountain" from a comparatively bare hill into tree-clad slopes that could scarcely be beaten for picturesqueness and varied beauty. The finest houses and grounds were made, and are still owned, by members of the British colony, to whom, and to the American colony, now, unfortunately, very small, it was due that the possibilities of Tangier as a residence for Europeans were discovered.

The British trade with Tangier, has, in face of the impetus which the establishment of a French Protectorate in the south of Morocco gave to that country's hopes and trade, lost its leading place; but it is still large and sound and deeply rooted, and could with very slight encouragement make up its lee-way. The tourist traffic, of an importance which must ever grow, has always been substantially British, and, a perhaps natural accompaniment, the majority of the chief hotels are British.

Of recent years there have been many signs of reviving British interests in Tangier; there have been some additions, the most considerable for many years, to the list of British commercial enterprises, official interest in the colony is much more sympathetic and lively, and the colony takes in the local life a far more energetic part than in the preceding years.

The scheme for giving Tangier a good enclosed port had made great progress before the war; the plans were ready, and there is little doubt that, if the war had not come, they would now be in hand. The war, must, of course, affect the whole scheme, but no one can doubt that through one agency or another Tangier will before long have the port which the position so thoroughly justifies. The Tangier-Fez railway has reached the stage of awarding some of the contracts for the work; and before many years Tangier will be linked by railway with Algeria, South Morocco, and eventually it may even be with South Africa and Cape Town. A few days ago a formal application was reported to have been made by a French company for a concession to make a tunnel under the Straits of Gibraltar, starting, it is said, from Tarifa. One of the views taken by those in favour of such a scheme is that, the tunnel once made, the Moroccan railways could be extended southwards to reach, eventually, Dakar, which would become a great port for South America in railway connection with Europe.

The Tunnel Project.

Whether the scheme of a tunnel under the Straits is, within any reasonable time, practicable or not, the promotion of the scheme is at least one more indication of the great importance that is being attached to the possibilities of joining Africa much more closely than before to Europe at the point where the two most nearly approach each other. It is not in the least likely that Great Britain, however great her wish to remove all obstacles to close friendship with Spain, can contemplate losing all footing at a point so vital to her maritime interests as the Straits. Tangier and her zone would have certain great advantages which Gibraltar lacks; it is not in any way necessary to the full development of the French zone; indeed, its occupation by France would not be by any means universally popular in that zone. Spain will, before long, have in Ceuta a port of much greater possibilities than are generally appreciated. If Tangier is not to be international, and, in the general removal of all causes of friction which the after-war settlements are expected to achieve, Gibraltar is to be returned to Spain, it would be difficult to find an equivalent which would be more in keeping with the object of the settlement than the substitution of Tangier for Gibraltar.

The Natural Products of your Country

may be of considerable interest to us as we are purchasers of consignments of Produce from all parts of the world.

Coconut Oil, Palm Oil, Oil Seeds, Oil Nuts, Kernels, Copra, Maize, Ivory, Gums, Grain, Fibres, Rubber, Cotton These interest us particularly.

Will you let us know what Products of your Country you can offer us?

We are prepared to finance consignments when necessary.

PRESS ON THE NEAR EAST.

Lahore and Islam.

The *Moslem World* for July contains several articles of strong interest. "Some Non-conforming Turks" gives some description of the Alevi Turks of Asia Minor, a little-known people that will repay study. Mr. Robert Williams, a well-known architect, writes instructively of "The Mosque of Ibn Tulun." A subject of which very little is known is dealt with in "Islam in French Indo-China," and Mr. Howard A. Walter contributes a paper on "Lahore as a Moslem Center," which contains several points that will set not a few readers thinking. For instance, many people are likely to be surprised by what Mr. Walter writes of Moslem missionary enterprise; and certain "hymns" by a Western Moslem writer, which are quoted are likely to be read with mixed feelings. Mr. Walter concludes his article as follows:—

These are momentous days for Islam in India, on whom many problems are pressing—of whom many questions are demanding an answer. Is Pan-Islamism a wholly dead issue? Shall Islam in India join hands with its age-long rival, Hinduism, in a political programme which puts India before Islam, even as the Young Turks placed Turkey first and Islam second in their hearts? Is rationalism to win the day over against belief in Islam as a revealed religion, as the split in the Ahmadiya movement and the trend in the Working Mission in England might seem to indicate? Is Mohammed to be defended, or glorified, or offered to mankind as the practical leader whom this war-stained, matter-of-fact world needs? And just emerging over the horizon, suspected at present by only a few of the leaders, are the problems raised by the higher critical labours of scholars like Lammens and Caetani, in the West, which threaten seriously to undermine not now the moral character but the very historic personality, in any full and real sense, of the Prophet of Islam. The influence of the Moslems of Lahore in answering these urgent questions for Indian Islam generally is certain to be of increasing importance in the years to come.

India's Middle Classes.

The current *International Review of Missions* contains two interesting articles on Indian topics: "The Awakening among the Middle Classes of South India," by the Rev. H. A. Popley, and "Education and Script in India," by Dr. H. U. W. Stanton. In the former article the writer tells us that "the present political awakening in India has suddenly brought to the front the great middle classes, who constitute the bulk of the population in this country." Long called "the voiceless masses," they are to-day no longer voiceless; they have found their voice, and at the same time they have awakened to political self-consciousness. And we read: "The proximate cause of this awakening is the sudden realisation of the danger of an unfriendly oligarchy being thrust upon them, and of their silence being taken for consent." It seemed impossible that the middle classes could ever invite and follow with any consistency a definite leadership. But, says the writer, they are doing it to-day throughout South India:—

Perhaps this sudden rising up of the middle classes in South India is one of the most remarkable events in the history of this much-divided peninsula. A year ago, to all outward seeming, they were sleeping still the profound sleep of ages, the merchant busied in money-getting, the cultivator in making the most of his land. To-day throughout the length of the peninsula from Vizagapatam to Cape Comorin, they are dramatically alive, organising conferences, establishing newspapers, and collecting funds for education and similar objects. To one who has watched them for years and who has long tried to come close to them, it seems almost a miracle. It is true that much of what is now coming to expression was there even in the days of seeming sleep. Many of them felt their terrible inferiority, many of them longed for a new India. But the great mass cared for none of these things. To-day, however, they care, and India is no longer a name, but a reality to many of them.

In order to attend these conferences, simple villagers have travelled miles on foot and in train, and have understood for the first time that they had something to say as regards the government of the country. The day is fast disappearing when we shall find any considerable body of people in India who take no interest in the Government which rules them, and who are not sure whether the English have been succeeded by someone else.

We have not space to quote further from the article, but it will repay reading in the original.

Indian Reform Proposals.

Commenting on the reception accorded to the Montagu-Chelmsford Report by Parliament, *The Times* says: "The broad purpose of the Report and of the declared policy of the Government obtained almost unanimous sympathy and approval." There is much in the Report that still requires careful consideration, but it will be the task of Parliament to make its dry bones live and to set them in motion. Referring to the origin of the Report, *The Times* says:—

The movement for a further enlargement of Indian liberties began, as Mr. Montagu rightly said, while Lord Hardinge was Viceroy, so far as official action was concerned. It was only the unforeseen circumstances of Mr. Austen Chamberlain's resignation of his post at the India Office which sent Mr. Montagu to India in his stead. The announcement of August 20 was a declaration of the deliberate and considered views of the War Cabinet. It was not merely an expression of Mr. Montagu's personal purpose, as is sometimes falsely alleged. In his capacity as Secretary of State for India he was acting as the mouthpiece of the British Government, though the declaration had his fullest support. We trust that there will be no further attempt to suggest that the great measures now foreshadowed sprang unbidden from the brain of Mr. Montagu, who, in conjunction with Lord Chelmsford, has discharged with great skill and tact the onerous mission entrusted to him by the Cabinet. It is nothing short of mischievous that the people of India should be told by implication that they owe this firm pledge of constitutional progress to an individual rather than to the whole Government.

In connection with the proposal that a Select Committee of the House of Commons should be appointed to report to the House on Indian affairs during the preceding year, *The Times* observes:—

Such a step would restore the intimate interest of the House of Commons in Indian questions, which to a great extent was suffered to lapse when Crown rule replaced the control of the Company. At the same time we must point out that such a Committee can be successful only if it is thoroughly representative. It must not be allowed to fall into the hands of a little coterie claiming to possess special knowledge of India, which is often obsolete. Indian questions became anathema in the Commons when a few members, hardly any of whom had won great eminence in India, took possession of the House on Indian Budget nights and addressed dull harangues to empty benches. The Select Committee should be so constituted as to command the respect and confidence of the whole House.

CORRESPONDENCE.

ARMENIAN RED CROSS & REFUGEE FUND

TO THE EDITOR OF "THE NEAR EAST."

DEAR SIR,—With reference to a cable which appeared in your issue of the 2nd inst. from Kasvin, saying "Great distress prevails" among the Armenian population in Transcaucasia, will you kindly inform your readers that a way has opened by which this fund can send money out for relief? We have to-day sent £500. Thousands of pounds are wanted for bread. I shall be thankful to receive contributions for the purpose. Cheques should be made payable to Mrs. Lydia Chambers, Hon. Treasurer, Armenian Red Cross and Refugee Fund, and crossed "London and South-Western Bank, Holland Park."—I am, etc.,

EMILY J. ROBINSON (MISS),
Hon. Secretary.

35A, Elsham Road,
Kensington, London, W.14.
August 6, 1918.

SERBIA AND MONTENEGRO.

Mr. Alex. Devine recently wrote to the Earl of Plymouth, Hon. Treasurer of the Serbian Relief Fund, expostulating against the attitude of certain partisans of Serbia in this country who have associated themselves with attacks on Montenegro. Lord Plymouth replied as follows:—

"54, Mount Street, London, W.1, July 31, 1918.

"Dear Mr. Devine,—I can assure you that the Serbian Relief Fund has nothing whatever to do with any of these political intrigues, and I was unaware of their existence. We have appealed for money, and we distribute the funds committed to us for the sole object of relieving the distress of the suffering Serbian population, both in their own country and in exile.

"You will find in me a strong supporter of the rights of Montenegro to be consulted as an independent State concerning the future settlement of the Balkan question. My idea of a Jugoslav Kingdom was in the direction of a voluntary association of the States of Slav origin to determine their own future, freed from Austrian and Turkish domination. I would never for a moment support any intrigue which had for its object the ultimate disposal of any independent State without its own consent freely and constitutionally given.—Yours very faithfully,

"PLYMOUTH."

On the occasion of the opening of the fifth year of the war, General Paraskevopoulos, commanding the Greek First Army Corps, has telegraphed to the British Commander-in-Chief in Macedonia a message of greeting, in which he expresses confidence in the victory of the Allies. The British Commander-in-Chief has replied warmly thanking him for his message.

NEAR EAST BOOKSHELF.

INDIA UNDER EXPERIMENT.*

The publisher's announcement informs us that the object of this book is to forecast as far as possible the changes contemplated in the Indian constitution, and to explain the dangers and difficulties which lie in the path. On such topics Mr. Chesney has every right to a respectful hearing, and if his forecast has not been very successful when judged in the light of the Montagu-Chelmsford Report, his statement of dangers and difficulties is on the whole an excellent piece of work, and should be read along with the Report in question by students who realise the importance of a thoroughly competent *advocatus diaboli*. The book is, in effect, an incisive, and at times somewhat bitter, analysis of the varying elements comprised in that heterogeneous entity which is spoken of as India, and it brings out very clearly the difficulty, though not, to our mind, the impossibility, of harmonising them into a great and powerful nation. Its effectiveness is to some extent marred by two faults: the author's knowledge is not always up to date, and in a few cases he states as present facts things that have ceased to be facts during the last few years; while we think the argument is weakened by the bitterness with which Mr. Montagu is spoken of, a bitterness which almost suggests that the writer accepts the position of advocate which we have ventured to assign to him. Substantially, however, the picture is true, though the colours may be unnecessarily lurid, and though details might be altered here and there, and its effect is greatly enhanced by the skill with which it is drawn. Mr. Chesney does not profess to solve the problem of India's future, but he gives material assistance towards realising how the problem stands.

TALES OF THE SARAI.†

There cannot be the least doubt that, if the author's wish is gratified, and this book of poems, a second Calverley's, should "go to France," it will win him friends galore. The setting is Indian, but the reader does not require to have set foot east of Suez or even south of Dover to appreciate both the rhyming and the philosophy of our poet, for though he would call himself a rhymester, Mr. A. G. Shirreff belongs to a much higher category of bards. In the tales that give their name to the small book a happy device has been chosen to link together a bizarre collection of verses witty and wise, slight and profound. In the shorter pieces Mr. Shirreff lets his capacity for contortionist verse run riot in happiest vein. "Majora canamus," it is needless to point out, tells in the first person the exploits of the Major, who ends thus:—

> Else you might have seen (you miss a
> Treat) how Rowland Ward had vied with
> Nature in the look of disa-
> ppointment and the squint he died with.

It is only fair, however, to our poet to add the closing lines on the sonnet entitled "Frater Ave."

> Not such the life you did not shrink to leave
> Without a word of doubt or of regret
> At the great call, not such the death you braved,
> When with a laugh you leaped the parapet;
> Dear brother, by your faith may I be saved,
> Now you are dead, I dare not disbelieve.

THE HEART OF THINGS.‡

Probably this book will not appeal to a very large circle, but its appeal to those who value originality of thought and sound work will be strong. The story which gives its title to the book is at once the longest and the most important: it is strong enough to grip us even while its central figure repels us as much as he repelled most of the people who were brought into contact with him; and we read it with the same interest that we read some of Poe's best tales. The idea upon which it is built is a clever one, and its imaginative side is handled very deftly; but those who are acquainted with the region in which the scene is set—the lower Euphrates—will find a good many rather irritating inaccuracies. Such errors would matter not at all in bad work, but in work so good as Mr. Cornish's they jar. Nevertheless, as so few people do know that district, most readers will be able to enjoy the story—and its companions—heartily. We can only regret that the author, who was killed in action in 1916, will not be able to give us more of his honest and sound work.

ECONOMIC PROBLEMS OF THE WAR.*

The first essential for an English reviewer of M. Lebon's book is to acknowledge his appreciation of the part we have played in the war, and his generous recognition, on behalf of France, that we have suffered severe economic losses, not merely in man-power but in ships and trade. The replacement of those losses is, as he states, a serious problem for the future, but we have confidence that we shall tackle them successfully. His whole chapter on the economic life of Great Britain after the war is a careful examination of the position in which this country will be; it is not, however, quite up to date, since it puts the excess profits tax at 60 instead of 80 per cent., and it does not recognise—what is at last beginning to be recognised here—that the tax will survive the war some years. M. Lebon states in his survey of France and French industry that France realises as well as we do that she was lacking in certain industries before the war, and that she has already begun to create those industries during the last four years. That must be put to the credit side of the war, and it is one of those indications which make one firm in the belief that France, like ourselves, will emerge really stronger, because more self-reliant, from the war than she was before.

COURAGEOUS SERBIA.

Mr. Lloyd George has sent the following telegram, dated August 5, to M. Pashitch, Serbian Prime Minister:—

"My warmest thanks for your telegram. Greetings from Serbia are especially welcome, because, in this great struggle for human freedom, no country has shown greater steadfastness and courage than Serbia. You are certainly right in believing that the day now fast approaches when the attempts of autocratic power to withstand the advance of democracy and to impose on the free peoples of Europe a militarist *Kultur* will have definitely failed. The Allied successes in Italy and on the Marne, the splendid stand of the Czecho-Slovaks in Russia and Siberia, and the matchless endurance of our own people, all point to final victory for our cause, and to the early liberation of your country and your compatriots from an alien yoke. Stand firm through these last days and your reward will be sure."

BRITISH COURTESY.

An indirect but striking testimony to the courtesy of the British military authorities in Palestine is paid by a correspondent of the *Pester Lloyd* of June 30 in an article describing a department of the Berne International Peace Bureau, which is a kind of clearing house for inquiries as to missing relatives and friends from all parts of the world. A not unimportant part of the correspondence relates to Palestine, and it is remarkable what trouble the British military authorities take to satisfy inquirers. Thus an inquiry having come from London with regard to a family in Tel Aviv, application was made to Alexandria, and an answer came from the English Military Governor giving the fullest details:—"The whole family is well, one daughter is teaching in Jerusalem, while the father works on the Jewish relief committee." A telegram from Berlin asks if Mr. and Mrs. N. Cohn are still alive. After a few days comes the answer, "Both Cohns well," signed by the Military Governor. A request will often come to the Bureau to find someone in Jerusalem to say "Kaddish" for persons who have died without children, and the British authorities, as usual, lend every assistance.

The committee of the Serbian Relief Fund appeals to the Sunday-schools of Great Britain to further its work by a special Sunday for Serbia on September 1, to interest British children in Serbian child refugees. A Children's Roll of Sympathy will be presented to the King of Serbia, containing the name of every Sunday-school, department, or class contributing £1 or over to Serbian relief. Certificates recording the gift will be awarded. Leaflets have been prepared telling the story of Serbia in such a way as to appeal to boys and girls. These may be obtained from the Secretary, Children's Branch, Serbian Relief Fund, 5, Cromwell Road, S.W.7.

PERSONAL AND GENERAL.

CALENDAR OF THE WEEK

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian (New Style).	Julian (Old Style).	—	Moslem.	Jewish.
1918. August	1918. July		1336. Julkada	5678. Elul.
9	27	Friday	2	1
10	28	Saturday.....	3	2
11	29	Sunday	4	3
12	30	Monday	5	4
13	31	Tuesday	6	5
	August			
14	1	Wednesday	7	6
15	2	Thursday	8	7

M. Romanos, the Greek Minister in Paris, has been visiting the Greek Army in Macedonia.

M. Michael B. Boeresco, Counsellor of the Roumanian Legation in London, is on a visit to Paris.

The King has been graciously pleased to accept a copy of Mr. Alex. Devine's book on "Montenegro: in History, Politics, and War."

M. Milan Gavrilovitch, First Secretary to the Serbian Legation, has left London for Athens, where he will act as Chargé d'Affaires.

M. Pashitch, the Serbian Prime Minister, arrived from Rome on Saturday at Eze, near Nice, where he will stay for some time with his family.

Professor Richard Norton, who was Director of the American Expedition to Cyrene, North Africa, in 1910, died in Paris on August 2 from meningitis.

The King has granted authority to Mr. C. D. Rawlins, lately British Consul at Canea, to wear the decoration of an Officer of the Greek Order of the Redeemer.

Lieutenant-Colonel N. Arion, Military Attaché to the Roumanian Legation and chief of the Roumanian Government Committee, left London for West Drayton last week.

The Paris newspapers state that General Iliesco, the former Commander-in-Chief of the Roumanian Armies, will take command, at the French front, of a Transylvanian Legion.

It is now announced that the Metropolitan of Athens and the members of the Mission under his presidency are proceeding to America direct from France, and will visit London on their return journey to Greece in the course of the coming autumn.

A marriage has been arranged between Arthur Ferguson MacCallan, M.D., Director of the Ophthalmic Hospitals, Egypt (Major, R.A.M.C.), and Hester Macneil, youngest daughter of Bishop Boyd Carpenter. The marriage will take place in Cairo early in September.

At a luncheon given on Saturday in honour of King Alexander's birthday, M. Venizelos presented the King with the Military Medal for the coolness shown by his Majesty during his recent visit to the front when bombs were dropped near his motor-car by an enemy aeroplane.

An engagement is announced between Gerard Linton, late 31st Punjabis, younger son of General Sir Henry B. B. Watkis, K.C.B., and Lady Watkis, of Farnborough, Hants, and Marjory Eveline Noel, third daughter of Captain W. W. Gascoyne and Mrs. Gascoyne, of Court Lodge, Westwell, Ashford, Kent.

M. Take Jonescu, who saw Mr. Balfour on Tuesday, brings his brief visit to London to a close this week. He returns to France, where he will probably have an opportunity of seeing M. Pashitch. A meeting later with M. Venizelos should help to prepare the ground for a joint understanding between Greece, Serbia, and Roumania on the subject of a Balkan settlement.

The King has granted permission to the Hon. Mrs. Alice Erin Massey to wear the Insignia of the Fourth Class of the Order of St. Sava, conferred by the King of Serbia in recognition of her services under the Serbian Relief Fund; and to Miss Kate Cary to wear the Insignia of the Fifth Class of the same Order, conferred in recognition of her services at the Scottish Women's Hospital at Salonika.

A marriage has been arranged, and will take place in India on the 11th September, between Captain Frederick Chalmers Bourne, Queen's Own Royal West Kent Regiment, eldest son of Sir Frederick Bourne, C.M.G., and Lady Bourne, of Mayfield, Sussex, and Heather Frances, eldest daughter of Lieutenant-Colonel F. W. Burbury, Queen's Own Royal West Kent Regiment, attached to The Rifle Brigade, and Mrs. Burbury, Sialkot, Punjab, formerly of Keresforth, Barnsley.

The King was represented by Major C. F. Romer at the funeral on Saturday at Charlton Cemetery of Lieutenant-General Sir Henry Geary, K.C.B., R.A. The funeral was with military honours, and the service was conducted by Bishop Leeke, late Bishop of Woolwich. A number of officers and men from the Royal Horse Artillery and Royal Artillery, Woolwich, attended.

A marriage has been arranged between Captain Cyril Noel Wilson, The Buffs, only son of Mr. Cyril Wilson, of 3, Morpeth Terrace, London, and Noël Rosemary, second daughter of Colonel Crole Wyndham, C.B., late E. of I. Lancers, and Mrs. Crole Wyndham, of 51, Augusta Gardens, Folkestone, and granddaughter of the late Sir George Barker, K.C.B.

An engagement is announced, and the marriage will shortly take place, leave permitting, between Major Rawdon J. Macnabb, Indian Cavalry and Indian Political Service, third son of the late James William Macnabb, of Arthurtone, Bracknell, Berks, and W. G. M. (Clova) Railston, only daughter of Colonel H. E. and Mrs. Railston, of 23, Queen's Gate, S.W., late of Stow-on-the-Wold, Gloucestershire.

The Mansion House Fund for the relief of sufferers by the Salonika fire raised £12,500.

M. Chubinski, Ukranian Minister of Justice, is to be succeeded by M. Romanoff, who has hitherto been his assistant.

Captain Gordon Bell, who was killed while flying in France, on July 29, was the first airman to fly over Constantinople and across the Dardanelles into Asia Minor.

Colonel William McWatters, R.A.M.C. (retired), of Alverstoke, Hants, who served in the Afghan War, 1878-80, and the Hazara Expedition, 1891, left property valued at £4,145.

In accordance with General Mackensen's advice, the German Government has decided to drop the case brought against M. Bratiano, the ex-Prime Minister of Roumania, by the Government, as an acquittal was practically certain.

OBITUARY.

Lieutenant-Colonel Eugenius Alfred Roche died at Brighton on August 1, at the age of sixty-four. He received his first commission in the Royal Army Medical Corps in 1877, and retired with the rank of lieutenant-colonel after thirty years' service. He took part in the Afghan War of 1878-80, and received the medal.

Lieutenant-Colonel Percy Archer Clive, Grenadier Guards, of Whitfield, Allensmore, Hereford, and Chester Street, S.W., twice M.P. for South Herefordshire, and at one time Parliamentary private secretary to the Secretary for India, who was killed in action on April 5, has left estate of the value of £264,724, with net personalty £47,401.

Rear-Admiral George Robert Lindley, C.B., died on August 1, at Temple Ewell, Dover, aged sixty-eight. He served on H.M.S. Achilles during the Egyptian War, and was awarded the Medal and the Khedive's Star. In 1893 he commanded a Naval Brigade in Witu territory, East Africa, for which he received the C.B., and the South African medal with clasp.

Lieutenant-General Sir Henry Geary, K.C.B., died at Camberley on August 1, aged eighty-one. On leaving the Royal Military Academy he obtained a commission in the Royal Artillery at the age of eighteen, and in the same year joined the siege train at Sebastopol, and was present in the trenches at the bombardments on June 6 and 7 and August 17, 1855. He witnessed the fall of the fortress, and received the medal with clasp, the Order of the Medjidieh, and the Turkish medal. In the latter part of the Indian Mutiny he was present during field operations in the Judgespore district, and served with the Gorruckpore Field Force. Having attained the rank of captain in 1862, he was later selected as brigade-major to the artillery that embarked with Lord Napier of Magdala for Abyssinia. He landed at Zula on January 1, 1868, and was present at the capture of Magdala and the action of Arogee; for his services he was mentioned in despatches, promoted major by brevet, and received the medal.

TRAGEDY OF MONTENEGRO,

THE SMALLEST AND POOREST OF OUR ALLIES.

MONTENEGRIN RED CROSS AND RELIEF FUND,

11, VICTORIA STREET, LONDON, S.W.1

(Registered in City of London. Section 1. War Charities 1916)

needs £700 WEEKLY for Feeding Prisoners interned in Austria-Hungary.

Donations will be much appreciated and gratefully acknowledged by the Hon. Treasurer, LADY ROPER PARKINGTON, Claridge's Hotel, Brook Street, London, W.1.

NEWS IN BRIEF.

Durazzo was bombed again on August 3.

Hunger riots are reported at Simferopol in the Crimea.

Wheat in Roumania is a failure as a crop, and maize is only medium.

Since July 5 the *Palestine News* has commenced to add to its Hebrew edition a literary supplement, under the direction of S. Ben Zion Gutmann, of Jerusalem.

Additional gratuities and war bonuses, ranging from 12 rupees to 60 rupees for every six months' service, are sanctioned during the war to Indians of all ranks in the Army.

Last week the Reporter read in the Roumanian Senate the report of the Parliamentary Commission on the inquiry into the conduct of the members of the Bratiano Cabinet.

By 94 votes to 9, the Roumanian Chamber has passed a Bill to compel workmen to work on the railways. A Bill temporarily suspending the inviolability of administrative officials was passed by 84 votes to 2.

Five Greek shipowners have been fined from £50,000 to £110,000 each, and ordered to pay indemnities of a similar amount for having sold steamers to foreigners in contravention of the law forbidding such sales.

In the House of Lords, on August 2, Lord Curzon said that Sir Ernest Cassel, by his generosity and public spirit, had largely contributed to the regeneration of Egypt during the last fifteen or twenty years.

By 84 votes to 13 the Roumanian Chamber has passed the Bill giving—as agreed by the peace treaty of Bucharest—civil rights to the Jews who fought in the campaigns of 1913-1916. The Senate had already passed the Bill.

M. Michalakopoulos, Greek Minister of Agriculture, who has returned to Athens from abroad, expresses much gratification at the settlement of various Greek questions attained through the British Government's good will.

General Ismail Hakki Pasha, Chief of the General Commissariat of the Turkish army, has been appointed Under-Secretary of State for War. He is succeeded as Chief of the Commissariat by Colonel Mustapha Nuri.

In the name of the Indian Army, the Commander-in-Chief in India has telegraphed a war anniversary message to Sir D. Haig, who has replied:—"All ranks join with me in sending grateful thanks, and voice your confidence in final victory."

General Garioni has succeeded General Ameglio as Governor-General of Libya. General Garioni went out with the first expeditionary force and was Governor of Tripolitania in 1913-14, when the Italians penetrated to Fezzan and Ghat.

Reuter's Amsterdam correspondent reports:—A Constantinople telegram states that, of 7,500 French and British civilian prisoners in Turkey, only 568 French and 666 British have asked to be sent home. This is adduced as a proof of the good treatment of enemy subjects in Turkey.

Subject to certain restrictions, letters, postcards, parcels (up to eleven pounds), and money orders may be sent free of all postal charges to prisoners of war interned abroad. Full details as to regulations and limitations will be found in a circular just issued by the General Post Office to postmasters.

Under date August 11, Reuter's Amsterdam correspondent reports:—The Essen *Allgemeine Zeitung* states that a Coalition Cabinet has been formed in the Crimea, whose aim will be the development of closer relations with the German military authorities. The new Cabinet includes members of German origin.

The *Egyptian Mail* announces that it is proposed to form a historical society in Cairo to occupy itself exclusively with the history of Egypt. Among those who have already joined this society are Mahmud Fahmy Pasha and Ahmed Lutfi El-Sayid Bey. It is one of the conditions of admission that members should be Egyptians.

The Secretary of State for India announces that certain improvements have recently been made in the pay and prospects of the Royal Indian Marine, and also in the grades and designations of officers. Further particulars and forms of application for appointment may be obtained from the Secretary, Military Department, India Office, S.W.1.

The *Palestine News* of July 5, states that the idea of forming a Jewish battalion to join the British force in Palestine is being eagerly taken up among the Jews there. A large number have already volunteered, and a still larger number will follow. They are inspired with the thought of fighting in the regions of Samaria and Galilee, which have been made historic by the exploits of Bar Cochba and his followers.

The Copenhagen Zionist Bureau reports that during the past year there has been a great revival of Jewish nationalist feeling among the Jewish population of Persia, which numbers a hundred thousand souls, and has suffered severely from the war. A large group of young Jews in Teheran has resolved to found a Zionist organisation in Persia, with the central committee in Teheran, and branches in other communities.

Reuter reports that at Salonika on Sunday, July 7, a cinematograph film showing General Sir Edmund Allenby's official entry into Jerusalem and his reception by the heads of the religious communities was projected for the second time at the local cinema and attracted a large audience, the hall being packed to its utmost capacity. The Jewish inhabitants largely preponderated, and cheered the different views with the greatest enthusiasm. A description of each picture was given in Hebrew and Greek, and every Hebrew inscription was greeted with an outburst of loud and prolonged cheering on the part of the Jews present. The Greeks also manifested their appreciation of the display, especially cheering the pictures showing detachments of the Allied troops proceeding to take up their respective positions for the ceremony.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO,
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

THE ONLY ENGLISH HOTELS IN ALEXANDRIA.
Proprietor: AUGUSTUS VAN MILLINGEN.

WINDSOR HOTEL
(Facing the Sea, opposite Y.M.C.A.), ALEXANDRIA.
Full Pension, P.T.50; Room, P.T.20;
Lunch, P.T.15; Dinner, P.T.20.
For long stay, apply to the Manager.

SUMMER PALACE HOTEL,
GLYMENOPOULO, RAMLEH.
This Hotel is situated near the Beach. Open all the Year.
Bathing Cabins.
Terms from: Pension, P.T.60; Lunch, P.T.20; Dinner, P.T.25.

HOTEL SOMERSET,
ORCHARD STREET (by Selfridge's) OXFORD STREET, W.
Most comfortable and home-like Establishment. English cooking a special feature. Eggs, Butter, Poultry direct from the farm.
200 well-appointed bedrooms with fitted basins (h. & c.). 30 bath-rooms
15 private Suites. Passenger lift. Own Artesian Well.
Magnificent Georgian Dining Hall (100 tables,)
Inclusive terms from 10/- to 15/- daily; 3 to 4½ guineas weekly.
Double room 16/- to 21/- daily; 5 to 7 guineas weekly.
Bedroom, bath, breakfast (3 courses) 7/6 daily.

AYAHS' HOME,
26, King Edward Road, South Hackney, London.
ESTABLISHED 1825.
IN CONNECTION WITH THE LONDON CITY MISSION.
Hindustani spoken. Ayahs boarded and lodged at 18s. per week each until their Return Passage is paid or a Situation secured for them to return. Ayahs met at any Dock or Railway Station in London. Experienced, well-recommended Ayahs taken entirely off Ladies' hands for a certain payment, which differs according to time of year. Ladies proceeding to India or China requiring an Ayah can generally obtain one by applying to Mrs. FLETCHER, Matron.

