FEDERATION OF BRITISH INDUSTRIES.

Proceedings at Annual Meeting.

The annual general meeting of the Federation of British Industries was held last week at the Connaught Rooms, Great Queen Street. The proceedings commenced on October 29, when a special general meeting was held, when the new constitution was formally approved. On the following day the retiring president, Sir Richard Vassar Smith, delivered his presidential address. He remarked that the federation had now commenced the third year of its existence and continued to grow and thrive. It had nearly doubled its membership and considerably more than doubled its strength. A year ago it represented 581 members and 78 trade associations; to-day the membership was 951, in which number 164 trade associations were included. This was a remarkable result and a striking tribute to the founder of the federation, who realised the need for a national organisation of this character. He wished to congratulate the committee which had drawn up their new constitution. If an organisation of that size was to avoid stagnation it was essential to provide it with an elastic constitution, so that each section might make its voice duly heard in the governing body. Such a constitution they now had; and he appealed to all connected with the group and sub-group committees to ensure that vital force might be breathed into the skeleton which had been evolved. A distinctive feature of the past year had been the organisation of the Parliamentary side of their work. Under the chairmanship of Sir Rowland Barran, the committee of this group had met with considerable success. Their other activities were set forth in the report, and no one could doubt that the federation was justifying its existence by practical results. It was also evident that their activities were founded on sound ideals. In the past it had been the object of unjustifiable criticism and suspicion, but that was fast dying out, and he hoped that the discussions which were to follow would put an end to it altogether.

The president went on to refer to the various questions which were to be discussed, pointing out that the most urgent and difficult was the tariff question. They were now within sight of being able to present to the Government a national policy which would meet the requirements and safeguard the interests of every trade. Another vital matter of State policy was taxation. The resolution which would be proposed on this subject sought to define the principles which should guide the Government in apportioning taxation. Other important subjects they were to consider were labour, education, housing, and the organisation of industry through trade associations. It would add enormously to the strength of the federation and to British industry generally if their huge membership would definitely adopt the policy of buying each other's products in preference to foreign goods. Finally, it would be impossible to direct the process of reconstruction effectively without the co-operation of industry.

Sir Richard Vassar Smith then proposed that Sir Vincent Caillard should be the president for the coming year. This was seconded by Mr. Dudley Docker and unanimously agreed to.

The following gentlemen were appointed vice-presidents:—Lord Aberconway, Sir Rowland Barran, M.P., Sir A. Herbert Dixon, Bart., Sir Algernon F. Firth, Bart., Sir Robert A. Hadfield, Bart., Mr. E. Manville, Sir H R. Rowell, K.B.E., and Mr. W. P. Rylands.

Sir Vincent Caillard, Mr. F. Dudley Docker, C.B., Sir Algernon F. Firth, Bart., Sir Robert A. Hadfield, Bart., and Sir Richard Vassar Smith were appointed trustees. Messrs. W. B. Peat and Co. were appointed auditors.

Sir Algernon Firth proposed a resolution impressing on the Government and country the necessity of maintaining the principle of private ownership of capital, and encouraging the free flow of capital into industry and of preserving and encouraging that spirit of individual enterprise and initiative which was the vital principle of national life. Mr. H. R. Armitage seconded the resolution, and it was carried unanimously.

Mr. Dudley Docker moved a resolution emphasising the supreme importance of British industry, and urging upon the Government the necessity of recognising the importance of industrial interests and of consulting the representatives of employers no less than of employed.—The resolution was seconded by Mr. P. H. Lockhart and carried unanimously.

Sir Vincent Caillard moved a resolution on the subject of national economic policy, remarking that they had reached the point when they could look at the subject free from old prejudices and controversies. Their object was to frame a policy that should safeguard the requirements of all those interests, whether by way of protective duties, maintenance of free import, subsidy, transport facilities or otherwise, and thus enable each industry to attain its maximum productions. The whole strength of the country and the whole well-being of all classes, and of labour especially, rested on production. The resolution also included declarations in favour of Preferential treatment for the Empire and our Allies, and urged the Government to set about the preparation of provisional schemes immediately in order to apply a practical test to the problems involved.—It was seconded by Mr. Muspratt and carried unanimously.

A resolution was moved by Mr. T. Biggart urging the Government so to regulate and apportion taxation as to encourage the flow of capital to industry and increased production; the provision of adequate reserves to meet the cost of renewals and extensions and the maintenance by manufacturers of adequate stocks.—The resolution was seconded by Sir William B. Peat and carried unanimously.

At the meeting on October 31 resolutions were carried dealing with education, housing, technical education, industrial unrest, and the constitution and co-operation of industries.

Messrs. Harrison and Crosfield, Ltd., have opened a branch office in Cochin for their export trade subordinate to their Quilon office.

LANCASHIRE COTTON.

Effects of Uncertainty.

(From Our Own Correspondent.)

MANCHESTER, Wednesday.

Business in the market continues disorganised by the very uncertain outlook. The confidence of traders has been severely shaken, and it may be some time before the conditions are such that buyers will be disposed to place orders with any freedom. Spinners and manufacturers at the moment are losing ground. At the time of writing the official estimate of the Egyptian cotton crop has not been published. Owing to prices being fixed there is less interest than usual in the probable out-turn. Egyptian yarns remain firm. A very slack demand has been reported in piece goods for Egypt. It is said that merchants in Cairo are nervous as to the future course of events. There should be big openings for trade, however, in that part of the world before long. Certain houses with connections in East Africa have met with an encouraging inquiry. Business for India has been very dull, and more cases are being mentioned of contracts being cancelled. The rains in the Bombay district this season have been a failure, and the grain crops are suffering. American yarns have been sluggish at very irregular rates. All kinds and qualities are more plentiful than a month ago and the margin of profit for spinners is being steadily narrowed. Some trade has been done in yarns for France and shippers to the countries of Northern Europe are looking forward to sending goods on a larger scale in the near future.

Cotton Trade Wages.

The demand of the cotton operatives of Lancashire for an increase in wages has now been considered at joint conferences between the employers and the trade union officials. At the end of last week a discussion took place between the Master Spinners' Federation and representatives of the Operative Spinners' Amalgamation and the Cardroom Operatives Amalgamation. In reply to the application of the workpeople for a rise of 40 per cent. on current rates, which means an advance of about 66 per cent. on list rates, the employers offered 40 per cent. on list rates, which would bring the total advances since the beginning of the war to 100 per cent. on list rates. The trade union officials, however, refused the offer, and they are now considering what further action shall be taken. Last Tuesday the weaving employers met the operatives in that section of the trade, and in reply to the request for an advance of 50 per cent. on current wages, which means about 82 per cent. on list rates, the masters made a long statement, in which they referred to the application as unreasonable and unjustifiable, and suggested that the claim of the operatives should be modified, as it was quite impossible for any agreement to be come to on the basis of the present demand. The trade union officials stated that, owing to the unsatisfactory reply, they had decided to place their case before the Government Committee on Production.

COMPANY NOTES & REPORTS

South Indian Railway.

The report of the South Indian Railway Company for the year ended March 31 last states that the total length of line worked was 1,829 miles. Gross earnings were £2,357,778, against £2,168,884; working expenses £1,010,946, against £1,077,168; net earnings being £1,346,832, against £1,081,716. Compared with the previous year there was an increase of £198,894 in gross earnings. Notwithstanding the higher prices that have to be paid for all stores, materials and fuel there was a decrease of £66,222 in working expenses, due to the unavoidable postponement of repairs and renewals, and to a reduction in train mileage owing to the necessity for conserving rolling stock. Coaching earnings increased Rs12,34,704 (£82,313), goods Rs16,85,460 (£105,697), and other sources Rs1,92,993 (£12,866). Steamboat earnings showed a decrease of Rs29,744 (£1,982). Passengers carried numbered 36,511,676, against 44,559,356, the amount received being £1,032,665 and £975,146 respectively. The result of increased fares had been to decrease the number of third-class passengers carried by 8,057,074 and of second-class passengers by 651, and to increase the earnings by £34,185 and £14,467 respectively. First-class traffic has, however, largely increased in numbers and amount. Earnings from parcels traffic amounted to Rs14,06,341 (£93,756), an increase of Rs3,47,129 (£23,142). There was a decrease in goods traffic carried for the public of 35,078 tons, but an increase of £100,331 in earnings. There was a decrease of 135,630 in passengers carried on the company's steamers and of Rs58,592 (£3,906) in the earnings. The net loss in working the steamer service amounted to Rs2,86,156 (£19,077). Revenue account to the end of October last shows total receipts were £115,339. Interim dividend and Indian super-tax for 1917-18 absorbed £10,250, leaving a balance to credit of surplus profits account, subject to income-tax and excess profits duty, of £105,089. The surplus profits are by far the highest so far received, but there is nothing for congratulation in this fact, because the larger earnings are due to the practical suspension of expenditure on repairs and renewals owing to the difficulty of getting the requisite materials. As, however, the net earnings are so large, the directors decided to pay an interim dividend in July last of 1½ per cent., and now recommend a final dividend of 2 per cent., making 3½ per cent., which, with the 3½ per cent. paid as guaranteed interest, makes a total distribution for the year of 6¾ per cent., as against 5½ per cent. last year. Meeting, Finsbury Pavement House, E.C., 13th instant, 2.30 p.m.

National Bank of India.

The report of the National Bank of India for the half-year ended June 30 last states that net profits, after providing for all bad and doubtful debts, amount to £177,228; £139,829 was brought forward, making £317,057. An ad-interim dividend at the rate of 20 per cent. per annum, free of income-tax, was paid on September 25 last, amounting to £100,000, leaving £217,057 to be carried forward. The balance-sheet shows:—Liabilities—Capital paid up, £1,000,000; reserve fund, £1,350,000; current, fixed deposit and other accounts, including provision for bad and doubtful debts and contingencies, £26,719,205; bills payable, £1,693,279; acceptances for customers, £634,482; profit and loss, £317,057; total, £31,714,023. Assets—Cash on hand, at call and at bankers, £5,466,304; bullion on hand, £2,709; together £5,469,013; Indian Government Rupee securities, £386,852; War Loan, Indian Government Guaranteed Debentures and other securities (of which £16,350 War Loan lodged with Bank of England as security for Government accounts), £2,057,642; house property and furniture, £180,528; bills of exchange, including Treasury bills, £14,421,088; discounts, loans receivable and other sums due to the bank, £8,564,419; customers for acceptances per contra, £634,482; total, £31,714,023.

INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following weekly cabled news received from the Director-General of Commercial Intelligence, dated October 31:—

Rain insufficient everywhere. Famine conditions expected in Bombay Presidency.

Cotton.—Fine Broach, ready delivery, quoted 800 Rs. (the same as last week).

Two officers have been deputed to formulate a scheme for a hydrographic survey of India.

Dated November 6.

Light rains in parts of Bombay, Bihar and Bengal. Situation is generally unchanged.

Quotations for fully good Broach for April—May delivery fluctuated widely. The highest being Rs.798 and the lowest Rs.675 a candy, closing at Rs.685.

A LANGUAGE FOR COMMERCE.

Dr. John Pollen, C.I.E., presided at a luncheon given to the members of the Greek Commercial Mission by the Common Language Committee at the Holborn Restaurant on November 2. The toast of "The Delegates" was proposed by Mr. A. Barton Kent, who, speaking on the means of increased commercial intercourse with Greece, said Esperanto was so easy that learning it gave courage to attack the national and classical languages.

M. Michalocopoulous said that he thought Esperanto should be introduced into the schools of all nations as an auxiliary language and a means of communication between civilised peoples. It had been approved for this purpose by the Government of Greece.

Lord Lamington, who replied to the toast of "The Visitors," said that the nation to benefit most by a *lingua franca* was our own, on account of our national indolence in learning foreign tongues. The great ideal of this country was freedom; it had given freedom of the seas for the benefit of the world, and nothing could tend to break down the barriers between nations and to promote free intercourse more than a common language.

At the seventy-eighth ordinary general meeting of the Peninsular and Oriental Steam Navigation Company, to be held on December 11, at 11 a.m., the directors, after providing for the usual dividend at the rate of 5 per cent. per annum on the preferred stock, less income tax, will recommend a dividend on the deferred stock of 6 per cent. for the six months, together with a bonus at the rate of 6 per cent., both free of income tax, making, with the interim dividend of 6 per cent. paid in May, a total distribution on the deferred stock of 18 per cent. for the year. Dividend warrants will be posted on December 16.

ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Street, Wednesday.

There has been rather more activity this week in spite of the practical cessation for Egyptian account, owing to the fact that Egypt can only buy here, and that for the time being, in many instances, prices are lower over there than on this side. It is said that the lower prices in Egypt are due to the belief in some quarters that with the end of the war will come a much less prosperous state of affairs; but the best opinion seems to be that, whilst this may prove to be the case to some extent as regards certain industrial concerns which have benefited largely from the war, on the other hand, most other investments, especially the Agricultural Land shares, should have prosperous times ahead of them after the war, owing to the big demand there is likely to be for a considerable time to come for their produce, and the fact that they will be able after the war to get delivery of drainage pumps and other agricultural machinery required for the improvement of the land.

In Government stocks Egyptian Unifieds have improved ½ to 92½ xd, whilst the 3½ per Cent. Prefs. are also ¼ better at 78¼.

In Bank shares the market continues very quiet, and there are no changes of prices to report.

Amongst Railways Delta Lights have had a big jump this week of ⅞ to 8¼, with very few shares changing hands, because as soon as some serious buyers came along the floating supply of shares was found to be exceedingly small.

In Land descriptions a fair business has been done in Aboukirs round 23s., and Behéras are ¼ down at 14¼, after being done as low as 13¾. Delta Lands are 3d. firmer at 17s., whilst, on the other hand, New Egyptians, on some big profit taking, are 7½d. lower at 21s. 4½d. There has been some good buying of United Egyptian Lands, which are fractionally firmer at 2s. 7½d., whilst a very substantial business has been done in Sidi Salem shares, which are 1-32 firmer at 2 23-32. A feature has been the demand for Egyptian and Foreign Trusts, which close to-night 2s. higher at 16s. 9d.

In Miscellaneous shares a big rise has again to be recorded in both Salts and Sodas and Khedivial Mail shares, which are closing to-night nearly 10s. up, in each case at 75s.

In Greek securities there has been absolutely no change to record since last week, and business has been on the smallest possible scale.

Oil Shares.

Roumanian Consols are 18s., a rise of 1s 6d. on the week, and other Roumanian shares have been a strong market. Anglo-Roumanian Petroleums closed at 9s. 9d., and Traian Roumanians, which have been in special request, are 10s. 1½d. Russians have shared in the demand consequent on the developments in the position. Bakus are 1s. up at 5s. 9d., while North Caucasians are 1 13-32, a rise of ⅛.

Paris Bourse.

Egyptian Unifieds are 94 (against 94.50), and Suez Canals are unchanged at 5,400. Other prices are: Serbian 1895's, 62.40; Turkish Unifieds, 74 (against 74.55); Banque d'Athenes, 105.75 (against 100.50); Credit Foncier Egyptiens, 775 (against 790); Land Bank of Egypts, 200 (against 207); and Ottoman Banks, 585 (against 585).

Every description of Banking Business undertaken on most favourable terms.

THE IMPERIAL BANK OF PERSIA

(Incorporated by Royal Charter, 1889).

CAPITAL (fully paid) - - - £650,000
RESERVE - - - - - £190,000
Reserve Liability of Shareholders - £1,000,000

London Office: 25, Abchurch Lane, E.C.4.
Chief Office in Persia: Teheran.

Branches at Anwar, Baghdad, Birjand, Bushire, Hamadan, Isfahan, Kazvin, Kerman, Kermanshah, Meshed, Mohammerah, Nasratabad, Resht, Shiraz, Sultanabad, Tabriz and Yezd. Agency at Busreh

The Bank is prepared to transact Banking business of every description in and connected with Persia and Mesopotamia; and in London grants Drafts, Telegraphic Transfers, and Letters of Credit, and negotiates or collects Bills on Persia and the Near East.

BANQUE FRANCO-SERBE.

Head Office—

14, RUE LE PELETIER, PARIS.

Paid Capital - Frs. 12,000,000

Central Office—Belgrade.

Branches—Skoplye (Uskub), Bitolj (Monastir).

London Office—

27, THROGMORTON ST., E.C.2.

Correspondence is invited from all those having Serbian interests or contemplating business with Serbia when communication is restored.

BANK OF MADRAS

Capital (Fully Paid up) - - Rs.75,00,000
Reserve Fund - - - - Rs.50,00,000

Head Office: MADRAS.

Branches.—ALLEPPEY, BANGALORE, BIMLIPATAM (*Outstation*, Vizianagram), CALICUT, COCANADA (*Outstations* Narsapur and Rajahmundry), COCHIN, COIMBATORE (*Outstation*, Erode), COLOMBO, GUNTUR (*Outstation*, Bezwada), MADURA, MANGALORE, MASULIPATAM, NEGAPATAM, OOTACAMUND, SALEM, TELLICHERRY, TRICHINOPOLY, TRIVANDRUM, TUTICORIN, and BELLARY.

Current Accounts.—Opened on terms which may be ascertained on application.

Fixed Deposits.—The Bank allows interest on Fixed Deposits and receives small sums in Savings Bank. Rules and Terms on application.

Letters of Credit and Drafts.—Issued on the principal towns in India, Burma, and Ceylon.

Government and Other Securities.—Received for safe custody, Purchases and Sales effected and Interest and Dividends Collected and Credited to Account, or Remitted, according to instructions.

Loans and Cash Credits.—Granted, approved Mercantile Bills discounted and Bills of Exchange negotiated.

By order of the Directors,

W. B. HUNTER, *Secretary and Treasurer*

BANK OF BENGAL.

Capital, Fully paid up Rs.2,00,00,000
Reserve Fund Rs.1,58,50,000
Reserve for Depreciation of Investments Rs. 67,50,000

Head Office: CALCUTTA.

Branches: CLIVE STREET, PARK STREET, AND BURRA BAZAAR, CALCUTTA, AGRA, AKYAB, ALLAHABAD, BENARES, CAWNPORE, CHITTAGONG, DACCA DELHI, HYDERABAD (DECCAN), JALPAIGURI, LAHORE LUCKNOW, MOULMEIN, NAGPORE, NARAINGUNGE PATNA, RANGOON, SECUNDERABAD (DECCAN), SERAJGUNGE, SIMLA.

Agency in Bombay: ELPHINSTONE CIRCLE.

Current Accounts opened free of charge. **Fixed Deposits** received at interest.
Government and other Securities received for safe custody; purchases and sales effected.
Interest collected and **Remittances** made.
Loans and Cash Credits granted. **Discount Accounts** opened and approved. **Mercantile Bills** discounted.
Savings Banks Deposits received and interest allowed
Copies of Rules, Rates, etc., may be had on application at the Head Office and at any of the Branches.

By order of the Directors,

N. H. Y. WARREN,
Secretary and Treasurer.

BANK OF BRITISH WEST AFRICA, LIMITED.

ESTABLISHED 1894.

BANKERS TO THE GOVERNMENTS OF THE GAMBIA, SIERRA LEONE, GOLD COAST, AND NIGERIA.

Authorised Capital - £2,000,000 | **Called-up Capital - - £580,000**

NOTES OF THE WEEK.

The Great War is at an end. There are, perhaps, only two safe ways of giving expression to the feelings that the news has evoked; the one leads to a place of worship, the other to the streets, with a flag. The British nation has adopted both. A third way, that would make use of the printed word, is in the circumstances superfluous, and need not be attempted here. As far as the Near East was concerned, we could already welcome the dawn of a new era last week. The armistice granted to Germany supplies the framework of the picture, just as the actual conditions of peace will fill in the details. Here and there a few finished lines appear. The evacuation of Roumania by German troops has to begin at once; the Treaty of Bucharest with its annexures is cancelled; gold taken from the country has to be restored; there is to be reparation for damage done in Serbia, Montenegro, and Roumania. The future of these countries, as of their neighbours, now rests entirely in the hands of each. May the result be commensurate with the opportunity.

Those who have followed the controversy between the "Westerners" and the "Easterners" will have noted the fact that the armistice with Germany was signed six weeks—to the day—after the capitulation of Bulgaria. Nowhere has it ever been suggested that the military strength of the Central Powers rested on the support of the small Bulgarian army. But the course of events has justified those who held that a wedge driven through the Central Alliance in the Balkan Peninsula would not only prove a decisive military gain, but would also undermine the *moral* of the German and Austro-Hungarian peoples, as it would mean the complete collapse of the hopes centred in the East, which had been their main stimulus throughout the war. It is true that the great series of substantial victories on the Western Front had already begun; and it would be folly to suppose that Germany would have sued for peace unless a graver disaster than the defection of Bulgaria had threatened her. In the end, however, it was the irresistible combination of defeat on the battlefield and the crumbling of the national *moral* that led to the acceptance of the Allied terms for an armistice. The myopia that caused the importance of the Near East from the military point of view, as well as politically, to be so long overlooked is now, we may hope, a thing of the past.

An Allied Fleet has reached Constantinople, and the subsequent course of events in Turkey, we may hope, will be regulated in harmony with the conditions which are likely to prevail in that country when the final conditions of peace have been fixed. In the meantime, the first consideration of the Allied Governments must be the situation in Russia. An attempt must be made to reach that unhappy land with a view to rescuing it from its present *impasse*. It is to be hoped, too, that in Southern Russia the Allies will be more successful than the Germans were in finding grain with which to relieve the food situation in Europe.

The second declaration of war by Roumania against Germany deserves mention as a historical fact. The existence of the Treaty of Bucharest had troubled people outside Roumania. It was argued that here was a document bearing the signatures of Germany and Roumania; could the Allies acquiesce in its being treated as another scrap of paper? The scruple was wide of the mark, as there could be no question of Roumania having agreed willingly to the terms imposed upon her. But she met the doubts of the over-sensitive by declaring war on Germany—an act which carried with it the annulment of all treaties between the two countries—and so has set herself technically right. The step, which was taken on November 10, was rendered unnecessary by the terms of the armistice which the Allies required Germany to accept; for among the thirty-five clauses was one which provided, as already stated, for the cancellation of both the Treaties of Brest-Livotsk and Bucharest. The resumption of hostilities in Roumania did not take place, inasmuch as by 5 a.m. on November 11, Germany had agreed to withdraw her troops from that country.

As was to be expected, the turn taken by events made it impossible for M. Marghiloman, who represented pro-Germanism in Roumania, to retain the office of Prime Minister. The collapse of Austria-Hungary left the Roumanian people free to express their true feelings. Imposing demonstrations in honour of the Entente Powers took place at Jassy, beyond the reach of Mackensen's bayonets, and M. Marghiloman resigned. General Coanda is reported to be at the head of the new Ministry; but nothing is known at present of the composition of the Cabinet. The presentation of an ultimatum to the German Commander was one of the first acts of the new Government.

However bright the future of the Balkan Peninsula may be, there can be no doubt that the immediate out-

Digitized by Google

look is overclouded by the appalling shortage of foodstuffs. The Allies are confronted with the task of furnishing supplies to millions, and can afford to make little distinction between friends and enemies. Food, it is understood, is available; the chief difficulty is transport; but the problem is engaging the attention of the Allied Governments, and it is hoped that the first convoys of relief will soon be nearing the more urgent of their destinations.

A significant question was put to the Secretary of State for Foreign Affairs last week by Mr. Ronald M'Neill. Mr. Balfour was asked whether he could give any information as to the position of Montenegro in relation to the changes occurring in the Balkans; whether care was being taken that the preservation of Montenegrin nationality under its own monarchy should not be prejudiced without the consent of the Montenegrin people; and what steps it was proposed to take to ascertain under what conditions the people of Montenegro might be willing to join a Serbo-Croat federation or other form of political union. The reply given was that the points raised would certainly not be lost sight of, but it would be understood that it was not possible at present to discuss them by question and answer across the floor of the House.

The reference in Mr. M'Neill's question is to a subject of no small importance to the future peace of the Balkans, which cannot be ignored with impunity. THE NEAR EAST has always been unwilling to accept *ex parte* statements regarding affairs in the Balkans or to lend itself to widening the unhappy breaches that have kept the different peoples apart. It is, therefore, not prepared to believe without further confirmation all the reports that reach it of what is now happening in some parts of the Peninsula. It is in the interest of all the peoples, however, that the fullest publicity should be given to any attempt, or alleged attempt, to prejudice the relations between the different States, and for this reason it becomes a duty to indicate the nature of some of the mischief now said to be afoot. The trouble originates with the desire of a number of Serbians to secure the incorporation of Montenegro within the kingdom of Serbia before Serbs, Croats, and Slovenes meet together in conference to decide upon the constitution of the new Yugoslav State. The object, we have previously stated, may *per se* be entirely legitimate and all for the best; but so long as any influential body of Montenegrins hold the view that no decision can be reached on such a question until their country has recovered its independence and the people can record their opinion, it is manifestly wrong to press the matter.

The burden of these reports is to the effect that Serbian troops are taking advantage of their presence in Montenegro to prepare the ground for the incorporation of the country in Serbia at an early date. It is unnecessary to specify the methods that it is alleged are being adopted. Those who specialise in reports of "atrocities" in the Balkans have only to select any number of statements at random and make the necessary changes in names; they will then be able to form a shrewd idea of the activities that a large number of Montenegrins are convinced are being indulged in by Serbian troops. The difficulty can only be met in one way. The Serbian Government, if it wishes to live up to the standard set by the Allies in this war, ought to withdraw all its troops from Montenegro, and ought to discountenance officially all attempts to plead the cause of the absorption of Montenegro in Serbia before the Montenegrins can determine their own future. It will not be overlooked that both at Corfu, and more recently at Geneva, Yugoslav conferences have been held to which no invitation to be present has been given to Montenegro. The statement has been made, with what truth we do not know, that for the Geneva conference an invitation was sent—but too late for the meeting.

In this connection it has to be admitted that the Montenegrin Government has not made the most of its opportunities. Both Serbia and Montenegro have been freed from a foreign yoke; but while King Peter has already reached Belgrade, King Nicholas still remains in France. His place is clearly at Cettinje, and so long as he delays to return there he offers encouragement to the enemies of his country to misrepresent his action and the whole trend of events in the Balkans.

The joint official statement made by the British and French Governments regarding their policies in Mesopotamia and Syria is a timely and in every way satisfactory document. Their aim is "the establishment of Governments and national administrations deriving their authority from the initiative and free choice of the indigenous populations." In order to carry out their intentions, the declaration continues: "France and Great Britain are at one in encouraging and assisting the establishment of indigenous Governments and administrations in Syria and Mesopotamia. . . . Far from wishing to impose on the populations of these regions any particular institutions, they are only concerned to ensure by their support and by adequate assistance the regular working of Governments and administrations freely chosen by themselves. To secure impartial and equal justice for all, to facilitate the economic development of the country by inspiring and encouraging local initiative, to favour the diffusion of education, to put an end to dissensions that have been too long taken advantage of by Turkish policy, such is the policy which the two Allied Governments uphold in the liberated territories." History, we venture to think, will record that Great Britain's dealings with Eastern peoples during the Great War, from the shortest proclamation to the administration of Mesopotamia, were the inspired product of genius and true sympathy.

Apart from her interests as a constituent portion of the British Empire, India has special reasons of her own for sharing the emotions of relief and thankfulness which have swayed us during this memorable week. The menace to her whole future involved in Germany's bid for world dominion was recognised by her almost instinctively from the first, and was brought home more and more clearly as time went on by the revelation of the deep-laid and world-wide plots designed to overthrow the existing Government and establish once again that hideous anarchy of which she has had such bitter experience in the past. Then the collapse of Russia brought the enemy within measurable distance of that North-Western Gate through which so many conquerors have marched to plunder and destroy, and only a few months ago the peril was greater than we care to think.

India may be quite sure that had the enemy legions passed through that Gate they would have equalled, and perhaps surpassed, the infamies which she still associates with the names of past invaders from Mahmud to Nadir Shah. *Dis aliter visum:* thanks to the prowess of the Allied Armies, among which her own forces have held no undistinguished rank, that menace is now definitely removed, and while so much of Europe stands confronted with all the perplexities and anxieties resulting from the overthrow of the evil but effective dynastic system which has dominated it for so long, India, which has been spared the actual horrors of war, can turn with a conqueror's calm to the many and urgent internal problems which now press for a solution, and can devote her energies to the peaceful work of political, economic and social reconstruction.

In that work England and the Empire are ready and willing to help; but is it too much to hope that there may be no more of the pestilent talk about claims and rewards which has of late been prominent in a section of the Press? In these four years of trial India has been tried and has stood the test; in her own phrase, she has acquired merit, and the result is to be looked for, not in any internal "boons," but in the strengthening of her national character and the development of her national faculties. If, then, political advance is to be more rapid than seemed possible before the war, the reason is not that India has "behaved well," but that she has made progress towards the realisation of her higher self.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, October 7.

Major-General Sir Lee Stack, Acting Governor-General of the Sudan and Sirdar of the Egyptian Army, has arrived with Lady Stack and his staff at Alexandria, where they are staying at the San Stefano Casino. Sir Lee and Lady Stack were the guests of honour on Wednesday at a luncheon which the Sultan offered at Ras-el-Tin Palace, the other guests consisting of the Minister for War, Sir Ismail Sirri Pasha, and the leading Sudan officials at present in Alexandria. The previous afternoon his Highness was present at the tea party given in the Antoniades Gardens in honour of General Sir Reginald and Lady Wingate, whilst on Monday evening he gave a State banquet at Ras-el-Tin to the new Italian Diplomatic Agent.

To-day is the Moslem New Year's Day, and is observed as a Government holiday. Usually on this day a reception is held at the Palace, but as the Sultan's Accession Day is so close, that ceremony has been put off till then. An anniversary service in memory of the late Sultan Hussein was held in Cairo earlier in the week, and was attended by Prince Kamel Eddine and other members of the Sultan's family, the Sultan being represented.

The Wheat Situation.

The wheat situation continues to be acute in the towns, especially in Alexandria, and to a somewhat lesser extent in Cairo. Your Cairo contemporary, the *Egyptian Mail*, has secured a very interesting interview with Mr. Ross Taylor, the President of the Supplies Control Board, who spoke reassuringly of the situation. He pointed out that only four months have elapsed since the wheat harvest, which was normal in quality and yield, and consequently there was undoubtedly plenty of wheat in the country. The present difficulty —Mr. Ross Taylor declined to call it a crisis—is due to the unwillingness of the cultivators to sell, because they hope and expect that thereby they will be able to force up prices. To these hopes and expectations the President of the Supplies Board took the opportunity of dealing a death-blow, by asserting that he had not the slightest intention of raising the very generous prices already fixed, adding that the Government had made arrangements to requisition the supplies held by all those who refused to part with them in the ordinary way; and that these holders would find that their attitude would cost them dearly, as the expenses entailed by the requisitioning process would be deducted from the price payable to them. It will be noticed that the statements made by Mr. Ross Taylor confirm the notes which have appeared on this subject in this correspondence, and it is satisfactory to learn that the Government intends to deal drastically with those who for their own ends are making their urban fellow-creatures suffer so severely.

The Cotton Crop.

There is reason to anticipate that a material change for the better will be registered this season in the conditions under which cotton is purchased in the interior. Until the outbreak of hostilities the handling of the crop was almost exclusively in the hands of the large exporters, who dealt with the large consignments to the general satisfaction of all concerned. After the first year of the war prices began to fluctuate, with a rising tendency; and the small merchant, taking advantage of the situation, started to buy on an increasingly large scale. The high prices at Alexandria encouraged speculation, and the small merchants were able to offer extraordinary prices to the cultivators to such an extent that the large houses reduced their dealings in the interior to the minimum and confined their operations to purchasing ginned cotton at Minet-el-Bassel, as they did not consider themselves justified in entering into transactions which, to say the least, were speculative, and at times precariously so. As a result of this state of things, the small merchants in the interior have during the past two years handled the bulk of the crop, and have made enormous sums out of their deals, the rising prices having helped them very considerably.

To-day, however, the situation is about to undergo a complete change. The arrangement between the British and Egyptian Governments for the purchase of the entire cotton crop at a fixed price has removed most of the speculative features from the market, and the small merchant has no longer the same incentive to buy recklessly, as he has done in the recent past. His only chance of profit is speculation on the allowances which he may be able to get from the Cotton Control Commission above the price fixed for F.G.F. Sakellarides, and it is to be foreseen certainly, from the prices which that element is offering to the cultivators, that his fingers will soon be burnt in the process. The fixing of the price of cotton in Alexandria will undoubtedly lead to the majority of the small dealers restricting their activities to the minimum and to a resumption by the large houses of their purchasing operations in the interior. The difficulty in obtaining cotton sacks will also in a great measure assist in bringing about this return to pre-war conditions, for the large houses all have their stocks, and the smaller dealers merely buy from hand to mouth, or at the last moment, and at present cannot satisfy their requirements. The re-entry of the large houses into the market in the interior and the elimination of the small dealer, at any rate on the scale on which he has more recently operated, will in every respect be for the good of the market and of the country, for it will remove the speculative factors, it will reduce to a minimum the exploitation of the smaller cultivators, it will facilitate the control of the crop, and it will altogether give a healthier complexion to the whole operation of moving the cotton crop.

The Telephone Administration.

When the Egyptian Government purchased the telephone system from the Telephone Company of Egypt the control of the work was handed over to the State Telegraphs Administration, which created a new department for the purpose. From this one would have imagined that the new service would be brought into line with the other Government services, and would carry on its correspondence in English and Arabic. But this is not so; the heads insist on addressing their clients in the French language, which has for some time now, especially since the declaration of a British Protectorate, been replaced by English in official correspondence. It is true that the old contracts, which form the base of the new agreements, were all in French, and that it would have entailed considerable work at a time when the staff is limited to draft them afresh in English—they have, all the same, had to be altered in order to incorporate the change in proprietorship—but the same excuse does not apply to the ordinary correspondence with subscribers, especially in connection with the contracts, which is being conducted in French, and which could just as easily be carried on in English. It would be interesting to know whether this introduction of the French language into a new administration as its official means of correspondence with the outer world has the approval of those responsible for the higher and political administration of this country.

KING NICHOLAS ON BRITISH SOLDIERS

At the conclusion of the dedication of a war memorial in the form of stained glass windows in the Chapel of Clayesmore School, Winchester, a ceremony performed on November 8 by the Bishop of Guildford, the following communication addressed by the King of Montenegro to the Headmaster (Mr. Alex. Devine) was read: "In spirit I take a very sincere part in the touching and sacred ceremony to be conducted by the Bishop of Guildford in commemoration of the glorious death of noble British boys on the field of battle for right and justice. What fine fellows these are who have fallen not only for the greatness and glory of their great country and their beloved King, but also for liberty and the freedom of small nations. God bless their noble souls."

PRINCE ALEXANDER OF SERBIA

The Serbian Press Bureau forwards the following translation of a letter addressed by King Peter to the Crown Prince Regent Alexander, upon the occasion of his Highness's promotion to the rank of General.

We have already announced that upon the occasion of the recent brilliant victories which brought about the liberation of Serbia his Royal Highness Crown Prince Alexander, Commander-in-Chief of the Serbian Army, was promoted to the rank of General. Already in June, as we said before, the Serbian Government submitted the request to the King that he would, on the occasion of his own name-day of St. Peter's, confer this high rank upon the Crown Prince, who had long earned it by his soldierly merit and the services rendered to his country. But the Crown Prince expressed the wish that this act should be deferred till later, until after the enemy's defeat. The moment arrived, and upon the renewed request of the Serbian Government King Peter despatched the following to the Crown Prince Regent:—

His Royal Highness Prince Alexander, by the fulfilment of his duty in the recent wars of 1912-1913 against the Turks and Bulgars, in that most glorious period of our national history, "won his spurs" as a leader and hero, who by his merits personifies the present and future of our people. In the brilliant military successes scored by the Serbian armies in 1912-1913 his First Army forced the successful decision by the battles of Kumanovo, Bitolia, and the Bregalnitza. These victories were of decisive importance.

Under his command the Serbian army attained the height of its glory in the campaign of 1914. It amazed the world by its victories over the Austro-Hungarian army. During the unexpected onslaught of the Austro-Hungarian armies upon Serbia the world was the spectator of an unequal struggle, recalling that between Goliath and David. In those days, when the whole world, aghast, was prepared to watch the consummation of an unprecedented international crime, the youthful Commander and his young army, ill-equipped and insufficiently armed—in that dramatic moment, we repeat, the youthful Commander and his army, small but imbued with self-reliance, calm and collected, went forth to meet its savage attacker, met him on the Cer and Jadar, and in the first encounter compelled him to retreat across the Danube and to stand on the defensive. The whole world was filled with admiration by our victory at Rudnik. The enemy, expelled from our country, with loss of his arms, guns and rolling-stock, was completely defeated.

Then came the year 1915. Attacked on all sides by forces numerically immensely superior, Serbia's fate was that of a hero-martyr. Her neighbour, the Bulgar, stabbed her in the back at a most critical moment. Our troops, in their defensive campaign, invariably scored victories redounding to their honour; but the enemy, helped by the most adverse concatenation of circumstances imaginable, drew his chain ever more tightly round the devoted Serbian people and its gallant army.

The withdrawal across Albania in the winter, through trackless and desolate country, marked the highest pinnacle of effort and self-sacrifice. Our Allies, cut off from us by the sea, looked on with dread and apprehension, wondering what would be the end of our retreat across Albania and over the sea. We ourselves set fire to our rolling-stock and destroyed our artillery. We covered Albania with our dead, and with empty hands, in rags, starved, and, so to say, half-dead, we arrived in January and February of 1916 in Corfu.

Our enemies heaved a sigh of relief. They thought it was all over with the Serbian army. It fell to our heroic and energetic Commander, Prince Alexander, to play the part of saviour to his heroic army, an army crowned with undying glory.

On the way through Albania he fell sick and had to undergo an operation. Yet he hastened across the ice-bound Albanian crags, never thinking of himself. His youth, his love for the Serbian people and his army, not only revived the courage of the men, but set the example of energy and boundless faith in the happy issue of this gigantic struggle. He travelled to Western Europe in order to gain fresh strength and energy amid our Allies.

After immense labours in Corfu, the resuscitated Serbian army made its appearance on the Serbian front, and, to the amazement of the whole world, crowned its heroic efforts with victories such as those of Chegan, Kaymakchalan, the Chukas, Bitolia and Moglena.

In 1917 the Serbian army was ceaselessly making ready, in concert with its mighty Allies, to deal the enemy his death-blow, and thereby to deliver our native land.

The crown of all the heroic exploits of the Serbian army hitherto has been the supreme victory of these latter days—the victory which within one fortnight brought deliverance to three-fourths of our country. After the enemy's front had been broken after the taking of the Vetrenik, Dobropolje, Sokol and Kozjak heights, the Serbian army, supported by the general co-operation of our Allies, pursued the enemy as far as Skoplje and Tsarevo Selo with such supreme gallantry, endurance, speed and extreme integrity that, in conjunction with the Allied action on the remaining sections of the battle front, it brought about the cessation of hostilities between the Allied armies and the Bulgars, and the return to our country which was occupied by Bulgars.

By this great victory of our army the glory of Serbia has gained supreme lustre and recognition. It will be inscribed upon the fairest page of the history of the heroic struggle of our people waged for freedom and unity.

This great and glorious achievement, which has raised the Serbian name to Olympian heights in the eyes of the gallant armies of our Allies and of the world, in which our Army and its leader have played a unique and epic part that will be held up in the world's history as the classical example for the encouragement of nations who love freedom and independence, fills my heart also, as Sovereign and father, with immeasurable gratitude. I wish to give expression to this gratitude to the nation and to the army by conferring upon its heroic Commander, his Royal Highness Prince Alexander, the rank of General.

SCHOOL OF ORIENTAL STUDIES.
London Institution, Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.

PERSIAN ROADS AND MEANS OF COMMUNICATION.

Speaking before the Royal Geographical Society on Monday, Colonel G. S. F. Napier described the road from Enzeli to Baghdad, which was the route, he said, pursued by the British force that went from Mesopotamia to Baku. Part of it was, except for a slight diversion near Hamadan, the identical road of Darius. It was the natural route for trade from India into Persia through Baghdad, but had been deliberately neglected by the old Russian Government, so long as it lay within their sphere of influence. He described the various sections of the road in detail. The highest point, he said, was 7,500 feet above sea-level, the road rising 3,500 feet from Kazvin. Hamadan, 1,500 feet lower, was at no great distance from the summit. Of this town, he said that, owing to its altitude, it enjoyed a good climate, and before the war had been surrounded by dense groves of trees. Much of this timber had been cut down during the recent Turkish occupation, but the neighbourhood still boasted a good many trees, poplar predominating. He had been told that a plot of land with water rights and planted with poplars would return 10 per cent. per annum on the cost of purchase in ten years, and 100 per cent. per annum from ten years onwards. Hamadan was on the edge of a fertile plain, and in normal years should export large quantities of grain; but when he was in Persia famine, due to the war, prevailed everywhere; and in the villages he passed through he found the principal food of the people was bread made from the acorns of the scrub oak, while he was told that deaths had occurred from foot-and-mouth disease due to people eating the flesh of transport animals that died on the road. Hamadan was a great centre for the carpet trade; these were collected from the country around, and large quantities were also woven on the Hamadan looms. Quartz cropped up in the vicinity, and gold washing was carried on in some of the streams. The principal sights of the town included the tombs of Esther and Mordecai. A steep ride up Mount Alvand brought one to the inscriptions of Darius and Xerxes, which had enabled Rawlinson in 1835 to decipher the Babylonian cuneiform writing.

Colonel Napier also briefly described some of the other main roads of Persia. In the past, he said, those of Northern Persia had been better than those of the South, but Sir Percy Sykes had made great efforts to rectify this. Speaking of the disturbed state of the country, he said that the vocation of robber had been there described as the stepping-stone to becoming a governor; and political conditions generally had tended to restrict rather than encourage the opening up of communication between the interior plateau and the Gulf. Persia, with its sharp fall from plateau to plain, was very much better adapted to motor road than to railways.

Sir Valentine Chirol, in the course of a short discussion that followed, said that the lecturer had regretted that his lantern slides could not show colour. He (Sir Valentine) regretted still more that they could not show the wonderful atmosphere. In no other country that he had travelled in had he seen such effects of light and shade. Every day these made sunrise and sunset a time in which it was a joy to live, and to see the transformation the often arid and barren mountains underwent during the magical hour. But there was another feature of Persia which the audience might congratulate itself could not be reproduced by the magic-lantern—that was the dirt; and, worse than the dirt, the smells. He fully agreed with the lecturer that the development of means of communication in Persia—so important for the country and for our trade and commerce there—depended very largely upon motor traffic. Persia offered a strange succession of mountain barriers rising and falling in parallel ranges. Sometimes in the course of one day's travel he had gone up five thousand feet, dropped four thousand feet, gone up another three thousand feet, and then down again. This made the building of railways extraordinarily difficult, but offered a far less serious obstacle to motors.

Sir Thomas Holdich, who presided, said that he was not surprised to hear that motor traffic was a reasonable possibility, for, at any rate, some of the Persian roads, and that the probable future of trans-Persian communication was in that direction; but there was one other method which should not be overlooked. He believed that within two years there would be a regular aeroplane service across Persia into India.

THE KING TO HIS ALLIES.

Among the messages sent by the King on Monday to the heads of Allied countries were the following:—

TO THE KING OF SERBIA

I send you a sincere message of congratulation on the occasion of the conclusion of an armistice with our last remaining enemy. The people of this country will never forget, either the feats of military prowess or the sufferings of the Serbian people in this great struggle for liberty, and it is with deep joy that we acclaim the realisation of our purpose, in which the brave Serbian armies have so nobly shared.

TO THE KING OF ROUMANIA

On the occasion of the conclusion of an armistice with Germany I send you a message of friendly greeting to your gallant country, whose sufferings and endurance have not been forgotten by us in our hour of rejoicing. The victors of Marmaros may rest assured that their achievements and sacrifices will not have been in vain, and they can now regard the future with renewed hope and confidence. My thoughts have been continually with you and the Queen throughout the dark days your country has endured.

TO THE KING OF MONTENEGRO

I desire to convey to your Majesty a message of congratulation on the occasion of the conclusion of an armistice with Germany.

TO THE SULTAN OF EGYPT

On this auspicious occasion, when the last of our enemies has acknowledged defeat, I send your Highness my hearty congratulations and my thanks for your loyal assistance. Egypt and her people may rest assured of their full share in the future greatness and prosperity of the British Empire.

TO THE KING OF GREECE

At the moment when an armistice has been concluded with our last remaining enemy, I desire to convey to you, your Army, and your people, a message of sincere congratulation on the realisation of complete victory. The people of this country, who are bound to Greece by traditional ties of sympathy and co-operation, will ever remember the loyal assistance given to us by the gallant military and naval forces of Greece.

LONDON ARMENIANS AND THE PEACE CONFERENCE.

A meeting of London Armenians was held on Saturday at the headquarters of the Armenian United Association in Radcliffe Square, the business before it being to elect another member to the delegation now sitting in Paris with the object of urging the claims of Armenia at the Peace Conference, when this is held. The original members of the delegation were appointed by the Catholicos Kevork the Fifth, who was himself elected by the Armenians in all parts of the world, so that the delegation has in any case a representative character; but the Armenian community feels that it would be better to strengthen it by some directly elected members, and Saturday's meeting was one of a series now being held for this purpose.

Mr. James Malcolm presided. He said the meeting was held under the shadow of wonderful events. Great empires were tumbling down, new States were rising on their ruins, and the fate of Armenia might be decided within the next few weeks. About the issue they had fears as well as hopes. At the outset of the war, in the face of great dangers and in spite of most alluring Turkish promises, the Armenians had unhesitatingly and unanimously decided to throw in their lot with the Allies. Since that time, and in consequence of their action, they had borne great sorrows and troubles in a just cause, and to-day they stood at the gates of freedom. The Governments that had freed the Moslem, Arab and the Jew would not leave Armenia under the Turkish yoke. Those Governments had asked for and received the military co-operation of Armenians, who had protected their flag in Mesopotamia, held the front in the Caucasus, and fought by thousands in Palestine, France, and elsewhere. With regard to the immediate object of the meeting, the two members and Hon. Secretary of the delegation in Paris were London Armenians. The Manchester Armenians had no representative, but had held a meeting, and given their overwhelming votes to Mr. Gregory Hacobian. He proposed that the present meeting should support this choice. Mr. D. H. Nevshehir seconded the resolution, and it was carried.

HIGH COMMISSIONER AT CONSTANTINOPLE.

His Majesty's Government have appointed Vice-Admiral the Hon. Sir Somerset Gough-Calthorpe, K.C.B., C.V.O., as High Commissioner at Constantinople for the purpose of maintaining contact with the Turkish Government during the present transitional period, and of protecting British subjects and interests in Turkey.

Rear-Admiral Richard Webb, C.B., has been appointed Assistant High Commissioner, and Mr. T. B. Hohler, C.B., C.M.G., will act as Chief Political Officer on the staff of the High Commissioner with the rank of Minister in H.M. Diplomatic Service.

Can you offer us

consignments of the . . . .
NATURAL PRODUCTS
of your Country? . . . . .

COCONUT OIL
PALM OIL
OIL NUTS
OIL SEEDS
GUMS
FIBRES
COPRA

These are of great interest to us, and we should like to know what you can offer us in this way. All Natural Products interest us, and we shall be glad to negotiate for large or small shipments.

We are prepared to finance consignments when necessary.

Mann & Cook,

7, St. Michael's Alley
Cornhill, London,
England.

And at Glasgow, Liverpool, Genoa, New York.

Telephone: Avenue 7125 (5 Lines).
Cables: Oiliness, London.
Codes: A.B.C. 5th Edition, Lieber's, Western Union, Bentley's, Marconi's.

TANGIER TO TEHERAN.

By the time these lines appear in print that notorious runaway the Goeben will, I trust, have been handed over to the safe keeping of our Navy, never again to flutter the peaceful harems of Stamboul or Pera, to say nothing of Galata. I wonder whether H.M.S. Gloucester will take part in the pleasing procession through the Straits. If so, it would surely be no bad thing to put her alongside the Goeben and allow the Turks—and others—in Constantinople to compare the chaser and the chased. There is no need for us to brag, but I think we are justified in asking Enver, Talaat and Co. what they think of the Kaiser's navy to-day, and what of the British. One would also like to know whether their views about the German account of the Battle of Jutland have undergone any change of late. Even the Turks, one supposes, will find it a little difficult to believe that the British Fleet was *quite* annihilated in that famous engagement when they see part of it moored off their capital. But perhaps they never *did* believe it, but only pretended to, to please Hajji-Wilhelm-as-Was.

***

It is reported—but at the time I write the report lacks official confirmation—that the German Crown Prince has met a fate which most people will say he richly deserved. Personally, I have always regarded him as being in all probability even more responsible for the War than the Kaiser; and while I have looked upon the latter with no favour, my dislike of his degenerate son has been far greater. However, this is hardly the time to discuss his character. *De mortuis.* . . . I have mentioned the young man only because I once heard a lady—and one for whom I have a very sincere regard and respect—stand up in his defence most stoutly when his character was assailed.

***

This was at dinner in a country house, where most of the guests happened to be Anglo-Indians; and it was in the early days of the War, when Prince Wilhelm was making himself particularly obnoxious. His champion, therefore, soon found herself in "a minority of one"; but she stuck to her guns undismayed, and declined to be convinced of his undesirability. She had seen much of him in India, and had entertained him; and, trusting to her own judgment of character, she refused to believe one-tenth of the stories to his discredit that were then echoing round the world. I think we all admired her staunchness, though we could not bring ourselves, even temporarily, to profess kindly feelings for her former guest. And later in the evening, when, over final smokes and "nightcaps," an Indian General and one or two others told tales of his Royal Highness's doings in the East—tales for which they vouched personally—I could only wonder how such a scamp could have enlisted the liking of such a particularly sweet and lovable lady as his dinner-time champion.

***

When Nazim Pasha—the same who was afterwards so foully assassinated by the "Young Turks"—was Vali of Baghdad he had ideas of bringing the Arabs of Lower Mesopotamia to heel by kindness, so to say. Many of his predecessors had tried force, and had failed—discovering that the Affej swamps offered no favourable field for the employment of troops and artillery, as known to them. Nazim, therefore, set out on the other tack, and invited the chief Sheikhs to a grand pow-wow in Baghdad. But the Sheikhs, remembering that the air of Baghdad had frequently proved anything but wholesome to their forbears, displayed a certain lack of enthusiasm about accepting the invitation. Very few turned up, and those who did so returned to their tribes with no favourable report of the "new" (*i.e.*, Young Turkish) Government, which seemed to them very like the old. So Nazim's experiment failed, though he deserved credit for trying it.

***

About a month ago the British Commander-in-Chief in Mesopotamia copied Nazim's example—or, at least, summoned a meeting of Sheikhs in Baghdad. In view of the good news we have been getting from Irak for some time now, it is not surprising that the meeting turned out a great success. The Sheikhs proved that they had already discovered the difference between British and Turkish rule by turning up almost to a man; and we may be sure that they returned home with very different reports from those borne away from Nazim's conference. The idea has, therefore, been justified, and the authorities in Baghdad are to be congratulated once more on having done the right thing in the right way.

***

Such a gathering of Sheikhs is bound to have far-reaching effects, and to benefit the country in many ways that might not be apparent at the first glance. For one thing, the Arab—and Kurdish—chieftains will have had an opportunity of seeing one another and of learning that t'other fellow is not quite such a bad sort as he has always been painted; and no doubt more than one Ibn Montague will have patched up his quarrel with Ibn Capulet. Then, they will all have had a chance to see the administrative machine running without the lubricating *backsheesh*—and what that means only those who knew the country of old can truly realise. And, most important of all, they will have had their first lesson in co-operation: the lesson which the Arab needs more than any other. CORSAIR.

PRESS ON THE NEAR EAST.

The Revivification of Mesopotamia.

Both advocates of State Socialism and its opponents will read with interest an article entitled "State Colonisation: Is Mesopotamia a Precedent?" contributed to *United Empire* by Claud Mullins. "This war," the author declares, "has furnished us with a colossal example of State colonisation":

Mesopotamia during the last four years has provided an interest to all sorts of people. To some at home it has meant mainly a convenient weapon for political sniping. To those of us who have been living and working there, it has been a crusade for civilisation—not that we often realised that at the time. But to all of us, Mesopotamia should be an event in Imperial history which demands our closest study; for the campaign in Mesopotamia is the biggest attempt at State colonisation that has ever been made.

The State has embarked on great development schemes before—notably in Northern India and in Egypt. But, as a general rule, we can accurately say that British colonisation has been the work of individuals, and that Government has, often with extreme reluctance, followed in their wake. The national flag has followed individual trade. Mesopotamia is a tremendous experiment in Imperial pioneering by the State itself.

It is wrong to regard the Mesopotamian campaign solely from the military standpoint; a large proportion of our men out there are engaged on purely civil work:

The occupied country is well organised from one end to the other. Trade is flourishing as it never did before; and all is being done under the immediate direction of the British or India Governments. I cannot, of course, detail all the manifold activities of Government in Mesopotamia; but enough is common knowledge to give an impression of the magnitude of the task done. Government has rendered the Tigris fit for constant navigation, has constructed huge wharves, quays, repairing yards, and even a dock for ocean-going steamers. Government has built railways and established a regular service of ferryboats and motor omnibuses. Government has taken over all taxation, it controls the exports from the country, it regulates its internal trade, manages the municipal markets, and carries the produce of the country on its railways. Government has further undertaken big schemes of irrigation and crop raising; it provides electric power and light, it organises the courts of law, supervises the schools and civilian medical organisations, it has re-established certain local industries, and organised local labour. Was there ever such a gigantic effort in State Socialism before? When one realises that there is not a stone or pebble south of Baghdad that has not been imported from afar, it seems incredible that so much has been accomplished. In my philosophic moments—and in a temperature round 120 degs. philosophy is a great stand-by, though it does not come easily—I have often looked around me and marvelled at the miracle that my fellow-countrymen have wrought. And to the smallest detail all has been done under immediate State direction.

The undertaking has been a success, but there is no reason why the experiment need be repeated. It has been possible to develop Lower Mesopotamia only because of war conditions, and "the experiment is not likely to be successfully repeated in times of peace":

It is necessary to remember that the development of Mesopotamia has been undertaken when the conscription of both men and supplies is part of the laws of our Empire. Thanks to military law, the State has been able to transplant whole armies of men to the country under conditions which bear no comparison with ordinary market terms. I wonder how much, say, a man would ordinarily expect who supervises coolies on the banks of the Tigris for some ten hours a day in August. What remuneration would a doctor require who, seven days in the week, wrestles with heat stroke cases from 5 p.m. to the early hours of the morning? And would either in ordinary times be content with a share of a tent or dug-out, without a fan or punkah, and in which he probably has to wear his topee during the hot hours of the day? No, the fact is that in war time men of all classes accept risks and discomfort for the minimum pay because they are fired by a sense of patriotism. Very few of those who are, or have been, engaged in the development of Mesopotamia would tolerate the conditions after the war. . . . It is perfectly true that no army on any front is better cared for than are our troops in Mesopotamia, but it is equally true that when it comes to doing the same job in times of peace, men who are not under military law will expect far better conditions and much higher pay. Similar reasoning applies to the obtaining of supplies.

The development of Mesopotamia could never have been undertaken save under these war conditions; and therefore Mesopotamia is no guide for any experiments of the kind that may be made after the war. "The fact that State Socialism in Mesopotamia has proved both necessary and successful proves nothing beyond the commonplace fact that war conditions are exceptional."

NEAR EAST BOOKSHELF.

AMID THE IMMORTALS.

Three side-light volumes on the glories and horrors of Gallipoli that will sell themselves. Let us quote from the Senior Service book (1):—

The Army has shown us the way to renown,
The Navy has shown us how heroes can drown;
To share in their triumphs our turn may yet come—
We, too, may fall fighting for Britain and home.

CHORUS.

So we don't care a button whatever folks say,
For the Naval Division has just come to stay;
And we'll make them acknowledge before we have done
We are Army and Navy both rolled into one.

And here is their Commander, Stuart-Jones, R.N.V.R., to their gallant chaplain and monographer:—

If any of the men who have gone can look down on the old battalion now (the Anson battalion), I don't think they'll be ashamed of us; and in my opinion all the good work we have done is almost entirely due to the example they set us in the olden days, up to which we are doing our best to live.

The Padre's mingled fun and pathos, love and pride, combine to lift his unambitious prose to the Olympian heights of epic verse.

Major Gillam, in his delightful Diary (1), honours the A.S.C., as, in his heart of hearts, Tommy has ever honoured it, especially in this war of wars. Through the happy Major's A.S.C. spectacles we obtain a dramatic film of the "Immortal XXIXth" from the original landing on the Peninsula on April 25, 1915, to the evacuation. It is an edited personal diary, "better than a play," and ends on a true top-note:—"What a nation! We never had a chance at Gallipoli. Let's forget about it." Readers who know both England and Egypt will appreciate the following:—"Called on Mrs. Carver at Ramleh for tea, and found several convalescent officers there and a few other people. Lovely house and garden and hard tennis court. But give me an English garden every time."

In propaganda work for the little "Manchesters'" (3) two-and-sixpennyworth we take an exceptional pleasure, having had the honour of dodging submarines between Alexandria and Marseilles in March, 1917, with some 1,700 of these stalwarts of the XLIInd, of Gallipoli and Egypt fame. Major Hurst, although not textually reproducing the fascinating language of the crowded transport decks, has given us a serious and artistic cameo of the doings of "the First Territorial Division to cross the seas"—to Khartoum, in fact, they went, until called to Gallipoli. At a casual guess we should say that tens of thousands of readers will be found for this little record even outside of Lancashire. All three volumes illuminate the same heroic drama played by the "Immortals." All are illustrated, but none as well as we could wish. In Major Hurst's volume we notice with pleasure a glowing tribute to the silent but brilliant work of Egypt's fifth Sirdar, now the High Commissioner, Sir Reginald Wingate.

THE TIDES OF ECONOMIC GEOGRAPHY.*

Wherever billows foam
The Briton fights at home,
For his heart is made of water,
Water blue and green.

—WATTS-DUTTON.

This is a re-draft of a series of lectures on the ocean transport of the globe, and throws a new and little-studied sidelight on practical geography. It should have a range of readers from shipowners, shippers and statesmen to fourth-form public schoolboys in all parts of the Empire. Especially should papers on this sort of geography be set in the schools of to-day. We would, however, ask Professor Sargent to rid his next edition of the objectionable "Mercator's Projection."

The book describes the how and the why of the great ocean trade routes, as governed by distance, time, winds, speed and capacity of vessels, depth of harbours, situation of commodities of exchange, local cost of fuel, political regularity of service—a goodly list of considerations. It exhibits incidentally the utter "official" indifference to organisation of statistical data for the statesman and trader and shipbuilder, a very crying evil in an Empire so dependent upon the ocean highways. It contains a most illuminating balancing of the present and future forces working the natural rivalry of the Suez and Panama Canals. The author writes regardless of the war, contending that it "cannot change radically those permanent facts of geography on which the distribution of trade and the organization of trade routes is ultimately based." He, however, seems to ignore the air in his passion for the ocean. For ourselves, we see the day very near when air routes will have an immense effect upon sea routes as regards at least passenger traffic and mails, and therefore speed, ports of call and cargo capacity of ships. "Professor, look aloft!" may we say?

MODERN RELIGIOUS MOVEMENTS IN INDIA.*

We welcome this re-issue of Dr. Farquhar's lectures, which first appeared in 1915, and give the best account we know of the extraordinary religious ferment which has been in progress in India. The last century has seen first a series of movements for the drastic reform of Indian religions, then a very definite reaction in favour of orthodoxy, closely connected with the spread of the nationalist idea, and lastly a somewhat timid and hesitating effort towards the alteration of that social life which is still dominated by the older religious views. On all these topics the book is a mine of information, well arranged and fairly stated, and it should be read by all who are interested in Indian affairs.

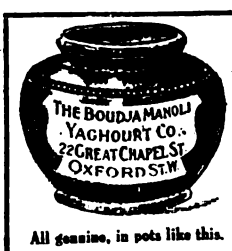
"Constantin Détrôné: Les Evénements de Grèce Février—Août 1917." By Robert Vaucher. (Paris: Perrin et Cie. 3 fr. 50.)

"The Sister of a Certain Soldier." By Dr. Stephen J. Maher. (New Haven, Conn.: Tuttle, Morehouse and Taylor Co. 25 cents.)



THE SOUTHERN SLAVS.

The Yugoslav Committee has published a map, with statistical data, of Southern Slav territory, as claimed by the Committee. A reference in the text to "*the independent kingdom of Serbia and Montenegro*" is an unfortunate error in printing, which should be repudiated and corrected at the earliest opportunity. Allowed to stand, it attributes to Serbia imperialistic designs which must necessarily prejudice both her and the Yugoslav movement in the eyes of the Allies, who have not broken up Austria-Hungary in order to perpetuate the Austro-Hungarian system across the border. It will be time enough to speak of Serbia and Montenegro as a single kingdom when the latter country has officially accepted the position.

ARMY UNITS IN INDIA.

In a written reply to Colonel Yate, Mr. Montagu says:—There are a certain number of regiments and units which have been retained in India for defence and garrison duties during the whole period of the war, though that does not mean that all the *personnel* have served in India during the whole of this period. The units in question belong to the Regular Army, and it is too early yet to publish their number. The question of their relief is under consideration in connection with the post-war garrison for India.

* "Modern Religious Movements in India." By J. N. Farquhar, D.Litt. (Oxon). (New York: The Macmillan Company, 1918.)

All genuine, in pots like this.

YAGHOURT.

THIS HEALTH-GIVING FOOD SHOULD BE TAKEN BY ALL.

Recommended by the leading medical faculty of to-day.

Suitable alike for the invalid and the healthy.

PERSONAL AND GENERAL.

CALENDAR OF THE WEEK

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian (New Style).	Julian (Old Style).	—	Moslem.	Jewish.
1918. November	1918. November.		1337. Safar.	5679. Kislev.
15	2	Friday	10	11
16	3	Saturday.....	11	12
17	4	Sunday	12	13
18	5	Monday	13	14
19	6	Tuesday	14	15
20	7	Wednesday	15	16
21	8	Thursday	16	17

General Townshend returned to London last Saturday.

On October 10, at Simla, the wife of Captain P. G. Loch, Political Agent, gave birth to a son.

Sir Malcolm and Lady McIlwraith have arrived at 36, Stanhope Gardens, which will be their future address.

Captain A. B. Haig, Indian Army, had the honour of being received by the King at Buckingham Palace on November 7.

The Sultan of Egypt returned on November 4 to Cairo, whither the seat of government has now been again transferred.

On November 8, at Carmanton, Camden Park, Tunbridge Wells, the wife of Captain Roy Dowland, M.C., Indian Army, gave birth to a daughter.

A marriage has been arranged between Commander F. A. H. Russel, Royal Navy, only son of the late Mr. and Mrs. F. A. Russel, and Margery Lillister, eldest daughter of Mr. and Mrs. T. B. Rees, of London and Smyrna.

The King of the Hellenes has conferred on the Bishop of London the Grand Cross of the Order of the Saviour. The Bishop, who is making pastoral visits to the various fronts, is not expected back in England until the last week of November or the first week of December.

On All Saints' Day, at Ardfinnan Parish Church, Francis James Bulmer de Sales La Terrière, Indian Cavalry, eldest son of Captain and Mrs. de Sales La Terrière, Dunalastair, Perthshire, was married to Joan Mary, widow of Captain Gerard O'Callaghan, 18th Royal Irish, son of General Sir Desmond O'Callaghan, and daughter of Mr. and Mrs. Grubb, Castle Grace, Co. Tipperary. The Rev. J. Disney, Rector, officiated, assisted by the Rev. J. Talbot, Rector of Clogheen.

MONSIEUR GENNADIUS.

It is with much regret that we learn of the resignation of Monsieur Gennadius, who has for so long occupied the position of Greek Minister to the Court of St. James's. His qualities as a Minister can be appreciated fully only by those who have had official relations with him, but his vigorous intellect and scholarly attainments are recognised by all who have met him. Socially His Excellency and Madame Gennadius have been and are extremely popular; and London will be glad to learn—from the correspondence published—that they are still to remain here.

The Mercers' Company have made a grant of £100 to the Mesopotamia Comforts Fund, and one of £150 to the Serbian Red Cross Society.

A National Conference of the Unredeemed Greeks is being held in Paris this week. The London delegates are Mr. B. Pandelis, Mr. P. Fermanoglou, and Mr. I. Chrysafides.

The five Indian editors who have been on a visit to the Front under the auspices of the Ministry of Information returned to their London headquarters at the Hyde Park Hotel last Friday.

M. Stoyanovitch has been appointed by the Serbian Government Chairman of the Commission to investigate violations of The Hague Convention in Serbia by the Austro-Germans and their Allies.

Lady Barker, whose name is familiar to most of our readers in connection with her work for former British residents in Constantinople, is to be congratulated on the successful inauguration of another helpful undertaking. This is the establishing of "Kitchener House for Wounded Officers." Situated at 34, Grosvenor Place, this is an educational club, where wounded officers are to be granted facilities for following courses of study in subjects that may interest them or may enable them to take up successfully occupations they desire to follow. The club, which is under Lady Barker's supervision, was inaugurated on Monday, when General Sir H. Mackinnon, Chairman of the Committee, presided over an enthusiastic meeting at which the scheme was explained. Any wounded officer who wishes for further particulars will be welcome at the club between the hours of 10 and 1 or 2.30 and 6.

APPOINTMENTS, PROMOTIONS, ETC.

Mr. K. C. Mukherjea, B.A., Jesus College (M.A., Calcutta), has been elected lecturer in Bengali at Oxford University.

M. Milan Rakitch, Counsellor to the Serbian Legation in London, has been appointed Envoy Extraordinary and Minister Plenipotentiary to Copenhagen.

The *Pioneer* announces that Colonel F. McConaghey, Political Agent, Sibi, Baluchistan, has been posted as His Britannic Majesty's Consul at Kerman, Persia.

Indian papers just to hand announce that Mr. R. H. Williamson, I.C.S., Collector of Basti, is joining the Foreign and Political Department of the Government of India.

The Lieutenant-Governor of the United Provinces has appointed Mr. E. A. H. Blunt, I.C.S., Settlement Officer of Basti, to succeed Mr. J. Campbell, O.B.E., I.C.S., as Director of Civil Supplies in the United Provinces.

The Secretary of State for India in Council has, subject to the usual conditions, appointed the undermentioned gentlemen to be Assistant Engineers in the Indian Public Works and State Railways Departments:—Alampadi Subbaraya Ramalingam, Mohammad Bashoer Farooki, and Dhan Raj Sethi.

In view of the constitution and official recognition of the Czecho-Slovak National Council as an Allied and belligerent Government, the offices of the National Council and of the Czech Press Bureau, at Thanet House, Strand, were closed last Saturday, November 9. All inquiries and communications should be addressed to the Secretary, Czecho-Slovak Legation, 9, Grosvenor Place, London, S.W.1 (Telephone Victoria 459).

It is announced that Sir Edward D. Maclagan, K.C.I.E., C.S.I., is appointed Lieutenant-Governor of the Punjab in succession to Sir Michael F. O'Dwyer, G.C.I.E., K.C.S.I. The latter succeeded Sir Louis Dane in 1913; his tenure was extended by a year in 1917, and he will remain in office at Lahore till next May. Sir Edward Maclagan has been Secretary to the Education Department of the Government of India since 1915, and prior to that had held various important posts.

OBITUARY.

Lieutenant Caradoc S. M. Prinsep, R.N., who is reported lost at sea, was the second son of the late Captain James Prinsep, Egyptian Army, and Mrs. Prinsep.

Captain W. D. Ward, of the staff of the Instructional School for Officers at Bangalore, was killed in that city as the result of a motor-bicycle accident on September 4. He formerly belonged to the Hampshire Regiment of Territorials.

By the death of Sir Henry Austin Lee, K.C.M.G., which is announced from Guernsey, Great Britain loses a very distinguished diplomatist. Sir Henry was born in 1847, and entered the service in 1870. Most of his work was done in Paris or at the Foreign Office, but in 1891 he was appointed one of the representatives of Great Britain on the Council of the Suez Canal Company. In 1876 he had been attached to the third Marquis of Salisbury's Special Embassy to Constantinople. He had quite recently resigned the position of Councillor to the Embassy and Commercial Attaché in Paris.

General Sir Peter Stark Lumsden, G.C.B., C.S.I., died at Dufftown on November 9. A younger son of Colonel Thomas Lumsden, C.B., he was born in 1829, and entered the Indian Army in 1847, as Ensign. During the early years of his service he was almost constantly employed on one or another frontier expedition, and during this time he acquired an enviable reputation for courage. In 1857-58 he was employed on a special mission to Afghanistan, and on his return received the thanks of the Government. He shared in the later stages of suppressing the Mutiny, and in 1860 took part in the operations in China, on

the staff of Sir Robert Napier's Second Division. In 1865 he shared in the Bhutan campaign. After this he held several important staff appointments. His most important for his country, however, was as British Commissioner on the Anglo-Russian Commission for the delimitation of the Afghan frontier (1879). The strong attitude which he took up when difficulties arose over certain sections of the work caused some embarrassment to Mr. Gladstone's Government, and he was eventually withdrawn; but Lord Salisbury, who succeeded to power when Gladstone's Ministry fell, rewarded Sir Peter with a G.C.B. Thereafter he worked at the India Office till 1893, when he retired and took up his residence in Scotland.

NEWS IN BRIEF.

In Colombo last week the death-rate from influenza dropped from 52 to 39.

Greece is devoting £40,000 to the relief of the population of Eastern Macedonia.

Ceylon celebrated the Austrian and Turkish surrenders by a public Bank Holiday.

New Zealand has asked the Imperial Government to garrison the Dardanelles with Anzac troops.

Fifty-five Australians, of whom five were sailors taken prisoners at Gallipoli, have arrived at Alexandria.

A Reuter's message announces that a number of Kut prisoners have arrived in Alexandria, as well as civilians from Constantinople and elsewhere.

A special Egyptian Army Order announces that war gratuities upon a higher scale will be given to officers of Egyptian Army and War Office employees.

Martial law has been proclaimed throughout Eastern Macedonia by the Greek authorities, and an Extraordinary Court-Martial has been established at Drama.

In lieu of the postage stamps formerly in use in Mesopotamia, stamps bearing Turkish designs overprinted "Iraq in British Occupation" and surcharged with values in Indian currency were brought into use on September 1.

A committee representing 250,000 Greek refugees from Thrace have sent a telegram to the Bishop of London, who is in Greece, appealing to him to intervene on their behalf. The Bishop has replied assuring them of his deep sympathy.

Delhi has been suffering severely from influenza, and the Conference of Ruling Princes has been indefinitely postponed. Influenza is also rife at Simla. The Government is considering delaying the transfer of departments to Delhi, as travelling is undesirable.

Reuter's Agency is informed that the Armenian Congress at Rome has passed a resolution requesting the Allies immediately to recognise Armenia's right to be constituted an independent nation, with dominion extending from the Caucasus to the Mediterranean.

Mr. G. Ward Price reports that strong British forces landed at Dedeagatch on October 28. The town was practically deserted of its inhabitants, and had a neglected, overgrown look. The Greek refugees whom the Bulgars had abandoned here were found starving.

Sir Alfred Mond has contributed £25,000 to the Jewish National Fund for the purchase of land in Palestine. The fund, which is registered as an English limited company, at Brook House, Walbrook, E.C., is the instrument of the Zionist organisation for the acquisition of land in Palestine for Jewish colonists.

The Boy Scouts of Great Britain, through their Chief Scout, sent congratulations to the Crown Prince of Serbia on the recent success of the Serbian Army. Sir Robert Baden-Powell has received the following reply:—"My sincere thanks to the Boy Scouts of Great Britain for the congratulations sent to me and their interest in the activities of my army.—Alexander."

A school of Oriental languages has been opened in Rome. The languages taught will be Albanian, Arabic, Modern Greek, Serbian, Turkish, Russian, and Roumanian. The objects of the school are to provide commercial travellers and others who have business relations with the Near East with a knowledge of the languages of the countries with which they do business.

Mr. Balfour, in a written reply to Mr. Wright, who asked whether in any discussion of terms of peace with the Turkish Government the punishment of those proved to be responsible for the Armenian massacres would be insisted upon, says:—It is clearly impossible for me to state what terms will or will not be insisted upon at the Peace Conference, but the suggestion of my hon. friend has my sympathy.

Sir George Cave, Home Secretary, replying to a question by Mr. J. H. Thomas, M.P., says: I am informed by the military authorities that arrangements are being made for the notification by telegraph to this country of the names of all prisoners of war in the hands of the Turks and of their release when effected, and this information will be at once forwarded to the next-of-kin. Notifications of all casualties of a serious or dangerous character and of serious sickness have already been telegraphed from Mesopotamia.

The recently issued report on the working of the Indian mints gives some interesting figures as to the distribution of offences against the coinage, says the *Pioneer*. Of the 320 persons convicted of these offences, 56 were brought to justice in Burma, 42 in Bombay, 41 in the United Provinces, 33 in the Punjab, 30 in Madras, 29 in Bengal, and 25 in the Central India Agency; while in both Bihar and Orissa and the Frontier Provinces the convictions numbered only four and in Delhi one. In the previous year no fewer than 70 persons were convicted in the Punjab and 73 in Burma.

Speaking at a dinner given in honour of the Indian journalists now in England, Mr. Mahbub Alam, editor of the *Paisa Akhbar* (Lahore), said the Mohammedans of India had been grieved that their co-religionists in Turkey had gone into the enemy's camp, but their regret had not weakened their allegiance, and they had readily gone to fight against their fellow Moslems. The speaker was convinced that the war had welded closer bonds between Christian Britain and Mohammedan India.

Mr. Sokolow sent a message of congratulation to the King of the Hejaz congratulating him on the liberation of Palestine and Arabia. "We Zionists," stated the message, "as old friends and admirers of Arab civilisation penetrated by the idea of Semitic solidarity, and now united in common effort for the revival of old countries, rejoice with your Highness and your nation on the recent triumphant victory." In reply to this message the King said: "Above all things, I pray God to enable me to fulfil my duty towards you which is holy duty, and one it is more than ever incumbent on me to perform on account of the noble and good feelings expressed in your message."

Indian papers to hand by the last mail contain news of the death at Rangoon of a very well-known character, Mr. John Whitefield Hirst, of "The Pagoda Carving Shop." Born in Huddersfield, Yorkshire, he was the son of a wealthy woollen merchant, and went to Burma to prospect for gold thirty years ago. He joined a Frenchman in Mandalay in the curio business, and on the latter selling out started business in Rangoon on his own account. When King Edward, as Prince of Wales, visited Rangoon he wished to visit Mr. Hirst's shop. The only available time was on Sunday, and Hirst declined to open his shop on Sunday for anyone, even the Prince of Wales. The Prince recognised the old man's independence, and caused many purchases to be made at the shop before he left Rangoon.

FRIDAY, NOVEMBER 15, 1918.

"ALL CLEAR!"

The bugle notes that rang out in London amid the firing of maroons, the hooting of sirens, and the clanging of church bells announcing the signing of the armistice were more inspired than they themselves knew. Until that moment the sound had been associated with the worst of the war that the people of this sheltered island has experienced; and just as we welcomed it in the past with thankfulness for respite from an ordeal which had proved fatal to others, so on the morning of November 11 the familiar notes spoke of a yet greater relief which could not, however, rid itself of the remembrance of the sufferings and sacrifices that the war, now happily ended, had brought upon the world. "All clear!" The message is singularly appropriate to the occasion. It tells of a fiery trial past, but it is also a challenge to be up and doing, with an energy that strives to make up for lost time. The war may indeed be over; for the terms of the armistice, when they have been carried out to the letter, make it impossible that Germany, or what was formerly the German Empire, should be able to renew the struggle. There remains, however, much to be done by each belligerent nation, and the future task is no less pressing than was the burden of self-defence imposed by the war. In these pages we are concerned primarily with the countries of the Near and Middle East, and for them equally with Great Britain, whose interests are so closely linked with the East, the challenge is unmistakable. The course of the war has enabled the British public to appreciate more thoroughly the nature of the menace to the very existence of the Empire that was being so skilfully constructed by Germany. When we reflect that in 1914 the British Government of the day was willing to surrender to the Germans, merely for the asking, the very point that they were ready to risk a world war to obtain—a position that would have enabled them to dominate the pivot of our Imperial defence—we must recognise that we cannot afford to remain indifferent to the future development of these regions. In the legitimate owners of Mesopotamia and Syria we have the best safeguard against the lands being used as a spearhead against the British Empire, provided that they can be conducted along the path that leads to settled government and material prosperity. A start in this direction has already been made in Mesopotamia, which is the more vital to British interests, and it is only necessary that Great Britain should shoulder her responsibilities openly and with conviction, in order that there may be in these parts a lasting monument to her civilising influence and a self-constituted barrier for the protection of her Indian Empire.

The task before the Balkan States is more complex and more difficult. For some of them there is the problem of material reconstruction on the ruins that mark the destructive presence of the Austro-German enemy in their land; for all of them there is the necessity of an entirely new orientation of their policy, domestic and foreign. By the terms of the armistice, it will be noted, the pledges of the Allied Powers have been redeemed. The treaty of Bucharest, as well as that of Brest-Litovsk, with the supplementary treaties, is annulled; all German troops have to be withdrawn from Roumania, Russia and Turkey, and all the Roumanian and Russian gold yielded to Germany or taken by that Power has to be restored at once. Under the comprehensive clause that enacts "reparation for damage done," provision is made for some measure of indemnity for the devastation worked in Roumania, Serbia and Montenegro. In all these countries, as well as in the former Austro-Hungarian territory and in Germany itself, the first needs of the peoples is food, and it is typical of the contrast between the Entente and the Central Powers that they should have at once grappled with this problem on behalf of their enemies no less than for their own Allies with as much zeal as the Germans showed in seeking to starve the unfortunate peoples who fell into their hands. Unfortunately, the territorial adjustments that have yet to be made in Europe have been left to the Peace Congress, and for this reason the Balkan States are unable at present to envisage the work of reconstruction in its complete details. We still hope that the folly of postponing all discussion until it is possible for German, Austrian and Hungarian representatives to take part in the negotiations will be avoided. A just settlement of the Near Eastern question cannot be easily reached; it will be practically impossible if enemy diplomatists are free to work upon the agitated feelings of some of the States more intimately concerned. The Versailles Conference has been able to decide with unanimity upon the conditions for an armistice; it could be almost equally successful with the terms of the Balkan settlement, if it would approach the subject with the same goodwill and the same determination to arrive at an understanding, while maintaining an unbroken front to all enemy intrigue.

Not until boundaries are fixed and recognition has been given to the necessity of accepting with the best grace, if not cheerfully, a hard and fast settlement can the work of reconstruction in the Balkans be undertaken wholeheartedly and comprehensively. Something, however, may be done towards preparing for this work. The first need is a determination that nothing shall be allowed to impair the harmony of the Grand Alliance; that where territorial adjustments have yet to be made nothing shall be done to prejudice any future decision, and that no attempt shall be made to press a claim which can only be maintained at the cost of estranging another State. For the purposes of the war the Allies pooled their material resources in a joint effort. They require to-day to be able in the same way to draw upon a common stock of political sagacity. One and all they have difficulties ahead; but the difficulties confronting the different countries vary. For domestic problems outside advice can avail little; in regard to foreign affairs the wider experience and acknowledged prestige of the Great Powers ought to be brought to bear for the benefit of the smaller Balkan States. The latter in the past have been accustomed to being a world unto themselves. If they have passed through this war in the proper spirit, they will have realised the need of subordinating the interests of the part to the good of the whole. There is no country in the Near East that cannot afford to make considerable territorial concessions for the sake of the permanent harmony of the Balkans. Hitherto they have been strangers to real peace and genuine goodwill among themselves, and are unable to form any adequate conception of the advantages that they stand to derive from these conditions. On this point there is room for definite guidance, which may even take the form of an injunction, from the Great Powers. If opportunity be left for further friction, this war will have been largely in vain for the Balkan States. They will not be allowed to set the whole of Europe by the ears in the hope of removing a personal grievance; but they will successfully retard or frustrate the co-operation of the whole Peninsula which is essential if the separate States are to derive the maximum benefit from the new era that the armistice of November 11 has ushered in for the world.

JERUSALEM REJOICES.

(From a Correspondent.)

Jerusalem.

Our interest, like yours in England, has swept north with the advance of the army: Gaza, Hebron, Jaffa, even Jerusalem are almost lost in the mists of peace; but, of course, the sense of distance is an illusion fostered by bad roads in the lately occupied country.

The importance of Allenby's victory does not consist in the gain of certain miles of country, but in the destruction of the enemy armies. It is a victory of the old-fashioned sort, leaving the conqueror free to go wherever he likes; and he has not as a Power left Jerusalem, but extended his control over a greater area. Jerusalem certainly felt itself the centre of affairs as the good news came in from the 19th to the 25th, and when, on October 1, Damascus fell. From the first advance on Tul Keram the exiled Arabs in the city began to be agreeably excited. There were larger and larger circles for talk in the waste places round the walls, and rejoicing less and less informal, grew to the scale of two really big celebrations on the night of September 24—one outside the Damascus Gate, a place that has grown to be the special centre of the Arabs, and one in a large waste piece of ground between the Italian building and St. George's Church. I struck this last by accident on my way to call on the Military Governor after dinner; and as the crowd contained some old friends of mine from Salt I was whirled almost by violence to a seat of honour, and watched as long as business allowed the endless dance swaying to a monotonous song with which the country-people celebrated the victory and their approaching return to their homes.

On the following day all the Arabs, Christian and Moslem, turned out with their chiefs on horseback and the good priests who have so faithfully taken care of their homeless flocks in Jerusalem. From outside the Jaffa Gate they marched, with their schools and bands, to the headquarters of the Military Administration and afterwards to the Military Governor. They were supported by all the notables of the Arab world and of the Moslem population of Jerusalem. There, with a group of high officials, came the Grand Mufti, whom everybody in Jerusalem likes and respects, a most cultivated and polished gentleman, the representative of the Husseini family, which has given Grand Muftis to Jerusalem for 600 years and many good public servants besides. He is, like the old English Chancellor, *mixta persona*. He combines an ecclesiastical function with that of a judge, and is the custodian of the principles of the Moslem Religious Law. The demonstration was, I think, primarily Arab, without distinction of religion, and then was joined by the heads of the Moslem interest, to which the movement of the Arab race, so far as I have been able to understand it after many weeks of constant intercourse with some of its leaders, is not a Moslem cause but a national one. Rich and powerful Christian Arabs are at least as eager partisans of the national movement as any of their Moslem brethren.

By the way, it seems from certain notices in the German Press that in Central Europe they regard the Arab Movement as a movement of Arabs against Syrians inside Palestine. It is nothing of the sort. The Arab movement is a movement of Arabia as a nation mainly existing beyond Jordan and spreading over the vast desert, not against Syrians but against Turkey and what they regard as the mushroom Khalifate of the Sultan of Roum, seized from the Arab tribe of the Koreish.

I think that some distinguished Rabbis came with the Grand Mufti and others in that morning affair, but I am not sure, because in the afternoon the Hebrew population turned out in its thousands, and I may have seen them then. Coming back to the country, I found the broad Jaffa road outside the city completely packed with various Jewish bodies. There were banners and tokens, and schools of boys and children. There were Maccabees, mounted and on foot, in their clean and fresh white uniform with light blue sashes. There were enthusiastic gentlemen in white waistcoats and European hats dancing wildly in the road, and setting to partners in fezzes and turbans; and whatever space was left by this vast procession was occupied by sympathetic spectators of every kind. There were the Latin Seminarists wearing the Roman black soutane and feriola with scarlet buttons and cinctures and the fez still supposed by many Englishmen to be a sign of Islam. There were all the various-coloured robes of the Arabs who had made their congratulatory expedition earlier in the day.

It seemed at first impossible to move, but I asked my chauffeur to move slowly forward, and, as we advanced at a snail's pace, the crowds most good-humouredly parted, with many cheers and gestures of enthusiasm; so that I felt for ten minutes like a public benefactor moving through an adoring populace.

Altogether it was a day of great joy and real happiness; and I dwell upon it because people at home will be wanting to know whether the enthusiasm of Palestine on its change of condition is merely the good manners of acquiescence or a spontaneous and irresistible outburst. Such a demonstration as we had the other day cannot possibly be manufactured or affected. There were, I suppose, people who waited to shout until they were out of the wood, and they now feel they are out of it, and shouted, I am sure, with all their hearts.

CORRESPONDENCE.

The columns of The Near East *are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* The Near East.

THE TURK AND THE SUBJECT RACES.

To the Editor of "The Near East."

Sir,—I read with interest your editorial on "Feeling the Way" in your issue of October 11.

After long residence in Turkey I would emphasize the thought you express that "popular feeling in Turkey counts for nothing." Although you applied that to the "present regime," I think you might well have made the statement without limiting its application. When has "popular feeling" had any determining effect in affairs governmental in Turkey? Surely not in Hamid's time! And less in the time of the Young Turk! The fact is that the government is, and has always been, in the hands of the few, often dominated by one man—as, for instance, Hamid or Enver. The present group is astute enough to use Parliament as a cloak of fairly respectable appearance, but of no real value in actual government. It has some value in advertising the idea of parliamentary government—*i.e.*, it has an educational influence, making the people somewhat familiar with the thought, which in its way is an excellent thing, but all power remains in the hands of the small governing group. Consequently, to carry out the idea of "self-determination" and allow Turkey to work out her own system would be to leave her as she has been for centuries—a country governed by a small group, not one of whom has shown any capacity for righteous and progressive government, or any semblance of even-handed justice for all the elements of the community. The Young Turk made great promises, and did some good things after 1908, but he demonstrated—without leaving any possibility for doubt—that it will be absolutely vain to hope for any improvement on the part of the Turk in governmental affairs. He does not possess the moral perception or staying qualities to make that possible. His trend is in the opposite direction.

I think you are right in your thought that international-

izing Constantinople, involving multiple control, would not be very satisfactory. A mandate given to some one Power to administer in the name of the internationalizing party would secure success for the experiment. You suggest the United States. If public opinion can be predicated of Turkey, such a proposition would find hearty endorsement, not only on the part of the Christians, but on the part of a very large number of the Turks themselves. The American is not accustomed to think in that way. It will require time and effort to persuade him that his duty lies in the way of doing for other oppressed and weak nations what he did for Cuba and what he is doing for the Philippines. America should be ready to do it; she has a great responsibility to the world because of her position as one of the great leaders in civilization and national progress.

But why confine the mandate to Constantinople? Why not extend it to cover all Asia Minor? Is the soil of Europe too sacred to allow the Turk to keep a foothold there? Adrianople is one of its sacred cities. Is the soil of Asia Minor any less sacred than that of Europe? Have not the subject races of Asia Minor as good a right to be relieved from the incubus of Turkish Administration as those of South-Eastern Europe? Asia Minor is no more the "home" of the Turk than is Thrace. He is more "at home," indeed, in Constantinople than he would be in Brousa or Konia. It is true that the Turk is in the majority in Asia Minor, but that is because of conquest and the gradual elimination of the subject race element through erosion by oppression and massacre. The rights of the minority are just as sacred as the rights of the majority. The majority may be as autocratic as the Kaiser and as unrighteous as Enver.

The revolution of 1908 did not prove a change of heart on the part of the Turk toward subject races—only change of venue. It was a change from Yildiz Kiosk in Beshiktasch to the Porte in Old Stamboul. His promises were as beautiful as the colours of the rainbow in a spring shower. His administration as evil as black Tartarus. The whole outcome of what is called the Turkish Revolution of 1908 is a demonstration of the fact that the Turk is utterly incapable of administering government in such manner as to secure a moiety of justice to the oppressed subject races As long as the Turk has any power as an independent governmental entity the non-Turkish races will remain "subject races," and will be treated as such, in accordance with Turkish tradition and practice. Is it not a fact that the Turk has absolutely forfeited all right to be recognised as an independent government amongst the civilized nations of the world? Should he be left in possession of that magnificent peninsula of Asia Minor which has served through all the centuries as the great highway for the movements of peoples between the East and the West and the West and the East? Can it come within the purview of any league of civilized nations that this territory should remain in the hands of the stagnant and blighting Turk, who gives no promise from within of any sort of progressive Government? Have the Greeks of Macedonia any more sacred rights than those of Asia Minor? Have the Bulgarians of the Balkans any more sacred rights than the Armenians of Armenia? Are these races in Anatolia, even though in the minority, to be left to accentuated oppression by the very expulsion of the Turk from Europe?

I have seen the Turk at his best and at his worst. He is a pleasant-spoken, polite, hospitable person, who can enunciate the principles that lie at the basis of righteous administration of government, and promise equality and just treatment to all—as Izzet Pasha did the other day in the Turkish Parliament—in a most charming way. But there is no greater distance between his best and his worst than between the smiles and the tears of a petulant child. He can smile and smile, and smite with suave politeness and with a cruelty and absence of human sympathy that we in former years thought unparalleled, but is second only in quality to the atrocities perpetrated by the followers of the Teutonic god Thor.

No! If the Turk should be driven out of Europe, he should be *driven out of office*. Nothing less than this does Europe owe as a sacred duty to the nations that have suffered such indescribably inhuman treatment throughout the years, more particularly during the past four years, at the hands of the "unutterable" Turk.

The world thought Sasun atrocities in 1894 the acme of human brutality, and Europe thought it worth while to organize a consular commission to investigate. The horrid massacres of '95 and '96 followed, so overshadowing those of '94 that Sasun was almost forgotten as a mere incident, and we verily thought the human sufferings of that time could not be surpassed in intensity. However, the orgy of blood and destruction at Adana in 1909, which synchronized with the march of the Turkish army of "liberty" from Salonika to overthrow the old *régime* in Constantinople, so surpassed that of '95 that it, in turn, seemed as a small blot on the page of Turkish history. Then came 1915, with its imprisonments, tortures, slaughters, deportations *en masse*, confiscation of properties, rapine, abandonment in the desert, starvation, the cruel martyrdom of a nation, in the durid light of which the horrible Adana atrocities fade into insignificance.

No. If the Turk is unfit for Europe he is unfit for Asia. Therefore let the slogan, "Drive the Turk out of Europe" be changed to "Drive the Turk out of office." It should be kept in mind that this refers to the Turk as a governing factor. On the other hand, the Turk, as a people to be governed, is obedient and easily governed. He is amenable to law properly enforced, and it need not be doubted that the great majority of the people would acclaim any change that would save them from their Turkish masters.

Drive the Turks out of office!

W. N. C.

Geneva, Switzerland,
October 28, 1918.

THE FUTURE OF TURKEY.

To the Editor of THE NEAR EAST.

SIR,—You will, we hope, permit us to protest against the spirit of your leading article in the issue of the 8th inst. entitled "Great Britain and Turkey." "For some time to come," you say, "when the strong hand of the Committee of Union and Progress has been removed, the Turks may be unequal to governing themselves without foreign help." The necessary conclusion would be, we should have thought, to renounce the solution of foreign domination, against which, in the case of Germany, we so loudly inveighed, and to leave the development of Turkey to those Turks who are equal to governing it.

The world has decided, you say, that no nationality shall be left against its will under foreign domination; yet you calmly contemplate our domination of Turkey and our dictation to Turks of the form of her government and of the *personnel* of her governors. The only application you make of the principle of nationality is to cut off the territorial possessions of Turkey as imperial rulers. But you miss one of the great decisions of the world in these latter days—the decision for "self-determination." How can you square "self"-determination with a blank refusal to allow Turkish subject nations to decide for themselves whether Turks, Frenchmen, Greeks or Jews shall rule them?—We are, Sir, yours faithfully,

THE ANGLO-OTTOMAN SOCIETY,
A. FIELD, Secretary.

158, Fleet Street, E.C., November 10.

[In connection with the above letter, we need only remind our correspondent that foreign help is not necessarily synonymous with foreign domination. The Anglo-Ottoman Society proclaims as one of its objects "To resist encroachments on the integrity of the Ottoman Empire," but omits to specify any date. If it is anxious to see Serbia, Greece and Bulgaria restored to Ottoman rule, it is a matter for congratulation that all its objects have not been realised. If, on the other hand, its policy is merely proleptic, and it proposes to "resist" any attempt to deprive the Turks of the right to govern themselves, we are heartily in accord with the objects of the society, although we cannot follow the secretary's line of argument. The real friends of the Turks must realise that the attempt to dominate alien nationalities has been the undoing of the Ottoman Empire, and they must look forward to the day when Turkish rule will be restricted to Turks, who will then have an opportunity of proving their merits. Their education in statecraft under a series of corrupt Governments has not been a happy one, and the suggestion made by THE NEAR EAST was that they should recognise for the time being their limitations and accept the assistance of foreign advisers or administrators in their Civil Service until such time as they feel confident of being able to administer the country themselves on sound modern lines. The model in view was the Maritime Customs Service and the Salt Administration of China.—ED.]

"AN ALBANIAN PROTEST."

To the Editor of THE NEAR EAST.

SIR,—I am very glad that my letter should have elicited a reply from so distinguished an authority on Albania as Miss Durham. Miss Durham has presented the Albanian case as convincingly as the scanty arguments available for it will permit. I will take this opportunity of presenting somewhat more fully the Epirote case, and leave all impartial readers to decide between the two.

Miss Durham cannot understand my surprise at Mehmed Bey posing as an Albanian delegate. The fact is, I am obliged flatly to contradict her assertion that he represents 60,000 Albanians in America. It is quite true that there are 60,000 natives of the country which she calls S. Albania, and which we call Epirus, in the States. But the significant fact is that their representative organisations call themselves Epirote, not Albanian, and work in the Epirote, not the Albanian, cause. I am in personal touch with these organisations, and four days ago I received a letter from the Secretary of the Pan-Epirote Society, "Markos Botzaris," of Worcester, Mass., informing me that the Pan-Epirote Union of the United States are about to submit a memorandum to President Wilson asking for union with Greece.

Mehmed Bey Konitza represents only a few hundreds of Moslem Albanians of rather suspicious antecedents and connections. This I know for a fact, and I challenge proof of the contrary.

The substance of my letter was that N. Epirus is in feeling and

Digitized by Google

conscience a Greek country. This has been admitted by such varied authorities as Colonel Murray, M. Rene Puaux, the late Marchese di San Giuliano in his pre-Ministerial indiscretion, "Lettere d'Albania," and Prince Lichnowsky. It was made still more clear by the armed resistance of the Epirotes in 1913 to Albanian rule, which obliged the then Albanian Government to acknowledge their right to Home Rule by the protocol of Corfu. To all this Miss Durham, I am afraid, has no satisfactory reply. "Rather more than half of the inhabitants," she writes, "are Moslem." Now the *Turkish* official statistics of 1908 gave 316,651 Orthodox Christians, as against 154,413 Moslems, for the whole of Epirus, and 122,601 Christians, as against 100,981 Moslems, for North Epirus. Miss Durham, I fear, then confuses Konitza, the home of Mehmed Bey himself, which I referred to as fanatically Greek, with Koritza. I fancy she is not so sound on South Albania as on North Albania and Montenegro. It was hardly to be expected that she should be asked for Greek schools in North Epirus, as there are already 258 flourishing Greek schools. In spite of Strabo and Brerewood, an elementary knowledge of race problems makes it quite clear that language is not a sure test of nationality. Not to mention Greek-speaking Turks and Turkish-speaking Greeks, we can find nearer at hand Alsatian Frenchmen who notoriously speak a Germanic dialect. Miss Durham dwells on the war-time creation of an Albanian republic of Koritza. This picturesque incident was due far more to the arbitrary initiative of a doctrinaire officer of an Allied Army than to the spontaneous movement of any large section of the population, and, indeed, elicited numerous protests. Since then three members of the somewhat unrepresentative Government set up have been shot as spies in Austrian pay. Koritza has undoubtedly a very mixed population, but the Hellenic feelings of the majority are recognised by visitors who take facts as they find them, and do not stretch them on a Procrustean bed till they suit theories evolved from their inner consciousness.

I am glad to be able to conclude by agreeing with Miss Durham on one point. As she says, the inhabitants themselves should decide their own destiny. Like her, we "have no doubts as to what would be the result."—I am, etc.,

THE FUTURE OF ALBANIA.

To the Editor of THE NEAR EAST.

SIR,—At a meeting held by the Anglo-Albanian Society on November 12, at which Lord Lamington presided, the following resolution was passed:—

"That inasmuch as the right of self-determination for the smaller nations of Europe has been solemnly [agreed ?] to by the United Kingdom and the United States, this meeting of the Anglo-Albanian Society trusts that those Governments and the Governments of the Allied Powers will secure the integrity of Albanian territory and will assure to the Albanian people the right to choose their own form of Government. It hopes that by these means the independence of Albania accorded by Treaty in 1913 shall be firmly established."

As the solution of the Albanian question must inevitably have an important bearing on future peace, the Society hopes that you will give space for the publication of this resolution.—I am, etc.,

M. E. DURHAM.

NEAR EAST IN PARLIAMENT.

HOUSE OF LORDS.

Armenia and Cilicia. Nov. 13.

Viscount BRYCE asked whether the Government would consider the expediency of occupying, for the purpose of preserving order, the districts of Armenia and Cilicia, in which disorders were most likely to arise, or at least of sending detachments of troops into such districts.

The ARCHBISHOP of CANTERBURY hoped that the Government would be able to give some assurance that they were not forgetting these unfortunate people.

The EARL of CRAWFORD said the subject was receiving the serious attention of His Majesty's Government in consultation with their Allies. He regretted that he could not state the precise action which it might become necessary to take, but he could give an assurance that the Government were fully alive to the national and humanitarian interests involved, and were determined to spare no effort to protect the rights and claims of the Armenian population.

HOUSE OF COMMONS.

Turkey and Peace. Nov. 6.

Mr. BALFOUR informed Mr. Bliss that no understanding of any kind has been entered into with Turkey other than the terms of the armistice as published, except that we had agreed that Allied prisoners of war may be handed over to us wherever it can be done most expeditiously, and not necessarily at Constantinople.

In reply to another question by Sir G. Toulmin, Mr. BALFOUR said that this country at the Peace Conference would be free to advocate terms securing full liberty to Armenia.

Motors in Mesopotamia.

Mr. WATT asked the Under-Secretary of State for War whether he is aware that great waste of petrol is taking place in the use of Government motor cars in Mesopotamia for pleasure purposes; whether the Regulation forbidding the presence of any female in such Government cars is in practice there; and will he make inquiry into this waste?

Mr. MACPHERSON: I am not aware of any waste of petrol in Mesopotamia nor that motor-cars are used for pleasure purposes. I have on previous occasions stated that strict instructions have been issued on the subject. Inquiry is, however, being made of the General Officer Commanding-in-Chief.

Relief for Montenegro. Nov. 7.

Sir L. WORTHINGTON EVANS, Parliamentary Under-Secretary, Foreign Office, replying to Mr. R. M'Neill, said:—His Majesty's Government have received reports of the serious position of the people of Montenegro, and schemes for relief are already under consideration.

Balkans: Territorial Distribution.

Mr. NOEL BUXTON asked the Secretary of State for Foreign Affairs whether he could give an assurance that no pledge will be given by the Allies in regard to the future territorial distribution in the Balkans previous to the decisions of the Peace Conference.

Lord R. CECIL: In so far as His Majesty's Government are concerned, it will certainly be our endeavour not to prejudice by prior commitments the decisions of the Peace Congress in regard to the Balkans.

Mr. BUXTON: Can the noble lord tell the House that no pledge has been given already?

Lord R. CECIL: No; I cannot say as to that.

Mr. KING asked the Secretary of State for Foreign Affairs whether he was aware of the various territorial offers made to Greece—of Southern Albania in November, 1914, of territories in Asia Minor at various dates in 1915 and 1916, of the Doirana district in 1915, and of Cyprus in October, 1915; whether these offers, or any of them, hold good to-day; and whether, before cessions of territory to Greece are finally decided upon, the wishes of the inhabitants will be obtained, preferably by plebiscite?

Lord R. CECIL: The points raised will not be forgotten.

British Prisoners in Turkey.

Sir ELLIS HUME-WILLIAMS asked the Home Secretary how soon the British prisoners in Turkey will be assembled in Constantinople; who is to make the necessary arrangements in Turkey, and who is detailed for the necessary duty of seeing that the arrangements are carried out; and whether all English prisoners in Turkey can be brought to this country on the ship due to arrive there this month, and originally intended to bring the 1,000 agreed to be exchanged under the Berne Agreement?

Major CHAPPLE asked what provision had been made for the immediate supply of necessities and comforts to Kut prisoners of war released by Turkey?

Sir G. CAVE: The prisoners of war in Turkey will not necessarily assemble at Constantinople, but will return by the quickest route that can be arranged. The arrangements for their return are in the hands of the British Admiral in the Eastern Mediterranean, who has been put into communication with the British military commanders for this purpose, and has at his disposal the stores of food and clothing already provided for the prisoners.

Sir J. BUTCHER: Have any active steps already been taken to get these prisoners to a place from which they can sail for England?

Sir G. CAVE: Certainly; I believe a number are already assembled at or near Smyrna.

Travel Restrictions.

Colonel WEDGWOOD asked the First Lord of the Admiralty whether, in view of the changed situation in the Mediterranean, any change has yet been made in the Regulations which prevent British wives from crossing the seas to join their husbands?

Dr. MACNAMARA: In the opinion of the Admiralty, the changed situation in the Mediterranean does not as yet justify any alteration of the existing Regulations.

Topics in Parliament.

The subject headings are those given in the Official Report:—

Armenian Provinces.—November 6.
Prisoners of War: Parcels (Turkey).—November 6.
Gabbari (Alexandria) Military Prison.—November 6.
Gallipoli (British Troops).—November 6.
British Army, Salonika (Report).—November 6.
Mesopotamia: Hospitals (Supplies).—November 6.
Armistice Terms (Turkey).—November 7.
Prisoners of War: Turkey and Mesopotamia.—November 7.

The East-West Club held a meeting on November 11, at the Minerva Restaurant, High Holborn, under the chairmanship of Mr. Arthur Field, to hear an address on Albania by Mr. John C. Paget, of the Anglo-Albanian Association. After the lecture there was a general and animated discussion, and eventually the following resolution was unanimously adopted:—"This meeting expresses its sympathy with the present distress and political uncertainty of the little nation of Albania, particularly as the claims of small nations are so strongly supported in the declaration of President Wilson. It hopes that the complete independence of Albania, distinctly promised to it and confirmed by Europe in 1913, shall be secured."

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

Obviously one cannot expect any rapid transformation at the termination of hostilities, but I hope that it will be found possible in the near future to spare some shipping for the Near East trade. Of the things that we have missed during the war, fruit, I think, by common consent, will be given first place, since its scarcity and lack of the usual variety have made matters very difficult for the housekeeper. We have always drawn large supplies of such things as currants, sultanas, dates, and figs from the Near East, and the fruit is there if we can only get it.

***

Greece, for instance, is well able to supply us with our normal imports of currants, and given expedition there would still be time for them to reach this country before Christmas. Then there is no reason that I can see why we should not draw a few cargoes of sultanas and figs from Syria, while Mesopotamia can export almost any amount of dates. But—and it is a very important "but"—I believe the general opinion is that it would be better to do without dates and other fruit if the absurd prices charged during the war are to be maintained. People will certainly not continue to pay such absurd prices as 2s. 6d. per lb. for dates, and it would be well for importers to understand clearly that the time has now come when prices of such things must bear some relation to value.

***

I referred last week to the registration of the British Roumanian Corporation, Limited, and in the present issue will be found full particulars of this important undertaking. The objects of the corporation are very comprehensive, including the business of financiers, concessionaires, merchants and shipowners—to mention only a few of the operations with which it will concern itself. The corporation has been formed under the most influential auspices, and will beyond question play an invaluable rôle in the future development of Anglo-Roumanian economic relations. It has the distinction of being the first company to be formed at the close of the war for Near Eastern commerce, and the field of its work offers unrivalled scope for sound business enterprise. There should be a great future before it in the furtherance of British interests in a region where, before the war, Germany and Austria had matters very much their own way.

***

The general industrial outlook in the United Provinces formed the subject of some interesting references by Sir Harcourt Butler in a recent speech at Cawnpore. "We have no coal or iron or other mineral deposits that we know of," he said. "We cannot, therefore, expect to make great advances in engineering or such lines. But we are rich in raw material and forest resources, and we may expect the manufactures will move closer and closer in course of time to the sources of raw material. We are the largest sugar-growing province in India, and we grow an enormous quantity of oil-seeds. The future of cotton is hopeful. We have a large and steady supply of hides and skins. The tanning and leather industry is capable of considerable development. Timber is available in large quantities, and there is ample scope for the extraction of wood-pulp."

***

In regard to the immediate outlook, Sir Harcourt quoted some notes which Sir Logie Watson prepared for him. Sir Logie stated that in some of the industries in Cawnpore which were proving themselves so invaluable to Government in the manufacture of war supplies there must, on the cessation of the war, follow a period of depression; but this, he believed, would be merely a depression when compared with the present time of stress and rush, of incessant work and constant shifts. That there would be any "slump" as compared with pre-war days he could not believe. In Sir Logie's opinion the real expansion of provincial industries will not come in the main lines of the great master industries of to-day, but in the introduction of remunerative side lines, in the establishment of other industries, subsidiary and yet essential to the master industries, and above all in the creation of new industries to supply those commodities which had not been forthcoming from abroad during the war.

***

No doubt the principal object of the Chartered Bank of India, Australia and China in applying to the Treasury for sanction to increase its capital is to prepare for future developments, for British interests in the East, particularly in India, demand strong financial assistance just as much as they do in other parts of the world. The proposed increase in the capital consists of 40,000 new shares of £20 each, fully paid, which will raise the paid-up capital from £1,200,000 to £2,000,000, and the shares are to be offered to shareholders at £40 in the proportion of two for three now held, which of course means a substantial bonus, as the shares stand at about 94. It is worth noting, incidentally, apropos of the suggestion of Lord Colwyn's Committee that the capital of banking institutions should be brought into more appropriate proportion to the deposits, that while the capital of the Chartered Bank has remained unchanged since 1910, the reserve has risen from £1,600,000 to £1,900,000, while the deposits have increased by over £13,000,000!

***

The Burma Corporation's report for 1917, which is now available, shows that excellent progress was made in the period under review. Thus the output of refined lead showed an increase of over 6,800 tons on the 1916 figures, while the refined silver amounted to 1,525,800 ounces against 105,600 ounces! Receipts increased by £271,300 at £796,200, and it is satisfactory to note that despite war difficulties the ratio of expenditure decreased from 63.71 to 60.24 per cent. The net surplus amounted to £158,500, which represents a very fair return on the capital. The Corporation, however, has not yet reached the dividend stage, and some time is likely to elapse before that is the case, as the proposed plant expansion is to be deferred seemingly "until both the post-war probabilities and the results of the metallurgical experiments are reasonably certain."

***

An extraordinary amount of attention has been given in the German Press during the war to the oil resources of Persia. From time to time I have quoted extracts from articles on the subject showing very plainly that the enemy was looking in that direction for post-war supplies of liquid fuel and its allied products. Within a few weeks of the armistice German writers have continued to prepare public opinion for some *coup* in Persia by drawing the most glowing visions of the oilfields. In the latest of these articles that have come to my notice the writer says that "the oil wells of Irak contain an inexhaustible supply, in quality far superior to Baku oils. The district—over 1,000 kilometres in circumference—stretches north into the province of Kermanshah, east almost to Ispahan, then cuts through Arabistan towards the Dascht and Daghistan ranges, and ends in the vicinity of Bundar Abbas." The writer goes on to discuss the Anglo-Persian Oil Company, saying *inter alia* "English diplomacy has been ceaseless in its efforts to obtain the collective supply, thus running in direct contradiction to contracts concluded with Persia in 1907. At the outbreak of war England took advantage of the poverty of the Government to obtain a concession for the monopoly of the whole industry."

***

Another of the Indian railway reports has been issued this week, that of the Nizam's Guaranteed State Railways, which makes a fairly satisfactory showing for the year ended March 31. There was an increase in the gross receipts, but as expenses rose at a greater rate there is a falling off in the net revenue. Business was good on the broad gauge system, but freight takings declined on the metre gauge system, though there were increased receipts from passenger traffic. The reason of the increased operating costs is not that there was an excessive outlay on the year's working, but that prudent provision was made for deferred maintenance. The surplus divisible between the Nizam and the company on the broad gauge working is £11,300, against £54,600, but there is no surplus available for division as regards the metre gauge line, while the previous year there was £28,400. It remains to note that the dividend is maintained at 5 per cent.

***

I understand that a branch of the Serbian Commercial Agency for the United Kingdom has been established in Italy, and that among the goods which will be imported by the new branch are textiles, woollen and cotton goods, flannels, linen wear, electrical articles, ironmongery, foot wear, office furniture and fittings, agricultural machinery, chemicals, and window glass.

AGRICULTURE IN MESOPOTAMIA.

(From Our Baghdad Correspondent.)

When the British occupied the Baghdad vilayet they were faced by the following difficult situation in regard to agriculture. All cultivation on the Tigris from Samarra nearly as far as Baghdad had been destroyed. The actions in the neighbourhood of Bilad and Istabulat had been fought when the crops were ripe, and what the Turks had not eaten they had destroyed. Near Baghdad the season had been very dry, and, as this was the third dry season in succession, the stocks of all agricultural products were reduced to a minimum, so that the feeding of stock throughout the summer proved a serious problem. From Baghdad to Kut there was practically no cultivation, because the Turks had deliberately removed the tribes from the river banks and forbidden all cultivation. On the Diala river many acres of green crops were destroyed, and in September roads and railways were laid down so quickly that many water courses had to be blocked. The Russians and Turks had devoured all there was to be had in Khanikin, so that a famine resulted there. On the Euphrates the inundation canals were silted and there was a very small harvest, and though there had been heavy sowings in the Hillah district, the barrage not being under control, the yield of matured was lighter than usual. The breaking of the Saklawiyah dam had so reduced the waters of the Euphrates that the rice crop sown in the Shamiyah district twice failed to mature, and the third time was only partially successful.

The Turkish authorities, who had their hands full on account of the war, found little time to settle quarrels between those hereditary enemies, the townsman landlord and the tribal cultivator. Hillah had revolted openly, and the landowners did not dare to venture near their properties, and where land was cultivated it was cultivated by the tribe without any reference to the proprietors. The discrepancy between Turkish law and Turkish practice was an added complication, and it was clear that some system that would enable the authorities to understand and remove the difficulties of the cultivator was imperative. A great portion of the land in the vilayet is irrigated by permanent canals, and the necessity of controlling irrigation was at once apparent. In peace time many canals were privately owned, and their maintenance and clearance was incumbent upon the proprietor.

The earthwork of the Hani Hassan Canal, in the Hillah district, commenced but abandoned some three years previously, was put in hand in May, the work being undertaken by local tribes. The Ba'quba canals are cleared in the spring, the Hillah canals in autumn; and by the time that general clearance became necessary on the latter an engineering staff had been appointed to the barrage.

In addition to the regular canal systems, advantage has been taken of facilities for occasional irrigation. The Turks, by cutting the Sarriyah dam, had flooded the depression known as the Khor Aqarquf, and there was a danger that the water would destroy the Fallujah road. The flood was therefore headed off by a bund, on the other side of which was a fairly extensive cultivable area that only required water and cultivators to produce a crop. The authorities were approached and permission was obtained to construct culverts at certain places. Areas for cultivation were then allotted. This area returned crops worth £1,360.

No correct information about Hillah was forthcoming until June, but it then became apparent that there too the harvest had been below normal, and that only by the expenditure of much capital, and by the careful organisation of labour, could the country be restored to prosperity. A scheme called the Agricultural Development Scheme was therefore put forward in June, but as the Turks were in the vicinity of the Diyalah canals' headworks, the Euphrates was the only area on which development could be commenced. The scheme, with its budget of £400,000, having been finally approved on September 19, a meeting of landowners was held in Baghdad and Hillah and the intentions of the Government explained. They were invited to co-operate and were offered assistance, but at the same time warned that no one who neglected his lands would be entitled as of right to the landlord's share of the next harvest. A tour was then made of the tribal areas, and at each centre the headmen were summoned and the scheme explained to them. Certain concessions were granted to the leading Sheikhs in return for their co-operation, and as a result the provision of seed for almost all the Hillah canals was guaranteed. In this way the scheme was relieved of the necessity for providing 6,000 out of the 15,000 tons budgeted for.

THE INDIAN INDUSTRIES COMMISSION REPORT.

Reuter's Simla correspondent, in a message dealing with this report, comments as follows :—

The report, which is intensely interesting, says that constructive proposals depend on the acceptance of two principles: (1) The Government must in future play an active part in the industrial development of the country, with the aim of making India more self-contained in respect of men and material; and (2) the Government cannot undertake that part unless provided with adequate administrative equipment and forearmed with reliable scientific and technical advice.