STRANGERS' HOME FOR ASIATICS,
WEST INDIA DOCK ROAD, LIMEHOUSE, LONDON, E.
"I was a stranger and ye took me in."
CONTRIBUTIONS ARE SOLICITED from the many who owe fortune or competence to India and China, and will be thankfully received by the SECRETARY or by MESSRS. BARCLAY & CO., LTD., 54, LOMBARD STREET, E.C.

FRIDAY, AUGUST 9, 1918.

A BALKAN CONFERENCE.

The timely ventilation of Greek misgivings on the subject of "Bulgarophils in England" serves as a warning against further delay on the part of the Allied Governments to come to an understanding among themselves with regard to the future settlement of South-Eastern Europe. According to a message to *The Times*, exception is taken to "persistent attempts of certain political circles in England which are advocating the purchasing of Bulgaria at the expense of Serbia," and in general the fear is expressed that the Allies may be willing to make terms with the Bulgarians that might not be endorsed by the Serbians and the Greeks. The reference is not clear, but in so far as it is a protest against any attempt to introduce a one-sided settlement in the Balkans it will be supported by all those who have the welfare of the Peninsula at heart. For too long the interests of the different countries have been regarded as irreconcilable, and each State in turn, knowing the fate that would be in store for it, if either of its neighbours dictated the terms of a settlement, has desired to see its own policy prevail. One effect of the war must be to put an end to this condition of affairs, and no words can be too harsh for those among non-Balkan peoples who have caused a separatist interpretation to attach to the terms Philhellene, Serbophil, and Bulgarophil, and have encouraged or connived at the unfortunate antagonisms of the three countries. It is clear that no statesman worthy of the name belonging to one of the Entente Powers would propose a Balkan settlement which, while satisfying Bulgaria, would leave responsible people in Greece or Serbia with a sense of grievance. But, unfortunately, there are apparently a large number of enthusiasts who are anxious to see perpetuated the state of things existing as a result of the Second Balkan War. The Treaty of Bucharest, 1913, was the typically Balkan solution of the Balkan problem. Bulgaria had been very properly chastised in a war that she had precipitated, and her enemies proceeded to act upon the principle of "*Vae victis.*" The result was Bulgaria's action in the European War, and, in passing, let it be said that the Entente Powers cannot divest themselves of responsibility for the Treaty of Bucharest. If we understood aright the attitude of those who champion the cause of mutual hatred among the Balkan peoples, they have nothing to suggest for the settlement after this war that is in any way an improvement on the principle upon which Roumania, Greece, and Serbia acted in 1913. Needless to say, the Bucharest policy is one to which no true friend of the Balkans will subscribe to-day.

There is a tendency to confuse the issue in the Balkans by calling the Bulgarians the Germans of the Peninsula, and by classing those who hold non-partisan views regarding the future with pacifists, who would make terms with Germany before she has acknowledged defeat. That the analogy does not hold good is proved by the fact that if, as might well have happened, Bulgaria had joined the side of the Allies in this war, the terms of the Treaty of 1913 would have been subjected to revision as a matter of course. Why? Because those terms represented, and were meant to represent, not an equitable solution of the Balkan problem, but the most drastic punishment that could be enforced at the time for Bulgaria's wrong-doing. Moreover, they would have been revised with the cordial approval of Serbia and Greece. It so happens, however, that Bulgaria, instead of making amends for her offence of 1913, has aggravated it by further and worse wrong-doing. What is to be the attitude of the Allies? Again, one of unreasoning vindictiveness, or is there to be a conscientious effort to inquire into the Balkan question, to understand it, and to evolve a lasting settlement? There can be no doubt as to which action will be in keeping with the spirit of justice and enlightenment that is actuating the Allied nations in the present struggle. Germany entered the war with no grievance, and the League of Nations will not be called upon to accord her fair-play that had previously been denied her. Yet it is certain that, if the principle of the Treaty of 1913 be repeated in the case of Bulgaria at the end of the war, the Bulgarians would have a case to submit to the League. Four weeks ago, in these columns, we suggested that it was never predicated of the League that it should perpetuate injustice, and enforce grudging acquiescence by a tyrannous use of power. The same point was elaborated by the Secretary of State for Foreign Affairs in the House of Commons last week. "A League of Nations," Mr. Balfour said, "broadly speaking, is designed to maintain the territorial *status quo*. If the territorial *status quo* is inherently unjust, if it is of a kind which cannot conduce to stable relations and peace, no machinery which you can devise will be strong enough to coerce or compress the forces with which mankind will have to deal. You must do your best to see that the world as reconstituted after the war is a world in which the territorial *status quo* is a tolerable and possible state of things."

If this view be sound, the Allies must abandon the Treaty of Bucharest principle in formulating their solution of the Balkan question. This contention, however, does not imply that they must rush to the opposite extreme and meet Bulgarian views to the exclusion of Roumanian, Greek, and Serbian. What is required is that the three last-named Governments should be invited to review in conference, under the ægis of Great Britain, France, Italy, and the United States, the Balkan situation, with a view to arriving at a definite solution to be carried into effect at the end of the war. The aim will be to arrive at "a tolerable and possible state of things," in accordance, as Mr. Balfour added, "with the principles of public morality and general enlightenment," which it will be possible for a League of Nations to stabilise. Such a conference, if it is to carry out its task thoroughly, must be protracted, and for this reason no time should be lost in summoning it. We are of opinion that, under satisfactory guidance—the Treaty of Bucharest proves that the unaided instinct of the Balkan States would be at fault—the conference could evolve a satisfactory settlement which could be embodied in the final terms of peace. It is not suggested that such a settlement would incorporate the views of Greek, Serbian, or Bulgarian extremists. Rather would it be the considered judgment of a court of appeal that had to decide between conflicting claims and to formulate a solution which would serve the true interests of the Balkans as a whole. But the exchange of views would enable all the parties concerned to follow the line of reasoning that determined the verdict, and we refuse to believe that, even where disappointment was felt, there would be found any real sense of grievance. Until such a course is adopted, there may well be misgivings among Greeks and Serbians, and opinions, equally erroneous, regarding the Allies' intentions, will probably be entertained in Bulgaria. A policy calculated to remove possible sources of friction among the Allies, and one that may exercise an important influence on the duration of the war, by detaching the Bulgarians from the Central Alliance, is surely worthy of being adopted.

KAZAN (AND THE RECONSTRUCTION OF RUSSIA).

The occupation of Kazan by the Czecho-Slovaks, which was announced some days ago, and, in the absence of contradictory reports, may now be considered secure, marks an important stage in the reconstruction of Russia. In the first place, it has a strategical import, for whoever holds Kazan commands the whole course of the Volga below it to its delta in the Caspian Sea. Even if we confine our expectations within the most moderate limits, as it is still wise to do, the control of this great river line should at least give the Czecho-Slovak forces, and the new political organisations which are springing up in Siberia behind them, a strong bulwark against a possible Bolshevik counter-offensive or some sudden move on the part of the Austro-German force cantonned in the territories ceded at the peace of Brest-Litovsk. But if the Czecho-Slovak movement is still gathering momentum—and the signs all point that way—then the Volga will serve it not merely as a defence of what is already won but as a high road to further successes.

The Volga—at any rate, during the ice-free months—has always been the central artery of communications in European Russia; and since the Revolution its importance has been increased by the falling-off of the railway traffic, especially on the two chief north-and-south lines—Moscow-Rostoff-Baku and Moscow-Orenburg-Tashkend—which have virtually broken down. The Bolsheviks of Moscow, Baku, and Tashkend are dependent for communication with one another upon the steamer service on the Volga and the Caspian Sea, and this is the sole route still open for the barter of commodities, to which the commerce of these regions of Russia has been reduced. Moscow is sending its manufactures down the Volga to elicit return freights of Caucasian oil and Turkestan cotton; while the starving provinces of Central Asia are looking (though in vain) to the Volga and Caspian for shipments of wheat. The control of the Volga places this traffic at the Czecho-Slovaks' mercy, and it also opens to them a military route for co-operation with those elements in the Caucasus and on the Don which have neither recognised the Bolsheviks nor accepted the hegemony of Germany.

In other words, the occupation of Kazan opens up the first, though still distant, prospect of a restored eastern front, and its importance will not come as a surprise to anyone who knows its history as a city.

Kazan is situated at a commanding point in the Volga basin, both for strategy and trade. Just below it the Volga is joined by its great north-eastern tributary, the Kama—itself a navigable river with tributaries of its own, which lead, by easy portages, eastward to Siberia or northward to Archangel. And a few miles below this, again, the Volga system passes out of the forest zone of Northern Russia into the rich "black earth" belt, which is the northern fringe of the steppe.

The Volga is to Central Russia what the Dnieper is to the Ukraine, and historically Kazan on the Volga and Kieff on the Dnieper have played almost identical parts.

Both cities have stood on the frontiers of forest and steppe, and have been outposts, by turns, of the one and the other. And each has drawn its religion and civilisation, like its merchandise, up its river from the ancient centres of human culture in the south. Kieff drew upon Constantinople, Kazan upon the Persian provinces on the south coast of the Caspian Sea, and ultimately, through Persia, on Baghdad. Kieff was converted to Orthodox or "Greek" Christianity towards the year 1,000 A.D., Kazan to Mohammedanism about a generation earlier, soon after the year 950.

Kazan has thus been a Moslem centre for nearly a thousand years, but it has always been a Moslem island in a sea of Pagan, and latterly of Christian, populations; and since the Russian conquest in the middle of the sixteenth century, it has been incorporated in a Christian State. The Kazan Moslems were treated more tolerantly by Russia than most Moslems conquered by Christian governments at that date. The Moors in Spain, for instance, were compelled to become Christians or to leave the country; but the Kazan Tartars were never presented with this alternative. They were allowed to continue in their homes as Moslems, and profited by the commercial opportunities which their city, with its magnificent geographical position, saw opened to it by the extension of the Russian Empire towards the south and east. They took kindly to the Russian connection, and became a prosperous "bourgeois" element in Russian society. No Moslem community exists to-day which has been longer than they under European government, and they are particularly adapted to be a connecting link between the two civilisations.

After the Revolution, the Kazan Moslems led a movement for the cultural autonomy of all Moslems in Russia as integral members of the Russian Empire. The tolerance they had received, though remarkable for the sixteenth century, had not advanced with the times, and like most of the non-Russian elements in the State, they had a just claim to much greater freedom of self-development. On the other hand, as a minority in their own territory, they very reasonably feared the consequences of a break-up of Russia into independent territorial entities. Unfortunately, the growth of disorder in Russia prevented their essentially moderate policy from prevailing against the extreme programme of those who wished altogether to sever their connection with a State whose future seemed so uncertain. And the Bolsheviks, who in December made a high bid for the Moslems' support, came more and more into collision with them as their own position grew more precarious. Last May a Moslem National Assembly sitting at Kazan was dispersed, and there were collisions between the Moslem population and the Soviet troops. During the same month the All-Russian Moslem Council at Petrograd was forcibly dissolved. And after this there is nothing surprising in a report that delegates of the Kazan Moslems are on their way to Berlin.

But for the Kazan Moslems, as for other liberal elements in Russia, the situation is transformed by the Czecho-Slovak advance. Instead of having to seek refuge from violent repression in extreme courses, such as sovereign independence or appeals for German aid, they have now more chance than at any previous moment since the Revolution of obtaining what they want by moderate means.

Their original policy was essentially reasonable, and in accordance with the true interests of Russia as a whole. It is to be hoped that they will now return to it, and that other Russian Moslems will follow their lead.

THE ARAB HORSE SOCIETY.

A Council meeting of this Society was held on July 31 at the Grosvenor Hotel, London, Mr. Sidney G. Hough being in the chair. The following new members were elected :—Alexander, Robert, Slateford, Midlothian; Armstrong, Forster, Beacon Grange, Hexham, Northumberland; Baird-Carter, A., 70, Jermyn Street, S.W.; Carson, Joseph, Pine Lodge, Theydon Bois, Essex; Clarke, Capt. T. A., Farran House, Farran, Co. Cork; Deane-Drummond, H. D., The Boyce Court, Dymock, Glos.; Edmonds, Capt. L., Cholderton Lodge, Cholderton, Salisbury; Fox, R. B. Carlton, Burythorp House, Malton, Yorks; Herbert-Armstrong, Brig.-Gen., 51, Eaton Place, S.W.; Horsburgh, Lieut. H. A., R.N., Stone House, Cullercoats, Northumberland; Lusty, William J., Salway House, Woodford, Essex; McCarthy, J., Drishane Castle, Mill Street, Co. Cork; Middleton, the Lord, Birdsall House, Malton, Yorks; Mucklow, Edward, Wood Hill, Bury, Lancs; Neilson, Capt. H. Stout, Althea House, Darien, Conn., U.S.A.; Scrimgeour, Miss E., Woodhouse, Midhurst; Sharp, Mrs. M. M., Stamfield House, Bourne, Lincs; Timmis, Major Reginald G., D.S.O., Royal Canadian Dragoons, B.E.F., France; Webb-Ware, W., 46, Burton Court, Chelsea, S.W.

The Council deplored the loss of one of their members of Council, Mr. Henry C. Stephens, of Cholderton Lodge, Salisbury, whose death occurred since the last meeting; and passed a vote of condolence and sympathy with his relatives. In the death of Mr. Stephens it was felt that the Society had lost a generous and enthusiastic supporter.

A satisfactory letter from the War Office was read with regard to Arab horses and mares in Mesopotamia and Palestine.

The Council examined and accepted the large number of entries received to date for the Arab Horse Stud Book and the Arab-bred Register, entry forms for which can be obtained from the Secretary, Rev. D. B. Montefiore, Islip, Oxon. The Council then adjourned to their next meeting on Wednesday, October 9 next, at the Grosvenor Hotel, London.

NEAR EAST IN PARLIAMENT.

HOUSE OF LORDS.

Austrian and Turkish Prisoners. Aug. 1.

Lord NEWTON, replying to Lord HARRIS, said that the Austrian Government had approached us with a view to the exchange of civilian prisoners, of whom we held many more than they did. We replied that we were prepared to exchange the civilians on a head to head basis; but that as regards the surplus we were not prepared to enter into any negotiations with them until the Turkish Government had carried out their agreement with us with regard to British prisoners in their hands. In other words, we proposed to utilise the Austrian Government for the purpose of putting pressure upon their allies for the benefit of our prisoners in the hands of the Turkish Government.

HOUSE OF COMMONS.

German Prisoners in Egypt. July 30.

Colonel YATE asked the Under-Secretary of State for war for what reason the military European German subjects taken prisoners of war during the operations in German East Africa had not been removed to India for internment in the same manner as the German residents in British East Africa were removed; how many of these Germans were now in German East Africa, and what was going to be done with them?

Mr. MACPHERSON: German combatant prisoners of war are transferred to Egypt for internment as opportunity offers. According to the latest information on the subject received in the War Office, there were fifty-two German combatant prisoners of war in German East Africa, and presumably these were awaiting transfer to Egypt.

Leave from Mesopotamia. Aug. 1.

Sir C. HOBHOUSE asked whether, in one of the British divisions in Mesopotamia, the total number of officers given leave this year was only five, and whether many of the officers had not been home on leave for four years.

Mr. MACPHERSON, Under-Secretary for War: I have no definite information as to the accuracy of these statements. Leave for troops serving in the East is dependent on transport facilities, and the accommodation available is unfortunately very limited. I hope in the near future it may be possible to increase considerably the number of troops granted leave from Mesopotamia and other theatres of war in the East.

Sir C. HOBHOUSE: Will the hon. member make inquiries and endeavour immediately to secure leave for these officers who have had none for four years?

Mr. MACPHERSON: Nobody is more anxious to give leave to the officers and men than the general officers commanding-in-chief. I have been in communication with general officers commanding in the East, particularly in Salonika, and the last telegram received expressed the wish that I should do something on this side to provide transport, and we are now negotiating with the Shipping Controller and the Admiralty and the other Departments concerned.

Prisoners in Turkey.

Mr. ALBION RICHARDSON raised the question of the condition of British prisoners in Turkish hands, and urged the necessity of taking immediate steps to alleviate it. More than half of the men captured by the Turks as prisoners of war had perished, and the mortality was due to the want of proper food and clothing. If it was a question of money, the food and clothing of these prisoners was a burden which the State ought to bear.

Mr. J. F. HOPE, Lord of the Treasury, thought that the hon. member had perhaps exaggerated the mortality among the prisoners, but it was serious enough. The latest figures received showed a more or less steady decrease in the mortality. He agreed that no effort should be spared to get the prisoners out of captivity as quickly as possible, and to alleviate their sufferings while they remained in captivity. As far as he knew, no step which could have been taken to secure the carrying out of the Berne Agreement had not been taken. It was not very hopeful to suggest the extension of the agreement with the Turkish Government when so little progress had been made in carrying out the existing agreement, but there would be no difficulty, he thought, on our side in extending it. The thing to do now was to concentrate on supplying the British prisoners with food and clothing. One difficulty had been removed. The Austrian authorities had stopped the parcel post through Central Europe for a considerable time, but now they had removed the prohibition and agreed to sealed railway trucks being sent through from Switzerland, and this would prevent pilfering. But it was one thing to send parcels through Central Europe and quite another to get them delivered at the prisoners' camps. What had now to be done was to devise an organisation which would see the parcels through all the way from Switzerland and then from Constantinople across to Asia, and from the landing places to the camps. That was no easy matter, but it was being most energetically taken in hand. Individuals could not send clothing to Turkey in the ordinary way, because there was every probability that if it were so sent it would fall into enemy hands, and never reach its destination. Arrangements were now being made for sending a double supply of clothing. His Department was taking every possible step to ensure that our prisoners would not have to face next winter without a proper supply of clothing or a proper supply of food. The Dutch Minister at Constantinople was entrusted with the adoption of all possible measures of relief.

India and the War. Aug. 2.

Mr. R. MACDONALD gave notice that on the motion to go into Committee on the Indian Budget he would move: "That this House welcomes the report on Indian constitutional reform, and asks for further opportunities for discussion at the earliest possible moment."

Mr. C. ROBERTS gave notice that on the same occasion he would call attention to the services of India in the war and move a resolution.

Prisoners in Turkey. August 7.

Lord CAVENDISH-BENTINCK drew attention to the deplorable condition of British and Indian prisoners in Turkey. The position of the officers in regard to allowances was deplorable, having regard to the rate of money exchange, and he asked whether the Government were not prepared to make a more generous money allowance to these officers. With regard to the men, they lived in a state of semi-starvation. He wished to know what steps the Prisoners of War Department were taking to ensure that these men got food and clothing.

Mr. J. F. HOPE, Lord of the Treasury, in reply, said that the Prisoners of War Department had already formulated definite proposals for exchange of prisoners with Turkey, Bulgaria, and Austria, and those proposals were now before the other Departments at home, and there would be no delay in dealing with them. The agreement with Turkey was on paper most satisfactory, and the machinery had been thoroughly thought out. The real difficulty in carrying out the Berne Agreement was of a different kind, whether owing to sinister influence, apathy, or some other cause. This made him a little doubtful as to the success of any wider proposals; but that was no reason why they should not be made. As far as the Prisoners of War Department was concerned, they had already been made. It was a mistake to suppose that experts in Turkish matters had not been employed at Berne. Two gentlemen who knew Constantinople thoroughly took an active part in the negotiations, and the agreement, good as it was on paper, was largely due to their knowledge and energy. Arrangements were being made to send complete clothing and blankets to our prisoners, and steps were being taken to ensure practically that there should be no delay. With regard to getting supplies which reached Turkey up inland, we must depend on the good offices of the Dutch Minister. A new arrangement had been devised to meet the wants of our prisoners in Turkey in the matter of money. The condition of our prisoners was undoubtedly deplorable in the last degree, at any rate in the case of the rank and file. There had, however, been a great improvement in the mortality.

Indian Reform.

The Montagu-Chelmsford Report was debated in both Houses of Parliament on Tuesday. Pressure on our space forbids our giving any report of the speeches, but the subject is dealt with in Notes of the Week.

COUNTERACTING GERMAN PROPAGANDA.

We have made arrangements for forwarding free of charge to our readers pamphlets and other publications dealing with the British and Allied cause. This literature is in many European languages, and certain pamphlets and illustrated publications are also available in a number of Oriental languages. All applications should be addressed to the Editor, THE NEAR EAST, Devonshire Square, London, E.C.2. Among the most recent publications available for distribution free of charge are the following:—

"THE WELFARE OF EGYPT," by J. S. Willmore. A short summary of English administration in Egypt; alluding also to Germany's undermining influence, and the Mussulman's preference for the English rule. 36 pp. London: Hodder and Stoughton.

"TURKEY, A PAST AND A FUTURE," by A. J. Toynbee. Development of the new Turkish Nationalism and of German intrigue in Western Asia. Moslem ideas must prevail. Mesopotamia will develop its resources mainly by colonisation. 79 pp. London: Hodder and Stoughton.

"GERMANY, TURKEY, AND ARMENIA." 125 pp. J. J. Kelliher and Co., Ltd., London. Containing important statements by German missionaries, Danish nurses, German officials, and other foreigners, and extracts from foreign journals prohibited in Germany by the Censor.

"LOYAL INDIA," by Lord Hardinge of Penshurst. 15 pp. Sir J. Causton and Sons On loyalty and service in the Indian Empire.

"THE CLEAN-FIGHTING TURK." A Spurious Claim. 4 pp. Reprint from *The Times*. This article, written by one who has exceptional experience of Turkish manners and customs, shows that the Turk behaves like a gentleman only when it pays him to do so.

"HORRORS OF ALEPPO," Seen by a German Eye-Witness, by Dr. Martin Niepage. 24 pp. T. Fisher Unwin, Ltd. The author, a teacher in the German technical school at Aleppo, reproaches German diplomacy for non-interference.

"MARTYRED ARMENIA." 56 pp. C. Arthur Pearson, Ltd., London. The author, a Bedawi, has acquired from reliable sources and from his own information, a mass of information regarding the atrocities committed by the Turk against the Armenian people. This he resolved to publish to the world, "to defend the faith of Islam against the charge of fanaticism."

"TURKISH PRISONERS IN EGYPT." 64 pp. A report by the Delegates of the International Committee of the Red Cross. Extracted and translated from the Official Reports of the Red Cross Society.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

While much has been done with regard to the trade relations between the United Kingdom and Serbia and Roumania after the war, comparatively little attention has so far been paid to commercial intercourse between this country and Greece. This will shortly be rectified, as I learn that a Greek Industrial Mission, consisting of a number of leaders of Greek industrial enterprise, is coming to this country at the invitation of the Federation of British Industries, to undertake a tour much on the lines of that of the recent Serbian Industrial Mission. I may add that the scheme has the full approval of the Department of Overseas Trade, and is cordially supported and approved by M. Venizelos.

***

I understand that the mission will arrive in London on September 15, and will then visit the chief industrial centres, going over in every place a certain number of large works. Among the manufactures which they will see are electric cables, cars and aeroplanes, rubber, rolling stock, lace, agricultural machinery, chemicals, soap, spinning and weaving, steam engines, locomotives, etc. The tour is being undertaken partly with a view to demonstrating to the Greek business men the great industrial power of England, and partly with a view to promoting closer trade relations between the two countries. In the latter connection it is well to remember that the business that can be done through Greece is not only confined to Greece itself, but extends to the Near East generally, including the Levant and Egypt.

***

While I am on this subject may I once more impress upon our merchants and manufacturers that there is no time like the present for preparing for trade after the war? The visit of these Greek business men offers them an admirable opportunity for finding out just what kind of goods will be needed in Greece in the future and what the market conditions will be like. They must avail themselves of this chance of obtaining the requisite information, and when they have it, must act upon it by cultivating the market while the war is still in progress. In other words, they must prepare for the future by letting their prospective customers know of their existence and of the wares they have for sale. That, of course, means advertising on an extensive scale, and from what I know of British merchants and manufacturers it is the last thing they are willing to do. But it is an absolute essential if they mean to obtain fresh trade and even to hold what they have.

***

The position of the gold mining industry has been attracting much attention of late, and very naturally so, because this vital industry has been very seriously affected by the war since expenses have risen all round, and yet the gold is still purchased by the Mint at the pre-war price of £3 17s. 10½d. per standard ounce. The grievance of the gold producers is increased by the fact that this price is no longer payable in gold coin, but by credits corresponding to paper money values, which, it need hardly be said, may entail actual losses under conditions of foreign exchange. The constant rise in values tending to the continual increase in expenditure has brought matters to the stage when, in default of action by the Government, some of the low-grade mines in the Empire may be forced to close down for the time being, a development which would obviously be most serious in view of the fact that we need all the gold we can produce.

***

It seems probable, however, that at last the critical position in the industry is to receive attention. At the recent meeting of the combined gold producers of the Empire a committee was appointed for the purpose of explaining the situation to the Government, and it is understood that the authorities, who as long ago as last autumn had the urgency of the matter impressed upon them, have decided to institute an official inquiry into the gold production question. I have not too much faith in "inquiries," for they are apt to be slow and to consider matters outside the immediate scope of their reference, and in the present case I can well imagine that the question of the gold standard may prove a tempting subject for discussion. That question can very well be discussed after the war. The immediate need is for increased gold production, and I trust, therefore, the inquiry will be speedy. There is no reason for delay, for the solution is obvious, namely, to make the mint price equivalent to what gold will buy.

***

The latest reports give a highly satisfactory account of the condition of the Egyptian crops. Circumstances appear on the whole to have been very favourable this season, as, for instance, in regard to the water supply, which has been sufficient to meet requirements. The cotton crop outlook is particularly good, this week's news being to the effect that the condition of the crop in Lower Egypt is 98 per cent. of the normal, while in Upper Egypt the percentage is 101. At one time the prospects of this crop were indifferent, but, thanks to the weather, it has made a rapid recovery after a belated start. Other crops which promise specially good results are rice (despite the fact that some trouble has been experienced from the rice-worm) and sugar cane. In general, however, the outlook is so propitious that it is scarcely necessary to differentiate between the crops.

***

The Egyptian State accounts for the financial year 1917-18, which have just been issued, show a revenue of £E23,166,074, and an expenditure, including Egypt's contribution of £E3,000,000 to British war expenditure, of £E22,496,948, giving a surplus of £E669,126. Compared with the estimates, these returns shown an excess of more than £E3,500,000 as regards revenue, and slightly under £E3,000,000 for expenditure, both totals being, needless to say, the highest on record. The main factors responsible for the increased revenue appears to have been the excellent returns given by cotton and cereals, and the prosperity that has come to the country through the presence of British troops, while the increased expenditure is principally accounted for by the incidence of higher values.

In the light of these returns, I can only reiterate my view that the estimates for the current year will, unless some totally unexpected circumstances intervene, prove to be very much at variance with the final results. The estimates, it will be remembered, provided for a revenue of £E22,900,000, and an expenditure of £E23,250,000, thus making allowance for a deficit of £E350,000. So far as can be seen very much the same factors that affected the results for 1917-18 will again be in operation. It is difficult, therefore, to see why, even if prices are on a slightly higher level, there should not be a fair surplus instead of a deficit, and I shall be much surprised if this does not turn out to be the case.

***

An interesting tea company report is that of the Doom Dooma Tea Company, one of the most important Assam plantations. The crop amounted to 4,798,700 lb., a slight decrease on the previous season, when it was 4,829,700 lb., and it realised an average price of 10.75d. per lb., which, with the Indian cost at 6.22d. per lb., gives an excellent margin. The net earnings of the company were £61,800, against £84,100 in the previous year. This suffices to give a dividend and bonus of 15 per cent., against 17½ per cent. last year, while £9,800 is placed to extension account, and £47,900 is carried forward, subject to excess profits duty.

***

I note with interest that the Greek banks are beginning to follow the now universal banking practice by establishing new branches for foreign business. Thus the Bank of Athens recently opened a branch at Marseilles, and intends, it is stated, to open one at Barcelona, in view of the development of commercial relations between Greece and Spain. No doubt the example of the Bank of Athens will prove an incentive to other Greek banking institutions, and I shall not be surprised if we hear news before long of similar movements on the part of other Greek banks.

***

It is worth noting that the mineral resources of Turkey have been coming in for increased attention of late. Thus it appears that within a comparatively short period no fewer than ninety applications have been made for concessions in one vilayet alone. Needless to say, the enemy countries are prominent in the matter. Krupps are said to have obtained the rights in two chromite ore mines and to be in negotiation for two others, while a German subject has obtained a concession to work a manganese mine, and an Austrian has obtained a concession of the same nature. Chromite ore deposits seem the most sought after, so far some sixty concessions having been granted. Enemy companies and subjects are not alone, by the way, in seeking concessions, for the Turks themselves have apparently been showing most unusual activity in this direction. This enterprise on their part is, perhaps, to be read in the light of their knowledge of the commercial penetration of Germany and Austria, and it has no doubt obtained inspiration from the reported discovery of fresh deposits of iron ore, chromite ore, coal, and nickel ore.

BRITISH TRADE WITH GREECE.

Prospects of Development.

Special interest attaches to the approaching visit of the Greek industrial mission in view of the fact that trade relations between the United Kingdom and Greece before the war were of an important character. For reasons with which our readers are well aware, our trade with Serbia, Bulgaria, and Roumania has been on a comparatively small scale, but this has not been the case with Greece, for, as the trade returns show, the United Kingdom has held a prominent place in exports to as well as imports from our Ally. The main factors responsible for this are no doubt the accessibility of Greece to our shipping, and the fact that both countries have commodities that the other needs; but a third reason—and one of no small importance—is to be found in the tendency of the Greeks to establish bodies of traders in other countries. They have done this in the larger Mediterranean ports and in the Black Sea with beneficial influence on their mercantile marine, while in this country London, Liverpool, and other leading commercial centres can each show an important Greek community. In this respect the Greeks have an advantage over the other Balkan countries, for they are heirs to tradition, and it is surely not going too far to regard their commercial communities as the development of the process which first began when little bands of colonists set out from Ancient Greece to found City States on the coast of Asia Minor and further afield. There can be little question that these communities have had a very considerable influence on the direction of Greek trade, and in the future they will be an invaluable factor in furthering the results of the work of the coming industrial commission. For, while the volume of trade between the United Kingdom and Greece has been considerable, there is wide scope for improvement; trade prospects in Greece after the war will be much more important than in the past, as, for instance, in connection with the rebuilding of Salonika, schemes of railway development, and construction work in general, in all of which this country should play its part. Then it has to be remembered that as in other Balkan countries Germany and Austria carried their work of commercial penetration into Greece, and a substitute must be provided for their trade relations with our Ally if they are to be effectively prevented from continuing their work after the war. It is gratifying to know that, thanks to developments during the war, British merchants and manufacturers are alive to the fact that the national interest demands that they should cultivate intimate trade relations with Serbia and Roumania; it is to be hoped they realise that precisely the same reasons hold good with regard to Greece.

The Agricultural Outlook.

In this connection it may be noted that the development of increased trade with Greece should not be difficult, because Greek exports, mainly consisting of agricultural products, cover a very wide range, and because Greece will probably always be in the main dependent on other countries for manufactured articles. The extent to which Greece is an agricultural country may be gathered from the fact that more than half the population is directly or indirectly engaged on the land. The soil, it may be added, is very rich in the plains and valleys, and, given an adequate water supply, produces magnificent crops, which affords an additional reason why it is to Greece's interest to concentrate her attention on agriculture to the partial exclusion of industrial aspirations. Unfortunately, until recent years, agriculture has in the main been carried on in a haphazard manner with primitive methods, with the result that Greece has not obtained anything like her full benefit from the soil. Modern methods have been introduced, however, and are now gaining ground, and no doubt a great impetus will have been given to agricultural developments in Macedonia by the presence of the Salonika Force. Much leeway has to be made up, however, and it would be unwise to expect miracles to happen. Greek agriculture has suffered too many hardships in the past for an unduly rapid improvement to be at all likely. The main obstacle to advance is no doubt the conservatism of the peasantry; but this is only one of many important factors—notably lack of capital, absentee landlordship, sparse population, bad roads, growing distaste for rural life, etc., all of which have had more or less influence on the position.

It is a characteristic of agricultural countries that they are only too liable to suffer adverse periods owing to crop failure, but fortunately Greece does not come into this category, for the wide range of her agricultural products prevents the failure of a few crops from having an undue effect. Thus the cereals grown include wheat, barley, rye, and maize, the area covered being, according to the latest figures, 2,029,000 acres, or 57.45 per cent of the cultivable soil. The best cultivated crop is currants, which also enjoys the greatest favour throughout the country. This crop has been one of the mainstays of Greece's economic life, but has also been responsible for much trouble among the cultivators. Currant growing became really popular between 1877 and 1880, when the French vineyards were suffering from phylloxera, and the French wine producers imported currants on a large scale for blending purposes. Greek currant production grew enormously, and when in due course the French vineyards recovered and a heavy duty was placed on currants, a period of much severe depression set in, and from then onwards the unwanted surplus has been a constant problem. Olives are next in importance to currants, and in 1906 some 250,000 acres were devoted to their cultivation Other crops of importance are tobacco, which yielded 102,275,710 lb. in 1917, nuts, of which the yield was 1,692,900 lb., figs, and rice.

Industrial Prospects.

The need for importing coal is the principal factor limiting Greek industrial development. There are, however, many local industries, some of them of considerable importance, and the wide field they cover may be gathered from the fact that flour mills, cloth, cotton and silk spinning mills, shipbuilding, and engineering works, oil presses, tanneries, soap mills, powder and dynamite mills, and the manufacture of such articles as paper, glass, matches, gloves, candles, etc., have all provided fair avenues of employment. The greatest prospects before Greece in the direction of industrial development consist, however, in the utilisation of her mineral resources, in which the country is very rich—lead, zinc, copper, manganese, iron and sulphur all being present in considerable quantities. Thus the famous mines at Laurium afford employment for several thousand workers; and other important mines are the iron ore mines at Larimna, in Locris, the neighbouring mines in Euboea, the sulphur and manganese mines in Melos; while marble is found in many parts of Greece, notably, of course, at Mount Pentelicos. Reference to the country's mineral resources would be incomplete without mention of the deposits of emery, salt, millstone, and gypsum, all of which are worked by the State, and there is no reason for thinking that the known sources by any means exhaust the country's mineral wealth, for history tells of valuable mines whose whereabouts is still unknown, and there is no doubt still scope for the prospector in the country.

Trade before the War.

Turning to the figures for exports and imports, we find that in 1913 Greek imports were valued at £6,868,220, the exports being valued at £4,593,438. Of these totals the United Kingdom's share in the imports amounted to £2,536,678, and the exports to £2,202,486. In both cases the proportion is high, but it is not exceptionally so, as may be seen from the figures for 1905, when Greece's exports amounted to £3,347,000, and her imports to £5,670,000, the United Kingdom's share being respectively £917,000 and £1,100,000. A comparison of these figures brings out the fact that before the war our commerce with Greece was increasing, and it is noteworthy that the exports and imports nearly balance, a fact which should give additional value in the eyes of the Greeks to the development of closer trade relations with this country. In the case of the enemy countries exports to Greece were well in excess of imports from that country. Thus Austria's exports to Greece amounted in 1905 to £777,000, but her imports from that country only amounted to £315,000, while Germany's exports were £555,000, and her imports £300,000, or just a little over half that amount. In short, the enemy countries found a ready market in Greece for their wares, but their own purchases in Greece were insignificant. There is not the slightest need for this trade to be re-established after the war. Greek products can readily be taken by the United Kingdom and the other Allies, notably France, Italy, and the United States, and between us we can more than provide the imports which Greece took from enemy countries. It will be the fault of the Allies, and, in particular, of this country, if the hand of the commercial Teuton is again laid upon Greece, and it may be hoped that if they do not realise their responsibilities already the Greek industrial mission will bring their duty home to our merchants and manufacturers.

MOROCCO.

Outlook for British Trade.

A very important memorandum on the necessary conditions for the success of British trade with Morocco has been received by the Department of Overseas Trades through the Foreign Office from the British Chamber of Commerce for Morocco. The published parts of the memorandum deal with such questions as the shortage of shipping, trade representation, and trade conditions, such as the need for long credit, stress being laid on the advantage the Germans possessed before the war in all these respects. It will be noted that the necessity for an adequate shipping service, which has been the subject of constant emphasis in THE NEAR EAST, is referred to as the most essential condition for the development of British trade with Morocco. We give below some extracts from the memorandum:—

"Opinion is quite unanimous that, however favourable all other conditions may be, no great progress can be made unless British trade is served by a steamer service as efficient as the German steamer service used to be. The German service was maintained by some twenty steamers of 1,500-2,000 tons. The Moroccan coast was, for purposes of steamer service, dealt with in sections, for each of which special arrangements were made. It was rare to find a port without a German steamer at anchor in it. The steamers stayed on the coast any length of time that was necessary, even if it were three or four months, until all their cargo was delivered and they had shipped all the cargo offering. The regular route of these steamers included Hamburg, Antwerp, Lisbon and the Moroccan ports, but they would arrange to take cargo to or from many other ports, notably London, Barcelona, Genoa, and the United States, and such cargo was almost invariably handled to the satisfaction of the shippers. It was rare that any serious complaints as to the service were made, and such as were received were given the most careful attention, and claims for damage were as a rule met generously. The trade was most carefully studied and handled and the captains invariably behaved as though they had a most personal interest in the efficiency of the service and the satisfaction of shippers. The company was always ready to meet unusual conditions, and would readily send special steamers when the cargo offering could not be dealt with rapidly enough by the regular service. Owing to the regularity and excellence of the service, and not, it should be noted, to lowness of freight, British trade before the war became greatly, and in the southern ports almost entirely, to depend on the German steamers. It must be remembered that the German steamer companies began a Moroccan service when Germany's trade in the country was very small and there appeared no opening for their enterprise. Before many years had passed they had succeeded, while, it is believed, making a very satisfactory profit, in diverting a very great part of the trade, especially the exports from Morocco, from London to Hamburg, and formed the main instrument by which Germany obtained a great and steadily increasing hold on the Moroccan market. In addition to the cargo steamer line, which, though providing on their boats excellent passenger accommodation, did not permit passenger traffic to interfere with its cargo work, the Germans had a first-class passenger service maintained by the powerful "Ost Afrika" line of passenger steamers running from Bremen and Southampton, and calling once a month at Tangier. Austrian trade, though very small, was served by a

monthly service of passenger and cargo boats running, between Trieste, Fiume, Algiers and Moroccan ports.

British Shipping Facilities.

"British trade, though much older and larger than the German trade, was served in the matter of steamers much less satisfactorily. The Royal Mail Steam Packet maintained, as a rule, a fortnightly service, starting from London, calling at Tangier and most west Moroccan ports, and returning by the Canaries. Their steamers were essentially tourist passenger boats, and, though bringing and taking cargo, were so much bound to time by a very strict fixed itinerary that very often they could not stop to deliver all their cargo, or to take what was offering. Their use for the bar ports, where, of course, it is often necessary for steamers to wait for some days for favourable conditions, was very limited. The other British line, the Power Steamship Co., with some three steamers of from 1,000-1,500 tons, kept up an approximately monthly cargo service, which has been of great value to British trade. These boats, however, which had to serve the whole coast from Melilla to Mogador, although used by the captains in command, and most of the agents in Morocco, with the utmost energy and consideration for shippers' needs, could not possibly provide facilities to compare with the German line.

"The result of the insufficiency of the steamer service between Morocco and Great Britain has been disastrous, although its effects have been to some extent disguised by the very considerable expansion of Moroccan trade as a whole. Trade has been more and more diverted from Great Britain; those who were most desirous of drawing their supplies from Great Britain were forced, even for those goods which could best be obtained in Great Britain, to rely more and more on foreign sources; and native merchants, in giving their orders for Manchester goods, have been known to stipulate that these must be sent by German steamer as the only means of ensuring approximately the date of delivery. The committee is confident that it is expressing the opinion of all British merchants engaged in the Moroccan trade in stating that it is essential, if British trade is to progress or even to maintain itself, that the steamer service with Great Britain should be immensely improved, and the trade supplied with facilities for sea transport at least equal to that of its competitors. In making this statement the committee is anxious not to seem forgetful of much good work which the existing British companies, with the limited means that they thought fit to employ in the Moroccan service, have often rendered, and would especially express the gratitude of merchants for the work done during the war, which has been invaluable, and beyond what, under the conditions, could possibly have been expected.

"In connection with the shipping question the committee desires to point out the great handicap placed on British shipping and trade alike by the very high charges at British ports, which have often been sufficient to decide the choice of port of shipment or discharge in favour of Hamburg, and to the great advantage German trade enjoyed in the low railway rates and special transport facilities allowed for goods for export.

Travellers.

"Up till the present time few British travellers have visited Morocco except in connection with those articles in which Great Britain has a very strong position in the Moroccan market, and even these were occupied rather in visiting and assisting their firms' local agents than in opening up fresh country. Steps such as those taken by the Germans—sending men to travel and stay in the interior to study native wants, even employing artists to visit villages and translate into colour sketches, before local critics, the suggestions of the natives as to the shape and colour most popular for articles of clothing and adornment—have never been contemplated. Such new branches of British trade as have been added to the main staples have as a rule been introduced by local British firms who have induced British manufacturers to supply what was wanted. It is not suggested that single firms dealing in an article for which the demand is not yet great could afford the expense of sending a thoroughly competent man to spend a considerable time in the country to open up a trade, but that groups of firms, especially firms in allied but not competing trades, should combine to do so. It would, of course, be useless to send a representative who did not know French well; a knowledge of Spanish would be most desirable and a thorough acquaintance with metric weights and measures would be essential.

Market Requirements.

"German merchants derived great help from the liberal terms of credit allowed by them, which though nominally stipulating, as a rule, for payment in four or five months, were very readily extended to very much longer periods on payment of interest. Since the war there has been a great restriction of credit and most business has been done on the terms of cash against documents at destination, but after peace has been established it is quite certain that it will again be necessary to give substantial credit. The committee believe that there has long been a misconception among firms in Great Britain, which have not had great experience of Morocco, as to the danger of granting credit in this country. In past times bad debts, when ordinary care was taken, were rare, and, though since the partial Europeanisation of the country failures are more common, it is still possible to allow long credit with safety, and it is probable that even the apparently excessive freedom with which Germans granted it was fully justified by results. In connection with the general trade methods followed by German merchants in this country, which combined careful development of the most minute opportunities of trade with a readiness to take risks and incur losses which to their competitors was incomprehensible, the interesting fact has come to light since the commencement of the war that practically all the German firms in Southern Morocco were financed by money from England. The committee is of opinion that merchants entering the Moroccan market must be prepared to allow, when competition compels it, long credit, and that if they work through their own branch, or through thoroughly reliable firms who are acquainted with the local business men, that they can do so without undue risk. Losses that have been suffered have been largely due to absence of care in selecting agents or failure to show any discretion in the grant of credit.

"In Morocco, as elsewhere, German trade profited greatly by carefully prepared price lists and catalogues, of which a typical example accompanies this report. They were always printed in the several European languages most current, and prices, weights, measures and sizes were quoted in such a way as to be understood by the principal buying nationalities. A great improvement has recently been noted in British price lists, some of which have every good feature possessed by the German price lists, and sometimes are even clearer and better turned out; the improvement is, however, confined to a few firms. With the advancing prosperity of the country it might be advisable in some cases to incur the expense of printing the text in Moroccan Arabic as well as European languages. A great inducement to dealing with German firms and travellers was their ability and willingness to quote prices, inclusive of packing and all expenses, c.i.f. Moroccan ports, and—a facility due to the zeal of German manufacturers for foreign trade and a good steamer service—to guarantee rapid delivery. It cannot be too clearly realised that the facility of knowing without long calculations the exact cost delivered, and the absence of delay in delivery often, especially in the case of small buyers, counterbalance in Morocco great defects of quality, and even to some extent higher price.

Representatives.

"It has very often been noted that British firms are, as a rule, reluctant to give their agents abroad the strong support necessary at the beginning to establish their goods on the market. Instead of sending their own representatives or selecting local agents with great care, and then allowing them liberal conditions and giving strong support, they often bestow their agencies with little discrimination, but are extremely reluctant to take the necessary steps to give their agents a good start. A striking Moroccan instance may be quoted, in which several motor-car firms—one English and two important German firms—were approached with a view to obtaining an agency. The British firm required its prospective agent to guarantee the sale of a number of cars that, under the circumstances, was quite impossible. The German firms not only dispensed with any guarantee of purchase, but were willing to supply gratis a car and a chauffeur for advertisement and demonstration.

"British firms as a rule are averse to trusting their agents with sufficient stocks, and expect them to obtain orders before the goods have been much known in the districts or have proved their suitability to the local markets.

"Undoubtedly one of the chief weak points of British Moroccan trade, and one which afforded, and still affords, great openings for competitors, has been the small number of British firms compared with the importance of the trade. If all those whose chief business it is to represent British houses were British subjects, the size and influence of the British colonies would be much increased, and the soundness and chances of expansion of the trade would be very much greater. It is not suggested that it is desirable to remove and replace by British subjects foreign agents who have done good work and whose interests and sympathies are with British trade, but that British firms entering the Moroccan trade should, whenever possible, make the initial and well-repaid effort of establishing their own countrymen as their resident agents, or, if forced to rely on foreign agents, make absolutely sure that they will not use their position, when occasion serves, against the interests of British trade.

Meeting Country's Needs.

"In the principal article of British Morocco trade—cottons—British manufacturers have catered for the country's needs with the greatest care and skill. The success achieved has been largely due to a thorough study of native taste and the supply of the exact articles to meet it. If the same course were followed in the numerous branches of trade which are now, through the country's development, becoming important, many of them could undoubtedly be to a great extent supplied from British sources, but so far there has been little apparent attempt to do so. Many cases could be quoted in which British manufacturers have, when urged to modify their products in order to suit the market, either been unwilling or unable to make any of the changes required, or have been content to make such alterations as in their opinion ought to be adequate. One of the most common objections was the cost of adapting their machinery to turn out the desired product. One of the chief failures to follow the demands of the Moroccan market has been in connection with the supply of broadcloth, samples of which of the current qualities accompany this report. The supply of this cloth to Morocco was many years ago a monopoly of British manufacturers, who produced an article of first-rate quality that was much liked by the natives. When, however, the Germans established houses in the country, they introduced much cheaper qualities attractively finished, and succeeded in getting the greater part of the trade. No serious attempt to compete in these inferior qualities has ever, we believe, been made by British firms. Until British manufacturers are convinced that the demand, in this and other articles, for cheapness, combined with superficial attractiveness, is worth seriously catering for, there will remain a large trade ready for exploitation by the Germans if or whenever they are free to undertake it."

BOMBAY MONSOON WEAK.

The break in the monsoon is causing anxiety, especially in the cotton districts (says *The Times* Bombay correspondent in a message dated July 19). Agricultural reports show that sowing and transplantation have been delayed in many districts through want of rain. The rainfall is almost universally much below the average, and the temperature everywhere is high. In Bombay City the rainfall is 22 inches below normal.

Five Greek shipowners have been fined from £50,000 to £110,000 each, and have been ordered to pay indemnities of a similar amount for having sold steamers to foreigners in contravention of the law forbidding such sales.

ENGINEERING NOTES.

Balkan Engineering Prospects.

Individual aptitude and comprehensive facilities for obtaining first-hand and thoroughly reliable information concerning any particular market, or markets, were the principal advantages which German manufacturers possessed in their efforts to attain trade domination. The State, by its well organised and business-like consular service, and the Press by its reliable commercial intelligence and advertising efficiency, did everything possible to further their efforts and encourage their enterprise. We have pointed out the nature of German competition that may be expected immediately after peace is restored, and have referred to German efforts in Roumania to secure complete control over the resources and markets of that fertile and progressive country. Germany's eagerness to exploit Roumania and to consolidate her position there can be well understood in view of the value of the Roumanian market before the war. At that time, for reasons which are thoroughly familiar to our readers, this market was the monopoly of the Central Powers, and they are evidently determined to retain it in the future if they can possibly do so.

What the Roumanian and other Balkan markets meant to the Central Powers may be illustrated by a few figures from the trade returns for the year before the war. In that year Roumania purchased agricultural machinery from Germany to the value of £215,900, from Austria-Hungary to the value of £64,750, while she only imported from the United Kingdom to the value of £17,000. Bulgaria's imports of agricultural machinery from Germany amounted to £69,350, from Austria to £20,450, and from the United Kingdom to only £5,000. Serbia's imports of the same commodity from Germany amounted to £20,300, from Austria to £9,800. while she took nothing from the United Kingdom. Besides agricultural machinery, internal combustion and explosion motors, gas turbines, machine tools, road locomotives, steam rollers, pumps, and pumping machinery, electrical appliances and apparatus, etc., were also imported to the value of from four to six figures for each item by each of these Balkan States; the largest imports coming from Germany and the smallest from the United Kingdom. Roumania always took the largest share. Taking into consideration the fact that these purchases took place soon after the Balkan wars we have the most convincing proof of the recuperative character of the Balkan States, and their speedy recovery from their internecine struggles should remove the last shadow of doubt from the minds of British manufacturers that these States will offer just as good markets after the war as they did before. It is certain that there will be an unprecedented demand on the part of the Balkan States for all kinds of machinery as soon as peace is declared, and the question is whether we shall be as ready to supply them with goods as we shall be to provide them with the capital necessary to repair the ravages of war. If we are not prepared, it is certain the Germans will be astute enough to take full advantage of our unpreparedness by providing these markets with goods of all kinds, if they think there is the slightest chance of commencing their commercial penetration again.

It is regrettable for the prospects of British post-war enterprise that pessimistic views should still be held in some quarters with regard to Balkan trade, partly on the ground that the peoples themselves are devoid of the requisite enterprise. There is no justification for this. Labourer, artisan, peasant, farmer, and tradesman alike are just as alive in the Balkans to the necessity for hard work and constant progress as they are in many more developed countries. It has also to be remembered that while war impoverishes a State it may not affect the people in the same degree, and with the exception of the Serbians whose country is at present almost entirely in the hands of the enemy, all the other Balkan peoples have had opportunities of making money during the war, and the extent to which they have taken advantage of their opportunities will affect the rapidity with which they recover from the effects of the war. The savings of a people will prove very useful when tradespeople are trying to replenish their stocks; agriculturists are in great need of implements and machinery, whilst Governments are trying to start the construction of bridges, railways, rolling-stock, waterworks, roads, factories, etc.

Algerian Cement Imports.

In view of the rapid growth of Algeria's imports of cement before the war, it seems possible that this country may offer an opening for British cement manufacturers when normal trade conditions can be resumed. Considerable attention has been paid, it is true, to the manufacture of cement in Algeria, but the demand for this commodity is not likely to be satisfied by home production for some years, as the quantity of cement required is certain to be on the up-grade in the future. The annual production of cement factories in Algeria is roughly 190,000 tons, and the country's requirements can be gauged by the fact that the imports in 1913 amounted to 90,039 tons, against 40,150 tons in 1908, and 38,421 tons in 1904. These figures show that the demand for cement was rapidly increasing in Algeria when war broke out, and there is every reason to think that the imports for 1913 will be largely exceeded after the war, since building construction has, of course, been greatly curtailed by present conditions, and there is a vast programme of port extensions, railway development, and general building operations awaiting attention. France has hitherto supplied most of the imported cement, and in this respect French exports have the advantage that there is no duty on the French product, while transportation costs are lower than from other countries. Post-war conditions may make it possible, however, for this country to secure some share of this trade.

A Machinery Market.

It is evident that Algeria will present one of the most promising markets for agricultural machinery after the war. There is a shortage of labour for the land, and it is believed that those workers who have taken advantage of war conditions to leave the land for industrial employment are unlikely to return to it, and it is recognised that, should that be the case, it will be essential to make an extended use of labour-saving devices. The Algerian market requires cultivating with care, and it is, therefore, highly desirable that British manufacturers and exporters of agricultural machinery should lose no time in making themselves acquainted with the market conditions, and in making their goods known to Algerian agriculturists.

LANCASHIRE COTTON.

Advance in Prices.

(From Our Own Correspondent.)

MANCHESTER, Wednesday.

A distinct advance in prices has occurred in the market during the past week. This has been due to bullish raw cotton advices from the United States, and a much smaller crop is expected than a month ago. The development in the situation has stimulated demand in certain quarters of the market, but actual operations have been somewhat irregular. Reports from Egypt with regard to the growth there have been rather mixed, but, on the whole, the plants seem to be doing fairly well. Users of Egyptian cotton are adjusting matters to the new Government regulations. It is still hoped that merchants before very long will be able to offer their private marks in addition to Government types. Prices in Egyptian yarns have tended to harden, and the undercurrent of demand remains healthy. An increased inquiry has been reported in piece goods for Egypt. That market tends to become a more important distributing centre as direct exportations to several Near Eastern outlets are impossible. An extensive demand has again been dealt with in a variety of goods for India. Certain kinds and qualities of light materials have been bought freely and a very fair trade has been done in grey staples. Owing to limited production and long engagements manufacturers have been very independent. American yarns have been raised in price, but quotations have shown a good deal of irregularity. Most of the buying has again been in medium counts. An increased demand has been experienced in yarns suitable for France.

EGYPT'S TRADE IN MAY.

Improvement Maintained.

(From Our Own Correspondent.)

CAIRO, July 9.

The Customs statistics for May show a further improvement in the trade of Egypt. Imports during the month amounted to £E4,123,219 and exports to £E3,122,664, as compared with £E2,065,008 and £E2,561,295 respectively a year ago. The tendency of the balance of trade to swing over against the country is shown by the fact that as a result of the five months now under review imports have increased by £E8,030,019 and exports by £E3,147,263 on 1917 figures, when the balance was £E6,295,974.

The chief imports during the month were: Hides, skins and tanned goods £E42,354, wheat and maize flour £E160,097, sugar £E88,056, coffee £E68,161, vegetable oils £E97,418, stationery £E183,657, coal £E263,970, medicinal and chemical products £E55,569, textiles £E2,046,515 (cotton yarn and thread £E92,610, cotton piece goods £E1,372,623, woollen textiles £E86,153, silks and ribbons £E58,854, sacks £E103,459, ready-made underclothing and hosiery £E117,046), manufactured iron and steel £E162,943, smallware £E56,492, and tobacco £E246,655.

The main exports were: Hides, skins and leather goods £E60,631, rice £E38,124, cotton-seed £E310,275, sugar £E36,166, gum £E53,419, cotton £E2,412,636, and cigarettes £E56,166.

Trade With the Empire.

Great Britain increased her share of the imports from £E880,186 to £E2,469,945, India from £E221,022 to £E403,946, and Australasia slightly to £E120,154. (The Empire was responsible for all the flour, vegetable oils, coal, cotton yarn and thread, sacks, most of the iron and steel, and cotton piece goods, and 75 per cent. of the coffee); France increased her sales from £E72,291 to £E181,093 (silks and ribbons, medical and chemical products, manufactured dyestuffs and paints, ready-made underclothing and hosiery), Japan hers from £E26,550 to £E121,556 (matches, glass and crystal, stationery, ready made underclothing, and hosiery, cotton piece goods, tobacco), Persia hers from £E4,112 to £E28,411 (all the petroleum), and Sweden hers from £E1,377 to £E35,109. The United States fell off by two-thirds and Greece and Italy both showed slight decreases.

Under exports, Great Britain rose from £E901,725 to £E2,615,497 (all the cotton-seed, 50 per cent. of the gum, and over 90 per cent. of the cotton). The United States, France, Japan, Greece, Switzerland and Italy all showed decreases—with the exception of Italy, somewhat considerable ones.

Trade between Egypt and the Sudan was brisk, imports into Egypt rising from £E205,931 to £E263,942, and exports to the Sudan from £E131,528 to £E186,872. The chief imports were livestock £E79,798, hides and skins £E27,418, cereals £E80,838, gum £E30,567, cotton £E25,181. The principal exports were sugar £E31,975, cotton piece-goods £E40,528, and tobacco £E16,182.

INDIAN TEA ESTATES AND INCOME TAX.

The Government has decided to exempt the industrial profits of tea estates from income-tax up to March 31 next (says *The Times* Simla correspondent in a message dated July 26). The Government vigorously repudiates the charge of bad faith in connection with the new Act, and declares that it took every measure it thought likely to acquaint the commercial public with its intentions. It suggests that if the Tea Association considers that the Government's interpretation of the law is incorrect, it can seek a decision in the Courts.

The *Norddeutsche Allgemeine Zeitung* states that the Trieste branch of the Oesterreichische Kreditanstalt (in Vienna) has obtained official sanction for founding a limited company under the style "Shipping Company 'Liburnica,' formerly Eredi Matteo Premuda and Co." The share capital is stated to be 3,800,000 kronen.

A WORLD-WIDE REPUTATION FOR OVER THREE-QUARTERS OF A CENTURY.

COMPANY NOTES & REPORTS

The directors of the Anglo-Ceylon and General Estates Company announce that, in consequence of the uncertainty and delay in mails from abroad and the time required to realise the company's produce, it will not be possible to hold the general meeting this year until early in October.

The report of the Futtickcherrie Tea Company for 1917 shows a profit of £795. After adjustment, including £1,395 realised in excess of estimates for season 1916 and deducting excess profits duty £682, there is an available balance of £1,912. It is proposed to pay a dividend of 5 per cent., less tax, and to carry forward (subject to excess profits duty) £1,112.

The net profit of the Bandarapolla Ceylon Company for 1917 amounted to £10,737, against £15,115. Final dividend of 15 per cent., making 25 per cent. for the year, against 20 per cent.; to the estates account for depreciation of buildings and machinery, £1,000, the same; forward, £3,072, against £5,834. An extraordinary general meeting will be held on August 9, for the purpose of altering the articles of association.

The net profit of the Singlo Tea Company for the past year amounted to £36,942. Directors recommend a dividend on the ordinary capital of 20 per cent., of which 3¾ per cent. was disbursed on April 22; forward, £33,863, subject to excess profits duty. The profits for 1916 were £72,644, and the dividend 20 per cent.

The report of the Malta and Mediterranean Gas Company for the year ended March 31 states that the balance of the general revenue account is £709. The directors propose, after transferring from the reserve account £3,500, to recommend a dividend of 3 per cent., free of tax, on the ordinary capital, making 5 per cent. for the year, leaving £232 to be carried forward.

The report of the Noyapara Tea Company for 1917 states that the profit was £6,632. It is proposed to pay a dividend of 10 per cent., less tax, leaving to carry forward, subject to excess profits duty, £11,865, including £7,745 brought in.

The report of the Travancore Rubber Company for 1917 states that amount at credit of profit and loss, including £5,431 brought forward, after allowing £719 for depreciation on buildings, machinery, etc., making ample provision for bad and doubtful debts and payment of an interim dividend of 5 per cent., less tax, is £20,463, which the Board recommend should be carried forward, subject to directors' and auditors' fees and excess profits duty. The latter will again require a very large sum. So far expenditure for the current year has had to be met out of 1917 profits, because, owing to the abnormal conditions prevailing, no money has yet been received in respect of the current year's crop. In view of these facts the Board have reluctantly come to the conclusion that they are not justified in recommending the payment of any further dividend.

The Paris-Maroc Company, which is a subsidiary of the Paris-France and Nouvelles Galeries Reunies group, realised, in 1917, a net profit of 1,060,471 francs. The capital is to be increased shortly from 6,500,000 francs to 10,000,000 francs.

The gross profit of the Credit Franco-Egyptien in 1917-18 amounted to 1,038,646 francs, and, after deducting 350,949 francs for general expenses, there is a net profit of 687,697 francs against 596,825 francs in 1916-17 and 479,156 francs in 1915-16. The dividend will probably be maintained at 9 francs.

The report of the Balijan Tea Company for 1917 states that the profit was £6,906, which, with additional profit made on account of 1916, £4,451, and £15,820 brought forward, after payment of final dividend for 1916, makes £27,177. Deducting excess profits duty 1916, £2,458, and interim dividend there is left £22,619. The directors recommend a final dividend of 14 per cent., less tax, making 20 per cent. for the year, and to carry forward £17,719, subject to excess profits duty 1917 (if any), and also an amount payable on additional profit for 1916.

The report of the Longai Valley Tea Company for 1917 shows crop 1,198,428 lb., estimate 1,320,000 lb., 1916 1,206,008 lb. Profit £3,230, brought forward £16,928, net balance credit £15,856. Directors recommend final dividend of 5 per cent. on ordinary shares, less tax, making 7 per cent., and carry forward £11,506.

The Doom Dooma Tea Company in 1917 made a profit of £61,762, making, with additional profit made on account of 1916 of £22,606 and the amount brought forward, £36,426, a total of £120,802. Excess profits duty paid on account of 1916, £27,559; final dividend of 7½ per cent. (making 12½ per cent. for the year), less tax, and bonus of 2½ per cent., making 15 per cent. for the year, against 17½ per cent.; to new extension account, £9,845; forward, £47,897, out of which there will have to be paid excess profits duty, the amount of which has yet to be decided.

An extraordinary general meeting of Egyptian Markets will be held at 213, Gresham House, Old Broad Street, on August 16, at 12 noon.

Dividends, Payments, etc.

The directors of Egyptian Markets, Limited, declared a final dividend of 5 per cent. (less income-tax) for the year ended December 31 on the ordinary shares, payable from July 26, at the Anglo-Egyptian Bank, Clements Lane, London, E.C.

Nestor Gianaclis.—The Bank of Athens will pay debenture coupon No. 14, due August 1, at 22, Fenchurch Street, E.C.3.

The directors of the Balijan Tea Company recommend a final dividend of 14 per cent., less tax, on account of 1917, making 20 per cent. per annum.

The directors of the Jokai (Assam) Tea Company have declared a final dividend for 1917 on the ordinary shares of 12 per cent., less tax, making 17 per cent. for the year, payable on and after August 17.

The directors of the Financial Times, Limited, have declared an interim dividend at the rate of 5 per cent. per annum on the preference shares for the half-year ended June 30 last, payable August 26, to all shareholders registered August 19. The preference share transfer books will be closed from Monday, August 19, to Monday, August 26, both dates inclusive.

The dividend on the preference shares of the Egyptian Delta Light Railways for the year ended March 31 will be 3½ per cent., subject to confirmation at the meeting.

The London County Westminster and Parr's Bank announce that branches of their French auxiliary, the London County and Westminster Bank (Paris), have been opened at 37, Rue de la République, Lyon, under the management of M. André Valiet, and in temporary premises at 31, Rue Paradis, Marseilles, under the management of Mr. Paul Coste Morson.

ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Street, Wednesday.

A large business has again been put through this week in Egyptian stocks, and there is a further general advance in prices where altered. Large buying orders have been coming in from Egypt, no doubt prompted by the good military news, by the satisfactory accounts of the growing crops in Egypt, and the big accumulation of funds there seeking investment.