The first chapters of the report show how little the march of modern industry has affected the great bulk of the population which is engrossed in agriculture, winning a bare subsistence from the soil by antiquated methods of cultivation. The changes wrought in rural areas, it says, are the effects of economic rather than of industrial evolution. Money has been invested in commerce rather than in industries, only those securities being taken up which appeared to offer easy profits. Previous to the war too ready reliance was placed on imports from overseas. India, the report points out, possesses nearly all the raw materials necessary for the requirements of a modern community, but her great textile industries depend on imported machinery, and would shut down if the command of the seas were lost.

Summing up, the Commission finds that India is a country rich in raw materials and industrial possibilities, but poor in manufacturing accomplishment. The deficiencies in her industrial system render her liable to foreign penetration in peace and to serious dangers in war. Her labour is inefficient, but capable of vast improvement. She relies almost entirely on foreign sources for foremen and supervisors, and her intelligentsia have yet to develop the right tradition of industrialism. Her stores of money lie inert and idle. The necessity of securing the economic safety of the country and the inability of the people to secure it without the co-operation and stimulation of the Government impose, therefore, on the Government a policy of energetic intervention in industrial affairs and the discharge of multifarious activities. This policy demands that the Government must be provided with suitable industrial equipment in the form of Imperial and provincial departments of industries.

Pundit Mohan Malaviya adds a minute of dissent. He quotes historical evidence purporting to show that India was once an important industrial country, but was forced to become a producer of raw materials by the policy of the East India Company. India's wealth rendered possible the English industrial revolution of the nineteenth century. He prefers the system of training mechanical engineers in Universities, in an atmosphere of culture, and he proposes an Imperial Polytechnic Institute for all India. He disapproves of an Imperial Board of Industries, and proposes to substitute an advisory Board largely elected by the Legislative Council. He thinks that the proposed industrial and scientific services are premature, and should be started when recruitment can be made wholly from Indian graduates. He proposes the institution of a State bank, and considers the range of the proposed salaries too high, and suggests that it should be based on a standard suitable for Indian graduates.

NEAR EAST MARKETS.

Egyptian Crops.

The bulletin of the Egyptian Ministry of Agriculture gives the following particulars regarding crop conditions in September :—

Cotton.—The weather was generally favourable, being hot during the day and cool at night. Reports from the provinces of Faiyûm and Minya, however, state that on the whole the days were too cool and the nights too damp to be congenial to the crop. A rainstorm broke out and was felt in some parts of Gharbiya and Sharqiya in the last week of September, but without causing any measurable damage, although it is feared that it may in some cases affect the quality of the unpicked cotton to a certain extent. Water supply ample, and some cultivators in the Faiyûm indulged in cotton flooding, with the usual result of boll shedding. Practically all reports agree that the pink boll worm attack has been, so far, lighter than in previous seasons. The ordinary boll worm is rarely noticed. Picking became general in the Delta, except the northernmost districts, and was far advanced in Middle and Upper Egypt about the middle of September. Where the first picking was finished the result was, on the whole, satisfactory, and the second picking of the early-sown crop has started.

Rice (*Séfi*).—The weather was rather cool, but on the whole favourable, and water supply abundant, except at the tail ends of canals in Beheira. Attacks from stalk-borer in Daqahliya are still occurring, but the damage is negligible. The crop is ripening well, and a good yield is expected; the harvest of Yabâni is about to begin in Gharbiya. The mixing of several varieties of rice in the same field is reported from Daqahliya as being quite prevalent in spite of repeated warnings to the cultivators. This practice is to be strongly deprecated.

Rice (*Nili*).—The plants are well advanced in growth and early-sown fields are in ear.

Maize.—Weather quite favourable and water supply sufficient. Watering, hoeing, thinning, and manuring were the operations in progress during the month. Flowering is profuse and cobs are being formed in the early-sown crop. There are practically no signs of attacks from pests and the crop is generally looking healthy. The growth is satisfactory and points to a better yield than last year, but it is feared the shortage of manures may yet cause an adverse effect on the crop later.

Millet (*Séfi*).—The crop is almost entirely harvested, and threshing is proceeding everywhere. The yield is a little below average. Some damage was caused by the stalk-borer, aphis and smut, and in some parts of Minya the crop has been immaturely harvested owing to the introduction of flood water in the *hôds*, with the result that the seed is somewhat poor.

Millet (*Nili*).—Weather favourable and water supply ample. Thinning, hoeing, and watering are in progress. The crop is healthy and well advanced in growth.

Sugar-cane.—Weather favourable and water supply ample. The attack from stalk-borer is general throughout the whole sugar-cane belt. Nevertheless, the crop presents a good appearance, but owing to the scarcity of manures the expected yield is not quite satisfactory. In the neighbourhood of towns the crop is being cut for sucking.

Sudan Products.

The following are extracts from the report of the C.E.B. for August :—

10,240 kantars of gum were sold in El Obeid market during August, as against 7,539 in the same month last year. This constitutes a record for August. The average price was £1,413 per kantar. 617 kantars arrived from Nahud market, as against 4,923 last year. The season has ended at Um Ruaba and Rahad, only 96 rottles being sold at the former place. There is still a good deal of the old crop to come in, so that the output for this year should again be well above the average. The total value of gum exported from Tendelti during the period January to May, inclusive, was £33,491.

Cotton.

Berber Province.—At Timirab cotton planting was pushed hard to make up for the delay caused by the wheat harvest, and some

Digitized by Google

very energetic levelling was carried out by tenants of the Government land in the Karu. At Zeidab cotton planting continued, but the area on native land is less than that of last year. Cotton at Darmali is disappointing, mainly due to damage done by the frog hopper fly. The Saadabia cotton is a good deal better. Some 40 feddans of cotton have been planted at Mikeilab. At Zeidab cotton is looking well.

Kassala Province.—The total crop of the year is 8,191 kantars of 315 rottles (142 kilos), of which rather more than half is Sakellaridis. The crop is about double last year's.

Dates.

Halfa Province.—The quality of the new date crop is moderate to good, while the quantity will fall short of previous years' crops by some 20 to 30 per cent. There is a greater demand for dates, and buyers are arriving from Egypt, including several new ones. They anticipate the price in Egypt will be excellent, and local prices will reach record figures. Financially the natives are in a sounder position, and will probably hold for good prices, which merchants must give to get their dates away by water before the Nile falls. A few dates are now coming on the market, but the first arrivals in any quantity will not be till the first half of November.

The Lord Mayor, Sir Horace Marshall, will preside at a meeting in the Mansion House on November 18, when an effort will be made to stimulate the Royal Horticultural Society's War Relief Fund, organised with the object of restoring the gardens and orchards of our French, Belgian, and Serbian Allies, which have been completely devastated by the enemy. An appeal is being made to all who have gardens and orchards in this country to help in the restoration. The hon. treasurer is Sir Harry J. Veitch, 17, Victoria Street, S.W.1.

BRITISH ROUMANIAN CORPORATION.

The British Roumanian Corporation, Ltd., was registered last week with a capital of £500,000, in £1 shares. The objects of the corporation are to carry on business as financiers, concessionnaires, merchants, bankers, contractors, shipowners; to transact agency business, and to participate in any commercial, mercantile, industrial, manufacturing, mining, and other businesses, etc.

The number of directors is to be not less than three and not more than seven. So long as the Bank of Roumania, Ltd., holds 50,000 shares, or one-tenth of the issued capital, whichever shall be greater, it shall have the right to appoint two directors. The qualification of a director is shares of the nominal value of £100, and the first three directors will be Mr. E. W. H. Barry, London manager of the Imperial Ottoman Bank, Ltd.; Mr. H. Locke, manager of the Bank of Roumania, Ltd.; and Mr. C. M. Woodbridge, director of Barclay's Bank, Ltd. The registered office is at 34-36, Gresham Street, E.C.

A paper will be read by Mr R. B. Joyner, C.I.E., on "The Tata Hydro Electric Power Supply Works, Bombay," at the meeting of the Institution of Civil Engineers on November 19.

The Secretary of the War Office states that Lord Harcourt's Army Agricultural Committee have learnt that the harvest recently gathered in Mesopotamia under Army superintendence and assistance has realised 475,000 tons of grain.

The returns of the Egyptian Markets for the week ended October 24 were:—Cattle markets, £685; general markets, £538; total, £1,223. Total for year, £41,906. The figures for the corresponding week last year ended October 25 were:—Cattle market, £424; general markets, £454; total, £878. Total for year, £46,750.

LANCASHIRE COTTON.

Unsettled Outlook.

(From Our Own Correspondent.)

Manchester, Wednesday.

No business has been attempted in the market this week. Production has been suspended in order to celebrate the victory of the Allies, and fresh trade has been quite out of the question. The outlook is very unsettled. There are fears in all quarters of a further depreciation in values. There is undoubtedly a large demand waiting to be met throughout the world for cotton fabrics, but it remains to be seen when business will mature, and there is no likelihood of any big buying movement until prices are steadier. Nothing new can be said with regard to Egyptian cotton supplies. The Liverpool market has been closed from Monday to Thursday. Quotations for Egyptian yarns have been quite nominal. Numerous spinners have refused to give out prices. Business in piece goods for Egypt has been at a standstill. Cables for Cairo and Alexandria have been scarce. Some attempts have been made to cancel contracts. From other outlets there is no fresh news. Business in American yarns has been disorganised, and practically nothing has been done.

The agricultural inspectors in Egypt have been engaged in collecting the legal fine imposed upon cultivators for the overplanting of cotton. It is stated that the amount gathered for that purpose from the Gharbieh Province alone amounts to several thousand pounds.

Mr. A. A. Black, of the Victoria Mills Company, Limited, Cawnpore, has been appointed a member of the education section of the United Provinces Board of Industries in place of Mr. B. R. Briscoe, of the Cawnpore Cotton Mills, resigned.

ENGINEERING NOTES.

Farming in Mesopotamia.

A Scottish soldier, who has been interested in the great possibilities in Mesopotamia, writing from Baghdad to his father in Scotland, says :—" You will be interested to know that quite a lot of money is going to be spent (a lot has already been spent) on agriculture, especially in the matter of irrigation to develop crops. Maize is being experimentally grown, also cotton and oats. Sheep farms are going to be established, also dairy farms in different localities; thus the British occupation has already brought great benefits to the country and the people. The soil of the country is good, from the source of the Shatt-el-Arab delta as far north as Samarra, and is a rich deposit of alluvium, most suitable for the growing of cereals. It is only a matter of the installation of up-to-date irrigation works in different localities, equipped with engines and pumps of modern design, to develop the great stretches of plain at present more or less devoid of crops." This simply corroborates what has often been stated in these notes with regard to the great possibilities in Mesopotamia for the sale of all classes of agricultural machinery. In recent engineering notes reference was made to the kind of engines and pumping machinery that are employed in Mesopotamia for irrigation and other purposes. It is possible that with the construction of canals and the development of a large system of State irrigation which should follow the construction of the State barrages, irrigation by gravitation will supersede in parts of the country this kind of engine and pumping machinery, as the latter is now superseding the bullock and horse lift. This, however, is still a somewhat remote contingency, and for some years yet the employment of mechanical pumps will be continued and increased. Even after the completion of a system of irrigation by gravitation many tracts will remain in which mechanical pumps will be employed with advantage.

Morocco's Irrigation Scheme.

It is reported that preparations are being made in France for the development of the agricultural resources of North Africa, and especially for carrying out a scheme for the irrigation of vast regions in Morocco, where subsoil water can be obtained in abundance. As we stated in previous notes, the method used in Morocco for bringing the water to the surface for irrigation purposes, etc., is, as a rule, the same that prevails in the East—namely the slow-going bullock or horse water-lift, a tedious, primitive, and costly process, which is, to a great extent, the cause of limiting cultivation, and, probably, is conducing to the proverbial dilatoriness of the Oriental toiler of the land. In recent years, however, there has been a marked inclination in Morocco to adopt modern methods of agriculture, one of the results being a great opening for mechanical pumps, such as internal combustion engines with centrifugal pumps, windmill pumping plants, etc. It is reported now that the whole question of the development of the agricultural resources of Morocco has recently been dealt with in a preliminary report prepared for the French Government, from which it appears that Morocco is remarkably rich in hydraulic resources which are capable of being utilised for the vast development of agriculture. On this report, apparently, are based the preparations which have been mentioned.

Bridging the Danube.

Just before the commencement of the war some enterprising German contractors, with the support of their Government, were interesting themselves in a Roumanian scheme for bridging the Danube, which would give the contractors an opportunity to undertake the construction in conjunction with a Bulgarian scheme of harbour works. The Roumanian Government at the time negotiated with the Bulgarian Government as to the choice of a suitable place for the construction of the bridge. The proposal for a bridge was favourably received in Bulgaria, which, apparently, had another scheme of much interest to Roumania. Since Turkey had ceded a district on the Ægean Sea to Bulgaria, the Bulgarian Government had decided upon the construction of a Bulgarian harbour at Porto Lagos, in Eastern Thrace, and of a railway leading thence in a northern direction into the Maritza Valley. This railway was to be the continuation of the line already running from the Maritza Valley through the Balkans to the Danube. By the construction of a bridge over the Danube connecting Rustchuk and Sistova Roumania would obtain the advantage of more direct communication with the Mediterranean. Both these schemes will have to be carried out in the near future, and it is not too soon for British contractors to interest themselves in these developments if they do not wish to see the work going to competitors who will assuredly not be backward.

THE GREEK MISSION.

The Greek community in London gave a dinner at the Savoy Hotel on November 7 in honour of the Greek Commercial Mission. The chair was taken by M. Gennadius, the Greek Minister, who proposed the health of M. Venizelos, whose very name he said was a eulogy. Honour had been conferred by him on Greece since his being at the head of affairs.

Mr. G. Marchetti proposed "The Greek Commercial Mission," and M. Michalacopoulos replied.

The Lord Mayor congratulated the Mission on the success of its visit to this country. Turning to the military political situation of the time, he said in the result of her efforts Greece had proved the far-sighted wisdom of Venizelos and the determination of the Greek nation to follow him for the vindication of its honour.

M. Caclamanos proposed "The Federation of British Industries." Sir Vincent Caillard responded, and announced that an association was being founded for industrial co-operation between Great Britain and Greece, and for the development of Greece.

TANNING EXPERIMENTS.

The Director of Industries, Madras, has issued the following Press communique :—A number of interesting experiments are being carried on at the Leather Trades School to ascertain the value of new tan stuffs and mixtures. The immense demands made by the war for tanned hides has brought into great prominence the question of the supplies of tanning barks and of a substitute for the bark of the Avaram shrub, which is, of course, the leading tanning material of Southern India. A consignment of black wattle bark was imported last year from South Africa and various experiments were tried, some with wattle bark alone and others with mixtures of wattle and Avaram in different proportions. The bark of the twig and trunk of Anogeissus Latefolia has also been experimented upon with promising results, as also have sumacs made from the powdered leaves of the tree. A number of other substitutes are being tried.

SUEZ CANAL RECEIPTS.

The traffic receipts of the Suez Canal were as follows on the undermentioned days :—November 6, 7, 480,000 frs., against 510,000 frs.

Lord Carmichael has joined the board of the Union Bank of Australia, Limited.

H.M. Trade Commissioner at Calcutta states that a well-known merchant firm at Calcutta intend sending a representative to Mesopotamia, if the Government approve, with a consignment of agricultural implements.

BUYERS' GUIDE.

COMPANY NOTES & REPORTS

Burma Corporation.

The report of the Burma Corporation for 1917 states that the amount receivable from the Burma Mines, Limited, was £144,108, against £58,155. This has been advanced to Burma Mines to meet capital expenditure, increasing the advances to £453,498. Burma Mines having given notice to pay off their debenture stock, the Corporation converted its holding into shares, and now hold 721,813 shares of total of 724,577. The board has decided to erect immediately zinc works in India. Burma Mines realised from sales of lead and silver £739,577, against £456,250, and its total receipts were £796,227, against £524,930. Operating expenditure was £479,694, against £334,433, the ratio being 60.24 per cent., against 63.71 per cent. Developments at the Bawdwin Mine have continued uniformly favourable. Ore reserves amounted to 4,138,000 tons, assaying 24.6 ozs. silver, 27.2 per cent. lead, 18.9 per cent. zinc, and 0.7 per cent. copper, against 3,644,000 tons, assaying 25.2 ozs. silver, 27.4 per cent. lead, 20.9 per cent. zinc, and 0.5 per cent. copper; and at June 30, 1918, the reserves are reported, after allowing for 31,345 tons extracted this year, to be 4,299,888 tons, assaying 24.2 ozs. silver, 26.8 per cent. lead, 18.7 per cent. zinc, and 0.7 per cent. copper, of which 3,897,345 tons has been proved. The Burma Railways have agreed to extend their line thirty-five miles to Namtu from Tahapalai. For excess profits duty the Burma Mines' statutory percentage has been increased to 12½ per cent. The general programme recommended by the consulting engineer is: (1) The average ore to be sent to the mill operating on the preliminary flow-sheet. (2) That the lead concentrates produced be treated for the time being at the present Namtu smelter with such temporary capacity additions as may be required, any excess base bullion over refining capacity being exported to England. (3) That a zinc retort smelter and acid plant to treat 25,000 tons zinc concentrates a year be at once erected at Sakchi, India, any excess concentrates produced being shipped to England when shipping conditions permit. (4) That the experiments already under way in several directions for the choice of a suitable process for the treatment of middlings be prosecuted vigorously, and upon satisfactory showing a commercial plant be erected in England. (5) That final decision as to ultimate mill flow-sheet, modern lead smelter, etc., be deferred until both the post-war probabilities and the results of the metallurgical experiments are reasonably certain. Meeting, River Plate House, E.C., 18th inst., noon.

Hyderabad (Deccan).

The directors of the Hyderabad (Deccan) Company, in their half-yearly report, state that there is still considerable delay in receiving information from India, and complete financial results have been received only up to the end of March. Revenue accounts brought up to the end of June from information received show that the output is about 3 per cent. less and the costs 5½ per cent. more than the corresponding period of 1917, while the average prices realised show a slight increase. The higher cost is due to increases in wages, materials, and stores. During the year to date investments have been increased by the purchase of £11,450 5 per cent. National War Bonds. On account of the year 1918 an interim dividend of 1s. per share, less income-tax, has been declared, and warrants will be posted 30th inst. to holders registered October 29.

Nizam's State Railways.

The report of H.H. the Nizam's Guaranteed State Railways Company for the year ended March 31 last states that expenditure on capital account in respect of the broad gauge system was £24,136, making a total of £3,957,476. Net earnings, after deducting £22,739 payable to the Government of India on account of the Bezwada Extension, amount to £221,301. The sum required to meet the charges for the year in respect of debentures and income-tax adjustments, together with 5 per cent. on capital stock, amounts to £210,000, leaving a surplus of £11,301 divisible between the Government of H.E.H. the Nizam and the company. The metre gauge system, Hyderabad Godavery

Valley Line, shows that expenditure on capital account was £5,474, making a total of £2,087,786. Net earnings amount to £105,308, of which £1,042 is payable to the Government of H.E.H. the Nizam on account of the Hingoli branch, leaving £104,266 to meet the charges on the Three and a-Half per Cent. Debentures and income-tax adjustments. At the general meeting held October 22 the Board recommended the payment of a dividend on the stock of the company for the half-year ended March 31 at the rate of 5 per cent. per annum, less tax, making 5 per cent. for the year. Warrants were issued on October 24. It is proposed to change the name of the company to His Exalted Highness the Nizam's Guaranteed State Railways Company. Adjourned meeting, Winchester House, E.C., 19th instant, 3 p.m.

British Metal Corporation.

The British Metal Corporation, Ltd., has been registered at Somerset House with a nominal capital of £5,000,000 in 500,000 shares of £10 each. The memorandum of association shows that power is taken to buy, sell, manufacture, crush, smelt, calcine, refine, dress, amalgamate, manipulate, prepare for market and deal in ores, metals, minerals, mineral substances and similar products, to carry on any other metallurgical operations. No share may, without the consent of the Board of Trade, be held by any enemy or by any member in trust for, or on behalf of, or in any way directly or indirectly at the disposal of or under the control or direction of any enemy or enemy State, or enemy corporation or corporation under enemy control. The number of directors is not to be less than three nor more than ten. The Treasury has the permanent right to be represented by one director. The first directors are to be appointed by the subscribers to the memorandum of association. The qualification of a director (except the Treasury nominee) is £5,000 shares. The remuneration of each director is to be £500 per annum, with an additional £500 for the chairman, and the board is also to receive collectively 5 per cent. of the balance of net profits remaining in any year after payment of 10 per cent dividend.

Oriental Gas.

The report of the Oriental Gas Company for the year ended June 30 last states that profit, after allocating £5,000 to renewals suspense account, was £26,415, or £338 more. The high rate of exchange produced an increment of £3,163 to equalisation account. The directors have entered into a contract with the municipality of Maniktala for the supply of gas to that district for 15 years. The directors recommend a dividend at the rate of 4½ per cent., less tax, making 8 per cent., less tax, for the year. Meeting, Finsbury House, E.C., 20th instant, noon.

Chartered Bank of India.

The directors have applied to the treasury for sanction to increase the capital of the bank from £1,200,000 to £2,000,000 by the issue of 40,000 new shares of £20 each fully paid. The issue price of the new shares will be £40 per share, and shareholders will be entitled to subscribe for the new shares in the proportion of two new shares for every three old shares now held by them. When the sanction of the Treasury is received, due notice will be sent to the shareholders announcing the date of special meeting to be held to confirm the arrangement in question.

Associated Tea of Ceylon.

The report of the Associated Tea Estates of Ceylon for the year ended June 30, shows a gross profit of £12,848; £13,028 was brought forward, and after providing for office expenses, excess profits duty 1916-17, preference dividend and interim dividend of 5 per cent. on ordinary shares, free of tax, there remains £5,288, which the directors propose to carry forward. In view of the uncertain outlook for rubber and of the poor prices realised for the proportion of tea not allotted to the Food Controller, the Board have thought it wise to keep the company financially strong and not pay any further dividend on the ordinary shares.

Dividends, Payments, etc.

Indian Electric Supply and Traction.—Interim of 2½ per cent. (6d. per share), less tax, for half-year, payable 20th inst.

The annual general meeting of the Land Bank of Egypt will be held on December 3 at 4 p.m. in Alexandria.

The court of directors of the Royal Mail Steam Packet Company have resolved to pay out of the profits of the current year an interim dividend at the rate of 2½ per cent. (less income-tax) on the preference stock, and an interim dividend at the rate of 2 per cent. (less income-tax) on the ordinary stock, being at the same rate as in the last three years. The dividend warrants will be posted to the proprietors on November 22.

The Aboukir Company, Limited, notify to the holders of Five per Cent. Debentures, falling due June 1, 1919, that the company are prepared forthwith to offer, in exchange for the old debentures, a new debenture to carry 6 per cent. interest, as from December 1, 1918, with certain rights of exchange for shares. The holders desiring to exchange should apply to the secretary for a circular containing full information. Shareholders may apply for debentures, which may not be taken by existing holders, and shareholders desiring to do so should apply to the secretary for full particulars.

The directors of the India General Navigation and Railway Company have declared an ad interim dividend of 4 per cent on the ordinary shares, free of income tax, payable 21st instant.

WOLFRAM IN BURMA.

As a result of the special measures taken by the Government of Burma during the war to promote the output of wolfram, the production increased in 1917 to 4,529 tons. The report for 1917 points out that about 80 per cent. of the provincial yield comes from the Tavoy district. This district produced about 1,950 tons in 1914, nearly one hundred tons more in 1915, 3,000 tons in 1916, and in 1917 nearly 3,700 tons. In the remaining wolfram producing areas—the Southern Shan States, and the Thaton and Mergui districts, the returns of output exhibit a satisfactory advance.

The price of wolfram remained unchanged in 1917, but early in 1918 the price was advanced 5s. per ton, and other concessions were granted to meet the heavy rises in freight, insurance, etc. With reference to the recent discovery of wolfram on the border between the Yamethin district and the Loilong State, it is mentioned that since the close of the year 1917 some 20 tons of wolfram have been extracted from a concession in this locality situated to the south of Byingye Peak, and numerous other prospecting licences are being issued in the neighbourhood. Features of the new field are the complete absence of tin and the large percentage of molybdenite which is found in the wolfram.

ON 'CHANGE.

THROGMORTON STREET, Wednesday.

There has been a very fair amount of business doing this week, but with some irregularity in prices. On the whole, however, the tendency has been upwards.

In Government stock, Egyptian Unifieds are ½ easier at 90.

Amongst Bank shares the only change is an improvement of 1-16 in Agriculturals to 6 31-32, after business up to 7 1-16.

In Railways, Egyptian Delta Lights have improved ¼ to 8½.

As regards Land descriptions, Aboukirs are 6d. firmer at 23s. 6d., and there has been a fair amount of business doing in Behéras and Delta Land shares round the current level. In Foreign Trusts, after a further improvement to 18s., the price closes 9d. up at 17s. 6d. New Egyptians at one time rose to 22s. 3d., and finish 7½d. higher at 22s. Sidi Salems have been a feature of strength, and a fairly large business has been put through, the price closing ⅛ up at 2 27-32. A feature of interest has been the strong demand for United Egyptian Lands, which have jumped 1s. 4½d. to 4s.

Amongst Miscellaneous shares Salts and Sodas have receded ⅛ to 3⅝, but, on the other hand, there has been a further important rise in Khedivial Mails, which are closing 13s. higher at 88s.

In Greek securities there is absolutely no change to report.

Oil Shares.

With the exception of Roumanian Consols, which have declined 6d. to 17s. 6d., Roumanian oils have been a strong market Anglo-Roumanian Petroleums closed at 11s. 3d., a rise of 1s. 6d., while Traian Roumanians, at 11s. 11½d., are 1s. 9¾d. up. Russian shares are variable. Bakus are 6d. down at 5s. 3d., while North Caucasians are weaker at 26s. 6d. Anglo-Egyptians B are firm at 2 13-16, as are Anglo-Persian Prefs. at 25s. 6d.

Paris Bourse.

Suez Canal shares have been stronger this week and close at 5,500, a rise of 100. Egyptian securities have been in better request. Credit Foncier Egyptiens are 7 up at 782. Land Banks of Egypt are 10 up at 210, but Unifieds are a point worse at 93. Other prices are: Serbian 1895's, 62.40 (unchanged); Turkish Unifieds, 71 (against 74); Banque d'Athenes, 105 (against 105.75), and Ottoman Banks, 555 (against 558).

INDIAN STERLING TRANSFERS ON LONDON.

In view of the present demand for homeward remittances the Government of India has decided to sell sterling transfers on London from next week onwards until further notice up to a maximum limit of £1,000,000 a week at rates based on 1s. 6d., the rate at which the Secretary of State has been until recently selling telegraphic transfers on India. The rate for immediate drafts will be for the present 1s. 5 31-32d. per rupee, and that for deferred drafts is. 6 1-32d. per rupee. Drafts will be issued in multiples of a thousand pounds, and no single draft will be issued for a smaller amount than £10,000. Applications are to be addressed to the Controller of Currency at Calcutta, and should reach him not later than 12 noon standard time on Thursday in each week, beginning from next week.

BRITISH TRADE CORPORATION

(Incorporated by Royal Charter),

13, AUSTIN FRIARS, LONDON, E.C.2.

Telegrams: "Trabanque, London."

CAPITAL: Authorised - £10,000,000 Subscribed and Paid Up - £2,000,000

Governor - THE LORD FARINGDON.

Manager, A. G. M. DICKSON. London Manager, P. C. WEST. Secretary, G. De B. BROUNLIE.

The Corporation has been established with the object of developing the Trade of the British Empire in every part of the world, and brings to the notice of all interested that it is prepared to grant financial facilities to British Manufacturers and Merchants for the increase of their Import and Export Trade.

It will be prepared to assist in opening up new channels for enterprise, and will afford financial facilities for the enlargement of works and the extension of plant.

The Corporation is appointing representatives in the chief cities of the world, and will open credits at home and abroad. It invites inquiries, and will endeavour where necessary to put expert advice at the disposal of correspondents regarding the financing of their foreign and overseas business. Moneys received on fixed deposit. Terms on application.

NOTES OF THE WEEK.

The work of giving effect to the terms of the different armistices is proceeding more or less smoothly, to the accompaniment of characteristic wails from Germany. These are raised at an inopportune moment, as they coincide with the reports of British prisoners of war being turned adrift from their camps to make their way without food or transport to the nearest Allied forces. It is evident that the Germans are not going to recover during the early stages of peace any of the reputation that they sacrificed during the war. "Brutes they were, and brutes they remain," was Mr. Balfour's outburst at the news of the sinking of the *Leinster*, and the armistice is revealing other qualities of the bully. Now that Dr. Solf has been told by President Wilson to direct his appeals to the Allied Governments, a new agent in an attempt to reach a soft spot in the hearts of the Allies is forthcoming in the person of Prince Lichnowsky, who has hitherto enjoyed in England a better reputation than any other German official. He addresses himself, on the same lines as Dr. Solf, to his "personal friends," and enumerates Lord Lansdowne, Earl Grey, and Mr. Asquith. He has the temerity—to use no stronger word—to suggest that the armistice conditions "are inspired by a spirit which cannot be characterized otherwise than as one of revenge, because their strict execution would unfailingly lead to misery, starvation, anarchy, and chaos." That such an appeal should be put forward by the spokesmen of the nation that drafted the treaties of Bucharest and Brest-Litovsk is a warning to the Allies to draw up conditions of peace that are applicable to the German people as they have revealed themselves during the last four years, regardless of the constitutional camouflage that they may have seen fit to adopt under the stress of military defeat.

In Turkey the Allied organization, with Vice-Admiral Gough-Calthorpe as British High Commissioner, is already established at Constantinople. The forts of the Dardanelles and Bosphorus are garrisoned by troops under the command of Lieutenant-General Sir Henry Wilson, and the process of evacuating the German troops is being supervised by General Liman von Sanders, whose failure in Palestine and Syria has now some chance of passing unnoticed in Germany amid the great *débâcle*. Mosul was to have been occupied by General Marshall's force on November 15, and by now British Political Officers will have been placed in charge of the local civil administration and the gendarmerie. In the Caucasus and in North-Western Persia the Turks are also withdrawing. Baku was occupied by British and Russian troops on November 17. The town was found to have been looted to a considerable extent by the Turkish forces. Only in Arabia has there been any delay in carrying out the terms of the armistice, owing to the difficulty of communicating with the several Turkish commanders in the interior.

From a warning that the British Under-Secretary of State for Foreign Affairs felt constrained to utter in the House of Commons on November 18, it has to be inferred that Turkey's compliance with the armistice conditions has been inclined to conform with Oriental ideas of how these things may be done rather than with the Western conception of orderly dispatch. Lord Robert Cecil stated that there were symptoms that the Turks had not learned their lesson, were still trying to carry on their old policy of delay, and were ready, if the opportunity occurred, to resort to their old device of setting one European nation against another. He warned them that they would make a profound mistake, if they did not realise that their power of delay and resistance was finished. They were now absolutely in our power, he added, and they could only hope to receive clemency or consideration if they showed that they had really mended their ways, and would hasten to carry out the terms of the armistice that they had signed. It will be hoped that this very outspoken warning does not imply that the Turkish situation is being handled on the spot without understanding of the Turkish character. No profound knowledge of the Turks is required to enable one to realise that advantage would be taken of the first symptom of any relaxation of what may be termed armistice discipline. The most effective method of correction ought to be at hand in Constantinople, and ought not to be sought in warnings from a distant Government.

The Cabinet changes in Turkey that followed the demand for an armistice are now reported to have resulted, after several makeshifts, in the complete elimination of the Committee of Union and Progress, which has been dissolved. Tewfik Pasha was first invited to form a new Ministry. He failed, and the post of Grand Vizier was given to Izzet Pasha. The reason for Tewfik's failure is said to have been his refusal to include any members of the Committee of Union and Progress. Izzet Pasha was prepared to remedy this defect, but encountered objection on the part of the Sultan, and resigned. Tewfik Pasha was once more called upon to form a

Digitized by Google

Government, and by this time the Committee appear to have decided, in view of the near approach of the Allies, that the wisest policy to adopt was self-effacement. If it be true that Enver has gone to the Caucasus and Talaat no farther than Odessa, it would seem as if they were adopting the tactics of the ex-Emperor William, and standing by at a safe distance to watch events. The Allies will do well to insist upon concrete proofs of a "mending of their ways" on the part of those now in authority.

The worst fears regarding the fate of many of the British and Indian prisoners in the power of the Turks have been confirmed by a White Paper on the subject. The story, as far as it can be pieced together, of the march from Samarra to Asia Minor of the men captured at Kut, is one of unrelieved horror. It is true, as the White Paper points out, that the treatment of the prisoners reflects the peculiarities of the Turkish character, for while some have been treated with almost theatrical politeness and consideration others have been driven and tormented like beasts. Regretfully it must be admitted, we fear, that these peculiarities have been realized too late in the day. The Turkish character ought to have been an open book to the British Government at the beginning of the war, and two alternatives were offered to them on the fall of Kut. They ought either to have bought the prisoners, or to have issued a very definite warning that, unless every precaution were taken for their proper treatment, Turkish officials, from the Grand Vizier downwards, would be held personally responsible. The attempt to purchase the prisoners' release, it need hardly be said, ought to have been made nominally *sub rosa*; a public communication on the subject could only afford the Turkish Commander or his Government the opportunity of posing as incorruptible patriots and of frustrating the British Government's object.

Harrowing tales of the sufferings of prisoners of war in Bulgarian hands are also being related these days. Here, again, it is only too apparent that both the correspondents who tell the stories and the public that reads them imagine themselves in the presence of a discovery. It is, however, far from being one. This ignorance of the Balkan character is unfortunate at this juncture. At the outbreak of the first Balkan War we warned our readers in these columns to prepare for a struggle that would not conform to the principles of warfare as laid down by the occupants of Western armchairs. The warning was justified by the course of the campaign, followed so soon after by the Second War, with its charges and counter-charges, which led to the appointment of a Carnegie Commission. The findings of this body amounted to the historic verdict of "six of one and half a dozen of the other."

No one in this country will have any desire to palliate the crimes of any Balkan nation, or to pretend that the maltreatment of prisoners of war can be venial in some cases and not in others. It is only asked that the British public and the Allied Governments should approach the subject with the knowledge that murder and outrages have long been the order of the day in the Balkans, and with the determination that now at last an end shall be put to the practice. Where justice can be meted out to the offenders, it should be enforced with the utmost rigour, but invariably at the instance of the Allied Governments and not by the agency of another Balkan State. Nowhere will more sympathy be felt than in England with the "inarticulate rage" of the Serbian commander quoted by *The Times* correspondent at Sofia. The Serbian army had been arrested by the armistice in mid-career in its onrush to Sofia, and the commander very accurately summed up the Bulgarian character to the correspondent. It was his opinion that "retaliatory invasion" of their country alone could have taught the Bulgarians an abiding lesson; but now they were being helped to elude "the punishment which was manifestly their due." As a matter of fact, that very lesson was administered to the Bulgarians in 1913, as well as a score of times before, but it did not long prove an "abiding" one. The self-same lesson has been administered in turn to Serbians, Greeks, and Bulgarians by one another. It has, however, never proved abiding, and there is no reason to suppose that it would prove so this time. Its one effect has been to perpetuate the policy of lawless bands—Bulgarian, Serbian and Greek *Komitaji*—bent on reprisals. These must now be suppressed at the Allies' direction.

It is the repeated failure of the old methods as applied by the Balkan peoples to one another that makes those who believe that peace and prosperity can yet be established in the Peninsula anxious to see new methods adopted now that the Entente Powers have made the Balkan quarrel their own. In the Balkans neither war, nor politics, nor private quarrels have hitherto been carried on with kid gloves, and partly for this reason the Near East has been the storm centre of Europe. The Allies now have an opportunity of inculcating some of the lessons of the great world conflict now happily at an end, but to do so they must set their faces against blind reprisals. If at home we have to create "a better Britain," it is equally a duty imposed on the Allies to create a better Balkan Peninsula.

The liquidation of what was Austria-Hungary has been advanced an important stage by the first sitting of the National Assembly of the Czecho-Slovak State. President Masaryk, as was to be expected, was elected first President of the Republic, with Dr. Kramarzh as Prime Minister and M. Franz Tomasek President of the National Assembly. Dr. Benes is Minister for Foreign Affairs. The Yugoslav National Council is also exercising the functions of a duly constituted Government at Zagreb (Agram). By a fresh agreement with the Serbian Government the two administrations are to exercise separate jurisdiction until a joint Government shall have been constituted to represent Yugoslavia. The anomaly of open denunciation of M. Pashitch by the English Press organ of Yugoslavia continues, and his "Ottoman" propensities are said to have been responsible for the exclusion of the heads of the Zagreb National Council, the Serbian Government, and the London Yugoslav Committee from the new United Yugoslav Cabinet now in process of formation. In the meantime M. Pashitch has reorganised his Ministry, and is now the head of a Coalition Government in Serbia.

The appointment of a successor to Sir Michael O'Dwyer as Lieutenant-Governor of the Punjab will be received with mixed feelings in India, where, if we were to trust the local Press, we should have to believe that the name is borne by two very different personalities. In the East, South, and West Sir Michael is regarded as the embodiment of a reactionary bureaucracy, and the mention of his name is sufficient to provoke a storm of abuse, but among his own people in the North he is liked as much as he is feared. They recall how, a few years ago, he steered his province through a really dangerous crisis, and how, more recently, he has led the recruiting campaign with such success as to justify the aphorism that the Punjab accomplishes in a week what other parts of India talk about for a year. They know him almost as well as he knows them, and there will be a widespread regret when the time for parting comes.

Sir Edward Maclagan, who succeeds to the Punjab, is, perhaps, a less striking personality, and so far as we have seen he has not yet incurred the dislike of politicians in other parts of India, but he is deeply imbued with the traditions of the province, where he is assured of a warm welcome. There are many signs that the martial races of the North intend, when there is no fighting to be done, to take a more prominent part than hitherto in internal politics, which will certainly benefit by a liberal infusion of Jats, Sikhs, and (we hope) Pathans, and we are confident that Sir Edward will do all that lies in his power to facilitate their entrance into the arena, and to see that the Punjab gets at least its fair share of whatever may be going.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, October 14.

The Sultan's Accession Day.

His Highness the Sultan celebrated the first anniversary of his accession to the throne on Wednesday last. The day was kept as a public holiday, and in the morning a reception was held at Ras el Tin Palace. It was originally intended that the reception should be a general one; but in view of the difficulty in providing train accommodation from the provinces, his Highness gave orders that it should be restricted to those persons resident, or on duty, in Alexandria. Notwithstanding this, the attendance was a very large one. On this occasion the Sultan conferred a number of honours and grades on Egyptian officials. In the evening the President of the Council, his Excellency Hussein Rushdi Pasha, gave a banquet at San Stefano Casino, followed by a reception, his guests including the Ministers, the Diplomatic Corps, the Advisers, Under-Secretaries, senior officials, and leading Egyptian and European residents. The previous afternoon the officers of the Sultania Guard gave a gymkhana on the square outside the Palace. It was attended by the Sultan, and provided some excellent entertainment for the guests, who included the Ministers and senior officers and Government officials.

On Saturday there was another Government holiday, making the third in the week. This time the *dies non* was in honour of the return of the Mahmal with the Holy Caravan from Mecca. The ceremony of receiving back the Mahmal took place in Cairo, where H.E. Rushdi Pasha, the Prime Minister, represented the Sultan. From what the pilgrims say, the pilgrimage this year has passed off very satisfactorily, and they are loud in their praises of the arrangements made for them by the Egyptian Government and the King of the Hejaz.

An Excellent Assault-at-Arms.

A very well-organised Assault-at-Arms was held at Zeitoun this week by the Imperial School of Instruction. The programme, which was a very varied one, included tent-pegging by Indian Lancers and all those events beloved of cavalry men. The huge concourse of spectators thoroughly appreciated the sport provided, especially the novelty contributed by the Aviation School. The latter sent over some of its smartest pilots, who performed some most remarkable feats, which gave some idea of what great advances have been made in the mastery of the air, and how aeroplanes can be made to manœuvre in just as good formation as infantry or cavalry. The Commander-in-Chief, General Sir Edmund Allenby, who was down in Cairo on short leave from his victories over the Turks, was present for a time, and the prizes were eventually distributed by Lady Allenby.

The Palestine Advance.

The wonderful advance in Palestine is still the main topic of conversation, especially in Egyptian circles. Prisoners continue to arrive here—their number now exceeds 80,000. The great part of them are in an emaciated, exhausted condition, and have had to be put at once into hospital; but despite the attention given them, many have succumbed to the privations which they evidently suffered prior to their capture. In connection with this offensive one remarkable feature has been noticeable, viz., the extraordinary amount of gold, German, British, and Turkish, which the prisoners, one and all, have on them.

The prospects of peace are also much discussed, and it is interesting to note that immediately the news was known that Germany had asked for peace terms the Stock Market fell flat and share prices came down with a run, whilst those of imported articles dropped considerably, in some cases as much as 30 per cent. As regards stocks and shares, this merely serves to show how unreliable the Egyptian market still is as an indication of the true value of investments; while as regards commodities, it gives an idea of the profits which merchants are now making.

The Sudan.

Very little is heard nowadays about the Sudan, but from time to time we get glimpses of the admirable work that is being done there. One such glimpse has just been afforded us by the notice issued in connection with the granting of war medals by the Sultan. This notice announces that medals will be granted to all troops, including the Sudan Government police, who took part in the following operations and were in certain areas between the dates mentioned:—*Darfur* (March 1 to December 31, 1916), *Zeraf Valley* (December 18, 1913, to February 20, 1914), *Lokoia Tribe* (January 1 to 25, 1915), *Matong Mountains* (February 17 to March 14, 1916), and *Lannaer Tribe* (February 27 to April 25, 1917). These, with the exception of Darfur, are all frontier affairs incidental to the administration of such a vast territory as that comprised under the designation "The Sudan," and they have nothing to do with the internal state of the country, which has throughout been eminently satisfactory. This notice, which only refers to some of the operations undertaken during the past five years, shows, however, that the flag is being kept valiantly flying in the far distant confines of this huge dependency by a small band of gallant Englishmen, whose doings receive no advertisement, but who deserve recognition every bit as much as their fellows in less remote spheres.

The Question of Rents.

Rents still continue to rise, and there is not unnaturally considerable feeling on the part of the tenants at this attempt of the landlord element to take advantage of the present situation, where, owing to the cessation of building operations and the demand of the Army for housing for their officers stationed in Cairo and Alexandria, the supply is far below the demand. A committee has been formed in Alexandria to combat the landlords, and its adherents can be numbered by the thousands. It is not known what the Government is going to do in the matter, but it would appear that something will have to be done to protect the tenants from the grasping profiteer landlords. As the tenants point out, they do not object to having their rents raised in a reasonable manner. They fully recognise that, just as their own expenses have increased, so also have those of the landlords, and that the latter must look to their house revenues to recoup them to some extent. But what they protest against is the general tendency to increase rents by such exorbitant amounts as 33 1-3 and even 40 per cent. as has been done in many cases.

War Treason Case in Alexandria.

A most extraordinary and unique case of war treason has lately been before the Military Courts, which have now passed sentence on the accused. The latter were the three brothers, members of the firm of Tarablusi, well known in Alexandria. They were accused of having had dealings with the Senussi, and of having acted as the go-betweens for procuring money from the Turkish Government for Nuri Bey, the leader of the Turkish forces in Tripoli, to enable him to pay his soldiers and bribe the followers of the Senussi to side with the Turks. The relations with the Senussi and Nuri Bey complained of dated back to the spring of 1915, when the former were still on good terms with us, and continued after he had come in against us; and the evidence showed very ingenious attempts at covering up the receipt and payment of the moneys in question. The case has lasted three months, and finally the Court delivered its decision, which was sentence of death on two of the brothers and five years' penal servitude on the third. The death sentence has since been commuted by the Commander-in-Chief to penal servitude for life.

Sir N. Chandavarkar and Mr. Justice Beachcroft, who were appointed by the Government to report on detenus and internees in Bengal, have presented an exhaustive statement, which has now been issued as a White Paper.

ROUMANIAN NOTES.

(From a Correspondent.)

The Declaration of War.

On November 9 Roumania re-took her place officially on the side of the Allied nations by declaring war on Germany. The Roumanian Army, which last year barred the march of Von Mackensen to Odessa, was ready to fight again. In less than a fortnight General Berthelot, who covered himself with glory in the last battle of the Marne, succeeded in putting his Roumanians, whom he left after the Peace of Bucharest, on a war footing. At the same time that they began to move southward from Moldavia, the French and British troops crossed the Danube in several places and were advancing towards Bucharest. There had already been some artillery fighting between the Allies and the Germans, fortified on the northern bank of the Danube, when the Armistice prevented further bloodshed. The Germans retired from Roumania in great disorder, and Von Mackensen rushed over the frontier with only 2,000 men.

Last Sunday General Berthelot entered Bucharest with the Roumanian, French, and British troops, who were received with indescribable enthusiasm by the population. After nearly two years of sufferings, the Roumanians saw at last the Allied liberators marching side by side with their own soldiers through the streets of their capital. The British troops have occupied Constantza.

The presence of the Allied troops on the Roumanian soil has also great political importance for the just solution of the difficult questions of the Near East and Russia. The geographical situation of Roumania, and, much more, the great sympathy of the people for the Allies and their firm determination to co-operate with their liberators, offer great possibilities for the success of the Allied nations in that part of troubled Europe. The Peace of Bucharest was turned to nought before the conclusion of the general armistice by the Roumanian Declaration of War on Germany. Furthermore, the Roumanian Parliament, despite all the pressure exercised upon it by the Germans, refused even at the end of September to ratify the infamous Treaty of Bucharest. Now, the new Roumanian Government, being the expression of the popular will, has made the position of Roumania clear by re-entering the Alliance of her liberators.

The Roumanians of Transylvania.

After the collapse of Austria-Hungary the Committee of the Roumanian National Party of Transylvania was compelled to take measures to protect the lives and property of the Roumanians. They recalled all the Roumanian soldiers serving in the army of the late Dual Monarchy to Transylvania, to defend their homes and their rights. Thus a national army was formed under their own flag, and they tried to preserve order and to suppress the bands of brigands and deserters who were spreading anarchy and destruction all over the country. The Magyar authorities, however, interfered in the organization of the Roumanians and sought to impose the old oppressive conditions, and the Magyar oligarchy began to deport the leaders of the Roumanians and to arrest their priests and school teachers in the villages. In these circumstances the Roumanian Government was compelled to give protection to the helpless Roumanians of Transylvania. It therefore sent a note to the Hungarian Government requesting the cessation of the oppressive measures against the Roumanians of Transylvania and the immediate withdrawal of all Magyar military forces from that province. In the meantime the Roumanian National Party asked Roumania for help, and the Roumanian soldiers therefore crossed the Carpathian Mountains again to protect their brethren. This action has nothing of the character of a military occupation. It is merely the fulfilment by the Roumanian soldier of his duty to protect his younger brother.

The New Government of Roumania.

After the collapse of Bulgaria the position of the Marghiloman Government became impossible. They tried, however, still to keep power in their own hands, and the Germans greatly helped them. They offered to leave the old frontiers to Roumania, and to hand over the Dobruja. The Germans made a great agitation in Roumania on this question of the Dobruja, saying that the Allies are disposed to give the province to Bulgaria, and urging as evidence that they had pledged themselves to do so the fact that they did not ask the Bulgarians to evacuate the Dobruja as they did in the case of Serbian and Greek territory. This stupid propaganda could not influence pubic opinion in Roumania. When the Roumanian Army from Moldavia asked to fight the Germans again and the big demonstrations at Jassy took place, the Government of the German bayonet collapsed. The King thereupon asked General Coanda to form a new Government. The new Premier of Roumania represented the Roumanian Army at the Russian Headquarters, and is more a diplomatist than a soldier. He was educated in France, and is one of the greatest friends of the French and British. The new Government is formed of military men and some high officials, and is not at all connected with the old political parties of Roumania. It seems that these parties have been nearly destroyed by the war. The new Government is a transitional one, to "carry on" until the union of the whole Roumanian race gives expression to a new political life.

MALTA NOTES.

(From Our Own Correspondent.)

Malta.

As I write, huge battleships, representing no less than five of the Allied nations, are leaving harbour for somewhere in the East; and ere these lines appear, it is probable that they will have given a good account of themselves. Even their mode of sailing is suggestive of sullen, yet supreme strength. Malta, from her position, has always been cosmopolitan and international; but never was she more so than she is to-day. British, French, Italian, American and Japanese tars fraternise in our streets in a manner more suggestive of prize days or picnics than submarine hunting and slaughter. It would break the heart of Potsdam to see how little the war worries us here, even though, in the boasted enemy conditions of peace of some short time ago, Malta was to be one of the plums to be taken by the Huns! We have not heard an enemy shot, seen an enemy aeroplane, or sighted a submarine; whilst we care so little for our enemy that we are to have our usual race meeting on the Marsa on November 23. Although the programme is more modest than it is wont to be in peace times, there will be six capital events, with the usual enthusiasm and nice frocks; and to try to imagine Malta without the Marsa would be to imagine a vain thing indeed.

I had occasion but a short time ago to refer to the charitable nature of the Governor, Lord Methuen, and the whole-hearted way in which he has stimulated all classes to help each other. One great wish before he leaves is to establish a British hospital, on sound lines and on a proper basis. To this end we are glad to learn that his Excellency is meeting with substantial support in his scheme, and it is with great pleasure that we learn of the munificent donations of £3,000 from the executors of the late Mrs. A. A. Hardman and of £1,000 from Miss Angas.

CYPRUS NOTES.

(From a Correspondent.)

There has been an oppressive heat-wave, in the beginning of October, a month which divides summer from winter, and which varies a good deal in different years as regards temperature. There have, however, been some good rains, especially in the hills. A few earthquake shocks have been felt. The island has not escaped an unwelcome invasion of "Spanish 'flu," which has attacked natives and British alike.

Government offices will return to winter hours on October 21. During the summer work begins and ends earlier, on account of the heat.

His Excellency the High Commissioner and Lady Clauson will be "at home" at Government House, Nicosia, on the first Wednesday of every month, from 4 to 7 p.m., from November 7.

Present conditions as regards the annual plague of locusts enable the Government to suspend collection of a part of the harassing, but hitherto necessary, Locust Tax. The levy on tithes, sheep, goats, and real properties is to be suspended for one year from next March; that on incomes and trade profits till further notice from the same date.

General Clayton has telegraphed from Damascus that there are between 25,000 and 30,000 Armenian refugees in the town, of whom 5,000 to 7,000 are in need of relief. It is calculated that 10,000 Armenians were massacred by the Turks at Baku. About twice this number escaped, and there are now 1,200 Armenian refugees at Enzeli and 20,000 at Petrovsk.

The Civil Service Commissioners give notice that an Open Competitive Examination for the Indian Civil Service will be held in London beginning on August 1, 1919. No person will be admitted to examination from whom the Secretary of the Civil Service Commission has not received, on or before June 2, an application, in the candidate's own handwriting, on a prescribed form, which may be obtained from the Secretary at once.

CORRESPONDENCE.

"AN ALBANIAN PROTEST."

TO THE EDITOR OF "THE NEAR EAST."

Sir,—May I beg a few lines to correct some errors in the letter of Mr. Kessary? I do not confuse Konitza and Koritza. They are two quite distinct places. Konitza is mainly inhabited not by Greeks but by Vlahs. Koritza is Albanian in population.

The Vlahs largely speak Greek. So do some of the Albanians. But, as Mr. Kessary himself points out, language is not a clear test of nationality. The people are none the less Vlahs and Albanians. He is mistaken also in supposing that Mehmed Bey reresents "only a few Moslems." The President of the Pan-Albanian Society, which he represents, is an Orthodox priest, and a large number of the Federation are Christian—both Catholic and Orthodox. The number, 60,000, is, I believe, correct, as I have taken much trouble, from American as well as Albanian sources, to make certain.

Mr. Kessary is, however, correct in saying: "It is not surprising that Miss Durham was not asked for Greek schools in North Epirus"—no, it is not. I was, on the contrary, asked to help get rid of them and get national schools established, and especially to free the country of Greek priests. Just as Alsace-Lorraine had German schools forced on it, so has Albania been afflicted with Greek ones. So strong is the feeling that Orthodox Albanians have told me that they will not allow their children to learn "that accursed tongue, Greek."—I am, etc.,

M. E. DURHAM.

THE PREHISTORIC PORT OF ALEXANDRIA

By JOSEPH OFFORD.

Historians and geographers all tell us that between the Christian era and that of the Hegira the maritime provinces of the Delta were lowered, or the depth of the Mediterranean increased, so that much land cultivable even in Greek and Roman times became salted and waterlogged, while a good deal was also covered by the sea, though only to a small depth.

It may be that at some time long previous to this a similar—but not such an extensive—change had occurred in the littoral of the Eastern Mediterranean, of which we have no direct record. Homer, in the Odyssey, speaks of "an island in the sea off the coast of Egypt, that is called Pharos. In this island is to be found a commodious harbour wherein mariners can put up their ships after traversing the black waters." This, as far as scholars yet know, is the only mention of such a created haven. It would seem likely that the construction must have disappeared soon after Homer's time; for otherwise, in connection with Alexander's selection of the site of Alexandria for the foundation of a great city and port the earlier harbour would surely have been mentioned had it existed—even in ruins—by the classic authors who describe his career. Pharos Island, too, is the place where the seventy translators of the Old Testament into Greek resided during their labours, and had there been any dim recollection of such a harbour the somewhat loquacious Aristeas, who describes their appointment and proceedings, would surely have referred to it. The conclusion we must, therefore, come to is that either Homer was mistaken or the port itself and all memory of it had vanished.

The magnificent Bay of Alexandria is bounded by the new quay wall, the island of Pharos, and the two capes, which converge towards the end of the island. In it, had it not been for the strong northerly wind and consequent rollers, the ancient galleys and vessels should have had comparatively safe anchorage. M. Jondet, however, by persevering examination of the sea to the west and south of Pharos, proves* that at some time or other it was thought necessary to provide a safer haven; and he has found beneath the water extensive vestiges of such a port in the neighbourhood of the promontory of Ras-el-Tin. The area of this place of maritime refuge was between 200 and 400 metres. It was formed by constructing at its western end a sort of breakwater and sea wall of immense size, with foundations starting at some depth. This again was protected by parallel works further out. The entrance to this harbour was from the south, towards the shore, so as not to be open to seas driven by the north wind.

M. Jondet says that these remains are not reduced merely to their foundations or to fragments that would leave the cause of their existence a doubtful matter, but, upon the contrary, much of their superstructure remains. The portions most exposed to the ravages of the sea have been demolished, but enough remains to render certain what purpose the construction was intended to serve.

Finally, M. Jondet suggests that this harbour was built by one of the greater Pharaohs, such as Rameses II., but that is merely a guess, and not a very probable suggestion. It is far more likely that it was the work of a people who wanted a safe anchorage, a slight distance away from the land, so as to be comparatively safe from sudden surprise by their neighbours. We know how, later, the Phœnicians always selected as a depot some place that had an island in the offing

NEAR EAST BOOKSHELF.

A YUGOSLAV DRAMA.*

We doubt whether "The Liberators" would ever achieve success on the stage—on the English stage, at any rate; it is too much in the nature of a political sermon, and, one must add, too gloomy. There is very little action, and the characters would be utterly unfamiliar to most English audiences. But as a "reading" play it is full of interest, and gives a vivid—and, we believe, very accurate, if somewhat depressing—picture of one of the ancient rivalries of the Balkans, and of a cruel situation that those rivalries might only too naturally bring about. The extent of the tragedy underlying the play can perhaps be appreciated only by those who have met representatives of all the Balkan nations, and noted how each in turn tells the same story of angels and devils, black and white, varying it only in the way he casts the characters for Angel or Devil.

The scene of the play is laid in Sofia, at the house of a Bulgarian general, whose family has befriended a young Serbian subaltern wounded and made prisoner in the "First" Balkan War. There comes the suicidal "Second" Balkan War, the defeat of Bulgaria, her loss of those things for which she had made her treacherous attack. The last act closes on a note of tremulous hope for the future. One fears that M. Tucic would make a different ending to the play where he writing it now. Stoyanoff, one of the poor wrecks of humanity who move across the stage in this sad drama, exclaims, as the curtain falls: "I will pray. I will pray . . . . and I will have faith once more!" If peace is real to come to the Balkans, Serbians, and Bulgarians alike must be prepared to "pray" . . . . and "have faith," not only "once more," but as many times as may be needful.

The play has been translated by Miss Fannie S. Copeland, who has done her work well; and Dr. Seton-Watson writes a vigorous and helpful Preface. We recommend the book to all who desire to study the "Balkanic" temperament and psychology.

LIBERATORS OF JERUSALEM.†

This twenty-four-page pamphlet seems to aim at helping us all to realise the spirit in which the British entered Jerusalem and in which they have worked there since last December. As the author says on his first page, "The significance of the event (*i.e.*, of General Allenby's entry into the city) runs back for thirty centuries into history and forward through illimitable vistas of the future; but at heart it is all summed up in the simple fact that General Allenby entered Jerusalem not as conqueror but as liberator." On this text Mr. Mathews discourses eloquently and agreeably. The numerous illustrations are interesting and very well produced, and the paper and type of the little book are excellent.

BOOKS RECEIVED.

"From the Garden of Eden to the Crossing of the Jordan." By Sir William Willcocks, K.C.M.G. (Cairo: French Institute of Oriental Archæology. 5s., or 24 P.T.).

M. Venizelos, the Greek Prime Minister, presided at a dinner at the Carlton Hotel on Monday night in honour of M. Gennadius. Among those present were Lord Robert Cecil, M.P., Mme. Gennadius, M. Michalacoupolos, Dr. Burrows, the Greek Archimandrite, M. M. Venizelos, Sir Francis Elliot, the Serbian Minister, Sir A. Crosfield, and members of the Legation and Greek officers. M. Venizelos said that M. Gennadius was leaving the service after nearly half a century of public life, during which he had discharged the difficult and responsible duties of his high post with splendid ability and devoted patriotism. The Government were deeply concerned at being deprived of the services of the *doyen* of their diplomatic body, and he was instructed to confer on M. Gennadius the first Grand Cross of the new Order of George I. Now that M. Gennadius had returned to private life the Government would be empowered by law to bestow on him the title of Honorary Minister, and he felt sure that if need be M. Gennadius would not hesitate to place his vast experience at the disposal of his country.

NEWS IN BRIEF.

Count Sforza has been appointed High Commissioner for Italy in Turkey.

At Cairo the influenza outbreak is still serious, especially amongst natives.

The United States Treasury has made a loan of £1,400,000 to the Czecho-Slovak Council.

It is reported that M. Doroshenko, the Ukrainian Foreign Minister, is going to Switzerland shortly.

As at present arranged, the Viceroy of India will invest the Maharaja of Bharatpur on November 28.

Count Metternich has arrived in Berne from Constantinople, where he has been in charge of German interests.

The influenza epidemic in India is declining. The Viceroy and the Government of India are now moving to Delhi.

Miss Harrison, of Dean Hill, Matlock, has left £2,500 to the Church Missionary Society for a missionary in India.

Vice-Admiral Amet has been appointed High Commissioner of the French Republic to the Ottoman Government.

Lieutenant-Colonel H. T. Dennys, Inspector-General of Police, Punjab, is due to retire from service on March 10 next.

Mr. Charles Arthur Galton, of Palmeira Court, Hove, late of the Indian Civil Service, left property valued at £5,227.

Miss Laura Pugh, of Lancaster Gate, W., daughter of the late Mr. Joseph Pugh, of Madras, left property valued at £28,785.

M. Gerassimos, a Greek resident in Egypt, has placed 50,000 frs. at the disposal of M. Venizelos for national needs.

The Governor of Bengal has nominated Mr. Edward Brooks-Henderson Panton to be an additional member of the Bengal Legislative Council.

Six shots were fired by a Serb in Geneva on Thursday at the Director of the Serbian Red Cross, who was slightly wounded. His assailant fled, but was arrested.

Syrians in Sierra Leone have presented to the Governor addresses of loyalty and gratitude for the British successes in Syria, and a contribution of £557 for Red Cross funds, on the occasion of the armistice.

M. Venizelos, who was accompanied by M. Michalocopoulos and M. Stavridi, the Greek Consul-General in London, addressed the members of the Baltic Exchange on Thursday afternoon, November 14, by special invitation of the directors. He had an enthusiastic reception.

The National Assembly of the Czecho-Slovak State has held its first sitting. After a speech by the President, Dr. Kramarzh, Professor Masaryk was elected the first President of the Republic, M. Franz Tomasek President of the National Assembly, and Dr. Kramarzh Prime Minister.

A reception took place at the India Office on Wednesday evening of the delegates from the Press of India who are on a visit to this country. The Secretary for India, Mr. E. S. Montagu, was present, and the guests were received by Sir Thomas Holderness. An opportunity was given the guests of inspecting a number of historical treasures of the India Office.

A telegram from Palestine to the Zionist Organisation in London states that the greatest poverty, distress, and misery exist among the Jews in Damascus, Beyrout, and Sidon. The Zionist Commission in Palestine is proceeding there to organise relief, but large funds are required for food, clothing, and the immediate wants of the suffering population. Children are dying of starvation in the streets of Beyrout.

Lady Selborne, Joint Hon. Treasurer of the Elsie Inglis London Memorial Fund, announces that Lord and Lady Cowdray have made up their gift to this Fund to the sum of £10,000, in the hope that as large an amount as possible will be collected for the reconstituted University of Belgrade in memory of the splendid work of Dr. Elsie Inglis, the founder of the Scottish Women's Hospitals. Contributions should be sent to the Joint Hon. Treasurers of the Fund, at 66, Victoria Street, S.W.1.

Dr. Benes, the Czecho-Slovak Foreign Minister, has sent the Prime Minister a telegram of congratulation on the Allied victory. He adds: "Our nation will never forget the help that Great Britain extended to her during this terrible war, and will do all in her power to continue the policy inaugurated during the war. The valour, the energy, and the loyalty which she has shown during the war while fighting on the side of the Allies will be the principles which will always guide her intimate collaboration with Great Britain in the future."

ANGLO-HELLENIC EDUCATION.

A lunch was given on Wednesday at the Savoy Hotel by invitation of the Ministry of Information for the purpose of considering plans for the promotion of an Anglo-Hellenic Educational Foundation which would aim at developing certain educational projects in Greece and in furthering the intellectual entente between Great Britain and Greece. Mr. G. H. Mair presided.

M. Venizelos expressed warm approval of the proposals put forward for discussion. These included the foundation of a British Grammar School in Athens, of a Greek Public School to be founded by means of the Corcialegno bequest, and a British College to provide higher education not only for Greeks but for other peoples in the Near East. As a result of the discussion it was resolved to form those persons present into a committee to consider the proposals in greater detail and to take any desirable steps to carry them into effect. Until the committee has appointed officers, Dr. Walter Seton, of the Ministry of Information and University College, London, will act as convener. Any persons interested in the proposal are invited to put themselves in communication with Dr. Walter Seton.

TANGIER TO TEHERAN.

A little while ago the *Egyptian Gazette*, in reporting a rescue from drowning, began its account thus:—

> On Sunday last a rather fat and heavy native woman, dressed in a galabieh, was suddenly seen to be floundering about out of her depth among the breakers at Sporting Club, just opposite the officers' Summer Camp . . .

One hopes that the plump and ponderous lady cannot read English, or, at any rate, that she will never read this all-too-candid description of her person and her natatory style. Should she do so, she would probably consider it a fair example of things that might have been more happily worded.

***

The success attending the efforts of those who have worked so vigorously on behalf of the various War Loans must have been extremely gratifying to the workers, and the ingenuity displayed in the way of advertising has usually resulted in the reaping of a rich harvest. But occasionally the organisers of various schemes and "dodges" have had a setback. This was the case in Burma, where a "War Loan Train" was employed. It did great things, collecting 11 lakhs of rupees; but at one station those in charge of the travelling moneybox had an experience that would have been exasperating if it had not been excruciatingly funny. On arrival at the station referred to they found that an elaborate meal had been prepared for them: the food was of the best, if looks went for anything, and champagne had been provided in liberal fashion. But there the generosity of the hosts—who were Chinese—came to an end, and they firmly declined to invest anything in the War Loan. Thereupon the collectors determined to leave the excellent meal untouched. In sorrow rather than in anger, but, one hopes, not conscious of any aching voids beneath their *kummerbunds*, they shook the dust of that place from their feet and steamed away. And, doubtless, the hosts-that-were-to-have-been did their best to avoid waste in war-time.

***

I have no intention of joining in the controversy now in progress in the correspondence columns of THE NEAR EAST regarding the "Albanian Protest" of Mehmed Konitza Bey. But readers who have followed the correspondence may be interested to know that the *Sphere* last week published two views of "Koritza, the seat of the Albanian Government"; and that the note accompanying the pictures stated:—

> "The inhabitants are nearly all Albanians (Tosks), both Christian (Orthodox) and Moslem. For years past the Greeks have done their best to Hellenize the people, but have met with very little success."

We are told also that "the town is modern and clean, and comes as a great surprise to people used to the filth and vermin found in Macedonian towns." I suspect that Miss Durham will have a higher opinion of the *Sphere's* description than will M. Kessary. To a simple soul like myself the flat contradictions that one encounters in Balkan controversy are very confusing.

***

No doubt most of my readers are aware that seafaring men generally hanker after a country life, and that when they spend strenuous hours afloat fighting the elements they console themselves with thoughts of that "snug little place in the country" in which they fondly hope to end their days. Similar visions were constantly before my eyes in those unregenerate days before I abandoned active "corsairing"; and as I watched my pile of doubloons and threepenny-bits growing steadily larger I rejoiced in the thought of the pigs and chickens, cabbage fields and orchards that should be mine some day. But things did not pan out just as I had hoped. Pigs, orchards, and so forth cost a deal of money, and—to cut a long story short—my farm still remains "a castle in Spain." At last, however, hope has sprung up in my breast again. For, a few days ago, in reading one of Mr. Ward Price's interesting descriptions of present-day Bulgaria, I came across this passage:—

> "From all sides flocks of sheep and herds of cattle are being driven towards the British Army to be offered for sale. There is certainly no sign of lack of food in Eastern Bulgaria, though the peasant is unwilling to part with produce for money of his own currency. A pair of boots or an old cooking-pot will fetch, however, almost any price in kind that you care to put upon it, and with the contents of a single old-clothes stall out of the Mile End Road you could stock a small-sized farm in Bulgaria just now."

I have got together my old clothes—and, owing to the war, they *are* old—and am now off to Bulgaria in haste, if only I can get free passage.

CORSAIR.

A GREAT MARVEL OF THIS MARVELLOUS WAR

The following letter speaks for itself:

SIR,—Recent and close association with the Serbian Army prompts me to offer my humble but sincere support to the appeal of the Serbian Relief Fund. No one who saw, as I saw, the remnants of that army upon their arrival in Corfu, after the terrible mid-winter retreat through the mountains of Albania and Montenegro, or who witnessed, as I did, the uncomplaining patience and great-hearted courage of these peasant soldiers, could fail in sympathy for their fearful sufferings or in respect and admiration for their heroic fortitude. That an army so reduced, so worn, wasted, starved and sorrow-stricken could in six short months take the field again as did the Serbians, reconstituted, re-equipped, and re-armed, not only full of confidence but eager to fight its way back to its native soil, as it is now so gloriously doing, is one of the great marvels of this marvellous war. No one who has lived with the Serbs from day to day, as I did for a year and a half, in hospital and camp, could fail o be deeply impressed by the simple fervour of their patriotism and the grandeur of their moral and physical endurance. To a Briton the absolute tfaith in the power and will of this country to support their efforts and to right their wrongs shown by these rugged, gentle-mannered soldiers is infinitely touching, and seems to demand the fullest possible return. They will go back into their country with the help of their powerful Allies, but to a country wrecked and devastated, to homes at best little better than empty shells, to wasted fields and shattered walls. They will need food, clothing, furniture, implements—everything. The Serbian Relief Fund has long earned the confidence of the Serbs, and is worthy of the most generous and prompt support in its immediate efforts to mitigate the inevitable privations and sufferings of this sorely stricken and most gallant nation through the approaching winter and the spring which, we trust, is to bring the dawn of peace to their war-wasted land.—Yours, &c.,

EDWARD WARREN,
Hon. Major, Royal Serbian Army,
20, Bedford Street, London, 18th October, 1918.

Send a donation to-day to the Hon. Treasurer,
The RIGHT HON. the EARL OF PLYMOUTH, G.B.E., C.B.

SERBIAN RELIEF FUND

5, CROMWELL ROAD, LONDON, S.W. 7.

(Registered under the War Charities Act, 1916.)

Offers of voluntary help at home or abroad should be sent to Lady Grogan. Parcels of Clothing, Materials, Boots, &c., for men, women and children should be sent to Mrs. Carrington Wilde, 5, Cromwell Road, London, S.W. 7.

28	15	Thursday	23	24

M. Také Jonescu has arrived in London.

The Marquess of Crewe has left London for Crewe Hall.

Lord Curzon returned to London last Friday from Paris.

M. Grouitch, late Serbian Minister to Switzerland, left Berne on Sunday for Paris and Washington.

On November 8, at Poona, the wife of Mr. James Crerar, C.I.E., I.C.S., gave birth to a daughter.

On October 27, at Ootacamund, the wife of Major Seymour Bazett, Gurkha Rifles, gave birth to a son.

M. Venizelos, the Greek Prime Minister, accompanied by M. Michalocopoulos, spent the week-end with Sir Arthur Crosfield.

Heddaya Bey, the Governor-General of the Suez Canal, has been made Chevalier of the Legion of Honour by the President of the French Republic.

Signor Tordi, Postmaster-General of Florence, has sent to General Allenby a collection of reproductions of antique silver to commemorate the reconquest of Jerusalem.

On Saturday, at Buckingham Palace, the King invested Major-General Sir Charles Townshend with the Insignia of a Knight Commander of the Order of the Bath (Military Division).

Sir Robert and Lady Clegg left Madras for England in September, travelling by way of America. Sir Robert's service in the Madras Presidency has extended over thirty-four years, eight of which were spent in the Board of Revenue.

On September 9, at St. John's-in-the-Wilderness, Naini Tal, India, Major Philip F. Pope, Indian Army, younger son of Mr. and Mrs. William Pope, Okefield, Crediton, Devon, was married to Eleanor Lawson Brown, daughter of Mr. H. F. Brown, Timaru, New Zealand.

The engagement is announced between Lieutenant R. G. Davis, I.A.R.O., son of Mr. and Mrs. Fred Davis, of Hangmoor, Virginia Water, and Thea, eldest daughter of Herr Martin Petersen, of Aarhüs, and niece of Dr. and Mrs. Arthur Latham, of 38, Portland Place, W.

The marriage arranged between Major Anthony Bovill, M.C., 9th Lancers, son of Mr. and the Hon. Mrs. Bovill, of 60, Pont Street, S.W., and Eleanor Victoria, daughter of Mr. and Mrs. Monins, of Ringwould, Kent, will take place, leave permitting, at Ringwould on December 5.

At an Investiture at Buckingham Palace last Saturday the King invested the following with the Insignia of the Distinguished Service Order:—Major Gerald Scott, Indian Infantry; Major Charles Wallace, Indian Infantry; and Mr. Harold MacMichael, late temporary captain, attached Egyptian Army.

The engagement is announced of Captain Hugh Lloyd Howard, M.C., Royal Engineers, only child of Mr. and Mrs. D. Lloyd Howard, of Little Friday Hill, Chingford, Essex, to Marcella, younger daughter of Mr. G. H. le Maistre, late Indian Public Works Department, and Mrs. le Maistre, of 8, Chester Terrace, Eaton Square, and La Maison du Coin, St. Aubins, Jersey.

The Greek Minister and Mme. Gennadius entertained M. Venizelos at luncheon last Friday. Among those present to meet him were:—The Serbian Minister, Viscount Bryce, Viscount Milner, Lord Robert Cecil, Sir Charles Hanson, Sir Francis Elliot, the Hon. Pember Reeves, Principal Burrows, M. Michalacopoulos, M. Caclamanos, M. M. Embiricos, Captain Rodoeanachi, and M. J. Papas.

The marriage will shortly take place at the Hague of Captain John Clive Doveton Mullaly, 9th (Bhopal) Infantry, Indian Army, eldest son of the late Brevet Lieutenant-Colonel Alexander Mullaly, D.S.O., Indian Army, and eldest grandson of the late Major-General W. J. Doveton, Madras Staff Corps, to Joan Mary, only daughter of the late Mr. and Mrs. Arthur Warner, of Botley, Hants.

On November 6, at Meiktila, Burma, Captain W. E. Hunt, eldest son of Mr. and Mrs. G. D. Hunt, Effingham House, Bath, was married to Miss Ellen Winifred Farrington, second daughter of Major G. Farrington, P.W.D., Burma, and Mrs. Farrington.

Our Cyprus Correspondent writes:—
Mr. H. W. Grimshaw has been appointed President of the District Court of Limasol, from September 15, and Mr. B. Dickenson President of the District Court of Papho, from the same date.
The Order of the British Empire has been conferred on Major Bolton, Commissioner of Limasol, and Provost Marshal in Cyprus.

The marriage of Lieutenant-Commander Claude Pratton Hermon-Hodge, D.S.C., R.N., fifth son of Sir Robert Hermon-Hodge, M.P., and Lady Hermon-Hodge, of Wyfold Court, Reading, and Miss Gwendoline Rose Davis, younger daughter of Mr. J. Goulding Davis, Public Works Department, and Mrs. Davis, of Bahawalpur, India, took place at St. James's Church, Piccadilly, on Tuesday. The ceremony was performed by the Rev. E. S. Shuttleworth, vicar of St. Paul's, Kingston Hill, assisted by the Rev. J. E. T. Evitt, curate of St. James's.

Our Malta Correspondent writes:—
The many friends, both in Malta and abroad, of Professor Thomas Agius, M.A., M.D., F.R.Met.Soc., will be glad to learn that he has just been appointed a temporary captain in the Royal Air Force, for duty at the Malta Meteorological Station. All through the war Professor Agius has been rendering very valuable services in connection with the Meteorological Office, and his present appointment is a striking proof that his important work has been fully appreciated.
The greatest sympathy is extended to Captain Sidney Andrews, R.N.R., Malta, the genial and courteous P. and O. agent here, on the loss of his son, Captain S. O. Andrews, A.O.D., who passed away whilst on active service early in the month. His death is attributed to pneumonia. The deceased was a young and most promising officer.

M. Pashitch, Prime Minister of Serbia, accompanied by other Ministers, arrived in London on Tuesday.

Under the auspices of the Anglo-Hellenic League, Mr. Thomas H. Mawson (City Planning Expert to the Greek Government) will give two lectures in the Great Hall at King's College, Strand: "The Rebuilding of Salonika," on Friday, November 22, and "The Rebuilding of Athens," on Friday, December 13, at 5 p.m. in each case.

Sir Basil Zaharoff, K.B.E., has intimated to the Vice-Chancellor his desire to offer to Oxford University the sum of £25,000 "for the establishment of a Chair of French, to be called the Marshal Foch Professorship of French Literature, and for other purposes connected with the promotion of French studies." Sir Basil, who is a Greek by birth, has previously founded Chairs of Aviation at Petrograd, Paris, and London Universities.

APPOINTMENTS, PROMOTIONS, &c.

The Hon. Mr. J. P. Thompson, C.S.I., of the Punjab, has been appointed an Additional Member of the Imperial Legislative Council.

It is rumoured that the Hon. Mr. D. W. Aikman, C.I.E., Chief Engineer, Buildings and Roads, Punjab, will probably retire from the public service in December next.

Mr. W. S. Hitchcock, Aide-de-Camp on the personal staff of the Lieutenant-Governor of Bihar and Orissa, has been appointed Private Secretary to his Honour in addition to his present duties.

The Council of the Royal Asiatic Society has appointed Miss Eleanor Hull, eldest daughter of the late Professor Edward Hull, LL.D., F.R.S., secretary of the Society in succession to Mr. R. W. Frazer, who recently retired.

TRAGEDY OF MONTENEGRO,
THE SMALLEST AND POOREST OF OUR ALLIES.

MONTENEGRIN RED CROSS AND RELIEF FUND,
11, VICTORIA STREET, LONDON, S.W.1
(Registered in City of London. Section 1. War Charities 1916)

needs £700 WEEKLY for Feeding Prisoners interned in Austria-Hungary.

Donations will be much appreciated and gratefully acknowledged by the Hon. Treasurer, LADY ROPER PARKINGTON, Montenegrin Consulate, 21, Mincing Lane, London, E.C.3.

The King has been graciously pleased to appoint Sir Sidney Arthur Taylor Rowlatt, one of the Judges of his Majesty's High Court of Justice, to be an additional Knight Commander of the Most Exalted Order of the Star of India in recognition of meritorious service rendered in connection with the war.

Sir George Lloyd, Governor-designate of Bombay, has made the following appointments to his staff:—Military Secretary, Major J. G. Greig, C.I.E., 131st Pioneers; Private Secretary, Mr. W. P. Cowie, Indian Civil Service; A.D.C.'s, Captain C. Benson, Grenadier Guards, and Captain C. Knox, Surrey Regiment.

The appointment of Mr. Thomas Beaumont Hohler, C.B., C.M.G., to the rank of Envoy Extraordinary and Minister Plenipotentiary in his Majesty's Diplomatic Service is gazetted. Mr. Hohler, who was born in 1871, entered the Diplomatic Service in 1894, and was appointed Attaché to Constantinople the following year. Later he served at Cairo, Petrograd, and Tokio; in 1905 he was appointed to Berlin, but "did not proceed"; in 1906-7 he was in Cairo, and at Adis Abeba; and the following year he was transferred to Constantinople again. In 1910 he went to Mexico, with the rank of First Secretary, and acted as Chargé d'Affaires on several occasions. As announced last week, he is now Chief Political Officer on the Staff of Admiral Sir Somerset Gough-Calthorpe, H.M. High Commissioner at Constantinople.

OBITUARY.

Second-Lieutenant Alec D. Anderson, Grenadier Guards, who was killed on November 6 by a German machine-gun at very close range, was the youngest son of the late T. C. Anderson, of Ceylon, and of Mrs. Anderson, of 13, King's Bench Walk, Temple, E.C.

A delayed Reuter's message from Bombay announces that the Maharaja of Rewa died in that city on November 3. Lieutenant-Colonel his Highness Maharaja Sir Venkat Raman Singh Bahadur was born in 1876, and succeeded to the Maharajaship of Rewa in 1880. He was created a G.C.S.I. in 1897 in recognition of his successful conduct of famine relief operations.

Lieutenant-Colonel Arthur Berkeley Drummond, Indian Political Department, died on November 12 at Victoria, B.C., while on his way to England. He received his first commission in 1890. For eight years he was in military employment, after which he became Political Assistant in Baluchistan, and two years later Assistant to the Resident in Mewar. In 1905 he was Political Agent at Rajputana, and afterwards was appointed Resident in Mewar. Two years later he was Political Agent at Haraoti and Tonk.

Lieutenant-Colonel T. G. Blois Johnson, C.M.G., C.I.E., 67th Punjabs, died at the Station Hospital, Murree, India, of influenza-pneumonia on November 6. He entered the Army in 1888, and served on the North-West Frontier, India, in 1897-8, being present at the Relief of Malakand, the operations in Bajaur, and Mohmand (medal and two clasps), and Tirah in 1897-8 (clasp). In 1902 he took part in the operations against the Darwesh Khel Waziris. He also commanded a detachment despatched to quell the rising in the Bastar Native State. He commanded the 22nd Punjabis in Mesopotamia in 1915, and was severely wounded at Kut. He received the C.M.G., and was also awarded the C.I.E. last year for good work on the Indian Frontier.

Dr. Augustus Frederic Hœrnle, C.I.E., died at his residence in Oxford on November 12, aged 77. Like his father, he served the Church Missionary Society in India, being stationed at Meerut from 1865 to 1870, when he accepted a professorship in Jay Narain's College, Benares. He was appointed principal of the Cathedral Mission College, Calcutta, in 1877, and four years later joined the Indian Educational Service as principal of the famous Calcutta Madrasah, which post he held until his retirement in 1899, when he settled in this country at Oxford. He was a great student of archæology and palæography, and edited many Central Asian texts. Among his published works are "Studies in the Medicine of Ancient India," a "Comparative Dictionary of the Bihari Language," and a "Comparative Grammar of the North Indian Languages."

We regret to learn from a Cairo correspondent that Mr. Robert Williams, F.R.I.B.A., died on October 16 after a short illness. He had been in practice in Egypt as an architect for nearly twenty years, and was much respected by natives and Europeans alike. Before leaving this country he had served on the London County Council, of which his interest in housing reform and kindred topics made him a valuable member. He was the author of "London Rookeries and Colliers' Slums," "Notes on English Bond," and "Jerusalem: the City of Many Sieges," and an occasional contributor to THE NEAR EAST and other journals. In his younger days he was an ardent Volunteer, and latterly was an honorary member of the League of Frontiersmen. A writer in the *Ahram*, in reporting Mr. Williams' death, wrote:—"The Egyptians have lost an old friend in the person of Mr. Robert Williams, the well-known architect. The deceased was a man of noble character, and he took a great interest in the work of Egyptians, of whom he had many friends." We understand that Mr. Williams' practice will be carried on by his son, Mr. I. R. Williams, who is at present attached to the A.I.D. headquarters in London.

Major James Boswell Egerton, Indian Cavalry, was killed in action on October 27. He received his first commission in 1900, on the unattached list of the Indian Army, and in 1901 was posted to a regiment of Punjab cavalry of the Frontier Force. He served on the North-West Frontier of India in the Waziristan operations in 1901 and 1902, and in the operations against the Darwesh Khel Waziris of 1902, and in East Africa, 1903-1904, in operations in Somaliland, including the action of Jidballa; he was mentioned in despatches, and received the medal with two clasps. He served in France during the autumn and winter of 1914-15, with a regiment of Hussars. Later, his own regiment being ordered on service, he rejoined, and had served continuously with them up to the date of his death. He was mentioned in dispatches, and received the Croix de Guerre.

General Sir Robert Biddulph, G.C.B., G.C.M.G., died on Monday, aged 83 years. As a second lieutenant in the R.A. he took part in the battles of the Alma and Balaclava and the siege of Sebastopol. Afterwards he served with distinction through the Indian Mutiny operations, including the relief of Lucknow. After more service, in India and in China, he was appointed Military Secretary in Madras, where he remained till 1865. In 1878 he was sent on special duty to Cyprus. There he acted as her Majesty's Commissioner for arranging the payment due to the Porte, and in 1879 he succeeded Sir Garnet Wolseley as High Commissioner and Commander-in-Chief. He remained in Cyprus until 1886, when he was created a G.C.M.G. Thereafter he held various appointments at Army Headquarters until 1893, when he was appointed Governor of Gibraltar, which post he held until 1900.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

THE RECONSTITUTION OF THE INDIA OFFICE.

It is no matter for surprise that the recent announcement regarding the reorganisation of the India Office should have passed almost unnoticed in this country. Administrative adjustments are in any case less interesting than the political measures they are intended to subserve, and in these days, when the Old World is struggling in the birth pangs of a new era, public feeling cannot be expected to manifest itself in the details of powers and sanctions, or the precise distribution of authority between Delhi and Whitehall. Yet the impending reorganisation is a matter in which the public are deeply concerned, for the India Office constitutes what we have learned to call a key-position in the peaceful campaign for the development of India, and the future depends in great measure on the results to be reached by the Committee which has now been constituted. Of the necessity for large changes there can be no question, but let us say at once that the matter is not one of administrative efficiency. Bureaucratically speaking, the India Office takes a high rank among its neighbours: it is not perfect, and politicians in a hurry have sometimes complained of its delays, but on the whole its business is efficiently done, and on this side only some adjustments of minor importance are required. The case for reorganisation, or, as we prefer to say, reconstitution, is based on the existing position in India, as is clearly explained in the report of Lord Chelmsford and Mr. Montagu; the old theory has worn out, and the institution must be remodelled in order to serve the new India as efficiently as it has hitherto served the old. It must be remembered that the India Office is the inheritor of the traditions as well as the formal authority of the East India Company, originally a purely commercial venture, despatching its agents to the East with definite and detailed instructions, and insisting on those instructions being carried out. It is true that the powers of the company came in process of time to be shared with the Board of Control, but the two streams of authority coalesced on the final dissolution of the former body, and the Secretary of State in Council occupies essentially the position which it formerly held. By law he controls the entire expenditure of the Indian revenues, and since everything costs money, he has thus the final voice on every administrative question: in practice he transacts a great variety of commercial and financial business, acting as the agent in this country for the Indian Governments.

This duality of functions, this union of control and business, is, in our opinion, one of the principal subjects to which the attention of the Committee should be directed. Natural in its origin, in the process of time it has become open to serious objection on both practical and sentimental grounds, and the weight of these objections is certain to increase as each forward step is taken on the road which has been marked out for India. In a business concern it may doubtless be desirable that the master should act also as the agent of his distant subordinates, but the governance of India can no longer be safely managed on these lines. It is inevitable that the master should be guided by his own judgment in matters of agency as in matters of control, and in practice this involves an amount of interference in detail which has long been irksome to the various Indian administrations and which is entirely incompatible with the introduction of responsible government. To put a concrete case, is it conceivable that a "transferred" provincial department, that is to say a department controlled by a responsible Minister, should purchase its European stores through the India Office? How can a Minister be responsible to the people of his province for transactions carried through by officials over whom he has no sort of control, officials trained in the tradition that they know what India wants much better than she knows herself? Indian Ministers will insist on freedom to choose their own markets and to employ agents over whom they have entire control, and while they may be less efficiently served, their claim cannot be denied if self-government is to be a reality. That the claim is certain to be made may be inferred from the unfortunate sentiment which has grown up in India round this subject. In any political meeting the readiest way of raising a cheer is to insist on the economic thraldom of the country to financial and commercial interests in England, and every student of the Indian Press has learned by experience that the dual position occupied by Whitehall lends itself admirably to exploitation from this point of view. Whitehall, it is said, rules India, while the "interests" dominate Whitehall, and India starves that England may grow rich. Such sentiments are, we are convinced, entirely unfounded, but in politics thoughts are things, and their existence must be taken into account. We believe that practical as well as sentimental needs can best be met by the establishment of agents of the various Indian Governments holding positions analogous to that of the recently appointed Trade Commissioner, and we trust that the new Committee will investigate the whole subject with a view to ascertaining how far it is possible to relieve the India Office of its functions as agent and confine its future activities to the exercise of administrative control.

These residual activities will in truth suffice to occupy an Imperial Minister, though they may not require a large subordinate staff. The change in the declared object of the institution will involve the introduction and the maintenance of a new spirit, the nature of which can best be described in the formula that the new India Office must be Parliamentary rather than Ministerial. Assuming, as we are entitled to do, that Parliament will shortly give its sanction to a scheme for the gradual limitation of its own authority and the transfer of powers to the various Indian Governments, the duty of the Secretary of State will be to see that the intentions of Parliament are carried out, and his position will be very different from that which he has held in recent years, when Parliament has laid down no policy, and it was open to each successive Minister to pursue a policy of his own. In the future there will be no scope for a departmental policy such as is associated with the names of various Secretaries of State, and there will be little scope even for a policy of the Ministry to which he belongs: he will stand out rather as the intermediary between Parliament and the Indian Governments which it has set up, and his duty will be on the one hand to see that no action contrary to the policy of Parliament is taken in India, and on the other hand to keep Parliament informed of the progress which is being made in carrying out its plans. He must therefore retain wide powers of sanctioning or disallowing the proposals of the Indian Governments in all the "reserved" branches of the administration, but he must approach these proposals in a new spirit, and base his decisions less on their inherent merits or defects than on their conformity to the policy which he has to carry out. The existing organisation of the India Office was not designed to accomplish such tasks, and its old-standing traditions are almost incompatible with their due performance. The problem now to be solved has thus two principal divisions: in the first place the institution has to be relieved as far as possible of all functions not directly necessary to the exercise of administrative control, and in the second place it has to be so reconstituted as to enable it to exercise this control in furtherance of the policy to be laid down by Parliament. The future of that policy will depend in no small measure on the degree of success attained in this direction.

THE BRITISH SOLDIER IN PALESTINE.

By ESTELLE BLYTH.

It is an established fact in history that English sailors and soldiers bear before the world a character for honour and humaneness which is equal to their reputation for valour. English history provides us with proof after proof of the chivalry and high character of our fighting men. From the Battle of Sluys, our first great naval victory (to look no farther back), when English sailors risked their lives to save their drowning French antagonists, to the present day, this spirit of our fighting men has been conspicuous, finding at times its perfect expression in individuals such as Philip Sidney, Lucius Cary, Viscount Falkland, Sir John Moore, and in how many of to-day! Never has the character of our soldiers stood higher, never has it more entirely deserved the world-wide admiration and respect it commands to-day.

The campaign in Palestine has been but one incident in the Great War, and it has suffered some eclipse by having been fought in a land the romance of whose name has tended to obscure the actual brilliance of the campaign. The time is not yet ripe for full justice to be done to it as a campaign, but we need not fear the verdict of history on it as a military achievement.

There is, however, one aspect of it with which we are immediately and intimately concerned, and to which full justice has not been done—namely, the irreproachable conduct of the British troops in Palestine throughout a singularly trying campaign. An English army has, of course, a very high standard to live up to and maintain; and from first to last not one man in Palestine has let it down. Not only by their valour and endurance, but by their gentleness, their mercy, their uprightness, the British troops have unflinchingly maintained and manifested before the world the great ideal of Christian soldiers. They have come through no easy test; first, the weary vigil on the marches of Egypt; then, the crossing of the desert; then, the fighting in Palestine. It has been no easy campaign, though possibly the swiftness and success of General Allenby's movements may deceive some into thinking otherwise. Those who know Palestine can form some idea of the difficulties of fighting in a country in which there are practically no roads or railways, but little water, few trees; a country whose formation is far better adapted to defence than attack, and in which a big army would be petrified by its size; a country starved and robbed by the Turk, and then scraped bare by the greedy German. And, in addition to these physical obstacles, the English soldiers have had to meet other and very real difficulties. The people of Palestine for years past have longed for English rule; during the four years' nightmare when the German and the Turk reigned supreme, the natives, with touching faith in England's will and power to save them, hid their best clothes to wear "on the day the English come." When that day dawned their joy knew no bounds. An English soldier could do no wrong, because he was English; every heart, every house, was thrown open—nothing was kept back that could do honour to those who came as saviours. The frenzy of delight shown first by Jerusalem was repeated at Nazareth, at Beyrout, at Damascus, at Salt—in fact, in every place set free by the British troops. I do not fear the charge of exaggeration when I say that not one English soldier has taken advantage of the unreserved gratitude and admiration of the people. Whether they come from the farthest limit of the Empire or from some crowded London street, in all circumstances and at all times our men have borne themselves as gentlemen. They have shown themselves reverent of the sanctity of the Holy Land, compassionate of the sufferings of the people; they have confirmed in the natives of every creed and class a passionate trust in, and devotion to, England; and they have upheld in utter simplicity the highest ideal of Englishmen and English soldiers.

It is also worth recording how time after time our men have burdened themselves with little starving, sometimes dying, children, picked up by the way, of whose family no trace appeared; washing, clothing, feeding them, taking charge of them with infinite tenderness and interest until an opportunity came of handing them over to some established centre of relief.

In closing I will quote from letters which refer to the English soldier in Palestine. A chaplain writes: "This leave trip has made me feel proud of our British nation. All along the route through Palestine, Egypt, the Mediterranean, Italy, and France the British soldiers and sailors are looked up to and loved. They are such perfect natural gentlemen, and so courteous to the people amongst whom they live. To me they seem cut out for the work of reconstruction which will be given to them after the war is over."—(Chronicle of the Community of the Resurrection. No. 63, p. 21.) Of the other four letters, all from Syrians, the two latter are from Syrian Christian girls:—

You can imagine how glad we are in being under the rule of the British Government. The day we saw the English troops entering Jerusalem was surely a great day to us. Faces were beaming with joy, and we were so happy that really we cannot describe it by writing. We surely appreciate all the work they have done, and we pray daily for their victory.

You may be sure that I will always do my best to help any of the English soldiers that I can. We will never forget all that they have done for us, and risked for us their own lives. In truth, they have done more for us than we deserve.

British people should be proud of their men and generals, for really what they have done in this war is wonderful. If it were not for them, where should we have been now? Now the British name is spread all over the world; it is like the Israelite name when they were near Jericho. I am sure the Turks are more afraid of this name than the people of Jericho of the Israelites.

We have had hard times here. Everyone is so relieved since the English took hold of this land. One feels to be in safe hands, they are Christians not in name only but in deed too, as they are doing all their best to help the people.

Great indeed is the debt of Palestine, and of ourselves at home no less, to those who by their discipline and self-control, as well as by their valour, have added to "the renown and everlasting glory of the English nation," and "with so great a resolution as we hardly find the like recorded in any history, having struggled with and overcome their enemies in the field, have purchased to themselves in general amongst all posterity the name of Deliverers."

HOUSE OF LORDS.

Riots in India. November 14.

Lord SYDENHAM asked the Under Secretary for India whether he could give the House any information as to the rioting in Calcutta and Madras in September.

Lord ISLINGTON, in reply, said that very full reports of the riots in Calcutta and Madras had appeared in the Indian Press, to which he referred members who desired fuller information than he was able to give. He thought a tribute was due to the Governor (Lord Ronaldshay) and his colleagues for the admirable manner in which they had handled what might have been a very serious incident. The thanks of the Government had been expressed to the troops, to the Indian Defence Force, to the police, the Fire Brigade, and the Ambulance Corps, and well-deserved acknowledgments had been made of the conduct of the General Officer-in-Command at Calcutta and his staff and the Commissioner of Police. In Madras the disturbances were purely economic in character and in origin, no sectarian element being reported. Three important points had emerged from the consideration of the recent disturbances. First, in Bengal there was undoubtedly an undercurrent of lawlessness and sedition. Secondly, the Government of Bengal, in the face of a most critical and difficult position, had shown and were showing foresight, promptness and firmness, while at the same time displaying scrupulous attention to the feelings of the various sections of the community; and, thirdly, the Government could not be deprived of the special powers necessary to deal effectively with violence and disaffection in order to ensure reasonable security and safety of the people entrusted to their care.

HOUSE OF COMMONS.

Topics in Parliament.

PRESS ON THE NEAR EAST.

The Cairo Bookmarket.

The *Egyptian Gazette* published recently an article entitled "Cairo's Bookmarket," written by "An Arabic Scholar," and dealing with "the latest Arabic books and their authors." The writer begins by a reference to the dearth of new books brought about by the dearness of paper. He then goes on to say: "While in England there is a season in which publishers bring out their books, although they may have been printed months before, there is no such season here, and books make their appearance when their authors have saved enough money to pay for their production." As to reviews of these works, "from time to time long articles are published making out the books under treatment to be marvels of their kind, the high-water mark of erudition and scholarship, and the authors littérateurs, scientists, or philosophers second to none in Egypt or anywhere else." These laudatory articles, which are supplied by the authors themselves, are not the only notices in the native press:—

No, indeed. The self-respecting newspapers and magazines give their readers unbiassed opinions of the latest works by men capable of estimating their merits, and do not hesitate to tear a book to pieces if they do not consider it worth reading by the public. It is true such reviews are rare, but the fact that they are made proves that there are in the country unprejudiced litterateurs who have courage enough to give their opinions on the books brought to their notice.

Later, in writing of some recently published books, the author refers to "'Amsal Al-Shark wal-Gharb' (Proverbs of the East and West), by Yussef Toma Al-Bustani. The compiler is a well-known Cairo bookseller, but, more like booksellers of old than those of the present day, he is not a man who sells books merely to earn a living or make a fortune, but one of certain literary attainments whose scope of knowledge must have been extensive." Of the book of this worthy scion of a well-known literary family, we read:—

Proverbs are said to be the fossil words of the teachings of the accumulated experience of past generations, preserved in a form that outlives the experience that formed them. By their universal applicability to all times the wisdom they embody is attested. Perhaps of all nations of the world the Arabs are more fond of employing proverbs in their conversation and writing than any other. 'Ala Ray el Masal" (as the proverb says) is a very common expression preceding the quotation of a proverb, heard every day among all classes of the population. But the proverbs here given are not limited to those of the Arab race only but to several as the name of the book implies. Thus in speaking of "Happiness," M. Bustani tells us what Marcus Anthonius, Lord Avebury, Tolstoi, the Japanese General Kuroki, Solomon, Abdul Rahman Shukri, Kassem Amin, Avicenna (Ibn Sina), Al Zamakhshari, Yehia Ibn Khalid, Shakespeare, and many others have said of it. As each has defined it in his own way and looked at it from a different point of view, the interest of the article is greatly enhanced. The book would be an excellent reading-book to the students of some classes, while those of the higher classes would find in it much to quote in writing their compositions. There are no fewer than thirty subjects treated, such as knowledge, patience, self-reliance, the value of time, etc., which, if studied, will help to improve the character of the student.

The article closes with a reference to a forthcoming lexicographical-philosophical work of considerable importance—a medical dictionary in which the names of the medicines are given in Arabic. "When it is remembered that only a fraction of the medicines now used was known to the Arabs, and consequently that the majority of the names are from the Greek and other foreign languages, it will be understood how gigantic was the task the learned chemist had before him. According to the paper in question the author had to read a large number of Arabic books in which he discovered the equivalents of great many names of medicines. As for those medicines which were unknown to the Arabs the author has used new Arabic names." Scholarship and painstaking research are evidently to be found in Egypt in classes where one would not expect to find them flourishing.

Turkey, Bulgaria, and America.

The article, "Bulgaria, Turkey, and the War," which Sir Edwin Pears contributes to the *Contemporary Review*, covers a good deal of old ground; but the ground is so unfamiliar to most people in this country that it will certainly be helpful to have it covered once more. Sir Edwin reminds us how, after the Bulgarians had chosen Prince Alexander as their sovereign, "a struggle began which vitally altered the relations between Russia and Bulgaria."

The war party in Russia, as already stated, determined to have its own way. There was no pretence of "self-determination" of the people. Russia was "the Deliverer and the Conqueror." Bulgaria should become a Russian province. During ten long years the struggle went on. An infamous Russian intrigue expelled Alexander in 1887. Then it became necessary to choose a successor. Russia put forward her candidate. But the people would not have him. A deputation was appointed by the Sobranje, the Bulgarian Chamber, to find a prince. They selected Ferdinand, as yet an unknown Austrian officer. Russia was once more disappointed, and from that time onward she became the enemy of Bulgaria.

From that time up to the present, Sir Edwin Pears considers, two influences have had great importance upon Bulgarian history: the first, that England steadily supported the independence of Bulgaria and opposed Russia's intention to force its people to accept her yoke; and the second, the influence of the United States:—

As my readers have probably noticed, the United States has never declared war upon Bulgaria; the explanation is that Bulgaria has received from America more aid in finding her soul than from all other countries. This influence came mainly from the great American institution known as Robert College in Constantinople. The late Dr. Washburn, the Principal of that College for nearly forty years, was a man of magnetic influence, resembling that of Arnold, of Rugby. Every year saw a number of graduates in the College of various races, but notably Bulgarian, who were hard students, and whose minds had been trained to accept the ideals of America. Stambuloff, though not himself there trained, spoke in very high terms of the value of its work. His successor, Stoiloff, was a graduate, and a man greatly respected both in Bulgaria and in England. He was one of the earliest graduates, and with him was Mr. Panaretoff, who since the commencement of the world war has been the able representative of Bulgaria in Washington. Clear-headed and thoughtful, but strictly straight in his diplomatic and private conduct, he has earned the respect of all in America who take an interest in Eastern politics. The only other Robert College Prime Minister who may be mentioned is Mr. Gueshoff, whose conduct in refusing to continue in office when King Ferdinand, probably at the dictation of Austria, sent new terms to be added to those already settled between him and Mr. Passitch, the Serbian Premier, gives him a notable place in the history of the last six years. If the story as told by various writers, largely confirmed by Gueshoff himself, be true, then King Ferdinand is responsible for the second Bulgarian war and for her entry on the side of Germany and Austria.

The story referred to is thus re-told by the writer:—

Passitch, the great Serbian Premier, and Gueshoff, who occupied the same position in Bulgaria, were authorised to arrange the difficulties between their two countries. They had virtually completed their task when Gueshoff received an order from his King to await the arrival of Savoff. When the latter arrived he produced new terms, and on reading them Gueshoff indignantly threw down his pen, and declared that as they meant war he would have nothing to do with them. Mr. Gueshoff emphasises the fact that no meeting of Ministers had taken place, and that the new terms were those of King Ferdinand alone. Efforts were made to retain the services of Gueshoff, but within a month he had resigned. War ensued. The intention of Ferdinand was to surprise Serbia, but he had miscalculated, and in the war, which was due to his interference, the Bulgarian army was deservedly beaten to its knees.

The attitude of the United States towards the Turks is much what it has been towards Bulgaria, and for very similar reasons:—

As with Bulgaria, so with Turkey. The United States of America have not declared war upon Turkey. She has played havoc among some of the American schools in the interior of the country, where the Turkish troops were under German generals who apparently did not understand why schools belonging to their enemies should be favoured by the Turks. Nevertheless, they have been so favoured. The great institutions of Robert College and the Girls' College at Constantinople have not been seriously molested. When it is remembered that all the Protestant missions in Turkey are under the Board of Protestant Missions at Boston, a body which has large ramifications and a great influence throughout the Union, one may recognise that the Turks were wise in inflicting upon them the minimum of inconvenience. It was the sense of this influence, combined with the high value of the work they were doing, which made Turks and Bulgars alike unwilling to provoke President Wilson into declaring war on either of their respective nations.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

The announcement is made that, following an Inter-Allied Conference in London, at which information was forthcoming regarding Greek finances, certain measures have been adopted by the Allied Governments concerned which will place the Greek Government in a position to liquidate its floating debt and its other internal and external indebtedness. I have frequently emphasised the fact that the Allies' share in the reconstruction of the Balkans will involve a generous measure of financial aid to those countries who threw in their lot with us in the war, and this prompt action on the part of the Allies cannot fail to have the happiest effect in the Near East, indicating as it does, that the Allies may not only be depended upon for all the help in their power, but also that it will be given at the earliest possible moment. Nothing could be more applicable to the situation in the Near East than the adoption of the maxim *bis dat qui cito dat.*

***

I understand that opium cultivation has now been prohibited in Egypt. For some obscure reason there has been a marked extension of the cultivation of the opium poppy in Egypt during the war, a development which has naturally been open to objection at a time when it is so essential to devote all the acreage possible to food production. I should imagine that it is in the highest degree unlikely that the prohibition will prove otherwise than permanent.

***

The promised excess profits tax in India is naturally a matter of great importance to the industries concerned, and it is satisfactory to learn, therefore, that the Bill embodying the proposals of the Finance Member will be published well before the time for its consideration, so that firms and individuals affected may have ample opportunity of considering it and of making any representations they desire to the Government. As regards the lines that may be followed, it may be noted that Sir William Meyer in his recent speech on the tax, after referring to improvements in the income tax machinery, said: "We think, therefore, after confidential consultation with local governments, that we ought to be able to tackle an excess profits tax satisfactorily, provided we leave out individuals and concerns whose profits have been less than a given amount which will receive further consideration, and concentrate ourselves on those who have made larger profits than this. The general method we propose to apply in respect of the latter category is to make a liberal allowance for normal expectation of profits, and to obtain non-official assistance where possible in dealing with difficult cases." Obviously it is desirable that the commercial community should be fully consulted before any final decision is taken, and Sir William's remarks suggest that this will be done.

***

The necessity of reviving the rubber industry in Ceylon has led the Government there to decide on the reduction of the export duty on rubber from 7½ rupees per lb. to three cents (about ½d.). Announcing this proposal at a meeting of the Legislative Council last week, the Governor, Sir William Manning, explained that it was proposed to meet the deficit of £183,333 that would thus be caused by taxation increases on cigarettes, postal rates, railway rates, and death duties, by higher stamp duties, and by the reimposition of the export duty on copra and coconut oil as from January next. The effect of the war on the Ceylon rubber industry has naturally been very pronounced, though there is little reason for thinking that the plantations in the island have been more seriously affected than those in other rubber producing centres in the East, and it is, in any case, interesting to note that the war has not prevented the extension of rubber cultivation in Ceylon. Thus the report on the Ceylon Blue Book for 1917 states that rubber continued to thrive during that period, and in parts of the Western Province was displacing cinnamon, while reference is made to the tendency to convert paddy lands in Kalutara District into rubber estates and to the utilisation of large areas in Matara District, formerly under citronella, for rubber cultivation. As the demand for rubber in the next few years is likely to be great, this persistence of the Ceylon planters is likely to meet with its reward.

***

A few weeks ago I was able to quote some extracts from a letter received by a correspondent showing the extraordinary level to which prices had soared in Constantinople by the end of July. Since then matters have evidently not improved, for Mr. G. Ward Price in a recent despatch from Constantinople says: "As regards her economic situation, Turkey is in a nightmare condition. In the matters of prices and the supply of goods she is living under the conditions of a Klondike gold rush. The necessaries of existence cost sums never before demanded in Europe. People with fixed incomes are starving, and the rest both gain and spend money in a fine extravagance of speculation and prodigality. To take a cab for an hour costs £T3, which at present rates means £2 sterling. The charge for a *table d'hôte* dinner in this hotel is the same sum. If you went into a Turkish tailor's with less than £50 in Bank of England notes you could not buy the shoddiest suit of clothes."

***

With the situation as it is described matters must be bad enough for the Turks themselves, but what must it be like for members of other races who for one reason or another have had to stay in Turkey during the war? In this connection I see that the position of British communities in Constantinople and other places in Turkey has been raised in the House by Mr. Bliss, who asked whether the Government would take measures to feed the starving portion of the British communities in these places until supplies could be provided normally. Mr. Baldwin, in reply, stated that the position of the British communities in Turkey was receiving consideration in connection with the general problem of relief in all territories where it was required, and it was hoped shortly to set up a regular system for meeting the needs of the situation, and in the meantime such emergency measures as were possible were being taken.

***

One of the difficulties in regard to industrial development in India is the supply of labour. An instance of this is provided by the report for 1917 of the Chief Inspector of Mines. In that year the number of persons employed in coal mines in India was 153,683, an increase of over 10,000 on the previous year. Despite this increase, the report states that the larger mines in Bengal and Bihar and Orissa were short of labour especially at the end of the year, while the persons who were employed did much less work than usual. The reasons for this position are stated to be the excellent harvest of 1916, and the abnormal monsoon of 1917, though the mining conditions also "played their part," Indian coal production, the Chief Inspector adds, is a question of labour, and given an adequate supply the output could be increased 50 per cent.

***

While the net profits of the Anglo-Egyptian Bank for the year ended August 31 only show a small increase, the report is none the less eminently satisfactory, indicating as it does that the steady progress of this institution has been more than maintained. There has been a marked development in the resources of the bank, a feature of the balance-sheet being an increase of almost 3½ millions in the deposits. The gross profit amounted to £273,900, an increase of £26,300 over the previous figures, but expenses were £24,600 higher, and the net profits are only £1,700 higher at £146,000. £67,000 was brought in, or £15,000 more than in 1917, and there is also £20,000 representing provision in 1915 for war contingencies, which is no longer required. The total is thus £36,700 greater at £233,000, and besides a dividend of 15 per cent. free of income-tax, the directors propose a special distribution of £1 per share, which is to be capitalised by the creation of 20,000 shares of £5 each. Last year the return to shareholders in dividends and bonus amounted to 17½ per cent.

EGYPT'S COMMERCE.

Further Expansion in August.

(From Our Own Correspondent.)
Cairo, October 13.

The August Customs returns show a further expansion in the foreign trade of this country. Imports during the month came to £E5,028,125 and exports to £E3,615,372, as compared with £E2,304,938 and £E2,717,515 respectively in August, 1917. So far imports are £E14,110,087 and exports £E6,059,340 up on the figures for the first eight months of last year.

The principal imports during the month were:—Meat, £E386,759 (all from Australia and New Zealand); cereals, £E155,117; coffee, £E96,201 (of which £E67,005 were from British possessions); stationery, £E149,778; coal, £E248,913; cotton piece goods, £E1,491,329 of which 90 per cent. were from the United Kingdom); woollen textiles, £E94,092 (practically all from the United Kingdom); ready-made underclothing, £E181,073 (one third from the United Kingdom and just under half from Japan); manufactured iron and steel, £E173,632 (50 per cent. from the United Kingdom); and tobacco, £E299,797 (60 per cent from Greece and 10 per cent. from Japan).

The chief exports were:—Hides and skins, £E73,553 (of which over 70 per cent. went to Greece); rice, £E27,648 (just over half to British possessions); cotton seed, £E51,901 (all to the United Kingdom); onions, £E32,907 (practically all to the United Kingdom); gum, £E43,209 (40 per cent. to the United States); liquid fuel, £E38,395 (60 per cent. to Italy and the balance for bunkers); cotton, £E3,131,737 (45 per cent. to the United Kingdom, 27 per cent. to Italy, 14 per cent. to Spain, and 7 per cent. to Japan); and cigarettes, £E78,689.

Direction of Trade.

The share of the imports of the United Kingdom rose from £E995,134 to £E2,386,920, whilst that of Australia increased from £E3,704 to £E518,309. Chili reappeared with £E77,965 (due to chemical manures), Japan increased her share from £E35,897 to £E359,852, Italy hers from £E143,811 to £E370,671, and Greece hers from £E190,612 to £E238,650. Under exports the United Kingdom increased her purchases by 20 per cent. to £E1,639,493, Spain hers from £E25,171 to £E435,721, Greece hers from £E75,276 to £E181,605, and Italy hers from £E502,578 to £E867,969. Japan showed the most marked falling off, her purchases only amounting to £E238,154.

Trade with the Sudan continues to be brisk. During the month imports from that country amounted to £E223,138, as against £E182,757 the previous August, and exports from Egypt attained the figure of £E265,5[illegible] as against £E113,547. The chief items on the import side were:—Livestock, £E56.447 (8,342 head); hides and skins, £E41,632; maize, £E23,403; sesame, £E23,632; gum, £E22,016; there was no cotton import. Under exports the principal articles were:—Cereals, £E22,399; sugar, £E63,996; cotton piece goods, £E97,122; and tobacco, £E12,506.

EGYPTIAN STATE FINANCES DURING JULY.

(From Our Own Correspondent.)
Cairo, October 21.

The returns of the Ministry of Finance for the month of July reveal a remarkable state of affairs as regards the financial prosperity of Egypt as a State. During the four months from April 1 the revenue receipts have amounted to £E8,583,556, as against £E6,470,903 during the corresponding period of 1907, an increase of over £E2,000,000; whilst the expenditure totals £E7,031,928, as compared with £E6,109,397, an increase of just under one million pounds. As a result there was at the end of July a surplus of no less than £E1,551,628, as compared with one of £E361,506 on the same date last year.

The chief increases in revenue were customs, £E760,691; tobacco dues, £E113,389; legal fees, £E66,947; railways, £E586,444; military exemption fees, £E47,220; Ghaffir cess, £E153,543; interest on investments, £E79,347; and sale of land, £E134,466; with the addition of £E262,727 from excise and £E48,936 from telephones.

The principal items of expenditure during the month were:—Irrigation, £E113,762; railways, £E201,694; War Office, £E194,806; war gratuities, £E42,966; extraordinary war expenditure, £E64,985; Ghaffirs, £E67,252; and public debt, £E104,238.

FROM WAR TO PEACE.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—Allow me to submit some considerations that may be useful in the transition from war to peace. Skilful management is quite as essential, or indeed even more essential, in emerging from war as in entering upon it. Given this, I believe we are on the threshold of a great future in industry. But there are problems to be solved in the industrial field and large armies to manœuvre into a safe position. We have to transfer men from their posts in the fighting forces to their industrial posts, and to do this, if we do not employ those who have spent their lives at the head of the great organisations of capital and labour controlling the staple industries of the country, we shall repeat, if not intensify, the errors that were made at the outbreak of war. In these industrial manœuvres I hope our leaders of industry will be the general officers commanding. As in the operations of war, the most successful officers are those who have been nursed in the school of strategy and tactics, so in the operations of industry the men most qualified to lead are those who are not only endowed with an aptitude for business, but are also highly skilled in the art of organisation. The men who lead the organisations of capital and labour should closely co-operate with the demobilisation authorities so that our fighting men, who have served us so magnificently, may step out of the zone of war into a land which shall show distinguishable marks of purification, of a freer, happier life, a democracy less self-centred and more self-sacrificing, and with a greater bond of sympathy connecting all classes in the State. If the men who have won our battles can detect this result of the nation having been flung into the crucible of war, they will realise that their services have saved civilisation, and that a grateful nation is concerned about their future welfare. But we must help them also to realise that the delicate mechanism of the world's commerce must, under our modern system of industrialism, take some time to settle down after the violent struggle of the last four years, and what we now have to consider is how to emerge successfully from the fearful dislocation that has resulted from the war.

It must be realised that all foodstuffs, raw materials in stock or in process, indeed, stock of all kinds, have been produced under abnormal conditions, and changes in the values must of necessity be gradual if we are not to be involved in serious financial disturbance.

The United States of America and the British Empire practically control the cotton crop of the world; wool also is largely under the same control, and in negotiating for a lasting peace this immense power will, I hope, be wisely, but not vindictively used. Those raw materials which contribute so largely to the production of clothing for the inhabitants of the globe have been raised, owing to the vicissitudes of war, to almost unprecedented prices, and I hope that the Allies will act together in controlling these commodities and distributing them equitably. Further, it is in the interest of all just as important to prevent a too rapid depreciation in the prices of raw materials as it is to prevent a further undue inflation. Statistics which are available show that the cost of living has increased enormously, and, in order to deal fairly with the workpeople wages have been increased to an extent which in pre-war times would never have been thought of. Experience has shown that it would have been wiser to have dealt with all advances of wages as war bonuses, increased at intervals as the cost of living rose, on the understanding that these bonuses should be reduced gradually as the cost of living fell.

I may say I am strongly in favour of permanently raising the standard of living of the working classes, and I believe this can be done by an agreement between all the nations, and in this way alone. I always like to point to what has been done, and much has already been accomplished by international co-operation which in times past would have been considered utopian.

I give it as my firm conviction, from a large experience of both national and international trade, that if the nations of the world would only fully realise their interdependence, and organised capital and labour were to work together in developing the undeveloped resources of the world, which, in my opinion, would give ample employment to all, the appalling waste caused by this disastrous world-wide war may be made up in a much shorter time than is generally believed.—I am, yours faithfully,

Charles W. Macara.

NEAR EAST MARKETS.

Sudan Gum Crop.

The following particulars regarding the Sudan gum crop are taken from the October issue of the *Sudan Chamber of Commerce Journal*:—

The season 1917-1918 promises to be a record one so far as concerns protracted arrivals. During the month of August about 12,000 kantars entered the open markets from the interior. September promises to yield a comparatively large quantity, and as far as can be gathered about 15,000 kantars are expected to come to hand from the interior before the new season begins.

Up to the present the crop is believed to be in excess of that of last month, inclusive of all descriptions of Hashab Gum, such as Kordofan, Gedaref, Gezira Hashab, etc. Doubtless the present arrivals are due entirely to the fact that Arabs were strongly impressed by the rapid advance in price which took place towards the closing stages of last season, and for that reason they have held their stocks in the interior in the hope, by doing so, of obtaining equally remunerative prices at the close of the present season. This is borne out by the quality of the gum now coming to hand, which from all appearances was gathered during the months of March and May. Arrivals for March and May fell below the average, the reason for which may be found in the foregoing remarks.

Prices have been fairly steady throughout the season, but nevertheless very high. The high prices can be attributed to the loss of a considerable quantity as a result of the German submarine campaign during the year 1917, which doubtless influenced many people with speculative tendencies. It is very satisfactory to observe that no losses have occurred from that cause throughout the whole year, not only from the fact that the submarine menace has been dealt with splendidly, but from the point of view of legitimate traders and consumers of the article. Prices in foreign markets have varied considerably, inasmuch as they have depended entirely upon available supplies. Stocks in hand at present in Khartoum, El Obeid, and Nabud aggregate 27,000 kantars of all descriptions Hashab Gum. Talh: About 5,000 kantars are available.

Egyptian Cotton Estimate.

The Government estimate of the 1918 cotton crop is 5,252,000 cantars (about 525,200,000 lb.), or an average of 3.86 cantars per feddan, says the Cairo correspondent of *The Times*. Reports on the condition of other crops show that in October maize was normal, while rice was slightly above normal, with a good yield of both expected.

CYPRUS TRADE NOTES.

(From a Correspondent.)

Olives and olive oil are among the principal articles of food of the peasantry, and the Agricultural Department has been wisely dealing with a pest now affecting trees in various parts of the island, namely, a fly (*Dacus oleæ*). Owners of olive trees known or suspected to be attacked are required, by a recent order of the High Commissioner, to bury in lime all fallen fruit which are maggoty, or suspected. Potatoes are also, unfortunately, attacked by rot, due apparently to a minute insect (*Lita solanella*); and several areas have been gazetted as infected. The pest is under investigation.

Government Butter.

The Agricultural Department is able to dispose of a limited quantity of excellent butter, made at the Government experimental farm at Athalassa, near Nicosia. Tenders are invited for the purchase of 10—20 lb. a week during the period November 10 to June 30, 1919. Fresh butter is a luxury not obtainable in Cyprus except by the few who keep cows. The article sold as "*butero*," or *semne*, is a fatty composition used in the place of lard or dripping for cooking purposes. All butter for the table is imported, Danish, in tins, being the most popular. In the future, when irrigation and pastures are improved as they should be, plenty of good butter should be made in Cyprus. The milk of the island, that of sheep and goats, is mostly made into small varieties of cheese, but a little butter has been made in late years.

Tobacco Cultivation.

A new order regulates the cultivation of tobacco in the coming agricultural year, that of October, 1917, being cancelled. No landowner may cultivate more than one-tenth of the land usually devoted to cereals, a maximum of 25 *donums* (roughly about 8 acres) being the limit. Again, no person between the ages of 12 and 60 can be employed. Licenses must be obtained by application to the Commissioners of Districts.

THE IMPERIAL INSTITUTE.

Reports on Raw Materials.

The current number of the *Bulletin of the Imperial Institute* contains a number of reports made recently by the Institute on raw materials from various parts of the Empire. Among the subjects dealt with is the question of tobacco-growing in Ceylon. Attempts are now being made in Ceylon to cultivate an improved type of tobacco, and recently a large number of samples, chiefly of pipe tobaccos, obtained in these trial cultivations, have been reported on by the Imperial Institute. The report is encouraging. It gives full information as to the composition of those tobaccos, their probable value, and the action required in Ceylon to improve the quality for the British market.

Mr. G. C. Dudgeon, Consulting Agriculturist to the Ministry of Agriculture in Egypt, discusses a question of great importance to Lancashire, viz., the maintenance of the quality of Egyptian cotton. It is well known that if any serious deterioration in the quality of Egyptian cotton occurred, it would inflict great damage on the British fine cotton spinning industry. Mr. Dudgeon points out that Egyptian cotton has in recent years consisted of a number of varieties of cotton, each an improvement on its predecessor, and each in its turn destined to deterioration, through crossing in the fields with inferior kinds. Owing to a series of fortunate accidents the quality of the cotton produced has on the whole improved, but he asserts that unless some system of protecting improved kinds is introduced there can be no guarantee that the present good quality of the output can be maintained. The principal action required is the isolation and issue of seed of the best kinds in a fairly pure state, that is, free from seed of inferior varieties. The steps necessary to this end can only be taken by Government with the consent and active support of the Egyptian producers.

The Indian Hides Trade.

An important article is one dealing exhaustively with the sources of supply of Indian hides and skins, the trade in these materials before the war, and the changes in the direction of this trade since the war began. As our readers know, by their tariff policy and other methods, the Germans were able to take a very large share of the Indian trade in raw hides before the war, the collection in India being largely in their hands and the exports going principally to tanneries in Germany. A full investigation of the possibility of finding British markets for these hides and skins has been carried out by the Hides and Tanning Materials Committee of the Imperial Institute, who have presented several reports on the subject, which are now under consideration by the Government of India. It seems likely that partly by increased tannage of the hides and skins in India itself, and partly by their increased use in this country and the British Dominions, a market for the greater part of these important Indian raw materials may in the future be found within the Empire. The committee have already taken practical steps to familiarise tanners in the Dominions with the good qualities of the Indian hides. The article in the *Bulletin* provides a basis of information on which merchants and tanners may take action, when normal conditions of trading are restored.

Das Echo states that, contrary to all "senseless rumours," the Turkish securities of the Deutsche Bank amount to something under 5,000,000 marks.

LANCASHIRE COTTON.

Position Unchanged.

(From Our Own Correspondent).

Manchester, Wednesday.

The market continues in a confused state. There is no confidence in current rate and prices continue to favour buyers. Although the world is not over supplied in cotton fabrics it is believed that the time has not yet come when it would be safe to purchase freely, as a further shrinkage in values is anticipated. The rules and regulations governing the buying and selling of Egyptian cotton continue to cause much irritation, and spinners and merchants are hampered at every turn. Whatever success may have attended Government control in other directions it is certain that so far as Egyptian cotton is concerned the trade has been disorganised from top to bottom. Representations continue to be made to the authorities but no relief seems to be in sight. Egyptian yarns remain quieter but late rates have been fairly well held. Most advices from Egypt relating to piece goods have not been at all favourable. There has again been considerable discussion with regard to the cancellation of contracts chiefly for India. The directors of the Chamber of Commerce have advised merchants to take a strong attitude and firmly refuse applications of this kind but cases of mutual arrangement keep occurring. Here and there fair orders have been booked for France. Manufacturers continue to lose ground. Prices in American yarns continue to crumble and users who have wanted a few ships have been able to purchase on practically their own terms. Export yarns continue in request for France.

Mills to Run Full Hours.

Throughout this year the chief problem for the leaders of the Lancashire cotton industry has been how to secure sufficient supplies of raw cotton, and owing to restricted shipping facilities a considerable amount of machinery has had to stand idle. There are now signs, however, of mills returning gradually to full production. For some time the Ministry of Shipping has only been able to provide freight space across the Atlantic for about 150,000 bales per month, this being the amount for November. The trade, however, has now been promised tonnage equal to 235,000 bales for December and about 300,000 bales for January. In view of this information the Control Board has decided to allow spinning mills and weaving sheds throughout Lancashire to run full hours from the beginning of next week. It may be said that at the present time spinning mills are only working 50 hours per week and weaving sheds 46 hours per week, instead of the full time of 55½ hours. The number of spindles in American mills to be run will still be restricted to 55 per cent. of the total but in weaving the percentage of looms has been increased from 60 to 65 per cent. Further concessions to spinners and manufacturers will be made according to available supplies of raw cotton and as operatives return from the army.

INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following weekly cabled news received from the Director-General of Commercial Intelligence, dated November 19:—

The north-east monsoon has started fair, and has greatly relieved the situation in Madras and also in Bombay and the Carnatic.

The announcement of the armistice has not had a very marked influence on Calcutta markets. Inquiries for shares are brisker, and the prices of coal and miscellaneous companies have hardened.

Piecegoods.—Calcutta shows better inquiry, with tendency to rise. Karachi is said to be overstocked, and prices have fallen there. In Bombay piecegoods position is unchanged, but prices both of mill shares and raw cotton have fallen. Fully good Broach April-May stands about Rs.650.

Industries.—Messrs. Heilgers have floated Nagpur Clay Company (capital six lakhs) to work clay ochres in Singbum district.

ENGINEERING NOTES.

Cement Works in Bulgaria.

The Bulgarian Joint Stock Company Kotwa, which was recently founded at Burgas with a capital of 3,000,000 francs, gave a commission to the Machine Factory and Iron Foundry, Louis Svest, in Düsseldorf, for the construction of a cement works on a large scale capable of a daily output of nearly 160,000 kilos. The order was given, according to reports, last August, and it will be interesting to know if it has been confirmed or carried out after what has recently happened in Bulgaria.

Machine Tools for Serbia.

It is not generally known that orders for machine tools for work, other than war work, may now be placed with manufacturers, merchants, and importers without submission to the Ministry of Munitions for approval, although the manufacture and delivery of goods will be subject to the existing restrictions. This new order will probably facilitate the preparation and despatch to Serbia of machine tools, which are very badly needed for railway and factory work, for, according to recent reliable information, it is an established fact that not only have the Serbian museums, churches, and public buildings been stripped of all their works of art, but also that the factories have been cleared of valuable machinery and farms of all available agricultural machinery and implements. A country denuded like this would be incapable of self support, and either the immediate return of the looted property must be demanded, or an adequate supply of new, or even second-hand, machinery must be quickly sent to that country.

It has not been well known that Serbia is a good market for machine tools. According to official returns, in 1911 the imports of various kinds of machine tools (metal, stone, wood-working, etc.) amounted to 204 tons, Austria-Hungary supplying 82 tons, Germany 101 tons, and the United Kingdom about 9 tons. After the second Balkan War, 1912-13, there was an increased demand for machine tools of all kinds, stone, wood, and metal working machinery, such as planing and drilling machines, turning lathes, cutting and sawing machines, and polishing machines. Germany, at the time, succeeded in obtaining a large share of the increased trade. The total imports in that year (1912-13) were valued at 252,000 francs (compared with 175,000 francs in the previous year), of which Germany contributed 136,000 francs, Austria 99,000 francs, France 15,000 francs, and the United Kingdom only 2,000 francs (£80).

The "Don't Bother" Policy.

In our notes on November 8 we quoted from an article in a contemporary which outlined the golden opportunities that will arise for British manufacturers in the near future, and pointed out that what are needed in this country if these openings are to be taken full advantage of are more modern business methods and more systematic energy on the part of British manufacturers; otherwise this country will not be ready and able to hold its own in the forthcoming international industrial struggle. Evidently these views are very generally held, for in another contemporary a leading article appeared last week, entitled, "The Danger of Don't Bother," in which it was stated that a well-known manufacturer, in conversation recently, was asked whether he was going to advertise his business on the cessation of hostilities. He replied, "No; why should I?" It was suggested that there would be a tremendous market for his wares, and by so doing he would increase his business. He said: "I was working to full capacity before the war, during the war, and expect to keep on doing so after the war." The reply was: "In that case why not enlarge your works?" to which he said, "Why should I bother? I am quite happy." "If this is the spirit of our manufacturers," our contemporary adds, "the lesson of the war is still unlearned. It was the 'not bother' policy that made the war possible. It was the 'not bother' policy which enabled the Hun manufacturers to capture our markets. It was the 'not bother' policy which gave the Hun the money with which to go to war, and blinded our rulers as to their intentions. If the people of this country 'don't bother' after the war, the industrious Hun will, in a few years, be in a position to start again. Germany was, and is, a great manufacturing country, and when the last shot is fired her brains of war will become brains of peace (don't forget she has brains), and our men of commerce will have to keep busy to prevent her being our greatest competitor again."

Enterprise Needed.

It may be hoped that some good results will come of this plain speaking. As for the manufacturers who, like the one referred to in the article, "don't bother," or ask, "Why should we advertise?" they should be reminded of the axiom of one of the most successful American manufacturers: "Advertising should be the central part—*the very spine*—of your whole selling scheme," and his expert opinion that "the sort of salesman who scorns the aid of advertising belongs back in last century, and is certain to prove a puny power in building up a progressive business." While the war of arms is over, a most desperate international industrial struggle is now being commenced, and the manufacturer who "does not bother" will be the "shirker" or the "conchy" in it—a very un-British posture. The East will be the greatest field for the international industrial struggle, in which engineers and engineer manufacturers of all categories will play a prominent part. The latter should lose no time in announcing to buyers there that they are ready to serve them, and thus receive their orders before others go and close contracts. There is no region in the world in which judicious advertising is more effective than in the East. Germans and Americans knew it, and acted accordingly with success.

ALLIES AND GREEK FINANCE.

At an Inter-Allied Conference recently held in London information as to the situation in Greece was furnished by the Greek Minister of Finance and by members of the Inter-Allied Financial Commission at Athens, in consequence of which the Governments concerned unanimously adopted certain measures which will enable the Greek Government to liquidate its floating debt and all other internal and external indebtedness. The material prosperity of the Greek people, which has greatly increased during the war and is still increasing, had already created general confidence in the financial position of the country, and the above measures will serve to strengthen the existing feeling of security.

EGYPTIAN MARKETS.

The returns of Egyptian Markets, Ltd., for the week ended October 31 were:—Cattle markets £788, general markets £520, total £1,308, total for year £43,214. The figures for the corresponding week last year ended November 1 were:—Cattle markets £429, general markets £455, total £884, total for year £47,634

EGYPTIAN DELTA LIGHT RAILWAYS.

The traffic returns of the Egyptian Delta Light Railways for the ten days ended October 20 amounted to £E13,442, making the total from April 1 £E176,066. The corresponding figures for 1917 were £E10,359 and £E126,395.

SUEZ CANAL RECEIPTS.

The traffic receipts of the Suez Canal were as follows on the undermentioned days:—November 8, 9, 440,000 frs. against 200,000 frs.; November 10, 11, 500,000 frs. against 430,000 frs.; November 12, 13, 14, 15, 680,000 frs. against 710,000 frs.; November 16, 100,000 frs. against 120,000 frs.

AN ALGERIAN ENTERPRISE.

A company has been formed at Algiers for the manufacture of paper pulp from alfa, with a capital of 3,000,000 frs. It is stated that there is an almost illimitable supply of alfa in the Department of Oran, the existing acreage being estimated at over 12,000,000 acres, with a possible annual production of 400,000 metric tons. The United Kingdom received nine-tenths of the shipments of alfa before the war.

ON 'CHANGE.

(From Our Own Correspondent.)
Throgmorton Street, Wednesday.

Our market has been irregular this week, and there has not been so much business passing. Whilst, however, there was a reactionary tendency during the early part of the week, things have brightened up rather to-day, and the feeling at the close was quite a cheerful one.

In Government stocks some business has been done in Egyptian Unifieds round 90, at which price there are still buyers; but sellers are very scarce. Egypt 3½ per cent. preferences, on the other hand, are nominally ⅜ lower at 77½. Turkish Fours, 1891, are 1½ points lower at 83.

In Bank shares Agriculturals are 1-32 higher at 7, and there has been some business in the preference shares at 7⅝, at which price there is still a demand; but for the moment there are again no sellers. Anglo-Egyptian Banks, after their recent rise, have further receded ⅜ to 20¾. A feature has been a big demand during the last day or two for National Bank of Egypt shares for Egyptian account, with the result that a fairly large business has been transacted, and the price closes ⅝ higher at 20⅝.

In Railways, Delta Lights, after their recent spurt, have reacted ⅛ to 8⅜.

Amongst Land descriptions, Aboukirs have further improved 6d. to 24s., with a fair business passing. Behéras are ¼ easier at 14, although the official intimation of the payment of a half-year's interest on the preference shares on account of arrears should prove a helpful factor; because it is now probable that during the winter months, when collections in Egypt are on a large scale, some more of the arrear coupons on the bearer shares will be paid off, and thus bring much nearer the time when dividends will be resumed on the ordinary capital. Behera Preferences are 4½ bid x.d. Delta Lands, on some trifling sales in an unsupported market, have relapsed 9d. to 16s. 3d.; whilst Foreign Trusts have also, after their recent big spurt, reacted 1s. to 16s. 6d. New Egyptians have remained a firm spot, with a fair amount of business passing, and they are only quite fractionally easier at 21s. 9d. In Sidi Salems the market has been quieter, and the shares are 1-16 easier at 2 25-32. Union Foncières remain a firm spot, but United Egyptian Lands are 3d. lower at 3s. 9d.

In Miscellaneous shares Alexandria Waters have dropped ¼ to 12½, and Egyptian Markets are 6d. easier at 27s. 6d. Salts and Sodas, after dropping to 3⅜, close only 1-16 lower at 3 9-16. Khedivial Mails, after their long and uninterrupted rise, have at last reacted somewhat, and are closing 5s. lower at 83s.

In Greek securities the only quotable change is a decline of ⅜ in the Monopoly Loan to 62¼.

Oil Shares.

In keeping with the prevailing tendency oils have been depressed this week, though towards the close there have been indications of a market revival. Anglo-Egyptians B closed at 2 21-32, a decline of 5-32, but Anglo-Persian Prefs. are unchanged at 25s. 6d. British Burmahs closed firm at 13s. 6d.

Roumanians have all been weak; Roumanian Consols are 6d. lower at 17s.; it is worth noting, however, that they closed to-day with a rise of 6d. Anglo-Roumanians have varied a good deal, and are 1s. 1½d. weaker at 10s. 1½d., while Traian-Roumanians are 11½d. down at 11s.

In Russias, Bakus are 6d. lower at 4s. 9d., and North Caucasians are 1s. 6d. down at 25s. Russian Generals are ⅞, Russian Petroleums 2s. 6d., and Ural Caspians 1 9-16.

Paris Bourse.

The market has been more or less quiet, with a tendency to firmness at the close. Greek securities have been firmly held, while in the banking section considerable attention has been bestowed on Near Eastern securities.

Suez Canal shares are slightly better at 5,550, a rise of 50. Egyptian Unifieds are 3 points lower at 90, while Credit Foncier Egyptiens have lost much of last week's rise, closing at 778, a decline of 4, and Land Banks are 5 down at 205. Other prices are: Serbian 1895's, 61 (against 62.40); Turkish Unifieds, 70.10 (against 71); Banque d'Athènes, 111 (against 105), and Ottoman Banks, 566 (against 555).

COMPANY MEETINGS.

The Nizam's Guaranteed State Railways.

The adjourned sixty-fifth general meeting of H.H. The Nizam's Guaranteed State Railways Company, Ltd., was held on November 19 at Winchester House, E.C., Mr. C. A. Winter (the chairman) presiding. The Secretary (Mr. M. T. Walker) read the notice and the report of the auditors.

The Chairman, in moving the adoption of the report and accounts, first referred to the broad gauge system, and pointed out that the expenditure on capital account was £24,135, of which £15,572 was spent on rolling stock and the balance on additional works and general improvements. The gross earnings showed an increase of 6½ lakhs of rupees over those of the previous year, but the working expenses had increased by Rs.10,63,226, and absorbed 52.75 per cent. of the earnings. Coaching traffic showed an increase of Rs.1,47,724, although 186,491 fewer passengers were carried. This was due to the increase in fares which had been adopted to reduce the passenger service as much as possible, in order to economise rolling stock and power. Goods traffic showed an increase of Rs.55,894, with goods rates unaltered. A most satisfactory feature was that a heavier traffic was carried by fewer trains. With regard to the increase in working expenses, an item of Rs.12,82,949, equal to £85,529, appeared in the revenue account under the heading of deferred maintenance. During the war it was impossible to get the necessary materials for the line and workshops, consequently the working expenses were not charged with the cost of materials and replacement of rolling stock that would have been debited under normal conditions. The result was that net earnings showed a larger figure than they would have done if the charges referred to had been met. This account would be continued until the materials and rolling stock in arrear had been obtained, an estimate being made yearly and added to ordinary working expenses. Another reason for the increase was that everything they had been able to get to keep the railway safe and workable had cost very much more than the usual price. Notwithstanding the provision for deferred maintenance, they had made £11,301 surplus profits, which were divided between H.E.H. the Nizam's Government and the company. Dealing with the metre gauge, he stated that the gross earnings showed an increase of Rs.39,634, but the working expenses had increased to Rs.4,09,176. Coaching traffic showed an increase of Rs.2,21,522. Goods earnings were Rs.1,83,935 less than in the previous year. The cotton crop was disappointing; heavy rain at the end of the season did great damage and the output was very much reduced. There was a considerable reduction in train mileage and a consequent saving in expenses. The working of both the broad gauge and metre gauge was so satisfactory that he was sure the proprietors would agree with him in thinking that the staff in India merited their thanks.

Lieut.-Colonel G. Huddleston seconded the resolution, which was carried unanimously, and at an extraordinary general meeting it was resolved to change the name of the company to "His Exalted Highness the Nizam's Guaranteed States Railways Company, Ltd."

The transfer books of the ordinary stock of Burma Railways will be closed from December 10 to 31 inclusive.

COMPANY NOTES & REPORTS

Ceylon Land and Produce.

The report of the Ceylon Land and Produce Company for the year ended June 30 states that net profit amounted to £14,885; £7,556 was brought forward, making £22,442. Deducting preference dividend, interim dividend on ordinary shares and income-tax, directors' fees, etc., estimated at £7,500, there is left £9,042. It is proposed to pay on 26th inst. a final dividend of 10 per cent. (making 20 per cent. for the year), less tax at 5s. 3d. in £, and to carry forward £5,354.

Anchor Line.

The report of the Anchor Line (Henderson Brothers), Limited, for the year ended April 30 last states that all the company's steamers continue under requisition of the Government. The services have been maintained as regularly as existing conditions admitted. Profits, after providing for depreciation and a special reserve for war taxation and contingencies, amounted to £309,399; £146,912 was brought forward, making £456,311. Deducting debenture interest, preference dividend, and £250,000 placed to reserve account, there is left £180,113. The directors recommend a dividend on the ordinary shares at the rate of 10 per cent., free of income-tax, also a bonus on ordinary shares at 10 per cent., free of tax, and to carry forward £130,113.

North Anantapur.

The report of North Anantapur Gold Mines, Limited, for the year ended June 30 states that expenditure on revenue account amounted to £36,162 and net profits to £57,017, leaving a profit of 21,855, as compared with £23,361. The total credit at profit and loss was £47,112, and after deducting the debit, amounting to £31,810, there is left a credit balance of £15,303. A refund of excess profits duty, amounting to £13,514, has been received. A balance dividend of 2s. 6d. per share and a bonus of 1s. per share on the preference and 6d. per share and a bonus of 1s. per share on the ordinary shares was paid on 1st inst., which absorbed £11,218, leaving £4,084 to carry forward. The total distribution for the year was 5s. 6d. per share on the preference and 1s. 6d. per share on the ordinary shares, both less income-tax.

Anglo-Egyptian Bank.

The report of the Anglo-Egyptian Bank for the year ended August 31 states that the gross profits for the year, after making full provision for all bad and doubtful debts and all taxation, are £273,885 1s. 2d., and deducting the expenses, amounting to £127,846 13s. 1d., there remains a balance of £146,038 8s. 1d. net profit for the year. To this amount must be added £67,000, the balance carried forward on August 31, 1917, and £20,000, being provision made in 1915 for war contingencies, not now required, making £233,038 8s. 1d., which the directors propose shall be dealt with in the following manner:—Contribution to staff provident fund, £3,038; interim dividend of 5s. per share paid, free of income tax, June 1, £25,000; dividend at 10s. per share, free of income tax, to be paid on December 2, making, with the interim dividend, 15 per cent. for the year, £50 000; special distribution £1 per share, proposed to be capitalised by creation of 20,000 shares, £100,000; bonus to staff, £12,000; written off premises account, £5,000; balance carried forward, £38,000. Branches of the bank have been opened at Jaffa and Jerusalem. Meeting, 27, Clement's Lane, E.C., November 26 3 p.m.

Sucreries d'Egypte.

As regards the results of the working of this company up to October 31, it is incontestable (says the *Situation Economique*) that native production has been slightly affected by the frosts, which have interfered with the ripening of the cane. It is also a fact that the company has met with serious obstacles owing to the high cost of labour and materials, and that the demands, hardly justified, of the Supplies Control Board, had they been maintained, would have greatly impeded the development of the business, but these various reasons do not appear to warrant the fall which has taken place in these shares. The diminution in native production has its natural remedy in the purchase of raw sugar from Java. The increased cost of raw materials and labour ought to be compensated for by raising the official tariffs. Neither Russia, Austria, nor Bulgaria, all more or less exhausted, will be able to compete for a long time with Egyptian sugars in the Mediterranean. Before the war the Trieste market regulated that of Alexandria. On the morrow it will be the reverse.

Caledonian (Ceylon).

The report of the Caledonian (Ceylon) Tea and Rubber Estates for the year ended June 30 last states that net profit, after writing off £1,000 for depreciation, is £8,067; £3,648 was brought forward, less excess profits duty £1,730, making £10,006. The directors propose a dividend of 6 per cent. on the ordinary shares, to place to coast advance reserve account £500, and to carry forward £2,436.

South Caucasian.

The report of the South Caucasian Syndicate states that no further development of the properties has taken place during the year ended September 30 last, and owing to the existing state of affairs in Russia the questions involved in settling the company's rights must necessarily be further postponed.

Central Tea of Ceylon.

The report of the Central Tea Company of Ceylon for the year ended June 30 last states that net profit, including the balance brought forward, amounted to £6,424. It is proposed to pay a final dividend of 2½ per cent. on the ordinary shares, making 5 per cent. for the year, to place to income-tax account £1,500, and to carry forward (subject to excess profits tax) £2,174.

Dividends, Payments, etc.

The directors of the Fine Cotton Spinners' and Doublers' Association have declared an interim dividend of 5 per cent. on the ordinary shares, less tax. The last interim payment was 4 per cent.

The directors of the Indian and General Investment Trust have declared an interim dividend for the six months ended October 31 last on the deferred stock at the rate of 8 per cent. per annum, payable December 11.

The interest on the 5 per cent. first debentures of the Aboukir Company, Limited, due December 2, will be paid on and after that date on presentation of coupon No. 39 at the offices of the company, 134, Palmerston House, Bishopsgate, E.C 2.

The directors of the Bank of British West Africa have declared an interim dividend at the rate of 3½ per cent. (less income-tax) for the half-year ended September 30, payable December 2. This is the same rate as last year.

A cable has been received by Messrs. John Taylor and Sons from the Kolar Goldfield stating that owing to influenza epidemic on all mines there is a considerable shortage of labour, and the companies' returns for November may be affected.

BRITISH TRADE CORPORATION

(Incorporated by Royal Charter),

13, AUSTIN FRIARS, LONDON, E.C.2.

Telegrams: "Trabanque, London."

CAPITAL: Authorised - £10,000,000 Subscribed and Paid Up - £2,000,000

Governor - THE LORD FARINGDON.

Manager, A. G. M. DICKSON. London Manager, P. C. WEST. Secretary, G. De B. BROUNLIE.

The Corporation has been established with the object of developing the Trade of the British Empire in every part of the world, and brings to the notice of all interested that it is prepared to grant financial facilities to British Manufacturers and Merchants for the increase of their Import and Export Trade.

It will be prepared to assist in opening up new channels for enterprise, and will afford financial facilities for the enlargement of works and the extension of plant.

The Corporation is appointing representatives in the chief cities of the world, and will open credits at home and abroad. It invites inquiries, and will endeavour where necessary to put expert advice at the disposal of correspondents regarding the financing of their foreign and overseas business. Moneys received on fixed deposit. Terms on application.

NOTES OF THE WEEK.

Swift retribution threatens the Allies, unless an extremely delicate situation is handled promptly and intelligently. As the least reflection must have enabled the Allied Governments to foresee, the failure to arrive at a definite settlement of the whole of the Near Eastern question while the war was on leaves a critical problem unsolved with the most powerful agency for a tactful compromise removed. But complete indifference during the early stages of the war to the danger of delaying a settlement only gradually gave place to a half-hearted attempt to discover a basis for a possible solution. The Near Eastern question now has a two-fold aspect; one concerns the delimitation of boundaries between Italian territory and the new Yugoslav State, the other is the partition of Macedonia. The former problem was the more urgent, as the points at issue made for the estrangement of two members of the Allied group, whereas in Macedonia one of the claimants was still an enemy.

Trouble has already arisen between the Italians and the Yugoslavs. It will be remembered that late in the day, but while the war was still on, the two parties made an attempt to arrive at an understanding. The negotiations, however, were at best semi-official, in the sense that there was no explicit instruction, as there ought to have been, to the disputants to compose their differences without further loss of time. Accordingly, after informal meetings elsewhere, a somewhat more formal conference was held in Rome, at which the general principles on which it was desirable that an agreement should ultimately be based were drawn up and, in due course, received the assent of the Italian Government. At the time it was urged in these columns that what was wanted was a hard and fast boundary line carefully traced from Carinthia to Albania, which would leave no room for misunderstanding on the part of either Italians or Southern Slavs. In the absence of this definite line, the collapse of Austria-Hungary has been followed by the inevitable scramble for positions between the troops of the two countries.

The spectacle is derogatory to both parties, and to the Allied Governments as a whole. "Acute tension," it is reported, has arisen at various places; but worse developments have apparently been prevented by a mixed Allied occupation at several debatable points. On the Yugoslav side it is pointed out that the trouble has arisen, in part, because the zone of occupation on the eastern and north-eastern Adriatic under the Austrian armistice was made to coincide almost exactly with the zone assigned to Italy by the "secret" Treaty of London of April, 1915. Consequently this armistice zone was regarded by the local populations as sanctioning the frontier drawn by the Treaty, and by inference we are asked to regard the Yugoslav peoples as justified in trying to enforce their claims even at the risk of armed collisions with Italian troops. Neither side to the conflict, let it be stated quite candidly, is displaying the spirit which it was hoped that the fiery trial through which they have both passed would introduce for the future into all international discussions.

The root of the whole matter is that no Allied Government outside Italy and the Balkan States has taken upon itself to master the intricacies of the Near Eastern question to the extent of realising that a solution can only be reached by compulsory arbitration. In other words, the claimants must be persuaded to leave their disputes in the hands of the British, French, and United States Governments, who must determine what in their opinion is the most equitable solution, and then insist upon its frank acceptance. The numerous preliminaries to the Conference at Rome and the nature of the Pact itself, which was entirely vague, and left room for the military incidents which have now arisen, prove that, left to themselves, the countries concerned have little chance of arriving at a final and complete settlement. Unless, therefore, storm signals are continually to be raised in the Balkans and unrest to remain the permanent state of Europe, the law must be laid down once and for all, and the knowledge must exist that a police force is within call to require its observance.

It is inconceivable that the rivalry between Italians and Yugoslavs should be allowed to be carried to extremes. At the first warning hurried steps have been taken to separate the disputants, and we may hope that, all too late, an attempt will now be made to bring them to a formal agreement. But it would be idle to ignore the material for unrest that exists in this part of the world; for even when Italian and Yugoslav differences have been composed, there is the possibility of political cross-currents disturbing the smooth development of Yugoslavia. We are confident that this new State will ultimately "find itself," if it is freed from outside interference. There is no lack of outward indications that its constitutional development is proceeding along normal lines. The component parts have agreed upon a course of action, and the Prince

Digitized by Google

Regent of Serbia is reported to have been "nominated" Regent of the whole Southern Slav State. But political intrigue is on foot in Serbia, and the Allied Governments are being asked to believe that M. Pashitch's continued direction of the Serbian administration is an obstacle to the progress of Yugoslavia. Whether this be the case or not, the Allied Governments will be well advised to insist that the matter is one to be settled by the Serbian people alone in a constitutional way. Serbia is not necessarily Yugoslavia, and the new State will be quite strong enough to deal "on its own" with any political difficulties that may arise in Belgrade. To pretend that Serbian recalcitrancy or M. Pashitch's alleged "pursuit of a personal policy" is going to arrest the growth of Yugoslavia is to ignore the fact that the motive power of the State will for a long time to come be in the north rather than in the south.

It is to be hoped that the political quarrels of the Serbians will bring Montenegro some respite from the intrigues aimed at settling her destiny before the people can record their decision on the question. Unfortunately, the Montenegrins are handicapped by being left at this critical period virtually without leaders. King Nicholas remains in Paris when his place and that of the Montenegrin Government are clearly in the liberated country. They might have to return empty-handed; but they could rely upon the speedy arrival of relief, and in the meantime they could reassure their fellow-countrymen and correct the impression that Montenegro had been deserted by the Petrovitch dynasty.

The discussion on the fate of Constantinople has called forth a somewhat severe letter in *The Times* from Mr. Ameer Ali, who lays stress upon the fact that the Mussulmans of India regard Constantinople as the "City of Islam," and points out that "to wrest it from the Turks and to hand it to any other people would indeed be an outrage to their feelings." It is a pity that the future of Constantinople should be associated by anyone with the question of creeds. The point at issue is the good government of a stretch of territory which, owing to its geographical position, is closely bound up with the peace of Europe. For an opinion of Turkish methods of government the Mussulmans of India cannot do better than consult the Arabs, who have also decided that the Turks, or at least the ruling class, far from being good Moslems, were hardly entitled to be regarded as Moslems at all. If Constantinople has to be held in trust for the world of Islam, it would be thought that the Committee of Union and Progress, hailing from Salonika, would be the last people to whom good Moslems would like to see it entrusted. It should be possible to respect the susceptibilities of Islam, while ridding the city of incompetent government.

London is shortly to be afforded the opportunity of welcoming a very distinguished visitor in the person of the Shereef Feisul, son of the King of the Hejaz, and Commander-in-Chief of our Arab allies in Arabia and Syria. The Arab campaign against the Turks has been not the least significant development of the war, and its history, though so little known in this country, is as important in its bearing on the future of that part of the world as it has been full of picturesque details. Its success has been largely due to the personality of the Shereef Feisul, who has not only proved a capable and resourceful leader in the field, but has also, under his father's auspices, succeeded in bringing the Arab people together in a way to which they have long been strangers. The other contributing factor to the triumph of the Arab cause in the revolt against Turkish misrule was the material help given by Great Britain. The visit of the Shereef Feisul to England places the seal on this co-operation, and will, it is to be hoped, prepare the way for the maintenance, with equally successful results for the future of Arabia and Syria, of close relations between the British and the Arabs.

Indian politicians will doubtless be gratified to know that, contrary to all recent precedents, the affairs of their country have furnished a "plank" in the Coalition platform for the General Election to which we are now endeavouring to attune our minds. In that document Ministers have explicitly reaffirmed the terms of last year's Declaration, and announced their intention to give effect to it, but they have offered no hint of any concrete measures to be brought forward, and consequently there is no chance of the matter becoming an issue in the contest, since so far as we can see none of the other parties in the field is in the least likely to raise any objection to the principle, however much they may have to say when the time for legislation arrives.

So far then India's position in the Election is satisfactory, but those of her politicians who have experience of the way in which things are done will probably turn from their perusal of the Ministerial programme with a feeling of depression; it is something to have a place at the start, but the course is very crowded, and the chances of an early arrival at the finish are none too bright. The work of Parliament was seriously behindhand when war broke out, arrears have been accumulating for more than four years, and now everything has to be tackled in a tremendous hurry. What chance does India stand alongside of demobilisation, increased production, education, housing, liquor control, the Second Chamber, Ireland, and all the other competitors for the attention of the new House of Commons?

We do not for a moment suggest that Ministers are insincere. We have no doubt that they honestly intend to lay the foundations of responsible government in India, but they cannot hope to do everything at once. The composition of the next House of Commons is an unknown factor, but we may be confident that a large proportion of the new members will wish to hear their own voices, and if they settle down to talk in the old familiar way even urgent measures are sure to be delayed. Of all people in the world Indian politicians have the least right to object to the consumption of time in talking, but it is unlikely that they will look at the matter in this light, and delay will have many drawbacks, apart from the disappointment of a particular class.

To put the matter shortly, the question of Indian reform having once been raised requires a prompt settlement. Everywhere we meet with paralysing uncertainty at a moment which calls for sustained and vigorous action. Neither officials nor politicians nor men of business know where they stand, and delay can serve only to strengthen the sinister forces which are already at work. We can only hope that in the coming struggle for priority India will be able to hold her own, and that her representatives in this country will have the knowledge and the energy required to apply pressure at the decisive point, not at the fringes of political activity, but at the centre where half a dozen men in effect decide what Parliament is to do.

Meanwhile, we are sorry to see that the two Committees on the result of whose investigations the Government measure will largely depend are threatened at the outset of their work in India with a boycott by the non-Brahmins of the South. Such a step would be a tactical mistake, but it would also be very much more. The Committees have to take all India into account; they will find a few sections of the people highly organised, and the rest for the most part apathetic, and they will in any case have some difficulty in preserving a due sense of proportion. The withdrawal of one of the few organisations representing the masses can only accentuate this difficulty, and still further strengthen the position of the few, and we trust the non-Brahmin Confederation will reconsider its somewhat hasty decision, and put the case of its members with all the skill it can command.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, October 21.

The Budget.

The various administrations are all busy drawing up their budgets for the 1919-1920 financial year. The estimates have to be submitted to the Ministry of Finance by the end of the current month, to permit of their being discussed and amended in time for publication in March next. It is understood that there will be several interesting innovations in the new Budget not unconnected with the economic and special development of the country. It should not be forgotten that in his last note of the Budget the Acting Financial Adviser foreshadowed the possibility of one or two new departures, among them the creation of a Ministry of Communications, and that the Balfour Public Health Commission recently recommended the transformation of the Public Health Department into a separate Ministry.

Hellenic Subjects in Egypt.

As a result no doubt of the change in the Balkan situation, an agreement has been come to between the Egyptian and Greek Governments whereby the former recognises as Greek subjects natives of the new Greek provinces who, having settled in Egypt, have opted for Greek nationality, and have applied within the period laid down by the Treaty of Athens of 1913 for recognition as Greek subjects by the local Hellenic consular authorities. This recognition does not, however, extend to natives of the islands of Imbros, Tenedos, or Castellorizo or to those of islands in the occupation of an Allied Power other than Great Britain. At the same time, the Egyptian Government expresses its readiness to recognise as Hellenic subjects persons of Greek origin, but registered as local subjects, who have volunteered or may volunteer for service with the Greek Army, or with the Army of any of the Allies of Great Britain, provided that at the time when the split took place in the Greek colony in Egypt in 1917 those persons had placed themselves under the protection of the General Commanding the British Forces in Egypt.

Rules for Women Travelling through the Mediterranean.

Ever since the first year of the war there have been varying regulations regarding the travelling of women and children through the Mediterranean, and from time to time references have appeared in The Near East on the subject. Since June this year the restrictions have been made considerably more severe, and a Committee, denominated the Women and Children Oversea Permit Committee has now been set up under the authority of the High Commissioner, the Commander-in-Chief Egyptian Expeditionary Forces, and the Rear-Admiral, Egypt, to deal with all applications for permission to travel to Europe. No British women and children (under 16) proceeding in British, Allied or neutral ships, or Allied and non-neutral women and children (under 16) proceeding by British ships may travel through the Mediterranean from Egypt without a permit from this Committee. It is understood that permits will only be granted in cases where going home is medically certified as being a matter of life or death, and then only on condition that the person in question does not return to Egypt during the duration of the war.

The New Cotton Seed Crop.

The regulations in connection with the control of the new cotton-seed crop under the scheme of purchase by H.B.M.'s Government have now been published. In substance they are the same as those of the previous season, and the control of the distribution of the seed destined for sowing continues in the hands of the Egyptian Government, which itself distributed about 40 per cent. of the total seed requirements of the country direct to the cultivators last year. It is interesting to note that the total amount of seed available this year, according to the returns of the Alexandria General Produce Association, was 3,794,000 ardebs. Of this quantity 2,711,000 ardebs were exported—2,694,000 ardebs to Great Britain, and about one million ardebs were consumed by the local oil crushing establishments. It is impossible to say what will be the seed prospects during the coming season, but an important diminishing influence will be exerted on the exportable quantum by the fact that the cotton area was restricted to one-third of every holding during 1918. In addition it is understood that the crushers will receive a larger allotment to enable them more adequately to meet the local demand for edible oils, which has hitherto been supplied by imports. The prices at which they can retail the oil and the cake are tariffed by the Government; but there is reason to believe that they are able to make a very considerable profit out of the operation, which explains why the shares of these enterprises stand so high at the present moment.

The Wheat Situation.

There is not much improvement in the wheat situation in the towns despite all the efforts that are being made to relieve it. The provincial authorities are being pressed by the Supplies Control Board to seize all stocks which they can get hold of, and to arrange for them to be forwarded to Alexandria and Cairo for distribution. The Government has meanwhile sent down considerable quantities of wheat from its own reserve in order to mitigate the critical situation in Alexandria, and it is hoped that before long arrivals from the interior will commence to be sufficiently satisfactory to meet the demands of that city and obviate further drawings on the Government reserve. Since there is reason to believe that in the towns arrivals have not been put on the market, but that they have been hoarded, the Supplies Control Board has issued an Order constituting at Minet el Bassal a Cereals Bureau, which will control all wheat and wheaten flour arrivals in Alexandria. Every consignment arriving there must be notified to the Bureau, which will have full power to direct how it is to be disposed of. By these means the efforts that are being made to bring wheat to the cities will not be thwarted by local hoarders. It is understood that a similar bureau will shortly be constituted in Cairo, which is the other centre suffering most from the withholding of wheat in the provinces.

Prohibition of Opium Cultivation.

By decree, the cultivation of the opium poppy has been prohibited throughout Egypt, with the proviso that the Ministry of Agriculture has the power to remove the prohibition, with the approval of the Council of Ministers, at any time it considers advisable. Any infraction of the decree renders the cultivator liable to a fine not exceeding £E1 and imprisonment not exceeding one week, and to have the plants pulled up at his expense. Until quite recently the opium poppy has not been cultivated on any extensive scale; but, since the war, whether owing to the almost complete cessation of smuggling of "Hashish" cannot be said, the area has

undergone considerable expansion; and, as in present circumstances every feddan that is cultivable should be put under food crops of some description, the Government decided to prohibit the cultivation of this noxious plant. It is to be hoped that this prohibition has come to stay, and that the Government will not avail itself of the power to permit the resumption of the cultivation of the opium poppy except for purely medicinal purposes, and then only under very close supervision.

ROUMANIAN NOTES.

(From a Correspondent.)

The Jassy Conference.

A very important conference opened at Jassy on November 19, to discuss not only economic and political questions regarding Roumania and the new Russian States, but also the policy of the Entente in Eastern Europe. Well-known politicians representing various Russian democratic organisations are taking part in this conference. M. Sazonoff, formerly Russian Minister for Foreign Affairs, arrived to represent the Ekaterinodar administration and the Government of Ufa, and the National parties of Ukrainia sent delegates. The conference has a task of extraordinary difficulty and delicacy before it, and it would be idle to prophesy what the results of its labours will be. It is obvious, however, that since Roumania is the only organised State left in Eastern Europe, it is of the utmost value and importance to the Allies; and the presence of Allied troops in the country and of Allied warships in Roumanian and Black Sea ports appears to indicate that they are prepared to take whatever steps may be necessary to extirpate the last traces of German influence there.

After the German Occupation.

The trials and sufferings of the Roumanians during nearly two years' occupation by the Germans are now over. But what was a beautiful garden before the coming of the invaders is now a ravaged country. Nearly all the villages at the foot of the Carpathians, with their treasures of popular art and architecture, are destroyed, the heaviest fighting having taken place there at the time of the German invasion. The oilfields, too, are in a deplorable state. The Germans made extraordinary efforts to restore the installations, but their success was very limited, and the oil production is now only one-fifth of what it was before the war. Naturally, the lack of oil causes great difficulties, in reconstructing other industries and in regard to means of communication; for all the factories of the country formerly used oil as fuel, as did also the trains.

As to rolling stock, Roumania used to have more than 14,000 wagons and about 5,000 locomotives. Now she has only four or five thousand wagons and a few hundred locomotives. Tunnels and bridges, including the magnificent bridge across the Danube between Fetesti and Cernavoda, have been destroyed, as have many railway stations. The splendid vineyards on the hills have been ravaged and the forests devastated. The number of cattle in the country has been reduced by 75 per cent., the rural population being thus deprived of the means to work and cultivate the land. The question of compensating all these victims of the war will be one of the most difficult to solve. It will probably be years before the Germans are compelled to pay for their infamous conduct; and the poor people need immediate assistance, if they are to begin their work again, and thus help to feed a hungry Europe.

Problems to Solve.

The most difficult problem to be solved in Roumania is the land question: the new democratic State of Roumania can only be built up on the solid base of a just solution. King Ferdinand has pledged himself to do justice to his soldier peasants who defended the country against German barbarity and Russian anarchy. After the Marghiloman Government resigned, and the Germans left the country, the King assured the peasants that the land should be divided among them and that the Franchise Bill should be voted very soon. The great masses of the Roumanian peasantry will, therefore, soon take an active part in the political life of their country, and will regenerate it.

Another important problem to be solved is the Jewish question. The Bratiano-Take Jonescu Government (1917) promised an equitable solution, and the Roumanian people are pledged to the democracies of the world to deal with the question fairly and fully.

CYPRUS NOTES.

(From a Correspondent.)

Great rejoicings have followed the news of the latest victories of the Allies throughout Cyprus. Thanksgiving services have been held in Greek churches. In the towns the streets have been beflagged, and there would have been illuminations had circumstances permitted. It is fully recognised that the lot of Cyprus has been a happy one, and that no part of the Empire has been more favoured during the four years of hardship and trial in other lands. This feeling is increased by the tales of distress which have filtered in from Syria and Palestine, where Cypriotes have many friends, connections, and interests. Communications are being resumed with these countries. Cyprus, although prices have risen to what many regard as exorbitant rates, is abundantly provided with almost all necessary articles.

The Greek members of the Legislative Council have despatched telegrams to Great Britain, France, and the United States, congratulating the Governments on the late victories. It is hardly necessary to add that they have taken the opportunity of expressing their hopes that the aspirations of (Greek) Cypriotes will not be overlooked when peace terms are discussed. It has been decided that a deputation of three or more members shall visit Athens as soon as possible in order to advocate "the cause" with the Government of M. Venizelos, which—it is hoped—will take the matter up. The list of Greek deputations from Cyprus has been a long one!

The Chief Secretary returned to Nicosia from Mount Troödos on October 17, the High Commissioner remaining till the 23rd. He has visited Papho, where various matters claimed attention, and travelled, by way of Limassol, to the capital.

Red Cross collections in the island have amounted to over £5,200 up to the end of September.

MALTA NOTES.

(From Our Own Correspondent.)

Malta (undated).

In spite of all that the Hun has been able to do, our little island has pursued the even tenour of its way. It was our races last week; now we have our grand opera in full swing, and those who have had the privilege of wintering with us in the past will remember the excellence of the performances. The season was inaugurated on Thursday night, October 31, when the Royal Theatre was crowded from pit to ceiling, the house presenting a very brilliant aspect. The Governor, attended by Major V. C. Micallef, A.D.C., was received at the entrance by Chev. C. de Lancelotti, impresario of the theatre, by whom he was conducted to the State box, together with his guests. As soon as his Excellency appeared at the front of the box the audience rose, and the orchestra played the Allied National Anthems amidst tremendous enthusiasm, which was redoubled when, after the curtain was raised, the entire company sang "God Save the King."

After a long and enforced absence, we have with us the Bishop of Gibraltar, and the Governor, in response to the earnest wish of the Bishop, arranged for a meeting of the entire Anglican Community in Malta, including members in the Navy, Army, and Air Service, in the hall of St. Michael and St. George, at the Palace, Valletta.

The presence of part of the Japanese Fleet lent additional importance this year to the celebration of the birthday of his Imperial Majesty the Emperor of Japan. The notable feature was a reception at which most of the *élite* of the island attended, which was held at the Japanese Consulate.

Personalia.

Lieut. J. E. Agius, King's Own Malta Regiment, is here at present on short leave. This officer has been one of the foremost to offer his services in the great war, and has done useful work in connection with the same.

The death of Mr. Ernesto Muscat, one of the proprietors of the *Malta Herald*, took place on Monday, the 4th inst., after a very short illness, at his residence, Strada Ridolfo, Sliema.

All genuine, in pots like this.

YAGHOURT.

THIS HEALTH-GIVING FOOD SHOULD BE TAKEN BY ALL.

Recommended by the leading medical faculty of to-day.

Suitable alike for the invalid and the healthy.

Obtainable at HARROD'S, SELFRIDGE'S and all the leading Stores.

LETTER FROM PORT SAID.

(From Our Own Correspondent.)

Port Said, November 9.

The War and the Port.

The war has vastly increased the trade activities of Port Said, and if the merchants reaped a rich harvest from passengers in normal times, the Army has brought wealth untold to many.

In peace time there was a large amount of transhipment of cargo here, which was destined for ports in the Eastern Mediterranean that were not touched by the large through steamers from the Far East going to the western ports of Europe. Owing to war conditions in the Mediterranean, some of the important shipping companies kept their finest steamers east of Port Said, and only allowed some of their older and less valuable boats to do the absolute minimum of essential traffic through the war area. As a consequence there has been a tremendous congestion of merchandise at Port Said. The bonded stores were quickly filled, and every available patch of desert in the neighbourhood was utilised, the large amount of Government and Army stores all helping to crowd what space there was.

In view of the situation, the French Government, with their usual care for commercial interests, have erected extensive sheds at convenient places round the harbour, where at present about 80,000 tons of cargo are stored. At the conclusion of peace this large quantity of mostly raw material will be already within six days' journey of Marseilles, ready to be shipped by the first available tonnage. It does not require much business acumen to see what an advantage this will give over others who have to bring their raw material from the Far East.

Conditions in Syria.

The first letters are beginning to arrive here from Beyrout, and though not much definite news has come through as to the commercial conditions of things, it is hoped to be able to give a definite account soon. One thing is noted, namely, that the inhabitants have a very natural suspicion of paper money; which is not to be wondered at after their four years' experience of Turkish and German promissory notes. One man told your correspondent that English £5 notes were being sold in Damascus for £3 in silver coin. Doubtless the natives will soon realise that British "Bradburys" bring a big benefit to the buyer.

Sickness in Port Said.

In common with other parts of Europe, the town is being visited by the so-called Spanish fever, and many business houses are hard put to it to carry on, owing to the number of their employees on the sick list.

THE LEBANON HOSPITAL.

For long centuries the condition of the insane in Syria and Palestine was pitiable in the extreme. Viewed often with a certain element of awe by the native population as *mejnun* (or devil possessed) they have been allowed to wander about more or less at will, or, when relatives or friends wished to "cure" them, they were treated with great cruelty—often with good intentions—in order to drive out the "jinn." In 1900 the first hospital for the insane was established at Asfurieh, near Beyrout, and it has continued to do its beneficent work with an ever-widening circle of influence ever since. The hospital, consisting of a collection of well-built pavilions, occupies a most beautiful situation, with very extensive grounds, on a hill top a few miles out of Beyrout. This institution had so won the hearts of the officials that, during the whole war with Turkey, it was allowed to continue open, was favoured by official help, and, most wonderful of all, the director, Dr. Watson Smith, a British subject, was allowed to carry on his duties. In spite of enormous difficulties and almost complete interruption of communication with the London Central Committee the work of the hospital was continued uninterrupted. Through the American Committee sums of money for its maintenance were forwarded from time to time. During this critical time it has been impolitic to make these facts known, but now that Syria is in the hands of the British and French, and the safety of the director and his staff is assured, it cannot be too widely known that this splendid work needs immediate financial assistance. The benefits of this hospital are open to all—Christian, Moslem and Jew—equally, and there is no doubt that there will be a very great demand upon its resources from a population which has undergone the mental and physical strain of these four long years of privation and terror. The London office of the Lebanon Hospital for the Insane is 35, Queen Victoria Street, E.C.4.

Owing to a great demand for teachers by the Government, the C.M.S. training school at Palamcotta, in Southern India, has lately been full.

Field-Marshal Sir Douglas Haig has received warm congratulatory telegrams from General Georgescu on behalf of the Roumanian Army.

What are your Natural Products?

We are interested in the Natural Products of your Country and desire to negotiate with you for the purchase of large or small consignments. We are particularly interested in

CORRESPONDENCE.

The columns of THE NEAR EAST *are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST.

THE FUTURE OF CONSTANTINOPLE.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—The problem of the future status of Constantinople, involving that of the waterway between the Black Sea and the Mediterranean, is complicated both by the historical and cultural affiliations of the city, and also by the commercial and political importance of the Straits.

These considerations suggest, as the most desirable solution of the problem, that the city of Constantinople and the territory adjacent to the waterway be made an independent state whose domestic affairs shall be controlled by a local parliament; while the city of Constantinople be chosen as the seat of the executive of the contemplated League of Nations for the preservation of peace, this city-state to have no foreign relationships except such as are involved in its status as seat of this executive. The city-state thus constituted would include both shores of the Bosphorus, the Marmora, and the Dardanelles, and also possibly the cities of Adrianople and Ismidt.

The obvious advantages of such a scheme are as follows:

In the first place, it would effectually guarantee the neutrality of the Straits, assuring to the nations contiguous to the Black Sea free and uninterrupted access to the Mediterranean in the pursuit of their lawful affairs. To place Constantinople under the control or protection of any single state or group of states would involve a certain amount of jealousy or suspicion on the part of the other states interested. To constitute this territory into a sovereign state in control of its own foreign affairs would leave it subject to the peaceful intrigues of its neighbours, if it be a weak state; or would endanger the international status of the waterway, if it be a strong state. To make Constantinople the seat of a League of Nations would give to the new state the protection which the prestige of the League would command; would obviate the rivalries and discontents which any other solution would raise; and would assure the international character of the waterway so long as the League shall survive.

In the second place, such a scheme would place the seat of the executive of the League of Nations in a city which is peculiarly and uniquely cosmopolitan; in a sense in which no other city of the world is. For not only is no city of the Eastern Hemisphere so centrally located or so easily accessible by water or by land to the rest of Europe, Asia and Africa; but, also, Constantinople does not belong predominantly to any one race or religion. In any other city in Europe, Asia or Africa, no matter how cosmopolitan in character, there is a dominant type of religion and culture; all others, however welcome, being recognised as foreign. In Constantinople, on the contrary, the flying robes of the Bedawi, the fur cap of the Turk from Samarcand or Bokhara, and the latest styles from Paris or New York are equally "at home." Constantinople is predominantly neither Christian nor Moslem; neither European nor Asiatic; hence here, as nowhere else, could representatives of all the races and religions of the world meet on a footing of absolute equality. The choice of this city as the seat of the world-wide League of Nations would therefore afford to the non-European races of the world a token of the good faith of the nations of Europe in taking them into partnership in the League for the preservation of world peace.—I am, etc.,

"AN ALBANIAN PROTEST."

TO THE EDITOR OF "THE NEAR EAST."

Sir,—Mehemet Bey Konitza being at present away from England, I hope you will allow me to answer Mr. Kessary's letter to you on the above subject.

Mr. Kessary makes a special distinction between Albanians and Epirotes. They are the same race, and there is more difference between the counties, say, of Lancashire and Sussex than between Albanian and Epirote. I need hardly add that there is no affinity between the Epirrotes and the Hellenes, except that the Christian of Epirus is of the Orthodox Greek Church.

It is absolutely untrue that Mehemet Bey only represents a few hundred Moslem Albanians. In this connection, what does Mr. Kessary mean by Albanians? The Moslems of Epirus are as much Epirotes as the Christians, and when he speaks of "rather suspicious antecedents and connections" the accusation is too vague. If he refers to Moslems in general I can only tell him what *I* know for a fact, and that is that the Moslems form the most respectable part of the community both in North Albania and Epirus. I have been a good many years in Albania, and, amongst other things, I remember that English travellers and sportsmen crossing over from Corfu were always recommended by the Corfiotes to provide themselves with letters of introduction to the Moslems and to camp for preference in or near Moslem villages rather than Christian.

I do not know his varied authorities, but, under present circumstances, he had better have left out Prince Lichnowsky's name. Moreover, this latter gentleman has never been in Albania.

With reference to Mr. Kessary's statements about Koritza, I will quote from the *New York Times* of October 2, 1914.

"The landing of Italian marines at Avlona or Vallona in Albania means that 150,000 Albanian refugee families will receive succour and that Italy will oust the Greek soldiers who have invaded Albania in the guise of Albanian rebels. It has been represented that Albania was in rebellion and that the Epirotes were in arms against the Government. That is not true. On the South the Greek regular troops have crossed the border and are doing the fighting, calling themselves the Epirotes."

Mr. Kessary is, I presume, either a Hellene or an Epirote of the Greek Church with Hellenistic sympathies.

The religion of the Moslem Epirote will always be an obstacle to the Hellenization of his race.

Speaking as an English well-wisher to the Albanian race, I consider that the Hellenization of Epirus would be the greatest misfortune that could happen to it.—I am, etc.,

GEORGE PAGET,
Major.

Gardnor House, Hampstead, N.W.3.

TANGIER TO TEHERAN.

I was startled a few days ago by coming across the following headlines in the *Egyptian Gazette*:—

SUICIDES OF EGYPTIAN STUDENTS.

A HABIT TO BE DISCOURAGED.

Personally, I should have been inclined to think that suicide was rarely likely to develop into a habit, though I heartily agree that it should be discouraged. When I read the article thus headed I found it began: "We frequently hear tales in the native newspapers of the bad habit, which is prevalent among Egyptian students, of attempting to commit suicide when they have failed to pass their examinations. This unfortunate tendency has been brought to the notice of the authorities of the Ministry of Education, and Mr. H. J. Boyd Carpenter, in his report as General President on this year's Secondary Education Certificate Examination (Parts II. and I.) gives vent to the opinion that this habit should be discouraged." One rather wonders whether the substitution of "pretending" for "attempting" would not be nearer to a statement of facts. Mr. Boyd Carpenter, I observe, suggests that "candidates so acting should be permanently excluded from all public examinations"; and that would certainly be wise. But would not such childish vanity—for that seems to be the explanation of the state of affairs—be suitably rewarded by a birching? That would surely "discourage" the "habit."

***

Certain native employees of the Sudan Government recently petitioned for leave to use native costume in their offices in place of European. The reason given was the comparative cheapness of the native clothing, which in such days was a strong recommendation for it; and, the petition being favourably received, the petitioners have now, no doubt, discarded coats and trousers, hats and collars, and taken again to the flowing galabieh and comfortable turban of their forefathers. In this respect, quite a number of people will agree with me, the war has been responsible for a good thing. For surely the native costume is not only much more picturesque—which is a small matter, of course—but also better adapted to the climate and to native habits and manners. It will have to disappear eventually, one supposes, and all the world will some day be betrousered and black-coated (or loud-tweeded, as the case may be). But anything that checks "progress" along those lines is surely something to be thankful for. At any rate, in nine hundred and ninety-nine cases out of a thousand an Oriental in European garb is an even greater failure than a European in Oriental costume.

NEAR EAST BOOKSHELF.

"THOSE MEN SO BEAUTIFUL."*

Hindenburg, in a platitudinous lucubration, has laid it down that victory goes to the strongest nerves. If he should escape the avenging justice of the Allied democracies he would do well to ask to be personally conducted by General Birdwood and General Gouraud over the southern and south-western extremities of the Gallipoli Peninsula; for there, if anywhere, he will be able to learn what real nerve means. If he should never be allowed such luck, the next best thing we can wish him is to read a German translation of this book and compare it with Liman von Sanders' private reports. The difference in nerve between the British in the Dardanelles campaign and the Germans before Verdun is like that between the Marathon news-runner who dropped dead and a Bolshevist racing down the Nevsky Prospect to have the first guzzle from a broken vodka-cask. The contemptible surrender of the unbeaten German Navy on November 21, 1918, will remain for ever as the true measure of German nerve. It had not even the excuse of treachery.

Opinions will differ for all time as to the wisdom of the evacuation of Gallipoli. Our author inclines to question it, and quotes Napoleon: "Never do what you know your enemy wants you to do." We would rather, considering our then hazardous position in the Near and Middle East, esteem it a gesture prompted by iron nerve. The spirit of "*Fides in Deo et me ipso*" was not thereby abandoned, but rather more loudly proclaimed.

Mr. Nevinson's comprehensive and lucid story ranks with any that has yet appeared. He brings into powerful relief the pitiable lack of guns, shells, bombs and fighting aircraft; the Homeric bravery of officers and men, and the iron nerve of Sir Ian Hamilton in calling upon his men again and again to do the impossible. He writes with far more liberty from the Censor than any Dardanelles author we have yet read, and he writes as an eye-witness. His maps and illustrations are informing. In a word, his presentation of the case for "Those Men So Beautiful" (Agamemnon, 453-455) is a memorial to pure Virtue.

* "The Dardanelles Campaign." By Henry W. Nevinson. (Nisbet and Co.' London. 18s. net.)

A FOREWORD TO "THE SHAMELESS SURRENDER."*

Admiral Sir Cyprian Bridge, G.C.B., was born in 1839, and entered the Royal Navy in 1853. Many people had never heard of the White Sea, or the Murman coast, until a "fed-up" world was re-galvanised in the summer of 1918 by the announcement that the Royal Navy had determined to take Bolshevism by the short hair and Archangel as a short cut to Berlin. But in 1854, over sixty years ago, Midshipman Bridge was fighting Russians in the White Sea. He now tells us, in this book, something of his long sea-life, and something of the links of the chain which binds Beatty to Nelson, something of the modest ways of ancient and modern mariners; and all unconsciously he explains the German terror of the Mistress of the Seas. For in his long career he takes us around the world, very much as a London policeman would conduct an old lady across the street, and by the time we have peeped into Esquimalt and early 'Frisco, seen Jeddah and Suez and Valparaiso, called at Calcutta, Sydney, Shanghai and Vladivostok and stepped on shore in one hundred and four Pacific islands, we begin to understand the "price of admiralty" and the impudence of the German in challenging it.

Our old Admiral's book is fascinating reading to a landlubber; for the craftsman of the ocean it will be a keepsake and a classic. We are satisfied that he and his surviving contemporaries can explain—to anybody but a German—the shameless surrender, and that very naughty and unnecessary conundrum, the "Freedom of the Seas."

The following communication has just reached the Serbian Relief Fund from Belgrade:—

"After our four years of privation, Spanish Influenza has now set in amongst us, and is making terrible ravages. Belgrade will soon be like a huge graveyard, since no victims have any power of resistance against the terrible scourge. Medical supplies there are none. Since 1917 there has not been one ounce of quinine for the population. We are without any food except dry bread. Those of us who are still in health can do nothing for the patients, who are languishing in cold, bare rooms, without fuel or sufficient clothing. If we could get condensed milk, blankets, and medical stores, there would be hope of saving some at least of our unhappy people."

This communication was written just before the Serbian troops entered Belgrade. The relief we have been able to send is quite inadequate, and far, far more is needed.

Parcels of clothing (cleaned and mended ready for immediate shipment) should be addressed to MRS. CARRINGTON WILDE, Serbian Relief Fund, 5, Cromwell Road, S.W.7.

Cheques and donations of money should be sent to the Hon. Treasurer, the Right Hon. the EARL OF PLYMOUTH, G.B.E., C.B.

SERBIAN RELIEF FUND

(Registered under the War Charities Act, 1916.)

3	20	Tuesday	28	29
4	21	Wednesday	29	Tebet. 1
5	22	Thursday	Rabia I. 1	2

M. Také Jonescu has left London for Paris.

M. Pashitch left London for Corfu last Friday.

M. Venizelos left London on Tuesday for Paris on his way to Athens.

Prince George of Serbia visited Queen Alexandra at Marlborough House last Friday.

Mr. Arthur Nias, Director-General of the Imperial Ottoman Bank, has left London for Constantinople.

The Maharaja of Bikanir will accompany Sir J. P. Sinha to the Peace Conference, says a Reuter's message from Delhi.

Earl Kitchener of Khartoum, accompanied by the Hon. E. Napier and Captain the Hon. F. Somerset, left London yesterday for East Africa, via Khartoum and the Nile.

The engagement is announced of Captain M. Stephens, R.A.F., to Marjorie, daughter of Mr. Alexander Finn, late H.B.M. Consul-General in Chile, and Mrs. Finn, of 2, Park Road, Richmond, Surrey.

The King has been pleased to appoint Major-General L. C. Dunsterville, C.B., to be an additional Companion of the Order of the Star of India in recognition of meritorious service rendered in connection with the war.

On November 22, at Eartham Parish Church, Captain William Bertram Allan, A.S.C., son of Mr. C. W. Allan, Indian Forest Service, was married to Miss Alison Phœbe Parker, A.S.C., daughter of the Rev. A. J. C. Parker, of Eartham Vicarage, Chichester.

A marriage is arranged, and will shortly take place, between Charles Frederick Wilkins, Executive Engineer, Indian Public Works Department, second son of the late Mr. C. M. B. Wilkins and of Mrs. Wilkins, Ceylon, and Amy, youngest daughter of Mr. and Mrs. E. H. Warner, Quorn Hall, Loughborough.

On November 21, at Park Parish Church, Glasgow, Captain George V. B. Gillan, Gurkha Rifles, only son of Sir Robert Woodburn Gillan, K.C.S.I., I.C.S., and Lady Gillan, Simla, India, was married to Sibell, younger daughter of Mr. and Mrs. Bulloch Graham, of Park Gardens, Glasgow, W.

The engagement is announced of Brigadier-General T. H. F. Price, C.M.G., D.S.O., son of Sir Frederick Price, K.C.S.I., and Lady Price, Trengwainton, Exmouth, and Lurline, widow of Major J. A. Higgon, Scolton, Pembrokeshire, and daughter of the Hon. Henry Moses, M.L.C., Sydney, Australia.

On November 4, at the English Church, Corfu, Lieut. H. Disney Vaughan-Hughes, R.N., only son of Captain A. M. Vaughan-Hughes, of Adsett Court, Westbury-on-Severn, Glos., was married to Vana, daughter of the late M. Gerassino Marchetto and of Mrs. Marchetto, of Argostoli, Cephalonia.

The Metropolitan of Athens, Mgr. Meletius, President of the Holy Synod of the Kingdom of Greece, arrived in London on Sunday from America. He was accompanied by the Great Archimandrite, Chrysostom Papadapoulos. Mgr. Meletius was met at Euston by M. Markantonakis, representing M. Venizelos, M. Jean Gennadius, M. Caclamanos, and Dr. Pagonis, the Great Archimandrite.

On November 19, at St. Marylebone Church, Marylebone Road, London, the marriage was solemnised of Lieutenant-Colonel G. E. Whittall, M.C., 1st Oxford and Buckinghamshire Light Infantry, son of Mr. and Mrs. H. O. Whittall, of Smyrna, to Lorna Elizabeth Pears, eldest daughter of Mr. and Mrs. Henry E. Pears, lately of Constantinople. The bridegroom, who had been in Mesopotamia since 1914, only arrived on leave in London, on Monday, the 18th, having been delayed several days on the voyage between Italy and England. Many friends of the parties concerned were present at the wedding, notwithstanding the short notice given.

The Bishop of London returns this week from Macedonia and the Western Front.

The marriage arranged between Captain Russell Landale, Indian Army Reserve, and Miss Gladys Phipps will take place at St. Paul's Church, Knightsbridge, on Tuesday, December 3, at 1.45. All friends will be welcome at the church.

The Emir and Shereef Faisul arrived at Marseilles on November 26 on board H.M.S. Gloucester. On the conclusion of his visit to France, he will cometo England as the guest of the British Government, and as the representative of his father, the King of the Hejaz.

The Coptic Committee announces that, owing to the unavoidable absence of the Bishop of London, and the imminence of a General Election, it has been thought advisable to postpone the complimentary dinner that was to be given to Mr. S. H. Leeder, on November 26. A date will be fixed and communicated as soon as possible.

The Gaekwar of Baroda has contributed £100 towards the proposed Sir George Birdwood Memorial. Among others who have already subscribed are Mr. Montagu, Secretary of State for India, Lord Hardinge of Penshurst, ex-Viceroy of India, Lord Reay, Lord Harris, and Lord Lamington, ex-Governors of Bombay, Lord George Hamilton, Lord Inchcape, and Sir Shapurji Broacha, of Bombay. Subscriptions may be paid to the hon. treasurer, Mr. T. J. Bennett, C.I.E., care of Royal Society of Arts, John Street, Adelphi, W.C.2.

At Brompton Oratory yesterday morning Captain Matila Costiesco-Ghyka, Assistant Military Attaché to the Roumanian Legation, son of Colonel Matila Costiesco and Princess Marie Ghyka, was married to Miss Eileen O'Conor, daughter of the late Sir Nicholas O'Conor and Lady O'Conor. The Rev. Father Talbot officiated, and among those present were Lady O'Conor, Miss Muriel O'Conor, the Duchess of Norfolk and Lady Mary Howard, the Dowager Marchioness of Bute, Mme. Misu (wife of the Roumanian Minister), Mlle. Misu, and M. Misu, M. A. de Fleuriau, the Swiss Minister, M. Boeresco (the Roumanian Chargé d'Affaires), Prince Bibesco, Lady Hope, Lady Tyrrell, Lady Kennard, Lady (Francis) Barker, Lady Barclay, Sir Edwin Pears, Baroness d'Erlanger, Count Léon Ostrorog, and General and Mrs. Maxwell-Scott. A reception was afterwards held at 29, Chester Square.

American admirers of the late Lord Kitchener have sent £7,000 to the Lord Kitchener National Memorial Fund.

At a meeting of the East India Association, held at 7, Tothill Street, on Monday afternoon, Mr. S. S. Thorburn read an interesting paper entitled "India: A Democracy?"

Reuter's Cairo correspondent reports (November 24): General Sir E. Allenby arrived here to-day, and was given an official reception. The High Commissioner in Egypt, Sir Reginald Wingate, the General Officer Commanding in Egypt, a representative of the Sultan, and distinguished military men and civilians were present at the station. The guard of honour outside the station was provided by the Sultan's bodyguard.

APPOINTMENTS, PROMOTIONS, &c.

Rear-Admiral Barttelot succeeded Rear-Admiral Ballard as Admiral Superintendent of Malta Dockyard on November 17.

Our Cyprus correspondent writes:—Mr. E. H. Nicolls, Director of Public Works, has been appointed Government Engineer on the Gold Coast, with a salary of £1,200 a year.

Reuter's Athens correspondent reports:—It is announced that General Danglis has resigned, and the post of Commander-in-Chief of the Greek Army has been given to General Paraskevopoulos.

Major A. L. Clive-Davies, Gordon Highlanders, has been taken on the strength of the Egyptian Army as a Special Service Officer and granted the temporary rank of Bimbashi. He has been attached to the 1st Battalion for duty.

BEYROUT AND THE LEBANON

Amidst all the tragedies of four years' war conditions THE LEBANON HOSPITAL (Mental) has "carried on" under its British Director, Dr. Watson Smith, who now writes: "All is comparatively well, but the Hospital has suffered greatly in repairs, linen, etc., and we have been living in semi-starvation and exorbitant prices."

Funds are needed immediately for relief and maintenance.

Donations will be gratefully acknowledged and a report sent by the Gen. Sec., Miss A. M. GOOCH, 35, Queen Victoria St., E.C.4

OBITUARY.

It is announced that Mme. Jonescu, mother of M. Také Jonescu, has died in Paris.

Colonel R. H. Jennings C.S.I., Royal Engineers, formerly of the Indian Political Department, died on November 21 at 20, Roland Gardens, S.W., aged 66.

The death has occurred at Taunton of Colonel Henry Alfred Walsh, C.B., at the age of sixty-five. He served in the Boer War in 1878-9 and in the Sudan Expedition of 1884-8.

Mr. George Pringle Rose, C.I.E., died on November 20 at Silthams, near Godalming. He formerly served in the P.W.D., India, and was Junior Consulting Engineer for Railways, Calcutta, to the Government of India.

Colonel Herbert A. Sawyer, late Indian Army, died at Alessio, Italy, suddenly, on November 15. He served in the Burmese Expedition of 1887-9, on the North-West Frontier of India, and took part in the Tirah Expedition. Colonel Sawyer was twice mentioned in despatches for his services, and was the recipient of several decorations.

News comes from Switzerland of the death, on November 14, from pneumonia following influenza, of Dr. Albert Zeller, who was for some years chief surgeon to the International Hospital in Cairo nursed by the Kaiserswert Deaconesses. Dr. Zeller was the youngest and sole surviving son of the late Rev. John Zeller, who for over forty years was a missionary of the Church Missionary Society in Palestine, and grandson of Bishop Gobat, the second Anglican Bishop in Jerusalem.

Mr. Nottidge Charles Macnamara, lately a Professor in the Medical College, Calcutta, has died at his home at Rickmansworth at the age of 86 years. He was a member of the Government of India Commission on Leprosy, and was also surgeon and founder of Mayo Hospital, Calcutta.

The death is announced of Mr. Thomas Humphrey Lyons, elder son of the late Admiral of the Fleet, Sir Algernon Lyons and Lady Lyons. Mr. Lyons, who was born in 1880, was nominated an Attaché at the Foreign Office in 1905, and in the following year was appointed to Cairo. Shortly afterwards he was promoted to Third Secretary, and two years later was transferred to Madrid and later to Peking. He became Second Secretary in January, 1913.

Major-General Sir Alfred Turner, K.C.B., died on November 20 at Carlyle House, Chelsea Embankment. In his young days he spent some six years in India with the R.A. Later, after some service in Ireland, he went (in 1884) to the Sudan with Lord Wolseley, and was D.A.A.G. on the Headquarters Staff in the Nile campaign. He was present at the battle of Abu Klea, was mentioned in despatches, and received the medal with two clasps, the bronze star, and the brevet of lieutenant-colonel. After this, he held various important appointments, in Ireland, and in this country.

Lieut. Robert Lukyn Williams, who was killed in Mesopotamia on October 27, three days before the surrender of the Turkish Army, was the third son of Mr. H. C. Williams, I.C.S. (retired), and Mrs. Williams, of St. George's Road, Bedford. He went to India in 1912, and when the war broke out he was in Calcutta, a member of the Calcutta Light Horse. As soon as he could be released from business he obtained a commission in the I.A.R.O., and was posted to the Supply and Transport Corps in March, 1916. He went to Mesopotamia in September of that year, and served there and in Persia from that time onwards up to his death. In the early part of this year he obtained a commission in the Indian Army, and joined the 23rd Cavalry at the end of July.

Lieutenant Francis Edmund Storrs, R.N.V.R., who died of pneumonia following influenza, was the second son of the Dean of Rochester and Mrs. Storrs, and the brother of Colonel R. Storrs, Governor of Jerusalem. In 1908 he was appointed under the Imperial Education Department to Elphinstone College, Bombay, where he served two years, and then accepted the Professorship of English at the College, Rangoon. On the outbreak of war he several times offered himself for enlistment or a commission in the Army, but was rejected on medical grounds. He was then appointed to the control of the Permit Department of the Russian Government Supply Committee, and for his services was awarded the Order of St. Anne. In 1916 he received a commission in the R.N.V.R., and proceeded to Greece, where he was engaged in the Naval Intelligence Department until recalled for special work at the War Cabinet in November, 1917.

Lieut.-Colonel William Jesser-Coope, who has died at Alverstoke, Hants, at the age of 82, served in the Crimean War. Retiring from the Regular Army in 1871, he was selected as inspector in the Imperial Ottoman Gendarmerie, with the rank of lieutenant-colonel, under the late Baker Pasha. He assisted in the distribution of relief organised by Lady Burdett-Coutts in the Balkans during the Russo-Turkish War. For the Turkish Army in the field he organised a stretcher-bearer service, but was captured with his staff at Telisch and detained as prisoner of war until 1878. He was decorated with the Crimean and Turkish medals, the Order of the Osmanieh (2nd Class), the Order of Medjidieh (3rd Class), the Queen's medal and clasp, and the King Edward medal for the South African War.

NEWS IN BRIEF.

The subscriptions collected from the kisms of Alexandria for the British Red Cross amount to £E7717.

A report that the Kaiser proposes to take up his residence in Corfu has caused sardonic amusement throughout Greece.

General Bridges, who is on a special mission in the Balkans, has had a long interview with M. Malinoff, the new Bulgarian Premier.

Influenza in India is rapidly decreasing, but it is feared that in some districts in the rural areas the mortality has been appalling.

For the first time since the beginning of the war an English postal valise from Egypt reached Syracuse last week en route for London via Paris.

The Armenian people in the region of Ararat (Reuter's Agency is informed) have formed an independent Republic, which consists of two million Caucasian Armenians, and is the nucleus of a future State which will embrace all Armenia.

It is reported that the Rumanes of Hungary have constituted a Government of their own, under the presidency of M. Jules Maniu, who is actively co-operating with Dr. Alex Vaida and the other Transylvanian leaders.

A supplement to the *London Gazette* on Tuesday contained a dispatch from Sir Charles Monro, Commander-in-Chief in India, dated Simla, August 20, 1918. The dispatch gives a short account of work done in India during three years of the war.

Mr. Balfour has telegraphed to the Boghos Nubar Pasha, head of the Armenians in Paris, expressing his deep appreciation of the great services rendered by the Armenian soldiers in the common cause, his profound sympathy for the terrible sufferings so courageously endured by the Armenian people, and his steadfast confidence in their future.

FRIDAY, NOVEMBER 29, 1918.

THE FATE OF CONSTANTINOPLE.

Probably no point not directly affecting Germany in the complicated settlement that has to follow the war will be more closely scrutinised in this country than the fate of Constantinople. The limited capacity of the British public to follow all the ramifications of international politics is proverbial; and the intricacy of the Near Eastern question as a whole will dispose the man in the street to accept whatever decision may be arrived at as the one that promises to make the best of a thankless task. But the future of Constantinople seems to offer a clear issue, and an unsatisfactory settlement of this problem will evoke more intelligent indignation than failure in any other strictly foreign sphere of the peace terms. In these circumstances it is well that the subject should be freely discussed, not with a view to embarrassing the Allied Governments in their conference on peace terms, but to insure that every aspect will have been carefully considered before a decision is ratified. As far as can be judged from the utterances of its spokesmen, the British Government's attitude is still in a fluid state. It subscribed in the first instance to a statement of the Allies' war aims which stipulated for the ejection of the Turks from Europe. More recently the Prime Minister declared that Great Britain did not challenge the maintenance of the Turks in the homeland of the Turkish race, with its capital in Constantinople, and as recently as November 18 Lord Robert Cecil, at the time Under-Secretary of State for Foreign Affairs, entered a *caveat* against any sweeping endorsement of the demand for the ejection of Turkish government from Constantinople by declaring that, while there was a great deal to be said for the demand, it must not be forgotten that Constantinople was predominantly a Turkish city. Both Mr. Lloyd George's statement and Lord Robert Cecil's are misleading. No part of Europe, or for that matter of Asia Minor, is the "homeland" of the Turks. By virtue of forming the great majority of the population they can claim Asia Minor as their country; but they cannot be said to occupy the same position in regard to Turkish territory in Europe. When Lord Robert Cecil speaks of Constantinople as a predominantly Turkish city, he can only mean that the Turks are more numerous than any other nationality. Turkish census returns are not necessarily infallible; but if they do err, it will be in Turkey's favour, and they had to admit that the Turkish inhabitants of the capital fell considerably short of half the population. Moreover, for the purposes of the future settlement it has to be remembered that a substantial proportion of the Turks belong to the official classes with their large households, and would leave Constantinople if the Turkish seat of Government were transferred to Asia Minor.

The multiplicity of the proposals that have been made for the future of Constantinople and the Straits is an indication of the delicate nature of the question. There can be little doubt, however, that general agreement exists among the Allied peoples on the two points, that the waterway must be made free and Constantinople recovered from Turkish rule, always supposing that the Turk is not superseded by a small or weak Power. Any attempt to compromise on the second point by distinguishing between "the evil forces which have been predominant" in the city in the past and some enlightened administration that may be created out of Turkish material in the future would certainly fail to satisfy public opinion in the Allied countries. To admit this is not to despair of the future of Turkey; still less does it imply indifference to the susceptibilities of Islam, which on reflection will not fail to endorse the Arab verdict on the Turkish ruling classes. But it is probable that the process of regeneration will be a difficult one, and to be successful it must not be handicapped by the inevitable international distractions that assail a Turkish Government in Constantinople. It is in the interests of the Turks as a people that they should be given a fair start in reconstructing the Ottoman State, freed from the complications of alien subject-communities and no longer occupying a site which, as the meeting point of East and West must always remain the cockpit of international diplomacy. If any considerable section of Turkish opinion supports Ahmed Riza Bey, President of the Senate, in a desire to arrange for close co-operation with Great Britain in the task of setting Turkey's house in order—a scheme adumbrated in these columns three weeks ago—the country's future is assured, provided the temptation to retain Constantinople as the seat of government is resisted. In this connection it is well to remember that once before Turkey asked for the help of British advisers, but the proposal was, it is understood, vetoed by Russia. The arrangements to be made at the Peace Conference may be admittedly temporary. If views regarding the near approach of the Millennium are held very strongly in any quarters, Constantinople may be administered for a season by another authority in trust for the Turks. On the other hand, if the desire is to spare Turkish susceptibilities it has to be remembered that less violence will be done to these by the application of the "clean cut" than by the permanent maintenance of an independent administration for the Dardanelles and Bosphorus in the very heart of the Ottoman Empire.

The plans that have been suggested for solving the problem of the Straits and Constantinople are at least a dozen in number, and range from the transfer of both to Russia to the internationalization of the waterway, with the city and its adjoining territory as the seat of the League of Nations. This latter portion of the joint scheme, which is elaborated by a correspondent in this issue, is the proposal, under a new guise, to make Constantinople a free town. In other words, it is proposed that what has hitherto been Turkey in Europe should become an independent State, "whose domestic affairs shall be controlled by a local parliament." In view of the fact that out of every hundred inhabitants more than forty would be Turkish, twenty Greek, nineteen Armenian, and fourteen "foreigners," it is probable that the parliamentary history of the State would be fuller of incident than its material cultural progress, unless, as is supposed in some quarters, the political education of the Greeks gave them at once the dominating position. This possibility must lead to the further one that the Greek Republic of Constantinople would sooner or later lead to its incorporation with Greece Proper, and to meet this difficulty (on the ground that there are objections which prevent such a solution being selected at the outset) the advocates of a free State have to propose a foreign military administration. The scheme must prove as invidious as it will be unpractical. A State, however small in territorial extent, must be under authority which can enforce the laws that govern the community. Experience is entirely against divided control, and Turkey's interests will not be promoted by an undue extension of a transitional or indeterminate régime. Nobody can foretell the form that the League of Nations will take. Ultimately it may evolve an ideal government for Constantinople and the adjacent territory; but in the meantime, as is apparent from the tenour of messages now being received from that city, it is desirable that the Turks should be able to settle down to the new order with the least possible delay.

EGYPTIAN MEMORIES.

THE EVE OF ASHOURA IN CAIRO.

The 10th day—*Ashoura*—of the 1st Moslem month, Moharrem, is held in deep reverence, and as a fast (especially in Persia) by Shi'ah Mohammedans as the date on which in A.H. 61 (A.D. 680) Hussein, son of Ali and grandson of the Prophet, fell as a "martyr" on the plain of Kerbela. Sunni Mohammedans respect it, as a fast, on other accounts.

Persians have often been called the Frenchmen of the East, and certainly none could surpass in politeness those whom we met in Egypt. Needless to say, these Shi'ah Moslems—who are well represented in Cairo—celebrate with unsurpassed fervour the great anniversary of Ashoura. An invitation to witness the extraordinary scenes which mark the eve of this day is a rather rare privilege, and when we were fortunate enough to receive one we naturally accepted it with pleasure.

Our rendezvous was the house of one Latif Bey. Riding from it through closed bazaars, we reached a dimly lighted lane near the Jews' Quarter, and dismounted in the narrow Har't el-Ajem, beneath a broad stone archway. On the way we had passed a number of Persians. After a short delay we were admitted, and, conducted along a narrow passage, found ourselves in the brilliantly illuminated inner courtyard of a large house. A canopy of coloured awning, with designs chiefly in green and red, shut out the starlight. The floor was spread with matting, upon which many handsome carpets were placed. The walls were covered to half their height with dark green cloth, above which ran a black border with Persian inscriptions worked in white letters. Latticed windows in two upper stories looked upon the court; those on the ground floor were occupied by visitors. Against the wall opposite the entrance were tiers of wooden shelves, upon which stood lamps and artificial flowers protected by glass shades, while in every available interspace wax candles were burning. Above them, flanked by a series of mirrors, was a large framed painting of the Persian Lion and Sun. On the west side was a flight of steps, like those of a *minbar*, or mosque pulpit, covered with green cloth embroidered with floral devices in silk and gold. On the highest but one five candles were placed on artificial white roses. To the right of the steps were seated two *munshids* (singers of poems), whose chanting continued for nearly two hours. This gave us ample time to observe the arrangements and to converse with some of the guests already assembled, among whom were a few Mevlevi dervishes, wearing their tall caps. Several of the Kadri Order were seated on the floor, and a few other Orders were represented. Next to us, wrapped in a thick cloak of camel's hair, sat the most striking and picturesque figure in the assembly. He told us that he was a dervish of the Jeláli Order, from Bokhara. There were also present several smart eunuchs—the guardians, no doubt, of some of the fair spectators in the upper rooms. The rest of the company were chiefly Persians, many of them with beards freshly stained with the bright red of henna.

At about half-past eight there was a general movement of most of the dervishes who were present. Our friend from Bokhara rose with the rest. The signal had been given that they should proceed to the Gemalieh, a street near the "Turkish Bazaar." Here the great procession is formed which makes its way from the large mosque of the Hasaneyn, in which the head of Hussein is said to be buried. Prayers are made there, and the procession passes slowly through streets along which police and soldiers are posted, to the house in which the dramatic scenes are enacted. Meanwhile the *munshids* continued their monotonous chant. Coffee was handed round several times, and some of the guests were munching ground nuts and other light refreshments.

At last, about ten o'clock, a loud din heralded the approach of the procession. A Mullah of serious but pleasing expression entered and took his place on a raised seat. Soon afterwards three wild-looking Kadri dervishes, with long black hair and rough caps, rushed in and drew up to the left of the Mullah. One of them carried one of the curiously shaped implements of his order. He was already hoarse, but was ejaculating excitedly. Then, amidst a confusion of sounds, two Persians led in a white horse. On a broad, flat saddle—supposed to represent that used at Kerbela—sat a boy of ten or twelve years, his face covered with blood, which also bedaubed the snow-white covering of the saddle. In his left hand was a handkerchief, also stained with blood. The Mullah shouted in a piteous tone: "O, Hussein, Son of Ali; O, Hassan, alas!" All the Persians present took up the cry. Many of them shouted: "O, Hussein, my soul for thine." Nothing could exceed their fervour: the scene became one of indescribable emotion. Meanwhile the horse was led several times round the limited central space, and then out of the court.

Loud cries were now heard from outside, and next followed the most ghastly scene to be witnessed in modern Egypt. From fifteen to twenty bareheaded Asiatic dervishes rushed in, brandishing above their heads long curved swords. They wore long white aprons falling square from their shoulders. These were covered with blood, which streamed from their foreheads, for they had been already cutting and notching their heads during the procession. Their frenzy was now at its height. Grasping their swords with both hands, they continued to gash their foreheads, while the blood flowed in streams over their faces. We were in the front row and unpleasantly near the devotees, and we drew back the bench on which we sat as far as possible. Several guests were bespattered with blood, and one who sat near us was so overcome that he left the court. A number of Persians now rushed forward and endeavoured to control the fanatics. Some of them tried to seize their swords; others struck down the weapons with painted sticks. A few were wounded in the struggle. Several dervishes were blinded with gore. One fell on the blood-stained floor and was carried out. Some Persians ran forward with long pieces of calico, which they tore into strips to bind the heads of the dervishes. We had been warned that the scene would be a barbarous one, but had no idea it would reach the degree of savagery that we witnessed.

The central space was now cleared, and after a short pause the next act followed. Ten or twelve dervishes, stripped to the waist, ran in, some of them wrapped in cloaks which they threw from their shoulders. Most of them carried leather thongs tied together and tipped with iron, and with these they proceeded to lash themselves over the shoulders till they almost brought blood. The others struck their breasts with their fists or open palms. They all shouted: "O, Hussein, son of Ali, my soul in thy place"; and "O, Ali, our love." Many of the audience joined, the Mullah bending forward and dictating various forms of words. This scene lasted rather longer than the last. The Mullah made a sign, and the dervishes, still shouting "Ya Hussein," passed out of the court, which was again cleared. Then, in a moment, the empty space was densely crowded by Persians who pressed in and occupied every available spot.

The Mullah looked around and waited till there was perfect silence. Then, opening a book, he read in a clear, impressive voice the touching story of the life and death of Hussein, from the time when he and his brother Hassan in infancy played upon the knees of the Prophet, until, after long trials, unmoved by the supplications of his sister and children, he gave himself up to a martyr's death. At each pause in the recital many in the audience wept and struck their breasts; some buried their faces in their hands. As the reciter proceeded his voice became more pathetic, louder and more impressive. As he approached the narrative of the death he took his turban from his head and placed it at his feet, leaving only a white skull-cap on his closely shaved head. After the words, "O, the base deed of Yezid!" there was a pause, during which every Persian cursed the traitor's name. It is impossible to describe the extent to which the feelings of many were moved. Near us many were sobbing. Old grey-bearded men wept silently; some of the younger were more demonstrative. We noticed an old man who had spoken to us of our Christmas and Easter; his eyes were full of tears. A grim-looking soldier who sat opposite to us, who had kept his eyes fixed intently on the Mullah and shown no signs of

emotion, now extracted from his tunic a red pocket-handkerchief and wiped his eyes.

Gradually the emotion subsided. It was a little after eleven o'clock. The Mullah closed his book; the audience rose to their feet. Every face was turned in the direction of Mecca. The Mullah delivered a concluding prayer. The Persians raised both hands towards heaven and uttered a long groan. Then, in complete silence, we all left the court and passed into the starlit night.

PRESS ON THE NEAR EAST.

Constantinople.

Under the title "To the City," an article in the *Nation* reviews the past glories of Constantinople and speculates upon its future. It begins:

Again the cry, "To the City!" has been heard, and again, as in olden times, the City has been Constantinople. That cry, from which the very name of Stamboul is said to have originated—how often through sixteen centuries has it re-echoed! And with what strange issues for mankind! Those spectral hosts of Goths and Attila's Huns, who swept through the world and vanished, those Bulgars and Saracens and Crusaders and Turks—all of them rallied to that cry, and some reached that destination. With that cry, generations of Russian Tsars, maintaining an impalpable and religious claim as mystical successors to the Byzantine Emperors, could confidently appeal to the ecclesiastic devotion and imperialistic avarice of their subjects. And with that cry the modern Greeks, inspired by the heart-stirring pathos of a country unredeemed, could muster their frail battalions against an enemy many ages in possession, and counting ten to one. For, indeed, ever since Constantine, with an insight like genius, selected the fortress of Byzantium as a permanent bastion to the Empire, and the site of a fresher Rome, Constantinople has been a jewel to the world. As Napoleon said: "After all, the question for Europe always remains: Who shall possess the City?"

No dream, says the writer, can be stranger or more lovely than the sight of the city itself. "For it lies compact upon both sides of a long and peaceful inlet of the sea. It is distinguished by white and lofty minarets, more beautiful than any Christian spire; and by domes for which Justinian's church, dedicated to 'Sophia,' the Wisdom of God, provided a model which no man who has seen that miracle of space captured and beautified for man's highest ends will ever forget. Its streets and houses rise upon successive hills. . . . Add the gardens, the cypress groves, the varying colour, the splendour of air and sky and sea, and one may conceive a city beautiful beyond the imagination of the world, and yet a reality of existence." As to the future of the city, "To the statesman who seeks the advantage of mankind rather than of his country or a sect, the future of the city presents difficulties complicated and serious."

It may be doubted whether even the Red Sultan himself would in a whole century have caused so much bloodshed as Christian kings and emperors have caused in the last four years. But since that fatal Tuesday, the Turk has lain like a blight upon the Near and Middle East; and, by the consent of all, the Turk has shown himself incapable of ruling, although he ruled. The mystic claims of Russia, which held this country in terror for nearly a century, and then were silently conceded, have been happily swept away with the Tsars and all their trumpery. What, then, is to become of the exquisite City now? Shall it be transformed into a modern Greek capital, leaving Athens deserted? Or shall a Commission, or perhaps America, take it in charge, as a pledge for the service of all peoples? Or shall the League of Nations occupy it as a noble though far-distant home? Napoleon's question still awaits solution, and it is still one of the problems of the world. But for the moment our minds are full only of envy for those who now behold that magic City in her beauty once again, so beautiful, so enchanted, no matter who may be her owner.

Our Indian Fighting Men.

The *Pioneer Mail* of September 27 contained an article entitled "Recruiting Lessons from the Past." The writer shows that whereas the Indian Army was formerly a representative one, it had in recent years become "practically a Punjabi army," and he urges that there is no reason why it should not revert to its earlier character. He reminds us that:

There are critics, well qualified to speak, who say that the extension of recruiting areas is a mistake; that the enlisting of races who have lost or never had the martial spirit is a waste of time and money; that no matter how well trained or disciplined, "down country men" will never fight or make good soldiers.

Others, equally well qualified to speak, maintain that given good officers and discipline, any race can be turned into useful fighting material: they instance Egypt, where the men who fled, broken and demoralised before the onrush of the Mahdi's fanatics, were, a decade later, after Kitchener's training, facing their old terrors at Omdurman as coolly as the British with whom they were brigaded; that willy-nilly it must be done, as the fighting races recruiting limit is rapidly being reached, and that probably it will not be so bad, as the regiments which by consensus of opinion have done best in this war are the Mahrattas, who in immediate pre-war days were not held in very high repute.

Then he proceeds to show what history has to teach us concerning the value of caste and race as affecting military value:—

Regimental records show that the "down-country" regiments, that is, those recruited in and historically connected with Madras and Bombay, are the oldest in the Indian Army List and have more battle honours than the "crack" and more warlike regiments of the north.

The system which ruled in the early days and up to the Mutiny was to enlist recruits of as many divers creeds and castes as were procurable, and to mix them indiscriminately in the ranks. In the lines of a Madras regiment Hindus, Mahomedans, Christians and Pariahs lived together in complete harmony, and in Bombay regiments black Jews and Parsees added to the variety.

The men who fought at Plassey under Clive, and avenged the Black Hole of Calcutta were Madrasis "miserable kaffirs of Telingana, whom the British had taught to fight in the ranks." The first Bengal army became, contrary to the intentions of its creators, a "class army." The unwarlike natives of Bengal would not furnish a single recruit, but the Hindustani natives of the north flocked down, attracted by high pay, pensions, prospects of plunder, and British prestige; they were followed by the Mussalman. They came in such numbers that the Bengal army became a sort of confraternity of the military classes of Oudh and the then North-West Provinces, and they were able to exclude all lower castes and different creeds, and the situation was tacitly admitted by the English. A certain number of northern men, rejected in Bengal for insufficient physique, were eagerly accepted in the Bombay army. Some reached Madras, but the service there was unpopular, as they lost caste by crossing the "kala pani," through the frequent service of the Madras army overseas.

The Sepoys of the coast army, as the old Madras army was called, though recruited from races despised as unwarlike by their Mussalman masters, developed into veteran soldiers in the stern school of incessant warfare. There was always war somewhere in India in those days; either the Mysoreans or the Mahrattas were out, and if they made a temporary peace, wandering Pindaris had to be chastised. Madrasis fought in Java and Mauritius, and Bombay Sepoys accompanied Sir David Baird to Egypt.

But after 1820, when the Pax Britannica reigned from Simla to Cape Comorin, the troops no longer had to exercise continuously the art of war, and deterioration set in: the climate of South India is more debilitating and enervating than that of the north, and the soldierly qualities the Madrassi had acquired in war were dissipated in a long peace.

The Indian Mutiny was confined entirely to the Bengal army, which had been spoiled by too generous treatment and slack discipline; the Madras and Bombay troops, aggregating one-half of the total army in India, all mixed regiments, stood loyal and were ready and willing to act against the mutineers. After the Mutiny the Bengal army was replaced by newly raised regiments from the Punjab, of Sikhs and Punjabi Mussalmans, and as they were, individually, better value for money, this replacement went on through the army at large, and it can be said that for ten years before the war the Indian Army was practically a Punjabi army, over half the troops, excluding the Gurkhas, being recruited from the Punjab.

In extending recruiting areas (the writer concludes) and taking in various castes and creeds, the Government is reverting to a former policy which was very successful, and which will probably be so again.

India in War and in Peace.

The Bombay correspondent of *The Times* begins an interesting report upon the present situation in India with the statement that "the closing stages of the war have been watched . . . with passionate interest" out there. At first the attitude of India was not unfairly represented by the views of a leading Indian Moslem, who said to him: "I know nothing of military affairs, but I am convinced that the Allies will win; therefore I do not perplex myself over the war news." But, the writer continues:—

This complacency was rudely disturbed by the military misfortunes of March and the sensational telegram sent by the Prime Minister revealing the dangers to India's frontiers arising from the German and Bolshevist extension of hostilities to Central Asia. Now that the crisis has passed it is desirable to say that the alarm caused by this message was deep and embarassing. It shook, especially in Northern India, confidence in the ultimate victory of the Allies, drove rupees down, bringing us to the verge of an inconvertible currency, and made some whose active loyalty had been conspicuous look around for a reinsurance policy. The influence of the Allied successes in France was consummated by General Allenby's victories in Palestine. Whilst we have not publicly rejoiced over the defeat and capitulation of Turkey, from deference to the susceptibilities of the Moslems, satisfaction is wide and deep, it was regarded as definitely removing the frontiers of India from the possible zone of hostilities. The tone of public feeling immediately changed. We steadily moved towards renewed confidence in the supreme victory now reaped.

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

Indian Mail. Nov. 18.

Mr. COTTON asked the Postmaster-General whether he can now revert to the normal practice of announcing the dates of despatch of the Indian mail; and when the weekly service will be resumed?

Mr. ILLINGWORTH: The normal practice of announcing the dates of sailings of mail steamers is being resumed this week. I regret that I am unable to give any accurate forecast when the weekly service to India will be recommended, but this question is under consideration.

Montenegro.

Mr. R. C. LAMBERT asked the Under-Secretary of State for War why, in view of the intrigues of the Serbian Government during the last four years against Montenegro, Serbian troops and independent Serbian bands have been allowed to enter Montenegro; whether these troops are, or have been, executing their Montenegrin political opponents under the pretence of their being pro-Austrian, and spreading the report that Montenegro is abandoned by its Sovereign, and should therefore become absorbed in Serbia; and whether pending the final adjustment of Balkan international questions, French or Italian troops might be asked to occupy these States to preserve order and ensure fairplay.

Mr. MACPHERSON: The task of clearing Montenegro of the enemy naturally devolved on the Serbian troops which were operating in the vicinity. I have no confirmation of the allegations made against the Serbian army by my honourable friend, and pending the Peace Conference, I am afraid I cannot discuss publicly the question of the military occupation of Montenegro, which will be determined by agreement between the Allied Powers.

1914-15 Star.

Colonel YATE asked the Under Secretary of State for War whether the 1914-15 Star will be granted to all officers and men of the 6th (Poona) Division who took part in the operations in Mesopotamia from the first landing at Busreh up to and including the siege of Kut-el-Amarah?

Mr. MACPHERSON: I think so, but perhaps my hon. and gallant friend will await the publication of the conditions of the award of the "1914-15 Star," which will be made in Army Orders very shortly.

Gallipoli Star.

Colonel YATE asked the Under-Secretary of State for War whether the Gallipoli Star will be given to the relatives of those who fell during the operations there?

Mr. MACPHERSON: Yes, sir; the medal will be given to the legal representative or the next-of-kin, according to whether the deceased soldier died testate or intestate.

Indian Prisoners of War. Nov. 21.

Sir J. D. REES asked the Secretary of State for India what arrangements had been made for the return to India of Indian prisoners of war?

Mr. MONTAGU: Indian prisoners of war in Turkey will be sent to Egypt, where the War Office are establishing special camps for their reception. Special arrangements have been made to clothe and equip them there, and to send them on to India. Indian prisoners in Roumania will similarly be sent direct to these camps in Egypt and thence to India. The War Office have been asked to arrange, if possible, that the few Indian prisoners remaining in Germany shall be sent direct to Marseilles, and thence also to the special camps in Egypt. There are no Indian prisoners of war in Austria.

Topics in Parliament.

The subject headings are those given in the Official Report:—

Eastern Campaign.—November 19.

Albania (Relief of Distress).—November 20.

EDUCATION IN MESOPOTAMIA.

The Simla correspondent of *The Times* states that the quinquennial report on Education describes the steps adopted to advance education in Mesopotamia. A normal school was established and 29 teachers passed the examination and gained appointments. Six new Government schools and a survey school were opened, from which 36 boys were appointed assistant surveyors. Young Arabs are also learning practical engineering in the workshops.

SOUTHERN ABYSSINIA.

Speaking before the Royal Geographical Society at Burlington House on Monday, Mr. Arnold Hodson described some journeys made during the last three and a-half years in a part of Abyssinia north-west of British East Africa and south-west of Somaliland. Travelling in Abyssinia, he said, was not an easy matter. It was necessary to have a passport from the Governor of every province that it was desired to pass through. A general passport from the central Government was not sufficient; for the Abyssinians act up to their own proverb that a dog knows its master but does not know its master's master. Most of the country he passed through he found extremely fertile and with a delightful climate. In the lower lands a large amount of cotton was produced and woven into shawls and blankets. Of one of the high-lying provinces, Boran, he said it was a wonderful country for stock. There was practically no cultivation there, but it was full of cattle, sheep, and horses. Boran was a very hilly province, situated on a plateau, very healthy and well watered by wells. These were sometimes of great depth; but, instead of drawing the water to the surface, a path was cut, beginning sometimes several hundred feet away and leading down to the water. Of another province, Jimma, Mr. Hodson said it was a large province, Mohammedan by religion, and one of the headquarters of the slave trade. Slaves were not allowed to be sold openly in Abyssinia, but the trade was carried on *sub rosa*. Every Abyssinian chief had his slaves, and not only the chiefs but the soldiers as well. Mr. Hodson found a variety of races inhabiting the different provinces he visited. Of the Abyssinians themselves, he said they were an extraordinary people, intensely suspicious by nature. It took months or years to win their confidence; when this had been done they could be very affectionate so long as it suited their book, but their friendship would not be deep enough to make them go against their own interests. Great hindrances to trade were the customs gates for merchants passing in and out of every province. At each such gate duties were levied, and officials had to be bribed as well; so that the profit left to the merchant was often very small. Mr. Hodson had some interesting experiences in building a consulate at Gardula. The Abyssinians were very unwilling that buildings should be erected by Europeans in their country; so, first of all, an order had to be obtained from the Governor. Then all the lesser chiefs were called together, and each was given a certain part of the work. There were many hundreds of native workers thus assembled, but the building took a long time to finish, because nearly every other day seemed to be a feast day, on which nobody would work.

ISLAM IN INDIA.

At University College, London, on Monday, Professor Arnold lectured on Islam in India. He said that Mohammedanism came into India a thousand years ago. The descendants of the invaders were now but a very small part of the population; the vast majority of the 66,000,000 Indian Moslems were of Hindu origin, springing from all castes, among others from the Brahmins. The largest accessions had been from the warrior castes. Between the Mohammedans of native descent and those of foreign origin there was a considerable difference, for the religion of the former was full of survivals of the older faith, in spite of the constant efforts of the orthodox teachers of Islam to root them out. Only 38 in the thousand of Indian Moslems were literate; the other 962 were but little touched by the movements that affected the great Mohammedan world. In common with the rest of the world India had its Sunnis and Shias, Ismailis and Wahabis, but peculiar to it were the eclectic sects that aimed at a reconciliation of Hinduism and Islam. The events of the Indian Mutiny and the Russian-Turkish War forced upon the attention of Moslems the fact that sovereignty had passed from Islam. The more thoughtful attributed this decline to lack of education, and set to work to remedy this evil. In India the greatest influence in this movement was exercised by Sir Sayyid Ahmad Khan, who was at once theologian, social reformer, educationalist, and politician. One of his aims was to reconcile Moslem theology with the learning of the West. He died in 1908, having founded no sect, but having gathered around him many of the finer spirits from among his co-religionists. These had developed the impulse he had given, and had sought to arouse Indian Mohammedans from the intellectual apathy into which they had fallen. Due to their efforts was the Nadwal-al-Ulama, an organisation of learned men, which had introduced into the very citadel of Indian Moslem orthodoxy a new spirit and a new way of thinking. They recognised that unless they brought about some reconciliation between their point of view and western science their hold on the new generation was seriously threatened.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

I have not had to wait long for an indication that my hope that Abyssinia will receive greater attention in future will be fulfilled, for I learn that a company is being formed to trade with Abyssinia under the title of the Abyssinian Corporation. The company will have the substantial capital of £1,005,000, and the fact that it is being launched under the most influential auspices is the best proof that it may be expected to do much to further British interests in a quarter of the world where it is very desirable that the British trader should be to the fore.

***

Those on both sides the "Black Water" are naturally very anxious to know how soon the P. and O. will be able to resume their normal sailings. Unfortunately, there are obvious difficulties in the way, and I should imagine that several months must elapse before Egypt enjoys the welcome but, just at first, unaccustomed sight of the arrival of P. and O. steamships at their pre-war intervals. For obvious reasons the resumption of the usual activities of the P. and O. is a matter of great importance, and it is scarcely necessary to say that no pains will be spared to expedite this phase of reconstruction.

***

The statement of Mr. Richardson, the chairman, at the general meeting of the Anglo-Egyptian Bank that he believed the accounts would satisfy the most exacting shareholders was amply justified, for the bank has achieved excellent results during the past year, in which respect, as he pointed out, it has simply reflected the continued prosperity of Egypt. It will be noted that the bank is contemplating the extension of its operations in Syria by opening a branch at Haifa, and that the branch at Jerusalem has already confirmed the bank's confidence in the prospects of that region by paying all its expenses, including the cost of initiation, by the close of the year. In Mr. Richardson's view there is every prospect of another good year in Egypt, and as regards the bank, while profits are not likely to increase owing to the excess profits duty, for the same reason they should not decrease very much.

***

At the meeting Mr. Richardson, who has been chairman of the bank for seven years, announced his resignation from that position, stating that his successor would be Mr. Raoul H. Foà, who is a partner in the well-known firm of King and Foà, bill brokers, of George Yard. Mr. Richardson's services to the bank, in particular during the difficult war period, were the subject of well-deserved tributes by Mr. Foà, Mr. W. H. Skeel, and Mr. Tompkinson, emphasis being laid on the fact that he leaves office at a time when the bank is in a sounder and stronger position than ever before. It is satisfactory to be able to record that Mr. Richardson will retain his seat on the board, so that his great abilities will continue to be at the service of the bank.

Industrial developments in Egypt during the war are the subject of a flattering reference in a report on trade conditions in Egypt by the Italian Government Commercial Delegate resident at Alexandria. He points out that the war gradually brought about a shortage in a number of indispensable products, such as tissues, furniture, agricultural implements, boots and shoes, paper, bricks, and glassware, and Egyptian syndicates were formed to manufacture these articles. "The success which has attended these efforts," he comments, "led to further capital being engaged in Egyptian manufacturing enterprises, in nearly all cases with substantial results. It may be confidently asserted that, as regards the above-mentioned products, Egypt is now independent of imports, except for high-grade goods."

***

As showing the remarkable profits derived from the investment of capital in Egypt since the war, the Italian Commercial Delegate refers to the shares of the Egyptian Sugar Refinery Company, which were quoted at 14s. before war broke out. He notes the failure of the textile industry to develop in the country as might have been expected, and explains it by saying that it is because all the products of the spinning mills established in Egypt had been taxed with a special 8 per cent. ad valorem duty, recently raised to 10 per cent. "Yet," he adds, "there is no organic reason why the textile industry in Egypt should not succeed, seeing that all the raw materials for textiles are to be found in Egypt."

***

I see that the American Mission which recently spent two months in Algeria has been very favourably impressed regarding the prospects of increased trade relations between the United States and that country. In the course of its report the Mission says: "Algerian agricultural resources are far from fully utilised. Vast tracts remain to be developed. The methods of cultivation are good, particularly in the case of grain. The stock of agricultural implements and machinery is plainly insufficient. It needs increasing and bringing up to date. Many types of machinery could be used with advantage. With regard to transport, the construction of secondary railway lines is particularly urgent. Transport requirements cannot nearly be met by existing rolling stock. The Mission considers that the establishment of a direct line of navigation between the United States and Algeria would be justified."

***

With reference to the notification by the Chartered Bank of India, Australia, and China on November 8 of the proposed increase in its capital from £1,200,000 to £2,000,000, it is announced that the Treasury have intimated that, subject to the usual restrictions, they raise no objection to the new issue. An extraordinary general meeting of shareholders will therefore be held on December 18 for the purpose of obtaining their confirmation.

***

Somewhat smaller profits are disclosed in the report of the Anchor Line for the year ended April 30, the surplus being £309,400, against £366,900 for the previous year. Including the £145,900 brought forward, the disposable total amounts to £456,300, and after deducting debenture interest and the preference dividend, and placing £250,000 to reserve, making that item £1,000,000, £180,100 remains. It is proposed to pay out of this an ordinary dividend of 10 per cent., free of tax, and also a bonus of 10 per cent., free of tax, on the ordinary shares, making the distribution on these shares the same as in 1917.

***

The report of the London and Maikop Oil Corporation states that no communication has been received from the company's representative since March, and it has been impossible, therefore, to make up the accounts for the year ended July 31. From an indirect source, however, it has been learned that in August they were still on the fields. Recent developments should be of great assistance in the protection of the company's interests, and the hope is expressed that the stable conditions essential to the resumption of operations may be restored at no distant date.

***

It is interesting to note how the attitude of the Press of the Central Powers towards Bulgaria changed after the Bulgarian defeat. Before that event the commercial prospects in that country were stated to be unbounded, a strong point being made of the wealth accumulated by the inhabitants during the war. An instance of the change is to be found in an article in the *Wirtschäftszeitung der Zentralmächte*, dated October 18, in which it is stated that in the future Bulgaria will "probably return to the economic policy she pursued before the war, and become for the most part an agrarian State. In view of the insecurity of her political situation, foreign capital for the opening up of her natural wealth will only be attracted in limited quantities, and only after all possible securities have been guaranteed." Remembering when it was written, it is possible, reading between the lines, to find in this statement a final admission that the Central Powers have realised that the day is over when the Balkans could be made to serve as a stepping-stone for their Eastern pretensions.

***

In the same issue of that journal there is another reference to Bulgaria which deserves notice, and that is the statement that the fact that Bulgaria lies between two seas, the Black Sea and the Ægean, is bound to lead to the construction of a canal between them. "It would be best," says the *Wirtschaftszeitung*, "for such a canal to start at Burgas, follow the Aibos Dere, where it would have to traverse an isthmus only 5 km. broad, with an elevation of 164 m. at most to reach Azmak Dere, whence the Maritza would be reached by way of the Tunja River, at a point near Adrianople, and thence the Gulf of Enos. Following this route, it would be impossible to avoid Turkish territory. If this difficulty proved insuperable, the canal would have to cross the Tunja, near Jambol, and continue through the plain to Satzlü Dere. The expense would not be so very great, while, on the other hand, the Black Sea—Ægean canal would contribute largely to the economic importance of Bulgaria."