In Government stocks there are constant buyers, but no quotable change in prices. Sellers remain very scarce, and some large blocks are wanted to satisfy the present demand.

Amongst Bank shares a fair business has been passing; but whilst Nationals remain firm, Agriculturals are 1-16 easier at 6 13-16, and Anglo-Egyptian Banks are ⅛ down at 17.

In Railways, Delta Lights have been done in a small way at 7⅛; but the price has since strengthened to 7¼, on the declaration of a dividend of 3½ per cent. for the year ended March 31 last.

In Land shares Aboukirs have risen 1s. 3d. to 24s. 9d., Egypt having now come into the market as a buyer of these shares. Land Allotments are in strong demand at the current quotation, but no business results, as there are no sellers. Béhéras have improved ¼ to 14⅜, and there has been quite a fair amount of business passing. Delta Lands have continued the improvement started last week, and are a further 6d. up at 16s. 3d. on a renewal of demand from Egypt. Foreign Trusts have improved 6d. to 12s. 9d. with a small business passing. Gharbieh Lands are a further ⅛ higher at 2⅜, but there are very few sellers of these shares at the present level, which is still a very depreciated one. In New Egyptians a very large business has been transacted, and the price to-night is 6d. higher at 22s. 6d., with a strong upward tendency, there being a very large demand for Egyptian account. Sidi Salems have further strengthened 1-16 to 2⅜, and here also Egypt has been a buyer; but sellers are pretty scarce even at the present advanced level as compared with some time back. Union Foncières and United Egyptian Lands have also been in constant demand for Egypt, and a very fair business has been put through. The former close to-night 5-32 higher at 3⅝, and the latter have improved 4½d. to 2s. 7½d.

Amongst miscellaneous descriptions, Alexandria Waters are 3-16 up at 12 11-16, Markets have recovered some of their dividendent at 26s. x.d., and Salts and Khedivial Mails have been strong features. Salts are ⅛ up at 2 11-16, and Khedivial Mails have improved 7s. 3d. to 55s.

Amongst Greek securities there are pretty large buyers round current levels, but practically no business is doing owing to the absence of sellers. The only quotable changes to record, however, are a rise of 2 points in Rentes to 53, of 1 point in 1910's to 64, and of 1 point in 1914's to 78. The 5 per cent Currant Bonds are quoted about unchanged at 93 x.d.

Wheat in Roumania is a failure as a crop, and maize is only medium.

Lord Inchcape has been appointed a director of the Great Western Railway in place of the late Mr. Albert Brassey.

The Zemindars of the Lyallpur District, Punjab, have generously offered one quarter of their entire wheat crop to the Government, to cover part of the expenses of war.

A telegram from Bucharest, received through German channels, states that the Minister of Finance, M. Saulescu, has declared that the introduction of an alcohol monopoly has finally been decided upon.

NOTES OF THE WEEK.

The Allied advance on the Western front has again been the dominating military event of the week. In other theatres of war there has been little activity except in Albania, where the Italians have compelled the enemy to evacuate the Jagodina bridgehead and pass to the right bank of the river; but the Serbians chronicle a successful raid, and there have been encounters on the Hejaz front, of which the Turks, as usual, report the repulse of the enemy after heavy losses. In addition, a whole series of successful British raids has been announced in Palestine on the Jerusalem-Nablus road, in which 600 of the enemy were killed and taken prisoner, and guns were captured.

The effect of the Allied victories in the West is already shown in the East. It is reported that the Germans have sent an urgent request for reinforcements to the generals commanding their armies in the East. But Mackensen, who is in command in Roumania, is said to have replied that the agitation existing among the Roumanian population made it more desirable to send reinforcements there than to withdraw them for employment on the Western front—a remark which is probably more than justified by the bitter indignation of the people at the way in which they have been exploited by the Germans. And the German generals in the Baltic provinces and the Ukraine appear to have been equally urgent in their demand for reinforcements in those countries.

The Germans find themselves, in fact, again menaced with the prospect of war on both fronts. The landing of the Allies at Vladivostok and Archangel appears to have taken the enemy as completely by surprise as the transport of American troops to France; the very serious possibilities of the Czecho-Slovak movement in Siberia are now fully recognised in Berlin; and the counter-revolutionary movement in Russia and the Ukraine is equally disconcerting to the Teuton. So menacing is the latter to Germany that von Helfferich has left his post owing, it is said, to the fear of assassination. The Germans, meanwhile, are calling on the Bolsheviks to suppress the counter-revolution of the Czecho-Slovaks and to evict the Allies, and no doubt the Bolsheviks would do so if they could—they have, in fact, already practically declared war on the Entente. But desire, as Falstaff found, often outlives the performance, and the Bolsheviks are now practically powerless. Lenin and Trotsky are said to be so afraid of assassination as to move their quarters day by day, and the German Press sorrowfully confesses that the day of these useful auxiliaries is practically over.

There are signs in plenty that the situation may be radically transformed in the East. The treaty of Brest-Litovsk, as one German journal remarks, is dead; and Germany, so far from finding prostrate Russia a source of strength to her, finds it at this moment a source of weakness, since it demands a large garrison, and has by no means provided Germany with the supplies that were so confidently expected. The present position is quite incalculable, and its possibilities infinite; the one thing certain is that Germany can no longer count on Russia either as being out of the war or look upon her as a milch-cow. Whether it turns to the advantage of the Allies depends very much on the action of the Allies. They have been blamed for remissness in the past, but it was in fact impossible to deal with the Bolsheviks, and those who urged them to do so made the suggestion less with the desire of helping with the war than helping the Bolsheviks. The time has now come to strike, and to strike hard.

It is noteworthy that the Vladivostok and Archangel enterprises have not yet given rise to any of those protests against dissipating our energies which were evoked by the Salonika and Palestine expeditions. A cynic might interpret this as meaning that one can be an "Easterner" so long as one is a Far Easterner; but the truth probably is that even the most extreme Westerners have now realised that the war must be won in the East as well as the West if it is not to be lost in the East and won in the West. If Germany intends to use Belgium as a pawn, so much the more would she use Roumania and the Russian provinces, which she already regards as hers by right of cession. As it is nowhere suggested that we should let the East of Europe go by default, action there was inevitable.

While Berlin is preoccupied with Russia, she is not allowed to forget that Bulgaria also is dissatisfied. King Ferdinand is taking the waters at a German spa, and his subjects have seized the opportunity to vent their feelings openly as to their position. It is even suggested in Germany that the disease from which the King is suffering is less physical than political, and that he left his country on account of the spread of republicanism—which will scarcely be cured by the doctors of Bad Nauheim. But the semi-official Sofia newspaper, the *Radical*, has also spoken very freely about the domination of the Quadruple Alliance by Berlin, and has, in

Digitized by Google

addition, complained that " all the booty taken in Roumania, including railway cars and locomotives," has been seized by Germany. Bulgaria further makes it a grievance that she is allowed no share in the civil administration of Roumania, that the Northern Dobruja is administered by Germany alone, " although the greatest sacrifices for its conquest were made by Bulgaria, and that, in addition, Turkey is to be given a share in the condominium, although Constantinople " has already been largely rewarded in the Caucasus."

The Bulgarian Prime Minister also received a deputation, whose composition is unknown, from the Dobruja on Saturday, which begged him to use his influence and urge his allies so that a solution of the Dobruja question should be brought about by its " annexation to the mother country," Bulgaria. Deputations of this kind are easily enough arranged, as Berlin knows well enough from its experiences in Lithuania and Courland; but the importance of this incident is less in what was said, which was no doubt arranged beforehand, than in the fact that it was officially received by the Prime Minister. But in view of her preoccupation on the Western front, it is perhaps unlikely that Germany will take the protests of her smaller Allies very seriously. She will probably remind Bulgaria that those who pay the piper call the tune, and leave Sofia to the regret, now almost openly expressed, that it joined the wrong side three years ago. Here also we may look for interesting developments in the situation before very long.

The Roumanian Senate has now approved, by 57 votes to 1, with six abstentions, the resolution of the Chamber to prosecute the members of the Bratiano Government, in spite of the dignified reply of the ex-Ministers to the accusation. But the prosecution having been determined on by the Germans in control at Bucharest, the parliamentary vote was clearly a foregone conclusion. It is an act of political persecution in which Roumania has no real option, and it will be recognised as such in the outer world. The decision is not a matter of justice, but of revenge. It is to be noted that Mr. Marghiloman advised that the Ministers should not be brought before the ordinary courts. He may doubt the wisdom of the prosecution—or its result.

Details of the developments in the regions between Kieff and the Caucasus are somewhat scanty, but not altogether unsatisfactory. The Don Cossacks announce that after three months' operations their country has been entirely cleared of the Bolsheviks, and that the Cossack army is now well equipped and numbers many thousands; while the Ukraine Government states that " an exceedingly important conference " took place between its representatives and those of the Don Government, " with the happiest results for both parties." Unfortunately, no details were given either of the agenda or of the actual details which led to the results between these two not very compatible entities, but a subsequent telegram to Cologne makes matters a little clearer, if it be true, as therein stated, that Rostoff, Taganrof, and the surrounding districts fall to the Don Republic. In view of the tottering condition of the Ukraine Government, the report is not improbable in itself.

An important step has been taken by the Persian Government. Several weeks ago it abrogated the agreement of 1907; it has now decided to abrogate all treaties, conventions, and concessions obtained by the former Russian Government and its subjects during the last hundred years, and the abolition has also been announced of Foreign Office tribunals and the Kargiyars Courts, which, says *The Times* Teheran correspondent, is equivalent to an abrogation of the treaty capitulation and the rights of foreigners. The denunciation of treaties for a century past practically covers the whole period during which Russia has been an intimate neighbour of Persia; the step is an indication that in the opinion of the Shah and his advisers the position in the Near East has been fundamentally modified by the collapse of Russia. It is also an indication that in their opinion the modification, if not the collapse, is likely to be permanent.

It is, of course, too much to expect that Mr. Arthur Henderson will be turned from his desire for a conversation with Germans and pro-Germans by the emphatic protest of the Executive of the Central Committee of Greek Hellenes at Athens against his peace policy. It is certainly a curious fact, as the Committee point out, that the Labour Socialist Conference forgot even to mention " the name of the Greek element," but that might have been explained as an inadvertent omission; more significant is the fact that the Conference " seems to have shown a delicate care and attention that the rapacious aspirations of Turkey and Bulgaria on lands which they have injured by sword and fire are not injured." It is possible, of course, that Mr. Henderson and his advisers are not intimately acquainted with the Balkans—they would not be the only people in England ready to advise on matters of which they are ignorant, as the sad case of Mr. H. G. Wells attests—but it is unfortunate that their ignorance should happen to show a bias against the Allies of their country.

If the facts are correctly reported in *The Times*—and no contradiction has yet been published—there will be a feeling of intense indignation at the announcement that British wounded have been turned out of the General Hospital near Cairo (formerly the Hotel Al Hayat) in order to accommodate German women. This appears to be one more exhibition of that official incompetence and idiotic tactlessness which makes Englishmen talk angrily about the Hidden Hand and foreigners talk contemptuously about the " mad English." The place was specially equipped for wounded; the cavalry barracks to which the wounded have been transferred appears not to be so equipped, and in any case a cavalry barracks is less suitable for a hospital than a hotel. It is to be hoped that full inquiry will be made into the origin of this scandalous blunder.

Nine years ago the whole world was electrified by the news that a French aviator had flown the Channel. Now we take it as little more than part of the day's news that two British officers have flown from England to Egypt. It happens that the feat was unprecedented, but it was performed on ordinary machines—the exact type is not mentioned—which had seen considerable service at the front; and the flight of over two thousand miles was " in every respect a piece of routine work," carried out without special designing or organisation. In view of the arrangements that are already being made for long-distance air services after the war, in another ten years it may be more novel to find an aviator who has not flown such a distance than one who has.

It is announced that an independent Armenian republic of Ararat has been proclaimed and recognised by the Turks. The republic consists of the districts of Erivan and Etchmiadzin, containing about 12,000 square kilometres of territory and 400,000 inhabitants. How far the republic will be allowed to enjoy its independence remains to be seen; but in fact its boundaries comprise two only out of the seven districts of Erivan, the other Armenian provinces of Russia and Turkey being entirely excluded. It is believed that the Armenians in those other provinces are to be forced to settle in the exiguous territories of this new republic.

A pleasant picture is given of the progress of British administrative work in Palestine by the Cairo correspondent of the *Times*. Confidence has been restored in Jerusalem, as is evidenced by the fact that the shops, which were all closed at our entry in December, are now nearly all open. It is evidently as true now as ever it was that Britain finds her true mission in constructive work; here, as in Mesopotamia and elsewhere, the successful soldier becomes the successful administrator almost before the details of the campaign are known. It is a matter in which the German is incapable of imitating his enemy, as the condition of Poland, Russia, and Roumania sufficiently attests.

LETTER FROM CAIRO.

(From Our Correspondent.)

Cairo, July 15.

Economic Crisis.

The Supply Control Board has practically concluded its labours in connection with the measures for coping with the economic crises from which the country has been suffering. Of course, foodstuffs and articles of primary necessity have already been tariffed, and shopkeepers have already been required to display copies of the official lists of maximum prices. Slight modifications have been introduced in the previous prices, the increases representing generally the difference of railway rates, which, for certain articles, have recently been raised. The new tariff becomes operative as from the 16th instant. The article which has received most attention from the Board is wheat. A central syndicate in Cairo, composed of representatives of the cereal merchants, has been formed; and provincial syndicates have been similarly constituted, each Markaz selecting four representatives exclusively from the cereal merchant class, and these re-electing in their turn ten members for each province. To these provincial syndicates, and to the central syndicate in Cairo, a copy of the regulations, drafted by a committee formed *ad hoc*, has already been submitted; and any remarks or criticism that the members may have to make should be received before the 30th instant, when the general assembly, formed of the central and provincial syndicates, will have to decide, with the concurrence of the President of the Supply Control Board, the application of such regulations. Pending the new regulations coming into force the Government has, with commendable solicitude for the welfare of the poor, sold so far 47,533 sacks of Australian flour, loaned from the Army depôts, and distributed chiefly in the populous quarters of old Cairo. On the other hand, the Ministry of Agriculture continues buying large quantities of wheat, chiefly from the National Bank of Egypt, for direct sale to the public at the tariff price. It is understood that similar measures to those taken in the case of wheat are to be applied to bread. Meantime the Governors of Cairo and Alexandria have been actively endeavouring to relieve the situation in regard to bread. The Governor of Alexandria has offered to supervise himself the work of the commission of baker representatives, and has received the thanks of the Supplies Control Board; while the Governor of Cairo has already obtained from twelve of the leading native bakers a written undertaking to sell bread, pure and unadulterated, at the tariff price.

With regard to sugar, further measures are being taken to prevent abuse. The Supplies Control Board has just ordered the prohibition of water transport of sugar in quantities over 100 kilog., except by special permit from the sugar company, or, in case of foreign sugar, from the Supplies Control Board itself. On the other hand, the Société de Sucre has published a notice to the effect that it is prepared to sell direct to retailers, whenever the latter meet with any difficulty in getting their requirements from the wholesale dealers. The Governorates are also getting lists drawn up of the grocers in each quarter, so as to help the Board to form an accurate idea of the requirements of the public. And yet abuse continues in regard both to bread and to sugar; while the public complains and the Press agitates. Of course, no final judgment can be passed before the regulations in regard to wheat are finally approved and enforced; but it is generally suspected that even then the remedy may not prove altogether radical, not because of any fault in the regulations themselves, but rather because of the aversion of the public to lodge any formal protest and get involved in the subsequent administrative formalities. It needs a man of particularly independent character, and more or less independent in his work, to face the trouble and loss of time involved in drawing up a *procès verbal* at a police station, and subsequently appearing before the Court. It has, therefore, been suggested that the same system should be adopted that proved such a success in the petroleum crisis, viz., the appointment of local committees of public-spirited men of good standing and practical experience, who would voluntarily exercise control over the grocers and shopkeepers in their respective quarters, and report eventually to the Supplies Control Board.

The meat crisis can hardly constitute a public grievance in a semi-tropical country like Egypt, where the less meat eaten the better for public health. The root of the complaint, however, lies in abuse in regard to prices and the fraudulent mixing of meats. Anomalous as it may seem, the retailers are bound by the tariff, while the cattle and sheep dealers are left free; wherefore, the butchers have been, naturally, clamouring to have their suppliers put under the same restrictions imposed on themselves. A suggestion has also been made for the institution of three meatless days, which, while reducing the consumption, would have the consequence of reducing prices also. A strict control is further recommended, to put a stop to the present abuse of mixing meats of different qualities and selling them at the price of the inferior quality. A proper system of stamping the different qualities would stop this abuse.

War Trophies from Palestine.

A most interesting exhibition of war trophies relating to the Palestine Campaign was opened last week at the Museum Annexe of the Alexandra Municipality. This exhibition is destined to have a more than transient interest. The exhibits range from the German *minenwerfer* and howitzer, the machine gun and trench mortar, to old swords, pistols, and daggers of antique workmanship; steel helmets are there also, and hand grenades and trench clubs. Some of the relics and souvenirs embody historic events of extraordinary interest, such as the White Flag which surrendered Jerusalem, and the portrait of General Allenby executed by a British officer, also his red and blue lance pennon as carried into the city; the splendid brass *hanukah* lamp used in the Jewish celebration service commemorating the British entry; and copies of General Allenby's famous Proclamation. Among the numerous other relics and souvenirs are specimens of the enemy propaganda and proclamations—and these are legion—distributed by aeroplane, and aimed especially at Egypt; and, contrasting with these is the historic Proclamation of the King of the Hejaz. Other souvenirs of peculiar interest are the photographs taken in Egypt and Palestine by the Royal Air Force. The exhibition, which may be considered still in the embryonic stage, is destined to become a medium of education, and to illustrate vividly a chapter of the History of the Great War, to which many more glorious pages are yet to be added by the Egyptian Expeditionary Force. The proceeds of the small admission fee will be devoted to the British Red Cross and Order of St. John. When completed the exhibition is to be transported to London, to form a section of the great Imperial War Museum.

Their Majesties' Silver Wedding.

On the occasion of their Majesties' Silver Wedding, their Excellencies the High Commissioner and Lady Wingate entertained to tea in the Residency grounds at Ramleh a thousand sailors and convalescent soldiers. In a brief speech Sir Reginald explained that, feeling sure as he did that his guests would wish to join in a loyal message to their Majesties, he had transmitted by cable their most respectful congratulations, and had just received a gracious reply, which he had the honour to read to them; after which he called for three hearty cheers for their Majesties, and ended by wishing them long life, happiness, and a complete victory over their enemy.

"Our Day" in Egypt.

The High Commissioner has just published in the local papers a statement wherein reference is made to the report received by him about "Our Day" for 1917, and to the list of subscriptions received from all parts of the world. It was a source of gratification to him that Egypt and the Sudan had responded so generously to the appeal, the total subscriptions from the

Digitized by Google

two countries amounting to £152,000 for 1917, while, for 1915 and 1916 the total was £400,000. The high example set by H.H. Sultan Fuad I., who subscribed £500, has no doubt contributed to the success of the appeal; and, while thanking, on behalf of the Committee, his Highness and the members of the Sultanian Family, the Sirdar of the Sudan and the Mudirs in Egypt, as well as all those who helped in swelling the list of subscriptions, the Commissioner expresses the conviction that his further appeal for "Our Day" 1918 will meet with an equally generous response, the Egyptians having given proof of the fact that where the alleviation of human suffering was concerned their munificent spirit was always equal to the growing demands made thereon.

The Bairam Feast.

The sight of the new moon marking the end of the fast, which according to Moslem tradition has to be vouched for by at least two witnesses before the Cadi Sheri, could not this year be declared on the day that had been reckoned for, and the fast was therefore prolonged by one day. The Government, which establishes its calculations for the Bairam on astronomical records, had already declared that day as a holiday, and the officials thus had five instead of the usual four days, which was quite a welcome gain in these hot days. The usual salvoes were fired from the Citadel, and Abbassia, and at Port Said and Alexandria; and his Highness the Sultan held the reception at his Palace of Ras al-Tin. Special trains had to be added to convey the crowd of foreign and native high officials and notables who went from Cairo to Alexandria to tender their congratulations to his Highness on this auspicious occasion.

CONDITIONS IN SYRIA AND PALESTINE.

(From a Correspondent.)

Cairo, July 1.

A Critic of the New Administration.

Sure evidence of a liberal regime is free criticism of official action. Even under martial law the British administration in Palestine has been allowing this—and in one of its own organs. A Palestinian correspondent calls attention to two grievances: (1) That the majority of officials is still drawn chiefly from men of the old dominant class, who, it is true, wield a certain measure of local influence, but one that was gained under the old regime by corruption and maintained by high-handed and arbitrary action; and (2) that the tithes are being collected without due regard being paid to the ruined condition of the country and the temporary impecuniosity of the majority of the inhabitants. On this the editor comments that, in so far as the first complaint is concerned, the Government of the Occupation has necessarily to select its officials from existing elements, and to give posts of local authority to those persons whom they found in actual possession of such authority. If those officials (he adds) in the past lived by corruption and acted arbitrarily, it was simply because the former regime favoured such methods; but under the vigilant eye of the present honest administration such methods cannot continue, and it may safely be assumed that these very officials will soon be found to exercise their influence and use their local knowledge and experience with integrity, in accordance with the principles of the Government which they are serving. That Government thought before everything else of increasing the salaries of officials precisely with the view of counteracting the influence of the past ignorant regime, which courted corruption. As regards the second complaint, the editor justly argues that a country cannot be administered without its inhabitants contributing at least a portion of the expenses of the administration which is responsible for the maintenance of order, the dispensation of justice, and the development of its economic and commercial life; and that it is a wrong principle of government to attempt economy in this direction. However, it is admitted that there are certain cases which deserve exceptional treatment, and it is said that the Government contemplates the remission of taxes in cases where utter inability to pay is established, and the granting of delays in less serious cases.

In the Lebanon.

News from Syria continues to be meagre, and can only occasionally be gleaned from refugees. Such refugees are beginning to arrive in larger numbers by the more or less safe route of the Hauran, which affords a kind of neutral passage between Damascus and the southern part of Eastern Palestine, now held by the Arabs.

A Lebanese, who is said to have left The Mountain not more than six weeks ago, gives the cheerful information that diseases and epidemics have now practically disappeared from that region, and that all the mulberry plantations have been sown with grain, which promised a good crop. The rearing of the silk worm has, of course, been abandoned for the more immediate necessaries of life. Besides, the silk that had been produced in the past was taken over by German, Austrian, and Swiss agents at prices of their own, and paid for in paper money, which crowned the calamitous nature of the transactions!

Wheat and flour continue to be sold at famine prices, which in the depreciated paper currency are represented by figures unprecedented in history.

This latest informant contradicts the report (which had found some credence even in serious quarters) that an Austrian Archduke had been appointed Prince of the Lebanon, with enlarged boundaries. This seems to be a legend; but it is satisfactory to learn that the present Turkish Governor of the Lebanon is a man of a mild and conciliatory character. Indeed, all reports agree in stating that the Turks have lately changed their tactics, and that Jemal's reign of terror in Syria has been succeeded by a pro-Arab policy.

The Germans in Damascus.

Another refugee from Damascus gives a gloomy report of that town. Epidemic diseases are said to be still raging, and the bodies of people who have died from starvation are still to be seen in the streets. That famine should thus prevail in the city of plenty is accounted for thus by a correspondent: "Even the German in civil or military service was allowed to send to his family in Germany eight kilogrammes of eatables, subject to his presentation to the authorities of a list of the names and addresses of relatives. These lists contained often twenty to thirty names, to each of whom cereals, oil, dried fruits, etc., were sent, while the natives died of starvation by the hundreds."

CYPRUS NOTES.

(From a Correspondent.)

The summer season is running its course much as usual, and there have been some hot weeks in the plains. Larger numbers than ever of Greek families have gone to the hills, especially to Platres and a few villages on the Limassol side of the Troödos encampment. Among them now are not a few families from Nicosia, who are beginning wisely to take advantage of the increased facilities for travel and the hill attractions. Fortune has favoured many people in the capital as well as other towns during the last few years, and this migration is one of the results.

The health of the High Commissioner, Sir John Clauson, who has been at "Government Cottage" since the middle of June, is much improved.

The new Greek Bishop of Kition (in succession to Meletios, now Metropolitan of Athens, who is proceeding to America on a mission) is Nicodemos Mylonas, late Vicar of the Archbishop at Famagusta. He is the youngest bishop in the Greek "Orthodox" Church, being only 32, and is held in high repute in Cyprus.

Of the two new British Judges, Mr. Grimshawe is President of the Limassol District Court, and is also acting at Papho. Mr. Dixon is acting as President at Kyrenia.

Mr. Alan Stuart, after long service at Papho and Limassol, and having acted for some time as Puisne Judge at Nicosia, is now at Larnaca, as President of the District Court.

TANGIER TO TEHERAN.

The *Busreh Times* still contains an extraordinary number of advertisements of lost dogs, whose owners not infrequently offer liberal rewards, and I am surprised to observe what a variety of breeds is represented. The Friend of Man seems to be well represented on the Shatt el-Arab these days, and clearly he is held in high esteem. Occasionally I note an advertisement of "a good dog wanted," and I suppose there must be some kind of local Leadenhall Market by now! But one advertisement struck me as rather pathetic. It ran:—

Found.—Black and Tan Dachshund, no name on collar. Owner please apply, 40th British General Hospital.

I hope the poor little beast's owner did apply, in spite of the unpopularity of the breed at the present time. Although the strayed one had "no name" (on collar), he may have been a genuine "naturalised." And dachshunds have wonderful eyes, anyhow!

***

The *Leipsiger Neueste Nachrichten* recently referred to Mr. Lloyd George as "a howling dervish." Thereby, it seems to me, the Leipzig journal has placed itself neatly on the horns of a dilemma; for the Howling Dervishes are—for practical purposes—Turks, or at least Turkish subjects, and therefore dear friends of Kaiser Hajji Wilhelm and company, who never tire of telling us how they love all that is Moslem—as they never tire of telling any lie that they think will help them. So either our poor Premier has been complimented by the *Leipsiger Neueste Nachrichten*, or, if he is so black as the Germans paint him as a rule, the Howling Dervishes have been insulted.

***

I heard the other day a wicked little story, which may, or may not, be true. It concerned a Government Employee and a certain Contractor. The latter was eager—very, very eager—to get certain goods that were required for the construction of a stretch of railway not fifty thousand miles from a particular region of the Near East. Among other things most urgently required were some steel fish-plates; and for these he sought to obtain "priority" from the Powers-that-be. Correspondence failing to produce results, he called at the Ministry of Munitions, where, in due course he was conducted into the presence of a Gilded Youth, to whom he stated his business. The G. Y. knew all about it. He had the application at hand, with the thousand-and-one memoranda concerning it that had been prepared by an industrious and intelligent staff. He waved the suppliant into silence, picked up the papers, and glanced through them. Then he delivered his verdict: "Steel fish-plates? No, really, it can't be done! You must use earthenware ones like other people. Good morning."

***

The Hungarian Press is exercised about some 80,000 children who have been sent from Vienna into Hungary in order to give them a better chance of avoiding semi-starvation. Certain papers point out that these poor little refugees are actually receiving hospitality from the Serbo-Croatians, not from the Magyars. But ought we to expect too much in this line from the Hung(a)ry-uns?

***

From the *Pioneer* I learn that "in the hills in the Yamethin district, Burma . . . . there exists a curious tribe who support themselves by weaving mats, which they barter with traders for rice and fish paste, but which they will not sell for money. . . . They are said to have had since Burmese times an invincible objection to taking money." If only we could induce these wise people to come to these islands, they would make ideal waiters or hair-dressers' assistants. They might even go to Westminster, where each of them would save the nation £400 a year. They seem to be thrown away, so to say, on mat-making.

***

The question of excluding dogs from cinematograph shows—I decline to call such sorry performances "entertainments"—appears to be exercising the minds of quite a number of people in Khartoum. The "cinema" there is situated in the open, and the poor dogs manage to find their way into the show, where, one supposes, they endeavour to introduce a little real fun into the proceedings by an occasional "scrap." Then, in the darkness, ankles and calves are likely to get bitten, and there is "a certain liveliness" among the audience. I am sorry—for the dogs, who, for their own sake, should be kept out of such foolish places as the average "cinema exhibition." And, yes, I am sorry, too, for the unhappy folk who have to suffer because some dog owners are too selfish to keep their animals under proper control.

CORRESPONDENCE.

FOR THE SETTLEMENT OF THE BALKANS.

TO THE EDITOR OF "THE NEAR EAST."

SIR,—I have been waiting up till now in the hope of seeing some reply to the letter of your correspondent in your issue of July 19, under the heading of "For the Settlement of the Balkans" and over the nom de plume of "Fiat Justitia."

Your correspondent suggests that Mr. Gennadius (Minister for the Grecian kingdom), when speaking recently at the Mansion House, should have refrained from pressing upon his hearers the claims of Greece in the Balkans. He must know very well that it has not been the custom of British and foreign statesmen, when speaking either at the Guildhall or at the Mansion House, to avoid giving expression to their political views.

When Mr. E. Venizelos (the Premier of Greece) delivered his address at the Mansion House, before a very distinguished audience, the aims and aspirations of Greece were explained and advocated, not only by Mr. E. Venizelos himself, but by Mr. Balfour, Lord Curzon, Mr. Churchill, as well as Mr. Gennadius himself, who were present on the platform.

In my view, too little has been heard of the just claims of Greece, our gallant Ally, and too much has been heard about showing consideration to the uncivilised Bulgarians and Turks, who are associated with our most bitter enemies—the Germans, etc.

Indeed, I think that in view of the courageous way in which the Hellenic people are fighting by the side of the Allies, it is only right that her claims and aspirations in the Balkans should be discussed sympathetically on every reasonable occasion; because in the immensity of the present great struggle the British public are liable to forget the important part that Greece has played, and is now playing, under peculiar difficulties in order to help us against our enemies, and it should be made quite clear that Greece is entitled to very special consideration when the future partition of Balkan territory comes to be considered at the peace conference.

Bearing in mind the treatment of the Greek people in Asia Minor and elsewhere by the ruthless Turks, they must be dealt with in the same manner as the Bulgarians.—I am, etc.,

NICHOLAS PAPANICOLAY.

Primrose Club,
St. James's, S.W.1.
August 10, 1918.

AN ENQUIRY.

TO THE EDITOR OF "THE NEAR EAST."

SIR,—It was stated in *The Times* several weeks ago that a Greek Metropolitan (I think, Gregory by name) had been taken in chains to Smyrna on a false charge. May I ask whether any of your readers or correspondents know if this bishop is still imprisoned? If so, can they make any suggestion as to the best course to pursue towards obtaining his release?—I am, etc.,

B. R. BALFOUR,
D.L. Co. Louth.

Townley Hall,
Drogheda, Ireland.
August 7, 1918.

ARE THE ROUMANIANS ROMANS?

TO THE EDITOR OF "THE NEAR EAST."

SIR,—How your correspondent, M. Ciotori, can imagine that scepticism with regard to the Roumanian claim to descend from Roman colonists is confined to "Magyar and Bulgarian Chauvinists" is more than I am able to explain. He is evidently unaware of the controversies which have long existed among well-known scholars with regard to this subject, as well as on the kindred question of the origin of the modern Greeks. Partisan literature has, of course, no value whatever in regard to an academic question of this kind. I am unacquainted with the Magyar language, but, so far as the Bulgarians are concerned, I think it improbable that any writer belonging to that very practical and self-centred race would care to interest himself in such a topic.