MESOPOTAMIA AGRICULTURE

In the Wake of the Turks.

(From a Correspondent.)
Baghdad, October.

The custom of the country ordains that the fellah (labourer) is primarily responsible for seed, and if he cannot provide it from his savings he must borrow it. It was necessary that the fellah should show as much of his own seed as possible. Whether the scheme was to accomplish all it aimed at or not, the new crop would be a heavier one than its predecessor, the prices, which had soared to an unprecedented height, were bound to fall, and everyone, therefore, who could obtain seed on easy terms would sell his own and sow what he borrowed. This was the first year of our Government, and the agricultural population was anxious to be considered as having the right to possession of as much land as possible, but proprietors by the terms of their title deeds can be called upon to forfeit whatever land they have neglectfully left uncultivated for three years. They were accordingly warned that the extent of a man's right would *prima facie* be considered the land which he had put under cultivation this year. If they claimed that they had no seed, seed would be provided at current market rates, to be repaid at the rates prevailing at harvest.

The offer of advances of the seed and money required by the cultivators and the provision of an irrigation staff were not in themselves sufficient to secure cultivation. Three years of war have left tribal cultivators more independent than ever, and inter-tribal jealousies have caused considerable trouble.

In the neighbourhood of Baghdad the gardens and the land behind them are watered by lift, and it was found that the retreating Turk had deliberately destroyed private repair shops and damaged many engines and pumps. Parts of others had been rifled in the general disorder, and many by reason of long disuse required petty repair. At first there were no workshops at all, but as time went on and conditions became more settled applications for assistance in replacing spare parts and effecting repairs to pumping machinery became more numerous. A mechanic was sent down to the Euphrates to report on the agricultural machinery lying there, and the Works Department were requested to undertake the necessary repairs. This they found themselves unable to do. At the same time, in view of the growing certainty that the harvest would be a heavy one, a proposal was put forward that threshing machinery should be purchased, and application was made for a mechanical expert to organise a workshop to cope with the growing stream of work. An officer was appointed, but the Works Department suggested that it would be more economical if, instead of building a new shop, theirs were extended, and to this proposal tentative effect was given.

The services of the Deputy-Director of Agriculture and his staff were then placed at the disposal of the Administrator of the scheme. This staff was primarily intended to stimulate the production of vegetables, with a view to the elimination of scurvy. It contained officers holding degrees in agriculture, and became the nucleus of a scheme which was introduced for the purpose of making agricultural advice available, not only for military gardens, but also for Arab cultivation. The occupied territories were divided into six circles, for each of which an agricultural expert with the necessary staff has been applied for. The scheme at the end of the year was still in its infancy, but agricultural societies have already been formed at Karbala and Ba'quba, and the welcome given to the experts has been most encouraging.

EGYPTIAN COMMERCIAL SERVICE.

The Under-Secretary of State to the Ministry of Finance, Cairo, informs the Board of Trade that a Commercial Service has been inaugurated by the Ministry. In order to foster closer relations between the United Kingdom and Egyptian traders, the Ministry desire to collect as complete a set of the catalogues of United Kingdom manufacturers as it is possible to obtain. These catalogues may be forwarded direct by British firms to the "Commercial Secretary, Ministry of Finance, Cairo."

BUSREH DATES.

Government Purchases.

In the House of Commons on November 20 General Page Croft asked the Financial Secretary to the War Office (1) whether he was aware that the Surveyor-General of Supply at the War Office had been buying articles of food in competition with the Ministry of Food; was he aware that the Surveyor-General was negotiating with firms in the dried fruit trade at Busreh for a supply of dates in August, 1917, when the Ministry of Food was also negotiating in the same market; and did the Surveyor-General decline to buy through the Ministry of Food and thus save competitive buying;

(2) Whether he was aware that the Surveyor-General of Supply purchased a large quantity of dates in October, 1917, at 20s. 6d. when the Ministry of Food purchased a similar quantity and quality at 18s. 6d. per cwt.; and what saving would have been made on this transaction had these orders been executed in August by the Ministry of Food;

(3) Whether he was aware that at the time of the purchase of dates in August, 1917, 75 per cent. of the supply of dates were in the hands of a combine, consisting of Messrs. Andrew Weir and Company, Messrs. Strick, Scott and Company, and Messrs. Gray, Dawes and Company; that the price of dates at that time was 16s. per cwt. f.o.b. for the best quality; and that, in consequence of the delay due to the refusal of the Surveyor-General of Supply to co-operate with the Ministry of Food, the price increased from 16s. per cwt. for the best quality, Hallawee, to 20s. 6d. for the same quality and a similar quantity;

(4) Whether the combine of which the firm of Andrew Weir and Company were members supplied dates and other dried fruit to the Armies in Palestine and Mesopotamia; and, if so, would he state what quantity and at what price; and whether the Surveyor-General of Supply had any other dealings with Messrs. Andrew Weir and Company;

(5) Whether the facts with regard to the increased price of dates in 1917 and the attitude of the Surveyor-General of Supply were brought to the notice of the War Cabinet by the late Lord Rhondda; and what action did the Cabinet take in the matter; and

(6) Whether the firm of Andrew Weir and Company, of London and Busreh, were in any way connected with the firm of which the Surveyor-General of Supply is chief partner?

Mr. Forster: I am not aware of any purchase made by the Surveyor-General of Supply in competition with the Ministry of Food. The Army purchases of Busreh dates in 1917 were made by the Chief Political Officer, Busreh, on the advice of the India Office. After arrangements had been made for these purchases the Ministry of Food approached the War Office suggesting co-operation, but it was considered inadvisable to withdraw the instructions already given for that season, though for the present season joint purchases are being made on behalf of the War Office and the Ministry of Food. The difference noted in the prices paid by the War Office and the Ministry of Food was due to the fact that the Ministry of Food bought after the War Office had filled its requirements when there remained no other market for the holders of stocks, export being at the time rigidly controlled. No question regarding the purchase of dates was brought to the notice of the War Cabinet. The Surveyor-General of Supply is a member of the firm of Messrs. Andrew Weir and Company, who have an interest in the date industry at Busreh, but he has taken no part in the activities of the firm since his appointment to the War Office. It is not known to what extent, if any, the firm indicated was interested in the purchases effected by the Political Officer at Busreh. The Surveyor-General of Supply has had no dealings of any kind whatever with the firm in question.

General Croft: Has any representative of the Surveyor-General of Supply had any dealings with this combine?

Mr. Forster: Not to my knowledge.

The estate of the late Mr. Duncan Mackinnon, chairman of the British India Steam Navigation Company, is returned at over £1,791,000, and the duty paid amounts to £309,667.

SERBIA'S RECONSTRUCTION.

Supplies and Materials Required

Reuter's Agency has had an interview with Dr. Velizar Yankovitch, Serbian Minister of Commerce and Agriculture, who is able to give the first official survey of the plans for the reconstruction of Serbia.

"I am glad to be able to announce," he said, "that these plans have been warmly welcomed by both the French and the British Governments. Lord Robert Cecil assured me that there was no limit to the support of the British Government. A vessel of 6,000 tons with a cargo of grain is already on its way from this country in order that the devastated fields of Serbia may be resown. It has to be remembered that Serbia has been at war for six years, and that for most of that time Serbian territory has been under destructive enemy occupation, that one-third of our population has died, and that all our cattle have been driven away. Serbia is therefore in a state of absolute economic ruin. But Serbia will recover. Firstly, we need food and clothes; secondly, we need agricultural machinery and supplies in order that the country may be restored. An Inter-Allied Commission will be formed at once in London to organise and control the shipment of material from the Allied countries. One of our greatest difficulties is that of communications. I went with the Serbian army into the interior in order to investigate the state of the railways. The main line from Monastir to Belgrade has been destroyed for distances of 10 kilometres at a stretch, and all the bridges have been blown up. We are therefore in great need of engineers and of railway material.

There remain, however, several ways of entry into Serbia. Material and food can be brought (1) for the south through Salonika by railway as far as Monastir; (2) for Belgrade and surroundings by railway from Fiume, which line is in its normal condition, and is the shortest possible way; (3) for the west from Ragusa and Metkovitch through Dalmatia; (4) for the east and centre from Dedeagatch through Sofia and over the Bulgarian railways; and (5) by the Danube to small Serbian ports below the Iron Gates. The Serbian people's goods have all been requisitioned by the enemy in exchange for paper receipts. The Serbian Government is also without funds. We therefore propose to ask the large Allied banking concerns to open credit for Serbian merchants up to a certain limit, with the State guarantee as additional security. The State could, should such a proceeding ever be necessary, hand over to the Allies in payment part of the war indemnity which will be due to Serbia. Besides this credit to merchants, which will allow the rebuilding of commerce and trade in the country, the Serbian Government proposes to ask for State credit for the purpose of buying cattle, grain, wagons, and agricultural implements. Serbia is essentially an agricultural country, and we must give all our aid to the agricultural industries. A prepared list of our necessities in this respect is already in the hands of the Allied Governments. After pointing out that it was to the interest, economically, financially, and politically, of the Allies to help Serbia, the Minister said he had a list of materials which are very important but slightly less necessary than food, clothes, and seed grain, the most important being sanitary and chemical materials, and telephone and telegraph wires and instruments. He added that it was proposed to erect as soon as possible two or more wireless stations, which would be invaluable in such a difficult country.

ITALIAN TRADE WITH MOROCCO.

Some of the French reviews, the *Reforme Economique*, for instance, mildly complain of the activity of Italian competition in Morocco, says the *Financial Times*. The occasion arises out of a recent circular issued by the Italian Chamber of Commerce at Casablanca, which deals with "after-war methods for the extension of Italian trade in Morocco." Among these it is urged that an Italian line of steamers should be started between Italian ports and Morocco, and that an Italian bank should be constituted in Morocco to further the extension of Italian trade. It is also proposed to issue a catalogue of Italian goods printed in Arabic.

ENGINEERING NOTES.

Opening for Builders' Material.

Before the outbreak of the war there was a great building boom in progress in Aleppo, which it was thought would continue for many months; but the war paralysed this activity, and building stopped. All buildings in Aleppo are constructed of stone, and the custom is to employ cement for roofing and walls, and plain lumber for ceiling with the rafters of rounded wood left exposed. This method is much more expensive than if metal shingles or metal ceilings were used, but no effort has been made to introduce these or any other modern decorative ceilings in Aleppo. There has always been, however, a demand there for corrugated sheets for sides, shutters, doors, arches, and awnings, gutters, etc.

New Use for Steam.

In recent notes a description was given of a new machine by means of which the productivity of the soil can be improved, the process being to apply, by a mechanical contrivance, a flame or radiant heat to all portions of the soil under treatment. Another process was mentioned in which saturated steam is used, but, as we pointed out, its cost is beyond the reach of the ordinary farmer. This latter process is used in Western Europe and in America. We were reminded since of another very simple and practical method by which steam is used for the same purpose, which was discovered by two English investigators, who made a study of improving the quality of the soil used by farmers for raising vegetables for transplanting, especially when the soil is used in cold frames or in borders, and is not manured. The method adopted consists in heating the soil with ordinary steam for some time. This kills insect pests, and seems to increase the food value of the soil. On the other hand, the seeds seem to germinate more slowly, and the early growth of the plant is somewhat retarded. This is more than made up for later, for the plant blossoms earlier, gives more and better fruit, and the root development is much more extensive. It is said that badly poisoned soils might be made available by this means.

Electric Lighting in Macedonia.

The local authorities of the towns of Seres, Drama, and Kavalla in Eastern Macedonia were studying the question of electric lighting, and were receiving proposals on the subject from agents of continental firms, when the war broke out. It is reported that new proposals are being prepared, as it appears that it is desired to make an arrangement with a company. At Drama the motive power is on the spot, but the cost of the works to be undertaken is estimated at 200,000 francs. At Seres and Kavalla the scheme to introduce electric lighting was far more advanced than at Drama, and it is probable that it will soon be actively pursued. At Kavalla the work will comprise the installations of the port. No agreement has been come to, however, and the question is still open for suggestions and proposals.

Bulgaria's Industries.

Bulgaria is often described in books of reference as a mountainous country, the exports of which consist of "grain, wool, skin, timber, attar of roses, and some other articles of minor importance," and her imports of "iron, coal, and manufactured goods." This description, with the undefined "manufactured goods," is probably often misleading to enterprising manufacturers and others, who may think on that account that Bulgaria is one of the still undeveloped Eastern markets. That this is not the case is proved by the exceptional activity shown there before the war by German, Austro-Hungarian, and American firms with a view to securing the supply of the required plant and other necessities for various local industries. These three countries have been the chief suppliers to Bulgaria of agricultural and industrial machinery and implements, such as steam engines, threshing machines, mowing and sowing machines, binders, ploughs, pumps for various purposes, machine tools, etc. In all these both Germany and Austria, in recent years, taking advantage of their superior facilities of transport, put up an energetic fight to oust American manufacturers, in which they succeeded to a certain extent.

Flour-Mill Machinery.

An important industry in Bulgaria which promises to develop on a larger scale is the milling industry. Austro-Hungarian machinery is generally being used, but the German opinion is that the success of the industry is due to "the great organising power of the Bulgarian merchant and capitalist." This milling industry touches all classes of the population, and is acknowledged to be one of the most important in the country. The output of every factory during a 24 hours' working day is calculated in railway truckloads. In these circumstances the factories have entirely superseded the formerly numerous water mills. This industry works for export. The total weight of exported flour rose from 822 tons in the years 1881-1895 to 67,204 tons in 1911, the last normal year. Another notable development is the progress of the spirit, brewing, and sugar industries; also the fruit and vegetable preserving industry, which in recent years has attained large proportions. The Germans undoubtedly had a keen eye on the great possibilities of Bulgarian industries, for besides capitalists, many German engineering firms were making arrangements for the development of the existing and the establishment of new industries when the Germano-Bulgarian alliance came to a sudden end. There is a large field of business for British manufacturers and others in Bulgaria in the future.

Greek Chamber of Commerce.

According to recent reports a Greek Chamber of Commerce has been established at Zurich, in Switzerland, to enable Greek merchants to dispose of their produce and to assist them in making arrangements for trade after the war. There has always been a considerable trade done between Greece and Switzerland, especially in light machinery, implements, tools, etc., which suited the former's market.

Diarbekir Copper Mines.

The copper mines that were owned by the Turkish Government at Agrana, in the Diarbekir vilayet, are of considerable importance. It is estimated that their deposits amount to over 1,200,000 tons of copper ore, principally copper pyrites, yielding 15.65 per cent. of copper; but, owing to unsatisfactory smelting, only some 13.25 per cent. of copper was recovered, according to the latest available reports. The "roasting," apparently, was done by wood. There are four furnaces, each smelting 2,600 kilogrammes of ore in twelve hours, running 815 kilogrammes of coarse copper. The blast is generated by a water-wheel. During the three years preceding the war the coarse copper has been sold at about £51 per ton, yielding a profit of £11 10s. per ton. The output, as a rule, is sent by camel to Samsoun or Alexandretta, but, of course, with railway facilities (for the mines are not far from the Baghdad railway line) the outlook of the mines will greatly improve as regards transport. Their future, in the meantime, is of much interest to many Syrian concerns at present.

SAFETY OF INTERNED SEAMEN.

With regard to the captains and crews of two Ellerman liners, Assiout and City of Khios, interned since the outbreak of war in Turkey, the Imperial Merchant Service Guild has received a cable from Captain Allen, of the Assiout, stating that the crews of both ships have arrived at Alexandria.

Mr. Walter Haynes is now secretary of Ruston and Hornsby Ltd.

Mr. Reginald Smith has been appointed as Consul for Belgium at Malta.

Owing to the shortage of men the Foochow agency of the Chartered Bank has been closed.

Messrs. Marsland, Price and Co., Ltd., of Bombay, have developed a speciality in the construction of concrete oil tanks with domed roofs.

M. Georges Danielopol, Director of the Roumanian State Bank, has been appointed Roumanian Minister to the United States. M. Danielopol, who is at present in Paris, will not leave for Washington until after the termination of President Wilson's visit to France.

LANCASHIRE COTTON.

Market Still Unsettled.

(From Our Own Correspondent.)

Manchester, Wednesday.

Any improvement in the market is slow in coming about. Buyers are still disposed to anticipate lower prices. A little more inquiry has been met with in some quarters, but business has not matured. Egyptian cotton rates continue steady. There is no particular change in the outlook for supplies. Many complaints are still met with as to the regulations under which business can be done. Yarns made from Egyptian cotton are getting more irregular in quotation. No buying of weight has transpired for several weeks, and some producers are more willing to consider offers. Nothing encouraging can be said with regard to piece goods for Egypt. The cancellations of contracts has not been very extensive, but the slump in values in Cairo has undoubtedly demoralised trade for the time being. Wires from India have been very scarce. Occasional bids have been mentioned in bleaching cloths for China. More South American shippers have wanted to stop deliveries. The home trade is passing through a very quiet time, and a decided falling-off has recently occurred in clearances in the retail establishments. Prices in American yarns continue to fall. The drop from the top is now about 1s. a lb. Stocks are beginning to show themselves in first hands. An increased inquiry has come through in cops for Holland, with isolated sales, and a steady demand has been reported for France.

CUSTOMS VALUATIONS IN EGYPT.

(From Our Own Correspondent.)

Port Said, November 9.

Considerable discontent is being caused amongst the trading community of Egypt by the practice of the Government in assessing goods at what amount to fictitious values for customs purposes. These values are not calculated on the invoice value of goods, but on the home value of the same class of goods at the time those in question arrive in Egypt (which may be six months later than the invoice date), plus insurance, freight commission, landing charges, and, over and above that, something extra, so as to make absolutely sure any error is on the right side. Merchants say that if they protest, the next consignment of goods may take four days to get through the customs instead of, perhaps, two. This excessive assessment plays into the hands of the profiteer, who charges the sum that the authorities have valued his goods at, while the merchant who tries to deal fairly (and there are all too few of such) must pass on the customs dues to the consumer, who naturally thinks that he is being imposed upon.

NEW DESIGNATIONS FOR COMMERCIAL ATTACHES.

The question of the designation to be borne by the commercial intelligence officers appointed in foreign countries in connection with the reorganisation of the Government system of commercial intelligence has been under consideration. It is felt that the title of Commercial Attaché is not the most suitable, and that some other designation should be adopted to indicate the inauguration of a new system. It has consequently been decided that the designation of these officers should be altered as follows:—Commercial Attaché, 1st grade, to be called Commercial Counsellor of Embassy. Commercial Attaché, 2nd grade, to be called Commercial Secretary of Embassy (1st grade). Commercial Attaché, 3rd grade, to be called Commercial Secretary of Embassy (2nd grade). Commercial Attaché, 4th grade, to be called Commercial Secretary of Embassy (3rd grade).

Up to November 2, Indian Treasury bills have been issued to the following amounts:—October 16, 1917, to March 31, 1918, Rs.43,50,00,000; April 1 to November 2, 1918, Rs. 52,50,25,000; total, Rs.96,00,25,000. Bills discharged or discounted as subscription to the Indian War Loan:—Bills outstanding on November 2, Rs.66,39,45,000.

COMPANY MEETINGS.

Anglo-Egyptian Bank.

The thirty-second ordinary general meeting of the Anglo-Egyptian Bank, Ltd., was held on November 26 at the offices, 27, Clements Lane, Mr. Henry Adair Richardson (the chairman) presiding. The Secretary (Mr. G. H. Soul) read the notice convening the meeting and the auditors' report.

The Chairman, in moving the adoption of the report and accounts, said it was his pleasure to lay before them accounts which, he believed, would satisfy the most exacting of the shareholders. The balance-sheet was, as usual, a very strong one, and indicated expansion in the right direction, but the net profits had not increased in proportion to this expansion, and none of those who knew the effect of the excess profits duty and income-tax at 6s. in the pound would be surprised at that. However, by drawing on their carry forward, and utilising the £20,000 they reserved in 1915 against war contingencies—which he foreshadowed last year might not be required—they were able to give the shareholders a very substantial bonus in shares, and, at the same time, strengthen the bank by the addition of £300,000 to its subscribed capital. Those of them who believed in the future of Egypt and the bank would welcome the opportunity of increasing their holding of shares, while those who preferred to sell their allotment would probably realise a cash bonus of perhaps £3 10s. against 2s. 6d. last year.

The bank's results simply reflected the continued prosperity of Egypt, which had been exceptionally favoured during the war. The geographical situation of Egypt had made it the base for the operations of the Armies in the East, and its cotton and food crops had realised phenomenal prices. £20,000,000 was transferred to the country through the War Office for the requirements of the Army, and the cotton crop alone was worth £50,000,000. This naturally caused a brisk demand for imported goods, which were freely bought, and as freely sold, but the sudden termination of the war, and the prospects of cheaper goods later on, had stopped business meantime, and merchants were caught with large stocks which it would take time to move off. But it was hoped that the opening up of Palestine and Syria, which must be bare of supplies, would relieve the congestion sooner than otherwise would have been the case. Cotton exporters and merchants had coined money, and the purchase by Government of the outstanding balance of the crop on August 1 had enabled them to close their books with no unsold stocks on hand, while, of course, all cultivators had made a rich harvest out of the high prices realised for their crops. So far this rapid accumulation of wealth had not resulted in any pronounced speculation, though naturally there had been a good deal of buying of Egyptian securities, and prices which were probably unduly depressed, had risen considerably. There would possibly be more when peace was definitely assured, but let them hope that the lesson of 1907 would not be forgotten, and that if speculators would speculate they would receive no encouragement from the banks. Agricultural land had risen in value; the cultivators had made money, and would put it into land, and get all reasonable assistance from the mortgage banks, who had not had much business of this sort offered them during the past few years.

The bank had opened branches at Jerusalem and Jaffa, and were now contemplating opening one at Haifa, and he was pleased to tell them, as perhaps it was a good augury for the future, that Jerusalem had, at the close of the year, paid all its expenses, including the cost of initiation. There was every prospect of another good year in Egypt. The bank had begun the year again quite satisfactorily. Their profits were not likely to increase owing to the excess profits duty, but for the same reason they should not decrease very much.

He stated, in conclusion, that that was the last time he should address them from the chair, which he had filled for eleven years. He believed he was divulging no secret when he said that Mr. Foà would take his place, and he was happy to think that he left them in good hands. The bank was never in a sounder or stronger position than it was to-day, and, in his opinion, it never had a brighter future, although no one could foretell the after-effects of the war.

Mr. Raoul H. Foà, in seconding the motion, said that they all knew how wonderfully Mr. Richardson had served the bank during the past eleven years, particularly during the past four troublous years. They felt that he had well earned his rest.

Mr. W. H. Skeel, after saying that the accounts afforded the shareholders solid grounds for satisfaction, said they were all sensible of the valuable work which Mr. Richardson had done for them, and in retiring from the chair he carried with him their best wishes. He hoped that his colleagues would arrange for his portrait to be painted in oils by some eminent artist and hung in the board room.

Mr. Tompkinson also paid a tribute to the services of the retiring chairman, and expressed satisfaction at the board's decision to capitalise a portion of the reserves.

The motion was adopted; and the proposed dividend of 10s. per share, free of income-tax, was declared, payable on December 2 next.

An extraordinary general meeting followed, at which resolutions were passed approving the scheme for the capitalisation of £100,000 of the company's undivided profits and the distribution of the same by way of bonus among the shareholders.

Mr. J. M. MacLeod, C.M.G., British Consul at Fez for many years, has been appointed British Consul-General for Chile.

PROMINENT INDIAN INDUSTRIES.

CAWNPORE WOOLLEN MILLS CO., Ltd.
— CAWNPORE, INDIA. —

Everything in Pure Wool.
MANUFACTURERS OF
"LALIMLI" WOOL WEAR
Flannels, Serges, Blankets, Tweeds,
Broadcloths, Coatings, Hosiery, Rugs,
Puttees, Uniforms, &c., &c. . . . .

COMPANY NOTES & REPORTS

Bengal-Nagpur Railway.

The report of the Bengal-Nagpur Railway Company for the year ended March 31 last states that £785,500 debentures maturing February 18 last were paid off by Secretary of State for India. The amount of capital raised to March 31, 1917, was £29,203,690. The Secretary of State's open line capital was increased by £1,049,236 and his advances for unopen lines increased by £632, making £30,253,558. Total expenditure to March 31, was £29,878,070. Capital expenditure was mainly on rolling stock ordered before the war and improvements to the main line and to the workshops at Khargpar. There was also some expenditure on the Bokharo Colliery. While gross earnings increased by Rs.51,64,120, the increase in working expenses was Rs.16,23,904, so that net earnings increased by Rs.35,40,216, or nearly 15½ per cent. The total number of passengers carried decreased by 1,604,193, or about 9½ per cent., but the amount received was more by Rs.11,84,262, or about 9½ per cent. The decrease in numbers is due to reductions in passenger train services to enable the railway to carry more material required for the war. The increase in receipts is due to fares having been raised with the object of restricting the number of passengers travelling to suit the reduced train services. In the principal commodities carried by the railway there has been an increase in tonnage and receipts. The increase in working expenses was due to the larger tonnage carried and the rise in cost of labour and materials. The proportion of working expenses to gross receipts was 46.56 per cent., against 48.10 per cent. The results of working for the year are:—Net earnings, Rs.3,01,32,863; interest on open line capital, Rs.1,61,64,594; excess of net earnings over interest Rs.1,39,68,269. The company's share of these net earnings amounted to Rs.18,95,649. This amount when remitted to England produced £142,171. In addition to the second half of the guaranteed interest at £1 15s. less income-tax at 5s. in £, the directors recommend a further dividend of ¾ per cent., less income-tax at 3s. 9d. in £, and a bonus of 1¾ per cent. for the year ended March 31, less income-tax at 3s. 9d. in £, and to write off as depreciation of reserve fund account £7,000. With these payments the whole return for the year on each £100 stock will be 7¾ per cent., less tax. After providing for income-tax and contributions to charitable and other funds, the balance at credit of surplus profits account at the end of 1918 will be more than £200,000, as against £194,000. Meeting, 132, Gresham House, Old Broad Street, E.C., 5th proximo, noon.

Prince Line.

The directors of the Prince Line propose to pay a final dividend for the year ended June last of 15 per cent. An interim dividend of 5 per cent. has been paid, so that the year's dividend is 20 per cent., compared with 30 per cent. in 1916 and 1917, 10 per cent. in 1915, and 5 per cent. in 1914. The profit announced is £264,728. as against £430,816 in 1917, £495,328 in 1916, £341,138 in 1915, and £280.413 in 1914. The paid-up capital is £601,495. The assets are given as £3,449,712, as against £3,619,993 a year ago.

Southern India Tea.

The report of the Southern India Tea Estates for the year ended February 28 last states that including balance brought forward, after providing for general and London office expenses and writing off £500 for depreciation, profit was £8,838. It is proposed to pay a dividend of 1s. per share (free of tax) on the ordinary shares and to carry forward £6,265.

Dividends, Payments, etc.

Greek Five per Cent. Loan, 1890 (Piræus-Larissa Railway).—The coupons falling due on December 15 will be paid 32 per cent. in gold of their face value in accordance with instructions received from the International Financial Commission, Athens.

The directors of Ruston and Hornsby, Limited, have declared an interim dividend on the ordinary shares at the rate of 5 per cent. per annum, less income-tax, for the half-year ended September 30 last, payable December 2 next.

The directors of the Egyptian Markets have declared an interim dividend on the ordinary shares of 5 per cent., less income-tax at 5s. 9d. in the £, in respect of the year ending December 31 next, payable on and after 19th proximo.

Oriental Telephone and Electric.—At an extraordinary meeting on November 20 a resolution was passed declaring that £1 5s. per ordinary share (being part of the moneys resulting from the conversion into money and collection of certain capital assets) be appropriated as capital among the holders of ordinary shares on the registers at the date of such distribution.

The directors of the Bengal Coal Company announce a dividend at the rate of 60 per cent. per annum for the half-year to October 31 last.

Alexandria Water.—Interim dividend of 4 per cent. (4s. per share), payable on December 15.

First Five per Cent. Debenture Coupons No. 40 of the Egyptian Markets, Ltd., falling due December 1, are payable at the Anglo-Egyptian Bank, Limited, 27, Clement's Lane, London, E.C.4, at the face value, and at the branch offices of the Anglo-Egyptian Bank, Limited, at Cairo and Alexandria, at the current rate of exchange.

Notice is hereby given that new interest coupon sheets in respect of the Five per Cent. Debentures of the Egyptian Markets, Ltd., will be ready for issue by the Anglo-Egyptian Bank, Limited, on and after Monday, December 2. The debenture bonds must be lodged with the Anglo-Egyptian Bank, Limited, 27, Clement's Lane, E.C.4, for endorsement.

INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following weekly cabled news received from the Director-General of Commercial Intelligence, Calcutta, dated November 21:—

Rain much needed everywhere. The influenza epidemic is hindering agricultural work in many districts.

Markets.—Fully good Broach Rs.603 April-May delivery. No improvement in the piece goods position in Bombay. Prices have declined further in Karachi.

Twenty companies (mostly private) were registered in India in August, with an authorised capital of 65½ lakhs. Some of the more interesting appear to be:—Orissa Minerals, 10 lakhs, registered in Calcutta; Madras Tanning and Trading Co., 5 lakhs, registered in Madras; and the Porcupine Foundry Co., 5 lakhs, registered in Calcutta.

The Madras Government pencil factory has been put up for sale as a going concern, as after showing the possibility of making pencils at a satisfactory profit, the Government is disposed to leave the field to private enterprise.

ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Street, Wednesday.

There has been very little doing this week, and changes in prices are only of a fractional character.

In Government Bonds, Egyptian Unifieds, after a fairly large business at 90, are offered at this price, and are quoted ½ lower at 89½, whilst a similar drop has taken place in 3½ per cent. pref. to 77.

In Bank shares, Nationals, after rising to 21, are closing only 3-16 better at 20 13-16. Agricultural Banks are dull at 7. In Railways, Delta Lights, on a certain amount of liquidation, have receded ¼ to 8⅜.

Amongst Land shares there has been a very small business doing. New Egyptians are fractionally easier at 21s. 6d., and both Foreign Trusts and Sidi Salems are again lower on further profit-taking after their recent advance, with the result that Foreign Trusts close 1s. 3d. down at 15s. 3d., and Sidi Salems have dropped ⅛ to 2 21-32. On the other hand, there has been a rather sustained demand for United Egyptian Lands, which closes 3d. firmer at 4s.

In Miscellaneous shares, Salts and Sodas are 1-16 lower at 3½, and Khedivial Mails have dropped 1s. 9d. to 81s. 3d.

Amongst Greek securities there is a decline of 1 point in Rentes to 56½, but the 5 per cent. 1890 Loan is 1 point firmer at 75. A fairly large line of "Currant" Bonds changed hands in the neighbourhood of 95. Bank of Athens shares are ¼ down at 4¼, although the price in Athens is very nearly equal to 5. Some business was also done in Piræus-Athens 4½ per cent. Railway Bonds round the current quotation.

Oil Shares.

Prices have remained at about the same level this week. Anglo-Egyptians "B" are a shade better at 2 11-16, but Anglo-Persian Prefs. and British Burmahs are unchanged at 25s. 6d. and 13s. 6d. respectively.

A feature of the Roumanian market has been the continued weakness of Roumanian Consols, which close at 16s., a fall of 1s. on the week. Anglo-Roumanians are 1½d. better at 10s. 3d., but Trajan Roumanians are 3d. lower at 10s. 9d.

The only changes to be recorded in Russians are a rise of 1s. in North Caucasians to 26s., and a small rise in Ural Caspians to 1 21-32.

Paris Bourse.

For the most part Near Eastern securities have appreciated in value, the main exception being Suez Canal shares, which have fallen 90 francs to 5,460. Egyptian Unifieds are slightly stronger at 90.50, and Credit Foncier Egyptiens at 780 have recovered 2 points of their recent fall; while Land Banks are 5 points better at 210. Other prices are: Serbian 1895's, 61.85 (against 61); Turkish Unifieds, 72.95 (against 70.10); Banque d'Athenes, 109 (against 111); and Ottoman Banks, 564 (against 566).

EGYPTIAN MARKETS.

The returns of Egyptian Markets, Ltd., for the week ended November 14 are:—Cattle markets, £853; general markets, £504; total, £1,357. Total for year, £45,987. The figures for the corresponding week last year ended November 15 were:—Cattle markets, £447; general markets, £476; total, £923. Total for year, £49,476.

BRITISH TRADE CORPORATION

(Incorporated by Royal Charter),

13, AUSTIN FRIARS, LONDON, E.C.2.

Telegrams: "Trabanque, London."

CAPITAL: Authorised - £10,000,000 Subscribed and Paid Up - £2,000,000

Governor - THE LORD FARINGDON.

Manager, A. G. M. DICKSON. London Manager, P. C. WEST. Secretary, G. De B. BROUNLIE.

The Corporation has been established with the object of developing the Trade of the British Empire in every part of the world, and brings to the notice of all interested that it is prepared to grant financial facilities to British Manufacturers and Merchants for the increase of their Import and Export Trade.

It will be prepared to assist in opening up new channels for enterprise, and will afford financial facilities for the enlargement of works and the extension of plant.

The Corporation is appointing representatives in the chief cities of the world, and will open credits at home and abroad. It invites inquiries, and will endeavour where necessary to put expert advice at the disposal of correspondents regarding the financing of their foreign and overseas business. Moneys received on fixed deposit. Terms on application.

NOTES OF THE WEEK.

The peace policy remains the all-important question of the day for the Allied peoples, and is forming the subject of repeated conferences between their Governments. The past week has seen M. Clemenceau and Marshal Foch, together with Signor Orlando and Baron Sonnino, in consultation with the British War Cabinet, and it is generally understood that far-reaching decisions have been taken. These may have to await President Wilson's arrival for their final ratification; but in so far as they may affect one aspect of the Near Eastern problem, we may hope that the decisions will be translated into immediate action. The London discussions have been held under the menace, as it were, of armed conflict on the eastern shore of the Adriatic, and on no point was it more urgent that an exact understanding should be arrived at than in regard to the future settlement of these regions. Before leaving Rome Signor Orlando had at last couched a lance in support of moderation in a speech to the Chamber of Deputies. He admitted that in the "secret" Treaty of London Italy had renounced her claim to Fiume, and, although he insisted upon the Italian character of that port, he pointed out that at times circumstances rendered it necessary for a Government to effect a compromise.

By passing an overwhelming vote of confidence in the Government after the Prime Minister had thus hinted at the need for compromise, the Italian Chamber proved that it was in no unduly chauvinistic mood. Pan-Italianism, in the form of Dante Alighieri societies, at once raised its head again, and a resolution was passed at a congress calling upon the Government to urge Italian claims upon Dalmatia and other sections of the eastern coast of the Adriatic. But moderate opinion in Italy is fortunately gaining ground, and it is becoming more widely recognised that lasting international peace is likely to prove a more valuable asset to Italy than the possession of additional strips of territory, with the certain prospect of chronic unrest within her borders. An attitude of reasonableness is to be welcomed wherever it appears; but it is no effective substitute for a hard and fast delimitation of frontiers between Italian territory and the new Yugoslav State. The Allies should aim at securing the latter as soon as possible, for until this is done opportunities for friction are bound to arise.

Professor Masaryk is no stranger to England, and it was with peculiar satisfaction that the people of London were able in these crowded days to welcome him back as first President of the Czecho-Slovak Republic. The geography of Europe has been so violently disturbed as a result of the war that the man in the street is apt to feel bewildered when he tries to take stock of the new map; but in the case of the Czecho-Slovaks he finds himself at once on familiar ground. Not only has the President's name become a household word during the last four years, but the dramatic stand made by Czecho-Slovak troops in Russia against Bolshevist terrorism has been one of the outstanding features of the war, and by no means the least valuable contribution to the ultimate collapse of Germany. The organisation of these troops—the one oasis of order and discipline in a wilderness of anarchy—was the work of Dr. Masaryk, and provides an excellent augury for the future of the Czecho-Slovak Republic, so critically situated as it will be in Central Europe. No less important for the difficult days immediately ahead is the fact that President Masaryk, who has expert knowledge of Near Eastern affairs, is now in a position to place that knowledge, with added authority, at the disposal of the Allies.

The situation in Russia appears to be suffering from the lack of a definite guiding principle among the Allied Governments. It would be idle to deny that widespread disappointment is felt at the slow progress that has been made in bringing practical assistance to the great bulk of the Russian people in the struggle against Bolshevism. Quite rightly the Russians had been given every opportunity to help themselves; but the important factor in their rehabilitation was time, and the Allies' first duty was to accelerate the movement. The stand made by the Czecho-Slovak troops, brilliant and indispensable as it was, was fortuitous, in the sense that the main purpose was to work their way out of Russia with a view to playing their part in the restoration of their own country. When attacked by the Bolshevists they had to fight, and at once they stemmed the Bolshevist tide. But they still want to return to Central Europe, and the Allies, it is thought, would have been well advised to h[illegible] ex-

Digitized by Google

pedited their journey and to have replaced them in Siberia and Russia by other troops. The appointment of Admiral Koltchak as a constitutional "Protector" seems to be the right solution of Russia's problem, and it is disconcerting to learn that the Czecho-Slovaks, doubtless owing to some misunderstanding, are hindering this work and helping to rally the force of opposition.

The establishment of the new Yugoslav State is a more complex matter than that of the Czecho-Slovak Republic. There is, however, no need for undue haste in the matter. A few weeks or even a few months are of little account in the life of a State, compared with the necessity that the foundations should be well and truly laid. As already announced, the formal act of proclaiming the union with Serbia and Montenegro of the Southern Slav territories formerly under Austrian rule took place at Neustad, South Austria, on November 25, when the appointment of the Prince Regent of Serbia as Regent of the United Southern Slav State was notified. A Congress is now to meet at Serajevo, and an attempt will be made to invest it with the authority of a Constituent Assembly. It is difficult to see how this can be done, unless the members of the delegations from the different units composing Yugoslavia are determined beforehand on some fixed basis. Here is clearly a case for hastening slowly. Signs of opposition are not wholly lacking, although they may be regarded as of no importance, but the new State does not want to give a handle to possible malcontents by dispensing with the formalities which the occasion requires. One of the duties of the Serajevo Congress would seem to be to formulate the constitution of the Constituent Assembly.

It is to be hoped that no false step will be taken in connection with Montenegro; for any injustice done now is sure to prejudice the smooth development of Yugoslavia. A report has been circulated on the authority of the Czecho-Slovak Press Bureau that, "on November 29, the Montenegrin Skupshtina decided to depose King Nicholas and his House, and to unite Montenegro with Serbia under King Peter." This may well be just one of the pitfalls into which the new Federal State has to beware of falling. The actual facts are necessarily outside our knowledge; but if the provisional Yugoslav Government wishes to lay claim to even the most rudimentary statecraft, it will examine very closely the credentials of the Podgoritsa assembly before it accepts its resolution. It is evident that there can have been no time for a general election in Montenegro; and if there had been it would be necessary to inquire under what authority it had been held. Without doubt the situation in regard to Montenegro is anomalous. King Nicholas and his Government delay to return to their country. If they are determined to leave it to its own devices for an indefinite period, some fresh authority will have to be created to take over the reins of government.

The future of Montenegro is now the concern of the whole of Yugoslavia, as well as of the Montenegrins, and it might be a sound course for the Provisional Government to require King Nicholas and his advisers to declare their intention in regard to their country. The constitution of Yugoslavia cannot be delayed indefinitely because Paris is more comfortable than Cettinje. On the other hand, it is to be hoped that the Yugoslav authorities will resolutely set their faces against any sharp practice or Prussianism. The Montenegrins have not forfeited their independence, and they have the right to determine their own future entirely of their own free will, however ill they happen to be served at the moment by their constituted authorities. The whole-hearted adhesion of the country to Yugoslavia is a foregone conclusion, and it is better that the Montenegrins should be able to retain their self-respect when taking the formal step. No one inside or outside Montenegro will believe that the meeting at Podgoritza was a constitutionally elected Skupshtina. If it was not, it can only have resembled the meetings in the Baltic provinces with which Germany familiarised us when she was anxious to impress the world with her adoption of the principle of self-determination.

The attempt of Mr. Justice Ameer Ali to identify Moslem opinion in India with the corrupt oligarchy of Constantinople that has brought discredit on Turkey and the Mohammedan name has not been allowed to pass unchallenged. A hundred years or more may have passed since Stamboul was corrupted into Islambol by, as one writer suggests, "the fertile fancy of some over-zealous Moslem propagandist"; but Sir Valentine Chirol points out that it would be difficult to find amongst Mohammedan Indians any trace of the sentiment towards Constantinople to which Mr. Ameer Ali gave expression much before the Crimean War. "The sympathies of Indian Mohammedans for Turkey," he adds, "and the religious deference paid to the Turkish Sultan as Khalif are themselves of quite modern growth, and owe their origin very largely to the close political relations between the British Empire and Turkey during the nineteenth century." The logical effect of Mr. Ameer Ali's contention would be to create an unbridgeable gulf between the Moslems of India and the Arabs, who have a better and older claim than any others to speak on behalf of Islam. The Arabs have cast off the yoke of Constantinople, and it is unthinkable after all that has been written and said by them about the regime associated with this city that they should endorse the contention that its withdrawal from Turkish control would be an outrage to Islam.

Reaction after the strict censorship of news during the war is, doubtless, responsible for the flourishing crop of rumours that is now raising its head in Europe. It is unfortunate that most of these rumours should concern the Balkans. This part of the Continent is no longer a German corridor, and there would seem to be no reason why the Allies should not contrive to arrange for the dissemination of reliable information. It would be of interest, for instance, to know whether Bulgaria is a monarchy, a republic, or merely a kingless kingdom. A few weeks ago it was reported that King Boris had abdicated; this week a message from Sofia states that he is ready to renounce the throne providing Bulgaria be admitted to the Balkan Confederation. Another report represented Bucharest in flames, with Roumania as a whole in the throes of a peasants' revolt. This week the return of King Ferdinand and Queen Marie to their capital is announced. Fortunately the later intelligence is the more credible. It coincides with further reports to the effect that a Roumanian army is in occupation of the Bukovina, and that a national Roumanian Council assembled at Hermannstadt (the Roumanian name for which is Sibiu) has declared the union of Transylvania with the Roumanian Kingdom. This decision, it is to be hoped, comes in time to allow the Roumanian race to be represented as a single whole at the preliminary Peace Conference of the Allies. The Roumanian Government itself will see to it that its representative is kept in touch with the opinions and aspirations of their countrymen formerly under Hungarian rule.

It is not without interest to recall that Sir Edward Maclagan, the new Lieutenant-Governor of the Punjab, is a distinguished historical scholar, whose appointment may revive the traditions associated with names like Muir or Lyall. We can hardly expect that he will find leisure for research in his new office, but we can hope that his weighty support will be afforded to any attempts which may be made to restore the study of Indian history to something like its true position. Each month sees a steady increase in the harm which is being done by the pseudo-historical teaching so sedulously fostered by the Extremists in India: their efforts to poison the minds of the rising generation can be counteracted only by the widest possible dissemination of the truth, and we trust that this need will receive the earliest attention of the authorities when the war-cloud has finally passed away.

Anyone who still doubts that the Indian Administration, like the rest of us, has been driven to move with the times, will find a convincing proof

Digitized by Google

of its adaptability in the information brought by the last batch of mails regarding the decision to control the market for food-grains throughout the entire country. For nearly half a century the principle that in famine-times private trade may be assisted, but must not be interfered with, has been regarded as established beyond possibility of question, and it must be admitted that this attitude has been fully justified by results. The impending period of stress is, however, to be met by an almost complete reversal of this well-tried policy, for traders will be unable to move food between the provinces without a licence, distribution is to be controlled in the same way, and as a necessary consequence prices are to be fixed by the administration.

We have seen no official declaration of the motives which have led to this change of policy, but it is common knowledge that the railway position is a dominant factor in the case. In recent famines the traffic in grain has been very heavy, and there is no doubt that stocks have sometimes been moved backwards and forwards in advance of actual necessity. At the present juncture the war has left the railways unable to cope with any traffic which is not absolutely indispensable, and some degree of control has thus become inevitable; half-measures would, however, be fatal, and so the administrative machine has been forced to assume responsibility for the distribution of the country's daily bread, a responsibility which everyone must hope it will be able to bear.

It is certainly unfortunate that India should be overshadowed by this problem of food at a time when all her intellectual energy is wanted for the task of knocking the new Constitution into shape. The committees which are now at work will undoubtedly find the atmosphere uncongenial in some parts of the country, and it is to be feared that many of the men who could give them most assistance will, as the winter goes on, be too busily engaged to think about politics. Yet the conjuncture cannot be regarded as inappropriate, for in India, as we have often said, economic problems come first, and it is perhaps as well that the investigations of the committees should be carried on in the environment in which the results will ultimately be tested, the environment of a population to whom to-morrow's food is almost the only matter worthy of serious consideration.

In the circumstances there are special reasons for regretting the illness of Lord Southborough, the chairman of the two committees, a contretemps which, as the cable suggests, may prevent their labours being finished "in time," that is, we suppose, in time for a Bill to be introduced in Parliament during the session of 1919. In Indian conditions, such committees involve severe strain, the members travelling by night, hearing evidence by day, devoting the evenings to less formal but not less important gatherings, and doing a vast amount of hard thinking in the intervals: a trying life in the most favourable circumstances, it is almost intolerable for a man who is not thoroughly fit, and we sincerely hope that Lord Southborough's indisposition will prove to be merely temporary.

Apart from this possibility of delay, there is little to add to what we said last week regarding the Parliamentary prospects of Reform. All parties have officially blessed the general idea, but no party has committed itself to a concrete scheme, and, judging from election addresses and reports of meetings in the constituencies, the electors are not in the least disposed to complain of the omission. We hope India will not blame them for this: the fact is, we in this country are very much in the position of a practitioner who by way of experiment has taken a very large dose of his own franchise mixture; the experiment will give valuable data, but just now we are too much concerned in its immediate results on our own person to be able to think about prescriptions for sufferers everywhere.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, October 28.

Tantah was *en fête* this week in honour of the visit of the Sultan, which took place on Thursday last. His Highness proceeded from Alexandria by special train, accompanied by the Prime Minister, the other Ministers, and his suite. He was met on arrival by the Mudir and the local officials, as well as the members of the municipality and of the Provincial Council. After a visit to the tomb of Sheikh Ahmed el Bedawi, a much venerated Moslem saint, the Sultan held a reception, followed by a luncheon. He subsequently inspected the schools and invited the principal residents and officials to tea in the public gardens, after which he returned to Ramleh. This is the first visit the Sultan has paid to any provincial town since his accession, and it is expected that on his return to the capital early next month he will make a round of the principal towns in the provinces.

The British Residency.

The last garden party of the Alexandria season was given by the High Commissioner and Lady Wingate on Wednesday last. It was one of the best attended that have taken place since the Residency took up its abode for the summer at the Villa Zervudachi, and the gardens presented a most picturesque appearance until late in the afternoon. The guests included the Sultania Princes Kamal Eddine, Youssef Kamal, and Omar Tussun, the Ministers, the Diplomatic Corps, the senior Government officials, officers of the Army and Navy, and the leading residents and notables. Just before tea-time his Highness the Sultan arrived and was greeted by the strains of the Sultania anthem. He was received by Sir Reginald Wingate, with whom he inspected the guard of honour drawn up at the entrance, and then proceeded into the villa, where he was welcomed by Lady Wingate and partook of tea, during which he received some of the more prominent guests.

"Our Day" in Egypt and the Sudan.

"Our Day," which was fixed for Thursday last, October 24, has been an immense success. The provisional total for Egypt and the Sudan has attained the figure of £st.200,000, of which £st.180,000 was contributed by Egypt alone. All the subscriptions have not been recorded at the head office of the Joint Committee in Alexandria, and contributions are still flowing in, so that the final total will be well in excess of the figure given above. As it stands, the present subscription to "Our Day" constitutes a record for this country. In 1917 the amount subscribed was £st.150,000, which itself was in excess of the previous years; this year's amount brings the total subscribed by Egypt and the Sudan to over £st.700,000, apart from individual subscriptions either sent in direct to the society in London or contributed at other periods of the year. The 1918 figure is all the more remarkable in that no special effort, such as street collecting or boxes at certain frequented centres, was made; and it only shows what the general public thinks of the great work which the joint societies have been doing. Prominent among the subscribers are Egyptians from the provinces, who by their subscriptions have demonstrated not only their loyalty to Great Britain and their recognition of the work of the societies, but also that they fully appreciate what is being done by them to alleviate the lot of members of the Egyptain auxiliary corps, who from time to time become inmates of the various hospitals created for them.

For Turkish Prisoners.

As may have been gathered from references in previous letters, a great many of the Turkish prisoners have had to be admitted to hospital for treatment. All that it is possible to do for them is being done, and as they are badly in need of medical necessaries the High Commissioner, using the discretionary powers vested in him as president in Egypt of the British Red Cross and Order of St. John, has sent £st.500 to the General Commanding the British Forces in Egypt for expenditure on

Digitized by Google

whatever is required in this respect by the Turkish prisoners under his charge.

Spurious Bank Notes.

Two or three spurious bank notes have lately been passed into circulation. They are hand-drawn and hand-coloured, and are strangely reminiscent of the famous bank fraud in London by D. S. Windle; for in the place of the signature of the Governor of the National Bank of Egypt, Mr. F. T. Rowlatt, there appears the signature, "D. Spoof." This, coupled with the fact that the notes are of the value only of P.T.50 each, would seem to point to their being made as a joke; for it is scarcely conceivable that anyone would otherwise spend so much time as must have been required for the hand-work on counterfeiting such a small value note. The authorities are much amused, and attach little importance to this matter.

A Sultania Rescript.

A most unusual rescript was addressed by the Sultan to the President of the Council, Rushdi Pasha, this week. It announced that his Highness, in view of information supplied to him by the Ministry of Justice, had decided to deprive Prince Mohammed Ali Hussein of the title and privileges of Prince. The degraded Prince is the great grandson of Mohammed Ali Pasha, and it is understood that the motives underlying the decision to deprive him of his title and privileges are unconnected with the present war, and have no political significance.

The Wheat Position.

There is still little improvement in the wheat situation in the towns. The Government has had to continue to supply part of the requirements of Alexandria from its own reserve, and distribution there has to be done under control in order to alleviate the distress among the lower classes. In Cairo, where, owing to an unfortunate misunderstanding the other day, eleven women, four children, and one policeman were crushed to death out at Rod-el-Farag in a rush for wheat, the Cereals Bureau has been opened, and there is reason to hope that the distribution in the capital will henceforward be under complete control.

ROUMANIAN NOTES.

(From a Correspondent.)

Preparing for the Future.

After a few days of rejoicing, of thankful realisation of the miracle of deliverance, the Roumanians have had again to turn to stern facts, as represented by the work of reconstruction. Grave problems await solution, and the fate of the nation depends upon decisions being taken promptly and rightly, and work being done without any delay. The masses, the peasants, kept in a state of quiescence by the 170,000 Germans of von Mackensen, are beginning to stir; and on the skill shown in directing this immense energy into the right channels depends the future of the Roumanian race.

The German occupation, which lasted nearly two years, has created immense difficulties, by stimulating, and indeed creating, social discontent, and by undermining the foundation on which the edifice of the Roumanian State rested. Bolshevism was professed by the placid German official quite as much as, if not more than, by the Russian agents. The new Government has, therefore, to face a most difficult situation. The old political parties have almost disappeared, remembered only by a few people who can hardly maintain their political existence. The rapid movement of events is bringing new men into the main current of political life; and even in the Parliament elected under the German occupation there were some great surprises: some peasant deputies astonished the Chamber by their speeches and their practical suggestions. Last year a Roumanian Labour Party was constituted—quite distinct from the old Socialist Party. The leader of this new political group is Dr. J. Cantacuzino, Professor of Medicine at Bucharest University, and one of the most prominent democrats in the country.

The union of Roumania, Bessarabia, Bukovina, and Transylvania creates a new series of problems, and the leaders of the Roumanians in the last-named three provinces demand certain conditions from the Roumanians of the Old Kingdom. The Bessarabians hastened the introduction of franchise reforms in their own province as well as in Roumania. The Transylvanians are in closer contact with the democratic elements, the great masses of the people, and with the "intellectuals" than with the old *boyars*, the very small political caste surviving from the old days of Roumania.

Undoing German Handiwork.

With von Mackensen and his soldiers have gone all the works of the Roumanian Parliament elected under the German occupation. Two decrees abolished the laws that the Germans had caused to be passed. On November 19 King Ferdinand signed a decree, prepared by the new Government, annulling all the Acts of the Parliament that supported the Government of M. Marghiloman, on the ground that the elections were manipulated by the Germans. It is, of course, notorious that some of the candidates were imposed on the people by von Mackensen. All the draconian laws regarding forced labour, confiscation of Allied properties, forced leasing of land, oilfields, harbours, wharves, the amnestying of traitors, criminals and German spies have been annulled. Unfortunately, the German agents and spies left the country before von Mackensen!

The second decree referred to concerned the new elections, which will be held in January. The new Parliament is to be elected on the basis of the reformed franchise, which is to extend over Old Roumania as well as over Bessarabia and the Dobruja. These two decrees are of great importance, for they mark the beginning of a new and free life, based on solid democratic principles.

The Roumanians of Transylvania.

The Magyar newspaper *Vilag* of November 14 reports the discussion which took place between the Roumanian National Council and the representatives of the Magyars. The Roumanians, represented by Goldish, St. Pop, Maniu, Vlad and Lazar, as a local Government, asked for complete freedom and the withdrawal of the Magyar administration and army from Transylvania. Their declaration runs:—"We must now apply President Wilson's principle. Nations speaking the same language must unite themselves. Henceforward there can be no question of any one people being oppressed by another. Transylvania and all the Roumanian districts in Austria-Hungary should separate themselves from the Dual Monarchy. Roumanians are in a majority there, and the territories concerned will naturally join Roumania. The Magyars, Szekels, and Saxons who inhabit Transylvania and form district minorities of the population will have the benefit of complete local self-government. The future Hungarian State will be able to carry on its world-wide trade through the ports of Trieste and Fiume, and, later on, through Constanza also, and will be able to develop all the more tranquilly from the fact that it will no longer possess enemies. In the future the neighbours may become partners. Hungary will have been diminished, but she will be the real Hungary."

The representatives of the Hungarian Government refused to accept the proposals of the Roumanians. The Roumanian Army did not pass the frontier until it was absolutely necessary to do so. In Arad alone thirty leaders of the Roumanians were shot. *Vilag* adds that later on there were found proofs that the poor Roumanians were not guilty, and the Magyar authorities made their excuses! But it was too late.

NEW ROUMANIAN CABINET.

Reuter's Paris correspondent reports (Dec. 3):—A telegram from Jassy of yesterday's date states that the Government has been constituted as follows:—

General Coanda	Premier and Foreign Affairs
General Vaitoiano	Interior
General Grigoresco	War
M. Pierre Poni	Public Instruction
M. Aughel Saligny	Public Works
M. Buzdugan	Justice
M. Cotesco	Commerce
M. Inouletz, M. Ciucureano	Ministers without portfolio for Bessarabia

SMYRNA NOTES.

(From Our Own Correspondent.)

Smyrna, November 6.

The first contingent of released military prisoners, with a few civilians, left here on November 1 for England, by way of Alexandria. A further contingent is now impatiently awaiting another boat.

From all parts of the interior Smyrna has been receiving these unfortunates, most of whom have passed through hard times during their term of imprisonment. They have suffered from insufficient and bad food, lack of proper attention for their wounds and ailments, and general ill-treatment. A large proportion of them have succumbed on the way.

The work of clearing the mines outside the Gulf of Smyrna is progressing, and to-day H. M. Monitor 29 entered the port with the staff of the Eastern Telgraph Company on board.

The treatment of civilian prisoners here has been lenient in so far as their personal liberty has been concerned. But it is necessary to add that they have been exploited unmercifully—and the point should not be forgotten. Those who have held power here—and their satellites—have a big debt to pay; and it is the heartfelt wish of all honest men that it shall be paid in full. Markets have been "rigged" in every conceivable way and on all possible occasions, and commandeering has been of an extraordinarily "elastic" character—even for Turkey! Various items, from the Smyrna Quay Company's premises down to a consignment of ladies' corsets, might be instanced as examples of "military requirements" as conceived by the clique which has now, fortunately, ceased to exercise power.

THE GORDON MEMORIAL COLLEGE.

The Report of the Gordon Memorial College for the year 1917 tells, as usual, an encouraging tale of good work done. As Sir Reginald Wingate writes in his covering letter accompanying the Report, "it shows that, in spite of adverse conditions and lack of *personnel* due to other and more urgent calls, the work of the College, educational and research, is proceeding satisfactorily." Sir Reginald refers to the Duke of Connaught's visit, and his Royal Highness keen appreciation of the work that is being carried out by the College authorities." His letter closes with a brief reference to "the great pleasure and sense of privilege" which the notification of his election last October to be President of the College afforded him. That election, it may be added, on the authority of the Principal of the College (Mr. John Crowfoot, M.A.) has "given the greatest satisfaction to all who have been privileged to serve under his Excellency here." Sir Reginald Wingate will, we are sure, prove a worthy successor to Lord Cromer and Lord Kitchener, the former Presidents.

For the proposed Medical School at Khartoum as a Sudan Memorial to Lord Kitchener £9,000 has already been collected in the Sudan, chiefly subscribed by natives. A liberal endowment for future students has been provided by a gift of land and house property by two native donors—Ahmed Hashim el Baghdadi, a retired Omdurman merchant, and Sheikh Hassan Shereef.

In his notes on the educational work Mr. Crowfoot reports that, as in 1916, there have been no changes in the senior staff, no new arrivals, and that "work which should be distributed between two house masters has fallen again . . . entirely on the shoulders of Mr. Field." He then refers to an innovation:—

"The one new feature which deserves special mention is the introduction of the Boy Scouts movement into the Gordon College. A troop was started some time ago in Atbara School, but hitherto we have been unable to find an experienced Scout master who could train boys in the Gordon College. Last year, however, Mr. Macdiarmid, of the Y.M.C.A., expressed his readiness to make the experiment, and his offer of assistance was gladly accepted. The movement is still too new for us to pronounce a final verdict upon its suitability to our conditions, but there is no doubt of its popularity, with the boys; and Mr. Macdiarmid and his chief assistant, Mr. Clark, of the Public Works Department, are more than satisfied with the progress already made."

The numbers of students at the beginning of 1917 are given as follows:—Upper school, 74; Kadis, 21; Arifs, 36; primary school, 301; and workshops, 118.

In the upper school the class work of the past year has been quite satisfactory, and Mr. Simpson reports that "the examination results show that the average level of attainment throughout the school is much higher than it was when the school was first opened in 1905, or even as recently as five years ago." Approximately the same number of boys left to take up posts in the Government service as last year.

As to boarders, we read:—"The total number of boarders from the different sections . . . was 235, and the number could easily have been increased if there had been more accommodation. As it is, we are only able to accommodate this number by hiring houses in the neighbourhood, and we have long outgrown the capacity of our existing kitchens, offices, and so forth. Further building has become an absolute necessity, and the Government has placed at our disposal a first instalment towards meeting the necessary expenditure." The bill of health is a satisfactory one, and games and sports appear to be "going strong," especially football.

Can you offer us

consignments of the . . . .
NATURAL PRODUCTS
of your Country? . . . . .

COCONUT OIL
PALM OIL
OIL NUTS
OIL SEEDS
GUMS
FIBRES
COPRA

These are of great interest to us, and we should like to know what you can offer us in this way. All Natural Products interest us, and we shall be glad to negotiate for large or small shipments.

We are prepared to finance consignments when necessary.

BULGARIA AND HER VICTIMS.

TO THE EDITOR OF "THE NEAR EAST."

SIR,—A notice has appeared in the Press to the effect that it is intended to open a Pan-Hellenic List of Subscriptions for the purpose of alleviating the distress prevailing in Eastern Macedonia as a consequence of Bulgarian devastations. We, the undersigned, Hellenes and British citizens of Hellenic origin, think there is no reason why Bulgaria should not indemnify her victims, and protest against any other people but the Bulgarians being invited to make good any damage, direct or indirect, caused by Bulgarians. We take it for granted that in the case of Germany it is the resolve of the Allied Governments to exact retribution from her for the devastations inflicted upon Belgium and France, and to call for the punishment of all persons responsible for those devastations, and it is clearly fair that Bulgaria should be similarly treated for her misdeeds in Macedonia.

We are Sir, yours faithfully,

THE FUTURE OF CONSTANTINOPLE.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—You have opportunely opened your columns to a discussion of the future of Constantinople and the Dardanelles; and it is certain that not even the fortification of the Panama Canal laughs in the face of a projected League of Nations more contemptuously than this problem of the bridge between Europe and Asia and Africa. Apart from Panama, here, at the Golden Horn, if anywhere, we have an opportunity of progressing constructionally towards the universal ideal of a League of Nations. I ask for space to offer a concrete suggestion. I venture to preface it by asserting that after a baptism of blood such as has been forced on the Grand Alliance, the old-time bogey of Internationalization will prove to be no bogey at all, if dressed in the robes of Righteousness. It is proposed:—

1. The Viceroyalty of the Dardanelles, to be held for three years, with residence at Constantinople, by the nominee, in rotation, of the Governments of France, Britain, Italy, Greece, Belgium, Roumania and the United States.

2. A Viceregal Council of eight members, of which France provides two portfolios, Finance and Justice, and the other Powers one each:—Britain, Interior and Police; Italy, Public Works and Railways; Greece, Agriculture and Shipping; Belgium, Posts and Telegraphs; Roumania, Customs; the United States, Education.

3. A Legislative Council, of some sixty lay members, elected by secret ballot, with power to offer advice to the Viceroy and to initiate reforms, but without power to obstruct financial decisions of the Viceregal Council.

4. No expenditure and no taxation to be valid unless sanctioned by five members of the Viceregal Council, whereupon the assent of the Viceroy becomes obligatory.

5. Foreign diplomatic status at the Viceregal Court, other than that of Councillor, to be limited to that of Consul.

6. The Viceroyalty to ignore and tolerate all creeds.

7. The salary of the Viceroy to be £12,000 and of a Councillor £8,000.

8. Civil Service appointments carrying salaries superior to 3,000 francs per annum to be countersigned by five Councillors.

9. Vice-Councillors to be opted locally by the Viceregal Council, at a salary of £2,000 per annum.

10. Prefectures on the French model.

11. Official languages, French, English, Greek and Turkish—the latter to be reconsidered in the third triennial with a view to its abolition.

12. Religious institutions to be self-supporting, and certain Christian churches to revert to the care of their religious foundations.

13. The Judiciary to be at the nomination of the President of the French Republic.

14. The constitution of the Viceroyalty to be reconsidered at a Council of the Sovereign States in the year 1938.

I dare not tax your space with arguments for these fourteen points. I would venture to add only three riders. First—there is no solution but that the intruding Ottoman must go East, bag and baggage; secondly—the amount of and the manner of meeting the Ottoman Debt is a separate matter for the Peace Conference; thirdly—in order to acquaint mankind with the decision of the Victorious Alliance to keep the world's peace and to trust Democracy, I would propose that an offer of the first Viceroyalty be made to Marshal Foch, and that the present Prime Minister of France be delegated to explain to Islam that the claim of Christendom to Constantinople is demonstrably compatible with universal brotherhood.—I am, etc.,

JANUS.

"AN ALBANIAN PROTEST."

TO THE EDITOR OF "THE NEAR EAST."

Sir,—I feel obliged to write again in reply to the letter of Major Paget.

I do not propose to go into discussions here of the craniological and ethnological aspects of the Epirot question, not because I have no arguments to adduce, but because all arguments of this kind are in themselves and by themselves inconclusive. The true test of nationality is the will of a given population to belong to a given nationality. "Avoir fait des grandes choses ensemble, vouloir en faire encore, voila ce qui constitue une nation," said Renan. That is why the land of Markos Botzaris and Spyromilios, of Souli and Chimarra, is Greek. Mehmed Bey Konitza is the London representative of the Albanian Society, "Vatra," in America. This society has 1,600 members—no more; their organ was also called *Vatra*, and if Major Paget read it at all, he will be able to say whether it struck him as pro-German and pro-Turkish before America entered the war, or in favour of the return of the notorious Prince William of Wied.

Major Paget was no doubt advised to get letters of introduction to Moslem Beys when he went shooting in Epirus, because these gentlemen would be better able to see that he was not molested by the local brigands, and could also offer him a more lavish hospitality.

I regret that Major Paget should know nothing of the authorities I quoted. It shows that he has never troubled to look at the most serious books on the question. If I mentioned Prince Lichnowsky, I did so because this diplomatist was one of those whose business it was to do all they could to secure the annexation of Epirus by Albania, though we now know what their inner convictions were. The same applies with even greater force to the Marchese di San Giuliano.

The telegrams of an American correspondent, writing under Italian inspiration, are not necessarily to be taken for gospel. I will leave your readers to decide if the figure "150,000 Albanian families" carries conviction to them.

As to my qualifications for speaking about Epirus, I would ask Major Paget to put the question to Mehmed Bey Konitza himself, or, still better, to Ismail Kemal Bey, whom I know very well. Regarding the danger of Epirus being Hellenised, I can say simply that this country is too Hellenic to need to be Hellenised.—I am, etc.,

CHR. KESSARY.

R.I.M. COMMISSIONS.

The King has been pleased, by and with the advice of his Privy Council, to approve the grant of commissions to officers of the Royal Indian Marine. The commissions will run in the name of the Secretary of State for India in Council, and will bear his Majesty's Royal Sign Manual. They will be granted to temporary as well as to permanent officers of the Service.

NEAR EAST BOOKSHELF.

A NOVEL OF EGYPT.*

Readers who know Egypt, especially those who have felt the charm of its desert spaces, will certainly give this book a hearty welcome; so will those to whom the occult and the supernatural make appeal. Miss Lorimer introduces her hero and heroine to one another in an excavator's camp, situated in a desert valley in which many kings and queens of Ancient Egypt had their tombs. And here one of those ancient royalties—the most interesting of them all, Akenhaten (or Akhnaton, as Miss Lorimer calls him), "the heretic Pharaoh," or his spirit, appears to the heroine. Many other strangs things happen in the valley, and later in the desert, whither the hero goes off on a mission that has proved a little puzzling to one reader. Then the scene shifts to London, and the time to that of the Great War, and other things happen of a more normal kind—or, at any rate, of a kind more natural in war days. But the spirit of Akhnaton still takes an amiable interest in the heroine and her hero; and, apart from one example of "spirit letter writing," throws the lovers—temporarily estranged—together, so that they "make it up" quite swiftly. At least, one supposes it is the ancient Pharaoh who thus favours the interesting and attractive couple; otherwise the "long arm" must be regarded as long indeed! The ending is cleverly arranged.

We like Miss Lorimer's heroine, Margaret, very much; and her brother, Freddy Lampton, the Egyptologist, still better. Mike, the hero, we find less attractive. "Most people," he remarks once, "think me a fool," and when he adds very soon: "I want to teach people how to live, and I don't know how to do it myself," we are inclined to agree with the majority, for once. The second "Mike" and his wife seem to us dangerously pleased with themselves. But Miss Lorimer has presented us with two positively fascinating characters, Moslem "Saints" both of them; and Freddy Lampton is refreshingly sensible, although he did allow such things as a "carelessly-tied necktie" to worry him—before the War. The sketches of native character and of Egyptian scenery are deftly done, as Miss Lorimer knows well how to do them. The description of the actual work of excavating reads rather oddly here and there to one who has seen much of such work; but there are "diggers" and "diggers," and Miss Lorimer may, for aught we know, be giving us a faithful picture of some actual excavator's methods.

The story is well told, and the volume is one to be remembered by anyone who wishes to give books as Christmas presents.

A PRE-ARMISTICE BOOK.†

Among Mr. Schreiner's acquaintances in Vienna was a very great lady. Her petrol was commandeered and her carriage horses seized, and, deprived by war of motors and brougham, she was compelled to ride in tramcars. She objected, naturally enough, to the overcrowding and the society of the great unwashed, but her nose told her that the suggestive odours were not entirely due to lack of soap. Mr. Schreiner enlightened her as to the cause. "I take it that you refer to the odour that comes from underfed bodies. . . . It reminded you, perhaps, of the faint odour of a cadaver far off? The waste of tissue due to malnutrition is a process not wholly dissimilar to the dissolution which sets in at death."

Such was the effect of war in the Austrian capital. In Germany things were bad, but they were not quite so bad; in the country districts everywhere in the Central Empires they were, of course, a good deal better. In large parts of Turkey apparently they were even worse; in the first year of the war the author saw enough corn wasted, owing to inefficiency and lack of transport, to feed the whole of the Central Empires for two years. Possibly if Germany had been able to organise and develop the natural resources of Turkey sufficiently, she would have gone a great way towards winning the war; but Mr. Schreiner has no belief in the boasted German faculty of organisation. Its natural basis is the extreme docility and love of order in the German people; but he gives details of a sufficient number of gross blunders and oversights on the part of the authorities to show that the faculty for organisation is not up to the standard of the advertisements.

In Turkey the difficulties were aggravated by other causes. The Turks have none of the German love of order, and still less of their industry; the rumours of bad feeling between Turk and German, to which Mr. Einstein bore witness, are authenticated, as it were, by the names and addresses of those who disagreed; and the Turks are fully determined after the war not to allow themselves to be exploited by Berlin. The innocent reader may ask in that case why the Turks joined the Central Powers at all? Mr. Schreiner gives the answer as it was given to him by Said Halim Pasha, then Grand Vizier. "The hour of Turkey was come," he said. "The Entente Government offered us guarantees that for thirty years Ottoman territory would be held inviolate by them. What do they amount to? We have had so many guarantees. When Turkey gets a guarantee it is merely a sign that there is one more pledge to be broken. We are through with guarantees. We joined the Germans because they offered none."

There could be no more illuminating example of the bankruptcy of international law. But the Turkish distrust of guarantees was probably inspired by German diplomacy, which has no use for pledges. Enver Pasha's view was more elementary. "This is Turkey's last chance. Better to go to hell with Germans than take more favours from the Entente." Well, they have gone. . . .

Lack of space forbids us to follow Mr. Schreiner's careful summary of the steady deterioration of the economic situation of Germany and Austria; it is likely to have a permanent value as a study of war emergency measures. But curiously enough one of the most important points of all he degrades to a footnote, which might escape the attention even of the most conscientious reviewer. Yet this sentence deserves the close attention of every student of war finance throughout the world: "We may rest assured that the German public will not continue to pay 5 per cent. on the war loans. *I may state that I have this information from prominent German and Austro-Hungarian bankers.*" A reduction of the interest will be made to 4 per cent., "no matter what happens," and the repudiation of half the war debt is being discussed. This chapter on the war loans of Germany, while by no means covering the whole ground, is deserving of very careful study.

NEW SERBIAN CABINET.

AMSTERDAM, Dec. 2.

A Belgrade telegram received via Vienna states that the new Serbian Cabinet is constituted as follows:—

M. Pashitch	PRIME MINISTER
M. Nazarevitch	FINANCE
M. Trifkovitch	INTERIOR
M. Nunovitch	PUBLIC WORKS
Dr. Jankovitch	WAR AND TRANSITIONAL ECONOMICS
M. Juritchitch	JUSTICE

All the Serbian parties are represented, except the Liberals and the Socialists.—*Reuter.*

PRISONERS IN TURKEY.

The following resolution, which has been passed by the Executive Committee of the Prisoners in Turkey Committee, has been circulated to the War Cabinet:—

The Executive Committee of the Prisoners in Turkey Committee begs respectfully to remind the War Cabinet of the enormous mortality among British and Indian prisoners in Turkey, especially that which occurred amongst the rank and file of the Kut garrison during their enforced march across the desert—without transport or medical arrangements of any sort—and during the immediately succeeding months when they were compelled to work on the railway, with entirely inadequate rations.

When the true facts of the case are known from the evidence of the prisoners on their return home the Committee realises that public opinion will demand some substantial redress (which, however, it may be then too late to obtain), and, therefore, urges that—

1. In the terms of peace now being discussed an indemnity should be demanded for and paid to the families of every man whose death was caused by the neglect of the Turks.
2. The guilty individuals be punished.

*"There was a King in Egypt." By Norah Lorimer. (Stanley Paul. 6s.)

PERSONAL AND GENERAL.

CALENDAR OF THE WEEK

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian (New Style).	Julian (Old Style).	—	Moslem.	Jewish.
1918. December	1918. November.		1337. Rabia I.	5679. Tebet.
6	23	Friday	2	3
7	24	Saturday.....	3	4
8	25	Sunday	4	5
9	26	Monday	5	6
10	27	Tuesday.....	6	7
11	28	Wednesday	7	8
12	29	Thursday	8	9

Sir George and the Hon. Lady Lloyd have left England for Bombay.

Queen Milena of Montenegro and her daughters arrived in Paris on November 27 from Bordeaux.

Lieutenant-Colonel N. Arion, Military Attaché to the Roumanian Legation, left London for Paris last week.

Mr. C. S. Wilson, Councillor of the American Embassy at Madrid, has been appointed American Chargé d'Affaires at Sofia.

Dr. McInnes, Bishop in Jerusalem, has left England for Palestine, having completed the business that necessitated his absence from his diocese.

M. Boeresco, the Roumanian Chargé d'Affaires, entertained at luncheon last Friday General Greenly, Major Gooden, and other British officers who are going out to Roumania.

An engagement is announced between Captain Harold Finlinson, Essex Regiment (Special Reserve), of Wellington, India, and Jessie, daughter of Mr. and Mrs. Arnold, of Park Lane, Salisbury.

M. Grouitch, Serbian Minister in Washington, and formerly Minister to the Court of St. James's, and Mme. Grouitch have arrived at the Hyde Park Hotel, where they will be for a few days before proceeding to the United States.

Sir A. Hamilton Grant, head of the Foreign and Political Department of the Government of India, is on his way to England to assist the Political Department of the India Office in London in connection with the forthcoming Peace negotiations.

Assad Khan, Persian Minister in Petrograd, has been imprisoned, and it is thought that the Bolshevists intend to retain him until the Soviet representative in Turkestan, who carried on violent propaganda in Persia, is released by the British.

On November 26, at Holy Trinity Church, Marylebone, the marriage was solemnised of Captain Ronald Wilkinson, Indian Army, to Doris Marguerite, only daughter of Dr. and Mrs. J. Wallis B. Mason, of 1, Osnaburgh Terrace, Regent's Park, N.W.

The marriage arranged between Mr. H. C. Bennett, Imperial Forest Service, and Barré, only child of the late C. D. J. Carmichael, C.I.E., D.I.G. of Police, and Mrs. Carmichael, of Thornford, Sherborne, will take place early in the year in India.

In a Convocation held at Oxford on November 28 the Vice-Chancellor, the President of Trinity, presiding, the degree of D.D. *honoris causa* was conferred upon his Beatitude Meletius Metaxakis, Metropolitan of Athens and President of the Holy Synod of Greece.

At the special request of the Queen, several thousand garments have been sent by Queen Mary's Needlework Guild to the Serbian Relief Fund, by whom nearly half a million garments are being sent to Serbia this week, accompanied by skilled workers, who will organise their distribution.

The King has granted permission to Rear-Admiral C. F. Lambert and to Major (temp. Lieut.-Colonel) W. L. Huntingford, R.M.A., to wear the Insignia of a Grand Commander and of an Officer respectively of the Order of the Redeemer, conferred on them by the King of the Hellenes.

The engagement is announced between Captain T. C. Twining, Grenadier Guards, son of Mr. H. H. Twining and Mrs. Twining, 43, Ennismore Gardens, and Eileen, only daughter of Major-General Anderson, C.B., D.D.M.S., Southern Command, India, and Mrs. Anderson, Queen's Gardens, Poona.

A marriage has been arranged, and will shortly take place, between Henry Carslake Brooke Johnson, temporary Captain Army Service Corps, of Lawas, Blackheath Park, S.E., second son of the late Captain W. F. Johnson, R.N., and Phyllis Loveday, second daughter of Lieutenant-Colonel F. Wynch, Indian Army, and Mrs. Wynch, Boarden Barn, Exmouth.

The engagement is announced between Major R. Hoskyn, R.G.A., elder son of the late Major C. R. Hoskyn, R.E., B.B. and C.I. Railway, Bombay, and of Mrs. Hoskyn, 6, Colville Gardens, to Bessy Margaret Fortesque Wells, eldest daughter of the late Colonel Henry Lake Wells, C.I.E., R.E., and Mrs. Lake Wells, of 17, Drayton Court.

The marriage arranged between Captain Arthur Bernard Hodgson, A.S.C., eldest son of the Bishop of St. Edmundsbury and Ipswich, and Mrs. Hodgson, Parklands, Ipswich, and Ruby Annette St. John, only daughter of Mrs. Alice Warner, formerly of Assam, India, will take place at the Chapel Royal, Savoy, on Thursday, December 19, at 11. There will be no reception, but all friends will be welcome at the Chapel.

Among recent gifts to *The Times* Fund on behalf of the British Red Cross Society and the Order of St. John is one of £2,784, which is made through her Majesty the Queen. This is the proceeds of the sale of a Ceylon gem neckchain. The chain contained thirty-five choice Ceylon gems, and the purchase price was sent to Queen Mary by the Governor of Ceylon to be devoted to such war relief work as her Majesty might select. The Queen decided to give the money to the Red Cross.

Professor Masaryk, President of the Czecho-Slovak Republic, arrived in London last Friday from New York. He was met at Euston by Mr. Synge, of the Foreign Office, who represented Mr. Balfour, Major-General Feilding, Commanding the London District, and Mr. Osuski, Czecho-Slovak Chargé d'Affaires. Among others present were Dr. Moroianu, representing the Rumane National Committee of Transylvania, Principal Burrows and members of the staff of King's College, Mr. Wickham Steed, Dr. R. W. Seton-Watson, and Mr. Nosek, of the Czecho-Slovak Legation.

Our Malta correspondent reports:—

Another gallant young Maltese has paid the supreme sacrifice on the field of honour whilst serving in a British regiment. The person concerned is Lce-Corpl. Fortunate Borda, son of Mr. George Borda, merchant. The deceased, who had been educated at St. Aloysius' College, Malta, and later at Edinburgh University, had joined the Scottish Borderers as a volunteer from the latter University some two years ago. He saw much active service, and was killed in action in France.

Captain W. R. Gatt, Royal Malta Artillery, has arrived here on leave from the Egyptian Expeditionary Force after an absence of three years. Captain Gatt was one of the first among the Maltese officers to volunteer for active service after the outbreak of hostilities, and has done very good work with the Egyptian Expeditionary Force.

On Tuesday afternoon the Archbishop of Athens received the members of the Greek community in London at the Greek Legation, Knightsbridge.

Major-General Henry Wylie, C.S.I., of Farnham Common, Bucks, Resident in Nepal 1891-1900, and Agent to the Governor-General of India for Baluchistan, left property valued at £12,539.

BEYROUT AND THE LEBANON

Amidst all the tragedies of four years' war conditions THE LEBANON HOSPITAL (Mental) has "carried on" under its British Director, Dr. Watson Smith, who now writes: "All is comparatively well, but the Hospital has suffered greatly in repairs, linen, etc., and we have been living in semi-starvation and exorbitant prices."

Funds are needed immediately for relief and maintenance.

Donations will be gratefully acknowledged and a report sent by the Gen. Sec., Miss A. M. GOOCH, 35, Queen Victoria St., E.C.4

MONTENEGRIN RED CROSS AND RELIEF FUND,

11, VICTORIA STREET, S.W.

Regt. Section 1, War Charities, 1916.

A DEVASTATED COUNTRY—MONTENEGRO,

The Smallest and Poorest of our Allies.

Thousands of Starving Women and Children need Food and Medicaments.

9,000 FAMISHED MONTENEGRINS FROM CAMPS OF CENTRAL EMPIRES MUST BE FED.

Donations will be much appreciated and gratefully acknowledged by the Hon. Treasurer, LADY ROPER PARKINGTON, Montenegrin Consulate, 21, Mincing Lane, London, E.C.3.

Field-Marshal William Gustavus Nicholson, 1st Baron Nicholson, G.C.B., R.E., who died on September 1, son of Mr. William Nicholson, of Roundhay Park, Leeds, left estate of the value of £91,151, the net personalty being £90,434.

The Duke of Connaught, Grand Master of the Masonic Knights Templar, with the members of the Order, will be present at a Thanksgiving Service in the Temple Church on Thursday, December 12, to commemorate the freedom of the Holy Land from the dominion of the Ottoman Empire.

Personal property of the value of £1,522,011 is left by Mr. Duncan Mackinnon, formerly chairman of the British India Steam Navigation Company and a director of Messrs. Gray, Dawes and Co., Great Winchester Street, E.C., who died on February 27, aged 78. Lord Inchcape is one of the executors.

Under the auspices of the Persia Society, on Wednesday, December 11, Lieutenant-Colonel G. S. F. Napier will read a paper, illustrated by lantern slides, on Western Persia, describing the road from Baghdad to Baku recently traversed by our troops. The lecture will be given at 6 p.m. at the lecture theatre of the Civil Service Committee, 6, Burlington Gardens, W. Applications for tickets should be made to the Hon. Secretary, Mr. G. J. Hogg, at 22, Albemarle Street, W.1, or at 13, Paternoster Row.

An Indian auxiliary of the Mission to Lepers which has been working in India for forty-four years has been formed, with Lady Chelmsford as patroness and Lady Munro, Lady Willingdon, Lady Pentland, and Lady Ronaldshay as vice-presidents. An influential committee has been formed in Simla, and the following are the members:—Lady Munro (chairman), Lady Hill, Lady Barnes, Lady Hudson, Sir W. Vincent, Surgeon-General Edwards, Colonel H. Austen Smith, Raja Sir Harnam Singh, Nawab Zulfikar Khan, Sardar Jogendra Singh, Major Norman White, Canon Wheeler, the Rev. J. Black and Mr. J. E. Woolacott.

The Grand Priory of the Order of the Hospital of St. John of Jerusalem in England is making an appeal on behalf of its Ophthalmic Hospital, long established at Jerusalem. Eye diseases are extremely prevalent in the Levant, and thousands of ophthalmic patients have been treated at the hospital, the only one of its kind in Palestine, without regard to race or creed. During hostilities the Turks used it as an ammunition store, and when they retreated from the triumphant troops of General Allenby they partly blew it up, and very seriously damaged it. Already out-patients are crowding to its doors. It is believed that many in England who feel gratitude for the liberation of the Holy Land will welcome the opportunity of making a thank-offering in response to the appeal. The sum of £50,000 is required. Subscriptions may be sent to the Right Hon. Evelyn Cecil, M.P., St. John's Gate, Clerkenwell, E.C.1.

OBITUARY.

Lieutenant-Colonel Frederick Hole, late Madras Staff Corps, died at Elm Court, Babbacombe, South Devon, on December 2, aged 79 years.

Major Thomas Morgan Bond, who died last week at a nursing home in London, aged 64, served with the Sudan Expedition in 1884-5, and was awarded the medal with clasp and the bronze star.

At Bombay, on November 23, the death occurred, from enteric, of Mr. Eustace Ferrers Nicholson, Government Solicitor and Public Prosecutor, and formerly commandant of the Bombay Volunteer Rifles.

Colonel John Henry Augustus Spyer, who died on Saturday at Banstead, Surrey, aged 67, served in the Afghan War of 1879-80 and in the Sudan Expedition in 1884-5. He was Chief National Representative of Recruiting in East Surrey.

News has just been received in this country of the death of Mr. J. M. Framji Patel, a Parsee gentleman who was well known both in England and in India as an enthusiastic cricketer. He was the author of a history of the game in India, and one of the chief movers in regard to sending a Parsee eleven to this country.

Mr. John Griffiths has died at Norton, Sherborne, aged 81. He was formerly Principal of the Bombay School of Art, being the first holder of that position, and it was largely due to his patience and care that the school survived the early days of its existence and achieved success. His work on "The Paintings at the Buddhist Cave Temples of Ajanta" is well known and esteemed, and as an artist and designer he had powers of no mean order.

Mr. Nottidge Charles Macnamara died on November 21 at Chorley Wood, aged 86. He went out to India when only 22 as a surgeon in the service of the East India Company. In 1865 he was appointed surgeon to the Ophthalmic Hospital in Calcutta, having previously distinguished himself by researches into diseases of the eye. He was largely instrumental in the building of the Mayo native hospital, Calcutta, and his works on cholera and on leprosy are regarded as of the highest value. For the past forty-four years his work had been in London. He married a daughter of the Hon. William Butterworth Bayley, Judge of the High Court of Calcutta.

NEWS IN BRIEF.

The Indian Association at Nairobi has passed a resolution asking that German East Africa should be reserved for Indian colonisation under the direct control of the Indian Government.

It is reported that opinion is growing in India that the Reforms Committees will experience difficulty in performing their task in time owing to the illness of Mr. Gillman and Lord Southborough.

The number of Indian ranks recruited during the war up to September 30 last, was 1,161,780, of which 757,747 were combatants. During the same period 219,534 British and 953,374 Indian officers and men were sent on service overseas from India; and the total Indian casualties were 101,439.

The Times Simla correspondent says:—The quinquennial report on Education dwells on the extensive part played by enemy missions in India before the war. In the Madras Presidency alone there were one college and 477 schools with 31,000 pupils wholly or partly under German management, while measures were taken to continue these educational activities by other agencies.

It is announced that in order to provide a basis for the settlement of the Armenian question, the Armenian National Delegation in Paris, under the presidency of Boghos Nubar Pasha, has proclaimed the unity and independence of the Armenian lands. The territories thus declared to be Armenian include the region of Cilicia.

The Archbishop of Canterbury presided at a public meeting at the Central Hall, Westminster, on Wednesday night, on behalf of the fund to make provision for the wants of Assyrian and Armenian refugees, some 80,000 of whom, it is computed, are homeless and starving. The Bishop of London, the Archbishop of Athens, and others spoke.

A Constantinople despatch says that the Ottoman Government has arrested 200 prominent Young Turks, among them Ferdri Bey, on his way to Odessa with a sum of £450,000 obtained in Aleppo. A telegram to the Paris *Journal* states that, at the request of the Ottoman Government, Enver Pasha, Talaat Pasha, Djemal Pasha, Nazim Pasha, and Shukri Bey, who sought refuge in Germany, have been arrested by order of the Berlin Government.

Mr. Nahum Sokolow, accompanied by his secretaries, left London last week for Paris, where he will remain until after the Peace Conference. With the approval of the British and French Governments he will open there a Zionist Bureau for the purpose of keeping the various peace delegations informed about Jewish national aspirations. Dr. C. Weizmann, head of the Zionist Commission to Palestine, will be leaving for Paris almost immediately. When the question of the future of Palestine comes up for discussion at the Peace Conference the Zionist leaders will have an opportunity of submitting before it the Jewish national claims to the country.

On Monday evening, at Sion House, Victoria Embankment, the Archbishop of Athens was presented with an address by the London clergy. It expressed the hope that the presence of the Archbishop in London would have the effect of strengthening the union between the Churches of England and Greece. The Bishop of London presided. The Archbishop, in the course of his reply, commented upon the fraternal feeling of the Anglican Church towards the Greek Church, and said he was sure that, with the assistance of the nations of the world, the Russian Church would enter upon a new development and recover its ancient glory.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO,
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

THE ONLY ENGLISH HOTELS IN ALEXANDRIA.
Proprietor: AUGUSTUS VAN MILLINGEN.

WINDSOR HOTEL
(Facing the Sea, opposite Y.M.C.A.), ALEXANDRIA.
Full Pension, P.T.50; Room, P.T.20;
Lunch, P.T.15; Dinner, P.T.20.
For long stay, apply to the Manager.

SUMMER PALACE HOTEL,
GLYMENOPOULO, RAMLEH.
This Hotel is situated near the Beach. Open all the Year.
Bathing Cabins.

FRIDAY, DECEMBER 6, 1918.

INTRIGUE IN MONTENEGRO.

The report has been spread that the Montenegrin Skupshtina has deposed King Nicholas and the Petrovitch dynasty, in order to unite Montenegro with Serbia under King Peter or the Prince-Regent, Alexander. It will be well to await confirmation of this report before credence is attached to it, for intrigue or worse has been busy of late in Montenegro. The position, however, is admittedly anomalous, and it is obvious that, if King Nicholas's Government dallies much longer in France instead of returning to Montenegro, some step such as that attributed to the Podgoritza gathering will be taken, with the binding force of a constitutional act. If, in the continued absence of their King, the Montenegrins should be constrained to repudiate him, the European stage will have lost a picturesque figure, and a harsh fate will have overtaken one of whom his country in the past has had every reason to be proud. The fortunes of the Continent are not bound up with the destiny of Montenegro, and for this reason personal sympathy may be allowed more play than would be permissible in a discussion of the affairs of a larger State. The world is awry these days; the tiny kingdom has been the sport of far mightier forces than it could muster itself, and it is hardly a matter for surprise if both sovereign and people have failed to surmount the crisis in which they found themselves involved. In his day—he is now in his seventy-eighth year—King Nicholas proved himself a born leader of men, and was in every way a prince after the heart of his hardy mountaineers. When, as the result of a chance meeting at Nice, he won the friendship of Queen Victoria, a shrewd judge of character, his position in Europe was established, and apart from the family ties which he formed through the marriages of his daughters, his personality made him a welcome guest of every Court that he visited. To his own people his relationship for the greater part of his reign was that of an Homeric chief, and if latterly the Father of the Nation contrived to be lost in the autocrat, the change was more apparent to onlookers than to the bulk of those over whom he ruled. The intrigue against the King has battened on support outside Montenegro rather than within. A few weeks ago the country was under the heel of the Austrian invader, with the King, the Government, and a section of the people in exile. Allied forces have secured its liberation, but at a moment when it was supposed that the only thought of the hapless Montenegrins would be directed towards the alleviation of the pangs of hunger, we learn of the summoning of Parliament and of the decree of deposition. The rapidity with which these developments have taken place in Montenegro must create a suspicion of their spontaneity.

Those who keep as their goal in regard to Near Eastern affairs the peace of the Peninsula are only concerned to see that no deliberate action is taken to render that peace impossible. The Montenegrins must be the arbiters of their own destiny; and if during the weary years of their subjection to Austrian tyranny they have resolved that their troubles are in large measure due to the actions of the ruling house and that the future of the country lies in its absorption by Serbia, they must bear the responsibility for taking such a step. It would seem to most people, however, that they would more effectually safeguard the country against future strife and intrigue by delaying action until it could not be argued as an excuse for possible unrest that the decision of the Skupshtina had been obtained under the threat of those who came as deliverers. Much will depend upon the numbers of the Montenegrins who range themselves behind the assembly at Podgoritza, and of those who are still loyal to the dynasty, unless, indeed, Montenegro should unwisely be held in certain quarters to have signed away already her status as an independent country, and any sympathy displayed towards the Petrovitch family be regarded as *lèse majesté* to the House of Karageorgevitch. The controversy that has raged round King Nicholas and his Government in exile will have had its echo in Montenegro. Perhaps the major portion of the trouble has turned on the failure of King Nicholas' sons to inspire the confidence which had been their father's great asset. With the actual charges brought against them during the war we are not here concerned, as these have elicited replies from those who have been attacked. But behind the charges would appear to be the personal unpopularity of the Princes, who have shown themselves to be out of touch with public opinion in Montenegro. Certainly the record of the Crown Prince, who is married to a German Princess, compares unfavourably with that of his nephew, the Serbian Crown Prince. To the minds of some of his subjects King Nicholas has allowed family affection to outrun his judgment as the head of the nation; and with the failure of the Princes to play their part in the national crisis has been associated the mediocre character of the advisers whom the King has kept around him in his exile. A stronger Government must have insisted that the Princes could prove their devotion to their country more clearly than by surrendering themselves entirely to the amenities of French or Swiss social life. As the day of liberation for Montenegro approached, their place was in the Balkans; but with a strange indifference to their own position and to the King's interests they have allowed the moment when they might have reinstated the dynasty in popular opinion to pass unutilised. King Nicholas also hesitated to exchange his comfortable exile for the hardships that might have awaited him in Montenegro, and his enemies have not been slow to profit by his mistakes.

Dynasties may rise and fall, but the people remain, and, in spite of political intrigue, the chief need of Montenegro at the present moment is probably food supplies. It is to be hoped, therefore, that the Allies will allow nothing to deter them from sending relief to the Montenegrin victims of Austrian oppression. Funds have been collected in Great Britain, and it is understood that the United States have also contributed generously. But the relief of the population requires to be organised on a large scale, and cannot be undertaken adequately without the co-operation of the Allied Governments.

AT HAIFA: A RECENT VISIT.

(From a Correspondent.)

Haifa is the only town in Northern Palestine without a place in Scripture. Its place is at the foot of Carmel and in dependence upon its sacred history. Carmel itself has never had a separate *political* importance. It is really a projection of the central range of Palestine, partly separated by softer and lower formations, that form the Shephelah of Israel, comparable to the Shephelah of Judah to the South. Carmel marches north-north-west from the Samarian hills, rising to its height not far from the sea. It looks like some land-leviathan stretched out to overlook the Mediterranean, and just south of Haifa, at the point of the northward bending hook of land that bounds the Bay of Acre, the mountain comes close to the beach. The sea-road from Kakon and Tul Keram ends in that narrow strip, an easily defended pass that renders the sea-way round Carmel perilous. Antiochus and Richard only followed it because the mountain was held. Beyond it lies Haifa, facing Acre, north-east across the length of the Bay. Acre is Akka and Ptolemais, and Haifa has usually depended on it in Government.

The road, the other day, was bad from Tul Keram; we made five punctures, and on the return journey four more and a broken spring. Columns of prisoners stretched sometimes out of sight either way on the rolling ground. I have never before seen so many troops on the march together, and for the most part the men seemed in fairly good case. There were bad exceptions, and some proved unfit for marching. Some civilian grumblers in Jerusalem ought to know that not all prisoners are brought south in lorries and fed on white bread and fresh eggs. How do they imagine seventy-nine thousand men are carried in luxury from one end of the country to the other? Those who saw it on its various routes, will not soon forget that captured army, a larger body of soldiers than in the old days we had ever seen together in England.

Carmel slopes from the central range of Palestine north-north-west to the sea; and the coast runs, as the Sunday yawning schoolboy knows too well, almost straight north-north-east. It follows that as you pass from Sharon upwards the low ground narrows almost regularly towards a point and the narrow beach-passage already spoken of. The Crusaders' names, Les Detroits and Patra Incisa, do not seem to be given to that passage itself, but, probably because the military character of the whole plain is determined by its northern issue, to a point about eight miles south on the road, where there must be three miles between sea and mountain.

"Les Detroits" was near Athlit (Le Chateau des Pelerins), where there is now a Jewish Colony. Lower hills of softer formation intervene between Carmel and the central range, and it is by one of the various passes in these that conquerors must reach Esdraelon, and, as Napoleon lays down, not by our sea-road "*qui longe la mer arrive au détroit de Haifa, passage difficile a forcer s'il était défendu.*" He himself only followed this road on his retreat. Going up, he went past Subbarin to the plain at Tel Keiman, as some of our forces did the other day. He took the left, most westerly, of the routes east of Carmel because he was for Acre.

We came into Haifa walking, the car going slowly on a flat rim, and so probably missed endless points of historical importance. But Haifa itself makes a great impression. It is a lovely place and not a bad town; Mediterranean first, Palestinian afterwards; almost Italian in character. The Franciscan cloister and other buildings show the jolly Tuscan arch coming straight on to the capitals, with nothing to represent the architrave. The population, which seemed cheerful enough, is less oriental than levantine, and the very few men in Arab dress are refugees waiting to get south. The situation, with the great peopled mountain behind and the long blue bay in front, bordered with palms and mulberry groves, is so glorious, and so plainly asks for development into a watering-place, that one trembles for its future when our people discover those charms and how near it is to places of supreme interest. To be able to sleep on Carmel, the mount Elijah sought as already a sanctuary of ancient prayer, and where Christian faith and devotion have so sacred a home, and to find Nazareth and Tabor within an easy drive on what will then be good roads! The temptations will be great. I see coloured advertisements of "The Scripture Riviera." May some good power protect us!'

Within a week of the capture of the town everyone seemed very cheerful at Haifa; only puzzled by Egyptian money. They will, no doubt, soon have all the available stock to study. There were some rather nice old things to be got: good Swedish matches of the elder world and Apollinaris water, which one has not seen for four years, and rows of German beer-glasses with pewter lids. The troops were welcome enough, and kindly as usual. Some people told me they had been alarmed by the aspect of the Indian cavalry; and the Latin Patriarch, whose blessing I had the happiness to ask, is still convinced that Japan is among the Allies to whom the town has fallen, and their hardy troops quartered near by. I represented to his Grace that the men he saw were Ghurkas, but the Patriarch knew Japan and all the Orient very well from his days at propaganda. The Prelate, who is now aged, has had to endure eleven months of exile from his residence in Jerusalem, and has suffered severely from fever. His deportation was particularly odious to him because he is not an Ottoman subject nor dependent on any belligerent Power, but the representative of the Holy See alone.

In Haifa during the war, and especially since Falkenhayn's defeat determined the Turkish retreat from Southern Palestine, the interests and work of the many religious houses and missions have been left in very few hands. There seem to have been some few French nuns left at Nazareth and Nablus, but here in Haifa only ecclesiastics and missionaries of Ottoman or German and Austrian nationality were allowed to remain. I was glad to see the Maronite priest, Père Pierre, who has been able to carry on; the solitary Carmelite father, Père Elie (a Hungarian) who is also curé of the Latin parish; Père Kandler, the chaplain of the Sisters of St. Charles Barromeo, as well as a Catholic gentleman, M. Menni, from Baghdad; the Consul of Spain and Persia and his English wife. All these smiled at the question whether the people were pleased with the change in affairs, and they all, I think, believe that when prices are fixed by authority—as they will have been long before this page is read—food now held back will be on the market, and that there ought to be no distress. With respect to distress, one sees the most lamentable groups—not here specially, but even in Jerusalem—here and there a gaunt woman, past youth, and carrying on her shoulder or head a child plainly sick for the want of food. But these dreadful sights are not of war alone, and we shall not cease to find them when the country is prosperous. They belong really to the system—which works well enough with good and kindly people and wears so agreeable a smile when it smiles—the system of one-sided marriage and facile divorce, with its contempt of the deserted woman and the charmless widow. You may make maize a penny a pound (or whatever is a low price) and there will still be wretched women in Palestine, so long as a dyspeptic husband can put his wife on the street for a bad curry. There were not more hungry women or neglected children in Haifa than elsewhere.

These are not days for lingering on Carmel. It is too difficult to get round the country. And Carmel is one of the places where Adam Smith has been particularly happy—Sir George Adam Smith, who unites the passion of a scholar with the passion of a poet; or, say, has known how to charm with a real music the fierce activities of his learning. He is a mountaineer, and is always inspired on the heights.

"Before him who stands on Carmel nature rises in a series of great stages from sea to Alp, the Mediterranean, the long coast to North and South with its sands and plains; Esdraelon covered with wheat, Tabor, and the lower hills of Galilee with their oaks—then, over the barer peaks of upper Galilee and the haze that is above them, the clear snow of Hermon, hanging like an only cloud in the sky."

Is not that almost as good as the Motterone Prelude to Vittoria? And we shall have the scene complete when Esdraelon has his corn again.

CAIRO TO BAGHDAD BY AIR.

On November 29 Major-General Salmond, Royal Air Force, Brigadier-General Borton, R.A.F., and Captain Ross Smith, A.F.C., with two air mechanics, started from Cairo in a Handley-Page machine, and arrived at Damascus the same afternoon.

Next day they started again from Damascus at 7.25 a.m., and flew to Baghdad, which they reached at 3.30 p.m. on December 1.

Thus in three days they visited the three countries, Egypt, Syria, and Mesopotamia, and linked up the two great Asiatic Expeditionary Forces of the British Empire.

SCHOOL OF ORIENTAL STUDIES.
London Institution, Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.

For particulars, apply to Sir E. DENISON ROSS, Director.

TANGIER TO TEHERAN.

Cairo is busy ridding itself of stray dogs and cats, which are being destroyed systematically by the authorities. As a dog-lover, I cannot help feeling some sympathy with the dogs; though, to be sure, a "stray" in the East is likely to be a horrid cur. As to the cats, my feelings are quite otherwise. But what a change from the days when the feline fraud was an object of worship on the banks of the Nile; mummified after death; and held so sacred that any mortal who killed a cat—even accidentally—stood in danger of paying for his "crime" with his own life! Shades of Bast and of the Cat that Jumped over the Moon! What a come-down for Poor Pussy!

***

A few days ago a friend was telling me of a little argument, between a boy and his father, regarding war prices. The youngster challenged his father to name offhand three things the price of which had not risen since the war. The father accepted the challenge, and started off at once: "The price of a seat in Hyde Park; the penny stamp; and—— er—" There he stuck, and finally "gave it up"—being, one supposes, too good a sportsman to mention the halfpenny stamp. But what a pity he didn't think of THE NEAR EAST! The fact that this journal has not raised its price is one on which those responsible for its direction are entitled to congratulate themselves—and as a humble contributor I may say as much without any risk of seeming to blow my own trumpet. It is pleasant to know that my views on this subject are shared by many readers at home and abroad. As a matter of fact, we all of us hate the kind of profiteering to which the war has given rise, and any article that has remained at its old price throughout the bad time deserves well of the public. Only once, by the way, have I found an article that had positively fallen in price—and that was a garden broom, which was a ha'penny "down." Can readers give any other instances of the kind?

***

Much excitement was caused recently in Zanzibar by the capture of a fish which bore strange markings on its sides, resembling one of the highly decorative Arabic scripts, such as one sees on ancient Persian tiles. An Indian who bought the finny curio was so impressed by these markings that he asked an Arabic scholar whether they were in fact decipherable, as they seemed to be. The scholar examined them, and, sure enough, read them off as easily as a learned Assyriologist would decipher cuneiform. One was: "*La Allah il' Allah*" (There is no god but God); and the other: "*Shani Allah*" (A promise from God). Careful examination proved that there was no trickery about the markings; they were Nature's work, not man's. The Indian owner, who had bought his treasure for a few *pice*, was delighted with his bargain; refused the chance of a handsome profit, running into thousands of rupees, on it; and, instead of making a meal off it, handed it over to an expert for preservation. It is hardly necessary to add that the portent was regarded as signifying the approach of some great event—probably the end of the War.

***

I should like to leave the story there, for it seems to me not altogether unworthy to stand beside several other well-known "fish stories"—of the Oriental variety. But as these columns are dedicated to Truth, I must give the sequel:—Some interested person, then, sent a description of the fish, and, I believe, a photograph of it also, to our own Natural History Museum here in London; and in due time Zanzibar was informed that, though it had a curio of a kind, it had not secured a miracle, so to say. The fish, it was explained, belonged to a species that is comparatively well known between Zanzibar and Madagascar. The name has slipped my memory, unfortunately; but I understand that the Museum has some specimens, and that though the markings on them are less clear than those on the Zanzibar example, this is due to the fact that the latter is, apparently, younger than the London examples. For, as the fish grows, the markings split up and lose their distinctness. As to the "portent" part of the story, it seems to me that the Zanzibar "prophecy" was no more fishy than others which had their origin nearer home.

The Future Palestine.

In our issue of July 19 we quoted at length from "Palestine Regained—What Then?—A Symposium," in the *Menorah Journal* for June. The October issue of the journal contains another selection of opinions, and we find them so interesting that we make no apology for giving further extracts on the subject. The first expression of opinion comes from Mr. Albert Hyamson, who differs from Lord Bryce in regard to the question of population. He writes:—

Lord Bryce expresses the opinion that the population could be increased by only another three hundred thousand or so. In this he is unduly pessimistic and at variance with all other authorities. He looks on the future Palestine as entirely agricultural. It is true that its future as an industrial country is very problematical. We agree with Lord Bryce that the basis of the new Palestine must be agricultural, nor do we wish it to be otherwise. But agriculture carries with it certain subsidiary industries which would aid materially towards the prosperity of the country. For instance, fruit cultivation leads directly to fruit preservation and exportation. Sugar-cane and beet-root growing might well be accompanied by sugar manufacture. Silk weaving could go hand-in-hand with the silkworm cultivation. Hitherto hides have been exported from Palestine and leather imported. But tanning was one of the ancient industries of the land. The wine-manufacture creates a considerable demand for bottles which might well be met at home. The well-stocked seas should render the success of a fish-preserving industry easy. Palestine was never a manufacturing land; nevertheless, some of its manufactured products were famous throughout the world. Who has not heard of Syrian dyes and Damascus blades? The silver filigree work of Palestine was and still is sought for in all the quarters of the globe. Even the mother-of-pearl and olive wood productions of Jerusalem and Bethlehem could be reorganised and developed as a small industry secure against the evils of the European industrial system.

Apart from agriculture, with its subsidiary industries, Mr. Hyamson foresees a future for Palestine as an emporium, "the commercial clearing-house between East and West." As a field for "cultured tourists endowed with the historic sense," also, the country may expect to find considerable prosperity. After going over the ground of an irrigatic Palestine, the author returns to the subject of population:—

Yet Lord Bryce says that the country can support only another 300,000 or so of inhabitants and about a million in all—one-seventh of the population of the country in the days of its greatest prosperity according to Conder, one-fifth according to the more moderate estimate of Elisée Reclus. But there seems no reason why the earlier prosperity should not be restored, especially by the aid of modern methods, and the country again hold a happy population of six or seven millions. The present population is 700,000 at the most. Thus five millions more can be provided for before the question of expropriating or otherwise dislodging the present inhabitants need be taken into consideration. But five million Jews will not settle in Palestine in the course of a year, or of a decade or even of a generation. Statesmen of to-day need not, therefore, trouble themselves about a possible overcrowding of Palestine. This problem may safely be relegated to their grandchildren or their great-grandchildren. The capacity of the country to support an adequate Jewish population may, I think, now be taken for granted.

Regarding the question of government and administration, Mr. Hyamson, wisely, we think, confines his observations to the immediate future.

The more remote future will lie in the hands of the Jews of Palestine and not of those of the Diaspora. Every serious student of Jewish politics is, I suppose, agreed that there can be no question, at any rate during the life-time of the present generation, of the creation of a Jewish State, in the accepted political sense, in Palestine. Apart from the fact that the Jews of Palestine, for the next twenty or thirty years at least, will form but a minority of the total population of the country, before a people can become capable of complete self-government it must serve an apprenticeship. The history of the British Empire and of the American federal system shows that no newly-emancipated people can be entrusted with full self-government at once. The process must be gradual, a system of development. More and more responsibilities must gradually be devolved on the people, the co-operation between whom and the Central Government must become closer and closer. On these lines only can success be assured. This is true if the population of the new country is homogeneous and comes from a land where self-government is, one might almost say, one of the laws of nature. How much more so must it be the case in Palestine, with its diverse populations, all equal in one respect—that of having lived hitherto under the most severe political restrictions? For the rejuvenation of Palestine a period of tutelage, of apprenticeship in self-government, is essential. This can only be attained under the protection of a great Power—one great Power, just and strong, not a condominium, or a system of partition. Either of the latter alternatives would lead to inevitable failure, for such is the universal experience and the lesson of history.

As to this question of the beginnings of the new State, so to say, another contributor to the symposium, the Rev. A. A. Berle, takes a very different view. To him, "the great function of that state is going to be international. It will, of course, stand for Jewish nationalism, and as such

Digitized by Google

be the legitimate channel through which Jewish culture and Jewish ideals must express themselves. But since it cannot, either physically or otherwise, comprehend within its national area the whole or even the major fraction of the Jews of the world or of their influence and power, its great service to both itself and the world will be international." No time should be lost in making a start.

But the organisation should not wait till the political guarantees have been secured. It should begin *now*. There should be an international commission appointed now—or organised out of the various national groups—which should take in hand the business of framing a constitution and otherwise clearing the way for intelligent and profitable discussion. Such a State framed on paper would not, of course, be final, but it would form the working hypothesis for intelligent discussion, which should begin *now*. The very fact that the population would from the beginning need such guidance, and would likewise assemble with a great variety of political antecedents, seems to indicate that the finding of certain common denominators of organic interest should begin at once. These should spring from an international group. The value of its findings would have a great deal to do with clearing away doubts and winning vital and effective support for the new State. The international commission might continue in the earlier stages of the life of the State to be an advisory body, until the conditions had become stabilised and the organic functions had begun to operate with smoothness and effectiveness. It might also avoid a great many difficulties and limit the area of mistakes in the earlier stages. The fascinating part of this matter to me is that there is no necessity, that I can see, why this State should not, by reason of the international co-operation of Jews everywhere and their mobilisation in a commission of acknowledged standing and power, leap at once into strength and power.

Another contributor, Simon Litman, expresses broad views from which we quote briefly:—

The Jew in dispersion stands for fair play, for liberty of conscience, for justice. Such should be the ideals of his State. In its organisation should be embodied all that is best in Jewish traditions, and all of value that the Jew has learned in the school of bitter experience through centuries of martyrdom and of adaptation to various environments. In order to accomplish this we need the co-operation of representaive Jews in every walk of life, in every profession—co-operation of Jews from every section of the earth.

. . . . . .

We need leaders of vision, of intellectual grasp, of moral reponsibility, leaders who are not afraid to say what they think, but whose speech and whose action bear the stamp of sincere and responsible manhood. There is one thing we must beware of—we must beware of the activity of self-seekers, of schemers, of politicians and of fanatics. Enthusiasm is necessary; but enthusiasm, unless it is tempered with good judgment and unless it is directed by experience, is bound to bring us into trouble.

Our Arab Allies.

In view of the visit to this country of Shereef Feisul, son of the King of the Hejaz, the following remarks taken from a recent number of the *United Service Gazette* are of considerable interest:—

We have often been told of Turkey's endeavour to create a holy war amongst our Indian Forces, but if the full facts are ever published it will be quite interesting to read how her efforts materialised against herself, for in preparing the "scene" of our violation of holy places they were caught red-handed by the Sherif, and, although no formal declaration of holy war was made, he immediately gathered his faithful followers and made war on the Turk. His campaign was a brilliant success—as many a hostile Arab found to his cost. No matter who his opponent happened to be, he went in and won. News has often been published of the "Hejaz Forces being at such-and-such a spot," but apart from that little credit has been given to this plucky band. It is to be expected that one of our diplomats will claim credit for bringing the Sherif on our side, but that little man can see a long way, and although perhaps encouraged by being recognised by England as King of the Hejaz, there is little doubt that he made war on the Turks becasue of their base treachery. Now that we have at last beaten the Turk we should include in our Terms of Peace that this faithful Ally must be recognised by Turkey as King and his safety from future attack guaranteed, or in a few years we shall have another little war on our hands.

While fully endorsing the views expressed, it seems to us that our Arab Allies have shown themselves quite capable of protecting themselves against the Turks!

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

Reference is made in the weekly cable received by Mr. D. T. Chadwick, the Indian Trade Commissioner, to an announcement by the Government of India of its intention to proceed with the excess profits tax. This step is presumably due to an element of uncertainty that has existed on the subject in commercial circles in India, and to which the conclusion of the Armistice has given strength. I need scarcely add that there has never been any likelihood that the tax would be abandoned, and now that we have particulars of the tax it is clear that the only objection that could have been raised to it—namely, the liability to double excess profits duty—does not exist, inasmuch as profits which have already borne the incidence of excess profits duty in this country are excluded from the computation. The reason for the tax is to enable India to meet the additional expenditure that has been entailed by the expansion of her forces, and on that account it is universally welcomed as affording her a further opportunity of making a contribution to the common cause.

***

Another Indian bank, the Mercantile Bank of India, has decided on an issue of shares. It has been decided to offer the unallotted capital, consisting of 15,000 "A" shares of £25 each to existing shareholders at £12 10s., the paid-up price of the present shares in the proportion of one share for every three. The quotation of the shares is £37 10s., so that shareholders will receive a substantial bonus in the purchase of the new shares.

***

Remarkable results have been achieved by the Egyptian Salt and Soda Company during the past year, for the report shows that the profits amounted to £E398,600, against £E236,000, while the net profits were £E361,600, against £E134,800. Naturally war prices have not been without their influence, but the really satisfactory nature of the figures may be gauged from the fact that as the Government controlled cotton plant products the company was compelled to devote its attention to other sources of revenue. The dividend is raised from 25 per cent. to 60 per cent., and the carry forward is increased from £E71,500 to £E141,800.

***

Considering the difficulties with which shipping companies have had to contend during the war, the report of the P. and O. for the year ended September 30 makes a most satisfactory showing. The net profits, after allowing for all charges, including debenture service and fleet depreciation, amount to £826,700, an increase of £21,400 on the figures for the previous year, and the dividend on the deferred stock is maintained at 18 per cent. for the third year in succession. As half a million of stock ranked for dividend during the whole of the past year, against only six of the previous twelve months, it will be realised that the result is even better than it appears, as the distribution amounts to £575,500, against £545,900. The contingency fund and the provident good service fund each receive £50,000, while the reserve fund remains at £1,500,000. As to the strength of the company's position, the statement may be noted that "in view of the grave uncertainties of the future of shipping, the directors feel confident that the proprietors will concur with them in the policy of building up the company's reserves."

***

Further testimony to the part the aeroplane is likely to play in the future in providing a link between places where communications are either non-existent or unsatisfactory is provided by the news of a recent flight from Cairo to Baghdad, particulars of which will be found elsewhere in this issue. To start from Cairo on November 29 and to be at Baghdad two days later plainly illustrates the surprising possibilities that the development of aerial transport brings within view.

***

I learn that the Greek currant crop was somewhat smaller than was anticipated, amounting to about 127,000 tons, against 140,000 tons last year; 20,000 tons were available from the previous crop, so that, allowing for the legal retention, about 135,000 tons were left for export. According to a recent estimate, almost half this amount will be used in Greece in the making of alcohol, wines, etc.

***

Apropos of my recent references to the high-handed policy adopted by Germany over the question of the purchase of Bulgarian tobacco, it may be noted that *Der Grelt Handel* declares that the prohibition of Bulgarian tobacco was one of the worst economic blunders of the old régime. "The tobacco industry—amounting to a yearly output of thirty million kilos—is practically the only means," it points out, "by which Bulgaria hopes to pay back the national debt, and obtain for herself certain expensive but essential imports. When, after the first year of war, the German authorities sought to lower the rising prices by prohibiting the entry of Bulgarian blends, bitterness among the merchants was intense and indignation grew."

***

An excellent report is forthcoming from the Bengal-Nagpur Railway for the year ended March 31. There was an increase in the gross earnings from Rs.5,12,28,400 to Rs.5,63,92,500, and though expenses also rose the expense ratio fell from 48.10 to 46.35 per cent., and the net revenue increased by over 13 per cent. to Rs.3,01,32,900. The number of passengers showed a marked decrease at 15,235,500, against 16,839,700; but owing to higher rates the receipts amounted to Rs.1,34,85,400, against Rs.1,23,01,200. There was also a decrease in freight business from 7,271,900 tons to 7,009,900 tons; but the receipts amounted to Rs.3,64,38,400, against Rs.3,36,52,300. The surplus of net earnings over interest was Rs.1,39,68,300, of which the company's share amounts to £142,200. The dividend for the year is 7¾ per cent., a record rate, and £200,000 is carried forward, against £194,000 brought in after writing off £7,000 for reserve investment, depreciation, and providing for other payments.

***

I have been interested to see that the view is expressed in a memorandum by the Commercial Attaché to the British Legation at Copenhagen on trade between India and Denmark, that a good market might be found in Denmark for Indian goods. One of the great problems that the Indian Government will have to solve in the future is the development of markets for Indian exports, and it may be hoped that this suggestion will be followed up, for India cannot afford to neglect any possible outlet for her goods. The Danish market was, of course, mainly supplied by Germany partly, no doubt, with Indian products, and it is pointed out in the memorandum that this was largely due "to British exporters not considering the market large enough to trouble about." It it not thought, incidentally, that there is any likelihood that Danish exports to India can assume any considerable importance, as Danish industries are, "practically speaking, in their infancy, and in view of the fact that practically all raw materials, including coal, must be imported, are unlikely to develop sufficiently to be of real importance from the point of view of the financial status of the country." In conclusion, the suggestion is put forward that the large British Indian houses in London should be encouraged to study the requirements of the Danish market, and to organise the trade with a view to excluding the trade done hitherto *viâ* Germany while developing the market generally.

***

Considerably reduced profits are shown in the report of the Dooars Tea Company, the net figures being £61,200, against £111,300 for the 1916 season. The dividend is reduced to 27½ per cent., against 32½ per cent., and a balance will remain to be carried forward of £29,000. This amount is subject to the recovery of excess profits duty for 1917, which, it is stated, should make the amount larger than the £30,800 brought in. The crop increased from 5,608,400 lb. to 5,825,800 lb., and was thus one of the largest ever obtained, but the net average price fell from 10.89d. to 8.52d. per lb. The Government took most of the tea at 8.23d. per lb. f.o.b. Calcutta. During 1918 the position with regard to the tea industry has been substantially the same, and if the company manages to maintain its dividend it will do all that can be expected.

ABYSSINIA.

A Field for British Enterprise.

In view of the known policy of British merchants and manufacturers before the war of avoiding small markets, the trade figures of Abyssinia provide an ample explanation of the insignificant place of the United Kingdom in the trade returns of that country. A total external trade of about £2,000,000 was scarcely calculated to arouse interest in a market where the conditions were known to be exceptionally difficult, particularly at a time when the United Kingdom was in no special need of new commercial fields, and so it is no matter for surprise that this country's direct trade with Abyssinia amounted to no more than £13,000 to £15,000, and that of these poor figures the bulk consisted of imports from Abyssinia. The British Empire's share in Abyssinian trade amounts, of course, to a much more satisfactory total, for trade relations between Abyssinia and the Sudan are on a considerable and growing scale, while Indian products also find a market there, but it should be much better, for it has been left to other countries to supply goods which might well have come from the United Kingdom. France, Italy, and the United States have all found a fair market for their goods in Abyssinia, to say nothing of Germany and Austria-Hungary, whose trade there, ably seconded, as usual, by steamship services (the Hamburg-Amerika line and the Austrian Lloyd both touching Jibuti), was making rapid progress before the war. The encouragement given by all these countries to trade with Abyssinia has been undoubtedly largely due to the knowledge that, while the present volume of commerce is insignificant, and must remain so as long as the requirements of the Abyssinians are on a limited scale, the market will ultimately be of immense importance, and that when that development comes the countries first in the field will benefit accordingly. The view is absolutely sound, and it speaks volumes for the comparative lack of enterprise of British merchants that they should have been unwilling to offer hostages to the future by engaging in what might be for a time an unremunerative trade. What made the pre-war position even more deplorable was the fact that of all countries the United Kingdom was perhaps most favourably situated for trade with Abyssinia.

Country's Unrealised Wealth.

Fortunately the war has altered the outlook of the British commercial community, and indications are not wanting that in future Abyssinia, in common with other previously neglected Near Eastern centres, will receive the attention it deserves. That this should be the case is a matter for extreme satisfaction, for it is probable that no country holds out greater prospects for enterprise than Abyssinia. The potential purchasing power of the country is very great, though almost entirely undeveloped. Apart from agriculture there is very considerable mineral wealth, gold, iron, coal, silver, copper, and sulphur being known to exist, while there may well be other minerals, but it has not even been possible to establish the extent of the mineral riches which the country is known to possess. The Abyssinians, as a correspondent pointed out recently in THE NEAR EAST, are extremely reluctant to accept foreign aid in the development of their resources, for it is not yet clear to them why the proper utilisation of their minerals cannot fail to be beneficial to them, and they prefer to go on exploiting them in their own old-fashioned way. "Methods as old as Moses" was the description applied by Mr. Skinner, American Consul-General and Commissioner to Abyssinia in 1903-4, to the system of gold production—and until there is a very complete change in their outlook it would be useless to try to induce them to consent to the introduction of modern methods.

Naturally the rapidity with which trade develops must depend on the utilisation of this unrealised purchasing power, and this in turn rests on another factor. So far the wants of the Abyssinians have been circumscribed, and until this is altered the country's material advance will be handicapped. At present, even agriculture, the staple industry and one which offers immense prospects, is in a most backward condition. The country is simply ideal for agriculture; the soil is exceptionally fertile and yields up to three crops a year in certain regions, while the climate permits of the successful cultivation of cotton, the sugar cane, the date palm, coffee, and the vine. There has been no methodical attempt to tap the riches of the soil; indeed the fact that the idea of landed property scarcely exists rather suggests that the Abyssinians do not realise the potentialities of their land. Pastoral industries, which are as backward as agriculture, might be conducted to equal advantage, for all the conditions are in the farmers' favour. Unquestionably the main drawback to progress is lack of incentive; and nothing would be so likely to correct that as increased trade with European countries. Trade relations in such a case provide a sure educative process, and it may be taken for granted that the gradual introduction of European goods will have a stimulating effect. The ambitions of the inhabitants will be quickened, and with a wider knowledge will come the perception that it is necessary to do things in a different way in order to raise the scale of living.

The Outlook.

It must not be imagined from what has been said that trade on a much increased scale is likely to be a matter of the distant future. There is, on the contrary, every probability that the next few years will see a great change in conditions in Abyssinia. In this connection it may be noted that in a report written not long before the war it was stated that while trade was in its infancy, large tracts of the country being then practically unexploited, development was, however, proceeding rapidly. Of course, it is futile to expect miracles, and it must be remembered that only a little time ago it was possible to describe Abyssinia's currency as consisting of "Maria Theresa dollars, bars of salt and cartridges." It is a long step from a state of things in which barter is the normal medium to one of trade conditions as we know them, and in the most favourable circumstances time is required to bridge the gulf. But the process of transition has been in progress for the past twenty years or so, and its results were to be seen before the war amongst other ways in a more varied range of imports, and it is this fact *inter alia* which suggests that the day of expanded trade may not be so very remote.

The pre-war trade figures show that the commodities then most in demand were cotton shirtings, which had been almost entirely supplied by America, cotton tissues, sugar, lime, and wines and spirits, etc. A fair trade was also carried on in such commodities as cement, corrugated iron, glassware, hardware, ironware, kerosene oil, metal piping, sacks, timber, and tools. Reference has already been made to the fact that Germany and Austria took pains to cultivate the market, and it should be of interest to British merchants and manufacturers to place on record the remarkable variety of articles which they exported to Abyssinia. Their exports included carpets, rugs, shawls, blankets, beads, enamel ware, crockery, hardware, cotton thread, scent, mirrors, tinned provisions, matches, watches, wines, and spirits, sewing machines, stationery, umbrellas, velvets, and waterproof canvas. The market was, of course, one particularly suitable for the trade methods of Germany and Austria, and it is not surprising to find that they took full advantage of it to fill the market with cheap and inferior wares. It is to be hoped that they will not have this opportunity in the future, and if British traders are to play their part in bringing about this result they cannot be too strongly urged to pay special attention to the list of imports from Germany and Austria. In conclusion, it may be emphasised that British firms who intend to cultivate the Abyssinian market must be prepared to be represented on the spot, or at any rate at Aden, which has hitherto been the great distributing centre for the Red Sea trade, for the market requirements are exceptional, and it is absolutely essential to be in touch with local conditions.

NEAR EAST MARKETS.

Sudan Products.

The C.E.B. report for September gives the following particulars of the cotton outlook in the Red Sea Province :—

There seems little doubt that the area flooded this year is considerably larger than that of last. Unfortunately, many Hods in the centre of the Delta only have received one watering, and it is to be feared that much of the land will not bear a cotton crop. The Inspector of Agriculture is, however, of opinion that the land flooded sufficiently to grow cotton equals, if not exceeds, in area that of last season, and provided that normal climatic conditions prevail, and that last year's scourge of locusts is not repeated, a larger crop than last season's may be expected. Locust patrols have been working thoroughly and continuously since the end of August in the districts between Tokar and the Eritrean border and up to the Baraka. So far practically no locusts, immature or otherwise, have been found, but the country is a mass of hills, and no amount of patrolling could absolutely ensure discovery. This, and the fact that locusts have been reported in Eritrea and Kassala, means that the danger will not be over for another month or so. The distribution of cotton seed for the whole Delta was completed by the 15th, and sowing was practically finished by the end of the month, which is two or three weeks earlier than last season.

Cattle.

372 head of cattle were imported from Abyssinia through Kurmuk during August. 734 head of cattle and 659 sheep were exported from the White Nile Province during the same month.

Gum.

195 tons of Hashab gum were exported from Sennar Province during August. 6,796 kantars were sold in El Obeid market during September, as against 5.400 kantars in the same month last year. The average price was £E1,435 per kantar of 100 rottles (45 kilos). 1,853 kantars arrived from Nahud, as against 8,521 kantars last year.

IMPERIAL OTTOMAN BANK.

In addition to Jerusalem and Jaffa, with which it has been in communication since the British occupation, the Imperial Ottoman Bank is now in a position to correspond with its branches in Syria as follows:—Beyrout, Damascus, Caiffa, Saida, Tripoli, Homs, Hama, Aleppo, and Alexandretta.

Inquiries as to the method of making mail or telegraphic payments in these places should be made to the Imperial Ottoman Bank, 26, Throgmorton Street, London, E.C.2, or at its office at 25, Pall Mall, Manchester.

INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following cabled news, received from the Director-General of Commercial Intelligence, Calcutta, dated November 28 :—

Useful rain has fallen in Madras, otherwise the crop position is substantially unchanged. The influenza epidemic has generally subsided throughout. Bombay piece goods market remains depressed. Fully good Broach for April-May delivery is quoted at Rs563 a candy. (Last week Rs605 was quoted D.T.C.). The Government has announced its intention of proceeding with the excess profits tax, and there has been a slight fall in the Calcutta share market with a heavier fall in the Bombay one The Indian Standard Wagon Co. is being floated by Messrs. Burn and Co. (word here mangled in transmission). Railway Board guarantee to purchase minimum number of wagons annually in India.

Crop Outlook.

The failure of the recent monsoon, with the delay in the advance of winter rains, is causing anxiety in connection with the crop outlook, says Reuter's Delhi correspondent in a message dated November 23. The controller of food grains has already assumed control in Central India and Hyderabad, and test works have been started in Northern Bombay. Harvest conditions elsewhere are poor, and in most provinces prices are ruling high.

ENGINEERING NOTES.

Dead Sea Bitumen.

It is not generally known that ample quantities of bitumen, as asphalt, occur in the Dead Sea region. It can easily be gathered and prepared for use in road-making, for which very large quantities of bitumen, or asphalt, are utilised annually, and there is the advantage that it will be obtainable at much cheaper rates than those which now obtain in the Near East and in Europe. British engineers who happen to be near that region should give a trial to this bitumen as a road surface dressing, and report the results. The material can best be applied by means of the usual tar-spraying machine. Dead Sea bitumen was undoubtedly used in ancient times. It is evident that the walls of the temples and palaces of Babylon and Nineveh were joined with bituminous cements, and there are bitumen-lined cisterns in Syria of great antiquity which are still water-tight and fit for use. A road surface treated with this bitumen according to modern methods may prove a most satisfactory solution of the very troublesome road question in the Near East, where, owing to climatic conditions and the narrow wheels of vehicles, the macadam system is often a source of trouble owing to the dust that rises from it.

Egyptian Oilfields.

The prospects of a good supply of oil-fuel for Egypt are very promising. At the beginning of the war the Anglo-Egyptian Oilfields was the only one of the various companies formed to search for oil in Egypt that remained in operation, and down to 1914 the only finds of importance had been at Gemsah, where none of the gushers that had been struck had given anything like a permanent yield. But the new field discovered in 1914 at Hurgada has been proved to be of singularly regular formation, and its yield has steadily increased, until, according to recent reports, it now stands at over 15,000 tons of crude oil a month. Meanwhile the Suez refinery has been enlarged, and there is every reason to hope that as much oil will shortly be available for internal consumption as can be dealt with by the company's existing transport facilities. It is stated that, in consequence, most of the public utility companies in Egypt have now converted their plants to burn petroleum residue.

Roumanian Industries.

The Roumanian Minister of Commerce has recently brought forward a project for an industrial syndicate with a view to placing certain raw materials under State control. The purchase, treatment, and sale of such materials will be regulated by the syndicate. The industries concerned include tanneries, textile factories, wool, sugar, soap, candle, oil, and cellulose factories and paper mills. The factories in the occupied districts and in Bessarabia which will join the syndicate will add their stocks of raw materials to the general stock and receive therefrom according to their capacities for production.

India's Steel Industry.

It is evident that the very promising development of India's mining industry has been watched with extraordinary interest by the Germans. For months before Germany's difficult position became apparent the German Press was directing the attention of the German ironmasters to the great potentialities of India's mining industries, and were pointing out the important part which India would play afer the war in supplying manufactured metal goods, railway, shipbuilding, and other structural iron and steel materials, not only to the Near and Far East, but also to Australasia and the Pacific Archipelago. The Tata Steel Works were referred to as the principal representative of the iron industry in India, and justly so, for the great efficiency and rapid progress of that concern is very remarkable. The Tata Steel Company was founded in 1907. The works are at Sakchi, 149 miles west of Calcutta, 37 miles from the nearest ore mines, and 118 miles from the nearest coalfield. The first machinery was installed in 1910, and the first coke-oven and blast-furnace were started in 1911. The furnace was capable of a daily output of 175 tons, and this capacity was increased later to 280 tons. The war, naturally, gave a great impetus to production. To make the necessary machines the Tata Works determined to erect their own machine shops. The new blast-furnaces were constructed on American models for a daily output of 600 tons. The Siemens-Martin furnaces were enlarged, and a number of furnaces for the production of electro-steel were built. The company is now in a position to deliver various classes of manufactured goods, among which are ship-plates, boiler-plates, corrugated plates—which are extensively used in India—pipes, tin-plates, bridges, roofs, and railway trucks. It is obvious, therefore, what part institutions like the Tata Works will play in the immediate future in the supply of iron and steel structural materials and other manufactured goods throughout the East.

Serbia's Reconstruction.

The reconstruction of Serbia is a question of great interest at the present time. According to official and other reliable reports "the agricultural, industrial and commercial activities of the country are completely dead." It is stated that there are no cattle, no foodstuffs, no farm implements, and no machinery, as all have been carried away by the enemy. Unquestionably the situation is very critical, and emergency measures must be taken before any extensive and far-reaching plans of systematic reconstruction are put forward. The effects of this destructive war have been so general unfortunately, that there is not a country now, whether belligerent or neutral, that has not been, directly or indirectly, affected, and is not in immediate need of the necessary materials, either for complete reconstruction, as in the case of Serbia, or for renewals of the mechanical means upon which the productivity of the country depends. With such a demand, therefore, the process of reconstruction is sure to be retarded.

Serbia is a nation made up very largely of hard-working peasants, with holdings mostly of only from 10 to 30 acres. They raise maize, wheat, barley, oats, sugar-beet, plums, tobacco and live-stock (chiefly pigs). Plums are exported (fresh, or as pulp or prunes), also much plum spirit. Much attention is also devoted to the rearing of silk worms and the manufacture of silk, an industry occupying some 40,000 persons. There is a certain amount of spinning and also weaving, especially of carpets and shawls. The other industries are milling, tanning, and boot-making, pottery, and iron founding. The mining industry has been partially developed. The petroleum industry and coal-mining are well developed; also copper mining, but on a smaller scale.

Utilisation of Water Power.

Some of the above-mentioned industries could speedily be developed by the utilisation of water-power. In previous notes Serbia's various resources of water-power were discussed, and mention was made of an expert opinion on the subject in connection with the country's agricultural and industrial development in the near future. Farmers in Switzerland, North Italy, Austria-Hungary, and Germany are very well served by numerous hydro-electric installations, both as to availability and cost. Why should not Serbians avail themselves of similar advantages in their own country? If Serbia's resources of water-power are developed along scientific lines, the establishment of hydro-electric installations will be an easy matter. There are some good waterfalls of 10 ft. and more in Serbia. If this great power, which can be carried by an electric wire to almost any distance, was employed in factories and farms, the problem of reconstruction would soon be solved to advantage. There are the Vardar, the Morava, the Ibar, and a large number of smaller rivers and streams from which all the required motive power for the development of Serbia's industrial and agricultural resources can be obtained at very low cost.

MERCANTILE BANK OF INDIA

New Issue of Capital.

The directors of the Mercantile Bank of India have decided to issue the unallotted portion of its capital, consisting of 15,000 "A" shares of £25 each, and are offering them to existing holders in the proportion of one in three, calling up £12 10s. per share, the same as in the case of the existing shares. The new issue will rank for dividend from January 1 next.

INDIAN EXCESS PROFITS TAX.

The Indian Government reiterates its decision to impose an excess profits tax, says Reuter's Delhi correspondent in a message dated November 23. A tax of 50 per cent. will therefore be charged on all excess profits earned in 1918-19, the average profits of the four preceding years being the basis of calculation. Businesses, however, paying excess profits duty in the United Kingdom will be exempt. The question of extending the provisions of the Bill for a further year will depend on the military expenditure of the country.

Greek merchant fleet losses during the war are stated to have reached 46 per cent.

LANCASHIRE COTTON.

Continued Decline in Prices.

(From Our Own Correspondent.)

Manchester, Wednesday.

The slack state of affairs in the market has been unabated, and business has again been of very limited dimensions. Prices in yarn and cloth continue to fall, quite irrespective of changes in the raw material. For nearly a couple of months spinners and manufacturers have not sold the reduced output of the machinery, with the result that their position is gradually being undermined. Nothing new can be said with regard to the Egyptian cotton crop. Stocks in Alexandria tend to increase. Only a retail trade has been done in Egyptian yarns. Prices when tested have been easier, especially in the coarser counts. Operations in piece goods for Egypt have been at a standstill. There are indications of values in Cairo being stabilised, but the rates being secured there are considerably below the Manchester level of prices. There has been practically no cloth business for India. The owners of some weaving sheds are getting increasingly anxious with regard to the future, and unless things improve machinery will soon have to be stopped. A further fall has occurred in American yarn prices, and demand remains flat. An irregular business has been done in export yarns for France and Holland. Sir George Askwith is now endeavouring to settle the wages dispute, and at the time of writing the conferences are still going on.

Cotton Spinning in 1918.

According to a statement published by Mr. Frederick W. Tattersall, of Manchester, enormous and record profits have been made in the Lancashire cotton-spinning industry this year. Mr. Tattersall has analysed the returns of forty companies for the twelve months ending November 30. All the mills produce yarn for sale in the market. A feature of the year has been a tendency for companies to cease issuing balance-sheets. The total profit made by the forty companies is £576,134, being an average per company of £14,403, against only £5,085 in 1917. Statistics are available for the past twenty-five years, and more money has been made during the past twelve months than in any similar period in the history of the trade. After allowing for depreciation and interest, the profit on share capital works out at over 34 per cent. per annum, as compared with about 13 per cent. per annum last year. On share and loan capital combined the profit is nearly 22 per cent. per annum, against 8 per cent. per annum in 1917. In the forty mills there are 3,752,561 spindles. The total paid-up share capital amounts to £1,677,709, and loans are £953,038. The height of prosperity during the year was reached in July and August, when the margin of profit for spinners was abnormally wide. Since then a distinct change for the worse in the trade situation has occurred, and prices now being secured are much less satisfactory than three or four months ago.

EGYPTIAN MARKETS.

The returns of the Egyptian Markets, Ltd., for the week ended November 21 were:—Cattle markets £839, general markets £522, total £1,361, total for year £47,348. The figures for the corresponding week last year ended November 22 were:—Cattle markets £428, general markets £467, total £895, total for year £50,371.

INDIAN CURRENCY RETURNS.

The Indian currency returns were as follows on November 15 (in lakhs of rupees):—Notes in circulation, 13,867; reserve in silver coin and bullion*, 3,211; gold coin and bullion in India, 2,044; gold coin and bullion out of India, 12 The corresponding figures on November 7 were:—Notes in circulation, 13,761; reserve in silver coin and bullion*, 3,109; gold coin and bullion in India, 2,040; gold coin and bullion out of India, 12.

A Reuter message from New York states that bar silver to the value of £400,000 was shipped on November 20 for India.

* Within and without India.

COMPANY NOTES & REPORTS

Madras and S. Mahratta Railway

The report of the Madras and Southern Mahratta Railway for the year ended March 31 last states that the gross earnings of the entire system amounted to Rs.5,70,82,835, as compared with Rs.5,19,73,685; while working expenses amounted to Rs.2,66,52,026, or 46.69 per cent., as compared with Rs.2,65,25,544, or 51.04 per cent., for the previous year. With an increase in gross earnings of Rs.51,09,150 and in working expenses of Rs.1,26,482, there was an increase in net earnings of Rs.49,82,668. In February, 1917, the passenger train service was reduced and fares enhanced, but notwithstanding these measures to enable the company to cope with goods and coal traffic, passenger earnings have increased. Parcels traffic is increasing from day to day. The increase in general merchandise is due not only to a greater volume of traffic for various reasons, but also to an increase in terminal charges, port-to-port rates between Madras and Bombay, and between Madras and Calcutta, increase in other station-to-station rates, and also to the withdrawal of special reduced rates. The mean mileage worked and maintained was 3,161, as compared with 3,169. Train mileage run was 12,228,381 miles, a decrease of 646,489 miles. The cost per train mile on the broad gauge was Rs.2.81, as compared with Rs.2,56, and on the metre gauge Rs.1.69, as compared with Rs.1.65. The gross earnings of the company's and State lines amounted to Rs.5,13.54,658, an increase of Rs.49,47,685. The increase in coaching earnings was Rs.19,46,526, in goods earnings Rs.29,09,554, and in miscellaneous earnings Rs.91,603. Working expenses amounted to Rs.2,38,91,004, an increase of Rs.2,56,185, the result being an increase in net earnings of Rs.46,91,498. The working expenses of the entire system amounted to Rs.2,66,52,026, or 46.69 per cent. of the gross earnings, as compared with Rs.2,65,25,544, or 51.04 per cent. The surplus profits realised £358,299. Interest on investments amounted to £14,669, bringing total receipts up to £372,968, compared with £245,473. The directors propose to pay on January 1 next a final dividend of 25s. per cent. from the stockholders' revenue account, in addition to the guaranteed interest of £1 15s. per cent. to be received from Government on that date under the terms of the company's contract, making the total distribution for the half-year £3 per cent., all subject to English income-tax. Meeting, 25, Buckingham Palace Road, S.W., 11th instant, noon.

P. and O.

The report of the Peninsular and Oriental Steam Navigation Company for the year ended September 30, 1918, states that the work entailed by keeping and rendering to Government the accounts of steamers worked on behalf of the State has been heavy, while the delays in communication with the East and Australia have made it impossible to close all voyage accounts. In several cases estimates have had to be made owing to the loss of papers by enemy action, but care has been taken to calculate the probable results on a conservative basis. Several unclosed transactions extending over some years, for which provision had been made, have now been finally adjusted, and this circumstance, together with the result of the year's working, has enabled the directors to add £50,000 to the provident good service fund, bringing it up to £250,000, and £50,000 to the contingent fund. In view of the grave uncertainties of the future of shipping the directors feel confident that the proprietors will concur with them in the policy of building up the company's reserves. After making this provision there is a credit balance on the year's accounts, including £92,712 1s. 4d. brought forward from last year, of £819,427 19s. 9d. The directors propose to deal with this balance as follows: 5 per cent. dividend on the preferred stock, £152.000; 12 per cent. dividend and 6 per cent. bonus on the deferred stock, free of income tax, £575,700 14s. 5d. (of which 2½ per cent. on preferred stock and 6 per cent. on deferred stock was paid as an interim dividend in May last); leaving £91,727 5s. 4d. to be carried forward to next account. The dividend and bonus now recommended will be payable on and after December 17. The accounts as submitted provide for suitable depreciation on the ships, investments and properties. £4,360 of the first and second debenture stock has been redeemed during the past twelve months, but, as before stated, the company retains the power to re-issue this, if desired. The whole of the fleet not retained on Admiralty Charter remains under requisition by the Ministry of Shipping at Blue Book rates, the earnings being for account of the Government. Two of the company's vessels which were in the service of the Admiralty as armed cruisers have been lost by enemy action. A number of the steamers belonging to our allied companies have also been sunk by enemy action during the year. The agreed value of all these ships has been recovered and the amount placed in National War Bonds, but unless the cost of shipbuilding falls very materially it will be impossible to replace the vessels which have been lost for anything like the amounts recovered. The two mail steamers referred to in the last report, which are named "Naldera" and "Narkunda," have been taken over by the Government, under charter, as armed cruisers. No progress has been made with the large mail steamer of 16,000 tons referred to in the last report, nor has any advance been made with the work of construction of two ships of the "Ballarat" class contracted for with Messrs. Caird. The directors take the opportunity of expressing their high appreciation of the services rendered by the captains, officers, engineers, and crews in the performance of their arduous duties. The mail contract continues to be worked as a temporary war measure, on the lines mentioned in last report. In last year's report it was stated that the company had purchased the long lease of the property in Cockspur Street previously occupied by the Hamburg-America Company. The freehold of this property has since been acquired, and the office in Northumberland Avenue has been sold. The directors regret to report the death of Mr. Herbert Brooks, who had been a member of the board for 21 years. The Hon. Kenneth Mackay felt himself obliged to retire from the board on September 30 last owing to his having been unable to attend to business on account of his military duties for some years. The directors have nominated Sir Duncan Carmichael, who has had a life-long experience of shipping, to a seat on the board, and, in accordance with the provisions of the charter, he will present himself for election at the annual meeting on December 11, at 11 a.m.

Egyptian Salt and Soda.

The report of the Egyptian Salt and Soda Company for the year ended August 31 last states that in view of Government control and tariffication of cottonseed and its products, the crushing of cottonseed was to a certain extent handicapped and profits realised limited. In consequence the board has been successful in creating and developing other sources of revenue independent of cotton seed crushing, which have considerably increased the resources of the company. Gross profits earned are £E399,646.000 m/ms. Deducting general administration expenses, £E4,195.697 m/ms, interest on debentures, £E3,346.687 m/ms, net profit is £E391,103.646 m/fs. The directors have set aside for depreciation of various factories, including an amount of £E3,000 for writing down the value of the patent rights for the new oil processes, £E19,520.348 m/ms, further provision for the renewal of railway line and rolling stock at Wady Natron £E10,000, leaving £E361,583.298 m/ms; £E71,472.402 m/ms was brought forward, making £E433,055.700 m/ms. The directors propose that £E291,208.320 m/ms be utilised for the payment of a dividend representing 60 per cent. on the share capital (12s. per share), and that the balance of £E141,847.380 m/ms be carried forward. Meeting, Alexandria, Egypt, 20th instant, 4.30 p.m.

Aboyne-Clyde Rubber of Ceylon.

The report of the above company for year to June 30 last states net profits, after deducting £19,517 in respect of handling charges, freight, insurance, etc., depreciation, and London expenses, amounted to £18,872; £3,866 was brought in, making £22,738. Dividend at rate of 7½ on ordinary; forward, £5,863. Rubber crop amounted to 485,659 lb., increase of 39,625 lb. Of this 431,118 lb. have been sold, realising an average price of 2s. 5.52d. per lb., as compared with 2s. 10d. per lb. Cost of production was 1s. 4.13d. per lb., as against 1s. 1.78d. per lb.

Doomoo Tea of Ceylon.

Report for year ended June 30 states that profit was depreciated by Rs.2,358 in con-

Digitized by Google

sequence of loss on exchange and amounted to Rs.36,496. Rs.5,139 was brought forward, making Rs.43,636. It is proposed to pay in sterling demand drafts a dividend of 5 per cent., to transfer to depreciation fund Rs.7,147, and to carry forward Rs.14,988.

Dividends, Payments, etc.

The directors of Bengal United Tea announce that no interim dividend will be paid on the ordinary shares.

The directors of Galaha Ceylon Tea and Agency announce a dividend on preference shares for half-year ending 31st inst. at rate of 6 per cent. per annum, payable January 1 next, less tax at 6s. in £.

The directors of Cachar and Dooars Tea announce that no interim dividend will be paid on the ordinary shares.

The directors of Scottish Tea and Rubber Trust announce 3 per cent. (7 1-5d. per share), less tax, on ordinary shares (interim). Last year, 4 per cent.

The directors of Imperial Tea announce 4 per cent. (9 3-5d. per share), less tax, on ordinary shares (interim), payable 16th inst.

The directors of Consolidated Tea and Lands announce 10s. per share, less tax, on ordinary shares (interim), payable on 14th inst.

The ordinary general meeting of the Egyptian Salt and Soda Company, Limited, will be held at the offices, 5, Rue Adib, Alexandria, Egypt, on December 20, for the purpose of receiving and considering the directors' report and accounts and balance-sheet to August 31, the declaration of a dividend, re-election of directors and auditors, and the ordinary business.

NEW TURKISH COMPANIES.

According to a correspondent of *La Revue de Turquie*, some 80 joint-stock companies have been founded in Turkey during the war, many of which do a large business and possess considerable capital. It is stated that a feature of these companies is the number of them which are purely Ottoman, as previously most of the joint-stock companies were foreign, the only Turkish companies being those which exploited the concessions of railways or mines.

Among the companies founded during the war, banking and credit businesses occupy a prominent place. There are, for instance, the National Ottoman Credit (£T4,000,000), the Société du Crédit Foncier Ottoman (£T100,000), the National Economic Bank (£T1,500,000), which has been founded by the Kantarieh Company for bakery and Anatolian products, the Agricultural Bank of Magnesia (£T150,000), the Mussulman Bank of Ada Bazar (£T100,000), and the National Mutual Bank (£T1,000,000). There are numerous financial institutions with a capital of less than £T100,000, among them the Commercial Bank of Palestine (£T25,000).

New insurance companies, all with moderate capital, have been formed, notably the Osmanli Milli (£T440,000), founded by the National Ottoman Credit, and the National Turkish Insurance Co. (£T176,000).

There are a number of new commercial companies of importance:—New Commercial Company (£T500,000), Company of Anatolian Products (£T200,000), the National Company for Importation of Colonial Commodities (£T200,000), Company for Turkish Tobacco (£T500,000), The National Turkish Export Company at Smyrna (£T400,000), and the Commercial Company of Karaman (£T200,000).

Industrial companies are numerous, but only five of them have a capital of £T100,000 or over. They are the Altoun Yildiz Wool Company (£T150,000), company for shipbuilding (£T100,000), company for economic undertakings (£T100,000), company for mining and industrial research (£T100,000), and the Exploitation Company, Konieh (£T100,000).

Three agricultural companies are worth notice—The Ottoman Company for organisation and development of agriculture (£T150,000), the Forest Exploitation Company (£T150,000), and the Smyrna Improvement and Building Company (£T300,000). Finally, among miscellaneous companies appears the Theatrical Enterprise Company (£T110,000).

SUEZ CANAL RECEIPTS.

The traffic receipts of the Suez Canal were as follows on the undermentioned dates:—November 21, 22, 540,000 francs against 180,000 francs; November 23, 24, 470,000 francs, against 510,000 francs; November 25, 26, 27, 500,000 francs, against 450,000 francs.

Associated Cotton Ginners of Egypt.—Meeting will be held at the offices in Alexandria on 19th instant at 4 p.m.

The directors of the British India Tea Company have declared an interim dividend of 3 per cent. (3s. per share), less income-tax, on the ordinary shares, payable 21st instant.

The Bank of England announce the numbers of 440 4 per cent. Egyptian Government Irrigation Trust certificates, which have been drawn for redemption on January 1, 1919, when interest thereon will cease.

ON 'CHANGE.

A Dull Tone.

(From Our Own Correspondent.)

Throgmorton Street, Wednesday.

This has again been a very quiet week, without any very decided tendency, and with, on the whole, only small fluctuations, some of which, in the present very inactive condition of the market, are quite disproportionate to the amount of business done.

In Government stocks Egyptian Unifieds are ¼ down at 89¼, whilst the 3½ per cent. Prefs. remain firm at 77. The Turkish 3½ per cent. Egyptian Tribute 1894 bonds are exceptionally strong at 75½, a rise of one point.

In Bank shares Nationals have changed hands to a very fair extent round 20¾, at which price they close, being 1-16 down. Anglo-Egyptians are rather firmer at 20½ xd., but Agriculturals have been rather a dull spot, and, on some small sales on an unsupported market, have dropped 3-16 to 6 13-16.

In Railways, Delta Light, after receding to 8 1-16, close ⅛ up at 8¼.

Amongst Land shares Delta Lands are 3d. down at 16s., whilst Foreign Trusts have gained a like fraction to 15s. 6d. There has been a fair amount of activity in New Egyptians, which, after receding to 21s., have again become a firm market round 21s. 6d. Union Foncières are 1-16 lower at 3½, and United Egyptian Lands fractionally quieter at 3s. 9d.

In Miscellaneous shares Alexandria Waters have dropped ¼ to 11⅞, at which price some small transactions were effected. Salts and Sodas, on the publication of the report and accounts, have firmed up 1-16 to 71s. 3d. The decline in Khedivial Mails has again made further progress, and the shares are closing 5s. lower at 3 13-16.

Amongst Greek securities, apart from the decline of half a point in Monopolies to 61½ and in Rentes to 56, there is no change of prices to report, and business in this market has been on the smallest possible scale.

Oil Shares.

In keeping with the general tone of the market, oil shares have displayed a somewhat lower trend. Anglo-Egyptians "B" at 2 9-16 are ⅛ lower than last week's level. Anglo-Persian Prefs. are firm at 25s. 6d., as are British Burmahs at 13s. 6d.

The Roumanian market has been comparatively featureless. Roumanian Consols are unchanged at 16s., but Anglo-Roumanians and Traian-Roumanians are both weaker, the former being 7½d. down at 9s. 7½d., while the latter are 3d. lower at 10s. 6d.

In Russians Bakus are 3d. lower at 4s. 6d. Ural Caspians close at 1 9-16, a decline of 3-32, and Russian Petroleums at 2s. 3d. are 3d. lower. North Caucasians are unchanged at 26s., while Russian Generals remain at ⅞.

Paris Bourse.

Prices have shown a somewhat varied tendency. Suez Canals, which rose 75 francs to 5,535 francs, have been the feature among Near East securities. Other prices were:—Egyptian Unifieds 91.75 (against 90.50), Serbian 1895's 61.90 (against 61.85), Turkish Unifieds 71.80 (against 72.95), Banque D'Athenes 108 (against 109), Credit Foncier Egyptiens 783 (against 780), Land Banks 202.50 (against 210), and Ottoman Banks 550 (against 560).

BRITISH TRADE CORPORATION

(Incorporated by Royal Charter),

13, AUSTIN FRIARS, LONDON, E.C.2.

Telegrams: "Trabancor, London."

CAPITAL: Authorised - £10,000,000 Subscribed and Paid Up - £2,000,000

Governor - THE LORD FARINGDON.

Manager, A. G. M. DICKSON. London Manager, P. C. WEST. Secretary, G. De B. BROUNLIE.

The Corporation has been established with the object of developing the Trade of the British Empire in every part of the world, and brings to the notice of all interested that it is prepared to grant financial facilities to British Manufacturers and Merchants for the increase of their Import and Export Trade.

It will be prepared to assist in opening up new channels for enterprise, and will afford financial facilities for the enlargement of works and the extension of plant.

The Corporation is appointing representatives in the chief cities of the world, and will open credits at home and abroad. It invites inquiries, and will endeavour where necessary to put expert advice at the disposal of correspondents regarding the financing of their foreign and overseas business. Moneys received on fixed deposit. Terms on application.

NOTES OF THE WEEK.

During the coming weeks the Allies have to decide upon the details of the settlement that is to confirm their victory on the battlefield and to enable the world to profit by the peace which has been won at so great a cost. In view of the number of the delegates allotted to each country it is to be hoped that the dilution of the small War Council which during the critical days of the struggle has learned the value of the Allies maintaining whole-hearted unity at all costs will not prejudice the harmony of the Conference. If the proposal to refer to separate committees the questions that turn largely on technical points be acted upon, it should be possible to avoid at the plenary meetings the spectacle of oratorical duels between the spokesmen of conflicting schemes. The preliminary discussion round the committee table will determine what is common ground in any controversial settlement and what remains contested. When the latter comes up for settlement before the Conference, it may be expected that the only arguments calculated to carry weight will be too severely matter-of-fact to leave room for impassioned eloquence.

Although the United States have retained a representative in Bulgaria throughout the war and a British mission is now installed in Sofia to superintend the carrying out of the terms of the armistice, no definite information is forthcoming as to conditions in Bulgaria. From the fact that King Boris remains on the throne, it has to be surmised that any revolutionary movement that there may have been—the actual strength of the revolutionary army was once stated—has failed. Probably the view obtains that when the whole of Europe is in the melting pot, the situation in Bulgaria is of no great importance, so long as the Allies' terms are being acted upon and peace is maintained. With regard to the maltreatment of prisoners of war, it will be necessary for the Allies' Peace Conference to fix upon a uniform course to be adopted against those who were responsible, alike in Germany, Austria-Hungary, Bulgaria, and Turkey.

Another point that will not be lost sight of in Paris is that any future arrangements in regard to the Balkans must guarantee the impossibility of border fighting as an aftermath of the passions rekindled by the events of the war. It will not be enough to provide that no Balkan Government shall exercise jurisdiction over any considerable alien community. Boundaries will have to be marked by a veritable no-man's land, from which all armed forces beyond the necessary police force will have to be excluded. The suggestion is not made from a desire to shield this or that people from what might be regarded as their deserts, but in the interests of the general peace. The rule must be applied to the Albanian frontiers as well as to the Bulgarian. No Balkan frontiersman is likely to be grateful for being deprived of the opportunity of keeping himself in war training; but in the new era it has to be brought home to him in a practical manner that border feuds and brigand work can no longer be tolerated. As we have urged before, there must be a distinct proviso for the disbandment of all *komitaji*.

As was to be expected, the Montenegrin Government, under King Nicholas, at Neuilly, does not acknowledge the competency of the meeting at Podgoritza to determine the future constitution of Montenegro. This right, it is pointed out, belongs only to the National Parliament, whose members have been legally elected by the people. A large number of the deputies are still detained in what was Austria-Hungary; others have not yet returned from Allied or neutral countries. The Podgoritza assembly would seem to have acted with more haste than discretion. A self-constituted Government is actually in existence in Montenegro. It consists, we understand, of four Ministers, three of whom are lawyers, and the fourth a professor and philosopher. The Premier, M. Raitchevitch, was associated with General Vechovitch in his guerilla warfare against the Austrians. The liberation of the country has been followed by a great revival of political activities, and a number of parties are competing for power. It was probably from a desire "to keep things moving" that the Podgoritza gathering was held, if indeed M. Raitchevitch's party was responsible for the step. But a body claiming to be a National Parliament or a Constituent Assembly ought to have confidence in its own authority. It should avoid unseemly haste and act in a way that would convince the outside world of its strength and of its belief in its own competence. The Podgoritza assembly has done neither.

King Nicholas still remains in France. His request to be allowed to return to Montenegro was made to the French Government over three weeks ago, but so far the latter has not seen its way to grant it. The reason for the refusal is not apparent. French troops are in Montenegro, and may be said to be engaged in the re-establishment of normal conditions in the country; but it is probable that other troops are no less active with a

Digitized by Google

different end in view. In any case, if it was possible to summon a "parliament" by November 29, fairly normal conditions must already have been established. On the other hand, if the Podgoritza meeting represented a revolutionary movement, it is evident that the people to cope with it are the duly constituted authorities of Montenegro. No doubt King Nicholas looks to France to give him material assistance on his return to his country, and on this ground the French Government could plead the inopportunity of the moment for his return, but the result is to prejudice the King's position among his people. In such circumstances, however, it would have been better for King Nicholas to have returned empty-handed rather than to have allowed himself to be placed in a false position.

As things are, there is some hope that the re-victualling of Montenegro will not be unduly delayed. The matter is understood to be engaging the attention of the Inter-Allied Food Council. Funds are in existence for the purpose, a commission is ready to receive the goods for distribution, and within a few days after the details of the organisation have been approved the work of relief can begin. The Montenegrin Government has sent Dr. Dobrechitch to this country as its envoy in connection with the relief measures. In this way, it is to be hoped, the task of revictualling the Balkan States will be carried out uniformly, so that all the peoples will have the same chance of settling down to the process of economic, and, where necessary, political, reconstruction. It must be the aim of the British, French, and American Governments to convince these States that there is no desire to distinguish between them as recipients of their good will and confidence.

An interesting despatch from a Press correspondent at Baghdad indicates on general lines the attitude of the Arabs towards the British occupation.

"Prosperity abounds," the correspondent states, "and the people are settling down to a life of security and peace. But some anxiety exists as to the future of the Irak State. Arab opinion is all for British help. We owe it to the world at large as well as to the inhabitants of this country to afford this and to back it up by armed force. Thus only can the inhabitants be given the desired degree of liberty to administer themselves under British advice, by means of representative institutions suited to the country. The inhabitants do not expect, or desire, that we should leave the country, knowing its control to be a task beyond their power. Because of the tribes, semi-civilised, turbulent, avaricious, and well armed, who might at any time plunge the country into general chaos, the British Army is essential to save Mesopotamia from disorder."

All this is axiomatic, but it needs re-stating, as a reminder to those who affect to believe that with the signature of peace or even of the armistice there is no more work for the British Army to do. The very tribes, it may be added, who are now well armed and turbulent, will be among the first to benefit by the *pax Britannica*, for they will be attracted by the settled conditions afforded under British jurisdiction, and will gradually abandon their nomadic life to join the ranks of the world's producers.

From the tenour of the French Government's reply to a communication from the Central Syrian Committee it may be inferred that the Allies are on their guard against a repetition of the mistake of being hurried into rash agreements. The Committee has the knowledge of the Allies' solicitude for the oppressed nationalities of Asia Minor, and now receives the assurance that Syria will be allowed to work out its own evolution towards a peaceful civilization. But the presence of the Emir Feisul as the guest of the French and British Governments is a guarantee against any hole-and-corner agreement regarding the future of Syria. As for what is described as a bitterly worded appeal from Shekri Ganem to the British authorities to relax certain restrictions imposed as a result of war conditions, it will be recalled that during the war some of the Syrians in what was then Turkish territory were taken to task by their fellow-countrymen for failing to do anything in support of the measures being taken for their relief, and it was suggested that they would probably be the first to cry out when once they had been liberated.

Those of our readers who are familiar with the course of Indian finance will not be surprised at the news cabled last week that the Administration is once again tightening its belt and preparing for a lean season. A bad monsoon means decreased income and much extra expenditure, and with the heavy cost of demobilisation to be provided, there will necessarily be little money to spare for all the urgent matters which have been hung up during the war. It is easy to realise the disheartening effect which such orders must produce on zealous officers who have been compelled to mark time for the last three or four years, and have been looking forward eagerly to an opportunity of putting into practice a great variety of beneficent schemes. But that is the way things happen in India, where, as a wise man once said, the bottom always falls out of the bucket.

It is satisfactory, however, to see that economic progress will not be entirely suspended, for the orders indicate that money may be spent, if it can be got, on the development of industries, on the forests, and on agricultural experiments, the three departments of activity which must now bear the brunt of the fight against poverty, as well as on the extension of education, which is scarcely less necessary for the future of the country, though it can do little to fill the stomachs of the present generation. We hope that when the financial sky clears Lord Chelmsford and his advisers will see that the productive departments get a fair chance, and are provided with the money, and the men, for which they have been waiting so long.

Apart from the undoubted needs of the country, there is a special reason just now for an immediate forward policy of economic development. In the gradual advance towards self-government, it is obvious that the productive departments cannot be reserved indefinitely, and in fact they bulk largely in the provisional list of activities to be "transferred," which is appended to the Montagu-Chelmsford Report. They are not, however, yet ripe for transfer; there is still much preliminary work to be done of the kind which can be carried through most effectively by the present bureaucratic administration; it has fallen rather seriously behindhand in these years of stress, and the lost ground ought to be made up without delay, so that the departments may be ready for transfer as soon as the new constitutional authorities are ready to take them over.

England, in fact, is in the position of trustee for a ward possessed of large undeveloped estates. The ward is rapidly growing up and will soon claim possession of the property, but will not at the outset possess very much experience of practical affairs; he will be competent to take over and manage a going concern, but it cannot be expected that he will be familiar with the more delicate operations of development. In this position the trustee's duty is obvious; the estate must be brought into working order without any further delay, the difficulties in the way of development must be faced and overcome, and the business so organised that it can prosper in relatively inexperienced hands. That, to our mind, is the most urgent task now confronting Lord Chelmsford and his advisers.

We regret to have to record the death of Mr. H. F. W. Gillman, a member of the committee appointed to consider the transfer of functions under the scheme of constitutional reform. Mr. Gillman's selection was attacked in some quarters on the ground that he was hostile to Brahmin aspirations, but the truth was that he was able to see the people of India as a whole, and he appreciated the relative importance of the different classes more justly than his critics are in a position to do. For this reason in particular the Committee is weakened by his loss, but his successor, Mr. M. E. Couchman, is a good selection, and his long practical experience of agricultural and industrial affairs will be valuable to a Committee which has to make recommendations regarding the future of the productive departments.

LETTERS FROM CAIRO.

(From Our Own Correspondent.)

Cairo, November 4.

Return of Residency.

The Residency returned to Cairo last Thursday from Alexandria for the winter season. The High Commissioner and Lady Wingate travelled up from Sidi-Gaber by special train, accompanied by the Staff. There was no official reception either at the departure or on the arrival at Cairo.

The Education Report.

The publication of the report on the Secondary Certificate Examinations this year has created somewhat of a stir. Not that the opinion of the general system of education or of the material from which the schools draw their pupils was in itself a surprise to most people; but the fact that the Ministry should so publicly and so boldly set on record the views of the examiners and revisors, together with those of the Chief Inspector, who was General President of the Examining commissions, came quite as a shock to the bureaucrats. As a matter of fact, it has been known for some time that there was something radically wrong with the general educational system of the country, and with the manner in which English was being taught. Wherever one went one heard the same criticism: a poor standard of English among the graduates, irresponsibility and total lack of the power of judgment, a marked absence of general knowledge, lack of keenness in the work of those who obtained Government posts, and an unwillingness to go through the drudgery that can alone lead to success in a career.

Mr. Boyd Carpenter has most courageously dotted the I's and crossed the T's of the examiners in their reports, and has emphasised and amplified the criticisms which are addressed alike to the private schools and the pupils themselves, though at the same time he has not exaggerated the situation. The conclusions he has drawn and the suggestions he has made are generally approved, and it is hoped that proper effect will be given without undue delay to the latter.

There is no doubt that the adoption of Arabic as the linguistic medium of instruction in science, geography, etc., is wrong. Attention has been drawn to this fact very frequently in this correspondence during the past four or five years, and there is no need now to labour the point. The satisfactory thing is that the Ministry of Education itself puts on record its opinion that the policy is wrong; and so there is a hope that there will be an early return to the former method, which will undoubtedly conduce to better results in the different subjects and a higher standard in English, since the students will have more opportunity of practice than they have at present. The control over candidates in the matter of their preparedness and the intervals at which unsuccessful ones may re-present themselves is also excellent. It is not sufficient, however, to penalise only the pupils who fail; similar penalties should be inflicted on the schools from which they come. Indeed, in this country, where public spirit does not exist, and everyone looks first at, and acts solely in, his own interest, education should under no circumstances be allowed to be carried on uncontrolled. Since the organisers of the private schools cannot be trusted to do this work conscientiously they should be made to fulfil certain initial but necessary conditions as to personnel and syllabus; they should be subjected to control, with the menace that if they do not conform to the requirements of the Ministry of Education, or their candidates do not show a certain standard of preparation, they can be closed by Ministerial order, and can be excluded from participation at future examinations.

The reform of the educational system existing in the country presages, and most necessarily so, an increase in the English personnel of the Ministry. The latter has given up the best part of its English staff to the war—it stands in this respect very nearly, if not quite, at the top of the list of administrations—and as a result it has not been able to carry out the inspection of the State-aided schools in the same efficient manner as it used to; hence the falling off in the State-inspected schools. Not only must all these old posts be filled up again, but the closer control over the private schools will of itself necessitate a large inspectorate staff.

The Egyptian University.

It is surely a curious turn of fate which has made the appearance of the Secondary Certificate report coincide so closely with the nomination of Saad Pasha Zagloul to the Controllership of the Egyptian University. It was during that gentleman's tenure of the portfolio of Education ten years ago that the abolition of English and the adoption of Arabic as the medium of instruction in the schools were decided upon and introduced. Although he was selected from the reactionary party by Lord Cromer to fill a prominent post in the Government, and was lauded by him in his valedictory speech at the Opera House as one of the most enlightened Egyptians, he nevertheless retained all his Nationalist proclivities; and when in the course of the pan-Egyptian wave that swept over the country in 1907-1910, the party clamoured for the adoption of Arabic in the schools instead of English, he supported the movement to such an extent that Sir Eldon Gorst in the face of strong opposition from the British educational heads ordered the change to be made. Of his reactionary turn of mind we had a sample during the session of the Legislative Assembly, when to the surprise of everyone and to the disgust of those of us who had expected greater things from him and an example to be set to the rest, he, one of the Vice-Presidents, took up a deliberately antagonistic attitude towards the Government, and encouraged the opposition faction to the point of leaving the house at its head. The pass to which his policy has now brought education in this country will, it is to be hoped, have led him to reconstruct his ideas on the subject; otherwise the ill-fated Egyptian University, to which he has now been appointed Controller, may expect to progress still further on its downward career.

The Legislative Assembly.

Mention of the Legislative Assembly reminds me that by the death of Eloui Pasha, the eminent oculist and scientist, that august body has added one more to the list of seats that have become vacant during the war. Their number is fourteen, of which nine have fallen vacant through death, one by the appointment of Said Zulfikar Pasha to the post of Grand Chamberlain to the Sultan, two through resignation, and the remaining two for political reasons. The sitting of the Assembly and the elections, which should have taken place during the war, were, it may be remembered, postponed *sine die*. It is to be presumed, however, that in the near future that body may expect to receive permission to resume the labours which were entrusted to it in 1913, and which, owing to the intervention of the war, it was only able to exercise during one session; and that the return of peace conditions will see a General Election in Egypt.

November 11.

Return of the Sultan.

His Highness the Sultan came up to Cairo by special train on Monday last. He was accompanied by the Prime Minister, the Ministers, the Acting Financial Adviser and his Household. There was a large gathering of officials and notables on the platform to greet his Highness on his return to the capital. A graceful compliment was paid him by the Royal Air Force. At the moment the special train entered the station four aeroplanes appeared over the city. They performed all manner of evolutions, dropping coloured lights at intervals, and returned to the aerodrome at Zeitun as soon as the Sultan had entered Abdin Palace. With the return of the Court the seat of Government has been re-transferred to Cairo, and his Highness presided on Saturday over the first Council of Ministers held in Cairo since May last.

The Armistices.

The satisfactory change in the general war situation is, of course, the main topic of conversation out here, as it surely must be in every other part of the universe. The foreign colonies have preserved very commendable

Digitized by Google

and dignified calm in the presence of events which mean so much to all of them.

Even the news of the capitulation of Turkey, which in a way more directly interested the local population, was received very quietly, the event having been expected for some days prior to its occurrence. The sole exceptions to the general attitude of calm have been the Greek and Italian communities. The former are greatly gratified at the prospect of their fleet co-operating with the Entente navies at the entry into the Bosphorus, but their rejoicing has mainly taken the form of celebrations of Te Deums in the churches. On the other hand, the Italian community has come out with flags at every point, and many members paraded the city singing the national anthem and acclaiming the Entente Powers and the occupation of Trieste.

On the Egyptians the general collapse of the Central Empire group has had a varying effect. The fellaheen, it has left quite unperturbed; in fact, whichever way the cat had jumped they would not have really minded, for the simple reason that, although they are sympathetically inclined towards the British, their interests are wrapped up in their fields, their village quarrels and their produce, entirely to the exclusion of all extraneous influences; though it must be admitted that latterly, and by that I mean of late years, more of them have taken an interest in political matters than was the case twenty years ago. The mercantile class and those who have dabbled in cereals and general goods, South Europeans and Levantines as well as Egyptians, are beginning to pull long faces. Prolongation of the war meant more profit for them, without any contribution to the cost of administration, whereas the cessation of hostilities, conducing as it does to freer communications between Egypt and the outside world and bringing nearer the date when a more equitable adjustment of the fiscal burden in this country will be possible, must perforce threaten the extent of their profits, if indeed it does not bring them in the long run serious loss. It will no doubt be some time before communications with the outside world assume any improvement; but in the meantime there is every possibility of a slump in the near future in certain local markets.

Amongst the remainder of the local population there is a certain element, which, I find, the sudden change in the war situation has somewhat nonplussed. This element, consisting, it is regrettable to say, largely of educated men, has up to now persisted in refusing to credit the news of German and Turkish defeat. It has asserted its belief that the Turkish army was still intact on the Palestine front, and has characterised all our statements of victories and captures of prisoners as mere fabrications. Its members are beginning at last to have a glimmer of the true situation, and to realise that all is far from being as well with the Germans and Turks as they would fain have it. They, however, derive some consolation from a most extraordinary theory which they now fondly cherish, and which I find is quite widespread. This theory is that Dr. Wilson, when he propounded his doctrine of self-determination for small nations, had in mind the Egyptians, and that at the end of the war he will insist on their being allowed to "self determine" if they so wish; in which event this element foresees the advent of self-government for them and their fellow-countrymen. Whilst the recent events on the various fronts have shattered their other views, nothing will dissuade them from the above belief, and as a result it is to be feared that a rude awakening awaits them.

Flower Show in Cairo.

The Ezbekia Gardens were recently the scene of an interesting flower show held by the Sultania Horticultural Society. The show was opened by Lady Wingate, who was accompanied by Mrs. R. Wingate and Captain Alexander. Lady Allenby also paid a visit during the afternoon, and there was a very good number of visitors. This is the second show held by the Society since its reconstruction. The first was a vegetable exhibition—and a very good one at that—whilst this one, although termed a flower show, was really a chrysanthemum show with numerous exhibits of flowers and fruits. The weather interfered considerably with the exhibits, the sudden heat wave, which we were then going through, causing all the flowers to droop. Nevertheless, they were sufficiently in condition for one to admire them and be able to compliment the exhibitors on the success of their efforts. Some of the roses were very fine, and there was an excellent exhibit of foreign fruit, tropical and non-tropical, grown in Egypt. From the utilitarian point of view perhaps the most interesting exhibit—or rather side exhibit—was the stand of native woods. There were specimens of "sant" wood beautifully grained and polished, and of "lebbekh" stained and polished. To the ordinary observer these exhibits were a revelation and an interesting indication of another direction in which Egyptian industry could develop its activities. The Egyptian Horticultural Society is certainly to be congratulated on having once more got together a very interesting show.

Spanish Influenza.

Spanish influenza, which made its appearance in Egypt some while back, has begun to assume somewhat serious proportions. The attack started in Alexandria at the end of the summer and has now spread to Cairo, where it is very severe at the present time. There have been numerous deaths amongst the indigenous population and amongst the soldiers, most of the mortality being due to pneumonia, which supervenes in so many instances. The doctors are having an exceedingly busy time, but it is hoped that the epidemic will be got well in hand before long.

SUDAN NOTES.

(From Our Own Correspondent.)

Khartoum, November 6.

The Acting Governor-General and Sirdar is expected to return to Khartoum with his Staff about the 15th of the month.

The arrival of the north wind has brought a welcome change in the weather, and the thermometer has reached a maximum below 100 degrees. The winter season may, therefore, be said to be about to begin.

The chief topics of interest at the present are the supply of wheat flour and the "durra" harvest. The former is somewhat low, and as the new crop cannot be expected for six months, some care has to be exercised in the distribution of supplies. The "durra" harvest has been rather disappointing. There was a possibility of a good crop, which, with the supplies in hand, would have made a considerable export easy. Unfortunately, the last rains which were required to bring the crop to maturity failed almost entirely, and as a result the crop is something below average. This applies especially in the Gezira, which forms the chief area for export owing to its proximity to the railway. There is no danger of famine, but some supervision of the distribution may be required, so that in those places where the crops have wholly failed there may be a supply for local needs. In the extreme south the failure of the rains may lead to a more serious situation, and some sort of relief may be needed. It appears that in Uganda and in parts of B.E.A. the Government has already had to start relief.

In the White Nile province the failure of the Nile flood to reach its full height has caused only a small area to be flooded for "seluca" cultivation, and this will be some handicap locally. The crops in the southern part of this province have been moderate, but in the northern half they have almost wholly failed.

It is reported from Eritrea and the western parts of Abyssinia that the rains have been disappointing, and it is not unlikely that there may be considerable want in places. In Eritrea the Government has been buying for a considerable time, and the failure of this year's crop will presumably be a serious matter.

It appears that the rains all over the high lands of Eastern Africa have failed for a considerable time. What effect, if any, this may have on the Nile flood remains to be seen. The Great Lakes, which had risen unexpectedly, have dropped several feet again, and it is to be hoped that abundant winter rains will restore the balance and bring the situation back to normal.

MOROCCO NOTES.

(From Our Own Correspondent.)

Tangier, December 1.

The 'Flu and Some Results.

There has been much improvement in the state of public health, at least as far as regards influenza, since the rains began and the nights became cooler, both here and in the neighbouring zones. Very severe criticisms of the inaction of the international authorities in Tangier when the epidemic commenced have appeared in England. It should not be forgotten, however, as explained in The Near East some weeks ago, that whilst Tangier is "international" in so far as she is governed by the Diplomatic Corps, the Special International Statute which had been so much discussed, of which so much was hoped, and which was to have been administered by a properly constituted authority, was not, at the last moment, approved by all the Powers concerned; and so was laid aside; the consequence being that Tangier can hardly be said to be governed at all, internationally or otherwise. It is also by no means certain that, had any one Power had full authority here, anything more would have been done for the native population when the epidemic became really bad. From information which I have every reason to believe trustworthy, it appears that the condition of things amongst the natives in the French zone was quite as bad, to say the least of it; and no steps seem to have been taken there until Europeans were attacked and prominent people began to succumb. Then a move was made with such a will that, it is said, even water for domestic purposes was disinfected and tea tasted of chloride of lime!

Much excellent work was done amongst the natives here in Tangier and the surrounding villages by private individuals, two or three showing very great devotion in visiting the sick in the very poorest huts, regardless of risk to themselves, alleviating their sufferings and instructing them in precautions to be taken and in simple methods of treatment. There is plenty of ground for complaint of those who are supposed to govern Tangier, and their action and inaction are generally open to criticism; but in the case of the influenza they were no more blameworthy than any other municipal authority which had to be stirred up by public opinion.

One good result of the visitation is that many of the filthiest holes and corners—and there were some very filthy ones—which had never been visited by a scavenger, have been well cleaned out. Of course, they will not remain clean long; it is hopeless to expect that, as things are; but they will remain more or less decent for some little time.

Now that the war is over, we are again venturing to hope that this chaotic state may really be nearing its end, and that amongst the many questions held over for solution when Peace is signed the future government of Tangier will not be forgotten.

Many rumours as to the eventual fate of Tangier have been current during the war, each in its turn gaining a certain amount of credence. What the British colony desire is easily guessed, and their view has many supporters, both native and foreign.

Peace Rejoicings.

In common with the rest of the world, Morocco gave itself over to rejoicing on the signing of the Armistice—both Moors and Europeans feeling, though not yet able to realise fully, the relief after the fearful strain of the last 4½ years. Here at Tangier it had been announced on the night of Friday, the 8th, that the Armistice was signed, and the news was duly fêted, both privately and at the Club and the Kursaal, until a late hour. On Saturday morning there was great disappointment when the news was contradicted, an unwarranted depression being evident in some quarters; but on Monday, when the official news arrived, rejoicing became general, banks and offices closed, and the streets were crowded with joyful throngs. There was naturally a great demand for flags, and an attempt was made to corner the stocks, and the supply of British colours was soon exhausted.

A thanksgiving service was held in our English Church on Sunday, the 17th, the Rev. E. Blaxland coming from Gibraltar, where he is stationed, to officiate. All the members of the British Diplomatic and Consular Staffs were present, as well as representatives of all our Allies. A number of officers and men from British steamers lying in the bay attended the service, and the little church was very crowded.

On Tuesday, the 19th, Sir Herbert and Lady White gave an At Home and impromptu dance at the Agency, to which all members of the colony were invited. A very large number attended and showed their appreciation of

The Natural Products of your Country

may be of considerable interest to us as we are purchasers of consignments of Produce from all parts of the world.

Coconut Oil, Palm Oil, Oil Seeds, Oil Nuts, Kernels, Copra, Maize, Ivory, Gums, Grain, Fibres, Rubber, Cotton

These interest us particularly.

Will you let us know what Products of your Country you can offer us?

We are prepared to finance consignments when necessary.

the opportunity of meeting to demonstrate their loyalty and to exchange congratulations.

A solemn Te Deum was celebrated in one of the Roman Catholic churches on the 12th, and a thanksgiving service held in one of the Jewish synagogues; and a torchlight procession and a demonstration in the local theatre were organised. Altogether a most memorable ten days' rejoicing.

A Hint to Invalids.

We are having glorious weather; the sun is still quite warm, beautiful starlight nights with just enough sharpness in the air to be pleasant. What a pity, for some of the poor tired, jaded people in England, that the tourist steamers are not running! Though living here is frightfully dear—much more so than in England—we are in many ways much better off than those at home.

EMIR FEISUL IN ENGLAND.

The Emir Feisul, third son of the King of the Hejaz, arrived in England on Tuesday afternoon for the purpose of presenting the respects of his father to the King. The Emir (says Reuter's Agency) is a tall, dignified figure, somewhat fairer than the usual Arab type, and is thirty-two years of age. He assumed direct command in the field of the Arab Northern Army, and led it on three successive and successful campaigns. During the whole of this period he lived as an ordinary soldier, enduring extremes of heat and cold, and was continually in the firing line. A price was placed on his head, and at any time he was in danger, if captured, of being executed by the Turks. A most interesting account of his achievements appeared recently in a series of articles, entitled "The Arab Epic," in *The Times*.

The Emir was met on arrival in this country by Mr. R. F. Synge on behalf of the Foreign Office. Wearing a long black *abba*, or cloak, and a headcloth of Damascus silk with golden *hagal* of Meccan manufacture, he received Mr. Synge in his saloon. On landing at Dover the Emir was received by the naval authorities. He is accompanied by Colonel T. E. Lawrence, General Nury Faieh, Chief of the Staff of the Arab Northern Army, and a suite including A.D.C.s, a doctor, and a secretary. General Faieh, who is a native of Baghdad, commanded a flying column of the Arab Army which co-operated on General Allenby's right wing last September. His army fought so well that General Allenby gave him the prestige of being the first to enter Damascus and Aleppo at the head of his columns.

"THE SALT OF THE EARTH."

To those of us who love the Arab, the visit to this country of the Emir Feisul is an event of almost unique interest. Other distinguished Allies have come and gone of late, and London has welcomed them tumultuously. What will the Londoners think of the Emir? How will they welcome him? Less warmly, in all probability, than they have welcomed many a lesser man; for the only "Arabs" of which the majority of them know anything at all are their own "street arabs." The Desert is all unknown to them, as is the spirit that it breeds; and the outlook on life of the Bedawi is as unlike the outlook of the Londoner as are the black tents of the Desert from the grimy buildings of a modern great city. Indeed, your lover of cities never could catch the spirit of the Desert, nor could he ever truly appreciate the character of the Bedawi; though, if he were an admirer of Mr. Hichens' stories, he might pretend to do so. Not his to share the enthusiasm of the writer of that brilliant "Arab Epic" that appeared recently in *The Times*. There we read of the "townsmen and villagers of Syria" that they are "excellent people, but not the salt of the earth, as are the Arabs of the desert." Which is plain truth.

It is men like Colonel T. E. Laurence, Captain Woolley, Captain Newcombe, the late Major Wavell, Captain Shakespeare, and a hundred others who are able to understand the Bedawi. And they understand him because they like him, in the first place, and because they honestly like—or certainly do not dislike—his simple way of life. England has been fortunate in that she has had many men of this type in the past—Burton and Kitchener, for instance—and that the Great War has brought many of them to the fore. In Mesopotamia to-day there are numbers of young "politicals" who, by reason of the faith that is in them, have been, and are, working miracles amongst the Arabs of that troublous region. It is these lovers of the Arab who will surely help him and his race to restore the glories of the Abbasside days, when Baghdad was the Queen of Cities. It is they who have helped him doing it no less than the "Bedu" has revelled in it himself.

It is, perhaps, unfortunate that so few Englishmen know what splendid work our Arab Allies have done in this war. We are all indebted to the writer already referred to for lifting the veil for us to some extent; but we still want to be told a lot more. For "The Arab Epic" is full of colour and of deeds of chivalry (on the part of the Arabs) such as redeem war from some of its worst horrors; and this tribute to the Emir and his countrymen cannot be closed more fittingly than by a quotation from it. It concerns an action outside the walls of Medina. The Arabs were clamouring to be led against a strong fort, and when Feisul tried to hold them back they "plunged forward without him." The writer continues:—

"The Turks had, however, a formidable armament collected there, and the Arabs had never before met artillery fire. The assaulting column swerved aside and took refuge in the broken lava slopes of a low hill outside the north-east angle of the town. The Turks saw their weakness, and sent out an enveloping force to cut off and destroy them. Feisul, with the rest of the Arabs, a mile back on the flank, saw the danger of their fellows, and started out to help them. The Turks opened with all their guns from the town wall, covering the open ground with bursting shrapnel, and after their first losses the Arabs wavered, and then took cover in the gardens. Feisul rode up to their front line on his horse and called to them to follow him. Their chief refused, saying that it was death to cross the plain. Feisul laughed, and, turning his horse, forced it at a walk through the Turkish fire till he had gained the shelter of the opposite gardens. Then he waved to the men behind him, who charged across to him at a wild gallop, losing only about twenty men on the way." Having regard to Arab methods of and views upon fighting, surely nothing finer than that was done in all the war. And—Emir Feisul is now in our midst.

THE PALESTINE ADMINISTRATION.

(From Our Own Correspondent.)

Cairo, November 18.

The administration of the occupied territories in Palestine is gradually being consolidated and organised on a firm basis. Various appointments have been made or are about to be announced. Amongst them are the following, which will interest those readers who have had any connection with Egypt:—

Lieut.-Colonel Gabriel as Financial Adviser; Colonel Cathcart Garner, late of the Egyptian Public Health Department, as Chief Medical Officer; Major Orme Clarke, who prior to the war was one of the experts called in by the Ottoman Government to revise the Ottoman Codes, etc., as Senior Judicial Officer; Major Norman Bentwich and Major J. H. Scott, both of the Sultania School of Law, as Judges; Colonel E. S. Jackson, C.M.G., D.S.O., of the Sudan Service, as Political Adviser to the Occupied Enemy Territory Administration; Major Tadman, of the Ministry of Education, as Director-General of Education; Captain J. W. A. Young, of the Ministry of Finance, as Agricultural Officer; Captain Waley as Deputy Military Governor of Zamerin and District; Captain Hubbard, of the Egyptian Coastguards Service, as Military Governor of Jaffa; Major Kenny, of the Egyptian Army, as Military Governor of Nablus; Major Mason, of the Egyptian Veterinary Service, as Veterinary Adviser; whilst the services of Major G. H. Carey and Captain W. A. C. Baynes, both of the Egyptian Bench, have been lent for a period in connection with the Palestine Courts. In addition it should be mentioned that Colonel Ronald Storrs, C.M.G., late Oriental Secretary to the Residency at Cairo, who has done such excellent work as Military Governor of Jerusalem, was recently delegated to organise the administration of Haifa whilst retaining his post in the Holy City. As can be seen, Anglo-Egypt is supplying many of the posts, and there is reason to believe that other appointments from the Egyptian Civil Service will in due course be made to fill posts in the Judicial, Financial, Educational and Municipal Administrations of Palestine.

Parcels can now be accepted for transmission to Greece. The rates of postage for Greece are: Weight not exceeding 3 lb., 2s. 4d.; exceeding 3 lb. but not exceeding 7 lb., 3s; exceeding 7 lb. but not exceeding 11 lb., 3s. 8d. Parcels cannot be insured and must not exceed three and a-half feet in length or six feet in length and girth combined. One despatch note and one

THE VALI OF SMYRNA.

(From Our Own Correspondent.)

Cairo, November 10.

Among the names of leading Turks which are mentioned in the articles written on the political situation in Turkey prior to the Armistice appears that of Rahmi Bey. This is the man who was Vali of Smyrna from the beginning of the war, and was only recently dismissed from that post. He has always been known as very "Ententophile," and the residents of Smyrna confirm in every detail the statements that he did everything he could to assist the enemy subjects and make their life easier and more bearable. He is generally regarded as the best Vali that district had ever had, for not only was he an able administrator, but he was also absolutely reliable, always carrying out his promises and never evading responsibility or a direct answer to a question.

According to the Turkish papers, which, by the by, appear to have become very outspoken and anti-German by that time, he was dismissed from his post for wanting to take a too active part in the political activities which preceded the armistice. He published an article in the *Journal d'Orient* of October 18, declaring that Turkey was going to throw off the German yoke and make a separate peace with the Entente. This somewhat upset the calculations of his friends in Constantinople, who were aware of his progressist tendencies and of his ambitions, and who, feeling that he would push on too far and leave them behind, decided to dismiss him. His dismissal took place on October 24. When the news was known in Smyrna there was great regret and indignation. The local press published eulogistic articles on the ability with which he had filled his post—encomiums which were certainly merited—and expressed the hope that his successor would be actuated by the same high motives; and he was presented with a farewell address, expressing their gratitude, by the British residents.

Apart from his Ententophile feelings, Rahmi Bey was exceedingly anti-German, and an amusing story is told of his dealings with the German Consul. Wishing to provide money for the building of a Turkish school, Rahmi Bey increased the postal rates on parcels by one piastre. As the Germans were sending large number of parcels, containing food and curios, to Germany, this increase hit them rather hard, and their Consul complained of what he termed the illegality of the Vali's act. Rahmi accordingly took off the extra piastre, but the Germans found that the boatmen who loaded the parcels immediately started to charge three piastres instead of one per parcel. The German Consul duly complained, but Rahmi replied that he really couldn't help it if the boatmen chose to charge more than usual. To the Consul's plaint that the extra two piastres were being taken from the boatmen by the Vali, the latter replied that that was not so, and that if the boatmen liked to give him two piastres per parcel towards the cost of erecting a school he was not going to refuse to take the money. The school was in due course erected, and at the inauguration ceremony Rahmi Bey publicly thanked the German Consul for the assistance the Community had given towards the cost of the building, adding at the same time details of the manner in which this contribution had been made. The story runs that the German Consul was beside himself with rage, and left after rebuking the Vali for asking him to be present in order to insult him.

THE BRITISH IN CONSTANTINOPLE.

A letter received this week from Constantinople gives particulars of some members of the British colony who remained in that city. The writer mentions that the Rev. Robert Frew, who had been sent to Brousa, is back in Constantinople, "just the the same as ever, not altered a bit," and that he was, at the time the letter was written, "preparing a social evening for our officers and men." Others mentioned as having been seen are Mr. P. C. Leete and his mother, Mr. James Gatherall, Mr. Morton Dawson, Mrs. Morton, Mrs. Vimicombe, and Captain Palmer. Mr. James MacGill, who had been interned for some time, is reported to be now on his way to England.

Another letter says:—"The sight on shore was very interesting, comprising a mixture of English 'Tommies' and French soldiers, English, French and Greek sailors, and Turkish and Hun soldiers, all mixed up, and in such crowds that it was difficult to move about. The 'Tommies' walked about very cheerful-looking, with caps on one side and pipes in mouths, seemingly thoroughly happy and contented. . . . Everything that was obtainable was rather expensive. Cigarettes were unprocurable."

From a Serbian source Reuter's Agency learns that Dr. Rot, formerly Chief Governor of the Banat, denies the report spread in the Hungarian and German Press that Bolshevism was spreading in the Banat and Southern Hungary. Perfect order prevails in all territories occupied by the Serbian Army.

SCHOOL OF ORIENTAL STUDIES.
London Institution, Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.

For particulars, apply to Sir E. DENISON ROSS, Director.

TANGIER TO TEHERAN.

The *Pioneer* tells an amusing story about a "padre" at Bangalore who, being stopped by a policeman for cycling without a light, claimed to be engaged on duty for His Majesty. The police officer rose to the occasion at once. "So am I, sir," he replied, and took the "padre's" address. By the way, what manner of man was it that was once described as loving the darkness and hating the light because his deeds were evil?

***

The advertisements in the *Basrah Times* continue to provide me with much interesting reading, as, I suppose, they provide many others who knew the city in its unregenerate days. For instance, who had ever heard of Hyde Park Corner, Magil, twenty—or even four—years ago? But to-day that is gravely given as the address of one of the numerous cinema shows advertised in the *B. T.* Then, among the official notices I have observed one announcing the establishment of a Civil Post Office at Kurnah; another regarding "the conveyance of public goods to Baghdad" by "the Mesopotamian Railways," a third imposing a speed limit for motor bicycles; and yet another, headed "Police Orders for the Muharram," which contained some fairly stiff rules and regulations. That last notice, more than anything else, I think, brought home to me the fact that British law and order really *are* established in Busreh to-day.

***

Another notice that I cut out from the *Basrah Times*—it appeared in August, I believe—offered a reward of one thousand rupees for information leading to the arrest of each of four prisoners of war, three of whom were Germans and one "of Indian nationality." "The prisoners were probably dressed as Arabs," says the notice. I hope they were all safely nabbed, especially the gentleman of "Indian nationality," who so far forgot himself as to mix in such company. The Salvation Army, we learn from another notice, has established "Date Palm Corps, Mesopotamia No. 1," which holds meetings at Magil, "in the United Board Chaplain's Tent" and "also under the date palms near Jubailah Road Bridge" at certain specified times. "Will you come?" asks the notice. Nothing would give me greater pleasure. I honestly admire the S.A., and I feel sure it is doing good work on the banks of the Shatt-el-Arab, as elsewhere.

***

My reading of unofficial notices and private advertisements (still in the *Basrah Times*) has not provided me with many thrills of late. But when I find enterprising firms advertising the arrival of "Tussore silks . . . embroidered voiles . . . manicure sets," I conclude that Busreh must number more ladies in its population than one would suspect. The item "crochey" in the same advertisement piques my curiosity. Is it meant for "croquet" or for "crochet"? Finally, I find an advertisement of "Persian ware for sale," announcing that the advertiser has "just received another considerable lot of Persian handwork," etc. And the advertiser is a certain ——, dentist. It may be unprofessional, but I should call it "good business." One would hardly care to argue on prices—or any other subject—when one was sitting in the chair of torture. Properly worked, the dental-trading combination ought to prove a little gold-mine.

***

When I am told a tale in which the long arm of coincidence plays the leading part, so to say, I am usually prepared to accept it as true; for I have seen too many strange coincidences myself—some of them verging on the uncanny—to be sceptical on the subject. The latest thing of the kind to come my way is from an unimpeachable source—a C.F., who is now serving somewhere in Mesopotamia. Some time ago he was acting as *locum tenens* for the rector of a certain London parish, and during this period it fell to his lot to conduct the funeral of a number of victims of an explosion. At the time he noticed a cinematograph man busily at work, but paid no further heed to his presence, and soon forgot it entirely. A short time ago, on arrival at Amarah, he visited a cinematograph show in that unlovely little Tigris town. One of the earliest pictures thrown on the screen was the funeral, with himself very much in evidence. Apart from the interest it holds—for me, at any rate—by reason of the coincidence it hinges on, I found the tale interesting as showing an odd taste on the part of Mesopotamian cinema patrons. Why anybody should care to see pictures of a funeral—especially of a funeral in an ugly London cemetery—passes my comprehension. And I suppose the managers of the "pictures" do consult their patrons' tastes!

PRESS ON THE NEAR EAST.

A Call to America.

The coming Peace Conference will have many tough problems to tackle, but none is likely to prove tougher than the disposal of what the *Round Table* refers to as "derelict territories severed from the German and Turkish Empires." The expression occurs in a section of the first article ("Windows of Freedom"), in which "America's Place in World Government" is discussed. "The crux of the problem" (we read) "lies in the fact that none of the territories outside Europe detached by this war from the German and Turkish Empires can in the near future provide peace, order, and good government for themselves. How to provide government for these territories is the most difficult of the questions which the Conference has to face. From a hundred lips and pens the answer will come that the solution lies in international control." That, however, is not the solution urged by the *Round Table*, which wishes to see America shoulder the responsibility. There are countries that can only thrive under guidance and guardianship—

Egypt is an example of the countries of the Near East for which there is at present no hope except in the guardianship of some civilised State. As powerful financial interests of Europe gained a footing in Egypt, her native despotism developed typical symptoms. Corruption, indebtedness, over-taxation, rapacity, torture and anarchy followed each other in turn. Less than forty years ago Egypt was one of the most miserable countries on earth. To-day she is one of the most prosperous, and is gradually contracting the habits of order from which progress towards self-government can begin. The marvellous transformation worked by Lord Cromer is well known. For the performance of that task, subject to definite treaties, England might well have been made responsible to an Inter-State Conference, had one existed. But what would Lord Cromer's position have been had he been answerable to a Conference of Powers from whom he could obtain no authority or instructions except in so far as they were all unanimous? The results would have been paralysis to begin with, disaster in Egypt, and, perhaps, in the end a conflict between the Powers themselves.

And Americans are invited to "apply the same reasoning to the problem of Mexico, which is at their doors." Later we read: "If ever a League of Nations, clothed with the appearance, but not with the attributes, of a government is used to administer vast territories which cannot as yet govern themselves, it will collapse. Those territories will be involved in its ruin, which will shatter the fabric of civilised society." The time has come for America to consider the whole matter on wide grounds. "The duty of external government can now once for all be placed on its right footing of trusteeship to society at large, if at this juncture the greatest and wealthiest of all democratic nations will not shrink from assuming her share."

Is it too much to ask that in this crisis of human destiny America shall forget to think of herself, and think rather of those infinitely wider interests to vindicate which she has sent two million Americans to Europe, and in doing so has saved freedom for mankind? Having put her hand to the plough, can she look back? Can she now shrink from the dignity of her calling? Can she now go back to the plea that American interests are the dominating principle of her policy? Can her spokesmen submit that plea to the Conference? And if not, if the welfare of the world at large be now and henceforth freely accepted as the pole-star of her policy, what infinite consequences follow?

There are no problems more calculated to provoke jealousies in peace between allies who have held together in war than those presented by German East Africa and by all the territories of the Middle East bounded by the frontier of Turkey in Europe, the Eastern frontiers of Egypt and Persia, by the Caucasus and the seas which connect these lines. Let us say at once that in these regions there are engagements with France and Italy which must in any case be observed. Pledges are pledges, however made, and it is not in the world's interest to break them. It is at least possible, however, that France might prefer to exchange the responsibilities to which she aspired in the Levant for others in respect of the German colonies of West Africa. All things are possible if the French and British as well as the American people can rise to the spirit of these times. There is no self-denying ordinance which England might not be prepared to make if France would consent to maintain the open door in all her African territories. If America can discard her old traditional aloofness it is surely not too much to ask that her Allies should forget their old rivalries and claims. The interest of the world is the only platform wide enough to hold them all. If once the problem is really considered on that plane it will come to be seen how largely it is solved if once America will make herself answerable to a League of Nations for peace, order and good government in some or all of the regions of the Middle East. Her very detachment renders her an ideal custodian of the Dardanelles. For exactly similar reasons her task in preserving the autonomy of Armenia, Arabia and Persia will be easier than if it were to rest in our hands. Her vast Jewish population pre-eminently fits her to protect Palestine. Her position between India and Europe removes all our objections to the railway development which these regions require. The task is one which she understands better than ourselves, and her knowledge of irrigation is second only to our own. Above all, she has the capital for these works, while we, with less than half her population, will be hard put to it to find enough for the vast territories we already control. Nor can America plead that she lacks knowledge. As a matter of fact, Robert College and the American missions in the Near East have given her a preponderant share, if not the monopoly, of public-spirited men with a first-hand knowledge of these regions.

The *Round Table* certainly makes out a strong case for the policy which, our readers will remember, was advocated long ago in THE NEAR EAST.

The Baghdad Railway.

It is not only the future of Constantinople that will require much careful thought at the Peace Conference when questions affecting the Near East are under discussion. The Baghdad Railway will afford food for discussion, as the *Christian Science Monitor* (Boston) points out in an editorial:—

The question of the rule of the Turk has to be settled once and for all. The proprietorship of Constantinople is, strictly speaking, a European question, but in concert with the whole question of the Ottoman Empire, it may be regarded as an Asian one. It is perfectly certain that the security of the Armenian people has to be provided for in the future, and an Armenian State set up which shall be endowed with the right and power to govern itself in its own way. Even then there will remain the question as to whether the Turk is to be allowed to hold sway on the western bank of the Bosphorus, and if the Turk is not, then as to who is to be entrusted with the keeping of the Straits? And, in addition to all this, there arises the question of the neutralisation in some form or another of the Baghdad Railway. It is quite certain that the Baghdad Railway cannot be allowed to pass into the hands of some one power with all the possibilities for mischief it possessed before Germany entered the war. The Baghdad Raiway, with its colossal trade opportunities, will have to become an international line, and the security of free transit and equal rights will have to be granted to everybody in the family of the nations.

Dirty but Lively.

Mr. Edmund Candler contributes to the *Spectator* a candid, if uncomplimentary, description of "Shuster." He begins it thus:—

Shuster is known for its filth, heat, and fanatics. It is probably the most dirty, religious, and immoral town in Persia. Outwardly the place is not characteristically Persian—the town and the people have an individuality of their own; inwardly, I believe, it is the quintessence of old-world Persia—not the ripe fruit ready to fall, but dry and withered fruit on the dead bough.

The dirt, of course, is the most evident of the three evils to which Shuster owes its ill-fame, and the smell which is the soul of dirt. The town challenges Hitt and Mosul for pre-eminence in filth. Mosul, I believe, stands first. Hitt I can vouch for. Shuster is probably less dirty than it was, for it is less populous. It is true that every house is provided with a cavity flush with the street into which its offal is shot; also that each street is a sewer. This is the rule in the East. But when every inhabitant of a city taints six foot of cubic air through the habits of indiscipline a dwindling census within a constant perimeter must be a step to healthier conditions.

I have seen entirely deserted cities, inhabited by monkeys and lizards. They are not so mournful as these half-dead cities where the living pass dreamily through the silent streets. Many of the big houses stood empty, and there were acres of humbler dwellings which had been levelled with the ground. Some of the demolition, I was told, was strategic, and connected with the line of fire between *mahalla* and *mahalla*. For Shuster is troubled by faction. There is generally shooting going on.

Into all the details of the factions and the fights we cannot now follow Mr. Candler, though we enjoyed reading of them. But a conversation which he had with an Englishman on the road to Ahwaz, and with which he closes his amusing article, throws some light on the subject. So we reproduce it:—

At Derra Ghazineh, on the road to Ahwaz, I met an Englishman who asked me how things were going at Shuster. "Fairly well," I told him. "There has been a bit of shooting at nights—nothing to speak of." "Oh! that is local," he said. "They are always at it. I thought perhaps this Seyyid Isa business might have upset them. You know the Khans have swapped him for Salar-i-Masud." "Yes, but the thing they are excited about now is a shop." "A *mahalla* quarrel, I suppose—property. Last time I was there the Raises got up a dummy scrap. A and B, hated rivals you know, both wanted funds, so they hunted together—a common ruse. First they faked a quarrel. Then delegates from both sides went round to the bazaars and told the shopkeepers there was going to be a scrap that night—'a big thing this time.' They advised them to have a guard, and of course offered to supply it. The merchant is for it either way. If he doesn't pay for the guard, his shop is looted, and the Rais comes round in the morning and says 'I told you so.'" This story was illuminating. Not only did it give me a clue to the inwardness of the Shusteri; it explained his physical appearance—that perched, perky, birdlike look about him which makes you think he is going to hop—not alertly, but deliberately, like one of his house-top storks.

I know nothing about Shuster. I do not pretend to understand it. I carried away suggestions, not facts. But the place gave me the idea that an Englishman, a man who could speak Persian well and had a sense of humour, and was "not incurious in God's handiwork," might spend many days in the garden city of Khuzistan and not be bored.

NEAR EAST BOOKSHELF.

THE SPELL OF THE ORIENT.*

"Turkey is doomed, and she deserves to be left *chiplac* (naked), as prophesied by the late Sultan Abdul Aziz, who hearing, whilst in his bath, of the birth of his son and heir said: 'The country under his reign will be reduced to the nakedness I find myself in when hearing of the news of his birth. All will go'" (p. 48).

If the members of the Allied Peace Conference, Eastern or Western, have any time for reading, they might do worse than pick up this unique volume, especially before tackling one of the greatest problems calling for decision—the Government of the "Bridge" between Europe, Asia, and Africa. We will venture upon another quotation to illustrate our timorous advice:—

"One of the Sheiks-ul-Islam at Constantinople, on receiving a visit from Mr. Alison, the First Secretary at the Embassy, who was a fine Arabic scholar, called for his prayer carpet, and devoutly petitioned Allah and Mahomet to forgive him addressing a dog of an infidel.

"When this devout Moslem had finished, Mr. Alison asked permission to use the sacred carpet for the same holy purpose, and, kneeling down, he repeated a form of prayer in excellent Arabic, and ended with a special appeal to the Almighty to forgive him holding speech with a dog of a Mohammedan. The Sheikh-ul-Islam learnt his lesson, while Mr. Alison enjoyed the joke" (p. 174).

Again:—

"I should think but few weddings have been of so composite a character as ours. (Monastir: 1858.) My brother-in-law was a Roman Catholic, His Holiness (the Archbishop of Pelagonia) was the head of the Orthodox (Greek) Church, we were members of the Church of England, and our two witnesses were Mohammedans."

Lady Blunt—"Aunt Fanny," as she is delighted to be known to half the British Navy: and Sir Rosslyn Wemyss writes an introduction to this her second book on the perimeter of the Bosphorus—has given us here a world of light and colour, patched with black and violent shadows—the loveliness of these Paradises of the Near East, the flowers and the honey, the fruits and the perfumes and the oil, the antiquity of Doric and Pelasgic culture, the social backwardness of the Balkan races, their bounteous natures but evil deeds, and over all pillage, ruin, waste, the foul blight of Othman. Lady Blunt's delightful reminiscences call for a lengthy commentary impossible here; they charm and instruct from page to page, with an intimate, even weird, insight into the things and peoples met in her chameleonic vicissitudes.

* "My Reminiscences." By Fanny, Lady Blunt. (John Murray, London, 15s. net.)

BOOKS RECEIVED.

"Can We Compete? Definite Ideas of German Pre-War Methods in Finance, Trade, Education, Consular Training, etc., adapted to British Needs." By Godfrey E. Mappin. (London: Skeffington and Son, Ltd. 4s. 6d. net.)

"Kultur in Roman Times." By J. Selden Willmore. (London: Constable and Co., Ltd. 4s. 6d. net.)

"Independent Bohemia." By Vladimir Nosek. (London: Dent and Sons. 3s. 6d. net.)

"Palestine of the Jews: Past, Present and Future." By Norman Bentwich. (London: Kegan Paul, Trench, Trubner and Co. 6s. net.)

The custom of sending Christmas and New Year cards is not a very old one, but it is a pretty one; and by helping us to keep in touch not only with intimate friends, but also with pleasant acquaintances, it serves a really useful purpose. Messrs. Raphael Tuck and Sons stand easily first as producers of such dainty and seasonable goods; and, judging by samples they have sent us, they are likely to hold that position unchallenged. The reproductions of the Royal cards are of extraordinary interest this year, and the subjects selected by the King and the Prince of Wales—"Entry of Lieut.-General Sir Stanley Maude into Baghdad," and "Prince Edward, son of King Henry III., in Palestine"—will surely appeal to all readers of THE NEAR EAST. There are very many other beautiful and characterful cards, including types suited to all tastes and—no inconsiderable matter in these days—all purses. The firm's toy books and books for children are also noteworthy, especially a novelty in the form of "model books," which contain the materials for making and colouring various models. These will surely appeal to any boy or girl, and we commend them to the notice of perplexed parents, uncles, aunts, and others wondering "what to get for Tommy—or Mary."

"A BURNT SITE was all that remained"

The Serbian Minister of War, General Rashitch, writes to Madame Christitch:

"The achievements of our wonderful men astonish even myself who was with them in their victorious campaigns of 1912 against the Turks, 1913 against the Bulgars, and 1914 against the Austrians. It does not beseem me, perhaps, to dwell on their latest feats, but I cannot refrain from comparing their last triumphant rush into Serbia with the exploits of Napoléon's classical veterans. Although now ripe in age, worn and weary by anxiety for my family and my country, I cannot think about the horrors of war, but have before my eyes the high ideals of my youth, the glory of our effort, and the deliverance of our long oppressed sturdy little nation. Our troops went forward this time not only to defeat the enemy, but to rescue the homes for which they had so poignantly yearned."

But to what homes have these heroes come? Plundered, devastated, ruined homes. The invaders had removed what they could, even to the doors and windows. But worse still, some found no homes; a burnt site was all that remained to recall the spot where a family had once dwelt in happiness.

To restore these homes, to bring together scattered families, is a fact which the Serbian Relief Fund cannot accomplish without your continual aid.

Send a donation to-day to the Hon. Treasurer,
THE RIGHT HON. THE EARL OF PLYMOUTH, G.B.E., C.B.

SERBIAN RELIEF FUND

5, CROMWELL ROAD, LONDON, S.W.7.

(Registered under the War Charities Act, 1916.)

Offers of voluntary help at home or abroad should be sent to LADY GROGAN. Parcels of Clothing, Materials, Boots, &c., for men, women and children should be sent to MRS. CARRINGTON WILDE, 5, Cromwell Road, London, S.W.7.

PERSONAL AND GENERAL.

CALENDAR OF THE WEEK

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian (New Style).	Julian (Old Style).	—	Moslem.	Jewish.
1918. December 13	1918. November. 30 December.	Friday	1337. Rabia I. 9	5679. Tebet. 10
14	1	Saturday.....	10	11
15	2	Sunday	11	12
16	3	Monday	12	13
17	4	Tuesday	13	14
18	5	Wednesday	14	15
19	6	Thursday	15	16

M. N. Cantacuzene, formerly Roumanian Minister in Petrograd, arrived in London from Copenhagen last week.

M. Michalacopoulo, the Greek Minister of Agriculture, and Madame Michalacopoulo have left London for France.

Captain E. O. Mousley, R.F.A., who was captured at Kut, has returned home as a special envoy of the Turkish Government.

To help those who have been crippled or maimed in the war, the Maharaja of Alwar has given the Viceroy half a lakh of rupees.

Sir Edward Maclagan, Lieutenant-Governor-designate of the Punjab, and Lady Maclagan are expected to arrive in England on holiday to-day.

Dr. Dobretchitch has arrived in England in connection with the measures being taken by the Inter-Allied Food Council for the relief of Montenegro.

The Serbian Minister and Mme. Yovanovitch on Monday entertained to luncheon M. Grouitch, the Serbian Minister at Washton, and Mme. Grouitch.

Lieut.-Colonel N. Arion, Military Attaché to the Roumanian Legation and head of the Roumanian Military Mission, returned to London last week from France.

The Cairo correspondent of *The Times* telegraphs under date of December 6:—It is understood that the Prime Minister, Rushdi Pasha, has tendered his resignation.

The Greek stall organised by Mrs. Gisburne at the Savoy Fair was very successful. Princess Patricia of Connaught visited the stall, and was one of those who made purchases at it.

The King of the Hellenes has conferred on the Bishop of London the Grand Cross, and on the Rev. Guy Vernon Smith, M.C., C.F., the Cross of Officer, of the Royal Order of the Redeemer.

In response to Lady Jellicoe's appeal on behalf of the British and Foreign Sailors' Society, the manager of the Bank of Persia, Shiraz, has forwarded £77, collected from the small community in that town.

On December 6, St. James's Church, Piccadilly, the marriage took place of Mr. C. F. Wilkins, Public Works Department, India, to Miss Amy Warner, youngest daughter of Mr. and Mrs. E. H. Warner, Quorn Hall, Loughborough.

Sir Malcolm McIlwraith, K.C.M.G., is one of the members of a Government Committee at Dover which is engaged in taking the evidence of returning prisoners of war on cases of special cruelty and ill-treatment by the enemy.

The engagement is announced, and the marriage will shortly take place between, Edgar Henry Hitchcock, of Sinnapittia, Gampola, Ceylon, and Elsie Muriel, daughter of Mr. and Mrs. John A. Merchant, of Harrow.

On December 3, at St. Paul's Church, Knightsbridge, the marriage took place of Henderson Russell Landale, I.A.R.O., son of the late Mr. and Mrs. G. D. Landale, of Limpsfield Grange, Surrey, to Gladys Rose, daughter of the late Mr. and Mrs. C. N. P. Phipps, of Chalcot, Wiltshire.

The engagement is announced between Captain J. S. W. Stone, M.C., R.E., youngest and only surviving son of Mr. J. H. Stone, C.I.E., and Mrs. Stone, and Dorothy, eldest daughter of Mr. and Mrs. James Kelway, of Wearne Wyche, Langport.

M. and Mme. Gennadius entertained the Metropolitan of Athens at luncheon last Friday. Among those present to meet him were the Bishop of London, Mr. Athelstan Riley, the Rev. Dr. Fynes Clinton, the Rev. H. J. White, the Archimandrites Chrysostom Papadopoulos, Callinikos, and Moschovakis, Mr. Alevitzanos, Colonel Phrantzis, Mr. Giannakopoulos, Mr. Carydia, Mr. Pandeli Ralli, Mr. Alex. Ralli, and Mr. Matangos.

Before leaving India, his Highness the Maharaja of Bikanir, now on his way to England in connection with the meetings of the Imperial War Cabinet, presented £50,000 to the Government as a contribution towards the expenses of the war.

The engagement is announced of Captain David H. Loch, son of the late Deputy Surgeon-General J. H. Loch, I.M.S., and Mrs. Loch, and Mary Freda, youngest daughter of the late General Lord William Seymour and Lady William Seymour.

On December 6, at St. Nicholas Church, Ringwould, Major Anthony Bovill, M.C., 9th Lancers, son of Mr. and the Hon. Mrs. Bovill, 60, Pont Street, was married to Eleanor Victoria, daughter of Mr. and Mrs. Monins, of Ringwould, Kent, and sister of Lady Kitchener.

A marriage has been arranged, and will shortly take place in India, between Captain A. G. Blake, younger son of Major and Mrs. F. W. H. Blake, Chelmsford, and Helen Everett, elder daughter of Mr. and Mrs. G. H. Everett, Valentia, Park Road, Winchester.

An engagement is announced between Captain H. C. Stork, Indian Civil Service and I.A.R., son of Mr. and Mrs. H. W. Stork, of Bridlington, Yorks, and Marjorie, daughter of Lieut.-Colonel F. R. S. Cosens, 4th Devons, attached R.A.M.C., and Mrs. Cosens, of Quetta, Baluchistan, and of Oakham.

A marriage has been arranged, and will shortly take place in India, between Major Geoffrey B. Sankey, 1/1st Kent Battalion, son of Mr. and Mrs. Percy E. Sankey, of 44, Russell Square, and Constance Elnith, elder daughter of the Rev. and Mrs. Raymond Bevan, of St. Lawrence Vicarage, Ramsgate.

The marriage arranged between Lieut. William B. Threlfall, R.N.V.R., third son of Sir Richard and Lady Threlfall, of Oakhurst, Edgbaston, and Evelyn, only daughter of A. F. Maconochie, Indian Civil Service (retired), will take place on December 18 at St. Clement Dane's Church, Strand, at 11 a.m. No invitations are being issued, but all friends will be welcome at the church.

The Archbishop of Athens concluded his visit to London last Friday, and left in the evening for Paris on his way to Athens. He travelled from Waterloo, and among those present at the station to take leave were the Bishop of Dover, representing the Archbishop of Canterbury, the Great Archimandrite, M. Jean Gennadius, M. Demetrius Caclamanos, and several Anglican clergymen.

The Maharaja of Bikaner and Sir S. P. Sinha, who, in association with the Secretary of State for India, will represent India at the Imperial War Cabinet preparatory to the Peace Conference, and also at the Conference, are expected to arrive in this country to-day. They are accompanied by Sir Hamilton Grant, Foreign Secretary to the Government of India, who has been deputed to give the latest information as to the attitude of the Government of India towards questions affecting India which are likely to be raised at the Peace Conference. During his stay here Sir Hamilton Grant will co-operate with the Foreign Department of the India Office.

BEYROUT AND THE LEBANON

Amidst all the tragedies of four years' war conditions THE LEBANON HOSPITAL (Mental) has "carried on" under its British Director, Dr. Watson Smith, who now writes: "All is comparatively well, but the Hospital has suffered greatly in repairs, linen, etc., and we have been living in semi-starvation and exorbitant prices."

Funds are needed immediately for relief and maintenance.

Donations will be gratefully acknowledged and a report sent by the Gen. Sec., Miss A. M. GOOCH, 35, Queen Victoria St., E.C.4

MONTENEGRIN RED CROSS AND RELIEF FUND,

11, VICTORIA STREET, S.W.

Regt. Section I, War Charities, 1916.

A DEVASTATED COUNTRY—MONTENEGRO,

The Smallest and Poorest of our Allies.

Thousands of Starving Women and Children need Food and Medicaments.

9,000 FAMISHED MONTENEGRINS FROM CAMPS OF CENTRAL EMPIRES MUST BE FED.

Donations will be much appreciated and gratefully acknowledged by the Hon. Treasurer, LADY ROPER PARKINGTON, Montenegrin Consulate, 21, Mincing Lane, London, E.C.3.

APPOINTMENTS, PROMOTIONS, &c.

M. Alexandropoulos, formerly Greek Minister in Belgrade, has been appointed High Commissioner of the Hellenic Government in Constantinople.

Mr. M. E. Couchman, Indian Civil Service, has been appointed to the Committee on the Division of Functions, as successor to the late Mr. H. F. W. Gillman, C.S.I.

Indian papers received by the last mail announce that Sir Percy Cox, Civil Commissioner in Mesopotamia, is acting as Chargé d'Affaires and Special Commissioner at Teheran during the absence in England of Sir Charles Marling.

The Secretary of State for India has approved the grant of vacant Indian Good Service pensions to the following officers:—Major-General P. M. Carnegy, C.B., Major-General A. Wallace, C.B., Major-General J. G. Turner, C.B., Lieut.-General Sir A. Phayre, K.C.B.

Canon E. S. Savage, of Hexham Abbey, is leaving for Serbia on an official mission to report on the damage done by the enemy in that country. He is delegated by the Serbian Minister to the Serbian Foreign Office as British representative, and as representative of the Church of England, and he carries a message to Serbia from the Archbishop of Canterbury. Canon Savage was formerly Commissioner for the Y.M.C.A. in the Mediterranean.

OBITUARY.

MR. H. A. CUMBERBATCH, C.M.G.

We much regret to announce that Mr. Henry Alfred Cumberbatch, C.M.G., late Consul-General at Beyrout, died on December 3 at 5, Brunswick Terrace, Weymouth. The eldest son of the late Mr. Robert W. Cumberbatch, at one time Consul-General at Smyrna, he was born on June 27, 1858, and was only eighteen when he was appointed Student-Dragoman in the Embassy at Constantinople. Almost immediately he was employed at Belgrade, and from November, 1876, to the following January he was in charge of the Consulate-General there. He was afterwards employed at Bucharest until 1879, when he was appointed H.M. Vice-Consul at Sulina (1881). In 1888 he was promoted to be Consul at Adrianople. He acted as Consul-General in Philippopolis (1888 and 1890), at Salonika (1891) and Smyrna (in 1892), and in 1893 he was transferred to Angora. He was in Erzeroum in the autumn of 1895, when a massacre of Armenians took place there. At the time he was in charge of the Consulate for Kurdistan, but the next year he was transferred to Smyrna, and in 1900 was promoted to the rank of Consul-General. In 1908 he was transferred to Beyrout, where he remained until he was recalled to this country on the outbreak of war. Since January, 1915, he had been employed in the Foreign Office. He was made a C.M.G. in 1896, and was awarded the Coronation Medal in 1911.

Mr. Cumberbatch was extremely popular in Smyrna and in Beyrout, as, indeed, he was wherever he served, and his loss at a comparatively early age will be widely regretted. He had been in failing health since the outbreak of hostilities with Turkey, and last October he went to Weymouth for the winter. Unhappily he became weaker soon after his arrival, and was unable to leave his bed, and on the night of December 3 he passed away. The funeral service was held at St. John's, Weymouth, on December 6, and the following day he was buried in Brompton Cemetery. Mr. Cumberbatch leaves a widow, two daughters, and three sons.

Mr. F. G. Aflalq died at Basel on December 9 from double pneumonia.

Dr. Reginald P. Cockin, of the London School of Topical Medicine, died on Monday in his fortieth year. He had served in the Government Medical Service in Cyprus, and under Colonel Leiper in Egypt on an investigation of bilharziosis.

Captain Philip Wyndham Brodie, Seaforth Highlanders, attached R.A.F., died at Taranto on November 18, aged thirty-one. He served in the punitive expeditions against the Zakka Khels and Mohmands in 1908, and received the medal and clasp.

Lieut.-Colonel Mackintosh Alexander Thomas Collie, late of the Indian Medical Service, has died at Barrow, of pneumonia following influenza, at the age of sixty-two years. He joined the Indian Medical Service in 1883, reached the rank of lieutenant-colonel in 1903, and retired five years ago.

Major Philip Edmund Vaughan, Worcestershire Regiment, died at the Endsleigh Palace Hospital on December 4 of broncho-pneumonia, following influenza. He had served in the South African War and in Bermuda, and for six years with the Egyptian Army, and in the present war he saw much fighting in France.

Mr. Herbert F. Webb Gillman has died at Simla from influenza. He was appointed to the Indian Civil Service in 1886, and served in Madras as Assistant Collector and Magistrate, and afterwards was District and Sessional Judge at Vizianagram Zemindari. Mr. Gillman was a member of the Executive Council, Madras, and was made a C.S.I. last year

NEWS IN BRIEF.

An Armenian military mission under Major-General Torcom has arrived in London.

A de aachment of Greek sailors has landed at Constantinople, and hoisted the national flag on the Greek Legation.

An Italian decree was issued last week releasing all persons deported from Northern Epirus, who may now return to their homes.

The Manchester City Council on Wednesday decided to confer the Freedom of the City on M. Venizelos, the Greek Prime Minister.

A Reuter's message (from Paris) announces that the Japanese cruiser "Nisshin," flying the flag of Rear-Admiral Sato, with two torpedo boats, arrived at Constantinople on December 6.

The Rajah of Sandur, a small Native State in South India, has been temporarily removed from the direct administration of his State as a disciplinary measure on account of misconduct.

German and Turkish statistics are stated by Khan Zadian to show that in 1916 the number of Armenians who had been deported amounted to 1,396,350, of whom 1,056,550 were massacred.

On Tuesday evening next the Union of the East and West will present in English at Wigmore Hall the Indian play "Malini," by Sir Rabindranath Tagore, and "Caliph for a Day," a comedy with music. Tickets may be obtained from the hall.

Speaking at a banquet after investing the young Maharaja of Bharatpur (Rajputana) with full powers, Lord Chelmsford, the Viceroy, said the State would have the full benefit of the measures which were being taken to deal with the scarcity and distress now unhappily anticipated in many areas.

Armenian delegates are being elected in various parts of the world to go to Paris and take part in a national conference which is to be held shortly. With regard to this it is interesting to note that two out of the five members of the Armenian National Delegation were educated at Balliol College, Oxford.

General Coanda, the Roumanian Premier, has telegraphed to M. Pashitch, the Serbian Prime Minister, expressing "the joy which we all feel, after the disastrous collapse of Russia, at finding ourselves again at the side of our noble Allies. I assure you especially," he continues, "of the feelings of brotherly friendship which unite us to the heroic Serbian nation."

Captain Rodocanachi delivered an address to a large meeting of American naval and military officers at the American Officers' Club on Thursday evening of last week (December 5). The gathering was presided over by Mr. J. Wilson Taylor. Captain Rodocanachi indicated the numerous links between Greece and the United States, both countries being democratic in policy.

A complete series of Turkish postage stamps, surcharged by the British for use in Mesopotamia, is being shown at the Exhition of War Stamps at the Philatelic Galleries, 110-111, Strand. The original inscriptions on the stamps are in Turkish, but they have been overprinted "Irak—in British Occupation." The British stamps for use by civilians in Palestine are also shown; they bear the imprint of the Egyptian Expeditionary Force.

The *London Gazette* announces that: "The King has been graciously pleased to grant to the Companions of the Order of the Bath, Star of India, Saint Michael and Saint George, and Indian Empire, to whom his Majesty recently granted precedence as Commanders, the privilege of surrounding their Armorial Bearings with the circle and motto of their respective Orders, and to suspend therefrom a representation of their riband and badge."

FACING FACTS.

The future welfare of the Balkan Peninsula and the peace of Europe depend in large measure upon the extent to which certain obvious factors in the situation are appreciated and acted upon at the present time. Shibboleths have always been an essential part of the stock-in-trade of democracy, but the war wrought havoc among those that seemed in 1914 to be the most firmly established in popular opinion. In the absence of new political watchwords which required, at least in Great Britain, a general election for their creation the Allied peoples seized hold of the idea of a League of Nations. No attempt was made to discover whether a working basis for such an organisation could be formulated; the conception was taken on trust, and the picturesque belief is now widely held, or expressed, that a wave of the Allied wand proclaiming a League of Nations will inaugurate the Millenium. The principle of such a League is thoroughly sound; it has been applied to rescue the world from the heel of Prussian militarism, and it must continue to be applied, if all that has been achieved by the Allied victory is not to be jeopardised. But just as the Allies in general and the people of Great Britain in particular could not win the war without the organisation, discipline and sacrifice which the stern logic of German superiority imposed upon them, so the League of Nations can hope for no success unless it is prepared to face in a critical and practical manner the difficulties with which it is confronted. The first axiom would seem to be that it is idle to seek to bring together on the same plane of constitutional development and political aim peoples who are actually on entirely different planes. To pretend that any two Balkan States without outside prompting or pressure are likely to approach and to settle differences of opinion in the same way as, say, the United States and Great Britain or Great Britain and France would, is to sow the seeds of fresh trouble for Europe. In no responsible quarter is the suggestion made that the League of Nations could serve any practical purpose, if Germany in her pre-war character and frame of mind were a member on an equal footing with other countries. Is it, therefore, a sensible policy to adopt for those on whom the responsibility for bringing the League of Nations into being will rest to affect to ignore the existing position in South-Eastern Europe from a reluctance to run the risk of wounding susceptibilities? A strong belief in the ultimate efficacy of a League of Nations and an unshakable conviction that, with proper handling, good will and mutual co-operation in the Balkans constitute an attainable goal prompt us to call attention to certain factors which militate against strict uniformity in the application of the principle of admission to the League.

What, then, is the position in the Balkans to-day? Within an incredibly short time after the enemy's capitulation it has become a veritable cauldron of intrigue, political controversy and armed conflict, and all this within the ranks of the Grand Alliance. It is possible that too much has been made of the quarrel between Italians and Yugoslavs. The propagandist bureaux of the two nationalities have been working during the war under a certain degree of restraint, and when this was relaxed it was inevitable that both parties should affect alarm, to justify their existence. Even the character of the collisions between Italian and Yugoslav troops may have been exaggerated, and in extenuation it may be urged that both Governments have kept their heads. It is evident, however, that they could not exercise the same control over their nationals, with the result that Allied contingents had to be brought in to ensure that there should be no further breach of the peace. In Serbia there is, or the world is asked to believe that there is, a political controversy of the most vital nature, that threatens the immediate future of Yugoslavia. Intrigue is rampant in Montenegro, and it is not unnaturally inferred that outside influences are at work. Farther south again everything points to a desire to settle old questions by the simple process of claim-jumping rather than by more formal methods. In no direction can it truthfully be said that the searching trial of the war has evolved a new spirit among the peoples of South-Eastern Europe. Even among the Roumanians, to whom the Western nations look to give the lead in the new order of things to the Balkans, the old bane of party politics would seem to be still rife, and there is danger lest the representation of Roumania at the Allies' Peace Preliminaries may be determined by the exigencies of faction rather than by an impartial selection of the most suitable delegates. Grave or trivial, the details of the Balkan picture reflect fierce animosities, either between the different nationalities or between parties and individuals in the same nation. The theme is an old one: but the fact that it is still being reproduced after the war is evidence that the characteristics are deep-seated and will have to be reckoned with for some time to come.

The idea of the League of Nations is that it should be the keeper of the world's conscience. But if there be any reality in the picture presented above it has to be inferred that not even Europe, much less the world, has a definite homogeneous conscience. There is, rather, one conscience, let us say, for the Balkans and another for Western Europe, and it may well be that President Wilson will attribute to the United States yet a third, different from either of the others. Those who are about to form the League will have to decide on what plane they wish to see the world's conscience set; whether on the highest which the human mind can conceive or whether they will be content with a compromise, the resultant of an admixture of the different consciences. There can be little doubt which course they ought to adopt. If then there is to be a League of Nations to speak in the name of all that is best in civilisation, justice, and good government, the inclusion in the League of countries which are bent on injustice to their neighbours or on perpetuating quarrels, or which have difficulty in maintaining order within their own territories, must prove an anomaly and be liable to bring the League into disrepute. On the other hand, the exclusion of any country, particularly of an Allied country, from what aims at being a world-wide organisation, would not only be invidious; it might also be condemning a whole people for the sins of a few. A way of escape from the dilemma is possible if, instead of allowing idealism to outstrip practical politics, the Grand Alliance makes itself the nucleus of an ultimately wider League of Nations, and starts by setting its own house in order before embarking upon the government of the world. The history of the last few weeks has shown that there is ample scope within the Grand Alliance for the exercise of the moral authority of Great Britain, France and the United States, and it should be a charge to the Allies' Conference on peace terms to determine how effect can best be given to this authority for the future peace and welfare of South-Eastern Europe.