Being far from access for the moment to the principal authorities on the subject, I confine myself to pointing out that Lucius of Trau (1666), Sulzer (1781), and, above all, Roesler (1871) have shown how slender is the foundation for the theory that the Vlach or Rouman populations are to any appreciable extent the descendants of Trajan's legionaries. Every Roumanian naturally loves to believe that the blood of Julius Cæsar runs in his veins, just as every Greek is fain to regard himself as the kinsman of Alexander the Great, but however gratifying these convictions may be to national vanity, they can hardly stand the test of scientific criticism. The conclusions of Roesler as regards the Roumans, and, still more, those of Fallermayer as regards the Greeks are probably too sweeping; in certain districts of the Carpathians, for instance, some more or less *pur sang* descendants of Trajan's legionaries may survive.

But, putting aside the scientific view, few persons possessed of ordinary common sense—enthusiastic lady writers must be left out of account—will be found to believe that a race claiming to number some twelve million souls and extending all over the Balkan Peninsula, possesses a lineal descent from a group of Roman colonists who occupied a comparatively limited district north of the Danube. The name "Roumania" is, of course, of modern origin, and no conclusion can be drawn from the circumstance that the Vlachs of Macedonia called and still call themselves Aroumâni; the Greeks similarly called themselves "Romans" and became the *Roum millet* of the Turkish Empire. If dialects are less marked in the Vlach language than in some of the sister tongues the explanation is to be found in the nomadic habits of the people: dialects grow up among populations which remain continually in the same locality. Welgard, the highest authority on the subject, mastered, if I recollect aright, thirteen Vlach dialects. What M. Ciotori means by "profund Latin traditions" I cannot say: it may be observed that in the establishment of descent tradition is held to be of no account by genealogists.—I am, etc.,

JAMES D. BOURCHIER.

THE GREEKS IN AMERICA.

(FROM A CORRESPONDENT.)

WASHINGTON, July 15.

American Independence Day was observed by Americans of Greek origin all over the United States with the highest feelings of patriotism and devotion to their adopted country. Their representative, Mr. D. J. Theophilatos (with thirty other delegates—Americans of foreign origin—the guests of the President at Mount Vernon), laid on the tomb of George Washington a wreath of laurels, with the inscription on a ribbon of red, white, and blue: "To the founder of freedom, George Washington, from the Americans of Hellenic descent."

President and Mrs. Wilson honoured the Greek delegates on board the Mayflower with a prolonged conversation about the Greeks in America and their patriotic activities on behalf of the country of their adoption; also about the political situation of Greece as an ally to the United States. President Wilson spoke of the glorious history of Greece and of her struggle for liberty—a history covering three thousand years of noble defence of civilisation against barbarism. Mr. Theophilatos, in reply, suggested that America has been more fortunate than Greece, since in a space of only 142 years of national life she has not only established the American people free and glorious, but has also successfully defended the rights and liberties of mankind.

In the evening hymns and dances of ancient Greece were given on the steps of Treasury Building by the Greek residents at Washington. The Greek pageant, led by the Evzones, wearing their national kilt, paraded before the President and Mrs. Wilson at the Capitol, and were greeted by the cheers of thousands of spectators.

"IMPUDENT FALSEHOOD."

The following is from *Al Kibla* of April 26:—

"To those who discard the Book of God, nothing is an offence."

We have received from H.H. the Emir Abdullah the following communication under the above title:—

"A letter has reached me, bearing the signature of the Commander-in-Chief in Syria and Turanian Minister of Marine, to the effect that an individual named Ahmed el Nakib has come to him, stating that he was sent by me, but having no documentary proof of this. This is an impudent falsehood, as far from the truth as East is from West. I protest by God, His Prophet, and His Book that the statement is a sheer audacious lie on the part of the above-named, on whom I fling back the fabrication. As there are men to whom such conduct as this is not repulsive, I make this announcement in *Al Kibla*, so that all readers, East and West, may know the facts; and the curse of God be upon liars.

(Signed) ABDULLAH,
Comm.-in-Chief of the Eastern Army.

Reuter's Cairo correspondent reports (August 11):—The aeroplane from London reached here at six o'clock on Thursday evening last. The huge machine, which was piloted by two local planes, landed in perfect style. At the aerodrome the airmen were greeted on their arrival by Major-General Salmond, who gave a banquet in their honour the same evening. In their flight the airmen covered 2,900 miles.

The Egyptians were deeply impressed with this remarkable and most significant feat.

NEAR EAST BOOKSHELF.

V.A.D. EXPERIENCES ON THE EASTERN FRONT—IN FACT AND FICTION.[1]

In "With the Scottish Nurses in Roumania" Miss Yvonne Fitzroy gives a terse and brightly written account of nine months' stirring experiences of a V.A.D. orderly in a Scottish hospital unit which was sent, August 31, 1916, to Russia viâ Archangel to the Roumanian front. The book is dedicated to Miss Elsie M. Inglis, M.B., founder of the Scottish Women's Hospital, who appears in it as the inspirer of the whole. "Month after month her courage and her endurance never flagged. Daily and hourly, in the very agony of suffering and death, she gave her life by inches." She died November 26, 1917.

Miss Fitzroy's journal is full of hardships and adventures—not a few serious—but all told in such a simple and humorous way as to make it delightful reading. There is material here for a large volume, but fortunately the author realises that the world has no time just now for minute accounts of individual adventures.

After the long railway journey through the breadth of Russia the unit at last, on October 1, reached Medjidia, in Roumania—close to the fighting line. Here is the picture of things:—

"Sheets of rain and dust all turned to mud. And *such* mud! Off early to a breakfast of black bread and Tchi (tea) at the Red Cross canteen, and worked at the Hospital all the morning scrubbing. We are trying to fit up boilers, but so far every drop of water has to be carried from the soldiers' pumps in pails. The place filthily dirty and the sanitary (?) arrangements unspeakable."

Two days later the rush of work began:—

"We have been working like blacks, alternately too busy and too weary to write. . . . Between filth and wounds the men's condition is indescribable. They are coming back in thousands; our transport have been working absolutely heroically. . . . . It has been the biggest rush of wounded they have yet had. By shoving the mattresses close to each other and putting others in every available corner we made room for every man we could, and still the cry of the authorities is for more—more—more."

And yet, with wounded men pouring to the rear, the hospital had to be evacuated on October 21, only just in time indeed, for Medjidia fell into the enemy's hands on the afternoon of the same day. Retreat to Galatz and six weeks of hospital work at Braila were followed by three harassed weeks at Galatz, a "nightmare of confusion, alarms, air raids, with all day the horror of gangrene and tetanus before their eyes, and all day and all night long the smell, the confusion, and the dirt."

On January 4 the hospital was moved by boat down the Danube to Reni, where the hospital accommodation was better, but the cold soon proved excessive. Two of the illustrations from photographs taken here show the Danube frozen from shore to shore. In the middle of March came the first rumours of the revolution:

"There is the wildest enthusiasm and confidence everywhere, and they claim the whole Revolution to be the work of the Army and people united. Splendid—*splendid*. Everyone is beaming, and one cannot even in these early days but rejoice in the change of attitude." Pathetic reading to-day!

A curious sidelight on the revolution is given when Miss Fitzroy was in Petrograd en route for home:

"There was a curious scene at the Opera one night. During an entr'acte half-a-dozen soldiers walked on the stage and, addressing the audience, their spokesman explained that his regiment, now in Petrograd, had been to the front and had suffered very severely. They were now resting, but if subscriptions were forthcoming they might find it possible to fight again. The hat was passed round by fairies from the chorus! Thus were we reminded of the Revolution, and murdered Generals floating in the canal, workers asking for a six-hour day, strikes and much singing of the Marseillaise all bore witness!"

In contrast to these painful realities, "A V.A.D. in Salonica," "a tale of a girl's work in the Great War," is light and pleasant reading. As a work of fiction for young girls it will be appreciated. Like most such work, it contains many impossible incidents, and the heroine's ability as a motorist quite overshadows her more humdrum duties as a nurse. There is, of course, the inevitable hero and the equally inevitable happy ending, all of which will make the book the more acceptable to those for whom it is intended, who will, we feel sure, agree with the "summary" that "Miss Marchant has made an excellent story."

[1] "With the Scottish Nurses in Roumania." By Yvonne Fitzroy. (London, John Murray. 5s. net.)

[2] "A V.A.D. in Salonika." By Bessie Marchant. (London: Blackie and Son. 3s. net.)

ENGLAND AND INDIA.*

We cannot recommend this book to the student of Indian problems. The writer thinks that neither Indians nor Englishmen are morally fit to govern the country, and he illustrates this thesis partly by extracts from his own writings, partly by quotations from very secondary authorities, with a couple of sermons thrown in as an appendix. He propounds a curious plan for getting out of the difficulty he has discovered, probably the least suitable plan that has yet been published either here or in India, and the rest of the book is largely vituperative. Mr. Milburn is not up-to-date, for apparently he has not yet heard of the announcement made last August in Parliament, and, speaking generally, his effort is sterilised by the consciousness of his superiority over the men with whom he deals.

THE MEGALITHIC CULTURE OF INDONESIA. †

Certain distinguished students of ethnology have come to the conclusion that the well-known megalithic monuments—such as menhirs, dolmens and cromleche—found in various parts of Western Asia, Egypt, and the Mediterranean are largely the work of one race of people of great antiquity, who all show evidence also of sun worship. The book before us is an exhaustive examination of the evidence of a race of similar culture having flourished in the region described as Indonesia—*i.e.*, in Further India, Borneo, the Philippines, the Celebes, and many small groups of islands lying to the south-east of this last. The difficulties of such a task are very great, and in many of the islands the existence of later races of higher civilisations has so far obliterated the earlier remains—especially the folk lore—that they are purposely neglected in this investigation. Indeed, the islands most backward in civilisation proved the more hopeful fields. The author has brought together a vast amount of important data covering all aspects of the question to prove his case. The book is a perfect mine of folk lore, of considerable importance to the student, but full of fascination for the general reader. The author considers that he has proved his case that people have migrated into these parts of Indonesia with which he is concerned "who brought in the use of stone, also terraced irrigation, metal working and rice growing. They founded lines of chiefs in some places, upper classes in others, and in others have caused warriors to be distinguished from the rest of the community. The immigrants appear to have brought with them the belief in a world in the sky. They imagine that their "soul substance" goes to the sky-world after death. Their religion was a sun cult, and some of their descendants claim to be "children of the sun." The ideas of these immigrants appear to be confined to a considerable extent to their descendants, and "their influence upon the indigenous peoples has apparently not been profound."

It will be seen that this investigation, which goes far beyond that of merely megalithic monuments, opens up an attractive new field for further research.

"There Was a King in Egypt." By Norma Lorimer. (London: Stanley Paul and Co. 7s. net.)

"The Letters of Thomasina Atkins, Private, W.A.A.C., on Active Service." (London: Hodder and Stoughton. 6s. net.)

"The Sorcerer." By Gregory Saben. (London: John Richmond. 6s. net.)

The July "Quarterly Statement" of the Palestine Exploration Fund contains an illustrated description of "A Sixth Century Greek Mosaic at Um Jerar" by Lieut. F. M. Drake, R.E., a paper on "The Settlement of Manasseh East of Jordan," by the Rev. M. H. Segal; and further instalments of Mr. Baldensperger's "The Immovable East," and Dr. E. W. G. Masterman's "Hygiene and Disease in Palestine in Modern and in Biblical Times." There is a report of the annual general meeting of the Society, and the "Notes and News" deal at some length with the proposed British School of Archæology in Palestine.

Messrs. Raphael Tuck and Sons have just published a remarkably fine "Oilette" reproduction of the Queen's Letter from the Women of the Empire to the Navy, Army, and Air Force, enclosed in a highly artistic border designed by Mr. F. O. Salisbury. Probably no better example of this class of work has ever been issued, and we congratulate the publishers on a really notable achievement. The picture is published entirely for the benefit of the British Red Cross Fund, and may be had at the following prices:—Popular edition, 2s. 6d.; plate paper print, 10s. 6d.; publishers' proof (limited to 1,000 copies), £1 1s.; and artist's proof (500 copies), £2 2s.

CALENDAR OF THE WEEK

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian (New Style).	Julian (Old Style).	—	Moslem.	Jewish.
1918. August	1918. August		1336. Zulkada	5678. Elul.
16	3	Friday	9	8
17	4	Saturday.....	10	9
18	5	Sunday	11	10
19	6	Monday	12	11
20	7	Tuesday	13	12
21	8	Wednesday	14	13
22	9	Thursday	15	14

Prince Bibesco, Secretary of the Roumanian Legation, visited the Foreign Office on Monday.

Sir Henry and Lady Bax-Ironside have left 23, Grosvenor Place, for Clunie Lodge, Inverness.

M. Take Jonescu, who visited Lord R. Cecil last Friday, left London on Monday for Aix-les-Bains.

Lady Methuen and the Hon. Seymour Methuen have arrived in London from Malta, and have proceeded to Corsham, Wilts.

Mme. Yovanovitch, the wife of the Serbian Minister, visited Kettering on Monday in connection with the Serbian Red Cross.

The Sultan of Egypt has conferred the Grand Cordon of the "Kamal" (for ladies) upon Lady Roushdy, wife of the Prime Minister.

The marriage of Mlle. Nava Pashitch, daughter of the Serbian Prime Minister, to Dr. Stephen Rashitch, a young Serbian, took place quietly at Nice on Monday.

M. J. J. Stavridis, Consul-General for Greece in London, has been promoted a Commander of the Order of the Redeemer by the King of the Hellenes for valuable services rendered.

His Highness the Maharaja of Kapurthala has accepted the invitation of the Viceroy of India to become a member of the Central Recruiting Board in place of his Highness the Maharaja of Patiala.

The *Sudan Times* (July 2) reports that Mr. C. P. Browne, Governor of Berber Province, has met with a bad motor accident, dislocating his elbow. It was thought advisable for him to proceed to Cairo.

On June 17, at Mussouri, India, the marriage took place of Colonel Keith H. Jackson, Indian Cavalry, youngest son of late Elphinstone Jackson, Esq., I.C.S., to Constance, widow of late Colonel Shore, and daughter of Colonel Watling, Rajputs.

The Serbian sculptor, M. Gjoka Yovanovic, has made a plaque with a portrait of the late Dr. Elsie Inglis, of the Scottish Women's Hospitals, which he has sent to the Serbian Minister in London, requesting him to hand it over to Dr. Inglis's family.

A marriage has been arranged, and will take place early in September, between William Pell Barton, C.I.E., I.C.S., Judicial Commissioner of the N.W.F. Province, and Evelyn Agnes Heriz-Smith, fourth daughter of Mr. and Mrs. Heriz-Smith, of Slade, Bideford, North Devon.

A marriage has been arranged, to take place at Alexandria, Egypt, in September, between Captain C. Elliott Davis, A.S.C., youngest son of Mr. Orlando J. H. Davis, Plymouth, and Miss Fay Leathes Prior, youngest daughter of Mr. and Mrs. Leathes Prior, of Thorpe and Mundesley, Norfolk.

Vice-Admiral Sir Cecil Thursby has just been appointed Commander-in-Chief at Plymouth. It was he who was in charge of the landing of Australian and New Zealand forces north of Gaba Tepe, Gallipoli, in April, 1915, and both Sir Ian Hamilton and Admiral de Robeck testified to his fine work on this occasion.

Dr. J. J. Findlay, M.A., Professor of Education at Manchester University, has accepted the invitation of the Y.M.C.A. Universities' Committee to become its Director of Education in Salonika, where it is hoped that an extensive system of classes and lectures will be developed during the autumn and winter. Professor Findlay will leave for Salonika in September. Professor Findlay was educated at Kingswood School, Bath, and Wadham College, Oxford, and is Ph.D. of Leipzig. He studied education in Germany and America, and has had practical experience as a teacher at Rugby, Bath College, two Wesleyan proprietary schools, and an intermediate school for boys.

General Sir Reginald Wingate, High Commissioner of Egypt, has sent to the Lord Mayor £3,118, subscribed by Egypt in response to his recent appeal for the "France's Day" Fund. The success of the appeal was largely due to the generous support of the Sultan, who opened the list with £E200 (£210 2s. 6d.).

The King has been pleased to appoint Mr. James Bennett Brunyate, C.S.I., C.I.E., to be an additional Knight Commander of the Order of the Star of India in recognition of special services rendered in connection with the war. The appointment is to date from July 17, 1918. Sir James Brunyate, who is a member of the Council of India, has just returned to this country from the United States, where he has been attached to the staff of Lord Reading as adviser on questions connected with Indian currency and Eastern exchange.

Mr. Martin Langford, of Reading, an Indian Mutiny veteran, has died at the age of 82.

Enver Pasha's title of Deputy Commander-in-Chief has been altered to Chief of the General Staff of the Supreme Army Command.

Reuter's Amsterdam correspondent reports (August 13):—A Berlin telegram states that Crown Prince Boris of Bulgaria visited the Kaiser on Sunday at Main Headquarters.

According to a Constantinople telegram, the former Turkish Ambassador in Paris, Rifaat Pasha, has been appointed Ambassador in Berlin, and the former Minister at Athens, Mukhtar Bey, has been appointed Minister at Kieff.

On the occasion of the fourth anniversary of the war, General Marshall, commanding in Mesopotamia, sent to Sir Douglas Haig a message of greeting and congratulation. Sir Douglas Haig replied, thanking him in the warmest terms.

General Allenby has telegraphed to Sir Douglas Haig:—"The Army in Palestine is delighted at your great success, and sends congratulations to you all." Sir Douglas Haig has sent his heartiest thanks to General Allenby for his message.

King Ferdinand of Bulgaria, accompanied by the Crown Prince and the Princess Eudoxia and Nadejda, arrived unexpectedly at Nauheim on August 7. King Ferdinand, who intends to remain there for some time, is staying incognito at one of the large hotels under the name of the Count von Murany.

M. Romanos, the Greek Minister to France, who has just returned from the Macedonian front, interviewed by the *Patrie*, expressed himself enthusiastically about the Greek and Allied armies, and added that the recent Allied victories on the Western front had filled the Greeks with renewed optimism and confidence.

APPOINTMENTS, PROMOTIONS, ETC.

Sir Verney Lovett has been appointed a member of the United Provinces Legislative Council, vice Mr. F. J. Pert, resigned.

Indian papers received by the last mail announce that Sir Stanley Reed has joined the Central Publicity Board as Vice-President, and Brigadier-General Skeen, of the General Staff, as a member.

Mr. B. Burnett, Chief Engineer, Sudan Public Works Department, has been appointed Director of Works, Sudan Government, in succession to Lewa M. R. Kennedy Pasha, retired, with effect from March 12.

Kaimakam Northcote Bey, Senior Inspector, Bahr el Ghazal Province, who has been acting as Governor of Mongalla since the retirement of Lewa Owen Pasha in February, has now been appointed Governor of that Province.

TRAGEDY OF MONTENEGRO,

THE SMALLEST AND POOREST OF OUR ALLIES.

MONTENEGRIN RED CROSS AND RELIEF FUND,

11, VICTORIA STREET, LONDON, S.W.1

(Registered in City of London. Section 1. War Charities 1916)

needs £700 WEEKLY for Feeding Prisoners interned in Austria-Hungary.

Donations will be much appreciated and gratefully acknowledged by the Hon. Treasurer, LADY ROPER PARKINGTON, Claridge's Hotel, Brook Street, London, W.1.

OBITUARY.

The Rev. Thomas Arthur Savage, headmaster of the Cathedral Boys' School, Bombay, died in that city on June 17, aged 64.

Lady Trevor, wife of Sir Arthur Charles Trevor, died on August 7 at Harcourt Terrace, Kensington. She was a daughter of Colonel Cyril Jockson Prescott, Bombay Staff Corps, of Branston, Lincoln, and was married to Sir Arthur Trevor, of the Bombay Civil Service, in 1867.

Captain William Howard Lister, D.S.O., M.C., R.A.M.C., was killed on August 9 in Italy. He served in the Balkan War as a Red Cross dresser, and was awarded the Balkan medal. When the present war broke out he threw up a house appointment at University College Hospital to enlist.

Mr. Herbert Coupland, late Revenue Secretary Bihar and Orissa Government, died on Friday, at Leeds, at the age of fifty-five. Educated at Ripon Grammar School and Corpus Christi College, Oxford, he was appointed to the Indian Civil Service in 1894. In Bengal he served as Assistant Magistrate and Collector and Assistant Settlement Officer, becoming Magistrate and Collector in August, 1907.

Lieutenant-Colonel Humfrey Hayes Kennedy, Seaforth Highlanders, was killed in action on July 29. He entered the Seaforth Highlanders in 1903. For services in the South African War he had five bars to the Queen's medal, and for service on the North-West Frontier in 1908 (operations in the Zakka Khel country) he received the Indian medal with clasp. From June, 1912, to August, 1914, he was employed with the West African Frontier Force.

Sir Richard George Glyn, Bt., D.L., died on August 9 at his residence, Gaunt's House, Wimborne, at the age of 86. As a captain of the Royal Dragoons he rode in the charge of Scarlett's Heavy Brigade at Balaclava, and was present at the Battle of Inkerman, receiving the Crimean Medal with three clasps. He retired from the Army in 1859, and in 1863 he made an expedition to the interior of Africa, being one of the first Europeans after Livingstone to reach the Victoria Falls of the Zambesi.

Second Lieutenant Charles St. Aubyn Clarke, Indian Infantry, who died on July 30, of endocarditis, at the Station Hospital, Agra, aged 20, was the only surviving son of Captain Robert Clarke (Staff) and Mrs. Robert Clarke, late of Thurcroft Hall, Yorkshire. He was educated at Malvern College, and joined the Inns of Court O.T.C. in August, 1915, obtaining a commission in the Machine Gun Corps in February, 1917. He saw service in France from July to beginning of October of the same year, and then returned to England, having exchanged into the Indian Army. He left for India in November, 1917.

NEWS IN BRIEF.

Dr. Ahmed Aziz, an Egyptian, has been appointed Assistant School and Tuberculosis Medical Officer for Wigan.

The *Matin* states that a report is spread in Germany that a Republican movement has made its appearance in Bulgaria, and that King Ferdinand displayed prudence in leaving for Nauheim.

A Kieff telegram, *viâ* Berlin, states that recruiting for the first division of the new Ukrainian Army has been most successful. A division consisting of 5,000 men is to be stationed at Kieff.

A Jassy telegram states that the ex-Chief of the Roumanian police, M. Panaitescu, has been arrested and charged with receiving large bribes before the outbreak of war, especially from Russia.

Kieff newspapers report that the Roumanian Government has agreed with the Ukrainian Government to the appointment of diplomatic representatives in the respective capitals of the two countries.

It is stated by the *Cologne Gazette* that the Roumanian Cabinet Council has decided to expel M. Kartamjcheff, the former Russian Consul at Galatz, and the Russian delegate to the International Danube Commission.

The *Palestine News* reports that a regular motor-lorry service has been instituted between Jerusalem and Hebron for the conveyance of passengers and luggage. A journey is made one way on each day of the week except Saturday.

Approval has been given to the creation, for the period of the war, of additional military administrative appointments in the Indian Medical Service up to eight in number. The appointments will carry the rank of colonel and will be filled as circumstances demand. Service in them will count towards the additional pension of £250 per annum for which colonels of the Indian Medical Service are eligible after five years' active service in that rank.

A Constantinople telegram reports that, as the result of the steps taken by the Armenian deputation, it has been decided gradually to send Armenian refugees back to the Caucasus. At present only those from the districts of Batoum and Alexandropol will be allowed to return.

M. Malinoff, the Bulgarian Prime Minister, on Saturday received a Dobrujan deputation, which described the "sufferings" of the Dobruja under Roumanian domination, and begged him to use his influence so that Bulgaria might urge its allies to bring about a solution of the Dobruja question in the sense of "annexation to the mother country."

The *Judische Rundschau* of July 26 contains a report received by it from the Jewish colony of Merchavya, in Northern Palestine, according to which the Jewish watchmen of the colony were attacked on the night of June 17 by a band of robbers. One of these was captured and handed over to the Turkish district commandant, but he was released (or escaped) the next day, and again came with a band of robbers, who attacked the Jewish watchmen as they entered the field, and shot one of them dead. No further action was taken by the authorities. In consequence of this and similar incidents, Jewish circles in the Central European countries are reported to be very uneasy, and the *Oesterreichische Wochenschrift* of July 26 refers to "a very disquieting report about atrocities in all parts of Turkey against the Jews and Jewish communities."

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO,
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

THE ONLY ENGLISH HOTELS IN ALEXANDRIA.
Proprietor: AUGUSTUS VAN MILLINGEN.

FRIDAY, AUGUST 16, 1918.

THE BASIS OF THE INDIAN CONSTITUTION.

The month which has elapsed since the publication of the official scheme of Indian reforms has been marked by a gradual definition of opinion, and it is now possible to review the situation as a whole and estimate the prospects of at least the immediate future. There is no doubt that both in India and in this country the Report came as a surprise. It is true that some form of political and administrative dualism was foreshadowed as an inevitable result of the declaration of policy made a year ago, but the general public had not grasped this fact, and while extremists found no difficulty in expressing their opinions, the ordinary man required time to face the new situation and adjust his ideas to a scheme for which he was not prepared. It is not yet possible to describe fully the result of this process in India, for cabled summaries of such movements are apt to be misleading, but the news which has reached this country justifies the statement that a large volume of responsible opinion has declared its support of the main features of the official scheme, and while there is no prospect of complete unanimity, the measures now proposed would, at any rate, not break down for want of the men to work them. As regards British opinion, it is possible to speak with more certainty. The policy of the gradual introduction of responsible government stands practically unquestioned. Any doubt of its entire acceptance by the War Cabinet was finally dispelled in the recent debates in Parliament. The full report of the proceedings of the Indo-British Association shows—what earlier accounts had left uncertain—that that influential body accepts the policy, though it rejects the scheme; and opposition to the principle is now confined to the few stalwarts who are always to be found in an essentially Conservative nation. As regards the measures to be adopted in pursuit of that policy, opinion is still fluid, and while there is a disposition to accept the main lines laid down by Lord Chelmsford and Mr. Montagu, useful criticism is being directed to some particular features, notably the burden which would have to be borne by provincial Governors and the complexity of the whole administrative machine.

The outstanding fact in the situation is, however, the clear recognition that everything turns on the system of representation to be adopted, a point on which we have throughout insisted in these columns, and we welcome the announcement that the Committee on this subject is to be set up almost immediately, and that it will not be debarred from considering particular methods by the fact that they have not won the approbation of the authors of the report. It is on this question of representation that the battle between democracy and oligarchy has to be fought out, and the responsibility of the new Committee can scarcely be exaggerated. The immediate and complete enfranchisement of the masses of peasants and artisans is not a practicable measure, but this fact must not be allowed to operate so as to give the privileged classes an indefinite if terminable lease of power. The problem to be placed before the Committee is how to secure adequate expression for the masses of the people who have not yet found their voice during the period in which they are learning to express their opinion for themselves, and no theoretical considerations can be allowed to stand in the way of a practically satisfactory solution. The familiar western paraphernalia of ballot-boxes, voters' lists, platforms, and programmes are, it must be remembered, only so much machinery, means that in certain circumstances are found to work tolerably well, and if the circumstances of India are not suited to their employment, they must be courageously discarded in favour of other means better adapted to the conditions which prevail. The task, like almost everything in India, is one of very great difficulty, but its accomplishment is not impossible provided that it is approached with the single-hearted steadfastness which has marked all the best work done by Englishmen in the country; and from this point of view we particularly welcome Mr. Montagu's explicit statement that the system of communal representation will be an open question before the Committee. We do not question the strength of the arguments against that system advanced in the report, but we do not admit that those arguments are conclusive, and we think it is quite possible that the Committee may eventually find itself forced to put them on one side. Communal representation is already a fact, so far at least as the Moslem community is concerned; it may be, as the Report hints, that Lord Minto granted it without fully realising the consequences of the grant, but the fact stands, and stands as a precedent for every other community in India. It is significant that the system is claimed as essential by the spokesman of the depressed classes in Madras and by the Deccan Ryots' Association in Bombay, the first to be heard of the new voices which are destined to increase in number and in volume until the full chorus tells what India really thinks and wants; and that the claims made by these interests are supported by some of the men in this country who are most familiar with the conditions of the problem. Representation by locality, the alternative and more familiar system, is, after all, little more than an accident, the result of obstacles to transit which no longer exist, and retained because it works tolerably well among fairly homogeneous nations. India is not yet homogeneous, and to press her into this Western mould might merely result in cramping her development without necessarily achieving the object in view. A long step towards the unification of India will have been taken when Brahmins and outcasts meet in the council chamber, and each can for the first time realise the aims and aspirations of the other; and if the idea sounds fantastic, the reason is that India has still a long way to go before Western systems of representation will meet her peculiar needs.

It would be premature, however, to conclude that the problem can be solved only by the adoption of communal representation as a normal feature of the Indian constitution. It is quite possible that among the various schemes which have been suggested, the Committee may find some alternative method of overcoming the difficulty which they have to face, the difficulty, that is, of finding a means for the expression of the collective opinion of the countryside, and we, at least, have no desire to prejudge the results of their inquiry. The main point is that this problem has to be faced, and that some method of ascertaining the opinion of the masses must be devised, to be introduced from the outset as an integral part of constitutional reform. There is a very real danger that the difficulties in the way may lead to an indefinite postponement, and that a measure of responsible government may be entrusted at the outset to what may now be fairly described as the suburban classes, not because they constitute the people of India, but because they constitute the only fraction of the people which fits easily into the scheme. To do this would undoubtedly be to follow the line of least resistance for the moment; but it would be to build the new constitution on inadequate and insecure foundations, and to arouse from the outset the opposition of such of the masses as have already begun to think, an opposition which would assuredly increase rapidly and would shortly prove to be overwhelming. The plain duty of the Committee is to avert the risk of such a catastrophe by ensuring that the opinion of the masses shall from the outset be so expressed as to carry its due weight with the Ministers, and with the Council, on whose support they will depend. The system of representation which India needs is the system which, whatever its theoretical defects may be, will lead most directly to this result.

ENGLAND AND PALESTINE.

BY ESTELLE BLYTH.

"When God wants a hard thing done in the world, He tells it to His Englishmen."—Milton.

This paper is meant for those sons and daughters of Palestine whose country is emerging little by little from thraldom into the liberty that is the keynote of British rule. The change is so great, the relief so exquisite, that for the moment you are breathless with the wonder of it, and can only realise that the miracle of deliverance is actually being wrought in your time and in your sight, and that, under God, you owe it to the nation from whom you have always longed that your freedom should come—England, the little island whose "spirit's meat is freedom," the little country with the great and understanding heart. "Now once again God is decreeing to begin some new and wonderful period; what does He then but reveal Himself to His servants, and as His manner is, first to His Englishmen; I say, as His manner is first to us. though we mark not the method of His counsels, and are unworthy." It is a trust which we as a nation have not sought nor striven after, but it has been enjoined upon us in terms too plain to be misunderstood; it is a heavy charge—yet who would not rejoice to serve Jerusalem at any cost?