EDUCATION IN EGYPT.

THE SECONDARY CERTIFICATE EXAMINATION.

(From Our Own Correspondent.)

Cairo, October 28.

The report on the Secondary Education Certificate Examinations which were held this year has just been published. It is signed by Mr. Boyd Carpenter, Senior Inspector in the Ministry of Education, and contains some very important and outspoken criticisms of the results of those examinations. The latter consist of two parts—viz.: Part I., for students who have spent two years in the secondary course; Part II., for students who have completed four years in that course and have passed Part I., this examination being more or less equivalent to the Matriculation in the English Universities.

In Part II. there were 1,341 candidates, as compared with 1,323 in 1917 and 1,133 in 1913. Of these 1,341 candidates, 451 came from Government schools, 527 from schools under State inspection, and 361 from other schools. The successful candidates, who represented 35 per cent. of the total, were divided as follows: 51 per cent. of the Government school candidates, 30 per cent. of the inspected school candidates, and 21 per cent. of those from other schools. In Part I. there were 5,192 candidates, as compared with 3,899 applicants in 1917, and 2,132 in 1913. Of these 5,192 candidates 849 came from Government schools, 2,020 from schools under State inspection, 2,323 from other schools, and 143 from French schools. The successful candidates were as follows:—37 per cent. of the Government school candidates, 14 per cent. of those from schools under State inspection, 12 per cent. of those from other schools, and 45 per cent. of those from the French schools.

Mr. Boyd Carpenter gives copious summaries of the reports of the examiners and revisers, and I quote below some verbatim extracts therefrom, beginning with Part II., as being the more important of the examinations, and taking each subject separately:—

Arabic.

The candidates occupied themselves far too much with small refinements of expression, and sacrificed matter to manner. There was a lamentable poverty of originality of thought as well as lack of orderly expression and connection, which proves that the more remote from actuality a subject of composition is the better pleased the candidates are. Aphorisms, platitudes and moral reflections are often memorised and inserted in compositions where they are totally irrelevant. In the oral part the general results were good, but in literature there was an unfortunate ignorance of the dates concerning the principal writers. In grammar the candidates showed a tendency to learn by heart rules which they were unable to understand, and their application was naturally faulty. The weakness of the candidates on the French side was very marked, and their general standard was that of foreigners learning the Arabic language rather than of Egyptian students. The standard of translation has fallen, and the work of the candidates showed lack of connection, a tendency to paraphrase rather than to translate, carelessness in the grammar of both languages, and an almost complete absence of style. In English they showed a lamentable ignorance of common terms and expressions, and this was most noticeable in a subject with which all should have been familiar—the work of the Nile in Egypt.

History and Geography.

The questions elicited very fair answers on the whole, but the non-European portion of the syllabus appeared to have been inadequately taught. The general faults were carelessness in reading the question, introduction of irrelevant matter, and too often an attempt to produce from memory a portion of the text-book or notes of lessons. The candidates tended to shirk those questions which required a reasoned answer. Fluency was the ruin of many answers, and long digression on irrelevant or small points destroyed whatever balance was attempted. The three desiderata appear to be clear thinking, a sense of proportion, and orderly arrangement. In geography, out of 554 candidates only sixty-seven obtained more than half marks. The questions were easy and the marking light, and the examiners are unanimously of opinion that the standard is far too low and the general work bad. Both the maps and the sketches were, comparatively speaking, worse than those of Part I.

Science and Mathematics.

The work submitted in mechanics was disappointing, and it is clearly almost impossible to set questions in this subject easy enough to be well done by most of the candidates. A very large number received no marks at all, and only succeeded in passing on their knowledge, usually imperfect, of the other subjects. In physics the papers were distinctly worse than the previous year. When attempting to answer the question on sound, the majority contented themselves with unintelligent reproduction of book-work and lecture-room experiments. The work in chemistry was on the whole fairly good, but the chief weakness was seen in a confusion of scientific terms. The drawing of apparatus was poor and careless. In many cases it was obvious that the candidates could not themselves have fitted the apparatus together, but were usually relying on the memory of some demonstration In general, there was an unsatisfactory absence of common sense and little evidence of knowledge how to apply scientific laws. In mathematics, on the literary side, the general results were fairly satisfactory, but great weakness was shown in geometrical exercises. It was evident that candidates are accustomed to memorise rules and formulæ to excess. On the scientific side a large number were very inadequately prepared. Lack of order, method, and neatness were very noticeable, and in many cases questions were carelessly misread. Generally in all divisions there was a lack of common sense, and in its place a display of purely mechanical work, which often showed that candidates did not understand their own methods.

French and English.

While the number of failures in French has greatly decreased, the examiners find little other cause for congratulation. The answers to the literature questions were too long, too diffuse, and in many cases totally unconnected with the subject. The syntax was most disappointing, and the meagreness of the vocabulary very remarkable. The compositions were marked by triviality, exaggeration of statement, and want of precision. In the supplementary the same remarks apply, but the chief impression on the minds of the examiners was one of mediocrity. The dictation was better, but full of curious mis-spelling, due in all probability to the bad pronunciation of the candidates themselves. In many cases the subject of composition was completely misunderstood. The faults displayed were due to want of attention and insufficient practice in the language. In the oral the results were better. In the principal examination few candidates had read sufficiently in private, and the want of general knowledge was very noticeable. In the supplementary the pronunciation and vocabulary were poor, and, whilst they could at least sustain a simple conversation, there were far too many phrases reminiscent of Arabic and English.

In the principal English examination about half the candidates passed, but it must not be inferred from this that the examiners were of opinion that the standard of English is actually satisfactory. They are unanimous and emphatic in deploring the present state of the English language in the secondary schools. English is apparently to a large number of candidates a dead language, and, therefore, to be learnt by mechanical translation, mental, verbal and written, from their tongue; there still persists a disastrous tendency to write Arabic-English—i.e., to use Arabic phrases, sentences and construction, in which each word is simply translated into the English equivalent. In composition the most striking feature was the utter ignorance not only of contemporary events, but also of what are usually regarded as the commonest topics of conversation. The mental poverty displayed was most marked. For example, the two chief advantages of "open spaces" were considered to be that in them people could "smell the pure air," and that "tents could be pitched for the purpose of holding Government examinations"; whilst those who wrote on the subject of inventions during the war either contented themselves with moral dissertations upon war in general, or when they attempted to give concrete examples only succeeded in being ludicrous, as, for instance, in suggesting that the war had made the Egyptians think how to invent lamp-glasses. These two instances show the unfortunate absence of a sense of proportion. By contrast, in the supplementary examination only one out of the sixteen candidates failed. The work was distinctly good, and the candidates appeared to be of a very promising type. There was certainly more variety of ideas than usual in the composition. In the oral the reading was bad, the recitation worse, and the conversation was rendered difficult by the fact that the candidates had a very small vocabulary. In the supplementary part the reading was fair, the grammar bad, and the conversation halting.

Having summarised these reports, Mr. Boyd Carpenter proceeds to give his views on the position as regards Part II. of the examination. He points out that the examiners as a body are but ill content with the general results, and that in one subject only is there any

WHITE HORSE WHISKY.
HEART TONIC.
DIGESTIVE AND NON-GOUTY.
By Appointment to

KING GEORGE.

KING OF SPAIN

Digitized by Google

satisfactory improvement, the Arabic language—the native tongue of practically all the candidates. He considers that while the fact that any subject escapes the general condemnation may be a matter for congratulation, improvement in this can hardly be regarded as typical of the general tendency. The examiner's reports all point to one main conclusion. To quote him verbatim, for his remarks merit reproduction *in toto*:—

The candidates rely on their memory rather than on their intelligence. They produce what they remember, and content themselves with the repetition of phrases and facts which are often ludicrously inappropriate. In Arabic or English the theme of the essay is often ignored, and a subject that has done duty in the class-room and which has been committed to memory is substituted. In mathematics, processes are blindly gone through, resulting in answers or attempted proof that the exercise of some intelligence would show to be absurd. In science, diagrams and apparatus are reproduced as they happen to be recalled from text-books or blackboard, without reference to the definite points required by the question. In fact, the root of the evil, so far as their mental qualifications are concerned, is their general failure to exercise common sense. Almost all the faults . . . can be traced to this. A very slight amount of intelligence applied to their own work would remove the constant puerility, the disconnectedness, the false inferences that are so common.

The critical faculty and the power to discriminate and choose are, he says, two of the fundamental requirements of any educated youth or man, and the distressing part about the absence of this faculty is the fact that the majority of the candidates in Part II. are not children, the average age this year being 21. "They are usually far more developed physically, morally, and socially than youths of the same age in Western countries. Unfortunately, their mental development is not similarly advanced. Narrowness of outlook and ignorance of contemporary events, lack of general knowledge, and, worst of all, absence of interest, show that education for itself is not the object which most candidates have in view." He adds that this may be a temporary phase, and that it may pass, but that it must not be ignored, and he proceeds to advise teachers in secondary schools to keep the ideal of education before them, and both to remember themselves and cause their pupils to remember that education is an end in itself, not merely a means of obtaining wealth or social importance. If they will do this, and if they can inculcate into the young men of Egypt a disinterested love of learning and the extension of human knowledge, it may be possible to hope for an intellectual renaissance of Egypt. Finally, he points out that the origin of these evils, which have contributed to this year's unsatisfactory results so far as numbers are concerned, lies in the conditions governing the admission to Part I., which will be dealt with in a separate article.

In concluding his remarks on Part II., Mr. Boyd Carpenter calls attention to the almost rapid increase of candidates on the scientific side. Twelve years ago the literary candidates were more than double the scientific, but the pendulum has swung completely the other way now, the explanation being that, restricted though the opportunities of higher education are, there are more chances of continuing education on scientific lines than on literary lines. It is, however, important to note that on both sides a large and increasing number of unsuccessful candidates find that there is no opportunity of continuing their studies in Egypt. "Bad as the result of Part I. has been, the great additional number of candidates is a clear indication that the numbers for Part II. will in the course of the next few years show a large increase, and the want of a sufficiently wide and varied system of higher education, already seriously felt, will become more acute."

A message from Mytilene states that the late M. Simon Pantazopoulos bequeathed his entire fortune of £480,000 to the Greek State.

According to information from Smyrna, the ex-Vali, Rahmi Pasha, has placed himself at the head of a Turco-Levantine League, whose object is to agitate for an Allied Protectorate in the Smyrna district.

An addition to the portion of the British Museum open to the public has been made by the reopening of the Assyrian Transept, containing the colossal human-headed bulls and lions from Nineveh. The following galleries are now open (from 10 to 1 and from 2 to 5):—The Entrance Hall, Grenville Room, First, Second, and Third Græco-Roman Rooms, Archaic Room, Ephesus Room, Elgin Room, and Assyrian Transept. The Trustees hope to have other galleries open before Christmas.

CORRESPONDENCE.

The columns of THE NEAR EAST *are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST.

"AN ALBANIAN PROTEST."

TO THE EDITOR OF "THE NEAR EAST."

Sir,—I may state that I am a regular reader of THE NEAR EAST, and hope I will be allowed to occupy some space in your columns.

I shall not venture to correct any one, especially Miss Durham (the fair sex are always correct), but simply to express my opinion.

I can understand the arguments of Mehmed Bey, or of Mr. Kessary—the former pretends to represent an Albanian Committee, while the latter is a Hellene—but I cannot understand either the *casus belli* of Miss Durham or her cerebral conception of ideas in comparing North Epirus to Alsace-Lorraine.

An episode between a simple-minded shepherd and a highly educated apostle of "Kultür" which I witnessed twenty-two years ago is applicable to the present question as to whether Koritza or any other part of North Epirus is Greek or Albanian. I was then a student in Smyrna; our headmaster took us for a day's excursion, and the route carried us through the field of the German Archæological Society. The German Professor in charge of the researches amused himself by putting questions to the boys, and the conversation soon turned to the events of the day—the Græco-Turkish War, 1897.

We boys—boys always will be boys—were "pulling the leg" of the Turcophil Professor, not hiding our feelings towards Hellas, with hopes that Smyrna would soon be Hellenic. The German Professor, either in fun or in earnest, was opposing our views, adding that Asia Minor was purely a Turkish country, etc. A shepherd was standing near by, leaning on his crook, listening attentively. When he heard the remarks of the German Professor he smiled the simple, natural smile of the mountaineers, shrugged his shoulders and made a grimace. "Ask the Professor," he said to the boys, "to dig the soil and see if the stones speak Greek or Turkish!"

Unless Miss Durham has made Albania her "spiritual home," inspired by the Albanian literature and history, I am sure, when next at Koritza, she will take the advice of the shepherd and "dig the soil and see if the stones speak Greek or Albanian."—I am, etc.,

X. K.

3, Tudor Street, E.C.4.

Mr. *Punch's* Christmas Number is sure of a welcome, year by year; and this year, besides welcoming it and laughing over its pictures and letterpress, we find ourselves admiring the skill with which the merry hunchback put his Almanack together so artfully that it was adapted either for Peace or for War. There are many good things in the number—that goes without saying—and though we, personally, like best Mr. Brock's illustrations of the Dragon's adventures—terminated only by a Tank—it is certain that Mr. Bateman's handling of the "Two's Company" theme will secure a large number of votes for First Place.

ROYAL SCHOOL
FOR
Daughters of Officers of the Army.

Patrons:
Their MAJESTIES THE KING AND QUEEN
and HER MAJESTY QUEEN ALEXANDRA.
Chairman: LT.-COL. A. GRUBB. J.P.
Vice-Chairman SURGEON-GEN. SIR WILLIAM TAYLOR, K.C.B.

Daughters of Officers of the Army are admitted to the above Schools according to the circumstances of their parents, at rates of £20, £45, £65, and £80 a year. Granddaughters of Officers are admitted at £45, £65, and £80 a year according to circumstances, and a limited number of daughters of civilians are admitted at £120 a year when there are vacancies. There are 15 Scholarships, open to competition, in the School, of amounts varying from £10 to £20 up to one of £50.

As half of the School consists of pupils on the £15 foundation, which includes both board and education, a deficiency of about £2,500 a year has to be met by contributions, which are earnestly solicited. Donations of £5 5s., giving one vote for life, or subscriptions of 10s. 6d., giving one vote for the year, may be sent to

F. W. T. ATTREE, COLONEL (late R.E.), Secretary.

Office: Panton House, 25, Haymarket, S.W.1.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

To Lancashire, in particular, the reopening of Near East markets is a question of immense importance. The Lancashire cotton trade is now in a far from satisfactory position, and it would do much to relieve matters if traders were in a position to take advantage of the need for cotton goods which undoubtedly exists throughout the Near East. It is not only immediate business which is at stake, it is also a question of the re-establishment of business relations with Near Eastern countries with a view to future trade.

***

In this respect France is ahead of us. French merchants are already able to correspond with the Near East, and I understand that a steamship service for goods is being instituted between Marseilles and the Levant. It is obviously very desirable that British traders should have equal facilities for the speedy resumption of business there.

***

The economic position in Malta in 1916-17 plainly indicated that the continuance of the war might mean considerable distress in the island, and it is clear from the White Paper on Malta in 1917-18, some extracts from which are given elsewhere, that this has been the case. The question of supplies has been the root of the trouble. The authorities grappled firmly with the food problem and succeeded in maintaining supplies and in preventing excessive profits, and in normal circumstances this would have been enough. But the position in Malta is peculiar, for the working part of the population is much in excess of the proportion that obtains elsewhere, so that while prices have continued to rise, wages have not made a corresponding advance, with the inevitable result that war conditions have been felt to an increasing extent by numbers of the inhabitants.

***

As regards Malta's finances, it may be noted that while there was a small excess of expenditure over revenue in 1916-17, this has been considerably increased in the year under review. The actual revenue amounted to £435,497 against an actual expenditure of £449,247, the deficit thus being £13,750. There has also been a decline in the excess of assets over liabilities, the figures being £29,324 against £43,074, and altogether it must be admitted that the financial position of the island is far from satisfactory. But this was only to be expected in view of the effects of the war, and now that the struggle is over it may confidently be anticipated that it will not be long before the former comparative prosperity of the island is restored. Trade during the year calls for little comment. There was rather a large decrease in imports, the figures being £2,874,420 against £3,318,412, while exports show a slight increase at £610,212 against £589,552.

***

Elsewhere in this issue will be found particulars of the Abyssinian Corporation, Limited, the prospective formation of which I was able to announce two weeks ago. The capital of the Corporation is large, but, all the same, not too substantial in view of the vast possibilities for commercial enterprise in Abyssinia. The part it is hoped the Corporation may play in the development of that largely unknown country may be gathered from its objects, which are of the most comprehensive character, including, *inter alia*, banking, trading, mining, and shipbuilding, and as some of the most influential firms and individuals in the commercial life of this country are behind the enterprise I shall not be erring on the side of optimism if I anticipate great results from this venture. I have only one criticism to offer, and that is, that the Corporation ought to have been formed a couple of decades ago. While other countries have taken advantage of the slow development of Abyssinia to widen the scope of their trade relations there, British traders have practically ignored the country, with the result that, as we pointed out last week, at the outbreak of the war the direct share of the United Kingdom in the trade of Abyssinia was practically negligible. I shall look to the new Corporation to effect a striking alteration in this direction.

***

About two weeks before the Armistice the preliminary notice of next year's British Industries Fair was issued to the effect that it would again be limited, as expected, to the minor industries. Since then the whole position has been changed, and the objections to making the exhibition thoroughly representative of British industries no longer exists. I hope, therefore, that there will be no question of holding the fair as arranged on the ground of time, but that even if it means postponing it for a few weeks or months every effort will be made to include exhibits from the larger industries.

***

From the point of view of "Indiamen," probably the most interesting portion of Lord Inchcape's notable address at the general meeting of the P. and O. was his reference to the prospects of the restoration of normal services to the East. As their ships were returned to them, he declared, they would resume their position in the Eastern and Australian trades, but it would be some time before they would be able to offer the public their pre-war standards of convenience, comfort, and regularity. He hoped that the regularity of the sailings might soon be restored, and added that the old prestige of the P. and O. Company would be at all costs maintained.

***

Among other matters dealt with by Lord Inchcape was the question of new construction. In this connection he declared that had shipowners been allowed to invest their depreciation, surplus earnings, and the amounts that had been recovered for ships that had been sunk in replenishing their fleet, the British mercantile marine would to-day have been much better equipped for the post-war trade of the world. Had they been permitted to make contracts to replace their vessels when they were sunk, and before values increased to present-day figures, they would not now have had to pay two or three times the pre-war prices. At present, he continued, when earning power was considered, they were two or three millions to the bad, if the value of the lost ships was compared with the amounts recovered, but the process of replenishment must go on. "Within the last few days," he added, "we have arranged for the construction of two large mail and passenger ships with Messrs. Harland and Wolff and for three steamers for the branch line with Messrs. Caird, while provisional arrangements have been made with other builders."

***

The recent flight from Cairo to Baghdad via Damascus could no doubt have been done in half the time if a direct route had been taken across the desert, and the fact that it would be possible to bring Baghdad within about a day's flight of Cairo is, perhaps, as telling an illustration of the potentialities of the aeroplane as can be obtained. It is extremely unlikely that a railway would ever be made across the true desert, and but for the areoplane communication between Egypt and Mesopotamia would probably have remained a long and circuitous process. It is in bringing together countries divided, as in this instance, by a natural obstacle that the aeroplane will perform one of its greatest services in the future.

***

Another way in which the aeroplane will be invaluable is in the provision of speedy services from one place to another. The people who really need such rapid transit will be mainly found in the commercial world, and among business men it will undoubtedly make a tremendous difference, for they will be able in some cases to do in person what they would otherwise have attempted by cable or by the post. It is certainly most likely that when the Near East can be reached early on the day after leaving Great Britain, and India on the third day after departure the temptation to make a personal visit will be irresistible. The expense of flying will naturally restrict its utility just at first, but it is presumable that, like every other mode of transit, fares will become cheaper in the course of time.

MOROCCO TRADE NOTES.

The Commercial Mission.

(From Our Own Correspondent.)

Tangier, December 1.

The Commercial Mission to Morocco, composed of Mr. E. H. Muloch, of H.B.M. Consular Service, and Mr. L. N. Barker, of the Department of Overseas Trade, arrived here on November 6. Mr. Muloch has been Vice-Consul at Saffi and Laraiche, and has therefore considerable knowledge of the country and of British trade here.

A lunch in honour of the Mission was given by the British Chamber of Commerce for Morocco. By a very happy coincidence the date appointed for the lunch was the day of universal rejoicing—Armistice Day, November 11.

The hon. president of the Chamber, Sir Herbert E. White, H.M. Agent and Consul-General, presided, and after referring to the great news which had just been received drew attention to the happy chance, and expressed the gratitude that every one must feel to all who had taken part in bringing about the glorious end, which would permit the world to devote itself to works of peace and commercial development. Sir Herbert White concluded by proposing the toast of our "Soldiers and Sailors," which was honoured with enthusiasm.

Sir Harry Maclean's Views.

Kaid Sir Harry Maclean, President of the Chamber, proposed the health of the members of the Mission, and wished them all success in their important work. They were all, he said, delighted to know that steps were being taken to inquire into and promote British commercial enterprise in Morocco, and the Chamber would do all in its power to help in any way.

Mr. H. Muloch replied, thanking the British Chamber of Commerce for their cordial welcome and hospitality to the Commercial Mission and for all they had done to facilitate its task.

The members of the Mission, who interviewed a number of British commercial men and attended a meeting of the Committee of the British Chamber of Commerce, left for Tetuan on November 15, returning here on November 19. It had been their intention to go by motor to Laraiche, and on to Rabat but unfortunately heavy rains had fallen, making motoring over the tracks in the Spanish zone very risky, so they left for Casablanca by sea, and will visit Laraiche from here on their return.

The Commissioners are evidently out for work, and do not intend to miss any points. They appear to be attacking their by no means easy task with energy, knowing what they want and duly appreciating the importance of the work entrusted to them. They have every one's good wishes, and great hopes are entertained of the results of their visit to Morocco.

The Armistice and Trade.

On receipt of the news of the armistice with Turkey and Austria trade in Morocco ceased entirely, and many merchants became greatly alarmed. It is fortunate that the armistice with our last enemy followed so closely; prices could not have gone worse, but a long period of waiting would have been disastrous. As it is, there are signs that saner ideas are spreading, and it is being gradually realised that there is not going to be the tremendous fall in prices of English exports that so many expected.

Shortly before the armistice the Intendance ceased buying canary seed, and announced that purchasing was free to anyone. There have, in consequence, been some important transactions, prices being nearly double what the Intendance was paying. Prices ruled high in both France and England, and it is hoped that the restrictions of export will soon be withdrawn or modified.

Some fear was entertained less the Intendance might recommence buying and that pre-armistice prices only would be given; but even if they did recommence they could hardly refuse to take into consideration the higher prices paid on the strength of the official notification that anyone was free to buy.

EGYPT'S COMMERCE.

Imports in Excess of Exports.

(From Our Own Correspondent.)

Cairo, November 14.

The Customs statistics for September have just been published. During the nine months imports have amounted to £E37,812,974 and exports to £E35,962,109, as compared with £E22,312,566 and £E27,637,531 respectively at the same date in 1917. Imports have therefore increased by £E15,500,408, or 70 per cent., and exports by £E8,324,578, or 30 per cent., and the balance of trade has swung over against the country to the extent of £E1,850,865, as against one in its favour of £E5,324,965. Exports have increased by £E530,658 to £E932,342, so the balance against Egypt should be reduced correspondingly.

Increases and Decreases.

The principal imports during the period have been: Meat £E1,176,599, hides, skins, and leather goods £E356,025 (an increase of 80 per cent.), flour £E343,309, sugar £E633,226 (an increase of over 90 per cent.), coffee £E513,603, tea £E258,245, vegetable oils £E390,599 (an increase of over 200 per cent.), mineral oils £E534,263 (an increase of over 100 per cent.), stationery £E1,255,066 (an increase of over 200 per cent.), coal £E3,751,579 (an increase of 45 per cent.), glass and crystal ware £E300,273 (an increase of 300 per cent.), matches £E38,248 (an increase of 400 per cent.), medicinal preparations £E472,591 (an increase of 150 per cent.), textiles £E18,480,094 (an increase of 130 per cent.), cotton piece goods £E12,038,980 (an increase of 150 per cent.), ready-made underclothing and hosiery £E1,100,924 (an increase of 266 per cent.), manufactured iron and steel £E1,522,019 (an increase of 125 per cent.), and tobacco £E2,211,271.

Under exports the principal items were hides and skins £E458,811, cotton seed £E1,948,534 (in 1917 £E1,347,957), sugar £E457,082 (a decrease of £E302,733), gum £E326,605, rice £E178,304, onions £E152,642 (a decrease of £E134,289), eggs £E255,628, cotton £E30,703,248 (an increase of 40 per cent.), and cigarettes £E461,447 (an increase of over 50 per cent.). There was a notable falling off in the quantity of oilcake exported; up to the end of September it stood at £E579,956, whereas this year it is only £E50. This is undoubtedly due to the consumption of oilcake in industrial establishments and in private houses, as a result of the shortage of fuel.

Great Britain's Share.

Turning to the share taken in Egypt's external trade by the trading nations of the world, we find that both in imports and exports Great Britain stands far at the top. In imports she was responsible for 60 per cent. and in exports she took nearly 70 per cent.; in either case a substantial improvement on her share last year. The whole of the Empire increased its sales to this country, the most noteworthy being India, which rose from £E2,111,144 to £E3,167,986. The United States, Brazil, Greece, and Chili all showed a falling off; but France augmented her sales by £E659,914 to £E1,396,225, Japan hers from £E248,124 to £E1,943,273. In exports, likewise, the United States shows a decrease, as also do France and Japan, but Greece and Italy both have an increased portion. These changes are mainly due to cotton, three-quarters of which was exported to the United Kingdom, which also took all the eggs, cotton seed, and onions.

Trade between the Sudan and Egypt during the nine months has continued to be brisk. Imports from the former have risen from £E1,630,829 to £E2,013,521 and exports from Egypt from £E1,044,405 to £E1,881,014. The principal imports have been livestock £E667,064 (against £E268,130 in 1917), hides and skins £E135,331, maize £E207,097, sesame £E150,241, gum £E304,853 (against £E103,186 in 1917); whilst the chief exports to the Sudan have been sugar £E461,697, textiles £E675,935 (against £E305,120 in 1917), and tobacco £E131,946.

THE LEVANT COMPANY.

British Commercial Enterprise in the Near East.

The formation is announced of the Levant Company, Ltd., with a nominal capital of £1,000,000, of which for the moment £200,000 has been issued and paid up. Its office is at 626, Salisbury House, London, E.C.2, and it aims at reviving in a modern form the commercial side of the activities of the old Levant Company, which, during the sixteenth and seventeenth centuries, was the recognised spearhead of British influence in the Near East. The directors of the company are:—The Right Hon. Sir Maurice N. E. de Bunsen, P.C., G.C.M.G., G.C.V.O., C.B. (chairman), Sir Francis Barker (Vickers, Limited), Sir Ernest Hiley (Metropolitan Carriage, Wagon and Finance Co., Limited), Mr. A. C. M. Dickson (British Trade Corporation), Mr. A. Henderson (managing) (late Henderson, Lane and Co.), and Mr. Guy H. Locock, C.M.G., and it has associated with it, both in London and abroad, English business men with a life-long experience of the lands where it proposes to operate, its aims being to capture for this country some share of the extensive business hitherto carried on by enemy firms. It will work through subsidiary undertakings abroad, and a feature in its programme will be the company's ability to offer traders a network of reputable and reliable firms pledged to push British interests, and all working in close touch with one another and the parent company in London.

The leading British firm in Constantinople, J. W. Whittall and Co., have ceded their business to a new company known as J. W. Whittall and Co., Ltd. (in which the Levant Co., Ltd. has a considerable share interest), and will work in close co-operation with the Levant company. While continuing the export trade from Turkey, in which they have hitherto been principally engaged, they contemplate devoting special attention to the development of an import and agency business, and have secured the services of men experienced in the proposed developments.

Another subsidiary is the Levant Co. (Greece), Ltd., which is taking over, as a nucleus of its business, Messrs. Whittall's branch house at Salonika, and which also proposes to extend its sphere to Athens at an early date.

Arrangements are nearing completion for the formation of the Levant Co. (Serbia), Ltd., to be followed as soon as practicable by subsidiary companies for Roumania, Bulgaria, Egypt, Syria, and the Sudan, Mesopotamia, etc.

The company recognises that lack of co-ordination has in the past been a source of weakness to the British houses scattered throughout the Levant, and it aims at remedying this by, wherever possible, enlisting the active co-operation of existing firms, but proposes to break new ground where necessary.

It is believed that Constantinople and Cairo are likely to become the hatching-grounds of schemes for the development of the surrounding regions, and the company will aim at taking a share in such business and calling the attention of investors to promising openings. It is notorious that hitherto British capital has lagged behind other competitors in the development even of countries within the Empire, such as Egypt, and it is hoped that a new era is now beginning.

The company has entered into a close working arrangement with the National Bank of Turkey, which will specialise in caring for British commercial interests. For this purpose it contemplates opening branches in the principal centres with the least possible delay.

H.M. TRADE COMMISSIONER AT CALCUTTA.

H.M. Trade Commissioner at Calcutta has recently completed a tour of Ceylon, and is now on a visit to Bombay, and will proceed to Karachi, the Punjab, Delhi and Cawnpore. He will return to Calcutta at the end of this month. These tours are being undertaken in order to keep in touch, as far as possible, with local conditions at these trade centres.

The Ionian Bank, Ltd., have opened an agency at 7, Sheria Sherifein, Cairo.

MALTA IN 1917-18.

Effects of War Conditions.

A White Paper has just been issued containing a report on the Blue Book for Malta for 1917-18, from which we give the following extracts :—

The revenue for the year 1917-18 was £470,976, and the expenditure £484,726; there was, therefore, an excess of expenditure over revenue of £13,750. These figures include an amount of £35,479, representing the duty collected on articles imported for His Majesty's naval and military forces, which was subsequently refunded in the form of drawback. The actual revenue for the year was, therefore, £435,497, and the actual expenditure £449,247. The excess of assets over liabilities on March 31, 1918, was £29,324, as against £43,074 on the corresponding date of the previous year.

The revenue collected in 1917-18 was £10,811 more than that of 1916-17. The only important decreases were under customs (£5,587) and harbour and quarantine dues (£1,333), the decrease in both cases being attributable to the disturbance of normal conditions caused by the war; while there were appreciable increases under other heads

Imports and Exports.

The total value of the imports of merchandise, including the value of goods entered by parcel post and excluding bullion and goods imported for transhipment, was £2,874,420, as compared with £3,318,412 in 1916-17, showing a decrease of £443,992. The value of imports during the year was £7,047 above the average for the past three years. The value of exports amounted to £610,212, as against £589,552 in 1916-17, an increase of £20,660 for the year under review. Food, drink, and tobacco account for £217,458 of the total, raw materials for £343,978, manufactured articles for £35,494, and miscellaneous exports for the remainder.

Agriculture.

The total area of land under cultivation was 42,849 acres, as against 42,687 in the previous year, while the area of uncultivated land was estimated at 3,842 acres, as against 3,979 in 1916-17. At the end of the year under review the number of holdings was estimated at 11,097, as against 11,107 in 1916-17. The principal agricultural products were cereals (including wheat), barley, and "mischiato" (a mixture of both), forage, potatoes, and onions. The total area under cereals was 20,107 acres, as compared with 18,330 in the previous year, the increase of 1,777 being due to the high price and scarcity of wheat. The total yield was :—Wheat, 39,441 quarters; barley, 18,708 quarters; and "mischiato," 5,230 quarters.

The area under beans and pulse was 2,742 acres, against 2,005 acres in 1916-17, and the total yield was 4,410 quarters, as compared with 3,430 quarters in the previous year. The area planted with potatoes was 2,718 acres, as against 3,190 acres in 1916-17, and the total yield was 290,800 cwt., as compared with 190,900 cwt. in 1916-17. The quantity of imported potatoes during 1917-18 was 39,846 cwt., of which 32,310 cwt. only were used as seed, the remainder being unserviceable through damage in transit.

The area planted with onions was 819 acres, as against 1,279 acres in 1916-17. The yield amounted to 2,958 tons, as compared with 6,054 in the previous year. Restrictions were imposed on the cultivation of cummin, in order to encourage the cultivation of foodstuffs, and the yield of this product was insignificant. The total quantity of oranges, lemons, and mandarines gathered is estimated at 171,560 dozen, as against 169,500 in 1916-17. There was no exportation of oranges during the year under review.

Cotton was grown on 744 acres, and the total yield was 128,395 lb. (an average of 172.57 lb. per acre). In 1916-17, the area under cotton was 817 acres, the production being 158,420 lb. (an average of 193 lb. per acre). The average price per lb. obtained was 11½d. In order to encourage the production of cotton, export of a limited quantity (82,416 lb.) was allowed, the high price obtainable affording a large profit. It is probable that all locally grown cotton will, for some time to come, be required for cloth manufacture in the island. Malta sail cloth is now much in demand and commands a high price. The development of the industry will, it is hoped, be followed by increased production of cotton.

Ten thousand seven hundred and sixty-one acres were under clover, barley green, vetches, etc., as against 10,913 acres in the previous year. The total yield amounted to 308,596 loads of ten bundles each, as compared with 323,114 loads in 1916-17.

Fisheries.

Nine hundred and nineteen boats were engaged in the fishing industry, and the number of hands employed is estimated at 2,910. The regulations governing fishing during wartime have placed restrictions on the areas and times in which fishermen can carry on their calling, and the industry has, naturally, been seriously affected in consequence. The average catch for the year 1917-18 may be taken as about 450 lb. per diem. The industry is one which, it is thought, could be largely extended and improved, when normal conditions are restored, by the introduction of more modern methods and appliances. Direct assistance by Government would appear, however, to be essential, as the fishing class are generally conservative and attached to their primitive habits and systems.

Railway, Water and Lighting.

The gross revenue of the railway during 1917-18 was £10,439, as against £8,712 in 1916-17. The expenditure, including additions and renewals (£461), was £10,269: in addition to which £152 was expended on the railway technical school. The revenue derived from water supplied, introduction of house services, and rent of meters, was £27,030, as compared with £26,978, in 1916-17. 826,000,000 gallons of water were consumed in 1917-18, as against 857,000,000 in the previous year. The revenue derived from the electric lighting installation was £21,726, as compared with £21,499 in 1916-17. The capital on March 31, 1918, was £49,300, and the profit on the year's working, after deducting interest and depreciation, was £1,283, or 2.6 per cent.

Control of Supplies.

With the reduced facilities for importation, the work of the Control Board, with its subsidiary boards, in the maintenance and distribution of supplies has been gradually extended to all essentials, though food and fuel have naturally demanded most attention. Prices and distribution of all foodstuffs, whether imported or locally produced, are controlled at all stages. Small committees in each district, consisting usually of the parish priest, the district medical officer, and the government schoolmaster, and one or more private citizens, report as to stocks and consumption of every commodity of importance, and make recommendations as to allotment to individual retailers in accordance with the requirements of their district. A flour board directs allotment of wheat to millers, the issue of flour from the mills to bakers, the amount issued being calculated on information supplied by the district committees as to the number of persons supplied with bread by each baker. Difficulties with regard to fuel have been met by the introduction of economical stoves designed to burn sawdust, while a cheap food kitchen is attached to each district.

Although the measures taken have been so far successful that food has been obtainable, and excessive profits prevented, distress has been general owing to increase of prices. Wages, in peace time, were not calculated on a high scale of living, and there has been little increase in the rate of wages since the outbreak of war. The patience with which privation has been borne and the readiness with which restrictions imposed by Government have been accepted, is all the more remarkable.

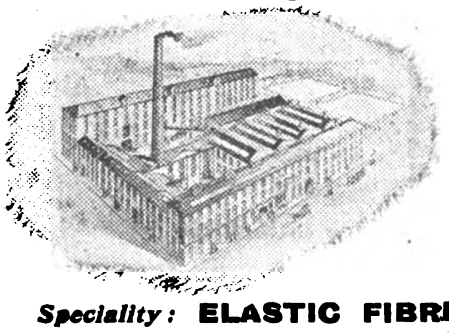
The financial position of the Government throughout the year has not been free from difficulty, as the advance in prices of all commodities has added to the cost of maintaining the principal public works—water supply, drainage, electric light, railways, etc—and the charitable institutions, the demands on which became increasingly insistent, while at the same time the revenue was largely affected by the restrictions on importation. Measures for imposing additional taxation were introduced which will, it is hoped, tend to restore the balance of revenue and expenditure.

INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following cabled news received from the Director-General of Commercial Intelligence, Calcutta, dated December 5 :—

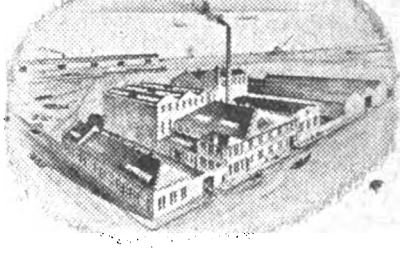
Useful rain has fallen in the Central Provinces. There have also been light to moderate rains Madras, Bombay, Burma, Bihar and Orissa, and in the United Provinces. Scarcity conditions have been declared to exist in several districts in Bombay.

Bombay cotton market is irregular. Fully good broach April-May quoted Rs. 569 a candy. No improvement in piece goods market.



The survey by State Agency of the Agra Karachi connection has been sanctioned.

Mr. C. C. Curwen, general manager of the Khedivial Mail Steamship Company at Alexandria, arrived in London on December 11.



M. Vassa Yovanovitch and M. Milosh Soutchitch, members of the Serbian Industrial Mission, arrived in London on December 11 from Paris.

Cable Address: "Lobe, Dundee." **LOW & BONAR, Ltd., Dundee, Scotland.** Codes used: A.B.C., 4th & 5th edns. A 1., Lieber, and Bentley's.

Manufacturers of SACKS and BAGS of LINEN, COTTON and JUTE, for all purposes. Also of WATERPROOF CANVAS and TARPAULINS, Specially prepared for tropical climates.

***Speciality:* ELASTIC FIBRE-LINED JUTE BAGS, Securing Absolute Purity of Contents**

DAMP-PROOF BAGS, WATERPROOF BAGS, FIREPROOF BAGS, Etc.
Shippers of all classes of JUTE, LINEN and COTTON FABRICS.

ENGINEERING NOTES.

Balkan Potentialities.

The remarkable industrial and agricultural progress that has been made by the Balkan States during the last twenty-five years is a convincing proof of the potentialities and economic value of those regions. When peace is permanently established they will, undoubtedly, rank among the most desirable markets for all kinds of machinery; whilst as fields for engineering and industrial enterprises they will afford great opportunities to enterprising firms. The Germans, well aware of this fact, have not spared efforts in the past to secure an economic predominance in these regions, and even during the war, notwithstanding their aggressive attitude and their doubtful military position there, they set in operation a most systematic commercial propaganda with the purpose of securing not only German trade supremacy, but also the "Germanisation" of some of the most important industrial and agricultural resources of those regions by an ingenious method of assimilation of German and local interests. Thus we hear now that various companies have been formed in the regions occupied by the Germans or their Allies during the last two years for the exploitation of local industries, mines, forests, water-power, etc., which companies, while apparently of native origin, had their economic and guiding centre in Germany! It may be assumed that effective measures will be taken in due course to deal with these companies.

Machinery for Roumania.

Roumania is one of the chief cereal-growing countries. In 1913 she exported 30,663,500 bushels of wheat, over 100,000,000 bushels of maize, and large quantities of oats, barley and rye. There is a flourishing trade in plums, exported as fruit pulp, dried, and also as plum spirit. Mining is almost entirely confined to coal and petroleum. For these industries it is obvious that large quantities of machinery and implements are employed. Taking the latest available returns (1913) the imports of machinery only represent a value of £2,366,200, of which the largest share was taken by Germany and Austria. These latter countries had also the largest share in an item of £4,902,200 representing the value of imported metals and manufactures thereof. It is needless to point out how urgent it is for British manufacturers who wish to do business in that market to act at once. The former chief suppliers of these machinery and metal goods, Germans and Austrians, have left Roumania in the worst possible condition. It will not be the fault of Roumania, if in its very urgent need for agricultural and other machinery and in the absence of any offer or approach from this or any other Allied country, it returns to the markets of Germany and Austria-Hungary, who, undoubtedly, in the circumstances will propose very attractive terms.

Roumanian Railway Schemes.

It is reported that a sum of four million francs has been set aside by the Roumanian Government, and all the necessary funds have been voted for the construction of a railway line to connect the northern part of Moldavia and the north of Bessarabia. The new line will join Lipcani, Radantzki, and Dangeni. Northern Moldavia possesses great natural resources, which have been but little developed hitherto. During the war this district provisioned the whole of the Roumanian army. The Government, it is stated, will do everything possible to hasten the completion of this new line.

Petroleum Industry.

According to recent German reports the Steaua Romano Company for the petroleum industry in Bucharest continues to increase its output and the refineries are fully occupied. Its final accounts for 1917 show that a dividend of 16 per cent. was distributed. With regard to the reconstruction of the ruined plant of the company it is asserted that this has been successfully carried out. The work of rebuilding began on February 1, 1917. Of the 288 oil-yielding soundings existing before the outbreak of the war in 1916 up to the end of December 115 had been re-opened. The output of oil grew as the restoration work progressed, and reached in the occupied territory in June, 1917, the highest daily quantity of 76.9 truck-loads. The company produced altogether in the occupied territory in the year 1917, 132,482 tons of oil to which must be added 38,544 tons supplied through the administration in Jassy from the Moldavian mines, so that in the last year 171,026 tons were obtained compared with 281,685 tons in the previous year.

A working association was constituted to open up part of the Roumanian State oilfields still unexploited. Most of the little available boring plant had to be used for the purpose of this association; in consequence of this, it is said, the usual activity of the company was much restricted.

Electricity in Bulgaria.

The Bulgarians have recently shown a remarkable aptness for modern industries and enterprises, which undoubtedly will help to expedite the development of their country's natural wealth. Concession after concession have been granted recently to companies and individuals which if properly and successfully utilised will enable Bulgaria to secure a prominent position among Near Eastern countries. According to recent reports, the Bulgarian Ministry of Trade has granted a concession for the production of electrical energy for industrial purposes in Preslaw and the vicinity, also another for the production of electrical energy from coal in Bistritza.

PROMINENT INDIAN INDUSTRIES.

"NEAR EAST" MARKETS.

Bombay Piece Goods Market.

Owing to various factors the Bombay piece goods market was in a very depressed condition by the commencement of November. The position is explained in the following extracts from a recent letter from India:—

"As it became apparent that the rains were a failure (this has been the worst monsoon that Bombay Presidency has experienced in the past 100 years), the market commenced to slump. The further absence of late October rain added to the depression. On top of this came the Government announcement of an Excess Profits Tax; then the Government scheme whereby every mill has to manufacture a defined quantity of standard cloth to be retailed, principally in other provinces, at fixed low rates. On top of this the influenza epidemic.

"The changes in the war situation completed the causes which have led to the present position. Local grey cloths, which were changing hands in early September at Rs3 to Rs3.8 per lb., have since been offered in the bazaar at Rs1.8, and this despite the fact that the mills replacing sale prices have varied from Rs 1.15 to Rs2.2 per lb. Broach cotton has slumped over Rs100 a candy, and cotton mill shares have declined all round, in the case of certain speculative shares by as much as 30 to 40 per cent. Japanese and Manchester cloths declined to well below replacing cost.

"The only redeeming feature in the situation is that this decline, owing to the series of causes which have led to it, has been much more gradual than would have been the case had, say, the monsoon been fair, and had Peace come upon us later and more suddenly.

"Gross speculation was taking place, and more and more outside people with no knowledge or previous experience of piece goods were becoming involved; the set-back now has badly shaken many, but it has, in general, made the position more healthy. Bombay is a panic market, but the effect to be looked for on the cessation of hostilities has probably been very largely discounted by the present fall.

"There are one or two factors which make for a little improvement in the situation. Certain dealers have held a meeting, and discussed steps to be taken to support the market. No decision was arrived at, but it is understood that most of the large dealers are agreeable to allowing *bona fide* cloth buyers two to three months extensions of delivery due date, on the buyers depositing margin.

"The local mills are granting extensions of delivery date fairly freely, and, in addition to this, their production will be curtailed a little, as the Tata Hydro Electric, owing to the failure of the rains can only supply full power to April, or alternatively, power for ten hours daily up to next monsoon. As against the effects of a curtailment of production is the probability that Indian Munitions Board purchases for 1919 delivery, or at least for July-December, 1919, may be much smaller than the quantities taken during the present year.

"Dewali falls on November 4, but we do not look to the festival bringing forth much forward business this year. Dealers will probably be content if they can move stocks into consumption. The fact that Peace may even result in increased oversea transport difficulties is recognised, and the buyers realise that labour troubles and a possible European demand for cloth may make it impossible to import cloth at present rates; but there is also a feeling—rightly or wrongly—that manufacturers are working on margins which allow of a very fair addition to their costings, and that there is room for reductions in home prices.

"An intelligent anticipation of what this market may do during the next few months is extremely difficult to make, but our feeling is that prices of Indian made cloth (and it must not be overlooked that the fact of dealers doing well, or otherwise, out of their local goods does materially, if indirectly, affect the prospects of the imported cloth trade), will steady up, while imported cloths will suffer a further temporary set-back when Peace is definitely arrived at. The set-back will probably only last for a few months—that is, until the market is steadied by the purchases from ready stock, and until the shortening of stocks brings a full realisation of replacing costs."

Egyptian Crops.

The bulletin of the Egyptian Ministry of Agriculture gives the following particulars regarding crop conditions in October.

COTTON.—The weather, except in El Faiyûm, was warmer than usual and generally beneficial to the late crop. The heavy rainstorm which broke out on the 24th and 25th of the month, however, caused some damage to the unpicked cotton in parts of Lower Egypt, especially in Gharbiya, Sharqiya and Qalyûbiya. Water supply was sufficient. The attack of the pink boll worm, although naturally on the ascendant as compared with last month, is still somewhat lighter in Lower Egypt than in past seasons. The second picking is approaching completion, except in the northern Delta, and has given disappointing results in Minya and the Mudirias lying south. The yield is generally below average, but the quality is comparatively good. A general tendency has been noticed this year of a more careful picking and cleaning of the crop by cultivators. The latter are now busily engaged in cleaning and removing their cotton sticks, in order to prepare their land for the early sowing of the winter crops.

RICE (*Sêfi*).—Weather favourable and water supply generally sufficient. The crop is free from pests. Harvesting is proceeding everywhere, but varieties such as Fino and Ein el Bint are still being watered in some parts of Daqahliya Province. A good yield is expected.

RICE (*Nili*).—Harvesting has started in the early-sown fields, while the late-sown rice is ripening. The yield is expected to be slightly above average.

MAIZE.—The weather was, on the whole, favourable to the early-sown maize, but quite unfavourable to the late crop. The rainstorm caused a certain amount of damage in parts of Lower Egypt, especially in Sharqiya and Qalyûbiya. Although slight attacks of stalk borer and smut are reported in some provinces, the mischief caused is negligible, but in Daqahliya Province the crop has suffered to a certain extent from the usual depredations by crows. The maize is now approaching maturity, and harvesting has started in the early-sown fields. Despite the shortage of manures, a good yield is expected this year, especially from the early-ripened crop.

MILLET (*Nili*).—Weather seasonable and water supply sufficient. Some difficulty is being experienced, however, in watering the crop near the small branch canals which have dried with the emptying of the basins in Giza Province. The area under millet appears to be smaller than last year. Trifling attacks of stalk borer are reported in Girga Qena and Aswân, but the condition of the crop is, on the whole, satisfactory.

SUGAR CANE.—The weather was congenial and unusually favourable for the growth and development of the cane in Minia Province. Water supply adequate. The attack from stalk borer is general, but damage caused is of no importance. In Asyût and provinces further south the canes appear to be rather smaller than usual, owing probably to the shortage of chemical manures.

BERSIM.—Weather favourable and water supply plentiful. Sowing is general, and is to a great extent, carried out under the standing crops, maize and cotton. Owing probably to the scarcity of fodder, farmers appear to be putting a larger area than last year under bersim. Few attacks by the cutworm and the cotton-worm are reported, but damage is insignificant. Germination is satisfactory and the growth of the young plants is good. Early crop sown after bare fallow is being grazed.

EGYPTIAN MARKETS.

The receipts of the Egyptian Markets, Ltd., for the week ended November 28, amounted to £1.271, making the total for the year £48,619. The figures for the corresponding week last year ended November 29 were £848 and £51,219.

EGYPTIAN STATE FINANCES DURING AUGUST.

(FROM OUR OWN CORRESPONDENT.)

CAIRO, November 8.

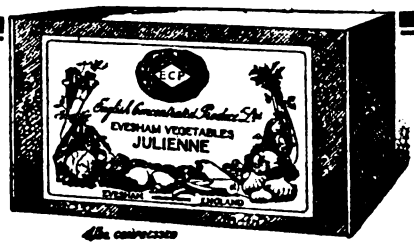
The State accounts for August show continued progress in the country's revenue. During the month revenue amounting to £E1,885,748 was collected, and expenditure of £E1,459,492 was incurred, leaving on the month's working a surplus of £E426,256. For the five months from the beginning of the financial year the revenue totals £E10,469,304, and the expenditure £E8,491,420, as against £E7,833,782 and £E7,281,712 at the same date in 1917. There is, therefore, a surplus of £E1,977,884 as compared with one of only £E552,070 a year ago.

The chief items of revenue during the month were direct taxes £E215,617, customs £E407,801, which are already within £E800,000 of the total estimated for the complete year, tobacco dues £E196,029, judicial fees £E122,423, railways £E597,921, whilst the main items of expenditure were, irrigation £E96,898, railways £E218,664, ghaffirs £E66,615, war office £E166,972, pensions and indemnities £E72,241, public debt £E117,324, and war gatuities £E48,720.

LANCASHIRE COTTON.

The Strike.

FROM OUR OWN CORRESPONDENT.



MANCHESTER, Wednesday.

The feature of interest in the market this week has been the strike of the operatives in the spinning mills of Lancashire, and business has been thoroughly disorganised. The immediate output of yarn and cloth is very uncertain, and it is contended that unless the dispute is settled weaving sheds, in addition to spinning mills, will be at a standstill at the end of the year. Last Friday, at a joint conference arranged by Sir George Askwith, the employers repeated their previous offer of 40 per cent. on list rates as against the claim of the workpeople for 40 per cent. on current wages, which means about 66 per cent. on list rates. The Trade Union officials again refused the proposal, and also declined to agree to arbitration. A deadlock, therefore, existed, and the meeting broke up without any settlement. Late on Wednesday Mr. Lloyd George intervened in the strike, and made arrangements to meet both parties early on Thursday morning. Nothing new can be said with regard to Egyptian cotton prospects. Nominally Egyptian yarns are distinctly dearer, but only small stock lots have been sold, as producers have not been inclined to book fresh orders. Inquiry in piece goods for Egypt remains slow. Very few offers have been met with for India and China. Most manufacturers have refused to quote. The American yarn market has been disorganised. Here and there 4d. to 6d. a pound more has been paid for stock lots. The bids mentioned in shipping counts have been altogether too low.

GREEK FINANCES.

A Reuter message states that in the Greek Chamber on December 8, M. Negropontis, the Minister of Finance, in a speech on the financial situation, pointed out that during the year 1918 there had been a surplus in the Greek Budget of sixteen million drachmae, as against an anticipated deficit of 165 millions. The surplus for 1918, which was expected to amount to 237,000,000 drachmae would only reach 163,000,000, owing to the increase in the salaries of the Civil Service. The Public Debt of Greece now amounted to 1,500 million drachmae. The mobilisation had entailed an expenditure of 500 million drachmae and the war 500 million drachmae more. In spite of this, however, the deficit for 1919 would only amount to 100 million drachmae, which would be covered by the yield of the new fiscal measures which had been submitted for the Chamber's approval.

The joint report of the United States Mint and Geological Survey gives the silver production of the United States of America for the calendar year 1917 as 71,740,362 fine ozs., compared with 74,414,802 fine ozs. in 1915.

COMPANY MEETINGS.

P. and O.

The seventy-eighth ordinary general meeting of the Peninsular and Oriental Steam Navigation Company was held on December 12 at the offices, 122, Leadenhall Street, E.C., the Right Hon. Lord Inchcape, G.C.M.G., K.C.S.I., K.C.I.E. (chairman of the company), presiding.

The Secretary (Mr. F. J. Abbott) read the notice convening the meeting.

The Chairman, in moving the adoption of the report and accounts, said that a considerable sum had been set aside by the company to meet the enhanced cost of building the ships needed to replenish their fleet. There would be great difficulty in working ships costing two or three times the pre-war amount so as to yield a profit and provide for depreciation on the cost. To keep values at a reasonable figure it would be necessary to write down drastically the outlay on new ships as soon as they were in the water. For the past few months they had had only one ship running to India, all the others being in Government employ, and the Indian mails had been mostly carried by British India steamers. As their ships were returned to them they would resume their position in the Eastern and Australian trades, but it would be some time before they would be able to offer the public their pre-war standards of convenience, comfort and regularity.

On the subject of the nationalisation of shipping, his lordship pointed out that at the outbreak of war the shipping companies placed every vessel needed by the State at the State's disposal at "Blue Book" or Government rates; later the whole mercantile marine was handed over, also at Blue Book rates. Then came the suggestion of permanent Government control, against the advocates of which the common sense of the Prime Minister and the House of Commons had prevailed, with the resulting pronouncement of the Government that they did not contemplate the nationalisation of shipping. Advocates of such a policy did not appreciate that much of this country's shipping was employed in international trades, the vessels so engaged never returning to these shores after leaving the builders' hands. Shipping was the most vital of all their "key" industries, and unless its superiority, its prosperity and its adaptability were restored the whole edifice of their foreign commerce must collapse.

As to reconstruction, they were, if left alone by Government Departments, perfectly capable of reconstructing themselves. He believed we should enter the first crucial period of peace in as favourable a position as most of our rivals. If we had high prices they would be world prices, but with a vast empire as yet undeveloped, its lands unworked and its treasures untapped, he trusted the days of the workhouse were well-nigh over. We could not hope to create a new heaven and a new earth in an old country, but we should pull through. Some few there were in the country who considered that labour was the sole creator of wealth, and who would welcome a war of classes. To know what happened when workers acted in the belief that the organisers of industry should be denounced and treated as enemies, that capital—the seed corn of the industrial harvest—was counted only as something to be confiscated, one had only to look at Russia, where in full and deadly bloom were flourishing every economic fallacy and every form of political quackery that had ever bewitched mankind. Russia to-day was a reference library of all the social, governmental, financial and industrial errors that it was possible for half-educated or wholly uneducated men, spurred on by passionate greed and hatred, to commit. Universal ruin, famine and anarchy would be the fruit of such policy. If it had been decreed that Government officials were to control British shipping while Allies, neutrals and enemies were free, they would have disposed of the two millions of tonnage which they and their associated companies possessed, have divided their assets among their shareholders and retired from business.

There had been a great deal of talk about the standard ships which the Government had built. He did not know who was responsible for the idea; one seldom knew who was responsible for a Government's idea. He had nothing to say against so-called standard ships, but they had always built standard ships, Having settled the type of ship they required, they placed orders, not for one but for several. There were limits to standardisation, but no finality to ship design or construction, and their next batch of ships was always an improvement on the previous one. Had shipowners been allowed to invest their depreciation, surplus earnings, and the amounts that had been recovered for ships that had been sunk in replenishing their fleet, the British mercantile marine would to-day have been much better equipped for the post-war trade of the world. Had they been permitted to make contracts to replace their vessels when they were sunk and before values increased to present-day figures, they would not now have had to pay two or three times the pre-war prices; he instanced the amounts recovered for three ships sunk by the enemy, which sums would, he said, not be sufficient to replace one-half of one of them. At present, when earning power was considered, they were two or three millions to the bad, if the value of the lost ships was compared with the amounts recovered. But the process of replenishment must go on. Within the last few days they had arranged for the construction of two large mail and passenger ships with Messrs. Harland and Wolff and for three steamers for the branch line with Messrs. Caird, while provisional arrangements had been made with other builders.

In the diversion of ships from their accustomed trades to other routes it had been laid down and confirmed by the Shipping Controller that there was to be no after-war poaching, and that each line, when things became normal, was to respect the other's pre-war trades. When the liner requisition came to an end, as they hoped it shortly would, he trusted there would be no disposition by one to take advantage of the other by means of information gained or relations established while all have been fighting the common enemy; but he was afraid such attacks might be made by those who were not British. Several dips had already been made by Allies and neutrals into British trades. British shipowners would have to fight to regain their positions, and in doing this would be at a great disadvantage from the fact that their profits had been severely limited, while the profits of others had been fabulous. The Government, for instance, were paying British owners 15s. per ton per month, and for neutral tonnage as much as 40s. or 50s. Under the Finance Act of 1917 all firms were granted a refund of excess profits duty should their profits fall in any year below pre-war standard, but from this rule shipowners have been especially excluded. It would be no more than an act of justice if the shipping community were in this respect put on an equality with all other business concerns. There was no greater dead-weight on enterprise, initiative and industry than the excess profits duty; it had been loyally accepted, but its operation was vicious in the extreme, leading to indifference and extravagance.

Two and a-half years ago they, in conjunction with some shipping friends, had purchased land and laid out a modest building yard at Chepstow, with every prospect of success; the Government, fifteen months later, had commandeered their property and plant, and, after protracted negotiations, they had been paid out in August last on terms extremely favourable to the Government. As Marryat had said in "Jacob Faithful," "What's done can't be mended," and the P. and O. Company in September last had acquired on fair terms a controlling interest in one of the most up-to-date yards on the Clyde, with ample ground for development, which acquisition, he believed, would be a valuable adjunct to the associated companies. Whether the covetous eyes of some Government official would lead to this yard being appropriated as well as Chepstow, he could not tell. In the course of two or three weeks the P. and O. express would, he hoped, again be running to and from Marseilles. Commencing with the steamer leaving Bombay on the 15th instant, the mails would be landed at Marseilles, and in a very short time the outward mails would be embarked there. He paid a tribute to the services rendered to the country by the captains, officers, engineers, and crews of the P. and O., British India and associated lines throughout the year, whose devotion, nerve, and courage had been beyond all praise. Many of their captains, officers, and engineers had been serving in His Majesty's ships throughout the war and many had received distinctions. All who cared to come back to the company's services would be welcomed. In conclusion, he would like to say that, thanks to the prudence displayed in the conduct of their finances, the company was in a perfectly sound position. Their ships and properties were well written down and their investments stood in the books at a realisable figure. Notwithstanding the uncertainties ahead, they faced the future with confidence and hoped to give next year the same modest return on the capital invested as they proposed to do for the year last terminated.

Mr. W. G. Rathbone seconded the motion, which was carried unanimously.

The Chairman next moved:—"That a dividend for the half-year ended September 30 of 2½ per cent. on the preferred stock, less income-tax, and a dividend of 6 per cent., with a bonus of 6 per cent., on the deferred stock, free of income-tax, as recommended in the report, be now declared, and that payment for the same be made on and after the 17th instant."

The resolution was seconded by Mr. P. Williams and unanimously adopted, and the retiring director and auditors were re-elected.

Mr. Edward Herbert proposed a vote of thanks to the chairman, directors, and staff.

Mr. W. B. Atkinson seconded the vote, which was unanimously accorded.

Bengal-Nagpur Railway.

The sixtieth ordinary general meeting of the Bengal-Nagpur Railway Company, Ltd., was held on December 5, at the offices, 132, Gresham House, Old Broad Street, E.C., Mr. Robert Miller (the chairman) presiding. The Managing Director (Sir Trevredyn R. Wynne, K.C.S.I., K.C.I.E.) read the notice convening the meeting and the auditors' report.

The Chairman, in moving the adoption of the report and accounts, said: From the accounts you will observe that the expenditure on capital account during the year ended March 31 has been extremely low, amounting as it does to £176,731, of which £81,678 only was expended on rolling stock. I need hardly inform you that those sums are much below our average annual expenditure on capital before the war. During the year ended March 31, 1914, we spent £451,047 on rolling stock, and our total expenditure on capital account amounted to £917,776. We have been fortunate in being able to place an order in Canada for 150 bogie goods vehicles which are most urgently required for handling coal, ore, rails, and other steel sections manufactured by the Tata Iron and Steel Company, situated on the railway. I hope that this stock will shortly be delivered and erected in India, as it will relieve to a certain extent the shortage now experienced. Since preparing these remarks we have had information that the stock in question is in course of being shipped. As comparatively few engines and wagons have been placed on the line for the past three years, every ounce of work has had to be extracted from our existing stock owing to the exceptional traffic that has had to be handled. Our post-war expenditure in repairs will of necessity be heavy for a time.

Dealing now with the results of the past year's working, you will have observed that the gross earnings are the highest we have ever received. These amount to £3,759,503, and exceeded the gross earnings for the year 1915-16 by £801,284 and those of 1916-17 by £344,275. Our working expenses, although very heavy, do not constitute so high a percentage of the gross earnings as during the two preceding years. The working expenses rose to £1,750,645, exceeding those of 1915-16 by £300,767, and those of 1916-17 by £108,260. The percentage of working expenses to gross earnings amounted to only 46.57, whereas for 1915-16 and 1916-17 the percentage was 49.01 and 48.09 respectively. So low a percentage has not been obtained since the year 1912, when it fell to 45.74. As I have already informed you, the revenue expenditure during the year amounted to £1,750,645, or an increase of £108,260. The heads under which the increase is most noticeable are locomotive and carriage and

Digitized by Google

wagon, these having increased during the year under review by £48,933 and £63,733 respectively. The increases are mainly due to the very heavy repairs that have been necessary to our locomotives, and to a very much larger number of goods wagons having been overhauled and returned to service. The abnormal price that has had to be paid for the iron and steel required for these repairs has also very considerably increased our expenditure. Owing to the efforts being made in India to keep as large a number of engines and wagons fit for the road as possible, the abnormal duty that is being extracted from them, and the excessive price of material, I am afraid we must anticipate that these expenses will rise to an even higher level this year than they stood at last year. Part of the increase in working expenses has been occasioned by a temporary war increase granted to our staff.

During the greater part of the year the amount of coal traffic that it has been necessary to move has been the chief factor in regulating the amount of other traffic that could be moved, since coal required for Government and railway purposes was given preference over other traffic. The development of the coal traffic and Government, military and other preferential traffic during the year under review was so great that little or no margin of capacity was left over for the carriage of ordinary public traffic during the greater part of the year. A Special Coal Controller was appointed by the Government to regulate and distribute the whole of the coal traffic, and for this very important work it is a compliment to this railway that Mr. Godfrey, our agent, was selected to fill the post. In spite of the extraordinary traffic that we have had to deal with during the past year, we are making preparations to deal with a further large increase during the current year, as it is anticipated that more coal and more general traffic must be carried over our system than we have hitherto been able to deal with. I would mention that our receipts for the current year up to the end of November exceed those of last year by about £260,000. To meet this anticipated increase of traffic the construction of additional crossing stations and additions to existing yards are being hurried forward as fast as possible. It is hoped that most of these will be ready in time to help in dealing with the anticipated demand. As the Government of India are fully alive to the urgent need of increasing our facilities, I have no doubt that steps will be taken to permit the Tata Iron and Steel Company, Ltd., to roll the necessary rails. There was some doubt about that until quite lately, but I have been given to understand that rails will be more easily obtained and at a lower price than was recently the case. Although hostilities have ceased, I surmise that Government traffic on Indian railways will be heavy for a considerable time to come. Very great leeway has to be made up in carrying public goods traffic, and the partial failure of the rains will create a traffic in grain by which we should benefit. I do not anticipate, therefore, any sudden drop in receipts owing to the sudden cessation of hostilities.

When I last addressed you I ventured to prophesy that when the war ends the railway will find that a large new and permanent traffic has been created. This opinion I still adhere to. Moreover, since our last general meeting enormous deposits of iron ore have been proved within seventy-five miles of our railway to the south of Chakardharpur, one of our headquarter stations. Several firms, besides the Tata Iron and Steel Company, Ltd., have obtained concessions in these fields, and one new steel and iron company has been floated within the last six months. This company has selected a site for its works on our line near Asansol, in the Sanctoria coalfields, and the works they are erecting are bound to bring a large increase of traffic to our railway. As soon as the difficulties regarding the manufacture of machinery and plant in England are removed, and the Government of India's restrictions in respect to the flotation of new companies are withdrawn, I can forecast with some certainty that other companies will be formed, situated on our railway. All these iron ore deposits are in the area served by your railway, and consequently we have good cause to be optimistic regarding its future prospects. A line is being surveyed to tap ore deposits, and will be constructed as soon as possible after the best route to serve these ore fields has been decided on. A survey is also being made for a line to serve the coalfields in the Korea State, to the east of our Katni branch. As iron ore has been found in proximity to these coalfields, which are reported to contain coal of good quality, I have little doubt that this branch will also add not only to the prosperity of India, but also to that of the railway. At our last meeting I mentioned that the negotiations which had been proceeding for three or four years regarding the construction of a harbour and docks at Vizagapatam by this railway had been successfully concluded. Steps are now being taken to acquire land for the harbour, docks, and railway approaches. I wish to bear witness to the severe strain the depleted superior staff of the railway in India have been subjected to during the year owing to the large numbers of officers absent and the great and unremitting increase of traffic. They deserve the greatest praise for their untiring efforts. In this praise I also include the whole of the subordinate staff of the line, who have cheerfully and willingly worked to their best. I would also like to congratulate our acting agent, Mr. Clark, on the way he has dealt with the difficulties of working the line under abnormal conditions.

Mr. Frederick Schooling seconded the motion, which was carried unanimously.

The dividend and bonus recommended by the directors were approved, the retiring directors and auditors were re-elected, and a vote of thanks to the chairman and directors concluded the proceedings.

NEW COMPANIES.

Abyssinian Corporation.

The Abyssinian Corporation, Ltd., has been registered with a capital of £1,005,000, in 1,000,000 ordinary and 5,000 deferred shares of £1 each. The objects of the corporation are to seek for and to secure openings for trade, and the employment of capital in Abyssinia and elsewhere, and to carry on the business of general traders, importers, exporters, planters, farmers, builders, contractors, carriers, shipbuilders, shipowners, shipbrokers, proprietors of hotels and general stores, land and mine-owners, bankers, and merchants, etc. There are to be not less than three and not more than eleven directors. The first directors are Viscount Wolmer, Mr. J. A. Barson, director of the Pekin Syndicate, Ltd., Mr. J. H. Batty, Mr. E. W. Janson, director of Fanti Consolidated, Ltd., Mr C. M. Higgins, director of the Commercial Bank of London, Mr. D. B. McGillivray, director of the Sudan Plantations, Ltd., Mr. P. H. Thomas, and Mr. C. H. Villiers, director of Magadi Soda, Ltd. As regards the distribution of profits, the ordinary shares are to be entitled to 90 per cent. of the profits available for dividend, but should that be insufficient to pay a dividend of 6 per cent., then to as much of the remaining 10 per cent. as may be required to make up the deficiency. The deferred shares will receive 10 per cent. of the profits in a year when 6 per cent. is paid on the ordinary shares.

J. W. Whittall and Co.

J. W. Whittall and Co., Ltd., was registered on December 5, as a private company with a capital of £350,000 in 15,000 Six per Cent. Cumulative Preference shares of £10 each, and 200,000 shares of £1 each, to take over all or part of the business of J. W. Whittall and Co., of Constantinople, and to carry on the business of general merchants and traders, financial agents, ship and barge owners, mine owners, farmers, etc., and to enter into an agreement with F. E., W. J. H. and R. La F. Whittall.

COMPANY NOTES & REPORTS

British India Steam Navigation.

The report of the British India Steam Navigation Company for the year ended September 30 states that after providing for depreciation, there is a balance of £170,095, which (less interim dividends paid in May) the directors recommend should be disposed of as follows:—Dividend of 5 per cent. on preference stock, £35,000; dividend of 8 per cent. (free of tax) on shares, £76,576; special bonus of 4 per cent. (free of tax) on shares, £38,288; leaving to be carried forward £20,231. The entire fleet has been under charter to, or requisition by, Government at Blue Book rates. The company has consequently been unable to provide sufficient tonnage for the requirements of some important trades, and opportunity was thus given, and availed of, by foreign tonnage to participate in these trades. When the steamers are again available it will be the first concern of the directors to recover their trades. The directors are arranging to make up the company's fleet to its former standard by contracts with builders.

Assam Bengal Railway.

The report of the Assam and Bengal Railway for year ended March 31 shows that gross receipts amounted to Rs76,77,127 and working expenses to Rs56,97,944, the ratio being 74.22, compared with 78.04. The usual half-yearly dividends at the guaranteed rate of 3 per cent. per annum were paid on January 1 and July 1.

Khedivial Mail Steamship.

The trading profit of the Khedivial Mail Steamship and Graving Dock Co., Ltd., for the year to June 30, including Government subsidies, and after adding dividends, interest and transfer fees received, and after providing for estimated liability in respect of excess profits duty and income-tax, amounted to £51,111. After deducting therefrom London office expenses, debenture interest, directors' fees, depreciation, etc., £24,613, there remains a net profit of £26,498, to which there is to be added the balance brought forward, after appropriations, and after deducting therefrom the dividend on the preference shares for the half-year to December 31, 1917, £15,844, making the balance £42,343. Out of this there has been paid since the date of the accounts half-year's dividend on preference shares to June 30 and an interim dividend of 5 per cent. on the ordinary shares, together, £10,497, leaving a balance available for appropriation of £31,845, out of which the directors recommend the payment of a dividend on the ordinary shares at the rate of 15 per cent. (making 20 per cent. for the year), £15,000, leaving to be carried forward £16,845. During the greater part of the past year the company's ships have been running under Government control.

Sudan Plantations.

The report of the Sudan Plantations Syndicate, Ltd., for the year ended June 30 states that the issued share capital remains at £135,000, and the debenture capital is likewise unchanged at £57,000. Since the closing of the books the debenture capital has been entirely paid off. The crops handled at the two ginning factories, compared with the previous year were as follows:—Zeidab 2,012 bales, against 1,631 bales; Wad Medani 3,120 bales, against 3,388 bales. The prices realised for cotton were very satisfactory. The supply of irrigation to natives in the Zeidab district again shows a further increase. The Government agricultural station at Tayiba continues to be worked by the syndicate on behalf of the Sudan Government. A scientific research station was started in the Gezira at the beginning of this year under the joint direction of the Sudan Government and the syndicate. The syndicate's own station at Barakat is now fully developed, and is proving most useful as a training ground for the future. The yield of cotton from this station last year was not good owing to the shortage of water. The profit and loss account for the twelve months, after deduction of all outgoings, shows a net profit of £59,692 7s. 10d., which, added to the balance brought forward from last year, viz., £11,014 0s. 7d., less directors' fees, since paid, £600, brings the total credit to £70,106 8s. 5d. It is proposed to deal with this sum as follows: To recommend the declaration of a dividend of 25 per cent., equal to 5s. per share (less income-tax), payable to shareholders registered on December 13, absorbing £33,750; to carry forward the balance of £36,356 8s. 5d. Mr. F. Eckstein and Mr. D. M. Hannay, directors of the syndicate, retire by rotation, and being eligible, offer themselves for re-election.

Dividends, Payments, etc.

The directors of the Land Bank of Egypt have declared dividends of 8s. 6d. per share, payable 16th instant, against coupon No. 16, and £3 per Founders' shrae, payable against coupon No. 12, in London at the Comptoir National d'Escompte de Paris, 8-13, King William Street, E.C.4.

The preference stock transfer books of the Rohilkund and Kumaon Railway Company, Limited, will be closed from the 19th inst. to January 4, both days inclusive, for the purpose of preparing the interest warrants payable to the shareholders whose names are on the register at the time of closing the books. No transfer will be received at the office while the books are closed.

The directors of the Panawatte Tea and Rubber Estates have declared an interim dividend of 5 per cent., less income-tax, payable early in January.

The directors of the Eastern Assam Company have declared an interim dividend of 5 per cent., free of income-tax, for the year ending 31st inst. (same as last year), payable 17th inst.

The directors of the Panagula Rubber Company have declared an interim dividend of 2 per cent., less tax, on account of the current year, payable 10th inst.

The directors of the Jhanzie Tea Association have declared an interim dividend of 4 per cent., or 4s. per share, less income-tax, payable on and after 23rd instant.

The report of the Southern India Rubber Company for the year ended March 31 last states that the loss on the year amounted to £1,540, which brought the total debit up to £8,070.

British Indian Tea.—Preference and ordinary registers will be closed from 11th to 20th inst., inclusive.

THE ALEXANDRIA WATER COMPANY, LIMITED

INTERIM DIVIDEND.

NOTICE IS HEREBY GIVEN that an INTERIM DIVIDEND of FOUR SHILLINGS per £5 share on COUPON No. 60 is payable on and after the 15th December, 1918, at Messrs. Barclays Bank, Limited 1, Pall Mall East, London, S.W., and 54, Lombar Street, London, E.C., or at the Anglo-Egyptian Bank Limited; in Alexandria, upon the making of a declaration as to ownership in the form required by the above Bank, form of which will be supplied upon application.

Dated Alexandria, 8th November, 1918.

By order of the Board,
H. R. C. BLAGDEN,
Managing Director.

ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Street, Wednesday.

There has again been very little doing this week. But the undertone of the market is quite good, and the news from Egypt is all of a very satisfactory character, although the Bourses are generally keeping very quiet.

In Government stocks Egyptian Unifieds are ½ down at 88¾, round which price some small buying has been in progress. The 3½ per cent. pref. loan remains a firm spot at 77.

In Bank shares, whilst there has been no change in Agriculturals, which have remained a very quiet market, there has been a good demand for National Banks, with the result that the price has jumped a half to 21¼. Anglo-Egyptian Banks are rather lower at 16 ex rights. There has been no change in Land Banks, although the dividends just announced, of 8s. 6d. on the ordinary and £3 on the deferred shares, are a further improvement on last year's results, and the prospects for this concern appear to be very bright.

Delta Light Railways have been a firm spot at 8¼, and there is some quiet buying in progress.

In Land shares prices have remained firm on the whole, and a certain amount of business has been passing; but the only quotable change is a rise of 6d. in New Egyptians to 22s.

Amongst Miscellaneous descriptions Salts and Sodas have been a feature on the very fine annual figures recently published, and have improved 7s. 6d. to 78s. 9d. Khedivial Mails, which had dropped at one time to 73s. 9d., have jumped up on the report issued to-day, which shows a very high financial position, and a dividend of 20 per cent. in all, as was the case last year. The shares close 1-16th up at 77s. 6d. There has also been some inquiry for the preference shares in the neighbourhood of the current quotation.

Amongst Greek securities Rentes are a half up at 56½, but otherwise there is no change in Government loans. Bank of Athens shares were done to-day at 81s. for 500 shares, which is rather lower than the recent quotation.

Oil Shares.

The tone in the market is rather better. Anglo-Egyptians (B) are somewhat stronger at 2 11-16, while British Burmahs are 3d. up at 13s. 9d. Anglo-Persian Prefs. are unchanged at 25s. 6d.

The Roumanian market has been weaker. Roumanian Consols and Traian Roumanians are unchanged at 16s. and 10s. 6d. respectively, but Anglo-Roumanians are 1s. 1½d. lower at 8s. 6d.

Russians have remained about the same. Bakus are 1½d. up at 4s. 7½d. Ural Caspians at 1 9-16, and Russian Petroleums at 2s. 3d. are unchanged. Russian Generals are ¼ up at 1½, and North Caucasians are 1 9-32.

Paris Bourse.

Suez Canals close at 5,450 francs, a fall on the week of 85 francs. Other prices are: Egyptian Unifieds 94.50 (against 91.75), Serbian 1895s 61.90 (unchanged), Turkish Unifieds 71.40 (against 71.80), Banque d'Athenes 101 (against 108), Credit Foncier Egyptiens 785 (against 783), Land Banks of Egypt 191.50 (against 202.50), and Ottoman Banks 535 (against 550).

BRITISH TRADE CORPORATION

(Incorporated by Royal Charter),

13, AUSTIN FRIARS, LONDON, E.C.2.

Telegrams: "Trabanque, London."

CAPITAL: Authorised - £10,000,000 Subscribed and Paid Up - £2,000,000

Governor - THE LORD FARINGDON.

Manager, A. G. M. DICKSON. London Manager, P. C. WEST. Secretary, G. De B. BROUNLIE.

NOTES OF THE WEEK.

There would seem to be a physical explanation for the scanty nature of the news received from the Balkans. Wireless telegraphy affords the only means of rapid communication for the present, and even this entails transmission through three or four stations before a message can reach England. When the daily capacity of the instruments comes to be distributed between numerous claimants, all of them official, the number of words allotted to each is comparatively small, and there is little opportunity for news of a general character. With regard to Bulgaria, the British Mission at present in that country is a military one, and cannot be expected to give much attention to non-military matters. It is to be hoped that an improvement will shortly be effected in the means of communication, as it is to the interests of neither the countries themselves nor of the Alliance as a whole that the details of the transition stage from war to peace should be elaborated in secret.

A correspondent in *The Times* puts his finger on the weak spot in the terms of the armistice granted to Turkey—the absence of "some formal putting down of the German mighty from their seats, some memorable and unmistakable assertion of the victory of Great Britain over Turkey and her German Allies, which would make a lasting impression on the Oriental mind." For a fortnight after the Turks had surrendered no Allied forces approached their capital, and "during all that fortnight the Germans continued to trail their rattling sabres in the streets of Constantinople, and the Young Turk party strove to regain credit by representing the peace as an honourable compromise and not a defeat." Even when the British forces did arrive, they landed "inconspicuously"; the Germans still had a fortnight's grace before they were obliged to leave, and they appear to have been at pains to parade themselves in public as prominently as possible, while British colonels tramped about on foot, and ultimately purchased from Greek middlemen the cars that they had failed to commandeer from the Germans.

These details of the British occupation of Constantinople are eminently characteristic. Whether the forbearance thus shown bears fruit in the long run is a matter for argument. There can be no doubt, however, that in the case of the members of the Committee of Union and Progress it has served to encourage an attitude bordering on *intransigeance*. The Turkish Press is emboldened to attack the Allies for alleged violations of the armistice, and there are said to have been cases not only of maltreatment of the local population for celebrating the Allies' victory, but also of German soldiers trying to hustle British troops, needless to say, with physical discomfort to the Germans. It is possible to overrate the significance of these and similar incidents; and the attitude adopted towards them by the average British officer, naval or military, can easily be imagined. On the other hand, they will be gall and bitterness to more sensitive peoples of southern latitudes, and there is always the possibility that lenience in one direction will encourage the Turk to commit excesses in another. Thus it is reported by a Greek newspaper that the situation of Smyrna has become critical owing to the appearance outside the town of bands armed by the Young Turks. Their positions, according to the same authority, have had to be shelled by the Allied Fleet. The wiser course, as we urged at the time, would have been to impose upon the Turks at once the regime, as near as possible, that the peace terms hold in store for them. It would have been better for the Turks themselves, and would have obviated the charges that are now being laid at their door of further outrages and oppression.

The problems awaiting solution at the hands of the Allied Conference in Paris are so numerous and intricate that there will be great temptation here and there to shirk the issue and to trust to the future finding a way out of the present difficulty. Any such temptation, however, must be resisted in the interests of the world's peace, for it is certain that an unsatisfactory settlement of any one question will mean a copious harvest of unrest. Not the least difficult among the problems will be the settlement of the Armenian question, with the complications represented by the Armenian districts in Russia and the presence of Kurds in the Armenian vilayets. The formation of an Armenian military mission to visit England, France, and the United States has much to commend it, as it is an attempt on the part of the Armenian people to help themselves, a preliminary step towards the reconstruction of their distressed country. The intention, we gather, is that the members of the mission should get into touch with the Armenians in the Allied countries with a view to the creation of an army which could supply the practical support that would be indispensable to the Armenian State in its early days. In England alone there can be no doubt that much material exists for such a force.

As much as any other people the Armenians require to have done with the political aspect of reconstruction as quickly as possible with a view to settling down t

the more pressing economic aspect. The greater part of the country is probably devastated; communications of all kinds are primitive and wholly inadequate. Here, then, is another claimant on the Allies for practically all the requirements of modern existence. As it has been found necessary to centralise the relief measures for which the Allied Governments have made themselves responsible, so it may be the more practical to attempt to systematise the efforts to restock the different countries with the necessaries of life. The prospect, let us say, of Armenians and Slovenes as rival claimants at this stage for essential Allied manufactures is not a satisfactory one; and in view of the congestion that will be the rule in many trades owing to the consumption of stocks during the last four years, there is every probability of many people having to do without the goods they need, unless some official estimate of the world's requirements can be compiled in order that manufacturers may realise the extent of the markets awaiting their products.

The new Yugoslav State is experiencing some difficulty in getting under way. With the news that the first Government had been formed with M. Pashitch, the Serbian Prime Minister, as Minister President; M. Koroshetz, the head of the Agram Provisional Government, as Vice-President, and M. Trumbitch, President of the London Yugoslav Committee, as Minister for Foreign Affairs, it was to be thought that the personal and political obstacles had been surmounted. There has been a considerable amount of intrigue on foot, and it was confidently asserted that the Yugoslavs were determined not to include M. Pashitch in any Federal Government. The spectacle of an English publication lending itself to personal attacks on the head of an Allied Government was objectionable enough to make most people wish to see M. Pashitch take up the position to which his claims entitled him. Now, however, comes the report that he has immediately resigned the Presidency. News from the Balkans is notoriously tendencious in character, and it will be well to wait for confirmation of this report. There can be little doubt as to M. Pashitch's personal popularity in his own country, if any reliance can be placed on the descriptions that reach us of the reception accorded him on his return to Serbia.

No greater disservice can be done to the peoples of South-Eastern Europe than to encourage their weakness for political intrigue, and it is nothing short of a tragedy when this encouragement comes from Englishmen who have acquired influence among the Balkan nations. As the clique that has been so violent in denunciation of M. Pashitch has been equally active in the Serbian Militarist designs on Montenegro, it is essential that whoever is the head of the new Yugoslav Government should lose no time in dissociating himself from the attempt to absorb Montenegro in Serbia before the Montenegrin people have an opportunity of determining their own destiny. It does not appear that the new Government contains a representative of Montenegro, but in view of the indeterminate conditions prevailing in that country, the omission is not unnatural. The adhesion of Montenegro to Yugoslavia is already an accomplished fact; but before the country can play its part in the new State it must adjust its own political anomalies. Both Serbia and Yugoslavia can afford to wait until the Montenegrin situation is cleared up to the satisfaction of the people. An attempt on Serbia's part to annex Montenegro before an unexceptional plebiscite has been taken cannot fail to prejudice the Yugoslavs in the eyes of the world.

Side by side with the attack on the Serbian Prime Minister and the designs on Montenegro has been carried out in the same English quarter a campaign calculated to embitter the relations between the Italians and the Yugoslavs. The grounds of dispute between the two peoples are admitted; but the only rôle that an outside observer is called upon to play, especially if he belong to a nation which has a reputation for level-headedness and statecraft, is to counsel or compel moderation on both sides and to point the way to an honourable settlement. Italian imperialism cannot be satisfactorily counteracted by fanning the flames of Yugoslav imperialism. It is to the Serbian Government's credit that it does not seem to have lent itself to extreme views on this subject, but has carried on negotiations with the Italian Government with the object of arriving at an amicable settlement.

A considerable amount of ground might be cleared away at the first meeting of the Allies' Preliminary Conference if all the delegates present were to be reminded that the discussion must start from the basis of the principle of nationality and the necessity for the more constitutionally experienced peoples to act as trustees for less favoured nations. Such a basis would at once knock the bottom out of the contention of Signor Tittoni in the Italian Senate regarding Italy's interests in the Levant. "Our interests," he said, "in the Eastern Mediterranean are of first-class importance, and, therefore, if the other Powers acquire territorial possessions there, we must do so too; if only as Protectorates, or zones of influence, then we must have the same; if for commercial or economic advantages, we must have them also; if they are to have nothing, neither shall we ask for anything. These are not Imperialist criteria, they are simply criteria of distributive justice. We shared largely in the risks and sufferings of the war, and we must share in equal measure in the advantages of peace."

To judge by these remarks the war has meant nothing to Signor Tittoni. If Great Britain, France, or the United States become responsible for the good government and peaceful development of certain portions of what was the Ottoman Empire, it will not be with a view to reaping "the advantages of peace" or equalising their material resources. It will be because Mesopotamia, Syria, and probably Constantinople cannot for the present be left to govern themselves, and the countries indicated are in existing circumstances marked out as the obvious trustees. The territory claimed by Italy in Asia Minor stands in no need of tutelage; it is claimed, according to Signor Tittoni, on the ground that Italy insists upon "getting something out of the war" in the Eastern Mediterranean. Unless appearances are deceptive, President Wilson can be relied upon to make short work of any such claims. They are reminiscent, it is true, of the secret treaty of 1915; but Italy is in honour bound to repudiate that document, which is altogether at variance with the spirit that has enabled the Allies to pull through the grim ordeal that has since confronted them.

The flight of a British aeroplane from Cairo to Delhi with a subsequent trip as far as Calcutta is a notable achievement in the world's history, and may well be associated with the Great War in marking the inauguration of a new era for the British Empire. The Handley Page machine employed for the purpose had previously been flown from England to Egypt, and had taken an active part in the final operation against the Turks on the Palestine front. It was, therefore, an ordinary service machine of the particular type. The actual journey was accomplished without incident, the distance of 3,200 miles to Delhi being covered in about forty-two hours of flying time. Behind these bald facts lies a considerable amount of organisation, to say nothing of expense, in connection with the preparation of petrol, oil, and spare depots; and this aspect of the undertaking will be responsible for any delay there may be in the introduction of aeroplane services the world over. But that these long-distance flights are practicable is now proved conclusively, and there will be thousands of British subjects at this moment envying Major-General W. G. H. Salmond and Captain Ross Smith their good fortune in having been able to demonstrate this fact.

NOTICE.

Owing to the Christmas holidays, it will be necessary to print next week's issue of THE NEAR EAST *on Tuesday afternoon. Communications intended for publication in that issue must reach* THE NEAR EAST *Office by the first post on Tuesday morning.*

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, November 18.*

Egypt celebrated the signing of the Armistice in joyous style. Flags of all the Entente Powers were hoisted at every point, and enthusiastic crowds filled the streets, cafés, and theatres, and cheered the various anthems, the strains of which, as well as of the most popular war melodies, were heard until very late into the night. Generally speaking, the people conducted themselves in an orderly manner. The Egyptians were, as usual, most undemonstrative, and few showed any enthusiasm. The British preserved great calm, though relief was plainly visible on their faces and in their actions; the troops also behaved generally in an exemplary fashion. As for the foreign colonies, the French, contrary to what one would have expected, showed great restraint, but the Italian and Greek were beside themselves with joy, and paraded the streets singing and shouting long before the final armistice was signed.

So much for the private, or what one might call the unofficial, recognition of the Armistice. As regards the official recognition, Cairo for once in a way was left far behind. In Alexandria, no sooner was the news known than Mr. Percy Carver, chairman of the British Chamber of Commerce, issued an invitation to the British Community to meet him at the Savoy Palace Hotel on the following day, when a most enthusiastic meeting was held, speeches were delivered by Mr. Carver; Mr. Geary, the Acting Consul-General; Judge Cator, of the Mixed Appeal Court; and Archdeacon Warlow; and telegrams of congratulation were despatched to H.M. the King and the leading men who had contributed to the Entente victory. The French communities in Cairo and Alexandria also held a meeting, but as far as the British community is concerned nothing at all has been done in Cairo. As regards the Government, a holiday was given to the schools, but that is the only outward recognition by the Egyptian authorities of the great event. Cairo, especially the British community, is not generally lacking in patriotic instincts, nor does it usually lag behind Alexandria in the expression thereof. One wonders why, for instance, the chairman of the Cairo community of the British Chamber of Commerce did not take the initiative or even follow the excellent example set him by his Alexandria senior, and call a meeting of the Cairo residents, who were only waiting for a lead from someone in authority. Certainly this omission of any official recognition by the British colony of Cairo, which has aroused surprised and unfavourable comment in Egyptian and European circles, is most regrettable.

The British Red Cross.

A four days' fête in aid of "Our Day, 1918," has been held this week in the Esbekia Gardens. It has proved a gigantic success, and the British Red Cross funds should receive a substantial addition as the result. The High Commissioner and Lady Wingate paid a visit to the gardens just before the fête was opened, and expressed their great satisfaction at what they saw. Sir Reginald subsequently sent the organisers a warm letter of appreciation of their efforts. In a report on the work of the British Red Cross the Commissioner expresses the opinion that it will not be possible to take any serious action with regard to demobilisation for several months yet. The large number of sick that are coming down from Palestine and Syria has necessitated the reopening of hospitals and the extension of existing ones, in addition to which the repatriation ships have to be looked after and provided with comforts; so that there is still plenty of good work to be done by the British Red Cross, which will continue to want funds for some time yet.

The Armenian Question.

The Armenian colonies of Egypt and the Sudan held a mass meeting on Sunday last in Cairo and voted a resolution to be sent to the President of the Armenian Delegation in Paris to the effect that they maintained the claim of the Armenian nation to the independence and sovereignty of the whole of Armenia, including Cilicia, and that they asked for the institution there of a provisional Armenian Government and the immediate evacuation of Turkish troops and their substitution by Allied troops and the Armenian contingents. This resolution they requested should be communicated to the Entente Powers and the United States. In this connection it is interesting to record that the Armenians both here and in Turkey look to Boghos Nubar Pasha as their head, and that they are ready to follow his leadership.

November 25.

General Sir Edmund Allenby, who came up to Cairo yesterday, had a most enthusiastic reception. This is the second occasion since his accession to the post of Commander-in-Chief of the Egyptian Expeditionary Forces that he has made an official entry into the capital. The first occasion was after the capture of Jerusalem, and yesterday's ceremony may be regarded as an official celebration of the signing of the armistice with Turkey and with Germany.

General Allenby, who travelled by special train, was received on arrival by the High Commissioner and his staff, Lewa Shehata Pasha Kamil (representing His Highness the Sultan), Major-General H. D. Watson and his staff, the Ministers, the Diplomatic Corps, and the leading British and European officials and notables. A guard of honour was furnished in the station by British troops, and outside by a detachment of the Sultan's Bodyguard. On alighting from the train General Allenby was received with cheers and the playing of the National Anthem, and after inspecting the two guards of honour, he drove off with his staff in motor-cars to his residence at Ghezireh. The cortège, which was preceded by three motor-cycles, passed at a slow pace through the main streets, which were lined with British troops, and thronged with a cosmopolitan crowd. Everywhere the gallant General was enthusiastically acclaimed, and at certain points flowers were thrown on his car from the upper stories of the houses. From the time of the entry of his special train into the station to his arrival at his house at Ghezireh the General was escorted from above by a squadron of aeroplanes.

It was an historic occasion, and General Allenby had every reason to be satisfied with his reception. At the same time considerable regret is expressed, not only in European, but also in Egyptian circles, that his triumphal progress through the capital should not have been made the occasion for a greater display.

The Turf.

The winter racing season has now begun. As last year, meetings will be held at Heliopolis and Gezira on alternate Saturdays, and some good sport is anticipated, owing, in the first place, to the rest which the animals have had since the close of the Alexandria season; and, secondly, to the introduction of a number of English thoroughbreds that were specially imported from England last summer. Certainly the character of the past meetings which have been held leads one to expect that the anticipation as to an improvement in the general standard will be realised this winter.

Spanish Influenza.

The attack of Spanish influenza has become sufficiently serious for the public health authorities to take up the matter. The malady is not one of those which require to be notified to the sanitary officials; in fact, it would be exceedingly difficult to treat it in the same manner. All that can apparently be done is to warn the public to place themselves under the doctor immediately the first symptoms manifest themselves, and to take certain hygienic and medical precautions to avoid contagion. This the public health authorities in Alexandria and Cairo have done in the form of a circular which has been extensively published, and it is to be hoped that the recommendations will be observed, and that as a result the spread of this malady will be restricted and the number of fatal cases reduced.

* Delayed in transmission. We much regret that our Cairo Letters—like others—have for so long been repeatedly and seriously delayed in transmission. Mails are now arriving more rapidly, and we trust that it will no longer be necessary to trust to our readers' kindness in bearing with the delay so patiently. It has seemed advisable to publish the letters, however late, for the sake of a record.—Ed.

LETTER FROM PORT SAID.

(From Our Own Correspondent.)

Port Said, November 25.

Since my last letter peace has come upon us almost as suddenly as war broke out in 1914, when we realized the providence that removed the Goeben from her moorings at the entrance to the Canal, where she lay the greater part of July. Had she remained there till the 4th of August she might have blocked the Canal so that it would have taken from six to twelve months to clear it.

The news of the signing of the Armistice was known to some here on the evening of Monday, November 11, but it was eight o'clock the next morning that the residents let themselves go. One could hardly hear oneself speak on the water front for the noise of the ships' syrens and hooters, and the natives came pouring down from Arab-town, hardly realizing what all the noise was about. All the ships in the harbour were dressed, and even the observation balloon went up with lines of flags attached. The warships fired salutes at noon, bands and processions paraded the town, stopping and demonstrating opposite the various consulates, all the flags in the place seemed to be hung out, and altogether Port Said has never before seen such a spontaneous celebration. In the evening there was a considerable display of rockets and Very's lights from the ships in the harbour.

In the morning there was a hastily convened Thanksgiving Service at the Rest Camp Y.M.C.A., which was attended by nearly every man there. At noon a meeting of British residents at the Consulate sent a telegram to Sir Reginald Wingate, requesting him to convey to the King their loyal congratulations on the signing of the Armistice.

Two days later a Thanksgiving Service was held in the English Church, at which the Allied Consuls were present, also representatives of the Greek Orthodox and Coptic Churches; while the Nonconformist Chaplain and the Secretary of the Y.M.C.A. were seated in the chancel. The following Sunday the usual church service was shelved, and a united service was held in the open air in the grounds of the Sporting Club.

Port Said is rapidly getting back to pre-war routine, and perhaps the most significant signs of peace conditions are the ships, which now arrive when and how they can, instead of in carefully shepherded convoys during daylight only. The Canal Company and the various shipping agencies are now giving information as to the expected arrivals and departures of vessels, which has been unobtainable through legitimate sources for the last four years.

PERSIAN TRAVEL AND THE WAR.

Before the Persian Society, on December 11, at Burlington Gardens, Colonel Napier repeated the lecture on Persian Roads and Means of Communication which we briefly reported when he delivered it before the Royal Geographical Society recently.

In the short discussion that followed, Mr. Greenway, who presided, said that the one thing which struck him more than anything else was the extraordinary change which had come with the advent of the British forces. The improvement in the comfort and speed of travelling was enormous, even as compared with only a few years ago. In 1911 he had travelled over very much the same route as Colonel Napier had taken when going from Baghdad to Baku, and had experienced conditions pretty nearly as bad as if he had been journeying to the North Pole. The whole country from the Tap-i-Girrah through Kermanshah, Dalatabad to Teheran, and on to Kazvin and Resht, was covered with snow to a depth in many places of from ten to fifteen feet. Persia owed us a great debt of gratitude for ameliorating the conditions of travel, by the introduction of motor and other forms of traffic necessary for a military expedition. The hundreds of thousands of pilgrims who every year travelled Persian roads—many of them coming from as far as Astrakhan or Bokhara, taking six months on the journey and experiencing every sort of climate—would have cause to rejoice that one of the services we should before long be rendering Persia would be the introduction not only of motors but of railways. Thus it would almost be made possible for Shiahs going to Kerbella to perform the pilgrimage in as many hours as it now sometimes took months.

Mr. Alexander Finn said he had lived in Persia for eleven years without a day's leave out of the country. He fully recognised that at the present day the necessities of life included motor-cars and railways; but he would be very sorry to go back to Persia and find motor-cars and railways there. Life in Persia was far more interesting in his day than it could be now. When he first went out it took ten days to go from Resht to Teheran, and a month to go from Teheran to Meshed. Letters used to arrive every four weeks. The European residents of Teheran would work hard to reply to their letters and then go away for four weeks' leave. Thus they learned a great deal more about the country than those who came afterwards.

THANKS FOR VICTORY.

A NOTABLE SERVICE IN JERUSALEM.

(From a Correspondent.)

Jerusalem, November 17.

A lovely November day of clear air and bright sunshine was just the right setting for a unique Sunday morning in Jerusalem. We wended our way through the rocky fields, where the vines are already sprouting after the early rains, to where the white tower of St. George's beckoned us to join with representatives of all creeds and nationalities in a service of praise and thanksgiving for the good news of victory and coming peace.

It was only representatives who could gather there, though the space was used to its utmost capacity, and wonderfully planned and thought out so as to accommodate the maximum number of all those who would fain be present. Fifty-one units of the victorious army were represented, and khaki filled the body of the building; but seats of honour were reserved for the Mufti and the Moslem notables, as for the Chief Rabbi and his colleagues. In the choir the stalls were occupied by the dark-robed figures of the dignitaries of the Eastern Churches, headed by the venerable Archbishop of Sinai and including as well Syrians and Greek Orthodox, Copts and Abyssinians, and Armenians in their quaint peaked head-dresses.

When every seat and all the standing room was occupied, we all stood and sang "O God our Help in ages past," while the choir boys led slowly in, followed by no gorgeously robed clergy, but khaki-clad men for the most part. It was a simple beginning to a service impressive in its simplicity, and from beginning to end one's heart was able to go out in fullest participation, without a jarring note. There was no disorder, no haste, no confusion, and a really devout atmosphere throughout. One wondered how it would strike the dignitaries accustomed to the elaborate ritual of the Eastern Churches, and still more the non-Christians present. I am sure that for these latter it would have a strong appeal.

What would be strange to all of them was the notable way in which the whole service was taken part in by all the worshippers. The hymns were the well-known ones, "Praise, my soul, the King of Heaven" and "All people that on earth do dwell," and the Te Deum was chanted to no new-fangled setting. So the praise from all these men's voices—for it was pre-eminently a men's congregation—rose strong and clear. Then the prayers were brief and clearly articulated, and the General Thanksgiving and the Lord's Prayer were joined in by all. The sermon or address was based on Psalm cxxvi., and you can see how appropriate it was. The Senior Chaplain who gave it had the courage to supplement it with a short address in Arabic, giving to the Arabic-speaking part of the congregation a few helpful thoughts along the same lines. The service closed by our standing with bowed heads while the choir sang softly the "Nunc Dimittis," and we thought of those, the comrades of so many present, who had laid down their lives to win the blessing of peace and freedom for the world.

When the short service was over we watched them all file past, the dignitaries in their robes of office, sombre for the most part; the Chief Rabbi in scarlet and lilac turban and grey soutane, another in long black velvet coat, and then the scarlet tabs and be-ribboned tunics of the Army men, and the well-worn khaki of bronzed privates. There was nothing of a parade service about it, and no forming up outside, but the Scouts of St. George's School lined up in the quadrangle, which was gay with flags and flowers. There was no Union Jack in the Cathedral or precincts, except as it figured with many others in the decorations; but over the marble screen of the choir on a background of green leaves stood out in white chrysanthemums the one word "Peace." That was the only attempt at decoration, and it was very effective.

One thought instinctively of the many who would have wished to be with us there, and of the many all over the world who were uniting with us in thanksgiving and prayer for strength to accomplish what lies before us. But I do not think that anywhere the words of the psalm and lesson (Isaiah xl.) can have seemed more fitting and appropriate than to that little congregation outside the Holy City.

ROUMANIAN NOTES.

(From a Correspondent.)

The Return to Bucharest.

The King and the Government are again in Bucharest. After exactly two years of German occupation, the cheerful capital of Roumania is free once more; the sufferings and miseries of that time are forgotten for a while; the Allied and Roumanian flags, flying overhead, help the citizens to forget the misdeeds of the Germans. At a notable dinner given by the Court, and attended by the representatives of the Allied nations, the King took the opportunity of expressing once more the gratitude of the Roumanians to the great peoples who are bent on securing justice for all mankind.

The French Minister, M. de Saint-Aulaire, also gave a luncheon at which the King and Queen were present, as were General Berthelot, with his staff, and the British representatives. M. de Saint-Aulaire in his speech referred to the terrible lot of the Roumanians during the past two years, and declared that the definite alliance between them and the Allies had been sealed anew by the great sacrifices they had made, by the blood of their sons, and, above all, by their unshaken faith in the cause of the Allies.

The new Government, which is Liberal in essence, is devoting itself to organization and to keeping order until the fresh elections make known the will of the entire Roumanian race. Probably these elections will be extended over Transylvania and Bukovina on the same democratic lines as in old Roumania.

Union of the Roumanians.

On December 1 one of the greatest events in the political life of the Roumanian people took place—their National Assembly, comprising Roumanians from Transylvania, from Bukovina, from Bessarabia, and from Banat, as well as from the kingdom, proclaimed their union. The delegates were elected on the principle of universal suffrage, and represented all classes, sects, political formations, and nationalities. Among them were forty members representing the Socialists of all the provinces. More than 200,000 people are reported to have arrived from various parts of the Roumanian lands to be present at this historic event.

The *Nepsara*, the official organ of the Magyar Socialist party, remarks that the Saxons and even the Magyars of Transylvania have decided to join the Roumanians. The journal expresses its view on the union of the Roumanian peoples as "a great event that will mark the beginning of a new civilization."

The six bishops of the Roumanians of Transylvania have also proclaimed the union with the Kngdom. This historic event took place in the old town of Alba Julia, where, in 1601, Michael the Brave, Prince of Wallachia, proclaimed the union of Transylvania with the other Roumanian provinces.

Roumanians' Political Programme.

The political programme of the Roumanians is very interesting for all who appreciate efforts towards a democratic organization. It is as follows:—

1. The National Assembly of Roumanians of Transylvania, Hungary, and the Banat declares the union of all Roumanians with the kingdom. It grants the inhabitants of the said territories provisional autonomy till a constituent Assembly elected by universal suffrage shall take a definite decision.

2. The political principles of Roumanian national unity are: (*a*) Full national liberty for all nationalities inhabiting the territories of the union. Each of these nationalities shall be free to govern itself, with its own language, it own administration and justice. The officials shall be elected from its midst. Each nationality has the right to be represented in the legislative bodies. In the government of the country they shall be represented proportionately to their number. (*b*) All creeds shall have equal rights and receive autonomy. (*c*) There shall be democratic government in every department of public life. Each citizen on reaching the age or twenty-one shall have an equal right to vote in secret. Women shall have the same rights. (*d*) Complete liberty of the Press, of meetings, and of associations. (*e*) Radical agrarian reform All estates, especially big estates, shall be requisitioned. On this basis the right of entail shall become extinct, and facilities shall be given to small peasants to obtain land which they can cultivate with the members of their families.

The guiding principle is equalization of social levels and the growth of production. To industrial workers shall be assured all rights enjoyed by the workers in the civilized countries in the west.

The Provisional Government is located at Sibiu (Hermanstadt).

THE ABYSSINIAN REVOLUTION

(From a Correspondent.)

Cairo, November 19.

A very well-informed correspondent gives the following account of the last stages of the Abyssinian revolution :—

It had been widely rumoured that the deposed Prince Yassou was killed in an engagement between his supporters and the new Government troops, and that the Government had hushed up the news of his death for political reasons. It is, however, ascertained now that this Prince is still alive and a fugitive in the interior of the Dakanel country. A few days ago there arrived at the capital some of Yassou's followers who had refused to abandon him on the occasion of his flight from Harrar following his deposition. These spent two years with him in the deserts of Abyssinia; but, realizing at last the futility of their chief's dream of regaining the throne, they forsook him and returned to the capital. Here they proceeded straight to the palace of Ras Tefari to ask for his pardon, which they readily obtained. The following is the account they gave to the correspondent who interviewed them :—

"When we left Yassou in the interior of the Dakanel country he had only about 200 soldiers remaining with him. He was so haunted by the fear of being surprised by the Government troops that he would often jump suddenly on his horse to reconnoitre for a possible enemy. He spent most of his time in hunting and predatory incursions. The land there being bleak, rainless, and waterless, it was not possible to settle long in any given place. We used to spend sometimes weeks on end without getting any grain and having only meat, and often we were deprived of both."

This Prince, who lost the throne through reckless ambition and evil counsels, is now being forsaken even by the small remnant of his own guard, and it is expected that he will any day either commit suicide or surrender to the Government. The inhabitants of Adis Abeba think and speak of him as though he had never existed for them. Yassou's father, Ras Mikhail, who is detained in a prison outside Adis Abeba, has lost his sight.

NEW BULGARIAN CABINET.

Reuter's Sofia correspondent telegraphs, under date of November 28 (delayed).—M. Malinoff, Bulgarian Prime Minister, has resigned with the entire Cabinet. The new Cabinet is composed as follows :—

M. Todoroff.....	Premier and Foreign Affairs
M. Mouchanoff (Democrat).....	Interior
M. Daneff (Progressive)	Finance
M. Kosturkoff (Radical)	Public Instruction
M. Liaptcheff (Democrat)	War
M. Djidroff (Unified Socialist)...	Justice
M. Draghieff (Leader of Peasants' Party)	Agriculture
M. Sakasof (Unified Socialist) ...	Industry, Commerce, and Labour
M. Bacaloff (Peasant Deputy) ...	Posts and Railways

M. Bacaloff will temporarily be in charge of the Ministry of Public Works, which is also destined for a member of the Peasants' Party.

ARMENIAN REFUGEES.

The Armenian Bureau has been informed by the Foreign Office that a telegram has been received from General Clayton stating that the Armenian situation at Homs, Hama, and Aleppo is serious. It is stated that eighty-five thousand Armenians are concentrated in these centres, of whom forty thousand are totally destitute, and that the situation is aggravated by the approach of winter and the arrival in these towns of large numbers of refugees from outlying districts. In order to relieve the prevailing distress it is estimated that a monthly cash contribution of £25,000, in addition to a supply of clothing and necessaries, would be required. The total contributions hitherto received amount to £4,000 for Damascus and £2,600 for Aleppo.

Another telegram, dated December 4, has been received from General Clayton to the effect that there are now 3,000 Armenian workmen in the Relief Camp at Damascus and that their numbers are increasing daily. General Clayton adds that all available funds are exhausted and that more are urgently required.

The Delhi correspondent of *The Times* reports that a leading extremist newspaper of Bengal, which virulently attacked the Rowlatt Committee, is now assailing the Allies on the ground that they are imbued with a passion for vengeance. Their thanksgivings, it says, have no greater moral or spiritual value than the sacrifices of primitive man to his war gods.

ANGLO-EGYPTIAN WEDDING.

(From Our Own Correspondent.)

Cairo, November 25.

An interesting wedding took place this week when Miss Thema Swete Langley, daughter of Mr. John Langley, Under-Secretary of State, Ministry of Agriculture, was married to Lieutenant Sinclair (attached R.A.F.). The ceremony took place at All Saints' Church, where the service was conducted by the Rev. C. T. Horan. All the leading members of the Anglo-Egyptian colony were present, the congregation including the High Commissioner and Lady Wingate, Lady Allenby, Major-General H. D Watson, Sir Alexander Baird, Sir James and Lady Willcocks, Lady Cheetham, as also Mahmud Pasha Shukri, representing the Sultan, Sir Ismail Pasha Sirry, K.C.M.G., Minister of Public Works; Sir Adly Yeghen Pasha, K.C.M.G., Minister of Education; Abdel Khalek Pasha Saroit, Minister of Justice; and Ahmed Pasha Ziwar, Minister of Wakfs. The bride, who was given away by her father, was attended by two little bridesmaids, the Misses Celia and Lena Westropp, and Lieut. Aitkin was best man. The High Commissioner and Lady Wingate signed the register after the ceremony, and Sir Reginald conducted Mrs. Langley to her car. A guard of honour was supplied outside the church by men of the R.A.F., under whose crossed sticks the happy couple passed from the church to their car.

A reception was subsequently held at the house of the bride's parents at Ghezireh, whither most of the guests proceeded from the church. During the afternoon the R.A.F. "conferred its blessing" on the happy couple by sending out four aeroplanes, which hovered over the house and performed some remarkable "stunts" until Lieut. and Mrs. Sinclair left for their honeymoon.

GORDON MEMORIAL COLLEGE.

We have already noticed the report of the Gordon Memorial College, Khartoum, for the year 1917, but pressure on our space forbade reference to certain matters dealt with in the later sections of the report. As the subject is of such great interest to many of our readers we make no apology for returning to it now.

In the instructional workshops work has been somewhat handicapped by various calls which have been made on the staff for work in connection with the Censorship, the destruction of locusts, and other special duties, but the output has been, on the whole, well maintained. "The number of apprentices has been reduced slightly, and is now 118. This reduction is due to the fact that, owing to the general shortage of timber, there is small demand for carpenters outside, though the carpentry section in the College has received as many orders as before; and the prospects in this section are brighter, as we have secured a fairly large consignment of timber from the South."

The research work has been kept up to a high level, in spite of difficulties caused by the war. Dr. Chalmers's Report makes satisfactory reading, and on the Central Research Farm and in the fields of archæology and natural history valuable results have been achieved.

Regarding the archæological excavations the report states :—"Dr. Reisner continues work on the pyramid field at Nuri which he had been already able in the previous year to identify as a royal cemetery of the great period of the Ethiopian Monarchy. The work of the last season has been extraordinarily productive of valuable historical data. Before Dr. Reisner's work we knew the names of seven kings who ruled Ethiopia between the time of Tirhaka, B.C. 668, and the close of the 4th century, and, with the exception of the first two of these kings, Tirhaka and Tanutamon, we know nothing as to the order or approximate date even of the five kings whose names had been already recovered. Dr. Reisner has now provided us with a list of twenty-two kings who ruled in Napata between B.C. 668 and B.C. 300, and has discovered evidence which leaves little doubt as to the sequence of these kings: he discovered the tomb of each of these kings and the tombs of several of their queens and other relatives, and sufficient remains in these tombs to give a tolerably clear idea of the progress or degeneration of the arts of building, pottery, gold work, and stone carving during these centuries. One of the most revolutionary results is the discovery that King Nastesen, who had been previously regarded as a contemporary of King Kambyses, must now be dated about two centuries later. All the pyramids had been seriously rifled in antiquity, and it was only the extreme care and skill of the excavator which has enabled the original order and grouping to be recovered. In spite of the rifling several objects of real value have been found, notably alabasters and jewellery from the pyramid of Tirhaka, a wonderful scarab and fine gold ornaments from the pyramid of Espalta and a massive silver mirror stand from that of Nastesen. The more important finds were divided last summer in Cairo, and Mr. Drummond, whose services have fortunately been returned to us, is now engaged in arranging to exhibit in Khartoum those which fell to our share."

M. Foucher, the leading authority on the Græco-Buddhist period of sculpture, is going to India shortly. He will be employed under the Archæological Department in connection with the Taxilla, Peshawar and Sanchi monuments, and he will also carry out certain archæological duties for the Hyderabad State.

CORRESPONDENCE.

The columns of THE NEAR EAST *are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST.

IRREDENTA DODECANESUS FILIA GRÆCIAE EST.

TO THE EDITOR OF "THE NEAR EAST."

SIR,—Grecian Irredentists claim not only Thrace and Asia Minor, but also the Dodecanese (where Herodotus and Hippocrates were born), whose history, religion, and culture bear witness to their right to appeal at the coming Peace Congress for their long delayed union with Greece, the Mother Country.

Tidings of good news are already spread throughout all the Greek communities abroad that our national rights will no longer be considered as a Midsummer Night's Dream and Utopia. The Unredeemed Greeks hope that their movement will meet with as much support as the similar rising of national spirit of the Armenians and Syrians has received. Irredentist meetings are held, a Provisional Government already established, and every Greek expects the realisation of the "Grand Idea" for which the Hellenic nation twice arose against the Osmanli before the Eight Years' War of Independence took place in 1821.

The Dodecanesians, true to their motherland, and a vital part of the Greek family, will emphasize the justice of their claim by presenting the following official statistics to the Peace Conference:—

Islands.	Greeks.	Turks.	Jews.	Various.	Tota
Patmos	2,700	—	20	—	2,720
Leros	6,000	—	—	—	6,000
Kalymnos	18,000	—	—	—	18,000
Kos	10,550	4,000	20	—	14,570
Nissyros	5,000	—	—	—	5,000
Astipalea	1,200	—	—	—	1,200
Symi	16,000	—	—	—	16,000
Delos	1,300	—	—	—	1,300
Halki	2,740	—	—	—	2,740
Rhodes	25,010	7,960	3,960	150	37,080
Karpathos	8,527	—	—	—	8,527
Kassos	5,700	—	—	—	5,700
	102,727	11,960	4,000	150	118,837

In fact, every Dodecanesian could repeat a new version of Mary Tudor's last words: "Open my heart, you will find Greece written upon it."—I am, etc.,

THEODORE D. MOSCONAS.

32, Oxford Street, Manchester, December 16.