England is no stranger to you. The history of your land is joined to ours by many links, forming a chain that stretches far back into the misty past; a chain which, we hope as much as you, shall never be broken while time lasts. If you feel you have a debt to the England of to-day, who is giving of her best for your freedom, do you remember that her giving has not been confined to *this* generation, *this* campaign? She has given you lives and thoughts and much service during many generations; and though it may be England's way to give without desiring repayment or even gratitude, it shall be to your honour to acknowledge the debt.

The connection between Palestine and England begins in very early days, but, closely interwoven though our histories are, we can do no more than glance at some of its most telling points. British prisoners walked in a Roman triumph through the streets of Jerusalem. To Helena, a British princess, came the dream revealing where the True Cross was hid; and her son Constantine the Great, builder of the Church of the Holy Sepulchre, was born at York in Britain. Alfred the Great sent an embassy of friendship to the Patriarch of Jerusalem. A steady stream of pilgrims flowed from our country eastward to yours. Then came the Crusades, those wonderful Adventures in which France and England first joined hands for love of the Holy Sepulchre. The First Crusade was composed of men drawn from nineteen different countries, but England was doubly represented by a contingent of Normans under Robert, Duke of Normandy, eldest son of William I. of England, and by a smaller Saxon force under Edgar Atheling, the last of the old Saxon Royal House of England from which King William had torn the English crown. Henry II., grandson of William I., gave money to the Patriarch Heraclius of Jerusalem for the defence of the Holy Land, though he refused to accept the keys of Jerusalem, which were offered to him by the Patriarch; he also sent the Knights Templars the sum of thirty thousand marks a year for the same purpose. Two of Henry's knights, who had been concerned in the murder of Thomas à Becket, Archbishop of Canterbury, went on a pilgrimage to Palestine out of penitence for their share in that crime; one at least of them is buried in that Church which is now the Mosque El-Aksa. Outside the Church of the Holy Sepulchre lies buried Sir Philip d'Aubigny, a worthy knight of England, one of those free, bold spirits who signed the great Charter of English liberty which you now shall share with us; and yet another knight sleeps in the Church of St. Anne.

So we come to Richard of England, the Lion-heart, whose name lives yet in Palestine. How he and his little English army fought and toiled and suffered unwearyingly for three years you know as well as we. Richard's name is written on Palestine in letters that even time cannot efface; he can never be forgotten there because of the love he bore the country. Everything he had he staked for her freedom. "I would sell London itself could I but find a buyer!" he said—not, I think, because he loved London so little as because he loved Jerusalem so much. And yet all his ardour, all his labour, availed nothing; he could not free Jerusalem. Coming once within sight of her dear walls and towers, he hid his eyes and cried: "Ah, Lord God, since I may not free Thy Holy City let not mine eyes behold it!" "Tell your Sultan that I shall return to take Jerusalem from him!" was Richard's farewell to the Saracen Emirs, when he left Palestine; and Saladin returned answer: "If it please God to take Jerusalem out of my hands, there is none more worthy to hold it than the King of England." Prophetic words!

A few years later Richard, Earl of Cornwall, the Lion-heart's nephew, sought to lead a crusade; but he was a Richard in name only; his army fell to pieces in his hands, and in the end he entered Jerusalem, not as a deliverer, but as an unknown pilgrim. Not until 1271 was there another English Crusade—that led by Prince Edward, afterwards Edward I., who, with a very small army, beat a large host of Egyptian Saracens under Bibars at Nazareth, and beat it soundly, too. But troubles at home clamoured for his return, and he left Palestine soon after. Thereafter the chain between Palestine and England becomes a slender one, composed of individuals rather than companies of men; and we pass on to the defence of Acre by Sir Sidney Smith, who, by sheer valour and bulldog tenacity of purpose, held those tottering walls against the furious assault of Napoleon and the French. All through the land we see scattered the graves of English dead who, in this age or in that, have given up their lives for Palestine. Thus the chain endures, unbreakable for all its slenderness, linking the present with the past in one bond of sacrifice.

You have known the British in your land, scattered here and there by ones and twos, or in little groups, working for the good of the land alone, with a faith in her future which even you did not always share. You know how they have lived among you, what their work has been, and to whose profit it was wrought. You know what English schools and English hospitals have done for your country. And you have a saying, "On the word of an Englishman it is true!" I think it must have been centuries of keeping faith that have bred in you the invincible trust in England that finds expression in those words. You will find your faith in England strengthened by the manner in which her soldiers bear themselves amongst you to-day; by their chivalry, their straightness, and their daring you shall know them to be English. We at home are not afraid that they will lower England in your eyes. To them—those young free Britons who have come from the ends of the earth to fight for Palestine, who have suffered and bled for Palestine, whose bodies stand between yourselves and the unnameable horrors of war, many of whom must give their lives that Palestine may live—to them, indeed, you owe great friendship and good faith.

Many of you have said before the war: "We have no country. Why should we fight for the Turks, and why should we work for them?" And in bitterness of heart you went away to other lands, and called yourselves "citizens of the world," holding that you were free of obligation to the country that had given you birth because, under the Turks, there was no room for you at home. But now your most beautiful country is being bought at a great price and given back to you. Now you will have her for your own, to fight for and work for, to serve with every nerve and fibre of your being. Truly, to have a country, and that country Palestine, must spur you to undreamed-of heights! There are no limits set to the future of Palestine; but it is for you to prove to the world by your faithful and unselfish service that you are worthy of the trust. Already you see a difference, though it is only a few weeks since Jerusalem was freed. And what will it be when all the land has peace?

And now, turning from your immediate concerns, think a little of what it means if you are really to be incorporated in that great autonomy of nations which is the British Empire. Freedom involves responsibility, of which, in a state of bondage, you naturally had none. You can no longer say, when things go wrong: "It is the Turks who are to blame!" and shrug aside responsibility as you did before. You will have full responsibilities of personal choice and action, as well as larger and more solemn obligations as members of the British Empire. What that membership is you can hardly realise as yet; for though you have known many English people, the quiet manner of their life and service among you has given you no idea of what England really is. For England is the head and mother of a divinely builded empire, whose walls bear the mark of "many a blow and biting sculpture" from the hand of the Heavenly Architect. With all her failures, her short-

comings, we believe that she has yet a special work to do in the world, and that sure proof of this is in the purity of purpose with which she entered on the war, the cleansing of her national ideals as evidenced in the chivalry of her fighting men, the willing sacrifices made by those at home, the uplifted tone of her literature; and not least in her being allowed to suffer with and for weaker and smaller nations.

Glory of warrior, glory of orator, glory of song . . . .
Glory of virtue, to fight, to struggle, to right the wrong—
Nay, but she aimed not at glory, no lover of glory she;
Give her the glory of going on, and still to be.

This is the day when England's voice is sounding right across the continent and in many lands, as not long since it was heard upon the sea. Some, even amongst her own people, have thought her silence over-long—for we do not hesitate to criticise our England whenever we fail to understand her. To such narrow-witted critics she seemed too well content to let others speak, too ready to work silently behind the lines, as it were, strengthening her friends, too willing to forge weapons for the hands of others rather than to flash her own. So these busy critics ran about and talked—perhaps to fill up the space of England's silence. But the children of her blood, who have been brought up in the faith of Crecy and Poictiers, of Balaclava and Rorke's Drift, of Plassey, Quebec, and Trafalgar, of Maiwand and Agincourt and Waterloo, knew that the old spirit was not faint within her, and they could wait for the time when she saw fit to let all men know it too. Now England is speaking, and when she speaks men listen.

Not alone in the terrific thunder of her guns are England's accents heard. Yet clearer sounds the voice of mercy to the fallen; of heartwhole joyous praise for her children and her friends, yes, and when possible for foes as well; of a gay enduring valour that does not minimise the cost of progress, but simply surmounts it. Oh, it is good to be English to-day, to listen to the great mother speaking, to watch the tireless sweep of her arm, as strong now as it has ever been, to see the proud lift of her head as she leads in battle! From far and near her sons flocked to her side, thinking, it maybe, that they were come to fight for her; and so they have, with a valour and a chivalry that stamp them as truly of the old breed, but they are also fighting with her. England's hand has not lost its cunning; she is striking home to-day with the youngest of her sons. Honour and valour and the deep-seated love of the child for the mother drew them on swift feet from East and West to the Old Country. Eager to prove their mettle and to show their love, they sought the mother—and found that she was out in the storm or ever she called them to her aid.

It is good to be English, but it is also terrible; the trust is so great, the inheritance so splendid the responsibility so tremendous in that we have to hand on that trust not only unstained, but, by the grace of God, enhanced. "Consider what nation it is whereof ye are," said Milton, addressing both England and the Greater England beyond the seas, with a solemnity that strikes mere boasting from our lips; "a nation not slow and dull, but of a quick, ingenious and piercing spirit, acute to invent, subtle and sinewy to discourse, not beneath the reach of any point the highest that human capacity can soar to. Therefore the studies of learning in her deepest Sciences have been so ancient, and so eminent among us, that Writers of good antiquity and ablest judgment have been persuaded that even the school of Pythagoras, and the Persian wisdom took beginning from the old philosophy of this island. . . . What wants there but wise and faithful labourers to make a knowing people, a nation of prophets, of sages, and of worthies."

To you who now seek to her, England shall be as a quiet harbour, wherein, please God, you shall find only welcome and healing and calm, sunlit waters after storm.

We are raised just now to heights of exaltation by the achievements of our Navy and our Army, both in the East and in the West. May God, who has called the Empire to such high honour and responsibility, keep all her peoples from any pettiness of self-praise and self-delight, such as would make us unworthy of our calling as England's men and women! We are out on a grand Adventure, one in the noblest band of allies that ever joined hands in a crusade against evil, fighting for the very principles of right and honour and truth, which are menaced by all that is foul and loathsome in human nature without law. We are all fighting also for the redemption of Germany, though she knows it not, that her soul may be set free from the power of darkness to which the lust of pride and the casting away of religion have sold her.

"The end is not yet." We strain our eyes to scan the horizon of the future, but it holds its secret still. We can only guess at what lies ahead; and we are almost afraid to guess. For the present, then, let us hold to this exaltation born of the realisation of England's calling; knowing, and rejoicing to know, that, though the generations pass, England lives for ever, the greater for each act of love and sacrifice and service rendered by each individual child of hers; fearless, merciful, and strong, our England, *your* England, the mother of us all.

SERBIAN CUSTOMS AND FOLK STORIES.

On August 8, at Mortimer Hall, Father Nikolai Velimirovitch delivered an address on "The Spiritual Value of the Serbian People." Speaking of various tests of spirituality, he said that if customs could be taken as standard, the Serbs had some very striking ones. Christmas Day was considered a day of reconciliation. First of all, of course, with neighbours and other human beings, but not with them only. It was a day of reconciliation with animals also, and even with plants and the elements. On Christmas Day the head of the family would go to the forest, embrace and kiss a tree, cut it down, take it home, and ask all the people to come round. Then he would ask the assembly to pray for forests, plants, corn, and all the animals; and the members of his family would kiss the tree. In his own experience, Father Velimirovitch said that as a child he used to be taken by his mother to the stable for reconciliation with the horses and oxen. A cake that she had made, formed like a ring, was hung on the horns of the oxen, and the children embraced the animals in token of reconciliation. If Christmas was a day of reconciliation with plants and animals, of course it was still more a day of reconciliation with human beings. In the morning everyone went to church carrying a little lighted candle, and whenever two people met they would embrace. One would say, "Christ is born," and the other would reply, "Yes, indeed, he is born." At Eastertide there was a similar custom.

Father Nikolai Velimirovitch's address was followed by one by Mr. Edmund Russell on Serbian folklore. Among the stories Mr. Russell told was one relating that God complained to Peter that there were too few people in heaven, and that there were many people in hell who ought not to be there. Peter went accordingly in search of any whom he might bring back to heaven, and in the course of his travels he came across the wickedest woman that had ever lived. For two whole days he tried without success to make her think of some good deed that she had done on earth, until at last she remembered a carrot that she had given to a poor beggar. "That good deed," said Peter, "can save you." In some mysterious way the carrot was there. Peter laid hold of it, the woman took the other end, and Peter began to pull her out of hell. As he pulled her along the sinner next her caught hold of her, the sinner next him caught hold of him, and so on, for all naturally wished to get out of the place. At last, in one long line, all the sinners in hell were being drawn out by means of the carrot. But the woman who had hold of the carrot, while she was glad to be saved herself, did not wish to save the rest. "Let go! let go!" she cried; "the carrot is mine." With this the carrot broke, and the whole lot fell back into hell.

A story almost of our own times was that of the blind poet who called on Kara George and offered to raise a regiment of men afflicted as himself. Kara George at first treated the offer with disdain. "Don't mock me," pleaded the blind man; "let me raise a regiment of the blind, mount us on old worn-out horses, give us your old and broken weapons. In the day of battle drive us in front of you. The Turks will fall upon us, break their sabres on our bones, glut themselves with our blood, and so we shall win the day for you." The offer was accepted and the battle was won.

Turkey has decided "to set up a special administration of general inspection for the Province of East Anatolia, which is now freed of the enemy."

Kieff newspapers report that the Roumanian Government has agreed with the Ukrainian Government to the appointment of diplomatic representatives in the respective capitals of the two countries.

A Convention has been made between the British Government and the Greek Government providing that Greek subjects of military age (eighteen to fifty-one, both inclusive) in this country shall serve in the British Army unless they return to Greece for military service before October 8.

Rainfall has been in excess in Assam, Bengal, and Central Provinces (excluding Berar); normal in Burma, Bihar, United Provinces East, Central India West, Berar, and Hyderabad North; fair in Orissa, Chota Nagpur, Konkan, Bombay Deccan, Hyderabad South, Malabar, Madras, Deccan, and Madras Coast North; and scanty elsewhere. The Bombay monsoon will probably be weak, especially in Northern India.

PRESS ON THE NEAR EAST.

The Four Treaties of Bucharest.

In the current issue of the *Quarterly Review*—a publication of wide interest—the article that most closely concerns the Near East is one on the Four Treaties of Bucharest, of 1812, 1886, 1913, and 1918, which the author sums up in the following words:—

The first Treaty of Bucharest marked the awakening of the Christian nations of the Balkans; the second the beginning of their fratricidal quarrels; the third the zenith of their madness; the fourth its inevitable consequences. In the interests of civilisation, militarism must disappear not only from Germany but also from the Balkans.

These aspects are elaborated with a fearless precision which displays solicitude for the Balkans as a whole without any unwillingness to admit the faults of the individual States. A special point is made of the war in 1885:

The real significance of the war of 1885 seems to have escaped the notice of most observers. It was the first instance since the Middle Ages of an attack made by one of the Christian nations of the Balkan Peninsula upon another. It was the beginning of a series of fratricidal conflicts, partly due to unscrupulous foreign intrigue, partly to the crude Chauvinism of young and inexperienced States, whose national programmes were as yet unfulfilled. It was the precursor of the Serbo-Bulgarian wars of 1913 and 1915. The Bulgarians have long memories, and never forget an injury; to those who are familiar with this trait in their character there is nothing surprising in the fact that they fired the first shot in the former year, and in the latter dealt their neighbours "a stab in the back" similar to that which they had received from them thirty years previously. Before 1885 the relations between the two races had been most friendly; Bulgarian *haiduks* in the mountains had helped the Serbians in their struggle for independence; a Bulgarian legion was organised at Belgrade when that city was bombarded by the Turks in 1862; and large numbers of Bulgars fought under the Serbian flag in the campaigns of 1876 and 1877.

Not the least interesting part of the narrative is the section in which the anonymous writer acknowledges authorship of an article in the *Quarterly Review* of October, 1913, entitled "The Final Settlement of the Balkans"—without doubt the most masterly effort yet made to deal with an intricate problem at once scientifically and sympathetically and replies to the criticisms passed upon that article by Dr. Burrows in the July *Quarterly*. The critic is no match for his opponent, whose rapier thrusts, backed by a profound knowledge of the subject, easily penetrate the one-sided academic arguments which camouflaged personal ignorance of the real problem. Thus against Dr. Burrows' reference to Monastir as "the watchword of Greek Irredentism," the writer of the *Quarterly* article cites acknowledged authorities to the following effect:—

With the exception of the Archbishop and the Hellenic Consul there is (in 1881) scarcely a family in Monastir that can lay claim to pure Greek blood.

The so-called Greeks of Monastir are Vlachs to a man.

Of Roumania, the author writes:—

. . . . Her gallant stand for national unity can only excite our admiration, and her misfortunes compel our sympathy, although they must be regarded as the historical consequence of past errors. She has been betrayed by the same Power which encouraged her to invade the territory of a neighbour with whom she was at peace.

And he recalls the pregnant utterance of King Carol, who a few hours after the signature of the 1913 Treaty said, in the midst of the national jubilation, "It is not a treaty; it is only a truce, and it cannot last."

Turk and Briton in Palestine.

The Cairo correspondent of *The Times* contributes to that journal a heartening article on "British Work in Palestine." From this we take the following passages:—

Experts are busy investigating the agricultural situation, the fiscal question, the educational requirements, public security, including the prisons, the complicated question of judicial organisation, and pious foundations. Slowly, but surely, an organised administration is being built up, despite the lack of local officers and the difficulty of obtaining competent men from outside. Already there is on every side abundant evidence of the fruits of this activity. Especially is this noticeable in a city like Jerusalem, where the normal life of the people has been entirely resumed, and where, except for the difficulty in obtaining domestic commodities, one would not know that a war is on. When we entered the city in December most of the shops were closed, and it had a deserted appearance. To-day closed shops are more the exception than the rule. David's Street and the Jaffa Gate have resumed their crowded and picturesque appearance, and the shopkeepers are exposing for sale goods which were thought to be unobtainable, and which they have unearthed from the places where they hid them from the Turks. One significant evidence of the British occupation is afforded by the condition of the streets. In the new city they were quite passable, but in the old they were renowned for their filthy and insanitary condition. To-day the old city is cleaner than it has ever been.

. . . . The effect of the era of justice and peace which has been inaugurated by the British is apparent not only on the faces of the people, who appear care-free and as if they had awakened from a terrible nightmare, but also in their general behaviour and their attitude towards the new régime. Complete confidence reigns between the people of every community and the British Administration, as is evident from the manner in which the former look to the latter for support and assistance in their difficulties, and the readiness with which, without any display of force, they do the behest of the authorities. The whole of the population of Palestine is indeed wholeheartedly pro-British. This is equally true of all communities, which have openly welcomed the British occupation as a release from the Turkish bondage under which they had suffered.

It is a little surprising to be told that "the cost of the administration and of the regeneration of the country is at present being financed from Army funds." The Turks had left the country swept clear of money.

Even as regards the funds devoted to religious or benevolent purposes, the proceedings of the Turkish Government do not appear to have been above reproach. The income of the Palestine Wakfs (religious and benevolent endowments) amounted to some £16,000 to £17,000 a year; and there were few years in which some thousands of pounds of this revenue failed to find their way to Constantinople for uses which can only be guessed at, as the expenditure does not appear in the accounts, but which may safely be presumed to have been other than pious. Moreover, when the occupation took place, and the treasures were emptied by the retreating Turk, the Wakf cash balances were involved in the common lot, with the result that the funds necessary for the upkeep, maintenance, and repair of these institutions have had to be provided, at any rate as a temporary measure, by the British Government.

Another item in the account that all good Moslems have against the "Young Turks"!

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

The White Paper, which has just been issued, containing "Observations by the Allied Ministers at Jassy with regard to the conditions of peace imposed upon Roumania by the Central Powers" is brief, but very much to the point, and brings into clear relief some of the more monstrous features of the treaty. With regard to the frontier "rectification," in which connection reference is made to a particularly ingenuous German report that "the treaty admits of neither annexation nor indemnity," it is pointed out that strategic reasons have been adduced as the pretext. The best comment on this argument is the fact that "the most fertile forests of the mountain district are included in the territories joined to Hungary," and it is added that "the principal object of these rectifications has been by this means to round off the sporting estates of the Hungarian nobles, and to ensure the prosperity of the forest exploitation companies, in which so many persons of importance in the two Empires are interested, and which will thus be in a position to create a monopoly of building timber."

***

Pointed attention is drawn in the White Paper to the war indemnity which Germany is trying to extort under the guise of a monopoly in the export of cereals and in the exploitation of forests and the sale of timber, and with regard to the former the remark may be noted that "from this year onwards the profit which Germany will realise as a result of the difference between the real value of the cereals and the prices imposed will be considerable." The Austro-Germans have taken the right to fix the amount of cereals to be exported, and the figures will depend on their needs and not on the harvest, and "by virtue of this arrangement Roumania, even after the signature of peace, will be forced to submit to a measure of rationing which may well amount to famine." The picture is rounded off by the fact that it is Roumania which has to provide the money for the exported produce, and it is left to the Central Powers to meet this credit at their convenience!

***

As it stands, the treaty, of course, spells absolute ruin for Roumania. It has ended the war, but not German dominion, for Germany is continuing to occupy the country. "The navigation of the Danube, the posts and telegraphs, and the railways remain under German control; by request of the Roumanian Government a German delegate has been appointed to each Ministry," and finally, as a fitting sequel, "a German company for agricultural exploitation has been founded with a capital of 80 millions," which "seeks to create a monopoly of Roumanian agricultural produce under the form of long leases, concluded under cover of the occupation, recognised by the treaties, and amounting, in reality, to expropriation in disguise." Painful as the description of Roumania's humiliation is as given in this White Paper it is not, according to M. Take Jonescu, a complete survey of the position, for, to use his own words, "the treaty of Bucharest is much more horrible than the Allied Ministers have described it."

***

Judging by an article in the *Frankfurter Zeitung*, Germany has every hope of being allowed to extend her commercial exploitation to Persia after the war. Referring to the general meeting of the Anglo-Persian Oil Company as evidence of the country's mineral oil wealth, the writer says that there is also oil in the Kasvin and Teheran districts of North Persia, and that German capital will be able to find employment there. He goes on to point out that there is abundant coal there, which will suffice for any industrial purposes and still "leave a surplus for export to Turkey!" I like the after thought; it is such a typically German touch. Presumably the idea is that Turkey, being a close neighbour, might entertain quite unreasonable suspicions of Germany's benevolent activities in "developing" Persia, and might even desire to participate in the exploitation. I hope a kindly providence places a copy of the *Frankfurter Zeitung* in Turkish hands!

***

The exploitation of Persia's oil and coal resources is, apparently, only a means and not an end in itself, for the writer goes on to explain that with the possession of this fuel supply "it will be possible to exploit the North Persian ore fields. Lead, iron, and antimony are all present in workable quantities, but the most important ore is copper, which occurs not only in the well-known Masanderan mines, but also within 30 or 40 kilometres of Teheran. Asbestos can likewise be mined, and there are said to be promising veins of gold." Electricity required for mines, smelting works, lighting, and railways could be provided, says the writer, by water power, and as regards communications in North Persia he expresses the view that German assistance would be welcomed in railway construction, while water transport could be provided by the canalisation of the Kawal and Shahund rivers. It is a pretty picture, and one calculated to give Persians "furiously to think." The writer is not so naïve as to declare that the "commercial penetration" of Persia will be a simple matter; on the contrary, he admits that "the realisation of projects such as these will meet with difficulties," and "energetic diplomatic action will be necessary." In other words, the work is to be done under the shadow of "the mailed fist." But, personally, I am of the opinion that it is not going to be done at all.

***

The recent exploit of two Royal Air Force officers in flying the 2,000 odd miles from England to Egypt in an ordinary service aeroplane, with only one or two stops for petrol, provides a further illustration of the commercial possibilities of flying after the war. If Germany had not decided to plunge the world into turmoil in 1914 one or two generations would probably have passed before flying had reached the stage when its commercial utilisation would have been possible. As it is, the development of the art in the last few years has been rapid in the extreme, and it is certain now that a commercial flying service is a thing of the very near future. Already attempts are being made in the Near East to establish aerial mail services. Thus, according to the Athens correspondent of *The Times*, a service was to be established this week between Athens and Salonika, and a similar service between Athens and Janina, which has been inaugurated, was to be regularised; and the correspondent added that it is hoped that air services will soon be extended to other Greek towns. This innovation, of which Greece may well be proud, is merely a foretaste of the future when the Balkans, like the rest of the world, will find in the air the possibility of better and more comprehensive communications than land or sea routes. And as regards the Balkans, this development will have the added value that a country like Roumania will be able to have direct communications with her friends and Allies irrespective of whether or no her country is only accessible by land through enemy States.

***

At the meeting of the Mortgage Company of Egypt last week, Mr. E. W. P. Foster, the deputy chairman, made some interesting remarks regarding the effect of Egypt's present prosperity on mortgage business. The landowner, he said, had been able to reduce his indebtedness, and there was a smaller demand for new money, in which connection he referred to the fact that the company's capital out on loan had contracted to the extent of £218,614 in the past year In his opinion the only direction in which there was a prospect of doing new business in the near future was in loans for the purchase of land, and for the development of backward land. "As you are no doubt aware," he added, the Egyptian has only one outlet for his surplus funds, and that is in the purchase and development of land. There are several other mortgage concerns in Egypt that are in the same position as your company in respect to decreasing outputs of new loans; consequently a certain amount of competition prevails, tending to lower the rate of interest obtained from borrowers. There is, of course, a limit below which it would be unwise to reduce the rate."

***

As the result of the past year's working there is an appreciable improvement in the position of the Egyptian Delta Light Railways. The receipts show a notable increase both as regards passenger and goods traffic. The passengers carried numbered 7,081,100, against 6,046,600 in 1916, and the goods dealt with amounted to 679,600 tons, against 597,300 tons. Coaching receipts increased by £43,600, and freight receipts by £26,200, and the total gross earnings were £292,500, against £232,900. The increased goods traffic was mainly due to cotton, grain, manure, seeds, and fruit and vegetables; while there was a marked decline in coal and building materials. While receipts were growing expenditure was decreasing, owing to the better position with regard to fuel, the ratio of expenses to receipts falling from 77.63 to 58.57. The net revenue for the year was £121,200, against £83,900, and the available balance is £180,000, against £154,600. Last year £57,600 was devoted to writing off the suspense account, and the absence of this liability, combined with the much more satisfactory results, enables a dividend of 3½ per cent. to be paid on the 5½ per cent. preference shares.

EGYPTIAN COTTON.

The Control Commission's Powers

(From Our Own Correspondent.)

Cairo, June 21.

In March last details were published of the scheme under which the cotton crop of Egypt was to be purchased by the British and Egyptian Governments at a fixed price and the export and manipulation of the raw cotton was to be controlled at every stage. A notice signed by General Allenby, Commander-in-Chief of H.B.M.'s Forces in Egypt, and by Sir Hussein Rushdi Pasha, President, Council of Ministers, was recently issued confirming the scheme and laying down the constitution and powers of the special commission which is to be entrusted with the purchase of cotton in Egypt and its sale for export.

As from August 1 all raw cotton in an Egyptian port shall be purchased by, and all raw cotton arriving in an Egyptian port from the interior shall be tendered to and purchased by, the commission, excepting such cotton which may at that date have been sold abroad and for which a subsisting licence for export may have been already granted. Should any such licence be subsequently cancelled, the commission will forthwith purchase the cotton to which it relates, and as from the same date raw cotton liable to be purchased by the commission will only be exportable under its permit.

As from July 1 the commission will have power to purchase any raw cotton in an Egyptian port, if the owner agrees to sell the same, and it may by licence exempt from liability to purchase under the scheme any raw cotton destined for use in any local spinning-mills or for any other local purposes. As from the same date the commission will take over all the powers of the Cotton Export Regulation Committee established by the Proclamation of November 16, 1917, and may cancel any export licence already issued if it is satisfied that the export of the cotton in question has become impossible.

The commission has power to avail itself, either by agreement or—subsequent to August 1—compulsorily, of any facilities for pressing or storing cotton existing in any Egyptian port, and, in default of agreement, the compensation to be paid for the use of such facilities and the conditions under which the commission shall be entitled to avail itself thereof will be determined by the Permanent Arbitration Board. The commission will not later than July 15 prepare and make public a schedule of types of cotton with the sale and purchase price for each type, and may make and publish rules for exercising the duties entrusted to it and the powers conferred on it under the scheme, particularly in regard to the procedure to be followed as to the tender of cotton to the commission and its purchase by it, the employment of firms to classify and value such cotton and prepare it for export, appeals by sellers against the valuation of cotton tendered by them for purchase, and the sale and shipment of cotton. Preliminary regulations in this connection have now been prepared and published.

The commission will correspond with the British and Egyptian Governments through the Financial Adviser, who will be responsible for satisfying himself that all regulations intended to be issued by the commission are in accordance with the instructions given by the two Governments or otherwise approved by them. All obligations incurred by the commission towards private persons and firms under the scheme are guaranteed by the Egyptian Government, which undertakes to perform all obligations subsisting at the date of the dissolution of the commission. All regulations and orders issued or made by the commission under the purchase scheme are to be deemed to be issued and made under Martial Law.

At the same time a notice similarly signed has been issued announcing the composition of an Advisory Board which is to assist the commission in the execution of its task. This commission consists of representatives of the leading export houses, cotton-growers, commission agents, and banks, and it is provided that its reasonable expenses should be paid by the commission. The mandate of the Cotton Seed Control Board, created in August, 1917, for the purchase and control of the cotton seed resulting from the 1917 crop, has in the meantime been extended to apply to the seed resulting from the 1918 crop. Thus all arrangements have now been made for the purchase and export under proper control of the balance of the old and the whole of the new cotton crops at prices which in the circumstances must be regarded as distinctly advantageous to the Egyptian cultivator, who should be well satisfied by the composition of the Advisory Board that his interests will throughout be safeguarded.

Cotton Sack Crisis.

The Government is faced with a crisis, which it cannot afford to neglect, inasmuch as it affects the staple product of the country. Taking advantage of the imminence of the cotton crop, holders of cotton sack stocks have lately forced up the prices to most unwarrantable figures. In order not to leave the cultivators, especially the small ones, at the mercy of these profiteers, it has been suggested to the Government, failing the enforcement of a reasonable price, that a large quantity should be ordered from India for sale at cost price. The Government, it is urged, should be in a position to know through the Supplies Control Board more or less accurately the amount of the stocks in the country, and in case of need should requisition them at a reasonable price. Such a procedure would not be inconsistent in view of the fact that the cotton crop itself has been requisitioned by it; and it is justly observed that, when the Government requisitioned the crop at a fixed price, the price of the sacks was only P.T.15. Since then every expense in connection with the cotton harvest has immoderately increased, camel and rail transport, manual labour, and finally that of the sacks, coming as a crowning blow; so that what was a fair price for cotton can no longer be considered so. The Government has not been heedless of these complaints, and already an official assurance has been given in this connection.

EGYPT'S EGG EXPORTS.

(From Our Own Correspondent.)

Cairo, July 15.

The Supplies Control Board has just published a notice to the effect that the export of eggs for 1918 and 1919 will as heretofore be confined to the United Kingdom. In view of the complaint received from the British authorities regarding the arrival of large quantities in bad condition, and in order to prevent the waste of such an important article of foodstuff—a vital consideration under present circumstances—the Board requires that no export of eggs be allowed except under special licence, and by such firms as can provide a safe guarantee for the proper handling of the goods. Such firms have to send in their applications to the Ministry of Finance with the least possible delay, clearly stating (1) the number of years during which they have been trading in this article, (2) the quantities exported by them in the years between 1912 and 1918, as well as the names of the firms in the United Kingdom to whom the consignments have been made.

INDIAN GOLD STANDARD RESERVE.

The India Office has issued the following statement, showing the form in which the balance of the gold standard reserve was held on July 31 :—

In India, nil.