"AN ALBANIAN PROTEST."

TO THE EDITOR OF "THE NEAR EAST."

SIR,—Please allow me yet a little space to answer the attack made by Mr. Kessary upon Konitza Bey. He implies that Mr. Konitza is not a representative of the Albanian people, but only of a small pro-German party. Let me remind you that Mr. Konitza was one of the delegates chosen by Albania to represent her at the important Conference of London in 1913. Albania then and now would have been only too glad to have welcomed an English Prince; but the united wisdom of the Powers inflicted a German one upon her. Because the Albanians accepted the decree of Europe, Mr. Kessary refers contemptuously to their support of "the notorious Prince of Wied." Mr. Kessary refers those who wish for information to "their organ called *Vatra*." No such "organ" exists. The daily paper published by the Pan-Albanian Society Vatra, which Mr. Konitza represents, is called *Dielli* (the Sun). From a recent number I learn that the head of the society has just been consecrated Archimandrite (Bishop). Yet Mr. Kessary would have us believe that the society consists entirely of Moslems!

Mr. Konitza was sent to London in 1916—that is, before America entered into the war. He came expressly to enlist English sympathies, and has gained many. To pretend that he has worked for the enemy is to insult his many English friends and colleagues who have worked with him. Several well-known members of the peerage belong to the Anglo-Albanian Society, and will certainly not permit themselves to be classed as working for Turks and Germans.

Mr. Kessary seems to think that Major Paget is a sportsman who paid a casual visit to Albania. He appears to be unaware that Major Paget resided for many years in Albania, speaks Albanian, and still owns property in Albania, and that he was in South Albania during the days of the Albanian League. He has, therefore, that personal knowledge which neither Prince Lichnowsky nor the late Marchese San Giuliano possessed. I note by the way that Mr. Kessary appeals to a German Prince (Lichnowsky) for support. And we have none of us forgotten that the numerous supporters of the "notorious King Constantine" were—well, not pro-English.

Very many Albanians enlisted in French and Italian ranks to fight for the liberation of their country. And they have fought bravely.

Mr. Kessary is correct in one point: "150,000 refugee families" should read "150,000 persons." This was a clerical slip. I was doing relief work at Valona at the time; and in that town alone and its immediate environs over 70,000 persons arrived within a very short space of time. The plain northward was also full of them, and when I rode up towards Tepeleni to reconnoitre the position of the Greek Army at the beginning of August, 1914, I found the whole track lined with unfortunate and destitute creatures, both Christian and Moslems. When I left Valona on August 5, 1914, there were still refugees coming in. The figure 150,000 was given by the American mission which visited the place after I had gone. Judging by what I saw, I think it is most probably correct. The misery and suffering of these poor creatures was such that I can never forget it, and that of the Belgians seemed little in comparison.

In conclusion, I must add that the accusation that Vatra is a pro-German society is a direct insult to that very gallant and upright gentleman, President Wilson, who has received its head, Bishop Noli, very kindly and promised his support. As has also Mr. Theodore Roosevelt, whose anti-German sentiments are too well known for me to have to enlarge upon them.—I am, etc.,

M. E. DENHAM.

(This correspondence is now closed.—ED.)

THE FUTURE OF SYRIA.

TO THE EDITOR OF "THE NEAR EAST."

SIR,—With reference to your comments upon the future government of Syria in your issue of the 13th inst., may I be allowed to say that the news we read and hear about the probable division of Syria into several spheres of influences is apt to make Syrians feel very concerned for the welfare of their country. I think that you will admit that if that country is to be divided partly under British control, partly under Arab rule, and partly under French administration, there will be a poor prospect for its future progress and unity.

I have not seen Mr. Ganem's article to which you refer, but I know him to be a true patriot, and I should not be surprised if his protest was bitterly worded, because if such division of the country is even contemplated it will only spell ruin to our just expectations and future national development. Let it also be said to Mr. Ganem's credit that he is very loyal to the cause of the Allies. To mention only one item of his activities, he sent last year a special mission of Syrians to Brazil, the result of which was that 600 Syrian volunteers swelled the ranks of the fighting forces of the Allies from that country alone; and I feel sure you are the first to give credit where credit is due.—I am, etc.,

Manchester, December 17. K. JEBARA.

A telegram from Aden announces the surrender on December 11 of Said Pasha, commander of the Turkish forces operating in the Aden Hinterland, and his staff.

The Delhi correspondent of *The Times* reports in a message dated November 29 (delayed):—News of the triumph of the Allies appears to have been received with rejoicing in all parts of the frontier district. One effect of victory is a remarkable rise in the Russian rouble in Peshawar bazaar. The termination of the war has also caused satisfaction in Kabul bazaar. Prices at Kabul have been extremely high, and a feeling evidently prevails that a reduction may now be expected.

EGYPT EXPLORATION FUND.

13, TAVISTOCK SQUARE, W.C.1.

LECTURE SEASON FOR 1918-1919.

SIX LECTURES have been arranged for December, January February, March, April and May. The First Lecture is by

Dr. A. M. BLACKMAN,

on

"THE RELATIONS OF ANCIENT EGYPT WITH FOREIGN COUNTRIES,"

and will be delivered to-day, FRIDAY, December 20th, at 4 p.m., at the

ROYAL SOCIETY, BURLINGTON HOUSE

(by kind permission of the President and Council). **Admission Free.**

NEWS IN BRIEF.

It is proposed to have a war exhibition in Lucknow in the cold weather. The exhibition will open for about a month, probably in February.

It is understood that Lieutenant-Colonel Gurdon, of the Foreign and Political Department, has decided not to return to India, for reasons of health.

Lieutenant-Colonel Desvoeux, Inspector-General of Police, Burma, has been granted an extension of service, which otherwise would have expired this year.

Colonel Douglas, Chief Commissioner of the Andamans and Superintendent of Port Blair, has been granted an extension of service for one year with effect from last month.

According to a telegram from Bucharest, M. Bratiano is to form a new Government, in which he will hold the portfolio for Foreign Affairs, and which will include M. Take Jonescu.

A protest by the heads of the Greek Mission in Sofia has been sent to the Bulgarian Government against the retention of Greeks who were forcibly incorporated in the Bulgarian Army.

According to reports from Constantinople, the Greek populations of the Black Sea littoral are about to urge the establishment of a Greek Republic of Pontus, with Trebizond as its capital.

The Canadian Pacific liner Tunisian reached Liverpool on December 12 from Canada with 150 Serbian soldiers, under British officers, on their way to the Continent to rejoin the Serbian Army.

A telegram from Mytilene states that the situation in Smyrna gives rise to anxiety. Certain Turkish elements have fortified themselves outside Smyrna, and the Allied Fleet has been obliged to bombard the position.

On January 13 at a meeting of the Royal Geographical Society in the Society's Theatre, Burlington Gardens, Mr. James Berry will read a paper on "Transylvania and its Relation to Ancient Dacia and Modern Roumania."

A proclamation from President Wilson calls for contributions to help to feed Armenian and Syrian sufferers from the war in the Near East; £6,000,000 is necessary to keep alive during winter 4,000,000 sufferers, including 400,000 orphans.

Mme. Grivas, honorary president of the National Council of Greek Women, has addressed an appeal to the National Councils of Women in France, England, and America, "In the name of the widows and orphans of Asia Minor and Thrace."

M. Pashitch, the Serbian Prime Minister, is reported to have arrived at Dubrovnik (Ragusa) on Monday from Italy. A great number of people welcomed him, including the official representatives of Serbia and the military and civil authorities.

The marriage arranged between Dr. G. R. Hubbard, L.R.C.P., M.R.C.S., and Nelly Kathleen Riley, daughter of Mr. and Mrs. George Riley, Ivy Croft, Wimbledon Common, will take place at the end of February, in Rangoon Cathedral, Burma.

General Russky, former Commander of the Russian Northern Army in Galicia, and General Radko Dmitrieff are reported from a Ukrainian source, through Petrograd, to have been shot on an order of the Soviet of the town of Piapiagorsk. General Dmitrieff was a Bulgarian.

According to information from Constantinople, all the Turks, Young as well as Old, are anxiously awaiting the verdict of the Peace Congress on the subject of their crimes against the Greeks and Armenians. They have begun to collaborate in order to preserve Turkey and Islam from what they describe as "the common danger."

The Egyptian Exploration Fund has arranged for a series of six lectures to be given between now and May next. The first will be by Dr. A. M. Blackman, on "The Relations of Ancient Egypt with Foreign Countries," and will be delivered this afternoon, at four o'clock, at the Royal Society's hall, Burlington House. Admission is free.

The first parties of repatriated Indian prisoners of war from Kut arrived in Bombay on December 6, where preparations had been made to extend them a very hearty welcome. Great crowds thronged the docks, which were gaily decorated. Lady Willingdon, the wife of the Governor, accompanied by the leading officers and citizens, met the parties as they landed, Lady Willingdon shaking hands with and welcoming each man.

A Budapest telegram says that Marshal Mackensen on his arrival in Budapest was summoned by Count Karolyi to order his entire army to lay down its arms in accordance with the terms of the armistice. He at first raised objections, but afterwards agreed, provided he received the subsequent sanction of the German Government. He has already ordered his entire army to lay down its arms, and, according to the *Az Est*, he has been interned by order of the Hungarian Govrenment.

The death in Bombay is announced of Mr. W. R. Howson, O.B.E. Mr. Howson belonged to the Indian Telegraph Department, but since 1910 he had served under the Foreign and Political Department of the Indian Government in Persia, where, says the *Pioneer*, he gained the respect of all who knew him. He did not spare himself, and his intimate knowledge of the country and the language was of especial value. At the time of his death Mr. Howson was H.B.M.'s Vice-Consul at Bandar Abbas and Assistant to the Resident in the Persian Gulf.

A retired member of the Indian Civil Service, who desires to remain anonymous, has placed at the disposal of the Secretary of State for India the sum of £1,000, and has asked that the amount may be placed in permanent trust with the Government of India in order that the interest may be applied to the relief of scarcity and famine in Ahmednagar and Gurgaon, two districts with which this officer was closely associated during his service. Mr. Montagu has expressed his cordial appreciation of this public-spirited offer, and the Government of India has been asked to make the necessary arrangements to give effect to the wishes of the donor.

British Help in Serbia

THE Serbian Relief Fund, whose organisation has been continuously relieving Serbian distress throughout the whole period of the war, made a special appeal to British generosity at the time of Bulgaria's surrender; since that time the Serbian Relief Fund has sent over 595,000 garments to Serbia. These and supplies of food and medical comforts are being distributed through the various ramifications of this British Organisation, which is wholly equipped and maintained in Serbia by British generosity.

The need for money and clothing is so great that all we can possibly send will be rapidly absorbed and still leave the utmost need for more.

Parcels of Clothing should be addressed to Mrs. Carrington Wilde, Serbian Relief Fund, 5, Cromwell Road, S.W.7.

Cheques and donations of money should be sent to the Hon. Treasurer,
THE RIGHT HON. THE EARL OF PLYMOUTH, G.B.E., C.B.

SERBIAN RELIEF FUND

(Registered under the War Charities Act, 1916.)

5, CROMWELL ROAD, LONDON, S.W.7.

NEAR EAST BOOKSHELF.

ON THE WRONG SIDE.*

M. Taslauanu, formerly of the Austro-Hungarian army operating against the Russians in Galicia, was a Transylvanian patriot. In pre-war times he was secretary of the Society for Roumanian culture in Hungary, one of the powerful moral links between the persecuted Transylvanian peasants under Magyar domination and their Moldavian and Wallachian brothers. War found him an officer, however, in the Austrian Army, in command of a platoon of Transylvanian Territorials who went through the Galician campaign, always in the front line and in the most dangerous sectors. The Russian advance in those early days of the war is now a matter of history, but little light has been thrown on the terrible defeats of the Austrians as seen from the Austrian side of the line. M. Taslauanu in his book on the subject throws a lurid light on the military chaos in Galicia, on the lack of organisation, on the cowardice of the Austro-Magyars, on the way in which the Transylvanian peasants were brutalised, sent into the worst zones and practically annihilated—all with a purpose, namely, that the lives of the Magyars, those arch-bullies of the Near East, might be saved. No wonder that the Roumanians of Transylvania longed and prayed for Russian victories against themselves. This seems paradoxical, and yet it is what really happened. As for Roumania, her entry was anxiously awaited. Was she never coming in against the Austro-Hungarian tyrant? We now know that she did, but it was later than the concluding chapter of M. Taslauanu's homely narrative, which has this about it, that it is the simple chronicle of one forced to fight under terrible hardships against the friends of his own country. The situation naturally became impossible and the Roumanian patriot-officer in the Austrian Army crossed the Carpathians. The book, in the form of a running diary, and brimful of quaint pictures and child-like touches, is well worth reading.

THE MILITARY ACTRESS.*

It is better late than never to have read the letters of "Thomasina Atkins," and to pass their weird charm on. Our innocent belief is that they are written by a young married W.A.A.C. to an invalid husband, which, in itself, seems a perfect reversal of pre-civilised custom, when Adam delved and Eve span; although, there being nothing new under the sun, we recall the Amazons from the musty mine of our schoolboy classics.

What is it that we do not like in these intimate and edited letters? First, that they are penned by a professional actress, and we had never imagined an Amazon an actress; secondly, "Peachie dear" and "Peachie darling" are dissonant to our fossilised concept of Miriam or Deborah, to say nothing of Jael, writing to their husbands. Perhaps Jael was the forerunner of all W.A.A.C.'s—the Amazons have no calculable date—as the inimitable Thomasina is among the newest. Perhaps Thomasina's letters break off too early—March 31, 1918, from "Somewhere in France." Or we, perhaps, were greedy, and wanted fireworks, and the letters carry us only to within sound of the rumble of Rupprecht's presumptuous guns. Are we within the limits of criticism in saying that "Peachie darling's" nerves under the strain of London air-raids distract from our instinctive homage to feminine patriotism and valour?

But what is it we like in these letters? Naïveté and nerve? Yes; and a considerable vein of philosophic thought, and the supreme grace of feminine unselfishness. There are also an excellent knack of literary skill and vigorous word-painting and raw humour. It is "some" W.A.A.C. who, on active service, begins a letter with this attractive assurance: "Just a line to remind you that I love you, in case you have forgotten it." And Thomasina in a few skittish strokes instantly gives us a sharp mental picture of colonel or sergeant-major, sub. or orderly, good Waac, naughty Waac, pretty Waac, plain Waac, thistle or leek—may we suppose that she is herself rose or shamrock? She does not say; but she does like chocolate. There is then to be added up in the total merits of these letters the plain "unvarnish." Some other Waac may write her story, but this picture of war's rough demands and Boadicean pluck stands. It is a noble picture; and all Waacs, and those who do and do not own Waacs, will be glad to have read it.

* "With the Austrian Army in Galicia." By Octavian C. Taslauanu. With map. (Skeffington. 6s.)

* "The Letters of Thomasina Atkins, Private (W.A.A.C.) on Active Service." (London: Hodder and Stoughton, 6s. net.)

SPAIN'S BOGEY.*

It has become axiomatic that the only people persistently to misunderstand and misrepresent the Spaniards are our friends the French. This is a great pity, if for only one reason—namely, that the Spaniards resent it, and do not hesitate to show their resentment. They have one bogey—for which our Allies are solely responsible—and that is a dread of French designs on their country. The result is a strong anti-French feeling characteristic of Spain. It finds expression in the pro-German sentiments (mind you, not at all anti-British!) of so many Spaniards who ought to have known better and in the studied anti-French policy of pinpricks in Morocco. These are ruthlessly exposed in M. Laborde's recent work. Justice is not, however, done to the underlying motives. We do not approve of the latter, but they will continue until the average Frenchman has forgotten to look down on the Spaniard, much as the third-rate Anglo-Egyptian official used to look down on the Cairo effendi.

BOOKS RECEIVED.

"La Révolution Russe." Tome II. By Claude Anet. (Paris: Payot et Cie., 4fr. 50.)

REBUILDING OF ATHENS.

At King's College, London, on December 13, Mr. T. H. Mawson gave an interesting account of the far-reaching improvements and extensions to the city of Athens which have been projected, and the carrying out of which has already begun under his supervision. Athens, he said, was a city in which, from the spectacular point of view, art and nature were in proper juxtaposition. Conflicting elements united to make a perfectly harmonious composition. Between the modern Athens, where there was scarcely a house that was more than eighty-five years old, and the monuments that had survived from the classical city, the only connecting link was provided by a few Byzantine churches and Turkish mosques. Athens, through the ages, had gradually extended from a small area immediately surrounding the Acropolis. As it existed to-day it was built on a plan prepared in 1856. The plan was a good one, but traffic conditions had altered. Further, there were four or five railway stations scattered about the city, and there were factory chimneys which in various places obtruded on the view. In the new plan that he had prepared the whole of the railways were brought to a common centre; and the factories, marble-working shops, etc., were built in a section of the city set apart for them, and run by power brought from a power station about a mile and a-half to the westward. Thus factory chimneys would be done away with. The city was divided into areas or zones. One of these would be devoted to Governmental purposes, where new Houses of Parliament would be built, surrounded by the Administration buildings, which in most capitals were scattered about the city. Another would be the business centre. Others included the first and second class residential areas, and the section of the city set apart for the housing of the working-class. This last was built close to the industrial zone, so that the workman need not spend more than ten minutes in walking to or from his work—a very important matter, as had been recognised by the captains of industry who had built industrial villages in England. These homes were built in blocks of seventy-two on a plot of about eight acres. They were built surrounding a court, and were connected with the road by a vine-covered pergola. Adjoining each block was a large garden. Each residence consisted of a living room about sixteen feet by eighteen, two bedrooms, scullery, etc., and it was hoped the rent would not be more than ten shillings a week. Athens already had a fine system of public parks, but this would be greatly extended, and when complete would be superior to that of any city now existing. The plans for the future extensions of Athens provided for its covering about forty square miles, and, among other things, took in the whole area between the existing city and the Bay of Phaleron.

Interesting slides illustrated the lecture.

Sir T. G. Jackson, who presided, said he hoped none of the Byzantine churches would be sacrificed to the new schemes; although, until a generation back, people in Greece thought only of the Parthenon and ancient monuments, and regarded the Byzantine work as barbarous.

Mr. Gennadius said that a great merit of Mr. Mawson's plan was that it not only preserved all the ancient and Byzantine monuments, but it rendered them more visible.

Prince George of Serbia has left London for Paris.

On December 14, at 28, Nelson Road, Lexden, Colchester, the wife of Major A. M. Mills, I.A., gave birth to a son.

M. S. Grouitch, the newly-appointed Serbian Minister to Washington, accompanied by Mme. Grouitch, will leave London to-morrow for America.

Sir George Lloyd, the new Governor of Bombay, entered upon his office on the 16th inst., when Lord Willingdon sailed from India for England.

It is understood that Prince Nicholas, second son of King Ferdinand of Roumania, will shortly arrive in London, and that he will continue his studies in this country.

General the Hon. Sir Julian and Lady Byng have returned to Thorpe-le-Soken for Christmas. They will remain there until General Byng returns to France, about the first week in January.

The marriage arranged between Commander Eustace H. Marsden, R.N., and Miss Nancy Lees, daughter of the late Sir Elliott Lees, Bt., D.S.O., of South Lytchet Manor, Poole, Dorset, will in all probability take place in Bombay towards the end of January.

The British Colony at Salonika, headed by the Consul-General, Mr. A. C. Wratislaw, has, says Reuter's correspondent at Salonika, presented General Milne with an address expressing admiration at the magnificent achievements of the British Army in the Near East.

A marriage is arranged, and will shortly take place, leave permitting, between Captain James Desmond Gabb, Indian Army, son of Dr. J. P. A. Gabb, Poyle Mount, Guildford, and Constance Margaret, daughter of Mr. and Mrs. H. V. S. Davids, Hillier House, Guildford.

On October 18, at St. Thomas's Cathedral, Bombay, the marriage was solemnized of Lieutenant John Stevenson, I.A., only son of the late J. D. Stevenson, British Guiana Police, to Phyllis, elder daughter of W. N. Richardson, Esq., J.P., City and Cantonment Magistrate, Karachi.

The marriage arranged between Captain A. A. Fraser Harris, 25th Punjabis, elder son of Mr. and Mrs. Andrew Fraser Harris, and Phyllis Mary, third daughter of the late Robert Davis, M.R.C.S., and of Mrs. Davis, Darrickwood, Orpington, Kent, will take place at the end of December, leave permitting.

The Delhi correspondent of *The Times* telegraphs (December 4):—Sir George Roos-Keppel, whose services to India and the Empire have been invaluable during the war, is taking a long furlough early next year and will probably not return to India. Sir Alfred Hamilton Grant, the Foreign Secretary, is spoken of as his successor.

In honour of the birthday of the Serbian Crown Prince the Serbian Minister in London and Mme. Yovanovitch held a reception at the Serbian Legation, Queen's Gate, Kensington, on Tuesday afternoon. In the morning a service was held at the Orthodox Russian Church, Welbeck Street, and was attended by the Serbian Minister and his wife and representatives of the Serbian colonies in London.

Prince Feisul, who was attended by Brigadier-General Nuri Pasha Said, Lieut.-Colonel T. E. Lawrence, and Mr. R. F. Synge, specially attached, visited the King at Buckingham Palace on Thursday, December 12. The Prince was decorated by His Majesty with the Chain of the Royal Victorian Order. The King afterwards had a long conversation with the Prince, Colonel Lawrence acting as interpreter. It is understood that the King expressed to the Prince his high appreciation of the assistance which the friendly Arabs had given to the British forces operating on the Eastern front. The Prince left London for the North last week with the intention of visiting the Grand Fleet, Edinburgh, and Glasgow, and returning to London this week.

Major Ralph de Seton Dudgeon, 25th Bombay Rifles and Military Accounts Department, Lahore, Punjab, India, who died April 29, left property valued at £8,520.

Letters received quite recently from Constantinople report that the Rev. W. Wigram, who was for some time interned by the Turks, is now on his way to this country. Dr. John McLean, of the British Hospital, Constantinople, is also homeward bound.

M. Jean Gennadius, Envoy Extraordinary and Minister Plenipotentiary from the Kingdom of Greece, was received in audience by the King last Saturday morning, and presented his Letters of Recall. M. Demetrius Caclamanos was also received in audience by his Majesty, and presented his Letters of Credence as Envoy Extraordinary and Minister Plenipotentiary from the Kingdom of Greece.

The engagement is announced between Lieutenant Claude Pemberton Wilkinson Lloyd, I.A.R.O. and I.E.S., son of the Rev. Pemberton Lloyd, of 3, Carlton Road, Ealing, late vicar of Ancaster, Lincolnshire, and Eileen Muriel, widow of Captain P. B. Maxwell, the East Yorkshire Regiment, and only daughter of Lieutenant-General Sir Alexander Hamilton Gordon, K.C.B., and Lady Hamilton Gordon, of Lynwood, Farnborough, Hants.

The marriage arranged between Mr. Harold Strachan, M.C. King's Own Scottish Borderers, elder son of the late Walter Strachan and Mrs. Strachan, of Hook Heath, Woking, and Kathleen, only daughter of Col. H. A. V. Cummins, 24th Punjabis, and Mrs. Cummins, Glenville, Camberley, will take place at St. Peter's, Cranley Gardens, on Tuesday, January 21, at 2. There will be no reception, but all friends will be welcome at the church.

A Reuter's message reports that among the passengers in the Finnish steamer Oihonna, which recently arrived here from Petrograd, was the Serbian Princess Helena, King Peter's daughter. The princess, who was married to the Russian Grand Duke Ivan Constantinovitch, was arrested by Bolshevists and imprisoned at Perm for four months and then in Moscow. Finally an attaché of the Norwegian Legation succeeded in securing her release.

A marriage has been arranged between Hugh Le Geyt Kensington, the Rifle Brigade (retired), elder son of the late Sir Alfred Kensington and of Lady Kensington, and Agnes Manson Macfarlane, youngest daughter of Mr. Richard Whitecross Adamson. It will take place on Tuesday, December 31, at St. Columba's Church, Pont Street, S.W., at 10.30. Owing to mourning in the bridegroom's family, there will be no reception or invitations, but all friends will be welcome at the church.

On December 10, at St. George's Church, Camberley, Captain Mark S. Teversham, 32nd Sikh Pioneers, only son of Col. R. K. Teversham, D.S.O., and Mrs. Teversham, of 5, Lansdowne House, W., was married to Miss Evelyn Mary Ross, only daughter of the late David Ross, Divisional Judge, Burma, and Mrs. Ross, of Pendennis, Camberley. The ceremony was performed by the Rev. A. P. Gutch, vicar of St. Margaret's, Streatham (cousin of the bride), assisted by the Rev. F. A. Storrs, vicar of the parish.

Major-General his Highness the Maharaja of Bikaner and Sir S. P. Sinha, the Indian representatives, in association with the Secretary of State, at the Imperial War Cabinet and at the forthcoming peace negotiations, arrived in London on Saturday, and are staying at the Ritz Hotel. They were accompanied by Lieutenant Maharaj Kamar Sardul Singh, the eldest son of the Maharaja, Major Hanson, and other members of his Highness's staff; Mr. W. R. Gourlay, I.C.S., who is acting as private secretary to Sir S. P. Sinha; and Sir Hamilton Grant, Foreign Secretary to the Government of India. Colonel Sir James Dunlop-Smith (Political Aide-de-Camp), representing the Secretary for India, met the visitors on their arrival at Victoria Station. There were also present Sir Charles Bayley and Mr. B. N. Basu (members of the Council of India), Lieutenant-General Sir Herbert Vaughan Cox, and Mr. M. C. Seton, Mr. C. H. Kisch, Mr. J. E. Shuckburgh, and Mr. N. C. Sen, of the India Office.

MONTENEGRIN RED CROSS AND RELIEF FUND,

11, VICTORIA STREET, S.W.

Regt. Section 1, War Charities, 1916.

A DEVASTATED COUNTRY—MONTENEGRO,

The Smallest and Poorest of our Allies.

Thousands of Starving Women and Children need Food and Medicaments.

9,000 FAMISHED MONTENEGRINS FROM CAMPS OF CENTRAL EMPIRES MUST BE FED.

Donations will be much appreciated and gratefully acknowledged by the Hon. Treasurer, LADY ROPER PARKINGTON, Montenegrin Consulate, 21, Mincing Lane, London, E.C.3.

APPOINTMENTS, PROMOTIONS, &c.

The City Corporation has decided to offer to General Sir Edmund Allenby the Freedom of the City and a sword of honour.

M. Rentis, Greek Chargé d'Affaires at Stockholm, has been appointed a member of the Greek delegation to attend the Peace Conference.

Mr. W. T. M. Wright, Additional District and Sessions Judge, Meerut, has joined the Legislative Department of the Government of India.

Mr. C. R. Ashbee, F.R.I.B.A., has been appointed Civic Adviser to the City of Jerusalem. He returns to Palestine in January to take up his duties.

Mr. E. R. J. Hussey, 2nd Inspector, Red Sea Province, has been transferred to the Education Department, Sudan Government, with effect from November 1.

The King has granted authority to Mr. S. Simpson to wear the Cross of a Chevalier of the Greek Order of the Redeemer, conferred on him by the King of the Hellenes.

Mr. D. G. Mackenzie, of the Foreign and Political Department, Indian Government, has been selected for the appointment of Assistant Private Secretary to the Viceroy.

The King has granted to Mr. G. Raymond, M.V.O., British Consul at Corfu, authority to wear the Insignia of an Officer of the Greek Order of the Redeemer, conferred on him by the King of the Hellenes.

Mr. N. R. Udal, Chief Inspector of Schools, Sudan Government, has been appointed Assistant Director of Education in succession to Mr. Simpson, recently transferred to the Egyptian Ministry of Education.

The King has granted to Mr. Walter Burton Harris, of Tangier, authority to wear the Insignia of Commander of the Shereefian Order of the Ouissam Alaouite, conferred upon him by the Sultan of Morocco.

Sir Lionel Abrahams, Joint Assistant Under-Secretary of State for India, having been in indifferent health for some time past, has been granted six months' leave of absence, during which time his place will be taken by Mr. Malcolm Seton, Secretary in the Judicial and Public Department, who accompanied Mr. Montagu on his recent tour in India.

OBITUARY.

LORD EDWARD CECIL.

We deeply regret to learn, through *The Times* Special Correspondent in Berne, of the death last Friday at Leysin, Switzerland, of Lord Edward Cecil, Financial Adviser to the Egyptian Government.

Lord Edward Cecil, the fourth son of the late Marquess of Salisbury, was born in 1867 and commissioned at the age of twenty to the Grenadier Guards. His ensuing military career embraced the Dongola Expedition in 1896 (British and Khedive's medals), the Sudan Campaign, 1898 (D.S.O. and lieutenant-colonelcy), and the South African War (Chief of Staff and A.A.G. in the defence of Mafeking).

However brilliant his military talents, Lord Edward's principal services to his country and to the Empire were rendered in the political field, as becomes a scion of the distinguished family of the Cecils. As a member of the Irish Viceregal Staff during Lord Crewe's Viceroyalty, later on Sir Rennell Rodd's mission to Abyssinia (1897), as Military Secretary to Sir Reginald Wingate, Governor-General of the Sudan (1903), and finally as Agent-General of the Sudan and Director of Intelligence to the Egyptian Army at Cairo (1904) he had ample opportunity for displaying his political abilites and bringing them to the notice of Lord Cromer. Thenceforward his rise in the Anglo-Egyptian Administration was rapid and assured: Under-Secretary of State for War (1906), joint Under-Secretary of State for Finance with Mr. Mitchell-Innes in the same year, and on the latter's retirement in 1907 sole Under-Secretary for the same Department. On the departure of Sir Paul Harvey from Egypt in 1912, Lord Edward was offered and accepted that most difficult and arduous post, the Financial Advisorship to the Egyptian Government. He still held this post when death overtook him at the early age of fifty-one years last week in Switzerland, where he had gone to recuperate after years of strenuous overwork in Cairo.

The very best of Lord Edward's life work, and that by which he will be remembered, is centred in his six years' activity as Financial Adviser to the Egyptian Government. His training for the post was thorough, covering as it did the period of Egypt's great financial depression, and he filled it with great tact—a *sine qua non* of successful administration in the East—and clear insight during the four terrible years of the Great War. Some of the measures which he introduced, or had introduced, were of a most controversial nature, but with few exceptions they proved beneficial to the country at large. As *The Times* points out, it is in no small measure due "to the tact and firmness with which the financial aspects of the situation were handled that the Egyptian masses have remained quiet and contented throughout the war." Lord Edward's share in this happy administration of our Egyptian Protectorate was a large and successful one. He may not have shone as a great financial expert, and we doubt very much whether his most enthusiastic supporters will care to claim this honour for him, but he was what is much more necessary in the post he filled, namely, a diplomatic and skilful statesman, and one whom it will not be easy to replace.

Lord Edward leaves a widow, a daughter of the late Admiral Maxse, and one daughter. His son, George Edward, of the Grenadier Guards, was killed in action in France in September, 1914.

Colonel C. J. L. Stuart, late 22nd Cavalry, P.F.F., whose death is announced at Bexhill, took part in the Jowaki Expedition in 1877 and in the Afghan War two years later, and had the medal with clasp for each campaign.

The death at his residence, Sele Grange, Hertford, is announced of Lieutenant-Colonel Henry S. Daniell, late of the Indian Army, and for 31 years Chief Constable of Hertfordshire. He joined the 3rd Queen's Own Light Cavalry (Bombay) in 1856, and served with them in the Persian Expedition of 1856-57 and through the Indian Mutiny. With the Central Indian Field Force he took part in the siege and capture of Ratghur, the action of Burodsa, in which he was wounded, the relief of Saugor, the forcing of the Muddenpore Pass, the siege and storm of Jhansi, and several other actions during the campaign. He retired from the Army about 1880.

Lieutenant R. F. D. Plunkett, 2/1st Gurkha Rifles, who was accidentally drowned on September 6 while on active service in Mesopotamia, was the elder son of Mr. and Mrs. F. S. Plunkett, of Cairo, Egypt. Born in Cairo in 1898, he was educated at Clayesmore School, Crowthorne Towers, and Oundle School. From Oundle he passed third in the examination for the Indian Army in July, 1916, and proceeded to Wellington College, whence he obtained his commission in the Gurkhas in 1917. He went to Mesopotamia last February attached to the 1/5th Regiment of the same service, with which he took part in the advance up the Euphrates as far as Abu Kemal, including, among other actions, that of Khan Baghdadi.

Colonel Harry George Melville, C.I.E., I.M.S., has died at the 23rd British Stationary Hospital, Baghdad. He was born in Edinburgh in 1869, and entered the Indian Medical Service in 1892. He was appointed to the 5th Punjab Cavalry, and was with that regiment until he was transferred to the civil side of his Service. In 1901 he was appointed to Lahore Medical College, and he held several chairs there. He served in the Waziristan campaign, 1894-95, and received the medal and clasp; in the Punjab frontier campaign of 1897 (medal and two clasps); and in the Tirah expedition of 1897-98. In 1916 he was appointed consultant physician to the Indian Expeditionary Force in Mesopotamia, and afterwards to the Mesopotamian Expeditionary Force. He was mentioned in General Marshall's despatch of April 15, 1918, and later was awarded a C.I.E.

Cairo's Hotels de Luxe.

THE INDIAN INDUSTRIAL COMMISSION.

The Report of the Indian Industrial Commission is a document of which the importance cannot easily be exaggerated. The Commission was exceptionally strong, and the final pronouncement of its members may be taken as definitive, both as a diagnosis of the evil and as an indication of the general lines on which remedial treatment should proceed. The verdict of the Commission is that India is unnecessarily poor. Raw materials abound, and industrial possibilities are great, but the people have hitherto failed to take advantage of this favourable position, and it is on the people that the blame is rightly placed. Labour is inefficient, supervision has to be provided from outside, owners of capital are inert, and, worst of all, the indispensable leaders, the men who should bring capital and labour together, are rarely to be found. India, then, has failed, and it is for the British Administration to intervene. The guiding principle is thus clear, and it is only in its practical application that difficulties arise, difficulties which the members of the Commission have faced with skill and resolution; they have indicated the ways in which the Administration can effectively intervene, and they have devised machinery by which, in their opinion, intervention can be undertaken to the best advantage. Their proposals are doubtless open to criticism in various matters of detail, but our present object is to consider the scheme from the broadest possible standpoint, and to endeavour to estimate the prospects of its coming into operation: how, we may ask, will the Report be viewed by men who are neither captains of industry nor captains of finance, but administrators, legislators, and statesmen?

Two different views are possible. The men of the younger generation, which has come so quickly to maturity under the stress of war, will find in the report a trumpet-call to new exertions. India is bound by the trammels of an evil past to a rock which the tide of economic progress already threatens to submerge. Unable to free herself, she has called for help, and assuredly it is no unworthy task to cut her bonds, tend her wounds, and set her feet firmly on the upward road. That, we believe, is the view which will be taken by the younger generation, and we earnestly hope that the task will be approached in this spirit, the spirit which looks on obstacles merely as things to be overcome. We must, however, reckon with a somewhat different view, that of the older men, who have indeed learned many things in these last strenuous years, but who have not forgotten what they learned before the war, and are not yet convinced that human nature has been suddenly transformed. Men of this type will rise from the Report with mingled feelings. They will sympathise with the enthusiasms of the younger generation, but they will recall former occasions on which not less enthusiasm has been displayed, and they will ask whether this Report really clears the way for action, or whether it is only one more stage in a discussion which has been carried on for nearly half a century. To recapitulate that discussion would serve no useful purpose, and if we recall a single episode which marked its course it is because of the lesson which that episode conveys. It is now more than a decade since Sir John Hewett, then India's strongest man, decided that the time for action had come, and called a Conference to formulate an industrial policy for the province of which he had just become Lieutenant-Governor. The Conference was strong and representative. We may mention, in passing, that it included the President and two of the most active members of the Commission which has now reported. It formulated a practical policy closely resembling that which has just been put forward, so far as provincial administration is concerned; and it broke up in an atmosphere of hope and confidence for the future. Its labours were not entirely unfruitful, for some concrete results were achieved, but when the more important proposals were submitted for sanction the old stream of dilatory correspondence broke out afresh, and enthusiasm gradually waned, until Lord Morley's famous despatch threw the whole question back to the position of thirty years before, and effort was sterilised not in one province only, but throughout the length and breadth of India. The recollection of such episodes inevitably prompts the question whether similar dangers await the proposals of the present Commission, and whether one more carefully wrought scheme may not be destined to perish in the bogs and sands of an unsympathetic environment. To this question we are unable to return a confident negative. We do not indeed anticipate that the present proposals will be shipwrecked on the shoal of the strict doctrine of *laisser faire* applied by Lord Morley in the despatch to which reference has just been made, but there seems to be a real risk that the vessel's course may lie in a region of hostile currents and conflicting winds, through which the best energies of her crew may fail to bring her into port.

To abandon metaphor and speak quite plainly, we fear that the organisation proposed by the Commission may prove to be incompatible with the impending changes in the Indian constitution. The members indeed indicate in a postcript to the Report their view that the scheme is "in general unison with the administrative changes" put forward by Lord Chelmsford and Mr. Montagu, but, as everyone knows, the constitutional question involves very much more than administrative changes, and what we dread is a conflict of principles and aspirations, not a mere discord in matters of administrative detail. The machinery devised by the Commission centres in the proposed Imperial Department, which, according to the official summary of the Report, is to "be responsible for the industrial policy of Government, and the inauguration and carrying out of a uniform programme of industrial development throughout the country." The administrative work would indeed be "almost entirely decentralised, and would devolve on Local Governments," but if the words we have quoted mean anything at all they mean that the central authority shall decide what is to be done, and that the provinces shall put those decisions into practice. We are not entirely certain that this summary does not go beyond the actual terms of the Report, but in any case it is clear that the central authority is designed to formulate a strong constructive policy, and to exercise a general control over its execution. Now while this central authority is being brought into existence, the provinces will be advancing towards responsible self-government, and towards that financial independence without which self-government is an empty phrase. Already some of the provinces have fairly definite ideas as to the lines on which their industrial development should proceed, and everyone who knows India will recognise that this will be a burning question in the provincial Legislatures of the future. Are these Legislatures to carry out, and pay for, the industrial programme of the central department, or are they to pursue a policy of their own? It is possible that the two authorities may agree, but it is equally possible that they may differ, and in that case there is a very real risk that the energies of both sides may be diverted into sterile controversy. To take one only of the many possibilities of conflict, suppose a province desires to establish a particular industry within its borders, while the central department considers that it should be localised in another part of India, and that the province should devote itself to some enterprise in which its Legislature is not interested; on the one side are technical efficiency and Imperial need, on the other provincial self-consciousness and aspirations, and while the ques-

Digitized by Google

tion can be decided by reason, the experience of the world forbids the assumption that reason will in every case prevail. The result may well be a deadlock between a sullen and obstructive Legislature and the expert enthusiasm of the central department, and pending its solution industries will not develop and the poverty of the people will not be alleviated. In our view this danger is sufficiently real to necessitate a careful reconsideration of the machinery designed to secure objects which in themselves are beyond dispute. Provincial self-government is inevitable, and administrative measures which fail to take it into account have no great prospect of practical success.

GENERAL ALLENBY IN CAIRO.

CAIRO, November 28.

Cairo has this week given itself up to celebrating the Palestine victory and affording the man responsible for it—General Sir Edmund Allenby—some outward evidence of the admiration and gratitude everyone feels towards him. On Sunday, as already reported, the Commander-in-Chief made his triumphal progress through the city, when the population gave him a most enthusiastic reception. On Monday it was the turn of the troops to give expression to their feelings towards their gallant chief, and the occasion was a fête given in his honour and "to celebrate the Palestine victory" by the Y.M.C.A. The grounds of Luna Park were thrown open to the troops, who were entertained to tea, and spent hours in and on the divers "side shows." The fête, which was in every respect a most impressive and memorable one, began with a meeting in the Skating Rink, presided over by the High Commissioner, Sir Reginald Wingate. With him on the platform were Lady Wingate, General Sir Edmund and Lady Allenby, Lieut.-General Sir Louis Bols, Major-General H. D. and Mrs. Watson, Lord Radstock, Sir Alexander Baird, Sir Reginald and Lady Oakes, Brigadier-General Sir George Macaulay, Sir Mil[illegible] and Lady Cheetham, Brigadier-General and Mrs. Clayton, Lieut.-Colonel J. K. Watson, and the members of the Y.M.C.A. Committee.

The proceedings opened by the singing, as the two generals made their appearance, of the National Anthem, followed by the Old Hundredth. The High Commissioner then rose, and amid loud cheers addressed the gathering in the following words:—

Men of the Egyptian Expeditionary Force,—I am sure you will all agree with me that on such an occasion we could not have done better in opening this fête—so generously and kindly given by the indefatigable committee of the Y.M.C.A.—than by all joining together in that magnificent hymn we have just sung and in thanking God from the bottom of our hearts for the glorious victories won by the Allied arms on the fronts.

The black shadow which has been hanging, not only over the British Empire, but over the whole world, and the German dreams of world conquest have gone for ever.

Our gallant comrades in France have taken no small share in giving the knock-out blow—as well as those in Salonika and Mesopotamia—but, most of you men here to-day have taken part in General Allenby's magnificently successful campaigns in Palestine and Syria, and we have the great good fortune to have with us on this platform and sharing with us in this celebration your own most gallant Commander-in-Chief, whom, in the name of each of you and in my own, I welcome most warmly. (Loud cheers.)

Sir Edmund Allenby has led you on from victory to victory; and the splendid force he commands and all who have shared in these great successes, living or dead, will go down to posterity as men who have covered themselves with glory and have taken such a great share in delivering those crushing and lightning strokes which dealt so deadly a blow to the German plans of domination in the East, and which have liberated for ever from oppression and misrule the fair lands of Palestine and Syria, and have thus prepared the way of a new era of peace and prosperity.

You can, indeed, be proud of your magnificent achievements, and I know your great leader is proud of you and all you have done to give effect to his instructions. Believe me, these great victories will go down to history as world's records of what can be achieved by bold and faultlessly conceived plans, initiated by capable leaders and carried into execution by brave and gallant troops who know no fear and who were not to be denied.

In the name of our Beloved King Emperor, as his representative in this country, and as patron here of the great association which has organised this fête, I thank you, General Allenby, and your splendid troops, for all you have done to maintain and uphold the honour of our King and country, and the glorious traditions of the British Empire.

You have all borne the burden of these campaigns undaunted—discomfort, wounds, sickness, and even death—and here I would pay a last tribute to our gallant comrades who have fallen in the field of battle or died from sickness; they have paid the Great Sacrifice, and it has not been in vain.

I rejoice to think, too, that this ancient land of Egypt and its inhabitants—from its illustrious Sultan down to the humblest tiller of the soil—have also contributed to these great and historic achievements, and are profoundly grateful for the powerful British protection which has saved their homeland from invasion and devastation and furthered its prosperity and progress.

Before sitting down I would say one word more to you men who left your homes and all that is nearest and dearest to you—some of you more than four years ago—to proceed overseas to fight for the freedom of the world, so seriously menaced by our now beaten foe. Many of you had families dependent on you, who, as you well realised, could ill afford to lose their supporters; and these domestic anxieties were added to the many hardships you have had to bear. Believe me, a grateful country is not unmindful of these sacrifices on your part, as the organisations for the provision of suitable employment for men released from service amply testify. Moreover, the habits of discipline, training, and of working together for the good of the whole which you have learnt in the Army will be an invaluable asset to you in after life, and I am confident none of you will regret the time you have passed with the Colours. On the contrary, you will look back on all these hard days with the happiest recollections, and you will feel thankful for the experience you have gained, and which will help you immeasurably in the battle of life that lies before you.

In conclusion, I am sure you will all agree with me in feeling that we owe a deep debt of gratitude to the Y.M.C.A., which has done, and is continuing to do, so much in providing distraction and help to the troops in a hundred different ways. I was present at the Ezbekia Gardens a few days ago when they welcomed more than 3,000 convalescents to tea and where every sort of entertainment was provided, from swimming baths to concerts, games, and other recreations; and here in Luna Park I do not think there can be less than 7,000 men gathered together for this great celebration as guests of this great association.

I know you will join with me in offering to the committee and the various workers an expression of our heartfelt gratitude, to which I would add my personal and warmest congratulations, on the admirable arrangements they have made for this afternoon's fête. To the whole committee—with its able chairman, Mr. R. E. Monteith-Smith—to its most energetic secretary, Mr. Jessop, and Mrs. Jessop, to Mr. Johnson, who must be known to everyone of you as a most capable organiser, and especially to all the ladies who are so kindly assisting to-day, and who have since the beginning of the war devoted so much of their time and energies to the welfare of the men, we desire to offer an expression of profound gratitude and appreciation.

I will now ask you all to rise and join me in giving a hearty welcome to our illustrious Commander-in-Chief, General Sir Edmund Allenby, and to Lady Allenby, who is so closely associated with him in every effort to assist the officers and men of the Egyptian Expeditionary Force when they come to Cairo or Alexandria, whether it be to hospital or for a rest and change. Three cheers for General Allenby and Lady Allenby.

His Excellency's call was responded to most vigorously by the many thousand soldiers who thronged the huge hall. When the Commander-in-Chief rose to reply the band played "See the Conquering Hero Comes," amid resounding cheering and applause. Indeed, it was several minutes before he could obtain a hearing, so enthusiastic was the reception accorded him. General Allenby said:—

In a few words I wish to thank you for all the kind things you have said about myself and Lady Allenby. I heartily thank you in my own name and in hers. We appreciate very highly your kind words, and for my own part I can only say, if I could not win battles with such troops as I had under me in Palestine and Syria no man could. On October 31, 1917, we attacked Beersheba. On October 31, 1918, we signed the armistice. (Laughter.) Many, alas, of those who were with us then are not now, but they have been followed by men as good as themselves, and every time a gap was made it was immediately filled; where a man has fallen another has stepped into his place. You will remember, Sir, when we attacked at Gaza, we advanced until we reached the walls of Jerusalem without any serious check. There we had, owing to climatic conditions and the rough country, to make a slight check. But on December 9 Jerusalem was taken, forty days after we started from Beersheba. And up to that time there was always perfect co-operation of all branches of my forces, the forces of the Army, artillery, infantry, and the Air Force working with absolute precision.

After taking Jerusalem a large part of my army was taken away and replaced by troops from India, many of them men only partly trained. The way these men prepared them-

Digitized by Google

selves for the work they had before them was excellent and deserving of the highest praise. I was told it would take seven months to train them, but we trained them in ten weeks, and all was most ably administered and organised by the members of my staff, many of whom are here to-day. It was wonderful how all applied themselves to the task before them. On the morning of the 19th we began the attack. This was at 4.30 a.m. By 6.30 a gap had been broken by our cavalry, and in thirty-six hours the 7th and 8th Turkish armies were surrounded and practically destroyed. On October 19 the attack began, and on November 1 Damascus was occupied. On the 26th Aleppo was occupied, and Aleppo is 400 miles from the Jaffa line. What carried these troops to victory was the fact that during the summer they had been training mind and body with one object in view, that was to beat the enemy, and every man worked unceasingly until that object was attained. I want to express my debt of gratitude to the Y.M.C.A. for helping to bring about this result. The Y.M.C.A. was of the greatest assistance, and all through the operations they worked with us absolutely hand in hand, and have done more than I can express to bring about that combination of sound minds in sound bodies in the troops under my command. Generally, after an advance, within forty-eight hours up came the Y.M.C.A. with all sort of comforts. They encountered great risks and great hardships, and provided not only spiritual but material comforts. They provided food, entertainments, etc., and I want to express my very great gratitude to them; and I am sure that the whole of the troops who have served with me in Syria and Palestine will heartily join me in thanking the Y.M.C.A. and all connected with them for all they have done. (Loud and prolonged cheers.)

The meeting closed with a vote of thanks to the High Commissioner for presiding, proposed by Mr. R. E. Monteith-Smith, the indefatigable president of the War Works Committee, to whose energy and enterprise the entertainment and care of the troops in Egypt and Palestine are mainly due. He testified to the invaluable assistance he and his colleagues had always received from the High Commissioner, who never refused them a favour or his support in anything they wanted.

As the two generals shook hands publicly the audience rose and sang "God Save the King."

On Tuesday evening the High Commissioner and Lady Wingate gave a dinner at the Residency in honour of H.H. the Sultan. The guests who were honoured with invitations included H.I.H. the Grand Duke Dmitri, General Sir Edmund Allenby, G.C.B., G.C.M.G., and Lady Allenby, H.E. Sir Hussein Rushdi Pasha, G.C.M.G., Sir Charles Marling, K.C.M.G., and Lady Marling, Sir William Brunyate, K.C.M.G., and Lady Brunyate, H.E. Mahmud Chukry Pasha, H.E. Said Zulfikar Pasha, Mr. Harry Farnall, C.B., C.M.G., and Miss Farnall, Mr. Douglas Dunlop, Mr. James Haines, Sir Milne Cheetham, K.C.M.G., and Lady Cheetham, Major-General H. D. Watson, C.B., G.M.G., C.I.E., and Mrs Watson, Brigadier-General E. S. Herbert, C.M.G., and Mrs. Herbert, H.E. El Lewa Chehata Kamil Pasha, C.M.G., Monsieur and Mme. Rolo, Lieut.-Colonel J. K. Watson, C.M.G., C.V.O., D.S.O., Mr. and Mrs. Greg, the Hon. M. Herbert, Lieut.-Colonel G. S. Symes, C.M.G., D.S.O., Major Castle Smith, Capt. and Mrs. Napier, and Capt. J. U. Alexander.

The loyal toasts of H.H. the Sultan, and H.M. the King were duly honoured, and the High Commissioner then raised his glass to General Allenby. Sir Reginald said that the details of the illustrious Commander-in-Chief's successful campaigns were far too well known to require recapitulation. It was to the complete confidence in his splendid qualities as a brilliant soldier and a man among men which General Allenby inspired amongst all ranks, from the High Commissioner downwards, to the high quality of the staff he had gathered around him, and to the magnificent gallantry of the troops under his command that we owed the series of great victories he had achieved. The messages of congratulation from H.M. the King and H.H. the Sultan had been wholeheartedly endorsed by the British nation, no less than by the Egyptian population, whom the Commander-in-Chief had saved from the dangers of invasion and devastation. He felt sure that he was only voicing the feelings of H.H. the Sultan and of all present when he expressed to General Allenby heartfelt gratitude for the great service he had rendered to England and Egypt, and offered him warmest congratulations on his splendid victories and on the well-merited honours he had received. The High Commissioner concluded by wishing health, long life and happiness to General Sir Edmund Allenby and Lady Allenby.

In thanking the High Commissioner, General Allenby said he was extremely proud to be the recipient of such words of esteem from His Excellency. He had been in command of the finest troops in the world; had always received invaluable advice from the High Commissioner; his Highness the Sultan had supported him; and the Egyptian Government had also placed at his disposal everything possible to assist him in his work. It was largely due to these factors that he had been able to lead his troops to victory and to save Egypt from devastation. He emphasised the fine work carried out by the Camel Transport Corps and the Egyptian Labour Corps, who, in addition to their splendid work on the lines of communication, had frequently shown the greatest bravery and devotion to duty in the face of the enemy, and he concluded by paying a special tribute to the Donkey Transport, whose splendid organisation left nothing that could be desired, and reflected the greatest credit on those responsible for its administration.

PRESS ON THE NEAR EAST.

The Future of Palestine.

The following highly significant passages are extracted from notes in *Palestine*, which is usually very well informed in regard to the subjects with which it deals:—

We have pointed out that the French have established an administration in Galilee, and have maintained it in spite of the protests from the British Government. We have the best of reasons for saying that the French Foreign Office are maintaining to the full their pretensions in relation to Palestine. They take up the position that the secret pact of 1915 holds good, and they are insisting upon every word and every particle of that unhappy document. We are not sure whether the French Foreign Office expects the Peace Conference to admit its pretensions in relation to Palestine. Probably not, for its agents in America, at any rate, are suggesting either international control or even American control in preference to British control over Palestine. The French Foreign Office, we take it, has two aims. It would, in the first place, like to prevent Great Britain securing the mandate for the creation of a Jewish Palestine. It would, in the second place, like to barter its own claims to Palestine for some solid equivalent elsewhere or in Palestine itself. All this is thoroughly orthodox as the old diplomacy understands it, and the circumstance that not one single thought is given to the interests and wishes of the Jewish people in this matter puts the seal upon its orthodoxy. We should like to say to the French Foreign Office two things. The first is that unless the Peace Conference is going to give the lie to every principle and profession on behalf of which it sent the manhood of the world to death and mutilation, the French pretensions in regard to Palestine will wither up as soon as men's minds are directed to them. The second is that the Jewish people will not suffer any of the various varieties of bargaining in relation to Palestine which have been conceived by French diplomats in their own interest. There is no wisdom or vision in this handling of the Jewish Palestinian question by the Quai D'Orsay.

The second note says:—

The *New York Times* reprints, with a map, an article on the territorial settlement of the Near East. It is the work of an Armenian writer, and the only thing to which we desire to draw attention here is the indication in the map, although not in the text, with regard to Palestine. The map limits the territory of the new Jewish Palestine to the Jordan Valley. All the other territory east of the Jordan, stretching south to Arabia and north into Syria, is put in this map under French control. It will, of course, be for the future Arab State to decide whether it desires, as this map makes it, to be under French control; but the idea that the eastern boundary of a Jewish Palestine should be the Jordan Valley must be rejected offhand. Palestine, the Palestine of history, of economics, of geography, and of politics, should properly stretch as far as the great Syrian desert.

A Reuter message from Athens states that on the anniversary of the attempted *coup d'état* by King Constantine in 1916 the Anglo-Hellenic League addressed a letter to the British Minister in Greece expressing joy and pride at the prowess of the Greek soldiers who have fought side by side with British troops in the great war.

A letter from Soudi, a Greek town on the railway between Dedeagatch and Adrianople, states that the Bulgars, even after the armistice, are committing destructions and plunder in fields and houses, forcing the inhabitants to hard work, outraging young girls, and putting Bulgarian inscriptions on churches and schools. Refugees from the Byzantine city of Meleniko, at present occupied by the Bulgars, have decided at a special meeting to do everything possible to put an end to Bulgarian rule.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

What I have said time and again regarding Balkan trade opportunities is fully confirmed by a message this week from the special correspondent of *The Times* at Belgrade. "There is now an enormous demand for manufactured and Colonial goods, agricultural implements, and machinery of all kinds in Serbia, as well as in all other countries of the Balkan Peninsula," he says, "and at present there are no means of satisfying the demand. British exporters should bestir themselves, so as to be the first to profit, and enter into immediate relations with reputable importing firms in these countries."

***

I hope British merchants and manufacturers will read the passage quoted very carefully, and will take special note that there is at present no means of satisfying the demand for manufactured goods in the Balkans, for it depends mainly upon their enterprise whether our friends in the Near East are able to establish the close economic relations with Great Britain which they desire, or whether in despair they must once more look to the enemy for their supplies. Trade difficulties at the present time are unquestionably very great, but the importance of the Balkan market is such that, even at the cost of neglecting for the moment other markets, no effort should be spared to meet its requirements.

***

Mr. T. H. Mawson's proposals for the reconstruction of Athens, outlined in a lecture last week, a report of which will be found elsewhere in this issue, are on the same comprehensive lines as his plans for the rebuilding of Salonika. There is, however, a noticeable difference in treatment, due to the fact that in Salonika he was dealing with a city destined to become one of the great industrial and distributing centres of the Near East, while in Athens he had to take into consideration not only the industrial requirements but also the claims of antiquity. Briefly stated, his proposals are to combine the various railway stations of Athens in one centre, to have first and second class residential districts, and a working-class district in close proximity to the industrial area, and to have power provided from a plant a mile from the city, so that the outlook may not be marred by the sight of the chimneys of factories and workshops.

***

There can be no question that Mr. Mawson's proposals to convert Athens into a garden city are interesting, but opinions may differ as to their practicability. Reconstruction would be entailed on such broad lines that it would almost be tantamount to the entire rebuilding of the city, and in a period like the present, when the first essential is to restore the economic life of whole countries, it is unlikely that there would be much support for such a plan. Greece is certainly not in a position to finance a scheme of this nature by herself, and it is equally inconceivable that any of the Powers would be prepared to give assistance for any purpose for which a good case could not be made out on a utilitarian basis. In any case many generations would be required to carry out the scheme. M. Gennadius aptly expressed the position when he said that it "was so vast that many of them could only contemplate it as something to be accomplished after they had gone."

***

I see that Mr. Ward Price has had an interview with M. Edouard Huguenin, the director-general of the Baghdad Railway, and has obtained from him some interesting particulars regarding the condition of that line. He stated that the Taurus Mountains were opened for broad-gauge traffic in October, and that trains can now run to Nisibin. The track is reported to be in good condition, but the rolling stock has naturally deteriorated, in which connection he made the significant statement that two-thirds of the engines were unfit for work through lack of spare parts, which Germany had been unable to supply. Despite this, he thought that a limited daily traffic would be possible but for the coal famine.

***

The Baghdad Railway has been, of course, staffed with German engineers, and on this point M. Huguenin's views are of interest. "Most of our German engineers," he said, "are civilians who have been in this country thirty years. They have acquired a special knowledge of the peculiarities of the Baghdad Railway, without which the line could not be worked. Even should the Allies insist on replacing them by engineers of their own, it would be necessary for the latter to pass a couple of months in collaboration with the present German staff before they would be able to accept responsibility. The system of the Taurus tunnels alone is one of the most difficult in the world. Daily inspection is necessary for the safety of the line." Naturally they will all have to be replaced, no matter what their length of service or their position with regard to their "Fatherland." M. Huguenin is making very large mountains out of very small mole-hills, as plenty of British engineers I am sure are prepared to prove.

***

The report of the Tata Iron and Steel Co. for the year ended June 30 shows that while the net profit was not quite maintained at the high level of the previous year the outlook for the company is extremely satisfactory. The profit amounted to Rs.1,05,69,798, against Rs.1,10,76,692, and including the carry-forward the total was Rs. 1,08,86,677. Out of this Rs.45,00,000 have been placed to the depreciation fund account, Rs.5,00,000 to provision for income-tax and super-tax, the dividends are maintained at the previous year's figures, and Rs.4,67,927 are carried forward. As regards the company's progress, it may be noted that both blast furnaces worked continuously throughout the year, the production being the highest on record, while the production of the rolling mills showed a very considerable increase. Then the company's general scheme of extension has been actively prosecuted, a significant indication being the acquisition of three collieries, two of them gas-coal properties.

***

The outlook for this enterprising company may be gauged from the decision to make a substantial increase in the capital by the creation of 7½ per cent. cumulative preference shares of Rs.100 each. The reason for this increase is that it is believed that the demands of the Government and the company-owned railways will be much greater than the company on its present basis will be able to meet. Among new developments it is stated that arrangements have been made for the manufacture of enamelled ware, tinplate, sulphuric acid and zinc, jute mill machinery, steel tubes, chemicals, tea machinery, agricultural implements, and structural work. The company is also contemplating the establishment of a number of other industries, notably general engineering, electrical machinery, manufacture of wagons, and steel shelving.

***

I have dealt with the Tata report in some detail because it gives a very good indication of the contribution that India may be expected to make in future years to the world's manufactures. Owing very largely to the war, India has made a very great advance in the direction of supplying herself with materials which she formerly drew from the Western world, and it does not need an extraordinary stretch of imagination to picture the day when she is not only capable of satisfying her own requirements for iron and steel manufactures, but also of entering into serious competition for markets within her immediate range. The prospect may be remote, but it undoubtedly exists, and it is one which British merchants and manufacturers must take into account.

***

A statement has been issued by the Department of Statistics in India with respect to the prices of commodities there at the end of the fourth year of war, showing that in August the wholesale prices of all commodities had risen 134 per cent. compared with the pre-war level, and 44 per cent. during the year. Prices have varied greatly in different localities. In Madras the rise above the pre-war level was 193 per cent., in Bombay 160 per cent., in Calcutta 90 per cent., and in Rangoon only 75 per cent. The rise in food prices during the four years has not been so marked as in other commodities, the increase being only 31 per cent.; but it may be noted that 15 per cent., or nearly half of this increase, took place in the past year.

***

Mr. James Rendel, presiding at the general meeting of the Assam-Bengal Railway Company, was able to give a most satisfactory picture of the year's working, as, in common with other Indian railways, the Assam-Bengal line has had a marked expansion in receipts despite the adverse war conditions. In the course of his speech the chairman referred to the old question of the transfer of the Dacca section of the Eastern Bengal State Railway to the Assam Bengal Railway, and said that Colonel Huddleston, who was deputed to lay their case before the Indian Government, had had two interviews with the Railway Board, but, so far as he knew, without any success. He added that the Railway Board were making a report to the India Office on the subject.

FUEL ECONOMY IN EGYPT.

Work of Mr. John Wells.

(From a Correspondent.)

When the price of coal reached prohibitive figures, and even at that the import of the required quantities into Egypt became uncertain, some qualities like anthracite becoming altogether unobtainable, the Egyptian Government, to meet the danger of a fuel famine, wisely thought of enabling the country to fall back on its own resources; and to that end the Financial Adviser engaged the services of a consulting engineer possessing previous experience of Egypt. That the choice was a happy one may be said to have been demonstrated by results. It is only about nineteen months since Mr. John Wells founded the Research Works at Shubra, Cairo, and although he has done the whole work of technical and general supervision single-handed, and has been seriously handicapped by existing difficulties, yet enough has been achieved, both in the theoretical and practical domain, to justify to the full the existence of these research works, which have opened up vast possibilities for Egypt, but more especially for the Sudan, where the fuel problem presents an insistent challenge to the authorities.

Recently Mr. Wells was kind enough to satisfy my desire for a close inspection of these works, and took me round the charcoal and tar-begrimed buildings constituting the workshops, laboratory, office, etc., explaining to me all that could interest, and be understood by, a layman. Along one side of the approach to the works my attention was attracted by a line of little heaps of what looked like sweepings, but were in reality samples of wood fuel, ranging from wheat, rice, and bean straw to chips of wood and bark of trees of commonest growth in Egypt, even to rags, to show that every organic matter could serve for the gas producer.

As I said, the works are the single creation of Mr. Wells, and are run practically under his sole supervision, and only a man inspired by the enthusiasm of a big idea in process of translation into useful action, and endowed with indomitable courage and persistent energy, could have carried on as he has done. With limited funds and innumerable and constant difficulties arising from war conditions, especially in connection with mechanical operations conducted in a country where the condition of the mechanical industry makes a call on home supplies a constant necessity, Mr. Wells had to exercise his ingenuity to the utmost, and his attempts at summary solutions of technical difficulties deserve the highest praise.

It seemed to me that in positive researches of this kind, where the actual results can be gauged with mathematical precision, no room for scepticism could be left, and I therefore obtained some data regarding the practical results achieved, which should, I think, be of special interest to readers of The Near East.

According to the latest report, there are at present in Egypt 277 engines operating wood fuel, of which over 80 per cent. are the same as those evolved at Shubra. As forecasted last year, the adoption of the first system evolved has led to a number of other systems, either based on, or improvements on, what had been done at the Research Works, mostly attempts at adapting a down cast producer to get rid of tar. A number of these have been introduced in combination with the cleaning apparatus used at Shubra, though a few are operating without it to the serious detriment of the engines.

The fuel cost to the owners and the wide variety of fuel being used are matters of considerable interest. Some owners report their cost per day on engines of 40 to 45 h.p. at 26 to 30 up to a maximum of 100 piastres, against 500 to 580 P.T. for coal in October, 1917. The power of engines varies from 30 h.p. in a few cases to 40-50 in the majority, with only a small number of larger engines of 75, 80, 100, and 260 h.p. each. It is safe to assume that the average owner is not expending more than 50 P.T. per day, therefore the cost of 277 engines at 50 P.T. per day is £E.138,500 per day, and on an average of 200 working days the total fuel costs would be £E.27,700 per year.

The amount of coal used during the same period would have been 26,592 tons. Coal from the date of starting of the engines has varied between £14 and £30 per ton, but for purposes of a year of running, taking £10 as a basic price, the fuel bill would have been £265,920.

Now let us see what has been the cost of this change of fuel. From information available, it appears that the cost of alteration per engine has varied from £150 to £350, with occasional higher figures, but it may be safely assumed that the average cost has not been more than £250, making the total cost £68,250, which, allowing for the lower cost of the fuel, represents a net saving to the owners of between £153,120 and £222,440, not taking into account the general value of land maintained under cultivation or mills kept at work which otherwise would have had to be closed down for lack of coal.

Since the inception of the research work in July, 1916, the actual expenditure incurred by the Egyptian Government has been £31,000 on the work and some £8,000 on professional fees. Reckoning the net value of the plant at Shubra at £9,000, the total amount of actual expenditure is reduced to £30,000, but of this only about half has been spent directly on gas engines, so that even if no more gas producers were to be installed the country would have already derived a handsome profit in the first year, represented by a net saving of from £123,000 to £192,400 on fuel alone, and three to four times this amount in the yield of cultivated land, which otherwise would have lain barren.

Very soon Egypt will begin to feel the benefit of the new research work of the last six months in the shape of much improved gas producers at a greatly reduced cost per unit, a new system of application of producer gas to boilers, and a line of producers suitable for converting kerosene oil engines into gas producers.

There are over 3,000 Kerosene engines in Egypt, 750 gas engines, and a much greater number of steam engines. The engine-owner, having a gas producer to generate gas, has a wide range of fuels to draw upon, viz., wood, charcoal, coke, soft coal, hard coal, tibn, straw, reeds, cotton sticks, in fact any vegetable matter. He is not at the mercy of the speculator in particular lines of fuel, as he is in a position to choose the fuel that suits him most as regards price, accessibility, etc. Furthermore, those possessing quantities of vegetable fuel in excess of their requirements may utilise the new combination charcoal and gas producer, producing at the same time gas and charcoal. The advantage of this new combination may be realised from the fact that charcoal is worth to-day from £20 to £25 per ton.

LIFE IN TURKEY.

Hardships of British Subjects.

What has already been said in these columns regarding the economic position in Turkey is fully borne out by the following extracts from letters just received from British subjects in Turkey:—

"The rate of exchange for an English £1 note is 180 to 200 piastres, and for a sovereign 300 to 350 piastres. Everything is about ten times the price asked in peace time. A suit of clothes costs from £50 to £60."

"Tea of the first quality costs £50 the oke (2.8 lb.); beef, 120 piastres (21s. 7d.) per oke; mutton, 140 piastres (25s. 2d.) the oke; fowls, 150 piastres (27s.) each; bread, 25 piastres (4s. 6d. the oke; and second quality bread *uneatable*, 4 piastres (8½d) the oke."

"I went to try and get some vegetables, only having had dried peas and haricot beans for a long time. I managed to get three cabbages and 2 lb. of potatoes, for which I paid 9s. 6d."

Another correspondent states that the whole British community in Turkey has been living on *bulgur* (crushed wheat), and the straits to which they have been reduced may be gathered from the fact that the little boy of one family was wearing a pair of boots made of sheepskin which cost £10!

EGYPT'S FOOD SUPPLIES.

Position Still Difficult.

(From Our Own Correspondent.)

Cairo, November 25.

The situation in the towns as regards the supply of flour and wheat has not improved very much, great difficulty being still experienced in laying hands on the stocks held by the cultivators. There is, however, every hope that the present state of affairs will be materially relieved in the very near future, as an order has been placed in Australia for a large consignment of flour, the first shipment of which is due to arrive here very shortly. The arrival and sale of this flour will bring prices down considerably, and will force the hoarders to unload their stocks, possibly—as they fully deserve—at a loss to themselves, since the foreign flour will in all probability be offered below the tariff prices.

The final link in the chain of control is also about to be forged—viz., the bringing under control of the bakers. The latter, who have become entirely dependent on the Government licensed millers and retailers, are now being forbidden to work unless they have a licence from the Supplies Control Board; and the Board will, of course, only issue those licences on condition that the bakers conform to certain prices, etc. Thus, complete control will be effected at all stages, and the complaint that the cultivators and intermediaries have their profits restricted, but that the bakers can do what they like, will no longer have any foundation.

In connection with the question of food supply, it is interesting to note that an important innovation has been made in Alexandria in regard to meat. Owing to the difficulty experienced from time to time in obtaining meat, although regular supplies come down from the Sudan, the municipality has come to an arrangement with the military authorities whereby horses unfit for use but free from disease are to be handed over to the former for slaughter and sale as meat to the poorer classes. A special slaughter house has been set up under Government supervision, and the sale seems to be meeting with success. At first the Moslem and Jewish communities refused to touch the meat, but arrangements have been made for the animals to be killed in accordance with the rites of the two religions. Whilst enabling the poorer classes to obtain meat at a reasonable price, this innovation, if it attains any extension, should in the long run tend to alleviate the general food situation, since it will lessen the demand for bread, etc., which has increased amongst the lower classes owing to their inability to afford meat at the prices hitherto ruling.

INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following weekly cabled news from the Director-General of Commercial Intelligence, dated December 12:—

Useful rain has fallen in South of Bombay Presidency. Local rain in Burma, Baluchistan, and Sind.

Bombay Cotton market still continues irregular. Fully good Broach, April-May delivery, quoted 572.

THE DESTRUCTION OF BAKU.

Mr. P. de Morgan gives the following picture of the destruction of Baku and its oil wells in the *Mercure de France*:—"On September 27 the enemy forced his way into the city, and the weak garrison, exhausted by a long struggle, was compelled to take to the boats, leaving the city in flames. Wholesale massacre, pillage, and destruction then took place, and the terrified population fled, abandoning their houses to the soldiery. Soon all the great industrial undertakings, the oil wells, representing millions of capital, were committed to the flames. Balakhané was a grand and terrible sight, the flames rose up in a roaring, whirling column hundreds of yards high, and in forty-eight hours the city of Baku was entirely destroyed." For years to come, says Mr. de Morgan, Europe will be deprived of its main source of supply for oil, and an enormous amount of capital will be required to put the oil wells in working order.

EMPIRE COTTON GROWING COMMITTEE.

Sir Henry Birchenough on the Outlook.

The Council of the British Cotton Growing Association have recently had an interview with Sir Henry Birchenough, K.C.M.G., the chairman of the Empire Cotton Growing Committee.

Sir Frank Forbes Adam, Bart., C.I.E., presided, and congratulated Sir Henry Birchenough on the great work he had done for the Empire in his capacity as chairman of numerous committees set up by the Government. The British Cotton Growing Association early in 1917 had come to the conclusion that the development of cotton cultivation within the British Empire was not receiving the attention and assistance which it merited from the Government, and that there was a good deal of indifference being shown which was injurious to the work the Association have at heart. It was, therefore, decided to send a deputation, which was received by the President of the Board of Trade on behalf of the Prime Minister. The outcome of that meeting was the appointment of a powerful committee, under the name of the Empire Cotton Growing Committee, of which Sir Henry Birchenough was chairman, to investigate the whole of the circumstances of the growth of cotton in the British Empire and to report. The British Cotton Growing Association had during the past fifteen years effected a great deal of arduous spade work, which had been done uncommonly well. Lancashire, both employers and operatives, had subscribed liberally to the funds of the Association, and nearly half a million of money had been raised without any expectation on the part of the subscribers of obtaining any return beyond extending the area of cotton cultivation. Any profits that might have been earned would have been spent in new developments.

Sir Henry Birchenough explained that the Empire Cotton Growing Committee was formed largely at the request of the British Cotton Growing Association, supported by a strong recommendation of the Board of Trade. The object of that committee was in no sense whatever to replace anything that had been done, or was being done, or would be done in the future, in Lancashire, but, on the contrary, its object was to supplement and support those efforts, and the committee was not intended to replace any efforts, or committees, or bodies which were already at work. Sir Henry recognised most gratefully the extraordinary work which the British Cotton Growing Association had done under circumstances of great difficulty. The early years were the difficult ones, but when once the preliminary difficulties had been overcome the reward came much more rapidly than seemed possible in the early stages. The Empire Cotton Growing Committee was composed of representatives of the self-governing Dominions and various colonies, of the representatives of public departments, and of representatives of the various branches of the cotton industry. The committee had been in existence almost a year, and during that time there had been certain pressing problems to advise upon. The war had made progress in many directions difficult, but the committee had now reached a stage at which they felt they could go ahead. The committee was being further strengthened in order to obtain the co-operation of all classes in Lancashire, a co-operation not only of interests but of knowledge.

Up to the present time seven sub-committees had been set up to divide the work among them on the one hand, and on the other hand to secure still further the cordial co-operation of the different classes in Lancashire. The committees already appointed were Finance, Commerce, Research, Information, and three territorial committees, viz., India, Egypt and the Sudan, and the self-governing Dominions and colonies. It was not desired that the committee should be regarded as a London one; certain meetings could most conveniently be held in London, but a large number of the committee meetings would be held in Manchester, or elsewhere in Lancashire, because it was necessary for Lancashire to feel that they were their committees, and that this was their work; and its association should be as close as possible to the industry itself. A combination of private enterprise and government assistance was vital to the future. The main committee of the Empire Cotton Growing Committee, which, of course, was interested in cotton-growing all over the world, even in the self-governing Colonies and India, could take over a great deal of the difficult work which the Association had done in the past, namely its relations with Government Departments, Colonial Governments, the Egyptian and Indian Governments. This would leave the Association freer to carry on the work of the active production of cotton. The desire and effort of the Empire Cotton Committee would be to assist the Association in every way, to give advice where possible, and represent the Association's wishes, wants, and needs, to the Government. Under these circumstances it was hoped that as soon as the troubles and difficulties of the war were over, the Association would be able to take a fresh leap forward, and attain the era of prosperity which all desired. It was absolutely necessary to develop the cotton growing areas in the British Empire, in view of the large increase of American takings, and there was now an atmosphere at Whitehall most favourable to that position. The present attitude of the Government was very sympathetic. The committee wished to feel that it had the united support of Lancashire behind it, and if so real progress would be made.

Mr. Hutton also spoke, and stated that it was for the Association to see that the committee was a success. It was necessary for capital, labour, and everybody to pull together in this matter, because sooner or later there would not be enough cotton to go round.

EGYPTIAN STATES FINANCES DURING SEPTEMBER.

(From Our Own Correspondent.)

Cairo, November 29.

The State accounts for September have just been issued, and so we are able to see how the Egyptian Government stands financially at the end of the first half of the financial year. Revenue during the period has totalled £E12,399,958 and expenditure £E10,255,778, as compared with £E9,085,328 and £E8,581,163 on the corresponding date last year. There has therefore been an increase of £E3,314,630 in revenue, as against one of £E1,674,615 in expenditure.

The chief items of revenue have been :— Direct taxes £E2,352,039, customs £2,346,411, tobacco dues £E1,025,218, legal fees £E754,354, railways £E3,201,640, State domains £E338,043, excise £E321,523, ghaffir cess £E571,692, interest on funds £E200,900, sale of land £E203,492, and miscellaneous receipts and dues £E366,554. The more important increases in revenue have been :— Customs £E1,105,682, railways £E1,010,407, tobacco dues £E213,204, ghaffir cess £E164,724, sale of land £E154,645, whilst excise and telephones, which appear for the first time this year in the State accounts, are responsible respectively for £E321,523 and £E99,284 of the total increase.

Under expenditure the heaviest items have been :—Sultan's Civil List :—LE175,995, post office £E182,187, education £E228,822, public health £E237,981, prisons £E172,470, irrigation £E559,471, railways £E1,680,678, police £E261,384, ghaffirs £E387,281, War Office £E649,243, pensions and indemnities £E369,428, public debt £E2,283,189, war gratuities £E395,017, extraordinary war expenditure £E298,214, mixed courts £E128,265, and native courts £E201,105. Important increases are railways £E214,078, war office £E201,828, war gratuities £E350,472, extraordinary war expenditure £E298,214.

The result of the first six months of the financial year is that there is a surplus of receipts of £E2,144,180, as against one of only £E504,165 at the end of September, 1917. This is eminently satisfactory, as the first is always the worst half as regards revenue collections, the heavier receipts from direct taxes being due in the third quarter of the year. We may confidently look forward, provided there is no unknown heavy item of expenditure to be met, to an even larger surplus at the close of the current year than was recorded at the end of the last one, when receipts showed an excess over expenditure of £E3,636,182 (before the contribution of £E2,967,056 to H.B.M.'s Government was written off).

SUDAN NOTES.

An Interesting Co-operative Movement.

From Our Own Correspondent.

Khartoum, November 6.

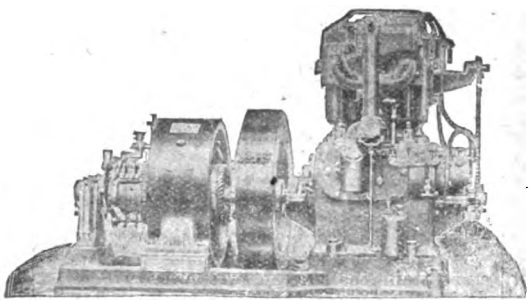
The various armistices have had the expected effect on the local market, and a period of stagnation has set in. The merchants, who had not contemplated so speedy a turn to affairs, have considerable stocks of cotton goods in hand, obtained at a high price from Egypt, where there is said to be a two years' supply of such articles. The buyers, feeling that a great reduction is to be expected, are refusing to buy at prices that the merchants offer, and stagnation is the natural result.

A movement has been begun to start something in the nature of a co-operative store on the part of the officials, who feel that the prices that they are called upon to pay by the grocers and import merchants are not justified by the facts. Whether the movement is likely to be brought to a successful conclusion or not is uncertain. It is probably true that the prices charged by the Greek grocers (and nearly all the grocers are Greek) are higher than those that would be charged by firms of greater financial stability, as there are many bad debts, and the majority of the firms practising in the Sudan have not enough capital and are compelled to make the good debtors pay the debts of the bad ones. Moreover, although the prices are sometimes high, they are not as outrageous as those charged by some of the firms in Egypt, who seem to be able to make what charges they please. There seems to be a very weak public opinion in Egypt, and prices are extortionate, but no one beyond becoming slightly abusive does anything. Besides, the shopkeepers are so rich after the enormous harvest of the war that they do not care greatly whether a would-be purchaser buys or not. In these circumstances it is difficult for the small public of the Sudan to make itself felt. A movement such as the one mentioned above, however, may help to bring the merchants to a proper appreciation of their position, and put prices on a more satisfactory basis. It is a commonplace to describe Egypt as the land of anomaly. Certainly this seems to be so in economics, as prices are not decided by the law of supply and demand, but by the machinations of the middleman, whose chief interest it is to prevent either maker or consumer knowing anything about the facts.

It is to be hoped that advantage will be taken of the present opportunity to establish British firms in these parts with a proper sense of proportion and genuine British methods. No doubt the Chamber of Commerce, which has in the last year taken on a more definite British attitude—a very welcome sign—would be glad to give any assistance possible to enterprise from the British Isles.

GREEK DEBT SERVICE.

The Council of Foreign Bondholders issues the following information, compiled from figures published by the International Financial Commission at Athens, with regard to the revenues assigned under the Law of Control for the service of the Greek Debt from January 1 to September 30, 1918. (New Style January 14 to October 13, 1918) :—



—		Monopolies, Tobacco, Stamps, Stamped Paper, Naxos Emery.	Piræus Customs.
		Drachmæ.	Drachmæ.
Gross Receipts, Sep., 1918		3,525,785	2,581,000
Do. do. do 1917		3,142,015	1,198,000
Estimated receipts for 9 months (Law of Control)		21,675,000	8,025,000
Actual do. do.	1918..	28,121,842	24,021,000
" " "	1917..	24,361,282	9,499,000
Difference between estimated and actual receipts for 9 months	1918	+ 6,446,842	+ 15,996,000
	1917	+ 2,686,252	+ 1,474,000

Note.—Of the surplus over the estimated receipts from monopolies, tobacco, stamps, stamped paper, and Naxos emery, 49 1-5 per cent. is applied towards increasing the minimum rates of interest and sinking fund of the External Gold Loans of 1881 to 1893.

ENGINEERING NOTES.

Balkan and Indian Timber.

The enormous consumption of seasoned and unseasoned timber for war purposes during the last four years has created an embarrassing situation in all branches of industry. The building trade generally, and especially as regards projects of reconstruction, is most seriously affected by the apparent scarcity of this most important material. It is expected that Sweden and Norway and some of the countries on the other hemisphere will be able (as far as shipping facilities allow) to supply the crying needs of Central and Western Europe; but Austria, or that region which until recently was part of Austria, and has been the principal supplier of the timber trade and allied industries in South-Eastern Europe and the Near East, is, for the present and, perhaps, for some time yet, out of the market. Thus, the scarcity of timber is general in Europe, especially in the South-Eastern regions. In the circumstances it may be pointed out that these districts and others in the East may be supplied with very large quantities of timber for building, railway, and industrial purposes, from hitherto commercially unknown, or little known, sources in the Balkans and even India.

Albania.

There are vast forests in Albania which would provide a ready and easy source of timber. With very few exceptions, all are quite unexplored, and the transport of wood in logs, etc., from the forests to the sea would be facilitated by the utilisation of the rivers and rivulets which Albania possesses. Some years ago one French and two Italian companies obtained concessions for the exploitation of forests in the districts of Durazzo and Scutari, but owing to the disturbed political conditions at the time none of them attempted to commence work. Later, just before the Balkan war began, an English company arranged the lease of certain forests in Northern Albania, from which, besides a variety of timber for industrial purposes, great quantities of railway sleepers could be obtained and brought to Liverpool or London at much less cost than those brought from other countries.

Macedonia.

From Macedonia great quantities of timber for all purposes can be obtained. There are, according to available information, 2,000,000 acres of forests in Macedonia, 30,000 of which are being developed on scientific lines by a company; the remainder are being unscientifically "damaged," to say the least, by charcoal burners. In the district of Grevenna a forest of some 650,000 acres produces excellent timber; 40 or 50 saws are working at various parts of the forest, operated by native workmen, producing timber for building and other purposes. The Turkish Government had a revenue of £2,000 from this forest.

Bulgaria.

Old Bulgaria possesses very extensive forests, which cover some 30 per cent. of the entire surface of the country. The State has a profitable source of revenue in them if properly cut, but so far forestry, as understood elsewhere, is non-existent in Bulgaria. A developed timber industry is unknown; this industry requires a larger capital expenditure than can be raised in the country itself. Germans and Austrians admit that a large field for enterprise is presented by the Bulgarian forests. The State owns wide tracts of wood, especially in the Varna region, where there are large stocks of oak, which hitherto have been but little exploited owing to defective means of transport; there are also great quantities of elms and ash trees. A certain amount of timber has been cut for railway sleepers and for fuel, but in more remote parts the trees have scarcely been felled at all.

In many other parts of the Balkan Peninsula there are vast forests which are not utilised, simply because the people concerned cannot exploit them. For men with enterprise who are prepared to launch out upon an initial expenditure for the purchase of machinery, the employment of labour of the right sort, and the organisation of transport, the exploitation of these forests presents an admirable opportunity.

India.

This scarcity of timber is a question to which also Indian timber merchants might with advantage give attention. It is asserted that one quarter of the total importation of timber in Baghdad comes from India. It is evident, therefore, that Indian timber can be brought to the Persian Gulf for shipment to England at cheaper rates, especially if the wood is sent in the native sailing vessels which come from India to fetch dates. With regard to the quality of the Indian wood, it is an interesting fact that the wood found in the ruined palaces of the Sassanian Kings at Ctesiphon (550—637 A.D.) and the Arab Khalifs at Samarra (860—900 A.D.) is Indian teak. At any rate if supplies of Indian timber for Europe cannot be conveniently arranged at present, they may greatly help the progress of Mesopotamia's reconstruction, for which large quantities of timber will be required.

Fiume Harbour Extensions.

To the optimism of the Austrians regarding the fate of Fiume is due the preparation of most elaborate plans for widening the harbour of that important Croatian seaport in the Adriatic; for a competent staff of engineers has been busily employed as recently as the summer of this year in this work. The Governor submitted the plans to the Government, and the works for carrying them out were to begin soon after peace was concluded. The projected extensions are estimated to cost more than 100 million kroner. The naval authorities were planning to increase the size of the harbour considerably by broadening and lengthening the present breakwaters and constructing large basins and moles, as well as new warehouses. These extensions are of great importance, for if the proposed territorial arrangement in the Slavonic States is carried out, Fiume will be one of the most, if not the most, important commercial distributing centres in the Adriatic, not excluding Trieste.

Machinery for Mesopotamia.

It is evident that Mesopotamia is developing at a very rapid rate, judging by the quantity of agricultural machinery and supplies which are being sent there both from India and the United Kingdom. India, says the *Baghdad Times*, is supplying ploughs, pumping sets, harrows, horse rakes, seed-drilling machines in large numbers, and also quantities of potatoes, peas, oats and grass seed. All these are being produced in India, so that the development of Mesopotamia is very favourably affecting Indian industries, manufactures and agriculture. England is sending grinding mills, chaff-cutters, mowers, and other agricultural machinery, which hitherto it has been found impossible to obtain from India. The gradual and efficient development of the agricultural machinery and allied industries in India we have often had occasion to point out in these columns during the past few years; and with the opportunities that Mesopotamia now offers a further incentive will be given to India's industrial expansion. Apart from India, there are also other countries which will undoubtedly avail themselves of the opportunities presented in Mesopotamia, and it is hoped that British manufacturers will not be the last to appear in the field.

LANCASHIRE COTTON.

The Strike Settlement.

(FROM OUR OWN CORRESPONDENT.)

MANCHESTER, Wednesday

The market has been generally inactive throughout the week, and producers in all quarters have again lost ground. The spinners' strike has been settled by the employers improving their previous offer. It has been arranged that the workpeople shall receive an advance of 50 per cent. on standard lists. The original application was for 40 per cent. on current wages, which meant about 66 per cent. on list rates. The operative weavers as a result of arbitration proceedings, have also secured a rise in wages of 50 per cent. on standard lists. The operatives in all branches of the industry will now receive higher wages to the extent of 110 per cent. on the wages ruling in July, 1914, when the war began. The cost to employers of the advance in wages to all operatives in the cotton industry will amount to about £180,000 a week. Nothing new can be said with regard to the Egyptian crop. Egyptian yarns have been slow of sale. Fine counts remain deeply sold, but engagements in the lower numbers are getting more irregular. Certain counts and qualities are scarcer than ever. Business in piece goods for Egypt has been at a standstill. News from Cairo has not been encouraging. Some cloth advices from India have been a little better. Inquiry has been about for China, but dealers in Shanghai are not prepared to pay Manchester prices. Complaints from manufacturers of cloth are increasing, and more looms are being forced to stand idle. There has been an absence of business in American yarns for home use. Prices when tested have been very irregular. Only small lots have been sold in export descriptions.

"NEAR EAST" MARKETS.

The Tea Trade.

Indian Outturn.

The following extracts are from the review of the tea trade in 1917-18 of Messrs. Brooke Bond and Co., Limited:—

The 1917 Indian crop exceeded that of the previous year, being 350,000,000 lb., against 345,000,000 lb. The contract of the Food Controller to purchase 66 per cent. of this year's crop is based on an estimated total outturn from North and South India of 373,000,000 lb., a far larger crop than has ever been manufactured before. With regard to the Ceylon crop we have no reliable statistics, but apparently not quite as much was manufactured as during the preceding twelve months. Malay planters, finding they could not get freight for a large crop, plucked fine, aiming at quality.

The quality of the Indian crop was in no way remarkable, the tea from most districts being generally about on a par with, and in some cases inferior to, that of former seasons. There has been no encouragement for planters to produce high-class tea. As tea can only be sold in the United Kingdom at 2s. 8d. a lb., it pays planters better to supply medium tea in large quantities than small quantities of fine tea. Exactly how much of the crop reached Great Britain we cannot say, but the quantity must have been considerable. The total stock in bond at the end of October was 113,226,000 lb., of which the greater part was Indian. The amount at the same date in 1917 was 32,131,000 lb., a stock which was unduly low. The total stock in bond on May 31, the date accepted for the end of the Indian tea year, was 103,636,000 lb., a figure never before reached in the annals of the trade, against an average of 86,783,000 lb. for the preceding six years.

Russia's Imports.

After the United Kingdom, for many years past, Russia has been India's best customer, and continued to be so for the first three years of the war. During 1917, however, Russia took 13,000,000 lb. less than in 1916, the demand from that country, which normally absorbs about 50 per cent. of the offerings in Calcutta, being practically non-existent during the latter part of the season. During the last few months Russian buyers have again operated in Calcutta, but their purchases have been very small compared to what they were before the war.

To the end of 1917 Australia took 4,000,000 lb. more than in the previous year, owing greatly, doubtless, to the embargo laid by the Commonwealth on Java and China tea. Early in the present year the embargo was partially raised, but on September 11 a proclamation was issued again prohibiting the importation into the Commonwealth, except with the written consent of the Minister of State for Trade and Customs, of tea other than that grown or produced in British Possessions.

Statistics as to Ceylon tea are almost non-existent. We know that the 1917 crop was normal, and that the quality of the Ceylon tea that has come to Great Britain during 1918, has been satisfactory, or, at any rate, up to the average, but dealers are at a loss to account for the smallness of the quality which has arrived here, particularly during the early months of the year. Imports during March were 3,000,000 lb. of Ceylon tea, against 41,000,000 lb. of Indian. It has been suggested that a great deal was taken for the use of the Army, and therefore did not appear in returns.

The Japanese are trying hard to capture some of the markets at present held by Indian tea. The Japanese Tea Manufacturers' Associations decided to spend 68,142 yen (about £6,956) on advertising in the United States, Canada, Russia, China, Manchuria, and Corea. The greater part of this sum—31,500 yen (about £3,215)—was allotted to establishing tea-houses, distributing samples, newspaper advertising, etc., in the United States. During the present century the consumption of tea has greatly increased, and British-grown tea has to a great degree taken the place of Chinese and Japanese. The Japanese are now trying to recover this lost trade.

COMPANY MEETINGS.

Assam-Bengal Railway.

The ordinary general meeting was held on December 17 at the offices, Bishopsgate House, Mr. James M. Rendel presiding.

The Chairman, in moving the adoption of the report, said: I am glad to say that, notwithstanding the unfavourable conditions imposed by the war—want of tonnage for exports and imports, shortness of rolling stock, and the continuous and heavy strain which has been thrown on a depleted staff, and has been borne by them with a cheerfulness which is beyond praise—notwithstanding these unfavourable conditions, the year shows an expansion both in gross and net receipts which is exceedingly satisfactory. This is due in the main to three causes. In the first place, the Hill Section, after having been closed for two years, was reopened for traffic in July, 1917, so that for nine months of the year we have had the benefit of through traffic over the hills. In the second place, there has been a substantial increase in the passenger fares. This was a war measure, taken at the instance of the Railway Board, with the object of restricting unnecessary traffic. The actual result was a small decrease in the number of passengers carried and a very substantial increase in the receipts from passenger traffic. The conclusion seems to be that the traffic will easily bear the increased rates. If so, it will be a question for serious consideration whether, and to what extent, these new fares should be diminished when normal conditions have returned. The third and most interesting source of increased traffic is the Mymensingh Bhairab Bazar line. This line, as you are aware, is the property of a separate company, and the Assam-Bengal Railway have undertaken to work it on what is known in India as "Branch Line Terms." Though only partially open during the financial year, it has already, in its incomplete state, developed a very considerable traffic.

As the result mainly of these three causes, the gross receipts of the Assam-Bengal Railway have risen from Rs.67,38,485 in 1916-17 to Rs.73,66,660 in 1917-18, an increase of Rs.6,28,175, or over 9 per cent. This increase is all the more satisfactory because the ratio of working expenses to gross receipts has, at the same time, fallen from 78.04 per cent. to 75.25 per cent. If, instead of confining ourselves to the Assam-Bengal Railway, we take the whole system worked by it, including the Mymensingh Bhairab Bazar Railway, we find that the total gross receipts of the system for the year amounted to Rs.76,77,127, the ratio of working expenses to gross receipts being 74.22 per cent.

I have already stated that the Hill Section, after two years arduous labour, has at length been reopened for traffic. But the work of restoration is as yet far from complete. For two important river crossings we have still to rely on temporary bridges, the provision of permanent work having been inevitably postponed by the war. Until these permanent bridges are erected our engineers will necessarily have a somewhat anxious time, especially during the rainy season. So far I am glad to say that we got through without any serious mishap.

At our last meeting I called your attention once more to the long standing controversy with the India Office on the subject of the proposed transfer to the Assam-Bengal Railway of the Dacca-Mymensingh section of the Eastern Bengal State Railway, and I told you that the board had decided, with the concurrence of the Secretary of State, to depute one of their number to India in order to lay the case in all its bearings before the Government of India and its advisers in that country. We had then to determine who should go, and in this difficulty we naturally turned to Colonel Huddleston, who had succeeded me as managing director, and who, by his long experience of railway working and his intimate acquaintance of traffic management, was peculiarly well fitted to represent the view of the board on the question at issue. I need not say that Colonel Huddleston placed us all under a great obligation in undertaking this mission, with all the discomfort, not to mention the danger, of a passage through the Mediterranean at such a time. I wish I could say that we were not disappointed at the result. Colonel Huddleston had two long interviews with the Railway Board, but, so far as he knows, he was unable to make any impression on them. There, for the present, the matter stands. It is believed that the Railway Board are making a report on the subject to the Secretary of State, with whom, of course, the ultimate decision rests. We presume that we shall, in due course, receive a copy of this report from the India Office, and we reserve our reply to it until it is actually in our hands. In the meantime, it is a satisfaction to know that, if the Railway Board is against us, the Government of Bengal, on grounds of public policy, strongly supports our view, and that outside the Railway Board, the weight of expert authority is entirely on our side. In support of this statement, it is sufficient to cite the names of Sir Francis Spring and Sir George Buchanan, both of whom have made elaborate reports dealing with the question from the point of view of the development of Chittagong Port. They both arrive at the same conclusion. They both hold—Sir Francis Spring as the adviser of the Chittagong Port Trust, and Sir George Buchanan more recently confirming him as the adviser of the Railway Board itself—that the Port of Chittagong is the natural outlet of the whole of the vast tract of Eastern Bengal and Assam which lies to the east of the Brahmaputra and constitutes its hinterland, that, by a moderate expenditure of public money judiciously applied, it can easily be converted into a harbour of really first-rate importance, and that the obvious and reasonable way to secure its development is, as we also contend, to place the whole system of railway communication between the port and its hinterland under the control of a single administration, viz., the administration of the Assam-Bengal Railway.

Lieutenant-Colonel G. Huddleston, C.I.E., V.D., seconded the resolution, which was unanimously adopted.

COMPANY NOTES & REPORTS

Ceylon and Indian Planters.

The report of the Ceylon and Indian Planters' Association for the year ended June 30 states that after paying debenture interest and all fixed charges there is a balance of £3,078, which, with the amount brought forward of £13,622, less excess profits tax £5,415, makes a total of £11,285. From this has been deducted the Preference dividend for the year, depreciation, etc., and the interim dividend on the Ordinary shares at 5 per cent., paid in May last, amounting to £4,597, leaving £6,687, plus interest and gain in exchange, £1,097, making £7,784. It is proposed to pay a final dividend on the Ordinary share capital of 10 per cent., making 15 per cent. for the year, £4,400, and to carry forward to next account (subject to return of excess profits tax) £3,384.

Bibi Eibat.

The report of the Bibi Eibat Oil Company for the year ended March 31 states that the debenture issue (originally £62,500) was further reduced by £5,050, and the amount outstanding is now £45,450. The gross income, chiefly consisting of interest accrued on loans to the Russian company, amounted to £13,245, of which general charges absorbed £4,264, leaving £8,980. Against this there has to be set £7,000 for interest and redemption of debentures and £359 for loss on realisation of investments, leaving £1,622. Adding £18,964 brought in, there remains £20,586, which it is proposed to set aside to the formation of a general reserve fund. The accounts are based on the assumption that the Russian company will ultimately be in a position to discharge its obligations to the English company, amounting to £109,537. The gross production of crude oil during 1917 is estimated at 2,663,000 poods (42,952 tons), in comparison with 3,012,000 poods (45,581 tons) for the previous year. The directors have reason to believe that the reports which have appeared in the public Press regarding damage to the oilfields during the September disturbances in Baku have been greatly exaggerated. The directors have received no communications from Mr. Walton, the general manager at Baku, since July. Mr. Walton mentions that the Government had decided to concentrate the working of the various oil undertakings into groups, one of which was that of Nobel Bros., and to this group the properties of La Société de Naphte de Bibi Eibat were to be attached as from July 18, 1918.

New Schibaieff.

The report for the year ended April 13, of the New Schibaieff Petroleum Company states that in the present unsettled condition of Russia it has not been possible for the auditors to examine the books of S. M. Schibaieff and Co., and no accounts have been received from that company dealing with the year 1917-18. The gross production of S. M. Schibaieff and Co. for the twelve months ended March 31 (O.S.) amounted (February and March, 1918, being estimated) to approximately 3,677,000 poods (59,306 tons), compared with 5,554,065 poods (89,582 tons) for the previous year. The net output, after deducting royalty and quantity used for fuel, should be about 2,143,300 poods (34,569 tons), compared with 3,309,800 poods (53,384 tons). The decrease is mainly due to the difficulties of working the fields, especially since the seizure of power by Bolsheviks, and the fact that two of the best producing wells in the Bibi-Eibat plots had temporarily ceased to yield and were being repaired. Since the downfall of the Kerensky Government the conditions under which oil companies have been obliged to work have become increasingly difficult; S. M. Schibaieff and Co., in common with other firms, have had to pay exorbitant wages, allowances, etc., for inefficient work, while it has been almost impossible to obtain supplies of materials even at the excessive prices ruling. On June 20, 1918, a decree of the Soviet Government was promulgated nationalising the whole of the oil industry in Russia. This decree has undoubtedly taken effect in the case of S. M. Schibaieff and Co. Claims for the property seized under this decree, as well as for all other loss and damage, will be lodged with the Foreign Office, and every step taken to protect the shareholders' interests and obtain restitution and full compensation.

Mocha Tea of Ceylon.

The report of the Mocha Tea Company of Ceylon, Ltd., for the year ended June 30 last, states that the profit on the year's working, after taking into account Rs.12,910.06 for loss on exchange, amounts to Rs.130,097.91, from which has to be deducted Rs.434.86 shortfall on the previous season's crop, and added Rs.9,791.41, the balance brought forward from last season, making a sum of Rs.139,454.46 to be dealt with, out of which a dividend of 10 per cent., absorbing Rs.45,000, was paid in July. There now remains a balance of Rs.94,454.46. The directors recommend a final dividend of 20 per cent., making 30 per cent. for the year, carrying forward Rs.3,454.46.

Kegalle Rubber and Tea.

The report of the Kegalle Rubber and Tea Company for year ended June 30 states that profit, after paying debenture interest and writing off Rs.2,287 for loss on exchange, amounts to Rs.267, which is carried forward.

Russian Petroleum.

The directors of the Russian Petroleum Company announce that they are unable to submit accounts for 1917 owing to the internal affairs of Russia stopping effective work by the company since the outbreak of the revolution in the early part of 1917. From information which has reached the company in London it would appear that the gross production of crude oil during 1917 was 2,310,127 poods, as compared with 3,040,867 poods for 1916 and 4,064,444 poods for 1915.

East India Distilleries.

At the Ordinary meeting held on December 17 the Chairman, Mr. E. S. Ormerod, stated that the accounts had not arrived from

THE ALEXANDRIA WATER COMPANY, LIMITED

INTERIM DIVIDEND.

NOTICE IS HEREBY GIVEN that an INTERIM DIVIDEND of FOUR SHILLINGS per £5 share on COUPON No. 60 is payable on and after the 15th December, 1918, at Messrs. Barclays Bank, Limited, 1, Pall Mall East, London, S.W., and 54, Lombard Street, London, E.C., or at the Anglo-Egyptian Bank, Limited, in Alexandria, upon the making of a declaration as to ownership in the form required by the above Bank, form of which will be supplied upon application.

Dated Alexandria, 8th November, 1918.

By order of the Board,

H. R. C. BLAGDEN,

Managing Director.

India. The meeting would be asked to sanction the payment of the usual dividend on the preference shares and to transact other formal business. A cablegram from Madras showed that the profits for the twelve months were larger than those of the previous year. The resolution for the adoption of the report was carried unanimously, and the meeting was adjourned to a date to be fixed by the directors.

Bombay Baroda Railway.

The directors of the Bombay Baroda and Central India Railway Company, in their report for the half-year ended September 30, which includes the detailed accounts of the working of the railways in India for the six months ended March 31, state that the total length of the railways worked was 3,822.63 miles as at March 31. Capital expenditure since December 31, 1911, up to March 31, 1918, including suspense accounts, but excluding payments on account of liabilities incurred prior to January 1, 1912, has amounted to Rs5,13,46,420. The funds to meet this outlay have been advanced by the Government to the extent of Rs4,93,36,420 and by the company to the extent of Rs20,10,000, and these amounts constitute temporary additions to the preferred capital of the Secretary of State and of the company respectively. For the half-year ended March 31, coaching traffic shows an increase of Rs12,27,957 on the broad gauge and of Rs2,91,205 on the metre gauge, goods traffic a decrease of Rs16,321 on the former and an increase of Rs2,07,210 on the latter, sundries an increase of Rs13,434 on the broad gauge and of Rs1,22,565 on the metre gauge, and telegraph an increase of Rs4,661 on the former and of Rs5,667 on the latter. For the whole year 1917-1918 the total net earnings amounted to Rs4,50,92,641. From the company's share the stockholders received a total payment, including the guaranteed interest, of 6½ per cent. on the capital stock, comparing with 5¾ per cent. for 1916-17, 5 per cent. for 1915-16, 4½ per cent. for 1914-15, 4¾ per cent. for 1913-14, 4½ per cent. for 1912, 4 per cent. for 1911, and with 3½ per cent. for each of the preceding five years. As the profits are calculated on the results of working for the complete financial year, no statement of profits for the half-year ended September 30, 1918, can be made, but information from India justifies the directors in recommending the payment in January next of an interim dividend in respect of the current financial year of 10s. per cent. in addition to the guaranteed interest then due, and a resolution authorising these payments will be submitted to the meeting. Meeting, Cannon Street Hotel, E.C., to-day (Friday).

Dividends, Payments, etc.

Assam Frontier Tea.—Ad-interim dividend of 3 per cent. on Preferred shares, payable 31st instant. Preferred share register will be closed from 17th to 31st instant, inclusive.

The directors of the Rohilkund and Kumaon Railway Company recommend a final dividend for the year ended September 30 of 3 per cent., together with a bonus of 3 per cent. on the ordinary stock, making 10 per cent. per annum, payable, less income-tax at 4s. 9d. in the £, early in February.

The directors of the Alliance Tea Company of Ceylon announce an interim dividend of 5 per cent., less income-tax, on account of the year ending 31st instant, payable January 6.

The directors of Hornsey Tea Estates Company, in their report for the year ended June 30 last, state that the gross profit is £2,045, and the directors propose a dividend on the ordinary shares of 5 per cent. (less tax), carrying forward £2,088.

The directors of the Jetinga Valley Tea Company have declared an interim dividend of 2½ per cent. (being at the rate of 5 per cent. per annum), free of income-tax, on the ordinary shares, payable 31st instant.

The directors of the Jokai (Assam) Tea Company have declared an interim dividend for 1918 on the ordinary shares of 5 per cent., less income-tax, payable on and after January 9 next.

Malta Tramways (In Liquidation).—An extraordinary meeting will be held at 4b, Frederick's Place, Old Jewry, E.C., on the 27th instant, at 2.15 p.m., for the purpose of appointing Mr. R. H. Parker liquidator in place of Mr. J. R. Tulloch, deceased.

The directors of the Bandarapola Ceylon Company have declared an interim dividend of 4 per cent., less tax on account of the current year, payable forthwith.

The directors of the Imperial Bank of Persia announce a dividend for the half-year ended September 20 last of 5s. per share, free of income-tax, payable on and after 30th instant.

Chartered Bank of India Australia and China.—At an extra-ordinary meeting on December 18 the resolution for increasing the capital from £1,200,000 to 2,000,000 was carried unanimously.

An interim dividend of 5 per cent. (less income-tax at 5s. 9d. in the £) in respect of the year ending December 31, 1918, has been declared on the ordinary shares of the Egyptian Markets, Limited, payable on and after December 19, at the Anglo-Egyptian Bank, 27, Clements Lane, London, E.C.4.

Oil Outputs.

Anglo-Egyptian.—Gemsah production for week, 20 tons (previous week, 21 tons); Hurgada, 3,363 tons, against 4,481 tons.

British Burmah Petroleum.—November production of crude oil by this company and the Rangoon Oil Company amounted to 79,725 barrels.

EGYPTIAN MARKETS.

The returns of the Egyptian Markets, Ltd., for the week ended December 5 were: Cattle markets, £734; general markets, £537; total, £1,271; total for year, £49,890. The figures for the corresponding week in 1917 ended December 6 were: Cattle markets, £294; general markets, £501; total, £795; total for year, £52,014.

MOTOR CARS FOR INDIA.

The Overseas Department of Trade of the Foreign Office and Board of Trade states that a cable received from India announces the removal of the prohibition of the importation of motor-cars into India. The removal takes effect immediately.

SUEZ CANAL RECEIPTS.

The traffic receipts of the Suez Canal were as follows on the undermentioned dates:—December 9, 10, 11, 12, 960,000 francs, against 1,220,000 francs.

The Brussels Bourse was to reopen on December 16.

Up to the 7th inst. Indian Treasury bills were sold to the following amounts:—October 16, 1917, to March 31, 1918, Rs.43,50,00,000, April 1 to December 7, 1918, Rs.55,19,60,000; bills discharged or discounted, Rs.70,38,00,000; bills outstanding on December 7, Rs.28,31,60,000.

ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Street, Wednesday.

This has again been a very quiet week, and business has almost been at a standstill, excepting for a certain amount of activity in one or two specialities.

In Government stocks Egyptian Unifieds have dropped ½ to 88¼, round which price there are still some buying orders in the market. The 3½ per cent. Prefs. also are nominally half a point down at 76½.

In Bank shares Nationals are ⅛ easier at 21⅛, and Agriculturals have relapsed 3-32 to 6 25-32. Some business has again been done in Agricultural Prefs. round 7⅝. Anglo-Egyptian Banks have recovered ¾ to 16¾. Land Banks are about unchanged at 7xd.

In Railways Delta Lights are ⅛ harder at 8⅜.

Amongst Land shares Aboukirs are 6d. higher at 24s. 6d. Some small business took place in Allotments round the current level; but Beheras are again ¼ easier at 13¾. Delta Lands and New Egyptians are both 3d. lower at 15s. 9d. and 21s. 9d. respectively; but there has been a very fair amount of business in the shares of the latter company, about which the most satisfactory reports continue to come from Egypt. A feature in this market has been the jump of 13-16 in Sudan Plantations, from 3⅛ to 3 15-16, on the issue of a most satisfactory report and a dividend of 25 per cent., against 10 per cent. last year.

In Miscellaneous shares Salts and Sodas are 1-16 lower at 77s. 6d.; but, on the other hand, there has again been a very strong demand for Khedivial Mails, and the price has been pushed up 12s. 6d. to 90s.

In Greek securities the market has remained firm, the only change worth recording being a rise of half a point in the 5 per cent. 1890 Loan to 75xd.

Oil Shares.

The market has been far from buoyant. Anglo-Egyptians "B" are unchanged at 2 11-16, as are British Burmahs at 13s. 9d., and Anglo-Persian Prefs. at 25s. 6d.

Roumanians have again been weaker. Roumanian Consols are 6d. lower at 15s. 6d., and Trajan Roumanians at 9s. 7½d. are 10½d. down.

Russians have been lower on the general outlook. Bakus are unchanged at 4s. 7½d., and Russian Generals and Ural Caspians remain at 1⅛ and 1 9-16 respectively. Russian Petroleums are 3d. lower at 2s., and North Caucasians are 1-32 down at 1¼.

Paris Bourse.

Suez Canal shares are again lower at 5405 francs, a fall of 45 francs. Other prices are Egyptian Unifieds 92.25 (against 94.50), Serbian 1895's 61.50 (against 61.90), Turkish Unifieds 71 (against 71.40), Banque d'Athenes 103 (against 101), Credit Foncier Egyptiens 782 (against 785), Land Banks of Egypt 201 (against 191.50) and Ottoman Banks 527 (against 535).

TENDERS INVITED.

Tenders are invited by the Calcutta Corporation for the supply and delivery for twelve months of lighting stores, including inverted incandescent mantles for street lighting, complete inverted incandescent burners, glass cylinders for inverted burners, and inverted incandescent gas arc-lamps. (Spec., 2 rupees, Central Record Keeper, Central Municipal Office Buildings.) March 10.

BRITISH TRADE CORPORATION

(Incorporated by Royal Charter),

13, AUSTIN FRIARS, LONDON, E.C.2.

Telegrams: "Trabanque, London."

CAPITAL: Authorised - £10,000,000 Subscribed and Paid Up - £2,000,000

Governor - THE LORD FARINGDON.

Manager, A. G. M. DICKSON. London Manager, P. C. WEST. Secretary, G. De B. BROUNLIE.

The Corporation has been established with the object of developing the Trade of the British Empire in every part of the world, and brings to the notice of all interested that it is prepared to grant financial facilities to British Manufacturers and Merchants for the increase of their Import and Export Trade.

It will be prepared to assist in opening up new channels for enterprise, and will afford financial facilities for the enlargement of works and the extension of plant.

The Corporation is appointing representatives in the chief cities of the world, and will open credits at home and abroad. It invites inquiries, and will endeavour where necessary to put expert advice at the disposal of correspondents regarding the financing of their foreign and overseas business. Moneys received on fixed deposit. Terms on application.

NOTES OF THE WEEK.

In his conception of the Allied Conference on peace terms President Wilson excludes the possibility of a master mind being able to settle the problems of to-day. The Allies, he points out, have all got to put their heads together and pool everything they have for the benefit of the ideals which are common to them all. He inveighs rightly against the "bosses" of the Congress of Vienna, who were concerned with their own interests and with those of the classes they represented rather than with the wishes of their peoples. But the event will prove, we imagine, that the Conference will need, if not a master mind, at least a master will. The various appeals that have already been addressed to the United States President are in some measure an indication of the general desire for a definite decision. True, the applicants all hope for a decision in their favour; but if the alternative of a compromise and the perpetuation of the present uncertainty were placed before them, there can be little doubt which they would select. It is essential that the great nations, as comrades of the less powerful, should share the difficulties and responsibilities presented by the successful termination of the war, and where rivalries exist between the smaller States the part that the former will have to play is to act as arbiters and to see that their decisions are carried into effect.

With M. Bratianu again at the head of the Government a definite landmark has been reached in the settlement of Roumania's affairs. The new Prime Minister is leader of the National Liberal Party, and as, contrary to the first report, no place has been found for M. Take Jonescu, the chief of the Conservative Democrats, we must infer that the decision has been taken to form a single party administration. It is no small tribute to the political sagacity of the nation that, in spite of the ordeal through which it has passed, its confidence in those who declared war on its behalf has not been shaken. If Roumania had kept out of the war she might have escaped military defeat, but she would have experienced a political and economic subjection to the Central Powers that would have been even more humiliating. Not only would she have lost her self-respect, but she might have forfeited some of the loyalty and affection on which she could always rely from her kinsfolk in Transylvania.

The establishment of a Greater Roumania would seem to be proceeding with a smoothness that the race, in view of all its sacrifices, has thoroughly deserved. In Transylvania there was never any doubt that the Roumanians would vote unanimously for incorporation in the Roumanian kingdom. The initial steps to this end having been taken, it might have been thought that there would be no need for Transylvania to be represented separately at the Allied Conference in Paris. But until the formal act of union has been consummated Transylvania enjoys an independent existence. Consequently the new Roumanian Cabinet is representative of the kingdom only. As an integral part of the former Dual Monarchy the Roumanes of Transylvania have the right to place the Conference officially in cognizance of their act of self-determination.

Incorporation in the Kingdom of Roumania will by no means entail the effacement of Transylvania. In the past several of Roumania's prominent men have been drawn from the other side of the Carpathians, and it is evident from the proceedings of the national gathering at Sibiu that the Transylvanians hold strong views on political questions. Their democratic leanings would make short work of any attempt to retain one moment longer than was absolutely necessary the restricted franchise that has hitherto done duty in the kingdom. In the same way, if we may judge by the degree of political autonomy that they propose to give alien communities in their own midst, their influence will be exercised in favour of the complete emancipation of the Jews. Fortunately, the political and social reforms of which Roumania has been for so long in need will be the first concern of the new Government. But it will be of interest to watch the effect that the inclusion of Transylvania will henceforth exercise on the constitutional development of Roumania.

The tendency towards what is known in mining-camp phraseology as claim-jumping shows signs of growing in the Near East. A report, which, as it is said to emanate from Budapest, must be accepted with reserve, states that the Italian National Council in Fiume has resolved to found an independent Republic, comprising the city, the harbour, and surrounding country, and that the first President of the new Republic has been elected. Fiume is claimed for the Southern Slavs, but has been occupied by Italian troops. It has less reason than Trieste for being a free port, but it is conceivable that the inhabitants, to avoid international complications, might decide among themselves in favour of an autonomous Town-State. Such a step, however, could only be taken as the result of the free and deliberate choice of the people, and the plebiscite should not be

Digitized by Google

held while troops are in occupation of the town. Republics are greatly in favour these days, and after examples of the big and the little the world is being treated to lesser ones, with the prospect of their being multiplied *ad infinitum*. Whether they will all survive the war settlement, when something like finality comes to be given to the map of Europe, remains to be seen.

Before long plebiscites will have to be the order of the day throughout the Continent. A number are overdue in Russia; the Southern Slavs will, no doubt, call for many, if Italy maintains her objections to the boundaries claimed for the Yugoslav State; Montenegro will require one, if an attempt should be made to invest the Podgoritza gathering with the status of a constitutionally elected assembly; there can be no other satisfactory solution for the settlement of the Albanian question, especially in the south. In every instance an indispensable preliminary to any voting should be the withdrawal of all troops. It would also be more satisfactory if arrangements could be made for the plebiscites to be held at least under the auspices of French, American, or British officials, with the consent of all the parties concerned. In the case of Albania, as neither the Italians nor the Greeks would consent to see the voting controlled by the other, it will be necessary to place the officials of one of the other countries named in entire charge of the process of self-determination. However great the inconvenience of this method, it has to be remembered that failure to arrive at an equitable settlement in regard to any one locality is almost certain to sow the seed for continued unrest in that part of Europe.

The French Prime Minister has made a very shrewd contribution to the settlement of the controversy between the Italians and the Yugoslavs. He points out that there is an interest superior to all extension of territory—in Italy's case to have good friends on the other side of the Adriatic—and asks the Italians to consider that an equitable accord between divergent interests must come before the old-fashioned tradition of the indefinite extension of territory. This principle will also have to be applied to the settlement of Nearer Asia, where new sentiments of solidarity among the Arabs will have to be reckoned with by the Allied Powers. Any delimitation of spheres of influence must be careful not to detach from one another tribes that show any desire to work together. Thus, if the inhabitants of the Mosul district want to be associated with Baghdad, they must not be joined for administrative purposes to Aleppo. In the same way, the Powers will not wish to encourage an Irredentist spirit among the Arabs of Damascus through the failure to accord them the same freedom for administrative development as the people of Baghdad, or to respect any sense of solidarity with the Hejaz that they may now feel.

Indian politics have been receiving but scanty attention from the Press in this country during the last few weeks, and we cannot honestly say that the British public are complaining of the neglect of a topic in which they are not for the moment keenly interested. A certain amount of campaign literature has, however, recently come into circulation, and we have before us three pamphlets which at any rate furnish material for thought. The views of the backward classes of Bombay are presented by the Indo-British Association, Dr. Nair is making a direct appeal to British Labour, and Mr. Dawlat Ram Kalia, of Ferozepore, writes from the point of view of the peasants and workmen of the Punjab, so that in the aggregate our authors claim to represent a substantial portion of India, and they give us a view which is remarkable chiefly for the fundamental unity underlying peculiarities of status and locality.

The sentiment which, in these pamphlets, unites Bombay, Madras, and the Punjab is a profound distrust of the classes from which most Indian politicians have hitherto been drawn. Its expression is necessarily distasteful to the classes in question, and the pill is not gilded by any attempts at euphemism; but politicians must expect hard language, and, language apart, the sentiment is important, because it springs from one of the ugliest facts of Indian life—the long-standing antagonism between the masses who work and the classes who live on the fruits of that work. "The real fight in India is between the dumb masses and the few educated"; "the working classes will get no sympathy or help from their caste superiors"; such statements may be objectively true or they may not, but the important point is that they represent accurately the mental attitude of a very large part of India.

Indian problems would be very much simpler and political discussions would be very much pleasanter if this feeling of antagonism did not exist; but there it is, and at the present juncture it would be fatal to ignore the ugly fact. It is a legacy from an indefinite number of centuries, during which it was better to be a parasite than a producer; the old *régime* was characterised by ruthless economic exploitation, and the masses are opposed to any changes which, in their eyes, appear likely to restore that evil tradition. The antagonism is of old standing; the new facts of the situation are, first, its transfer from the sub-conscious to the conscious plane, and, second, the courage which enables it to find expression. These new facts are pregnant with hope to those who can take a long view, but they are exceedingly awkward for the men who have to solve the problems of the moment.

These problems centre on the constitution of provincial Legislatures sufficiently representative to assume responsibility for an increasing measure of the work of government. In the existing state of feeling, which is certain to wax before it begins to wane, the Legislatures must represent the illiterate masses or they will be unable to bear the burden of responsibility, and so we come to the position so often pressed in these columns: that the work of Lord Southborough's Commission is fundamental, and that until we know the franchise we can form no judgment on any constitutional scheme. The solution may be found in communal representation, or in some other adaptation of electoral machinery; but if the feelings of the masses should be excluded from the councils at the outset, we see no prospect of anything but an increase of the existing antagonism until the disastrous omission is rectified.

One other pamphlet on our table is important from a somewhat different point of view. The Indo-British Association have issued an epitome of the Rowlatt Report, and we hope the effort will be successful in spreading knowledge regarding the actualities of what it is the fashion to speak of as political crime, actualities which have a very definite bearing on the constitutional problems of the moment. We could wish the compiler had found it possible to exclude some of the technical expressions, which are likely to puzzle the ordinary elector, and perhaps even the ordinary member of Parliament, but apart from this drawback the epitome is a useful piece of work, and we trust that it will be widely read by those who for any reason are unable to study the report itself.

Perhaps some of our readers may ask whether such topics as these are appropriate to the closing week of a year during which the clouds of war have parted, and India, with the rest of the Empire, has been privileged to watch the dawn of peace. We have not written in forgetfulness of the season. No lesson of these nightmare years stands out more clearly than the need of facing facts, however ugly they may look. It was by facing facts that India was enabled to render such material help to the cause of civilisation in the mountains of Palestine and on the plains of Mesopotamia, and it is by facing facts that she can best prepare herself for the new and larger life upon which she hopes to enter in the coming year.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, December 2.

His Highness the Sultan.

His Highness the Sultan gave a luncheon this week at the Abdin Palace in honour of General Sir Edmund and Lady Allenby. The guests invited included the Ministers and the Senior British Officers of the Staff. His Highness also received a visit at his private palace from the Grand Duke Dimitri of Russia, which he returned later on at the Russian Agency; and he attended the races this week at Heliopolis, the first time since the opening of the winter season.

General Allenby.

General Allenby continues to be the recipient of attentions from the European and Egyptian Communities. This week he was entertained by Mr. Smyrnow, the Russian Minister, at a reception given in his honour at the Russian Agency, to which were also invited the High Commissioner and Lady Wingate, His Excellency Hussein Rushdi Pasha, Prime Minister, and the Ministers, the Grand Duke Dimitri, and the Diplomatic Corps. The gallant Commander-in-Chief was also the guest of honour at a dinner given by the Syrian Community at their club in Cairo; delegates from all the other Syrian Communities in Egypt attended and very cordial speeches were exchanged, a notable instance being an eloquent oration by Dr. Farès Nimr, the well-known Syrian journalist and politician. General and Lady Allenby have now proceeded to Alexandria, where he is to review the troops and to be entertained by the British Community.

The Influenza Epidemic.

Spanish influenza is still ravaging the country, and it is feared that the cold weather, which has now set in, will aggravate the situation by exposing people more to complications, such as pneumonia, etc. The Public Health authorities are hard at work trying to combat the epidemic, but the mortality is still very heavy, especially among the native population. As a precautionary measure it has been decided to suspend funeral processions and ceremonies in all but the large towns. It was also proposed to close the schools, but after consideration it was decided for more reasons than one that it was preferable to keep them going; and so far only in the cases of certain categories of schools, especially those not directly under State supervision, has any order in this respect been given. A large quantity of serum has been ordered from Europe, but it has not yet arrived, and until it comes no bacteriological preventive measures can be taken.

Prisoners of War with the Turks.

More of the officers who were prisoners with the Turks have now landed in Egypt. They report that there have been many cases of utter brutality on the part of the camp commandants, and that the treatment has in certain instances been so disgraceful that the Turkish authorities themselves brought the men responsible to book for their actions. During the past year the treatment of the officers improved somewhat, but that of the men has been consistently bad throughout.

The Fuel Question and the Water Supply.

The Fuel Committee presided over by Mr. P. M. Tottenham, which has been dealing with the question of fuel, has issued a timely warning to cultivators with regard to the prospects of water next year. It points out that the country has been favoured during the last two years with an ample summer water supply, which, together with the exceptional measures taken by the Irrigation Department and the extended use of cotton sticks, vegetable refuse, and oil-fuel, has made it possible to give an adequate supply of water to all crops. The water supply of the coming summer will, however, be much smaller than that of the last two years, probably below the average of the previous ten years; and in view of the lower levels which will be maintained in canals, owners of all lifting machines are advised by the Committee to get their plant put into working order, to collect and store all available fuel, such as cotton sticks, wood, rice-straw, and vegetable refuse, to adapt the boilers of steam engines to burning oil fuel, and to make arrangements for its supply. At the same time the Committee is careful to point out that this warning must not be understood to imply that the coming summer water supply will necessarily be much below normal, but that it does, nevertheless, imply that considerably less free flow irrigation will be possible, and that higher lifts will certainly be involved from May-July, 1919, than in recent years, though it is possible that the position will be very materially improved by the early arrival of the 1919 flood.

The reminder that Egypt has been very well favoured by the water supply during the past two years is quite correct, and the fortunate position of the country in respect of fuel is perhaps not as generally realised as it should be. Normally Egypt imports about 1,700,000 tons of coal annually, of which a large portion is required for industrial and irrigation purposes. The good summer water supply has meant that less lifting has had to be done, and thus less fuel has been required for the irrigation and pumping engines, etc., whilst the extended use of vegetable refuse as fuel has materially reduced the quantity of fuel required in these circumstances for irrigation purposes, which had to be imported from abroad. When one considers that, whereas during 1912-1913 the total coal imports came to 3,360,000 tons, worth £E3,600,000, they aggregated only 2,380,000 tons with a value of £E10,900,000 during the three war years 1915-1917, one can understand that the direct saving on the country's fuel bill has been enormous, even allowing for the increase in the amount of cotton seed crushed in the country since the war, from which, in addition to domestic oil, a large quantity of cake has been obtained for fuel purposes. At the same time the real value of the combination of these two important factors is still greater than it would appear; for it is a moot question whether the country could have obtained, even at a price, the whole quantity of coal it normally requires, in which event it would not have been possible to put as much of the cultivable area under cereals and cotton as has been done these past two years. In short, the country has been saved several millions sterling.

With regard to the use made of vegetable refuse as fuel during the past two years, the question presents itself whether, once coal and oil fuel become more moderate and more accessible, the agricultural classes will revert to them or keep to vegetable refuse, which they put to no extensive economic use before the war. The main difficulty appears to be connected with collection; but now that a device has been contrived for the production of producer gas for consumption in furnaces, which can be easily converted to the consumption of gas

and can just as easily be converted back for oil-fuel, it is to be hoped that the people will generally make use of the almost inexhaustible stock of vegetable refuse which lies unutilised, and by reducing the quantity of foreign fuel which has to be imported annually thus lessen the dependence of Egypt, in this respect, on foreign sources, and decrease the amount which has to be sent out of the country either in gold or produce to pay for the fuel imported.

INSCRIPTION OF PHILIP THE TETRARCH

A discovery of much historical and biblical interest in the Near East has now been made known in the 4th Divisional volume of the reports of the Princeton University Expedition to Syria, in the shape of an inscription in Nabatean characters, in seven lines, found engraved upon the pedestal of an altar examined at Sic, in the Southern Hauran, East of the Jordan. This text refers to Philip (II.) the Tetrarch, who is mentioned in Luke iii. 1, and who must not be confounded with the Herod of verse 19, of the same chapter, and of the other gospels. This Philip was one of the well-known Herodian family so much connected with Syria and Palestine about the commencement of our era.

The text of the inscription is as follows:—"In the year of our lord Philippos there was made by Witr, son of Budar, and Kasin, son of Sudai, and Hanu'el, son of Masak'el, and Nuna, son of Garm, this altar of the statue of Galis, son of Banat."

This is the first time that a mention of the Tetrarchy of Philip has occurred in any Oriental inscription, and consequently it is of importance. The southern Hauran, where it was found, was presented to Herod in B.C. 23, and is described by the classics as forming part of a country denominated Auranitis. Inscriptions during Herod's reign are dated according to the Seleucidan era, Philip II. was the son of Herod by a Jerusalem lady, named Cleopatra; his wife was named Salome, she was daughter of Herodias. Philip's sovereignty extended over Gaulanitis, Batanea, Traconitis, Auranitis, and Paneas. His rule lasted from B.C. 4 to the twentieth year of Tiberius, A.D. 34. Josephus tells us he was a lenient ruler and popular with his people, who accordingly dated their documents by his regnal years, as did the neighbouring Nabateans by their kings at Bosra and Petra. This new inscription completely confirms the historian.

The existence of Philip's tetrarchy and the comparative independence it enjoyed are confirmed by its coinage, which bears, in Greek, the legend Philippos Tetrarch; also as far as present known specimens are concerned the representation of a tetrastyle temple. They commence with Philip's twelfth regnal year. Upon the other face, which may be termed the Roman one, are portraits of Augustus or Tiberius. The temple was supposed to be the famous edifice Herod I. erected at Paneas, a city whose name Philip changed to Cæsarea Philippi, in honour of Cæsar; but De Saulcy considered the building to be the elaborate tomb Philip constructed for himself at Beth Saida of Galilee, which he renamed Julius. As the temple is on Philip's earliest known coin this seems improbable.

JOSEPH OFFORD.

THE NEW ROUMANIAN CABINET.

The following message, which has been much delayed, was sent off by Reuter's correspondent in Jassy on December 14:—The new Roumanian Cabinet has been constituted as follows:—

M. Bratiano	Prime Minister and Foreign Affairs
M. A. Constantinesco	Industry and Commerce
General Vaitolano	War
M. Saliqa	Public Works
M. Buzdagan	Justice
M. Osdar Kiriacesco	Finance
M. Duca	Public Instruction
M. Marsezoe	Interior
M. Enesco	Agriculture
M. Inoculez, Dr. Cingureano, M. Pherekyde	Ministers without portfolio

In submitting to-day the policy of the new Government, M. Bratiano said that foreign policy would aim at the complete realisation of the rights of the Roumanian nation, which were based on their great war sacrifices. Internal policy would direct all its efforts to the immediate application of the two reforms recently introduced—namely, universal suffrage and the breaking up by way of expropriation of large estates and the distribution of land thus secured among the peasants.

All genuine, in pots like this.

YAGHOURT.

THIS HEALTH-GIVING FOOD SHOULD BE TAKEN BY ALL.

Recommended by the leading medical faculty of to-day.

Suitable alike for the invalid and the healthy.

Obtainable at HARROD'S, SELFRIDGE'S and all the leading Stores.

ROUND THE BADGNAK.

Women carol singers are below the window. In the darkened room we sit by the flickering light of the fire on the hearth and listen. It seems ages ago since carols were sung at Christmas by women voices. Out in the trenches we hummed tunes or stood pensive, trying to keep warm.

"Peace on earth!" There is rhythm even in dissonance, and music (at Christmas) in street voices. The words, moreover, are, or would, seem to be so appropriate. The whole scene inspires in a contemplative sort of a fashion, and thoughts wander to other times and other people.

"Peace on earth!" What is happening this Yuletide in the stricken hamlets and towns of Serbia the Old, fortress and bulwark of the Southern Slavs? Are peasants worshipping Daybog, the Sun God, in their old quaint way, just as in our holly and mistletoe customs we live again in the superstitions of the Druids? Does the wandering minstrel, the gousslar, tarry beside the burning Badgnak and sing of Marko, the Serbian Cid, and of Sharatz, his immortal charger, both of whom were last seen (to my knowledge) on that memorable day in the year 1913 when, on the plains of Kumanovo, they led the Serbian troops in a victorious charge on the armies of Sultan Mahomet V.? Perchance, however, the undying hero accompanied his valiant Serbs into exile, bringing up the rearguard of the fugitives under Putnik (what has been General Putnik's fate?) across the snows and ice of the White and Black Mountains unto the island of Corfu. More likely still, when the bugle sounded the advance among the cliffs of the Vardar last autumn, Marko and Sharatz, and even the veela Raviyoyla, were there—figures like wraiths of mist of an early morning in dampened meadows—and hurled themselves on the Bulgars, driving them from their stolen forts and fastnesses. Surely the blind gousslar, who saw all these glorious deeds, is chanting their praise in some forgotten Serbian village to the elders seated around him in the gloaming, crumbs of the thesnitza cake on the table, and a carpet of strewn straw on the earthen floor. At least, I like to think that it is so. Besides, why should Marko *not* have been in at the finish? Is he not everywhere in Serbia, in every cottage, and in the thoughts of all the men and women? Nothing more natural, therefore, than that he and his white charger should have been seen time and time again in the hills of Monastir, doing sentry go and on scout duty, leading the brave and firing them with enthusiasm, killing the faithless enemy and speeding the valiant to their own particular dwelling place in the heroes' heaven. A mere matter of imagination—but the Serbs are highly imaginative. For them romance is not a sickly dream, but a dream of life made beautiful, and they quaff deeply and wisely in the glorious epics of Dushan the Mighty and Milosh Voïnovitch, of Roksanda the Fair and the Beautiful Iconia, of the building of Skadar and the death of Sultan Amurath on the plains of Kossovo.

Alas, however, for the old-time forgotten village! Methinks it has been wiped away by the Hun, the Ungar, and the Bulgar, and that in few, very few, homely spots will the maid proceed on this Christmas morn to the public well and throw into its gurgling water a handful of corn or a sprig of basil. Few will be the festivals of the Bojitch, and fewer still the families able to kill the traditional sucking-pig and roast it on a spit over an open fire. But the wishes for a happy Badgni dan will be as hearty as ever, and the Patriarch's blessings on homestead and homelands no less fervent than they were wont to be in those dim and distant days before the first Balkan war came to the valleys of the Morava and Struma, a tiny forerunner of the war of the Rhine, the Po, and the Danube.

The future? Who knows what the future has in store for the dwellers in the realm of the Southern Slavs? But this we do know, that the brave people who have fought and suffered so much in this terrible war will not be downcast on this Christmas Day, this Badgni of theirs. On the contrary, they will be as hopeful as Marko ever was, and many a father will console his destitute family by promising a solemn and well-stocked Yuletide when next the shortest day of the year comes round and the Sun God has to be appeased for his seeming disfavour. The good wife also, at home again after years of exile and hardship, will look ahead to those better days when the golden coin has been given to the blacksmith to melt in the ploughshare, when the wax candle has been lit and incense burns on the Christmas embers, when wine is poured on the flaming log and sparks fly from the boughs and branches of the Christmas-tree, and when the gousslar in the wake of the polaznik hobbles into the low-ceilinged room and sings of the great doings of the Yugoslavs of yore, of the wooing of maids and the loves of the veele, and of the greatest national epic of all—the heroism of the men and women of Serbia the New.

OF THE UNIVERSITY OF CALIFORNIA

THE ROADMAKERS.*

A Song of the Dead Men of Kut.

The Jews they toiled for Pharaoh
And groaned beneath his rod,
For Pharaoh's hand was heavy;
Till the people called on God,
And God showed signs and wonders
To set his chosen free,
And broke the rod of Pharaoh,
And smote the land of Pharaoh,
And slew with plagues his first-born,
His armies with the sea.

Five to our one, you fled from us on many a stricken field;
We fought you all the sweltering seasons through;
And when you hemmed us in at last and we were forced to yield,
We struck our flag to Hunger, not to you.
You lied to us with courteous speech, and we believed you then,
To learn too soon your honour's little worth.
To-day but few are left alive to tell the tale to men,
But our blood cries out against you from the earth.

Famished and spent, across the waste, beast-like you drove us on,
And clubbed to death the stragglers by the way;
Our sick men in the lazar-huts you left to die alone,
And you robbed the very dying as they lay.
Naked and starved, we built your roads and tunnelled through your hills,
And you flogged us when we fainted at our work.
Fevered beneath the sun, we toiled, racked with the winter chills,
Till death released us, kindlier than the Turk.

The wastes where through you herded us, the barren ways we came,
When the weak fell out to die beside the track;
The remnants of your armies shall be hunted through the same,
With the swords of our avengers at their back.
Your dole of bread shall fail you then, and thirst shall thin your ranks,
You shall faint beneath the burden of the suns,
And the carrion-scenting Arabs shall be hovering on your flanks
To snatch the dwindling salvage of our guns.

The kin of us you murdered shall be masters of your lands,
They shall batter down the bulwarks of your trust;
The city of your sultans shall be wrested from your hands,
Your glory shall be trampled in the dust.
And the tunnels that we drove for you, the roads that we have made,
Shall be highways for the armies of your foe;
We shall mock you from our graves that in what we did as slaves
We helped, we too, to work your overthrow.

Heartbroken and forsaken,
Our Calvary we trod,
Yet with our faith unshaken,
We turned from you to God;
And God has greatly taught us
To count our losses gain,
Since we who fought for England
Here, too, took thought for England,
In bondage wrought for England,
And have not died in vain.

W.

Mr. Fremantle, of the Indian Civil Service, has been appointed Controller of sea passage to and from India, which will be fully arranged by the middle of January. Newspapers strongly urge the Government to take action regarding present high rates of passages.

It is said that a letter addressed to an officer of the Indian Army in London with the name of his regiment—the "Poona Horse"—largely written thereon, was returned to the writer with this official addition: "No public house of this name known."—*Sudan Times.*

Reuter's Paris correspondent reports (December 22):—A Belgrade message states that a new Yugoslav Cabinet was constituted there on the evening of December 20, including the following members:—M. Protitch, Premier (late Minister of Finance); M. Koroshetz, Vice-President of the Council; Dr. Trumbitch, Foreign Affairs; M. Nintchitch, Finance. M. Pashitch, the late Premier, will head the Mission representing the new Yugoslav State at the forthcoming Peace Congress in Paris.

* *This poem was originally published in the journal of the prisoners at Kastamuni, April, 1917.*

Can you offer us

consignments of the . . . .
NATURAL PRODUCTS
of your Country? . . . . .

COCONUT OIL
PALM OIL
OIL NUTS
OIL SEEDS
GUMS
FIBRES
COPRA

These are of great interest to us, and we should like to know what you can offer us in this way. All Natural Products interest us, and we shall be glad to negotiate for large or small shipments.

We are prepared to finance consignments when necessary.

Mann & Cook,

7, St. Michael's Alley
Cornhill, London,
England.

And at Glasgow, Liverpool, Genoa, New York.

Telephone: Avenue 7125 (5 Lines).
Cables: Oiliness, London.
Codes: A.B.C. 5th Edition, Lieber's, Western Union, Bentley's, Marconi's.

PRESS ON THE NEAR EAST.

Egypt's "Nationalists."

A Cairo correspondent contributes to the *Morning Post* (December 13) an interesting article on "Nationalism in Egypt." He begins by remarking that little has been heard of Egyptian nationalism during the war, chiefly because "we have been living under martial law, which does not blend kindly with nationalist organisation," partly because Egyptians have been too busy making money to spend energy on less profitable pursuits. Moreover, at the beginning of the war several irrepressibles were asked to leave the country and went off to Spain; while others were interned.

But the Nationalists in the early days were content to wait. They felt sure Germany and Turkey would triumph. This assurance was strengthened by the Turkish attack on the Canal and our own failures at Gallipoli and Kut; indeed, down to July last their faith in the victory of Great Britain's enemies was unshaken. Happy in this illusion, the Nationalists waited for the inevitable end. So quiet, indeed, were they that one might have thought they had seen the errors of their ways and had decided to turn over a new leaf and work loyally with the Government for their country's good. . . . Only occasional slight ebullition showed that the old spirit had not been exorcised. Sultan Hussein, on his accession day, was booted by the Law School students as he drove up to the Palace steps, and two separate attempts were made on his life in the first six months of his reign. The Ministers were also threatened, and one of them, a staunch friend of the British, was stabbed on the platform of Cairo railway station and severely wounded. The Sultan subsequently became popular because of certain rumours about his having opposed the introduction of compulsory service. Nine out of ten Egyptians believe this story, says the writer—and we can agree with him when he remarks that "Egypt is a marvellous country for the *on dit*." For a time, then, the "Nationalists" possessed their souls in patience.

Only in July last did Egyptian Nationalists begin to have doubts about their having backed the wrong horse. It became necessary to look for "liberation" elsewhere than from the arms of Germany. Then it was that they suddenly discovered that their liberation would come from President Wilson. With the political obtuseness that has always marked the Nationalist movement here, it did not seem to strike them that the British nation was fighting for the same cause and against the same enemies as the country of which President Wilson is the head. They had read the famous "fourteen points" and taken to heart Clause 12, which stated that non-Turkish nationalities in the Ottoman Empire should be assured of autonomous development.

So after a little preliminary thinking some of the gentlemen who may be considered as leaders of the Nationalist movement decided to apply to the American Diplomatic Agent in Cairo. Mr. Hampson Gary, who has filled that post with great success for something under a year, received them politely and gave them good advice. He told them it was quite useless their appealing to his President over the heads of the British authorities, that Great Britain was the Protecting Power, and to Great Britain they should apply for anything they wanted.

Mr. Hampson Gary's candid remarks have been taken to heart, and they have laid their case before the High Commissioner.

The Nationalists' hopes have been raised by the joint declaration by the British and French Governments regarding Syria and Mesopotamia. "What is sauce for the Syrians and Arabs of Mesopotamia is sauce for the Egyptians. So (the writer declares) a mild attack of nationalism is at present to be anticipated."

Egypt has probably never been so tranquil as in these past four years. That result has been secured on the one hand by a wave of prosperity, exaggerated though it has been in the English Press, affecting all classes, and on the other by a Press censorship which has required all newspapers to have their proofs submitted and approved before publication, by the prohibition of all public meetings, and by the non-summoning of the Legislative Assembly. This body has not met since May, 1914. But the Press censorship in its present form cannot exist indefinitely, and there can hardly be any reason why the Legislative Assembly should not meet in the spring. And then we shall hear more of Egyptian Nationalism.

"Flying in India."

Under the above title, *The Times* published on December 13 an article which gains in interest in view of Major-General Salmond's fine flight to India. The writer holds that "from many points of view India offers an unrivalled field for contributing to the foremost position in aeronautics, to which the great responsibilities of the British Empire and the enterprise of the British race in the development of modern means of communication entitle us," and he thinks that "it is of hopeful augury that Brigadier-General Lord Montagu of Beaulieu has devoted special attention to the Indian aspects of the question from the early days of the war." It is also announced that "Lord Montagu will proceed to India within the next few days in order to pursue his investigations. Though his stay cannot be prolonged, owing to important calls of public service here, his enthusiasm and practical knowledge will have a stimulating effect on the various developments in contemplation."

After a tribute to the unselfish part played by India during the war in regard to aeronautical matters, the writer glances at the future.

If only from the point of view of the readjustment of India's position in the scheme of Imperial defence, aeronautics are bound to be an important factor. She must not lag behind the standards of Western countries, as she has done in respect to other means of communication and transport.

Happily, the return of peace finds India so full of zest for the economic development which the war has initiated that her administrators and business men will be most eager to see aircraft turned to the fullest possible account for this purpose, and for meeting the expanding needs of the country, as powerfully expounded in the Report of the Industrial Commission. The railways have been sorely taxed by war conditions, new construction having been brought to a virtual standstill, and the upkeep of equipment suspended, save in cases of absolute urgency, while some lines have been taken up to meet the clamant needs of theatres of war oversea. All the important lines have been severely strained by the congestion of military and export traffic. With so many competing claims in the work of reconstruction, it will take some years to bring the Indian railways up to the pre-war standard, and many more years to equip the country with the mileage—at least treble the present 36,000—that she needs. Motor transport is doing good service; but its use is greatly circumscribed by the infrequency of good roads, by great waterways, by mountain ranges, and other natural obstacles.

If the transport by air of commodities, save those of small bulk and high value, is not practicable within the near future, the aeroplane can soon be called into effective service for purposes of rapid written communication, which are so important to the business man. The Government of India was the first of our oversea governments to announce that the establishment of an aerial mail service between important centres is under consideration. The value of such service for urgent correspondence, whether official or commercial, in a country where trains are relatively slow, and there are frequent breakdowns owing to floods and other causes, may be judged by a few figures based on the assumption of an average air speed for India of no more than 70 miles per hour.

Later we read:—

Opinion in Burma every now and again is unsettled by arguments for the separation of the province administratively from India. The familiar complaint that the country is isolated and forgotten by the Government of India owing to the slowness of sea communications (and these, by-the-bye, were temporarily suspended when the Emden was active in destruction of shipping in the Bay of Bengal), would be rendered obsolete by the establishment of a postal service by air from Rangoon to Calcutta, via Mandalay and Chittagong.

Another possibility is envisaged thus:—

The isolation of which we hear most is that of the Imperial and Provincial Governments during the hot and rainy months that they spend at the hill stations. This is not the occasion to discuss this long-standing controversy. The advent of the aeroplane as a regular means of communication must enormously reduce the practical inconvenience attaching to the present system on the one hand, by helping to mitigate Government isolation in health resorts, and, on the other, by providing a means of week-end recuperation from the plains without spending most of the time on trying railway or motor-car journeys. There could be much closer personal contact between Government and district officers, who could be called to headquarters, whether in the hills or on the plains, for consultation and instructions on urgent matters within a short time. The need for so many high officers of Government to be on the hilltops for more than half the year would be much less apparent if access to the hills consumed no more time than a run down to Brighton from London.

The best opinion is decisive that a passenger service could be regularly carried on between the plains and Simla and other Himalayan stations, except for the three most winterly months—when there would be little need for it.

Finally a tempting prospect is opened up by the reminder that the Vale of Kashmir, now so remote that a holiday of a fortnight or three weeks is of little use for sojourn there, could be brought within an hour or so of the railway, by flight over the Pir Panjal range, in place of the road journey from railhead, which now occupies nearly two days.

We have received copies of the first and second numbers of the *Adriatic Review*, a journal published (monthly) at 97, Compton Street, Boston, U.S.A., and devoted to furthering Albanian interests. It reproduces many articles from the British Press and contains original notes and articles of the most vigorous character.

SCHOOL OF ORIENTAL STUDIES.
London Institution, Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.

NEAR EAST BOOKSHELF.

RUSSIA AS A FIELD FOR BRITISH CAPITAL.*

No country in the world can vie with Russia in the opportunities offered to industrial and commercial enterprise. All the factors making for success are there in limitless profusion. The climate is sub-polar in the north, temperate in the central districts, and sub-tropical in the south. The mineral wealth of Russia defies calculation: its soil is very fertile, especially in the black earth region. Labour abounds, and may be controlled with ease by appealing to the co-operative instinct ingrained in the racial character. It may safely be said that no immigrant of British birth possessing ordinary intelligence, a business training, and some capital has failed to make his fortune in Russia. The world-war and its *sequelæ* have severed a connection dating back to Queen Elizabeth's spacious days. But Russia's deliverance from the nightmare of anarchism cannot be long delayed, and the time is approaching for co-ordinated efforts to resume relations which are full of promise for both countries. Two books written by experts may be recommended as guides to the British investor. Baron A. Heyking, who was formerly Consul-General for Russia in London, pleads for sympathy with a mighty race in travail. He opines that it would be as unjust to judge a man's business capacity by his condition while suffering from German measles as to consider Russia hopelessly bankrupt because she lies for the moment prostrate under the heel of a soulless tyranny. She needs our pity rather than pardon. We should not forget that she saved France from almost irretrievable disaster by invading Eastern Prussia at the outset of the war, and that Nicholas II. proved a staunch ally until his German wife encircled him with a network of intrigue. Baron Heyking sheds no new light on the revolution. It has pursued a course in strict analogy with that of France during the years 1789-94, a course which may be followed in Western Europe unless the economic and political situation be handled with real statesmanship. The most useful portion of Baron Heyking's book is Chapter IX., which affords a lucid survey of Russia's resources. He urges the construction of a short line of railway linking the Trans-Caspian and Indian systems. Not less important from an Imperial standpoint is the establishment of steam communication between Odessa and Bombay. Our author has some pertinent remarks to make regarding the eternal Jewish question. Russia harbours about 7,000,000 of the Chosen Race, whose commercialism and clannishness give them an overwhelming advantage over the amorphous native population. But Russians who are galled by the Jewish yoke must realize that it will not be lightened by pogroms or social ostracism. Hebrews are very rarely met with north of the Tweed, because Scotsmen possess better education and greater cohesive power the moral of which is that Russians must fight Jewry with its own weapons. Most readers would dispense with Baron Heyking's portrait, which serves as a frontispiece, in favour of a map of Russia coloured to indicate the staple products of every region. More valuable from an economic point of view is "Russia: Its Trade and Commerce," by M. Arthur Raffalovich, who is one of the pillars of our Royal Statistical Society and chairman of his country's Chamber of Commerce in Paris. His work is a fairly complete manual of Russian industries, and merits careful study by the British investor. M. Raffalovich lays especial stress on the necessity of reforming the law of joint stock companies, which dates back to 1836, and offers almost insurmountable obstacles to foreign enterprise. The racial love of strong drink is another factor which robs Russian labour of half its efficiency. For, like all Asiatic people, the Russians drink solely in order to bemuse their brains. It has been stated more than once that the defeats of 1914 were due to the Tsar's ukase forbidding the sale of vodka at a loss of nearly £70,000,000 to his revenue. M. Raffalovich, however, proves that the output of Russian farms and factories increased enormously when the *Muzhik* was unable to absorb his daily poison. It is devoutly to be hoped that prohibition may be re-enforced when Russia attains the blessing of a strong government. One fact leaps to light in both volumes; unless the Entente join hands in a strenuous effort to restore order, Russia will be mercilessly exploited by a ruthless neighbour which had ground her down for nearly three centuries.

F. H. S.

ISLAM AND MORALITY.

Lecturing at the School of Oriental Studies (on October 17) on "Islam and its Relation to International Morality," Mr. Alexander Séfi said that, leaving the Mohammedan belief in the Koran as the word of God on one side, there was no doubt that the early preaching as well as the first mission of Mohammed to his pagan people was the outcome of his desire to give them a better and truer religion. He could not read, but was highly intelligent (none of the famous old Arabian poets could read), and was by hearsay familiar with Judaism and Christianity, then flourishing in Arabia, being especially intimate with the Nestorian monks, who inculcated in him the belief in Christ; and their version of that belief is what we find textually reproduced as dogma in the Koran. He sympathised with the poverty and piety of those monks, although he disapproved of celibacy and seclusion, and he had a reverent respect for the merciful mission of Christ, and was probably on that account impatient with the Jews. His first effort, however, was to try to conciliate the Jews by the retention of circumcision, and to bring them to believe in the prophetic mission of Jesus, and to unite them with the Christians and his own people in a universal religion. Having failed to persuade either Christians or Jews, and his own tribe, the Korashites, showing him hostility, he put himself at the head of his adherents (Companions and *Ansars*) and fought them.

Later, referring to the position of Moslem women and Moslem households, Mr. Séfi said: "Whatever our opinion may be of such households and their inconvenience to husbands and wives, morality did not suffer, especially as the new institution was an improvement on the old custom, and had in mind the propagation of the race. The use the Mohammedans had made of this advantage or disadvantage, however, is very small in general, and at the present day one wife is more the rule than the exception. Divorce is, perhaps, too easy; but if the judge is capable, he can make it difficult. The real and positive evil resulting from this Mohammedan system has been rather in the seclusion of the woman from the age of twelve, which in the great majority of cases has prevented her from receiving full education, even when willing to receive it. Arab women were, however, never veiled or secluded by order. With all that, Islam has given the world some of the finest specimens of women and men, and as the 'Hadith' (i.e., the recorded authentic sayings of the Prophet) foreshadow the possibility of modification in the laws to suit modified future circumstances, there is room for education to expand and very little for Jews and Christians to take exception to in this faith, especially as the Koran says: 'Do not argue (in the matter of religion) with the peoples of the Book (Old and New Testament), except in kindness'; also, 'Thou shalt find thy nearest friends among those who call themselves Nazarenes.'

"Is Islam, then, a true and good religion?" asked the lecturer, and continued: "Jews and Christians, whose God it adopts and whose Books it accepts, cannot dispute its truth; and as to being good or bad all depends on the instruction of the men who profess and practise it, just as in all other religions. The higher the ideal, of course, the better the religion, as a religion, and *vice versâ*. Hence ideals must be respected in proportion to their aim." Mr. Séfi concluded his lecture: "The character has much to do, after all, with the race of the people, and the pure and old Arabian race, which the British have always liked, and are now helping to a fresh start in the government of this world, promises to be—education and experience in the light of modern history assisting—of great service to humanity. But it must be allowed to develop on its own lines, and not be diverted either by foreign customs or, worse still, by the example of half-castes, who despise Arabian culture, and are incapable of assimilating the culture of the West!"

2	20	Thursday	Rabia II. 1	Shebat 1

Lord and Lady Inchcape left London last Friday for Scotland.

On December 6, at Simla, the wife of Mr. H. B. Saxby gave birth to twin sons.

M. Boeresco, Secretary to the Roumanian Legation, left London on Monday for Paris.

Mr. and Mrs. Levack, of Baghdad, are expected to arrive in England very shortly.

King Alexander of the Hellenes and certain of his guards have been bitten by a dog.

Sir Arthur Steel Maitland is ill with blood poisoning as the result of an abscess in the jaw.

On December 6, at Dacca, Eastern Bengal, the wife of Captain M. H. Ravenhill, Military Police, gave birth to a daughter.

The marriage arranged between Mr. G. Purefoy Jervoise and Miss Winifred Gripper will take place at Mombasa early in March.

On December 19, at Moor Mead Hill, Hitchin, a daughter was born to Mr. and Mrs. John Norval Home, of Calcutta and Boothby Hall, Burgh, Lincs.

Prince Feisul, who was attended by Lieutenant-Colonel T. E. Lawrence and Mr. R. F. Synge, specially attached, visited Queen Alexandra on Monday at Marlborough House.

A resolution has been passed by the Bombay Legislative Council expressing high appreciation of Lord Willingdon's services as Governor, and regret at his leaving Bombay.

Major-General the Maharaja of Bikaner and Maharaj-Kumar Lieutenant Sadul Singhji had the honour of being received by the King and Queen at Buckingham Palace on December 19.

At Buckingham Palace, on December 19, the King invested Major James Yates, Indian Army, with the Insignia of a Companion of the Order of the Indian Empire and the Distinguished Service Order.

Major T. D. Cree, who was taken prisoner (for the second time) by the Turks at Kut, has arrived in this country with Mrs. Cree and their children, having travelled by way of Constantinople, Salonika, and Marseilles. All are well.

Colonel Sir Henry Streatfeild (Equerry to Queen Alexandra) represented Queen Alexandra at the memorial service for Colonel the Lord Edward Cecil (Grenadier Guards), which was held at the Royal Military Chapel, Wellington Barracks, on Monday.

A marriage has been arranged between Mr. Norman Odling, 4th Dragoon Guards, second son of Mr. Arthur Odling, of 16, Belsize Square, N.W., and Katharine (Bunty), third daughter of the Rev. J. A. Graham, D.D., C.I.E., and Mrs. Graham, of Kalimpong, Bengal, India

A marriage has been arranged, and will shortly take place in Bombay, between Major E. F. Vereker Ventris, Royal Artillery, attached Headquarters Staff, Simla, eldest son of Major-General F. Ventris, Commanding British Force, Hong Kong, and Mrs. Ventris, 136, Thurlow Park Road, Dulwich, and Dorothea, only daughter of Mr. and Mrs. J. A. Janasz, of Salford House, Welford, near Rugby.

Prince Nicholas of Roumania, the second son of King Ferdinand, has arrived in London. He was met by M. Boeresco, the Roumanian Chargé d'Affaires, and Lieutenant-Colonel Arion, Military Attaché to the Legation and Head of the Roumanian Government Mission. Prince Bibesco and the *personnel* of the Legation also arrived. The Prince visited the King and Queen at Buckingham Palace on Sunday afternoon.

In a letter to *The Times*, the Countess Michel Karolyi, Government Commissioner of the Hungarian Red Cross, writes:—"I do not know in which part of the world is living now Lady Paget, who in 1915, as leader of an English Red Cross Mission in Serbia, has been the last and most persevering friend and nurse of the unfortunate Hungarian prisoners of war abandoned to starvation, and dying by thousands of typhoid fever. Lady Paget treated them as if they had been British soldiers. She provided blankets for them when they were nearly frozen with cold in their rags; she had the sick isolated, disinfected, and fed; the dead buried. The Hungarian invalids who knew her said about her, 'She has been a mother to us; she was God's angel among us.' We know she has been but an English lady, the perfect incarnation of her generous race, of its ancient virtue, which is always to assist, never to strike, the fallen and the helpless. In the name of our heart-broken mothers, I bow to this great heart. The name of Lady Paget will be known in every Hungarian home, and our children will learn in school to remember it for ever." Lady Paget is the wife of the former British Minister at Belgrade.

Sir Charles Edmund Fox, K.C.S.I., of Bigswear House, St. Briavels, Glos., formerly Government Advocate in Burma and afterwards Puisne Judge of the Chief Court, Burma, and Chief Judge in 1906, left property valued at £12,836.

Under the patronage of the Lord Mayor and Mme. Yovanovitch, a Serbian Victory Ball will be held at the Prince's Galleries, Piccadilly, this evening (Friday, December 27), in aid of "Le Fond des Officiers Serbe morts dans la guerre." Mlle. Lydia Kyasht will give a solo dance. Dancing from 9.30 till 2. Tickets can be obtained from Messrs. Keith Prowse and from Ashton and Mitchell's Royal Library, Bond Street.

OBITUARY.

Colonel James Sconce, Indian Army (retired), died at 18, Belgrave Crescent, Edinburgh, on December 19. He was formerly Deputy Surveyor-General of India.

Mrs. Josephine Grigg, widow of Lieutenant-Colonel E. E. Grigg, Commissioner of Kumaon, India, died on December 21 at Westlands, Rothsay Gardens, Bedford.

Second Lieutenant Frederick William Campbell, I.A.R.O., attached 105th Labour Corps, died of pneumonia at Tank, North-West Frontier Province, India, on December 11. After serving as a gunner from the beginning of the war he was later embodied in the Indian Defence Force, and had only recently been selected by the Burma Government for special training in Staff duties. He was an employee of Messrs. Bullock Bros., of Rangoon, and was well known for his frequent hunting exploits in the wilds of Burma.

A telegram announcing the death of the ex-Sultan of Zanzibar on December 15 has been received at the Foreign Office. The ex-Sultan succeeded his father as Sultan in 1902, when he was a boy of seventeen. He abdicated nine years later in favour of his eldest son, who was five years of age. "It is entirely due to considerations of health," he said, "as I have to be away undergoing treatment in Europe for six months every year." He was educated at Harrow and Oxford, and spoke English perfectly. He was a good sportsman, playing racquets, football, and tennis, and was fond of motoring. His State, which is under British protection, yielded him an income of £7,000 a year when he was the Sultan, but he had other sources of wealth which made him a rich man. One of his hobbies was the collection of clocks, of which he had a great number. "My upbringing at an English public school and university have, I am afraid, unfitted me for the monotony of an Oriental Sovereign's life," he confessed just before resigning his throne.

Sir Frederick Alexander Robertson, LL.D., formerly Judge of the Chief Court, Punjab, India, died suddenly in London last Friday, aged 64. He passed into the Indian Civil Service in 1874, and in the Punjab served first as Settlement Officer and then as Director of Land Records and Agriculture. Later, having been called to the Bar in 1887, his work became judicial. In 1896 he was made a Divisional Judge, and six years later was appointed to the Chief Court of the province. A few years later he was

MONTENEGRIN RED CROSS AND RELIEF FUND,

11, VICTORIA STREET, S.W.

Regt. Section 1, War Charities, 1916.

A DEVASTATED COUNTRY—MONTENEGRO,

The Smallest and Poorest of our Allies.

Thousands of Starving Women and Children need Food and Medicaments.

9,000 FAMISHED MONTENEGRINS FROM CAMPS OF CENTRAL EMPIRES MUST BE FED.

Donations will be much appreciated and gratefully acknowledged by the Hon. Treasurer, LADY ROPER PARKINGTON, Montenegrin Consulate, 21, Mincing Lane, London, E.C.3.

confirmed as a Puisne Judge. In 1909-10 he was Vice-Chancellor of the Punjab University. In 1913 he retired, but he still retained his strong interest in India after his return to this country, and was active in work for the welfare of Indian students here, being chairman of a hospitality committee for their benefit. He was much interested in the Indian Gymkhana Club, and in fostering the love of cricket among young Indians in this country. He was lecturer in Hindu and Mohammedan law for the Council of Legal Education, and lecturer in Mohammedan law at the Imperial Institute.

THE GRAVES ON GALLIPOLI.

The following official statement was issued last Friday:—

The Secretary of the War Office regrets to announce that a telegraphic report has been received that the cemeteries on the Gallipoli Peninsula have in many cases been grievously molested and desecrated by the Turks.

A detailed report has been asked for, and on receipt of this an explanation will be demanded from the Turkish Government, who have previously given frequent assurances that the graves and cemeteries on the Peninsula should be carefully safeguarded.

Meanwhile immediate steps are being taken to rectify matters by the Graves Registration Unit, composed of British, Australian, and New Zealand officers, which landed on the Peninsula on November 10.

A MOTHER IN SERBIA.

Autumn, 1917.

Haggard and mute, stubbornly she cleaves
To those rich fields, now treasure of the foe;
While the tired hands pile wearily the sheaves,
Her mind dwells on the measure of her woe.

One brother in Bizerte, one at Focsani slain,
Her love a wounded prisoner in Rhodope,[1]
Strange places, names uncouth to haunt the brain—
She broods, unconscious of one living hope.

Sombre for her the sky of ardent blue,
Barren the soil teeming with ripened wheat,
Sullen she stands, deaf to a plaintive coo,
Blind to two black stars gleaming at her feet.

Till lo! her knees are clasped, with gurgling whoops!
She needs must turn and gaze upon the boy;
And gazing, soften. Suddenly she stoops
And gathers to her breast her tragic joy.

"For thee, my heart!* the corn shall one day grow,
The trees shall bear their fruit for thee, my Gold†
For thee the Serbian sun again shall glow,
For thee these sacred Serbian lands I hold!

"And those who left know well that I who stayed
Nightly croon Serbian ballads in thine ear;
The spirit of our proud race shall not fade,
Nor Serbia be lost while I am here!"

ELISABETH CHRISTITCH.

[1] Dissyllable, for Rhodopé. * Serce moje!
† Zlato moje!—Serbian terms of endearment.

THE COMMITTEE OF THE
BRITISH REFUGEES FROM TURKEY FUND
will be
AT HOME
on WEDNESDAY, JAN. 1, NEW YEAR'S DAY,
at LOWNDES HOUSE, LOWNDES PLACE, EATON SQUARE, from 3.30 to 7 o'clock, in order to meet their friends from Turkey. As addresses are so difficult to obtain, they much hope that anyone seeing this notice will accept it as an invitation.
LADY NEAVE, President.
LADY BARKER, Vice-President.
LADY LOWTHER, Chairman.

ROYAL SCHOOL FOR DAUGHTERS OF OFFICERS OF THE ARMY.

At an ELECTION of Six Pupils at £20 a year on the 17th December, 1918, the following was the RESULT of the POLL:—

SUCCESSFUL.

	Votes.		Votes.
Miss N. H. Mortimore...	7,910	Miss N. H. Reid	5,662
Miss R. J. Edridge	7,237	Miss S. M. Bentley	5,561
Miss V. M. K. Smith ...	6,486	Miss A. M. Sykes	5,267

UNSUCCESSFUL.

Miss G. D. S. Smyth ...	3,309	Miss M. F. Maycock.....	772
Miss U. C. Mortimore...	3,000	Miss K. M. Wilson	630
Miss M. F. I. Wood.....	2,507	Miss D. Owen	370
Miss R. L. Edridge ...	2,452	Miss E. M. Owen	314
Miss A. Smith	1,311		

By Order,
F. W. T. ATTREE, Col. (late R.E.), Secretary.
25, Haymarket, S.W.1.

NEWS IN BRIEF.

Reports received last week from Syria indicate a continuance of the recently announced distress.

Five hundred pounds has been contributed by the Government of New South Wales to Australian canteens for Serbians. The total sum in hand is now almost £10,000.

The Ceylon Legislative Council has passed a resolution that no German or Austrian should be permitted to reside in the island, at any rate till after the lapse of some years.

Representatives of the Dodecanesians resident in Egypt met in Alexandria on December 1 and passed a resolution asking the Allies to put an end to the present transitory state of the islands by uniting them with Greece.

A Reuter's message from Amsterdam, dated December 22, states:—It is reported from Agram viâ Berlin that the Montenegrin Skupshtina in Belgrade yesterday issued an official notification of the union of Montenegro with Serbia.

A considerable number of Palestinian Jews who had been deported by the Turkish authorities to Damascus during their retreat before the victorious attack by General Allenby are now returning to their homes in Palestine. The British authorities are rendering them every assistance.

M. Adonis Kyrou, editor of the Athens *Hestia*, died on December 16 of pneumonic influenza, complicated with heart trouble. The Vice-President of the Chamber announced the same afternoon that the Cross of Knight Commander of the Order of the Saviour had been awarded to M. Kyrou. M. Venizelos announced that the funeral would be at the public cost.

By order of General Allenby, December 17 was declared a general holiday throughout Egypt in celebration of the signing of the Armistice. In Cairo the day's programme began with an open-air thanksgiving service in the Sporting Club at Gezira, conducted by Dr. MacInnes, Anglican Bishop in Jerusalem, assisted by the Rev. C. T. Horan, British Chaplain in Cairo. The congregation included Sir Reginald Wingate, representatives of the Sultan, the Prime Minister, and members of the Government.

To commemorate the River Clyde's part in the Gallipoli landing a Liverpool shipowner is providing a special war medallion in bronze, designed and executed by Mr. E. Carter Preston, the designer of the National Memorial War Plaque and other work of a similar kind. The Imperial Merchant Service Guild will distribute these medallions to those who were serving in the River Clyde at the time and were awarded the Victoria Cross for conspicuous valour in effecting the landing, or to the next-of-kin. Only three of the six survive.

General Allenby visited Hama and Aleppo on December 10. At Aleppo he made a state entry, with a large escort of Indian cavalry. The streets were lined by the 5th Cavalry Division, and the numerous crowds, estimated at 100,000, watched the procession. At the Serai the Commander-in-Chief gave an audience to civil and religious chiefs, Moslem, Christian, Jewish, and leading citizens, and then the administrative heads, and subsequently addressed the people gathered in the Serai square, amidst scenes of the greatest enthusiasm.

Cairo's Hotels de Luxe.

HITHER ASIA AND THE PEACE CONFERENCE.

The attitude of certain Powers at the Paris Conference towards the settlement of that part of the Ottoman Empire lying between the Ægean Sea and the Persian Gulf is likely to prove the "acid test" of the sincerity with which they subscribe to what are generally accepted as the Allies' war aims. Before the war the question of the reversion of the Turkish inheritance was continually before the European Chancelleries. The latest claimant for favourable consideration was Italy, whose war with Turkey represented a definite step in a policy that aimed at Mediterranean equilibrium, in other words, the equalizing of Italy's position in the Mediterranean with the position of Great Britain and of France. Those were the unregenerate days of Europe. The war between Italy and Turkey ended with the latter in possession of the islands of the Dodecanesus, with the right to retain them as security for the fulfilment by the Turks of their treaty stipulations. Before these islands had been returned to Turkey, the Italians secured from the Porte a concession which gave them a foothold on the mainland of Asia Minor. It was found that this concession, a railway from Adalia to Bourdour, near Egadir, clashed with the rights of the Smyrna-Aidin Railway. The British company was understood to be willing to waive part of its claims, but the negotiations between Italy and Turkey were still in suspense when the European war broke out. As a result of her decision to range herself on the side of the Allies Italy's overseas ambitions have experienced a marked development. According to the Italian version of the Treaty of April, 1915, the Entente Powers agreed that Italy should obtain full possession of all the islands of the Dodecanesus actually occupied by her; the same Powers also recognised that Italy was interested in maintaining the political equilibrium of forces in the Mediterranean, and acknowledged her right, in the event of Great Britain, France, and Russia occupying parts of Turkey, to occupy the south-western portion of Asia Minor. At a later date it was asserted by the Italian Press that the Allied Conference at St. Jean de Maurienne had agreed that the Italian sphere in Asia Minor should comprise Smyrna, Konia, and Adana. Much water has passed under the bridges of the Tiber since 1915. The Western democracies found that far loftier motives than the mere lust of territorial aggrandisement were required to sustain a war of so exacting a character. The evils of the old system were realized, and it was seen that the only hope for the future peace of the world lay in the renunciation of purely Imperialist aims. To this doctrine the Allies have formally given their adherence.

With the complete collapse of Germany and with the prospect of, as it were, a free hand for the Allies in the drafting of the peace terms, there has been a tendency in certain quarters to forget the self-denying ordinances that were enunciated so readily when victory seemed a long way off. The necessity of making provision for the non-Turkish inhabitants of the Ottoman Empire has revived all the pre-war claims. Italy is again exercised over her future as a Mediterranean country, on the same lines as she was six or more years ago. "The Mediterranean interests of Italy," said Baron Sonnino in the Chamber of Deputies in June, 1917, "are based essentially on the principle of equilibrium and equality among the Powers." At a later date he declared that Italy did not pursue Imperialist aims in the Eastern Mediterranean; but he added, "we merely wish that in the case of eventual aggrandisement on the part of others as a result of the war the equilibrium of forces should be maintained." Speaking a few days ago, Signor Tittoni amplified this doctrine by stating that Italy must play in the break-up of Turkey exactly the same part as Great Britain and France. If the latter Powers annexed territory Italy must do the same; if they exercised a protectorate over some of the non-Turkish peoples Italy must exercise a protectorate over others. French claims, it has to be admitted, are urged on grounds equally remote from the new spirit that the war is supposed to have engendered in the world. Thus, in a work which has just been published, entitled *La Paix Coloniale Française*, by M. Camille Fidel, we find France's claims on Syria based on her historic protection of Christians, the moral priority conferred by her educational institutions, her economic preponderance as a result of capital invested, and the expressed wish of the Syrian population to be "reunited" with France. Individually the claims may be unexceptional; but it is noticeable in their presentation that, apart from the reference to the attitude of the Syrian people, only French interests are kept in view, and there is nothing to show that the French writer is conscious of any responsibility towards the inhabitants of the territories claimed. The omission is most unfortunate.

Unlike Italy's pretensions to South-West Asia Minor which cannot be harmonized with the declarations of the Allies, the French claims in regard to Syria are not challenged. The peoples now freed from Turkish misrule cannot yet be left entirely to their own resources, and as Great Britain is the natural protector of the Arabs in Mesopotamia, so France may be regarded as the obvious Power to assist the Syrians. An exemplary statement of the Allies' intentions was officially given a year ago, when the Syrian Central Committee was informed that, rejecting any idea of colonial domination, France and Great Britain were resolved, each in her sphere of action, to direct the populations concerned towards a regime of autonomy and civilized development. It will be recalled that a similar assurance has been given by the British Government to the Arabs of Mesopotamia. But whereas every detail of the Mesopotamian administration reflects this sense of trusteeship which actuates the British, there is nothing, as far as we are aware, in the French declarations to suggest that France is going to assume her responsibilities in the same spirit. We trust that we are wronging her intentions, and in that case she will be able to make good the omission and reassure public opinion in Syria. One thing is certain, the French will find in Syria a population far more advanced politically as well as in civilization than the original inhabitants of her actual colonies. In these circumstances it is inevitable that such a statement as that of the French publicist, Count Cressaty: "It (Syria) will be in the East a second France," should give rise to misgivings; and there need be no surprise if, at the outset, symptoms of friction with Syrian and Arab manifest themselves. The misunderstanding, it is to be hoped, will be cleared away at the Allied Conference in Paris, when it will be impressed upon all the Powers that the exercise of a protectorate over less advanced nations is not to be regarded as an advantage derived from the war, but as a trusteeship for which an account will have to be rendered, if not to a formally constituted League of Nations, at least before the bar of Allied public opinion. It follows, therefore, that in the delimitation of boundaries the interests of the native population must be strictly the determining factor, and that the allocation of this or that port to one or other of the spheres of influence will be decided by the requirements of the hinterland that the port serves.

THE YEAR OF GRACE.

By Estelle Blyth.

The passing of a year must always waken in us feelings of regret. It has grown so familiar to us by December, it has brought us joys as well as sorrows, and we feel as though an old friend were abandoning us to a new one whose worth and qualities are all unknown. It may be that the years of war, as they drew mournfully to their close in shadows and uncertainty, passed amid fewer regrets than other years, so stricken and scarred they were, so terrible to look back on with their tale of desolation and tears. Waiting for the burden they bore, for the legacy of woe they left behind, the sad years passed into the darkness. And yet their track was not only desolation, their legacy not only mourning. Each in turn has borne on its tattered colours the battle honours of our mighty dead—of the young lives whose shining glories make new constellations round the feet of God; of that inarticulate unnamed host whose deeds of chivalry, of mercy, of daring incredible, of self-sacrifice and dumb devotion, we shall one day hear as a new song in the mouths of the sons of God.

The year 1918 is the year of dawn. The dread voices of the guns are silent for the first time in four years; swift death no longer flashes on us out of quiet skies; slowly the elements sink back into harmony that were chained by man's violence to work destruction. Our pride for a past in which our worshipped England has surpassed even the greatness of her own record, our hope and confidence in the eternal promise of her future, bid us take regretful leave of 1918.

This is the year that has seen the liberation of the East—Mesopotamia, Palestine, and Syria. Jerusalem was freed, and, as was meet for the Mother of the world, she became the centre from which the liberation of the Holy Land and of Syria, its twin, was directed. To England was entrusted that supreme task—a task not undertaken in any lightness of spirit nor in pride of power, but a task that was enjoined upon her in terms too plain to be misunderstood. "Dieu le veult!" We need not here repeat the story, wonderful as it is and endlessly fresh, of the dumb trust in England's will and power to help them which the people of Palestine cherished for three years of darkness, nor recall the extraordinary passion of welcome that met the deliverers in each place as they set it free, not only in Jerusalem, but in Beyrout, in Damascus, in Galilee, in Aleppo, in Salt. Syria, no less than Palestine, paid her glad tribute of gratitude and welcome to those English soldiers who struck the fetters link by link from her hands. It is enough to say that it is to England that Palestine has looked all these years for help, to England that she has called for deliverance and protection. It is England that Palestine wants, and now that England has come Palestine is satisfied. A great word that, but true.

The greatness and splendour of a trust does not always imply a fitness in the instrument employed. Nations, no less than individuals, can fail and falter under a trust. But I think we can look back without fear or disappointment at what our England has done in and for Palestine in the year of grace, according to the good hand of our God upon her.

The Turks ruled in Jerusalem for some seven hundred years, and were merely a blight upon her and upon the whole country. There was no water supply, practically no roads of communication and travel, no harbourage for ships, no facilities of transport or import, no poor relief of any sort, and such municipal offices as existed were either a scandal or a farce. Things went from bad to worse; the officials were so shamefully underpaid that they could not live without taking bribes, and depression and despair settled on the people out of whom, in the long run, the living of every class was wrung. In December, 1917, the English came. In June, 1918, a full supply of water blessed the Holy City. A railway now spans the desert, linking Palestine with Egypt in a fifteen hours' run. Roads are being made or repaired, telegraphic communication is increased, a safe postal service is installed, food supplies are ensured, and employment is organised. Relief centres and orphanages are at work wherever there is special need. We must remember that all these reforms were started and in vigorous action while fighting was still going on within a very few miles of Jerusalem. We, who are dulled by centuries of safety and good government, can only dimly realize what it is to the people of Palestine to experience paid and protected labour, courts of justice which need no golden key to open them, a Law which provides and protects but does not rob, an army in which every soldier behaves as a friend and a gentleman. Think what it must be to them to have young business ventures supported, and not suppressed, by authority; for age and weakness and poverty to be sheltered and helped instead of being kicked to the wall; for the Fellah to be able to plant and sow knowing that he, and not another, will reap the fruits of his labour. That the people understand what English rule means two small instances suffice to show. The day after the British troops entered Ramleh the Fellaheen were out ploughing behind our lines, and within two hours of the reading of General Allenby's Proclamation the shopkeepers of Jerusalem were displaying all those choice wares which they had hidden for three years from the Germans and the Turks. Straws, perhaps, but they show how the winds of Palestine blow towards England. It were idle to go on elaborating these facts; it were equally idle to seek to belittle or evade them.

There is a great deal of talk just now about "claims"—claims to indemnity, claims to territory, claims of all sorts and descriptions. We can be proud in reflecting that England's voice has not been raised to press any claims of her own, though she has spoken clearly in support of those of her Allies. She has freed Africa and the East. She, who alone understands what is the freedom of the seas, has held those seas open for lawful use. All this, and more, she has done, and perhaps it does not become her children to speak of what they know and the world avows. But she alone has made no claims. She has freed Mesopotamia and Palestine and Syria, and has brought order out of chaos, installing a wise and efficient form of government which is in complete harmony with the temper and prejudices of the people. She has shed her blood lavishly in East and West; she has fought on every front, and alone on two; of the three great epics of the war—Mons, Gallipoli, and Verdun—two are hers; and amid all the horrors and preoccupations of war she has found time to turn a new and purified page of her literature.

There are claims to be urged in regard to Palestine which in justice should not be set aside. There is the claim of a people long distressed to have the government they desire. There is the claim of the Moslem to share in the city which is also holy to him. There is the claim of the Jew and his starved aspirations that turn to Zion. There is the solemn claim of our dead that they shall not have died in vain for Palestine. No amount of political argument and gainsaying can do away with the fact that it is England who is wanted by the people of Palestine. It is not just *any* Christian Power, *any* European form of government, that they desire, but England and the English way of rule. England understands the East, and the East trusts England. If Palestine would play Ruth to England's Naomi, why, in the name of justice, should she be prevented? It is only under English guardianship that the vexed and complex problems of Palestine will be solved with justice to all creeds and races and claims. The Jew knows this, the Moslem knows this, and there is no reason that others should not know it too. If England were to relinquish her hold of Palestine now, the East, and particularly the Moslem East, including India, would for ever feel that she had evaded a trust. If ever ungrudging sacrifices and unstinted giving on the one side, and on the other the passionate desire of one people to be affiliated to another, constituted a claim, then England has that claim to Palestine, whether she urge it or not, and Palestine has claim on her.

This problem of Palestine must be left to 1919 for solution; 1918 passes in honour, ever to be remembered by us as the Year of Grace whose ways have led us to the gate of Peace.

The *Matin* says that Admiral Amet, French High Commissioner in Constantinople, has requisitioned all German ships in Ottoman ports. On board these vessels will be placed a number of Austrians and Germans who have been a source of mischief in both European and Asiatic Turkey. They will be conveyed to France, and will be kept there under strict surveillance until the conclusion of peace.

TANGIER TO TEHERAN.

I see that the Military Governor of Busreh recently offered prizes for the best papers on (1) the type of residential house best suited for Europeans in the lowlands of Mesopotamia, and (2) the type of residential house best suited for Arabs in the lowlands having regard to their special customs. The competition closed on November 1. Competitors who endeavoured to strike out on original lines, and yet to confine their suggestions within the limits of the practical, will have found the task no easy one, I fancy. As far as planning and arrangement are concerned, the good-class house of Baghdad or Busreh appears to me to be particularly well adapted to the country and climate. That is what one would expect, of course: the Mesopotamian heat, flies, and other trials of the flesh have set man's wits to work, and experience has evolved a good type of dwelling on the whole. But there are certain sanitary improvements that might well be introduced, and the kitchens and servants' quarters will give an architect much to think about, too, if once he makes a start on them. But the thing most to be desired is better building in general—better foundations, better bricks, real mortar instead of mud, better plastering, and, most emphatically, better roofs. For the rest the Baghdad house is not a bad place of its kind; and it is of the kind suited to the country.

***

The greatest trouble that confronts the builder in Lower Mesopotamia (the "lowlands" of the Military Governor of Busreh's announcement, I take it) is the lack of decent materials. Stone there is none, and brick is hard to make locally with any satisfaction. Some of the very old Babylonian bricks were excellent, as is proved by the fact that they have been used over and over again, and are still serving in many houses and public buildings in the country; and when bitumen was used with them, for waterproofing purposes and as mortar, they made a first-class job, although the problem of "bonding" was always an awkward one to solve, owing to their shape. But the supply of these bricks is limited, and obviously it would be wiser to look elsewhere than in the ruins for material. There seems to me to be an opening for concrete construction in Mesopotamia. I do not like it, and—for very good reasons, though I need not give them here—I strongly mistrust "ferro-concrete" buildings. But plain concrete is no worse than the crude masses of mud that often do duty for walls in Irak: it would last longer and wear better, and in many ways it would lend itself well to local forms of architectural treatment. Moreover, it is sanitary—which mud is not!

***

A young lady of my acquaintance informs me that other people's umbrellas seem to have a peculiar fascination for some folk who attend church; and as she speaks from sad experience, one has to accept her statement as correct. Similarly, if one may judge from what one hears and reads, footwear left at the doors of mosques by worshippers possesses an irresistible attraction for some Orientals. The latest example I have come across is that of a native of Alexandria who, charged with stealing three pairs of boots from a mosque to which he had gone to attend prayers, confessed the crime, but pleaded that Satan had enticed him into committing it. As his instigator failed to put in an appearance, the Court sentenced the prisoner to three months. The plea had all the greatness of originality, and the prisoner deserved a better fate!

***

The report of the Chin Hills administration mentions a primitive method of deciding cases that is still in use in the Chiefs' Court in the Arakan Hill district. This is, in fact, an "ordeal by water" of the same character as the old "ordeal by fire." When a conflict of evidence troubles the judges, the defendant and the plaintiff both have to go under water, and the one who stays longest is the winner of the case. This may or may not be satisfactory to the litigants, but it certainly seems to me that it is not a method that would find favour in the eyes of an asthmatic litigant, and I am not surprised to learn that cases are to be referred to these courts in future only when both parties desire it. The reference of such a case will be pretty sure evidence that both plaintiff and defendant have faith in their own lung power.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

A message published this week from the Madras correspondent of *The Times* gives some interesting particulars regarding the industrial possibilities of Southern India. Pointing out that Southern India has hitherto been regarded as a reservoir of raw material, the lack of cheap fuel having prevented progress, the correspondent states that attention is now being paid to hydro-electric schemes to provide the lacking power, but that results cannot be expected in this direction in less than three years. "The following fields," he adds, "offer an immediate prospect of successful development, viz., cottonseed oil, groundnut, copra, castor and many other seeds; in fact, the fringe of the oil and fats industry has hardly been touched. The Government experimental soap factory has done well during the war period, and Messrs. Tata have recently floated a company for crushing copra on the west coast. They propose to make soap, vegetable butter, and other oil seed products. The east coast, with its vast stores of oil seeds, still awaits development, and signs are not wanting of increased activity in forest produce."

***

Of the important tanning industry of South India the correspondent says that though there are over six hundred establishments for rough tanning there is much room for the development of a more finished article. For other industries the outlook is said to be eminently satisfactory. "Small power industries, catering for local needs, are gradually adapting themselves to the use of power machinery and labour-saving appliances," the correspondent concludes, "namely, rice husking, water-pumping, cotton ginning, seed decortication, and button-making. There is also a marked tendency to use improved appliances for agricultural work. Smaller industries that afford promise are fibre bristles for brushes, distillation of essential oils, such as sandalwood, eucalyptus, lemon grass, thymol, and vetiver. Rubber plantations make steady progress, and the vulcanisation of crude rubber offers scope for another industry."

***

This picture, it will no doubt be admitted, leaves little to be desired, but unfortunately there is another side to this pleasant vista, namely, the prospect of labour unrest, which, the correspondent tells us "is chiefly manifest in the European controlled industries, politics having, unfortunately, been recently introduced into the factories by unions started by the Home Rule propagandists, and strikes have been frequent through the year." The introduction of this element into Indian industrial life would be far more disastrous in its effects than in a country already more or less developed, and it is to be hoped that the tendencies already noted will prove to be nothing more than merely temporary phenomena, for, if otherwise, views on India's coming industrial development will have to be entirely recast.

***

It is not too soon to begin considering what British policy is to be with regard to the future of the Baghdad Railway. That the line will be completed in due course may no doubt be taken for granted, since the commercial possibilities attaching to it are very considerable, and the railway would be a valuable accessory to British shipping in the development of Mesopotamia. This naturally pre-supposes that an end is put to all German interests in the line, for it would otherwise be impossible for this country to permit the construction of the remaining portions of the railway. The question of the control of the line may possibly present some difficulty, and in this connection I will only point out that the region from Mosul southwards has always been recognised as falling within the British sphere of influence—even by French authorities.

***

Apropos of this subject, I wonder if my readers have been as struck as I have been with the remarkable secrecy the Germans managed to maintain with regard to the reason for their great project. It was not merely a question of the official German, but every German, high and low, seemed to be in a compact to do everything possible to throw dust in the eyes of the rest of the world. And they may be said to have nearly done what they desired, though some of their excuses were too absurd to pass muster for a moment. One influential German was once asked point blank what were Germany's intentions in pushing forward the railway. And the answer came pat: "We are out to get the passenger traffic to Jerusalem"! Need I add that he supported this luminous proposition with excellent statistics, culled from goodness knows where, and would have made out quite a good case if he had not been talking to someone who knew too much to be taken in by such Teutonic guile.

***

At the meeting of the Sudan Plantations Syndicate, Ltd., the chairman, Mr. F. Eckstein, was able to give an excellent account of the year's working. The receipts from all sources were £43,861 higher than the previous year, against an increase in expenses of £12,242, due to the increase in the cost of irrigation, increased salaries, and expenditure in connection with the newly-founded scientific research station, and the final results showed a profit of £59,692, or £44,855 better than last year. This is being utilised to pay a dividend of 25 per cent., and £36,000 is carried forward. "As regards our prospects for the coming year," said Mr. Eckstein, "we have lately received cabled advice from the Sudan, intimating that the Zeidab cotton crop is very promising, and that 4,000 kantars have been picked, as against 1,516 at the same time last year. The area at Zeidab is 3,200 feddans, against 3,000 feddans in the previous year. Further cable advice from the Gezira states that at Tayiba the crop is fair. The cotton area at this station is 1,727 feddans, as against 1,700 feddans last year. At Barakat the cotton area is 2,237 feddans, as against 2,156 feddans last year. Prospects at Barakat are not good, owing to an attack of fly, but it is to be hoped that some recovery will set in before picking starts."

***

The report of the European Oilfields does not contain the statement of accounts as disorders in the Caucasus, and the interruption of communications with Baku, have prevented any accounts from being submitted. For the year ended April 13, the production of crude oil was 3,554,000 poods, against 4,696,500 poods, while the gross profits are estimated approximately at Rs.450,000, against Rs.919,400. The production for the thirteen weeks to July 13 was 602,500 poods, compared with 1,073,500 poods, and there have been no later advices. It is stated that the Baku Local Government, after nationalising the oil industry in June, denationalised it in October. All the available information is to the effect that the mills appear to have suffered little damage, except through neglect.

***

The Khedivial Mail Steamship and Graving Dock Company, Ltd., has unquestionably had an excellent year. The profit amounted to £42,343, against £37,163, and the investments of the company have risen from £91,187 to £394,660, an increase of over £300,000. As to the prospects before the company, it may be noted that Lord Ernest Hamilton, at last week's general meeting, said that as soon as the ships which were under Government control were released it was anticipated that a very profitable trade would await them in the Mediterranean and Red Sea. He particularly emphasised "the very enhanced prospects of trade on the Syrian coast, and generally in the Eastern Mediterranean." There was a good deal of discussion at the meeting regarding the future of the company, some shareholders suggesting the advisability of taking advantage of the fortunate position in which the company is at present by selling the assets. Whether any developments will take place remains to be seen. Personally, I doubt it.

BRITISH COMMERCE WITH EGYPT.

Opening to Capture Enemy Trade

It may be hoped that the Egyptian market will receive special attention at the hands of British merchants in the future, not only on account of the exceptional prosperity of the country, but also because a great opportunity exists there at the present time of obtaining most, if not all, of the trade in goods which were formerly imported from Germany and her ally. The trade of the Central Powers with Egypt before the war was on a considerable scale; it was also on the increase, and there was every evidence that the enemy was cultivating the market with particular care. In 1914 Germany's share in imports, amounting to £E23,504,000, was 6.3 per cent., and Austria's was 5.2 per cent. Of the exports, totalling £E30,460,000, Germany took 9.5 per cent. and Austria 4 per cent. As in the case of enemy trade with India, it will be noted that Germany's imports from Egypt were much greater than her exports to that country, a fact which carries the obvious moral that if Great Britain is to take the place of the enemy she must be prepared to increase her purchases of Egypt's produce.

As to the reasons why the enemy trade with Egypt was on the up grade, it may be said that they are, roughly, similar to those which have contributed to the success of the policy of commercial penetration in other countries. German and Austrian merchants studied the market requirements, and spared no pains to meet them, and they were absolutely unscrupulous in their methods, while their low prices gave them a marked advantage in a country where cheapness is a great recommendation. Then they were faced with little serious competition in their special lines, for British merchants preferred to follow their old routine rather than produce varieties of goods suitable for changed circumstances. As things were, indeed, but for the war enemy trade with Egypt would no doubt have continued to increase at the expense of British commerce unless our merchants and manufacturers had acquired a new outlook, which the conditions of the time hardly suggest as probable. It is possible to excuse the failure of British traders to hold their own in the Balkan markets, but in Egypt, where the position was largely in their favour, it is scarcely possible to understand how it was that German and Austrian traders did not encounter such strenuous competition, even in their special lines, that they would have been unable to make any headway. As it was, German and Austrian trade steadily increased during the thirty years before the war, up to, as we have seen, 11.5 per cent. of the imports, while Great Britain's share of the imports fell from 37.84 per cent. in 1888 to 32 per cent. in 1914.

The list of German and Austrian exports to Egypt is far too long to deal with in detail in the space of a short article, for, as a matter of fact, with the exception of natural indigo, the enemy's trade covered all the principal imports of the country. In attempting to give a brief outline of the field for British traders we shall, therefore, merely touch on the main items in this trade. Without further references it will be understood that the figures are for the last year before the war.

Wealth of Imports.

Of Egypt's imports of indigo, the whole of the artificial indigo, valued at £E68,381, came from Germany, while that country also supplied aniline dyes to the extent of £E10,983, against imports from the United Kingdom of £E3,214. Here there is undoubtedly great scope for British dyes. In metal and hardware the enemy found another profitable line, and while British trade predominated in most of the items coming under this heading, enemy imports were on a considerable scale. Austria was not greatly concerned in trade, but in one instance—enamelled ware for domestic purposes—she supplied the bulk of the imports, the figures being £E33,901, out of a total trade of £E40,919. Of German lines, mention may be made of windows and door fittings, which were supplied to the extent of £E57,533, against the United Kingdom's total of £E28,503. The reason of German success in the hardware trade was that she flooded the market with very cheap goods and so placed the British manufacturers at a great disadvantage.

The bulk of the imports of clothing came from the enemy. Of ready-made clothing, valued at £E305,912, Austria's share was £E165,480, Germany's £E6,116, and the United Kingdom's £E49,984. Knitted and woven articles were imported to the value of £E248,906, and of this total Germany's trade amounted to £E76,435, while the figures for Austria and the United Kingdom respectively were £E20,203 and £E23,733. Of ready-made underclothing, the United Kingdom supplied imports worth £E84,295, out of a total of £E315,472, but Austria was a serious competitor with imports worth £E45,814. In machinery and railway rolling stock, German imports were on the increase. Her trade in agricultural machinery amounted to £E48,297, against the United Kingdom's figures of £E195,833, while she supplied practically all the locomotives, her imports amounting to £E51,592 out of a total trade of £E55,132. Oil and petrol engines was another line in which German trade was increasing, her imports totalling £E30,528, against the United Kingdom's figures of £E61,504.

Variety of Enemy Goods.

In leather goods Austrian imports were important. Egypt's imports of leather were valued at £E142,996, and of this the United Kingdom's share was £E40,927, Austria's was £E23,323, and Germany's was £E11,092. Under the heading "boots and shoes," Austria and Germany respectively exported goods worth £E16,200 and £E8,640, while of Egypt's imports of fancy leather goods those from Austria were valued at £E8,500, or almost twice the United Kingdom's total. Probably the leather in question, or most of it, came from India, whose resources of hides, as our readers know, were absolutely exploited by Germans. Paper, of course, provided the enemy with a satisfactory field for commercial penetration. Here Austria led the way, with Germany prominent in one or two branches of the trade. Austria supplied writing and printing paper to the value of £E46,700, against the United Kingdom's £E28,744, packing paper to the value of £E39,200, against £E2,200 from this country, and cigarette paper to the value of £E31,207, against the United Kingdom's meagre total of £E500. Germany was to the fore in the trade in cardboard boxes and other articles in cardboard, her imports being £E11,400, against the United Kingdom's £E9,900. Furniture was another trade in which the enemy had a decided hold. Egypt's imports amounted to £E117,904, and of this £E38,400 came from Austria and £E8,800 from Germany, while of imports of other joinery work, amounting to £E109,582, Germany supplied £E16,900, against the United Kingdom's £E13,900. Then in regard to imports of basket work, Austria's trade of £E6,742 was almost treble that of the United Kingdom. Austria found another profitable line in cement, her trade in which totalled £E15,800, or about half that of the United Kingdom. China and glassware have been special lines in the enemy's trade aggression throughout the world, and the Egyptian market was no exception. Thus, of imports of china and glazed earthenware of £E68,939, Germany's share was £E20,400, and Austria's £E14,300, against £E3,800 for the United Kingdom. Of articles in glass other than window glass and mirrors, the imports of which came to £E114,123, Austria supplied goods worth £E58,357, and Germany's trade was £E24,803, against £E4,355 for the United Kingdom.

The trade in matches was very largely in the hands of Austria, her share being £E23,727 out of a trade of £E81,368. Then, as regards textile imports, while the enemy trade did not approach the figures for the United Kingdom, both Germany and Austria were making evident headway, particularly in cheap lines. Of the imports of woollen piece goods, valued at £E372,917, for instance, while the United Kingdom's figures were £E131,658, Austria's trade was £E99,259 and Germany's £E58,751. Shawls were almost entirely imported from the enemy, Austria's figures being £E28,257, and Germany's £E48,463, out of a total trade of £E92,761. Mixed fabrics were also largely supplied by Germany and Austria, their joint trade amounting to £E45,227, against the United Kingdom's figures of £E33,116. Egypt's imports of jewellery, watches, and clocks were almost entirely taken from Germany and Austria. The trade in these commodities has been small, the only considerable item being gold jewellery, totalling £E18,744, of which Austria's share was £E11,789. In miscellaneous imports both Austria and Germany played a leading rôle. Austria had the monopoly of the supply of tarboushes, with a trade of £E24,507 out of £E33,676, while the enemy between them supplied Egypt's need for pianos, organs, etc.

Market Requirements.

These items show very clearly the ramifications of the enemy trade with Egypt, and the splendid opening that awaits enterprise on the part of British merchants and manufacturers. The trade will not go back to Germany and Austria; that much is certain, but whether our business men will seize the chance of regaining their position in the Egyptian market is another matter. Some part of this trade will no doubt be taken by the development of Egypt's industries, but too much should not be made of this factor because, in the most favourable circumstances, a long time must elapse before any definite results accrue from the movement to promote industries in the country. The United Kingdom, is, however, not the only competitor in the market. Japan and America, who have made their presence felt in so many new markets during the past few years, are fully alive to the possibilities in Egypt, and unless British traders are alert enough to catch the fleeting hour, they may find themselves too late. But we will not contemplate that prospect, for it is unthinkable that so inviting a market as Egypt should be ignored especially in a time when it is evident that the United Kingdom will need all the markets it can find. The trade will not be obtained merely for the asking, however, and it is well that British traders should realise that fact. Hard work will be entailed; the market will have to be cultivated as it never was before, and the task must be entered upon in a very different spirit from the *laissez faire* attitude which obtained before the war. There must be an end of the "take it or leave it" spirit; if the goods of a competitor have the preference for the time being, they must be examined, and every effort made to produce a similar article, and *a better one at the price*. The words in italics might well be hung up in every export house in the country; for on the accomplishment of that feat British trade supremacy will depend in the future, not only in Egypt, but throughout the world. It need hardly be added that every British trader who desires to enter on an Egyptian campaign should have constantly before him samples of German and Austrian goods which were in demand in that country. Enemy trade methods naturally cannot be followed, but there is no reason why we should not supply Egypt with exactly similar articles to those which were formerly imported from Germany and Austria. Above all, it is quite essential to enter the Egyptian market with the aid of an agent in Egypt of adequate standing, and English for preference. In the past unsatisfactory agents of foreign nationality have often been employed, to the detriment of British trade interests. Then, besides a resident agent, travellers should occasionally be sent out, firms combining together to send one should the cost be excessive for a single business. It is in following these methods that success will await those traders who decide to enter the Egyptian market.

ENGINEERING NOTES.

Mining in Serbia.

In previous notes reference has been made to the partially developed state of the mining industry in Serbia. This condition was to a great extent the result of the unsatisfactory state of affairs created by the systematic political intrigues of neighbouring States, which naturally discouraged serious enterprises. There are, however, mines in Serbia which, if adequately developed in accordance with modern scientific methods, should prove of great importance to the country. In 1910, the last normal year before the outbreak of the Balkan war, the production of coal in Serbia, amounted to 276,845 tons, lead and zinc ore to 1,032 metric tons, iron pyrites to 36,835 metric tons, antimony to 326 metric tons, copper to 5,335 metric tons, lead to 56 metric tons, and gold to 303 kilogrammes. Alluvial gold has recently been discovered in the vicinity of the Pek, a tributary of the Danube. Gold has also been traced at Cestobodica, near the Austro-Serbian frontier, and in the Timok mining district, on the eastern frontier facing Bulgaria. Quicksilver is found at Avalaberg and antimony at Kostainik. Plenty of lead ore, frequently containing silver, is found in Serbia, notably at Rudnik, situated in Central Serbia, south of Belgrade. Zinc is also obtained here, together with silver and gold. Copper is found, both pure and in the form of pyrites, near Majdan Pek at Bor, in the east, and at Rebelj and Wis in the south-west. It is hoped that these mines will be thoroughly explored as soon as possible.

Roumanian Sugar Industry.

It was recently announced at Bucharest that only the ready co-operation of the large land-owners was needed to establish an important sugar industry in Roumania, and it was pointed out that already seven large factories existed in different parts of the country, which might form the nucleus of the enterprise. The climate and soil, particularly in Moldavia, are favourable to the cultivation of the sugar-beet, and only enterprise is required to develop the industry. The announcement aroused considerable interest among German industrialists and others, whose schemes for the exploitation of Roumania's resources were very numerous. Their hasty evacuation of the country has undoubtedly upset their schemes.

Electricity by Wind-Power.

The development of wind power for generating electricity, which has recently been announced, will be of much interest to many municipal governments, industrial companies, and private individuals in many districts in the Near East, where, owing to transport difficulties, scarcity of water, or high cost of fuel, steam or oil engines cannot be advantageously employed, and wind-power is principally utilised for any local milling industry, or for irrigation purposes. To such districts the new development of wind-power for generating electricity will be very beneficial. It is a wind-turbine, the wheel of which has rigid screen screw-shaped blades and drives through conical gear-wheels. Its direction is adjusted according to the direction and strength of the wind. A battery, working in parallel with the dynamo, has a capacity sufficient to cover the output required for two days. An electromagnetic switch interrupts the connection between the battery and dynamo when the speed falls below a given value and resistance is automatically inserted in the field circuit of the dynamo when the speed rises. The voltage of the battery is controlled by a double battery switch. The voltage regulation of the dynamo may also be effected by a compound winding, or mechanically, by an arrangement including a slipping belt. The cost of generation is given as ½d. to 1d. per h.p. hr., including interest, depreciation and maintenance.

Building Activity in Sofia.

According to the *Bulgarenshaw*, great building activity prevails in Sofia in spite of the war conditions. An up-to-date railway station, designed by Professor Kühne, is to be erected. The city aims at enlarging and beautifying its public buildings, and the authorities intend to make Sofia vie with other capitals. For the purpose a loan of 60 million francs is to be issued, and with the funds thus obtained many new buildings will be constructed, including a fine city hall, four district town halls, eight district municipal offices, two branch fire stations, two public baths, three new hospitals, an extension of the old infirmary, numerous workmen's cottages and cheap houses, three elementary schools, three higher schools, an opera house and an abattoir. The cessation of building operations in the larger towns has, apparently, been very severely felt, for, like all other people in the Near East, every Bulgarian likes to have a house of his own. The rent of houses during the war has increased by between 100 and 150 per cent. Thus, with the existing great dearth of houses, and the carrying out of the above-mentioned building plans, there will be in Bulgaria, not only a great demand for building materials, but also for expert builders.

With regard to financial means for carrying out these plans, it appears there will be no difficulty since, according to the statement in the annual report of the Kreditna Banka of Sofia, during 1917 there was an unprecedented commercial boom in Bulgaria, unheard of prices being paid for agricultural produce, especially when exported. Tobacco brought in no less than 700 million francs, as against about 100 million francs before the war. Very large deposits were received by the banks, and there was no fall in the value of money owing to the number of new companies floated and to speculation in securities. The Kreditna Banka itself increased its capital by 4 million leva (= francs) and paid a 7 per cent. dividend, against 6 per cent. in 1915.

LANCASHIRE COTTON.

Brighter Outlook.

(From Our Own Correspondent.)

Manchester, Monday.

Nearly the whole of this week has been given up to holidaymaking, and since Tuesday the market has been entirely closed. Although no particular development in the situation can be recorded, the prospects rather tend to improve. There is less inclination to anticipate lower values in the near future. Owing to prices being controlled, Egyptian cotton keeps steady. A rather hardening movement, however, has shown itself in American qualities. A little more inquiry has been mentioned in Egyptian yarns, chiefly in special sorts. Business in piece goods for Egypt remains depressed. Better telegrams have again been received from India, and freer clearances are said to be taking place in the bazaars at hardening prices. American yarns remain uncertain. Most users continue to purchase from hand to mouth. Some fair sales have been mentioned in yarns suitable for France.

TENDERS INVITED.

Corrugated Iron Sheets for Morocco.

H.M. Vice-Consul at Tetuan reports that a client of a general commission agent at Ceuta desires to purchase 10,000 sheets of corrugated iron, measuring approximately 8 mm. thick, 2 m. 10 cm. long, and 80 cm. broad, from United Kingdom manufacturers. The sheets, which need not be all alike, are required urgently to cover sheds destined to serve as stores for goods deposited in the "depots francs." Information can be obtained from the Department of Overseas Trade (Development and Intelligence), quoting Reference No. 420.

THE MORTGAGE COMPANY OF EGYPT, LIMITED.

The Board have decided to pay a DIVIDEND on the Five per Cent. Cumulative Preferred Shares for the Half-year ending 31st December, 1918. Warrants will be posted on 31st instant, and the BOOKS will be CLOSED from the 18th December to the 31st December inclusive.

ROBERT H. EGGAR,
Secretary.

INDIA'S MINING INDUSTRY.

Position in 1917.

The report of the Chief Inspector of Mines in India for 1917 states that there was a large increase in the output of coal, which reached 17,326,384 tons, an increase of 907,302 tons on the figures for 1916. The increase was general throughout British India, and only in five of the seventeen coalfields was there failure to respond to it. The five included, however, the important Raniganj and Giridih coalfields. The main increase was in the Theria coalfield, the output of which was 833,470 tons more than in 1916. Of the total output, 16,562,712 tons, or 95.59 per cent., were raised in Bengal and Bihar and Orissa. The percentage for the previous five years for these provinces was 95.89.

The output of mica amounted to 35,896 cwts., against 35,978 cwts. in 1916. There was an increase of about 10,000 cwts. in the Bihar and Orissa field, but this was balanced by a similar decrease in the Madras field.

There was a decrease in the output of manganese, the figures being 497,252 tons, against 568,032 tons in 1916. The demand was strong for this material in all the Allied countries, and prices marked a further advance, the average rate for the year being 37¼d., against an average rate for 1916 of 29½d.

The output of wolfram showed a substantial increase, the production amounting to 79,312 cwts., against 59,094 cwts. in 1916. The increase was most noticeable at the beginning of the year, which, it is stated, points to its being the result of lode mining rather than of hydraulic methods. There are now four air compressor plants operating machine drills, and two mines are equipped with milling machinery of fairly large capacity. In hydraulic mining much progress has been made, and water rights have been granted to enable several important schemes to be put into operation. The most important scheme comprises a reservoir with a capacity of 550,000,000 gallons to supply water under a head of approximately 1,800 feet to turbo generators which will develop power to electrify most of the machinery of a large mine and also to drive dredging machinery. It is pointed out that the installation of a magnetic separator at Tavoy has been of much assistance in the separation and cleaning of concentrates for shipment. Great progress has been made in road construction throughout the field.

The output of gems amounted to 198,200 carats against 209,724 carats in 1916. There was a somewhat spasmodic demand for rubies in the Home market, but in the Indian market there was a considerable business in most qualities. There was no improvement in the rates for the finer stones, but there was a substantial advance of about 25 per cent. in the prices of the inferior qualities. The year was an excellent one for the producer of sapphires owing to a great demand from Paris, and really fine Mogok stones brought very high prices. The supply was naturally stimulated, and the view is expressed that more sapphires were probably produced in 1917 than in any previous year.

There was a slight decrease in the gold output, the figures being 22,991 oz. against 23,235 oz. in 1916. The copper output showed a remarkable increase on the previous year's total at 20,108 tons, against 2,671 tons. Increases also took place in limestone, iron ore, magnesite, molybdenite, chromite, clay, tin, steatite, and fuller's earth, and decreases in slate, salt, bauxite, galena, silver, and graphite. An output of samarskite is again reported from a mica mine in the Nellore district, Madras, and bismuth and yellow ochre appear for the first time.

TURKISH FINANCES.

In Berlin it is reported from Constantinople, says Reuter's Copenhagen correspondent in a message dated December 21, that the Turkish Government intends to declare the State bankrupt.

COMPANY MEETINGS.

Sudan Plantations.

The eleventh ordinary general meeting of the Sudan Plantations Syndicate, Ltd., was held on December 20 at the registered office of the company, 1, London Wall Buildings, London, E.C., Mr. F. Eckstein (the chairman) presiding.

The acting secretary having read the notice convening the meeting and the report of the auditors,

The chairman said:—Gentlemen, our annual report, balance-sheet and profit and loss account having been circulated and sent to all shareholders, we will, with your permission, follow the usual course of taking them as read. The directors' report gives the number of bales of cotton forwarded from our ginning factories in the Sudan. The yield of cotton grown in the Zeidab and Tayiba districts was quite satisfactory. The Barakat return was lower than usual owing to shortage of water and pests. Zeidab district produced 7,738 kantars, against 6.450 kantars in the previous year. Tayiba average yield per feddan was 4.1 kantars, giving over 1,700 feddans 6,953 kantars, and Barakat 2.6., giving over 2,156 feddans 5,743 kantars. Cotton prices have ruled high. Shipping facilities were distinctly bad in the early part of the year, but improved later on owing to representations made by the Sudan Government. All our shipments arrived safely and were sold to advantage. We disposed of one consignment of 481 bales in Alexandria at satisfactory prices.

If you will now look for a moment at our balance-sheet you will see that our share capital remains unaltered at last year's figure, and our Debenture capital was likewise unaltered on June 30 last, but since that date the total amount has been paid off, so that this liability no longer exists. We have again increased the Gezira reserve account by £4,000. This account now stands at £20,000. Creditors in London are represented by drafts (£3,000) drawn on London in June last and not presented during that month. This account also includes our provision for postponed repairs and a bonus to our staff. Sudan creditors, £44,000, is made up of £36,925 tenants' deposits, £884 staff deposits, and £6,291 outstanding accounts. The amount owing to the Sudan Government is £39.468. which is higher than usual, but is accounted for by the fact that the Government share in Tayiba for the previous year, amounting to £14,172, is included, and was only paid after the closing of our books. The balance of £25,296 is Government share in Tayiba for the year under review. Turning to the other side of the balance-sheet, concession and land account is less than last year's figure by £22. General development.—The Zeidab figure again remains unaltered. The Gezira figure is £775 less than in the previous year, owing to recoveries for work done. Buildings and furniture stand at £4,000 less than last year. This reduction has been effected by the sale of our building in Khartoum at a figure above cost price. Instead of taking this profit into our profit and loss account, we have reduced capital. Canalisation account remains at last year's figure. Pumping installation is reduced by £2,000. Agricultural implements are reduced by £2,000, through the sale of machinery and writing off. Ginning factories remain at last year's figure. Tug, barges and boat account is less by £500. Cotton and seed, appearing as an asset for £215,821, is now all sold at that figure, and it gives me great pleasure to mention here and gratefully acknowledge our thanks to the British Cotton Growing Association, Manchester, for the valuable assistance we have received from that association. These friends have done all they could to expedite sales and render accounts, and the same remark applies to our friends, Messrs. Kelly and Co., Glasgow. Other stocks in the Sudan include our live stock, stores and supplies necessary for our work, and also about 500 tons of cotton-seed lying at Port Sudan awaiting shipment. Debtors in the Sudan (£6.020) are represented by £158 loans to tenants against the present growing crop, £978 sundry accounts, and £4,884 working account. The latter represents work done by the syndicate with heavy steam ploughing tackle, and later on charged to the tenants. Treasury bills and cash are at the figures shown in the balance-sheet as at June 30 last. Since that date our cash position has largely increased owing to cotton sales, and you will be glad to hear that, after paying off all our Debentures, our cash position to-day stands approximately at £160,000.

Turning now to our profit and loss account, you will notice that receipts from all sources amount to £121,296, or £43,861 higher than last year. Expenses in London and the Sudan are £37,632, or £12,242 more than last year, which requires an explanation on my part. In the first instance, I have to record a natural increase in the cost of irrigation, increased salaries, as well as a bonus paid to our staff in the Sudan during the last winter. It also includes expenditure in connection with the newly founded and necessary scientific research station, of which you will find mention made in the directors' report. Altogether these items amount to £12,166, which is practically equivalent to this increase. Provision for postponed repairs is a new item. Since the outbreak of war we have found great difficulty in obtaining certain necessary spares to keep our agricultural implements, pumping installations, ginning factories and buildings in first-class order, and we now propose laying aside the sum of £9,948 14s. 4d. for this purpose. We propose paying a bonus to our staff, and are making the necessary provision. We have written off the sum of £4,102, as per details shown in the profit and loss account. The final results, therefore, show a profit of £59.692, which is £44,855 better than last year. From this we propose to declare a dividend of 25 per cent. for the past year, which, after payment, will enable us to bring forward a balance of about £36,000 to the new account.

As regards our prospects for the coming year, we have lately received cabled advice from the Sudan intimating that the Zeidab cotton crop is very promising and that 4,000 kantars have been picked, as against 1,516 at the same time last year. The area at Zeidab is 3,200 feddans, against 3,000 feddans the previous year. Further cable advice from the Gezira states that at Tayiba the crop is fair. The cotton area at this station is 1,727 feddans, as against 1,700 feddans last year. At Barakat the cotton area is 2,237 feddans, as against 2,156 feddans last year. Prospects at Barakat are not so good, owing to an attack of fly, but it is to be hoped that some recovery will set in before picking starts. Reverting to our negotiations and agreement in respect of the Gezira scheme with the Sudan Government, I regret to say that the war, now happily and victoriously ended, has so far prevented a final ratification, but I can say this, that the draft agreement, as far as we have been able to complete it, has this year been approved by the Sudan Government. We sincerely hope that with the coming peace negotiations we may also reach our final turning point and that when we have the honour of meeting you next year we may be able to announce to you the conclusion of negotiations which began and lasted for so many years. It will interest you to hear that work in connection with the dam on the Blue Nile has been going on, though, naturally, on a modified scale. Our colleague, Lord Lovat, is still in France, and therefore unable to be present at our meeting. Another and valued colleague, Mr. Hutton, has, I regret to say, been unwell and unable to attend our meetings for some time, but last week we had the pleasure of seeing him again at one of our directors' meetings. Again I wish to record the Board's grateful appreciation of the loyal and efficient services rendered by our staff in the Sudan. I now beg to propose that the report and statement of accounts be received and adopted.

Mr. D. M. Hannay seconded the motion, which was carried unanimously.

The chairman next moved:—"That a dividend be declared for the year ended June 30, 1918, upon the issued shares of the company at the rate of 25 per cent., equal to 5s. per share, less Income-tax, and that such dividend be payable to all shareholders registered at the close of business on December 13, 1918."

Mr. F. Wise seconded the resolution, which was unanimously adopted, and the chairman announced that the dividend warrants would be posted that evening.

Mr. D. M. Hannay and Mr. F. Eckstein, the retiring directors, were unanimously re-elected, and Messrs. Cooper Brothers and Co. were reappointed auditors.

Colonel Whitburn, in moving that the sum of £200 each be paid to the directors as remuneration for their services, referred to the difficult and arduous work they had carried on and the success they had achieved, as reflected in the results now submitted.

Colonel S. H. Pollen seconded the motion, which was unanimously carried.

A vote of thanks to the chairman and directors, proposed by Mr. Styer and seconded by Colonel Pollen, was unanimously carried.

The chairman having acknowledged the vote, the proceedings terminated.

Khedivial Mail Steamship.

The twenty-first ordinary general meeting of the Khedivial Mail Steamship and Graving Dock Company, Ltd., was held on December 20, at Winchester House, Old Broad Street, E.C., Lord Ernest Hamilton (the chairman) presiding.

The acting secretary, Mr. Alfred C. Silley, having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen,—From the shareholders' point of view the result of the year's working may be considered extremely satisfactory, and I think shareholders will agree, as undoubtedly the Board does, that great credit is due to our management in Egypt for the very satisfactory result shown. The profit for the year is £42,343, as against £37,163 in the preceding year. During this year the steamship realisation fund has risen from £12,770 to £128,000. Our investments have risen from £91,187 to £394,660, or an increase of over £300,000. You have already been notified in the report of the ships which we have unhappily lost since we last met. It is satisfactory to be able to report to you that little loss of life accompanied the sinking of any of these ships with the exception of the "Osmanieh," which was being used as a transport, and had on board a large number of troops. All the company's ships are still under Government control, and we have received no intimation as to when there is a probability of their being released. The Board, however, anticipates that as soon as they are released there is a very profitable trade awaiting them in the Mediterranean and Red Sea. The twelve months under review has been a period of constant anxiety and very strenuous work for the management out in Egypt. For the first time since his appointment in 1914 our general manager has been able to relax temporarily his control in Egypt and to meet us here; the war has precluded his taking any holidays.

I cannot conclude my remarks to you without drawing your attention to the very enhanced prospects of trade on the Syrian coast, and generally in the Eastern Mediterranean. It should be a simple matter, as soon as opportunity offers, to re-establish our agencies in that part of the world and renew trade which was broken off by the outbreak of war. That, gentlemen, is all that I have to communicate to you at the present moment.

Mr. Francis Allen seconded the resolution.

Mr. W. H. Skeel remarked that neither in the report nor in the chairman's speech had it been mentioned whether the ships which the company unfortunately lost were covered against war risks, but he supposed they were.

The chairman replied in the affirmative.

Mr. Hugh Reeves said that during the twenty years' existence of the company the Ordinary shareholders had received £113,000, including the dividend now proposed. That was just about 6 per cent. per annum on the ordinary capital, which amounted to £100,000. What, he asked, had they done with the rest of their large earnings? Well, they had put £400,000 into depreciation. It was a curious thing to find that £400,000 was represented by liquid assets, which fortunately was the property of the shareholders. The payments to those who were necessarily employed—the directors and the auditors—had absorbed £50,000, which was just about half what the ordinary shareholders had received. He did not complain about this; it was only a matter which should be borne in mind in looking at the future. The company was in a very sound position to-day and he should have liked to hear from the Board what their real policy was to be in the future. Personally, as a considerable shareholder he should be against embarking any of the liquid assets in tonnage at present prices.

Mr. Vere Herbert Smith said that it seemed to him that any sensible shareholder would wish to touch some of the cash which was in the company's coffers, and there were three courses open to them:—To go on in business as they were; to amalgamate with some other concern; or to sell the assets out and out. It seemed to him that the most beneficial course for the company would be to liquidate.

they could not sell their assets lock, stock and barrel at a reasonable price, they might sell them piecemeal.

The chairman, in reply, said that the directors quite realised that to shareholders a bird in the hand was worth two or even three in the bush, but he thought some of the remarks were open to comment. In the old days the company was run with very old, unsuitable boats. They were boats picked up here and there—anything that could be got at a cheap price, whether it suited the trade for which it was required or whether it did not. A further disadvantage was that the company started absolutely without any working capital, and all the ships had to be bought and paid for out of profits. To-day they had half-a million in round figures in cash, which in the ordinary course would be reinvested in ships. Those ships would not be the old shells which they used to buy and attempted to trade with, but ships which were suited to their purposes, which could be run cheaply, and on which the profit presumably would be very much greater than the profit earned on the old ships.

A shareholder said that they would have to buy at the top of the market.

The Chairman: No Sir. I do not think anyone here would for a moment advocate buying fresh tonnage at present prices. He stated that it was quite impossible for him to outline a definite policy for the future because the future of shipping was uncertain. All the directors could say was that they would leave the company's money as it was until they saw a suitable opportunity of investing it in ships at reasonable prices. The alternative, as Mr. Vere Smith had said, was either amalgamation or liquidation. Amalgamation, he thought, they might brush aside as out of the question; he did not think it was practicable. As to the question of a direct sale, that was not so easy a matter as it would appear on the surface to the shareholders. He thought there was very little doubt that they could only sell their remaining assets as a whole to some existing company. Someone had suggested that they might sell them piecemeal, but he did not think that that was at all feasible. No definite policy had been outlined and nothing could be done at that meeting, because no notice of a resolution had been given, and it seemed to him that the only procedure possible was for the directors, at the instigation of shareholders, to summon a special meeting, at which two alternative resolutions could be submitted—one authorising the Board to sell not under a certain figure named, and the other giving them a free hand to make the best negotiations possible. He thought the first alternative would be very much the preferable one from the point of view of the Board. In order to requisition an extra-ordinary general meeting the shareholders would have to deposit 10 per cent. of the value of the issued shares, and if they did so it would show that there was a sufficient desire on the part of the bulk of the shareholders to have the liquidation carried through.

Mr. Parsons said he thought the feeling of the shareholders was very much in favour of liquidation.

The resolution for the adoption of the report and accounts was then put to the meeting and carried unanimously.

The Chairman next moved:—"That a final dividend of 15 per cent. on the ordinary shares of the company for the year ended June 30, 1918, be and is hereby declared payable on January 6, 1919."

Mr. Allen seconded the motion, which was unanimously agreed to.

The retiring directors, Mr. S. Wellhoff and Mr. Francis Allen, were re-elected, and Messrs. Edwin Guthrie and Co. were re-appointed auditors.

Mr. Reeves proposed that the company should defray the income-tax on all directors' fees payable for the period covered by the accounts presented to the meeting.

Mr. Vere Herbert Smith, in seconding the motion, suggested that if the directors required a mandate to call a special meeting the shareholders should communicate with Mr. Hugh Reeves, of 42, Old Broad Street, E.C., so that the necessary shares could be deposited.

The motion was agreed to and a cordial vote of thanks to the chairman, directors, the general manager, secretary and staffs both at home and abroad concluded the proceedings.

COMPANY NOTES & REPORTS

European Oilfields.

The report of the European Oilfields Corporation states that in consequence of the continued disorders in the Caucasus and the interruption to communications with Baku the directors are unable to present the accounts for the year ended April 13. Production during the year ranged from 43,800 poods to 86,500 poods per week, and in the aggregate amounted to 3,554,069 poods (57,298 tons), an average of 68,348 poods (1,102 tons) per week. For the previous year the total production was 4,696,514 poods (75,716 tons), an average of 90,318 poods (1,456 tons) per week. The gross profits of the year are estimated at approximately Rs.450,000, in comparison with Rs.919,402. The last advice of any production was that for the week ended July 13, 1918. The production for thirteen weeks to that date was 602,500 poods (9,713 tons), in comparison with 1,073,500 poods (17,307 tons). Upon the return of normal conditions on the oilfields the first aim of the board will be to restore production to its former volume. The directors have no reason to suppose that the wells have suffered serious damage.

Central Province Ceylon Tea.

The report of the Central Province Ceylon Tea Company for the year ended June 30 states that the net profit, after writing off £300 from estates account for depreciation of machinery, placing £400 to Income-tax and excess profits reserve and £2,000 to maturing suspense account, is £9,409, which with £1,951 brought forward makes £11,359, dealt with as follows:—Preference dividend paid January 15, £3,000; Ordinary dividend of 13 per cent., less Income-tax, now recommended, £6,500, carrying forward £1,859.

Beau Sejour Tea.

The report of the Beau Sejour (Ceylon) Tea and Rubber Company for the year ended June 30 last states that net profit was £1,013; £1,365 was brought in, making £2,378. After providing for preference dividend amounting to £696, there remains £1,681, which the directors propose to carry forward.

Dividends, Payments, etc.

Chandpore Tea.—Interim dividend of 5 per cent., less tax, same as last year, payable January 11.

Adulla Rubber.—7½ per cent. (1s. 6d. per share), less tax (interim). Last year, 10 per cent. (paid in July).

Pathini Tea.—5 per cent. (1s. per share), less tax, on ordinary shares (interim), payable 24th instant. Last year, dividend same.

The directors of the Dekhari Tea Company have declared an ad-interim dividend of 6 per cent., less income-tax, on account of 1918, payable on January 3.

INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following weekly cabled news received from the Director-General of Commercial Intelligence, dated December 19:—

Prohibition on importation into India of motor cars, etc., has been removed.

Season.—Favourable in Madras. Light to good rain has fallen in parts of Bombay. Light rains in parts of Punjab, South Madras, South-East, Central Provinces, and in the United Provinces.

Markets.—Bombay cotton market irregular. Fully good broach quoted April-May Rs.580. Piece goods market hopeful.

Mr. Freemantle has been appointed controller of steamer passages.

NEAR EAST MARKETS.

Indian Crop Acreages.

Cotton.—The second forecast of the cotton crop for 1918-19, relating generally to sowings made up to October 1, estimates the total area sown this year at 15,814,000 acres, 25 per cent. below the estimate at the same date last year. The decrease, which is mainly due to unfavourable weather conditions at sowing time, occurs in Mysore (80 per cent.), Ajmer-Merwara (60 per cent.), Rajputana (46 per cent.), Madras (41 per cent.), Bombay and Hyderabad (38 per cent. each), the United Provinces (37 per cent.), Central India (12 per cent.), and the Central Provinces and Berar (9 per cent.). On the other hand, the North-West Frontier Province shows an increase of 41 per cent., Burma 33 per cent., Sind 31 per cent., Punjab 14 per cent., Bihar and Orissa 13 per cent., and Assam 3 per cent. The crop has been adversely affected by deficient rainfall in most of the important cotton-growing provinces.

Sesame.—The total area under crop reported at the end of October for the present season is 1,589,000 acres, against 2,756,000 acres reported at the same time last year, or a decrease of 42 per cent.

Ground Nuts.—This forecast is based upon reports received from the three provinces of Madras, Burma, and Bombay, which comprise 99 per cent. of the entire ground-nut area of British India. The total area sown in the present season in these provinces is estimated at 1,147,000 acres, against 1,771,000 acres estimated in October, 1917, or a decrease of 35 per cent. The decrease is attributed to deficient rainfall at sowing-time.

Rice.—This forecast is based upon reports furnished by provinces which contain about 99 per cent. of the total area under rice in British India. The reports relate to conditions up to October 1. The total area sown is reported to be 70,952,000 acres, which is 6 per cent. below the revised estimate for the corresponding period last year. As compared with the final estimate of last year (79,614,000 acres), the present estimate shows a decrease of 11 per cent.

Sugar Cane.—This forecast is based upon reports furnished by provinces which contain, on an average, 99 per cent. of the total area under sugar cane in British India. The area so far reported this year amounts to 2,590,000 acres, as against 2,565,000 acres estimated in October, 1917, or an increase of 1 per cent. As compared with the final estimate (2,796,000 acres) last year, the present estimate shows a decrease of 7 per cent.

Tunisian Export of Dates.

A decree published in the *Journal Officiel*, Tunis, of October 23, states that in view of reports received regarding the date harvest, it is possible to open an export credit of 9,100 quintals of deglas, and 30,000 quintals of inferior qualities, for shipment to France and Allied countries.

COX'S SHIPPING AGENCY

Cox's Shipping Agency, Limited (in connection with Messrs. Cox and Company), 16, Charing Cross, S.W., announce that on January 1 they are opening an office at 16, Bishopsgate, E.C.2, to transact chartering, insurance, and general shipping business, and have appointed Mr. Henry F. Bennett, late chairman of Messrs. Wm. H. Muller and Company (London), Limited, a director of the company, to control the chartering, and engaged Mr. S. V. Lockitt, who is a member of Lloyd's, and who has been connected with Lloyd's for nearly 24 years, to manage the insurance department.

ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Street.

During the few days comprised in this short week there has been rather a better tone, but business has continued on the restricted scale.

In Government stocks Egyptian Unifieds are ½ better at 88¾, and there has been a like improvement in the Three and a-half per Cent. Preferences at 77 on buying orders from Egypt; but, for the time being, there are no sellers.

In bank shares, Nationals are ¼ down at 20⅞, and Agriculturals have lost 1-32 at 6 11-16 on some small local realisations. On the other hand, Agricultural Preferences have been a firm spot at 7⅛, at which business has been done with further unsatisfied buyers. Anglo-Egyptian Banks have improved another ¼ to 17.

Amongst railways, Delta Lights are again ⅛ higher at 8½.

In land shares, Aboukirs are in good demand round the current level It is understood that the bank's encashments this year have been of such a satisfactory character that the payment of a dividend for 1918 is quite on the cards. Egyptian and Foreign Trusts are fractionally harder at 15s. 9d. On the other hand, United Egyptian Lands have relapsed 4½d. to 3s. 4½d., and Sudan Plantations are 1-16 lower at 3⅞, on profit-taking after their recent substantial rise. Amongst miscellaneous descriptions there has been a certain amount of business doing in Alexandria Waters, which are in demand for Egypt round about the current level. Salts and Sodas are fractionally easier at 76s. 3d., and Khedivial Mails, after being up to 92s., are closing unaltered at 90s.

In Greek securities, beyond a drop of one point in the 1902 Loan to 67, there is no change in prices to be recorded. Bank of Athens shares have again been done for a few hundreds at 81s., at which price there are further buyers.

Oil Shares.

There are few changes to record. British Burmahs are stronger at 14s., but Anglo-Egyptians B and Anglo-Persian Prefs., are unchanged at 2 11-16 and 25s. 6d. respectively.

Roumanian Consols are steady at 15s. 6d., but Traian Roumanians are 1½d. down at 9s. 6d. Anglo-Roumanians are 8s. 4½d.

Of Russians, Ural Caspians were stronger at 1⅝, but North Caucasians were slightly lower at 24s.

Paris Bourse.

Suez Canal shares were again lower at 5,360 francs. Other prices were: Egyptian Unifieds 91.30 (against 92.25), Serbian 1895's 62 (against 61.50), Turkish Unifieds 70.15 (against 71), Banque d'Athenes 103 (unchanged), Credit Foncier Egyptiens 77 (against 782), Land Banks of Egypt 184.50 (against 201), and Ottoman Banks 540 (against 527).

The death is announced at Bidston, Cheshire, at the age of 74, of Mr. Herbert Wheeler Hind, principal of the firm of J. H. Hind and Co., East India merchants, Liverpool, and one of the most esteemed men in that city, where his interests were very extensive, particularly in insurance and banking circles. He was High Sheriff of Cheshire in 1909.

BRITISH TRADE CORPORATION

(Incorporated by Royal Charter),

13, AUSTIN FRIARS, LONDON, E.C.2.

Telegrams: "Trabanque, London."

CAPITAL: Authorised - £10,000,000 Subscribed and Paid Up - £2,000,000

Governor - THE LORD FARINGDON.

Manager, A. G. M. DICKSON. London Manager, P. C. WEST. Secretary, G. De B. BROUNLIE.

The Corporation has been established with the object of developing the Trade of the British Empire in every part of the world, and brings to the notice of all interested that it is prepared to grant financial facilities to British Manufacturers and Merchants for the increase of their Import and Export Trade.

It will be prepared to assist in opening up new channels for enterprise, and will afford financial facilities for the enlargement of works and the extension of plant.

The Corporation is appointing representatives in the chief cities of the world, and will open credits at home and abroad. It invites inquiries and will endeavour where necessary to put expert advice at the disposal of correspondents regarding the financing of their foreign and overseas business. Moneys received on fixed deposit. Terms on application.