In England :—Cash placed by the Secretary of State for India in Council at short notice, £6,000,008; British and Colonial Government securities (value as on March 31, 1918), £19,818,604; British Government securities since purchased (cost price), £8,918,435.

INDIA'S COAL PRODUCTION.

The output of coal in India in 1917 amounted to 17,326,384 tons. Of this total Bihar and Orissa provided 11,931,141 tons, Bengal 4,631,577 tons, the Central Provinces 371,498 tons, and Assam 301,305 tons. In 1916 the output was 17,254,309 tons, and in 1915,, 17,103,932 tons.

A Reuter message from Simla states that monsoon prospects have generally improved.

The Indian Industries Commission reassembled in Simla last month to consider its draft report.

CYPRUS CROP PROSPECTS.

Outlook Satisfactory.

(From a Correspondent.)

Harvest returns are most satisfactory. Government tithe on wheat should amount to about 300,000, and barley to 400,000 bushels. This would mean about three million bushels of wheat and four million of barley; by far the largest actual production since the British occupation. But in view of the fact that the cultivation of cereals has been largely increased, perhaps by 25 per cent., during the last few years, allowance must be made for this in any comparison of totals. The outlook for Cyprus is thus very gratifying, as regards the food supply. If wheaten flour alone were used for bread, there should be a surplus of over 100,000 bushels above the coming year's consumption. But as barley flour is used to a very considerable extent, the figure will be much larger; while barley will be a very profitable crop. The Government continues the sale of both wheat and barley from its tithe grain stores to municipalities, in order to cheapen the price of bread, which has fallen from 3½ piastres (about 4½d.) the oke of 2 4-5 lb. to 2½ piastres.

As regards tobacco, now so interesting a topic, if report is correct only about a quarter of this year's plantations will be successful. The total amount of land cultivated under present Government restrictions is probably not much over 2,000 English acres. But growers hope to sell the leaf at over 10s. the oke, or over 3s. 6d. per lb., in the island. This is for tobacco which at pre-war prices would fetch less than that sum delivered in England. It is still impossible to know what value will be placed by consumers upon the leaf which is being chiefly grown, but, as far as can be gathered from recent information, it is only likely to be marketable in London for blending purposes in cigarettes. Full precautions have been taken by Government to insure an accurate registration of all plantations. Village headmen are required to assist in pointing out and identifying boundaries, and in giving information as to ownership. Picking must be completed before October 31, and all stalks, waste leaves, and blossoms must be destroyed immediately after that date.

A new official tariff of maximum retail prices has been promulgated, coming into force on July 1. The following list of prices per lb. will give some idea of rates as compared with those in England :—Mutton and lamb 6½d., pork 10½d., pork sausages 1s. 4½d., ground coffee 1s. 4d., sugar 7½d., wheaten flour 2d., barley flour 1½d., best rice 2½d., potatoes 1½d., lentils 2½d., onions ½d., tomatoes 1½d., and spinach ¾d. Cucumbers are 1d. each, while milk (goat and sheep) costs 5½d. per quart.

RECONSTRUCTION IN GREECE.

The Greek Minister of National Economy has invited a number of leaders of Greek industry to confer with him with a view to the settlement of Greece's future economic policy. Among the subjects to be discussed are : (1) The best way of finding fuel for the factories, including the adaptation of boilers; (2) the encouragement of private initiative by the State; (3) in what way the mechanical industries can best help industry in general, and how best to furnish raw material to the different industries; (4) how to strengthen existing industries and to create new ones; and (5) industrial legislation. It is understood that two manufacturers will be appointed to present a preliminary report on each subject.

UGANDA COTTON FOR INDIA.

At last week's meeting of the Council of the British Cotton Growing Association at Manchester, presided over by Mr. Alfred Crewdson, it was stated that owing to the lack of freight and heavy insurance charges, larger quantities of Uganda cotton were being shipped to India than previously. The returns for the quarter ended March 31 showed that 210,000 lb. of cotton, valued at £17,500, was exported to the United Kingdom, and 1,251,633 lb., valued at £104,303, to India and Burma. Under present conditions India was in a much more favourable position than this country as regards shipping facilities and insurance charges from East Africa.

ENGINEERING NOTES.

Prospects in Greece.

In view of the approaching visit of the Greek Industrial Mission to this country, at the invitation of the Federation of British Industries, a series of notes in these columns showing the great possibilities for the British engineering trade in that country should be very helpful to British manufacturers and shippers. We may remind the latter that Greece must not be considered only as a market in the light of her present territorial boundaries, but also as one of the most influential commercial and industrial centres of the Near East, since, besides the population in the country, there are between seven and eight million Greeks spread over Turkey in Europe, Asia Minor, Egypt, Southern Russia, and the Ægean Islands, who are engaged in important industries, commerce, and agriculture, and who consider Greece as their national as well as economic and commercial centre, and, as a rule, deal direct with, or through, her for their imports. As various branches of industry, agriculture, railways, roads, rivers, harbours, and other public works and projects in connection with them will be mentioned in these notes, it may be of some advantage to mention that Greece, on the mainland, acquired, after the Balkan war, 16,919 square miles, her present area being 41,933 square miles, while her population, which was 2,733,000 before that war, has increased to 4,363,000.

Existing Railways.

Until 1867 there were no railways in Greece. In 1868 the Athens-Piræus railway (10 kilometres) was constructed (we believe by the South-Eastern Railway Company as contractors), and other larger lines followed. At present these lines are in existence:—The Athens-Piræus-Peloponnesus line (758 kilometres); the Pyrgos-Katacolon line (13 kilometres); the Thessalian railways, Volo-Larissa-Karditza, etc. (233 kilometres); the Piræus-Athens-Larissa, to the old boundaries (441 kilometres); the North-Western Greek Railway (63 kilometres); the Attica Railway (73 kilometres); in all 1,591 kilometres (988 miles) in the old territory. In the new territories, after the Balkan war and the Bucharest Treaty, Greece acquired about 635 kilometres, viz.:—Of the Salonika-Monastir line, 208 kilometres; of the Salonika-Uskub-Nish line, 77 kilometres; and of the Salonika-Dedeagatch line, 340 kilometres. To these may be added some 95 or 100 kilometres which link the Athens-Larissa and old boundary line with the Salonika-Monastir line, constructed, or being constructed, by the Greek Government

Proposed Lines.

With increased territory and greater prospects, the construction of new lines for the purpose of better communications, and especially of the Thessalian and Macedonian lines, became indispensable, and accordingly the necessary plans, etc., for the new lines were prepared, and with the conclusion of peace it is expected that their construction will be put in hand as quickly as possible by the Greek Government. These plans, etc., should be carefully studied by British railway experts on the spot if possible, for there is no doubt that other competitors will come forward for their construction, and for providing the materials, etc. Among the most interesting projects is the line which will connect the Thessalian railway with the Adriatic. It is proposed to prolong the line from Volo to Kalambaka, thence to the north, through the mountains to a point near Grevena, where a junction will be made with a line running from the port of Sahadli on the Adriatic through Janina. There will then be a double line of communications between the Ægean and the Adriatic—the one from Sahadli-Janina, through Grevena to Veria, and so to Salonika; the other from Sahadli, through Janina, Grevena, Kalambaka, to Volo, where a good port already exists. Another line in Western Greece has to be prolonged. Starting from Missolonghi, the line reaches Agrinion, about forty miles from the former town, and the Government intends to prolong the line through Arta to Janina.

Harbour Works.

Another opening in Greece for British enterprise is in harbour construction and improvements, which, but for the present war, would have been in progress. Among the most important schemes are those connected with the harbours of Piræus and Salonika. The number of vessels calling at the former place increased before the war to such an extent that it became a matter of most extreme urgency to improve the port and to give it modern labour-saving appliances, and to enlarge the quay and Customs House accommodation. When the project was decided upon vessels had to discharge in the stream, and passengers had to land in boats with their baggage. It has been proposed, therefore, to build a new Customs House, moles, and jetty heads, and to erect special appliances for discharging cargoes at the quays. British contractors will find the proposals very interesting, and, as the Harbour Board are most particular to choose the best men to carry out works of this kind, it is almost certain that one or other of the leading British firms which have had so much experience in this direction will be employed for the work if they take the necessary steps. Just before the commencement of the war French and German financiers submitted schemes for these Piræus harbour works, which were sympathetically considered by the authorities.

Another scheme is that for the extension of the port of Salonika, which, although enormous sums were spent on it by the Turkish Government, and particularly by the late Sultan Abdul Hamid, requires considerable improvements. The necessary plans are in the hands of the Government, which, soon after the occupation of Salonika by the Greeks, employed expert engineers for this purpose. It is admitted that when the necessary harbour improvements have been carried out, and the greater part of the town which was recently destroyed by fire has been rebuilt, Salonika will be one of the leading ports in the Near East.

Macedonia as a Machinery Market.

Macedonia possesses all the natural elements needed for the promotion of industry, agriculture, and commerce on a large scale, but these are undeveloped yet, as the unfortunate country, from the time of its liberation from the Turks, has been prevented by war from having an opportunity for rest or revival. There are, however, rivers, lakes, lands, and forests which, with the aid of modern scientific and technical methods and appliances, can be turned into sources of immense wealth and prosperity.

Athens Water Supply.

An important enterprise which ought to attract the attention of British engineers and financiers, is the water supply of Athens, which, but for the withdrawal of M. Venizelos from the Government in 1915, would now have been in progress. The scheme is for the supply of Athens and the Piræus with water taken from Lake Stymphalia or the river Melas. The former is about 88 miles from Athens, while the latter is much nearer. An Anglo-Greek Syndicate proposed to undertake the works and supply water from Lake Stymphalia, while others offered to do the same from the river Melas—the former at a cost of £1,250,000 and the latter at about £800,000. An Austrian engineer, called in by the National Bank, was in favour of the Anglo-Greek Syndicate's plans and proposals, while another expert, a German engineer called in by the Municipality of Athens, favoured the river Melas scheme. A Bill authorising the Government to proceed with the scheme of bringing the water from Stymphalia was laid before the Chamber of Deputies in Athens when the war troubles began, and the withdrawal of Mr. Venizelos from the Government brought the matter to a standstill. All the plans, etc., are at the disposal of the Greek Government, and the Minister of the Interior, we believe, may be able to accept new proposals on the same plans. It is a first-class enterprise, and the concession will be for seventy years.

The Indian gold output for July was 40,230 oz., a decrease of 1,070 oz. on the figures for the preceding month.

The Treasury has made an order, dated August 9, fixing the maximum price for silver bullion sold in the United Kingdom at 48 13-16d. per standard ounce.

INDIAN JUTE PROFITS.

The Department of Statistics in India has made an estimate of jute mills' profits from an analysis of the published accounts of 42 companies, 36 of which were registered under the Indian Companies Act, four in Scotland, and one each in England and France, the latter's factory being situated at Chandernagore. It is stated that the compilation of the data was made uniform as far as practicable, and the 42 mills have been regarded as one mill. In all cases the profits were shown after deduction of Indian income tax and super tax, because the amount of tax paid was not always shown separately in the balance-sheets, but lumped with other items of expenditure under the head of "manufacturing and other expenses." In the case of sterling companies, the British income tax and the British excess profits duty have been deducted as well as the Indian income tax and super tax. The profits are shown before and after deduction of interest on debentures. Some companies have paid off their debentures. others are paying off these, while others again have created debenture redemption funds out of surplus profits. Debenture interest is not shown separately in all the published accounts, but the amounts were ascertained as correctly as possible. No allowance has been made for depreciation, as no uniform practice of writing off depreciation is followed by jute mills in Bengal. The results are summarised in the following table:—

	1914.	1915.	1916.	1917.
	£	£	£	£
Total profits ..	982,000	4,820,000	6,309,000	4,831,000
Deb. interest ..	159,000	159,000	154,000	142,000
Net profits (subject to depreciation)	823,000	4,661,000	6,155,000	4,689,000
Ratio of net profits to paid-up capital ..	10	58	75	53

It is pointed out that the position of the mills has been enormously strengthened as a result of the war, and that this development will be enhanced by this year's results, which promise to be a high record. The phenomenal increases in the reserve and depreciation funds of the various companies give further evidence of the prosperity of the trade. The variations in the market prices of the shares of a number of jute mills have also been worked out. If the price at the outbreak of war (and of July, 1914) be taken at 100, the fluctuations are as follows:

	July, 1914.	July, 1917.	March 1918.
32 Jute Mills shares (Ord.)..	100	311	467
31 ,, Preference shares	100	109	109

COMPANY MEETINGS.

Mortgage Company of Egypt.

The tenth ordinary general meeting was held on August 8 at the Cannon Street Hotel, Mr. E. W. P. Foster, C.M.G., deputy-chairman of the company, presiding. The Secretary (Mr. Robert Henry Eggar) having read the notice convening the meeting and the auditors' report,

The Chairman, in moving the adoption of the report and balance-sheet, said:—Gentlemen, you are, no doubt, aware that the chairman, Sir Henry Babington Smith, was early in the year appointed by the British Government to an important post in the United States. This explains why he is unable to preside at this meeting. In his address at the last general meeting, the chairman referred to the satisfactory recovery of and the steady progress made in the economic position of Egypt. I have much pleasure in being able to state that the prosperity of Egypt has not only been maintained, but it has progressed. The country continues to benefit by the high prices now reigning without being subject to the very serious adverse conditions created by the war in other countries. Labour is scarce and consequently expensive, but it is hoped no serious effects will result. This shortage is probably due to the large numbers of the cultivating class who are employed by the military authorities in connection with the prosecution of the war. Although the very high price to which cotton rose this time last year was not long maintained, the lowest to which it fell was still a very profitable one, and, considering that the yield of last year's crop was from 6¼ to 6½ million kantars, as compared with only a little over five millions in the preceding year, it is evident landowners and cultivators have done well. The market prices of all food crops have continued to rise, enabling the landowner to dispose of his surplus produce to great advantage.

The Cotton Crop.

The two Governments of Great Britain and Egypt in concert decided early in the year to purchase, as from August 1, 1918, all cotton remaining undisposed of in Alexandria at that date, as well as all cotton coming to Alexandria from the interior on and after that date. The prices fixed by the Government for the varying qualities of cotton are said to be fair, if not liberal. Government took another very important decision towards the end of last year—to restrict the area put under cotton in the season of 1918, the reason given being the urgent necessity for increasing the acreage of food crops. It is believed the actual decrease in area planted as compared with normal years will be about 300,000 feddans. The loss of area may be compensated for by the excellent price the producer is certain of obtaining, and if the ravages of the insect pests can be minimised. It is not surprising that such prosperity has resulted in the landowner reducing his indebtedness. The natural consequence is a smaller demand for new money. This reflects on your company's business; you will remark that the capital out on loan has contracted to the extent of £218,614 in the year under report.

Future of Mortgage Business.

It is very difficult to form any idea of what the future will bring forth in respect to mortgage business, but the only direction in which I see a prospect of doing new business in the near future is in loans for the purchase of land and for the development of backward land. As you are no doubt aware, the Egyptian has only one outlet for his surplus funds, and that is in the purchase and development of land. There are several other mortgage concerns in Egypt that are in the same position as your company in respect to decreasing output of new loans; consequently a certain amount of competition prevails, tending to lower the rate of interest obtained from borrowers. There is, of course, a limit below which it would be unwise to reduce the rate. Your board is giving this matter its best attention. The past year has been a very prosperous one—so much so that, after making further provision for bad and doubtful debts, increasing the amounts usually employed in writing down the company's buildings, and adding to the general reserve, and after paying the preference dividend, the directors are able to recommend the payment of a dividend on the ordinary shares at the rate of 8 per cent. per annum.

It has been possible to dispose of an even larger extent of property than that acquired during the year at prices which practically covered the original debts, thus reducing the value of properties remaining on hand from £173,496, as at the end of March, 1917, to £132,494 at the same date this year. The local board in Cairo, under the able guidance of Harari Pasha, and assisted by the loyal and capable staff managed by Mr. T. F. Stevens, with Mr. E. Crewe as his assistant, have again borne the burden of the company's business in Egypt. It is with great pleasure I record their untiring exertions.

The Hon. A. H. Mills seconded the motion, which was unanimously carried; and resolutions were then adopted declaring the dividend mentioned and re-electing the retiring directors and auditors.

Union Fonciere D'Egypte.

At the annual general meeting of this company, held in Alexandria, after the reports of the directors and that of the auditors for the year ended March 31, 1918, had been read, the shareholders approved the balance-sheet and the profit and loss account, and decided to carry forward the debit balance of the latter. Messrs. Zarifi, E. Bourre, and G. Foster were re-elected directors. The directors' fees were fixed at £5 per sitting, and Mr. S. Pappo, sub-manager of the Land Bank of Egypt, was re-elected as auditor for the current year with the remuneration of £100 for that period.

The Report.

The report was as follows:—The high prices realised during the course of the past year by all classes of agricultural products have placed Egyptian agriculture on a most satisfactory footing. The peasantry have not only paid off the greater part of their debts, but in the majority of cases have surpluses in hand. Being no longer tempted to hoard their savings, they have naturally put their money into land, thus causing a marked increase in the value of all agricultural property. Those companies whose business is the reclaiming and selling of land, and whose outlook at the beginning of the war was rendered so depressing as a result of innumerable expropriations caused by the bad crops and the low price of cotton, have now picked up again and their transactions have increased beyond expectation. In our case the demand for reclaimed land, thanks to the work put in during the bad years, has been more than we could have foreseen.

Development and Cultivation.

There has been an abundant supply of water this year, thus permiting us to extend our rice plantations over a very large area, especially on our estates of Teda, Kafr-El-Charki, Dokmera, Waziria, Hessas, and even Dar-El-Bakar. We have given particular attention to the extension of cultivation of rice on this last estate, in view of the large demands of buyers in this district. The area now under cottor cultivation is 2,537 feddans, against 2,422 feddans last year, whereas the area covered by rice is 1,738 feddans, against 830 feddans As the greater part of our arable land was rented out and as most of the tenants have paid their rent and taken away their cotton, it is impossible for us to give the yield per feddan. We may say, however, that our revenues from arable lands amounted to £E34,219,963, against £E21,872,756 in 1916-1917.

Balance Sheet.

Rural Estates.—This item represents the net area belonging to the company multiplied by the cost price per feddan, giving £E64,030 per feddan, against £E63,660 last year.

Debtors for Land Sales.—Assets under this heading amount to £E142,113,487, divided as follows: £E80,531,270 vendors' rights, ceded to the Land Bank, as against £E25,239,214 last year. £E12,341,688 vendors' rights ceded to our bankers, and £E49,240,549 vendors' rights not ceded, as against £E49,807,802 last year. On the other hand, the land sale annuities discounted by the Land Bank under our guarantee, originally amounting to £E77,960, have been reduced to £E37,582,241, against £E42,572,899 last year.

Annuities in Arrears.—We began the year with a total sum of £E19,122,116, which has been reduced to £E9,260,217 during the year under review.

1917-1918 Annuities.—Of these annuities, the total of which reacned £E19,562,576, we have already encashed £E13,396,725, making our total encashments in respect of annuities £E23,259,921.

Provision for Interests in arrears.—There has been no change in this account.

Provisions for rents in arrears.—The amount of £E7,000 provided for in our last balance sheet has been considered sufficient by your directors.

Profit and Loss Account.

In addition to the usual amortisations a sum of £E10,909,427, being profits accrued but not yet due on land sales by annuities, has been put to reserve. A profit of £E831,033 was made by the sale of 500 of the company's shares which had been deposited with us as director's guarantees by Messrs. G. and A. Zervudachi. Fees for the management of estates amounted to £E1,783,406, against £E1,250,775 last year. The financial year closes with a profit of £E12,078,504, thus reducing the amount standing to the debit of profit and loss account to £E7,822,038.

Directors and Auditor.

We address our sincere good wishes to Mr. Leopold Jullien, now fighting in France, and to Mr. Isaac Aghion, who has voluntarily joined the Italian Army. The retiring directors are Messrs. Zarifi, Bourre, and Foster, who offer themselves for re-election.

The directors propose that Mr. S. Pappo be re-elected as auditor for the present year and that his remuneration be increased to £100.

Auditors' Report.

"In execution of the mandate you have conferred on me, I have the honour to inform you that I have examined the balance-sheet and profit and loss account, which are now submitted for your approval, and I have found that they conform with your company's books. In consequence of the favourable results of the year's work, your profit and loss account shows a profit of £E12,078,504. This amount deducted from the previous losses brings the said profit and loss account to a debit balance of £E7,822,038. The item 'Investments' representing 500 of your company's shares, which have figured for several years in your balance-sheet and which have been the statutory guarantee of your late directors, Messrs. Ambroise and George Zervudachi, has been eliminated by the sale of the said shares."

COMPANY NOTES & REPORTS

Egyptian Delta Light Railways.

The report of the Egyptian Delta Light Railways, Ltd., for the year ended March 31 states that an aggregate of 559.79 miles were open and working at the end of the year. Gross receipts were £292,520, against £232,927, the average per mile per week being £10 0s. 10d., against £7 14s. 5d. The number of passengers carried was 7,081,061, as compared with 6,046,605 the previous year. Coaching traffic gross receipts were £179,675, an increase of £43,559, the average per mile per week being £6 3s. 5d., against £4 10s. 3d. Gross receipts from goods traffic were £105,212, an increase of £26,171, the tonnage lifted being 679,595 tons, an increase of 82,302 tons. Working expenses amounted to £171,331, as compared with £130,821 the previous year, the ratio of actual expenses to gross expenses being 58.57 per cent., against 77.63 per cent. The balance carried to net revenue account is £121,189, which, with interest and dividends earned, amounting to £9,981, and £49,248 brought in, gives £180,419. After providing for interest on debentures, all fixed charges and for proportion of profits due to the Egyptian Government under the terms of the concession, amounting to £9,878, there remains £121,780. The board recommend a dividend of 3½ per cent. on the Preference shares for the year, and to carry forward £85,353. Meeting, Winchester House, E.C., 21st instant, noon.

Dividends, Payments, etc.

The directors of the Standard Tea Company of Ceylon have declared an interim dividend of 5 per cent. (at rate of 10 per cent. per annum) for the six months to June 30.

ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Street, Wednesday.

We have again had a rising market this week, and a large business has been doing both on local and Egyptian account. In Government stocks a fair amount of business has been done in Unifieds without altering the price, but in Egypt 3½ Prefs. there remain large unsatisfied buyers.

In Bank shares Nationals have kept steady, but there has been a rise of 3-16 in Agriculturals to 7, a large business having been done in these shares to-day. Anglo-Egyptian Banks have improved ¼ to 17½.

In Railways Delta Lights have further improved 3-16 to 7 7-16, but business has been restricted in consequence of the scarcity of sellers.

Amongst Land descriptions Aboukirs have risen 4s. 6d. to 26s. 3d., Allotments ⅛ to 4⅜, and Gharbieh Lands a similar fraction to 2½. Both the latter shares have been enquired for from Egypt. There has been a persistent demand for Béhéras, which have improved a further ⅝ to 15½, with a very fair amount of business passing. Delta Lands on local demand have jumped up ⅛ to 17s. 6d. after business at an even higher level. Foreign Trusts have again appreciated 6d. at 13s. 3d. In New Egyptians a very large business has been going on, with the result that the shares close a further 6d. up on balance at 23s. Sidi Salems were a strong feature, improving 5-16 to 2 15-16; but they are closing only 3-16 up at 2 13-16 on some profit taking. A rise of a further ⅛ to 3⅜ has taken place in Union Foncières, which have been in good demand for Egypt. A large business has been done in United Egyptian Lands up to 3s., a rise of 4½d.

In Miscellaneous shares Egyptian Markets improved at one time ⅛ to 27s. 6d., but are closing 1s. higher only at 27s. Salts and Sodas touched 59s. 3d., but at the close are ⅛ up at 2 13-16. A further sensational rise has taken place in Khedivial Mails, which are 7s. higher to-night at 62s., and the preference shares have improved 1-16 to 4.

In Greek securities prices, where altered, show a further appreciation. The 1881, 1884 and 1890 Loans are all 1½ up at 68, Monopolies have risen 2 to 65½, and Rentes are a point up at 54. The 1914 Loan has also risen a point to 79, the 1902 Loan half a point to 66, and "Currant" Bonds are 2 points up at 95. There has been a certain amount of business doing, but sellers continue pretty scarce.

Paris Bourse.

Suez Canal shares were a feature of the market on August 14, and reached 5,600 frs., an advance of 180 frs. since the beginning of the month. Other prices were Egyptian Unifieds 100 frs. (against 100.50), Serbian 1895's 56, Turkish Unifieds 64 (unchanged), Credit Foncier Egyptiens 799 (against 800), and Ottoman Banks 446.

Oil Shares.

Anglo-Egyptians (B) declined 1-32 to 2 21-32. Otherwise there was little change to record.

GREEK DEBT.

The Council of Foreign Bondholders issues the following information compiled from figures published by the International Financial Commission at Athens, with regard to the revenues assigned under the Law of Control for the service of the Greek Debt from January 1 to May 31, 1918. (New Style, January 14 to June 13, 1918):—

—		Monopolies, Tobacco, Stamps, Stamped Paper, Naxos Emery.	Piræus Customs.
		Drachmæ.	Drachmæ.
Gross Receipts, May,	1918	2,598,712	1,462,000
Do. do. do	1917	3,257,804	500,000
Estimated receipts for 5 months (Law of Control)		12,041,666	4,458,333
Actual do. do.	1918..	15,313,057	12,084,000
" "	1917..	12,408,121	4,952,000
Difference between estimated and actual receipts for 5 months	1918	+ 3,271,391	+ 7,625,666
	1917	+ 366,455	+ 493,666

Note.—Of the surplus over the estimated receipts from monopolies, tobacco, stamps, stamped paper, and Naxos emery, 49 1-5 per cent. is applied towards increasing the minimum rates of interest and sinking fund of the External Gold Loans of 1881 to 1893.

NOTES OF THE WEEK.

Most of the attention that can be spared from the Western front this week will be given to recent developments in Asia, which can hardly fail to have an important bearing upon the course of the war. The field of operations is so vast and the interplay of forces so intricate that the situation in any other circumstances would monopolize public interest. As things are, however, it is difficult to take in at once all the potentialities of the new orientation now given to the Allies' policy in the East. For the moment all the preparations are represented as being on an essentially small scale; but it will not be the first time that an expedition has outgrown the original design. Most of the hesitation still shown by the Allies may be attributed to the United States, and it adds to the irony of the position that only a big campaign will avail to give effect to the policy that President Wilson has so emphatically declared it to be his intention to carry out.

It will be fortunate indeed if the delay on the part of the Allies to take steps commensurate with the needs of the situation does not jeopardise the success of the enterprise. The very vastness of Russia should have been a decisive argument against an attempt to carry out with mere handfuls of men the Allies' resolve to help the Russians. There could be no guarantee that the restoration of ordered government in Eastern Siberia would react upon European Russia within any given time, unless the influence that had been at work in the Amur Province could be reproduced at Moscow and Petrograd. The purpose of the Allies is to help the Russians to help themselves; but it is certain that, in view of the degree to which the disintegration of the country has been carried, no ordered government can be introduced without the support of a disciplined army, which must bear some relationship numerically to the extent of the territory that has to be recovered from chaos and Bolshevik mob law. If, as is alleged, there is also an Austro-German force of 150,000 ex-prisoners of war to be overcome first in Siberia, the effort required of the Allies, which must devolve mainly upon Japan, will be both substantial and sustained.

While reports from Russia represent the central organisation of Bolshevism as *in extremis*, the forces which carry out its behests up and down the country appear able to render a good account of themselves in the field. In Siberia they have the assistance of the large number of Austro-German prisoners, and in Russia they can probably command some German support in one way or another. In both countries they are temporarily able to press the Czecho-Slovak troops; at Kazan, which the latter only captured last month, and at various points in Siberia. The Allies are lending the Czecho-Slovaks based on Vladivostok some assistance; but what with rival Russian "Governments" in Eastern Siberia, the inadequacy of existing means of transport and the multiplication of authorities concerned in any forward movement, progress has been distressingly slow so far. The immediate objective is to reach Irkutsk, where a Czecho-Slovak force is being hard pressed by the Bolsheviks; but even if the safety of this town is assured before winter sets in, there will still be Czecho-Slovak troops in Russia, who cannot be expected to hold out indefinitely against the forces that the Bolsheviks and Germans may bring against them.

For reasons that are explained elsewhere in this issue the dispatch of British troops to the Caspian Sea will have at first a moral rather than a military effect. To appreciate how it will strike the Germans, it is necessary to know something of the expectations raised by Turco-German successes in the Middle East. Germany has set herself to "think in continents." The saying attributed to Prince Charles of Hohenzollern when he was asked why he had accepted the Roumanian Crown is revived (he is supposed to have placed a ruler on a map so as to connect Berlin and Bombay, and to have replied: "Because Roumania lies on this line"), and it is recorded that Roumania, like Bulgaria and Turkey, is now a pillar of "the bridge which binds the coast of Flanders with the shores of the Caspian Sea." Already the importance of Persia as a source of raw materials for Germany is being canvassed, and the need for the construction of a railway from Trebizond to Tabriz is urged. The appearance of British troops at Baku and Meshed, with General Marshall holding the line from Baghdad to Enzeli on the Caspian Sea, will be a rude awakening from all such dreams.

The Allies' attitude towards the Czecho-Slovak people has been modelled on the principle of two or more bites to a cherry. At last, however, the Czecho-Slovak National Council has secured the formal recognition for which it has so long pleaded. It has received an official intimation to the effect that the British Government regards the Czecho-Slovaks as an Allied nation, and recognises the Council's right, as the supreme organ of the Czecho-Slovak national interests and as the present trustee of the future Czecho-Slovak Government, to exercise supreme authority over the Czecho-Slovak

Digitized by Google

armies now fighting on three different battlefields. This notification will allay all fears that Great Britain was not whole-hearted in her antagonism to Austria-Hungary, but might be prepared to overlook her share of responsibility for the world-war in the major guilt of Germany. From the very first statement of the Allies' war aims it was clear that the only possible solution of the Eastern Question would be the dismemberment of the Dual Monarchy; but the Allied Governments have shown a reluctance to commit themselves to a definite undertaking. The recognition of one of the races comprised in Austria-Hungary as an Allied nation leaves nothing to be desired as an explicit declaration of policy.

The British Government's action in according official recognition to the Czecho-Slovaks has been followed by an animated discussion in the Italian Press on the alleged differences of opinion or policy between Signor Orlando and his Foreign Minister, Baron Sonnino. Apart from the purely Italian aspect of the discussion, it reflects in all probability an incomplete exchange of views on the subject between the Allied Governments. Clearly it would have been better if Great Britain's notification to the Czecho-Slovaks could have been made in the name of and on behalf of all the Allies, and it may be inferred that any hesitation that there may have been was on the part of the Italian Government.

As far as can be gathered the point at issue is not a vital one. When Italy entered the war she made an agreement with the Allies which guaranteed her territorial rectifications not only at the expense of Austria-Hungary, but also at that of the Jugoslavs and other members of the Grand Alliance. Reflection has shown that the pact will no longer stand examination in the light of the principles to which the Allies are pledged, and the Italian Government tacitly accepted this view when it gave its adherence to the Rome Agreement, which recognised the legitimacy of the aspirations of the Jugoslavs. Logic would prompt Italy to cancel the earlier Agreement and to enter upon a new pact with her Allies, and it may be that a section of the Italian Cabinet is prepared to take this step. Apparently another section holds a different view. It regards the London Agreement as the only formal commitment of the Entente to the dismemberment of Austria-Hungary, and is loath to annul that covenant. On the other hand, it does not dispute the necessity for a revision of its terms, but it maintains that there is no need for action until the end of the war.

The question is one for Italy to decide, and there would be no need for the Allies to press the matter, provided Italy's hesitation is not allowed to affect the resolve of the Slav subjects of the Dual Monarchy to insist upon complete separation from the Hapsburg Crown. A few individuals among the Czecho-Slovaks in Bohemia may be willing to compromise on this point, but nothing could be more striking in the circumstances than the bold stand that Austria's victims are taking in spite of their being completely in the hands of an autocracy that has shown itself ready to stick at nothing in the attempt to break the spirit of its unwilling subjects. What is clear behind the Italian controversy is that Italy places the dismemberment of Austria-Hungary in the forefront of her policy, and is resolved that nothing shall turn her from that one goal.

The sudden departure of King Ferdinand from Bulgaria has been quickly followed by the report that he is lying in a critical condition at Frankfort. Rumour, as was to be expected, has connected this journey with the political situation in Bulgaria, and it would be in keeping with the precedent that he established after the second Balkan War, if King Ferdinand were to seek refuge abroad in order to avoid possibly crude manifestations of his personal unpopularity. If, however, the state of his health was as serious as would now seem to have been the case, his departure may have had a worthier cause. The next few days will probably bring an explanation of the mystery, as the Bulgarian Government can hardly refrain from making an official statement on the subject.

The obscurity of recent cables regarding the political situation in India is doubtless mainly the result of the obscurity of the situation itself. Opinion is gradually forming, and a regrouping of parties seems to be in progress, but the lines of cleavage are not yet accurately demarcated, and it is still possible that the ranks may once again be closed. At the moment, however, we are shown three parties—the Moderates, who are inclined to accept the official scheme; the Extremists, who would wreck it by impossible amendments; and the "More-Extremists," who will have nothing whatever to do with it. It is rather piquant to read of Mrs. Besant having to fight for a majority against the "More-Extremists" in Madras, but every Cleon must eventually meet a Sausage-seller, and the latter is likely to triumph if he has the necessary gifts of tongue.

It is noteworthy that so far we have been told very little regarding the trend of opinion in the North of India. We should like to think that this silence indicates that the United Provinces and the Punjab are not in a hurry to commit themselves, but the more probable explanation is that the omission is accidental, news coming only from the places where correspondents are to be found. At the moment, however, the North-West has anxieties of its own. The reports of the monsoon are still unfavourable. We are now entering on the three or four critical weeks which determine the success or failure of two harvests representing the country's income for the whole year, and even the great work of nation-building shrinks into the background when men and women are waiting to see whether there will be enough to eat.

Nation-building involves many activities, other than the framing of a constitution, and we are reminded of some of the most important of these by two pamphlets received from the Bureau of Education in India. We confess to relishing this style of publication much more than annual, or even quinquennial, reports; they tell us in the course of twenty pages or so something of what is being attempted in some particular line—instruction in drawing and manual work, or the education of the children who swarm in Indian tea-gardens, factories, and coal mining districts; they do not dilate unduly upon results, but give a clear account of the methods practised and the difficulties encountered; and, best of all, they allow us to see that the spirit of experiment is abroad.

It may seem superfluous to insist on the need for experiment at this stage, but it is well to remember that in the early days of Indian education this need was insufficiently recognised. Methods and processes were too often imported ready-made, and the result is that India is still very inadequately supplied with the types of citizens and peasants required to enable her to take her proper position in the world. Some of the greatest difficulties confronting the constitution-builders spring directly from ignorance, whether it be the naked and unashamed ignorance of the masses or the unconscious and insidious ignorance of the classes commonly described as educated, and, though it is somewhat late in the day, nothing but a policy of wise and bold experiment can ensure that the citizens and peasants of the next generation shall be fit to bear the burden of responsible government.

The pamphlets of which we have spoken refer mainly to the training of children in towns and industrial centres, and we hope the Bureau of Education will shortly give us similar accounts of the experiments practised in the village schools, where the need for new methods is even more insistent. It has been well said that India wants most of all youths content to be peasants but determined to be better peasants than their fathers. The old methods have failed to meet this want, for the peasants they produced are on the average no improvement on the earlier generation. We know that for some time past men have been working hard to remove this defect, and we ask the Bureau to let us know whether any definite progress can be reported.

LETTER FROM CAIRO.

(From Our Correspondent.)

Cairo, July 22.

Shortage of Small Change.

A sudden scarcity of change, especially of the smaller nickel coins, was felt lately, to the great inconvenience of the public. The newspaper-sellers and other itinerant vendors of small wares have been specially hit. The use of postage stamps helped to a certain limited extent to relieve the situation, which, however, remains sufficiently awkward to justify Government action. Hoarding cannot be the only cause, though it may be one of the causes, of this shortage; and it is more likely that money-changers and other unscrupulous persons are responsible for this most annoying state of things. Changing a 20-piastre piece lately cost as much as 1 piastre. No amount of preaching will prevent the ignorant native classes from hoarding; and, as an intelligent native lawyer once remarked, it is not want of confidence in the paper currency, since the fellah is too ignorant to comprehend the principle of political economy involved therein, but rather the fact that the silver coin represents to his mind and senses a palpable intrinsic value which the paper money does not; and there is, besides, the greater risk of destruction or loss of paper with such a careless and primitive class. The recent issue of 10- and 25-piastre notes was a quite necessary measure, and without this the country would have been faced with a veritable silver coin crisis. The amount of silver coins hoarded may be reckoned by the million.

Controlled Prices.

As reported in my last week's letter, the Supplies Control Board has published in the "Official Journal" the new list of maximum prices of foodstuffs and articles of prime necessity for each Governorate and Mudirieh. It is to be noted that, whereas certain modifications had to be introduced in regard to some foodstuffs of some importance, such as rice, sugar, meat, and cottonseed oil, due to increase of railway rates and other causes, the prices have been maintained for such articles of prime importance as wheat, barley, lentils, flour, butter, etc. In acquainting the public with the controlled prices the Board calls upon it to see that they are duly observed, as it is only with the co-operation of the people that respect of the tariff can be secured. Many people to whom an extra small payment is of little account refrain sometimes from reporting infringements to the police to avoid personal inconvenience, forgetting that by so doing they not only render themselves liable to punishment for disobeying an order under martial law, but fail in their duty to the general public, especially the poorer classes.

The prices quoted for certain leading articles cannot fail to be of interest to the reader for purposes of comparison between his own country's economic condition and that of Egypt. Wheat per ardeb of 150 kilog. from Piastres Tariff, 316 to P.T.341, according to quality; beans per ardeb of 155 kilog., P.T.253-258; lentils per ardeb of 157 kilog., P.T.260; rice per ardeb of 156 okes, P.T.446-494; sugar per cantar of 100 lb., P.T.180½-186; petroleum per 4 gallons, P.T.24¼; spirits 90° per litre, P.T.3. All these prices, save, of course, for petroleum and spirits, are wholesale for Cairo. They are on the whole a little higher for Alexandria.

The Department of Supplies issued lately a comparative list of prices in Cairo and Alexandria for the months of May, 1916, 1917, and 1918. The price of each commodity for July, 1914, has been taken as basis, and noted for convenient calculation at 100. The figures for certain articles for May last are 200 and 250. On the whole, the average rise is put down at about 100 per cent.; but this estimate is based on the tariff, and the cost of living may be said to have more than doubled since the war. Indeed, imported articles of more or less prime necessity have trebled in price, and it was high time for the authorities to intervene. It is unfortunate that in this case the prevailing spirit of greed cannot be similarly checked by official action. It is known, for instance, that there are stocks of cotton goods sufficient to last the country about a couple of years, a state of things brought about by wild speculation and by the discount of sinkings which, fortunately, was not realised, thanks to the efficient system of convoys. And yet, while we see sometimes goods passing from a feebler to a stronger speculator at prices 30 per cent. and even 40 per cent. less than those ruling at Manchester, the retail prices remain unaffected, and indeed continue on the upward grade.

Fortunately, the country is self-supporting as regards foodstuffs, and the public is hoping to see the recent measures taken by the Supplies Control Board soon bearing fruit. In Cairo the leading bakers who had given the undertaking to the Governorate to sell their two qualities of bread at the tariff prices have been faithful to their promise, and have started actually selling at these prices. At Alexandria the Governor has called upon the leading bakers to follow the example of their colleagues in Cairo, failing which he threatened them with the establishment of municipal bakeries.

In regard to sugar, the company has, no doubt under the pressure of the Supplies Control Board, been preparing a statistical list of the groceries in Cairo, who sell sugar direct to the public; and it is now requiring from the wholesale dealers, before delivering to them their contract quantities, a list of their clients to see whether they are provided with a licence as duly authorised grocers. With regard to cotton-seed oil, the Cairo Governorate, at the request of the Supplies Control Board, has been requiring the police to draw up lists of the oil manufacturers and grocers with the latter's addresses, so as to compute correctly their requirements. In this case the matter would seem to lie most in the hands of the Government, who have taken over the cotton-seed crop, and supply the oil presses with what they require. There seems to be little doubt now that the shortage of oil is due in great measure to the short supply of seed to the presses.

COUNTERACTING GERMAN PROPAGANDA.

We have made arrangements for forwarding free of charge to our readers pamphlets and other publications dealing with the British and Allied cause. This literature is in many European languages, and certain pamphlets and illustrated publications are also available in a number of Oriental languages. All applications should be addressed to the Editor, The Near East, Devonshire Square, London, E.C.2. Among the most recent publications available for distribution free of charge are the following:—

"The Welfare of Egypt," by J. S. Willmore. A short summary of English administration in Egypt; alluding also to Germany's undermining influence, and the Mussulman's preference for the English rule. 36 pp. London: Hodder and Stoughton.

"Turkey, a Past and a Future," by A. J. Toynbee. Development of the new Turkish Nationalism and of German intrigue in Western Asia. Moslem ideas must prevail. Mesopotamia will develop its resources mainly by colonisation. 79 pp. London: Hodder and Stoughton.

"Germany, Turkey, and Armenia." 125 pp. J. J. Kelliher and Co., Ltd., London. Containing important statements by German missionaries, Danish nurses, German officials, and other foreigners, and extracts from foreign journals prohibited in Germany by the Censor.

"Loyal India," by Lord Hardinge of Penshurst. 15 pp. Sir J. Causton and Sons On loyalty and service in the Indian Empire.

"The Clean-Fighting Turk." A Spurious Claim. 4 pp. Reprint from *The Times*. This article, written by one who has exceptional experience of Turkish manners and customs, shows that the Turk behaves like a gentleman only when it pays him to do so.

"Horrors of Aleppo," Seen by a German Eye-Witness, by Dr. Martin Niepage. 24 pp. T. Fisher Unwin, Ltd. The author, a teacher in the German technical school at Aleppo, reproaches German diplomacy for non-interference.

"Martyred Armenia." 56 pp. C. Arthur Pearson, Ltd., London. The author, a Bedawi, has acquired from reliable sources and from his own information, a mass of information regarding the atrocities committed by the Turk against the Armenian people. This he resolved to publish to the world, "to defend the faith of Islam against the charge of fanaticism."

"Turkish Prisoners in Egypt." 64 pp. A report by the Delegates of the International Committee of the Red Cross. Extracted and translated from the Official Reports of the Red Cross Society.

CORRESPONDENCE.

"A BALKAN CONFERENCE."

TO THE EDITOR OF "THE NEAR EAST."

Sir,—The leading article in your issue of 9th inst. serves a useful purpose in bringing to a head the present discussion regarding a separate peace with Bulgaria. If criticism there be, it will not question the desirability of a settlement of the Balkan problem, but rather the premises upon which your arguments are based, and the inference that the desired end should be achieved by bribing Bulgaria, our enemy, necessarily at the expense of Greece and Serbia, our friends.

You assert that Bulgaria's action in the present war was occasioned by the Treaty of Bucharest. But this is by no means the deduction to be drawn from the evidence now available. The Austro-Bulgar pact is of old standing. It was inaugurated by Stambouloff, and since the advent of Ferdinand it has been the mainspring of Bulgarian politics. The intermittent flirtations with Russia have been ephemeral, and dictated by purely selfish motives. The treacherous attack on Greece and Serbia was carried out in collusion with Austria-Hungary, who had let it be known that she was prepared to help Bulgaria militarily and diplomatically.

If the Bulgars had reason to be angry against either combination of the Great Powers at Bucharest—and it is difficult to understand what claim they had to be saved from the consequences of their deliberate action—their animosity should surely have been directed against the Triple Alliance. At its worst, the action of the Entente was sympathetic and neutral; that of the Alliance was positive and hostile. Austria had let them down badly, and it was the Kaiser himself who backed the claims of Roumania and Greece to the Dobruja and Kavalla respectively!

You agree that Bulgaria was very properly chastised, but apparently regard the chastisement as unjust. What could Greece have taken less than Kavalla? What could the Serbs have taken less than Central Macedonia? Would it be justice to allow Bulgaria to bluff and brag, and ruthlessly plunge the Balkans into bloodshed, and then receive territorial reward for her infamy? Bulgaria fought for the hegemony of the Peninsula. At Bucharest, Greece, Serbia, and Roumania sought to establish an equilibrium.

The European war precipitated a situation, which was not envisaged at Bucharest any more than in Downing Street. Even so, the treaty provided the Entente Powers with a ready-made barrier against Pan-German aggression, had they chosen to profit by it. Our statesmen followed out the theory of conciliation and compensation right up to the twelfth hour. And what was the result? Bulgaria merely bluffed them into complacency until she was ready to strike the blow that had been decided upon before the war commenced. How different would it all have been had we backed our three Balkan friends and taken measures to protect ourselves against Bulgarian treachery! We should have had more to show for our exploits on Gallipoli than the whited bones of our heroes. We should have been saved the costly expeditions to Salonika, Mesopotamia, and Palestine. And without doubt peace would now reign in the land.

The fault was not with the Treaty of Bucharest, but with ourselves. Bulgaria did not dare to move until assured of Greek neutrality; and Constantine would not have dared to give that guarantee had we not strengthened his hand and weakened that of Venizelos by offering Hellenic territory to Bulgaria without so much as a "by your leave."

We had a League of Nations in the Balkans in 1912. Bulgaria destroyed it. In 1915 Bulgaria was offered greater compensation than can be accorded her to-day. She refused to accept it. It will be advanced that conditions have changed. Assuredly they have. Greece was once prepared to make concessions in order to secure the assistance of Bulgaria in common action on the side of the Entente. She will not be inclined to repeat the offer to-day, when Bulgaria has despoiled her territories, massacred and exiled her people, and played into the hands of her enemies. Serbia also was once prepared to concede all that Bulgaria asked. She will not willingly repeat the offer to-day, when the Bulgars have turned her fair land into a shambles, slaughtered her peaceable citizens, wrecked her monuments of art and culture, pilfered and burned her literary treasures, stolen even the tombstones from her cemeteries, and exported her maidens to the harems of Asia Minor.

We are fighting for justice, and justice demands that such deeds as have been perpetrated by the Germans in Europe and the Bulgars in the Balkans shall not go unpunished.

We are all striving after the ideal of a Balkan Confederation, and most of us regard it as a future possibility. Success or failure will depend upon the methods employed to attain the desired end. European attempts to solve the problem have not been happy in the past, and there is little reason to think that they would be more satisfactory now. It is only three short years since the Entente Powers demonstrated a lamentable inability to understand Balkan politics, and there is grave danger that, the immediate end in view—peace with Bulgaria—being precisely the same as it was in 1913, the same mistakes would be committed. Bulgaria's territorial hunger cannot be assuaged by an *hors d'œuvre*—that will merely whet her appetite; and there is no imaginable division of the Peninsula which will at once satisfy responsible people in Bulgaria and leave responsible people in Greece and Serbia without a grievance.

It will be far better to let our Balkan Allies settle their own business, giving what assistance is desired, and, when they have done so, bid them invite Bulgaria to join their family at the price of reasonable concessions. Bulgaria declined a Serbian proposal in this sense which was made in the early days of the war; perhaps she will be inclined to consider it when the catastrophe of 1919 has followed the catastrophe of 1913. It would be fatal to recognise any Bulgarian "right" to disputed territory. This cannot be recognised by our Allies, who, being our Allies, are at least entitled to the benefit of the doubt.

But all this must be for a later epoch. Bulgaria could not make a separate peace to-day even if she would, and all the declarations of her statesmen go to prove that she would not do so even if she could. Sooner or later Bulgaria, defeated and distressed, will display contrition, blame everybody from Ferdinand to the palace shoeblack, sue for mercy and appeal to the declarations of Grey and Sazonoff. This is all part of the game, and we may as well be ready for it. At that moment we must couple justice to our Allies with a determination that never again shall it be possible for Bulgaria to act as a bridge over which Pan-Germanism shall march to the conquest of the world. That is her chosen rôle in international politics, and it constitutes a danger which Imperial Britain cannot afford to ignore.—I am, etc.,

CRAWFURD PRICE.

[The main contentions of our correspondent were met in the article to which he refers, which did not, however, suggest that "the desired end should be achieved by bribing Bulgaria." Just as the Allies refuse to accept Bolshevism as a permanent impersonation of Russia, so confidence in the purging effects of this world-war must look to a new Bulgaria, with whom it will be possible for our Near Eastern Allies to create a new era of peace and prosperity for the Balkan Peninsula.—ED.]

ARE THE ROUMANIANS ROMANS?

TO THE EDITOR OF "THE NEAR EAST."

Sir,—I hope Mr. Bourchier will credit me with some knowledge regarding the history of my own nation, and will admit that I was aware of the old controversies on the Latinity of Roumanians, at least as much as he is interested himself in such a topic. Just because I am not evidently unaware of the "scientific writers" honoured so much by Mr. Bourchier, I consider the efforts to revive this controversy as if one would look after dead horses to take their hoofs as very precious things. Although Mr. Bourchier may be for the moment far from the principal authorities on the subject—he would like to suggest that there are many authors far more important who deny our nationality—he fires the Roumanian question with the "Big Bertha" of the Chauvinists, Sulzer. The theory of this historian was too grateful for the political necessities of the Magyars and Austrians, and therefore was largely circulated. (Lucius alludes only incidentally to the subject in his "De Regno Dalmatiæ," and Roesler, though the most noisy and ticklish for the Magyar national vanity, can hardly stand the test of criticism.) But even the theory of Sulzer is, in its essence, concerned to demonstrate that the Roman colonists were withdrawn from Dacia Trajana by Aurelian on the south of the Danube, and that the Roumanians returned again to Roumania and Transylvania of our days after the invasion of the descendants of Arpad (Sulzer, "Geschichte des Transalpinische Daciens," II., pp. 3—63).

It is evident why the Magyar Chauvinists cherish this "scientific writer," and therefore I am not at all terrified when Mr. Bourchier threatens me with such "well-known scholars and principal authorities." The very existence of a people cannot be contested with dead letters taken from dubious writers, because every humble cottage presents its living arguments which are of the greatest account for the modern historian.

Mr. Bourchier credits us with the foolishness of believing ourselves to be of the flesh and blood of Julius Cæsar. What we really believe is that the Roman colonists, as Eutropius says, were brought by Trajanus in "infinitas copias hominum transtulerat ad agros et urbes colendas," that these colonists Latinised the Thraco-Illyrian peoples, the Dacians, the Gets, and by that process was moulded a Neo-Latin people, the Roumanians. It was the same phenomenon by which the English life and civilisation takes new form and expression in the Anglicised British colonies. But, anyhow, will Mr. Bourchier kindly allow me to oppose his "scientific writers" with some humble chroniclers and historians, as: Anonymus Bellæ regis notarius, Eutropius, Gibbon, Ubicini, Thierry, Mommsen. Edgar Quinet, Rambaud? Regarding the Bulgarian Chauvinist, I had better point out a new book of Professor Georgevitch, "Macedonia, pp. 226-227.

Roumania is a modern name, but the name of Vlachs is a very old one (could be found even in Froissart), and is nothing more than a form from Gaulois (Welches) (Rambaud). The Germans called the Northern Italy "Waelchenland."

The force of nationality cannot be produced artificially. It must grow up and blossom as a flower. Therefore, we think, the work of genealogists who condemn the traditions and the past of the nations "is held to be of no account" by modern historians.—I am, etc.,

D. N. CROTOM.

TANGIER TO TEHERAN.

A case of witch-hunting found its way into the Patna High Court lately, when seven men who were accused of murdering a "witch" appealed against a sentence of transportation for life. They won their case, and were set at liberty, and we may therefore conclude that they were innocent of the crime. But that does not affect the fact that, according to the prosecution, some people were sufficiently sure that the "witch" was responsible for a cholera epidemic to take on themselves the risk involved in punishing her. These persons unknown went to her house, beat her to death, and afterwards burnt her body. It is an unpleasant little story, but it serves to show that in the East, as in the West, when ignorant people get frightened they are usually very cruel; and that they not infrequently take risks that they would never dream of taking in their saner moments.

***

Either the "hunger strike" has been found not to pay, in this country, or else the authorities have—very wisely—decided not to give the "hunger-strikers" the advertisement that seems to stand them in stead of more wholesome and more solid support. At any rate, we have, fortunately, heard nothing of such strikes or strikers, though we have heard rather too much of other varieties. But in India the foolish form of protest still survives. A Calcutta message reports that in June thirty-six State prisoners in Hazaribagh Jail resorted to hunger-striking, and that "some of them are prepared to starve themselves to death." As I have observed before, the obvious course to follow is to let them make good their "threats," if they have the grit to do it. The State would be freed from a lot of useless creatures, and very soon "hunger-striking" would die a natural death also. Of the three dozen "strikers" referred to, the majority are graduates of the Calcutta University and one is a college professor. I am not surprised to learn that their list of grievances is a long one, and that most of the said grievances are of a petty nature. If they had real cause for complaint, they would almost certainly adopt some wiser way of drawing attention to it.

***

Apropos of strikes, I note that the *Sudan Times* reports a strange rumour "that the bakers in Khartoum have secretly agreed to go on strike at an unexpected time, as they claim that the tariff prices for bread do not allow them any profits in view of the high prices of wheat, fuel and labour." The *Sudan Times* expresses a very natural scepticism regarding this rumour, pointing out that the bakers would probably "make representations in a proper manner to the local authorities" before doing anything so melodramatic as suggested. But to me the fact that one hears of strikes of one kind or another all over the world is symptomatic. We hear and read a great deal about the "unselfishness" of everybody nowadays, and if we accepted the Press view of humanity we should be forced to think that the Millenium had come—except in Central Europe, of course! I fear, however, that some selfish people still survive, and that they are ready—whether in the East or in the West—to turn the Great War to their own personal advantage whenever and however they can do so. The Khartoum bakers and the London "conductorettes" are, after all, only human; and the latter, at least, evidently want to be very well paid for "doing their bit," "keeping the home fires burning," and so forth, and so on.

***

A hard case seems to be that of a man arrested by the Hyderabad police as a deserter, who, according to the official account, "was arrested at about 1 a.m., and was then wearing only a shirt in order to pretend that he was mad." Much depends on the length of the shirt, one supposes. In these days—or nights—most of us wear pyjamas, no doubt; but has the night shirt *quite* died out? Suppose the "madman's" p.j.'s had been stolen or mislaid, should he, if he wished to look for them, have gone out "mid nodings on"? Really, I have no wish to interfere with the Hyderabad police or to cast aspersions of any kind on them; but it seems a bit rough to call a man mad merely because he chose to walk abroad in the night clad only in a shirt. Now, if he had worn *no* shirt——!

CORSAIR.

The Tangier correspondent of *The Times* reports the death recently, at Marskesh, of Madani Glaoui, the most important of the great hereditary Kaids of Southern Morocco. He adds:—Madani Glaoui's influence was great, and he held absolute sway over the Atlas and Trans-Atlas tribes almost as far as Tafilet. He was a man of energy, much intelligence, and great courage, and was the stedfast friend of France. He rendered invaluable service in maintaining law and order in those turbulent districts.

Can you offer us

consignments of the . . . .
NATURAL PRODUCTS
of your Country? . . . . .

COCONUT OIL
PALM OIL
OIL NUTS
OIL SEEDS
GUMS
FIBRES
COPRA

These are of great interest to us, and we should like to know what you can offer us in this way. All Natural Products interest us, and we shall be glad to negotiate for large or small shipments.

We are prepared to finance consignments when necessary.

PRESS ON THE NEAR EAST.

Armenia and the Armenians.

Writing on "Turkey and Armenia" in the *Contemporary Review*, Prof. G. Thoumaian discusses proposals put forward by Mr. Brailsford for the reconstruction of Turkey. These Mr. Thoumaian does not approve of. The most interesting part of his article is that in which he discusses the future of Armenia, and institutes a comparison between the Jews and the Armenians. He writes:—

Armenia is such a well-defined country historically, geographically, and from the point of view of architecture, that even a handful of Armenians would be able to assert their rights and claims to it. A few generations of peaceful lives would be quite enough for the prolific Armenians to fill the country and to bring it to great prosperity. At the date of their emancipation Greece and Bulgaria had only a few hundreds of thousands of Greeks and Bulgars respectively.

Lately, through the generosity of the British Government, justice has been done to the Jewish race in assigning Palestine to be their home. Centuries of deprivation and injustice did not prevent England from finding out the real and original owners of the land. There are no Jews in Palestine, yet none would deny or doubt Palestine to be the Jews' fatherland. Why so? Because history proves it; the geography of the land is Jewish; names of towns, villages, valleys, mountains, rivers, and lakes are connected with Jewish history; the soil is soaked with Jewish blood, the graveyards are filled with Jewish ancestors, and, above all, the heart of every Jew is attached to the land, and their eyes, from all parts of the world, are turned to Mount Zion.

The case of Armenia bears remarkable resemblance to that of Palestine. It has been identified with the Armenians as their historic home for over 3,000 years. The soil is soaked with their blood. The land is covered with Armenian monuments of all ages. The earth is full of the ruins of their ancient monuments or the graves of their ancestors. One cannot travel in any direction through the country without coming across scenes of great importance connected with the history of their struggle for right and liberty.

In one important feature, however, the case of Armenia differs from that of Palestine, and her claim is stronger. While Palestine had for 2,000 years ceased to be inhabited by Jews, Armenia, on the contrary, was all the time inhabited by the Armenians; and it is only since the war that the Turks have, it is said, cleared Armenia of them by massacring and deporting them, in order to be able to say, with Mr. Brailsford, that "one cannot make a State without inhabitants." If, therefore, Palestine, without Jews, can be assigned as the home of the Jews, the more so, surely, can Armenia be assigned to the Armenians, where, until lately, Armenian communities, towns, and villages were thriving, and where the hearths of their ruined homes are still smouldering.

The "Gippo" L.C.

A correspondent in Egypt sends to *The Times* an account of "The Egyptian Labour Corps." From this we take the following passages descriptive of the men:—

. . . . Cairo is Mecca for most of them nowadays. A large proportion, it is true, are frankly looking forward to a debauch in which *hashish*, gambling, and other seductions figure prominently; but to many others, more provident or less inclined to dissipation, the holiday is merely a change of work, and before long they can purchase with the fruits of their industry a camel or a few *feddans* of land wherewith to lay the foundation of a competency for their old age. The spendthrifts, having exhausted their resources, re-enlist again and again in the E.L.C.; the wise men may return once or twice, but thereafter the corps sees them no more.

In physique the great majority of these men are lithe and well-muscled; not a few can carry a 5-cwt. load for a short distance, and a twelve-hour day does not unduly fatigue them. Some, too, are quite remarkably intelligent; the writer knows of one who mastered the art of traction-engine driving in four or five days. He hailed from the Sudan, and these Sudanese, it is generally conceded, are more able, and decidedly more willing, than the ordinary "Gippo." Their weak point—speaking of them collectively—is their eyesight; it is astonishing how many of them are purblind, or have defective vision of one sort or another. Disease is the cause in some cases, but in many others the pupil of one eye was pierced by the mother shortly after birth in order to render the future man unfit for military service.

Jugoslavia.

The following passages are taken from an article entitled "The Jugoslav State: A Need of To-day," contributed to the *Daily Telegraph* (August 16) by Dr. E. J. Dillon:—

The Southern Slavs form one race, with three ethnic names—the Serbs, the Croats, and the Slavonians. They are separated from each other by different religious tenets or liturgies, cultural tendencies, historical and political traditions. Thus the Serbs are members of the Orthodox Eastern Church, whereas the Croats and Slavonians are Catholics, and their culture is Western. But all three branches speak one and the same language. So little does the Serbo-Croatian idiom differ in the mouths of these three peoples that even the uneducated peasants of any one of the three understand with ease a conversation carried on by people from the other two. The only divergencies from the normal worth mentioning occur in the Slavonian, and yet they offer no difficulties to the Croatians or the Serbs. This is an important fact which makes for ethnic unity. At a celebrated trial held in Milan a few years ago the Sicilian witnesses who spoke only their own dialect were not understood by the Court, which had to employ sworn interpreters to translate their evidence into Italian. Yet they were all Italians. Among the Jugo-Slavs such a thing would be impossible.

And yet it was not until the nineteenth century, when the principle of nationality was preached by Mazzini, Manin, and other humanitarians, that the idea of uniting these three peoples into one political community was harboured and disseminated. The first form which this idea assumed was that of a proposal to bring together the three peoples under the sceptre of the Habsburgs, but after the battle of Sadowa, when Austria, bereft of her independence, was bound to the chariot of Germany, this project was given up for one which placed the political centre of gravity of all the Southern Slavs in Belgrade. But it was not until the Obrenovitches, in the person of King Alexander, were eliminated, and Austria's ascendency was challenged, that the idea took deep root. Different politicians and publicists, however, favoured different projects, but all agreed that the three ethnic fragments must be fused into one, and as far as feasible their historical traditions harmonised. It was also accepted as axiomatic that Serbia, who belongs to the Orthodox Church, and was brought up on Byzantine lines, stands to gain much if only she will bring herself to look to the West in future, instead of Eastward, as heretofore.

The antagonism which subsisted among these peoples in the past has of late years been to a large extent assuaged. Passion had subsided. But there is still room for progress. The Serbs employ the Cyrillic alphabet, which is almost the same as the Russian, and they use the Julian calendar; whereas the Croats and Slovenes write the Latin alphabet and count their months and years according to the Gregorian system. In these matters conformity offers no serious difficulty. Then a large percentage of the Bosniaks and Herzegovinians are Mohammedans, and their traditions are accordingly very dissimilar to those of their Christian brethren. Still, there is no invincible antagonism between them. The acknowledged leaders of all the Jugo-Slavs are naturally Serbs, largely a pastoral people, whose upper classes were assimilated by the Turks centuries ago, and who are, therefore, profoundly democratic to-day. It has been asserted that the culture of the Croats, whose aristocracy maintained its nationality and its social influence, is superior to that of the Serbs, but so long as the Serbian kingdom subsisted and expanded, Serb leadership was questioned only academically. What arrangements will be made after the war it is at present impossible to forecast, but in all probability all parties would be glad of friendly counsel and help from the Allies.

INDIAN PENSIONS.

The Secretary of State for India has decided to alter the conditions under which Indian Good Service Pensions may be awarded to officers of the Indian Army and Indian Medical Service, to officers of Royal Artillery selected for continuous Indian service, and to officers of Royal Engineers who have elected for continuous Indian service or who have acquired a right to an Indian retiring pension.
